The primary rule for the conduct of Intellect is to have control of the thoughts without losing their natural attitudes and action. They are the oracle; we are not to poke and drill and force, but to follow them. Yet the spirits of the prophets are subject to the prophets. You must formulate your thought or 't is all sky and no stars. There are men of great apprehension, discursive minds, who easily entertain ideas, but are not exact, severe with themselves, cannot connect or arrange their thoughts so as effectively to report them. A blending of these two — the intellectual perception of truth and the moral sentiment of right — is wisdom. All thought is practical. Wishing is one thing; will another. Wishing is castle-building; the dreaming about things agreeable to the senses, but to which we have no right. Will is the advance to that which rightly belongs to us, to which the inward magnet ever points, and which we dare to make ours. The revelation of thought takes us out of servitude into freedom. So does the sense of right.

Will is the measure of power. To a great genius there must be a great will. If the thought is not a lamp to the will, does not proceed to an act, the wise are imbecile. He alone is strong and happy who has a will. The rest are herds. He uses; they are used. He is of the Maker; they are of the Made.

Will is always miraculous, being the presence of God to men. When it appears in a man he is a hero, and all metaphysics are at fault. Heaven is the exercise of the faculties, the added sense of power.

All men know the truth, but what of that? It is rare to find one who knows how to speak it. A man tries to speak it and his voice is like the hiss of a snake, or rude and chiding. The truth is not spoken but injured. The same thing happens in power to do the right. His rectitude is ridiculous. His organs do not play him true.

There is a meter which determines the constructive power of man, — this, namely, the question whether the mind possesses the control of its thoughts, or they of it. The new sect stands for certain thoughts. We go to individual members for an exposition of them. Vain expectation. They are possessed by the ideas but do not possess them. One meets contemplative men who dwell in a certain feeling and delight which are intellectual but wholly above their expression. They cannot formulate. They impress those who know them by their loyalty to the truth they worship but cannot impart. Sometimes the patience and

love are rewarded by the chamber of power being at last opened; but sometimes they pass away dumb, to find it where all obstruction is removed.

By and by comes a facility; some one that can move the mountain and build of it a causeway through the Dismal Swamp, as easily as he carries the hair on his head. Talent is habitual facility of execution. We like people who can do things. The various talents are organic, or each related to that part of nature it is to explore and utilize. Somewhat is to come to the light, and one was created to fetch it, — a vessel of honor or of dishonor. 'T is of instant use in the economy of the Cosmos, and the more armed and biassed for the work the better.

Each of these talents is born to be unfolded and set at work for the use and delight of men, and, in the last result, the man with the talent is the need of mankind; the whole ponderous machinery of the state has really for its aim just to place this skill of each.

But idea and execution are not often entrusted to the same head. There is some incompatibility of good speculation and practice, for example, the failure of monasteries and Brook Farms. To hammer out phalanxes must be done by smiths; as soon as the scholar attempts it he is half a charlatan.

The grasp is the main thing. Most men's minds do not grasp anything. All slips through their fingers, like the paltry brass grooves that in most country houses are used to raise or drop the curtain, but are made to sell, and will not hold any curtain but cobwebs. I have heard that idiot children are known from their birth by the circumstance that their hands do not close round anything. Webster naturally and always grasps, and therefore retains something from every company and circumstance.

As a talent Dante's imagination is the nearest to hands and feet that we have seen. He clasps the thought as if it were a tree or a stone, and describes as mathematically. I once found Page the painter modelling his figures in clay, Ruth and Naomi, before he painted them on canvas. Dante, one would say, did the same thing before he wrote the verses.

I have spoken of Intellect constructive. But it is in degrees. How it moves when its pace is accelerated! The pace of Nature is so slow. Why not from strength to strength, from miracle to miracle, and not as now with this retardation — as if Nature had sprained her foot — and plenteous stopping at little stations?

The difference is obvious enough in Talent between the speed of one man's action above another's. In debate, in legislature, not less in action; in war or in affairs, alike daring and effective. But I speak of it in quite another sense, namely, in the habitual speed of combination of thought.

The same functions which are perfect in our quadrupeds are seen slower

performed in palæontology. Many races it cost them to achieve the completion that is now in the life of one. Life had not yet so fierce a glow.

Shakespeare astonishes by his equality in every play, act, scene or line. One would say he must have been a thousand years old when he wrote his first line, so thoroughly is his thought familiar to him, and has such scope and so solidly worded, as if it were already a proverb and not hereafter to become one. Well, that millenium in effect is really only a little acceleration in his process of thought.

But each power is commonly at the expense of some other. When pace is increased it will happen that the control is in a degree lost. Reason does not keep her firm seat. The Delphian prophetess, when the spirit possesses her, is herself a victim. The excess of individualism, when it is not corrected or subordinated to the Supreme Reason, makes that vice which we stigmatize as monotonies, men of one idea, or, as the French say, *enfant perdu d'une conviction isolée*, which give such a comic tinge to all society. Every man has his theory, true, but ridiculously overstated. We are forced to treat a great part of mankind as if they were a little deranged. We detect their mania and humor it, so that conversation soon becomes a tiresome effort.

You laugh at the monotonies, at the men of one idea, but if we look nearly at heroes we may find the same poverty; and perhaps it is not poverty, but power. The secret of power, intellectual or physical, is concentration, and all concentration involves of necessity a certain narrowness. It is a law of nature that he who looks at one thing must turn his eyes from every other thing in the universe. The horse goes better with blinders, and the man for dedication to his task. If you ask what compensation is made for the inevitable narrowness, why, this, that in learning one thing well you learn all things.

Immense is the patience of Nature. You say thought is a penurious rill. Well, we can wait. Nature is immortal, and can wait. Nature having for capital this rill, drop by drop, as it trickles from the rock of ages, — this rill and her patience, — she husbands and hives, she forms reservoirs, were it only a phial or a hair-tube that will hold as it were a drop of attar. Not having enough to support all the powers of a race, she thins her stock and raises a few individuals, or only a pair. Not sufficing to feed all the faculties synchronously, she feeds one faculty and starves all the rest. I am familiar with cases, we meet them daily, wherein the vital force being insufficient for the constitution, everything is neglected that can be spared; some one power fed, all the rest pine. 'T is like a withered hand or leg on a Hercules. It makes inconvenience in society, for we presume symmetry, and because they know one thing we defer to them in another, and find them really contemptible. We can't make half a bow and say, I honor and despise you. But

Nature can; she whistles with all her winds, and does as she pleases.

It is much to write sentences; it is more to add method and write out the spirit of your life symmetrically. But to arrange general reflections in their natural order, so that I shall have one homogeneous piece, — a Lycidas, an Allegro, a Hamlet, a Midsummer Night's Dream, — this continuity is for the great. The wonderful men are wonderful hereby. Such concentration of experiences is in every great work, which, though successive in the mind of the master, were primarily combined in his piece.

But what we want is consecutiveness. 'T is with us a flash of light, then a long darkness, then a flash again. Ah! could we turn these fugitive sparkles into an astronomy of Copernican worlds.

I must think this keen sympathy, this thrill of awe with which we watch the performance of genius, a sign of our own readiness to exert the like power. I most think we are entitled to powers far transcending any that we possess; that we have in the race the sketch of a man which no individual comes up to.

Every sincere man is right, or, to make him right, only needs a little larger dose of his own personality. Excellent in his own way by means of not apprehending the gift of another. When he speaks out of another's mind, we detect it. He can't make any paint stick but his own. No man passes for that with another which he passes for with himself. The respect and the censure of his brother are alike injurious and irrelevant. We see ourselves; we lack organs to see others, and only squint at them.

Don't fear to push these individualities to their farthest divergence. Characters and talents are complementary and supplementary. The world stands by balanced antagonisms. The more the peculiarities are pressed the better the result. The air would rot without lightning; and without the violence of direction that men have, without bigots, without men of fixed idea, no excitement, no efficiency.

The novelist should not make any character act absurdly, but only absurdly as seen by others. For it is so in life. Nonsense will not keep its unreason if you come into the humorist's point of view, but unhappily we find it is fast becoming sense, and we must flee again into the distance if we would laugh.

What strength belongs to every plant and animal in nature. The tree or the brook has no duplicity, no pretentiousness, no show. It is, with all its might and main, what it is, and makes one and the same impression and effect at all times. All the thoughts of a turtle are turtles, and of a rabbit, rabbits. But a man is broken and dissipated by the giddiness of his will; he does not throw himself into his judgments; his genius leads him one way but 't is likely his trade or politics

in quite another. He rows with one hand and with the other backs water, and does not give to any manner of life the strength of his constitution. Hence the perpetual loss of power and waste of human life.

The natural remedy against this miscellany of knowledge and aim, this desultory universality of ours, this immense ground-juniper falling abroad and not gathered up into any columnar tree, is to substitute realism for sentimentalism; a certain recognition of the simple and terrible laws which, seen or unseen, pervade and govern.

You will say this is quite axiomatic and a little too true. I do not find it an agreed point. Literary men for the most part have a settled despair as to the realization of ideas in their own time. There is in all students a distrust of truth, a timidity about affirming it; a wish to patronize Providence.

We disown our debt to moral evil. To science there is no poison; to botany no weed; to chemistry no dirt. The curses of malignity and despair are important criticism, which must be heeded until he can explain and rightly silence them.

“ *Croyez moi, l’erreur aussi a son mérite* “ said Voltaire. We see those who surmount by dint of egotism or infatuation obstacles from which the prudent recoil. The right partisan is a heady man, who, because he does not see many things, sees some one thing with heat and exaggeration; and if he falls among other narrow men, or objects which have a brief importance, prefers it to the universe, and seems inspired and a godsend to those who wish to magnify the matter and carry a point. ’Tis the difference between progress by railroad and by walking across the broken country. Immense speed, but only in one direction.

There are two theories of life; one for the demonstration of our talent, the other for the education of the man. One is activity, the busy-body, the following of that practical talent which we have, in the belief that what is so natural, easy and pleasant to us and desirable to others will surely lead us out safely; in this direction lie usefulness, comfort, society, low power of all sorts. The other is trust, religion, consent to be nothing for eternity, entranced waiting, the worship of ideas. This is solitary, grand, secular. They are in perpetual balance and strife. One is talent, the other genius. One is skill, the other character.

We are continually tempted to sacrifice genius to talent, the hope and promise of insight to the lust of a freer demonstration of those gifts we have; and we buy this freedom to glitter by the loss of general health.

It is the levity of this country to forgive everything to talent. If a man show cleverness, rhetorical skill, bold front in the forum or the senate, people clap their hands without asking more. We have a juvenile love of smartness, of showy speech. We like faculty that can rapidly be coined into money, and society seems to be in conspiracy to utilize every gift prematurely, and pull down genius to

lucrative talent. Every kind of meanness and mischief is forgiven to intellect. All is condoned if I can write a good song or novel.

Wide is the gulf between genius and talent. The men we know, poets, wits, writers, deal with their thoughts as jewellers with jewels, which they sell but must not wear. Like the carpenter, who gives up the key of the fine house he has built, and never enters it again.

There is a conflict between a man's private dexterity or talent and his access to the free air and light which wisdom is; between wisdom and the habit and necessity of repeating itself which belongs to every mind. Peter is the mould into which everything is poured like warm wax, and be it astronomy or railroads or French revolution or theology or botany, it comes out Peter. But there are quick limits to our interest in the personality of people. They are as much alike as their barns and pantries, and are as soon musty and dreary. They entertain us for a time, but at the second or third encounter we have nothing more to learn.

The daily history of the Intellect is this alternating of expansions and concentrations. The expansions are the invitations from heaven to try a larger sweep, a higher pitch than we have yet climbed, and to leave all our past for this enlarged scope. Present power, on the other hand, requires concentration on the moment and the thing to be done.

The condition of sanity is to respect the order of the intellectual world; to keep down talent in its place, to enthrone the instinct. There must be perpetual rallying and self-recovery. Each talent is ambitious and self-asserting; it works for show and for the shop, and the greater it grows the more is the mischief and the misleading, so that presently all is wrong.

No wonder the children love masks and costumes, and play horse, play soldier, play school, play bear, and delight in theatricals. The children have only the instinct of the universe, in which becoming somewhat else is the perpetual game of nature, and death the penalty of standing still. 'T is not less in thought. I cannot conceive any good in a thought which confines and stagnates. The universe exists only in transit, or we behold it shooting the gulf from the past to the future. We are passing into new heavens in fact by the movement of our solar system, and in thought by our better knowledge. Transition is the attitude of power. A fact is only a fulcrum of the spirit. It is the terminus of a past thought, but only a means now to new sallies of the imagination and new progress of wisdom. The habit of saliency, of not pausing but proceeding, is a sort of importation and domestication of the divine effort into a man. Routine, the rut, is the path of indolence, of cows, of sluggish animal life; as near gravitation as it can go. But wit sees the short way, puts together what belongs together, custom or no custom; in that is organization.

Inspiration is the continuation of the divine effort that built the man. The same course continues itself in the mind which we have witnessed in nature, namely the carrying-on and completion of the metamorphosis from grub to worm, from worm to fly. In human thought this process is often arrested for years and ages. The history of mankind is the history of arrested growth. This premature stop, I know not how, befalls most of us in early youth; as if the growth of high powers, the access to rare truths, closed at two or three years in the child, while all the pagan faculties went ripening on to sixty.

So long as you are capable of advance, so long you have not abdicated the hope and future of a divine son. That wonderful oracle will reply when it is consulted, and there is no history or tradition, no rule of life or art or science, on which it is not a competent and the only competent judge.

Man was made for conflict, not for rest. In action is his power; not in his goals but in his transitions man is great. Instantly he is dwarfed by self-indulgence. The truest state of mind rested in becomes false.

The spiritual power of man is twofold, mind and heart, Intellect and morals; one respecting truth, the other the will. One is the man, the other the woman in spiritual nature. One is power, the other is love. These elements always coexist in every normal individual, but one predominates. And as each is easily exalted in our thoughts till it serves to fill the universe and become the synonym of God, the soul in which one predominates is ever watchful and jealous when such immense claims are made for one as seem injurious to the other. Ideal and practical, like ecliptic and equator, are never parallel. Each has its vices, its proper dangers, obvious enough when the opposite element is deficient.

Intellect is skeptical, runs down into talent, selfish working for private ends, conceited, ostentatious and malignant. On the other side the clearheaded thinker complains of souls led hither and thither by affections which, alone, are blind guides and thriftless workmen, and in the confusion asks the polarity of intellect. But all great minds and all great hearts have mutually allowed the absolute necessity of the twain.

If the first rule is to obey your genius, in the second place the good mind is known by the choice of what is positive, of what is advancing. We must embrace the affirmative. But the affirmative of affirmatives is love. *Quantus amor tantus animus*. Strength, enters as the moral element enters. Lovers of men are as safe as the sun. Good will makes insight. Sensibility is the secret readiness to believe in all kinds of power, and the contempt of any experience we have not is the opposite pole. The measure of mental health is the disposition to find good everywhere, good and order, analogy, health and benefit, — the love of truth, tendency to be in the right, no fighter for victory, no cockerel.

We have all of us by nature a certain divination and parturient vaticination in our minds of some higher good and perfection than either power or knowledge. Knowledge is plainly to be preferred before power, as being that which guides and directs its blind force and impetus; but Aristotle declares that the origin of reason is not reason but something better.

The height of culture, the highest behavior, consists in the identification of the Ego with the universe; so that when a man says I hope, I find, I think, he might properly say, The human race thinks or finds or hopes. And meantime he shall be able continually to keep sight of his biographical Ego, — I have a desk, I have an office, I am hungry, I had an ague, — as rhetoric or offset to his grand spiritual Ego, without impertinence, or ever confounding them.

I may well say this is divine, the continuation of the divine effort. Alas! it seems not to be ours, to be quite independent of us. Often there is so little affinity between the man and his works that we think the wind must have writ them. Also its communication from one to another follows its own law and refuses our intrusion. It is in one, it belongs to all; yet how to impart it?

We need all our resources to live in the world which is to be used and decorated by us. Socrates kept all his virtues as well as his faculties well in hand. He was sincerely humble, but he utilized his humanity chiefly as a better eyeglass to penetrate the vapors that baffled the vision of other men.

The superiority of the man is in the simplicity of his thought, that he has no obstruction, but looks straight at the pure fact, with no color of option. Profound sincerity is the only basis of talent as of character. The virtue of the Intellect is its own, its courage is of its own kind, and at last it will be justified, though for the moment it seem hostile to what it most reveres.

We wish to sum up the conflicting impressions by saying that all point at last to a unity which inspires all. Our poetry, our religion are its skirts and penumbrae. Yet the charm of life is the hints we derive from this. They overcome us like perfumes from a far-off shore of sweetness, and their meaning is that no tongue shall syllable it without leave; that only itself can name it; that by casting ourselves on it and being its voice it rushes each moment to positive commands, creating men and methods, and ties the will of a child to the love of the First Cause.

III. MEMORY.

Memory is a primary and fundamental faculty, without which none other can work; the cement, the bitumen, the matrix in which the other faculties are imbedded; or it is the thread on which the beads of man are strung, making the personal identity which is necessary to moral action. Without it all life and thought were an unrelated succession. As gravity holds matter from flying off into space, so memory gives stability to knowledge; it is the cohesion which keeps things from falling into a lump, or flowing in waves.

We like longevity, we like signs of riches and extent of nature in an individual. And most of all we like a great memory. The lowest life remembers. The sparrow, the ant, the worm, have the same memory as we. If you bar their path, or offer them somewhat disagreeable to their senses, they make one or two trials, and then once for all avoid it.

Every machine must be perfect of its sort. It is essential to a locomotive that it can reverse its movement, and run backward and forward with equal celerity. The builder of the mind found it not less needful that it should have retroaction, and command its past act and deed. Perception, though it were immense and could pierce through the universe, was not sufficient.

Memory performs the impossible for man by the strength of his divine arms; holds together past and present, beholding both, existing in both, abides in the flowing, and gives continuity and dignity to human life. It holds us to our family, to our friends. Hereby a home is possible; hereby only a new fact has value.

Opportunities of investment are useful only to those who have capital. Any piece of knowledge I acquire to-day, a fact that falls under my eyes, a book I read, a piece of news I hear, has a value at this moment exactly proportioned to my skill to deal with it. To-morrow, when I know more, I recall that piece of knowledge and use it better.

The Past has a new value every moment to the active mind, through the incessant purification and better method of its memory. Once it joined its facts by color and form and sensuous relations. Some fact that had a childish significance to your childhood and was a type in the nursery, when riper intelligence recalls it means more and serves you better as an illustration; and perhaps in your age has new meaning. What was an isolated, unrelated belief or conjecture, our later experience instructs us how to place in just connection with other views which confirm and expand it. The old whim or perception was an augury of a broader insight, at which we arrive later with securer conviction. This is the companion, this the tutor, the poet, the library, with which you travel

It does not lie, cannot be corrupted, reports to you not what you wish but what really befel. You say, "I can never think of some act of neglect, of selfishness, or of passion without pain." Well, that is as it should be. That is the police of the Universe: the angels are set to punish you, so long as you are capable of such crime. But in the history of character the day comes when you are incapable of such crime. Then you suffer no more, you look on it as heaven looks on it, with wonder at the deed, and with applause at the pain it has cost you.

Memory is not a pocket, but a living instructor, with a prophetic sense of the values which he guards; a guardian angel set there within you to record your life, and by recording to animate you to uplift it. It is a scripture written day by day from the birth of the man; all its records full of meanings which open as he lives on, explaining each other, explaining the world to him and expanding their sense as he advances, until it shall become the whole law of nature and life.

As every creature is furnished with teeth to seize and eat, and with stomach to digest its food, so the memory is furnished with a perfect apparatus. There is no book like the memory, none with such a good index, and that of every kind, alphabetic, systematic, arranged by names of persons, by colors, tastes, smells, shapes, likeness, unlikeness, by all sorts of mysterious hooks and eyes to catch and hold, and contrivances for giving a *hint* .

The *memory collects* and *recollects* . We figure it as if the mind were a kind of looking-glass, which being carried through the street of time receives on its clear plate every image that passes; only with this difference that our plate is iodized so that every image sinks into it, and is held there. But in addition to this property it has one more, this, namely, that of all the million images that are imprinted, the very one we want reappears in the centre of the plate in the moment when we want it.

We can tell much about it, but you must not ask us what it is. On seeing a face I am aware that I have seen it before, or that I have not seen it before. On hearing a fact told I am aware that I knew it already. You say the first words of the old song, and I finish the line and the stanza. But where I have them, or what becomes of them when I am not thinking of them for months and years, that they should lie so still, as if they did not exist, and yet so nigh that they come on the instant when they are called for, never any man was so sharp-sighted, or could turn himself inside out quick enough to find.

'T is because of the believed incompatibility of the affirmative and advancing attitude of the mind with tenacious acts of recollection that people are often reproached with living in their memory. Late in life we live by memory, and in our solstices or periods of stagnation; as the starved camel in the desert lives on his humps. Memory was called by the schoolmen *vespertina cognitio* , evening

knowledge, in distinction from the command of the future which we have by the knowledge of causes, and which they called *matutina cognitio*, or morning knowledge.

Am I asked whether the thoughts clothe themselves in words? I answer, Yes, always; but they are apt to be instantly forgotten. Never was truer fable than that of the Sibyl's writing on leaves which the wind scatters. The difference between men is that in one the memory with inconceivable swiftness flies after and recollects the flying leaves, — flies on wing as fast as that mysterious whirlwind, and the envious Fate is baffled.

This command of old facts, the clear beholding at will of what is best in our experience, is our splendid privilege. "He who calls what is vanished back again into being enjoys a bliss like that of creating," says Niebuhr. The memory plays a great part in settling the intellectual rank of men. We estimate a man by how much he remembers. A seneschal of Parnassus is Mnemosyne. This power will alone make a man remarkable; and it is found in all good wits. Therefore the poets represented the Muses as the daughters of Memory, for the power exists in some marked and eminent degree in men of an ideal determination. Quintilian reckoned it the measure of genius. "Tantum ingenii quantum memoriæ."

We are told that Boileau having recited to Daguesseau one day an epistle or satire he had just been composing, Daguesseau tranquilly told him he knew it already, and in proof set himself to recite it from end to end. Boileau, astonished, was much distressed until he perceived that it was only a feat of memory.

The mind disposes all its experience after its affection and to its ruling end; one man by puns and one by cause and effect, one to heroic benefit and one to wrath and animal desire. This is the high difference, the quality of the association by which a man remembers. In the minds of most men memory is nothing but a farm-book or a pocket-diary. On such a day I paid my note; on the next day the cow calved; on the next I cut my finger; on the next the banks suspended payment. But another man's memory is the history of science and art and civility and thought; and still another deals with laws and perceptions that are the theory of the world.

This thread or order of remembering, this classification, distributes men, one remembering by shoptule or interest; one by passion; one by trifling external marks, as dress or money. And one rarely takes an interest in how the facts really stand, in the order of cause and effect, without self-reference. This is an intellectual man. Nature interests him; a plant, a fish, time, space, mind, being, in their own method and law. Napoleon was such, and that saves him.

But this mysterious power that binds our life together has its own vagaries and interruptions. It sometimes occurs that memory has a personality of its own,

and volunteers or refuses its informations at its will, not at mine. One sometimes asks himself, Is it possible that it is only a visitor, not a resident? Is it some old aunt who goes in and out of the house, and occasionally recites anecdotes of old times and persons which I recognize as having heard before, and she being gone again I search in vain for any trace of the anecdotes?

We can help ourselves to the *modus* of mental processes only by coarse material experiences. A knife with a good spring, a forceps whose lips accurately meet and match, a steel-trap, a loom, a watch, the teeth or jaws of which fit and play perfectly, as compared with the same tools when badly put together, describe to us the difference between a person of quick and strong perception, like Franklin or Swift or Webster or Richard Owen, and a heavy man who witnesses the same facts or shares experiences like theirs. 'Tis like the impression made by the same stamp in sand or in wax. The way in which Burke or Sheridan or Webster or any orator surprises us is by his always having a sharp tool that fits the present use. He has an old story, an odd circumstance, that illustrates the point he is now proving, and is better than an argument. The more he is heated, the wider he sees; he seems to remember all he ever knew; thus certifying us that he is in the habit of seeing better than other people; that what his mind grasps it does not let go. 'Tis the bull-dog bite; you must cut off the head to loosen the teeth.

We hate this fatal shortness of Memory, these docked men whom we behold. We gathered up what a rolling snow-ball as we came along, — much of it professedly for the future, as capital stock of knowledge. Where is it now? Look behind you. I cannot see that your train is any longer than it was in childhood. The facts of the last two or three days or weeks are all you have with you, — the reading of the last month's books. Your conversation, action, your face and manners report of no more, of no greater wealth of mind. Alas! you have lost something for everything you have gained, and cannot grow. Only so much iron will the load-stone draw; it gains new particles all the way as you move it, but one falls off for every one that adheres.

As there is strength in the wild horse which is never regained when he is once broken by training, and as there is a sound sleep of children and of savages, profound as the hibernation of bears, which never visits the eyes of civil gentlemen and ladies, so there is a wild memory in children and youth which makes what is early learned impossible to forget; and perhaps in the beginning of the world it had most vigor. Plato deploras writing as a barbarous invention which would weaken the memory by disuse. The Rhapsodists in Athens it seems could recite at once any passage of Homer that was desired.

If writing weakens the memory, we may say as much and more of printing.

What is the newspaper but a sponge or invention for oblivion? the rule being that for every fact added to the memory, one is crowded out, and that only what the affection animates can be remembered.

The mind has a better secret in generalization than merely adding units to its list of facts. The reason of the short memory is shallow thought. As deep as the thought, so great is the attraction. An act of the understanding will marshal and concatenate a few facts; a principle of the reason will thrill and magnetize and redistribute the whole world.

But defect of memory is not always want of genius. By no means. It is sometimes owing to excellence of genius. Thus men of great presence of mind who are always equal to the occasion do not need to rely on what they have stored for use, but can think in this moment as well and deeply as in any past moment, and if they cannot remember the rule they can make one. Indeed it is remarked that inventive men have bad memories. Sir Isaac Newton was embarrassed when the conversation turned on his discoveries and results; he could not recall them; but if he was asked why things were so or so he could find the reason on the spot.

A man would think twice about learning a new science or reading a new paragraph, if he believed the magnetism was only a constant amount, and that he lost a word or a thought for every word he gained. But the experience is not quite so bad. In reading a foreign language, every new word mastered is a lamp lighting up related words and so assisting the memory. Apprehension of the whole sentence aids to fix the precise meaning of a particular word, and what familiarity has been acquired with the genius of the language and the writer helps in fixing the exact meaning of the sentence. So is it with every fact in a new science: they are mutually explaining, and each one adds transparency to the whole mass.

The damages of forgetting are more than compensated by the large values which new thoughts and knowledge give to what we already know. If new impressions sometimes efface old ones, yet we steadily gain insight; and because all nature has one law and meaning, — part corresponding to part, — all we have known aids us continually to the knowledge of the rest of nature. Thus, all the facts in this chest of memory are property at interest. And who shall set a boundary to this mounting value? Shall we not on higher stages of being remember and understand our early history better?

They say in Architecture, “An arch never sleeps;” I say, the Past will not sleep, it works still. With every new fact a ray of light shoots up from the long buried years. Who can judge the new book? He who has read many books. Who, the new assertion? He who has heard many the like. Who, the new man? He that

has seen men. The experienced and cultivated man is lodged in a hall hung with pictures which every new day retouches, and to which every step in the march of the soul adds a more sublime perspective.

We learn early that there is great disparity of value between our experiences; some thoughts perish in the using. Some days are bright with thought and sentiment, and we live a year in a day. Yet these best days are not always those which memory can retain. This water once spilled cannot be gathered. There are more inventions in the thoughts of one happy day than ages could execute, and I suppose I speak the sense of most thoughtful men when I say, I would rather have a perfect recollection of all I have thought and felt in a day or a week of high activity than read all the books that have been published in a century.

The memory is one of the compensations which Nature grants to those who have used their days well; when age and calamity have bereaved them of their limbs or organs, then they retreat on mental faculty and concentrate on that. The poet, the philosopher, lamed, old, blind, sick, yet disputing the ground inch by inch against fortune, finds a strength against the wrecks and decays sometimes more invulnerable than the heyday of youth and talent.

I value the praise of Memory. And how does Memory praise? By holding fast the best. A thought takes its true rank in the memory by surviving other thoughts that were once preferred. Plato remembered Anaxagoras by one of his sayings. If we recall our own favorites we shall usually find that it is for one crowning act or thought that we hold them dear.

Have you not found memory an apotheosis or deification? The poor, short lone fact dies at the birth. Memory catches it up into her heaven, and bathes it in immortal waters. Then a thousand times over it lives and acts again, each time transfigured, ennobled. In solitude, in darkness, we tread over again the sunny walks of youth; confined now in populous streets you behold again the green fields, the shadows of the gray birches; by the solitary river hear again the joyful voices of early companions, and vibrate anew to the tenderness and dainty music of the poetry your boyhood fed upon. At this hour the stream is still flowing, though you hear it not; the plants are still drinking their accustomed life and repaying it with their beautiful forms. But you need not wander thither. It flows for you, and they grow for you, in the returning images of former summers. In low or bad company you fold yourself in your cloak, withdraw yourself entirely from all the doleful circumstance, recall and surround yourself with the best associates and the fairest hours of your life: —

“Passing sweet are the domains of tender memory.”

You may perish out of your senses, but not out of your memory or

imagination.

The memory has a fine art of sifting out the pain and keeping all the joy. The spring days when the bluebird arrives have usually only few hours of fine temperature, are sour and unlovely; but when late in autumn we hear rarely a bluebird's notes they are sweet by reminding us of the spring. Well, it is so with other tricks of memory. Of the most romantic fact the memory is more romantic; and this power of sinking the pain of any experience and of recalling the saddest with tranquillity, and even with a wise pleasure, is familiar. The memory is as the affection. Sampson Reed says, "The true way to store the memory is to develop the affections." A *souvenir* is a token of love. *Remember me* means, Do not cease to love me. We remember those things which we love and those things which we hate. The memory of all men is robust on the subject of a debt due to them, or of an insult inflicted on them. "They can remember," as Johnson said, "who kicked them last,"

Every artist is alive on the subject of his art. The Persians say, "A real singer will never forget the song he has once learned." Michael Angelo, after having once seen a work of any other artist, would remember it so perfectly that if it pleased him to make use of any portion thereof, he could do so, but in such a manner that none could perceive it.

We remember what we understand, and we understand best what we like; for this doubles our power of attention, and makes it our own. Captain John Brown, of Ossawatimie, said he had in Ohio three thousand sheep on his farm, and could tell a strange sheep in his flock as soon as he saw its face. One of my neighbors, a grazer, told me that he should know again every cow, ox, or steer that he ever saw. Abel Lawton knew every horse that went up and down through Concord to the towns in the county. And in higher examples each man's memory is in the line of his action.

Nature trains us on to see illusions and prodigies with no more wonder than our toast and omelet at breakfast. Talk of memory and cite me these fine examples of Grotius and Daguesseau, and I think how awful is that power and what privilege and tyranny it must confer. Then I come to a bright school-girl who remembers all she hears, carries thousands of nursery rhymes and all the poetry in all the readers, hymn-books, and pictorial ballads in her mind; and 'tis a mere drug. She carries it so carelessly, it seems like the profusion of hair on the shock heads of all the village boys and village dogs; it grows like grass. 'Tis a bushel-basket memory of all unchosen knowledge, heaped together in a huge hamper, without method, yet securely held, and ready to come at call; so that an old scholar, who knows what to do with a memory, is full of wonder and pity that this magical force should be squandered on such frippery.

He is a skilful doctor who can give me a recipe for the cure of a bad memory. And yet we have some hints from experience on this subject. And first, *health*. It is found that we remember best when the head is clear, when we are thoroughly awake. When the body is in a quiescent state in the absence of the passions, in the moderation of food, it yields itself a willing medium to the intellect. For the true river Lethe is the body of man, with its belly and uproar of appetite and mountains of indigestion and bad humors and quality of darkness. And for this reason, and observing some mysterious continuity of mental operation during sleep or when our will is suspended, 't is an old rule of scholars, that which Fuller records, "'Tis best knocking in the nail overnight and clinching it next morning." Only I should give extension to this rule and say Yes, drive the nail this week and clinch it the next, and drive it this year and clinch it the next.

But Fate also is an artist. We forget also according to beautiful laws. Thoreau said, "of what significance are the things you can forget. A little thought is sexton to all the world."

We must be severe with ourselves, and what we wish to keep we must once thoroughly possess. Then the thing seen will no longer be what it was, a mere sensuous object before the eye or ear, but a reminder of its law, a possession for the intellect. Then we relieve ourselves of all task in the matter, we put the *onus* of being remembered on the object, instead of on our will. We shall do as we do with all our studies, prize the fact or the name of the person by that predominance it takes in our mind after near acquaintance. I have several times forgotten the name of Flamsteed, never that of Newton; and can drop easily many poets out of the Elizabethan chronology, but not Shakespeare.

We forget rapidly what should be forgotten. The *universal* sense of fables and anecdotes is marked by our tendency to forget name and date and geography. "How in the right are children," said Margaret Fuller, "to forget name and date and place."

You cannot overstate our debt to the past, but has the present no claim? This past memory is the baggage, but where is the troop? The divine gift is not the old but the new. The divine is the instant life that receives and uses, the life that can well bury the old in the omnipotency with which it makes all things new.

The acceleration of mental process is equivalent to the lengthening of life. If a great many thoughts pass through your mind you will believe a long time has elapsed, many hours or days. In dreams a rush of many thoughts, of seeming experiences, of spending hours and going through a great variety of actions and companies, and when we start up and look at the watch, instead of a long night we are surprised to find it was a short nap. The opium-eater says, "I sometimes seemed to have lived seventy or a hundred years in one night."

You know what is told of the experience of some persons who have been recovered from drowning. They relate that their whole life's history seemed to pass before them in review. They remembered in a moment all that they ever did.

If we occupy ourselves long on this wonderful faculty, and see the natural helps of it in the mind, and the way in which new knowledge calls upon old knowledge — new giving undreamed-of value to old; everywhere relation and suggestion, so that what one had painfully held by strained attention and recapitulation now falls into place and is clamped and locked by inevitable connection as a planet in its orbit (every other orb, or the law or system of which it is a part, being a perpetual reminder), — we cannot fail to draw thence a sublime hint that thus there must be an endless increase in the power of memory only through its use; that there must be a proportion between the power of memory and the amount of knowables; and since the Universe opens to us, the reach of the memory must be as large.

With every broader generalization which the mind makes, with every deeper insight, its retrospect is also wider. With every new insight into the duty or fact of to-day we come into new possession of the past.

When we live by principles instead of traditions, by obedience to the law of the mind instead of by passion, the Great Mind will enter into us, not as now in fragments and detached thoughts, but the light of to-day will shine backward and forward.

Memory is a presumption of a possession of the future. Now we are halves, we see the past but not the future, but in that day will the hemisphere complete itself and foresight be as perfect as after-sight.

BOSTON.

“We are citizens of two fair cities,” said the Genoese gentleman to a Florentine artist, “and if I were not a Genoese, I should wish to be Florentine.” “And I,” replied the artist, “if I were not Florentine.”— “You would wish to be Genoese,” said the other. “No,” replied the artist, “I should wish to be Florentine.”

The rocky nook with hill-tops three Looked eastward from the farms, And twice each day the flowing sea Took Boston in its arms.

The sea returning day by day Restores the world-wide mart; So let each dweller on the Bay Fold Boston in his heart.

Let the blood of her hundred thousands Throb in each manly vein, And the wits of all her wisest Make sunshine in her brain.

And each shall care for other, And each to each shall bend, To the poor a noble brother, To the good an equal friend.

A blessing through the ages thus Shield all thy roofs and towers! God with the fathers, so with us , Thou darling town of ours!

BOSTON.

The old physiologists said, “There is in the air a hidden food of life;” and they watched the effect of different climates. They believed the air of mountains and the seashore a potent predisposer to rebellion. The air was a good republican, and it was remarked that insular people are versatile and addicted to change, both in religious and secular affairs.

The air that we breathe is an exhalation of all the solid material globe. An aerial fluid streams all day, all night, from every flower and leaf, from every water and soil, from every rock-ledge; and from every stratum a different aroma and air according to its quality. According to quality and according to temperature, it must have effect on manners.

There is the climate of the Sahara: a climate where the sunbeams are vertical; where is day after day, sunstroke after sunstroke, with a frosty shadow between. “There are countries,” said Howell, “where the heaven is a fiery furnace, or a blowing bellows, or a dropping sponge, most parts of the year.” Such is the assimilating force of the Indian climate, that, Sir Erskine Perry says, “the usage and opinion of the Hindoos so invades men of all castes and colors who deal with them that all take a Hindoo tint. Parsee, Mongol, Afghan, Israelite, Christian, have all passed under this influence and exchanged a good part of their patrimony of ideas for the notions, manner of seeing, and habitual tone of

Indian society.” He compares it to the geologic phenomenon which the black soil of the Dhakkan offers, — the property, namely, of assimilating to itself every foreign substance introduced into its bosom.

How can we not believe in influences of climate and air, when, as true philosophers, we must believe that chemical atoms also have their spiritual cause why they are thus and not other; that carbon, oxygen, alum and iron, each has its origin in spiritual nature?

Even at this day men are to be found superstitious enough to believe that to certain spots on the surface of the planet special powers attach, and an exalted influence on the genius of man. And it appears as if some localities of the earth, through wholesome springs, or as the *habitat* of rare plants and minerals, or through ravishing beauties of Nature, were preferred before others. There is great testimony of discriminating persons to the effect that Rome is endowed with the enchanting property of inspiring a longing in men there to live and there to die.

Who lives one year in Boston ranges through all the climates of the globe. And if the character of the people has a larger range and greater versatility, causing them to exhibit equal dexterity in what are elsewhere reckoned incompatible works, perhaps they may thank their climate of extremes, which at one season gives them the splendor of the equator and a touch of Syria, and then runs down to a cold which approaches the temperature of the celestial spaces.

It is not a country of luxury or of pictures; of snows rather, of east-winds and changing skies; visited by icebergs, which, floating by, nip with their cool breath our blossoms. Not a luxurious climate, but wisdom is not found with those who dwell at their ease. Give me a climate where people think well and construct well, — I will spend six months there, and you may have all the rest of my years.

What Vasari says, three hundred years ago, of the republican city of Florence might be said of Boston; “that the desire for glory and honor is powerfully generated by the air of that place, in the men of every profession; whereby all who possess talent are impelled to struggle that they may not remain in the same grade with those whom they perceive to be only men like themselves, even though they may acknowledge such indeed to be masters; but all labor by every means to be foremost.”

We find no less stimulus in our native air; not less ambition in our blood, which Puritanism has not sufficiently chastised; and at least an equal freedom in our laws and customs, with as many and as tempting rewards to toil; with so many philanthropies, humanities, charities, soliciting us to be great and good.

New England is a sort of Scotland. ‘T is hard to say why. Climate is much; then, old accumulation of the means, — books, schools, colleges, literary

society; — as New Bedford is not nearer to the whales than New London or Portland, yet they have all the equipments for a whaler ready, and they hug an oil-cask like a brother.

I do not know that Charles River or Merrimac water is more clarifying to the brain than the Savannah or Alabama rivers, yet the men that drink it get up earlier, and some of the morning light lasts through the day. I notice that they who drink for some little time of the Potomac water lose their relish for the water of the Charles River, of the Merrimac and the Connecticut, — even of the Hudson. I think the Potomac water is a little acrid, and should be corrected by copious infusions of these provincial streams.

Of great cities you cannot compute the influences. In New York, in Montreal, New Orleans and the farthest colonies, — in Guiana, in Guadaloupe, — a middle-aged gentleman is just embarking with all his property to fulfil the dream of his life and spend his old age in Paris; so that a fortune falls into the massive wealth of that city every day in the year. Astronomers come because there they can find apparatus and companions. Chemist, geologist, artist, musician, dancer, because there only are grandees and their patronage, appreciators and patrons. Demand and supply run into every invisible and unnamed province of whim and passion.

Each great city gathers these values and delights for mankind, and comes to be the brag of its age and population. The Greeks thought him unhappy who died without seeing the statue of Jove at Olympia. With still more reason, they praised Athens, the “Violet City.” It was said of Home in its proudest days, looking at the vast radiation of the privilege of Roman citizenship through the then-known world,— “the extent of the city and of the world is the same” (*spatium et urbis et orbis idem*). London now for a thousand years has been in an affirmative or energizing mood; has not stopped growing. Linnæus, like a naturalist, esteeming the globe a big egg, called London the *punctum saliens* in the yolk of the world.

This town of Boston has a history. It is not an accident, not a windmill, or a railroad station, or cross-roads tavern, or an army-barracks grown up by time and luck to a place of wealth; but a seat of humanity, of men of principle, obeying a sentiment and marching loyally whither that should lead them; so that its annals are great historical lines, inextricably national; part of the history of political liberty. I do not speak with any fondness, but the language of coldest history, when I say that Boston commands attention as the town which was appointed in the destiny of nations to lead the civilization of North America.

A capital fact distinguishing this colony from all other colonies was that the persons composing it consented to come on the one condition that the charter

should be transferred from the company in England to themselves; and so they brought the government with them.

On the 3d of November, 1620, King James in-corporated forty of his subjects, Sir F. Gorges and others, the council established at Plymouth in the county of Devon for the planting, ruling, ordering and governing of New England in America. The territory — conferred on the patentees in absolute property, with unlimited jurisdiction, the sole power of legislation, the appointment of all officers and all forms of government — extended from the 40th to the 48th degree of north latitude, and in length from the Atlantic to the Pacific.

John Smith writes (1624): “Of all the four parts of the world that I have yet seen not inhabited, could I but have means to transplant a colony, I would rather live here than anywhere; and if it did not maintain itself, were we but once indifferently well fitted, let us starve. Here are many isles planted with corn, groves, mulberries, salvage gardens and good harbours. The sea-coast as you pass shows you all along large cornfields and great troops of well-proportioned people.” Massachusetts in particular, he calls “the paradise of these parts,” notices its high mountain, and its river, “which doth pierce many days’ journey into the entrails of that country.” Morton arrived in 1622, in June, beheld the country, and “the more he looked, the more he liked it.”

In sixty-eight years after the foundation of Boston, Dr. Mather writes of it, “The town hath indeed three elder Sisters in this colony, but it hath wonderfully outgrown them all, and her mother, Old Boston in England, also; yea, within a few years after the first settlement it grew to be the metropolis of the whole English America.”

How easy it is, after the city is built, to see where it ought to stand. In our beautiful bay, with its broad and deep waters covered with sails from every port; with its islands hospitably shining in the sun; with its waters bounded and marked by light-houses, buoys and sea-marks; every foot sounded and charted; with its shores trending steadily from the two arms which the capes of Massachusetts stretch out to sea, down to the bottom of the bay where the city domes and spires sparkle through the haze, — a good boatman can easily find his way for the first time to the State House, and wonder that Governor Carver had not better eyes than to stop on the Plymouth Sands.

But it took ten years to find this out. The colony of 1620 had landed at Plymouth. It was December, and the ground was covered with snow. Snow and moonlight make all places alike; and the weariness of the sea, the shrinking from cold weather and the pangs of hunger must justify them.

But the next colony planted itself at Salem, and the next at Weymouth; another at Medford; before these men, instead of jumping on to the first land that

offered, wisely judged that the best point for a city was at the bottom of a deep and islanded bay, where a copious river entered it, and where a bold shore was bounded by a country of rich undulating woodland.

The planters of Massachusetts do not appear to have been hardy men, rather, comfortable citizens, not at all accustomed to the rough task of discoverers; and they exaggerated their troubles. Bears and wolves were many; but early, they believed there were lions; Monadnoc was burned over to kill them. John Smith was stung near to death by the most poisonous tail of a fish, called a sting-ray. In the journey of Rev. Peter Bulkeley and his company through the forest from Boston to Concord they fainted from the powerful odor of the sweetfern in the sun; — like what befell, still earlier, Biorn and Thorfinn, Northmen, in their expedition to the same coast; who ate so many grapes from the wild vines that they were reeling drunk. The lions have never appeared since, — nor before. Their crops suffered from pigeons and mice. Nature has never again indulged in these exasperations. It seems to have been the last outrage ever committed by the sting-rays or by the sweetfern, or by the fox-grapes; they have been of peaceable behavior ever since.

Any geologist or engineer is accustomed to face more serious dangers than any enumerated, excepting the hostile Indians. But the awe was real and overpowering in the superstition with which every new object was magnified. The superstition which hung over the new ocean had not yet been scattered; the powers of the savage were not known; the dangers of the wilderness were unexplored; and, in that time, terrors of witchcraft, terrors of evil spirits, and a certain degree of terror still clouded the idea of God in the mind of the purest.

The divine will descends into the barbarous mind in some strange disguise; its pure truth not to be guessed from the rude vizard under which it goes masquerading. The common eye cannot tell what the bird will be, from the egg, nor the pure truth from the grotesque tenet which sheathes it. But by some secret tie it holds the poor savage to it, and he goes muttering his rude ritual or mythology, which yet conceals some grand commandment; as courage, veracity, honesty, or chastity and generosity.

So these English men, with the Middle Ages still obscuring their reason, were filled with Christian thought. They had a culture of their own. They read Milton, Thomas à Kempis, Bunyan and Flavel with religious awe and delight, not for entertainment. They were precisely the idealists of England; the most religious in a religious era. An old lady who remembered these pious people said of them that “they had to hold on hard to the huckleberry bushes to hinder themselves from being translated.”

In our own age we are learning to look as on chivalry at the sweetness of that ancient piety which makes the genius of St. Bernard, Latimer, Seougal, Jeremy Taylor, Herbert, and Leighton. Who can read the fiery ejaculations of St. Augustine, a man of as clear a sight as almost any other; of Thomas à Kempis, of Milton, of Bunyan even, without feeling how rich and expansive a culture — not so much a culture as a higher life — they owed to the promptings of this sentiment; without contrasting their immortal heat with the cold complexion of our recent wits? Who can read the pious diaries of the Englishmen in the time of the Commonwealth and later, without a sigh that we write no diaries to-day? Who shall restore to us the odoriferous Sabbaths which made the earth and the humble roof a sanctity?

This spirit, of course, involved that of Stoicism, as, in its turn, Stoicism did this. Yet how much more attractive and true that this piety should be the central trait and the stern virtues follow, than that Stoicism should face the gods and put Jove on his defence. That piety is a refutation of every skeptical doubt. These men are a bridge to us between the unparalleled piety of the Hebrew epoch and our own. These ancient men, like great gardens with great banks of flowers, send out their perfumed breath across the great tracts of time. How needful is David, Paul, Leighton, Fénelon, to our devotion. Of these writers, of this spirit which deified them, I will say with Confucius, “If in the morning I hear of the right way, and in the evening die, I can be happy.”

I trace to this deep religious sentiment and to its culture great and salutary results to the people of New England; first, namely, the culture of the intellect, which has always been found in the Calvinistic church. The colony was planted in 1620; in 1638 Harvard College was founded. The General Court of Massachusetts, in 1647, “To the end that learning may not be buried in the graves of the forefathers, ordered, that every township, after the Lord has increased them to the number of fifty householders, shall appoint one to teach all children to write and read; and where any town shall increase to the number of a hundred families, they shall set up a Grammar School, the Masters thereof being able to instruct youth so far as they may be fitted for the University.”

Many and rich are the fruits of that simple statute. The universality of an elementary education in New England is her praise and her power in the whole world. To the schools succeeds the village Lyceum, — now very general throughout all the country towns of New England, — where every week through the winter, lectures are read and debates sustained which prove a college for the young rustic. Hence it happens that the young farmers and mechanics, who work all summer in the field or shop, in the winter often go into a neighboring town to teach the district school arithmetic and grammar. As you know too, New

England supplies annually a large detachment of preachers and schoolmasters and private tutors to the interior of the South and West.

New England lies in the cold and hostile latitude which by shutting men up in houses and tight and heated rooms a large part of the year, and then again shutting up the body in flannel and leather, defrauds the human being in some degree of his relations to external nature; takes from the muscles their suppleness, from the skin its exposure to the air; and the New Englander, like every other northerner, lacks that beauty and grace which the habit of living much in the air, and the activity of the limbs not in labor but in graceful exercise, tend to produce in climates nearer to the sun. Then the necessity, which always presses the northerner, of providing fuel and many clothes and tight houses and much food against the long winter, makes him anxiously frugal, and generates in him that spirit of detail which is not grand and enlarging, but goes rather to pinch the features and degrade the character.

As an antidote to the spirit of commerce and of economy, the religious spirit — always enlarging, firing man, prompting the pursuit of the vast, the beautiful, the unattainable — was especially necessary to the culture of New England. In the midst of her laborious and economical and rude and awkward population, where is little elegance and no facility; with great accuracy in details, little spirit of society or knowledge of the world, you shall not unfrequently meet that refinement which no education and no habit of society can bestow; which makes the elegance of wealth look stupid, and unites itself by natural affinity to the highest minds of the world; nourishes itself on Plato and Dante, Michael Angelo and Milton; on whatever is pure and sublime in art, — and, I may say, gave a hospitality in this country to the spirit of Coleridge and Wordsworth, and to the music of Beethoven, before yet their genius had found a hearty welcome in Great Britain.

I do not look to find in England better manners than the best manners here. We can show native examples, and I may almost say (travellers as we are) natives who never crossed the sea, who possess all the elements of noble behavior.

It is the property of the religious sentiment to be the most refining of all influences. No external advantages, no good birth or breeding, no culture of the taste, no habit of command, no association with the elegant, — even no depth of affection that does not rise to a religious sentiment, can bestow that delicacy and grandeur of bearing which belong only to a mind accustomed to celestial conversation. All else is coarse and external; all else is tailoring and cosmetics beside this; for thoughts are expressed in every look or gesture, and these thoughts are as if angels had talked with the child.

[“Come dal fuoco il caldo, esser diviso,
Non puo’l bel dall’ eterno.”

Michael Angelo.

As from fire heat cannot be separated, — neither can beauty from the eternal.]

By this instinct we are lifted to higher ground. The religious sentiment gave the iron purpose and arm. That colonizing was a great and generous scheme, manly meant and manly done. When one thinks of the enterprises that are attempted in the heats of youth, the Zoars, New-Harmonies and Brook - Farms, Oakdales and Phalansteries, which have been so profoundly ventilated, but end in a protracted picnic which after a few weeks or months dismisses the partakers to their old homes, we see with new increased respect the solid, well-calculated scheme of these emigrants, sitting down hard and fast where they came, and building their empire by due degrees.

John Smith says, “Thirty, forty, or fifty sail went yearly in America only to trade and fish, but nothing would be done for a plantation, till about some hundred of your Brownists of England, Amsterdam and Leyden went to New Plymouth; whose humorous ignorances caused them for more than a year to endure a wonderful deal of misery, with an infinite patience.”

What should hinder that this America, so long kept in reserve from the intellectual races until they should grow to it, glimpses being afforded which spoke to the imagination, yet the firm shore hid until science and art should be ripe to propose it as a fixed aim, and a man should be found who should sail steadily west sixty-eight days from the port of Palos to find it, — what should hinder that this New Atlantis should have its happy ports, its mountains of security, its gardens fit for human abode where all elements were right for the health, power and virtue of man?

America is growing like a cloud, towns on towns, States on States; and wealth (always interesting, since from wealth power cannot be divorced) is piled in every form invented for comfort or pride.

If John Bull interest you at home, come and see him under new conditions, come and see the Jonathanization of John.

There are always men ready for adventures, — more in an over-governed, over-peopled country, where all the professions are crowded and all character suppressed, than elsewhere. This thirst for adventure is the vent which Destiny offers; a war, a crusade, a gold mine, a new country, speak to the imagination and offer swing and play to the confined powers.

The American idea, Emancipation, appears in our freedom of intellection, in our reforms, and in our bad politics; it has, of course, its sinister side, which is

most felt by the drilled and scholastic, but if followed it leads to heavenly places.

European and American are each ridiculous out of his sphere. There is a Columbia of thought and art and character, which is the last and endless sequel of Columbus's adventure.

European critics regret the detachment of the Puritans to this country without aristocracy; which a little reminds one of the pity of the Swiss mountaineers when shown a handsome Englishman: "What a pity he has no goitre! The future historian will regard the detachment of the Puritans without aristocracy the supreme fortune of the colony; as great a gain to mankind as the opening of this continent.

There is a little formula, couched in pure Saxon, which you may hear in the corners of streets and in the yard of the dame's school, from very little republicans: "I'm as good as you be," which contains the essence of the Massachusetts Bill of Rights and of the American Declaration of Independence. And this was at the bottom of Plymouth Rock and of Boston Stone; and this could be heard (by an acute ear) in the Petitions to the King, and the platforms of churches, and was said and sung in every tone of the psalmody of the Puritans; in every note of Old Hundred and Hallelujah and Short Particular Metre.

What is very conspicuous is the saucy independence which shines in all their eyes. They could say to themselves, Well, at least this yoke of man, of bishops, of courtiers, of dukes, is off my neck. We are a little too close to wolf and famine than that anybody should give himself airs here in the swamp.

London is a long way off, with beadles and pursuivants and horse-guards. Here in the clambanks and the beech and chestnut forest, I shall take leave to breathe and think freely. If you do not like it, if you molest me, I can cross the brook and plant a new state out of reach of anything but squirrels and wild pigeons.

Bonaparte sighed for his republicans of 1789. The soul of a political party is by no means usually the officers and pets of the party, who wear the honors and fill the high seats and spend the salaries. No, but the theorists and extremists, the men who are never contented and never to be contented with the work actually accomplished, but who from conscience are engaged to what that party professes, — these men will work and watch and rally and never tire in carrying their point. The theology and the instinct of freedom that grew here in the dark in serious men furnished a certain rancor which consumed all opposition, fed the party and carried it, over every rampart and obstacle, to victory.

Boston never wanted a good principle of rebellion in it, from the planting until now; there is always a minority unconvinced, always a heresiarch, whom the governor and deputies labor with but cannot silence. Some new light, some

new doctrinaire who makes an unnecessary ado to establish his dogma; some Wheelwright or defender of Wheelwright; some protester against the cruelty of the magistrates to the Quakers; some tender minister hospitable to Whitefield against the counsel of all the ministers; some John Adams and Josiah Quincy and Governor Andrew to undertake and carry the defence of patriots in the courts against the uproar of all the province; some defender of the slave against the politician and the merchant; some champion of first principles of humanity against the rich and luxurious; some adversary of the death penalty; some pleader for peace; some noble protestant, who will not stoop to infamy when all are gone mad, but will stand for liberty and justice, if alone, until all come back to him.

I confess I do not find in our people, with all their education, a fair share of originality of thought; — not any remarkable book of wisdom; not any broad generalization, any equal power of imagination. No *Novum Organon*; no *Mécanique Céleste*; no *Principle*; no *Paradise Lost*; no *Hamlet*; no *Wealth of Nations*; no *National Anthem*; have we yet contributed.

Nature is a frugal mother and never gives without measure. When she has work to do she qualifies men for that and sends them equipped for that. In Massachusetts she did not want epic poems and dramas yet, but first, planters of towns, fellers of the forest, builders of mills and forges, builders of roads, and farmers to till and harvest corn for the world. Corn, yes, but honest corn; corn with thanks to the Giver of corn; and the best thanks, namely, obedience to his law; this was the office imposed on our Founders and people; liberty, clean and wise. It was to be built on Religion, the Emancipator; Religion which teaches equality of all men in view of the spirit which created man.

The seed of prosperity was planted. The people did not gather where they had not sown. They did not try to unlock the treasure of the world except by honest keys of labor and skill. They knew, as God knew, that command of nature comes by obedience to nature; that reward comes by faithful service; that the most noble motto was that of the Prince of Wales,— “I serve,” — and that he is greatest who serves best. There was no secret of labor which they disdained.

They accepted the divine ordination that man is for use; that intelligent being exists to the utmost use; and that his ruin is to live for pleasure and for show. And when within our memory some flippant senator wished to taunt the people of this country by calling them, “the mudsills of society,” he paid them ignorantly a true praise; for good men are as the green plain of the earth is, as the rocks, and the beds of rivers are, the foundation and flooring and sills of the State.

The power of labor which belongs to the English race fell here into a climate

which befriended it, and into a maritime country made for trade, where was no rival and no envious lawgiver. The sailor and the merchant made the law to suit themselves, so that there was never, I suppose, a more rapid expansion in population, wealth and all the elements of power, and in the citizens' consciousness of power and sustained assertion of it, than was exhibited here.

Moral values become also money values. When men saw that these people, besides their industry and thrift, had a heart and soul and would stand by each other at all hazards, they desired to come and live here. A house in Boston was worth as much again as a house just as good in a town of timorous people, because here the neighbors would defend each other against bad governors and against troops; quite naturally house-rents rose in Boston.

Besides, youth and health like a stirring town, above a torpid place where nothing is doing. In Boston they were sure to see something going forward before the year was out. For here was the moving principle itself, the *primum mobile*, a living mind agitating the mass and always afflicting the conservative class with some odious novelty or other; a new religious sect, a political point, a point of honor, a reform in education, a philanthropy.

From Roger Williams and Eliot and Robinson and the Quaker women who for a testimony walked naked into the streets, and as the record tells us "were arrested and publicly whipped, — the baggages that they were;" from Wheelwright the Antinomian and Ann Hutchinson and Whitefield and Mother Ann the first Shaker, down to Abner Kneeland and Father Lamson and William Garrison, there never was wanting some thorn of dissent and innovation and heresy to prick the sides of conservatism.

With all their love of his person, they took immense pleasure in turning out the governor and deputy and assistants, and contravening the counsel of the clergy; as they had come so far for the sweet satisfaction of resisting the Bishops and the King.

The Massachusetts colony grew and filled its own borders with a denser population than any other American State (Kossuth called it the City State), all the while sending out colonies to every part of New England; then South and West, until it has infused all the Union with its blood.

We are willing to see our sons emigrate, as to see our hives swarm. That is what they were made to do, and what the land wants and invites. The towns or countries in which the man lives and dies where he was born, and his son and son's son live and die where he did, are of no great account.

I know that this history contains many black lines of cruel injustice; murder, persecution, and execution of women for witchcraft.

I am afraid there are anecdotes of poverty and disease in Broad Street that

match the dismal statistics of New York and London. No doubt all manner of vices can be found in this, as in every city; infinite meanness, scarlet crime. Granted. But there is yet in every city a certain permanent tone; a tendency to be in the right or in the wrong; audacity or slowness; labor or luxury; giving or parsimony; which side is it on? And I hold that a community, as a man, is entitled to be judged by his best.

We are often praised for what is least ours. Boston too is sometimes pushed into a theatrical attitude of virtue, to which she is not entitled and which she cannot keep. But the genius of Boston is seen in her real independence, productive power and northern acuteness of mind, — which is in nature hostile to oppression. It is a good city as cities go; Nature is good. The climate is electric, good for wit and good for character. What public souls have lived here, what social benefactors, what eloquent preachers, skilful workmen, stout captains, wise merchants; what fine artists, what gifted conversers, what mathematicians, what law-yers, what wits; and where is the middle class so able, virtuous and instructed?

And thus our little city thrives and enlarges, striking deep roots, and sending out boughs and buds, and propagating itself like a banyan over the continent. Greater cities there are that sprung from it, full of its blood and names and traditions. It is very willing to be outnumbered and outgrown, so long as they carry forward its life of civil and religious freedom, of education, of social order, and of loyalty to law. It is very willing to be outrun in numbers, and in wealth; but it is very jealous of any superiority in these, its natural instinct and privilege. You cannot conquer it by numbers, or by square miles, or by counted millions of wealth. For it owes its existence and its power to principles not of yesterday, and the deeper principle will always prevail over whatever material accumulations.

As long as she cleaves to her liberty, her education and to her spiritual faith as the foundation of these, she will teach the teachers and rule the rulers of America. Her mechanics, her farmers will toil better; she will repair mischief; she will furnish what is wanted in the hour of need; her sailors will man the Constitution; her mechanics repair the broken rail; her troops will be the first in the field to vindicate the majesty of a free nation, and remain last on the field to secure it. Her genius will write the laws and her historians record the fate of nations.

In an age of trade and material prosperity, we have stood a little stupefied by the elevation of our ancestors. We praised the Puritans because we did not find in ourselves the spirit to do the like. We praised with a certain adulation the invariable valor of the old war-gods and war-councillors of the Revolution. Washington has seemed an exceptional virtue. This praise was a concession of

un-worthiness in those who had so much to say of it. The heroes only shared this power of a sentiment, which, if it now breathes into us, will make it easy to us to understand them, and we shall not longer flatter them. Let us shame the fathers, by superior virtue in the sons.

It is almost a proverb that a great man has not a great son. Bacon, Newton and Washington were childless. But, in Boston, Nature is more indulgent, and has given good sons to good sires, or at least continued merit in the same blood. The elder President Adams has to divide voices of fame with the younger President Adams. The elder Otis could hardly excel the popular eloquence of the younger Otis; and the Quincy of the Revolution seems compensated for the shortness of his bright career in the son who so long lingers among the last of those bright clouds,

“That on the steady breeze of honor sail
In long succession calm and beautiful.”

Here stands to-day as of yore our little city of the rocks; here let it stand forever, on the man-bearing granite of the North! Let her stand fast by herself! She has grown great. She is filled with strangers, but she can only prosper by adhering to her faith. Let every child that is born of her and every child of her adoption see to it to keep the name of Boston as clean as the sun; and in distant ages her motto shall be the prayer of millions on all the hills that gird the town, “As with our Fathers, so God be with us!” SICUT PATRIBUS, SIT DEUS NOBIS!

THE CELEBRATION OF INTELLECT

AN ADDRESS DELIVERED BEFORE THE STUDENTS OF TUFTS
COLLEGE, JULY 10, 1861

BY Sybarites beguiled,
He shall no task decline;
Merlin's mighty line
Extremes of nature reconciled —
Bereaved a tyrant of his will,
And made the lion mild.

I KNOW the mighty bards,
I listen when they sing,
And now I know
The secret store
Which these explore
When they with torch of genius pierce
The tenfold clouds that cover
The riches of the universe
From God's adoring lover.
And if to me it is not given
To fetch one ingot hence
Of the unfading gold of Heaven
His merchants may dispense,
Yet well I know the royal mine
And know the sparkle of its ore,
Know Heaven's truths from lies that shine —
Explored, they teach us to explore.

CELEBRATION OF INTELLECT

I CANNOT consent to wander from the duties of this day into the fracas of politics. The brute noise of cannon has, I know, a most poetic echo in these days when it is an instrument of freedom and the primal sentiments of humanity. Yet it is but representative and a far-off means and servant: but here in the college we are in the presence of the constituency and the principle itself. Here is, or

should be, the majesty of reason and the creative cause; and it were a compounding of all gradation and reverence to suffer the flash of swords and the boyish strife of passion and the feebleness of military strength to intrude on this sanctity and omnipotence of Intellectual Law. Against the heroism of soldiers I set the heroism of scholars, which consists in ignoring the other. You shall not put up in your Academy the statue of Caesar or Pompey, of Nelson or Wellington, of Washington or Napoleon, of Garibaldi, but of Archimedes, of Milton, of Newton. Archimedes disdained to apply himself to the useful arts, only to the liberal or the causal arts. Hiero the king reproached him with his barren studies. Like Thales, he was willing to show him that he was quite able in rude matters, if he could condescend to them, and he conducted the defence of Syracuse against the Romans. Then he returned to his geometry; and when the Roman soldier, at the sack of Syracuse, broke into his study, the philosopher could not rise from his chair and his diagram, and took his death without resistance. Michael Angelo gave himself to art, despising all meaner pursuits. When the war came to his own city, he lent his genius, and defended Florence as long as he was obeyed. Milton congratulates the Parliament that, whilst London is besieged and blocked, the Thames infested, inroads and excursions round, and battle oft rumored to be marching up to her walls and suburb trenches, — yet then are the people, or the greater part, more than at other times wholly taken up with the study of highest and most important matters to be reformed, — they reasoning, reading, inventing, discoursing, even to a rarity and admiration, things not before discoursed or written, and the fact argues a just confidence in the grandeur and self-subsistency of the cause of religious liberty which made all material war an impertinence.

For either science and literature is a hypocrisy, or it is not. If it be, then resign your charter to the Legislature, turn your college into barracks and warehouses, and divert the funds of your founders into the stock of a rope-walk or a candle-factory, a tan-yard or some other undoubted conveniency for the surrounding population. But if the intellectual interest be, as I hold, no hypocrisy, but the only reality, — then it behooves us to enthrone it, obey it; and give it possession of us and ours; to give, among other possessions, the college into its hand casting down every idol, every pretender, every hoary lie, every dignified blunder that has crept into its administration.

At this season, the colleges keep their anniversaries, and in this country where education is a primary interest, every family has a representative in their halls, a son, a brother, or one of our own kindred is there for his training. But even if we had no son or friend therein, yet the college is part of the community, and it is there for us, is training our teachers, civilizers and inspirers. It is essentially the

most radiating and public of agencies, like, but better than, the light-house, or the alarm-bell, or the sentinel who fires a signal-cannon, or the telegraph which speeds the local news over the land. Besides, it deals with a force which it cannot monopolize or confine; cannot give to those who come to it and refuse to those outside. I have no doubt of the force, and for me the only question is, whether the force is inside.

This power which it deals is dear to all. If the colleges were better, if they had any monopoly of it, nay, if they really had it, had the power of imparting valuable thought, creative principles, truths which become powers, thoughts which become talents, — if they could cause that a mind not profound should become profound, — we should all rush to their gates: instead of contriving inducements to draw students, you would need to set police at the gates to keep order in the in-rushing multitude.

These are giddy times, and, you say, the college will be deserted. No, never was it so much needed. But I say, those were the giddy times which went before these, and the new times are the times of arraignment, times of trial and times of judgment. 'T is because the college was false to its trust, because the scholars did not learn and teach, because they were traders and left their altars and libraries and worship of truth and played the sycophant to presidents and generals and members of Congress, and gave degrees and literary and social honors to those whom they ought to have rebuked and exposed, incurring the contempt of those whom they ought to have put in fear; then the college is suicidal; ceases to be a school; power oozes out of it just as fast as truth does; and instead of overawing the strong, and upholding the good, it is a hospital for decayed tutors.

This Integrity over all partial knowledge and skill, homage to truth — how rare! Few men wish to know how the thing really stands, what is the law of it without reference to persons. Other men are victims of their means — sanity consists in not being subdued by your means.

Two men cannot converse together on any topic without presently finding where each stands in moral judgment; and each learns whether the other's view commands, or is commanded by, his own. I presently know whether my companion has more candor or less, more hope for men or less, whether his sense of duty is more or less severe and his generosity larger than mine; whether he stands for ideal justice, or for a timorous expediency.

Society is always idolatrous and exaggerates the merits of those who work to vulgar ends. But genius may be known by its probity. Never was pure valor — and almost I might say, never pure ability — shown in a bad cause. For ambition makes insane.

Society is always taken by surprise at any new example of common sense and of simple justice, as at a wonderful discovery. Thus, at Mr. Rarey's mode of taming a horse by kindness, or Garibaldi's emancipation of Italy for Italy's sake; at the introduction of gentleness into insane asylums, and of cleanliness and comfort into penitentiaries. A farmer wished to buy an ox. The seller told him how well he had treated the animal. "But," said my farmer, "I asked the ox, and the ox showed me by marks that could not lie that he had been abused." We affect to slight England and Englishmen. But I note that we had a vast self-esteem on the subject of Bunker Hill, Yorktown and New Orleans. We should not think it much to beat Indians or Mexicans, — but to beat English! The English newspapers and some writers of reputation disparage America. Meantime I note that the British people are emigrating hither by thousands, which is a very sincere, and apt to be a very seriously considered expression of opinion. The emigration into America of British, as well as of Continental people, is the eulogy of America by the most competent and sincere arbiters. The hater of property and of government takes care to have his warranty-deed recorded; and the book written against fame and learning has the author's name on the title-page. ...

Gentlemen, I too am an American, and value practical talent. I love results and hate abortions. I delight in people who can do things. I value talent, — perhaps no man more. I value dearly the poet who knows his art so well that, when his voice vibrates, it fills the hearer with sympathetic song, just as a powerful note of an organ sets all tuned strings in its neighborhood in accordant vibration, — the novelist with his romance, the architect with his palace, the composer with his score. I wish you to be eloquent, to grasp the bolt and to hurl it home to the mark. I wish to see that Mirabeau who knows how to seize the heart-strings of the people and drive their hands and feet in the way he wishes them to go, to fill them with himself, to enchant men so that their will and purpose is in abeyance and they serve him with a million hands just as implicitly as his own members obey him. But I value it more when it is legitimate, when the talent is in true order, subject to genius, subject to the total and native sentiment of the man, and therefore in harmony with the public sentiment of mankind. Such is the patriotism of Demosthenes, of Patrick Henry and of what was best in Cicero and Burke; not an ingenious special pleading, not the making a plausible case, but strong by the strength of the facts themselves. Then the orator is still one of the audience, persuaded by the same reasons which persuade them; not a ventriloquist, not a juggler, not a wire-puller paid to manage the lobby and caucus.

In Demosthenes is this realism of genius. He wins his cause honestly. His

doctrine is self-reliance. "If it please you to note it, my counsels to you are not such whereby I should grow great among you, and you become little among the Grecians; but they be of that nature as is sometimes not good for me to give, but are always good for you to follow."

You, gentlemen, are selected out of the great multitude of your mates, out of those who begun life with you, set apart through some strong persuasion of your own, or of your friends, that you were capable of the high privilege of thought. Need enough there is of such a band of priests of intellect and knowledge; and great is the office, and well deserving and well paying the last sacrifices and the highest ability. But I wish this were a needless task, to urge upon you scholars the claims of thought and learning. The order of the world educates with care the senses and the understanding. ...

Men are as they think. A certain quantity of power belongs to a certain quantity of truth. And the man who knows any truth not yet discerned by other men is master of all other men, so far as that truth and its wide relations are concerned. Do you suppose that the thunderbolt falls short? Do you imagine that a lie will nourish and work like a truth? ... The whole battle is fought in a few heads. A little finer order, a larger angle of vision, commands centuries of facts and millions of thoughtless people. It reverses all rank; "he who discriminates is the father of his father." ...

And yet the world is not saved. With this divine oracle, we somehow do not get instructed. Here are still perverse millions full of passion, crime and blood. Here are bad governors and bad subjects. Nay, in the class called intellectual the men are no better than the uninstructed. They use their wit and learning in the service of the Devil. There are bad books and false teachers and corrupt judges; and in the institutions of education a want of faith in their own cause. Nay, it happens often that the well-bred and refined, the inhabitants of cities, dwelling amidst colleges, churches, and scientific museums, lectures, poets, libraries, newspapers, and other aids supposed intellectual are more vicious and malignant than the rude country people, and need to have their corrupt voting and violence corrected by the cleaner and wiser suffrages of poor farmers. The poet does not believe in his poetry. Men are ashamed of their intellect. ...

Instinct is the name for the potential wit, that feeling which each has that what is done by any man or agent is done by the same with as his. He looks at all men as his representatives, and is glad to see that his wit can work at that problem as it ought to be done, and better than he could do it; whether it be to build, engineer, carve, paint, sing, heal, or compute, or play chess, or ride, or swim. We feel as if one man wrote all the books, painted, built, in dark ages, and we are sure we can do more than ever was done. It was the same mind that built the

world.

The Understanding is the name we give to the low, limited power working to short ends, to daily life in house and street. This is the power which the world of men adopt and educate. He is the calculator, he is the merchant, the politician, the worker in the useful; he works by shifts, by compromise, by statute, by bribes. All his activities are to short, personal ends, and he is apt to be a talker, a boaster, a busy-body.

Will you let me say to you what I think is the organic law of learning? It is to observe the order, to keep down the talent, to enthrone the Instinct. There must be the perpetual rallying and self-recovery; each talent links itself so fast with self-love and with petty advantage that it loses sight of its obedience, which is beautiful, and sets up for itself, and makes confusion. Falsehood begins as soon as it disobeys, it works for show, and for the shop, and the greater it grows, the more is the mischief and misleading, so that presently all is wrong, talent is mistaken for genius, dogma or system for truth. ...

Now the idea of a college is an assembly of such men, obedient each to this pure light, and drawing from it illumination to that science or art to which his constitution and affections draw him. And the very highest advantage which a young man of good mind can meet is to find such a teacher. No books, no aids, laboratory, apparatus, prizes, can compare with this. Here is sympathy; here is an order that corresponds to that in his own mind, and in all sound minds, and the hope and impulse imparted. And education is what it should be, a delightful unfolding of the faculties in right order.

I could heartily wish it were otherwise, but there is a certain shyness of genius, of free thought, of a master of art in colleges, which is as old as the rejection of Molière by the French Academy, of Bentley by the pedants of his time, and only the other day, of Arago; in Oxford, the recent rejection of Max Müller. ... If the truth must be told, thought is as rare in colleges as in cities. The necessity of a mechanical system is not to be denied. Young men must be classed and employed, not according to the secret needs of each mind but by some available plan that will give weekly and annual results; and a little violence must be done to private genius to accomplish this. Then genius is always its own law, and must be a little impatient and rebellious to this rule, so that, of necessity, a certain hostility and jealousy of genius grows up in the masters of routine, and unless, by rare good fortune, the professor has a generous sympathy with genius and takes care to interpose a certain relief and cherishing and reverence for the wild poet and dawning philosopher he has detected in his classes, that will happen which has happened so often, that the best scholar, he for whom colleges exist, finds himself a stranger and an orphan therein. 'T is

precisely analogous to what befalls in religious societies. In the romance *Spiridion* a few years ago, we had what it seems was a piece of accurate autobiography, the story of a young saint who comes into a convent for her education, and not falling into the system and the little parties in the convent, but inspired with an enthusiasm which finds nothing there to feed it, it turns out in a few days that every hand is against this young votary. Piety in a convent accuses every one, from the novice to the abbess. What right have you to be better than your neighbor? Piety comes to be regarded as a spy and a rebel. ... And how often we have had repeated the trails of the young man who made no figure at college because his own methods were new and extraordinary, and who only prospered at last because he forsook theirs and took his own.

It is true that the University and the Church, which should be counterbalancing institutions to our great material institutions of trade and of territorial power, do not express the sentiment of the popular politics and the popular optimism, whatever it be. Harvard College has no voice in Harvard College, but State Street votes it down on every ballot. Everything will be permitted there which goes to adorn Boston Whiggism, — is it geology, astronomy, poetry, antiquities, art, rhetoric. But that which it exists for, to be a fountain of novelties out of heaven, a Delphos uttering warning and ravishing oracles to lift and lead mankind, — that it shall not be permitted to do or to think of. On the contrary, every generosity of thought is suspect and gets a bad name. And all the youth come out decrepit citizens; not a prophet, not a poet, not a daimon, but is gagged and stifled or driven away. All that is sought in the instruction is drill; tutors, not inspirers.

I conceive that a college should have no mean ambition, but should aim at a reverent discipline and invitation of the soul, that here, if no-where else in the world, genius should find its home; here Imagination should be greeted with the problems in which it delights; the noblest tasks to the Muse proposed and the most cordial and honoring rewards; here the highest duties be urged, and enthusiasm for liberty and wisdom should breed enthusiasm and form heroes for the state. The College should hold the profound thought, and the Church the great heart to which the nation should turn, and these two should be counterbalancing to the bad politics and selfish trade. But there is but one institution, and not three. The Church and the College now take their tone from the City, and do not dictate their own. You all well know the downward tendency in literature, the facility with which men renounce their youthful aims and say, the labor is too severe, the prize too high for me; and they accept the employments of the market. ...

Ah, gentlemen, it's only a dream of mine, and perhaps never will be true, —

but I thought a college was a place not to train talents, not to train attorneys, and those who say what they please, but to adorn Genius, which only speaks truth, and after the way which truth uses, namely, Beauty; a college was to teach you geometry, or the lovely laws of space and figure; chemistry, botany, zoölogy, the streaming of thought into form, and the precipitation of atoms which Nature is.

This, then, is the theory of Education, the happy meeting of the young soul, filled with the desire, with the living teacher who has already made the passage from the centre forth, step by step, along the intellectual roads to the theory and practice of special science. Now if there be genius in the scholar, that is, a delicate sensibility to the laws of the world, and the power to express them again in some new form, he is made to find his own way. He will greet joyfully the wise teacher, but colleges and teachers are no wise essential to him; he will find teachers everywhere.

I would have you rely on Nature ever, — wise, omnific, thousand-handed Nature, equal to each emergency, which can do very well without colleges, and, if the Latin, Greek, Algebra or Art were in the parents, it will be in the children, without being pasted on.

If your college and your literature are not felt, it is because the truth is not in them. When you say the times, the persons are prosaic, where is the feudal, or the Saracenic, or Egyptian architecture? where the romantic manners? where the Romish or the Calvinistic religion, which made a kind of poetry in the air for Milton, or Byron, or Belzoni? but to us it is barren, — you expose your atheism. Is a railroad, or a shoe-factory, or an insurance office, bank or bakery outside of the system and connection of things, or further from God than a sheep-pasture or a clam-bank? Is chemistry suspended? Do not the electricities and the imponderable influences play with all their magic undulations? Do not gravity and polarity keep their unerring watch on a needle and thread, on a cobbler's lapstone or a switchman's turntable as on the moon's orbit? Only bring a deep observer, and he will make light of the new shop or old cathedral — all one to him — or new circumstances that afflict you. He will find the circumstances not altered; as deep a cloud of mystery on the cause, as dazzling a glory on the invincible law. Is it so important whether a man wears a shoe-buckle or ties his shoe-lappet with a string? ... Bring the insight, and he will find as many beauties and heroes and astounding strokes of genius close by him as Shakspeare or AEschylus or Dante beheld. It was in a beggarly heath farm, it was in a mean country inn that Burns found his fancy so sprightly. You find the times and places mean. My friend, stretch a few threads over a common AEolian harp, and put it in your window, and listen to what it says of times and the heart of Nature. I do not think that you will believe that the miracle of Nature is less, the

chemical power worn out. Watch the breaking morning, the enchantments of the sunset.

If I had young men to reach, I should say to them, Keep the intellect sacred. Reverse it. Give all to it. Its oracles countervail all. Attention is its acceptable prayer. Sit low and wait long; and know that, next to being its minister, like Aristotle, and perhaps better than that, is the profound reception and sympathy, without ambition which secularizes and trades it. Go sit with the Hermit in you, who knows more than you do. You will find life enhanced, and doors opened to grander entertainments. Yet all comes easily that he does, as snow and vapor, heat, wind and light. Power costs nothing to the powerful. I should say to them, Do what you can do. He that draws on his own talent cannot be overshadowed or supplanted. ... Homage to truth discriminates good and evil. Power never departs from it.

Our colleges may differ much in the scale of requirements, and the examination for admission and the examination for degrees and honors may be lax in this college and severe in that, and you may find facilities, translations, syllabuses and tutors here or there to coach you through, but 't is very certain that an examination is yonder before us and an examining committee that cannot be escaped nor deceived, that every scholar is to be put fairly on his own powers and must hear the questions proposed, and answer them by himself, and receive honor or dishonor according to the fidelity shown. For the men and women of your time, the circle of your friends and employers, your conditions, the invisible world, are the interrogators. ...

When the great painter was told by a dauber, "I have painted five pictures whilst you have made one," he replied, "Pingo in aeternitatem." "Study for eternity smiled on me," says Van Helmont. And it were a good rule to read some lines at least every day that shall not be of the day's occasion or task, but of study for eternity.

I have detained you too long; but it is the privilege of the moral sentiment to be every moment new and commanding, and old men cannot see the powers of society, the institutions, the laws under which they have lived, passing, or soon to pass, into the hands of you and your contemporaries, without an earnest wish that you have caught sight of your high calling, your vast possibilities and inspiring duties.

COUNTRY LIFE

THE air is wise, the wind thinks well,
And all through which it blows;
If plant or brain, if egg or shell,
Or bird or biped knows.
What boots it here of Thebes or Rome,
Or lands of Eastern day?
In forests I am still at home
And there I cannot stray.

KEEN ears can catch a syllable,
As if one spoke to another,
In the hemlocks tall, untamable,
And what the whispering grasses smother.
Wonderful verse of the gods,
Of one import, of varied tone;
They chant the bliss of their abodes
To man imprisoned in his own.

COUNTRY LIFE

THE Teutonic race have been marked in all ages by a trait which has received the name of Earth-hunger, a love of possessing land. It is not less visible in that branch of the family which inhabits America. Nor is it confined to farmers, speculators, and filibusters, or conquerors. The land, the care of land, seems to be the calling of the people of this new country, of those, at least, who have not some decided bias, driving them to a particular craft, as a born sailor or machinist. The capable and generous, let them spend their talent on the land. Plant it, adorn it, study it, it will develop in the cultivator the talent it requires.

The avarice of real estate native to us all covers instincts of great generosity, namely, all that is called the love of Nature, comprising the largest use and the whole beauty of a farm or landed estate. Travel and walking have this apology, that Nature has impressed on savage men periodical or secular impulses to emigrate, as upon lemmings, rats and birds. The Indians go in summer to the coast, for fishing; in winter, to the woods. The nomads wander over vast territory, to find their pasture. Other impulses hold us to other habits. As the

increasing population finds new values in the ground, the nomad life is given up for settled homes. But the necessity of exercise and the nomadic instinct are always stirring the wish to travel, and in the spring and summer, it commonly gets the victory. Chaucer notes of the month of April,

“Than longen folk to goon on pilgrimages,
And palmers for to seken straunge strondes,
To ferne halwes, couthe in sondry londes.”

And, in the country, Nature is always inviting to the compromise of walking as soon as we are released from severe labor. Linnaeus, early in life, read a discourse at the University of Upsala on the necessity of travelling in one's own country, based on the conviction that Nature was inexhaustibly rich, and that in every district were swamps, or beaches, or rocks, or mountains, which were now nuisances, but, if explored, and turned to account, were capable of yielding immense benefit. At Upsala, therefore, he instituted what were called herborizations: he summoned his class to go with him on excursions on foot into the country, to collect plants and insects, birds and eggs. These parties started at seven in the morning, and stayed out till nine in the evening; the Professor was generally attended by two hundred students, and, when they returned, they marched through the streets of Upsala in a festive procession, with flowers in their hats, to the music of drums and trumpets, and with loads of natural productions collected on the way.

Let me remind you what this walker found in his walks. He went into Oland, and found that the farms on the shore were perpetually encroached on by the sea, and ruined by blowing sand. He discovered that the *arundo arenaris*, or beach-grass, had long firm roots, and he taught them to plant it for the protection of their shores. In Tornea, he found the people suffering every spring from the loss of their cattle, which died by some frightful distemper, to the number of fifty or a hundred in a year. Linnaeus walked out to examine the meadow into which they were first turned out to grass, and found it a bog, where the water-hemlock grew in abundance, and had evidently been cropped plentifully by the animals in feeding. He found the plant also dried in their cut hay. He showed them that the whole evil might be prevented by employing a woman for a month to eradicate the noxious plants. When the ship-yards were infested with rot, Linnaeus was sent to provide some remedy. He studied the insects that infested the timber, and found that they laid their eggs in the logs within certain days in April and he directed that during ten days, at that time of the year, the logs should be immersed under the water, which being done, the timber was found to be uninjured.

He found that the gout, to which he was subject, was cured by wood-

strawberries. He had other remedies. When Kalm returned from America, Linnaeus was laid up with severe gout. But the joy in his return, and the curiosity to see his plants, restored him instantly, and he found an old friend as good as the treatment by wood-strawberries. He learned the secret of making pearls in the river-pearl mussel. He found out that a terrible distemper which sometimes proves fatal in the north of Europe, was occasioned by an animalcule, which he called *Furia infernalis*, which falls from the air on the face, or hand, or other uncovered part, burrows into it, multiplies and kills the sufferer. By timely attention, it is easily extracted.

He examined eight thousand plants; and examined fishes, insects, birds, quadrupeds; and distributed the animal, vegetable and mineral kingdoms. And if, instead of running about in the hotels and theatres of Europe, we would, manlike, see what grows, or might grow, in Massachusetts, stock its gardens, drain its bogs, plant its miles and miles of barren waste with oak and pine, and following what is usually the natural suggestion of these pursuits, ponder the moral secrets which, in her solitudes, Nature has to whisper to us, we were better patriots and happier men.

We have the finest climate in the world, for this purpose, in Massachusetts. If we have coarse days, and dogdays, and white days, and days that are like ice-blinks, we have also yellow days, and crystal days, — days which are neither hot nor cold, but the perfection of temperature. New England has a good climate, — yet, in choosing a farm, we like a southern exposure, whilst Massachusetts, it must be owned, is on the northern slope, towards the Arctic circle, and the Pole. Our climate is a series of surprises, and among our many prognostics of the weather, the only trustworthy one that I know is that, when it is warm, it is a sign that it is going to be cold. The climate needs, therefore, to be corrected by a little anthracite coal, — a little coal indoors, during much of the year, and thick coats and shoes must be recommended to walkers. I own I prefer the solar to the polar climates. “I have no enthusiasm for Nature,” said a French writer, “which the slightest chill will not instantly destroy.”

But we cannot overpraise the comfort and the beauty of the climate in the best days of the year. In summer, we have for weeks a sky of Calcutta, yielding the richest growth, maturing plants which require strongest sunshine, and scores of days when the heat is so rich, and yet so tempered, that it is delicious to live.

The importance to the intellect of exposing the body and brain to the fine mineral and imponderable agents of the air makes the chief interest in the subject. “So exquisite is the structure of the cortical glands,” said the old physiologist Malpighi, “that when the atmosphere is ever so slightly vitiated or altered, the brain is the first part to sympathize and to undergo a change of

state.” We are very sensible of this, when, in midsummer, we go to the seashore, or to mountains, or when, after much confinement to the house, we go abroad into the landscape, with any leisure to attend to its soothing and expanding influences. The power of the air was the first explanation offered by the early philosophers of the mutual understanding that men have. “The air,” said Anaximenes, “is the soul, and the essence of life. By breathing it, we become intelligent, and, because we breathe the same air, understand one another.” Plutarch thought it contained the knowledge of the future. “If it be true that souls are naturally endowed with the faculty of prediction, and that the chief cause that excites that faculty is a certain temperature of air and winds,” *etc.* Even Lord Bacon said, “The Stars inject their imagination or influence into the air.”

The air that we breathe is an exhalation of all the solid material of the globe. ... It is the last finish of the work of the Creator. We might say, the Rock of Ages dissolves himself into the mineral air to build up this mystic constitution of man’s mind and body.

Walking has the best value as gymnastics for the mind. “You shall never break down in a speech,” said Sydney Smith, “on the day on which you have walked twelve miles.” In the English universities, the reading men are daily performing their punctual training in the boat-clubs, or a long gallop of many miles in the saddle, or, taking their famed “constitutionals,” walks of eight and ten miles. “Walking,” said Rousseau, “has something which animates and vivifies my ideas.” And Plato said of exercise that “it would almost cure a guilty conscience.” “For the living out of doors, and simple fare, and gymnastic exercises, and the morals of companions, produce the greatest effect on the way of virtue and of vice.”

Few men know how to take a walk. The qualifications of a professor are endurance, plain clothes, old shoes, an eye for Nature, good humor, vast curiosity, good speech, good silence and nothing too much. If a man tells me that he has an intense love of Nature, I know, of course, that he has none. Good observers have the manners of trees and animals, their patient good sense, and if they add words, ‘t is only when words are better than silence. But a loud singer, or a story-teller, or a vain talker profanes the river and the forest, and is nothing like so good company as a dog.

There is also an effect on beauty. ... De Quincey said, “I have seen Wordsworth’s eyes sometimes affected powerfully in this respect. His eyes are not under any circumstances bright, lustrous or piercing, but, after a long day’s toil in walking, I have seen them assume an appearance the most solemn and spiritual that it is possible for the human eye to wear. The light which resides in them is at no time a superficial light, but, under favorable accidents, it is a light

which seems to come from depths below all depths; in fact, it is more truly entitled to be held 'the light that never was on land or sea,' a light radiating from some far spiritual world, than any that can be named." But De Quincey prefixes to this description of Wordsworth a little piece of advice, which I wonder has not attracted more attention. "The depth and subtlety of the eyes varies exceedingly with the state of the stomach, and, if young ladies were aware of the magical transformations which can be wrought in the depth and sweetness of the eye by a few weeks' exercise, I fancy we should see their habits in this point altered greatly for the better."

For walking, you must have a broken country. In Illinois, everybody rides. There is no good walk in that state. The reason is, a square yard of it is as good as a hundred miles. You can distinguish from the cows a horse feeding, at the distance of five miles, with the naked eye. Hence, you have the monotony of Holland, and when you step out of the door can see all that you will have seen when you come home. In Massachusetts, our land is agreeably broken, and is permeable like a park, and not like some towns in the more broken country of New Hampshire, built on three or four hills having each one side at forty-five degrees and the other side perpendicular: so that if you go a mile, you have only the choice whether you will climb the hill on your way out or on your way back. The more reason we have to be content with the felicity of our slopes in Massachusetts, undulating, rocky, broken and surprising, but without this alpine inconveniency. Twenty years ago in Northern Wisconsin the pinery was composed of trees so big, and so many of them, that it was impossible to walk in the country, and the traveller had nothing for it but to wade in the streams. One more inconveniency, I remember, they showed me in Illinois, that, in the bottom lands, the grass was fourteen feet high. We may well enumerate what compensating advantages we have over that country, for 't is a commonplace, which I have frequently heard spoken in Illinois, that it was a manifest leading of the Divine Providence that the New England states should have been first settled, before the Western country was known, or they would never have been settled at all.

The privilege of the countryman is the culture of the land, the laying out of grounds and gardens, the orchard and the forest. The Rosaceous tribe in botany, including the apple, pear, peach and cherry, are coeval with man. The apple is our national fruit. In October, the country is covered with its ornamental harvests. The American sun paints itself in these glowing balls amid the green leaves, the social fruit, in which Nature has deposited every possible flavor; whole zones and climates she has concentrated into apples. I am afraid you do not understand values. Look over the fence at the farmer who stands there. He

makes every cloud in the sky, and every beam of the sun, serve him. His trees are full of brandy. He saves every drop of sap, as if it were wine. A few years ago those trees were whipsticks. Now, every one of them is worth a hundred dollars. Observe their form; not a branch nor a twig is to spare. They look as if they were arms and fingers, holding out to you balls of fire and gold. One tree yields the rent of an acre of land. Yonder pear has every property which should belong to a tree. It is hardy, and almost immortal. It accepts every species of nourishment, and yet could live, like an Arab, on air and water. It grows like the ash Ygdrasil. It seems to me much that I have brought a skilful chemist into my ground, and keep him there overnight, all day, all summer, for an art he has, out of all kinds of refuse rubbish to manufacture Virgaliens, Bergamots, and Seckels, in a manner which no confectioner can approach, and his method of working is no less beautiful than the result.

In old towns there are always certain paradises known to the pedestrian, old and deserted farms, where the neglected orchard has been left to itself, and whilst some of its trees decay, the hardier have held their own. I know a whole district, Estabrook Farm, made up of wide, straggling orchards, where the apple-trees strive with and hold their ground against the native forest-trees: the apple growing with profusion that mocks the pains taken by careful cockneys, who come out into the country, plant young trees and watch them dwindling. Here, no hedges are wanted; the wide distance from any population is fence enough: the fence is a mile wide. Here are varieties of apple not found in Downing or Loudon. The "Tartaric" variety, and "Cow-apple," and the "Bite-me-if-you-dare," the "Beware-of-this." Apples of a kind which I remember in boyhood, each containing a barrel of wind and half a barrel of cider. But there was a contest between the old orchard and the invading forest-trees, for the possession of the ground, of the whites against the Pequots, and if the handsome savages win, we shall not be losers. ...

According to the common estimate of farmers, the wood-lot yields its gentle rent of six per cent., without any care or thought, when the owner sleeps or travels, and it is subject to no enemy but fire. Evelyn quotes Lord Caernarvon's saying, "Wood is an excrescence of the earth provided by God for the payment of debts."

When Nero advertised for a new luxury, a walk in the woods should have been offered. 'T is one of the secrets for dodging old age. For Nature makes a like impression on age as on youth. Then I recommend it to people who are growing old, against their will. A man in that predicament, if he stands before a mirror, or among young people, is made quite too sensible of the fact; but the forest awakes in him the same feeling it did when he was a boy, and he may

draw a moral from the fact that 't is the old trees that have all the beauty and grandeur. I admire the taste which makes the avenue to a house, were the house never so small, through a wood; besides the beauty, it has a positive effect on manners, as it disposes the mind of the inhabitant and of his guests to the deference due to each. Some English reformers thought the cattle made all this wide space necessary between house and house, and that, if there were no cows to pasture, less land would suffice. But a cow does not need so much land as the owner's eyes require between him and his neighbor.

Our Aryan progenitors in Asia celebrated the winds as the conveying Maruts, "traversers of places difficult of access. Stable is their birth-place in the sky, but they are agitators of heaven and earth, who shake all around like the top of a tree. Because they drive the clouds, they have harnessed the spotted deer to their chariot; they are coming with weapons, war-cries and decorations. I hear the cracking of the whips in their hands. I praise their sportive resistless strength. They are the generators of speech. They drive before them in their course the long, vast, uninjurable, rain-retaining cloud. Wherever they pass, they fill the way with clamor. Every one hears their noise. The lightning roars like a parent cow that bellows for its calf, and the rain is set free by the Maruts. Maruts, as you have vigor, invigorate mankind! Aswins (Waters), long-armed, good-looking Aswins! bearers of wealth, guides of men, harness your car! Ambrosia is in you, in you are medicinal herbs." The Hindoos called fire Agni, born in the woods, bearer of oblations, smoke-bannered and light-shedding, lord of red coursers; the guest of man; protector of people in villages; the sacrificer visible to all, thousand-eyed, all-beholding, of graceful form and whose countenance is turned on all sides.

What uses that we know belong to the forest, and what countless uses that we know not! How an Indian helps himself with fibre of milkweed, or withe-bush, or wild hemp, or root of spruce, black or white, for strings; making his bow of hickory, birch, or even a fir-bough, at a pinch; hemlock bark for his roof, hair-moss or fern for his bed. He goes to a white birch-tree, and can fit his leg with a seamless boot, or a hat for his head. He can draw sugar from the maple, food and antidotes from a hundred plants. He knows his way in a straight line from watercourse to watercourse, and you cannot lose him in the woods. He consults by way of natural compass, when he travels: (1) large pine-trees, which bear more numerous branches on their southern side; (2) ant-hills, which have grass on their south and whortleberries on the north; (3) aspens, whose bark is rough on the north and smooth on the south side. All his knowledge is for use, and it only appears in use, whilst white men have theirs also for talking purposes.

I am a very indifferent botanist, but I admire that perennial four-petalled

flower, which has one gray petal, one green, one red, and one white. I think sometimes how many days could Methuselah go out and find something new! In January the new snow has changed the woods so that he does not know them; has built sudden cathedrals in a night. In the familiar forest he finds Norway and Russia in the masses of overloading snow which break all that they cannot bend. In March, the thaw, and the sounding of the south wind, and the splendor of the icicles. On the pond there is a cannonade of a hundred guns, but it is not in honor of election of any President. He went forth again after the rain; in the cold swamp, the buds are swollen, the ictodes prepares its flower, and the mallows and mouse-ear. The mallows the Greeks held sacred as giving the first sign of the sympathy of the earth with the celestial influences. The next day the Hylas were piping in every pool, and a new activity among the hardy birds, the premature arrival of the bluebird, and the first northward flight of the geese, who cannot keep their joy to themselves, and fly low over the farms. In May, the bursting of the leaf, — the oak and maple are red with the same colors on the new leaf which they will resume in autumn when it is ripe. In June, the miracle works faster,

Painting with white and red the moors

To draw the nations out of doors.

Man feels the blood of thousands in his body, and pumps the sap of all this forest through his arteries; the loquacity of all birds in the morning; and the immensity of life seems to make the world deep and wide. In August, when the corn is grown to be a resort and protection to woodcocks and small birds, and when the leaves whisper to each other in the wind, we observe already that the leaf is sere, that a change has passed on the landscape. The world has nothing to offer more rich or entertaining than the days which October always bring us, when, after the first frosts, a steady shower of gold falls in the strong south wind from the chestnuts, maples and hickories: all the trees are wind-harps, filling the air with music; and all men become poets, and walk to the measure of rhymes they make or remember. The dullest churl begins to quaver. The forest in its coat of many colors reflects its varied splendor through the softest haze. The witch-hazel blooms to mark the last hour arrived, and that Nature has played out her summer score. The dry leaves rustle so loud, as we go rummaging through them, that we can hear nothing else. The leaf in our dry climate gets fully ripe, and, like the fruit when fully ripe, acquires fine color, whilst, in Europe, the damper climate decomposes it too soon.

But the pleasures of garden, orchard and wood must be alternated. We know the healing effect on the sick of change of air, — the action of new scenery on the mind is not less fruitful. We must remember that man is a natural nomad, and

his old propensities will stir at midsummer, and send him, like an Indian, to the sea. The influence of the ocean on the love of liberty, I have mentioned elsewhere. Its power on the mind in sharpening the perceptions has made the sea the famous educator of our race. The history of the world, — what is it but the doings about the shores of the Mediterranean Sea, and the Atlantic? ...

What freedom of grace has the sea with all this might! ... The freedom makes the observer feel as a slave. Our expression is so thin and cramped! Can we not learn here a generous eloquence? This was the lesson our starving poverty wanted. ... At Niagara, I have noticed, that, as quick as I got out of the wetting of the Fall, all the grandeur changed into beauty. You cannot keep it grand, 't is so quickly beautiful; and the sea gave me the same experience. 'T is great and formidable, when you lie down in it, among the rocks. But, on the shore, at one rod's distance, 't is changed into a beauty as of gems and clouds. Shores in sight of each other in a warm climate make boat-builders; and whenever we find a coast broken up into bays and harbors, we find an instant effect on the intellect and industry of the people.

On the seashore the play of the Atlantic with the coast! What wealth is here! Every wave is a fortune; one thinks of Etzlers and great projectors who will yet turn all this waste strength to account: what strength and fecundity, from the sea-monsters, hugest of animals, to the primary forms of which it is the immense cradle, and the phosphorescent infusories; — it is one vast rolling bed of life, and every sparkle is a fish. What freedom and grace with all this might! The seeing so excellent a spectacle is a certificate to the mind that all imaginable good shall yet be realized. The sea is the chemist that dissolves the mountain and the rock; pulverizes old continents, and builds new; — forever redistributing the solid matter of the globe; and performs an analogous office in perpetual new transplanting of the races of men over the surface, the Exodus of nations. We may well yield us for a time to its lessons. But the nomad instinct, as I said, persists to drive us to fresh fields and pastures new. Indeed the variety of our moods has an answering variety in the face of the world, and the sea drives us back to the hills.

Dr. Johnson said of the Scotch mountains, "The appearance is that of matter incapable of form or usefulness, dismissed by Nature from her care." The poor blear-eyed doctor was no poet. Like Charles Lamb, he loved the sweet security of streets. It was said of him that "he preferred the Strand to the Garden of the Hesperides." But this is not the experience of imaginative men, nor of men with good eyes and susceptible organizations. "For my own part," says Linnaeus, "I have enjoyed good health, except a slight languor, but as soon as I got upon the Norway Alps I seemed to have acquired a new existence. I felt as if relieved

from a heavy burden. Then, spending a few days in the low country of Norway, though without committing the least excess, my languor or heaviness returned. When I again ascended the Alps, I revived as before.” And he celebrates the health and performance of the Laps as the best walkers of Europe. “Not without admiration, I have watched my two Lap companions, in my journey to Finmark, one, my conductor, the other, my interpreter. For after having climbed the Alps, whilst I, a youth of twenty-five years, was spent and tired, like one dead, and lay down as if to die in those ends of the world, these two old men, one fifty, one seventy years, running and playing like boys, felt none of the inconveniences of the road, although they were both loaded heavily enough with my baggage. I saw men more than seventy years old put their heel on their own neck, without any exertion. O holy simplicity of diet, past all praise!”

But beside their sanitary and gymnastic benefit, mountains are silent poets, and a view from a cliff over a wide country undoes a good deal of prose, and reinstates us wronged men in our rights. The imagination is touched. There is some pinch and narrowness to us, and we are glad to see the world, and what amplitudes it has, of meadow, stream, upland, forest and sea, which yet are lanes and crevices to the great space in which the world shines like a cockboat in the sea.

Of the finer influences, I shall say that they are not less positive, if they are indescribable. If you wish to know the shortcomings of poetry and language, try to reproduce the October picture to a city company, — and see what you make of it. There is somewhat finer in the sky than we have senses to appreciate. It escapes us, and yet is only just beyond our reach. Is all this beauty to perish? Where is he who is to save the perfect moment, and cause that this beauty shall not be lost? Where is he who has senses fine enough to catch the inspiration of the landscape? The mountains in the horizon acquaint us with finer relations to our friends than any we sustain.

I think ‘t is the best of humanity that goes out to walk. In happy hours, I think all affairs may be wisely postponed for this walking. Can you hear what the morning says to you, and believe that? Can you bring home the summits of Wachusett, Greylock, and the New Hampshire hills? the Savin groves of Middlesex? the sedgy ripples of the old Colony ponds? the sunny shores of your own bay, and the low Indian hills of Rhode Island? the savageness of pine-woods? Can you bottle the efflux of a June noon, and bring home the tops of Uncanoonuc? The landscape is vast, complete, alive. We step about, dabble and dot, and attempt in poor linear ways to hobble after those angelic radiations. The gulf between our seeing and our doing is a symbol of that between faith and experience. ...

Our schools and colleges strangely neglect the general education of the eye. Every acquisition we make in the science of beauty is so sweet that I think it is cheaply paid for by what accompanies it, of course, the prating and affectation of connoisseurship. The facts disclosed by Winkelmann, Goethe, Bell, Greenough, Ruskin, Garbett, Penrose, are joyful possessions, which we cannot spare, and which we rank close beside the disclosures of natural history. There are probably many in this audience who have tried the experiment on a hilltop, and many who have not, of bending the head so as to look at the landscape with your eyes upside down. What new softness in the picture! It changes the landscape from November into June. My companion and I remarked from the hilltop the prevailing sobriety of color, and agreed that russet was the hue of Massachusetts, but on trying this experiment of inverting the view he said, "There is the Campagna! and Italy is Massachusetts upside down." The effect is remarkable, and perhaps is not explained. An ingenious friend of mine suggested that it was because the upper part of the eye is little used, and therefore retains more susceptibility than the lower, and returns more delicate impressions.

Dr. Johnson said, "Few men know how to take a walk," and it is certain that Dr. Johnson was not one of the few. It is a fine art, requiring rare gifts and much experience. No man is suddenly a good walker. Many men begin with good resolution, but they do not hold out, and I have sometimes thought it would be well to publish an Art of Walking, with Easy Lessons for Beginners. These we call apprentices. Those who persist from year to year, and obtain at last an intimacy with the country, and know all the good points within ten miles, with the seasons for visiting each, know the lakes, the hills, where grapes, berries and nuts, where the rare plants are; where the best botanic ground; and where the noblest landscapes are seen, and are learning all the time; — these we call professors. ...

Nature kills egotism and conceit; deals strictly with us; and gives sanity; so that it was the practice of the Orientals, especially of the Persians, to let insane persons wander at their own will out of the towns, into the desert, and, if they liked, to associate with wild animals. In their belief, wild beasts, especially gazelles, collect around an insane person, and live with him on a friendly footing. The patient found something curative in that intercourse, by which he was quieted, and sometimes restored. But there are more insane persons than are called so, or are under treatment in hospitals. The crowd in the cities, at the hotels, theatres, card-tables, the speculators who rush for investment, at ten per cent., twenty per cent., cent. per cent., are all more or less mad, — I need not say it now in the crash of bankruptcy; — these point the moral, and persuade us to seek in the fields the health of the mind.

I hold all these opinions on the power of the air to be substantially true. The poet affirms them; the religious man, going abroad, affirms them; the patriot on his mountains or his prairie affirms them; the contemplative man affirms them.

Nature tells everything once. Our microscopes are not necessary. She shows every fact in large bodies somewhere. On the seashore, she reveals to the eye, by the sea-line, the true curve of the globe. It does not need a barometer to find the height of mountains. The line of snow is surer than the barometer: and the zones of plants, the savin, the pine, vernal gentian, plum, linnaea and the various lichens and grapes are all thermometers which cannot be deceived, and will not lie. They are instruments by the best maker. The earthquake is the first chemist, goldsmith and brazier: he wrought to purpose in craters, and we borrowed the hint in crucibles. When I look at natural structures, as at a tree, or the teeth of a shark, or the anatomy of an elephant, I know that I am seeing an architecture and carpentry which has no sham, is solid and conscientious, which perfectly answers its end, and has nothing to spare. But in all works of human art there is deduction to be made for blunder and falsehood. Therefore Goethe, whose whole life was a study of the theory of art, said no man should be admitted to his Republic, who was not versed in Natural History.

The college is not so wise as the mechanic's shop, nor the quarter-deck as the fore-castle. Witness the insatiable interest of the white man about the Indian, the trapper, the hunter and sailor. In a water-party in which many scholars joined, I noted that the skipper of the boat was much the best companion. The scholars made puns. The skipper saw instructive facts on every side, and there was no trifle to him. How startling are the hints of wit we detect in the horse and dog, and in the wild animals! By what compass the geese steer, and the herring migrate, we would so gladly know. What the dog knows, and how he knows it, piques us more than all we heard from the chair of metaphysics.

Is it not an eminent convenience to have in your town a person who knows where arnica grows, or sassafras, or pennyroyal, and the mints, or the scented goldenrod, or punk for slow-match; or the slippery-elm, or wild cherries, or wild pears? Where are the best hazel-nuts, chestnuts and shagbarks? Where the white grapes? Where are the choice apple-trees? And what are the poisons? Where is the Norway pine, where the beech, where the epigaea, the linnaea, or sanguinaria, or orchis pulcherrima, or sundew, or laurus benzoin, or pink huckleberry? where trout, woodcocks, wild bees, pigeons, where the bittern (stake-driver) can be seen and heard, where the Wilson's plover can be seen and heard?

The true naturalist can go wherever woods or waters go; almost where a squirrel or a bee can go, he can; and no man is asked for leave. Sometimes the

farmer withstands him in crossing his lots, but 't is to no purpose; the farmer could as well hope to prevent the sparrows or tortoises. It was their land before it was his, and their title was precedent. My naturalist knew what was on their land, and the farmers did not, and sometimes he brought them ostentatiously gifts of flowers, fruits or rare shrubs they would gladly have paid a price for, and did not tell them that he gathered them in their own woods. Moreover the very time at which he used their land and water (for his boat glided like a trout everywhere unseen) was in hours when they were sound asleep. Before the sun was up, he went up and down to survey his possessions, and passed onward and left them, before the second owners, as he called them, were awake.

If we should now say a few words on the advantages that belong to the conversation with Nature, I might set them so high as to make it a religious duty. 'T is the greatest use and the greatest beauty. 'T is the lesson we were put hither to learn. What truth, and what elegance belong to every fact of Nature, we know. And the study of them awakens the like truth and elegance in the student. One thing, the lover of Nature cannot tell the best thing he knows. ...

What alone possesses interest for us is the naturel of each man. This is that which is the saliency, or principle of levity, the antagonist of matter and gravitation, and as good as they. This is forever a surprise, and engaging, and lovely. We can't be satiated with knowing it, and about it. It is related to the purest of the world, to gravity, the growth of grass, and the angles of crystals. Nature speaks to the imagination; first, through her grand style, — the hint of immense force and unity which her works convey; second, because her visible productions and changes are the nouns of language, and our only means of uttering the invisible thought. Every new perception of the method and beauty of Nature gives a new shock of surprise and pleasure; and always for this double reason: first, because they are so excellent in their primary fact, as frost, or cloud, or fire, or animal; and, secondly, because we have an instinct that they express a grander law.

'T is not easy to say again what Nature says to us. But it is the best part of poetry, merely to name natural objects well. A farmer's boy finds delight in reading the verses under the Zodiacal vignettes in the Almanac. What is the merit of Thomson's Seasons but copying a few of the pictures out of this vast book into words, without a hint of what they signify, and the best passages of great poets, old and new, are often simple enumerations of some features of landscape. And as man is the object of Nature, what we study in Nature is man. 'T is true, that man only interests us. We are not to be imposed upon by the apparatus and the nomenclature of the physiologist. Agassiz studies year after year fishes and fossil anatomy of saurian, and lizard, and pterodactyl. But

whatever he says, we know very well what he means. He pretends to be only busy with the foldings of the yolk of a turtle's egg. I can see very well what he is driving at; he means men and women. He talks about lizard, shell-fish and squid, he means John and Mary, Thomas and Ann. For Nature is only a mirror in which man is reflected colossally. Swedenborg or Behman or Plato tried to decipher this hieroglyphic, and explain what rock, what sand, what wood, what fire signified in regard to man.

They may have been right or wrong in any particulars of their interpretation, but it is only our ineradicable belief that the world answers to man, and part to part, that gives any interest in the subject. If we believed that Nature was foreign and unrelated, — some rock on which souls wandering in the Universe were shipwrecked, we should think all exploration of it frivolous waste of time. No, it is bone of our bone, flesh of our flesh, made of us, as we of it. External Nature is only a half. The geology, the astronomy, the anatomy, are all good, but 't is all a half, and — enlarge it by astronomy never so far — remains a half. It requires a will as perfectly organized, — requires man. Astronomy is a cold, desert science, with all its pompous figures, — depends a little too much on the glass-grinder, too little on the mind. 'T is of no use to show us more planets and systems. We know already what matter is, and more or less of it does not signify. He can dispose in his thought of more worlds, just as readily as of few, or one. It is his relation to one, to the first, that imports. Nay, I will say, of the two facts, the world and man, man is by much the larger half.

I know that the imagination ... is a coy, capricious power, and does not impart its secret to inquisitive persons. Sometimes a parlor in which fine persons are found, with beauty, culture and sensibility, answers our purpose still better. Striking the electric chain with which we are darkly bound, but that again is Nature, and there we have again the charm which landscape gives us, in a finer form; but the persons must have had the influence of Nature, must know her simple, cheap pleasures, must know what Pindar means when he says that "water is the best of things," and have manners that speak of reality and great elements, or we shall know no Olympus.

Matter, how immensely soever enlarged by the telescope, remains the lesser half. The very science by which it is shown to you argues the force of man. Nature is vast and strong, but as soon as man knows himself as its interpreter, knows that Nature and he are from one source, and that he, when humble and obedient, is nearer to the source, then all things fly into place, then is there a rider to the horse, an organized will, then Nature has a lord.

CONCORD WALKS

NOT many men see beauty in the fogs

Of close, low pine-woods in a river town; Yet unto me not morn's
magnificence

Nor the red rainbow of a summer's eve,

Nor Rome, nor joyful Paris, nor the halls Of rich men, blazing hospitable
light,

Nor wit, nor eloquence, — no, nor even the song Of any woman that is now
alive, — Hath such a soul, such divine influence, Such resurrection of the happy
past,

As is to me when I behold the morn

Ope in such low, moist roadside, and beneath Peep the blue violets out of the
black loam.

THERE is no rood has not a star above it; The cordial quality of pear or plum
Ascends as gladly in a single tree

As in broad orchards resonant with bees; And every atom poises for itself,
And for the whole. The gentle deities

Showed me the love of color and of sounds, The innumerable tenements of
beauty,

The miracle of generative force,

Far-reaching concords of astronomy

Felt in the plants and in the punctual birds; Better, the linkèd purpose of the
whole.

CONCORD WALKS

WHEN I bought my farm, I did not know what a bargain I had in the bluebirds,
bobolinks and thrushes, which were not charged in the bill; as little did I guess
what sublime mornings and sunsets I was buying — what reaches of landscape,
and what fields and lanes for a tramp. Neither did I fully consider what an
indescribable luxury is our Indian river, the Musketaquid, — which runs parallel
with the village street and to which every house on that long street has a back
door, which leads down through the garden to the river-bank, when a skiff, or a
dory, gives you, all summer, access to enchantments, new every day, and all
winter, to miles of ice for the skater. And because our river is no Hudson or

Mississippi I have a problem long waiting for an engineer, — this, — to what height I must build a tower in my garden that shall show me the Atlantic Ocean from its top — the ocean twenty miles away.

Still less did I know what good and true neighbors I was buying, men of thought and virtue, some of them now known the country through for their learning, or subtlety, or active or patriotic power, but whom I had the pleasure of knowing long before the Country did; and of other men not known widely but known at home, farmers, — not doctors of laws but doctors of land, skilled in turning a swamp or a sand-bank into a fruitful field, and, when witch-grass and nettles grew, causing a forest of apple-trees or miles of corn and rye to thrive.

I did not know what groups of interesting school-boys and fair school-girls were to greet me in the highway, and to take hold of one's heart at the School Exhibitions.

“Little joy has he who has no garden,” said Saadi. Montaigne took much pains to be made a citizen of Rome; and our people are vain, when abroad, of having the freedom of foreign cities presented to them in a gold box. I much prefer to have the freedom of a garden presented me. When I go into a good garden, I think, if it were mine, I should never go out of it. It requires some geometry in the head to lay it out rightly, and there are many who can enjoy to one that can create it.

Linnaeus, who was professor of the Royal Garden at Upsala, took the occasion of a public ceremony to say, “I thank God, who has ordered my fate, that I live in this time, and so ordered it that I live happier than the king of the Persians. You know, fathers and citizens, that I live entirely in the Academy Garden; here is my Vale of Tempe, say rather my Elysium. I possess here all that I desire of the spoils of the East and the West, and, unless I am very much mistaken, what is far more beautiful than Babylonian robes, or vases of the Chinese. Here I learn what I teach. Here I admire the wisdom of the Supreme Artist, disclosing Himself by proofs of every kind, and show them to others.” Our people are learning that lesson year by year. As you know, nothing in Europe is more elaborately luxurious than the costly gardens, — as the Boboli at Florence, the Borghese, the Orsini at Rome, the Villa d' Este at Tivoli; with their greenhouses, conservatories, palm-houses, fish-ponds, sculptured summer-houses and grottoes; but without going into the proud niceties of an European garden, there is happiness all the year round to be had from the square fruit-gardens which we plant in the front or rear of every farmhouse. In the orchard, we build monuments to Van Mons annually.

The place where a thoughtful man in the country feels the joy of eminent domain is in his wood-lot. If he suffer from accident or low spirits, his spirits

rise when he enters it. He can spend the entire day therein, with hatchet or pruning-shears, making paths, without remorse of wasting time. He can fancy that the birds know him and trust him, and even the trees make little speeches or hint them. Then he remembers that Allah in his allotment of life “does not count the time which the Arab spends in the chase.”

If you can add to the garden a noble luxury, let it be an arboretum. In the arboretum you should have things which are of a solitary excellence, and which people who read of them are hungry to see. Thus plant the Sequoia Gigantea, give it room, and set it on its way of ten or fifteen centuries. Bayard Taylor planted two — one died, but I saw the other looking well. Plant the Banian, the Sandal-tree, the Lotus, the Upas, Ebony, Century Aloes, the Soma of the Vedas — Asclepias Viminalis, the Mandrake and Papyrus, Dittany, Asphodel, Nepenthe, Haemony, Moly, Spikenard, Amomum. Make a calendar — your own — of the year, that you may never miss your favorites in their month. As Linnaeus made a dial of plants, so shall you of all the objects that guide your walks.

Learn to know the conspicuous planets in the heavens, and the chief constellations. Thus do not forget the 14th of November, when the meteors come, and on some years drop into your house-yard like sky-rockets. And ‘t is worth remarking, what a man may go through life without knowing, that a common spy-glass, which you carry in your pocket, will show the satellites of Jupiter, and turned on the Pleiades, or Seven Stars, in which most eyes can only count six, — will show many more, — a telescope in an observatory will show two hundred. How many poems have been written, or, at least attempted, on the lost Pleiad! for though that pretty constellation is called for thousands of years the “Seven Stars,” most eyes can only count six.

Horses and carriages are costly toys, but the word park always charms me. I could not find it in my heart to chide the citizen who should ruin himself to buy a patch of heavy oak timber. I admire the taste which makes the avenue to the house — were the house never so small — through a wood; — as it disposes the mind of the inhabitant and of his guest to the deference due to each.

There are two companions, with one or other of whom ‘t is desirable to go out on a tramp. One is an artist, that is, who has an eye for beauty. If you use a good and skilful companion, you shall see through his eyes; and, if they be of great discernment, you will learn wonderful secrets. In walking with Allston, you shall see what was never before shown to the eye of man. And as the perception of beauty always exhilarates, if one is so happy as to find the company of a true artist, he is a perpetual holiday and benefactor, and ought only to be used like an oriflamme or a garland, for feasts and May-days, and

parliaments of wit and love.

The other is a naturalist, for the reason that it is much better to learn the elements of geology, of botany, of ornithology and astronomy by word of mouth from a companion than dully from a book. There is so much, too, which a book cannot teach which an old friend can. A man should carry Nature in his head — should know the hour of the day or night, and the time of the year, by the sun and stars; should know the solstice and the equinox, the quarter of the moon and the daily tides.

This is my ideal of the powers of wealth. Find out what lake or sea Agassiz wishes to explore, and offer to carry him there, and he will make you acquainted with all its fishes: or what district Dr. Gray has not found the plants of, — carry him; or when Dr. Wyman wishes to find new anatomic structures or fossil remains; or when Dr. Charles Jackson or Mr. Hall would study chemistry or mines; and you secure the best company and the best teaching with every advantage.

But the countryman, as I said, has more than he paid for; the landscape is his. I am sorry to say the farmers seldom walk for pleasure. It is a fine art; — there are degrees of proficiency, and we distinguish the professors of that science from the apprentices. But there is a manifest increase in the taste for it. 'T is the consolation of mortal men. It is an old saying that physicians or naturalists are the only professional men who continue their tasks out of study-hours; and the naturalist has no barren places, no winter, and no night, pursuing his researches in the sea, in the ground, in barren moors, in the night even, because the woods exhibit a whole new world of nocturnal animals; in winter, because, remove the snow a little, a multitude of plants live and grow, and there is a perpetual push of buds, so that it is impossible to say when vegetation begins. I think no pursuit has more breath of immortality in it.

I admire in trees the creation of property so clean of tears, or crime, or even care. No lesson of chemistry is more impressive to me than this chemical fact that "Nineteen twentieths of the timber are drawn from the atmosphere." We knew the root was sucking juices from the ground. But the top of the tree is also a tap-root thrust into the public pocket of the atmosphere. This is a highwayman, to be sure. And I am always glad to remember that in proportion to the foliage is the addition of wood. Then they grow, when you wake and when you sleep, at nobody's cost, and for everybody's comfort. Lord Abercorn, when some one praised the rapid growth of his trees, replied, "Sir, they have nothing else to do!"

That uncorrupted behavior which we admire in the animals, and in young children, belongs also to the farmer, the hunter, the sailor, the man who lives in the presence of Nature. Cities force the growth and make him talkative and

entertaining, but they make him artificial. What alone possesses interest for us is the nature of each, that which is constitutional to him only. This is forever a surprise, and engaging, and lovely; we can't be satiated with knowing it, and about it, and this is that which the conversation with Nature goes to cherish and to guard.

The man finds himself expressed in Nature. Yet when he sees this annual reappearance of beautiful forms, the lovely carpet, the lovely tapestry of June, he may well ask himself the special meaning of the hieroglyphic, as well as the sense and scope of the whole — and there is a general sense which the best knowledge of the particular alphabet leaves unexplained.

ART AND CRITICISM

To clothe the fiery thought
In simple words succeeds,
For still the craft of genius is
To mask a king in weeds.

ART AND CRITICISM

LITERATURE is but a poor trick, you will say, when it busies itself to make words pass for things; and yet I am far from thinking this subordinate service unimportant. The secondary services of literature may be classed under the name of Rhetoric, and are quite as important in letters as iron is in war. An enumeration of the few principal weapons of the poet or writer will at once suggest their value.

Writing is the greatest of arts, the subtlest, and of most miraculous effect; and to it the education is costliest. On the writer the choicest influences are concentrated, — nothing that does not go to his costly equipment: a war, an earthquake, revival of letters, the new dispensation by Jesus, or by Angels; Heaven, Hell, power, science, the Néant, exist to him as colors for his brush.

In this art modern society has introduced a new element, by introducing a new audience. The decline of the privileged orders, all over the world; the advance of the Third Estate; the transformation of the laborer into reader and writer has compelled the learned and the thinkers to address them. Chiefly in this country, the common school has added two or three audiences: once, we had only the boxes; now, the galleries and the pit.

There is, in every nation, a style which never becomes obsolete, a certain mode of phraseology so consonant and congenial to the analogy and principles of its respective language as to remain settled and unaltered. This style is probably to be sought in the common intercourse of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hope of finding or making better; those who wish for distinction forsake the vulgar, when the vulgar is right; but there is a conversation above grossness and below refinement where prosperity resides, and where Shakspeare seems to have gathered his comic dialogue. Goethe valued himself not on his learning or eccentric flights, but that he knew how to write German. And many

of his poems are so idiomatic, so strongly rooted in the German soil, that they are the terror of translators, who say they cannot be rendered into any other language without loss of vigor, as we say of any darling passage of our own masters. "Le style c'est l'homme," said Buffon; and Goethe said, "Poetry here, poetry there, I have learned to speak German." And when I read of various extraordinary polyglots, self-made or college-made, who can understand fifty languages, I answer that I shall be glad and surprised to find that they know one. For if I were asked how many masters of English idiom I know, I shall be perplexed to count five.

Ought not the scholar to convey his meaning in terms as short and strong as the smith and the drover use to convey theirs? You know the history of the eminent English writer on gypsies, George Borrow; he had one clear perception, that the key to every country was command of the language of the common people. He therefore mastered the patois of the gypsies, called Romany, which is spoken by them in all countries where they wander, in Europe, Asia, Africa. Yet much of the raw material of the street-talk is absolutely untranslatable into print, and one must learn from Burke how to be severe without being unparliamentary. Rabelais and Montaigne are masters of this Romany, but cannot be read aloud, and so far fall short. Whitman is our American master, but has not got out of the Fire-Club and gained the entrée of the sitting-rooms. Bacon, if "he could out-cant a London surgeon," must have possessed the Romany under his brocade robes. Luther said, "I preach coarsely; that giveth content to all. Hebrew, Greek and Latin I spare, until we learned ones come together, and then we make it so curled and finical that God himself wondereth at us." He who would be powerful must have the terrible gift of familiarity, — Mirabeau, Chatham, Fox, Burke, O'Connell, Patrick Henry; and among writers, Swift, De Foe and Carlyle.

Look at this forlorn caravan of travellers who wander over Europe dumb, — never exchange a word, in the mother tongue of either, with prince or peasant; but condemned to the company of a courier and of the padrone when they cannot take refuge in the society of countrymen. A well-chosen series of stereoscopic views would have served a better purpose, which they can explore at home, sauced with joyful discourse and with reference to all the books in your library.

Speak with the vulgar, think with the wise. See how Plato managed it, with an imagination so gorgeous, and a taste so patrician, that Jove, if he descended, was to speak in his style. Into the exquisite refinement of his Academy, he introduces the low-born Socrates, relieving the purple diction by his perverse talk, his gallipots, and cook, and trencher, and cart-wheels — and steadily kept this coarseness to flavor a dish else too luscious. Everybody knows the points in which the mob has the advantage of the Academy, and all able men have known

how to import the petulance of the street into correct discourse. I heard, when a great bank president was expounding the virtues of his party and of the government to a silent circle of bank pensioners, a grave Methodist exclaimed "Fiddle-sticks!" The whole party were surprised and cheered, except the bank president, though it would be difficult to explain the propriety of the expression, as no music or fiddle was so much as thought of.

Not only low style, but the lowest classifying words outvalue arguments; as, upstart, dab, cockney, prig, granny, lubber, puppy, peacock— "A cocktail House of Commons." I remember when a venerable divine [Dr. Osgood] called the young preacher's sermon "patty cake." The sans-culottes at Versailles cried out, "Let our little Mother Mirabeau speak!" Who has not heard in the street how forcible is bosh, gammon and gas. The short Saxon words with which the people help themselves are better than Latin. The language of the street is always strong. I envy the boys the force of the double negative (no shoes, no money, no nothing), though clean contrary to our grammar rules, and I confess to some titillation of my ears from a rattling oath.

In the infinite variety of talents, 't is certain that some men swear with genius. I knew a poet in whose talent Nature carried this freak so far that his only graceful verses were pretty blasphemies. "The better the worse," you will say; and I own it reminds one of Vathek's collection of monstrous men with humps of a picturesque peak, and horns of exquisite polish. What traveller has not listened to the vigor of the Sacre! of the French postilion, the Sia ammazato! of the Italian contadino, or the deep stomach of an English drayman's execration. I remember an occasion when a proficient in this style came from North Street to Cambridge and drew a crowd of young critics in the college yard, who found his wrath so aesthetic and fertilizing that they took notes, and even over-stayed the hour of the mathematical professor.

'T is odd what revolutions occur. We were educated in horror of Satan, but Goethe remarked that all men like to hear him named. Burns took him into compassion and expressed a blind wish for his reformation.

"Ye aiblins might, I dinna ken,
Still have a stake."

And George Sand finds a whole nation who regard him as a personage who has been greatly wronged, and in which he is really the subject of a covert worship. As a study in language, the use of this word is curious, to see how words help us and must be philosophical. The Devil in philosophy is absolute negation, falsehood, nothing; and in the popular mind, the Devil is a malignant person. Yet all our speech expresses the first sense. "The Devil a monk was he," means, he was no monk, and "The Devil you did!" means you did not. Natural

science gives us the inks, the shades; ink of Erebus — night of Chaos. ... Goethe, who had collected all the diabolical hints in men and nature for traits for his *Walpurgis Nacht*, continued the humor of collecting such horrors after this first occasion had passed, and professed to point his guest to his *Walpurgis Sack*, or *Acherontian Bag*, in which, he said, he put all his dire hints and images, and into which, he said, he should be afraid to fall himself, lest he should be burnt up. Dante is the professor that shall teach both the noble low style, the power of working up all his experience into heaven and hell; also the sculpture of compression.

The next virtue of rhetoric is compression, the science of omitting, which makes good the old verse of Hesiod, "Fools, they did not know that half was better than the whole." The French have a neat phrase, that the secret of boring you is that of telling all,— "Le secret d'ennuyer est celui de tout dire;" which we translate short, "Touch and go." The silences, pauses, of an orator are as telling as his words. What the poet omits exalts every syllable that he writes. In good hands it will never become sterility. A good writer must convey the feeling of a flamboyant witness, and at the same time of chemic selection, — as if in his densest period was no cramp, but room to turn a chariot and horses between his valid words. There is hardly danger in America of excess of condensation; there must be no cramp insufficiency, but the superfluous must be omitted. In the Hindoo mythology, "Viswaharmán" placed the sun on his lathe to grind off some of his effulgence, and in this manner reduced it to an eighth, — more was inseparable. ...

In architecture the beauty is increased in the degree in which the material is safely diminished; as when you break up a prose wall, and leave all the strength in the poetry of columns. As soon as you read aloud, you will find what sentences drag. Blot them out, and read again, you will find the words that drag. 'T is like a pebble inserted in a mosaic. Resolute blotting rids you of all those phrases that sound like something and mean nothing, with which scriptural forms play a large part. Never say, "I beg not to be misunderstood." It is only graceful in the case when you are afraid that what is called a better meaning will be taken, and you wish to insist on a worse; a man has a right to pass, like Dean Swift, for a worse man than he is, but not for a better.

And I sometimes wish that the Board of Education might carry out the project of a college for graduates of our universities, to which editors and members of Congress and writers of books might repair, and learn to sink what we could best spare of our words; to gazette those Americanisms which offend us in all journals. Some of these are odious. Some as an adverb— "reeled some;" considerable as an adverb for much; "quite a number;" slim for bad; the

adjective graphic, which means what is written, — graphic arts and oral arts, arts of writing, and arts of speech and song, — but is used as if it meant descriptive: “Minerva’s graphic thread.” A Mr. Randall, M. C., who appeared before the committee of the House of Commons on the subject of the American mode of closing a debate, said, “that the one-hour rule worked well; made the debate short and graphic.” ‘T is the worst praise you can give a speech that it is as if written.

Never use the word development, and be wary of the whole family of Fero. Dangerous words in like kind are display, improvement, peruse, circumstances, commence for begin. Vulgarisms to be gazetted, moiety used for a small part;— “nothing would answer but;” “there is none but what”— “there being scarce a person of any note in England but what some time or other paid a visit or sent a present to our Lady of Walsingham” (Bishop Parcy); “might have to go;” “I have been to Europe;” “in our midst;” considerable— “it is considerable of a compliment,” “under considerable of a cloud;” balance for remainder— “spent the balance of his life;” “as a general thing;” “after all.” Confusions of lie and lay, sit and set, shall and will.

Persons have been named from their abuse of certain phrases, as “Pyramid” Lambert, “Finality” Russell, “Humanity” Martin, “Horizon” Turner.

Every age gazettes a quantity of words which it has used up. We are now offended with “Standpoint,” “Myth,” “Subjective,” “the Good and the True” and “the Cause.”

A list might be made of showy words that tempt young writers: asphodel, harbinger, chalice, flamboyant, golden, diamond, amethyst, opal and the rest of the precious stones, carcanet, diadem.

But these cardinal rules of rhetoric find best examples in the great masters, and are main sources of the delight they give. Shakspeare might be studied for his dexterity in the use of these weapons, if it were not for his heroic strength. There is no such master of low style as he, and therefore none can securely soar so high. I do not mean that he delights in comedy, exults in bringing the street itself, uproarious with laughter and animal joy, on to the scene, with Falstaff and Touchstone and Trinculo and the fools; but that in the conduct of the play, and the speech of the heroes, he keeps the level tone which is the tone of high and low alike, and most widely understood. A man of experience altogether, his very sonnets are as solid and close to facts as the Banker’s Gazette; and the only check on the detail of each of his portraits is his own universality, which made bias or fixed ideas impossible — his impartiality is like a sunbeam.

His fun is as wise as his earnest, its foundations are below the frost. His muse is moral simply from its depth, and I value the intermixture of the common and

the transcendental as in Nature. One would say Shakspeare must have been a thousand years old when he wrote his first piece; so thoroughly is his thought familiar to him, so solidly worded, as if it were already a proverb, and not only hereafter to become one. Well, that millennium is really only a little acceleration in his process of thought; his loom is better toothed, cranked and pedalled than other people's, and he can turn off a hundred yards to their one. Shakspeare is nothing but a large utterance. We cannot find that anything in his age was more worth expression than anything in ours; nor give any account of his existence, but only the fact that there was a wonderful symbolizer and expressor, who has no rival in all ages and who has thrown an accidental lustre over his time and subject.

My friend thinks the reason why the French mind is so shallow, and still to seek, running into vagaries and blind alleys, is because they do not read Shakspeare; whilst the English and Germans, who read Shakspeare and the Bible, have a great onward march. Shakspeare would have sufficed for the culture of a nation for vast periods. The Chinese have got on so long with their solitary Confucius and Mencius; the Arabs with their Mahomet; the Scandinavians with their Snorre Sturleson; and if the English island had been larger and the Straits of Dover wider, to keep it at pleasure a little out of the imbroglio of Europe, they might have managed to feed on Shakspeare for some ages yet; as the camel in the desert is fed by his humps, in long absence from food.

Montaigne must have the credit of giving to literature that which we listen for in bar-rooms, the low speech, — words and phrases that no scholar coined; street-cries and war-cries; words of the boatman, the farmer and the lord; that have neatness and necessity, through their use in the vocabulary of work and appetite, like the pebbles which the incessant attrition of the sea has rounded. Every historic autobiographic trait authenticating the man adds to the value of the book. We can't afford to take the horse out of the Essays; it would take the rider too.

Herrick is a remarkable example of the low style. He is, therefore, a good example of the modernness of an old English writer. So Latimer, so Chaucer, so the Bible. He found his subject where he stood, between his feet, in his house, pantry, barn, poultry-yard, in his village, neighbors' gossip and scandal. Like Montaigne in this, that his subject cost him nothing, and he knew what he spake of, and did not write up to it, but could write down (a main secret), and took his level, so that he had all his strength, the easiness of strength; he took what he knew, and "took it easy," as we say. The Germans praise in Goethe the comfortable stoutness. Herrick's merit is the simplicity and manliness of his

utterance, and, rarely, the weight of his sentence. He has, and knows that he has, a noble, idiomatic English, a perfect, plain style, from which he can soar to a fine, lyric delicacy, or descend to coarsest sarcasm, without losing his firm footing. This flower of speech is accompanied with an assurance of fame. We have an artist who in this merit of which I speak will easily cope with these celebrities.

In Carlyle as in Byron one is more struck with the rhetoric than with the matter. He has manly superiority rather than intellectuality, and so makes hard hits all the time. There's more character than intellect in every sentence — herein strongly resembling Samuel Johnson. The best service Carlyle has rendered is to rhetoric, or art of writing. In his books the vicious conventions of writing are all dropped. You have no board interposed between you and the writer's mind, but he talks flexibly, now high, now low, in loud emphasis, in undertones, then laughs till the walls ring, then calmly moderates, then hints, or raises an eyebrow. He has gone nigher to the wind than any other craft.

Carlyle, with his inimitable ways of saying the thing, is next best to the inventor of the thing, and I think of him when I read the famous inscription on the pyramid, "I King Saib built this pyramid. I, when I had built it, covered it with satin. Let him who cometh after me, and says he is equal to me, cover it with mats." What he has said shall be proverb, nobody shall be able to say it otherwise. No book can any longer be tolerable in the old husky Neal-on-the-Puritans model. In short, I think the revolution wrought by Carlyle is precisely parallel to that going forward in picture, by the stereoscope. Until history is interesting, it is not yet written.

Here has come into the country, three months ago, a History of Friedrich, infinitely the wittiest book that ever was written; a book that, one would think, the English people would rise up in a mass to thank him for, by cordial acclamation, and signify, by crowning him with chaplet of oak-leaves, their joy that such a head existed among them, and sympathizing and much-reading America would make a new treaty or send a minister extraordinary to offer congratulations of honoring delight to England in acknowledgment of such a donation; a book holding so many memorable and heroic facts, working directly on practice; with new heroes, things unvoiced before — the German Plutarch, now that we have exhausted the Greek and Roman and British biography — with a range, too, of thought and wisdom, so large, so colloquially elastic, that we not so much read a stereotype page as we see the eyes of the writer looking into ours, whilst he is humming and chuckling, with understones, and trumpet-tones, and shrugs, and long commanding glances, stereoscoping every figure that passes, and every hill, river, wood, hummock and pebble in the long perspective,

with its wonderful mnemonics, whereby great and insignificant men are ineffaceably marked and medalled in the memory by what they were, had and did; and withal a book that is a judgment-day for its moral verdict on the men and nations and manners of modern times. And this book makes no noise. I have hardly seen a notice of it in any newspaper or journal, and you would think there was no such book. I am not aware that Mr. Buchanan has sent a special messenger to Great Cheyne Row, Chelsea; but the secret interior wits and hearts of men take note of it, not the less surely. They have said nothing lately in praise of the air, or of fire, or of the blessing of love, and yet, I suppose, they are sensible of these, and not less of this Book, which is like these.

After Low Style and Compression what the books call Metonymy is a principal power of rhetoric. It means, using one word or image for another. It is a low idealism. Idealism regards the world as symbolic, and all these symbols or forms as fugitive and convertible expressions. The power of the poet is in controlling these symbols; in using every fact in Nature, however great and stable, as a fluent symbol, and in measuring his strength by the facility with which he makes the mood of mind give its color to things. The world, history, the powers of Nature, — he can make them speak what sense he will.

All conversation, as all literature, appears to me the pleasure of rhetoric, or, I may say, of metonymy. “To make of motes mountains, and of mountains motes,” Isocrates said, “was the orator’s office.” Well, that is what poetry and thinking do. Whatever new object we see, we perceive to be only a new version of our familiar experience, and we set about translating it at once into our parallel facts. We have hereby our vocabulary.

Everything has two handles. Pindar when the victor in a race by mules offered him a trifling present, pretended to be hurt at thought of writing on demiasse. When, however, he offered a sufficient present, he composed the poem:

—
“Hail, daughters of the tempest-footed horse,
That skims like wind along the course.”

That was the other handle. I passed at one time through a place called New City, then supposed, like each of a hundred others, to be destined to greatness. I fell in with one of the founders who showed its advantages and its river and port and the capabilities: “Sixty houses, sir, were built in a night, like tents.” After Chicago had secured the confluence of the railroads to itself, I chanced to meet my founder again, but now removed to Chicago. He had transferred to that city the magnificent dreams which he had once communicated to me, and no longer remembered his first emporium. “Where is the town? Was there not,” I asked, “a

river and a harbor there?” “Oh yes, there was a guzzle out of a sand-bank.” “And the town?” “There are still the sixty houses, but when I passed it, one owl was the only inhabitant.” When Samuel Dexter, long since, argued the claims of South Boston Bridge, he had to meet loud complaints of the shutting out of the coasting-trade by the proposed improvements. “Now,” said he, “I come to the grand charge that we have obstructed the commerce and navigation of Roxbury Ditch.” ‘T is very easy to call the gracious spring “poor goody herb-wife,” or to represent the farm, which stands for the organization of the gravest needs, as a poor trifle of pea-vines, turnips and hen-roosts. Everything has two handles. Shakspeare says, “A plague of opinion; a man can wear it on both sides, like a leather jerkin.”

Here is my friend E., the model of opinionists. He is the April day incarnated and walking, soft sunshine and hailstones, sour east wind and flowery southwest — alternating, and each sovereign, and painting all things its own color. He has it all his own way. He complains of Nature, — too many leaves, too windy and grassy, and I suppose the birds are too feathery and the horses too leggy. He thinks Egypt a humbug, and Palestine used up, and England a flash in the pan; and that the only art is landscape-painting. But when we came, in the woods, to a clump of goldenrod,— “Ah!” he says, “here they are! these things consume a great deal of time. I don’t know but they are of more importance than any other of our investments.” Well, this is the game that goes on every day in all companies; this is the ball that is tossed in every court of law, in every legislature and in literature, and in the history of every mind by sovereignty of thought to make facts and men obey our present humor or belief.

I designed to speak of one point more, the touching a principal question in criticism in recent times — the Classic and Romantic, or what is classic?

The art of writing is the highest of those permitted to man as drawing directly from the soul, and the means or material it uses are also of the soul. It brings man into alliance with what is great and eternal. It discloses to him the variety and splendor of his resources. And there is much in literature that draws us with a sublime charm — the superincumbent necessity by which each writer, an infirm, capricious, fragmentary soul, is made to utter his part in the chorus of humanity, is enriched by thoughts which flow from all past minds, shares the hopes of all existing minds; so that, whilst the world is made of youthful, helpless children of a day, literature resounds with the music of united vast ideas of affirmation and of moral truth.

What is the Classic? Classic art is the art of necessity; organic; modern or romantic bears the stamp of caprice or chance. One is the product of inclination, of caprice, of haphazard; the other carries its law and necessity within itself.

The politics of monarchy, when all hangs on the accidents of life and temper of a single person, may be called romantic politics. The democratic, when the power proceeds organically from the people and is responsible to them, are classic politics. The classic unfolds, the romantic adds. The classic should, the modern would. The classic is healthy, the romantic is sick. The classic draws its rule from the genius of that which it does, and not from by-ends. It does not make a novel to establish a principle of political economy.

Don't set out to please; you will displease. The Augsburg Allgemeine Zeitung deprecates an observatory founded for the benefit of navigation. Nor can we promise that our School of Design will secure a lucrative post to the pupils.

When I read Plutarch, or look at a Greek vase, I incline to accept the common opinion of scholars, that the Greeks had clearer wits than any other people. But there is anything but time in my idea of the antique. A clear or natural expression by word or deed is that which we mean when we love and praise the antique. In society I do not find it, in modern books, seldom; but when I come into the pastures, I find antiquity again. Once in the fields with the lowing cattle, the birds, trees and waters and satisfying curves of the landscape, and I cannot tell whether this is Thessaly and Enna, or whether Concord and Acton.

A man of genius or a work of love or beauty will not come to order, can't be compounded by the best rules, but is always a new and incalculable result, like health. Don't rattle your rules in our ears; we must behave as we can. Criticism is an art when it does not stop at the words of the poet, but looks at the order of his thoughts and the essential quality of his mind. Then the critic is poet. 'T is a question not of talents but of tone; and not particular merits, but the mood of mind into which one and another can bring us.

MICHAEL ANGELO.

Never did sculptor's dream unfold
A form which marble doth not hold
In its white block; yet it therein shall find
Only the hand secure and bold
Which still obeys the mind.
Michael Angelo's *Sonnets* .
New ha l'ottimo artista aicnn concetto,
Ch'un marmo solo in sè non circoseriva
Col sno soverchio, e solo a quello arriva
La man che obbedisce all' intelletto.
M. Angelo , *Sonnetto primo* .

[Reprinted from the *North American Review*, June, 1837.]

Few lives of eminent men are harmonious; few that furnish, in all the facts, an image corresponding with their fame. But all things recorded of Michael Angelo Buonarotti agree together. He lived one life; he pursued one career. He accomplished extraordinary works; he uttered extraordinary words; and in this greatness was so little eccentricity, so true was he to the laws of the human mind, that his character and his works, like Sir Isaac Newton's, seem rather a part of nature than arbitrary productions of the human will. Especially we venerate his moral fame. Whilst his name belongs to the highest class of genius, his life contains in it no injurious influence. Every line in his biography might be read to the human race with wholesome effect. The means, the materials of his activity, were coarse enough to be appreciated, being addressed for the most part to the eye; the results, sublime and all innocent. A purity severe and even terrible goes out from the lofty productions of his pencil and his chisel, and again from the more perfect sculpture of his own life, which heals and exalts. "He nothing common did, or mean," and dying at the end of near ninety years, had not yet become old, but was engaged in executing his grand conceptions in the ineffaceable architecture of St. Peter's.

Above all men whose history we know, Michael Angelo presents us with the perfect image of the artist. He is an eminent master in the four fine arts, Painting, Sculpture, Architecture and Poetry. In three of them by visible means, and in poetry by words, he strove to express the Idea of Beauty. This idea possessed

him and determined all his activity. Beauty in the largest sense, beauty inward and outward, comprehending grandeur as a part, and reaching to goodness as its soul, — this to receive and this to impart, was his genius.

It is a happiness to find, amid the falsehood and griefs of the human race, a soul at intervals born to behold and create only beauty. So shall not the indescribable charm of the natural world, the great spectacle of morn and evening which shut and open the most disastrous day, want observers. The ancient Greeks called the world *οὐρανὸς ἁἰθέριος*, *Beauty*; a name which, in our artificial state of society, sounds fanciful and impertinent. Yet, in proportion as man rises above the servitude to wealth and a pursuit of mean pleasures, he perceives that what is most real is most beautiful, and that, by the contemplation of such objects, he is taught and exalted. This truth, that perfect beauty and perfect goodness are one, was made known to Michael Angelo; and we shall endeavor by sketches from his life to show the direction and limitations of his search after this element.

In considering a life dedicated to the study of Beauty, it is natural to inquire, what is Beauty? Can this charming element be so abstracted by the human mind, as to become a distinct and permanent object? Beauty cannot be defined. Like Truth, it is an ultimate aim of the human being. It does not lie within the limits of the understanding. “The nature of the beautiful,” — we gladly borrow the language of Moritz, a German critic,— “consists herein, that because the understanding in the presence of the beautiful cannot ask, ‘Why is it beautiful?’ for that reason is it so. There is no standard whereby the understanding can determine whether objects are beautiful or otherwise. What other standard of the beautiful exists, than the entire circuit of all harmonious proportions of the great system of nature? All particular beauties scattered up and down in nature are only so far beautiful, as they suggest more or less in themselves this entire circuit of harmonious proportions.” This great Whole, the understanding cannot embrace. Beauty may be felt. It may be produced. But it cannot be defined.

The Italian artists sanction this view of beauty by describing it as *il più nell’ uno*, “the many in one,” or multitude in unity, intimating that what is truly beautiful seems related to all nature. A beautiful person has a kind of universality, and appears to have truer conformity to all pleasing objects in external nature than another. Every great work of art seems to take up into itself the excellencies of all works, and to present, as it were, a miniature of nature.

In relation to this element of Beauty, the minds of men divide themselves into two classes. In the first place, all men have an organization corresponding more or less to the entire system of nature, and therefore a power of deriving pleasure from Beauty. This is Taste. In the second place, certain minds, more closely

harmonized with nature, possess the power of abstracting Beauty from things, and reproducing it in new forms, on any object to which accident may determine their activity; as stone, canvas, song, history. This is Art.

Since Beauty is thus an abstraction of the harmony and proportion that reigns in all nature, it is therefore studied in nature, and not in what does not exist. Hence the celebrated French maxim of Rhetoric, *Rien de beau que le vrai*; "Nothing is beautiful but what is true." It has a much wider application than to Rhetoric; as wide, namely, as the terms of the proposition admit. In art, Michael Angelo is himself but a document or verification of this maxim. He labored to express the beautiful, in the entire conviction that it was only to be attained unto by knowledge of the true. The common eye is satisfied with the surface on which it rests. The wise eye knows that it is surface, and, if beautiful, only the result of interior harmonies, which, to him who knows them, compose the image of higher beauty. Moreover, he knew well that only by an understanding of the internal mechanism can the outside be faithfully delineated. The walls of houses are transparent to the architect. The symptoms disclose the constitution to the physician; and to the artist it belongs by a better knowledge of anatomy, and, within anatomy, of life and thought, to acquire the power of true drawing. "The human form," says Goethe, "cannot be comprehended through seeing its surface. It must be stripped of the muscles, its parts separated, its joints observed, its divisions marked, its action and counter action learned; the hidden, the reposing, the foundation of the apparent, must be searched, if one would really see and imitate what moves as a beautiful inseparable whole in living waves before the eye." Michael Angelo dedicated himself, from his childhood to his death, to a toilsome observation of nature. The first anecdote recorded of him shows him to be already on the right road. Granacci, a painter's apprentice, having lent him, when a boy, a print of St. Antony beaten by devils, together with some colors and pencils, he went to the fish-market to observe the form and color of fins and of the eyes of fish. Cardinal Farnese one day found him, when an old man, walking alone in the Coliseum, and expressed his surprise at finding him solitary amidst the ruins; to which he replied, "I go yet to school that I may continue to learn." And one of the last drawings in his portfolio is a sublime hint of his own feeling; for it is a sketch of an old man with a long beard, in a go-cart, with an hour-glass before him; and the motto, *Ancoraimparo*, "I still learn."

In this spirit he devoted himself to the study of anatomy for twelve years; we ought to say rather, as long as he lived. The depth of his knowledge in anatomy has no parallel among the artists of modern times. Most of his designs, his contemporaries inform us, were made with a pen, and in the style of an engraving on copper or wood; a manner more expressive but not admitting of

correction. When Michael Angelo would begin a statue, he made first on paper the *skeleton*; afterwards, upon another paper, the same figure clothed with muscles. The studies of the statue of Christ in the Church of Minerva at Rome, made in this manner, were long preserved.

Those who have never given attention to the arts of design, are surprised that the artist should find so much to study in a fabric of such limited parts and dimensions as the human body. But reflection discloses evermore a closer analogy between the finite form and the infinite inhabitant. Man is the highest, and indeed the only proper object of plastic art. There needs no better proof of our instinctive feeling of the immense expression of which the human figure is capable, than the uniform tendency which the religion of every country has betrayed towards Anthropomorphism, or attributing to the Deity the human form. And behold the effect of this familiar object every day! No acquaintance with the secrets of its mechanism, no degrading views of human nature, not the most swinish compost of mud and blood that was ever misnamed philosophy, can avail to hinder us from doing involuntary reverence to any exhibition of majesty or surpassing beauty in human clay.

Our knowledge of its highest expression we owe to the Fine Arts. Not easily in this age will any man acquire by himself such perceptions of the dignity or grace of the human frame, as the student of art owes to the remains of Phidias, to the Apollo, the Jove, the paintings and statues of Michael Angelo, and the works of Canova. There are now in Italy, both on canvas and in marble, forms and faces which the imagination is enriched by contemplating. Goethe says that he is but half himself who has never seen the Juno in the Rondanini palace at Rome. Seeing these works true to human nature and yet superhuman, “we feel that we are greater than we know.” Seeing these works, we appreciate the taste which led Michael Angelo, against the taste and against the admonition of his patrons, to cover the walls of churches with unclothed figures, “improper” says his biographer, “for the place, but proper for the exhibition of all the pomp of his profound knowledge.”

The love of beauty which never passes beyond outline and color, was too slight an object to occupy the powers of his genius. There is a closer relation than is commonly thought between the fine arts and the useful arts; and it is an essential fact in the history of Michael Angelo, that his love of beauty is made solid and perfect by his deep understanding of the mechanic arts. Architecture is the bond that unites the elegant and the economical arts, and his skill in this is a pledge of his capacity in both kinds. His Titanic handwriting in marble and travertine is to be found in every part of Rome and Florence; and even at Venice, on defective evidence, he is said to have given the plan of the bridge of the

Rialto. Nor was his a skill in ornament, or confined to the outline and designs of towers and façades, but a thorough acquaintance with all the secrets of the art, with all the details of economy and strength.

When the Florentines united themselves with Venice, England and France, to oppose the power of the Emperor Charles V., Michael Angelo was appointed Military Architect and Engineer, to superintend the erection of the necessary works. He visited Bologna to inspect its celebrated fortifications, and, on his return, constructed a fortification on the heights of San Miniato, which commands the city and environs of Florence. On the 24th of October, 1529, the Prince of Orange, general of Charles V., encamped on the hills surrounding the city, and his first operation was to throw up a rampart to storm the bastion of San Miniato. His design was frustrated by the providence of Michael Angelo. Michael made such good resistance, that the Prince directed the artillery to demolish the tower. The artist hung mattresses of wool on the side exposed to the attack, and by means of a bold projecting cornice, from which they were suspended, a considerable space was left between them and the wall. This simple expedient was sufficient, and the Prince was obliged to turn his siege into a blockade.

After an active and successful service to the city for six months, Michael Angelo was informed of a treachery that was ripening within the walls. He communicated it to the government with his advice upon it; but was mortified by receiving from the government reproaches at his credulity and fear. He replied, "that it was useless for him to take care of the walls, if they were determined not to take care of themselves," and he withdrew privately from the city to Ferrara, and thence to Venice. The news of his departure occasioned a general concern in Florence, and he was instantly followed with apologies and importunities to return. He did so, and resumed his office. On the 21st of March, 1530, the Prince of Orange assaulted the city by storm. Michael Angelo is represented as having ordered his defence so vigorously, that the Prince was compelled to retire. By the treachery however of the general of the Republic, Malatesta Baglioni, all his skill was rendered unavailing, and the city capitulated on the 9th of August. The excellence of the works constructed by our artist has been approved by Vauban, who visited them and took a plan of them.

In Rome, Michael Angelo was consulted by Pope Paul III. in building the fortifications of San Borgo. He built the stairs of Ara Celi leading to the Church once the temple of Jupiter Capitolinus: he arranged the piazza of the Capitol, and built its porticoes. He was charged with rebuilding the Pons Palatinus over the Tiber. He prepared, accordingly, a large quantity of blocks of travertine, and was proceeding with the work, when, through the intervention of his rivals, this work

was taken from him and intrusted to Nanni di Bacio Bigio, who plays but a pitiful part in Michael's history. Nanni sold the travertine, and filled up the piers with gravel at a small expense. Michael Angelo made known his opinion, that the bridge could not resist the force of the current; and, one day riding over it on horseback, with his friend Vasari, he cried, "George, this bridge trembles under us; let us ride faster lest it fall whilst we are upon it." It fell, five years after it was built, in 1557, and is still called the "Broken Bridge."

Versatility of talent in men of undoubted ability always awakens the liveliest interest; and we observe with delight, that, besides the sublimity and even extravagance of Michael Angelo, he possessed an unexpected dexterity in minute mechanical contrivances. When the Sistine Chapel was prepared for him that he might paint the ceiling, he found the platform on which he was to work, suspended by ropes which passed through the ceiling. Michael demanded of San Gallo, the Pope's architect, how these holes were to be repaired in the picture? San Gallo replied; "That was for him to consider, for the platform could be constructed in no other way." Michael removed the whole, and constructed a movable platform to rest and roll upon the floor, which is believed to be the same simple contrivance which is used in Rome, at this day, to repair the walls of churches. He gave this model to a carpenter, who made it so profitable as to furnish a dowry for his two daughters. He was so nice in tools, that he made with his own hand the wimbles, the files, the rasps, the chisels and all other irons and instruments which he needed in sculpture; and, in painting, he not only mixed but ground his colors himself, trusting no one.

And not only was this discoverer of Beauty, and its teacher among men, rooted and grounded in those severe laws of practical skill, which genius can never teach, and which must be learned by practice alone, but he was one of the most industrious men that ever lived. His diligence was so great that it is wonderful how he endured its fatigues. The midnight battles, the forced marches, the winter campaigns of Julius Cæsar or Charles XII. do not indicate greater strength of body or of mind. He finished the gigantic painting of the ceiling of the Sistine Chapel in twenty months, a fact which enlarges, it has been said, the known powers of man. Indeed he toiled so assiduously at this painful work, that, for a long time after, he was unable to see any picture but by holding it over his head. A little bread and wine was all his nourishment; and he told Vasari that he often slept in his clothes, both because he was too weary to undress, and because he would rise in the night and go immediately to work. "I have found," says his friend, "some of his designs in Florence, where, whilst may be seen the greatness of his genius, it may also be known that when he wished to take Minerva from the head of Jove, there needed the hammer of Vulcan." He used to make to a

single figure nine, ten, or twelve heads before he could satisfy himself, seeking that there should be in the composition a certain universal grace such as nature makes, saying, that “he needed to have his compasses in his eye, and not in his hand, because the hands work whilst the eye judges.” He was accustomed to say, “Those figures alone are good, from which the labor is scraped off, when the scaffolding is taken away.”

At near eighty years, he began in marble a group of four figures for a dead Christ; because, he said, to exercise himself with the mallet was good for his health.

And what did he accomplish? It does not fall within our design to give an account of his works, yet for the sake of the completeness of our sketch we will name the principal ones. Sculpture, he called *his* art, and to it he regretted afterwards he had not singly given himself. The style of his paintings is monumental; and even his poetry partakes of that character. In sculpture, his greatest work is the statue of Moses in the Church of Pietro in Vincolo, in Rome. It is a sitting statue of colossal size, and is designed to embody the Hebrew Law. The lawgiver is supposed to gaze upon the worshippers of the golden calf. The majestic wrath of the figure daunts the beholder. In the Piazza del Gran Duca at Florence, stands, in the open air, his David, about to hurl the stone at Goliath. In the Church called the Minerva, at Rome, is his Christ; an object of so much devotion to the people, that the right foot has been shod with a brazen sandal to prevent it from being kissed away. In St. Peter’s, is his Pietà, or dead Christ in the arms of his mother. In the Mausoleum of the Medici at Florence, are the tombs of Lorenzo and Cosmo, with the grand statues of Night and Day, and Aurora and Twilight. Several statues of less fame, and bas-reliefs, are in Rome and Florence and Paris.

His Paintings are in the Sistine Chapel, of which he first covered the ceiling with the story of the creation, in successive compartments, with the great series of the Prophets and Sibyls in alternate tablets, and a series of greater and smaller fancy-pieces in the lunettes. This is his capital work painted in fresco. Every one of these pieces, every figure, every hand and foot and finger, is a study of anatomy and design. Slighting the secondary arts of coloring, and all the aids of graceful finish, he aimed exclusively, as a stern designer, to express the vigor and magnificence of his conceptions. Upon the wall, over the altar, is painted the Last Judgment.

Of his designs, the most celebrated is the cartoon representing soldiers coming out of the bath and arming themselves; an incident of the war of Pisa. The wonderful merit of this drawing, which contrasts the extremes of relaxation and vigor, is conspicuous even in the coarsest prints.

Of his genius for Architecture, it is sufficient to say that he built St. Peter's, an ornament of the earth. He said he would hang the Pantheon in the air; and he redeemed his pledge by suspending that vast cupola, without offence to grace or to stability, over the astonished beholder. He did not live to complete the work; but is there not something affecting in the spectacle of an old man, on the verge of ninety years, carrying steadily onward with the heat and determination of manhood, his poetic conceptions into progressive execution, surmounting by the dignity of his purposes all obstacles and all enmities, and only hindered by the limits of life from fulfilling his designs? Very slowly came he, after months and years, to the dome. At last he began to model it very small in wax. When it was finished, he had it copied larger in wood, and by this model it was built. Long after it was completed, and often since, to this day, rumors are occasionally spread that it is giving way, and it is said to have been injured by unskilful attempts to repair it. Benedict XIV., during one of these panics, sent for the architect Marchese Polini, to come to Rome and examine it. Polini put an end to all the various projects of repairs, by the satisfying sentence; "The cupola does not start, and if it should start, nothing can be done but to pull it down."

The impulse of his grand style was instantaneous upon his contemporaries. Every stroke of his pencil moved the pencil in Raphael's hand. Raphael said, "I bless God I live in the times of Michael Angelo." Sir Joshua Reynolds, two centuries later, declared to the British Institution, "I feel a self-congratulation in knowing myself capable of such sensations as he intended to excite."

A man of such habits and such deeds, made good his pretensions to a perception and to delineation of external beauty. But inimitable as his works are, his whole life confessed that his hand was all inadequate to express his thought. "He alone" he said, "is an artist whose hands can perfectly execute what his mind has conceived;" and such was his own mastery, that men said, "the marble was flexible in his hands." Yet, contemplating ever with love the idea of absolute beauty, he was still dissatisfied with his own work. The things proposed to him in his imagination were such, that, for not being able with his hands to express so grand and terrible conceptions, he often abandoned his work. For this reason he often only blocked his statue. A little before he died, he burned a great number of designs, sketches, and cartoons made by him, being impatient of their defects. Grace in living forms, except in very rare instances, did not satisfy him. He never made but one portrait (a cartoon of Messer Tommaso di Cavalieri), because he abhorred to draw a likeness unless it were of infinite beauty.

Such was his devotion to art. But let no man suppose that the images which his spirit worshipped were mere transcripts of external grace, or that this profound soul was taken or holden in the chains of superficial beauty. To him, of

all men, it was transparent. Through it he beheld the eternal spiritual beauty which ever clothes itself with grand and graceful outlines, as its appropriate form. He called external grace "the frail and weary weed, in which God dresses the soul which he has called into Time." "As from the fire, heat cannot be divided, no more can beauty from the eternal." He was conscious in his efforts of higher aims than to address the eye. He sought, through the eye, to reach the soul. Therefore, as, in the first place, he sought to approach the Beautiful by the study of the True, so he failed not to make the next step of progress, and to seek Beauty in its highest form, that of Goodness. The sublimity of his art is in his life. He did not only build a divine temple, and paint and carve saints and prophets. He lived out the same inspiration. There is no spot upon his fame. The fire and sanctity of his pencil breathe in his words. When he was informed that Paul IV. desired he should paint again the side of the chapel where the Last Judgment was painted, because of the indecorous nudity of the figures, he replied, "Tell the Pope that this is easily done. Let him reform the world and he will find the pictures will reform themselves." He saw clearly that if the corrupt and vulgar eyes, that could see nothing but indecorum in his terrific prophets and angels, could be purified as his own were pure, they would only find occasion for devotion in the same figures. As he refused to undo his work, Daniel di Volterra was employed to clothe the figures; hence ludicrously called *Il Braghettone*. When the Pope suggested to him that the chapel would be enriched if the figures were ornamented with gold, Michael Angelo replied, "In those days, gold was not worn; and the characters I have painted were neither rich nor desirous of wealth, but holy men, with whom gold was an object of contempt."

Not until he was in the seventy-third year of his age, he undertook the building of St. Peter's. On the death of San Gallo, the architect of the church, Paul III. first entreated, then commanded the aged artist, to assume the charge of this great work, which though commenced forty years before, was only commenced by Bramante, and ill continued by San Gallo. Michael Angelo, who believed in his own ability as a sculptor, but distrusted his capacity as an architect, at first refused and then reluctantly complied. His heroic stipulation with the Pope was worthy of the man and the work. He required that he should be permitted to accept this work without any fee or reward, because he undertook it as a religious act; and, furthermore, that he should be absolute master of the whole design, free to depart from the plans of San Gallo and to alter what had been already done.

This disinterestedness and spirit, — no fee and no interference, — reminds one of the reward named by the ancient Persian. When importuned to claim some compensation of the empire for the important services he had rendered it,

he demanded, "that he and his should neither command nor obey, but should be free." However, as it was undertaken, so was it performed. When the Pope, delighted with one of his chapels, sent him one hundred crowns of gold, as one month's wages, Michael sent them back. The Pope was angry, but the artist was immovable. Amidst endless annoyances from the envy and interest of the office-holders and agents in the work whom he had displaced, he steadily ripened and executed his vast ideas. The combined desire to fulfil, in everlasting stone, the conceptions of his mind, and to complete his worthy offering to Almighty God, sustained him through numberless vexations with unbroken spirit. In answer to the importunate solicitations of the Duke of Tuscany that he would come to Florence, he replies that "to leave St. Peter's in the state in which it now was, would be to ruin the structure, and thereby be guilty of a great sin;" that he hoped he should shortly see the execution of his plans brought to such a point that they could no longer be interfered with, and this was the capital object of his wishes, "if," he adds, "I do not commit a great crime, by disappointing the cormorants who are daily hoping to get rid of me."

A natural fruit of the nobility of his spirit is his admiration of Dante, to whom two of his sonnets are addressed. He shared Dante's "deep contempt of the vulgar, not of the simple inhabitants of lowly streets or humble cottages, but of that sordid and abject crowd of all classes and all places who obscure, as much as in them lies, every beam of beauty in the universe." In like manner, he possessed an intense love of solitude. He lived alone, and never or very rarely took his meals with any person. As will be supposed, he had a passion for the country, and in old age speaks with extreme pleasure of his residence with the hermits in the mountains of Spoleto; so much so that he says he is "only half in Rome, since, truly, peace is only to be found in the woods." Traits of an almost savage independence mark all his history. Although he was rich, he lived like a poor man, and never would receive a present from any person; because it seemed to him that if a man gave him anything, he was always obligated to that individual. His friend Vasari mentions one occasion on which his scruples were overcome. It seems that Michael was accustomed to work at night with a pasteboard cap or helmet on his head, into which he stuck a candle, that his work might be lighted and his hands at liberty. Vasari observed that he did not use wax candles, but a better sort made of the tallow of goats. He therefore sent him four bundles of them, containing forty pounds. His servant brought them after night-fall, and presented them to him. Michael Angelo refused to receive them. "Look you, Messer Michael Angelo," replied the man, "these candles have well nigh broken my arm, and I will not carry them back; but just here, before your door, is a spot of soft mud, and they will stand upright in it very well, and there I

will light them all.”— “Put them down, then,” returned Michael, “since you shall not make a bonfire at my gate.” Meantime he was liberal to profusion to his old domestic Urbino, to whom he gave at one time two thousand crowns, and made him rich in his service.

Michael Angelo was of that class of men who are too superior to the multitude around them to command a full and perfect sympathy. They stand in the attitude rather of appeal from their contemporaries to their race. It has been the defect of some great men, that they did not duly appreciate or did not confess the talents and virtues of others, and so lacked one of the richest sources of happiness and one of the best elements of humanity. This apathy perhaps happens as often from preoccupied attention as from jealousy. It has been supposed that artists more than others are liable to this defect. But Michael Angelo’s praise on many works is to this day the stamp of fame. Michael Angelo said of Masaccio’s pictures that when they were first painted they must have been alive. He said of his predecessor, the architect Bramante, that he laid the first stone of St. Peter’s, clear, insulated, luminous, with fit design for a vast structure. He often expressed his admiration of Cellini’s bust of Altoviti. He loved to express admiration of Titian, of Donatello, of Ghiberti, of Brunelleschi. And it is said that when he left Florence to go to Rome, to build St. Peter’s, he turned his horse’s head on the last hill from which the noble dome of the Cathedral (built by Brunelleschi) is visible, and said, “Like you, I will not build; better than you I cannot.” Indeed, as we have said, the reputation of many works of art now in Italy derives a sanction from the tradition of his praise. It is more commendation to say, “This was Michael Angelo’s favorite,” than to say, “This was carried to Paris by Napoleon.” Michael, however, had the philosophy to say, “Only an inventor can use the inventions of others.”

There is yet one more trait in Michael Angelo’s history, which humanizes his character without lessening its loftiness; this is his platonic love. He was deeply enamored of the most accomplished lady of the time, Vittoria Colonna, the widow of the Marquis di Pescara, who, after the death of her husband, devoted herself to letters, and to the writing of religious poetry. She was also an admirer of his genius, and came to Rome repeatedly to see him. To her his sonnets are addressed; and they all breathe a chaste and divine regard, unparalleled in any amatory poetry except that of Dante and Petrarch. They are founded on the thought that beauty is the virtue of the body, as virtue is the beauty of the soul; that a beautiful person is sent into the world as an image of the divine beauty, not to provoke but to purify the sensual into an intellectual and divine love. He enthrones his mistress as a benignant angel, who is to refine and perfect his own character. Condivi, his friend, has left this testimony; “I have often heard

Michael Angelo reason and discourse upon love, but never heard him speak otherwise than upon platonic love. As for me, I am ignorant what Plato has said upon this subject; but this I know very well, that, in a long intimacy, I never heard from his mouth a single word that was not perfectly decorous and having for its object to extinguish in youth every improper desire, and that his own nature is a stranger to depravity.” The poems themselves cannot be read without awakening sentiments of virtue. An eloquent vindication of their philosophy may be found in a paper by Signer Radici in the London “Retrospective Review,” and, by the Italian scholar, in the Discourse of Benedetto Varchi upon one sonnet of Michael Angelo, contained in the volume of his poems published by Biagioli, from which, in substance, the views of Radici are taken.

Towards his end, there seems to have grown in him an invincible appetite of dying, for he knew that his spirit could only enjoy contentment after death. So vehement was this desire that, he says, “my soul can no longer be appeased by the wonted seductions of painting and sculpture.” A fine melancholy, not unrelieved by his habitual heroism, pervades his thoughts on this subject. At the age of eighty years, he wrote to Vasari, sending him various spiritual sonnets he had written, and tells him he “is at the end of his life, that he is careful where he bends his thoughts, that he sees it is already twenty-four o’clock, and no fancy arose in his mind but DEATH was sculptured on it.” In conversing upon this subject with one of his friends, that person remarked, that Michael might well grieve that one who was incessant in his creative labors should have no restoration. “No,” replied Michael, “it is nothing; for, if life pleases us, death, being a work of the same master, ought not to displease us.” But a nobler sentiment, uttered by him, is contained in his reply to a letter of Vasari, who had informed him of the rejoicings made at the house of his nephew Lionardo, at Florence, over the birth of another Buonarotti Michael admonishes him that “a man ought not to smile, when all those around him weep; and that we ought not to show that joy when a child is born, which should be reserved for the death of one who has lived well”

Amidst all these witnesses to his independence, his generosity, his purity and his devotion, are we not authorized to say that this man was penetrated with the love of the highest beauty, that is, goodness; that his was a soul so enamored of grace, that it could not stoop to meanness or depravity; that art was to him no means of livelihood or road to fame, but the end of living, as it was the organ through which he sought to suggest lessons of an unutterable wisdom; that here was a man who lived to demonstrate that to the human faculties, on every hand, worlds of grandeur and grace are opened, which no profane eye and no indolent eye can behold, but which to see and to enjoy, demands the severest discipline of

all the physical, intellectual and moral faculties of the individual?

The city of Florence, on the river Arno, still treasures the fame of this man. There, his picture hangs in every window; there, the tradition of his opinions meets the traveller in every spot. “Do you see that statue of St. George? Michael Angelo asked it why it did not speak.”— “Do you see this fine church of Santa Maria Novella? It is that which Michael Angelo called ‘his bride.’”— “Look at these bronze gates of the Baptistery, with their high reliefs, cast by Ghiberti five hundred years ago. Michael Angelo said, ‘they were fit to be the gates of Paradise.’” — Here is the church, the palace, the Laurentian library, he built. Here is his own house. In the church of Santa Croce are his mortal remains. Whilst he was yet alive, he asked that he might be buried in that church, in such a spot that the dome of the cathedral might be visible from his tomb when the doors of the church stood open. And there and so is he laid. The innumerable pilgrims whom the genius of Italy draws to the city, duly visit this church, which is to Florence what Westminster Abbey is to England. There, near the tomb of Nicholas Machiavelli, the historian and philosopher; of Galileo, the great-hearted astronomer; of Boccaccio, and of Alfieri, stands the monument of Michael Angelo Buonarrotti. Three significant garlands are sculptured on the tomb; they should be four, but that his countrymen feared their own partiality. The forehead of the bust, esteemed a faithful likeness, is furrowed with eight deep wrinkles one above another. The traveller from a distant continent, who gazes on that marble brow, feels that he is not a stranger in the foreign church; for the great name of Michael Angelo sounds hospitably in his ear. He was not a citizen of any country; he belonged to the human race; he was a brother and a friend to all who acknowledge the beauty that beams in universal nature, and who seek by labor and self-denial to approach its source in perfect goodness.

MILTON.

I framed his tongue to music,
I armed his hand with skill,
I moulded his face to beauty,
And his heart the throne of wil.

[Reprinted from the North American Review, July, 1838.]

The discovery of the lost work of Milton, the treatise "Of the Christian Doctrine," in 1823, drew a sudden attention to his name. For a short time the literary journals were filled with disquisitions on his genius; new editions of his works, and new compilations of his life, were published. But the new-found book haying in itself less attraction than any other work of Milton, the curiosity of the public as quickly subsided, and left the poet to the enjoyment of his permanent fame, or to such increase or abatement of it only as is incidental to a sublime genius, quite independent of the momentary challenge of universal attention to his claims.

But if the new and temporary renown of the poet is silent again, it is nevertheless true that he has gained, in this age, some increase of permanent praise. The fame of a great man is not rigid and stony like his bust. It changes with time. It needs time to give it due perspective. It was very easy to remark an altered tone in the criticism when Milton reappeared as an author, fifteen years ago, from any that had been bestowed on the same subject before. It implied merit indisputable and illustrious; yet so near to the modern mind as to be still alive and life-giving. The aspect of Milton, to this generation, will be part of the history of the nineteenth century. There is no name in English literature between his age and ours that rises into any approach to his own. And as a man's fame, of course, characterizes those who give it, as much as him who receives it, the new criticism indicated a change in the public taste, and a change which the poet himself might claim to have wrought.

The reputation of Milton had already undergone one or two revolutions long anterior to its recent aspects. In his lifetime, he was little or not at all known as a poet, but obtained great respect from his contemporaries as an accomplished scholar and a formidable pamphleteer. His poem fell unregarded among his countrymen. His prose writings, especially the "Defence of the English People," seem to have been read with avidity. These tracts are remarkable compositions. They are earnest, spiritual, rich with allusion, sparkling with innumerable ornaments; but, as writings designed to gain a practical point, they fail. They are

not effective, like similar productions of Swift and Burke; or, like what became also controversial tracts, several masterly speeches in the history of the American Congress. Milton seldom deigns a glance at the obstacles that are to be overcome before that which he proposes can be done. There is no attempt to conciliate, — no mediate, no preparatory course suggested, — but, peremptory and impassioned, he demands, on the instant, an ideal justice. Therein they are discriminated from modern writings, in which a regard to the actual is all but universal.

Their rhetorical excellence must also suffer some deduction. They have no perfectness. These writings are wonderful for the truth, the learning, the subtilty and pomp of the language; but the whole is sacrificed to the particular. Eager to do fit justice to each thought, he does not subordinate it s as to project the main argument. He writes whilst he is heated; the piece shows all the rambles and resources of indignation, but he has never *integrated* the parts of the argument in his mind. The reader is fatigued with admiration, but is not yet master of the subject.

Two of his pieces may be excepted from this description, one for its faults, the other for its excellence. The “Defence of the People of England,” on which his contemporary fame was founded, is, when divested of its pure Latinity, the worst of his works. Only its general aim, and a few elevated passages, can save it. We could be well content, if the flames to which it was condemned at Paris, at Toulouse, and at London, had utterly consumed it. The lover of his genius will always regret that he should not have taken counsel of his own lofty heart at this, as at other times, and have written from the deep convictions of love and right, which are the foundations of civil liberty. There is little poetry or prophecy in this mean and ribald scolding. To insult Salmasius, not to acquit England, is the main design. What under heaven had Madame de Saumaise, or the manner of living of Saumaise, or Salmasius, or his blunders of grammar, or his niceties of diction, to do with the solemn question whether Charles Stuart had been rightly slain? Though it evinces learning and critical skill, yet, as an historical argument, it cannot be valued with similar disquisitions of Robertson and Hallam, and even less celebrated scholars. But, when he comes to speak of the reason of the thing, then he always recovers himself. The voice of the mob is silent, and Milton speaks. And the peroration, in which he implores his countrymen to refute this adversary by their great deeds, is in a just spirit. The other piece is his “Areopagitica,” the discourse, addressed to the Parliament, in favor of removing the censorship of the press; the most splendid of his prose works. It is, as Luther said of one of Melancthon’s writings, “alive, hath hands and feet, — and not like Erasmus’s sentences, which were made, not grown.” The weight of the thought

is equalled by the vivacity of the expression, and it cheers as well as teaches. This tract is far the best known and the most read of all, and is still a magazine of reasons for the freedom of the press. It is valuable in history as an argument addressed to a government to produce a practical end, and plainly presupposes a very peculiar state of society.

But deeply as that peculiar state of society, in which and for which Milton wrote, has engraved itself in the remembrance of the world, it shares the destiny which overtakes everything local and personal in nature; and the accidental facts on which a battle of principles was fought have already passed, or are fast passing, into oblivion. We have lost all interest in Milton as the redoubted disputant of a sect; but by his own innate worth this man has steadily risen in the world's reverence, and occupies a more imposing place in the mind of men at this hour than ever before.

It is the aspect which he presents to this generation, that alone concerns us. Milton the polemic has lost his popularity long ago; and if we skip the pages of "Paradise Lost" where "God the Father argues like a school divine," so did the next age to his own. But, we are persuaded, he kindles a love and emulation in us which he did not in foregoing generations. We think we have seen and heard criticism upon the poems, which the bard himself would have more valued than the recorded praise of Dryden, Addison and Johnson, because it came nearer to the mark; was finer and closer appreciation; the praise of intimate knowledge and delight; and, of course, more welcome to the poet than the general and vague acknowledgment of his genius by those able but unsympathizing critics. We think we have heard the recitation of his verses by genius which found in them that which itself would say; recitation which told, in the diamond sharpness of every articulation, that now first was such perception and enjoyment possible; the perception and enjoyment of all his varied rhythm, and his perfect fusion of the classic and the English styles. This is a poet's right; for every masterpiece of art goes on for some ages reconciling the world unto itself, and despotically fashioning the public ear. The opposition to it, always greatest at first, continually decreases and at last ends; and a new race grows up in the taste and spirit of the work, with the utmost advantage for seeing intimately its power and beauty.

But it would be great injustice to Milton to consider him as enjoying merely a critical reputation. It is the prerogative of this great man to stand at this hour foremost of all men in literary history, and so (shall we not say?) of all men, in the power to *inspire*. Virtue goes out of him into others. Leaving out of view the pretensions of our contemporaries (always an incalculable influence), we think no man can be named whose mind still acts on the cultivated intellect of England

and America with an energy comparable to that of Milton. As a poet, Shakspeare undoubtedly transcends, and far surpasses him in his popularity with foreign nations; but Shakspeare is a voice merely; who and what he was that sang, that sings, we know not. Milton stands erect, commanding, still visible as a man among men, and reads the laws of the moral sentiment to the new-born race. There is something pleasing in the affection with which we can regard a man who died a hundred and sixty years ago in the other hemisphere, who, in respect to personal relations, is to us as the wind, yet by an influence purely spiritual makes us jealous for his fame as for that of a near friend. He is identified in the mind with all select and holy images, with the supreme interests of the human race. If hereby we attain any more precision, we proceed to say that we think no man in these later ages, and few men ever, possessed so great a conception of the manly character. Better than any other he has discharged the office of every great man, namely, to raise the idea of Man in the minds of his contemporaries and of posterity, — to draw after nature a life of man, exhibiting such a composition of grace, of strength and of virtue, as poet had not described nor hero lived. Human nature in these ages is indebted to him for its best portrait. Many philosophers in England, France and Germany, have formerly dedicated their study to this problem; and we think it impossible to recall one in those countries who communicates the same vibration of hope, of self-reverence, of piety, of delight in beauty, which the name of Milton awakens. Lord Bacon, who has written much and with prodigious ability on this science, shrinks and falters before the absolute and uncourtly Puritan. Bacon's Essays are the portrait of an ambitious and profound calculator, — a great man of the vulgar sort. Of the upper world of man's being they speak few and faint words. The man of Locke is virtuous without enthusiasm and intelligent without poetry. Addison, Pope, Hume and Johnson, students, with very unlike temper and success, of the same subject, cannot, taken together, make any pretension to the amount or the quality of Milton's inspirations. The man of Lord Chesterfield is unworthy to touch his garment's hem. Franklin's man is a frugal, inoffensive, thrifty citizen, but savors of nothing heroic. The genius of France has not, even in her best days, yet culminated in any one head, — not in Rousseau, not in Pascal, not in Fénelon, — into such perception of all the attributes of humanity as to entitle it to any rivalry in these lists. In Germany, the greatest writers are still too recent to institute a comparison; and yet we are tempted to say that art and not life seems to be the end of their effort. But the idea of a purer existence than any he saw around him, to be realized in the life and conversation of men, inspired every act and every writing of John Milton. He defined the object of education to be, "to fit a man to perform justly, skilfully and magnanimously all the offices, both

private and public, of peace and war.” He declared that “he who would aspire to write well hereafter in laudable things, ought himself to be a true poem; that is, a composition and pattern of the best and honorablest things, not presuming to sing high praises of heroic men or famous cities, unless he have in himself the experience and the practice of all that which is praiseworthy.” Nor is there in literature a more noble outline of a wise external education, than that which he drew up, at the age of thirty-six, in his Letter to Samuel Hartlib. The muscles, the nerves and the flesh with which this skeleton is to be filled up and covered, exist in his works and must be sought there.

For the delineation of this heroic image of man, Milton enjoyed singular advantages. Perfections of body and of mind are attributed to him by his biographers, that, if the anecdotes had come down from a greater distance of time, or had not been in part furnished or corroborated by political enemies, would lead us to suspect the portraits were ideal, like the Cyrus of Xenophon, the Telemachus of Fénelon, or the popular traditions of Alfred the Great.

Handsome to a proverb, he was called the lady of his college. Aubrey says, “This harmonical and ingenuous soul dwelt in a beautiful and well-proportioned body.” His manners and his carriage did him no injustice. Wood, his political opponent, relates that “his deportment was affable, his gait erect and manly, bespeaking courage and undauntedness.” Aubrey adds a sharp trait, that “he pronounced the letter R very hard, a certain sign of satirical genius.” He had the senses of a Greek. His eye was quick, and he was accounted an excellent master of his rapier. His ear for music was so acute, that he was not only enthusiastic in his love, but a skilful performer himself; and his voice, we are told, was delicately sweet and harmonious. He insists that music shall make a part of a generous education.

With these keen perceptions, he naturally received a love of nature and a rare susceptibility to impressions from external beauty. In the midst of London, he seems, like the creatures of the field and the forest, to have been tuned in concord with the order of the world; for, he believed, his poetic vein only flowed from the autumnal to the vernal equinox; and, in his essay on Education, he doubts whether, in the fine days of spring, any study can be accomplished by young men. “In those vernal seasons of the year when the air is calm and pleasant, it were an injury and sullenness against nature not to go out and see her riches and partake in her rejoicing with heaven and earth.” His sensibility to impressions from beauty needs no proof from his history; it shines through every page. The form and the voice of Leonora Baroni seemed to have captivated him in Rome, and to her he addressed his Italian sonnets and Latin epigrams.

To these endowments it must be added that his address and his conversation

were worthy of his fame. His house was resorted to by men of wit, and foreigners came to England, we are told, “to see the Lord Protector and Mr. Milton.” In a letter to one of his foreign correspondents, Emeric Bigot, and in reply apparently to some compliment on his powers of conversation, he writes: “Many have been celebrated for their compositions, whose common conversation and intercourse have betrayed no marks of sublimity or genius. But, as far as possible, I aim to show myself equal in thought and speech to what I have written, if I have written anything well.”

These endowments received the benefit of a careful and happy discipline. His father’s care, seconded by his own endeavor, introduced him to a profound skill in all the treasures of Latin, Greek, Hebrew and Italian tongues; and, to enlarge and enliven his elegant learning, he was sent into Italy, where he beheld the remains of ancient art, and the rival works of Raphael, Michael Angelo and Correggio; where, also, he received social and academical honors from the learned and the great. In Paris, he became acquainted with Grotius; in Florence or Rome, with Galileo; and probably no traveller ever entered that country of history with better right to its hospitality, none upon whom its influences could have fallen more congenially.

Among the advantages of his foreign travel, Milton certainly did not count it the least that it contributed to forge and polish that great weapon of which he acquired such extraordinary mastery, — his power of language. His lore of foreign tongues added daily to his consummate skill in the use of his own. He was a benefactor of the English tongue by showing its capabilities. Very early in life he became conscious that he had more to say to his fellow-men than they had fit words to embody. At nineteen years, in a college exercise, he addresses his native language, saying to it that it would be his choice to leave trifles for a grave argument,

“Such as may make thee search thy coffers round,
Before thou clothe my fancy in fit sound;
Such where the deep transported mind may soar
Above the wheeling poles, and at Heaven’s door
Look in, and see each blissful deity,
How he before the thunderous throne doth lie.”

Michael Angelo calls “him alone an artist, whose hands can execute what his mind has conceived.” The world, no doubt, contains many of that class of men whom Wordsworth denominates “*silent poets*,” whose minds teem with images which they want words to clothe. But Milton’s mind seems to have no thought or emotion which refused to be recorded. His mastery of his native tongue was more than to use it as well as any other; he cast it into new forms. He uttered in it

things unheard before. Not imitating but rivalling Shakspeare, he scattered, in tones of prolonged and delicate melody, his pastoral and romantic fancies; then, soaring into unattempted strains, he made it capable of an unknown majesty, and bent it to express every trait of beauty, every shade of thought; and searched the kennel and Jakes as well as the palaces of sound for the harsh discords of his polemic wrath. We may even apply to his performance on the instrument of language, his own description of music;

“ — Notes, with many a winding bout
Of linked sweetness long drawn out,
With wanton heed and giddy cunning,
The melting voice through mazes running,
Untwisting all the chains that tie
The hidden soul of harmony.”

But, whilst Milton was conscious of possessing this intellectual voice, penetrating through ages and propelling its melodious undulations forward through the coming world, he knew that this mastery of language was a secondary power, and he respected the mysterious source whence it had its spring; namely, clear conceptions and a devoted heart. “For me,” he said, in his “Apology for Smectymnus,” “although I cannot say that I am utterly untrained in those rules which best rhetoricians have given, or unacquainted with those examples which the prime authors of eloquence have written in any learned tongue, yet true eloquence I find to be none but the serious and hearty love of truth; and that whose mind soever is fully possessed with a fervent desire to know good things, and with the dearest charity to infuse the knowledge of them into others, when such a man would speak, his words, by what I can express, like so many nimble and airy servitors, trip about him at command, and in well-ordered files, as he would wish, fall aptly into their own places.”

But, as basis or fountain of his rare physical and intellectual accomplishments, the man Milton was just and devout. He is rightly dear to mankind, because in him, among so many perverse and partial men of genius, — in him humanity rights itself; the old eternal goodness finds a home in his breast, and for once shows itself beautiful. His gifts are subordinated to his moral sentiments. And his virtues are so graceful that they seem rather talents than labors. Among so many contrivances as the world has seen to make holiness ugly, in Milton at least it was so pure a flame, that the foremost impression his character makes is that of elegance. The victories of the conscience in him are gained by the commanding charm which all the severe and restrictive virtues have for him. His virtues remind us of what Plutarch said of Timoleon’s victories, that they resembled Homer’s verses, they ran so easy and natural. His

habits of living were austere. He was abstemious in diet, chaste, an early riser, and industrious. He tells us, in a Latin poem, that the lyrist may indulge in wine and in a freer life; but that he who would write an epic to the nations, must eat beans and drink water. Yet in his severity is no grimace or effort. He serves from love, not from fear. He is innocent and exact, because his taste was so pure and delicate. He acknowledges to his friend Diodati, at the age of twenty-one, that he is enamored, if ever any was, of moral perfection: "For, whatever the Deity may have bestowed upon me in other respects, he has certainly inspired me, if any ever were inspired, with a passion for the good and fair. Nor did Ceres, according to the fable, ever seek her daughter Proserpine with such unceasing solicitude, as I have sought this *Ætæ 0's±½*, this perfect model of the beautiful in all forms and appearances of things."

When he was charged with loose habits of living, he declares, that "a certain niceness of nature, an honest haughtiness and self-esteem either of what I was or what I might be, and a modesty, kept me still above those low descents of mind beneath which he must deject and plunge himself, that can agree" to such degradation. "His mind gave him," he said, "that every free and gentle spirit, without that oath of chastity, ought to be born a knight; nor needed to expect the gilt spur, or the laying of a sword upon his shoulder, to stir him up, by his counsel and his arm, to secure and protect" attempted innocence.

He states these things, he says, "to show, that, though Christianity had been but slightly taught him, yet a certain reservedness of natural disposition and moral discipline, learned out of the noblest philosophy, was enough to keep him in disdain of far less incontinences than these," that had been charged on him. In like spirit, he replies to the suspicious calumny respecting his morning haunts. "Those morning haunts are where they should be, at home; not sleeping, or concocting the surfeits of an irregular feast, but up and stirring, in winter, often ere the sound of any bell awake men to labor or devotion; in summer, as oft with the bird that first rouses, or not much tardier, to read good authors, or cause them to be read, till the attention be weary, or memory have its perfect fraught; then with useful and generous labors preserving the body's health and hardiness, to render lightsome, clear, and not lumpish obedience to the mind, to the cause of religion and our country's liberty, when it shall require firm hearts in sound bodies to stand and cover their stations. These are the morning practices." This native honor never forsook him. It is the spirit of "Comus," the loftiest song in the praise of chastity that is in any language. It always sparkles in his eyes. It breathed itself over his decent form. It refined his amusements, which consisted in gardening, in exercise with the sword, and in playing on the organ. It engaged

his interest in chivalry, in courtesy, in whatsoever savored of generosity and nobleness. This magnanimity shines in all his life. He accepts a high impulse at every risk, and deliberately undertakes the defence of the English people, when advised by his physicians that he does it at the cost of sight. There is a forbearance even in his polemics. He opens the war and strikes the first blow. When he had cut down his opponents, he left the details of death and plunder to meaner partisans. He said, "he had learned the prudence of the Roman soldier, not to stand breaking of legs, when the breath was quite out of the body."

To this antique heroism, Milton added the genius of the Christian sanctity. Few men could be cited who have so well understood what is peculiar in the Christian ethics, and the precise aid it has brought to men, in being an emphatic affirmation of the omnipotence of spiritual laws, and, by way of marking the contrast to vulgar opinions, laying its chief stress on humility. The indifference of a wise mind to what is called high and low, and the fact that true greatness is a perfect humility, are revelations of Christianity which Milton well understood. They give an inexhaustible truth to all his compositions. His firm grasp of this truth is his weapon against the prelates. He celebrates in the martyrs, "the irresistible might of weakness." He told the bishops that "instead of showing the reason of their lowly condition from divine example and command, they seek to prove their high preëminence from human consent and authority." He advises that in country places, rather than to trudge many miles to a church, public worship be maintained nearer home, as in a house or barn. "For, notwithstanding the gaudy superstition of some still devoted ignorantly to temples, we may be well assured, that he who disdained not to be born in a manger, disdains not to be preached in a barn." And the following passage, in the "Reason of Church Government," indicates his own perception of the doctrine of humility. "Albeit I must confess to be half in doubt whether I should bring it forth or no, it being so contrary to the eye of the world, that I shall endanger either not to be regarded, or not to be understood. For who is there, almost, that measures wisdom by simplicity, strength by suffering, dignity by lowliness?" Obeying this sentiment, Milton deserved the apostrophe of Wordsworth:

"Pure as the naked heavens, majestic, free,
So didst thou travel on life's common way
In cheerful godliness; and yet thy heart
The lowliest duties on itself did lay."

He laid on himself the lowliest duties. Johnson petulantly taunts Milton with "great promise and small performance," in returning from Italy because his country was in danger, and then opening a private school. Milton, wiser, felt no

absurdity in this conduct. He returned into his revolutionized country, and assumed an honest and useful task, by which he might serve the state daily, whilst he launched from time to time his formidable bolts against the enemies of liberty. He felt the heats of that “love” which “esteems no office mean.” He compiled a logic for boys; he wrote a grammar; and devoted much of his time to the preparing of a Latin dictionary. But the religious sentiment warmed his writings and conduct with the highest affection of faith. The memorable covenant, which in his youth, in the second book of the “Reason of Church Government,” he makes with God and his reader, expressed the faith of his old age. For the first time since many ages, the invocations of the Eternal Spirit in the commencement of his books are not poetic forms, but are thoughts, and so are still read with delight. His views of choice of profession, and choice in marriage, equally expect a divine leading.

Thus chosen, by the felicity of his nature and of his breeding, for the clear perception of all that is graceful and all that is great in man, Milton was not less happy in his times. His birth fell upon the agitated years when the discontents of the English Puritans were fast drawing to a head against the tyranny of the Stuarts. No period has surpassed that in the general activity of mind. It is said that no opinion, no civil, religious, moral dogma can be produced, that was not broached in the fertile brain of that age. Questions that involve all social and personal rights were hasting to be decided by the sword, and were searched by eyes to which the love of freedom, civil and religious, lent new illumination. Milton, gentle, learned, delicately bred in all the elegance of art and learning, was set down in England in the stern, almost fanatic society of the Puritans. The part he took, the zeal of his fellowship, make us acquainted with the greatness of his spirit as in tranquil times we could not have known it. Susceptible as Burke to the attractions of historical prescription, of royalty, of chivalry, of an ancient church illustrated by old martyrdoms and installed in cathedrals, — he threw himself, the flower of elegance, on the side of the reeking conventicle; the side of humanity, but unlearned and unadorned. His muse was brave and humane, as well as sweet. He felt the dear love of native land and native language. The humanity which warms his pages begins as it should, at home. He preferred his own English, so manlike he was, to the Latin, which contained all the treasures of his memory. “My mother bore me,” he said, “a speaker of what God made mine own, and not a translator.” He told the Parliament, that “the imprimaturs of Lambeth House had been writ in Latin; for that our English, the language of men ever famous and foremost in the achievements of liberty, will not easily find servile letters enow to spell such a dictatory presumption.” At one time he meditated writing a poem on the settlement of Britain, and a history of England

was one of the three main tasks which he proposed to himself. He proceeded in it no further than to the Conquest. He studied with care the character of his countrymen, and once in the "History," and once again in the "Reason of Church Government," he has recorded his judgment of the English genius.

Thus drawn into the great controversies of the times, in them he is never lost in a party. His private opinions and private conscience always distinguish him. That which drew him to the party was his love of liberty, ideal liberty; this therefore he could not sacrifice to any party. Toland tells us, "As he looked upon true and absolute freedom to be the greatest happiness of this life, whether to societies or single persons, so he thought constraint of any sort to be the utmost misery; for which reason he used to tell those about him the entire satisfaction of his mind, that he had constantly employed his strength and faculties in the defence of liberty, and in direct opposition to slavery." Truly he was an apostle of freedom; of freedom in the house, in the state, in the church; freedom of speech, freedom of the press, yet in his own mind discriminated from savage license, because that which he desired was the liberty of the wise man, containing itself in the limits of virtue. He pushed, as far as any in that democratic age, his ideas of *civil* liberty. He proposed to establish a republic, of which the federal power was weak and loosely defined, and the substantial power should remain with primary assemblies. He maintained, that a nation may try, judge, and slay their king, if he be a tyrant. He pushed as far his views of *ecclesiastical* liberty. He taught the doctrine of unlimited toleration. One of his tracts is writ to prove that no power on earth can compel in matters of religion. He maintained the doctrine of *literary* liberty, denouncing the censorship of the press, and insisting that a book shall come into the world as freely as a man, so only it bear the name of author or printer, and be responsible for itself like a man. He maintained the doctrine of *domestic* liberty, or the liberty of divorce, on the ground that unfit disposition of mind was a better reason for the act of divorce than infirmity of body, which was good ground in law. The tracts he wrote on these topics are, for the most part, as fresh and pertinent to-day as they were then. The events which produced them, the practical issues to which they tend, are mere occasions for this philanthropist to blow his trumpet for human rights. They are all varied applications of one principle, the liberty of the wise man. He sought absolute truth, not accommodating truth. His opinions on all subjects are formed for man as he ought to be, for a nation of Miltons. He would be divorced when he finds in his consort unfit disposition; knowing that he should not abuse that liberty, because with his whole heart he abhors licentiousness and loves chastity. He defends the slaying of the king, because a

king is a king no longer than he governs by the laws; “it would be right to kill Philip of Spain making an inroad into England, and what right the king of Spain hath to govern us at all, the same hath the king Charles to govern tyrannically.” He would remove hirelings out of the church, and support preachers by voluntary contributions; requiring that such only should preach as have faith enough to accept so self-denying and precarious a mode of life, scorning to take thought for the aspects of prudence and expediency. The most devout man of his time, he frequented no church; probably from a disgust at the fierce spirit of the pulpits. And so, throughout all his actions and opinions, is he a consistent spiritualist, or believer in the omnipotence of spiritual laws. He wished that his writings should be communicated only to those who desired to see them. He thought nothing honest was low. He thought he could be famous only in proportion as he enjoyed the approbation of the good. He admonished his friend “not to admire military prowess, or things in which force is of most avail. For it would not be matter of rational wonder, if the wethers of our country should be born with horns that could batter down cities and towns. Learn to estimate great characters, not by the amount of animal strength, but by the habitual justice and temperance of their conduct.”

Was there not a fitness in the undertaking of such a person to write a poem on the subject of Adam, the first man? By his sympathy with all nature; by the proportion of his powers; by great knowledge, and by religion, he would reascend to the height from which our nature is supposed to have descended. From a just knowledge of what man should be, he described what he was. He beholds him as he walked in Eden: —

“His fair large front and eye sublime declared
Absolute rule; and hyacinthine locks
Round from his parted forelock manly hung
Clustering, but not beneath his shoulders broad.”

And the soul of this divine creature is excellent as his form. The tone of his thought and passion is as healthful, as even, and as vigorous, as befits the new and perfect model of a race of gods.

The perception we have attributed to Milton, of a purer ideal of humanity, modifies his poetic genius. The man is paramount to the poet. His fancy is never transcendent, extravagant; but, as Bacon’s imagination was said to be “the noblest that ever contented itself to minister to the understanding,” so Milton’s ministers to the character. Milton’s sublimest song, bursting into heaven with its peals of melodious thunder, is the voice of Milton still. Indeed, throughout his poems, one may see under a thin veil, the opinions, the feelings, even the incidents of the poet’s life, still reappearing. The sonnets are all occasional

poems. "L'Allegro" and "Il Penseroso" are but a finer autobiography of his youthful fancies at Harefield; the "Comus" a transcript, in charming numbers, of that philosophy of chastity, which, in the "Apology for Smectymnuus," and in the "Reason of Church Government," he declares to be his defense and religion. The "Samson Agonistes" is too broad an expression of his private griefs to be mistaken, and is a version of the "Doctrine and Discipline of Divorce." The most affecting passages in "Paradise Lost" are personal allusions; and, when we are fairly in Eden, Adam and Milton are often difficult to be separated. Again, in "Paradise Regained," we have the most distinct marks of the progress of the poet's mind, in the revision and enlargement of his religious opinions. This may be thought to abridge his praise as a poet. It is true of Homer and Shakspeare that they do not appear in their poems; that those prodigious geniuses did cast themselves so totally into their song, that their individuality vanishes, and the poet towers to the sky, whilst the man quite disappears. The fact is memorable. Shall we say that in our admiration and joy in these wonderful poems we have even a feeling of regret that the men knew not what they did; that they were too passive in their great service; were channels through which streams of thought flowed from a higher source, which they did not appropriate, did not blend with their own being? Like prophets, they seem but imperfectly aware of the import of their own utterances. We hesitate to say such things, and say them only to the unpleasing dualism, when the man and the poet show like a double consciousness. Perhaps we speak to no fact, but to mere fables, of an idle mendicant Homer, and of a Shakspeare content with a mean and jocular way of life. Be it how it may, the genius and office of Milton were different, namely, to ascend by the aids of his learning and his religion, — by an equal perception, that is, of the past and the future, — to a higher insight and more lively delineation of the heroic life of man. This was his poem; whereof all his indignant pamphlets and all his soaring verses are only single cantos or detached stanzas. It was plainly needful that his poetry should be a version of his own life, in order to give weight and solemnity to his thoughts; by which they might penetrate and possess the imagination and the will of mankind. The creations of Shakspeare are cast into the world of thought to no further end than to delight. Their intrinsic beauty is their excuse for being. Milton, fired "with dearest charity to infuse the knowledge of good things into others," tasked his giant imagination and exhausted the stores of his intellect for an end beyond, namely, to teach. His own conviction it is which gives such authority to his strain. Its reality is its force. If out of the heart it came, to the heart it must go. What schools and epochs of common rhymers would it need to make a counterbalance to the severe oracles of his muse:

“In them is plainest taught and easiest learnt,
What makes a nation happy, and keeps it so.”

The lover of Milton reads one sense in his prose and in his metrical compositions; and sometimes the muse soars highest in the former, because the thought is more sincere. Of his prose in general, not the style alone but the argument also is poetic; according to Lord Bacon’s definition of poetry, following that of Aristotle, “Poetry, not finding the actual world exactly conformed to its idea of good and fair, seeks to accommodate the shows of things to the desires of the mind, and to create an ideal world better than the world of experience.” Such certainly is the explanation of Milton’s tracts. Such is the apology to be entered for the plea for freedom of divorce; an essay, which, from the first until now, has brought a degree of obloquy on his name. It was a sally of the extravagant spirit of the time, overjoyed, as in the French Revolution, with the sudden victories it had gained, and eager to carry on the standard of truth to new heights. It is to be regarded as a poem on one of the griefs of man’s condition, namely, unfit marriage. And as many poems have been written upon unfit society, commending solitude, yet have not been proceeded against, though their end was hostile to the state; so should this receive that charity which an angelic soul, suffering more keenly than others from the unavoidable evils of human life, is entitled to.

We have offered no apology for expanding to such length our commentary on the character of John Milton; who, in old age, in solitude, in neglect, and blind, wrote the *Paradise Lost*; a man whom labor or danger never deterred from whatever efforts a love of the supreme interests of man prompted. For are we not the better; are not all men fortified by the remembrance of the bravery, the purity, the temperance, the toil, the independence and the angelic devotion of this man, who, in a revolutionary age, taking counsel only of himself, endeavored, in his writings and in his life, to carry out the life of man to new heights of spiritual grace and dignity, without any abatement of its strength?

PAPERS FROM THE DIAL.

*The tongue is prone to lose the way;
Not so the pen, for in a letter
We have not better things to say,
But surely say them better.*

I. THOUGHTS ON MODERN LITERATURE.

[The Dial, vol. i. p. 137.]

In our fidelity to the higher truth we need not disown our debt, in our actual state of culture, in the twilights of experience, to these rude helpers. They keep alive the memory and the hope of a better day. When we flout all particular books as initial merely, we truly express the privilege of spiritual nature, but alas, not the fact and fortune of this low Massachusetts and Boston, of these humble Junes and Decembers of mortal life. Our souls are not self-fed, but do eat and drink of chemical water and wheat. Let us not forget the genial miraculous force we have known to proceed from a book. We go musing into the vault of day and night; no constellation shines, no muse descends, the stars are white points, the roses, brick-colored leaves, and frogs pipe, mice cheep, and wagons creak along the road. We return to the house and take up Plutarch or Augustine, and read a few sentences or pages, and lo! the air swims with life, secrets of magnanimity and grandeur invite us on every hand, life is made up of them. Such is our debt to a book. Observe moreover that we ought to credit literature with much more than the bare word it gives us. I have just been reading poems which now in memory shine with a certain steady, warm, autumnal light. That is not in their grammatical construction which they give me. If I analyze the sentences it eludes me, but is the genius and suggestion of the whole. Over every true poem lingers a certain wild beauty, immeasurable; a happiness lightsome and delicious fills the heart and brain, as they say every man walks environed by his proper atmosphere, extending to some distance around him. This beautiful result must be credited to literature also in casting its account.

In looking at the library of the Present Age, we are first struck with the fact of the immense miscellany. It can hardly be characterized by any species of book, for every opinion, old and new, every hope and fear, every whim and folly has an organ. It exhibits a vast carcass of tradition every year with as much solemnity as a new revelation. Along with these it vents books that breathe of new morning, that seem to heave with the life of millions, books for which men and women peak and pine; books which take the rose out of the cheek of him that wrote them, and give him to the midnight a sad, solitary, diseased man; which leave no man where they found him, but make him better or worse; and which work dubiously on society and seem to inoculate it with a venom before any healthy result appears.

In order to any complete view of the literature of the present age, an inquiry should include what it quotes, what it writes and what it wishes to write. In our

present attempt to enumerate some traits of the recent literature, we shall have somewhat to offer on each of these topics, but we cannot promise to set in very exact order what we have to say.

In the first place it has all books. It reprints the wisdom of the world. How can the age be a bad one which gives me Plato and Paul and Plutarch, St. Augustine, Spinoza, Chapman, Beaumont and Fletcher, Donne and Sir Thomas Browne, beside its own riches? Our presses groan every year with new editions of all the select pieces of the first of mankind, — meditations, history, classifications, opinions, epics, lyrics, which the age adopts by quoting them. If we should designate favorite studies in which the age delights more than in the rest of this great mass of the permanent literature of the human race, one or two instances would be conspicuous. First; the prodigious growth and influence of the genius of Shakspeare, in the last one hundred and fifty years, is itself a fact of the first importance. It almost alone has called out the genius of the German nation into an activity which spreading from the poetic into the scientific, religious and philosophical domains, has made theirs now at last the paramount intellectual influence of the world, reacting with great energy on England and America. And thus, and not by mechanical diffusion, does an original genius work and spread himself.

The poetry and speculation of the age are marked by a certain philosophic turn, which discriminates them from the works of earlier times. The poet is not content to see how “Fair hangs the apple from the rock,” “What music a sunbeam awoke in the groves,” nor of Hardiknute, how “Stately steppes he east the way, and stately steppes he west,” but he now revolves, What is the apple to me? and what the birds to me? and what is Hardiknute to me? and what am I? And this is called subjectiveness, as the eye is withdrawn from the object and fixed on the subject or mind.

We can easily concede that a steadfast tendency of this sort appears in modern literature. It is the new consciousness of the one mind, which predominates in criticism. It is the uprising of the soul, and not the decline. It is founded on that insatiable demand for unity, the need to recognize one nature in all the variety of objects, which always characterizes a genius of the first order. Accustomed always to behold the presence of the universe in every part, the soul will not condescend to look at any new part as a stranger, but saith,— “I know all already, and what art thou? Show me thy relations to me, to all, and I will entertain thee also.”

There is a pernicious ambiguity in the use of the term *subjective*. We say, in accordance with the general view I have stated, that the single soul feels its right to be no longer confounded with numbers, but itself to sit in judgment on history

and literature, and to summon all facts and parties before its tribunal. And in this sense the age is subjective.

But, in all ages, and now more, the narrow-minded have no interest in anything but in its relation to their personality. What will help them to be delivered from some burden, eased in some circumstance, flattered or pardoned or enriched; what will help to marry or to divorce them, to prolong or to sweeten life, is sure of their interest; and nothing else. Every form under the whole heaven they behold in this most partial light or darkness of intense selfishness, until we hate their being. And this habit of intellectual selfishness has acquired in our day the fine name of subjectiveness.

Nor is the distinction between these two habits to be found in the circumstance of using the first person singular, or reciting facts and feelings of personal history. A man may say I, and never refer to himself as an individual; and a man may recite passages of his life with no feeling of egotism. Nor need a man have a vicious subjectiveness because he deals in abstract propositions.

But the criterion which discriminates these two habits in the poet's mind is the tendency of his composition; namely, whether it leads us to nature, or to the person of the writer. The great always introduce us to facts; small men introduce us always to themselves. The great man, even whilst he relates a private fact personal to him, is really leading us away from his to an universal experience. His own affection is in nature, in *what is*, and, of course, all his communication leads outward to it, starting from whatsoever point. The great never with their own consent become a load on the minds they instruct. The more they draw us to them, the farther from them or more independent of them we are, because they have brought us to the knowledge of somewhat deeper than both them and us. The great never hinder us; for their activity is coincident with the sun and moon, with the course of the rivers and of the winds, with the stream of laborers in the street and with all the activity and well-being of the race. The great lead us to nature, and in our age to metaphysical nature, to the invisible awful facts, to moral abstractions, which are not less nature than is a river or a coal-mine, — nay, they are far more nature, — but its essence and soul.

But the weak and wicked, led also to analyze, saw nothing in thought but luxury. Thought for the selfish became selfish. They invited us to contemplate nature, and showed us an abominable self. Would you know the genius of the writer? Do not enumerate his talents or his feats, but ask thyself, What spirit is he of? Do gladness and hope and fortitude flow from his page into thy heart? Has he led thee to nature because his own soul was too happy in beholding her power and love? Or is his passion for the wilderness only the sensibility of the sick, the exhibition of a talent which only shines whilst you praise it; which has

no root in the character, and can thus minister to the vanity but not to the happiness of the possessor; and which derives all its *éclat* from our conventional education, but would not make itself intelligible to the wise man of another age or country? The water we wash with never speaks of itself, nor does fire or wind or tree. Neither does the noble natural man: he yields himself to your occasion and use, but his act expresses a reference to universal good.

Another element of the modern poetry akin to this subjective tendency, or rather the direction of that same on the question of resources, is the Feeling of the Infinite. Of the perception now fast becoming a conscious fact, — that there is One Mind, and that all the powers and privileges which lie in any, lie in all; that I as a man may claim and appropriate whatever of true or fair or good or strong has anywhere been exhibited; that Moses and Confucius, Montaigne and Leibnitz are not so much individuals as they are parts of man and parts of me, and my intelligence proves them my own, — literature is far the best expression. It is true, this is not the only nor the obvious lesson it teaches. A selfish commerce and government have caught the eye and usurped the hand of the masses. It is not to be contested that selfishness and the senses write the laws under which we live, and that the street seems to be built and the men and women in it moving, not in reference to pure and grand ends, but rather to very short and sordid ones. Perhaps no considerable minority, no one man, leads a quite clean and lofty life. What then? We concede in sadness the fact. But we say that these low customary ways are not all that survives in human beings. There is that in us which mutters, and that which groans, and that which triumphs, and that which aspires. There are facts on which men of the world superciliously smile, which are worth all their trade and politics; which drive young men into gardens and solitary places, and cause extravagant gestures, starts, distortions of the countenance, and passionate exclamations; sentiments, which find no aliment or language for themselves on the wharves, in court, or market, but which are soothed by silence, by darkness, by the pale stars, and the presence of nature. All over the modern world the educated and susceptible have betrayed their discontent with the limits of our municipal life, and with the poverty of our dogmas of religion and philosophy. They betray this impatience by fleeing for resource to a conversation with nature, which is courted in a certain moody and exploring spirit, as if they anticipated a more intimate union of man with the world than has been known in recent ages. Those who cannot tell what they desire or expect, still sigh and struggle with indefinite thoughts and vast wishes. The very child in the nursery prattles mysticism, and doubts and philosophizes. A wild striving to express a more inward and infinite sense characterizes the works of every art. The music of Beethoven is said, by those

who understand it, to labor with vaster conceptions and aspirations than music has attempted before. This feeling of the Infinite has deeply colored the poetry of the period. This new love of the vast, always native in Germany, was imported into France by De Staël, appeared in England in Coleridge, Wordsworth, Byron, Shelley, Felicia Hemans, and finds a most genial climate in the American mind. Scott and Crabbe, who formed themselves on the past, had none of this tendency; their poetry is objective. In Byron, on the other hand, it predominates; but in Byron it is blind, it sees not its true end — an infinite good, alive and beautiful, a life nourished on absolute beatitudes, descending into nature to behold itself reflected there. His will is perverted, he worships the accidents of society, and his praise of nature is thieving and selfish.

Nothing certifies the prevalence of this taste in the people more than the circulation of the poems, — one would say most incongruously united by some bookseller, — of Coleridge, Shelley and Keats. The only unity is in the subjectiveness and the aspiration common to the three writers. Shelley, though a poetic mind, is never a poet. His muse is uniformly imitative; all his poems composite. A good English scholar he is, with ear, taste, and memory; much more, he is a character full of noble and prophetic traits; but imagination, the original, authentic fire of the bard, he has not. He is clearly modern, and shares with Richter, Chateaubriand, Manzoni and Wordsworth, the feeling of the infinite, which so labors for expression in their different genius. But all his lines are arbitrary, not necessary. When we read poetry, the mind asks, — Was this verse one of twenty which the author might have written as well; or is this what that man was created to say? But, whilst every line of the true poet will be genuine, he is in a boundless power and freedom to say a million things. And the reason why he can say one thing well, is because his vision extends to the sight of all things, and so he describes each as one who knows many and all.

The fame of Wordsworth is a leading fact in modern literature, when it is considered how hostile his genius at first seemed to the reigning taste, and with what limited poetic talents his great and steadily growing dominion has been established. More than any poet his success has been not his own but that of the idea which he shared with his coevals, and which he has rarely succeeded in adequately expressing. The Excursion awakened in every lover of Nature the right feeling. We saw stars shine, we felt the awe of mountains, we heard the rustle of the wind in the grass, and knew again the ineffable secret of solitude. It was a great joy. It was nearer to Nature than anything we had before. But the interest of the poem ended almost with the narrative of the influences of Nature on the mind of the Boy, in the First Book. Obviously for that passage the poem was written, and with the exception of this and of a few strains of the like

character in the sequel, the whole poem was dull. Here was no poem, but here was poetry, and a sure index where the subtle muse was about to pitch her tent and find the argument of her song. It was the human soul in these last ages striving for a just publication of itself. Add to this, however, the great praise of Wordsworth, that more than any other contemporary bard he is pervaded with a reverence of somewhat higher than (conscious) thought. There is in him that property common to all great poets, a wisdom of humanity, which is superior to any talents which they exert. It is the wisest part of Shakspeare and of Milton. For they are poets by the free course which they allow to the informing soul, which through their eyes be-holdeth again and blesseth the things which it hath made. The soul is superior to its knowledge, wiser than any of its works.

With the name of Wordsworth rises to our recollection the name of his contemporary and friend, Walter Savage Landor — a man working in a very different and peculiar spirit, yet one whose genius and accomplishments deserve a wiser criticism than we have yet seen applied to them, and the rather that his name does not readily associate itself with any school of writers. Of Thomas Carlyle, also, we shall say nothing at this time, since the quality and energy of his influence on the youth of this country will require at our hands, ere long, a distinct and faithful acknowledgment.

But of all men he who has united in himself, and that in the most extraordinary degree, the tendencies of the era, is the German poet, naturalist and philosopher, Goethe. Whatever the age inherited or invented, he made his own. He has owed to Commerce and to the victories of the Understanding, all their spoils. Such was his capacity, that the magazines of the world's ancient or modern wealth, which arts and intercourse and skepticism could command, — he wanted them all. Had there been twice so much, he could have used it as well. Geologist, mechanic, merchant, chemist, king, radical, painter, composer, — all worked for him, and a thousand men seemed to look through his eyes. He learned as readily as other men breathe. Of all the men of this time, not one has seemed so much at home in it as he. He was not afraid to live. And in him this encyclopædia of facts, which it has been the boast of the age to compile, wrought an equal effect. He was knowing; he was brave; he was clean from all narrowness; he has a perfect propriety and taste, — a quality by no means common to the German writers. Nay, since the earth as we said had become a reading-room, the new opportunities seem to have aided him to be that resolute realist he is, and seconded his sturdy determination to see things for what they are. To look at him one would say there was never an observer before. What sagacity, what industry of observation. To read his record is a frugality of time, for you shall find no word that does not stand for a thing, and he is of that

comprehension which can see the value of truth. His love of Nature has seemed to give a new meaning to that word. There was never man more domesticated in this world than he. And he is an apology for the analytic spirit of the period, because, of his analysis, always wholes were the result. All conventions, all traditions he rejected. And yet he felt his entire right and duty to stand before and try and judge every fact in nature. He thought it necessary to dot round with his own pen the entire sphere of knowables; and for many of his stories, this seems the only reason: Here is a piece of humanity I had hitherto omitted to sketch; — take this. He does not say so in syllables, — yet a sort of conscientious feeling he had to be *up* to the universe, is the best account and apology for many of them. He shared also the subjectiveness of the age, and that too in both the senses I have discriminated. With the sharpest eye for form, color, botany, engraving, medals, persons and manners, he never stopped at surface, but pierced the purpose of a thing and studied to reconcile that purpose with his own being. What he could so reconcile was good; what he could not, was false. Hence a certain greatness encircles every fact he treats; for to him it has a soul, an eternal reason why it was so, and not otherwise. This is the secret of that deep realism, which went about among all objects he beheld, to find the cause why they must be what they are. It was with him a favorite task to find a theory of every institution, custom, art, work of art, which he observed. Witness his explanation of the Italian mode of reckoning the hours of the day, as growing out of the Italian climate; of the obelisk of Egypt, as growing out of a common natural fracture in the granite parallelo-piped in Upper Egypt; of the Doric architecture, and the Gothic; of the Venetian music of the gondolier, originating in the habit of the fishers' wives of the Lido singing on shore to their husbands on the sea; of the amphitheatre, which is the enclosure of the natural cup of heads that arranges itself round every spectacle in the street; of the coloring of Titian and Paul Veronese, which one may verify in common daylight in Venice every afternoon; of the Carnival at Rome; of the domestic rural architecture in Italy; and many the like examples.

But also that other vicious subjectiveness, that vice of the time, infected him also. We are provoked with his Olympian self-complacency, the patronizing air with which he vouchsafes to tolerate the genius and performances of other mortals, “the good Hiller,” “our excellent Kant,” “the friendly Wieland,” c. c. There is a good letter from Wieland to Merck, in which Wieland relates that Goethe read to a select party his journal of a tour in Switzerland with the Grand Duke, and their passage through the Vallais and over the St. Gothard. “It was,” says Wieland,” as good as Xenophon’s *Anabasis*. The piece is one of the most masterly productions, and is thought and written with the greatness peculiar to

him. The fair hearers were enthusiastic at the nature in this piece; I liked the sly art in the composition, whereof they saw nothing, still better. It is a true poem, so concealed is the art too. But what most remarkably in this, as in all his other works, distinguishes him from Homer and Shakspeare, is, that the Me, the *Ille ego*, everywhere glimmers through, although without any boasting and with an infinite fineness." This subtle element of egotism in Goethe certainly does not seem to deform his compositions, but to lower the moral influence of the man. He differs from all the great in the total want of frankness. Who saw Milton, who saw Shakspeare, saw them do their best, and utter their whole heart manlike among their brethren. No man was permitted to call Goethe brother. He hid himself, and worked always to astonish, which is egotism, and therefore little.

If we try Goethe by the ordinary canons of criticism, we should say that his thinking is of great altitude, and all level; not a succession of summits, but a high Asiatic table-land. Dramatic power, the rarest talent in literature, he has very little. He has an eye constant to the fact of life and that never pauses in its advance. But the great felicities, the miracles of poetry, he has never. It is all design with him, just thought and instructed expression, analogies, allusion, illustration, which knowledge and correct thinking supply; but of Shakspeare and the transcendent muse, no syllable. Yet in the court and law to which we ordinarily speak, and without adverting to absolute standards, we claim for him the praise of truth, of fidelity to his intellectual nature. He is the king of all scholars. In these days and in this country, where the scholars are few and idle, where men read easy books and sleep after dinner, it seems as if no book could so safely be put in the hands of young men as the letters of Goethe, which attest the incessant activity of this man, to eighty years, in an endless variety of studies, with uniform cheerfulness and greatness of mind. They cannot be read without shaming us into an emulating industry. Let him have the praise of the love of truth. We think, when we contemplate the stupendous glory of the world, that it were life enough for one man merely to lift his hands and cry with St. Augustine, "Wrangle who pleases, I will wonder." Well, this he did. Here was a man who, in the feeling that the thing itself was so admirable as to leave all comment behind, went up and down, from object to object, lifting the veil from every one, and did no more. What he said of Lavater, may truelier be said of him, that "it was fearful to stand in the presence of one before whom all the boundaries within which Nature has circumscribed our being were laid flat." His are the bright and terrible eyes which meet the modern student in every sacred chapel of thought, in every public enclosure.

But now, that we may not seem to dodge the question which all men ask, nor

pay a great man so ill a compliment as to praise him only in the conventional and comparative speech, let us honestly record our thought upon the total worth and influence of this genius. Does he represent, not only the achievement of that age in which he lived, but that which it would be and is now becoming? And what shall we think of that absence of the moral sentiment, that singular equivalence to him of good and evil in action, which discredit his compositions to the pure? The spirit of his biography, of his poems, of his tales, is identical, and we may here set down by way of comment on his genius the impressions recently awakened in us by the story of Wilhelm Meister.

All great men have written proudly, nor cared to explain. They knew that the intelligent reader would come at last, and would thank them. So did Dante, so did Machiavel. Goethe has done this in Meister. We can fancy him saying to himself: — There are poets enough of the Ideal; let me paint the Actual, as, after years of dreams, it will still appear and reappear to wise men. That all shall right itself in the long Morrow, I may well allow, and my novel may wait for the same regeneration. The age, that can damn it as false and falsifying, will see that it is deeply one with the genius and history of all the centuries. I have given my characters a bias to error. Men have the same. I have let mischance befall instead of good fortune. They do so daily. And out of many vices and misfortunes, I have let a great success grow, as I had known in my own and many other examples. Fierce churchmen and effeminate aspirants will chide and hate my name, but every keen beholder of life will justify my truth, and will acquit me of prejudging the cause of humanity by painting it with this morose fidelity. To a profound soul is not austere truth the sweetest flattery?

Yes, O Goethe! but the ideal is truer than the actual. That is ephemeral, but this changes not. Moreover, because nature is moral, that mind only can see, in which the same order entirely obtains. An interchangeable Truth, Beauty and Goodness, each wholly interfused in the other, must make the humors of that eye which would see causes reaching to their last effect and reproducing the world forever. The least inequality of mixture, the excess of one element over the other, in that degree diminishes the transparency of things, makes the world opaque to the observer, and destroys so far the value of his experience. No particular gifts can countervail this defect. In reading Meister, I am charmed with the insight; to use a phrase of Ben Jonson's, "it is rammed with life." I find there actual men and women even too faithfully painted. I am moreover instructed in the possibility of a highly accomplished society, and taught to look for great talent and culture under a gray coat. But this is all. The limits of artificial society are never quite out of sight. The vicious conventions, which hem us in like prison walls and which the poet should explode at his touch, stand

for all they are worth in the newspaper. We are never lifted above ourselves, we are not transported out of the dominion of the senses, or cheered with an infinite tenderness, or armed with a grand trust.

Goethe, then, must be set down as the poet of the Actual, not of the Ideal; the poet of limitation, not of possibility; of this world, and not of religion and hope; in short, if we may say so, the poet of prose, and not of poetry. He accepts the base doctrine of Fate, and gleans what straggling joys may yet remain out of its ban. He is like a banker or a weaver with a passion for the country; he steals out of the hot streets before sunrise, or after sunset, or on a rare holiday, to get a draft of sweet air and a gaze at the magnificence of summer, but dares not break from his slavery and lead a man's life in a man's relation to nature. In that which should be his own place, he feels like a truant, and is scourged back presently to his task and his cell. Poetry is with Goethe thus external, the gilding of the chain, the mitigation of his fate; but the Muse never assays those thunder-tones which cause to vibrate the sun and the moon, which dissipate by dreadful melody all this iron network of circumstance, and abolish the old heavens and the old earth before the freewill or Godhead of man. That Goethe had not a moral perception proportionate to his other powers, is not then merely a circumstance, as we might relate of a man that he had or had not the sense of tune or an eye for colors, but it is the cardinal fact of health or disease; since, lacking this, he failed in the high sense to be a creator, and, with divine endowments, drops by irreversible decree into the common history of genius. He was content to fall into the track of vulgar poets and spend on common aims his splendid endowments, and has declined the office proffered to now and then a man in many centuries in the power of his genius, of a Redeemer of the human mind. He has written better than other poets only as his talent was subtler, but the ambition of creation he refused. Life for him is prettier, easier, wiser, decenter, has a gem or two more on its robe, but its old eternal burden is not relieved; no drop of healthier blood flows yet in its veins. Let him pass. Humanity must wait for its physician still at the side of the road, and confess as this man goes out, that they have served it better who assured it out of the innocent hope in their hearts that a Physician will come, than this majestic Artist, with all the treasuries of wit, of science, and of power at his command.

The criticism, which is not so much spoken as felt in reference to Goethe, instructs us directly in the hope of literature. We feel that a man gifted like him should not leave the world as he found it. It is true, though somewhat sad, that every fine genius teaches us how to blame himself. Being so much, we cannot forgive him for not being more. When one of these grand monads is incarnated whom nature seems to design for eternal men and draw to her bosom, we think

that the old weariness of Europe and Asia, the trivial forms of daily life will now end, and a new morning break on us all. What is Austria? What is England? What is our graduated and petrified social scale of ranks and employments? Shall not a poet redeem us from these idolatries, and pale their legendary lustre before the fires of the Divine Wisdom which burn in his heart? All that in our sovereign moments each of us has divined of the powers of thought, all the hints of omnipresence and energy which we have caught, this man should unfold, and constitute facts.

And this is the insatiable craving which alternately saddens and gladdens men at this day. The Doctrine of the Life of Man established after the truth through all his faculties; — this is the thought which the literature of this hour meditates and labors to say. This is that which tunes the tongue and fires the eye and sits in the silence of the youth. Verily it will not long want articulate and melodious expression. There is nothing in the heart but comes presently to the lips. The very depth of the sentiment, which is the author of all the cutaneous life we see, is guarantee for the riches of science and of song in the age to come. He who doubts whether this age or this country can yield any contribution to the literature of the world, only betrays his own blindness to the necessities of the human soul. Has the power of poetry ceased, or the need? Have the eyes ceased to see that which they would have, and which they have not? Have they ceased to see other eyes? Are there no lonely, anxious, wondering children, who must tell their tale? Are we not evermore whipped by thoughts;

“In sorrow steeped, and steeped in love
Of thoughts not yet incarnated.”

The heart beats in this age as of old, and the passions are busy as ever. Nature has not lost one ringlet of her beauty, one impulse of resistance and valor. From the necessity of loving none are exempt, and he that loves must utter his desires. A charm as radiant as beauty ever beamed, a love that fainteth at the sight of its object, is new to-day.

“The world does not run smoother than of old,
There are sad haps that must be told.”

Man is not so far lost but that he suffers ever the great Discontent which is the elegy of his loss and the prediction of his recovery. In the gay saloon he laments that these figures are not what Raphael and Guercino painted. Withered though

he stand, and trifler though he be, the august spirit of the world looks out from his eyes. In his heart he knows the ache of spiritual pain, and his thought can animate the sea and land. What then shall hinder the Genius of the time from speaking its thought? It cannot be silent, if it would. It will write in a higher spirit and a wider knowledge and with a grander practical aim than ever yet guided the pen of poet. It will write the annals of a changed world, and record the descent of principles into practice, of love into Government, of love into Trade. It will describe the new heroic life of man, the now unbelieved possibility of simple living and of clean and noble relations with men. Religion will bind again these that were sometime frivolous, customary, enemies, skeptics, self-seekers, into a joyful reverence for the circumambient Whole, and that which was ecstasy shall become daily bread.

II. WALTER SAVAGE LANDER. 1

We sometimes meet in a stage coach in New England an erect, muscular man, with fresh complexion and a smooth hat, whose nervous speech instantly betrays the English traveller; — a man nowise cautious to conceal his name or that of his native country, or his very slight esteem for the persons and the country that surround him. When Mr. Boll rides in an American coach, he speaks quick and strong; he is very ready to confess his ignorance of everything about him, persons, manners, customs, politics, geography. He wonders that the Americans should build with wood, whilst all this stone is lying in the roadside; and is astonished to learn that a wooden house may last a hundred years; nor will he remember the fact as many minutes after it has been told him: he wonders that they do not make elder-wine and cherry-bounce, since here are cherries, and every mile is crammed with elder-bushes. He has never seen a good horse in America, nor a good coach, nor a good inn. Here is very good earth and water and plenty of them; that he is free to allow; to all other gifts of nature or man his eyes are sealed by the inexorable demand for the precise conveniences to which he is accustomed in England. Add to this proud blindness the better quality of great downrightness in speaking the truth, and the love of fair play, on all occasions, and moreover the peculiarity which is alleged of the Englishman, that his virtues do not come out until he quarrels.

Transfer these traits to a very elegant and accomplished mind, and we shall have no bad picture of Walter Savage Landor, who may stand as a favorable impersonation of the genius of his countrymen at the present day. A sharp, dogmatic man, with a great deal of knowledge, a great deal of worth, and a great deal of pride; with, a profound contempt for all that he does not understand; a master of all elegant learning, and capable of the utmost delicacy of sentiment, and yet prone to indulge a sort of ostentation of coarse imagery and language. His partialities and dislikes are by no means culpable, but are often whimsical and amusing; yet they are quite sincere, and, like those of Johnson and Coleridge, are easily separable from the man. What he says of Wordsworth is true of himself, that he delights to throw a clod of dirt on the table, and cry “Gentlemen, there is a better man than all of you.” Bolivar, Mina and General Jackson will never be greater soldiers than Napoleon and Alexander, let Mr. Landor think as he will; nor will he persuade us to burn Plato and Xenophon, out of our admiration of Bishop Patrick, or “Lucas on Happiness,” or “Lucas on Holiness,” or even Barrow’s Sermons. Yet a man may love a paradox without either losing his wit or his honesty. A less pardonable eccentricity is the cold and

gratuitous obtrusion of licentious images, not so much the suggestion of merriment as of bitterness. Montaigne assigns as a reason for his license of speech, that he is tired of seeing his Essays on the work-tables of ladies, and he is determined they shall for the future put them out of sight. In Mr. Landor's coarseness there is a certain air of defiance, and the rude word seems sometimes to arise from a disgust at niceness and over-refinement. Before a well-dressed company he plunges his fingers in a cesspool, as if to expose the whiteness of his hands and the jewels of his ring. Afterward, he washes them in water, he washes them in wine; but you are never secure from his freaks. A sort of Earl Peterborough in literature, his eccentricity is too decided not to have diminished his greatness. He has capital enough to have furnished the brain of fifty stock authors, yet has written no book.

But we have spoken all our discontent. Possibly his writings are open to harsher censure; but we love the man, from sympathy as well as for reasons to be assigned; and have no wish, if we were able, to put an argument in the mouth of his critics. Now for twenty years we have still found the "Imaginary Conversations" a sure resource in solitude, and it seems to us as original in its form as in its matter. Nay, when we remember his rich and ample page, wherein we are always sure to find free and sustained thought, a keen and precise understanding, an affluent and ready memory familiar with all chosen books, an industrious observation in every department of life, an experience to which nothing has occurred in vain, honor for every just and generous sentiment and a scourge like that of Furies for every oppressor, whether public or private, — we feel how dignified is this perpetual Censor in his curule chair, and we wish to thank a benefactor of the reading world.

Mr. Landor is one of the foremost of that small class who make good in the nineteenth century the claims of pure literature. In these busy days of avarice and ambition, when there is so little disposition to profound thought or to any but the most superficial intellectual entertainments, a faithful scholar, receiving from past ages the treasures of wit and enlarging them by his own love, is a friend and consoler of mankind. When we pronounce the names of Homer and Æschylus; Horace, Ovid and Plutarch; Erasmus, Scaliger and Montaigne; Ben Jonson and Isaak Walton; Dryden and Pope, — we pass at once out of trivial associations and enter into a region of the purest pleasure accessible to human nature. We have quitted all beneath the moon and entered that crystal sphere in which everything in the world of matter reappears, but transfigured and immortal. Literature is the effort of man to indemnify himself for the wrongs of his condition. The existence of the poorest play-wright and the humblest scrivener is a good omen. A charm attaches to the most inferior names which have in any

manner got themselves enrolled in the registers of the House of Fame, even as porters and grooms in the courts; to Creech and Fenton, Theobald and Dennis, Aubrey and Spence. From the moment of entering a library and opening a desired book, we cease to be citizens, creditors, debtors, housekeepers and men of care and fear. What boundless leisure! what original jurisdiction! the old constellations have set, new and brighter have arisen; an Elysian light tinges all objects: —

“In the afternoon we came unto a land
In which it seemed always afternoon.”

And this sweet asylum of an intellectual life must appear to have the sanction of nature, as long as so many men are born with so decided an aptitude for reading and writing. Let us thankfully allow every faculty and art which opens new scope to a life so confined as ours. There are vast spaces in a thought: a slave, to whom the religious sentiment is opened, has a freedom which makes his master's freedom a slavery. Let us not be so illiberal with our schemes for the renovation of society and nature as to disesteem or deny the literary spirit. Certainly there are heights in nature which command this; there are many more which this commands. It is vain to call it a luxury, and as saints and reformers are apt to do, decry it as a species of day-dreaming. What else are sanctities, and reforms, and all other things? Whatever can make for itself an element, means, organs, servants, and the most profound and permanent existence in the hearts and heads of millions of men, must have a reason for its being. Its excellency is reason and vindication enough. If rhyme rejoices us there should be rhyme, as much as if fire cheers us we should bring wood and coals. Each kind of excellence takes place for its hour and excludes everything else. Do not brag of your actions, as if they were better than Homer's verses or Raphael's pictures. Raphael and Homer feel that action is pitiful beside their enchantments. They could act too, if the stake was worthy of them: but now all that is good in the universe urges them to their task. Whoever writes for the love of truth and beauty, and not with ulterior ends, belongs to this sacred class; and among these, few men of the present age have a better claim to be numbered than Mr. Landor. Wherever genius or taste has existed, wherever freedom and justice are threatened, which he values as the element in which genius may work, his interest is sure to be commanded. His love of beauty is passionate, and betrays itself in all petulant and contemptuous expressions.

But beyond his delight in genius and his love of individual and civil liberty, Mr. Landor has a perception that is much more rare, the appreciation of character. This is the more remarkable considered with his intense nationality, to which we have already alluded. He is buttoned in English broadcloth to the chin.

He hates the Austrians, the Italians, the French, the Scotch, and the Irish. He has the common prejudices of an English landholder; values his pedigree, his acres and the syllables of his name; loves all his advantages, is not insensible to the beauty of his watch-seal, or the Turk's head on his umbrella; yet with all this miscellaneous pride there is a noble nature within him which instructs him that he is so rich that he can well spare all his trappings, and, leaving to others the painting of circumstance, aspire to the office of delineating character. He draws his own portrait in the costume of a village schoolmaster, and a sailor, and serenely enjoys the victory of nature over fortune. Not only the elaborated story of Normanby, but the whimsical selection of his heads proves this taste. He draws with evident pleasure the portrait of a man who never said anything right and never did anything wrong. But in the character of Pericles he has found full play for beauty and greatness of behavior, where the circumstances are in harmony with the man. These portraits, though mere sketches, must be valued as attempts in the very highest kind of narrative, which not only has very few examples to exhibit of any success, but very few competitors in the attempt. The word Character is in all mouths; it is a force which we all feel; yet who has analyzed it? What is the nature of that subtle and majestic principle which attaches us to a few persons, not so much by personal as by the most spiritual ties? What is the quality of the persons who, without being public men, or literary men, or rich men, or active men, or (in the popular sense) religious men, have a certain salutary omnipresence in all our life's history, almost giving their own quality to the atmosphere and the landscape? A moral force, yet wholly unmindful of creed and catechism, intellectual, but scornful of books, it works directly and without means, and though it may be resisted at any time, yet resistance to it is a suicide. For the person who stands in this lofty relation to his fellow-men is always the impersonation to them of their conscience. It is a sufficient proof of the extreme delicacy of this element, evanescing before any but the most sympathetic vision, that it has so seldom been employed in the drama and in novels. Mr. Landor, almost alone among living English writers, has indicated his perception of it.

These merits make Mr. Landor's position in the republic of letters one of great mark and dignity. He exercises with a grandeur of spirit the office of writer, and carries it with an air of old and unquestionable nobility. We do not recollect an example of more complete independence in literary history. He has no clanship, no friendships that warp him. He was one of the first to pronounce Wordsworth the great poet of the age, yet he discriminates his faults with the greater freedom. He loves Pindar, Æschylus, Euripides, Aristophanes, Demosthenes, Virgil, yet with open eyes. His position is by no means the highest

in literature: he is not a poet or a philosopher. He is a man full of thoughts, but not, like Coleridge, a man of ideas. Only from a mind conversant with the First Philosophy can definitions be expected. Coleridge has contributed many valuable ones to modern literature. Mr. Landor's definitions are only enumerations of particulars; the generic law is not seized. But as it is not from the highest Alps or Andes but from less elevated summits that the most attractive landscape is commanded, so is Mr. Landor the most useful and agreeable of critics. He has commented on a wide variety of writers, with a closeness and extent of view which has enhanced the value of those authors to his readers. His Dialogue on the Epicurean philosophy is a theory of the genius of Epicurus. The Dialogue between Barrow and Newton is the best of all criticisms on the essays of Bacon. His picture of Demosthenes in three several Dialogues is new and adequate. He has illustrated the genius of Homer, Æschylus, Pindar, Euripides, Thucydides. Then he has examined before he has expatiated, and the minuteness of his verbal criticism gives a confidence in his fidelity when he speaks the language of meditation or of passion. His acquaintance with the English tongue is unsurpassed. He "hates false words, and seeks with care, difficulty and moroseness those that fit the thing." He knows the value of his own words. "They are not," he says, "written on slate." He never stoops to explanation, nor uses seven words where one will do. He is a master of condensation and suppression, and that in no vulgar way. He knows the wide difference between compression and an obscure elliptical style. The dense writer has yet ample room and choice of phrase, and even a gamesome mood often between his valid words. There is no inadequacy or disagreeable contraction in his sentence, any more than in a human face, where in a square space of a few inches is found room for every possible variety of expression.

Yet it is not as an artist that Mr. Landor commends himself to us. He is not epic or dramatic, he has not the high, overpowering method by which the master gives unity and integrity to a work of many parts. He is too wilful, and never abandons himself to his genius. His books are a strange mixture of politics, etymology, allegory, sentiment, and personal history; and what skill of transition he may possess is superficial, not spiritual. His merit must rest, at last, not on the spirit of the dialogue or the symmetry of any of his historical portraits, but on the value of his sentences. Many of these will secure their own immortality in English literature; and this, rightly considered, is no mean merit. These are not plants and animals, but the genetical atoms of which both are composed. All our great debt to the Oriental world is of this kind, not utensils and statues of the precious metal, but bullion and gold-dust. Of many of Mr. Landor's sentences we are fain to remember what was said of those of Socrates; that they are cubes,

which will stand firm, place them how or where you will.

III. PRAYERS.

[The Dial, vol. iii. p. 77.]

“Not with fond shekels of the tested gold,
Nor gems whose rates are either rich or poor
As fancy values them: but with true prayers,
That shall be up at heaven and enter there
Ere sunrise; prayers from preserved souls,
From fasting maids, whose minds are dedicate
To nothing temporal.”

Shakspeare

Pythagoras said that the time when men are honestest is when they present themselves before the gods. If we can overhear the prayer we shall know the man. But prayers are not made to be overheard, or to be printed, so that we seldom have the prayer otherwise than it can be inferred from the man and his fortunes, which are the answer to the prayer, and always accord with it. Yet there are scattered about in the earth a few records of these devout hours, which it would edify us to read, could they be collected in a more catholic spirit than the wretched and repulsive volumes which usurp that name. Let us not have the prayers of one sect, nor of the Christian Church, but of men in all ages and religions who have prayed well. The prayer of Jesus is (as it deserves) become a form for the human race. Many men have contributed a single expression, a single word to the language of devotion, which is immediately caught and stereotyped in the prayers of their church and nation. Among the remains of Euripides we have this prayer: "Thou God of all! infuse light into the souls of men, where by they may be enabled to know what is the root from whence all their evils spring, and by what means they may avoid them." In the Phædrus of Plato, we find this petition in the mouth of Socrates: "O gracious Pan! and ye other gods who preside over this place! grant that I may be beautiful within; and that those external things which I have may be such as may best agree with a right internal disposition of mine; and that I may account him to be rich, who is wise and just." Wacic the Caliph, who died A.D. 845, ended his life, the Arabian historians tell us, with these words: "O thou whose kingdom never passes away, pity one whose dignity is so transient." But what led us to these remembrances was the happy accident which in this undevout age lately brought us acquainted with two or three diaries, which attest, if there be need of attestation, the eternity of the sentiment and its equality to itself through all the variety of expression. The first is the prayer of a deaf and dumb boy: — "When my long-attached friend comes to me, I have pleasure to converse with him, and I rejoice to pass my eyes over his countenance; but soon I am weary of spending my time causelessly and unimproved, and I desire to leave him, (but not in rudeness), because I wished to be engaged in my business. But thou, O my Father, knowest I always delight to commune with thee in my lone and silent heart; I am never full of thee; I am never weary of thee; I am always desiring thee. I hunger with strong hope and affection for thee, and I thirst for thy grace and spirit.

"When I go to visit my friends, I must put on my best garments, and I must think of my manner to please them. I am tired to stay long, because my mind is not free, and they sometimes talk gossip with me. But oh, my Father, thou

visitest me in my work, and I can lift up my desires to thee, and my heart is cheered and at rest with thy presence, and I am always alone with thee, and thou dost not steal my time by foolishness. I always ask in my heart, where can I find thee?”

The next is a voice out of a solitude as strict and sacred as that in which nature had isolated this eloquent mute: — “My Father, when I cannot be cheerful or happy, I can be true and obedient, and I will not forget that joy has been, and may still be. If there is no hour of solitude granted me, still I will commune with thee. If I may not search out and pierce thy thought, so much the more may my living praise thee. At whatever price, I must be alone with thee; this must be the demand I make. These duties are not the life, but the means which enable us to show forth the life. So must I take up this cross, and bear it willingly. Why should I feel reproved when a busy one enters the room? I am not idle, though I sit with folded hands, but instantly I must seek some cover. For that shame I reprove myself. Are they only the valuable members of society who labor to dress and feed it? Shall we never ask the aim of all this hurry and foam, of this aimless activity? Let the purpose for which I live be always before me; let every thought and word go to confirm and illuminate that end; namely, that I must become near and dear to thee; that now I am beyond the reach of all but thee.

“How can we not be reconciled to thy will? I will know the joy of giving to my friend the dearest treasure I have. I know that sorrow comes not at once only. We cannot meet it and say, now it is overcome, but again, and yet again, its flood pours over us, and as full as at first.

“If but this tedious battle could be fought,
Like Sparta’s heroes at one rocky pass,
‘One day be spent in dying,’ men had sought
The spot, and been cut down like mower’s grass.”

The next is in a metrical form. It is the aspiration of a different mind, in quite other regions of power and duty, yet they all accord at last.

“Great God, I ask thee for no meaner pelf Than that I may not disappoint myself,
That in my action I may soar as high, As I can now discern with this clear eye.

And next in value, which thy kindness lends, That I may greatly disappoint my friends,
Howe’er they think or hope that it may be, They may not dream how thou’st distinguished me.

That my weak hand may equal my firm faith, And my life practise more than my tongue saith;
That my low conduct may not show, Nor my relenting lines,

That I thy purpose did not know, Or overrated thy designs.”

The last of the four orisons is written in a singularly calm and healthful spirit, and contains this petition: — “My Father: I now come to thee with a desire to thank thee for the continuance of our love, the one for the other. I feel that without thy love in me I should be alone here in the flesh. I cannot express my gratitude for what thou hast been and continuest to be to me. But thou knowest what my feelings are. When nought on earth seemeth pleasant to me, thou dost make thyself known to me, and teach that which is needful for me, and dost cheer my travels on. I know that thou hast not created me and placed me here on earth, amidst its toils and troubles and the follies of those around me, and told me to be like thyself when I see so little of thee here to profit by; thou hast not done this, and then left me here to myself, a poor, weak man, scarcely able to earn my bread. No; thou art my Father and I will love thee, for thou didst first love me, and lovest me still. We will ever be parent and child. Wilt thou give me strength to persevere in this great work of redemption. Wilt thou show me the true means of accomplishing it. ... I thank thee for the knowledge that I have attained of thee by thy sons who have been before me, and especially for him who brought me so perfect a type of thy goodness and love to men. ... I know that thou wilt deal with me as I deserve. I place myself therefore in thy hand, knowing that thou wilt keep me from harm so long as I consent to live under thy protecting care.”

Let these few scattered leaves, which a chance (as men say, but which to us shall be holy) brought under our eye nearly at the same moment, stand as an example of innumerable similar expressions which no mortal witness has reported, and be a sign of the times. Might they be suggestion to many a heart of yet higher secret-experiences which are ineffable! But we must not tie up the rosary on which we have strung these few white beads, without adding a pearl of great price from that book of prayer, the “Confessions of Saint Augustine.”

“And being admonished to reflect upon myself, I entered into the very inward parts of my soul, by thy conduct; and I was able to do it, because now thou wert become my helper. I entered and discerned with the eye of my soul (such as it was), even beyond my soul and mind itself, the Light unchangeable. Not this vulgar light which all flesh may look upon, nor as it were a greater of the same kind, as though the brightness of this should be manifold greater and with its greatness take up all space. Not such was this light, but other, yea, far other from all these. Neither was it so above my understanding as oil swims above water, or as the heaven is above the earth. But it is above me, because it made me; and I am under it, because I was made by it. He that knows truth or verity, knows what

that light is, and he that knows it, knows eternity, and it is known by charity. O eternal Verity! and true Charity! and dear Eternity! thou art my God, to thee do I sigh day and night. Thee when I first knew, thou liftedst me up that I might see, there was what I might see, and that I was not yet such as to see. And thou didst beat back my weak sight upon myself, shooting out beams upon me after a vehement manner; and I even trembled between love and horror, and I found myself to be far off, and even in the very region of dissimilitude from thee.”

IV. AGRICULTURE OF MASSACHUSETTS.

[The Dial, vol. iii. p. 123.]

In an afternoon in April, after a long walk, I traversed an orchard where boys were grafting apple-trees, and found the Farmer in his corn-field. He was holding the plow, and his son driving the oxen. This man always impresses me with respect, he is so manly, so sweet-tempered, so faithful, so disdainful of all appearances, — excellent and re-verable in his old weather-worn cap and blue frock bedaubed with the soil of the field; so honest withal, that he always needs to be watched lest he should cheat himself. I still remember with some shame that in some dealing we had together a long time ago, I found that he had been looking to my interest in the affair, and I had been looking to my interest, and nobody had looked to his part. As I drew near this brave laborer in the midst of his own acres, I could not help feeling for him the highest respect. Here is the Cæsar, the Alexander of the soil, conquering and to conquer, after how many and many a hard-fought summer's day and winter's day; not like Napoleon, hero of sixty battles only, but of six thousand, and out of every one he has come victor; and here he stands, with Atlantic strength and cheer, invincible still. These slight and useless city limbs of ours will come to shame before this strong soldier, for his have done his own work and ours too. What good this man has or has had, he has earned. No rich father or father-in-law left him any inheritance of land or money. He borrowed the money with which he bought his farm, and has bred up a large family, given them a good education, and improved his land in every way year by year, and this without prejudice to himself the landlord, for here he is, a man every inch of him, and reminds us of the hero of the Robin Hood ballad, —

“Much, the miller's son,
There was no inch of his body
But it was worth a groom.”

Innocence and justice have written their names on his brow. Toil has not broken his spirit. His laugh rings with the sweetness and hilarity of a child; yet he is a man of a strongly intellectual taste, of much reading, and of an erect good sense and independent spirit which can neither brook usurpation nor falsehood in any shape. I walked up and down the field, as he ploughed his furrow, and we talked as we walked. Our conversation naturally turned on the season and its new labors. He had been reading the Report of the Agricultural Survey of the Commonwealth, and had found good things in it; but it was easy to see that he felt toward the author much as soldiers do towards the historiographer who

follows the camp, more good-nature than reverence for the gownsman.

The First Report, he said, is better than the last, as I observe the first sermon of a minister is often his best, for every man has one thing which he specially wishes to say, and that comes out at first. But who is this book written for? Not for farmers; no pains are taken to send it to them; it was by accident that this volume came into my hands for a few days. And it is not for them. They could not afford to follow such advice as is given here; they have sterner teachers; their own business teaches them better. No; this was written for the literary men. But in that case, the state should not be taxed to pay for it. Let us see. The account of the maple sugar, — that is very good and entertaining, and, I suppose, true. The story of the farmer's daughter, whom education had spoiled for everything useful on a farm, — that is good too, and we have much that is like it in Thomas's Almanack. But why this recommendation of stone houses? They are not so cheap, not so dry, and not so fit for us. Our roads are always changing their direction, and after a man has built at great cost a stone house, a new road is opened, and he finds himself a mile or two from the highway. Then our people are not stationary, like those of old countries, but always alert to better themselves, and will remove from town to town as a new market opens or a better farm is to be had, and do not wish to spend too much on their buildings.

The Commissioner advises the farmers to sell their cattle and their hay in the fall, and buy again in the spring. But we farmers always know what our interest dictates, and do accordingly. We have no choice in this matter; our way is but too plain. Down below, where manure is cheap and hay dear, they will sell their oxen in November; but for me to sell my cattle and my produce in the fall, would be to sell my farm, for I should have no manure to renew a crop in the spring. And thus Necessity farms it; necessity finds out when to go to Brighton, and when to feed in the stall, better than Mr. Colman can tell us.

But especially observe what is said throughout these Reports of the model farms and model farmers. One would think that Mr. D. and Major S. were the pillars of the Commonwealth. The good Commissioner takes off his hat when he approaches them, distrusts the value of "his feeble praise," and repeats his compliments as often as their names are introduced. And yet, in my opinion, Mr. D., with all his knowledge and present skill, would starve in two years on any one of fifty poor farms in this neighborhood, on each of which now a farmer manages to get a good living. Mr. D. inherited a farm, and spends on it every year from other resources; otherwise his farm had ruined him long since; — and as for the Major, he never got rich by his skill in making land produce, but in making men produce. The truth is, a farm will not make an honest man rich in money. I do not know of a single instance in which a man has honestly got rich

by farming alone. It cannot be done. The way in which men who have farms grow rich, is either by other resources, or by trade, or by getting their labor for nothing, or by other methods of which I could tell you many sad anecdotes. What does the Agricultural Surveyor know of all this? What can he know? He is the victim of the "Reports," that are sent him, of particular farms. He cannot go behind the estimates to know how the contracts were made, and how the sales were effected. The true men of skill, the poor farmers, who, by the sweat of their face, without an inheritance and without offence to their conscience have reared a family of valuable citizens and matrons to the state, reduced a stubborn soil to a good farm, — although their buildings are many of them shabby, are the only right subjects of this Report; yet these make no figure in it. These should be holden up to imitation, and their methods detailed; yet their houses are very uninviting and inconspicuous to State Commissioners. So with these premiums to farms, and premiums at cattle-shows. The class that I describe must pay the premium which is awarded to the rich. Yet the premium obviously ought to be given for the good management of a poor farm.

In this strain the Farmer proceeded, adding many special criticisms. He had a good opinion of the Surveyor, and acquitted him of any blame in the matter, but was incorrigible in his skepticism concerning the benefits conferred by legislatures on the agriculture of Massachusetts. I believe that my friend is a little stiff and inconvertible in his own opinions, and that there is another side to be heard; but so much wisdom seemed to lie under all his statement that it deserved a record.

V. EUROPE AND EUROPEAN BOOKS.

[*The Dial*, vol. iii. p. 511.]

It was a brighter day than we have often known in our literary calendar, when within a twelvemonth a single London advertisement announced a new volume of poems by Wordsworth, poems by Tennyson, and a play by Henry Taylor. Wordsworth's nature or character has had all the time it needed in order to make its mark and supply the want of talent. We have learned how to read him. We have ceased to expect that which he cannot give. He has the merit of just moral perception, but not that of deft poetic execution. How would Milton curl his lip at such slipshod newspaper style. Many of his poems, as for example the Rylstone Doe, might be all improvised. Nothing of Milton, nothing of Marvell, of Herbert, of Dryden, could be. These are such verses as in a just state of culture should be *vers de société*, such as every gentleman could write but none would think of printing, or of claiming the poet's laurel on their merit. The Pindar, the Shakspeare, the Dante, whilst they have the just and open soul, have also the eye to see the dimmest star that glimmers in the Milky Way, the serratures of every leaf, the test-objects of the microscope, and then the tongue to utter the same things in words that engrave them on all the ears of mankind. The poet demands all gifts, and not one or two only.

The poet, like the electric rod, must reach from a point nearer the sky than all surrounding objects, down to the earth, and into the dark wet soil, or neither is of use. The poet must not only converse with pure thought, but he must demonstrate it almost to the senses. His words must be pictures, his verses must be spheres and cubes, to be seen and smelled and handled. His fable must be a good story, and its meaning must hold as pure truth. In the debates on the Copyright Bill, in the English Parliament, Mr. Sergeant Wakley, the coroner, quoted Wordsworth's poetry in derision, and asked the roaring House of Commons what that meant, and whether a man should have public reward for writing such stuff. Homer, Horace, Milton and Chaucer would defy the coroner. Whilst they have wisdom to the wise, he would see that to the external they have external meaning. Coleridge excellently said of poetry, that poetry must first be good sense; as a palace might well be magnificent, but first it must be a house.

Wordsworth is open to ridicule of this kind. And yet Wordsworth, though satisfied if he can suggest to a sympathetic mind his own mood, and though setting a private and exaggerated value on his compositions; though confounding his accidental with the universal consciousness, and taking the public to task for

not admiring his poetry, — is really a master of the English language, and his poems evince a power of diction that is no more rivalled by his contemporaries than is his poetic insight. But the capital merit of Wordsworth is that he has done more for the sanity of this generation than any other writer. Early in life, at a crisis it is said in his private affairs, he made his election between assuming and defending some legal rights, with the chances of wealth and a position in the world, — and the inward promptings of his heavenly genius; he took his part; he accepted the call to be a poet, and sat down, far from cities, with coarse clothing and plain fare to obey the heavenly vision. The choice he had made in his will, manifested itself in every line to be real. We have poets who write the poetry of society, of the patrician and conventional Europe, as Scott and Moore, and others who, like Byron or Bulwer, write the poetry of vice and disease. But Wordsworth threw himself into his place, made no reserves or stipulations; man and writer were not to be divided. He sat at the foot of Helvellyn and on the margin of Windermere, and took their lustrous mornings and their sublime midnights for his theme, and not Marlow, nor Massinger, not Horace, nor Milton, nor Dante. He once for all forsook the styles and standards and modes of thinking of London and Paris, and the books read there, and the aims pursued, and wrote Helvellyn and Windermere, and the dim spirits which these haunts harbored. There was not the least attempt to reconcile these with the spirit of fashion and selfishness, nor to show, with great deference to the superior judgment of dukes and earls, that although London was the home for men of great parts, yet Westmoreland had these consolations for such as fate had condemned to the country life, — but with a complete satisfaction he pitied and rebuked their false lives, and celebrated his own with the religion of a true priest. Hence the antagonism which was immediately felt between his poetry and the spirit of the age, that here not only criticism but conscience and will were parties; the spirit of literature and the modes of living and the conventional theories of the conduct of life were called in question on wholly new grounds, — not from Platonism, not from Christianity, but from the lessons which the country muse taught a stout pedestrian climbing a mountain and following a river from its parent rill down to the sea. The Cannings and Jeffreys of the capital, the Court Journals and Literary Gazettes were not well pleased, and voted the poet a bore. But that which rose in him so high as to the lips, rose in many others as high as to the heart. What he said, they were prepared to hear and confirm. The influence was in the air, and was wafted up and down into lone and into populous places, resisting the popular taste, modifying opinions which it did not change, and soon came to be felt in poetry, in criticism, in plans of life, and at last in legislation. In this country it very early found a stronghold, and its

effect may be traced on all the poetry both of England and America.

But, notwithstanding all Wordsworth's grand merits, it was a great pleasure to know that Alfred Tennyson's two volumes were coming out in the same ship; it was a great pleasure to receive them. The elegance, the wit and subtlety of this writer, his rich fancy, his power of language, his metrical skill, his independence on any living masters, his peculiar topics, his taste for the costly and gorgeous, discriminate the musky poet of gardens and conservatories, of parks and palaces. Perhaps we felt the popular objection that he wants rude truth; he is too fine. In these boudoirs of damask and alabaster, one is farther off from stern nature and human life than in Lalla Rookh and "The Loves of the Angels." Amid swinging censers and perfumed lamps, amidst velvet and glory we long for rain and frost. Otto-of-roses is good, but wild air is better. A critical friend of ours affirms that the vice which bereaved modern painters of their power, is the ambition to begin where their fathers ended; to equal the masters in their exquisite finish, instead of their religious purpose. The painters are not willing to paint ill enough; they will not paint for their times, agitated by the spirit which agitates their country; so should their picture picture us and draw all men after them; but they copy the technics of their predecessors, and paint for their predecessors' public. It seems as if the same vice had worked in poetry. Tennyson's compositions are not so much poems as studies in poetry, or sketches after the styles of sundry old masters. He is not the husband, who builds the homestead after his own necessity, from foundation-stone to chimney-top and turret, but a tasteful bachelor who collects quaint staircases and groined ceilings. We have no right to such superfineness. We must not make our bread of pure sugar. These delicacies and splendors are then legitimate when they are the excess of substantial and necessary expenditure. The best songs in English poetry are by that heavy, hard, pedantic poet, Ben Jonson. Jonson is rude, and only on rare occasions gay. Tennyson is always fine; but Jonson's beauty is more grateful than Tennyson's. It is a natural manly grace of a robust workman. Ben's flowers are not in pots at a city florist's, arranged on a flower-stand, but he is a countryman at a harvest-home, attending his ox-cart from the fields, loaded with potatoes and apples, with grapes and plums, with nuts and berries, and stuck with boughs of hemlock and sweet-briar, with ferns and pond lilies which the children have gathered. But let us not quarrel with our benefactors. Perhaps Tennyson is too quaint and elegant. What then? It is long since we have had as good a lyrist; it will be long before we have his superior. "Godiva" is a noble poem that will tell the legend a thousand years. The poem of all the poetry of the present age for which we predict the longest term, is "Abou ben Adhem," of Leigh Hunt. Fortune will still have her part in every victory, and it is strange that one of the best poems should

be written by a man who has hardly written any other. And "Godiva" is a parable which belongs to the same gospel. "Locksley Hall" and "The Two Voices" are meditative poems, which were slowly written to be slowly read. "The Talking Oak," though a little hurt by its wit and ingenuity, is beautiful, and the most poetic of the volume. "Ulysses" belongs to a high class of poetry, destined to be the highest, and to be more cultivated in the next generation. "Ænone" was a sketch of the same kind. One of the best specimens we have of the class is Wordsworth's "Laodamia," of which no special merit it can possess equals the total merit of having selected such a subject in such a spirit.

Next to the poetry, the novels, which come to us in every ship from England, have an importance increased by the immense extension of their circulation through the new cheap press, which sends them to so many willing thousands. We have heard it alleged with some evidence that the prominence given to intellectual power in Bulwer's romances has proved a main stimulus to mental culture in thousands of young men in England and America. The effect on manners cannot be less sensible, and we can easily believe that the behavior of the ballroom and of the hotel has not failed to draw some addition of dignity and grace from the fair ideals with which the imagination of a novelist has filled the heads of the most imitative class.

We are not very well versed in these books, yet we have read Mr. Bulwer enough to see that the story is rapid and interesting; he has really seen London society, and does not draw ignorant caricatures. He is not a genius, but his novels are marked with great energy and with a courage of experiment which in each instance had its degree of success. The story of Zanoni was one of those world-fables which is so agreeable to the human imagination that it is found in some form in the language of every country, and is always reappearing in literature. Many of the details of this novel preserve a poetic truth. We read Zanoni with pleasure, because magic is natural. It is implied in all superior culture that a complete man would need no auxiliaries to his personal presence. The eye and the word are certainly far subtler and stronger weapons than either money or knives. Whoever looked on the hero would consent to his will, being certified that his aims were universal, not selfish; and he would be obeyed as naturally as the rain and the sunshine are. For this reason, children delight in fairy tales. Nature is described in them as the servant of man, which they feel ought to be true. But Zanoni pains us and the author loses our respect, because he speedily betrays that he does not see the true limitations of the charm; because the power with which his hero is armed is a toy, inasmuch as the power does not flow from its legitimate fountains in the mind, is a power for London; a divine power converted into a burglar's false key or a highwayman's pistol to

rob and kill with.

But Mr. Bulwer's recent stories have given us who do not read novels, occasion to think of this department of literature, supposed to be the natural fruit and expression of the age. We conceive that the obvious division of modern romance is into two kinds: first, the novels of costume or of circumstance, which is the old style, and vastly the most numerous. In this class, the hero, without any particular character, is in a very particular circumstance; he is greatly in want of a fortune or of a wife, and usually of both, and the business of the piece is to provide him suitably. This is the problem to be solved in thousands of English romances, including the Porter novels and the more splendid examples of the Edgeworth and Scott Romances.

It is curious how sleepy and foolish we are, that these tales will so take us. Again and again we have been caught in that old foolish trap. Had one noble thought opening the chambers of the intellect, one sentiment from the heart of God been spoken by them, the reader had been made a participator of their triumph; he too had been an invited and eternal guest; but this reward granted them is property, all-excluding property, a little cake baked for them to eat and for none other, nay, a preference and cosseting which is rude and insulting to all but the minion.

Except in the stories of Edgeworth and Scott, whose talent knew how to give to the book a thousand adventitious graces, the novels of costume are all one, and there is but one standard English novel, like the one orthodox sermon, which with slight variation is repeated every Sunday from so many pulpits.

But the other novel, of which "Wilhelm Meister" is the best specimen, the novel of *character*, treats the reader with more respect; the development of character being the problem, the reader is made a partaker of the whole prosperity. Everything good in such a story remains with the reader when the book is closed. A noble book was Wilhelm Meister. It gave the hint of a cultivated society which we found nowhere else. It was founded on power to do what was necessary, each person finding it an indispensable qualification of membership that he could do something useful, as in mechanics or agriculture or other indispensable art; then a probity, a justice was to be its element, symbolized by the insisting that each property should be cleared of privilege, and should pay its full tax to the State. Then a perception of beauty was the equally indispensable element of the association, by which each was dignified and all were dignified; then each was to obey his genius to the length of abandonment. They watched each candidate vigilantly, without his knowing that he was observed, and when he had given proof that he was a faithful man, then all doors, all houses, all relations were open to him; high behavior fraternized

with high behavior, without question of heraldry, and the only power recognized is the force of character.

The novels of Fashion, of D'Israeli, Mrs. Gore, Mr. Ward, belong to the class of novels of costume, because the aim is purely external success. Of the tales of fashionable life, by far the most agreeable and the most efficient was Vivian Grey. Young men were and still are the readers and victims. Byron ruled for a time, but Vivian, with no tith of Byron's genius, rules longer. One can distinguish the Vivians in all companies. They would quiz their father and mother and lover and friend. They discuss sun and planets, liberty and fate, love and death, over the soup. They never sleep, go nowhere, stay nowhere, eat nothing, and know nobody, but are up to anything, though it were the genesis of nature, or the last cataclysm, — Festus-like, Faust-like, Jove-like, and could write an Iliad any rainy morning, if fame were not such a bore. Men, women, though the greatest and fairest, are stupid things; but a rifle, and a mild pleasant gunpowder, a spaniel, and a cheroot, are themes for Olympus. I fear it was in part the influence of such pictures on living society which made the style of manners of which we have so many pictures, as, for example, in the following account of the English fashionist. "His highest triumph is to appear with the most wooden manners, as little polished as will suffice to avoid castigation, nay, to contrive even his civilities so that they may appear as near as may be to affronts; instead of a noble high-bred ease, to have the courage to offend against every restraint of decorum, to invert the relation in which our sex stand to women, so that they appear the attacking, and he the passive or defensive party."

We must here check our gossip in mid volley and adjourn the rest of our critical chapter to a more convenient season.

VI. PAST AND PRESENT.

[The Dial, vol. iv. p. 96.]

Here is Carlyle's new poem, his Iliad of English woes, to follow his poem on France, entitled the History of the French Revolution. In its first aspect it is a political tract, and since Burke, since Milton, we have had nothing to compare with it, It grapples honestly with the facts lying before all men, groups and disposes them with a master's mind, and, with a heart full of manly tenderness, offers his best counsel to his brothers. Obviously it is the book of a powerful and accomplished thinker, who has looked with naked eyes at the dreadful political signs in England for the last few years, has conversed much on these topics with such wise men of all ranks and parties as are drawn to a scholar's house, until such daily and nightly meditation has grown into a great connection, if not a system of thoughts; and the topic of English politics becomes the best vehicle for the expression of his recent thinking, recommended to him by the desire to give some timely counsels, and to strip the worst mischiefs of their plausibility. It is a brave and just book, and not a semblance. "No new-truth," say the critics on all sides. Is it so? Truth is very old, but the merit of seers is not to invent but to dispose objects in their right places, and he is the commander who is always in the mount, whose eye not only sees details, but throws crowds of details into their right arrangement and a larger and juster totality than any other. The book makes great approaches to true contemporary history, a very rare success, and firmly holds up to daylight the absurdities still tolerated in the English and European system. It is such an appeal to the conscience and honor of England as cannot be forgotten, or be feigned to be forgotten. It has the merit which belongs to every honest book, that it was self-examining before it was eloquent, and so hits all other men, and, as the country people say of good preaching, "comes bounce down into every pew." Every reader shall carry away something. The scholar shall read and write, the farmer and mechanic shall toil, with new resolution, nor forget the book when they resume their labor.

Though no theocrat, and more than most philosophers a believer in political systems, Mr. Carlyle very fairly finds the calamity of the times, not in bad bills of Parliament, nor the remedy in good bills, but the vice in false and superficial aims of the people, and the remedy in honesty and insight. Like every work of genius, its great value is in telling such simple truths. As we recall the topics, we are struck with the force given to the plain truths; the picture of the English nation all sitting enchanted, the poor, enchanted so that they cannot work, the rich, enchanted so that they cannot enjoy, and are rich in vain; the exposure of

the progress of fraud into all arts and social activities; the proposition that the laborer must have a greater share in his earnings; that the principle of permanence shall be admitted into all contracts of mutual service; that the state shall provide at least schoolmaster's education for all the citizens; the exhortation to the workman that he shall respect the work and not the wages; to the scholar that he shall be there for light; to the idle, that no man shall sit idle; the picture of Abbot Samson, the true governor, who "is not there to expect reason and nobleness of others, he is there to give them of his own reason and nobleness;" and the assumption throughout the book, that a new chivalry and nobility, namely the dynasty of labor, is replacing the old nobilities. These things strike us with a force which reminds us of the morals of the Oriental or early Greek masters, and of no modern book. Truly in these things is great reward. It is not by sitting still at a grand distance and calling the human race *larvce*, that men are to be helped, nor by helping the depraved after their own foolish fashion, but by doing unweariedly the particular work we were born to do. Let no man think himself absolved because he does a generous action and befriends the poor, but let him see whether he so holds his property that a benefit goes from it to all. A man's diet should be what is simplest and readiest to be had, because it is so private a good. His house should be better, because that is for the use of hundreds, perhaps of thousands, and is the property of the traveller. But his speech is a perpetual and public instrument; let that always side with the race and yield neither a lie nor a sneer. His manners, — let them be hospitable and civilizing, so that no Phidias or Raphael shall have taught anything better in canvas or stone; and his acts should be representative of the human race, as one who makes them rich in his having, and poor in his want.

It requires great courage in a man of letters to handle the contemporary practical questions; not because he then has all men for his rivals, but because of the infinite entanglements of the problem, and the waste of strength in gathering unripe fruits. The task is superhuman; and the poet knows well that a little time will do more than the most puissant genius. Time stills the loud noise of opinions, sinks the small, raises the great, so that the true emerges without effort and in perfect harmony to all eyes; but the truth of the present hour, except in particulars and single relations, is unattainable. Each man can very well know his own part of duty, if he will; but to bring out the truth for beauty, and as literature, surmounts the powers of art. The most elaborate history of to-day will have the oddest dislocated look in the next generation. The historian of to-day is yet three ages off. The poet cannot descend into the turbid present without injury to his rarest gifts. Hence that necessity of isolation which genius has always felt. He must stand on his glass tripod, if he would keep his electricity.

But when the political aspects are so calamitous that the sympathies of the man overpower the habits of the poet, a higher than literary inspiration may succor him. It is a costly proof of character, that the most renowned scholar of England should take his reputation in his hand and should descend into the ring; and he has added to his love whatever honor his opinions may forfeit. To atone for this departure from the vows of the scholar and his eternal duties to this secular charity, we have at least this gain, that here is a message which those to whom it was addressed cannot choose but hear. Though they die, they must listen. It is plain that whether by hope or by fear, or were it only by delight in this panorama of brilliant images, all the great classes of English society must read, even those whose existence it proscribes. Poor Queen Victoria, — poor Sir Robert Peel, poor Primate and Bishops, — poor Dukes and Lords! There is no help in place or pride or in looking another way; a grain of wit is more penetrating than the lightning of the night-storm, which no curtains or shutters will keep out. Here is a book which will be read, no thanks to anybody but itself. What pains, what hopes, what vows, shall come of the reading! Here is a book as full of treason as an egg is full of meat, and every lordship and worship and high form and ceremony of English conservatism tossed like a foot-ball into the air, and kept in the air, with merciless kicks and rebounds, and yet not a word is punishable by statute. The wit has eluded all official zeal; and yet these dire jokes, these cunning thrusts, this flaming sword of Cherubim waved high in air, illuminates the whole horizon, and shows to the eyes of the universe every wound it inflicts. Worst of all for the party attacked, it bereaves them beforehand of all sympathy, by anticipating the plea of poetic and humane conservatism, and impressing the reader with the conviction that the satirist himself has the truest love for everything old and excellent in English land and institutions, and a genuine respect for the basis of truth in those whom he exposes.

We are at some loss how to state what strikes us as the fault of this remarkable book, for the variety and excellence of the talent displayed in it is pretty sure to leave all special criticism in the wrong. And we may easily fail in expressing the general objection which we feel. It appears to us as a certain disproportion in the picture, caused by the obtrusion of the whims of the painter. In this work, as in his former labors, Mr. Carlyle reminds us of a sick giant. His humors are expressed with so much force of constitution that his fancies are more attractive and more credible than the sanity of duller men. But the habitual exaggeration of the tone wearies whilst it stimulates. It is felt to be so much deduction from the universality of the picture. It is not serene sunshine, but everything is seen in lurid storm-lights. Every object attitudinizes, to the very mountains and stars almost, under the refraction of this wonderful humorist; and

instead of the common earth and sky, we have a Martin's Creation or Judgment Day. A crisis has always arrived which requires a *deus ex machinâ*. One can hardly credit, whilst under the spell of this magician, that the world always had the same bankrupt look, to foregoing ages as to us, — as of a failed world just re-collecting its old withered forces to begin again and try to do a little business. It was perhaps inseparable from the attempt to write a book of wit and imagination on English politics, that a certain local emphasis and love of effect, such as is the vice of preaching, should appear, — producing on the reader a feeling of forlornness by the excess of value attributed to circumstances. But the splendor of wit cannot outdazzle the calm daylight, which always shows every individual man in balance with his age, and able to work out his own salvation from all the follies of that, and no such glaring contrasts or severalties in that or this. Each age has its own follies, as its majority is made up of foolish young people; its superstitions appear no superstitions to itself; and if you should ask the contemporary, he would tell you, with pride or with regret, (according as he was practical or poetic), that he had none. But after a short time, down go its follies and weakness and the memory of them; its virtues alone remain, and its limitation assumes the poetic form of a beautiful superstition, as the dimness of our sight clothes the objects in the horizon with mist and color. The revelation of Reason is this of the unchangeableness of the fact of humanity under all its subjective aspects; that to the cowering it always cowers, to the daring it opens great avenues. The ancients are only venerable to us because distance has destroyed what was trivial; as the sun and stars affect us only grandly, because we cannot reach to their smoke and surfaces and say, Is that all?

And yet the gravity of the times, the manifold and increasing dangers of the English State, may easily excuse some over-coloring of the picture; and we at this distance are not so far removed from any of the specific evils, and are deeply participant in too many, not to share the gloom and thank the love and the courage of the counsellor. This book is full of humanity, and nothing is more excellent in this as in all Mr. Carlyle's works, than the attitude of the writer. He has the dignity of a man of letters, who knows what belongs to him, and never deviates from his sphere; a continuer of the great line of scholars, he sustains their office in the highest credit and honor. If the good heaven have any good word to impart to this unworthy generation, here is one scribe qualified and clothed for its occasion. One excellence he has in an age of Mammon and of criticism, that he never suffers the eye of his wonder to close. Let who will be the dupe of trifles, he cannot keep his eye off from that gracious Infinite which enbosoms us.

As a literary artist he has great merits, beginning with the main one that he

never wrote one dull line. How well-read, how adroit, what thousand arts in his one art of writing; with his expedient for expressing those unproven opinions which he entertains but will not endorse, by summoning one of his men of straw from the cell, — and the respectable Sauerteig, or Teufelsdröckh, or Dryasdust, or Picturesque Traveller, says what is put into his mouth, and disappears. That morbid temperament has given his rhetoric a somewhat bloated character; a luxury to many imaginative and learned persons, like a showery south-wind with its sunbursts and rapid chasing of lights and glooms over the landscape, and yet its offensiveness to multitudes of reluctant lovers makes us often wish some concession were possible on the part of the humorist. Yet it must not be forgotten that in all his fun of castanets, or playing of tunes with a whiplash like some renowned charioteers, — in all this glad and needful venting of his redundant spirits, he does yet ever and anon, as if catching the glance of one wise man in the crowd, quit his tempestuous key, and lance at him in clear level tone the very word, and then with new glee return to his game. He is like a lover or an outlaw who wraps up his message in a serenade, which is nonsense to the sentinel, but salvation to the ear for which it is meant. He does not dodge the question, but gives sincerity where it is due.

One word more respecting this remarkable style. We have in literature few specimens of magnificence. Plato is the purple ancient, and Bacon and Milton the moderns of the richest strains. Burke sometimes reaches to that exuberant fullness, though deficient in depth. Carlyle, in his strange, half-mad way, has entered the Field of the Cloth of Gold, and shown a vigor and wealth of resource which has no rival in the tourney-play of these times; — the indubitable champion of England. Carlyle is the first domestication of the modern system, with its infinity of details, into style. We have been civilizing very fast, building London and Paris, and now planting New England and India, New Holland and Oregon, — and it has not appeared in literature; there has been no analogous expansion and recomposition in books, Carlyle's style is the first emergence of all this wealth and labor with which the world has gone with child so long. London and Europe, tunnelled, graded, corn-lawed, with trade-nobility, and East and West Indies for dependencies; and America, with the Rocky Hills in the horizon, have never before been conquered in literature. This is the first invasion and conquest. How like an air-balloon or bird of Jove does he seem to float over the continent, and stooping here and there pounce on a fact as a symbol which was never a symbol before. This is the first experiment, and something of rudeness and haste must be pardoned to so great an achievement. It will be done again and again, sharper, simpler; but fortunate is he who did it first, though never so giant-like and fabulous. This grandiose character pervades his wit and

his imagination. We have never had anything in literature so like earthquakes as the laughter of Carlyle. He “shakes with his mountain mirth.” It is like the laughter of the Genii in the horizon. These jokes shake down Parliament-house and Windsor Castle, Temple and Tower, and the future shall echo the dangerous peals. The other particular of magnificence is in his rhymes. Carlyle is a poet who is altogether too burly in his frame and habit to submit to the limits of metre. Yet he is full of rhythm, not only in the perpetual melody of his periods, but in the burdens, refrains, and grand returns of his sense and music. Whatever thought or motto has once appeared to him fraught with meaning, becomes an omen to him henceforward, and is sure to return with deeper tones and weightier import, now as threat, now as confirmation, in gigantic reverberation, as if the hills, the horizon, and the next ages returned the sound.

VII. A LETTER.

[*The Dial*, vol. iv. p. 262.]

As we are very liable, in common with the letter-writing world, to fall behind-hand in our correspondence; and a little more liable because in consequence of our editorial function we receive more epistles than our individual share, we have thought that we might clear our account by writing a quarterly catholic letter to all and several who have honored us, in verse or prose, with their confidence, and expressed a curiosity to know our opinion. We shall be compelled to dispose very rapidly of quite miscellaneous topics.

And first, in regard to the writer who has given us his speculations on Rail-roads and Air-roads, our correspondent shall have his own way. To the railway, we must say, — like the courageous lord mayor at his first hunting, when told the hare was coming, — “Let it come, in Heaven’s name, I am not afraid on’t.” Very unlooked-for political and social effects of the iron road are fast appearing. It will require an expansion of the police of the old world. When a rail-road train shoots through Europe every day from Brussels to Vienna, from Vienna to Constantinople, it cannot stop every twenty or thirty miles at a German custom-house, for examination of property and passports. But when our correspondent proceeds to flying-machines, we have no longer the smallest taper-light of credible information and experience left, and must speak on *a priori* grounds.

Shortly then, we think the population is not yet quite fit for them, and therefore there will be none. Our friend suggests so many inconveniences from piracy out of the high air to orchards and lone houses, and also to other high fliers; and the total inadequacy of the present system of defence, that we have not the heart to break the sleep of the good public by the repetition of these details. When children come into the library, we put the inkstand and the watch on the high shelf until they be a little older; and Nature has set the sun and moon in plain sight and use, but laid them on the high shelf where her roustering boys may not in some mad Saturday afternoon pull them down or burn their fingers. The sea and the iron road are safer toys for such ungrown people; we are not yet ripe to be birds.

In the next place, to fifteen letters on Communities, and the Prospects of Culture, and the destinies of the cultivated class, — what answer? Excellent reasons have been shown us why the writers, obviously persons of sincerity and elegance, should be dissatisfied with the life they lead, and with their company. They have exhausted all its benefit, and will not bear it much longer. Excellent reasons they have shown why something better should be tried. They want a

friend to whom they can speak and from whom they may hear now and then a reasonable word. They are willing to work, so it be with friends. They do not entertain anything absurd or even difficult. They do not wish to force society into hated reforms, nor to break with society. They do not wish a township, or any large expenditure, or incorporated association, but simply a concentration of chosen people. By the slightest possible concert, persevered in through four or five years, they think that a neighborhood might be formed of friends who would provoke each other to the best activity. They believe that this society would fill up the terrific chasm of ennui, and would give their genius that inspiration which it seems to wait in vain.

But, 'the selfishness!' One of the writers relentingly says, "What shall my uncles and aunts do without me?" and desires distinctly to be understood not to propose the Indian mode of giving decrepit relatives as much of the mud of holy Ganges as they can swallow, and more, but to begin the enterprise of concentration by concentrating all uncles and aunts in one delightful village by themselves! — so heedless is our correspondent of putting all the dough into one pan, and all the leaven into another. Another objection seems to have occurred to a subtle but ardent advocate. Is it, he writes, a too great wilfulness and intermeddling with life, — with life, which is better accepted than calculated? Perhaps so; but let us not be too curiously good. The Buddhist is a practical Necessitarian; the Yankee is not. We do a great many selfish things every day; among them all let us do one thing of enlightened selfishness. It were fit to forbid concert and calculation in this particular, if that were our system, if we were up to the mark of self-denial and faith in our general activity. But to be prudent in all the particulars of life, and in this one thing alone religiously forbearing; prudent to secure to ourselves an injurious society, temptations to folly and despair, degrading examples, and enemies; and only abstinent when it is proposed to provide ourselves with guides, examples, lovers!

We shall hardly trust ourselves to reply to arguments by which we would too gladly be persuaded. The more discontent, the better we like it. It is not for nothing, we assure ourselves, that our people are busied with these projects of a better social state, and that sincere persons of all parties are demanding somewhat vital and poetic of our stagnant society. How fantastic and unpresentable soever the theory has hitherto seemed, how swiftly shrinking from the examination of practical men, let us not lose the warning of that most significant dream. How joyfully we have felt the admonition of larger natures which despised our aims and pursuits, conscious that a voice out of heaven spoke to us in that scorn. But it would be unjust not to remind our younger friends that whilst this aspiration has always made its mark in the lives of men of

thought, in vigorous individuals it does not remain a detached object, but is satisfied along with the satisfaction of other aims. To live solitary and unexpressed, is painful, — painful in proportion to one's consciousness of ripeness and equality to the offices of friendship. But herein we are never quite forsaken by the Divine Providence. The loneliest man, after twenty years, discovers that he stood in a circle of friends, who will then show like a close fraternity held by some masonic tie. But we are impatient of the tedious introductions of Destiny, and a little faithless, and would venture something to accelerate them. One thing is plain, that discontent and the luxury of tears will bring nothing to pass. Regrets and Bohemian castles and aesthetic villages are not a very self-helping class of productions, but are the voices of debility. Especially to one importunate correspondent we must say that there is no chance for the aesthetio village. Every one of the villagers has committed his several blunder; his genius was good, his stars consenting, but he was a marplot. And though the recuperative force in every man may be relied on infinitely, it must be relied on before it will exert itself. As long as he sleeps in the shade of the present error, the after-nature does not betray its resources. Whilst he dwells in the old sin, he will pay the old fine.

More letters we have on the subject of the position of young men, which accord well enough with what we see and hear. There is an American disease, a paralysis of the active faculties, which falls on young men of this country as soon as they have finished their college education, which strips them of all manly aims and bereaves them of animal spirits; so that the noblest youths are in a few years converted into pale Caryatides to uphold the temple of conventions. They are in the state of the young Persians, when "that mighty Yezdam prophet" addressed them and said, "Behold the signs of evil days are come; there is now no longer any right course of action, nor any self-devotion left among the Iranis." As soon as they have arrived at this term, there are no employments to satisfy them, they are educated above the work of their times and country, and disdain it. Many of the more acute minds pass into a lofty criticism of these things, which only embitters their sensibility to the evil and widens the feeling of hostility between them and the citizens at large. From this cause, companies of the best-educated young men in the Atlantic states every week take their departure for Europe; for no business that they have in that country, but simply because they shall so be hid from the reproachful eyes of their countrymen and agreeably entertained for one or two years, with some lurking hope, no doubt, that something may turn up to give them a decided direction. It is easy to see that this is only a postponement of their proper work, with the additional disadvantage of a two years' vacation. Add that this class is rapidly increasing

by the infatuation of the active class, who, whilst they regard these young Athenians with suspicion and dislike, educate their own children in the same courses, and use all possible endeavors to secure to them the same result.

Certainly we are not insensible to this calamity, as described by the observers or witnessed by ourselves. It is not quite new and peculiar; though we should not know where to find in literature any record of so much unbalanced intellectuality, such undeniable apprehension without talent, so much power without equal applicability, as our young men pretend to. Yet in Theodore Mundt's account of Frederic Hölderlin's "Hyperion," we were not a little struck with the following Jeremiad of the despair of Germany, whose tone is still so familiar that we were somewhat mortified to find that it was written in 1799. "Then came I to the" Germans. I cannot conceive of a people more disjoined than the Germans. Mechanics you shall see, but no man. Is it not like some battle-field, where hands and arms and all members lie scattered about, whilst the life-blood runs away into the sand? Let every man mind his own, you say, and I say the same. Only let him mind it with all his heart, and not with this cold study, literally, hypocritically, to appear that which he passes for, — but in good earnest, and in all love, let him be that which he is; then there is a soul in his deed. And is he driven into a circumstance where the spirit must not live? Let him thrust it from him with scorn, and learn to dig and plough. There is nothing holy which is not desecrated, which is not degraded to a mean end among this people. It is heartrending to see your poet, your artist, and all who still revere genius, who love and foster the Beautiful. The Good! They live in the world as strangers in their own house; they are like the patient Ulysses whilst he sat in the guise of a beggar at his own door, whilst shameless rioters shouted in the hall and asked, Who brought the ragamuffin here? Full of love, talent and hope, spring up the darlings of the muse among the Germans; some seven years later, and they flit about like ghosts, cold and silent; they are like a soil which an enemy has sown with poison, that it will not bear a blade of grass. On earth all is imperfect! is the old proverb of the German. Aye, but if one should say to these God-forsaken, that with them all is imperfect only because they leave nothing pure which they do not pollute, nothing holy which they do not defile with their fumbling hands; that with them nothing prospers because the godlike nature which is the root of all prosperity they do not revere; that with them, truly, life is shallow and anxious and full of discord, because they despise genius, which brings power and nobleness into manly action, cheerfulness into endurance, and love and brotherhood into towns and houses. Where a people honors genius in its artists, there breathes like an atmosphere a universal soul, to which the shy sensibility opens, which melts self-conceit, — all hearts become pious and great,

and it adds fire to heroes. The home of all men is with such a people, and there will the stranger gladly abide. But where the divine nature and the artist is crushed, the sweetness of life is gone, and every other planet is better than the earth. Men deteriorate, folly increases, and a gross mind with it; drunkenness comes with a disaster; with the wantonness of the tongue and with the anxiety for a livelihood the blessing of every year becomes a curse, and all the gods depart.”

The steep antagonism between the money-getting and the academic class must be freely admitted, and perhaps is the more violent, that whilst our work is imposed by the soil and the sea, our culture is the tradition of Europe. But we cannot share the desperation of our contemporaries; least of all should we think a preternatural enlargement of the intellect a calamity. A new perception, the smallest new activity given to the perceptive power, is a victory won to the living universe from Chaos and old Night, and cheaply bought by any amounts of hard fare and false social position. The balance of mind and body will redress itself fast enough. Superficialness is the real distemper. In all the cases we have ever seen where people were supposed to suffer from too much wit, or, as men said, from a blade too sharp for the scabbard, it turned out that they had not wit enough. It may easily happen that we are grown very idle, and must go to work, and that the times must be worse before they are better. It is very certain that speculation is no succedaneum for life. What we would know, we must do. As if any taste or imagination could take the place of fidelity! The old Duty is the old God. And we may come to this by the rudest teaching. A friend of ours went five years ago to Illinois to buy a farm for his son. Though there were crowds of emigrants in the roads, the country was open on both sides, and long intervals between hamlets and houses. Now after five years he had just been to visit the young farmer and see how he prospered, and reports that a miracle had been wrought. From Massachusetts to Illinois the land is fenced in and builded over, almost like New England itself, and the proofs of thrifty cultivation abound; — a result not so much owing to the natural increase of population, as to the hard times, which, driving men out of cities and trade, forced them to take off their coats and go to work on the land; which has rewarded them not only with wheat but with habits of labor. Perhaps the adversities of our commerce have not yet been pushed to the wholesomest degree of severity. Apathies and total want of work, and reflection on the imaginative character of American life, etc., etc., are like seasickness, and never will obtain any sympathy if there is a wood-pile in the yard, or an unweeded patch in the garden; not to mention the graver absurdity of a youth of noble aims who can find no field for his energies, whilst the colossal wrongs of the Indian, of the Negro, of the emigrant, remain

unmitigated, and the religious, civil and judicial forms of the country are confessedly effete and offensive. We must refer our clients back to themselves, believing that every man knows in his heart the cure for the disease he so ostentatiously bewails.

As far as our correspondents have entangled their private griefs with the cause of American Literature, we counsel them to disengage themselves as fast as possible. In Cambridge orations and elsewhere there is much inquiry for that great absentee American Literature. What can have become of it? The least said is best. A literature is no man's private concern, but a secular and generic result, and is the affair of a power which works by a prodigality of life and force very dismaying to behold, — every trait of beauty purchased by hecatombs of private tragedy. The pruning in the wild gardens of nature is never forborne. Many of the best must die of consumption, many of despair, and many be stupid and insane, before the one great and fortunate life which they each predicted can shoot up into a thrifty and beneficent existence.

VIII. THE TRAGIC.

[From the course on "Human Life," read in Boston, 1839–40. Published in The Dial, vol. iv. p. 515.]

He has seen but half the universe who never has been shewn the house of Pain. As the salt sea covers more than two-thirds of the surface of the globe, so sorrow encroaches in man on felicity. The conversation of men is a mixture of regrets and apprehensions. I do not know but the prevalent hue of things to the eye of leisure is melancholy. In the dark hours, our existence seems to be a defensive war, a struggle against the encroaching All, which threatens surely to engulf us soon, and is impatient of our short reprieve. How slender the possession that yet remains to us; how faint the animation! how the spirit seems already to contract its domain, retiring within narrower walls by the loss of memory, leaving its planted fields to erasure and annihilation. Already our own thoughts and words have an alien sound. There is a simultaneous diminution of memory and hope. Projects that once we laughed and leapt to execute, find us now sleepy and preparing to lie down in the snow. And in the serene hours we have no courage to spare. We cannot afford to let go any advantages. The riches of body or of mind which we do not need to-day, are the reserved fund against the calamity that may arrive to-morrow. It is usually agreed that some nations have a more sombre temperament, and one would say that history gave no record of any society in which despondency came so readily to heart as we see it and feel it in ours. Melancholy cleaves to the English mind in both hemispheres as closely as to the strings of an Æolian harp. Men and women at thirty years, and even earlier, have lost all spring and vivacity, and if they fail in their first enterprises they throw up the game. But whether we and those who are next to us are more or less vulnerable, no theory of life can have any right which leaves out of account the values of vice, pain, disease, poverty, insecurity, disunion, fear and death.

What are the conspicuous tragic elements in human nature? The bitterest tragic element in life to be derived from an intellectual source is the belief in a brute Fate or Destiny; the belief that the order of nature and events is controlled by a law not adapted to man, nor man to that, but which holds on its way to the end, serving him if his wishes chance to lie in the same course, crushing him if his wishes lie contrary to it, and heedless whether it serves or crushes him. This is the terrible meaning that lies at the foundation of the old Greek tragedy, and makes the *CEdipus* and *Antigone* and *Orestes* objects of such hopeless commiseration. They must perish, and there is no overgod to stop or to mollify

this hideous enginery that grinds or thunders, and snatches them up into its terrific system. The same idea makes the paralyzing terror with which the East Indian mythology haunts the imagination. The same thought is the predestination of the Turk. And universally, in uneducated and unreflecting persons on whom too the religious sentiment exerts little force, we discover traits of the same superstition: “If you baulk water you will be drowned the next time; ““if you count ten stars you will fall down dead; ““if you spill the salt;” “if your fork sticks upright in the floor;” “if you say the Lord’s prayer backwards;” — and so on, a several penalty, nowise grounded in the nature of the thing, but on an arbitrary will. But this terror of contravening an unascertained and unascertainable will, cannot co-exist with reflection: it disappears with civilization, and can no more be reproduced than the fear of ghosts after childhood. It is discriminated from the doctrine of Philosophical Necessity herein: that the last is an Optimism, and therefore the suffering individual finds his good consulted in the good of all, of which he is a part. But in destiny, it is not the good of the whole or the *best will* that is enacted, but only *one particular will*. Destiny properly is not a will at all, but an immense whim; and this the only ground of terror and despair in the rational mind, and of tragedy in literature. Hence the antique tragedy, which was founded on this faith, can never be reproduced.

After reason and faith have introduced a better public and private tradition, the tragic element is somewhat circumscribed. There must always remain, however, the hindrance of our private satisfaction by the laws of the world. The law which establishes nature and the human race, continually thwarts the will of ignorant individuals, and this in the particulars of disease, want, insecurity and disunion.

But the essence of tragedy does not seem to me to lie in any list of particular evils. After we have enumerated famine, fever, inaptitude, mutilation, rack, madness and loss of friends, we have not yet included the proper tragic element, which is Terror, and which does not respect definite evils but indefinite; an ominous spirit which haunts the afternoon and the night, idleness and solitude.

A low, haggard sprite sits by our side, “casting the fashion of uncertain evils” — a sinister presentiment, a power of the imagination to dislocate things orderly and cheerful and show them in startling array. Hark! what sounds on the night wind, the cry of Murder in that friendly house; see these marks of stamping feet, of hidden riot. The whisper overheard, the detected glance, the glare of malignity, ungrounded fears, suspicions, half-knowledge and mistakes, darken the brow and chill the heart of men. And accordingly it is nature’s not clear, not of quick and steady perceptions, but imperfect characters from which somewhat

is hidden that all others see, who suffer most from these causes. In those persons who move the profoundest pity, tragedy seems to consist in temperament, not in events. There are people who have an appetite for grief, pleasure is not strong enough and they crave pain, mithridatic stomachs which must be fed on poisoned bread, natures so doomed that no prosperity can soothe their ragged and dishevelled desolation. They mis-hear and mis-behold, they suspect and dread. They handle every nettle and ivy in the hedge, and tread on every snake in the meadow.

“Come bad chance,
And we add to it our strength,
And we teach it art and length,
Itself o’er us to advance.”

Frankly, then, it is necessary to say that all sorrow dwells in a low region. It is superficial; for the most part fantastic, or in the appearance and not in things. Tragedy is in the eye of the observer, and not in the heart of the sufferer. It looks like an insupportable load under which earth moans aloud. But analyze it; it is not I, it is not you, it is always another person who is tormented. If a man says, Lo! I suffer — it is apparent that he suffers not, for grief is dumb. It is so distributed as not to destroy. That which would rend you falls on tougher textures. That which seems intolerable reproach or bereavement, does not take from the accused or bereaved man or woman appetite or sleep. Some men are above grief, and some below it. Few are capable of love. In phlegmatic natures calamity is unaffecting, in shallow natures it is rhetorical. Tragedy must be somewhat which I can respect. A querulous habit is not tragedy. A panic such as frequently in ancient or savage nations put a troop or an army to flight without an enemy; a fear of ghosts; a terror of freezing to death that seizes a man in a winter midnight on the moors; a fright at uncertain sounds heard by a family at night in the cellar or on the stairs, — are terrors that make the knees knock and the teeth clatter, but are no tragedy, any more than seasickness, which may also destroy life. It is full of illusion. As it comes, it has its support. The most exposed classes, soldiers, sailors, paupers, are nowise destitute of animal spirits. The spirit is true to itself, and finds its own support in any condition, learns to live in what is called calamity as easily as in what is called felicity; as the frailest glass-bell will support a weight of a thousand pounds of water at the bottom of a river or sea, if filled with the same.

A man should not commit his tranquillity to things, but should keep as much as possible the reins in his own hands, rarely giving way to extreme emotion of

joy or grief. It is observed that the earliest works of the art of sculpture are countenances of sublime tranquillity. The Egyptian sphinxes, which sit to-day as they sat when the Greek came and saw them and departed, and when the Roman came and saw them and departed, and as they will still sit when the Turk, the Frenchman and the Englishman, who visit them now, shall have passed by,—“with their stony eyes fixed on the East and on the Nile,” have countenances expressive of complacency and repose, an expression of health, deserving their longevity, and verifying the primeval sentence of history on the permanency of that people, “Their strength is to sit still.” To this architectural stability of the human form, the Greek genius added an ideal beauty, without disturbing the seals of serenity; permitting no violence of mirth, or wrath, or suffering. This was true to human nature. For, in life, actions are few, opinions even fewer, prayers few; loves, hatreds, or any emissions of the soul. All that life demands of us through the greater part of the day, is an equilibrium, a readiness, open eyes and ears, and free hands. Society asks this, and truth, and love, and the genius of our life. There is a fire in some men which demands an outlet in some rude action; they betray their impatience of quiet by an irregular Catali-narian gait; by irregular, faltering, disturbed speech, too emphatic for the occasion. They treat trifles with a tragic air. This is not beautiful. Could they not lay a rod or two of stone wall, and work off this superabundant irritability? When two strangers meet in the highway, what each demands of the other is that the aspect should shew a firm mind, ready for any event of good or ill, prepared alike to give death or to give life, as the emergency of the next moment may require. We must walk as guests in nature; not impassioned, but cool and disengaged. A man should try Time, and his face should wear the expression of a just judge, who has nowise made up his opinion, who fears nothing, and even hopes nothing, but who puts nature and fortune on their merits: he will hear the case out, and then decide. For all melancholy, as all passion, belongs to the exterior life. Whilst a man is not grounded in the divine life by his proper roots, he clings by some tendrils of affection to society — mayhap to what is best and greatest in it, and in calm times it will not appear that he is adrift and not moored; but let any shock take place in society, any revolution of custom, of law, of opinion, and at once his type of permanence is shaken. The disorder of his neighbors appears to him universal disorder; chaos is come again. But in truth he was already a driving wreck, before the wind arose which only revealed to him his vagabond state. If a man is centred, men and events appear to him a fair image or reflection of that which he knoweth beforehand in himself. If any perversity or profligacy break out in society, he will join with others to avert the mischief, but it will not arouse resentment or fear, because he discerns its impassable limits. He sees already in

the ebullition of sin the simultaneous redress.

Particular reliefs also, fit themselves to human calamities; for the world will be in equilibrium, and hates all manner of exaggeration.

Time, the consoler, Time, the rich carrier of all changes, dries the freshest tears by obtruding new figures, new costumes, new roads, on our eye, new voices on our ear. As the west wind lifts up again the heads of the wheat which were bent down and lodged in the storm, and combs out the matted and dishevelled grass as it lay in night-locks on the ground, so we let in time as a drying wind into the seed-field of thoughts which are dark and wet and low bent. Time restores to them temper and elasticity. How fast we forget the blow that threatened to cripple us. Nature will not sit still; the faculties will do somewhat; new hopes spring, new affections twine and the broken is whole again.

Time consoles, but Temperament resists the impression of pain. Nature proportions her defence to the assault. Our human being is wonderfully plastic; if it cannot win this satisfaction here, it makes itself amends by running out there and winning that. It is like a stream of water, which if dammed up on one bank, overruns the other, and flows equally at its own convenience over sand, or mud, or marble. Most suffering is only apparent. We fancy it is torture; the patient has his own compensations. A tender American girl doubts of Divine Providence whilst she reads the horrors of "the middle passage;" and they are bad enough at the mildest; but to such as she these crucifixions do not come: they come to the obtuse and barbarous, to whom they are not horrid, but only a little worse than the old sufferings. They exchange a cannibal war for the stench of the hold. They have gratifications which would be none to the civilized girl. The market-man never damned the lady because she had not paid her bill, but the stout Irishwoman has to take that once a month. She however never feels weakness in her back because of the slave-trade. This self-adapting strength is especially seen in disease. "It is my duty," says Sir Charles Bell, "to visit certain wards of the hospital where there is no patient admitted but with that complaint which most fills the imagination with the idea of insupportable pain and certain death. Yet these wards are not the least remarkable for the composure and cheerfulness of their inmates. The individual who suffers has a mysterious counterbalance to that condition, which, to us who look upon her, appears to be attended with no alleviating circumstance." Analogous supplies are made to those individuals whose character leads them to vast exertions of body and mind. Napoleon said to one of his friends at St. Helena, "Nature seems to have calculated that I should have great reverses to endure, for she has given me a temperament like a block of marble. Thunder cannot move it; the shaft merely glides along. The great events of my life have slipped over me without making any demand on my

moral or physical nature.”

The intellect is a consoler, which delights in detaching or putting an interval between a man and his fortune, and so converts the sufferer into a spectator and his pain into poetry. It yields the joys of conversation, of letters and of science. Hence also the torments of life become tuneful tragedy, solemn and soft with music, and garnished with rich dark pictures. But higher still than the activities of art, the intellect in its purity and the moral sense in its purity are not distinguished from each other, and both ravish us into a region whereinto these passionate clouds of sorrow cannot rise.

The Essays

The Old Manse, located on Monument Street in Concord, Massachusetts. The house was built in 1770 for Rev. William Emerson, father of noted minister Rev. William Emerson and the grandfather of the famous Transcendentalist writer. In November 1834, Ralph Waldo Emerson moved to the Old Manse where he lived with his aging step-grandfather Ezra Ripley. While there, he wrote the first draft of Nature, a foundational work of the Transcendentalist movement.

28 Cambridge Turnpike, Concord, Massachusetts — Emerson moved into this house, which he called 'Bush', with his newly married second wife in 1835. The author remained there for the rest of his life. It was here that he wrote his famous essays "The American Scholar" and "Self Reliance". The house now serves as the Ralph Waldo Emerson House museum, dedicated to the life and writings of the author.

Thomas Carlyle painted by John Everett Millais, c. 1893

VOLUME I.

“To my friend I write a letter, and from him I receive a letter. It is a spiritual gift, worthy of him to give, and of me to receive.” — Emerson

“What the writer did actually mean, the thing he then thought of, the thing he then was.” — Carlyle

EDITORIAL NOTE

The trust of editing the following Correspondence, committed to me several years since by the writers, has been of easy fulfilment. The whole Correspondence, so far as it is known to exist, is here printed, with the exception of a few notes of introduction, and one or two essentially duplicate letters. I cannot but hope that some of the letters now missing may hereafter come to light.

In printing, a dash has been substituted here and there for a proper name, and some passages, mostly relating to details of business transactions, have been omitted. These omissions are distinctly designated. The punctuation and orthography of the original letters have been in the main exactly followed. I have thought best to print much concerning dealings with publishers, as illustrative of the material conditions of literature during the middle of the century, as well as of the relations of the two friends. The notes in the two volumes are mine.

My best thanks and those of the readers of this Correspondence are due to Mr. Moncure D. Conway, for his energetic and successful effort to recover some of Emerson's early letters which had fallen into strange hands. — Charles Eliot Norton

Cambridge, Massachusetts
January 29, 1883

CORRESPONDENCE OF CARLYLE AND EMERSON

At the beginning of his "English Traits," Mr. Emerson, writing of his visit to England in 1833, when he was thirty years old, says that it was mainly the attraction of three or four writers, of whom Carlyle was one, that had led him to Europe. Carlyle's name was not then generally known, and it illustrates Emerson's mental attitude that he should have thus early recognized his genius, and felt sympathy with it.

The decade from 1820 to 1830 was a period of unusual dulness in English thought and imagination. All the great literary reputations belonged to the beginning of the century, Byron, Scott, Wordsworth, Coleridge, Shelley, Keats, had said their say. The intellectual life of the new generation had not yet found expression. But toward the end of this time a series of articles, mostly on German literature, appearing in the Edinburgh and in the Foreign Quarterly Review, an essay on Burns, another on Voltaire, still more a paper entitled "Characteristics," displayed the hand of a master, and a spirit in full sympathy with the hitherto unexpressed tendencies and aspirations of its time, and capable of giving them expression. Here was a writer whose convictions were based upon principles, and whose words stood for realities. His power was slowly acknowledged. As yet Carlyle had received hardly a token of recognition from his contemporaries.

He was living solitary, poor, independent, in "desperate hope," at Craigenputtock. On August 24, 1833, he makes entry in his Journal as follows: "I am left here the solitariest, stranded, most helpless creature that I have been for many years..... Nobody asks me to work at articles. The thing I want to write is quite other than an article... In *all* times there is a word which spoken to men; to the actual generation of men, would thrill their inmost soul. But the way to find that word? The way to speak it when found?" The next entry in his Journal shows that Carlyle had found the word. It is the name "Ralph Waldo Emerson," the record of Emerson's unexpected visit. "I shall never forget the visitor," wrote Mrs. Carlyle, long afterwards, "who years ago, in the Desert, descended on us, out of the clouds as it were, and made one day there look like enchantment for us, and left me weeping that it was only one day."

At the time of this memorable visit Emerson was morally not less solitary than Carlyle; he was still less known; his name had been unheard by his host in the desert. But his voice was soon to become also the voice of a leader. With temperaments sharply contrasted, with traditions, inheritances, and circumstances radically different, with views of life and of the universe widely at

variance, the souls of these two young men were yet in sympathy, for their characters were based upon the same foundation of principle. In their independence and their sincerity they were alike; they were united in their faith in spiritual truth, and their reverence for it. Their modes of thought of expression were not merely dissimilar, but divergent, and yet, though parted by an ever widening cleft of difference, they knew, as Carlyle said, that beneath it “the rock-strata, miles deep, united again, and their two souls were at one”

Two days after Emerson’s visit Carlyle wrote to his mother: —

“Three little happinesses have befallen us: first, a piano-tuner, procured for five shillings and sixpence, has been here, entirely reforming the piano, so that I can hear a little music now, which does me no little good. Secondly, Major Irving, of Gribton, who used at this season of the year to live and shoot at Craigenvey, came in one day to us, and after some clatter offered us a rent of five pounds for the right to shoot here, and even tabled the cash that moment, and would not pocket it again. Money easilier won never sat in my pocket; money for delivering us from a great nuisance, for now I will tell every gunner applicant, ‘I cannot, sir; it is let.’ Our third happiness was the arrival of a certain young unknown friend, named Emerson, from Boston, in the United States, who turned aside so far from his British, French, and Italian travels to see me here! He had an introduction from Mill, and a Frenchman (Baron d’Eichthal’s nephew) whom John knew at Rome. Of course we could do no other than welcome him; the rather as he seemed to be one of the most lovable creatures in himself we had ever looked on. He stayed till next day with us, and talked and heard talk to his heart’s content, and left us all really sad to part with him. Jane says it is the first journey since Noah’s Deluge undertaken to Craigenputtock for such a purpose. In any case, we had a cheerful day from it, and ought to be thankful.”

On the next Sunday, a week after his visit, Emerson wrote the following account of it to his friend, Mr. Alexander Ireland.

“I found him one of the most simple and frank of men, and became acquainted with him at once. We walked over several miles of hills, and talked upon all the great questions that interest us most. The comfort of meeting a man is that he speaks sincerely; that he feels himself to be so rich, that he is above the meanness of pretending to knowledge which he has not, and Carlyle does not pretend to have solved the great problems, but rather to be an observer of their solution as it goes forward in the world. I asked him at what religious development the concluding passage in his piece in the Edinburgh Review upon German literature (say five years ago), and some passages in the piece called ‘Characteristics,’ pointed. He replied that he was not competent to state even to

himself, — he waited rather to see. My own feeling was that I had met with men of far less power who had got greater insight into religious truth. He is, as you might guess from his papers, the most catholic of philosophers; he forgives and loves everybody, and wishes each to struggle on in his own place and arrive at his own ends. But his respect for eminent men, or rather his scale of eminence, is about the reverse of the popular scale. Scott, Mackintosh, Jeffrey, Gibbon, — even Bacon, — are no heroes of his; stranger yet, he hardly admires Socrates, the glory of the Greek world; but Burns, and Samuel Johnson, and Mirabeau, he said interested him, and I suppose whoever else has given himself with all his heart to a leading instinct, and has not calculated too much. But I cannot think of sketching even his opinions, or repeating his conversations here. I will cheerfully do it when you visit me here in America. He talks finely, seems to love the broad Scotch, and I loved him very much at once. I am afraid he finds his entire solitude tedious, but I could not help congratulating him upon his treasure in his wife, and I hope he will not leave the moors; ‘t is so much better for a man of letters to nurse himself in seclusion than to be filed down to the common level by the compliances and imitations of city society.’ *

—— * *Ralph Waldo Emerson. Recollections of his Visits to England* By Alexander Ireland. London, 1882, p. 58. ——— ——— ———

Twenty-three years later, in his “English Traits,” Emerson once more describes his visit, and tells of his impressions of Carlyle.

“From Edinburgh I went to the Highlands. On my return I came from Glasgow to Dumfries, and being intent on delivering a letter which I had brought from Rome, inquired for Craigenputtock. It was a farm in Nithsdale, in the parish of Dunscore, sixteen miles distant. No public coach passed near it, so I took a private carriage from the inn. I found the house amid desolate heathery hills, where the lonely scholar nourished his mighty heart. Carlyle was a man from his youth, an author who did not need to hide from his readers, and as absolute a man of the world, unknown and exiled on that hill-farm, as if holding on his own terms what is best in London. He was tall and gaunt, with a cliff-like brow, self-possessed and holding his extraordinary powers of conversation in easy command; clinging to his northern accent with evident relish; full of lively anecdote, and with a streaming humor which floated everything he looked upon. His talk, playfully exalting the most familiar objects, put the companion at once into an acquaintance with his Lars and Lemurs, and it was very pleasant to learn what was predestined to be a pretty mythology. Few were the objects and lonely the man, ‘not a person to speak to within sixteen miles, except the minister of Dunscore’; so that books inevitably made his topics.

“He had names of his own for all the matters familiar to his discourse.

Blackwood's was the 'sand magazine'; Fraser's nearer approach to possibility of life was the 'mud magazine'; a piece of road near by that marked some failed enterprise was 'the grave of the last sixpence.' When too much praise of any genius annoyed him, he professed hugely to admire the talent shown by his pig. He had spent much time and contrivance in confining the poor beast to one enclosure in his Pen; but pig, by great strokes of judgment, had found out how to let a board down, and had foiled him. For all that, he still thought man the most plastic little fellow in the planet, and he liked Nero's death, *Qualis artifex pereo!* better than most history. He worships a man that will manifest any truth to him. At one time he had inquired and read a good deal about America. Landor's principle was mere rebellion, and *that*, he feared, was the American principle. The best thing he knew of that country was, that in it a man can have meat for his labor. He had read in Stewart's book, that when he inquired in a New York hotel for the Boots, he had been shown across the street, and had found Mungo in his own house dining on roast turkey.

"We talked of books. Plato he does not read, and he disparaged Socrates; and, when pressed, persisted in making Mirabeau a hero. Gibbon he called the splendid bridge from the old world to the new. His own reading had been multifarious. Tristram Shandy was one of his first books after Robinson Crusoe and Robertson's America, an early favorite. Rousseau's Confessions had discovered to him that he was not a dunce; and it was now ten years since he had learned German, by the advice of a man who told him he would find in that language what he wanted.

"He took despairing or satirical views of literature at this moment; recounted the incredible sums paid in one year by the great booksellers for puffing. Hence it comes that no newspaper is trusted now, no books are bought, and the booksellers are on the eve of bankruptcy.

"He still returned to English pauperism, the crowded country, the selfish abdication by public men of all that public persons should perform. 'Government should direct poor men what to do. Poor Irish folk come wandering over these moors; my dame makes it a rule to give to every son of Adam bread to eat, and supplies his wants to the next house. But here are thousands of acres which might give them all meat, and nobody to bid these poor Irish go to the moor and till it. They burned the stacks, and so found a way to force the rich people to attend to them.'

"We went out to walk over long hills, and looked at Criffel, then without his cap, and down into Wordsworth's country. There we sat down and talked of the immortality of the soul. It was not Carlyle's fault that we talked on that topic, for he has the natural disinclination of every nimble spirit to bruise itself against

walls, and did not like to place himself where no step can be taken. But he was honest and true, and cognizant of the subtle links that bind ages together, and saw how every event affects all the future. 'Christ died on the tree that built Dunscore kirk yonder: that brought you and me together. Time has only a relative existence.'

"He was already turning his eyes towards London with a scholar's appreciation. London is the heart of the world, he said, wonderful only from the mass of human beings. He liked the huge machine. Each keeps its own round. The baker's boy brings muffins to the window at a fixed hour every day, and that is all the Londoner knows or wishes to know on the subject. But it turned out good men. He named certain individuals, especially one man of letters, his friend, the best mind he knew, whom London had well served."

Such is the record of the beginnings of the friendship between Carlyle and Emerson. What place this friendship held in the lives of both, the following Correspondence shows.

I. Emerson to Carlyle

Boston, Massachusetts, 14 May, 1884

My Dear Sir, — There are some purposes we delay long to execute simply because we have them more at heart than others, and such an one has been for many weeks, I may say months, my design of writing you an epistle.

Some chance wind of Fame blew your name to me, perhaps two years ago, as the author of papers which I had already distinguished (as indeed it was very easy to do) from the mass of English periodical criticism as by far the most original and profound essays of the day, — the works of a man of Faith as well as Intellect, sportive as well as learned, and who, belonging to the despairing and deriding class of philosophers, was not ashamed to hope and to speak sincerely. Like somebody in *Wilhelm Meister*, I said: This person has come under obligations to me and to all whom he has enlightened. He knows not how deeply I should grieve at his fall, if, in that exposed England where genius always hears the Devil's whisper, "All these kingdoms will I give thee," his virtue also should be an initial growth put off with age. When therefore I found myself in Europe, I went to your house only to say, "Faint not, — the word you utter is heard, though in the ends of the earth and by humblest men; it works, prevails." Drawn by strong regard to one of my teachers I went to see his person, and as he might say his environment at Craigenputtock. Yet it was to fulfil my duty, finish my mission, not with much hope of gratifying him, — in the spirit of "If I love you, what is that to you?" Well, it happened to me that I was delighted with my visit, justified to myself in my respect, and many a time upon the sea in my homeward voyage I remembered with joy the favored condition of my lonely philosopher, his happiest wedlock, his fortunate temper, his steadfast simplicity, his all means of happiness; — not that I had the remotest hope that he should so far depart from his theories as to expect happiness. On my arrival at home I rehearsed to several attentive ears what I had seen and heard, and they with joy received it.

In Liverpool I wrote to Mr. Fraser to send me Magazine, and I have now received four numbers of the *Sartor Resartus*, for whose light thanks evermore. I am glad that one living scholar is self-centred, and will be true to himself though none ever were before; who, as Montaigne says, "puts his ear close by himself, and holds his breath and listens." And none can be offended with the self-subsistency of one so catholic and jocund. And 't is good to have a new eye inspect our mouldy social forms, our politics, and schools, and religion. I say *our*, for it cannot have escaped you that a lecture upon these topics written for England may be read to America. Evermore thanks for the brave stand you have

made for Spiritualism in these writings. But has literature any parallel to the oddity of the vehicle chosen to convey this treasure? I delight in the contents; the form, which my defective apprehension for a joke makes me not appreciate, I leave to your merry discretion. And yet did ever wise and philanthropic author use so defying a diction? As if society were not sufficiently shy of truth without providing it beforehand with an objection to the form. Can it be that this humor proceeds from a despair of finding a contemporary audience, and so the Prophet feels at liberty to utter his message in droll sounds. Did you not tell me, Mr. Thomas Carlyle, sitting upon one of your broad hills, that it was Jesus Christ built Dunscore Kirk yonder? If you love such sequences, then admit, as you will, that no poet is sent into the world before his time; that all the departed thinkers and actors have paved your way; that (at least when you surrender yourself) nations and ages do guide your pen, yes, and common goose-quills as well as your diamond graver. Believe then that harp and ear are formed by one revolution of the wheel; that men are waiting to hear your epical song; and so be pleased to skip those excursive involved glees, and give us the simple air, without the volley of variations. At least in some of your prefaces you should give us the theory of your rhetoric. I comprehend not why you should lavish in that spendthrift style of yours celestial truths. Bacon and Plato have something too solid to say than that they can afford to be humorists. You are dispensing that which is rarest, namely, the simplest truths, — truths which lie next to consciousness, and which only the Platos and Goethes perceive. I look for the hour with impatience when the vehicle will be worthy of the spirit, — when the word will be as simple, and so as resistless, as the thought, — and, in short, when your words will be one with things. I have no hope that you will find suddenly a large audience. Says not the sarcasm, “Truth hath the plague in his house”? Yet all men are *potentially* (as Mr. Coleridge would say) your audience, and if you will not in very Mephistophelism repel and defy them, shall be actually;* and whatever the great or the small may say about the charm of diabolism, a true and majestic genius can afford to despise it.

—— ——— * This year, 1882, seventy thousand copies of a sixpenny edition of *Sartor Resartus* have been sold. ——

I venture to amuse you with this homiletic criticism because it is the sense of uncritical truth seekers, to whom you are no more than Hecuba, whose instincts assure them that there is Wisdom in this grotesque Teutonic apocalyptic strain of yours, but that ‘t is hence hindered in its effect. And though with all my heart I would stand well with my Poet, yet if I offend I shall quietly retreat into my Universal relations, wherefrom I affectionately espy you as a man, myself as another.

And yet before I come to the end of my letter I may repent of my temerity and unsay my charge. For are not all our circlets of will as so many little eddies rounded in by the great Circle of Necessity, and *could* the Truth-speaker, perhaps now the best Thinker of the Saxon race, have written otherwise? And must not we say that Drunkenness is a virtue rather than that Cato has erred?

I wish I could gratify you with any pleasing news of the regeneration, education, prospects, of man in this continent. But your philanthropy is so patient, so far-sighted, that present evils give you less solicitude. In the last six years government in the United States has been fast becoming a job, like great charities. A most unfit person in the Presidency has been doing the worst things; and the worse he grew, the more popular. Now things seem to mend. Webster, a good man and as strong as if he were a sinner, begins to find himself the centre of a great and enlarging party and his eloquence incarnated and enacted by them; yet men dare not hope that the majority shall be suddenly unseated. I send herewith a volume of Webster's that you may see his speech on Foot's Resolutions, a speech which the Americans have never done praising. I have great doubts whether the book reaches you, as I know not my agents. I shall put with it the little book of my Swedenborgian druggist,* of whom I told you. And if, which is hardly to be hoped, any good book should be thrown out of our vortex of trade and politics, I shall not fail to give it the same direction.

—— ——— ——— — * *Observations on the Growth of the Mind*, by Sampson Reed, first published in 1825. A fifth edition of this thoughtful little treatise was published in 1865. Mr. Reed was a graduate of Harvard College in 1818; he died in 1880, at the age of eighty. —— —

I need not tell you, my dear sir, what pleasure a letter from you would give me when you have a few moments to spare to so remote a friend. If any word in my letter should provoke you to a reply, I shall rejoice in my sauciness. I am spending the summer in the country, but my address is Boston, care of Barnard, Adams, & Co. Care of O. Rich, London. Please do make my affectionate respects to Mrs. Carlyle, whose kindness I shall always gratefully remember. I depend upon her intercession to insure your writing to me. May God grant you both his best blessing.

Your friend,

R. Waldo Emerson

II. Carlyle to Emerson

5 Great Cheyne Row, Chelsea, London 12 August, 1834

My Dear Sir, — Some two weeks ago I received your kind gift from Fraser. To say that it was welcome would be saying little: is it not as a voice of affectionate remembrance, coming from beyond the Ocean waters, first decisively announcing for me that a whole New Continent *exists*, — that I too have part and lot there! “Not till we can think that here and there one is thinking of us, one is loving us, does this waste Earth become a peopled Garden.” Among the figures I can recollect as visiting our Nithsdale hermitage, — all like *Apparitions* now, bringing with them airs from Heaven or else blasts from the other region, — there is perhaps not one of a more undoubtedly supernal character than yourself: so pure and still, with intents so charitable; and then vanishing too so soon into the azure Inane, as an Apparition should! Never has your Address in my Notebook met my eye but with a friendly influence. Judge if I am glad to know that there, in Infinite Space, you still hold by me.

I have read in both your books at leisure times, and now nearly finished the smaller one. He is a faithful thinker, that Swedenborgian Druggist of yours, with really deep ideas, who makes me too pause and think, were it only to consider what manner of man he must be, and what manner of thing, after all, Swedenborgianism must be. “Through the smallest window look well, and you can look out into the Infinite.” Webster also I can recognize a sufficient, effectual man, whom one must wish well to, and prophesy well of. The sound of him is nowise poetic-rhythmic; it is clear, one-toned, you might say metallic, yet distinct, significant, not without melody. In his face, above all, I discern that “indignation” which, if it do not make “verses,” makes *useful* way in the world. The higher such a man rises, the better pleased I shall be. And so here, looking over the water, let me repeat once more what I believe is already dimly the sentiment of all Englishmen, Cisoceanic and Transoceanic, that we and you are not two countries, and cannot for the life of us be; but only two *parishes* of one country, with such wholesome parish hospitalities, and dirty temporary parish feuds, as we see; both of which brave parishes *Vivant! vivant!* And among the glories of *both* be Yankee-doodle-doo, and the Felling of the Western Forest, proudly remembered; and for the rest, by way of parish constable, let each cheerfully take such George Washington or George Guelph as it can get, and bless Heaven! I am weary of hearing it said, “We love the Americans,” “We wish well,” &c., &c. What in God’s name should we do else?

You thank me for *Teufelsdröckh*; how much more ought I to thank you for your hearty, genuine, though extravagant acknowledgment of it! Blessed is the voice that amid dispiritment, stupidity, and contradiction proclaims to us, *Euge!* Nothing ever was more ungenial than the soil this poor Teufelsdröckhish seed-corn has been thrown on here; none cries, Good speed to it; the sorriest nettle or hemlock seed, one would think, had been more welcome. For indeed our British periodical critics, and especially the public of *Fraser's Magazine* (which I believe I have now done with), exceed all speech; require not even contempt, only oblivion. Poor Teufelsdröckh! — Creature of mischance, miscalculation, and thousand-fold obstruction! Here nevertheless he is, as you see; has struggled across the Stygian marshes, and now, as a stitched pamphlet “for Friends,” cannot be *burnt* or lost before his time. I send you one copy for your own behoof; three others you yourself can perhaps find fit readers for: as you spoke in the plural number, I thought there might be three; more would rather surprise me. From the British side of the water I have met simply one intelligent response, — clear, true, though almost enthusiastic as your own. My British Friend too is utterly a stranger, whose very name I know not, who did not print, but only write, and to an unknown third party.* Shall I say then, “In the mouth of two witnesses”? In any case, God be thanked, I am done with it; can wash my hands of it, and send it forth; sure that the Devil will get his full share of it, and not a whit more, clutch as he may. But as for you, my Transoceanic brothers, read this earnestly, for it *was* earnestly meant and written, and contains no *voluntary* falsehood of mine. For the rest, if you dislike it, say that I wrote it four years ago, and could not now so write it, and on the whole (as Fritz the Only said) “will do better another time.” With regard to style and so forth, what you call your “saucy” objections are not only most intelligible to me, but welcome and instructive. You say well that I take up that attitude because I have no known public, am alone under the heavens, speaking into friendly or unfriendly space; add only, that I will not defend such attitude, that I call it questionable, tentative, and only the best that I, in these mad times, could conveniently hit upon. For you are to know, my view is that now at last we have lived to see all manner of Poetics and Rhetorics and Sermonics, and one may say generally all manner of *Pulpits* for addressing mankind from, as good as broken and abolished: alas, yes! if you have any earnest meaning which demands to be not only listened to, but *believed* and *done*, you cannot (at least I cannot) utter it *there*, but the sound sticks in my throat, as when a solemnity were *felt* to have become a mummery; and so one leaves the pasteboard coulisses, and three unities, and Blair's Lectures, quite behind; and feels only that there is *nothing*

sacred, then, but the *Speech of Man* to believing Men! This, come what will, was, is, and forever must be *sacred*; and will one day, doubtless, anew environ itself with fit modes; with solemnities that are *not* mummeries. Meanwhile, however, is it not pitiable? For though Teufelsdröckh exclaims, “Pulpit! canst thou not make a pulpit by simply *inverting the nearest tub?*” yet, alas! he does not sufficiently reflect that it is still only a tub, that the most inspired utterance will come from *it*, inconceivable, misconceivable, to the million; questionable (not of *ascertained* significance) even to the few. Pity us therefore; and with your just shake of the head join a sympathetic, even a hopeful smile. Since I saw you I have been trying, am still trying, other methods, and shall surely get nearer the truth, as I honestly strive for it. Meanwhile, I know no method of much consequence, except that of *believing*, of being *sincere*: from Homer and the Bible down to the poorest Burns’s Song, I find no other Art that promises to be perennial.

* In his Diary, July 26, 1834, Carlyle writes— “In the midst of innumerable discouragements, all men indifferent or finding fault, let me mention two small circumstances that are comfortable. The first is a letter from some nameless Irishman in Cork to another here, (Fraser read it to me without names,) actually containing a *true* and one of the friendliest possible recognitions of me. One mortal, then, says I am *not* utterly wrong. Blessings on him for it! The second is a letter I got today from Emerson, of Boston in America; sincere, not baseless, of most exaggerated estimation. Precious is man to man.” Fifteen years later, in his *Reminiscences of My Irish Journey*, he enters, under date of July 16, 1849: “Near eleven o’clock [at night] announces himself ‘Father O’Shea’! (who I thought had been *dead*); to my astonishment enter a little gray-haired, intelligent-and-bred-looking man, with much gesticulation, boundless loyal welcome, red with dinner and some wine, engages that we are to meet tomorrow, — and again with explosions of welcomes goes his way. This Father O’Shea, some fifteen years ago, had been, with Emerson of America, one of the *two* sons of Adam who encouraged poor bookseller Fraser, and didn’t discourage him, to go on with Teufelsdröckh. I had often remembered him since; had not long before *re-*inquired his name, but understood somehow that he was dead — and now.”

But now quitting theoretics, let me explain what you long to know, how it is that I date from London. Yes, my friend, it is even so: Craigenputtock now stands solitary in the wilderness, with none but an old woman and foolish grouse-destroyers in it; and we for the last ten weeks, after a fierce universal disruption, are here with our household gods. Censure not; I came to London for

the best of all reasons, — to seek bread and work. So it literally stands; and so do I literally stand with the hugest, gloomiest Future before me, which in all sane moments I good-humoredly defy. A strange element this, and I as good as an Alien in it. I care not for Radicalism, for Toryism, for Church, Tithes, or the “Confusion” of useful Knowledge. Much as I can speak and hear, I am alone, alone. My brave Father, now victorious from his toil, was wont to pray in evening worship: “Might we say, We are not alone, for God is with us!” Amen! Amen!

I brought a manuscript with me of another curious sort, entitled *The Diamond Necklace*. Perhaps it will be printed soon as an Article, or even as a separate Booklet, — a *queer* production, which you shall see. Finally, I am busy, constantly studying with my whole might for a Book on the French Revolution. It is part of my creed that the Only Poetry is History, could we tell it right. This truth (if it prove one) I have not yet got to the limitations of; and shall in no way except by *trying* it in practice. The story of the Necklace was the first attempt at an experiment.

My sheet is nearly done; and I have still to complain of you for telling me nothing of yourself except that you are in the country. Believe that I want to know much and all. My wife too remembers you with unmixed friendliness; bids me send you her kindest wishes. Understand too that your old bed stands in a new room here, and the old welcome at the door. Surely we shall see you in London one day. Or who knows but Mahomet may go to the mountain? It occasionally rises like a mad prophetic dream in me, that I might end in the Western Woods!

From Germany I get letters, messages, and even visits; but now no tidings, no influences, of moment. Goethe’s Posthumous Works are all published; and Radicalism (poor hungry, yet inevitable Radicalism!) is the order of the day. The like, and even more, from France. Gustave d’Eichthal (did you hear?) has gone over to Greece, and become some kind of Manager under King Otho.*

— * Gustave d’Eichthal, whose acquaintance Emerson had made at Rome, and who had given him an introduction to Carlyle, was one of a family of rich Jewish bankers at Paris. He was an ardent follower of Saint-Simon, and an associate of Infantin. After the dispersion of the Saint-Simonians in 1832, he traveled much, and continued to devote himself to the improvement of society.

Continue to love me, you and my other friends; and as packets sail so swiftly, let me know it frequently. All good be with you!

Most faithfully,

T. Carlyle

Coleridge, as you doubtless hear, is gone. How great a Possibility, how small a realized Result! They are delivering Orations about him, and emitting other kinds of froth, *ut mos est*. What hurt can it do?

III. Emerson to Carlyle *

Concord, Mass., 20 November, 1834

My Dear Sir, — Your letter, which I received last week, made a bright light in a solitary and saddened place. I had quite recently received the news of the death of a brother** in the island of Porto Rico, whose loss to me will be a lifelong sorrow. As he passes out of sight, come to me visible as well as spiritual tokens of a fraternal friendliness which, by its own law, transcends the tedious barriers of custom and nation; and opens its way to the heart. This is a true consolation, and I thanked my jealous [Greek] for the godsend so significantly timed. It, for the moment, realizes the hope to which I have clung with both hands, through each disappointment, that I might converse with a man whose ear of faith was not stopped, and whose argument I could not predict. May I use the word, “I thank my God whenever I call you to remembrance.”

—— — * This letter was printed in the *Athenaeum*, London, June 24, 1882. It, as well as three others which appeared in the same journal, is now reprinted, through the courtesy of its editor, from the original.

** Edward Bliss Emerson, his next younger brother, “brother of the brief but blazing star,” of whom Emerson wrote *In Memoriam*: —

”There is no record left on earth,
Save in tablets of the heart,
Of the rich, inherent worth,
Of the grace that on him shone,
Of eloquent lips, of joyful wit;
He could not frame a word unfit,
An act unworthy to be done.

On his young promise Beauty smiled,
Drew his free homage unbeguiled,
And prosperous Age held out his hand,
And richly his large future planned,
And troops of friends enjoyed the tide, —
All, all was given, and only health denied.”

—— —
I receive with great pleasure the wonderful Professor now that first the decent limbs of Osiris are collected.* We greet him well to Cape Cod and Boston Bay.

The rigid laws of matter prohibit that the soul imprisoned within the strait edges of these types should add one syllable thereto, or we had adjured the Sage by every name of veneration to take possession by so much as a Salve! of his Western World, but he remained inexorable for any new communications.

—— * The four copies of *Sartor* which Carlyle had sent were a “stitched pamphlet,” with a title-page bearing the words: “Sartor Resartus: in Three Books. Reprinted for Friends, from Fraser’s Magazine. London, 1834.” ——

I feel like congratulating you upon the cold welcome which you say Teufelsdröckh* has met. As it is not earthly happy, it is marked of a high sacred sort. I like it a great deal better than ever, and before it was all published I had eaten nearly all my words of objection. But do not think it shall lack a present popularity. That it should not be known seems possible, for if a memoir of Laplace had been thrown into that muck-heap of Fraser’s Magazine, who would be the wiser? But this has too much wit and imagination not to strike a class who would not care for it as a faithful mirror of this very Hour. But you know the proverb, “To be fortunate, be not too wise.” The great men of the day are on a plane so low as to be thoroughly intelligible to the vulgar. Nevertheless, as God maketh the world forevermore, whatever the devils may seem to do, so the thoughts of the best minds always become the last opinion of Society. Truth is ever born in a manger, but is compensated by living till it has all souls for its kingdom. Far, far better seems to me the unpopularity of this Philosophical Poem (shall I call it?) than the adulation that followed your eminent friend Goethe. With him I am becoming better acquainted, but mine must be a qualified admiration. It is a singular piece of good-nature in you to apotheosize him. I cannot but regard it as his misfortune, with conspicuous bad influence on his genius, that velvet life he led. What incongruity for genius, whose fit ornaments and reliefs are poverty and hatred, to repose fifty years on chairs of state and what pity that his Duke did not cut off his head to save him from the mean end (forgive) of retiring from the municipal incense “to arrange tastefully his gifts and medals”! Then the Puritan in me accepts no apology for bad morals in such as he. We can tolerate vice in a splendid nature whilst that nature is battling with the brute majority in defence of some human principle. The sympathy his manhood and his misfortunes call out adopts even his faults; but genius pampered, acknowledged, crowned, can only retain our sympathy by turning the same force once expended against outward enemies now against inward, and carrying forward and planting the standard of Oromasdes so many leagues farther on into the envious Dark. Failing this, it loses its nature and becomes talent, according to the definition, — mere skill in attaining vulgar ends. A certain wonderful friend of mine said that “a false priest is the falsest of false

things.” But what makes the priest? A cassock? O Diogenes! Or the power (and thence the call) to teach man’s duties as they flow from the Superhuman? Is not he who perceives and proclaims the Superhumanities, he who has once intelligently pronounced the words “Self-Renouncement,” “Invisible Leader,” “Heavenly Powers of Sorrow,” and so on, forever the liege of the same?

_____ * Emerson uniformly spells this name “Teufelsdröckh.”

Then to write luxuriously is not the same thing as to live so, but a new and worse offence. It implies an intellectual defect also, the not perceiving that the present corrupt condition of human nature (which condition this harlot muse helps to perpetuate) is a temporary or superficial state. The good word lasts forever: the impure word can only buoy itself in the gross gas that now envelops us, and will sink altogether to ground as that works itself clear in the everlasting effort of God.

May I not call it temporary? for when I ascend into the pure region of truth (or under my undermost garment, as Epictetus and Teufelsdröckh would say), I see that to abide inviolate, although all men fall away from it; yea, though the whole generation of Adam should be healed as a sore off the face of the creation. So, my friend, live Socrates and Milton, those starch Puritans, for evermore! Strange is it to me that you should not sympathize (yet so you said) with Socrates, so ironical, so true, and who “tramped in the mire with wooden shoes whenever they would force him into the clouds.” I seem to see him offering the hand to you across the ages which some time you will grasp.

I am glad you like Sampson Reed, and that he has inspired some curiosity respecting his Church. Swedenborgianism, if you should be fortunate in your first meetings, has many points of attraction for you: for instance, this article, “The poetry of the Old Church is the reality of the New,” which is to be literally understood, for they esteem, in common with all the Trismegisti, the Natural World as strictly the symbol or exponent of the Spiritual, and part for part; the animals to be the incarnations of certain affections; and scarce a popular expression esteemed figurative, but they affirm to be the simplest statement of fact. Then is their whole theory of social relations — both in and out of the body — most philosophical, and, though at variance with the popular theology, self-evident. It is only when they come to their descriptive theism, if I may say so, and then to their drollest heaven, and to some autocratic not moral decrees of God, that the mythus loses me. In general, too, they receive the fable instead of the moral of their Aesop. They are to me, however, deeply interesting, as a sect which I think must contribute more than all other sects to the new faith which must arise out of all.

You express a desire to know something of myself. Account me “a drop in the ocean seeking another drop,” or God-ward, striving to keep so true a sphericity as to receive the due ray from every point of the concave heaven. Since my return home, I have been left very much at leisure. It were long to tell all my speculations on my profession and my doings thereon; but, possessing my liberty, I am determined to keep it, at the risk of uselessness (which risk God can very well abide), until such duties offer themselves as I can with integrity discharge. One thing I believe, — that Utterance is place enough: and should I attain through any inward revelation to a more clear perception of my assigned task, I shall embrace it with joy and praise. I shall not esteem it a low place, for instance, if I could strengthen your hands by true expressions of the hope and pleasure which your writings communicate to me and to some of my countrymen. Yet the best poem of the Poet is his own mind, and more even than in any of the works I rejoice in the promise of the workman. Now I am only reading and musing, and when I have any news to tell of myself, you shall hear them.

Now as to the welcome hint that you might come to America, it shall be to me a joyful hope. Come and found a new Academy that shall be church and school and Parnassus, as a true Poet’s house should be. I dare not say that wit has better chance here than in England of winning world-wages, but it can always live, and it can scarce find competition. Indeed, indeed, you shall have the continent to yourself were it only as Crusoe was king. If you cared to read literary lectures, our people have vast curiosity, and the apparatus is very easy to set agoing. Such ‘pulpit’ as you pleased to erect would at least find no hindrance in the building. A friend of mine and of yours remarked, when I expressed the wish that you would come here, “that people were not here, as in England, sacramented to organized schools of opinion, but were a far more convertible audience.” If at all you can think of coming here, I would send you any and all particulars of information with cheerfulest speed.

I have written a very long letter, yet have said nothing of much that I would say upon chapters of the *Sartor*. I must keep that, and the thoughts I had upon ‘poetry in history,’ for another letter, or (might it be!) for a dialogue face to face.

Let me not fail of *The Diamond Necklace*. I found three greedy receivers of Teufelsdröckh, who also radiate its light. For the sake of your knowing what manner of men you move, I send you two pieces writ by one of them, Frederic Henry Hedge, the article on Swedenborg and that on Phrenology. And as you like Sampson Reed, here are one or two more of his papers. Do read them. And since you study French history do not fail to look at our Yankee portrait of

Lafayette. Present my best remembrances to Mrs. Carlyle, whom that stern and blessed solitude has armed and sublimed out of all reach of the littleness and unreason of London. If I thought we could win her to the American shore, I would send her the story of those godly women, the contemporaries of John Knox's daughter, who came out hither to enjoy the worship of God amidst wild men and wild beasts.

Your friend and servant,
R. Waldo Emerson

IV. Carlyle to Emerson

5 Cheyne Row, Chelsea, London 3 February, 1835

My Dear Sir, — I owe you a speedy answer as well as a grateful one; for, in spite of the swift ships of the Americans, our communings pass too slowly. Your letter, written in November, did not reach me till a few days ago; your Books or Papers have not yet come, — though the ever-punctual Rich, I can hope, will now soon get them for me. He showed me his *way-bill* or invoice, and the consignment of these friendly effects “to another gentleman,” and undertook with an air of great fidelity to bring all to a right bearing. On the whole, as the Atlantic is so broad and deep, ought we not rather to esteem it a beneficent miracle that messages can arrive at all; that a little slip of paper will skim over all these weltering floods, and other inextricable confusions, and come at last, in the hand of the Twopenny Postman, safe to your lurking-place, like green leaf in the bill of Noah’s Dove? Let us be grateful for mercies; let us use them while they are granted us. Time was when “they that feared the Lord spake *often* one to another.” A friendly thought is the purest gift that man can afford to man. “Speech” also, they say, “is cheerfuler than light itself.”

The date of your letter gives me unhappily no idea but that of Space and Time. As you know my whereabouts, will you throw a little light on your own? I can imagine Boston, and have often seen the musket volleys on Bunker Hill; but in this new spot there is nothing for me save sky and earth, the chance of retirement, peace, and winter seclusion. Alas! I can too well fancy one other thing: the bereavement you allude to, the sorrow that will so long be painful before it can become merely sad and sacred. Brothers, especially in these days, are much to us: had one no brother, one could hardly understand what it was to have a Friend; they are the Friends whom Nature chose for us; Society and Fortune, as things now go, are scarcely compatible with Friendship, and contrive to get along, miserably enough, without it. Yet sorrow not above measure for him that is gone. He is, in very deed and truth, with God, — *where* you and I both are. What a thin film it is that divides the Living from the Dead! In still nights, as Jean Paul says, “the limbs of my Buried Ones touched cold on my soul, and drove away its blots, as dead hands heal eruptions of the skin.” Let us turn back into Life.

That you sit there bethinking yourself, and have yet taken no course of activity, and can without inward or outward hurt so sit, is on the whole rather pleasing news to me. It is a great truth which you say, that Providence can well

afford to have one sit: another great truth which you feel without saying it is that a course wherein clear faith cannot go with you may be worse than none; if clear faith go never so slightly against it, then it is certainly worse than none. To speak with perhaps ill-bred candor, I like as well to fancy you *not* preaching to Unitarians a Gospel after their heart. I will say farther, that you are the only man I ever met with of that persuasion whom I could unobstructedly like. The others that I have seen were all a kind of halfway-house characters, who, I thought, should, if they had not wanted courage, have ended in unbelief; in “faint possible Theism,” which I like considerably worse than Atheism. Such, I could not but feel, deserve the fate they find here; the bat fate: to be killed among the rats as a bird, among the birds as a rat.... Nay, who knows but it is doubts of the like kind in your own mind that keep you for a time inactive even now? For the rest, that you have liberty to choose by your own will merely, is a great blessing: too rare for those that could use it so well; nay, often it is difficult to use. But till *ill health* of body or of mind warns you that the moving, not the sitting, position is essential, *sit* still, contented in conscience; understanding well that no man, that God only knows *what* we are working, and will show it one day; that such and such a one, who filled the whole Earth with his hammering and troweling, and would not let men pass for his rubbish, turns out to have built of mere coagulated froth, and vanishes with his edifice, traceless, silently, or amid hootings illimitable; while again that other still man, by the word of his mouth, by the very look of his face, was scattering influences, as *seeds* are scattered, “to be found flourishing as a banyan grove after a thousand years.” I beg your pardon for all this preaching, if it be superfluous impute it to no miserable motive.

Your objections to Goethe are very natural, and even bring you nearer me: nevertheless, I am by no means sure that it were not your wisdom, at this moment, to set about learning the German Language, with a view towards studying *him* mainly! I do not assert this; but the truth of it would not surprise me. Believe me, it is impossible you can be more a Puritan than I; nay, I often feel as if I were far too much so: but John Knox himself, could he have seen the peaceable impregnable *fidelity* of that man’s mind, and how to him also Duty was *infinite*, — Knox would have passed on, wondering not reproaching. But I will tell you in a word why I like Goethe: his is the only *healthy* mind, of any extent, that I have discovered in Europe for long generations; it was he that first convincingly proclaimed to me (convincingly, for I saw it *done*): Behold, even in this scandalous Sceptico-Epicurean generation, when all is gone but hunger and cant, it is still possible that Man be a Man! For which last Evangel, the confirmation and rehabilitation of all other Evangels whatsoever, how can I be

too grateful? On the whole, I suspect you yet know only Goethe the Heathen (Ethnic); but you will know Goethe the Christian by and by, and like that one far better. Rich showed me a Compilation* in green cloth boards that you had beckoned across the water: pray read the fourth volume of that, and let a man of your clearness of feeling say whether that was a Parasite or a Prophet. — And then as to “misery” and the other dark ground on which you love to see genius paint itself, — alas! consider whether misery is not *ill health* too; also whether good fortune is not worse to bear than bad; and on the whole whether the glorious serene summer is not greater than the wildest hurricane, — as Light, the Naturalists say, is stronger a thousand times than Lightning. And so I appeal to Philip sober; — and indeed have hardly said as much about Goethe since I saw you, for nothing reigns here but twilight delusion (falsely for the time than midnight darkness) on that subject, and I feel that the most suffer nothing thereby, having properly nothing or little to do with such a matter but with you, who are not “seeking recipes for happiness,” but something far higher, it is not so, and *therefore* I have spoken and appealed; and hope the new curiosity, if I have awakened any, will do you no mischief.

—— ——— * Obviously Carlyle’s *Specimens of German Romance*, of which the fourth volume was devoted to Goethe. —— —— ——

But now as to myself; for you will grumble at a sheet of speculation sent so far: I am here still, as Rob Roy was on Glasgow Bridge, *biding tryste*; busy extremely, with work that will not profit me at all in some senses; suffering rather in health and nerves; and still with nothing like dawn on any quarter of my horizon. *The Diamond Necklace* has not been printed, but will be, were this *French Revolution* out; which latter, however, drags itself along in a way that would fill your benevolent heart with pity. I am for three small volumes now, and have one done. It is the dreadfulest labor (with these nerves, this liver) I ever undertook; all is so inaccurate, superficial, vague, in the numberless books I consult; and without accuracy at least, what other good is possible? Add to this that I have no hope about the thing, except only that I *shall be done with it*: I can reasonably expect nothing from any considerable class here, but at *best* to be scolded and reproached; perhaps to be left standing “on my own basis,” without note or comment of any kind, save from the Bookseller, who will lose his printing. The hope I have however is sure: if life is lent me, I shall be *done with* the business; I will write this “History of Sansculottism,” the notablest phenomenon I meet with since the time of the Crusades or earlier; after which my part is played. As for the future, I heed it little when so busy; but it often seems to me as if one thing were becoming indisputable: that I must seek another

craft than literature for these years that may remain to me. Surely, I often say, if ever man had a finger-of-Providence shown him, thou hast it; literature will neither yield thee bread, nor a stomach to digest bread with: quit it in God's name, shouldst thou take spade and mattock instead. The truth is, I believe literature to be as good as dead and gone in all parts of Europe at this moment, and nothing but hungry Revolt and Radicalism appointed us for perhaps three generations; I do not see how a man can honestly live by writing in another dialect than that, in England at least; so that if you determine on not living dishonestly, it will behove you to look several things full in the face, and ascertain what is what with some distinctness. I suffer also terribly from the solitary existence I have all along had; it is becoming a kind of passion with me, to feel myself among my brothers. And then, How? Alas! I care not a doit for Radicalism, nay I feel it to be a wretched necessity, unfit for me; Conservatism being not unfit only but false for me: yet these two are the grand Categories under which all English spiritual activity that so much as thinks remuneration possible must range itself. I look around accordingly on a most wonderful vortex of things; and pray to God only, that as my day, is so my strength may be. What will come out of it is wholly uncertain: for I have possibilities too; the possibilities of London are far from exhausted yet: I have a brave brother, who invites me to come and be quiet with him in Rome; a brave friend (known to you) who opens the door of a new Western world, — and so we will stand considering and consulting, at least till the Book be over. Are all these things interesting to you? I know they are.

As for America and Lecturing, it is a thing I do sometimes turn over, but never yet with any seriousness. What your friend says of the people being more persuadable, so far, as having no Tithe-controversy, &c., &c. will go, I can most readily understand it. But apart from that, I should rather fancy America mainly a new Commercial England, with a fuller pantry, — little more or little less. The same unquenchable, almost frightfully unresting spirit of endeavor, directed (woe is me!) to the making of money, or money's worth; namely, food finer and finer, and gigmatic renown higher and higher: nay, must not your gigmaticity be a *purse-gigmaticity*, some half-shade worse than a *purse-and-pedigree* one? Or perhaps it is not a whit worse; only rougher, more substantial; on the whole better? At all events ours is fast becoming identical with it; for the pedigree ingredient is as near as may be gone: *Gagnez de l'argent, et ne vous faites pas pendre*, this is very nearly the whole Law, first Table and second. So that you see, when I set foot on American land, it will be on no Utopia; but on a *conditional* piece of ground where some things are to be expected and other

things not. I may say, on the other hand, that Lecturing (or I would rather it were *speaking*) is a thing I have always had some hankering after: it seems to me I could really *swim* in that element, were I once thrown into it; that in fact it would develop several things in me which struggle violently for development. The great want I have towards such an enterprise is one you may guess at: want of a *rubric*, of a title to name my speech by. Could any one but appoint me Lecturing Professor of Teufelsdröckh's science,— "Things in general"! To discourse of Poets and Poetry in the Hazlitt style, or talk stuff about the Spirit of the Age, were most unedifying: one knows not what to call himself. However, there is no doubt that were the child born it *might* be christened; wherefore I will really request you to take the business into your consideration, and give me in the most rigorous sober manner you can some scheme of it. How many Discourses; what Towns; the probable Expenses, the probable net Income, the Time, &c., &c.: all that you can suppose a man wholly ignorant might want to know about it. America I should like well enough to visit, much as I should another part of my native country: it is, as you see, distinctly possible that such a thing might be; we will keep it hanging, to solace ourselves with it, till the time decide.

Have I involved you in double postage by this loquacity? or What is your American rule? I did not intend it when I began; but today my confusion of head is very great and words must be multiplied with only a given quantity of meaning.

My wife, who is just gone out to spend the day with a certain "celebrated Mrs. Austin," (called also the "celebrated Translatress of Puckler-Muskau,") charged me very specially to send you her love, her good wishes and thanks: I assure you there is no hypocrisy in that. She votes often for taking the Transatlantic scheme into contemplation; declares farther that my Book and Books must and will indisputably prosper (at some future era), and takes the world beside me — as a good wife and daughter of John Knox should. Speaking of "celebrated" persons here, let me mention that I have learned by stern experience, as children do with fire, to keep in general quite out of the way of celebrated persons, more especially celebrated women. This Mrs. Austin, who is half ruined by celebrity (of a kind), is the only woman I have seen not wholly ruined by it. Men, strong men, I have seen die of it, or go mad by it. *Good* fortune is far worse than bad!

Will you write with all despatch, my dear sir; fancy me a fellow-wayfarer, who cordially bids you God-speed, and would fain keep in sight of you, within sound of you.

Yours with great sincerity,

T. Carlyle

V. Emerson to Carlyle

Concord, 12 March, 1838

My Dear Sir, — I am glad of the opportunity of Mr. Barnard's* visit to say health and peace be with you. I esteem it the best sign that has shone in my little section of space for many days, that some thirty or more intelligent persons understand and highly appreciate the *Sartor*. Dr. Channing sent to me for it the other day, and I have since heard that he had read it with great interest. As soon as I go into town I shall see him and measure his love. I know his genius does not and cannot engage your attention much. He possesses the mysterious endowment of natural eloquence, whose effect, however intense, is limited, of course, to personal communication. I can see myself that his writings, without his voice, may be meagre and feeble. But please love his catholicism, that at his age can relish the *Sartor*, born and inveterated as he is in old books. Moreover, he lay awake all night, he told my friend last week, because he had learned in the evening that some young men proposed to issue a journal, to be called *The Transcendentalist*, as the organ of a spiritual philosophy. So much for our gossip of today.

* Mr. Henry Barnard, of Hartford, Connecticut, to whom Emerson had given a note of introduction to Carlyle.

But my errand is yet to tell. Some friends here are very desirous that Mr. Fraser should send out to a bookseller here fifty or a hundred copies of the *Sartor*. So many we want very much; they would be sold at once. If we knew that two or three hundred would be taken up, we should reprint it now. But we think it better to satisfy the known inquirers for the book first, and when they have extended the demand for it, then to reproduce it, a naturalized Yankee. The lovers of Teufelsdröckh here are sufficiently enthusiastic. I am an icicle to them. They think England must be blind and deaf if the Professor makes no more impression there than yet appears. I, with the most affectionate wishes for Thomas Carlyle's fame, am mainly bent on securing the medicinal virtues of his book for my young neighbors. The good people think he overpraises Goethe. There I give him up to their wrath. But I bid them mark his unsleeping moral sentiment; that every other moralist occasionally nods, becomes complaisant and traditional; but this man is without interval on the side of equity and humanity! I am grieved for you, O wise friend, that you cannot put in your own contemptuous disclaimer of such puritanical pleas as are set up for you; but each creature and Levite must do after his kind.

Yet do not imagine that I will hurt you in this unseen domain of yours by any

Boswellism. Every suffrage you get here is fairly your own. Nobody is coaxed to admire you, and you have won friends whom I should be proud to show you, and honorable women not a few. And cannot you renew and confirm your suggestion touching your appearance in this continent? Ah, if I could give your intimation the binding force of an oracular word! — in a few months, please God, at most, I shall have wife, house, and home wherewith and wherein to return your former hospitality. And if I could draw my prophet and his prophetess to brighten and immortalize my lodge, and make it the window through which for a summer you should look out on a field which Columbus and Berkeley and Lafayette did not scorn to sow, my sun should shine clearer and life would promise something better than peace. There is a part of ethics, or in Schleiermacher's distribution it might be physics, which possesses all attraction for me; to wit, the compensations of the Universe, the equality and the coexistence of action and reaction, that all prayers are granted, that every debt is paid. And the skill with which the great All maketh clean work as it goes along, leaves no rag, consumes its smoke, — will I hope make a chapter in your thesis.

I intimated above that we aspire to have a work on the First Philosophy in Boston. I hope, or wish rather. Those that are forward in it debate upon the name. I doubt not in the least its reception if the material that should fill it existed. Through the thickest understanding will the reason throw itself instantly into relation with the truth that is its object, whenever that appears. But how seldom is the pure loadstone produced! Faith and love are apt to be spasmodic in the best minds: Men live on the brink of mysteries and harmonies into which yet they never enter, and with their hand on the door-latch they die outside. Always excepting my wonderful Professor, who among the living has thrown any memorable truths into circulation? So live and rejoice and work, my friend, and God you aid, for the profit of many more than your mortal eyes shall see. Especially seek with recruited and never-tired vision to bring back yet higher and truer report from your Mount of Communion of the Spirit that dwells there and creates all. Have you received a letter from me with a pamphlet sent in December? Fail not, I beg of you, to remember me to Mrs. Carlyle.

Can you not have some *Sartors* sent? Hilliard, Gray, & Co. are the best publishers in Boston. Or Mr. Rich has connections with Burdett in Boston.

Yours with respect and affection,
R. Waldo Emerson

VI. Emerson to Carlyle

Concord, 30 April, 1835

My Dear Sir, — I received your letter of the 3d of February on the 20th instant, and am sorry that hitherto we have not been able to command a more mercantile promptitude in the transmission of these light sheets. If desire of a letter before it arrived, or gladness when it came, could speed its journey, I should have it the day it was written. But, being come, it makes me sad and glad by turns. I admire at the alleged state of your English reading public without comprehending it, and with a hoping scepticism touching the facts. I hear my Prophet deplore, as his predecessors did, the deaf ear and the gross heart of his people, and threaten to shut his lips; but, happily, this he cannot do, any more than could they. The word of the Lord *will* be spoken. But I shall not much grieve that the English people and you are not of the same mind if that apathy or antipathy can by any means be the occasion of your visiting America. The hope of this is so pleasant to me, that I have thought of little else for the week past, and having conferred with some friends on the matter, I shall try, in obedience to your request, to give you a statement of our capabilities, without indulging my penchant for the favorable side. Your picture of America is faithful enough: yet Boston contains some genuine taste for literature, and a good deal of traditional reverence for it. For a few years past, we have had, every winter, several courses of lectures, scientific, political, miscellaneous, and even some purely literary, which were well attended. Some lectures on Shakespeare were crowded; and even I found much indulgence in reading, last winter, some Biographical Lectures, which were meant for theories or portraits of Luther, Michelangelo, Milton, George Fox, Burke. These courses are really given under the auspices of Societies, as “Natural History Society,” “Mechanics’ Institutes,” “Diffusion of Useful Knowledge,” &c., &c., and the fee to the lecturer is inconsiderable, usually \$20 for each lecture. But in a few instances individuals have undertaken courses of lectures, and have been well paid. Dr. Spurzheim* received probably \$3,000 in the few months that he lived here. Mr. Silliman, a Professor of Yale College, has lately received something more than that for a course of fifteen or sixteen lectures on Geology. Private projects of this sort are, however, always attended with a degree of uncertainty. The favor of my townsmen is often sudden and spasmodic, and Mr. Silliman, who has had more success than ever any before him, might not find a handful of hearers another winter. But it is the opinion of many friends whose judgment I value, that a person of so many claims upon the ear and imagination of our fashionable populace as the “author

of the *Life of Schiller*," "the reviewer of *Burns's Life*," the live "contributor to the *Edinburgh and Foreign Reviews*," nay, the "worshipful Teufelsdröckh," the "personal friend of Goethe," would, for at least one season, batter down opposition, and command all ears on whatever topic pleased him, and that, quite independently of the merit of his lectures, merely for so many names' sake.

— * The memory of Dr. Spurzheim has faded, but his name is still known to men of science on both sides of the Atlantic as that of the most ardent and accomplished advocate of the doctrine of Phrenology. He came to the United States in 1832 to advance the cause he had at heart, but he had been only a short time in the country when he died at Boston of a fever. —

But the subject, you say, does not yet define itself. Whilst it is "gathering to a god," we who wait will only say, that we know enough here of Goethe and Schiller to have some interest in German literature. A respectable German here, Dr. Follen, has given lectures to a good class upon Schiller. I am quite sure that Goethe's name would now stimulate the curiosity of scores of persons. On English literature, a much larger class would have some preparedness. But whatever topics you might choose, I need not say you must leave under them scope for your narrative and pictorial powers; yes, and space to let out all the length of all the reins of your eloquence of moral sentiment. What "Lay Sermons" might you not preach! or methinks "Lectures on Europe" were a sea big enough for you to swim in. The only condition our adolescent ear insists upon is, that the English as it is spoken by the unlearned shall be the bridge between our teacher and our tympanum.

Income and Expenses. — All our lectures are usually delivered in the same hall, built for the purpose. It will hold 1,200 persons; 900 are thought a large assembly. The expenses of rent, lights, doorkeeper, &c. for this hall, would be \$12 each lecture. The price of \$3 is the least that might be demanded for a single ticket of admission to the course, — perhaps \$4; \$5 for a ticket admitting a gentleman and lady. So let us suppose we have 900 persons paying \$3 each, or \$2,700. If it should happen, as did in Prof. Silliman's case, that many more than 900 tickets were sold, it would be easy to give the course in the day and in the evening, an expedient sometimes practised to divide an audience, and because it is a great convenience to many to choose their time. If the lectures succeed in Boston, their success is insured at Salem, a town thirteen miles off, with a population of 15,000. They might, perhaps, be repeated at Cambridge, three miles from Boston, and probably at Philadelphia, thirty-six hours distant.

At New York anything literary has hitherto had no favor. The lectures might be fifteen or sixteen in number, of about an hour each. They might be delivered, one or two in each week. And if they met with sudden success, it would be easy

to carry on the course simultaneously at Salem, and Cambridge, and in the city. They must be delivered in the winter.

Another plan suggested in addition to this. A gentleman here is giving a course of lectures on English literature to a private class of ladies, at \$10 to each subscriber. There is no doubt, were you so disposed, you might turn to account any writings in the bottom of your portfolio, by reading lectures to such a class, or, still better, by speaking.

Expense of Living. — You may travel in this country for \$4 to \$4.50 a day. You may board in Boston in a “gigmanic” style for \$8 per week, including all domestic expenses. Eight dollars per week is the board paid by the permanent residents at the Tremont House, — probably the best hotel in North America. There, and at the best hotels in New York, the lodger for a few days pays at the rate of \$1.50 per day. Twice eight dollars would provide a gentleman and lady with board, chamber, and private parlor, at a fashionable boardinghouse. In the country, of course, the expenses are two thirds less. These are rates of expense where economy is not studied. I think the Liverpool and New York packets demand \$150 of the passenger, and their accommodations are perfect. (N.B. — I set down all sums in dollars. You may commonly reckon a pound sterling worth \$4.80.) “The man is certain of success,” say those I talk with, “for one winter, but not afterwards.” That supposes no extraordinary merit in the lectures, and only regards you in your leonine aspect. However, it was suggested that, if Mr. C. would undertake a Journal of which we have talked much, but which we have never yet produced, he would do us great service, and we feel some confidence that it could be made to secure him a support. It is that project which I mentioned to you in a letter by Mr. Barnard, — a book to be called *The Transcendentalist*, or *The Spiritual Inquirer*, or the like, and of which F.H. Hedge* was to be editor. Those who are most interested in it designed to make gratuitous contributions to its pages, until its success could be assured. Hedge is just leaving our neighborhood to be settled as a minister two hundred and fifty miles off, in Maine, and entreats that you will edit the journal. He will write, and I please myself with thinking I shall be able to write under such auspices. Then you might (though I know not the laws respecting literary property) collect some of your own writings and reprint them here. I think the *Sartor* would now be sure of a sale. Your *Life of Schiller*, and *Wilhelm Meister*, have been long reprinted here. At worst, if you wholly disliked us, and preferred Old England to New, you can judge of the suggestion of a knowing man, that you might see Niagara, get a new stock of health, and pay all your expenses by printing in England a book of travels in America.

— — —
*Now the Rev. Dr. Hedge, late Professor of German and of
Ecclesiastical History in Harvard College.
— — —

I wish you to know that we do not depend for your *eclat* on your being already known to rich men here. You are not. Nothing has ever been published here designating you by name. But Dr. Channing reads and respects you. That is a fact of importance to our project. Several clergymen, Messrs. Frothingham, Ripley, Francis, all of them scholars and Spiritualists, (some of them, unluckily, called Unitarian,) love you dearly, and will work heartily in your behalf. Mr. Frothingham, a worthy and accomplished man, more like Erasmus than Luther, said to me on parting, the other day, "You cannot express in terms too extravagant my desire that he should come." George Ripley, having heard, through your letter to me, that nobody in England had responded to the *Sartor*, had secretly written you a most reverential letter, which, by dint of coaxing, he read to me, though he said there was but one step from the sublime to the ridiculous. I prayed him, though I thought the letter did him no justice, save to his heart, to send you it or another; and he says he will. He is a very able young man, even if his letter should not show it.* He said he could, and would, bring many persons to hear you, and you should be sure of his utmost aid. Dr. Bradford, a medical man, is of good courage. Mr. Loring,** a lawyer, said, "— Invite Mr. and Mrs. Carlyle to spend a couple of months at my house," (I assured him I was too selfish for that,) "and if our people," he said, "cannot find out his worth, I will subscribe, with, others, to make him whole of any expense he shall incur in coming." Hedge promised more than he ought. There are several persons beside, known to me, who feel a warm interest in this thing. Mr. Furness, a popular and excellent minister in Philadelphia, at whose house Harriet Martineau was spending a few days, I learned the other day "was feeding Miss Martineau with the *Sartor*." And here some of the best women I know are warm friends of yours, and are much of Mrs. Carlyle's opinion when she says, Your books shall prosper.

— * Emerson's estimate of Mr. Ripley was justified as the years went on. His *Life*, by Mr. Octavius Frothingham, — like his father, "a worthy and accomplished, man," but more like Luther than Erasmus, — forms one of the most attractive volumes of the series of *Lives of American Men of Letters*.

** The late Ellis Gray Loring, a man of high character, well esteemed in his profession, and widely respected. — — —

On the other hand, I make no doubt you shall be sure of some opposition.

Andrews Norton, one of our best heads, once a theological professor, and a destroying critic, lives upon a rich estate at Cambridge, and frigidly excludes the Diderot paper from a *Select Journal* edited by him, with the remark, "Another paper of the Teufelsdröckh School." The University perhaps, and much that is conservative in literature and religion, I apprehend, will give you its cordial opposition, and what eccentricity can be collected from the Obituary Notice on Goethe, or from the *Sartor*, shall be mustered to demolish you. Nor yet do I feel quite certain of this. If we get a good tide with us, we shall sweep away the whole inertia, which is the whole force of these gentlemen, except Norton. That you do not like the Unitarians will never hurt you at all, if possibly you do like the Calvinists. If you have any friendly relations to your native Church, fail not to bring a letter from a Scottish Calvinist to a Calvinist here, and your fortune is made. But that were too good to happen.

Since things are so, can you not, my dear sir, finish your new work and cross the great water in September or October, and try the experiment of a winter in America? I cannot but think that if we do not make out a case strong enough to make you build your house, at least you should pitch your tent among us. The country is, as you say, worth visiting, and to give much pleasure to a few persons will be some inducement to you. I am afraid to press this matter. To me, as you can divine, it would be an unspeakable comfort; and the more, that I hope before that time so far to settle my own affairs as to have a wife and a house to receive you. Tell Mrs. Carlyle, with my affectionate regards, that some friends whom she does not yet know do hope with me to have her company for the next winter at our house, and shall not cease to hope it until you come.

I have many things to say upon the topics of your letter, but my letter is already so immeasurably long, it must stop. Long as it is, I regret I have not more facts. Dr. Channing is in New York, or I think, despite your negligence of him, I should have visited him on account of his interest in you. Could you see him you would like him. I shall write you immediately on learning anything new bearing on this business. I intended to have despatched this letter a day or two sooner, that it might go by the packet of the 1st of May from New York. Now it will go by that of the 8th, and ought to reach you in thirty days. Send me your thoughts upon it as soon as you can. I *jalouse* of that new book. I fear its success may mar my project.

Yours affectionately,
R. Waldo Emerson

VII. Carlyle to Emerson

5 Cheyne Row, Chelsea, London 13 May, 1835

Thanks, my kind friend, for the news you again send me. Good news, good new friends; nothing that is not good comes to me across these waters. As if the "Golden West" seen by Poets were no longer a mere optical phenomenon, but growing a reality, and coining itself into solid blessings! To me it seems very strange; as indeed generally this whole Existence here below more and more does.

We have seen your Barnard: a most modest, intelligent, compact, hopeful-looking man, who will not revisit you without conquests from his expedition hither. We expect to see much more of him; to instruct him, to learn of him: especially about that real-imaginary locality of "Concord," where a kindly-speaking voice lives incarnated, there is much to learn.

That you will take to yourself a wife is the cheerfulest tidings you could send us. It is in no wise meet for man to be alone; and indeed the beneficent Heavens, in creating Eve, did mercifully guard against that. May it prove blessed, this new arrangement! I delight to prophesy for you peaceful days in it; peaceful, not idle; filled rather with that best activity which is the stillest. To the future, or perhaps at this hour actual Mrs. Emerson, will you offer true wishes from two British Friends; who have not seen her with their eyes, but whose thoughts need not be strangers to the Home she will make for you. Nay, you add the most chivalrous summons: which who knows but one day we may actually stir ourselves to obey! It may hover for the present among the gentlest of our day-dreams; mild-lustrous; an impossible possibility. May all go well with you, my worthy Countryman, Kinsman, and brother Man!

This so astonishing reception of Teufelsdröckh in your New England circle seems to me not only astonishing, but questionable; not, however, to be quarreled with. I may say: If the New England cup is dangerously sweet, there are here in Old England whole antiseptic floods of good *hop*-decoction; therein let it mingle; work wholesomely towards what clear benefit it can. Your young ones too, as all exaggeration is transient, and exaggerated love almost itself a blessing, will get through it without damage. As for Fraser, however, the idea of a new Edition is frightful to him; or rather ludicrous, unimaginable. Of him no man has inquired for a *Sartor*: in his whole wonderful world of Tory Pamphleteers, Conservative Younger-brothers, Regent-Street Loungers, Crockford Gamblers, Irish Jesuits, drunken Reporters, and miscellaneous

unclean persons (whom nitre and much soap will not wash clean), not a soul has expressed the smallest wish that way. He shrieks at the idea. Accordingly I realized these four copies from [him,] all he will surrender; and can do no more. Take them with my blessing. I beg you will present one to the honorablest of those “honorable women”; say to her that her (unknown) image as she reads shall be to me a bright faultless vision, textured out of mere sunbeams; to be loved and worshiped; the best of all Transatlantic women! Do at any rate, in a more business like style, offer my respectful regards to Dr. Channing, whom certainly I could not count on for a reader, or other than a grieved condemnatory one; for I reckoned tolerance had its limits. His own faithful, long-continued striving towards what is Best, I knew and honored; that he will let me go my own way thitherward, with a God-speed from him, is surely a new honor to us both.

Finally, on behalf of the British world (which is not all contained in Fraser’s shop) I should tell you that various persons, some of them in a dialect not to be doubted of, have privately expressed their recognition of this poor Rhapsody, the best the poor Clothes-Professor could produce in the circumstances; nay, I have Scottish Presbyterian Elders who read, and thank. So true is what you say about the aptitude of all natural hearts for receiving what is from the heart spoken to them. As face answereth to face! Brother, if thou wish me to believe, do thou thyself believe first: this is as true as that of the *flere* and *dolendum*; perhaps truer. Wherefore, putting all things together, cannot I feel that I have washed my hands of this business in a quite tolerable manner? Let a man be thankful; and on the whole go along, while he has strength left to go.

This Boston *Transcendentalist*, whatever the fate or merit of it prove to be, is surely an interesting symptom. There must be things not dreamt of, over in that Transoceanic Parish! I shall cordially wish well to this thing; and hail it as the sure forerunner of things better. The Visible becomes the Bestial when it rests not on the Invisible. Innumerable tumults of Metaphysic must be struggled through (whole generations perishing by the way), and at last Transcendentalism evolve itself (if I construe aright), as the *Euthanasia* of Metaphysic altogether. May it be sure, may it be speedy! Thou shalt open thy *eyes*, O Son of Adam; thou shalt *look*, and not forever jargon about *laws* of Optics and the making of spectacles! For myself, I rejoice very much that I seem to be flinging aside innumerable sets of spectacles (could I but *lay* them aside, — with gentleness!) and hope one day actually to see a thing or two. Man *lives* by Belief (as it was well written of old); by logic he can only at best long to live. Oh, I am dreadfully, afflicted with Logic here, and wish often (in my haste) that I had the

besom of destruction to lay to it for a little!

“Why? and WHEREFORE? God wot, simply THEREFORE! Ask not WHY; ‘t is SITH thou hast to care for.”

Since I wrote last to you, (which seems some three months ago,) there has a great mischance befallen me: the saddest, I think, of the kind called Accidents I ever had to front. By dint of continual endeavor for many weary weeks, I had got the first volume of that miserable *French Revolution* rather handsomely finished: from amid infinite contradictions I felt as if my head were fairly above water, and I could go on writing my poor Book, defying the Devil and the World, with a certain degree of assurance, and even of joy. A Friend borrowed this volume of Manuscript, — a kind Friend but a careless one, — to write notes on it, which he was well qualified to do. One evening about two months ago he came in on us, “distraction (literally) in his aspect”; the Manuscript, left carelessly out, had been torn up as waste paper, and all but three or four tatters was clean gone! I could not complain, or the poor man seemed as if he would have shot himself: we had to gather ourselves together, and show a smooth front to it; which happily, though difficult, was not impossible to do. I began again at the beginning; to such a wretched paralyzing torpedo of a task as my hand never found to do: at which I have worn myself these two months to the hue of saffron, to the humor of incipient desperation; and now, four days ago, perceiving well that I was like a man swimming in an element that grew ever rarer, till at last it became vacuum (think of that!) I with a new effort of self-denial sealed up all the paper fragments, and said to myself: In this mood thou makest no way, writest *nothing* that requires not to be erased again; lay it by for one complete week! And so it lies, under lock and key. I have digested the whole misery; I say, if thou canst *never* write this thing, why then never do write it: God’s Universe will go along *better* — without it. My Belief in a special Providence grows yearly stronger, unsubduable, impregnable: however, you see all the mad increase of entanglement I have got to strive with, and will pity me in it. Bodily exhaustion (and “Diana in the shape of bile”)* I will at least try to exclude from the controversy. By God’s blessing, perhaps the Book shall yet be written; but I find it will not do, by sheer direct force; only by gentler side-methods. I have much else to write too: I feel often as if with one year of health and peace I could write something considerable; — the image of which sails dim and great through my head. Which year of health and peace, God, if He see meet, will give me yet; or withhold from me, as shall be for the best.

* This allusion to Diana as an obstruction was a favorite one with Carlyle. “Sir Hudibras, according to Butler, was about to do a dreadful homicide, — an

all-important catastrophe, — and had drawn his pistol with that full intent, and would decidedly have done it, had not, says Butler, ‘Diana in the shape of rust’ imperatively intervened. A miracle she has occasionally wrought upon me in other shapes.” So wrote Carlyle in a letter in 1874.

I have dwelt and swum now for about a year in this World-Maelstrom of London; with much pain, which however has given me many thoughts, more than a counterbalance for that. Hitherto there is no outlook, but confusion, darkness, innumerable things against which a man must “set his face like a flint.” Madness rules the world, as it has generally done: one cannot, unhappily, without loss, say to it, Rule then; and yet must say it. — However, in two months more I expect my good Brother from Italy (a brave fellow, who is a great comfort to me); we are then for Scotland to gather a little health, to consider ourselves a little. I must have this Book done before anything else will prosper with me.

Your American Pamphlets got to hand only a few days ago; worthy old Rich had them not originally; seemed since to have been oblivious, out of Town, perhaps unwell. I called one day, and unearthed them. Those papers you marked I have read. Genuine endeavor; which may the Heavens forward! — In this poor Country all is swallowed up in the barren Chaos of Politics: Ministries tumbled out, Ministries tumbled in; all things (a fearful substratum of “Ignorance and Hunger” weltering and heaving under them) apparently in rapid progress towards — the melting-pot. There will be news from England by and by: many things have reached their term; Destiny “with lame foot” has overtaken them, and there will be a reckoning. O blessed are you where, what jargonizing soever there be at Washington, the poor man (*ungoverned* can govern himself) shoulders his age, and walks into the Western Woods, sure of a nourishing Earth and an overarching Sky! It is verily the Door of Hope to distracted Europe; which otherwise I should see crumbling down into blackness of darkness. — That too shall be for good.

I wish I had anything to send you besides these four poor Pamphlets; but I fear there is nothing going. Our Ex-Chancellor has been promulgating tritivalities (significant as novelties, when *he* with his wig and lordhood utters them) against the Aristocracy; whereat the upper circles are terribly scandalized. In Literature, except a promised or obtained (but to me still unknown) volume of Wordsworth, nothing nameworthy doing. — Did I tell you that I saw Wordsworth this winter? Twice, at considerable length; with almost no disappointment. He is a *natural* man (which means whole immensities here and now); flows like a natural well yielding mere wholesomeness, — though, as it

would not but seem to me, in *small* quantity, and astonishingly *diluted*. Franker utterance of mere garrulities and even platitudes I never heard from any man; at least never, whom I could *honor* for uttering them. I am thankful for Wordsworth; as in great darkness and perpetual *sky-rockets* and *coruscations*, one were for the smallest clear-burning farthing candle. Southey also I saw; a far *cleverer* man in speech, yet a considerably smaller man. Shovel-hatted; the shovel-hat is *grown* to him: one must take him as he is.

The second leaf is done; I must not venture on another. God bless you, my worthy Friend; you and her who is to be yours! My Wife bids me send heartiest wishes and regards from her too across the Sea. Perhaps we shall all meet one another some day, — if not Here, then Yonder!

Faithfully always,
T. Carlyle

VIII. Carlyle to Emerson

Chelsea, London, 27 June, 1835

My Dear Friend, — Your very kind Letter has been in my hand these four weeks, — the subject of much meditation, which has not yet cleared itself into anything like a definite practical issue. Indeed, the conditions of the case are still not wholly before me: for if the American side of it, thanks to your perspicuous minuteness, is now tolerably plain, the European side continues dubious, too dim for a decision. So much in my own position here is vague, not to be measured; then there is a Brother, coming home to me from Italy, almost daily expected now; whose ulterior resolutions cannot but be influential on mine; for we are Brothers in the old good sense, and have one heart and one interest and object, and even one purse; and Jack is a *good man*, for whom I daily thank Heaven, as for one of its principal mercies. He is Traveling Physician to the Countess of Clare, well entreated by her and hers; but, I think, weary of that inane element of “the English Abroad,” and as good as determined to have done with it; to seek *work* (he sees not well how), if possible, with wages; but even almost *without*, or with the lowest endurable, if need be. Work and wages: the two prime necessities of man! It is pity they should ever be disjoined; yet of the two, if one *must*, in this mad Earth, be dispensed with, it is really wise to say at all hazards, Be it the wages then. This Brother (if the Heavens have been kind to me) must be in Paris one of these days; then here speedily; and “the House must resolve itself into a Committee” — of ways and means. Add to all this, that I myself have been and am one of the stupidest of living men; in one of my vacant, interlunar conditions, unfit for deciding on anything: were I to give you my actual *view* of this case, it were a view such as Satan had from the pavilion of the Anarch old. Alas! it is all too like Chaos: confusion of dense and rare: I also know what it is to drop *plumb*, fluttering my pennons vain, — for a series of weeks.

One point only is clear: that you, my Friend, are very friendly to me; that New England is as much my country and home as Old England. Very singular and very pleasant it is to me to feel as if I had a *house of my own* in that far country: so many leagues and geographical degrees of wild-weltering “unfruitful brine”; and then the hospitable hearth and the smiles of brethren awaiting one there! What with railways, steamships, printing presses, it has surely become a most *monstrous* “tissue,” this life of ours; if evil and confusion in the one Hemisphere, then good and order in the other, a man knows not how: and so it

rustles forth, immeasurable, from “that roaring Loom of Time,” — miraculous ever as of old! To Ralph Waldo Emerson, however, and those that love me as he, be thanks always, and a sure place in the sanctuary of the mind. Long shall we remember that Autumn Sunday that landed him (out of Infinite Space) on the Craigenputtock wilderness, not to leave us as he found us. My Wife says, whatever I decide on, I cannot thank you too heartily; — which really is very sound doctrine. I write to tell you so much; and that you shall hear from me again when there is more to tell.

It does seem next to certain to me that I could preach a very considerable quantity of things from that Boston Pulpit, such as it is, — were I once fairly started. If so, what an unspeakable relief were it too! Of the whole mountain of miseries one grumbles at in this life, the central and parent one, as I often say, is that you cannot utter yourself. The poor soul sits struggling, impatient, longing vehemently out towards all corners of the Universe, and cannot get its hest delivered, not even so far as the voice might do it. Imprisoned, enchanted, like the Arabian Prince with half his body marble: it is really bad work. Then comes bodily sickness; to act and react, and double the imbroglio. Till at last, I suppose, one does rise, like Eliphaz the Temanite; states that his inner man is bursting (as if filled with carbonic acid and new wine), that by the favor of Heaven he will speak a word or two. Would it were come so far, — if it be ever to come!

On the whole I think the odds are that I shall some time or other get over to you; but that for this winter I ought not to go. My London expedition is not decided hitherto; I have begun various relations and arrangements, which it were questionable to cut short so soon. That beggarly Book, were there nothing else, hampers me every way. To fling it once for all into the fire were perhaps the best; yet I grudge to do that. To finish it, on the other hand, is denied me for the present, or even so much as to work at it. What am I to do? When my Brother arrives, we go all back to Scotland for some weeks: there, in seclusion, with such calmness as I can find or create, the plan for the winter must be settled. You shall hear from me then; let us hope something more reasonable than I can write at present. For about a month I have gone to and fro utterly *idle*: understand that, and I need explain no more. The wearied machine refused to be urged any farther; after long spasmodic struggling comes collapse. The burning of that wretched Manuscript has really been a sore business for me. Nevertheless that too shall clear itself, and prove a *favor* of the Upper Powers: *tomorrow* to fresh fields and pastures new! This monstrous London has taught me several things during the past year; for if its Wisdom be of the most uninformative ever heard of by that name of wisdom, its Folly abounds with lessons, — which one ought to learn. I feel (with my burnt manuscript) as if defeated in this campaign; defeated,

yet not altogether disgraced. As the great Fritz said, when the battle had gone against him, "Another time we will do better."

As to Literature, Politics, and the whole multiplex aspect of existence here, expect me not to say one word. We are a singular people, in a singular condition. Not many nights ago, in one of those phenomenal assemblages named routs, whither we had gone to see the countenance of O'Connell and Company (the Tail was a Peacock's tail, with blonde muslin women and heroic Parliamentary men), one of the company, a "distinguished female" (as we call them), informed my Wife "O'Connell was the master-spirit of this age." If so, then for what we have received let us be thankful, — and enjoy it *without* criticism. — It often painfully seems to me as if much were coming fast to a crisis here; as if the crown-wheel had given way, and the whole horologe were rushing rapidly down, down, to its end! Wreckage is swift; rebuilding is slow and distant. Happily another than we has charge of it.

My new American Friends have come and gone. Barnard went off northward some fortnight ago, furnished with such guidance and furtherance as I could give him. Professor Longfellow went about the same time; to Sweden, then to Berlin and Germany: we saw him twice or thrice, and his ladies, with great pleasure; as one sees worthy souls from a far country, who cannot abide with you, who throw you a kind greeting as they pass. I inquired considerably about Concord, and a certain man there; one of the fair pilgrims told me several comfortable things. By the bye, how very good you are, in regard to this of Unitarianism! I declare, I am ashamed of my intolerance: — and yet you have ceased to be a Teacher of theirs, have you not? I mean to address you this time by the secular title of Esquire; as if I liked you better so. But truly, in black clothes or in white, by this style or by that, the man himself can never be other than welcome to me. You will further allow me to fancy that you are now wedded; and offer our united congratulations and kindest good wishes to that new fair Friend of ours, whom one day we shall surely know more of, — if the Fates smile.

My sheet is ending, and I must not burden you with double postage for such stuff as this. By dint of some inquiry I have learnt the law of the American Letter-carrying; and I now mention it for our mutual benefit. There are from New York to London three packets monthly (on the 1st, on the 10th, on the 20th); the masters of these carry Letters gratis for all men; and put the same into the Post-Office; there are some pence charged on the score of "Ship-letter" there, and after that, the regular postage of the country, if the Letter has to go farther. I put this, for example, into a place called North and South American Coffee-house in the City here, and pay twopence for it, and it flies. Doubtless there is some similar receiving-house with its "leather bag" somewhere in New York,

and fixed days (probably the same as our days) for emptying, or rather for tying and despatching, said leather bag: if you deal with the London Packets (so long as I am here) in preference to the Liverpool ones, it will all be well. As for the next Letter, (if you write as I hope you may before hearing from me again,) pray direct it, "Care of John Mill, Esq., India House, London"; and he will forward it directly, should I even be still absent in the North. — Now will you write? and pray write something about yourself. We both love you here, and send you all good prayers. *Vale faveque!*

Yours ever,
T. Carlyle

IX. Emerson to Carlyle*

Concord, 7 October, 1835

My Dear Friend, — Please God I will never again sit six weeks of this short human life over a letter of yours without answering it.

— * The original of this letter is missing; what is printed here is from the rough draft. —

I received in August your letter of June, and just then hearing that a lady, a little lady with a mighty heart, Mrs. Child,* whom I scarcely know but do much respect, was about to visit England (invited thither for work's sake by the African or Abolition Society) and that she begged an introduction to you, I used the occasion to say the godsend was come, and that I would acknowledge it as soon as three then impending tasks were ended. I have now learned that Mrs. Child was detained for weeks in New York and did not sail. Only last night I received your letter written in May, with the four copies of the *Sartor*, which by a strange oversight have been lying weeks, probably months, in the Custom-House. On such provocation I can sit still no longer.

—— ——— * The excellent Mrs. Lydia Maria Child, whose romance of *Philothea* was published in this year, 1835.

"If her heart at high floods swamps her brain now and then,
'T is but richer for that when the tide ebbs agen."

says Lowell, in his *Fable for Critics*. —

The three tasks were, a literary address; a historical discourse on the two-hundredth anniversary of our little town of Concord* (my first adventure in print, which I shall send you); the third, my marriage, now happily consummated. All three, from the least to the greatest, trod so fast upon each other's heel as to leave me, who am a slow and awkward workman, no interstice big enough for a letter that should hope to convey any information. Again I waited that the Discourse might go in his new jacket to show how busy I had been, but the creeping country press has not dressed it yet. Now congratulate me, my friend, as indeed you have already done, that I live with my wife in my own house, waiting on the good future. The house is not large, but convenient and very elastic. The more hearts (specially great hearts) it holds, the better it looks and feels. I have not had so much leisure yet but that the fact of having ample space to spread my books and blotted paper is still gratifying. So know now that your rooms in America wait for you, and that my wife is making ready a closet

for Mrs. Carlyle.

—— — * “A Historical Discourse, delivered before the Citizens of Concord, 12th September, 1835, on the Second Centennial Anniversary of the Incorporation of the Town. By Ralph Waldo Emerson. Published by Request. Concord: G.F. Bemis, Printer. 1835.” 8vo, pp. 52. — A discourse worthy of the author and of the town. It is reprinted in the eleventh volume of Emerson’s Works, Boston, 1883. —

I could cry at the disaster that has befallen you in the loss of the book. My brother Charles says the only thing the friend could do on such an occasion was to shoot himself, and wishes to know if he have done so. Such mischance might well quicken one’s curiosity to know what Oversight there is of us, and I greet you well upon your faith and the resolution issuing out of it. You have certainly found a right manly consolation, and can afford to faint and rest a month or two on the laurels of such endeavor. I trust ere this you have re-collected the entire creation out of the secret cells where, under the smiles of every Muse, it first took life. Believe, when you are weary, that you who stimulate and rejoice virtuous young men do not write a line in vain. And whatever betide us in the inexorable future, what is better than to have awaked in many men the sweet sense of beauty, and to double the courage of virtue. So do not, as you will not, let the imps from all the fens of weariness and apathy have a minute too much. To die of feeding the fires of others were sweet, since it were not death but multiplication. And yet I hold to a more orthodox immortality too.

This morning in happiest time I have a letter from George Ripley, who tells me you have written him, and that you say pretty confidently you will come next summer. *Io paean!* He tells me also that Alexander Everett (brother of Edward) has sent you the friendly notice that has just appeared in the *North American Review*, with a letter.* All which I hope you have received. I am delighted, for this man represents a clique to which I am a stranger, and which I supposed might not love you. It must be you shall succeed when Saul prophesies. Indeed, I have heard that you may hear the *Sartor* preached from some of our best pulpits and lecture-rooms. Don’t think I speak of myself, for I cherish carefully a salutary horror at the German style, and hold off my admiration as long as ever I can. But all my importance is quite at an end. For now that Doctors of Divinity and the solemn Review itself have broke silence to praise you, I have quite lost my plume as your harbinger.

— * Mr. A.H. Everett’s paper on *Sartor Resartus* was published in the *North American Review* for October, 1835. —

I read with interest what you say of the political omens in England. I could

wish our country a better comprehension of its felicity. But government has come to be a trade, and is managed solely on commercial principles. A man plunges into politics to make his fortune, and only cares that the world should last his day. We have had in different parts of the country mobs and moblike legislation, and even moblike judicature, which have betrayed an almost godless state of society; so that I begin to think even here it behoves every man to quit his dependency on society as much as he can, as he would learn to go without crutches that will be soon plucked away from him, and settle with himself the principles he can stand upon, happen what may. There is reading, and public lecturing too, in this country, that I could recommend as medicine to any gentleman who finds the love of life too strong in him.

If virtue and friendship have not yet become fables, do believe we keep your face for the living type. I was very glad to hear of the brother you describe, for I have one too, and know what it is to have presence in two places. Charles Chauncy Emerson is a lawyer now settled in this town, and, as I believe, no better Lord Hamlet was ever. He is our Doctor on all questions of taste, manners, or action. And one of the pure pleasures I promise myself in the months to come is to make you two gentlemen know each other.

X. Emerson to Carlyle

Concord, Mass., 8 April, 1856

My Dear Friend, — I am concerned at not hearing from you. I have written you two letters, one in October, one in November, I believe, since I had any tidings of you.* Your last letter is dated 27 June, 1835. I have counted all the chances of delay and miscarriage, and still am anxious lest you are ill, or have forgotten us. I have looked at the advertising sheet of the booksellers, but it promised nothing of the *History*. I thought I had made the happiest truce with sorrow in having the promise of your coming, — I was to take possession of a new kingdom of virtue and friendship. Let not the new wine mourn. Speak to me out of the wide silence. Many friends inquire of me concerning you, and you must write some word immediately on receipt of this sheet.

—— — * One in August by Mrs. Child, apparently not delivered, and one, the preceding, in October. —

With it goes an American reprint of the *Sartor*. Five hundred copies only make the edition, at one dollar a copy. About one hundred and fifty copies are subscribed for. How it will be received I know not. I am not very sanguine, for I often hear and read somewhat concerning its repulsive style. Certainly, I tell them, it is very odd. Yet I read a chapter lately with great pleasure. I send you also, with Dr. Channing's regards and good wishes, a copy of his little work, lately published, on our great local question of Slavery.

You must have written me since July. I have reckoned upon your projected visit the ensuing summer or autumn, and have conjectured the starlike influences of a new spiritual element. Especially Lectures. My own experiments for one or two winters, and the readiness with which you embrace the work, have led me to think much and to expect much from this mode of addressing men. In New England the Lyceum, as we call it, is already a great institution. Beside the more elaborate courses of lectures in the cities, every country town has its weekly evening meeting, called a Lyceum, and every professional man in the place is called upon, in the course of the winter, to entertain his fellow-citizens with a discourse on whatever topic. The topics are miscellaneous as heart can wish. But in Boston, Lowell, Salem, courses are given by individuals. I see not why this is not the most flexible of all organs of opinion, from its popularity and from its newness permitting you to say what you think, without any shackles of prescription. The pulpit in our age certainly gives forth an obstructed and uncertain sound, and the faith of those in it, if men of genius, may differ so much from that of those under it, as to embarrass the conscience of the speaker,

because so much is attributed to him from the fact of standing there. In the Lyceum nothing is presupposed. The orator is only responsible for what his lips articulate. Then what scope it allows! You may handle every member and relation of humanity. What could Homer, Socrates, or St. Paul say that cannot be said here? The audience is of all classes, and its character will be determined always by the name of the lecturer. Why may you not give the reins to your wit, your pathos, your philosophy, and become that good despot which the virtuous orator is?

Another thing. I am persuaded that, if a man speak well, he shall find this a well-rewarded work in New England. I have written this year ten lectures; I had written as many last year. And for reading both these and those at places whither I was invited, I have received this last winter about three hundred and fifty dollars. Had I, in lieu of receiving a lecturer's fee, myself advertised that I would deliver these in certain places, these receipts would have been greatly increased. I insert all this because my prayers for you in this country are quite of a commercial spirit. If you lose no dollar by us, I shall joyfully trust your genius and virtue for your satisfaction on all other points.

I cannot remember that there are any other mouthpieces that are specially vital at this time except Criticism and Parliamentary Debate. I think this of ours would possess in the hands of a great genius great advantages over both. But what avail any commendations of the form, until I know that the man is alive and well? If you love them that love you, write me straightway of your welfare. My wife desires to add to mine her friendliest greetings to Mrs. Carlyle and to yourself.

Yours affectionately,

R. Waldo Emerson

I ought to say that Le-Baron Russell, a worthy young man who studies Engineering, did cause the republication of *Teufelsdröckh*.* I trust you shall yet see a better American review of it than the *North American*.

—— ——— * This first edition of *Sartor* as an independent volume was published by James Munroe and Company, Boston. Emerson, at Mr. (now Dr.) Russell's request, wrote a Preface for the book. He told Dr. Russell that his brother Charles was not pleased with the Preface, thinking it "too commonplace, too much like all prefaces." —

XI. Carlyle to Emerson

5 Cheyne Row, Chelsea, London 29 April, 1836

My Dear Emerson, — Barnard is returning across the water, and must not go back without a flying salutation for you. These many weeks I have had your letter by me; these many weeks I have felt always that it deserved and demanded a grateful answer; and, alas! also that I could give it none. It is impossible for you to figure what mood I am in. One sole thought, That Book! that weary Book! occupies me continually: wreck and confusion of all kinds go tumbling and falling around me, within me; but to wreck and growth, to confusion and order, to the world at large, I turn a deaf ear; and have life only for this one thing, — which also in general I feel to be one of the pitifulest that ever man went about possessed with. Have compassion for me! It is really very miserable: but it will end. Some months more, and it is *ended*; and I am done with *French Revolution*, and with Revolution and Revolt in general; and look once more with free eyes over this Earth, where are other things than mean internecine work of that kind: things fitter for me, under the bright Sun, on this green Mother's-bosom (though the Devil does dwell in it)! For the present, really, it is like a Nessus' shirt, burning you into madness, this wretched Enterprise; nay, it is also like a kind of Panoply, rendering you invulnerable, insensible, to all *other* mischiefs.

I got the fatal First Volume finished (in the miserablest way, after great efforts) in October last; my head was all in a whirl; I fled to Scotland and my Mother for a month of rest. Rest is nowhere for the Son of Adam: all looked so "spectral" to me in my old-familiar Birthland; Hades itself could not have seemed stranger; Annandale also was part of the kingdom of TIME. Since November I have worked again as I could; a second volume got wrapped up and sealed out of my sight within the last three days. There is but a Third now: one pull more, and then! It seems to me, I will fly into some obscurest cranny of the world, and lie silent there for a twelvemonth. The mind is weary, the body is very sick; a little black speck dances to and fro in the left eye (part of the retina protesting against the liver, and striking work): I cannot help it; it must flutter and dance there, like a signal of distress, unanswered till I be done. My familiar friends tell me farther that the Book is all wrong, style cramp, &c., &c.: my friends, I answer, you are very right; but this also, Heaven be my witness, I cannot help. — In such sort do I live here; all this I had to write you, if I wrote at all.

For the rest I cannot say that this huge blind monster of a City is without some sort of charm for me. It leaves one alone, to go his own road unmolested. Deep in your soul you take up your protest against it, defy it, and even despise it; but need not divide yourself from it for that. Worthy individuals are glad to hear your thought, if it have any sincerity; they do not exasperate themselves or you about it; they have not even time for such a thing. Nay, in stupidity itself on a scale of this magnitude, there is an impressiveness, almost a sublimity; one thinks how, in the words of Schiller, “the very Gods fight against it in vain”; how it lies on its unfathomable foundations there, inert yet peptic; nay, eupeptic; and is a *Fact* in the world, let theory object as it will. Brown-stout, in quantities that would float a seventy-four, goes down the throats of men; and the roaring flood of life pours on; — over which Philosophy and Theory are but a poor shriek of remonstrance, which oftenest were wiser, perhaps, to hold its peace. I grow daily to honor Facts more and more, and Theory less and less. A Fact, it seems to me, is a great thing: a Sentence printed if not by God, then at least by the Devil; — neither Jeremy Bentham nor Lytton Bulwer had a hand in *that*.

There are two or three of the best souls here I have known for long: I feel less alone with them; and yet one is alone, — a stranger and a pilgrim. These friends expect mainly that the Church of England is not dead but asleep; that the leather coaches, with their gilt panels, can be peopled again with a living Aristocracy, instead of the simulacra of such. I must altogether hold my peace to this, as I do to much. Coleridge is the Father of all these. *Ay de mi!*

But to look across the “divine salt-sea.” A letter reached me, some two months ago, from Mobile, Alabama; the writer, a kind friend of mine, signs himself James Freeman Clarke.* I have mislaid, not lost his Letter; and do not at present know his permanent address (for he seemed to be only on a visit at Mobile); but you, doubtless, do know it. Will you therefore take or even find an opportunity to tell this good Friend that it is not the wreckage of the Liverpool ship he wrote by, nor insensibility on my part, that prevents his hearing direct from me; that I see him, and love him in this Letter; and hope we shall meet one day under the Sun, shall live under it, at any rate, with many a kind thought towards one another.

—— — * Now the Rev. Dr. Clarke, of Boston. —— —— —

The *North American Review* you spoke of never came (I mean that copy of it with the Note in it); but another copy became rather public here, to the amusement of some. I read the article myself: surely this Reviewer, who does not want in [sense]* otherwise, is an original: either a *thrice*-plied quiz (*Sartor*’s “Editor” a twice-plied one); or else opening on you a grandeur of still Dulness,

rarely to be met with on earth.

—— * The words supplied here were lost under the seal of the letter. ——

My friend! I must end here. Forgive me till I get done with this Book. Can you have the generosity to write, *without* an answer? Well, if you cannot, I will answer. Do not forget me. My love and my Wife's to your good Lady, to your Brother, and all friends. Tell me what you do; what your world does. As for my world, take this (which I rendered from the German Voss, a tough old-Teutonic fellow) for the best I can say of it: —

”As journeys this Earth, her eye on a Sun, through the
heavenly spaces,
And, radiant in azure, or Sunless, swallowed in tempests,
Falters not, alters not; journeying equal, sunlit or
stormgirt
So thou, Son of Earth, who hast Force,
Goal, and Time, go still onwards.”

Adieu, my dear friend! Believe me ever Yours,
Thomas Carlyle

XII. Emerson to Carlyle

Concord, Massachusetts, 17 September, 1836

My Dear Friend, — I hope you do not measure my love by the tardiness of my messages. I have few pleasures like that of receiving your kind and eloquent letters. I should be most impatient of the long interval between one and another, but that they savor always of Eternity, and promise me a friendship and friendly inspiration not reckoned or ended by days or years. Your last letter, dated in April, found me a mourner, as did your first. I have lost out of this world my brother Charles,* of whom I have spoken to you, — the friend and companion of many years, the inmate of my house, a man of a beautiful genius, born to speak well, and whose conversation for these last years has treated every grave question of humanity, and has been my daily bread. I have put so much dependence on his gifts that we made but one man together; for I needed never to do what he could do by noble nature much better than I. He was to have been married in this month, and at the time of his sickness and sudden death I was adding apartments to my house for his permanent accommodation. I wish that you could have known him. At twenty-seven years the best life is only preparation. He built his foundation so large that it needed the full age of man to make evident the plan and proportions of his character. He postponed always a particular to a final and absolute success, so that his life was a silent appeal to the great and generous. But some time I shall see you and speak of him.

* Charles Chauncy Emerson, — died May 9, 1836, — whose memory still survives fresh and beautiful in the hearts of the few who remain who knew him in life. A few papers of his published in the *Dial* show to others what he was and what he might have become. —

We want but two or three friends, but these we cannot do without, and they serve us in every thought we think. I find now I must hold faster the remaining jewels of my social belt. And of you I think much and anxiously since Mrs. Channing, amidst her delight at what she calls the happiest hour of her absence, in her acquaintance with you and your family, expresses much uneasiness respecting your untempered devotion to study. I am the more disturbed by her fears, because your letters avow a self-devotion to your work, and I know there is no gentle dulness in your temperament to counteract the mischief. I fear Nature has not inlaid fat earth enough into your texture to keep the ethereal blade from whetting it through. I write to implore you to be careful of your health. You are the property of all whom you rejoice in art and soul, and you must not deal with your body as your own. O my friend, if you would come here and let me

nurse you and pasture you in my nook of this long continent, I will thank God and you therefor morning and evening, and doubt not to give you, in a quarter of a year, sound eyes, round cheeks, and joyful spirits. My wife has been lately an invalid, but she loves you thoroughly, and hardly stores a barrel of flour or lays her new carpet without some hopeful reference to Mrs. Carlyle. And in good earnest, why cannot you come here forthwith, and deliver in lectures to the solid men of Boston the *History of the French Revolution* before it is published, — or at least whilst it is publishing in England, and before it is published here. There is no doubt of the perfect success of such a course now that the *five hundred copies of the Sartor are all sold*, and read with great delight by many persons.

This I suggest if you too must feel the vulgar necessity of *doing*; but if you will be governed by your friend, you shall come into the meadows, and rest and talk with your friend in my country pasture. If you will come here like a noble brother, you shall have your solid day undisturbed, except at the hours of eating and walking; and as I will abstain from you myself, so I will defend you from others. I entreat Mrs. Carlyle, with my affectionate remembrances, to second me in this proposition, and not suffer the wayward man to think that in these space-destroying days a prayer from Boston, Massachusetts, is any less worthy of serious and prompt granting than one from Edinburgh or Oxford.

I send you a little book I have just now published, as an entering wedge, I hope, for something more worthy and significant.* This is only a naming of topics on which I would gladly speak and gladlier hear. I am mortified to learn the ill fate of my former packet containing the *Sartor* and Dr. Channing's work. My mercantile friend is vexed, for he says accurate orders were given to send it as a packet, not as a letter. I shall endeavor before despatching this sheet to obtain another copy of our American edition.

* This was *Nature*, the first clear manifesto of Emerson's genius.

I wish I could come to you instead of sending this sheet of paper. I think I should persuade you to get into a ship this Autumn, quit all study for a time, and follow the setting sun. I have many, many things to learn of you. How melancholy to think how much we need confession!...* Yet the great truths are always at hand, and all the tragedy of individual life is separated how thinly from that universal nature which obliterates all ranks, all evils, all individualities. How little of you is in your *will!* Above your will how intimately are you related

to all of us! In God we meet. Therein we *are*, thence we descend upon Time and these infinitesimal facts of Christendom, and Trade, and England Old and New. Wake the soul now drunk with a sleep, and we overleap at a bound the obstructions, the griefs, the mistakes, of years, and the air we breathe is so vital that the Past serves to contribute nothing to the result.

— ** Some words appear to be lost here. —

I read Goethe, and now lately the posthumous volumes, with a great interest. A friend of mine who studies his life with care would gladly know what records there are of his first ten years after his settlement at Weimar, and what Books there are in Germany about him beside what Mrs. Austin has collected and Heine. Can you tell me?

Write me of your health, or else come.

Yours ever,

R.W. Emerson.

P.S. — I learn that an acquaintance is going to England, so send the packet by
him.

XIII. Carlyle to Emerson Chelsea, London, 5 November, 1836

My Dear Friend, — You are very good to write to me in my silence, in the mood you must be in. My silence you may well judge is not forgetfulness; it is a forced silence; which this kind Letter enforces into words. I write the day after your letter comes, lest the morrow bring forth something new to hinder me.

What a bereavement, my Friend, is this that has overtaken you! Such a Brother, with such a Life opening around him, like a blooming garden where he was to labor and gather, all vanished suddenly like frostwork, and hidden from your eye! It is a loss, a sore loss; which God had appointed you. I do not tell you not to mourn: I mourn with you, and could wish all mourners the spirit you have in this sorrow. Oh, I know it well! Often enough in this noisy Inanity of a vision where *we* still linger, I say to myself, Perhaps thy Buried Ones are not far from thee, are with thee; they are in Eternity, which is a Now and HERE! And yet Nature will have her right; Memory would feel desecrated if she could forget. Many times in the crowded din of the Living, some sight, some feature of a face, will recall to you the Loved Face; and in these turmoiling streets you see the little silent Churchyard, the green grave that lies there so silent, inexpressibly *wae*. O, perhaps we *shall* all meet YONDER, and the tears be wiped from all eyes! One thing is no Perhaps: surely we *shall* all meet, if it be the will of the Maker of us. If it be not His will, — then is it not better so? Silence, — since in these days we have no speech! Eye hath not seen, nor ear heard, in any day.

You inquire so earnestly about my welfare; hold open still the hospitable door for me. Truly Concord, which I have sought out on the Map, seems worthy of its name: no dissonance comes to me from that side; but grief itself has acquired a harmony: in joy or grief a voice says to me, Behold there is one that loves thee; in thy loneliness, in thy darkness, see how a hospitable candle shines from far over seas, how a friendly heart watches! It is very good, and precious for me.

As for my health, be under no apprehension. I am always sick; I am sicker and worse in body and mind, a little, for the present; but it has no deep significance: it is *weariness* merely; and now, by the bounty of Heaven, I am as it were within sight of land. In two months more, this unblest Book will be *finished*; at Newyearday we begin printing: before the end of March, the thing is out; and I am a free man! Few happinesses I have ever known will equal that, as it seems to me. And yet I ought not to call the poor Book unblest: no, it has girdled me round like a panoply these two years; kept me invulnerable, indifferent, to innumerable things. The poorest man in London has perhaps been one of the freest: the roaring press of gigs and gigmens, with their gold blazonry

and fierce gig-wheels, have little incommoded him; they going their way, he going his. — As for the results of the Book, I can rationally promise myself, on the economical, pecuniary, or otherwise worldly side, simply *zero*. It is a Book contradicting all rules of Formalism, that have not a Reality within them, which so few have; — testifying, the more quietly the worse, internecine war with Quacks high and low. My good Brother, who was with me out of Italy in summer, declared himself shocked, and almost terror-struck: “Jack,” I answered, “innumerable men give their lives cheerfully to defend Falsehoods and Half-Falsehoods; why should not one writer give his life cheerfully to say, in plain Scotch-English, in the hearing of God and man, To me they seem false and half-false? At all events, thou seest, I cannot help it. It is the nature of the beast.” So that, on the whole, I suppose there is no more unpromotable, unappointable man now living in England than I. Literature also, the miscellaneous place of refuge, seems done here, unless you will take the Devil’s wages for it; which one does not incline to do. *A disjectum membrum*; cut off from relations with men? Verily so; and now forty years of age; and extremely dyspeptical: a hopeless-looking man. Yet full of what I call desperate-hope! One does verily stand on the Earth, a Star-dome encompassing one; seemingly accoutred and enlisted and sent to battle, with rations good, indifferent, or bad, — what can one do but in the name of Odin, Tuisco, Hertha, Horsa, and all Saxon and Hebrew Gods, fight it out? — This surely is very idle talk.

As to the Book, I do say seriously that it is a wild, savage, ruleless, very bad Book; which even you will not be able to like; much less any other man. Yet it contains strange things; sincerities drawn out of the heart of a man very strangely situated; reverent of nothing but what is reverable in all ages and places: so we will print it, and be done with it; — and try a new turn next time. What I am to do, were the thing done, you see therefore, is most uncertain. How gladly would I run to Concord! And if I were there, be sure the do-nothing arrangement is the only conceivable one for me. That my sick existence subside again, this is the first condition; that quiet vision be restored me. It is frightful what an impatience I have got for many kinds of fellow-creatures. Their jargon really hurts me like the shrieking of inarticulate creatures that ought to articulate. There is no resource but to say: Brother, thou surely art not hateful; thou art lovable, at lowest pitiable; — alas! in my case, thou art dreadfully wearisome, unedifying: go thy ways, with my blessing. There are hardly three people among these two millions, whom I care much to exchange words with, in the humor I have. Nevertheless, at bottom, it is not my purpose to quit London finally till I have as it were *seen it out*. In the very hugeness of the monstrous City, contradiction cancelling contradiction, one finds a sort of composure for one’s

self that is not to be met with elsewhere perhaps in the world: people tolerate you, were it only that they have not time to trouble themselves with you. Some individuals even love me here; there are one or two whom I have even learned to love, — though, for the present, cross circumstances have snatched them out of my orbit again mostly. Wherefore, if you ask me, What I am to do? — the answer is clear so far, “Rest myself awhile”; and all farther is as dark as Chaos. Now for resting, taking that by itself, my Brother, who has gone back to Rome with some thoughts of settling as a Physician there, presses me to come thither, and rest in Rome. On the other hand, a certain John Sterling (the best man I have found in these regions) has been driven to Bordeaux lately for his health; he will have it that I must come to him, and walk through the South of France to Dauphine, Avignon, and over the Alps next spring!* Thirdly, my Mother will have me return to Annandale, and lie quiet in her little habitation; — which I incline to think were the wisest course of all. And lastly from over the Atlantic comes my good Emerson’s voice. We will settle nothing, except that all shall remain unsettled. *Die Zukunft decket Schmerzen and Glucke.*

* In his *Life of Sterling*, Carlyle prints a letter from Sterling to himself, dated Bordeaux, October 26, 1836, in which Sterling urges him to come “in the first fine days of spring.” It must have reached him a few days before he wrote this letter to Emerson.

I ought to say, however, that about Newyear’s-day I will send you an Article on *Mirabeau*, which they have printed here (for a thing called the *London Review*), and some kind of Note to escort it. I think Pamphlets travel as Letters in New England, provided you leave the ends of them open: if I be mistaken, pray instruct Messrs. Barnard to *refuse* the thing, for it has small value. *The Diamond Necklace* is to be printed also, in *Fraser*; inconceivable hawking that poor Paper has had; till now Fraser takes it — for L50: not being able to get it for nothing. The *Mirabeau* was written at the passionate request of John Mill; and likewise for needful lucre. I think it is the first shilling of money I have earned by my craft these four years: where the money I have lived on has come from while I sat here scribbling gratis, amazes me to think; yet surely it has come (for I am still here), and Heaven only to thank for it, which is a great fact. As for Mill’s *London Review* (for he is quasi-editor), I do not recommend it to you. Hide-bound Radicalism; a to me well-nigh insupportable thing! Open it not:

a breath as of Sahara and the Infinite Sterile comes from every page of it. A young Radical Baronet* has laid out L3,000 on getting the world instructed in that manner: it is very curious to see. — Alas! the bottom of the sheet! Take my hurried but kindest thanks for the prospect of your second Teufelsdröckh: the *first* too is now in my possession; Brother John went to the Post-Office, and worked it out for a ten shillings. It is a beautiful little Book; and a Preface to it such as no kindest friend could have improved. Thank my kind Editor** very heartily from me.

* Sir William Molesworth. In his *Autobiography* Mill gives an interesting account of the founding of this *Review*, and his quasi-editorial relations to it. “In the beginning,” he says, “it did not, as a whole, by any means represent my opinion.”

** Dr. Le-Baron Russell My wife was in Scotland in summer, driven thither by ill health; she is stronger since her return, though not yet strong; she sends over to Concord her kindest wishes. If I fly to the Alps or the Ocean, her Mother and she must keep one another company, we think, till there be better news of me. You are to thank Dr. Channing also for his valued gift. I read the Discourse, and other friends of his read it, with great estimation; but the *end* of that black question lies beyond my ken. I suppose, as usual, Might and Right will have to make themselves synonymous in some way. CANST and SHALT, if they are very well understood, mean the same thing under this Sun of ours. Adieu, my dear Emerson. *Gehab' Dich wohl!* Many affectionate regards to the Lady Wife: it is far within the verge of Probabilities that I shall see her face, and eat of her bread, one day. But she must not get sick! It is a dreadful thing, sickness; really a thing which I begin frequently to think *criminal* — at least in myself. Nay, in myself it really is criminal; wherefore I determine to be well one day.

Good be with you and Yours.

T. Carlyle As to Goethe and your Friend: I know not anything out of Goethe's own works (which have many notices in them) that treats specially of those ten years. Doubtless your Friend knows Jordens's *Lexicon* (which dates all the writings, for one thing), the *Conversations-Lexicon Supplement*, and such like. There is an essay by one Schubarth which has reputation; but it is critical and ethical mainly. The Letters to Zelter, and the Letters to Schiller, will do nothing for those years, but are essential to see. Perhaps in some late number of the *Zeitgenossen* there may be something? Blackguard Heine is worth very little; Mentzel is duller, decenter, not much wiser. A very curious Book is Eckermann's *Conversations with Goethe*, just published. No room more!*

— * Concerning this letter Emerson wrote in his Diary: “January 7, 1837. Received day before yesterday a letter from Thomas Carlyle, dated 5 November; — as ever, a cordial influence. Strong he is, upright, noble, and sweet, and makes good how much of our human nature. Quite in consonance with my delight in his eloquent letters I read in Bacon this afternoon this sentence (of Letters): ‘And such as are written from wise men are of all the words of men, in my judgment, the best; for they are more natural than orations, public speeches, and more advised than conferences or present speeches.’” ——

XIV. Carlyle to Emerson

5 Cheyne Row, Chelsea, London, 13 February, 1837

My Dear Emerson, — You had promise of a letter to be despatched you about New-year's-day; which promise I was myself in a condition to fulfil at the time set, but delayed it, owing to delays of printers and certain "Articles" that were to go with it. Six weeks have not yet entirely brought up these laggard animals: however, I will delay no longer for them. Nay, it seems the Articles, were they never so ready, cannot go with the Letter; but must fare round by Liverpool or Portsmouth, in a separate conveyance. We will leave them to the bounty of Time.

Your little Book and the Copy of *Teufelsdröckh* came safely; soon after I had written. The *Teufelsdröckh* I instantaneously despatched to Hamburg, to a Scottish merchant there, to whom there is an allusion in the Book; who used to be my *Speditor* (one of the politest extant though totally a stranger) in my missions and packages to and from Weimar.* The other, former Copy, more specially yours, had already been, as I think I told you, delivered out of durance; and got itself placed in the bookshelf, as *the* *Teufelsdröckh*. George Ripley tells me you are printing another edition; much good may it do you! There is now also a kind of whisper and whimper rising *here* about printing one. I said to myself once, when Bookseller Fraser shrieked so loud at a certain message you sent him: "Perhaps after all they will print this poor rag of a thing into a Book, after I am dead it may be, — if so seem good to them. *Either* way!" As it is, we leave the poor orphan to its destiny, all the more cheerfully. Ripley says farther he has sent me a critique of it by a better hand than the *North American*: I expect it, but have not got it Yet.** The *North American* seems to say that he too sent me one. It never came to hand, nor any hint of it, — except I think once before through you. It was not at all an unfriendly review; but had an opacity, of matter-of-fact in it that filled one with amazement. Since the Irish Bishop who said there were some things in *Gulliver* on which he for one would keep his belief *suspended*, nothing equal to it, on that side, has come athwart me. However, he *has* made out that *Teufelsdröckh* is, in all human probability, a fictitious character; which is always something, for an Inquirer into Truth. — Will you, finally, thank Friend Ripley in my name, till I have time to write to him and thank him.

— * The allusion referred to is the following: "By the kindness of a Scottish

Hamburg merchant, whose name, known to the whole mercantile world, he must not mention; but whose honorable courtesy, now and before spontaneously manifested to him, a mere literary stranger, he cannot soon forget, — the bulky Weissnichtwo packet, with all its Custom-house seals, foreign hieroglyphs, and miscellaneous tokens of travel, arrived here in perfect safety, and free of cost.” — *Sartor Resartus*, Book I. ch. xi.

** An article by the Rev. N.L. Frothingham in the *Christian Examiner*. —

Your little azure-colored Nature gave me true satisfaction. I read it, and then lent it about to all my acquaintance that had a sense for such things; from whom a similar verdict always came back. You say it is the first chapter of something greater. I call it rather the Foundation and Ground-plan on which you may build whatsoever of great and true has been given you to build. It is the true Apocalypse, this when the “Open Secret” becomes revealed to a man. I rejoice much in the glad serenity of soul with which you look out on this wondrous Dwelling-place of yours and mine — with an ear for the *Ewigen Melodien*, which pipe in the winds round us, and utter themselves forth in all sounds and sights and things: not to be written down by gamut-machinery; but which all right writing is a kind of attempt to write down. You will see what the years will bring you. It is not one of your smallest qualities in my mind, that you can wait so quietly and let the years do their best. He that cannot keep himself quiet is of a morbid nature; and the thing he yields us will be like him in that, whatever else it be.

Miss Martineau (for I have seen her since I wrote) tells me you “are the only man in America” who has quietly set himself down on a competency to follow his own path, and do the work his own will prescribes for him. Pity that you were the only one! But be one, nevertheless; be the first, and there will come a second and a third. It is a poor country where all men are *sold* to Mammon, and can make nothing but Railways and Bursts of Parliamentary Eloquence! And yet your New England here too has the upper hand of our Old England, of our Old Europe: we too are sold to Mammon, soul, body, and spirit; but (mark that, I pray you, with double pity) Mammon will not *pay* us, — we, are “Two Million three hundred thousand in Ireland that have not potatoes enough”! I declare, in History I find nothing more tragical. I find also that it will alter; that for me as one it has altered. Me Mammon will *pay* or not as he finds convenient; buy me he will not. — In fine, I say, sit still at Concord, with such spirit as you are of; under the blessed skyey influences, with an open sense, with the great Book of Existence open round you: we shall see whether you too get not something

blessed to read us from it.

The Paper is declining fast, and all is yet speculation. Along with these two "Articles" (to be sent by Liverpool; there are two of them, *Diamond Necklace* and *Mirabeau*), you will very probably get some stray Proofsheets — of the unutterable *French Revolution!* It is actually at Press; two Printers working at separate Volumes of it, — though still too slow. In not many weeks, my hands will be washed of it! You, I hope, can have little conception of the feeling with which I wrote the last word of it, one night in early January, when the clock was striking ten, and our frugal Scotch supper coming in! I did not cry; nor I did not pray but could have done both. No such *spell* shall get itself fixed on me for some while to come! A beggarly Distortion; that will please no mortal, not even myself; of which I know not whether the fire were not after all the due place! And yet I ought not to say so: there is a great blessing in a man's doing what he utterly can, in the case he is in. Perhaps great quantities of dross are burnt out of me by this calcination I have had; perhaps I shall be far quieter and healthier of mind and body than I have ever been since boyhood. The world, though no man had ever less empire in it, seems to me a thing lying *under* my feet; a mean imbroglia, which I never more shall fear, or court, or disturb myself with: welcome and welcome to go wholly *its own way*; I wholly clear for going mine. Through the summer months I am, somewhere or other, to rest myself, in the deepest possible sleep. The residue is vague as the wind, — unheeded as the wind. Some way it will turn out that a poor, well-meaning Son of Adam has bread growing for him too, better or worse: *any way*, — or even *no way*, if that be it, — I shall be content. There is a scheme here among Friends for my Lecturing in a thing they call Royal Institution; but it will not do there, I think. The instant two or three are gathered together under any terms, who want to learn something I can teach them, — then we will, most readily, as Burns says, "loose our tinkler jaw"; but not I think till then; were the Institution even Imperial.

America has faded considerably into the background of late: indeed, to say truth, whenever I think of myself in America, it is as in the Backwoods, with a rifle in my hand, God's sky over my head, and this accursed Lazar-house of quacks and blockheads, 'and sin and misery (now near a head) lying all behind me forevermore. A thing, you see, which is and can be at bottom but a daydream! To rest through the summer: that is my only fixed wisdom; a resolution taken; only the place where uncertain. — What a pity this poor sheet is done! I had innumerable things to tell you about people whom I have seen, about books, — Miss Harriet Martineau, Mrs. Butler, Southey, Influenza,

Parliament, Literature and the Life of Man, — the whole of which must lie over till next time. Write to me; do not forget me. My Wife, who is sitting by me, in very poor health (this long while), sends “kindest remembrances,” “compliments” she expressly does not send. Good be with you always, my dear Friend!

— T. Carlyle

We send our felicitation to the Mother and little Boy; which latter you had better tell us the name of.

XV. Emerson to Carlyle Concord, Mass., 31 March, 1837

My Dear Friend, — Last night, I said I would write to you forthwith. This morning I received your letter of February 13th, and *with it* the *Diamond Necklace*, the *Mirabeau*, and the olive leaf of a proof-sheet. I write out the sum of my debt as the best acknowledgment I can make. I had already received, about New-Year's-Day, the preceding letter. It came in the midst of my washbowl-storm of a course of Lectures on the Philosophy of History. For all these gifts and pledges, — thanks. Over the finished *History*, joy and evergreen laurels. I embrace you with all my heart. I solace myself with the noble nature God has given you, and in you to me, and to all. I had read the *Diamond Necklace* three weeks ago at the Boston Athenaeum, and the *Mirabeau* I had just read when my copy came. But the proof-sheet was virgin gold. The *Mirabeau* I forebode is to establish your kingdom in England. That is genuine thunder, which nobody that wears ears can affect to mistake for the rumbling of cart-wheels. I please myself with thinking that my Angelo has blocked a Colossus which may stand in the public square to defy all competitors. To be sure, that is its least merit, — that nobody can do the like, — yet is it a gag to Cerberus. Its better merit is that it inspires self-trust, by teaching the immense resources that are in human nature; so I sent it to be read by a brave man who is poor and decried. The doctrine is indeed true and grand which you preach as by cannonade, that God made a man, and it were as well to stand by and see what is in him, and, if he act ever from his impulses, believe that he has his own checks, and, however extravagant, will keep his orbit, and return from far; a faith that draws confirmation from the sempiternal ignorance and stationariness of society, and the sempiternal growth of all the individuals.

The *Diamond Necklace* I read with joy, whilst I read with my own eyes. When I read with English or New-English eyes, my joy is marred by the roaring of the opposition. I doubt not the exact story is there told as it fell out, and told for the first time; but the eye of your readers, as you will easily guess, will be bewildered by the multitude of brilliant-colored hieroglyphics whereby the meaning is conveyed. And for the Gig, — the Gig, — it is fairly worn out, and such a cloud-compeller must mock that particular symbol no more.

I thought as I read this piece that your strange genius was the instant fruit of your London. It is the aroma of Babylon. Such as the great metropolis, such is this style: so vast, enormous, related to all the world, and so endless in details. I think you see as pictures every street, church, parliament-house, barrack, baker's

shop, mutton-stall, forge, wharf, and ship, and whatever stands, creeps, rolls, or swims thereabouts, and make all your own. Hence your encyclopediacal allusion to all knowables, and the virtues and vices of your panoramic pages. Well, it is your own; and it is English; and every word stands for somewhat; and it cheers and fortifies me. And what more can a man ask of his writing fellow-man? Why, all things; inasmuch as a good mind creates wants at every stroke.

The proof-sheet rhymes well with *Mirabeau*, and has abated my fears from your own and your brother's account of the new book. I greet it well. Auspicious Babe, be born! The first good of the book is that it makes you free, and as I anxiously hope makes your body sound. A possible good is that it will cause me to see your face. But I seemed to read in *Mirabeau* what you intimate in your letter, that you will not come westward. Old England is to find you out, and then the New will have no charm. For me it will be the worst; for you, not. A man, a few men, cannot be to you (with your ministering eyes) that which you should travel far to find. Moreover, I observe that America looks, to those who come hither, as unromantic and unexciting as the Dutch canals. I see plainly that our Society, for the most part, is as bigoted to the *respectabilities* of religion and education as yours; that there is no more appetite for a revelation here than elsewhere; and the educated class are, of course, less fair-minded than others. Yet, in the moments when my eyes are open, I see that here are rich materials for the philosopher and poet, and, what is more to your purpose as an artist, that we have had in these parts no one philosopher or poet to put a sickle to the prairie wheat. I have really never believed that you would do us that crowning grace of coming hither, yet if God should be kinder to us than our belief, I meant and mean to hold you fast in my little meadows on the Musketaquid (now Concord) River, and show you (as in this country we can anywhere) an America in miniature in the April or November town meeting. Therein should you conveniently study and master the whole of our hemispherical politics reduced to a nutshell, and have a new version of Oxenstiern's little wit; and yet be consoled by seeing that here the farmers patient as their bulls of head-boards — provided for them in relation to distant national objects, by kind editors of newspapers — do yet their will, and a good will, in their own parish. If a wise man would pass by New York, and be content to sit still in this village a few months, he should get a thorough native knowledge which no foreigner has yet acquired. So I leave you with God, and if any oracle in the great Delphos should say "Go," why fly to us instantly. Come and spend a year with me, and see if I cannot respect your retirements.

I must love you for your interest in me and my way of life, and the more that we only look for good-nature in the creative class. They pay the tag of grandeur,

and, attracted irresistibly to make, their living is usually weak and hapless. But you are so companionable — God has made you Man as well as Poet — that I lament the three thousand miles of mountainous water. Burns might have added a better verse to his poem, importing that one might write Iliads or Hamlets, and yet come short of Truth by infinity, as every written word must; but “the man’s the govd for a’ that.” And I heartily thank the Lady for her good-will. Please God she may be already well. We all grieve to know of her ill health. People who have seen her never stop with *Mr. Carlyle*, but count him thrice blest in her. My wife believes in nothing for her but the American voyage. I shall never cease to expect you both until you come.

My boy is five months old, he is called Waldo, — a lovely wonder that made the Universe look friendlier to me.

My Wife, one of your best lovers, sends her affectionate regards to Mrs. Carlyle, and says that she takes exception in your letters only to that sentence that she would go to Scotland if you came here. My Wife beseeches her to come and possess her new-dressed chamber. Do not cease to write whenever you can spare me an hour. A man named Bronson Alcott is great, and one of the jewels we have to show you. Good bye.

— R.W. Emerson The second edition of *Sartor* is out and sells well. I learned the other day that twenty-five copies of it were ordered for England. It was very amiable of you, that word about it in *Mirabeau*.*

—— — * This refers to Carlyle’s introducing, in his paper on *Mirabeau*, a citation from *Sartor*, with the words, “We quote from a New England Book.”

—— — —

XVI. Carlyle to Emerson

5 Cheyne Row, Chelsea, London, 1 June, 1857

My Dear Friend, — A word must go to Concord in answer to your last kind word. It reached me, that word of yours, on the morning of a most unspeakable day; the day when I, half dead with fret, agitation, and exasperation, was to address extempore an audience of London quality people on the subject of German Literature! The heart's wish of me was that I might be left in deepest oblivion, wrapped in blankets and silence, not speaking, not spoken to, for a twelvemonth to come. My Printers had only let me go, out of their Treadmill, the day before. However, all that is over now; and I am still here alive to write to you, and hope for better days.

Almost a month ago there went a copy of a Book called *French Revolution*, with your address on it, over to Red-Lion Square, and thence, as old Rich declared, himself now *emeritus*, back to one Kennet (I think) near Covent Garden; who professes to correspond with Hilliard and Company, Boston, and undertook the service. The Book is not gone yet, I understand; but Kennet engages that it shall leave Liverpool infallibly on the 5th of June. I wish you a happy reading of it, therefore: it is the only copy of my sending that has crossed the water. Ill printed (there are many errors, one or two gross ones), ill written, ill thought! But in fine it *is* off my hands: that is a fact worth all others. As to its reception here or elsewhere, I anticipate nothing or little. Gabble, gabble, the astonishment of the dull public brain is likely to be considerable, and its ejaculations unedifying. We will let it go its way. Beat this thing, I say always, under thy dull hoofs, O dull Public! trample it and tumble it into all sinks and kennels; if thou canst kill it, kill it in God's name: if thou canst not kill it, why then thou wilt not.

By the by, speaking of dull Publics, I ought to say that I have seen a review of myself in the *Christian Examiner* (I think that is it) of Boston; the author of which, if you know him, I desire you to thank on my part. For if a dull million is good, then withal a seeing unit or two is also good. This man images back a beautiful idealized Clothes-Philosopher, very satisfactory to look upon; in whose beatified features I did verily detect more similitude to what I myself meant to be, than in any or all the other criticisms I have yet seen written of me. That a man see himself reflected from the soul of his brother-man in this brotherly improved way: there surely is one of the most legitimate joys of existence. Friend Ripley took the trouble to send me this Review, in which I detected an

Article of his own; there came also some Discourses of his much to be approved of; a Newspaper passage-of-fence with a Philistine of yours; and a set of Essays on Progress-of-the-species and such like by a man whom I grieved to see confusing himself with that. Progress of the species is a thing I can get no good of at all. These Books, which Miss Martineau has borrowed from me, did not arrive till three weeks ago or less. I pray you to thank Ripley for them very kindly; which at present I still have not time to do. He seems to me a good man, with good aims; with considerable natural health of mind, wherein all goodness is likely to grow better, all clearness to grow clearer. Miss Martineau laments that he does not fling himself, or not with the due impetuosity, into the Black Controversy; a thing lamentable in the extreme, when one considers what a world this is, and how perfect it would be could Mungo once get his stupid case rectified, and eat his squash as a stupid *Apprentice* instead of stupid *Slave*!

Miss Martineau's Book on America is out, here and with you. I have read it for the good Authoress's sake, whom I love much. She is one of the strangest phenomena to me. A genuine little Poetess, buckramed, swathed like a mummy into Socinian and Political-Economy formulas; and yet verily alive in the inside of that! "God has given a Prophet to every People in its own speech," say the Arabs. Even the English Unitarians were one day to have their Poet, and the best that could be said for them too was to be said. I admire this good lady's integrity, sincerity; her quick, sharp discernment to the depth it goes: her love also is great; nay, in fact it is too great: the host of illustrious obscure mortals whom she produces on you, of Preachers, Pamphleteers, Antislavers, Able Editors, and other Atlases bearing (unknown to us) the world on their shoulder, is absolutely more than enough. What they say to her Book here I do not well know. I fancy the general reception will be good, and even brilliant. I saw Mrs. Butler* last night, "in an ocean of blonde and broadcloth," one of those oceans common at present. Ach Gott! They are not of Persons, these soirdes, but of Cloth Figures.

—— — * Mrs Fanny Kemble Butler. —— —— —

I mean to retreat into Scotland very soon, to repose myself as I intended. My Wife continues here with her Mother; here at least till the weather grow too hot, or a journey to join me seem otherwise advisable for her. She is gathering strength, but continues still weak enough. I rest myself "on the sunny side of hedges" in native Annandale, one of the obscurest regions; no man shall speak to me, I will speak to no man; but have dialogues yonder with the old dumb crags, of the most unfathomable sort. Once rested, I think of returning to London for another season. Several things are beginning which I ought to see end before taking up my staff again. In this enormous Chaos the very multitude of conflicting perversions produces something more like a *calm* than you can

elsewhere meet with. Men let you alone, which is an immense thing: they do it even because they have no time to meddle with you. London, or else the Backwoods of America, or Craigenputtock! We shall see.

I still beg the comfort of hearing from you. I am sick of soul and body, but not incurable; the loving word of a Waldo Emerson is as balm to me, medicinal now more than ever. My Wife earnestly joins me in love to the Concord Household. May a blessing be in it, on one and all! I do nowise give up the idea of sojourning there one time yet. On the contrary, it seems almost certain that I shall. Good be with you.

Yours always,
T. Carlyle*

— * Emerson wrote in his Diary, July 27, 1837: “A letter today from Carlyle rejoiced me. Pleasant would life be with such companions. But if you cannot have them on good mutual terms you cannot have them. If not the Deity but our wilfulness hews and shapes the new relations, their sweetness escapes, as strawberries lose their flavor by cultivation.” —— —— —

XVII. Emerson to Carlyle

Concord, 13 September, 1837

My Dear Friend, — Such a gift as the *French Revolution* demanded a speedier acknowledgment. But you mountaineers that can scale Andes before breakfast for an airing have no measures for the performance of lowlanders and valetudinarians. I am ashamed to think, and will not tell, what little things have kept me silent.

The *French Revolution* did not reach me until three weeks ago, having had at least two long pauses by the way, as I find, since landing. Between many visits received, and some literary haranguing done, I have read two volumes and half the third and I think you a very good giant; disporting yourself with an original and vast ambition of fun: pleasure and peace not being strong enough for you, you choose to suck pain also, and teach fever and famine to dance and sing. I think you have written a wonderful book, which will last a very long time. I see that you have created a history, which the world will own to be such. You have recognized the existence of other persons than officers, and of other relations than civism. You have broken away from all books, and written a mind. It is a brave experiment, and the success is great. We have men in your story and not names merely; always men, though I may doubt sometimes whether I have the historic men. We have great facts — and selected facts — truly set down. We have always the co-presence of Humanity along with the imperfect damaged individuals. The soul's right of wonder is still left to us; and we have righteous praise and doom awarded, assuredly without cant. Yes, comfort yourself on that particular, O ungodliest divine man! thou cantest never. Finally we have not — a dull word. Never was there a style so rapid as yours, — which no reader can outrun; and so it is for the most intelligent. I suppose nothing will astonish more than the audacious wit and cheerfulness which no tragedy and no magnitude of events can overpower or daunt. Henry VIII loved a Man, and I see with joy my bard always equal to the crisis he represents. And so I thank you for your labor, and feel that your contemporaries ought to say, All hail, Brother! live forever: not only in the great Soul which thou largely inhalest, but also as a named, person in this thy definite deed.

I will tell you more of the book when I have once got it at focal distance, — if that can ever be, and muster my objections when I am sure of their ground. I insist, of course, that it might be more simple, less Gothically efflorescent. You will say no rules for the illumination of windows can apply to the *Aurora borealis*. However, I find refreshment when every now and then a special fact

slips into the narrative couched in sharp and businesslike terms. This character-drawing in the book is certainly admirable; the lines are ploughed furrows; but there was cake and ale before, though thou be virtuous. Clarendon surely drew sharp outlines for me in Falkland, Hampden, and the rest, without defiance or sky-vaulting. I wish I could talk with you face to face for one day, and know what your uttermost frankness would say concerning the book. I feel assured of its good reception in this country. I learned last Saturday that in all eleven hundred and sixty-six copies of *Sartor* have been sold. I have told the publisher of that book that he must not print the *History* until some space has been given to people to import British copies. I have ordered Hilliard, Gray, & Co. to import twenty copies as an experiment. At the present very high rate of exchange, which makes a shilling worth thirty cents, they think, with freight and duties, the book would be too costly here for sale, but we confide in a speedy fall of Exchange; then my books shall come. I am ashamed that you should educate our young men, and that we should pirate your books. One day we will have a better law, or perhaps you will make our law yours.

I had your letter long before your book. Very good work you have done in your lifetime, and very generously you adorn and cheer this pilgrimage of mine by your love. I find my highest prayer granted in calling a just and wise man my friend. Your profuse benefaction of genius in so few years makes me feel very poor and useless. I see that I must go on trust to you and to all the brave for some longer time, hoping yet to prove one day my truth and love. There are in this country so few scholars, that the services of each studious person are needed to do what he can for the circulation of thoughts, to the end of making some counterweight to the money force, and to give such food as he may to the nigh starving youth. So I religiously read lectures every winter, and at other times whenever summoned. Last year, "the Philosophy of History," twelve lectures; and now I meditate a course on what I call "Ethics." I peddle out all the wit I can gather from Time or from Nature, and am pained at heart to see how thankfully that little is received.

Write to me, good friend, tell me if you went to Scotland, — what you do, and will do, — tell me that your wife is strong and well again as when I saw her at Craigenputtock. I desire to be affectionately remembered to her. Tell me when you will come hither. I called together a little club a week ago, who spent a day with me, — counting fifteen souls, — each one of whom warmly loves you. So if the *French Revolution* does not convert the "dull public" of your native Nineveh, I see not but you must shake their dust from your shoes and cross the Atlantic to a New England. Yours in love and honor.

— R. Waldo Emerson

May I trouble you with a commission when you are in the City? You mention being at the shop of Rich in RedLion Square. Will you say to him that he sent me some books two or three years ago without any account of prices annexed? I wrote him once myself, once through S. Burdett, bookseller, and since through C.P. Curtis, Esq., who professes to be his attorney in Boston, — three times, — to ask for this account. No answer has ever come. I wish he would send me the account, that I may settle it. If he persist in his self-denying contumacy, I think you may immortalize him as a bookseller of the gods.

I shall send you an Oration presently, delivered before a literary society here, which is now being printed.* Gladly I hear of the Carlylet — so they say — in the new Westminster.

* This was Emerson's famous Oration before the Phi Beta Kappa Society, at Cambridge, August 31, 1837, on "The American Scholar." In his admirable essay on Thoreau, — an essay which might serve as introduction and comment to the letters of Carlyle and Emerson during these years, — Lowell speaks of the impression made by this remarkable discourse. It "was an event without any former parallel in our literary annals, a scene to be always treasured in the memory for its picturesqueness and its inspiration. What crowded and breathless aisles, what windows clustering with eager heads, what enthusiasm of approval, what grim silence of foregone dissent! It was our Yankee version of a lecture by Abelard, our Harvard parallel to the last public appearances of Schelling." — *My Study Windows*, p. 197

XVIII. Emerson to Carlyle Concord, 2 November, 1837

My Dear Friend, — Mr. Charles Sumner, a lawyer of high standing for his age, and editor or one editor of a journal called *The Jurist*, and withal a lover of your writings, tells me he is going to Paris and thence to London, and sets out in a few days. I cannot, of course, resist his request for a letter to you, nor let pass the occasion of a greeting. Health, Joy, and Peace be with you! I hope you sit still yet, and do not hastily meditate new labors. Phidias need not be always tinkering. Sit still like an Egyptian. Somebody told me the other day that your friends here might have made a sum for the author by publishing *Sartor* themselves, instead of leaving it with a bookseller. Instantly I wondered why I had never such a thought before, and went straight to Boston, and have made a bargain with a bookseller to print the *French Revolution*. It is to be printed in two volumes of the size of our American *Sartor*, one thousand copies, the estimate making the cost of the book say (in dollars and cents) \$1.18 a copy, and the price \$2.50. The bookseller contracts with me to sell the book at a commission of twenty percent on that selling price, allowing me however to take at cost as many copies as I can find subscribers for. There is yet, I believe, no other copy in the country than mine: so I gave him the first volume, and the printing is begun. I shall take care that your friends here shall know my contract with the bookseller, and so shall give me their names. Then, if so good a book can have a tolerable sale, (almost contrary to the nature of a good book, I know,) I shall sustain with great glee the new relation of being your banker and attorney. They have had the wit in the London *Examiner*, I find, to praise at last; and I mean that our public shall have the entire benefit of that page. The *Westminster* they can read themselves. The printers think they can get the book out by Christmas. So it must be long before I can tell you what cheer. Meantime do you tell me, I entreat you, what speed it has had at home. The best, I hope, with the wise and good withal.

I have nothing to tell you and no thoughts. I have promised a course of Lectures for December, and am far from knowing what I am to say; but the way to make sure of fighting into the new continent is to burn your ships. The “tender ears,” as George Fox said, of young men are always an effectual call to me ignorant to speak. I find myself so much more and freer on the platform of the lecture-room than in the pulpit, that I shall not much more use the last; and do now only in a little country chapel at the request of simple men to whom I sustain no other relation than that of preacher. But I preach in the Lecture-Room and then it tells, for there is no prescription. You may laugh, weep, reason, sing,

sneer, or pray, according to your genius. It is the new pulpit, and very much in vogue with my northern countrymen. This winter, in Boston, we shall have more than ever: two or three every night of the week. When will you come and redeem your pledge? The day before yesterday my little boy was a year old, — no, the day before that, — and I cannot tell you what delight and what study I find in this little bud of God, which I heartily desire you also should see. Good, wise, kind friend, I shall see you one day. Let me hear, when you can write, that Mrs. Carlyle is well again.

— R. Waldo Emerson

XIX. Carlyle to Emerson

Chelsea, London, 8 December, 1837

My Dear Emerson, — How long it is since you last heard of me I do not very accurately know; but it is too long. A very long, ugly, inert, and unproductive chapter of my own history seems to have passed since then. Whenever I delay writing, be sure matters go not well with me; and do you in that case write to me, were it again and over again, — unweariable in pity.

I did go to Scotland, for almost three months; leaving my Wife here with her Mother. The poor Wife had fallen so weak that she gave me real terror in the spring-time, and made the Doctor look very grave indeed: she continued too weak for traveling: I was worn out as I had never in my life been. So, on the longest day of June, I got back to my Mother's cottage; threw myself down, I may say, into what we may call the "frightfulest *magnetic sleep*," and lay there avoiding the intercourse of men. Most wearisome had their gabble become; almost unearthly. But indeed all was unearthly in that humor. The gushing of my native brooks, the *sough* of the old solitary woods, the great roar of old native Solway (billowing fresh out of your Atlantic, drawn by the Moon): all this was a kind of unearthly music to me; I cannot tell you how unearthly. It did not bring me to rest; yet *towards* rest I do think at all events, the time had come when I behoved to quit it again. I have been here since September evidently another little "chapter" or paragraph, *not* altogether inert, is getting forward. But I must not speak of these things. How can I speak of them on a miserable scrap of blue paper? Looking into your kind-eyes with my eyes, I could speak: not here. Pity me, my friend, my brother; yet hope well of me: if I can (in all senses) *rightly hold my peace*, I think much will yet be well with me. SILENCE is the great thing I worship at present; almost the sole tenant of my Pantheon. Let a man know rightly how to hold his peace. I love to repeat to myself, "Silence is of Eternity." Ah me, I think how I could rejoice to quit these jarring discords and jargonings of Babel, and go far, far away! I do believe, if I had the smallest competence of money to get "food and warmth" with, I would shake the mud of London from my feet, and go and bury myself in some green place, and never print any syllable more. Perhaps it is better as it is.

But quitting this, we will actually speak (under favor of "Silence") one very small thing; a pleasant piece of news. There is a man here called John Sterling (*Reverend* John of the Church of England too), whom I love better than anybody I have met with, since a certain sky-messenger alighted to me at Craigenputtock,

and vanished in the Blue again. This Sterling has written; but what is far better, he has lived, he is alive. Across several unsuitable wrappages, of Church-of-Englandism and others, my heart loves the man. He is one, and the best, of a small class extant here, who, nigh drowning in a black wreck of Infidelity (lighted up by some glare of Radicalism only, now growing *dim* too) and about to perish, saved themselves into a Coleridgian Shovel-hattedness, or determination to *preach*, to preach peace, were it only the spent *echo* of a peace once preached. He is still only about thirty; young; and I think will shed the shovel-hat yet perhaps. Do you ever read *Blackwood*? This John Sterling is the “New Contributor” whom Wilson makes such a rout about, in the November and prior month “Crystals from a Cavern,” &c., which it is well worth your while to see. Well, and what then, cry you? — Why then, this John Sterling has fallen overhead in love with a certain Waldo Emerson; that is all. He saw the little Book *Nature* lying here; and, across a whole *silva silvarum* of prejudices, discerned what was in it; took it to his heart, — and indeed into his pocket; and has carried it off to Madeira with him; whither unhappily (though now with good hope and expectation) the Doctors have ordered him. This is the small piece of pleasant news, that two sky-messengers (such they were both of them to me) have met and recognized each other; and by God’s blessing there shall one day be a trio of us: call you that nothing?

And so now by a direct transition I am got to the *Oration*. My friend! you know not what you have done for me there. It was long decades of years that I had heard nothing but the infinite jangling and jabbering, and inarticulate twittering and screeching, and my soul had sunk down sorrowful, and said there is no articulate speaking then any more, and thou art solitary among stranger-creatures? and lo, out of the West comes a clear utterance, clearly recognizable as a *man’s* voice, and I *have* a kinsman and brother: God be thanked for it! I could have *wept* to read that speech; the clear high melody of it went tingling through my heart; — I said to my wife, “There, woman!” She read; and returned, and charges me to return for answer, “that there had been nothing met with like it since Schiller went silent.” My brave Emerson! And all this has been lying silent, quite tranquil in him, these seven years, and the “vociferous platitude” dinning his ears on all sides, and he quietly answering no word; and a whole world of Thought has silently built itself in these calm depths, and, the day being come, says quite softly, as if it were a common thing, “Yes, I *am* here too.” Miss Martineau tells me, “Some say it is inspired, some say it is mad.” Exactly so; no say could be suitabler. But for you, my dear friend, I say and pray heartily: May God grant you strength; for you have a *fearful* work to do! Fearful I call it; and

yet it is great, and the greatest. O for God's sake *keep yourself still quiet!* Do not hasten to write; you cannot be too slow about it. Give no ear to any man's praise or censure; know that that is *not* it: on the one side is as Heaven if you have strength to keep silent, and climb unseen; yet on the other side, yawning always at one's right-hand and one's left, is the frightfulest Abyss and Pandemonium! See Fenimore Cooper; — poor Cooper, he is *down in it*; and had a climbing faculty too. Be steady, be quiet, be in no haste; and God speed you well! My space is done.

And so adieu, for this time. You must write soon again. My copy of the *Oration* has never come: how is this? I could dispose of a dozen well. — They say I am to lecture again in Spring, *Ay de mi!* The "Book" is babbled about sufficiently in several dialects: Fraser wants to print my scattered Reviews and Articles; a pregnant sign. Teufelsdröckh to precede. The man "screamed" once at the name of it in a very musical manner. He shall not print a line; unless he give me money for it, more or less. I have had enough of printing for one while, — thrown into "magnetic sleep" by it! Farewell my brother.

— T. Carlyle

O. Rich, it seems, is in Spain. His representative assured me, some weeks since, that the Account was now sent. There is an Article on Sir W. Scott: shocking; invitissima Minerva!*

*Carlyle's article on Scott published in the *London and Westminster Review*, No. 12. Reprinted in his *Critical and Miscellaneous Essays*.

Miss Martineau charges me to send kind remembrances to you and your Lady: her words were kinder than I have room for here. — Can you not, in defect or delay of Letter, send me a Massachusetts Newspaper? I think it costs little or almost nothing now; and I shall know your hand.

XX. Emerson to Carlyle

Concord, 9 February, 1838

My Dear Friend, — It is ten days now — ten cold days — that your last letter has kept my heart warm, and I have not been able to write before. I have just finished — Wednesday evening — a course of lectures which I ambitiously baptized “Human Culture,” and read once a week to the curious in Boston. I could write nothing else the while, for weariness of the week’s stated scribbling. Now I am free as a wood-bird, and can take up the pen without fretting or fear. Your letter should, and nearly did, make me jump for joy, — fine things about our poor speech at Cambridge, — fine things from CARLYLE. Scarcely could we maintain a decorous gravity on the occasion. And then news of a friend, who is also Carlyle’s friend. What has life better to offer than such tidings? You may suppose I went directly and got me *Blackwood*, and read the prose and the verse of John Sterling, and saw that my man had a head and a heart, and spent an hour or two very happily in spelling his biography out of his own hand; — a species of palmistry in which I have a perfect reliance. I found many incidents grave and gay and beautiful, and have determined to love him very much. In this romancing of the gentle affections we are children evermore. We forget the age of life, the barriers so thin yet so adamantean of space and circumstance; and I have had the rarest poems self-singing in my head of brave men that work and conspire in a perfect intelligence across seas and conditions — and meet at last. I heartily pray that the Sea and its vineyards may cheer with warm medicinal breath a Voyager so kind and noble.

For the *Oration*, I am so elated with your goodwill that I begin to fear your heart has betrayed your head this time, and so the praise is not good on Parnassus but only in friendship. I sent it diffidently (I did send it through bookselling Munroe) to you, and was not a little surprised by your generous commendations. Yet here it interested young men a good deal for an academical performance, and an edition of five hundred was disposed of in a month. A new edition is now printing, and I will send you some copies presently to give to anybody who you think will read.

I have a little budget of news myself. I hope you had my letter — sent by young Sumner — saying that we meant to print the *French Revolution* here for the Author’s benefit. It was published on the 25th of December. It is published at my risk, the booksellers agreeing to let me have at cost all the copies I can get subscriptions for. All the rest they are to sell and to have twenty percent on the retail price for their commission. The selling price of the book is \$2.50; the cost

of a copy, \$1.26; the bookseller's commission, 50 cts.; so that T.C. only gains 74 cts. on each copy they sell. But we have two hundred subscribers, and on each copy they buy you have \$1.26, except in cases where the distant residence of subscribers makes a cost of freight. You ought to have three or four quarters of a dollar more on each copy, but we put the lowest price on the book in terror of the Philistines, and to secure its accessibleness to the economical Public. We printed one thousand copies: of these, five hundred are already sold, in six weeks; and Brown the bookseller talks, as I think, much too modestly, of getting rid of the whole edition in one year. I say six months. The printing, &c. is to be paid and a settlement made in six months from the day of publication; and I hope the settlement will be the final one. And I confide in sending you seven hundred dollars at least, as a certificate that you have so many readers in the West. Yet, I own, I shake a little at the thought of the bookseller's account. Whenever I have seen that species of document, it was strange how the hopefulest ideal dwindled away to a dwarfish actual. But you may be assured I shall on this occasion summon to the bargain all the Yankee in my constitution, and multiply and divide like a lion.

The book has the best success with the best. Young men say it is the only history they have ever read. The middle-aged and the old shake their heads, and cannot make anything of it. In short, it has the success of a book which, as people have not fashioned, has to fashion the people. It will take some time to win all, but it wins and will win. I sent a notice of it to the *Christian Examiner*, but the editor sent it all back to me except the first and last paragraphs; those he printed. And the editor of the *North American* declined giving a place to a paper from another friend of yours. But we shall see. I am glad you are to print your *Miscellanies*; but — forgive our Transatlantic effrontery — we are beforehand of you, and we are already selecting a couple of volumes from the same, and shall print them on the same plan as the *History*, and hope so to turn a penny for our friend again. I surely should not do this thing without consulting you as to the selection but that I had no choice. If I waited, the bookseller would have done it himself, and carried off the profit. I sent you (to Kennet) a copy of the *French Revolution*. I regret exceedingly the printer's blunder about the numbering the Books in the volumes, but he had warranted me in a literal, punctual reprint of the copy without its leaving his office, and I trusted him. I am told there are many errors. I am going to see for myself. I have filled my paper, and not yet said a word of how many things. You tell me how ill was Mrs. C., and you do not tell me that she is well again. But I see plainly that I must take speedily another sheet. I love you always.

— R.W. Emerson

XXI. Emerson to Carlyle Boston, 12 March, 1838

My Dear Friend, — Here in a bookseller's shop I have secured a stool and corner to say a swift benison. Mr. Bancroft told me that the presence of English Lord Gosford in town would give me a safe conveyance of pamphlets to you, so I send some *Orations* of which you said so kind and cheering words. Give them to any one who will read them. I have written names in three. You have, I hope, got the letter sent nearly a month ago, giving account of our reprint of the *French Revolution*, and have received a copy of the same. I learn from the bookseller today that six hundred and fifty copies are sold, and the book continues to sell. So I hope that our settlement at the end of six months will be final, or nearly so.

I had nearly closed my agreement the other day with a publisher for the emission of *Carlyle's Miscellanies*, when just in the last hour comes word from E.G. Loring that he has an authentic catalogue from the Bard himself. Now I have that, and could wish Loring had communicated his plan to me at first, or that I had had wit enough to have undertaken this matter long ago and conferred with you. I designed nothing for you or your friends; but merely a lucrative book for our daily market that would have yielded a pecuniary compensation to you, such as we are all bound to make, and have bought our Socrates a cloak. Loring contemplated something quite different, — a “Complete Works,” etc., — and now clamors for the same thing, and I do not know but I shall have to gratify him and others at the risk of injury to this my vulgar hope of dollars, — that innate idea of the American mind. This I shall settle in a few days. No copyright can be secured here for an English book unless it contain original matter: But my moments are going, and I can only promise to write you quickly, at home and at leisure, for I have just been reading the *History* again with many, many thoughts, and I revere, wonder at, and love you.

— R. Waldo Emerson

XXII. Carlyle to Emerson

Chelsea, London, 16 March, 1838

My Dear Emerson, — Your letter through Sumner was sent by him from Paris about a month ago; the man himself has not yet made his appearance, or been heard of in these parts: he shall be very welcome to me, arrive when he will. The February letter came yesterday, by direct conveyance from Dartmouth. I answer it today rather than tomorrow; I may not for long have a day freer than this. *Fronte capillata, post est occasio calva*: true either in Latin or English!

You send me good news, as usual. You have been very brisk and helpful in this business of the *Revolution* Book, and I give you many thanks and commendations. It will be a very brave day when cash actually reaches me, no matter what the *number* of the coins, whether seven or seven hundred, out of Yankee-land; and strange enough, what is not unlikely, if it be the *first* cash I realize for that piece of work, — Angle-land continuing still *insolvent* to me! Well, it is a wide Motherland we have here, or are getting to have, from Bass's Straits all round to Columbia River, already almost circling the Globe: it must be hard with a man if somewhere or other he find not some one or other to take his part, and stand by him a little! Blessings on you, my brother: nay, your work is already twice blessed. — I believe after all, with the aid of my Scotch thrift, I shall not be absolutely thrown into the streets here, or reduced to borrow, and become the slave of somebody, for a morsel of bread. Thank God, no! Nay, of late I begin entirely to despise that whole matter, so as I never hitherto despised it: "Thou beggarliest Spectre of Beggary that hast chased me ever since I was man, come on then, in the Devil's name, let us see what is in thee! Will the Soul of a man, with Eternity within a few years of it, quail before *thee*?" Better, however, is my good pious Mother's version of it: "They cannot take God's Providence from thee; thou hast never wanted yet."*

—— — * In his Diary, May 9, 1838, Emerson wrote: "A letter this morning from T. Carlyle. How should he be so poor? It is the most creditable poverty I know of." —— —— —

But to go on with business; and the republication of books in that Transoceanic England, New and improved Edition of England. In January last, if I recollect right, Miss Martineau, in the name of a certain Mr. Loring, applied to me for a correct List of all my fugitive Papers; the said Mr. Loring meaning to publish them for my behoof. This List she, though not without solicitation, for I had small hope in it, did at last obtain, and send, coupled with a request from me that you should be consulted in the matter. Now it appears you had of yourself

previously determined on something of the same sort, and probably are far on with the printing of your Two select volumes. I confess myself greatly better pleased with it on that footing than on another. Who Mr. Loring may be I know not, with any certainty, at first hand; but who Waldo Emerson is I do know; and more than one god from the machine is not necessary. I pray you, thank Mr. Loring for his goodness towards me (his intents are evidently charitable and not wicked); but consider yourself as in nowise bound at all by that blotted Paper he has, but do the best you can for me, consulting with him or not taking any counsel just as you see to be fittest on the spot. And so Heaven prosper you, both in your “aroused Yankee” state, and in all others; — and let us for the present consider that we have enough about Books and Guineas. I must add, however, that Fraser and I have yet made no bargain. We found, on computing, that there would be five good volumes, including *Teufelsdröckh*. For an edition of Seven hundred and Fifty I demanded L50 a volume, and Fraser refused: the poor man then fell dangerously ill, and there could not be a word farther said on the subject; till very lately, when it again became possible, but has not yet been put in practice. All the world cries out, Why *do you* publish with Fraser? “Because my soul is sick of Booksellers, and of trade, and deception, and ‘need and greed’ altogether; and this poor Fraser, not worse than the rest of them, has in some sort grown less hideous to me by custom.” I fancy, however, either Fraser will publish these things before long; or some Samaritan here will take me to some bolder brother of the trade that will. Great Samuel Johnson assisted at the beginning of Bibliopoly; small Thomas Carlyle assists at the ending of it: both are sorrowful seasons for a man. For the rest, people here continue to receive that *Revolution* very much as you say they do *there*: I am right well quit of it; and the elderly gentlemen on both sides of the water may take comfort, they will not soon have to suffer the like again. But really England is wonderfully changed within these ten years; the old gentlemen all shrunk into nooks, some of them even voting with the young. — The American ill-printed Two and-a-half-dollars Copy shall, for Emerson’s sake, be welcomest to me of all. Kennet will send it when it comes.

The *Oration* did arrive, with my name on it, one snowy night in January. It is off to Madeira; probably there now. I can dispose of a score of copies to good advantage. Friend Sterling has done the best of all his things in the current *Blackwood*, — “Crystals from a Cavern,” — which see. He writes kind things of you from Madeira, in expectation of the Speech. I will gratify him with your message; he is to be here in May; better, we hope, and in the way towards safety. Miss Martineau has given you a luminous section in her new Book about

America; you are one of the American “Originals,” — the good Harriet!

And now I have but one thing to add and to repeat: Be quiet, be quiet! The fire that is in one’s own stomach is enough, without foreign bellows to blow it ever and anon. My whole heart shudders at the thrice-wretched self-combustion into which I see all manner of poor paper-lanterns go up, the wind of “popularity” puffing at them, and nothing left erelong but ashes and sooty wreck. It is sad, most sad. I shun all such persons and circles, as much as possible; and pray the gods to make me a brick layer’s hodbearer rather. O the “cabriolets, neatflies,” and blue twaddlers of both sexes therein, that drive many a poor Mrs. Rigmarole to the Devil!* — As for me, I continue doing as nearly nothing as I can manage. I decline all invitations of society that are declinable: a London rout is one of the maddest things under the moon; a London dinner makes me sicker for a week, and I say often, It is better to be even dull than to be witty, better to be silent than to speak.

—— — * This sentence is a variation on one at the beginning of the article on Scott. —— ——

Curious: your Course of Lectures “on Human Culture” seems to be on the very subject I am to discourse upon here in May coming; but I am to call it “on the History of Literature,” and *speak* it, not write it. While you read this, I shall be in the agonies! Ah me! often when I think of the matter, how my one sole wish is to be left to hold my tongue, and by what bayonets of Necessity clapt to my back I am driven into that Lecture-room, and in what mood, and ordered to speak or die, I feel as if my only utterance should be a flood of tears and blubbering! But that, clearly, will not do. Then again I think it is perhaps better so; who knows? At all events, we will try what is in this Lecturing in London. If something, well; if nothing, why also well. But I do want to get out of these coils for a tune. My Brother is to be home again in May; if he go back to Italy, if our Lecturing proved productive, why might we not all set off thitherward for the winter coming? There is a dream to that effect. It would suit my wife, too: she was alarmingly weak this time twelvemonth; and I can only yet tell you that she is stronger, not strong: she has not ventured out except at midday, and rarely then, since Autumn last; she sits here patiently waiting Summer, and charges me to send you her love. — America also always lies in the background: I do believe, if I live long, I shall get to Concord one day. Your wife must love me. If the little Boy be a well-behaved fellow, he shall ride on my back yet: if not, tell him I will have nothing to do with him, the riotous little imp that he is. And so God bless you always, my dear friend! Your affectionate,

— T. Carlyle

XXIII. Emerson to Carlyle*

Concord, 10 May, 1838

My Dear Friend, — Yesterday I had your letter of March. It quickens my purpose (always all but ripe) to write to you. If it had come earlier I should have been confirmed in my original purpose of publishing *Select Miscellanies of T.C.* As it is, we are far on in the printing of the first two volumes (to make 900 pages) of the papers as they stand in your list. And now I find we shall only get as far as the seventeenth or eighteenth article. I regret it, because this book will not embrace those papers I chiefly desire to provide people with, and it may be some time, in these years of bankruptcy and famine, before we shall think it prudent to publish two volumes more. But Loring is a good man, and thinks that many desire to see the sources of Nile. I, for my part, fancy that to meet the taste of the readers we should publish *from the last* backwards, beginning with the paper on Scott, which has had the best reception ever known. Carlyleism is becoming so fashionable that the most austere Seniors are glad to qualify their reprobation by applauding this review. I have agreed with the bookseller publishing the *Miscellanies* that he is to guarantee to you one dollar on every copy he sells; and you are to have the total profit on every copy subscribed for. The retail price [is] to be \$2.50. The cost of the work is not yet precisely ascertained. The work will probably appear in six or seven weeks. We print one thousand copies. So whenever it is sold you shall have one thousand dollars.

— — — * Printed in the *Athenaeum*, July 8, 1882. — — —

The *French Revolution* continues to find friends and purchasers. It has gone to New Orleans, to Nashville, to Vicksburg. I have not been in Boston lately, but have determined that nearly or quite eight hundred copies should be gone. On the 1st of July I shall make up accounts with the booksellers, and I hope to make you the most favorable returns. I shall use the advice of Barnard, Adams, & Co. in regard to remittances.

When you publish your next book I think you must send it out to me in sheets, and let us print it here contemporaneously with the English edition. The *eclat* of so new a book would help the sale very much.

But a better device would be, that you should embark in the “Victoria” steamer, and come in a fortnight to New York, and in twenty-four hours more to Concord. Your study arm-chair, fireplace, and bed, long vacant, auguring expect you. Then you shall revise your proofs and dictate wit and learning to the New World. Think of it in good earnest. In aid of your friendliest purpose, I will set

down some of the facts. I occupy, or *improve*, as we Yankees say, two acres only of God's earth; on which is my house, my kitchen-garden, my orchard of thirty young trees, my empty barn. My house is now a very good one for comfort, and abounding in room. Besides my house, I have, I believe, \$22,000, whose income in ordinary years is six percent. I have no other tithe or glebe except the income of my winter lectures, which was last winter \$800. Well, with this income, here at home, I am a rich man. I stay at home and go abroad at my own instance. I have food, warmth, leisure, books, friends. Go away from home, I am rich no longer. I never have a dollar to spend on a fancy. As no wise man, I suppose, ever was rich in the sense of *freedom to spend*, because of the inundation of claims, so neither am I, who am not wise. But at home, I am rich, — rich enough for ten brothers. My wife Lidian is an incarnation of Christianity, — I call her Asia, — and keeps my philosophy from Antinomianism; my mother, whitest, mildest, most conservative of ladies, whose only exception to her universal preference for old things is her son; my boy, a piece of love and sunshine, well worth my watching from morning to night; — these, and three domestic women, who cook and sew and run for us, make all my household. Here I sit and read and write, with very little system, and, as far as regards composition, with the most fragmentary result: paragraphs incompressible, each sentence an infinitely repellent particle.

In summer, with the aid of a neighbor, I manage my garden; and a week ago I set out on the west side of my house forty young pine trees to protect me or my son from the wind of January. The ornament of the place is the occasional presence of some ten or twelve persons, good and wise, who visit us in the course of the year. — But my story is too long already. God grant that you will come and bring that blessed wife, whose protracted illness we heartily grieve to learn, and whom a voyage and my wife's and my mother's nursing would in less than a twelvemonth restore to blooming health. My wife sends to her this message: "Come, and I will be to you a sister." What have you to do with Italy? Your genius tendeth to the New, to the West. Come and live with me a year, and if you do not like New England well enough to stay, one of these years (when the *History* has passed its ten editions, and been translated into as many languages) I will come and dwell with you.

I gladly hear what you say of Sterling. I am foolish enough to be delighted with being an object of kindness to a man I have never seen, and who has not seen me. I have not yet got the *Blackwood* for March, which I long to see, but the other three papers I have read with great satisfaction. They lie here on my table. But he must get well.

As to Miss Martineau, I know not well what to say. Meaning to do me a signal kindness (and a kindness quite out of all measure of justice) she does me a great annoyance, — to take away from me my privacy and thrust me before my time (if ever there be a time) into the arena of the gladiators to be stared at. I was ashamed to read, and am ashamed to remember. Yet, as you see her, I would not be wanting in gratitude to a gifted and generous lady who so liberally transfigures our demerits. So you shall tell her, if you please, that I read all her book with pleasure but that part, and if ever I shall travel West or South, I think she has furnished me with the eyes. Farewell, dear wise man. I think your poverty honorable above the common brightness of that thorn-crown of the great. It earns you the love of men and the praise of a thousand years. Yet I hope the angelical Beldame, all-helping, all-hated, has given you her last lessons, and, finding you so striding a proficient, will dismiss you to a hundred editions and the adoration of the booksellers.

— R.W. Emerson

I have never heard from Rich, who, you wrote, had sent his account to me. Let him direct to me at Concord.

A young engineer in Cambridge, by name McKean,* volunteers his services in correcting the proofs of the *Miscellanies*, — and he has your errata, — for the love of the reading. Shall we have anthracite coal or wood in your chamber? My old mother is glad you are coming.

— * The late Mr. Henry S. McKean, a son of Professor McKean, and a graduate of Harvard College in 1828. —

XXIV. Carlyle to Emerson

Chelsea, London, 15 June, 1838

My Dear Emerson, — Our correspondence has fallen into a raveled state; which would doubtless clear itself could I afford to wait for your next Letter, probably tumbling over the Atlantic brine about this very moment: but I cannot afford to wait; I must write straightway. Your answer to this will bring matters round again. I have had two irregular Notes of your writing, or perhaps three; two dated March, one by Mr. Bancroft's Parcel, — bringing Twelve *Oration*s withal; then some ten days later, just in this very time, another Note by Mr. Sumner, whom I have not yet succeeded in seeing, though I have attempted it, and hope soon to do it. The Letter he forwarded me from Paris was acknowledged already, I think. And now if the Atlantic will but float me in safe that other promised Letter!

I got your American *French Revolution* a good while ago. It seems to me a very pretty Book indeed, wonderfully so for the money; neither does it seem what we can call *incorrectly* printed so far as I have seen; compared with the last *Sartor* it is correctness itself. Many thanks to you, my Friend, and much good may it do us all! Should there be any more reprinting, I will request you to rectify at least the three following errors, copied out of the English text indeed; nay, mark them in your own New-English copy, whether there be reprinting or not: Vol. I. p. 81, last paragraph, *for* September *read* August; Vol. II. p. 344, first line, *for* book of prayer *read* look of prayer; p. 357, *for* blank *read* black (2d paragraph, "all black"). And so *basta*. And let us be well content about this F.R. on both sides of the water, yours as well as mine.

"Too many cooks"! the Proverb says: it is pity if this new apparition of a Mr. Loring should spoil the broth. But I calculate you will adjust it well and smoothly between you, some way or other. How you shall adjust it, or have adjusted it, is what I am practically anxious now to learn. For you are to understand that our English Edition has come to depend partly on yours. After long higgling with the foolish Fraser, I have quitted him, quite quietly, and given "Saunders and Ottley, Conduit Street," the privilege of printing a small edition of *Teufelsdröckh* (Five Hundred copies), with a prospect of the "Miscellaneous Writings" soon following. Saunders and Ottley are at least more reputable persons, they are useful to me also in the business of Lecturing. *Teufelsdröckh* is at Press, to be out very soon; I will send you a correct copy, the only one in America I fancy. The enterprise here too is on the "half-profits" plan, which I

compute generally to mean equal partition of the oyster-shells and a net result of zero. But the thing will be economically useful to me otherwise; as a publication of the "Miscellaneous" also would be; which latter, however, I confess myself extremely unwilling to undertake the trouble of for *nothing*. To me they are grown or fast growing *obsolete*, these Miscellanies, for most part; if money lie not in them, what does lie for me? Now it strikes me you will infallibly edit these things, at least as well as I, and are doing it at any rate; your printing too would seem to be cheaper than ours: I said to Saunders and Ottley, Why not have two hundred or three hundred of this American Edition struck off with "London: Saunders and Ottley, Conduit Street," on the title-page, and sent over hither in sheets at what price they have cost my friends yonder? Saunders of course threw cold water on this project, but was obliged to admit that there would be some profit in it, and that for me it would be far easier. The grand profit for me is that people would understand better what I mean, and come better about me if I lectured again, which seems the only way of getting any wages at all for me here at present. Pray meditate my project, if it be not already too late, hear what your Booksellers say about it, and understand that I will not in any case set to printing till I hear from you in answer to this.

How my sheet is filling with dull talk about mere economics! I must still add that the *Lecturing* I talked of, last time, is verily over now; and well over. The superfine people listened to the rough utterance with patience, with favor, increasing to the last. I sent you a Newspaper once, to indicate that it was in progress. I know not yet what the money result is; but I suppose it will enable us to exist here thriftily another year; not without hope of at worst doing the like again when the time comes. It is a great novelty in my lot; felt as a very considerable blessing; and really it has arrived, if it have arrived, in *due* time, for I had begun to get quite impatient of the other method. Poverty and Youth may do; Poverty and Age go badly together. — For the rest, I feel fretted to fiddle-strings; my head and heart all heated, sick, — ah me! The question as ever is: Rest. But then where? My Brother invites us to come to Rome for the winter; my poor sick Wife might perhaps profit by it; as for me, Natty Leatherstocking's lodge in the Western Wood, I think, were welcomer still. I have a great mind, too, to run off and see my Mother, by the new railways. What we shall do, whether not stay quietly here, must remain uncertain for a week or two. Write you always hither, till you hear otherwise.

The *Orations* were right welcome; my *Madeira* one, returned thence with Sterling, was circulating over the West of England. Sterling and Harriet stretched out the right hand with wreathed smiles. I have read, a second or third

time. Robert Southey has got a copy, for his own behoof and that of *Lakeland*: if he keep his word as to *me*, he may do as much for you, or more. Copies are at Cambridge; among the Oxonians too; I have with stingy discretion distributed all my copies but two. Old Rogers, a grim old Dilettante, full of sardonic sense, was heard saying, "It is German Poetry given out in American Prose." Friend Emerson ought to be content; — and has now above all things, as I said, to *be in no haste*. Slow fire does make sweet malt: how true, how true! Also his next work ought to be a *concrete* thing; not *theory* any longer, but *deed*. Let him "live it," as he says; that is the way to come to "painting of it." Geometry and the art of Design being once well over, take the brush, and *andar con Dios!*

Mrs. Child has sent me a Book, *Philothea*, and a most magnanimous epistle. I have answered as I could. The Book is beautiful, but of a *hectic* beauty; to me not pleasant, even fatal looking. Such things grow not in the ground, on Mother Earth's honest bosom, but in hothouses, — Sentimental-Calvinist fire traceable underneath! Bancroft also is of the hothouse partly: I have a Note to send him by Sumner; do you thank him meanwhile, and say nothing about *hothouses!* But, on the whole, men ought in New England, too to "swallow their formulas";* there is no freedom till then: yet hitherto I find only one man there who seems fairly on the way towards that, or arrived at that. Good speed to *him*. I had to send my Wife's love: she is not dangerously ill; but always feeble, and has to *struggle* to keep erect; the summer always improves her, and this summer too. Adieu, dear Friend; may Good always be with you and yours.

— T. Carlyle

— * This was the saying of the old Marquis de Mirabeau concerning his son, *Il a hume toutes les formules*, and is used as a text by Carlyle in his article on Mirabeau. "Of inexpressible advantage is it that a man have 'an eye instead of a pair of spectacles merely'; that, seeing through the formulas of things and even 'making away' with many a formula, he see into the thing itself, and so know it and be master of it!" — — —

XXV. Emerson to Carlyle Boston, 30 July, 1838

My Dear Sir, — I am in town today to get what money the booksellers will relinquish from their faithful gripe, and have succeeded now in obtaining a first instalment, however small. I enclose to you a bill of exchange for fifty pounds sterling, which costs here exactly \$242.22, the rate of exchange being nine percent. I shall not today trouble you with any account, for my letter must be quickly ready to go by the steam-packet. An exact account has been rendered to me, which, though its present balance in our favor is less than I expected, yet, as far as I understand it, agrees well with all that has been promised: at least the balance in our favor when the edition is sold, which the booksellers assure me will assuredly be done within a year from the publication, must be seven hundred and sixty dollars, and what more Heaven and the subscribers may grant. I shall follow this letter and bill by a duplicate of the bill in the next packet.

The *Miscellanies* is published in two volumes, a copy of which goes to you immediately. Munroe tells me that two hundred and fifty copies of it are already sold. Writing in a bookshop, my dear friend, I have no power to say aught than that I am heartily and always, Yours,

R. Waldo Emerson

XXVI. Emerson to Carlyle

Concord, 6 August, 1838

My Dear Friend, — The swift ships are slow when they carry our letters. Your letter dated the 15th of June arrived here last Friday, the 3d of August. That day I was in Boston, and I have only now got the information necessary to answer it. You have probably already learned from my letter sent by the “Royal William” (enclosing a bill of exchange for L50), that our first two volumes of the *Miscellanies* are published. I have sent you a copy. The edition consists of one thousand copies. Of these five hundred are bound, five hundred remain in sheets. The title-pages, of course, are all printed alike; but the publishers assure me that new title-pages can be struck off at a trifling expense, with the imprint of Saunders and Ottley. The cost of a copy in sheets or “folded” (if that means somewhat more?) is eighty-nine cents; and bound is \$1.15. The retail price is \$2.50 a copy; and the author’s profit, \$1; and the bookseller’s, 35 cents per copy; according to my understanding of the written contract.

Here I believe you have all the material facts. I think there is no doubt that the book will sell very well here. But if, for the reasons you suggest, you wish any part of it, you can have it as soon as ships can bring your will.

When you see your copy, you will perceive that we have printed half the matter. I should presently begin to print the remainder, inclusive of the Article on Lockhart’s Scott, in two more volumes; but now I think I shall wait until I hear from you. Of those books we will print a larger edition, say twelve hundred and fifty or fifteen hundred, if you want a part of it in London. For I feel confident now that our public here is one thousand strong. Write me therefore *by the steam packet* your wishes.

I am sure you will like our edition. It has been most carefully corrected by two young gentlemen who successively volunteered their services, (the second when the first was called away,) and who, residing in Cambridge, where the book was printed, could easilier oversee it. They are Henry S. McBean, an engineer, and Charles Stearns Wheeler, a Divinity student, — working both for love of you. To one other gentleman I have brought you in debt, — Rev. Convers Francis* (brother of Mrs. Child), who supplied from his library all the numbers of the *Foreign Review* from which we printed the work. We could not have done without his books, and he is a noble-hearted man, who rejoices in you. I have sent to all three copies of the work as from you, and I shall be glad if you will remember to sanction this expressly in your next letter.

—— — * This worthy man and lover of good books was, from 1842

till his death in 1863, Professor in the Divinity School of Harvard University.

Thanks for the letter: thanks for your friendliest seeking of friends for the poor *Oration*. Poor little pamphlet, to have gone so far and so high! I am ashamed. I shall however send you a couple more of the thin gentry presently, maugre all your hopes and cautions. I have written and read a kind of sermon to the Senior Class of our Cambridge Theological School a fortnight ago; and an address to the Literary Societies of Dartmouth College;* for though I hate American pleniloquence, I cannot easily say No to young men who bid me speak also. And both these are now in press. The first I hear is very offensive. I will now try to hold my tongue until next winter. But I am asked continually when you will come to Boston. Your lectures are boldly and joyfully expected by brave young men. So do not forget us: and if ever the scale-beam trembles, I beseech you, let the love of me decide for America. I will not dare to tease you on a matter of so many relations, and so important, and especially as I have written out, I believe, my requests in a letter sent two or three months ago, — but I must see you somewhere, somehow, may it please God! I grieve to hear no better news of your wife. I hoped she was sound and strong ere this, and can only hope still. My wife and I send her our hearty love.

Yours affectionately,

R.W. Emerson

— * The Address at the Cambridge Divinity School was delivered on the 15th of July, and that at Dartmouth College on the 24th of the same month. The title of the latter was “Literary Ethics.” Both are reprinted in Emerson’s *Miscellanies*.

These remarkable discourses excited deep interest and wide attention. They established Emerson’s position as the leader of what was known as the Transcendental movement. They were the expressions of his inmost convictions and his matured thought. The Address at the Divinity School gave rise to a storm of controversy which did not disturb the serenity of its author. “It was,” said Theodore Parker, “the noblest, the most inspiring strain I ever listened to.” To others it seemed “neither good divinity nor good sense.” The Address at Dartmouth College set forth the high ideals of intellectual life with an eloquence made irresistible by the character of the speaker. From this time Emerson’s influence upon thought in America was acknowledged. — — —

XXVII. Carlyle to Emerson Scotsbrig, Ecclefechan, (Annandale, Scotland)
25 September, 1838

My Dear Emerson, — There cannot any right answer be written you here and now; yet I must write such answer as I can. You said, “by steamship”; and it strikes me with a kind of remorse, on this my first day of leisure and composure, that I have delayed so long. For you must know, this is my Mother’s house, — a place to me unutterable as Hades and the Land of Spectres were; likewise that my Brother is just home from Italy, and on the wing thitherward or somewhither swiftly again; in a word, that all is confusion and flutter with me here, — fit only for *silence!* My Wife sent me off hitherward, very sickly and unhappy, out of the London dust, several weeks ago; I lingered in Fifeshire, I was in Edinburgh, in Roxburghshire; have some calls to Cumberland, which I believe I must refuse; and prepare to creep homeward again, refreshed in health, but with a head and heart all seething and tumbling (as the wont is, in such cases), and averse to pens beyond all earthly implements. But my Brother is off for Dumfries this morning; you before all others deserve an hour of my solitude. I will abide by business; one must write about that.

Your Bill and duplicate of a Bill for L50, with the two Letters that accompanied them, you are to know then, did duly arrive at Chelsea; and the larger Letter (of the 6th of August) was forwarded to me hither some two weeks ago. I had also, long before that, one of the friendliest of Letters from you, with a clear and most inviting description of the Concord Household, its inmates and appurtenances; and the announcement, evidently authentic, that an apartment and heart’s welcome was ready there for my Wife and me; that we were to come quickly, and stay for a twelvemonth. Surely no man has such friends as I. We ought to say, May the Heavens give us thankful hearts! For, in truth, there are blessings which do, like sun-gleams in wild weather, make this rough life beautiful with rainbows here and there. Indicating, I suppose, that there is a Sun, and general Heart of Goodness, behind all that; — for which, as I say again, let us be thankful evermore.

My Wife says she received your American Bill of so many pounds sterling for the Revolution Book, with a “pathetic feeling” which brought “tears” to her eyes. From beyond the waters there is a hand held out; beyond the waters too live brothers. I would only the Book were an Epic, a *Dante*, or undying thing, that New England might boast in after times of this feat of hers; and put stupid, poundless, and penniless Old England to the blush about it! But after all, that is no matter; the feebler the well-meant Book is, the more “pathetic” is the whole

transaction: and so we will go on, fuller than ever of “desperate hope” (if you know what that is), with a feeling one would not give and could not get for several money-bags; and say or think, Long live true friends and Emersons, and (in Scotch phrase) “May ne’er waur be amang us!” — I will buy something permanent, I think, out of this L50, and call it either *Ebenezer* or *Yankee-doodle-doo*. May good be repaid you manifold, my kind Brother! may good be ever with you, my kind Friends all!

But now as to this edition of the *Miscellanies* (poor things), I really think my Wife is wisest, who says I ought to leave you altogether to your own resources with it, America having an art of making money out of my Books which England is unfortunately altogether without. Besides, till I once see the Two Volumes now under way, and can let a Bookseller see them, there could no bargain be made on the subject. We will let it rest there, therefore. Go on with your second Two Volumes, as if there were no England extant, according to your own good judgment. When I get to London, I will consult some of the blockheads with the Book in my hand: if we do want Two Hundred copies, you can give us them with a trifling loss. It is possible they may make some better proposal about an Edition here: that depends on the fate of *Sartor* here, at present trying itself; which I have not in the least ascertained. For the present, thank as is meet all friends in your world that have interested themselves for me. Alas! I have nothing to give them but thanks. Henry McKean, Charles Wheeler, Convers Francis; these Names shall, if it please Heaven, become Persons for me, one day. Well! — But I will say nothing more. That too is of the things on which all Words are poor to Silence. Good to the Good and Kind!

A Letter from me must have crossed that *descriptive* Concord one, on the Ocean, I think. Our correspondence is now standing on its feet. I will write to you again, whether I hear from you or not, so soon as my hand finds its cunning again in London, — so soon as I can see there what is to be done or said. All goes decidedly better, I think. My Wife was and is much healthier than last year, than in any late year. I myself get visibly quieter my preternatural *Meditations in Hades*, apropos of this Annandale of mine, are calm compared with those of last year. By another Course of Lectures I have a fair prospect of living for another season; nay, people call it a “new profession” I have devised for myself, and say I may live by it as many years as I like. This too is partly the fruit of my poor Book; one should not say that it was worth nothing to me even in money. Last year I fancied my Audience mainly the readers of it; drawn round me, in spite of many things, by force of it. Let us be content. I have Jesuits, Swedenborgians, old Quakeresses, *omne cum Proteus*, — God help me, no man ever had so

confused a public! — I salute you, my dear Friend, and your hospitable circle. May blessings be on your kind household, on your kind hearts!

— T. Carlyle A copy of the English *Teufelsdröckh* has lain with your name on it these two months in Chelsea; waiting an opportunity. It is worth nothing to you: a dingy, ill-managed edition; but correct or nearly correct as to printing; it is right that such should be in your hands in case of need. The New England Pamphlets will be greedily expected. More than one inquires of me, Has that Emerson of yours written nothing else? And I have lent them the little Book *Nature*, till it is nearly thumbed to pieces. Sterling is gone to Italy for the winter since I left town; swift as a flash! I cannot teach him the great art of *sitting still*; his fine qualities are really like to waste for want of that.

I read your paragraph to Miss Martineau; she received it, as she was bound, with a good grace. But I doubt, I doubt, O Ralph Waldo Emerson, thou hast not been sufficiently ecstatic about her, — thou graceless exception, confirmatory of a rule! In truth there *are* bores, of the first and of all lower magnitudes. Patience and shuffle the cards.

XXVIII. Emerson to Carlyle Concord, 17 October, 1838

My Dear Friend, — I am quite uneasy that I do not hear from you. On the 21st of July I wrote to you and enclosed a remittance of L50 by a Bill of Exchange on Baring Brothers, drawn by Chandler, Howard, & Co., which was sent in the steamer “Royal William.” On the 2d of August I received your letter of inquiry respecting our edition of the *Miscellanies*, and wrote a few days later in reply, that we could send you out two or three hundred copies of our first two volumes, in sheets, at eighty-nine cents per copy of two volumes, and the small additional price of the new title-page. I said also that I would wait until I heard from you before commencing the printing of the last two volumes of the *Miscellanies*, and, if you desired it, would print any number of copies with a title-page for London. This letter went in a steamer — the “Great Western” probably — about the 10th or 12th of August. (Perhaps I misremember the names [of the steamers], and the first should be last.) I have heard nothing from you since. I trust my letters have not miscarried. (A third was sent also by another channel inclosing a duplicate of the Bill of Exchange.) With more fervency, I trust that all goes well in the house of my friend, — and I suppose that you are absent on some salutary errand of repairs and recreation. *Use, I pray you, your earliest hour in certifying me of the facts.*

One word more in regard to business. I believe I expressed some surprise, in the July letter, that the booksellers should have no greater balance for us at this settlement. I have since studied the account better, and see that we shall not be disappointed in the year of obtaining at least the sum first promised, — seven hundred and sixty dollars; but the whole expense of the edition is paid out of the copies first sold, and our profits depend on the last sales. The edition is almost gone, and you shall have an account at the end of the year.

In a letter within a twelvemonth I have urged you to pay us a visit in America, and in Concord. I have believed that you would come one day, and do believe it. But if, on your part, you have been generous and affectionate enough to your friends here — or curious enough concerning our society — to wish to come, I think you must postpone, for the present, the satisfaction of your friendship and your curiosity. At this moment I would not have you here, on any account. The publication of my *Address to the Divinity College* (copies of which I sent you) has been the occasion of an outcry in all our leading local newspapers against my “infidelity,” “pantheism,” and “atheism.” The writers warn all and sundry against me, and against whatever is supposed to be related to my connection of opinion, &c.; against Transcendentalism, Goethe, and *Carlyle*. I am heartily

sorry to see this last aspect of the storm in our washbowl. For, as Carlyle is nowise guilty, and has unpopuliarities of his own, I do not wish to embroil him in my parish differences. You were getting to be a great favorite with us all here, and are daily a greater with the American public, but just now, *in Boston*, where I am known as your editor, I fear you lose by the association. Now it is indispensable to your right influence here, that you should never come before our people as one of a clique, but as a detached, that is, universally associated man; so I am happy, as I could not have thought, that you have not yielded yourself to my entreaties. Let us wait a little until this foolish clamor be overblown. My position is fortunately such as to put me quite out of the reach of any real inconvenience from the panic-strikers or the panic-struck; and, indeed, so far as this uneasiness is a necessary result of mere inaction of mind, it seems very clear to me that, if I live, my neighbors must look for a great many more shocks, and perhaps harder to bear.

The article on German Religious Writers in the last *Foreign Quarterly Review* suits our meridian as well as yours; as is plainly signified by the circumstance that our newspapers copy into their columns the opening tirade and *no more*. Who wrote that paper? And who wrote the paper on Montaigne in the *Westminster*? I read with great satisfaction the Poems and Thoughts of Archaeus in *Blackwood*. "The Sexton's Daughter" is a beautiful poem: and I recognize in them all *the Soul*, with joy and love. Tell me of the author's health and welfare; or, will not he love me so much as to write me a letter with his own hand? And tell me of yourself, what task of love and wisdom the Muses impose; and what happiness the good God sends to you and yours. I hope your wife has not forgotten me.

Yours affectionately,

R.W. Emerson The *Miscellanies*, Vols. I. and II., are a popular book. About five hundred copies have been sold. The second article on Jean Paul works with might on the inner man of young men. I hate to write you letters on business and facts like this. There are so few Friends that I think some time I shall meet you nearer, for I love you more than is fit to say. W.H. Channing has written a critique on you, which I suppose he has sent you, in the *Boston Review*.

XXIX. Carlyle to Emerson

5 Cheyne Row, Chelsea, London 7 November, 1838

My Dear Friend, — It is all right; all your Letters with their inclosures have arrived in due succession: the last, inquiring after the fate of the others, came this morning. I was in Scotland, as you partly conjecture; I wrote to you already (though not without blamable delay), from my Mother's house in Annandale, a confused scrawl, which I hope has already got to hand, and quieted your kind anxieties. I am as well as usual in health, my Wife better than usual; nothing is amiss, except my negligence and indolence, which has put you to this superfluous solicitude on my account. However, I have an additional Letter by it; you must pardon me, you must not grudge me that undeserved pleasure, the reward of evil-doing. I may well say, you are a blessing to me on this Earth; no Letter comes from you with other than good tidings, — or can come while you live there to love me.

The Bill was thrust duly into Baring's brass slit "for acceptance," on my return hither some three weeks ago; and will, no doubt, were the days of grace run, come out in the shape of Fifty Pounds Sterling; a very curious product indeed. Do you know what I think of doing with it? *Dyspepsia*, my constant attendant in London, is incapable of help in my case by any medicine or appliance except one only, Riding on horseback. With a good horse to whirl me over the world for two hours daily, I used to keep myself supportably well. Here, the maintenance of a Horse far transcends my means; yet it seems hard I should not for a little while be in a kind of approximate health in this Babylon where I have my bread to seek it is like swimming with a millstone round your neck, — ah me! In brief, I am about half resolved to buy myself a sharp little nag with Twenty of these Transatlantic Pounds, and ride him till the other Thirty be eaten: I will call the creature "Yankee," and kind thoughts of those far away shall be with me every time I mount him. Will not that do? My Wife says it is the best plan I have had for years, and strongly urges it on. My kind friends!

As to those copies of the Carlyle Miscellanies, I unfortunately still can say nothing, except what was said in the former (Scotch) letter, that you must proceed in the business with an eye to America and not to us. My Booksellers, Saunders and Ottley, have no money for me, no definite offer in money to make for those Two Hundred copies, of which you seem likely to make money if we simply leave them alone. I have asked these Booksellers, I have asked Fraser too: What will you *give me in ready money* for Two Hundred and Fifty copies of

that work, sell it afterwards as you can? They answer always, We must see it first. Now the copy long ago sent me has never come to hand; I have asked for it of Kennet, but without success; I have nothing for it but to wait the winds and chances. Meanwhile Saunders and Ottley want forsooth a *Sketches of German Literature* in three volumes: then a *Miscellanies* in three volumes: that is their plan of publishing an English edition; and the outlook they hold out for me is certain trouble in this matter, and recompense entirely uncertain. I think on the whole it is extremely likely I shall apply to you for Two Hundred and Fifty copies (that is their favorite number) of these four volumes, (nay, if it be of any moment, you can bind me down to it *now*, and take it for sure,) but I cannot yet send you the title-page; no bookseller purchasing till “we see it first.” But after all, will it suit America to print an *unequal* number of your two pairs of volumes? Do not the two together make one work? On the whole, consider that I shall in all likelihood want Two Hundred and Fifty copies, and consider it certain if that will serve the enterprise: we must leave it here today. I will stir in it now, however, and take no rest till in one way or other you do get a title-page from me, or some definite deliverance on the matter. O Athenians, what a trouble I *give*, having *got* your applauses!

Kennet the Bookseller gave me yesterday (on my way to “the City” with that Brother of mine, the Italian Doctor who is here at present and a great lover of yours) ten copies of your Dartmouth Oration: we read it over dinner in a chop-house in Bucklersbury, amid the clatter of some fifty stand of knives and forks; and a second time more leisurely at Chelsea here. A right brave Speech; announcing, in its own way, with emphasis of full conviction, to all whom it may concern, that great forgotten truth, *Man is still man*. May it awaken a pulsation under the ribs of Death! I believe the time is come for such a Gospel. They must speak it out who have it, — with what audience there may be. I have given away two copies this morning; I will take care of the rest. Go on, and speed. — And now where is the heterodox Divinity one, which awakens such “tempest in a washbowl,” brings Goethe, Transcendentalism, and Carlyle into question, and on the whole evinces “what [difference] New England also makes between *Pan*-theism and *Pot*-theism”? I long to see that; I expect to congratulate you on that too. Meanwhile we will let the washbowl storm itself out; and Emerson at Concord shall recognize it for a washbowl storming, and hold on his way. As to my share in it, grieve not for half an instant. Pantheism, Pottheism, Mydoxy, Thydoxy, are nothing at all to me; a weariness the whole jargon, which I avoid speaking of, decline listening to: *Live*, for God’s sake, with what Faith thou couldst get; leave off *speaking* about Faith! Thou knowest it not. Be *silent*,

do not speak. — As to you, my friend, you are even to go on, giving still harder shocks if need be; and should I come into censure by means of you, there or here, think that I am proud of my company; that, as the boy Hazlitt said after hearing Coleridge, “I will go with that man”; or, as our wild Burns has it,

”Wi’ sic as he, where’er he be,
May I be saved or damned!”

Oime! what a foolish goose of a world this is! If it were not [for] here and there an articulate-speaking man, one would be all-too lonely.

This is nothing at all like the letter I meant to write you; but I will write again, I trust, in few days, and the first paragraph shall, if possible, hold all the business. I have much to tell you, which perhaps is as well not written. O that I did see you face to face! But the time shall come, if Heaven will. Why not you come over, since I cannot? There is a room here, there is welcome here, and two friends always. It must be done one way or the other. I will take care of your messages to Sterling. He is in Florence; he was the Author of *Montaigne*.* The *Foreign Quarterly* Reviewer of *Strauss* I take to be one Blackie, an Advocate in Edinburgh, a frothy, semi-confused disciple of mine and other men’s; I guess this, but I have not read the Article: the man Blackie is from Aberdeen, has been roaming over Europe, and carries more sail than ballast. Brother John, spoken of above, is knocking at the door even now; he is for Italy again, we expect, in few days, on a better appointment: know that you have a third friend in him under this roof, — a man who quarrels with me all day in a small way, and loves me with the whole soul of him. My Wife demanded to have “room for one line.” What she is to write I know not, except it be what she has said, holding up the pamphlet, “Is it not a noble thing? None of them all but he,” &c., &c. I will write again without delay when the stray volumes arrive; before that if they linger. Commend me to all the kind household of Concord: Wife, Mother, and Son.

Ever yours,
T. Carlyle

* See *ante*, p. 184. Sterling’s essay on Montaigne was his first contribution, in 1837, to the *London and Westminster Review*. It is reprinted in “Essays and Tales, by John Sterling, collected and edited, with a Memoir of his Life, by Julius Charles Hare,” London, 1848, Vol. I. p. 129. — — —

“*Forgotten you?*” O, no indeed! If there were nothing else to remember you by, I should never forget the Visitor, who years ago in the Desert descended on

us, out of the clouds as it were, and made one day there look like enchantment for us, and left me weeping that it was only *one* day. When I think of America, it is of you, — neither Harriet Martineau nor any one else succeeds in giving me a more extended idea of it. When I wish to see America it is still you, and those that are yours. I read all that you write with an interest which I feel in no other writing but my Husband's, — or it were nearer the truth to say there is no other writing of living men but yours and his that I *can* read. God Bless you and Weib and Kind. Surely I shall some day see you all.

Your affectionate

Jane Carlyle

XXX. Carlyle to Emerson

Chelsea, London, 15 November, 1835

Dear Emerson, — Hardly above a week ago, I wrote you in immediate answer to some friendly inquiries produced by negligence of mine: the Letter is probably tumbling on the salt waves at this hour, in the belly of the “Great Western”; or perhaps it may be still on firm land waiting, in which case this will go along with it. I had written before out of Scotland a Letter of mere acknowledgment and postponement; you must have received that before now, I imagine. Our small piece of business is now become articulate, and I will despatch it in a paragraph. Pity my stupidity that I did not put the thing on this footing long ago! It never struck me till the other day that though no copy of our *Miscellanies* would turn up for inspection here, and no Bookseller would bargain for a thing unseen, I myself might bargain, and leave their hesitations resting on their own basis. In fine, I have rejected all their schemes of printing *Miscellaneous Works* here, printing *Sketches of German Literature*, or printing anything whatever on the “half-profits system,” which is like toilsomely scattering seed into the sea: and I settled yesterday with Fraser to give him the American sheets, and let them sell *themselves*, on clear principles, or remain unsold if they like. I find it infinitely the best plan, and to all appearance the profitablest as to money that could have been devised for me.

What you have to do therefore is to get Two Hundred and Fifty copies (*in sheets*) of the whole Four Volumes, so soon as the second two are printed, and have them, with the proper title-page, sent off hither to Fraser’s address; the sooner the better. The American title-page, instead of “Boston,” &c. at the bottom, will require to bear, in three lines “London: *James Fraser, 215 Regent Street, 1839.*” Fraser is anxious that you should not spell him with a z; your man can look on the Magazine and beware. I suppose also you should print *labels* for the backs of the four volumes, to be used by the *half-binder*; they do the books in that way here now: but if it occasion any difficulty, never mind this; it was not spoken of to Fraser, and is my own conjecture merely; the thing can be managed in various other ways. Two Hundred and Fifty copies, then, of the entire book: there is nothing else to be attended to that you do not understand as well as I. Fraser will announce it in his Magazine: the eager, select public will wait. Probably, there is no chance before the middle of March or so? Do not hurry yourselves, or at all change your rate for *us*: but so soon as the work is ready in the course of Nature, the earliest conveyance to the Port of London will bring a

little cargo which one will welcome with a strange feeling! I declare myself delighted with the plan; an altogether romantic kind of plan, of romance and reality: fancy me riding on *Yankee* withal, at the time, and considering what a curious world this is, that bakes bread for one beyond the great Ocean-stream, and how a poor man is not left after all to be trodden into the gutters, though the fight went sore against him, and he saw no backing anywhere. *Allah akbar!* God is great; no saying truer than that. — And so now, by the blessing of Heaven, we will talk no more of business this day.

My employments, my outlooks, condition, and history here, were a long chapter; on which I could like so well to talk with you face to face; but as for writing of them, it is a mere mockery. In these four years, so full of pain and toil, I seem to have lived four decades. By degrees, the creature gets accustomed to its element; the salamander learns to live in fire, and be of the same temperature with it. Ah me! I feel as if grown old innumerable things are become weary, flat, stale, and unprofitable. And yet perhaps I am not old, only wearied, and there is a stroke or two of work in me yet. For the rest, the fret and agitation of this Babylon wears me down: it is the most unspeakable life; of sunbeams and miry clay; a contradiction which no head can reconcile. Pain and poverty are not wholesome; but praise and flattery along with them are poison: God deliver us from that; it carries madness in the very breath of it! On the whole, I say to myself, what thing is there so good as *rest*? A sad case it is and a frequent one in my circle, to be entirely cherubic, *all* face and wings. “*Mes enfans,*” said a French gentleman to the cherubs in the Picture, “*Mes enfans, asseyez-vous?*” — “*Monseigneur,*” answer they, “*il n’y a pas de quoi!*” I rejoice rather in my laziness; proving that I *can* sit. — But, after all, ought I not to be thankful? I positively can, in some sort, exist here for the while; a thing I had been for many years ambitious of to no purpose. I shall have to lecture again in spring, Heaven knows on what; it will be a wretched fever for me; but once through it there will be board wages for another year. The wild Ishmael can hunt in *this* desert too, it would seem. I say, I will be thankful; and wait quietly what farther is to come, or whether anything farther. But indeed, to speak candidly, I do feel sometimes as if another Book were growing in me, — though I almost tremble to think of it. Not for this winter, O no! I will write an Article merely, or some such thing, and read trash if better be not. This, I do believe, is my horoscope for the next season: an Article on something about New-Year’s-day (the Westminster Editor, a good-natured, admiring swan-geese from the North Country, will not let me rest); then Lectures; then — what? I am for some practical subject too; none of your pictures in the air, or *aesthetisches Zeug* (as Mullner’s wife called it,

Mullner of the *Midnight Blade*): nay, I cannot get up the steam on any such best; it is extremely irksome as well as fruitless at present. In the next *Westminster Review*, therefore, if you see a small scrub of a paper signed "S.P." on one Varnhagen a German, say that it is by "Simon Pure," or by "Scissars and Paste," or even by "Soaped Pig" — whom no man shall *catch!* Truly it is a secret which you must not mention: I was driven to it by the Swan-goose above mentioned, not Mill but another. Let this suffice for my winter's history: may the summer be more productive.

As for Concord and New England, alas! my Friend, I should but deface your Idyllion with an ugly contradiction, did I come in such mood as mine is. I am older in years than you; but in humor I am older by centuries. What a hope is in that ever young heart, cheerful, healthful as the morning! And as for me, you have no conception what a crabbed, sulky piece of sorrow and dyspepsia I am grown; and growing, if I do not draw bridle. Let me gather heart a little! I have not forgotten Concord or the West; no, it lies always beautiful in the blue of the horizon, afar off and yet attainable; it is a great possession to me; should it even never be attained. But I have got to consider lately that it is you who are coming hither first. That is the right way, is it not? New England is becoming more than ever part of Old England; why, you are nearer to us now than Yorkshire was a hundred years ago; this is literally a fact: you can come *without* making your will. It is one of my calculations that all Englishmen from all zones and hemispheres will, for a good while yet, resort occasionally to the Mother-Babel, and see a thing or two there. Come if you dare; I said there was a room, house-room and heart-room, constantly waiting you here, and you shall see blockheads by the million. *Pickwick* himself shall be visible; innocent young Dickens reserved for a questionable fate. The great Wordsworth shall talk till you yourself pronounce him to be a bore. Southey's complexion is still healthy mahogany-brown, with a fleece of white hair, and eyes that seem running at full gallop. Leigh Hunt, "man of genius in the shape of a Cockney," is my near neighbor, full of quips and cranks, with good humor and no common sense. Old Rogers with his pale head, white, bare, and cold as snow, will work on you with those large blue eyes, cruel, sorrowful, and that sardonic shelf-chin: — This is the Man, O Rogers, that wrote the German Poetry in American Prose; consider him well! — But whither am I running? My sheet is done! My Brother John returns again almost immediately to Italy. He has got appointed Traveling Doctor to a certain Duke of Buccleuch, the chief of our Scotch Dukes: an excellent position for him as far as externals go. His departure will leave me lonelier; but I must reckon it for the best: especially I must begin working.

Harriet Martineau is coming hither this evening; with beautiful enthusiasm for the Blacks and others. She is writing a Novel. The first American book proved generally rather wearisome, the second not so; we have since been taught (not I) “How to observe.” Suppose you and I promulgate a treatise next, “How to see”? The old plan was, to have a pair of *eyes* first of all, and then to open them: and endeavor with your whole strength to *look*. The good Harriet! But “God,” as the Arabs say, “has given to every people a Prophet (or Poet) in its own speech”: and behold now Unitarian mechanical Formalism was to have its Poetess too; and stragglings of genius were to spring up even through that like grass through a Macadam highway! — Adieu, my Friend, I wait still for your heterodox Speech; and love you always.

— T. Carlyle

An English *Sartor* goes off to you this day; through Kennet, to C.C. Little and J. Brown of Boston; the likeliest conveyance. It is correctly printed, and that is all. Its fate here (the fate of the publication, I mean) remains unknown; “unknown and unimportant.”

XXXI. Carlyle to Emerson Chelsea, London, 2 December, 1838

My Dear Emerson, — Almost the very day after my last Letter went off, the long-expected two volumes of *Miscellanies* arrived. The heterodox pamphlet has never yet come to hand. I am now to write you again about that *Miscellany* concern the fourth letter, I do believe; but it is confirmatory of the foregoing three, and will be the last, we may hope.

Fraser is charmed with the look of your two volumes; declares them unsurpassable by art of his; and wishes (what is the main part of this message) that you would send his cargo in the *bound* state, bound and lettered as these are, with the sole difference that the leaves be *not* cut, or shaved on the sides, our English fashion being to have them *rough*. He is impatient that the Book were here; desires further that it be sent to the Port of London rather than another Port, and that it be packed in *boxes* “to keep the covers of the volumes safe,” — all which I doubt not the Packers and the Shippers of New England have dexterity enough to manage for the best, without desire of his. If you have printed off nothing yet, I will desire for my own behoof that Two hundred and *Sixty* be the number sent; I find I shall need some ten to give away: if your first sheet is printed off, let the number stand as it was. It would be an improvement if you could print our title-pages on paper a little stronger; that would stand ink, I mean: the fly leaves in the same, if you have such paper convenient; if not, not. Farther as to the matter of the title-page, it seems to me your Printer might give a bolder and a broader type to the words “Critical and Miscellaneous,” and add after “Essays” with a colon (:), the line “Collected and Republished,” with a colon also; then the “By,” &c. “In Four Volumes, Vol. I.,” &c. I mean that we want, in general, a little more ink and decisiveness: show your man the title-page of the English *French Revolution*, or look at it your self, and you will know. R.W.E.’s “Advertisement,” friendly and good, as all his dealings are to me ward, will of course be suppressed in the English copies. I see not that with propriety I can say anything by way of substitute: silence and the New England *imprint* will tell the story as eloquently as there is need.

For the rest you must tell Mr. Loring, and all men who had a hand in it along with you, that I am altogether right well pleased with this edition, and find it far beyond my expectation. To my two young Friends, Henry S. McKean (be so good as write these names more indisputably for me) and Charles Stearns Wheeler, in particular, I will beg you to express emphatically my gratitude; they have stood by me with right faithfulness, and made the correctest printing; a

great service had I known that there were such eyes and heads acting in behalf of me there, I would have scraped out the Editorial blotches too (notes of admiration, dashes, “We think”s, &c., &c., common in Jeffrey’s time in the *Edinburgh Review*) and London misprints; which are almost the only deformities that remain now. It is *extremely* correct printing wherever I have looked, and many things are silently amended; it is the most fundamental service of all. I have not the other *Articles* by me at present; I think they are of themselves a little more correct; at all events there are nothing but *misprints* to deal with; — the Editors, by this time, had got bound up to let me alone. In the *Life of Scott*, fourth page of it (p. 296 of our edition), there is a sentence to be deleted. “It will tell us, say they, little new and nothing pleasing to know”: out with this, for it is nonsense, and was marked for erasure in the manuscript, I dare say. I know with certainty no more at present.

Fraser is to sell the Four Volumes at Two Guineas here. On studying accurately your program of the American mercantile method, I stood amazed to contrast it with our English one. The Bookseller here admits that he could, by diligent bargaining, get up such a book for something like the same cost or a *little* more; but the “laws of the trade” deduct from the very front of the selling price — how much think you — *forty percent* and odd, when your man has only *fifteen*; for the mere act of vending! To cover all, they charge that enormous price. (A man, while I stood consulting with Fraser, came in and asked for Carlyle’s *Revolution*; they showed it him, he asked the price; and exclaimed, “Guinea and a half! I can get it from America for nine shillings!” and indignantly went his way; not without reason.) There are “laws of the trade” which ought to be *repealed*; which I will take the liberty of contravening to all lengths by all opportunities — if I had but the power! But if this joint-stock American plan prosper, it will answer rarely. Fraser’s first *French Revolution*, for instance, will be done, he calculates, about New-Year’s-day; and a second edition wanted; mine to do with what I like. If you in America wanted more also — ? I leave you to think of this. — And now enough, enough!

My Brother went from us last Tuesday; ought to be in Paris yesterday. I am yet writing nothing; feel forsaken, sad, sick, — not unhappy. In general Death seems beautiful to me; sweet and great. But Life also is beautiful, is great and divine, were it never to be joyful any more. I read Books, my wife sewing by me, with the light of a sinumbra, in a little apartment made snug against the winter; and am happiest when all men leave me alone, or nearly all, — though many men love me rather, ungrateful that I am. My present book is *Horace Walpole*; I get endless stuff out of it; epic, tragic, lyrical, didactic: all inarticulate

indeed. An old blind Schoolmaster in Annan used to ask with endless anxiety when a new scholar was offered him, "But are ye sure *he's not a Dunce?*" It is really the one thing needful in a man; for indeed (if we will candidly understand it) all else is presupposed in that. Horace Walpole is no dunce, not a fibre of him is duncish.

Your Friend Sumner was here yesterday, a good while, for the first time: an ingenious, cultivated, courteous man; a little sensitive or so, and with no other fault that I discerned. He borrowed my copy of your Dartmouth business, and bound himself over to return with it soon. Some approve of that here, some condemn: my Wife and another lady call it better even than the former, I not so good. And now the Heterodox, the Heterodox, where is that? Adieu, my dear Friend. Commend me to the Concord Household; to the little Boy, to his Grandmother, and Mother, and Father; we must all meet some day, — or *some no-day* then (as it shall please God)! My Wife heartily greets you all.

Ever yours,

T. Carlyle I sent your book, message, and address to Sterling; he is in Florence or Rome. Read the article *Simonides* by him in the *London and Westminster* — brilliant prose, translations — wooden? His signature is L (Pounds Sterling!). — *Now* you are to write *soon*? I always forgot to tell you, there came long since two packages evidently in your hand, marked "One printed sheet," and "one Newspaper," for which the Postman demanded about Fifteen shillings: *rejected*. After considerable correspondence the Newspaper was again offered me at *ten pence*; the *sheet* unattainable altogether: "No," even at tenpence. The fact is, it was wrong wrapped, that Newspaper. Leave it open at the ends, and try me again, once; I think it will come almost gratis. Steam and Iron are making all the Planet into one Village. — A Mr. Dwight wrote to me about the dedicating of some German translations: Yes. What are they or he? — Your *Sartor* is off through Kennet. Could you send me two copies of the *American Life of Schiller*, if the thing is fit for making a present of, and easy to be got? If not, do not mind it at all. — Addio!

—— * Mr. John S. Dwight, whose volume of *Select Minor Poems from the German of Goethe and Schiller*, published in 1839, was dedicated to Carlyle. It was the third volume of *Specimens of Foreign Standard Literature*, edited by George Ripley. Beside Mr. Dwight's own excellent versions, it contained translations by Mr. Bancroft, Dr. Hedge, Dr. Frothingham, and others. For many years Mr. Dwight rendered a notable public service as the editor of *Dwight's*

Journal of Music, — a publication which did more than any other to raise and to maintain high the standard of musical taste and culture in America.

XXXII. Emerson to Carlyle Concord, 13 January, 1839

My Dear Friend, — I am not now in any Condition to write a letter, having neither the facts from the booksellers which you would know touching our future plans, nor yet a satisfactory account balanced and settled of our past dealings; and lastly, no time to write what I would say, — as my poor lectures are in full course, and absorb all my wits; but as the “Royal William” will not wait, and as I have a hundred pounds to send on account of the sales of the *French Revolution*, I must steal a few minutes to send my salutation. I have received all your four good letters: and you are a good and generous man to write so many. Two came on the 2d and 3d of January, and the last on the 9th. If the bookselling Munroe had answered me yesterday, as he ought, I should be able to satisfy you as to the time when to expect our cargo of *Miscellanies*. The third and fourth volumes are now printing: 't is a fortnight since we began. You shall have two hundred and fifty copies, — I am not quite sure you can have more, — bound, and *entitled*, and directed as you desire, at least according to the best ability of our printer as far as the typography is concerned, and we will speed the work as fast as we can; but as we have but a single copy of *Fraser's Magazine* — we do not get on rapidly. The *French Revolution* was all sold more than a month since. We should be glad of more copies, but the bookseller thinks not of enough copies to justify a new edition yet. I should not be surprised, however, to see that some bold brother of the trade had undertaken it. Now, what does your question point at in reference to your new edition, asking “if we want more”? Could you send us out a part of your edition at American prices, and at the same time to your advantage? I wish I knew the precise answer to this question, then perhaps I could keep all pirates out of our bay.

I shall convey in two days your message to Stearns Wheeler, who is now busy in correcting the new volumes. He is now Greek Tutor in Harvard College.* — Kindest thanks to Jane Carlyle for her generous remembrances, which I will study to deserve. Has the heterodoxy arrived in Chelsea, and quite destroyed us even in the charity of our friend? I am sorry to have worried you so often about the summer letter. Now am I your debtor four times. The parish commotion, too, has long ago subsided here, and my course of Lectures on “Human Life” finds a full attendance. I wait for the coming of the *Westminster*, which has not quite yet arrived here, though I have seen the London advertisement. It sounds prosperously in my ear what you say of Dr. Carlyle's appointments. I was once very near the man in Rome, but did not see him. I will atone as soon as I can for this truncated epistle. You must answer it immediately, so far as to acknowledge

the receipt of the enclosed bill of exchange, and soon I will send you the long promised *account* of the *French Revolution*, and also such moral account of the same as is over due.

Yours affectionately,

R.W. Emerson * This promising young scholar edited with English notes the first American edition of Herodotus. He went to Europe to pursue his studies, and died, greatly regretted, at Rome, of a fever, in 1848.

XXXIII. Carlyle to Emerson

Chelsea, London, 8 February, 1859

My Dear Friend, — Your welcome little Letter, with the astonishing inclosure, arrived safe four days ago; right welcome, as all your Letters are, and bringing as these usually do the best news I get here. The miraculous draught of Paper I have just sent to a sure hand in Liverpool, there to lie till in due time it have ripened into a crop of a hundred gold sovereigns! On this subject, which gives room for so many thoughts, there is little that can be said, that were not an impertinence more or less. The matter grows serious to me, enjoins me to be silent and reflect. I will say, at any rate, there never came money into my hands I was so proud of; the promise of a blessing looks from the face of it; nay, it *will* be *twice* blessed. So I will ejaculate, with the Arabs, *Allah akbar!* and walk silent by the shore of the many-sounding Babel-tumult, meditating on much. Thanks to the mysterious all-bounteous Guide of men, and to you my true Brother, far over the sea! — For the rest, I showed Fraser this Nehemiah document, and said I hoped he would blush very deep; — which indeed the poor creature did, till I was absolutely sorry for him.

But now first as to this question, What I mean? You must know poor Fraser, a punctual but most pusillanimous mortal, has been talking louder and louder lately of a “second edition” here; whereupon, as labor-wages are not higher here than with you, and printing-work, if well bargained for, ought to be about the same price, it struck me that, as in the case of the *Miscellanies*, so here inversely the supply of both the New and the Old England might be profitably combined. Whether aught can come of this, now that it is got close upon us, I yet know not. Fraser has only seventy-five copies left; but when these will be done his prophecy comprehends not,— “surely within the year”! For the present I have set him to ascertain, and will otherwise ascertain for myself, what the exact cost of *stereotyping* the Book were, in the same letter and style as yours; it is not so much more than printing, they tell me: I should then have done with it forever and a day. You on your side, and we on ours, might have as many copies as were wanted for all time coming. This is, in these very days, under inquisition; but there are many points to be settled before the issue.

I have not yet succeeded in finding a Bookseller of any fitness, but am waiting for one always. And even had I found such a one, I mean an energetic seller that would sell on other terms than forty percent for his trouble, it were still a question whether one ought to venture on such a speculation: “quitting the old highways,” as I say, “in indignation at the excessive tolls, with hope that you

will arrive cheaper in the steeple-chase way!" It is clear, however, that said highways are of the corduroy sort, said tolls an anomaly that must be remedied soon; and also that in all England there is no Book in a likelier case to adventure it with than this same, — which did not sell at all for two months, as I hear, which all Booksellers got terrified for, and which has crept along mainly by its own gravitation ever since. We will consider well, we shall see. You can understand that such a thing, for your market too, is in agitation; if any pirate step in before us in the meanwhile, we cannot help it.

Thanks again for your swift attention to the *Miscellanies*; poor Fraser is in great haste to see them; hoping for his forty-per-cent division of the spoil. If you have not yet got to the very end with your printing, I will add a few errata; if they come too late, never mind; they are of small moment....

This foggy Babylon tumbles along as it was wont; and, as for my particular case, uses me not worse, but better, than of old. Nay, there are many in it that have a real friendliness for me. For example, the other night, a massive portmanteau of Books, sent according to my written list, from the Cambridge University Library, from certain friends there whom I have never seen; a gratifying arrival. For we have no Library here, from which we can borrow books home; and are only in these weeks striving to get one:* think of that! The worst is the sore tear and wear of this huge roaring Niagara of things on such a poor excitable set of nerves as mine. The velocity of all things, of the very word you hear on the streets, is at railway rate: joy itself is unenjoyable, to be avoided like pain; there is no wish one has so pressing as for quiet. Ah me! I often swear I will be buried at least in free breezy Scotland, out of this insane hubbub, where Fate tethers me in life! If Fate always tether me; — but if ever the smallest competence of worldly means be mine, I will fly this whirlpool as I would the Lake of *Malebolge*, and only visit it now and then! Yet perhaps it is the proper place after all, seeing all places are improper: who knows? Meanwhile I lead a most dyspeptic, solitary, self-shrouded life: consuming, if possible in silence, my considerable daily allotment of pain; glad when any strength is left in me for working, which is the only use I can see in myself, — too rare a case of late. The ground of my existence is black as Death; too black, when all void too but at times there paint themselves on it pictures of gold and rainbow and lightning; all the brighter for the black ground, I suppose. Withal I am very much of a fool. — Some people will have me write on *Cromwell*, which I have been talking about. I do read on that and English subjects, finding that I know nothing and that nobody knows anything of that: but whether anything will come of it remains to be seen. Mill, the *Westminster* friend, is gone in bad health to the Continent, and

has left a rude Aberdeen Longear, a great admirer of mine too, with whom I conjecture I cannot act at all: so good-bye to that. The wisest of all, I do believe, were that I bought my nag *Yankee* and set to galloping about the elevated places here! A certain Mr. Coolidge,** a Boston man of clear iron visage and character, came down to me the other day with Sumner; he left a newspaper fragment, containing “the Socinian Pope’s denunciation of Emerson.”

* The beginning of the London Library, a most useful institution, from which books may be borrowed. It served Carlyle well in later years, and for a long time he was President of it.

** The late Mr. Joseph Coolidge.

The thing denounced had not then arrived, though often asked for at Kennet’s; it did not arrive till yesterday, but had lain buried in bales of I know not what. We have read it only once, and are not yet at the bottom of it. Meanwhile, as I judge, the Socinian “tempest in a washbowl” is all according to nature, and will be profitable to you, not hurtful. A man is called to let his light shine before men; but he ought to understand better and better what medium it is through, what retinas it falls on: wherefore look *there*. I find in this, as in the two other Speeches, that noblest self-assertion, and believing originality, which is like sacred fire, the *beginning* of whatsoever is to flame and work; and for young men especially one sees not what could be more vivifying. Speak, therefore, while you feel called to do it; and when you feel called. But for yourself, my friend, I prophesy it will not do always: a faculty is in you for a *sort* of speech which is itself *action*, an artistic sort. You *tell* us with piercing emphasis that man’s soul is great; *show* us a great soul of a man, in some work symbolic of such: this is the seal of such a message, and you will feel by and by that you are called to this. I long to see some concrete Thing, some Event, Man’s Life, American Forest, or piece of Creation, which this Emerson loves and wonders at, well *Emersonized*, depicted by Emerson, filled with the life of Emerson, and cast forth from him then to live by itself. If these Orations balk me of this, how profitable soever they be for others. I will not love them. — And yet, what am I saying? How do I know what is good for *you*, what authentically makes your own heart glad to work in it? I speak from *without*, the friendliest voice must speak from without; and a man’s ultimate monition comes only from *within*. Forgive me, and love me, and write soon. *A Dieu!*

— T. Carlyle

My Wife, very proud of your salutation, sends a sick return of greeting. After a winter of unusual strength, she took cold the other day, and coughs again; though she will not call it serious yet. One likes none of these things. She has a

brisk heart and a stout, but too weak a frame for this rough life of mine. I will not get sad about it.

One of the strangest things about these New England Orations is a fact I have heard, but not yet seen, that a certain W. Gladstone, an Oxford crack Scholar, Tory M.P., and devout Churchman of great talent and hope, has contrived to insert a piece of you (*first* Oration it must be) in a work of his on *Church and State*, which makes some figure at present! I know him for a solid, serious, silent-minded man; but how with his Coleridge Shovel-Hattism he has contrived to relate himself to *you*, there is the mystery. True men of all creeds, it *would* seem, are Brothers.

To write soon!

XXXIV. Emerson to Carlyle*

Concord, 15 March, 1839

My Dear Friend, — I will spare you my apologies for not writing, they are so many. You have been very generous, I very promising and dilatory. I desired to send you an Account of the sales of the *History*, thinking that the details might be more intelligible to you than to me, and might give you some insight into literary and social, as well as bibliopolical relations. But many details of this account will not yet settle themselves into sure facts, but do dance and mystify me as one green in ledgers. Bookseller says nine hundred and ninety-one copies came from Binder, nine remaining imperfect, and so not bound. But in all my reckonings of the particulars of distribution I make either more or less than nine hundred and ninety-one copies. And some of my accounts are with private individuals at a distance, and they have their uncertainties and misrememberings also. But the facts will soon show themselves, and I count confidently on a small balance against the world to your credit.

—— — * This letter appeared in the *Athenaeum*, July 22, 1882. ——

The *Miscellanies* go forward too slowly, at about the rate of seventy-two pages a week, as I understand. Of the *Fraser* articles and of some others we have but a single copy, (such are the tough limits of some English immortalities and editorial renowns,) but we expect the end of the printing in six weeks. The first two volumes, with title-pages, are gone to the binder — two hundred and sixty copies — with strait directions; and I presume will go to sea very soon. We shall send the last two volumes by a later ship. You will pay nothing for the books we send except freight. We shall deduct the cost of the books from the credit side of your account here. We print of the second series twelve hundred and fifty copies, with the intention of printing a second edition of the first series of five hundred, if we see fit hereafter to supply the place of the emigrating portion of the first. You express some surprise at the cheapness of our work. The publishers, I believe, generally get more profits. They grumbled a little at the face of the account on the 1st of January; so in the new contract for the new volumes I have allowed them nine cents more on each copy sold by them. So that you should receive ninety-one cents on a copy instead of one dollar. When the two hundred and fifty copies of our first two volumes are gone to you, I think they will have but about one hundred copies more to sell.

Your books are read. I hear, I think, more gratitude expressed for the *Miscellanies* than for the *History*. Young men at all our colleges study them in

closets, and the Copernican is eradicating the Ptolemaic lore. I have frequent and cordial testimonies to the good working of the leaven, and continual inquiry whether the man will come hither. *Speriamo*.

I was a fool to tell you once you must not come if I did tell you so. I knew better at the time, and did steadily believe, as far as I was concerned, that no polemical mud, however much was thrown, could by any possibility stick to me; for I was purely an observer; had not the smallest personal or *partial* interest; and merely spoke to the question as a historian; and I knew whoever could see me must see that. But, at the moment, the little pamphlet made much stir and excitement in the newspapers; and the whole thousand copies were bought up. The ill wind has blown over. I advertised, as usual, my winter course of Lectures, and it prospered very well. Ten Lectures: I. Doctrine of the Soul; II. Home; III. The School; IV. Love; V. Genius; VI. The Protest; VII. Tragedy; VIII. Comedy; IX. Duty; X. Demonology. I designed to add two more, but my lungs played me false with unseasonable inflammation, so I discoursed no more on "Human Life." Now I am well again. — But, as I said, as I could not hurt myself, it was foolish to flatter myself that I could mix your cause with mine and hurt you. Nothing is more certain than that you shall have all our ears, whenever you wish for them, and free from that partial position which I deprecated. Yet I cannot regret my letter, which procured me so affectionate and magnanimous a reply.

Thanks, too, for your friendliest invitation. But I have a new reason why I should not come to England, — a blessed babe, named Ellen, almost three weeks old, — a little, fair, soft lump of contented humanity, incessantly sleeping, and with an air of incurious security that says she has come to stay, has come to be loved, which has nothing mean, and quite piques me.

Yet how gladly should I be near you for a time. The months and years make me more desirous of an unlimited conversation with you; and one day, I think, the God will grant it, after whatever way is best. I am lately taken with *The Onyx Ring*, which seemed to me full of knowledge, and good, bold, true drawing. Very saucy, was it not? in John Sterling to paint Collins; and what intrepid iconoclasm in this new Alcibiades to break in among your Lares and disfigure your sacred Hermes himself in Walsingham.* To me, a profane man, it was good sport to see the Olympic lover of Frederica, Lili, and so forth, lampooned. And by Alcibiades too, over whom the wrath of Pericles must pause and brood ere it falls. I delight in this Sterling, but now that I know him better I shall no longer expect him to write to me. I wish I could talk to you on the grave questions, graver than all literature, which the trifles of each day open. Our doing seems to

be a gaudy screen or popinjay to divert the eye from our nondoing. I wish, too, you could know my friends here. A man named Bronson Alcott is a majestic soul, with whom conversation is possible. He is capable of truth, and gives me the same glad astonishment that he should exist which the world does.

—— * Collins and Walsingham, two characters in *The Onyx Ring*, are partly drawn, not very felicitously, from Carlyle and Goethe. In his *Life of Sterling*, Carlyle says of the story: "A tale still worth reading, in which, among the imaginary characters, various friends of Sterling's are shadowed forth not always in the truest manner." It is reprinted in the second volume of Sterling's *Essays and Tales*, edited by Julius Hare.

As I hear not yet of your reception of the bill of exchange, which went by the "Royal William" in January, I enclose the duplicate. And now all success to the Lectures of April or May! A new Kingdom with new extravagances of power and splendor I know. Unless you can keep your own secret better in *Rahel*, &c., you must not give it me to keep. The London *Sartor* arrived in my hands March 5th, dated the 15th of November, so long is the way from Kennet to Little & Co. The book is welcome, and awakens a sort of nepotism in me, — my brother's child.

— R.W. Emerson

I rejoice in the good accounts you give me of your household; in your wife's health; in your brother's position. My wife wishes to be affectionately remembered to you and yours. And the lady must continue to love her *old* Transatlantic friend.

XXXV. Emerson to Carlyle Concord, 19 March, 1839

My Dear Friend, — Only last Saturday I despatched a letter to you containing a duplicate of the bill of exchange sent in January, and all the facts I knew of our books; and now comes to me a note from Wheeler, at Cambridge, saying that the printers, on reckoning up their amount of copy, find that nowise can they make 450 pages per volume, as they have promised, for these two last of the *Miscellanies*. They end the third volume with page 390, and they have not but 350 or less pages for the fourth. They ask, What shall be done? Nothing is known to me but to give them *Rahel*, though I grudge it, for I vastly prefer to end with *Scott*. *Rahel*, I fancy, cost you no night and no morning, but was writ in that gentle after-dinner hour so friendly to good digestion. Stearns Wheeler dreams that it is possible to draw at this eleventh hour some possible manuscript out of the unedited treasures of Teufelsdröckh's cabinets. If the manuscripts were ready, all fairly copied out by foreseeing scribes in your sanctuary at Chelsea, the good goblin of steam would — with the least waiting, perhaps a few days — bring the packet to our types in time. I have little hope, almost none, from a sally so desperate on possible portfolios; but neither will I be wanting to my sanguine co-editor, your good friend. So I told him I would give you as instant notice as Mr. Rogers at the Merchants' Exchange Bar can contrive, and tell you plainly that we shall proceed to print *Rahel* when we come so far on; and with that paper end; unless we shall receive some contrary word from you. And if we can obtain any manuscript from you before we have actually bound our book, we will cancel our last sheets and insert it. And so may the friendly Heaven grant a speedy passage to my letter and to yours! I fear the possibility of our success is still further reduced by the season of the year, as the Lectures must shortly be on foot. Well, the best speed to them also. When I think of you as speaking and not writing them, I remember Luther's words, "He that can speak well, the same is a man."

I hope you liked John Dwight's translations of Goethe, and his notes. He is a good, susceptible, yearning soul, not so apt to create as to receive with the freest allowance, but I like his books very much.

Do think to say in a letter whether you received *from me* a copy of our edition of your *French Revolution*. I ordered a copy sent to you, — probably wrote your name in it, — but it does not appear in the bookseller's account. Farewell.

— R.W. Emerson

XXXVI. Carlyle to Emerson Chelsea, London, 13 April, 1839

My Dear Emerson, — Has anything gone wrong with you? How is it that you do not write to me? These three or four weeks, I know not whether *duly* or not so long, I have been in daily hope of some sign from you; but none comes; not even a Newspaper, — open at the ends. The German Translator, Mr. Dwight, mentioned, at the end of a Letter I had not long ago, that you had given a brilliant course of Lectures at Boston, but had been obliged to *intermit it on account of illness*. Bad news indeed, that latter clause; at the same time, it was thrown in so cursorily I would not let myself be much alarmed; and since that, various New England friends have assured me here that there was nothing of great moment in it, that the business was all well over now, and you safe at Concord again. Yet how is it that I do not hear? I will tell you my guess is that those Boston Carlylean *Miscellanies* are to blame. The Printer is slack and lazy as Printers are; and you do not wish to write till you can send some news of him? I will hope and believe that only this is it, till I hear worse.

I sent you a Dumfries Newspaper the other week, for a sign of my existence and anxiety. A certain Mr. Ellis of Boston is this day packing up a very small memorial of me to your Wife; a poor Print rolled about a bit of wood: let her receive it graciously in defect of better. It comes under your address. Nay, properly it is my Wife's memorial to your Wife. It is to be hung up in the Concord drawing-room. The two Households, divided by wide seas, are to understand always that they are united nevertheless.

My special cause for writing this day rather than another is the old story, book business. You have brought that upon yourself, my friend; and must do the best you can with it. After all, why should not Letters be on business too? Many a kind thought, uniting man with man, in gratitude and helpfulness, is founded on business. The speaker at Dartmouth College seems to think it ought to be so. Nor do I dissent. — But the case is this, Fraser and I are just about bargaining for a second edition of the *Revolution*. He will print fifteen hundred for the English market, in a somewhat closer style, and sell them here at twenty-four shillings a copy. His first edition is all gone but some handful; and the man is in haste, and has taken into a mood of hope, — for he is weak and aguish, alternating from hot to cold; otherwise, I find, a very accurate creature, and deals in his unjust trade as justly as any other will. He has settled with me; his half-profits amount to some L130, which by charging me for every presentation copy he cuts down to somewhere about L110; *not* the lion's share in the gross produce, yet a great

share compared with an expectancy no higher than *zero!* We continue on the same system for this second adventure; I cannot go hawking about in search of new terms; I might go farther and fare worse. And now comes your part of the affair; in which I would fain have had your counsel; but must ask your help, proceeding with my own light alone. After Fraser's fifteen hundred are printed off, the types remain standing, and I for my own behoof throw off five hundred more, designed for your market. Whether five hundred are too many or too few, I can only guess; if too many, we can retain them here and turn them to account; if too few, there is no remedy. At all events, costing me only the paper and press-work, there is surely no Pirate in the Union that can *undersell* us! Nay, it seems they have a drawback on our taxed paper, sufficient or nearly so to land the cargo at Boston without more charge. You see, therefore, how it is. Can you find me a Bookseller, as for yourself; he and you can fix what price the ware will carry when you see it. Meanwhile I must have his Title-page; I must have his directions (if any be needed); nay, for that matter, you might write a Preface if you liked, — though I see not what you have to say, and recommend silence rather! The book is to be in three volumes duodecimo, and we will take care it be fit to show its face in your market. A few errors of the press; and one correction (about the sinking of the *Vengeur*, which I find lately to be an indisputable falsehood); these are all the changes. We are to have done printing, Fraser predicts, "in two months"; — say two and a half! I suppose you decipher the matter out of this plastering and smearing; and will do what is needful in it. "Great inquiry" is made for the *Miscellanies*, Fraser says; though he suspects it may perhaps be but one or two men inquiring *often*, — the dog!

I am again upon the threshold of extempore lecturing: on "the Revolutions of Modern Europe"; Protestantism, 2 lectures; Puritanism, 2; French Revolution, 2. I almost regret that I had undertaken the thing this year at all, for I am no longer driven by Poverty as heretofore. Nay, I am richer than I have been for ten years; and have a kind of prospect, for the first time this great while, of being allowed to subsist in this world for the future: a great blessing, perhaps the greatest, when it comes as a novelty! However, I thought it right to keep this Lecture business open, come what might. I care less about it than I did; it is not agony and wretched trembling to the marrow of the bone, as it was the last two times. I believe, in spite of all my perpetual indigestions and nervous woes, I am actually getting into better health; the weary heart of me is quieter; I wait in silence for the new chapter, — feeling truly that we are at the end of one period here. I count it *two* in my autobiography: we shall see what the *third* is; [if] third there be. But I am in small haste for a third. How true is that of the old Prophets, "The

word of the Lord came unto” such and such a one! When it does not come, both Prophet and Prosaist ought to be thankful (after a sort), and rigorously hold their tongue. — Lord Durham’s people have come over with golden reports of the Americans, and their brotherly feelings. One Arthur Buller preaches to me, with emphasis, on a quite personal topic till one explodes in laughter to hear him, the good soul: That I, namely, am the most esteemed, &c., and ought to go over and Lecture in all great towns of the Union, and make, &c., &c.! I really do begin to think of it in this interregnum that I am in. But then my Lectures must be written; but then I must become a *hawker*, — *ach Gott!*

The people are beginning to quote you here: *tant pis pour eux!* I have found you in two Cambridge books. A certain Mr. Richard M. Milnes, M.P., a beautiful little Tory dilettante poet and politician whom I love much, applied to me for *Nature* (the others he has) that he might write upon it. Somebody has stolen *Nature* from me, or many have thumbed it to pieces; I could not find a copy. Send me one, the first chance you have. And see Miss Martineau in the last *Westminster Review*: — these things you are old enough to stand? They are even of benefit? Emerson is not without a select public, the root of a select public on this side of the water too. — Popular Sumner is off to Italy, the most popular of men, — inoffensive, like a worn sixpence that has no physiognomy left. We preferred Coolidge to him in this circle; a square-cut iron man, yet with clear symptoms of a heart in him. Your people will come more and more to their maternal Babylon, will they not, by the steamers? — Adieu, my dear friend. My Wife joins me in all good prayers for you and yours.

— Thomas Carlyle

XXXVII. Carlyle to Emerson Chelsea, London, 17 April, 1839

Dear Friend, — Some four days ago I wrote you a long Letter, rather expressive of anxiety about you; it will probably come to hand along with this. I had heard vaguely that you were unwell, and wondered why you did not write. Happily, that point is as good as settled now, even by your silence about it. I have, half an hour ago, received your Concord Letter of the 19th of March. The Letter you speak of there as “written last Saturday” has not yet made its appearance, but may be looked for now shortly: as there is no mention here of any mischance, except the shortcoming of Printers’ copy, I infer that all else is in a tolerably correct state; I wait patiently for the “last Saturday” tidings, and will answer as to the matters of copy, in good heart, without loss of a moment.

There is nothing of the manuscript sort in Teufelsdröckh’s repositories that would suit you well; nothing at all in a completed state, except a long rigmarole dissertation (in a crabbed sardonic vein) about the early history of the Teutonic Kindred, wriggling itself along not in the best style through Proverb lore, and I know not what, till it end (if my memory serve) in a kind of Essay on the *Minnesingers*. It was written almost ten years ago, and never contented me well. It formed part of a lucklessly projected *History of German Literature*, subsequent portions of which, the *Nibelungen* and *Reinecke Fox*, you have already printed. The unfortunate “*Cabinet Library Editor*,” or whatever his title was, broke down; and I let him off, — without paying me; and this alone remains of the misventure; a thing not fit for you, nor indeed at bottom for anybody, though I have never burnt it yet. My other Manuscripts are scratchings and scrawlings; — children’s *infant* souls weeping because they never could be born, but were left there whimpering *in limine primo!*

On this side, therefore, is no help. Nevertheless, it seems to me, otherwise there is. *Varnhagen* may be printed I think without offence, since there is need of it: if that will make up your fourth volume to a due size, why not? It is the last faint murmur one gives in Periodical Literature, and may indicate the approach of silence and slumber. I know no errors of the Press in *Varnhagen*: there is one thing about Jean Paul F. Richter’s *want* of humor in his *speech*, which somehow I could like to have the opportunity of uttering a word on, though *what* word I see not very well. My notion is partly that V. overstates the thing, taking a Berlin *propos de salon* for a scientifically accurate record; and partly farther that the defect (if any) was *creditable* to Jean Paul, indicating that he talked from the abundance of the heart, not burning himself off in miserable perpetual sputter

like a Town-wit, but speaking what he had to say, were it dull, were it not dull, — for his own satisfaction first of all! If you in a line or two could express at the right point something of that sort, it were well; yet on the whole, if not, then is almost no matter. Let the whole stand then as the commencement of slumber and stertorous breathing!

Varnhagen himself will not bring up your fourth volume to the right size; hardly beyond 380 pages, I should think; yet what more can be done? Do you remember Fraser's Magazine for October, 1832, and a Translation there, with Notes, of a thing called Goethe's *Mahrchen*? It is by me; I regard it as a most remarkable piece, well worthy of perusal, especially by all readers of mine. The printing of your third volume will of course be finished before this letter arrive; nevertheless I have a plan: that you (as might be done, I suppose, by cancelling and reprinting the concluding leaf or leaves) append the said Translated Tale, in a smaller type, to that volume. It is 21 or 22 pages of *Fraser*, and will perhaps bring yours up to the mark. Nay, indeed there are two other little Translations from Goethe which I reckon good, though of far less interest than the *Mahrchen*; I think they are in the *Fraser*s almost immediately preceding; one of them is called *Fragment from Goethe* (if I remember); in his *Works*, it is *Novelle*; it treats of a visit by some princely household to a strange Mountain ruin or castle, and the catastrophe is the escape of a show-lion from its booth in the neighboring Market-Town. I have not the thing here, — alas, sinner that I am, it now strikes me that the "two other things" are this one thing, which my treacherous memory is making into two! This however you will find in the Number immediately, or not far from immediately, preceding that of the *Mahrchen*; along with which, in the same type with which, it would give us letter-press enough. It ought to stand *before* the *Mahrchen*: read it, and say whether it is worthy or not worthy. Will this *Appendix* do, then? I should really rather like the *Mahrchen* to be printed, and had thoughts of putting [it] at the end of the English *Sartor*. The other I care not for, intrinsically, but think it very beautiful in its kind. — Some rubbish of my own, in small quantity, exists here and there in *Fraser*; one story, entitled *Cruthers and Jonson*,* was written sixteen years ago, and printed somewhere early (probably the second year) in that rubbish heap, with several gross errors of the press (mares for maces was one!): it is the first thing I wrote, or among the very first; — otherwise a thing to be kept rather secret, except from the like of you! This or any other of the "original" immaturities I will *not* recommend as an *Appendix*; I hope the *Mahrchen*, or the *Novelle* and *Mahrchen*, will suffice. But on the whole, to thee, O Friend, and thy judgment and decision, without appeal, I leave it altogether.

Say Yes, say No; do what seemeth good to thee. — Nay now, writing with the speed of light, another consideration strikes me: Why should Volume Third be interfered with if it is finished? Why will not this *Appendix* do, these *Appendixes*, to hang to the skirts of Volume Four as well? Perhaps better! the *Mahrchen* in any case closing the rear. I leave it all to Emerson and Stearns Wheeler, my more than kind Editors: E. knows it better than I; be his decision irrevocable.

—
* “Cruthers and Jonson; or, The Outskirts of Life. A True Story.” *Fraser’s Magazine*, January, 1831.

—— ——— This letter is far too long, but I had not time to make it shorter. — I got your *French Revolution*, and have seen no other: my name is on it in your hand. I received Dwight’s Book, liked it, and have answered him: a good youth, of the kind you describe; no Englishman, to my knowledge, has yet uttered as much sense about Goethe and German things. I go this day to settle with Fraser about printers and a second edition of the *Revolution Book*, — as specified in the other Letter: five hundred copies for America, which are to cost he computes about 2/7, and *your* Bookseller will bind them, and defy Piracy. My Lectures come on, this day two weeks: O Heaven! I cannot “speak”; I can only gasp and writhe and stutter, a spectacle to gods and fashionables, — being forced to it by want of money. In five weeks I shall be free, and then — ! Shall it be Switzerland, shall it be Scotland, nay, shall it be America and Concord?

Ever your affectionate

T. Carlyle All love from both of us to the Mother and Boy. My Wife is better than usual; rejoices in the promise of summer now at last visible after a spring like Greenland. Scarcity, discontent, fast ripening towards desperation, extends far and wide among our working people. God help them! In man as yet is small help. There will be work yet, before that account is liquidated; a generation or two of work! Miss Martineau is gone to Switzerland, after emitting *Deerwood* [sic], a Novel.* How do you like it? people ask. To which there are serious answers returnable, but few so good as none. Ah me! Lady Bulwer too has written a Novel, in satire of her Husband. I saw the Husband not long since; one of the wretchedest Phantasms, it seemed to me, I had yet fallen in with, — many, many, as they are here.

The L100 Sterling Bill came, in due time, in perfect order; and will be payable one of these days. I forget dates; but had well calculated that before the

19th of March this piece of news and my gratitude for it had reached you.

—— — * *Deerbrook* —— ——

XXXVIII. Emerson to Carlyle Boston, 20 April, 1839

My Dear Friend, — Learning here in town that letters may go today to the “Great Western,” I seize the hour to communicate a bookseller’s message. I told Brown, of C.C. Little & Co., that you think of stereotyping the *History*. He says that he can make it profitable to himself and to you to use your plates here in this manner (which he desires may be kept secret here, and I suppose with you also). You are to get your plates made and proved, then you are to send them out here to him, having first insured them in London, and he is to pay you a price for every copy he prints from them. As soon as he has printed a supply for our market, — and we want, he says, five hundred copies now, — he will send them back to you. I told him I thought he had better fix the price per copy to be paid by him, and I would send it to you as his offer. He is willing to do so, but not today. It was only this morning I informed him of your plan. I think in a fortnight I shall need to write again, — probably to introduce to you my countrywoman, Miss Sedgwick, the writer of affectionate New England tales and the like, who is about to go to Europe for a year or more. I will then get somewhat definite from Brown as to rates and prices. Brown thought you might better send the plates here first, as we are in immediate want of copies; and afterwards print with them in London. He is quite sure that it would be more profitable to print them in this manner than to try to import and sell here the books after being manufactured in London.

On the 30th of April we shall ship at New York the first two volumes of the *Miscellanies*, two hundred and sixty copies. In four weeks, the second two volumes will be finished, unless we wait for something to be added by yourself, agreeably to a suggestion of Wheeler’s and mine. Two copies of *Schiller’s Life* will go in the same box. We send them to the port of London. When these are gone, only one hundred copies remain unsold of the first two volumes (*Miscellanies*).

Brown said it was important that the plates should be proved correct at London by striking off impressions before they were sent hither. This is the whole of my present message. I shall have somewhat presently to reply to your last letter, received three weeks since. And may health and peace dwell with you and yours!

— R.W. Emerson

XXXIX. Emerson to Carlyle Concord, 25 April, 1839

My Dear Friend, — Behold my account! A very simple thing, is it not! A very mouse, after such months, almost years, of promise! Despise it not, however; for such is my extreme dulness at figures and statements that this nothing has been a fear to me, a long time, how to extract it from the bookseller's promiscuous account with me, and from obscure records of my own. You see that it promises yet to pay you between \$60 and \$70 more, if Mr. Fuller (a gentleman of Providence, who procured many *subscribers* for us there) and Mr. Owen (who owes us also for copies subscribed for) will pay us our demand. They have both been lately reminded of their delinquency. Herrick and Noyes, you will see credited for eight copies, \$18. They are booksellers who supplied eight subscribers, and charged us \$2 for their trouble and some alleged damage to a copy. One copy you will see is sold to Ann Pomeroy for \$3. This lady bought the copy of me, and preferred sending me \$3 to sending \$2.50 for so good a book. You will notice one or two other variations in the prices, in each of which I aimed to use a friend's discretion. Add lastly, that you must revise all my figures, as I am a hopeless blunderer, and quite lately made a brilliant mistake in regard to the amount of 9 multiplied by 12.

Have I asked you whether you received from me a copy of the *History*? I designated a copy to go, and the bookseller's boy thinks he sent one, but there is none charged in their account. The account of the *Miscellanies* does not prosper quite so well....

Thanks for your too friendly and generous expectations from my wit. Alas! my friend, I can do no such gay thing as you say. I do not belong to the poets, but only to a low department of literature, the reporters; suburban men. But in God we are all great, all rich, each entitled to say, All is mine. I hope the advancing season has restored health to your wife, and, if benedictions will help her, tell her we send them on every west wind. My wife and babes are well.

— R.W.E.

XL. Emerson to Carlyle Concord, 28 April, 1839

My Dear Friend, — I received last night C.C. Little & Co.'s proposition in reference to the stereotyping the *History*. Their offer is based on my statement that you proposed to print the book in two volumes similar to ours. They say, "We should be willing to pay three hundred dollars for the use of plates for striking off five hundred copies of the two volumes, with the farther agreement that, if we wished to strike off another five hundred in nine months after the publication of the first five hundred, we should have the liberty to do so, paying the same again; that is, another three hundred dollars for the privilege of printing another five hundred copies; — the plates to be furnished us ready for use and free of expense." They add, "Should Mr. Carlyle send the plates to this country, he should be particular to ship them to *this port direct*." I am no judge of the liberality of this offer, as I know nothing of the expense of the plates. The men, Little and Brown, are fair in their dealings, and the most respectable bookselling firm in Boston. When you have considered the matter, I hope you will send me as early an answer as you can. For as we have no protection from pirates we must use speed.

I ought to have added to my account and statement sent by Miss Sedgwick one explanation. You will find in the account a credit of \$13.75, agreed on with Little & Co., as compensation for lost subscribers. We had a little book, kept in the bookshop, into which were transferred the names of subscribers from all lists which were returned from various places. These names amounted to two hundred, more or less. When we came to settle the account, this book could not be found. They expressed much regret, and made much vain searching. Their account with me recorded only one hundred and thirty-four copies delivered to subscribers. Thus, a large number, say sixty-six, had been sold by them to our subscribers, and our half-dollar on each copy put in their pocket as commission, expressly contrary to treaty! With some ado, I mustered fifty-five names of subscribers known to me as such, not recorded on their books as having received copies, and demanded \$27.50. They replied that they also had claims; that they had sent the books to distant subscribers in various States, and had charged no freight (with one or two exceptions, when the books went alone); that other booksellers had, no doubt, in many cases, sold the copies to subscribers for which I claimed the half-dollar; and lastly, which is indeed the moving reason, that they had sent twenty copies up the Mississippi to a bookseller (in Vicksburg, I think), who had made them no return. On these grounds they proposed that they should pay half my demand, and so compromise. They said, however, that,

if I insisted, they would pay the whole. I was so glad to close the affair with mutual goodwill that I said with the unjust steward, write \$13.75. So are we all pleased at your expense. [Greek] I think I will not give you any more historiettes, — they take too much room; but as I write this time only on business, you are welcome to this from your friend, — R.W. Emerson

XLI. Emerson to Carlyle*

Concord, 15 May, 1839.

My Dear Friend, — Last Saturday, 11th instant, I had your two letters of 13th and 17th April. Before now, you must have one or two notes of mine touching the stereotype plates: a proposition superseded by your new plan. I have also despatched one or two sheets lately containing accounts. Now for the new matter. I was in Boston yesterday, and saw Brown, the bookseller. He accedes gladly, to the project of five hundred American copies of the *History*. He says, that the duty is the same on books in sheets and books in boards; and desires, therefore, that the books may come out *bound*. You bind yours in cloth? Put up his in the same style as those for your market, only a little more strongly than is the custom with London books, as it will only cost a little more. He would be glad also to have his name added in the titlepage (London: Published by J. Fraser; and Boston: by C.C. Little and James Brown, 112 Washington St.), or is not this the right way? He only said he should like to have his name added. He threatens to charge me 20 percent commission. If, as he computes from your hint of 2/7, the work costs you, say, 70 cents per copy, unbound; he reckons it at a dollar, when bound; then 75 cents duty in Boston, \$1.75. He thinks we cannot set a higher price on it than \$3.50, *because* we sold our former edition for \$2.50. On that price, his commissions would be 70 cents; and \$1.05 per copy will to you. If when we see the book, we venture to put a higher price on it, your remainder shall be more. I confess, when I set this forth on paper, it looks as bad as your English trade, — this barefaced 20 percent; but their plea is, We guarantee the sales; we advertise; we pay you when it is sold, though we give our customers six months' credit. I have made no final bargain with the man, and perhaps before the books arrive I shall be better advised, and may get better terms from him. Meantime, give me the best advice you can; and despatch the books with all speed, and if you send six hundred, I think, we will sell them.

— — — * In the first edition of this Correspondence a portion of this letter was printed from a rough draft, such as Emerson was accustomed to make of his letters to Carlyle. I owe the original to the kindness of the editor of the *Athenaeum*, in the pages of which it was printed. —

I went to the *Athenaeum*, and procured the *Frasers'* and will print the *Novelle* and the *Mahrchen* at the end of the Fourth Volume, which has been loitering under one workman for a week or two past, awaiting this arrival. Now we will finish at once. *Cruthers and Jonson* I read gladly. It is indispensable to such as

would see the fountains of Nile: but I incline to what seems your opinion, that it will be better in the final edition of your Works than in this present First Collection of them. I believe I could find more matter now of yours if we should be pinched again. The Cat-Raphael? and *Mirabeau* and *Macaulay*? Stearns Wheeler is very faithful in his loving labor, — has taken a world of pains with the sweetest smile. We are very fortunate in having him to friend. — For the *Miscellanies* once more, the two boxes containing two hundred and sixty copies of the first series went to sea in the “St. James,” Captain Sebor, addressed to Mr. Fraser. (I hope rightly addressed; yet I saw a memorandum at Munroe’s in which he was named *John Fraser*.)

Arthur Buller has my hearty thanks for his good and true witnessing. And now that our old advice is indorsed by John Bull himself, you will believe and come. Nothing can be better. As soon as the lectures are over, let the trunks be packed. Only my wife and my blessed sister dear — Elizabeth Hoar, betrothed in better times to my brother Charles, — my wife and this lovely nun do say that Mrs. Carlyle must come hither also; that it will make her strong, and lengthen her days on the earth, and cheer theirs also. Come, and make a home with me; and let us make a truth that is better than dreams. From this farm-house of mine you shall sally forth as God shall invite you, and “lecture in the great cities.” You shall do it by proclamation of your own, or by the mediation of a committee, which will readily be found. Wife, mother, and sister shall nurse thy wife meantime, and you shall bring your republican laurels home so fast that she shall not sigh for the Old England. Eyes here do sparkle at the very thought. And my little placid Musketaquid River looked gayer today in the sun. In very sooth and love, my friend, I shall look for you in August. If aught that we know not must forbid your wife at present, you will still come. In October, you shall lecture in Boston; in November, in New York; in December, in Philadelphia; in January, in Washington. I can show you three or four great natures, as yet unsung by Harriet Martineau or Anna Jameson, that content the heart and provoke the mind. And for yourself, you shall be as cynical and headstrong and fantastical as you can be.

I rejoice in what you say of better health and better prospects. I was glad to hear of Milnes, whose *Poems* already lay on my table when your letter came. Since the little *Nature* book is not quite dead, I have sent you a few copies, and wish you would offer one to Mr. Milnes with my respects. I hope before a great while I may have somewhat better to send him. I am ashamed that my little books should be “quoted” as you say.

My affectionate salutations to Mrs. Carlyle, who is to sanction and enforce all

I have written on the migration. In the prospect of your coming I feel it to be foolish to write. I have very much to say to you. But now only Good Bye.

— R.W. Emerson

XLII. Carlyle to Emerson

Chelsea, London, 29 May, 1839

My Dear Emerson, — Your Letter, dated Boston, 20th April, has been here for some two weeks. Miss Sedgwick, whom it taught us to expect in “about a fortnight,” has yet given no note of herself, but shall be right welcome whenever she appears. Miss Martineau’s absence (she is in Switzerland this summer) will probably be a loss to the fair Pilgrim; — which of course the rest of us ought to exert ourselves to make good.... My Lectures are happily over ten days ago; with “success” enough, as it is called; the only *valuable* part of which is some L200, gained with great pain, but also with great brevity: — economical respite for another solar year! The people were boundlessly tolerant; my agitation beforehand was less this year, my remorse afterwards proportionally greater. There was but one moderately good Lecture, the last, — on Sausculottism, to an audience mostly Tory, and rustling with the beautifullest quality silks! Two things I find: first that *I ought to have had a horse*; I had only three incidental rides or gallops, hired rides; my horse *Yankee* is never yet purchased, but it shall be, for I cannot live, except in great pain, without a horse. It was sweet beyond measure to escape out of the dustwhirlpool here, and *fly*, in solitude, through the ocean of verdure and splendor, as far as Harrow and back again; and one’s nerves were *clear* next day, and words lying in one like water in a well. But the *second* thing I found was, that extempore speaking, especially in the way of Lecture, is an *art* or craft, and requires an apprenticeship, which I have never served. Repeatedly it has come into my head that I should go to America, this very Fall, and belecture you from North to South till I learn it! Such a thing does lie in the bottom-scenes, should hard come to hard; and looks pleasant enough. — On the whole, I say sometimes, I must either begin a Book, or do it. Books are the lasting thing; Lectures are like corn ground into flour; there are loaves for today, but no wheat harvests for next year. Rudiments of a new Book (thank Heaven!) do sometimes disclose themselves in me. *Festina lente*. It ought to be better than the *French Revolution*; I mean better written. The greater part of that Book, as I read proof-sheets of it in these weeks, does nothing but *disgust* me. And yet it was, as nearly as was good, the utmost that lay in me. I should not like to be nearer killed with any other Book! — Books too are a triviality. Life alone is great; with its infinite spaces, its everlasting times, with its Death, with its Heaven and its Hell. Ah me!

Wordsworth is here at present; a garrulous, rather watery, not wearisome old

man. There is a freshness as of brooks and mountain breezes in him; one says of him: Thou art not great, but thou art genuine; well speed *thou*. Sterling is home from Italy, recovered in health, indeed very well could he but *sit still*. He is for Clifton, near Bristol, for the next three months. I hear him speak of some sonnet or other he means to address to you: as for me he knows well that I call his verses timber toned, without true melody either in thought, phrase or sound. The good John! Did you ever see such a vacant turnip-lantern as that Walsingham Goethe? Iconoclast Collins strikes his wooden shoe through him, and passes on, saying almost nothing. — My space is done! I greet the little *maidkin*, and bid her welcome to this unutterable world. Commend her, poor little thing, to her little Brother, to her Mother and Father; — Nature, I suppose, has sent her strong letters of recommendation, without our help, to them all. Where I shall be in six weeks is not very certain; likeliest in Scotland, whither our whole household, servant and all, is pressingly invited, where they have provided horses and gigs. Letters sent hither will still find me, or lie waiting for me, safe: but perhaps the *speediest* address will be “Care of Fraser, 215 Regent Street.” My Brother wants me to the Tyrol and Vienna; but I think I shall not go. Adieu, dear friend. It is a great treasure to me that I have you in this world. My Wife salutes you all. —

Yours ever and ever,
T. Carlyle

XLIII. Carlyle to Emerson Chelsea, London, 24 June, 1833

Dear Friend, — Two Letters from you were brought hither by Miss Sedgwick last week. The series of post Letters is a little embroiled in my head; but I have a conviction that all hitherto due have arrived; that up to the date of my last despatch (a *Proof-sheet* and a Letter), which ought to be getting into your hands in these very days, our correspondence is clear. That Letter and Proof-sheet, two separate pieces, were sent to Liverpool some three weeks ago, to be despatched by the first conveyance thence; as I say, they are probably in Boston about this time. The Proof-sheet was one of the forty-seven such which the new *French Revolution* is to consist of: with this, as with a correct sample, you were to act upon some Boston Bookseller, and make a bargain for me, — or at least report that none was to be made. A bad bargain will content me now, my hopes are not at all high.

For the present, I am to announce on the part of Bookseller Fraser that the First Portion of our celebrated *Miscellanies* have been hovering about on these coasts for several weeks, have lain safe “in the River” for some two weeks, and ought at last to be safe in Fraser’s shop today or else to morrow. I will ask there, and verify, before this Letter go. The reason of these “two weeks in the river” is that the packages were addressed “John Fraser, London,” and the people had tried all the Frasers in London before they attempted the right individual, James, of 215 Regent Street. Of course, the like mistake in the second case will be avoided. A Letter, put ashore at Falmouth, and properly addressed, but without any *signature*, had first of all announced that the thing was at the door, and so with this “John Fraser,” it has been knocking ever since, finding difficult admission. In the present instance, such delay has done no ill, for Fraser will not sell till the Second Portion come; and with this the mistake will be avoided. What has shocked poor James much more is a circumstance which your Boston Booksellers have no power to avoid: the “enormousness” of the charges in our Port here! He sends me the account of them last Saturday, with eyes — such as drew Priam’s curtains: L31 and odd silver, whereof L28 as duty on Books at L5 per cwt. is charged by the rapacious Custom-house alone! What help, O James? I answer: we cannot bombard the British Custom-house, and sack it, and explode it; we must yield, and pay it the money; thankful for what is still left. — On the whole, one has to learn by trying. This notable finance-expedient, of printing in the one country what is to be sold in the other, did not take Vandalic custom-houses into view, which nevertheless do seem to exist. We must persist in it for the present reciprocal pair of times, having started in it for these: but on future

occasions always, we can ask the past; and *see* whether it be not better to let each side of the water stand on its own basis.

As for your “accounts,” my Friend, I find them clear as day, verifiable to the uttermost farthing. You are a good man to conquer your horror of arithmetic; and, like hydrophobic Peter of Russia making himself a sailor, become an Accountant for my sake. But now will you forgive me if I never do verify this same account, or look at it more in this world except as a memento of affection, its arithmetical ciphers so many hieroglyphs, really *sacred* to me! A reflection I cannot but make is that at bottom this money was all yours; not a penny of it belonged to me by any law except that of helpful Friendship. I feel as if I could not examine it without a kind of crime. For the rest, you may rejoice to think that, thanks to you and the Books, and to Heaven over all, I am for the present no longer poor; but have a reasonable prospect of existing, which, as I calculate, is literally the most that money can do for a man. Not for these twelve years, never since I had a house to maintain with money, have I had as much money in my possession as even now. *Allah kerim!* We will hope all that is good on that side. And herewith enough of *it*.

You tell me you are but “a reporter”: I like you for thinking so. And you will never know that it is *not true*, till you have tried. Meanwhile, far be it from me to urge you to a trial before your time come. Ah, it will come, and soon enough; much better, perhaps, if it never came! — A man has “*such* a baptism to be baptized withal,” no easy baptism; and is “straitened till it be accomplished.” As for me I honor peace before all things; the silence of a great soul is to me greater than anything it will ever say, it ever can say. Be tranquil, my friend; utter no word till you cannot help it; — and think yourself a “reporter,” till you find (not with any great joy) that you are not altogether that!

We have not yet seen Miss Sedgwick: your Letters with her card were sent hither by post we went up next day, but she was out; no meeting could be arranged earlier than tomorrow evening, when we look for her here. Her reception, I have no doubt, will be abundantly flattering in this England. American Notabilities are daily becoming notabler among us; the ties of the two Parishes, Mother and Daughter, getting closer and closer knit. Indissoluble ties: — I reckon that this huge smoky Wen may, for some centuries yet, be the best Mycale for our Saxon *Panionium*, a yearly meeting-place of “All the Saxons,” from beyond the Atlantic, from the Antipodes, or wherever the restless wanderers dwell and toil. After centuries, if Boston, if New York, have become the most convenient “*All-Saxondom*,” we will right cheerfully go thither to hold such festival, and leave the Wen. — Not many days ago I saw at breakfast the

notabest of all your Notabilities, Daniel Webster. He is a magnificent specimen; you might say to all the world, This is your Yankee Englishman, such Limbs we make in Yankeeland! As a Logic-fencer, Advocate, or Parliamentary Hercules, one would incline to back him at first sight against all the extant world. The tanned complexion, that amorphous crag-like face; the dull black eyes under their precipice of brows, like dull anthracite furnaces, needing only to be *blown*; the mastiff-mouth, accurately closed: — I have not traced as much of *silent Berserkir-rage*, that I remember of, in any other man. “I guess I should not like to be your nigger!” — Webster is not loquacious, but he is pertinent, conclusive; a dignified, perfectly bred man, though not English in breeding: a man worthy of the best reception from us; and meeting such, I understand. He did not speak much with me that morning, but seemed not at all to dislike me: I meditate whether it is fit or not fit that I should seek out his residence, and leave *my* card too, before I go? Probably not; for the man is political, seemingly altogether; has been at the Queen’s levee, &c., &c.: it is simply as a mastiff-mouthed *man* that he is interesting to me, and not otherwise at all.

In about seven days hence we go to Scotland till the July heats be over. That is our resolution after all. Our address there, probably till the end of August, is “Templand, Thornhill, Dumfries, N. B.,” — the residence of my Mother-in-law, within a day’s drive of my Mother’s. Any Letter of yours sent by the old constant address (Cheyne Row, Chelsea) will still find me there; but the other, for that time, will be a day or two shorter. We all go, servant and all. I am bent on writing *something*; but have no faith that I shall be able. I *must* try. There is a thing of mine in *Fraser* for July, of no account, about the “sinking of the *Vengeur*” as you will see. The *French Revolution* printing is not to stop; two thirds of it are done; at this present rate, it ought to finish, and the whole be ready, within three weeks hence. A Letter will be here from you about that time, I think: I will print no title-page for the Five Hundred till it do come. “Published by *Fraser and Little*” would, I suppose, be unobjectionable, though *Fraser* is the most nervous of creatures: but why put *him* in at all, since these Five hundred copies are wholly *Little’s* and yours? Adieu, my Friend. Our blessings are with you and your house. My wife grows better with the hot weather; I, always worse.

Yours ever,

T. Carlyle I say not a word about America or Lecturing at present; because I mean to consider it intently in Scotland, and there to decide. My Brother is to be at Ischl (not far from Salzburg) during Summer: he was anxious to have me there, and I to have gone;

but — but — Adieu.

Fraser's Shop. Books not yet come, but known to be safe, and expected soon. Nay, the dexterous Fraser has argued away L15 of the duty, he says! All is right therefore. N.B. he says you are to send the second Portion *in sheets*, the weight will be less. This if it be still time. — *Basta.*

— T.C.

XLIV. Emerson to Carlyle

Concord, 4 July, 1839

I hear tonight, O excellent man! that, unless I send a letter to Boston tomorrow with the peep of day, it will miss the Liverpool steamer, which sails earlier than I dreamed of. O foolish Steamer! I am not ready to write. The facts are not yet ripe, though on the turn of the blush. Couldst not wait a little? Hurry is for slaves; — and Aristotle, if I rightly remember only that little from my college lesson, affirmed that the high-minded man never walked fast. O foolish Steamer! wait but a week, and we will style thee Megalopsyche, and hang thee by the Argo in the stars. Meantime I will not deny the dear and admirable man the fragments of intelligence I have. Be it known unto you then, Thomas Carlyle, that I received yesterday morning your letter by the “Liverpool” with great contentment of heart and mind, in all respects, saving that the American Hegira, so often predicted on your side and prayed on ours, is treated with a most unbecoming levity and oblivion; and, moreover, that you do not seem to have received all the letters I seem to have sent. With the letter came the proof-sheet safe, and shall be presently exhibited to Little and Brown. You must have already the result of our first colloquy on that matter. I can now bring the thing nearer to certainty. But you must print their names as before advised on the title-page.

Nearly four weeks ago Ellis sent me the noble Italian print for my wife.* She is in Boston at this time, and I believe will be glad that I have written without her aid or word this time, for she was so deeply pleased with the gift that she said she never could write to you. It came timely to me at least. It is a right morning thought, full of health and flowing genius, and I rejoice in it. It is fitly framed and tomorrow is to be hung in the parlor.

—— — * Morghen’s engraving of Guido’s Aurora. —— ——

Our Munroe’s press, you must believe, was of Aristotle’s category of the high-minded and slow. Chiding would do no good. They still said, “We have but one copy, and so but one hand at work”! At last, on the 1st of July, the book appeared in the market, but does not come from the binder fast enough to supply the instant demand; and therefore your two hundred and sixty copies cannot part from New York until the 20th of July. They will be on board the London packet which sails on that day. The publisher has his instructions to bind the volumes to match the old ones. Our year since the publication of the Vols. I. and II. is just complete, and I have set the man on the account, but doubt if I get it before twelve or fourteen days. All the edition is gone except forty copies, he told me;

and asked me if I would not begin to print a small edition of this First Series, five hundred, as we have five hundred of the new Series too many, with that view. But I am now so old a fox that I suspend majestically my answer until I have his account. For on the 21st of July I am to pay \$462 for the paper of this new book: and by and by the printer's bill, — whose amount I do not yet know; and it is better to be “slow and high-minded” a little more, since we have been so much, and not go deeper into these men's debt until we have tasted somewhat of their credit. We are to get, as you know, by contract, near a thousand dollars from these first two volumes; yet a month ago I was forced to borrow two hundred dollars for you on interest, such advances had the account required. But the coming account will enlighten us all.

I am very happy in the “success” of the London lectures. I have no word to add tonight, only that Sterling is not timber-toned, that I love his poetry, that I admire his prose with reservations here and there. What he knows he writes manly and well. Now and then he puts in a pasteboard man; but all our readers here take *Blackwood* for his sake, and lately seek him in vain. I am getting on with some studies of mine prosperously for me, have got three essays nearly done, and who knows but in the autumn I shall have a book? Meantime my little boy and maid, my mother and wife, are well, and the two ladies send to you and yours affectionate regards, — they would fain say urgent invitations. My mother sends tonight, my wife always.

I shall send you presently a copy of a translation published here of Eckermann, by Margaret Fuller, a friend of mine and of yours, for the sake of its preface mainly. She is a most accomplished lady, and her culture belongs rather to Europe than to America. Good bye.

— R.W. Emerson

XLV. Emerson to Carlyle

Concord, 8 August, 1839

Dear Friend, — This day came the letter dated 24 June, with “steam packet” written by you on the outside, but no paddles wheeled it through the sea. It is forty-five days old, and too old to do its errand even had it come twenty days sooner — so far as printer and bookbinder are concerned. I am truly grieved for the mischance of the *John Fraser*, and will duly lecture the sinning bookseller. I noticed the misnomer in a letter of his New York correspondent, and, I believe, mentioned to you in a letter my fear of such a mischance. I am more sorry for the costliness of this adventure to you, though in a gracious note to me you cut down the fine one half. The new books, tardily printed, were tardily bound and tardily put to sea on the packet ship “Ontario,” which left New York for London on the 1st of August. At least this was the promise of Munroe & Co. I stood over the boxes in which they were packing them in the latter days of July. I hope they have not gone to John again, but you must keep an eye to both names....

I cannot tell you how glad I am that you have seen my brave Senator, and seen him as I see him. All my days I have wished that he should go to England, and never more than when I listened two or three times to debates in the House of Commons. We send out usually mean persons as public agents, mere partisans, for whom I can only hope that no man with eyes will meet them; and now those thirsty eyes, those portrait-eating, portrait-painting eyes of thine, those fatal perceptions, have fallen full on the great forehead which I followed about all my young days, from court-house to senate-chamber, from caucus to street. He has his own sins no doubt, is no saint, is a prodigal. He has drunk this rum of Party too so long, that his strong head is soaked, sometimes even like the soft sponges, but the “man’s a man for a’ that.” Better, he is a great boy, — as wilful, as nonchalant and good-humored. But you must hear him speak, not a show speech which he never does well, but *with cause* he can strike a stroke like a smith. I owe to him a hundred fine hours and two or three moments of Eloquence. His voice in a great house is admirable. I am sorry if you decided not to visit him. He loves a *man*, too. I do not know him, but my brother Edward read law with him, and loved him, and afterwards in sick and unfortunate days received the steadiest kindness from him.

Well, I am glad you are to think in earnest in Scotland of our Cisatlantic claims. We shall have more rights over the wise and brave, I believe before many years or months. We shall have more men and a better cause than has yet moved on our stagnant waters. I think our Church, so called, must presently

vanish. There is a universal timidity, conformity, and rage; and on the other hand the most resolute realism in the young. The man Alcott bides his time. I have a young poet in this village named Thoreau, who writes the truest verses. I pine to show you my treasures; and tell your wife, we have women who deserve to know her.

— R.W. Emerson

The Yankees read and study the new volumes of *Miscellanies* even more than the old. The “Sam Johnson” and “Scott” are great favorites. Stearns Wheeler corrected proofs affectionately to the last. Truth and Health be with you alway!

XLVI. Carlyle to Emerson Scotsbrig, Ecclefechan, 4 September, 1839

Dear Emerson, — A cheerful and right welcome Letter of yours, dated 4th July, reached me here, duly forwarded, some three weeks ago; I delayed answering till there could some definite statement, as to bales of literature shipped or landed, or other matter of business forwarded a stage, be made. I am here, with my Wife, rustivating again, these two months; amid diluvian rains, Chartism, Teetotalism, deficient harvest, and general complaint and confusion; which not being able to mend, all that I can do is to heed them as little as possible. “What care I for the house? I am only a lodger.” On the whole, I have sat under the wing of Saint Swithin; uncheery, sluggish, murky, as the wettest of his Days; — hoping always, nevertheless, that blue sky, figurative and real, does exist, and will demonstrate itself by and by. I have been the stupidest and laziest of men. I could not write even to you, till some palpable call told me I must.

Yesternight, however, there arrives a despatch from Fraser, apprising me that the American *Miscellanies*, second cargo, are announced from Portsmouth, and “will probably be in the River tomorrow”; where accordingly they in all likelihood now are, a fair landing and good welcome to them! Fraser “knows not whether they are bound or not”; but will soon know. The first cargo, of which I have a specimen here, contented him extremely; only there was one fatality, the cloth of the binding was multiplex, party-colored, some sets done in green, others in red, blue, perhaps skyblue! Now if the second cargo were not multiplex, party-colored, nay multiplex, *in exact concordance with the first*, as seemed almost impossible — ? — Alas, in that case, one could not well predict the issue! — Seriously, it is a most handsome Book you have made; and I have nothing to return but thanks and again thanks. By the bye, if you do print a small second edition of the First Portion, I might have had a small set of errata ready: but *where are they?* The Book only came into my hand here a few days ago; and I have been whipt from post to pillar without will of my own, without energy to form a will! The only glaring error I recollect at this moment is one somewhere in the second article on *Jean Paul*: “Osion” (I think, or some such thing) instead of “Orson”: it is not an original American error, but copied from the English; if the Printer get his eye upon it, let him rectify; if not, not, I *deserve* to have it stand against me there. Fraser’s joy, should the Books prove either unbound or multiplex in the right way, will be great and unalloyed; he calculates on selling all the copies very soon. He has begun reprinting Goethe’s *Wilhelm Meister* too, the *Apprenticeship* and *Travels* under one; and hopes to remunerate himself for

that by and by: whether there will then remain any small peculium for me is but uncertain; meanwhile I correct the press, nothing doubting. One of these I call my best Translation, the other my worst; I have read that latter, the *Apprenticeship*, again in these weeks; not without surprise, disappointment, nay, aversion here and there, yet on the whole with ever new esteem. I find I can pardon *all* things in a man except purblindness, falseness of vision, — for, indeed, does not that presuppose every other kind of falseness?

But let me hasten to say that the *French Revolution*, five hundred strong for the New England market, is also, as Fraser advises, “to go to sea in three days.” It is bound in red cloth, gilt; a pretty book, James says; which he will sell for twenty-five shillings here; — nay, the London brotherhood have “subscribed” for one hundred and eighty at once, which he considers great work. I directed him to consign to Little and Brown in Boston, the *property* of the thing *yours*, with such phraseology and formalities as they use in those cases. I paid him for it yesterday (to save discount) L95; that is the whole cost to me, twenty or thirty pounds more than was once calculated on. Do the best with it you can, my friend; and never mind the result. If the thing fail, as is likely enough, we will simply quit that transport trade, and my experience must be *paid for*. The Title-page was “Boston: Charles C. Little and James Brown,” then in a second line and smaller type, “London James Fraser”; to which arrangement James made not the slightest objection, or indeed rather seemed to like it. — So much for trade matters: is it not *enough*? I declare I blush sometimes, and wonder where the good Emerson gets all his patience. We shall be through the affair one day, and find something better to speak about than dollars and pounds. And yet, as you will say, why not even of dollars? Ah, there are leaden-worded [bills] of exchange I have seen which have had an almost sacred character to me! *Pauca verba*.

Doubt not your new utterances are eagerly waited for here; above all things the “Book” is what I want to see. You might have told me what it was about. We shall see by and by. A man that has discerned somewhat, and knows it for himself, let him speak it out, and thank Heaven. I pray that they do not confuse you by praises; their blame will do no harm at all. Praise is sweet to all men; and yet alas, alas, if the light of one’s own heart go out, bedimmed with poor vapors and sickly false glitterings and flashings, what profit is it! Happier in darkness, in all manner of mere outward darkness, misfortune and neglect, “so that *thou canst endure*,” — which however one cannot to all lengths. God speed you, my Brother! I hope all good things of you; and wonder whether like Phoebus Apollo you are destined to be a youth forever. — Sterling will be right glad to hear your

praises; not unmerited, for he is a man among millions that John of mine, though his perpetual mobility wears me out at times. Did he ever write to you? His latest speculation was that he should and would; but I fancy it is among the clouds again. I hear from him the other day, out of Welsh villages where he passed his boyhood, &c., all in a flow of “lyrical recognition,” hope, faith, and sanguine unrest; I have even some thoughts of returning by Bristol (in a week or so, that must be), and seeing him. The dog has been reviewing me, he says, and it is coming out in the next *Westminster!* He hates terribly my doctrine of “*Silence.*” As to America and lecturing, I cannot in this torpid condition venture to say one word. Really it is not impossible; and yet lecturing is a thing I shall never grow to like; still less lionizing, Martineau-ing: *Ach Gott!* My Wife sends a thousand regards; *she* will never get across the ocean, you must come to her; she was almost *dead* crossing from Liverpool hither, and declares she will never go to sea for any purpose whatsoever again. Never till next time! My good old Mother is here, my Brother John (home with his Duke from Italy); all send blessings and affection to you and yours. Adieu till I get to London.

Yours ever,
T. Carlyle

XLVII. Carlyle to Emerson Chelsea, London, 8 December, 1839

My Dear Emerson, — What a time since we have written to one another! was it you that defalcated? Alas, I fear it was myself; I have had a feeling these nine or ten weeks that you were expecting to hear from me; that I absolutely could not write. Your kind gift of Fuller's *Eckermann** was handed in to our Hackney coach, in Regent Street, as we wended homewards from the railway and Scotland, on perhaps the 8th of September last; a welcome memorial of distant friends and doings: nay, perhaps there was a Letter two weeks prior to that: — I am a great sinner! But the truth is, I could not write; and now I can and do it!

—— — * “Conversations with Goethe. Translated from the German of Eckermann. By S.M. Fuller.” Boston, 1839. This was the fourth volume in the series of “Specimens of Foreign Standard Literature,” edited by George Ripley. The book has a characteristic Preface by Miss Fuller, in which she speaks of Carlyle as “the only competent English critic” of Goethe. —— —— — Our sojourn in Scotland was stagnant, sad; but tranquil, *well let alone*, — an indispensable blessing to a poor creature fretted to fiddle-strings, as I grow to be in this Babylon, take it as I will. We had eight weeks of desolate rain; with about eight days bright as diamonds intercalated in that black monotony of bad weather. The old Hills are the same; the old Streams go gushing along as in past years, in past ages; but he that looks on them is no longer the same: and the old Friends, where are they? I walk silent through my old haunts in that country; sunk usually in inexpressible reflections, in an immeasurable chaos of musings and mopings that cannot be reflected or articulated. The only work I had on hand was one that would not prosper with me: an Article for the *Quarterly Review* on the state of the Working Classes here. The thoughts were familiar to me, old, many years old; but the utterance of them, in what spoken dialect to utter them! The *Quarterly Review* was not an eligible vehicle, and yet the eligiblest; of Whigs, abandoned to Dilettantism and withered sceptical conventionality, there was no hope at all; the *London-and-Westminster* Radicals, wedded to their Benthamite Formulas, and tremulous at their own shadows, expressly rejected my proposal many months ago: Tories alone remained; Tories I often think have more stuff in them, in spite of their blindness, than any other class we have; — Walter Scott's *sympathy* with his fellow creatures, what is it compared with Sydney Smith's, with a Poor Law Commissioner's! Well: this thing would not prosper with me in Scotland at all; nor here at all, where nevertheless I had to persist writing; writing and burning, and cursing my destiny, and then again

writing. Finally the thing came out, as an *Essay on Chartism*; was shown to Lockhart, according to agreement; was praised by him, but was also found unsuitable by him; suitable to *explode* a whole fleet of Quarterlies into sky-rockets in these times! And now Fraser publishes it himself, with some additions, as a little Volume; and it will go forth in a week or two on its own footing; and England will see what she has to say to it, whether something or nothing; and one man, as usual, is right glad that he has nothing more to do with it. This is the reason why I could not write. I mean to send you the Proof-sheets of this thing, to do with as you see cause; there will be but some five or six, I think. It is probable my New England brothers may approve some portions of it; may be curious to see it reprinted; you ought to say Yes or No in regard to that. I think I will send all the sheets together; or at farthest, at two times.

Fraser, when we returned hither, had already received his *Miscellanies*; had about despatched his five hundred *French Revolutions*, insured and so, forth, consigned, I suppose, to your protection and the proper booksellers; probably they have got over from New York into your neighborhood before now. Much good may they do you! The *Miscellanies*, with their variegated binding, proved to be in perfect order; and are now all sold; with much regret from poor James that we had not a thousand more of them! This thousand he now sets about providing by his own industry, poor man; I am revising the American copy in these days; the printer is to proceed forthwith. I admire the good Stearns Wheeler as I proceed; I write to him my thanks by this post, and send him by Kennet a copy of Goethe's *Meister*, for symbol of acknowledgment. Another copy goes off for you, to the care of Little and Company. Fraser has got it out two weeks ago; a respectable enough book, now that the version is corrected somewhat. Tell me whether you dislike it less; what you do think of it? By the by, have you not learned to read German now? I rather think you have. It is three months spent well, if ever months were, for a thinking Englishman of this age. — I hope Kennet will use more despatch than he sometimes does. Thank Heaven for these Boston Steamers they project! May the Nereids and Poseidon favor them! They will bring us a thousand miles nearer, at one step; by and by we shall be of one parish after all.

During Autumn I speculated often about a Hegira into New England this very year: but alas! my horror of *Lecturing* continues great; and what else is there for me to do there? These several years I have had no wish so pressing as to hold my peace. I begin again to feel some use in articulate speech; perhaps I shall one day have something that I want to utter even in your side of the water. We shall see. Patience, and shuffle the cards. — I saw no more of Webster; did not even learn

well where he was, till lately I noticed in the Newspapers that he had gone home again. A certain Mr. Brown (I think) brought me a letter from you, not long since; I forwarded him to Cambridge and Scotland: a modest inoffensive man. He said he had never personally met with Emerson. My Wife recalled to him the story of the Scotch Traveler on the top of Vesuvius: "Never saw so beautiful a scene in the world!"— "Nor I," replied a stranger standing there, "except once; on the top of Dunmoot, in the Ochil Hills in Scotland."— "Good Heavens! That is a part of my Estate, and I was never there! I will go thither." Yes, do! — We have seen no other Transoceanic that I remember. We expect your *Book* soon! We know the subject of your Winter Lectures too; at least Miss Martineau thinks she does, and makes us think so. Heaven speed the work! Heaven send my good Emerson a clear utterance, in all right ways, of the nobleness that dwells in him! He knows what silence means; let him know speech also, in its season the two are like canvas and pigment, like darkness and light-image painted thereon; the one is essential to the other, not possible without the other.

Poor Miss Martineau is in Newcastle-on-Tyne this winter; sick, painfully not dangerously; with a surgical brother-in-law. Her meagre didacticalities afflict me no more; but also her blithe friendly presence cheers me no more. We wish she were back. This silence, I calculate, forced silence, will do her much good. If I were a Legislator, I would order every man, once a week or so, to lock his lips together, and utter no vocable at all for four-and-twenty hours: it would do him an immense benefit, poor fellow. Such racket, and cackle of mere hearsay and sincere-cant, grows at last entirely deafening, enough to drive one mad, — like the voice of mere infinite rookeries answering your voice! Silence, silence! Sterling sent you a Letter from Clifton, which I set under way here, having added the address. He is not well again, the good Sterling; talks of Madeira this season again: but I hope otherwise. You of course read his sublime "article"? I tell him it was — a thing untellable!

Mr. Southey has fallen, it seems, into a mournful condition: oblivion, mute hebetation, loss of all faculty. He suffered greatly, nursing his former wife in her insanity, for years till her relief by death; suffered, worked, and made no moan; the brunt of the task over, he sank into collapse in the hands of a new wife he had just wedded. What a lot for him; for her especially! The most excitable but most methodic man I have ever seen. [Greek] that is a word that awaits us all. — I have my brother here at present; though talking of Lisbon with his Buccleuchs. My Wife seems better than of late winters. I actually had a Horse, nay actually have it, though it has gone to the country till the mud abate again! It did me perceptible good; I mean to try it farther. I am no longer so desperately poor as I have been for twelve years back; sentence of starvation or beggary seems

revoked at last, a blessedness really very considerable. Thanks, thanks! We send a thousand regards to the two little ones, to the two mothers. *Valete nostrum memores.*

— T. Carlyle

XLVIII. Emerson to Carlyle

Concord, 12 December, 1839

My Dear Friend, — Not until the 29th of November did the five hundred copies of the *French Revolution* arrive in Boston. Fraser unhappily sent them to New York, whence they came not without long delays. They came in perfectly good order, not in the pretty red you told us of, but in a sober green; — not so handsome and salable a back, our booksellers said, as their own; but in every other respect a good book. The duties at the New York Custom House on these and a quantity of other books sent by Fraser amounted to \$400.36, whereof, I understand, the *French Revolution* pays for its share \$243. No bill has been brought us for freight, so we conclude that you have paid it. I confided the book very much to the conscience and discretion of Little and Brown, and after some ciphering they settle to sell it at \$3.75 per copy, wherefrom you are to get the cost of the book, and (say) \$1.10 per copy profit, and no more. The booksellers eat the rest. The book is rather too dear for our market of cheap manufactures, and therefore we are obliged to give the booksellers a good percentage to get it off at all: for we stand in daily danger of a cheap edition from some rival neighbor. I hope to give you good news of its sale soon, although I have been assured today that no book sells, the times are so bad. Brown had disposed of fifty or sixty copies to the trade, and twelve at retail. He doubted not to sell them all in six months....

Several persons have asked me to get some copies of the *German Romance* sent over here for sale. Last week a gentleman desired me to say he wanted four copies, and today I have been charged to procure another. I think, if you will send me by Little and Brown, through Longman, six copies, we can find an immediate market.

It gives me great joy to write to my friend once more, slow as you may think me to use the privilege. For a good while I dared believe you were coming hither, and why should I write? — and now for weeks I have been absorbed in my foolish lectures, of which only two are yet delivered and ended. There should be eight more; subject, “The Present Age.” Out of these follies I remember you with glad heart. Lately I had Sterling’s letter, which, since I have read his article on you, I am determined to answer speedily. I delighted in the spirit of that paper, loving you so well and accusing you so conscientiously. What does he at Clifton? If you communicate with him, tell him I thank him for his letter, and hold him dear. I am very happy lately in adding one or two new friends to my little circle, and you may be sure every friend of mine is a friend of yours. So

when you come here you shall not be lonely. A new person is always to me a great event, and will not let me sleep. — I believe I was not wise to volunteer myself to this fever fit of lecturing again. I ought to have written instead in silence and serenity. Yet I work better under this base necessity, and then I have a certain delight (base also?) in speaking to a multitude. But my joy in friends, those sacred people, is my consolation for the mishaps of the adventure, and they for the most part come to me from this *publication* of myself. — After ten or twelve weeks I think I shall address myself earnestly to writing, and give some form to my formless scripture.

I beg you will write to me and tell me what you do, and give me good news of your wife and your brother. Can they not see the necessity of your coming to look after your American interests? My wife and mother love both you and them. A young man of New York told me the other day he was about getting you an invitation from an Association in that city to give them a course of lectures on such terms as would at least make you whole in the expenses of coming thither. We could easily do that in Boston.

— R.W. Emerson

What manner of person is Heraud? Do you read Landor, or know him, O seeing man? Farewell!

XLIX. Carlyle to Emerson

Chelsea, London, 6 January, 1840

My Dear Emerson, — It is you, I surely think, that are in my debt now;* nevertheless I must fling you another word: may it cross one from you coming hither — as near the *Lizard Point* as it likes!

* The preceding letter had not yet arrived.

Some four sheets making a Pamphlet called *Chartism* addressed to you at Concord are, I suppose, snorting along through the waters this morning, part of the Cargo of the “British Queen.” At least I gave them to Mr. Brown (your unseen friend) about ten days ago, who promised to dispose of them; the “British Queen,” he said, was the earliest chance. The Pamphlet itself (or rather booklet, for Fraser has gilt it, &c., and asks five shillings for it as a Book) is out since then; radicals and others yelping considerably in a discordant manner about it; I have nothing other to say to *you* about it than what I said last time, that the sheets were *yours* to do with as you saw good, — to burn if you reckoned that fittest. It is not entirely a Political Pamphlet; nay, there are one or two things in it which my American Friends specially may like: but the interests discussed are altogether English, and cannot be considered as likely to concern New-Englishmen very much. However, it will probably be itself in your hand before this sheet, and you will have determined what is fit.

A copy of *Wilhelm Meister*, two copies, one for Stearns Wheeler, are probably in some of the “Line Ships” at this time too: good voyage to them! The *French Revolutions* were all shipped, invoiced, &c.; they have, I will suppose, arrived safe, as we shall hear by and by. What freightages, landings, and embarkments! For only two days ago I sent you off, through Kennet, another Book: John Sterling’s *Poems*, which he has collected into a volume. Poor John has overworked himself again, or the climate without fault on his side has proved too hard for him: he sails for Madeira again next week! His Doctors tell me there is no intrinsic danger; but they judge the measure safe as one of precaution. It is very mortifying he had nestled himself down at Clifton, thinking he might now hope to continue there; and lo! he has to fly again. — Did you get his letter? The address to him now will be, for three months to come, “*Edward Sterling, Esq., South Place, Knightsbridge, London,*” his Father’s designation.

Farther I must not omit to say that Richard Monckton Milnes purposes, through the strength of Heaven, to *review* you! In the next Number of the *London and Westminster*, the courageous youth will do this feat, if they let him.

Nay, he has already done it, the Paper being actually written he employed me last week in negotiating with the Editors about it; and their answer was, "Send us the Paper, it promises very well." We shall see whether it comes out or not; keeping silence till then. Milnes is a *Tory* Member of Parliament; think of that! For the rest, he describes his religion in these terms: "I profess to be a Crypto-Catholic." Conceive the man! A most bland-smiling, semi-quizzical, affectionate, high-bred, Italianized little man, who has long olive-blond hair, a dimple, next to no chin, and flings his arm round your neck when he addresses you in public society! Let us hear now what he will say, of the *American Vates*.*

* The end of this letter has been cut off.

L. Carlyle to Emerson Chelsea, London, 17 January, 1840

Dear Emerson, — Your Letter of the 12th of December, greatly, to my satisfaction, has arrived; the struggling Steamship, in spite of all hurricanes, has brought it safe across the waters to me. I find it good to write you a word in return straightway; though I think there are already two, or perhaps even three, messages of mine to you flying about unacknowledged somewhere under the moon; nay, the last of them perhaps may go by the same packet as this, — having been forwarded, as this will be, to *Liverpool*, after the “British Queen” sailed from London.

Your account of the *French Revolution* packages, and prognosis of what Little and Brown will do with them, is altogether as it should be. I apprised Fraser instantly of his invoiceless Books, &c.; he answers, that order has been taken in that long since, “instructions” sent, and, I conclude, arrangements for *bills* least of all forgotten. I mentioned what share of the duty was his; and that your men meant to draw on him for it. That is all right. As to the *French Revolution*, I agree with your Booksellers altogether about it; the American Edition actually pleases myself better for looking at; nor do I know that this new English one has much superiority for use: it is despicably printed, I fear, so far as false spellings and other slovenlinesses can go. Fraser “finds the people like it”; *credat Judaeus*; — as for me, I have told him I will *not print any more* with that man, but with some other man. Curious enough, the price Little and Brown have fixed upon was the price I remember guessing at beforehand, and the result they propose to realize for me corresponds closely with my prophecy too. Thanks, a thousand thanks, for all the trouble you never grudge to take. We shall get ourselves handsomely out of this export and import speculation; and know, taught at a rather *cheap* rate, not to embark in the like again.

There went off a *Wilhelm Meister* for you, and a letter to announce it, several weeks ago; that was message first. Your traveling neighbor, Brown, took charge of a Pamphlet named *Chartism*, to be put into the “British Queen’s” Letter-bag (where I hope, and doubt not, he did put it, though I have seen nothing of him since); that and a letter in reference to it was message second. Thirdly, I sent off a volume of *Poems* by Sterling, likewise announced in that letter. And now this that I actually write is the fourth (it turns out to be) and last of all the messages. Let us take Arithmetic along with us in all things. — Of *Chartism* I have nothing farther to say, except that Fraser is striking off another One Thousand copies to be called Second Edition; and that the people accuse me, not of being an

incendiary and speculative Sansculotte threatening to become practical, but of being a Tory, — thank Heaven. The *Miscellanies* are at press; at *two* presses; to be out, as Hope asseverates, in March: five volumes, without *Chartism*; with Hoffmann and Tieck from German Romance, stuck in somewhere as Appendix; with some other trifles stuck in elsewhere, chiefly as Appendix; and no essential change from the Boston Edition. Fraser, “overwhelmed with business,” does not yet send me his net result of those Two Hundred and Fifty Copies sold off some time ago; so soon as he does, you shall hear of it for your satisfaction. — As to *German Romance*, tell my friends that it has been out of print these ten years; procurable, of late not without difficulty, only in the Old-Bookshops. The comfort is that the best part of it stands in the new *Wilhelm Meister*: Fraser and I had some thought of adding Tieck’s and Richter’s parts, had they suited for a volume; the rest may without detriment to anybody perish.

Such press-correctings and arrangings waste my time here, not in the agreeablest way. I begin, though in as sulky a state of health as ever, to look again towards some new kind of work. I have often thought of Cromwell and Puritans; but do not see how the subject can be presented still alive. A subject dead is not worth presenting. Meanwhile I read rubbish of Books; Eichhorn, Grimm, &c.; very considerable rubbish; one grain in the cart load worth pocketing. It is pity I have no appetite for lecturing! Many applications have been made to me here; — none more touching to me than one, the day before yesterday, by a fine, innocent-looking Scotch lad, in the name of himself and certain other Booksellers’ shopmen eastward in the City! I cannot get them out of my head. Poor fellows! they have nobody to say an honest word to them, in this articulate-speaking world, and they apply to *me*. — For you, good friend, I account you luckier; I do verily: lecture there what innumerable things you have got to say on “The Present Age”; — yet withal do not forget to *write* either, for that is the lasting plan after all. I have a curious Note, sent me for inspection the other day; it is addressed to a Scotch Mr. Erskine (famed among the saints here) by a Madame Necker, Madame de Stael’s kinswoman, to whom he, the said Mr. Erskine, had lent your first Pamphlet at Geneva. She regards you with a certain love, yet a *shuddering* love. She says, “Cela sent l’Americain qui apres avoir abattu les forets a coup de hache, croit qu’on doit de meme conquerir le monde intellectuel”! What R.M. Milnes will say of you we hope also to see. — I know both Heraud and Landor; but alas, what room is here! Another sheet with less of “Arithmetic” in it will soon be allowed me. Adieu, dear friend.

Yours, ever and ever,

T. Carlyle

LI. Emerson to Carlyle*

New York, 18 March, 1840

My Dear Friend, — I have just seen the steamer “British Queen” enter the harbor from sea, and here lies the “Great Western,” to sail tomorrow. I will not resist hints so broad upon my long procrastinations. You shall have at least a tardy acknowledgment that I received in January your letter of December, which I should have answered at once had it not found me absorbed in writing foolish lectures which were then in high tide. I had written you, a little earlier, tidings of the receipt of your *French Revolution*. Your letter was very welcome, as all your letters are. I have since seen tidings of the *Essay on Chartism* in an English periodical, but have not yet got my proof-sheets. They are probably still rolling somewhere outside of this port, for all our packetships have had the longest passages: only one has come in for many a week. We will be as patient as we can.

—— — * This letter appeared in the *Athenaeum*, for July 22, 1882 ——

I am here on a visit to my brother, who is a lawyer in this city, and lives at Staten Island, at a distance of half an hour’s sail. The city has such immense natural advantages and such capabilities of boundless growth, and such varied and ever increasing accommodations and appliances for eye and ear, for memory and wit, for locomotion and lavation, and all manner of delectation, that I see that the poor fellows that live here do get some compensation for the sale of their souls. And how they multiply! They estimate the population today at 350,000, and forty years ago, it is said, there were but 20,000. But I always seem to suffer some loss of faith on entering cities. They are great conspiracies; the parties are all maskers, who have taken mutual oaths of silence not to betray each other’s secret and each to keep the other’s madness in countenance. You can scarce drive any craft here that does not seem a subornation of the treason. I believe in the spade and an acre of good ground. Whoso cuts a straight path to his own bread, by the help of God in the sun and rain and sprouting of the grain, seems to me an *universal* workman. He solves the problem of life, not for one, but for all men of sound body. I wish I may one day send you word, or, better, show you the fact, that I live by my hands without loss of memory or of hope. And yet I am of such a puny constitution, as far as concerns bodily labor, that perhaps I never shall. We will see.

Did I tell you that we hope shortly to send you some American verses and prose of good intent? My vivacious friend Margaret Fuller is to edit a journal

whose first number she promises for the 1st of July next, which I think will be written with a good will if written at all. I saw some poetical fragments which charmed me, — if only the writer consents to give them to the public.

I believe I have yet little to tell you of myself. I ended in the middle of February my ten lectures on the Present Age. They are attended by four hundred and fifty to five hundred people, and the young people are so attentive; and out of the hall ask me so many questions, that I assume all the airs of Age and Sapience. I am very happy in the sympathy and society of from six to a dozen persons, who teach me to hope and expect everything from my countrymen. We shall have many Richmonds in the field presently. I turn my face homeward tomorrow, and this summer I mean to resume my endeavor to make some presentable book of Essays out of my mountain of manuscript, were it only for the sake of clearance. I left my wife, and boy, and girl, — the softest, gracefulest little maiden alive, creeping like a turtle with head erect all about the house, — well at home a week ago. The boy has two deep blue wells for eyes, into which I gladly peer when I am tired. Ellen, they say, has no such depth of orb, but I believe I love her better than ever I did the boy. I brought my mother with me here to spend the summer with William Emerson and his wife and ruddy boy of four years. All these persons love and honour you in proportion to their knowledge and years.

My letter will find you, I suppose, meditating new lectures for your London disciples. May love and truth inspire them! I can see easily that my predictions are coming to pass, and that. having waited until your Fame wag in the floodtide, we shall not now see you at all on western shores. Our saintly Dr. T — , I am told, had a letter within a year from Lord Byron's daughter, *informing* the good man of the appearance of a certain wonderful genius in London named Thomas Carlyle, and all his astonishing workings on her own and her friends' brains, and him the very monster whom the Doctor had been honoring with his best dread and consternation these five years. But do come in one of Mr. Cunard's ships as soon as the booksellers have made you rich. If they fail to do so, come and read lectures which the Yankees will pay for. Give my love and hope and perpetual remembrance to your wife, and my wife's also, who bears her in her kindest heart, and who resolves every now and then to write to her, that she may thank her for the beautiful Guido.

You told me to send you no more accounts. But I certainly shall, as our financial relations are grown more complex, and I wish at least to relieve myself of this unwonted burden of booksellers' accounts and long delays, by sharing them. I have had one of their estimates by me a year, waiting to send. Farewell.

— R.W.E.

LII. Carlyle to Emerson

Chelsea, London, 1 April, 1840

My Dear Emerson, — A Letter has been due to you from me, if not by palpable law of reciprocity, yet by other law and right, for some week or two. I meant to write, so soon as Fraser and I had got a settlement effected. The traveling Sumner being about to return into your neighborhood, I gladly accept his offer to take a message to you. I wish I had anything beyond a dull Letter to send! But unless, as my Wife suggests, I go and get you a D'Orsay *Portrait* of myself, I see not what there is! Do you read German or not? I now and then fall in with a curious German volume, not perhaps so easily accessible in the Western world. Tell me. Or do you ever mean to learn it? I decidedly wish you would. — As to the D'Orsay Portrait, it is a real curiosity: Count D'Orsay the emperor of European Dandies portraying the Prophet of spiritual Sansculottism! He came rolling down hither one day, many months ago, in his sun-chariot, to the bedazzlement of all bystanders; found me in dusty gray-plaid dressing-gown, grim as the spirit of Presbyterianism (my Wife said), and contrived to get along well enough with me. I found him a man worth talking to, once and away; a man of decided natural gifts; every utterance of his containing in it a wild caricature *likeness* of some object or other; a dashing man, who might, some twenty years sooner born, have become one of Bonaparte's Marshals, and *is*, alas, — Count D'Orsay! The Portrait he dashed off in some twenty minutes (I was dining there, to meet Landor); we have not chanced to meet together since, and I refuse to undergo any more eight-o'clock dinners for such an object. — Now if I do not send you the Portrait, after all?

Fraser's account of the *Miscellanies* stood legibly extended over large spaces of paper, and was in several senses amazing to look upon. I trouble *you* only with the result. Two Hundred and forty-eight copies (for there were some one or two "imperfect"): all these he had sold, at two guineas each; and sold swiftly, for I recollect in December, or perhaps November, he told me he was "holding back," not to run entirely out. Well, of the L500 and odd so realized for these Books, the portion that belonged to me was L239, — the L261 had been the expense of handing the ware to Emerson over the counter, and drawing in the coin for it! "Rules of the Trade"; — it is a Trade, one would surmise, in which the Devil has a large interest. However, — not to spend an instant polluting one's eyesight with that side of it, — let me feel joyfully, with thanks to Heaven and America, that I do receive such a sum in the shape of wages, by decidedly the noblest method in which wages could come to a man. Without Friendship,

without Ralph Waldo Emerson, there had been no sixpence of that money here. Thanks, and again thanks. This earth is not an unmingled ball of Mud, after all. Sunbeams visit it; — mud *and* sunbeams are the stuff it has from of old consisted of. — I hasten away from the Ledger, with the mere good-news that James is altogether content with the “progress” of all these Books, including even the well-abused *Chartism* Book. We are just on the point of finishing our English reprint of the *Miscellanies*; of which I hope to send you a copy before long.

And now why do not *you* write to me? Your Lectures must be done long ago. Or are you perhaps writing a Book? I shall be right glad to hear of that; and withal to hear that you do not hurry yourself, but strive with deliberate energy to produce what in you is best. Certainly, I think, a right Book does lie in the man! It is to be remembered also always that the true value is determined by what we *do not* write! There is nothing truer than that now all but forgotten truth; it is eternally true. He whom it concerns can consider it. — You have doubtless seen Milnes’s review of you. I know not that you will find it to strike direct upon the secret of *Emerson*, to hit the nail on the head, anywhere at all; I rather think not. But it is gently, not unlovingly done; — and lays the first plank of a kind of pulpit for you here and throughout all Saxondom: a thing rather to be thankful for. It on the whole surpassed my expectations. Milnes tells me he is sending you a copy and a Note, by Sumner. He is really a pretty little robin-redbreast of a man.

You asked me about Landor and Heraud. Before my paper entirely vanish, let me put down a word about them. Heraud is a loquacious scribacious little man, of middle age, of parboiled greasy aspect, whom Leigh Hunt describes as “wavering in the most astonishing manner between being Something and Nothing.” To me he is chiefly remarkable as being still — with his entirely enormous vanity and very small stock of faculty — out of Bedlam. He picked up a notion or two from Coleridge many years ago; and has ever since been rattling them in his head, like peas in an empty bladder, and calling on the world to “List the Music of the spheres.” He escapes *assassination*, as I calculate, chiefly by being the cheerfulest best-natured little creature extant. — You cannot kill him he laughs so softly, even when he is like killing you. John Mill said, “I forgive him freely for interpreting the Universe, now when I find he cannot pronounce the *h’s!*” Really this is no caricature; you have not seen the match of Heraud in your days. I mentioned to him once that Novalis had said, “The highest problem of Authorship is the writing of a Bible.” — “That is precisely what I am doing!” answered the aspiring, unaspiring.* — Of Landor I have not got much benefit

either. We met first, some four years ago, on Cheyne Walk here: a tall, broad, burly man, with gray hair, and large, fierce-rolling eyes; of the most restless, impetuous vivacity, not to be held in by the most perfect breeding, — expressing itself in high-colored superlatives, indeed in reckless exaggeration, now and then in a dry sharp laugh not of sport but of mockery; a wild man, whom no extent of culture had been able to tame! His intellectual faculty seemed to me to be weak in proportion to his violence of temper: the judgment he gives about anything is more apt to be wrong than right, — as the inward whirlwind shows him this side or the other of the object; and *sides* of an object are all that he sees. He is not an original man; in most cases one but sighs over the spectacle of common place torn to rags. I find him painful as a writer; like a soul ever promising to take wing into the Aether, yet never doing it, ever splashing webfooted in the terrene mud, and only splashing the worse the more he strives! Two new tragedies of his that I read lately are the fatalest stuff I have seen for long: not an ingot; ah no, a distracted coil of wire-drawings salable in no market. Poor Landor has left his Wife (who is said to be a fool) in Italy, with his children, who would not quit her; but it seems he has honestly surrendered all his money to her, except a bare annuity for furnished lodgings; and now lives at Bath, a solitary sexagenarian, in that manner. He visits London in May; but says always it would kill him soon: alas, I can well believe that! They say he has a kind heart; nor does it seem unlikely: a perfectly honest heart, free and fearless, dwelling amid such hallucinations, excitations, tempestuous confusions, I can see he has. Enough of him! Me he likes well enough, more thanks to him; but two hours of such speech as his leave me giddy and undone. I have seen some other Lions, and Lion's-providers; but consider them a worthless species. — When will you write, then? Consider my frightful outlook with a Course of Lectures to give “On Heroes and Hero-worship,” — from Odin to Robert Burns! My Wife salutes you all. Good be in the Concord Household!

Yours ever,
T. Carlyle

—— — * There is an account of Heraud by an admirer in the *Dial* for October, 1842, p. 241. It contrasts curiously and instructively with Carlyle's sketch. —— ——

LIII. Emerson to Carlyle

Concord, 21 April, 1840

My Dear Friend, — Three weeks ago I received a letter from you following another in the week before, which I should have immediately acknowledged but that I was promised a private opportunity for the 25th of April, by which time I promised myself to send you sheets of accounts. I had also written you from New York about the middle of March. But now I suppose Mr. Grinnell — a hospitable, humane, modest gentleman in Providence, R.I., a merchant, much beloved by all his townspeople, and, though no scholar, yet very fond of silently listening to such — is packing his trunk to go to England. He offered to carry any letters for me, and as at his house during my visit to Providence I was eagerly catechised by all comers concerning Thomas Carlyle, I thought it behoved me to offer him for his brethren, sisters, and companions' sake, the joy of seeing the living face of that wonderful man. Let him see thy face and pass on his way. I who cannot see it, nor hear the voice that comes forth of it, must even betake me to this paper to repay the best I can the love of the Scottish man, and in the hope to deserve more.

Your letter announces *Wilhelm Meister*, *Sterling's Poems*, and *Chartism*. I am very rich, or am to be. But Kennet is no Mercury. *Wilhelm* and *Sterling* have not yet made their appearance, though diligently inquired after by Stearns Wheeler and me. Little and Brown now correspond with Longman, not with Kennet. But they will come soon, perhaps are already arrived.

Chartism arrived at Concord by mail not until one of the last days of March, though dated by you, I think, the 21st of December. I returned home on the 3d of April, and found it waiting. All that is therein said is well and strongly said, and as the words are barbed and feathered the memory of men cannot choose but carry them whithersoever men go. And yet I thought the book itself instructed me to look for more. We seemed to have a right to an answer less concise to a question so grave and humane, and put with energy and eloquence. I mean that whatever probabilities or possibilities of solution occurred should have been opened to us in some detail. But now it stands as a preliminary word, and you will one day, when the fact itself is riper; write the Second Lesson; or those whom you have influenced will. I read the book twice hastily through, and sent it directly to press, fearing to be forestalled, for the London book was in Boston already. Little and Brown are to print it. Their estimate is: —

Printing page for page with copy \$63.35

Paper	44.00
Binding	90.00
Total	\$197.35

Costing say twenty cents per copy for one thousand copies bound. The book to sell for fifty cents: the Bookseller's commission twenty percent on the Retail price. The author's profit fifteen cents per copy. They intend, if a cheap edition is published, — no unlikely event, — to stitch the book as pamphlet, and sell it at thirty-eight cents. I expect it from the press in a few days. I shall not on this sheet break into the other accounts, as I am expecting hourly from Munroe's clerk an entire account of R.W.E. with T.C., of which I have furnished him with all the facts I had, and he is to write it out in the manner of his craft. I did not give it to him until I had made some unsuccessful experiments myself.

I am here at work now for a fortnight to spin some single cord out of my thousand and one strands of every color and texture that lie raveled around me in old snarls. We need to be possessed with a mountainous conviction of the value of our advice to our contemporaries, if we will take such pains to find what that is. But no, it is the pleasure of the spinning that betrays poor spinners into the loss of so much good time. I shall work with the more diligence on this book to-be of mine, that you inform me again and again that my penny tracts are still extant; nay, that, beside friendly men, learned and poetic men read and even review them. I am like Scholasticus of the Greek Primer, who was ashamed to bring out so small a dead child before such grand people. Pygmalion shall try if he cannot fashion a better, certainly a bigger. — I am sad to hear that Sterling sails again for his health. I am ungrateful not to have written to him, as his letter was very welcome to me. I will not promise again until I do it. I received a note last week forwarded by Mr. Hume from New York, and instantly replied to greet the good messenger to our Babylonian city, and sent him letters to a few friends of mine there. But my brother writes me that he had left New York for Washington when he went to seek him at his lodgings. I hope he will come northward presently, and let us see his face.

22 April. — Last evening came true the promised account drawn up by Munroe's clerk, Chapman. I have studied it with more zeal than success. An account seems an ingenious way of burying facts: it asks wit equal to his who hid them to find them. I am far as yet from being master of this statement, yet, as I have promised it so long, I will send it now, and study a copy of it at my leisure. It is intended to begin where the last account I sent you, viz. of *French Revolution*, ended, with a balance of \$9.53 in your favor.... I send you also a paper which Munroe drew up a long time ago by way of satisfying me that, so

far as the first and second volumes [of the *Miscellanies*] were concerned, the result had accorded with the promise that you should have \$1,000 profit from the edition. We prosper marvelously on paper, but the realized benefit loiters. Will you now set some friend of yours in Fraser's shop at work on this paper, and see if this statement is true and transparent. I trust the Munroe firm, — chiefly Nichols, the clerical partner, — and yet it is a duty to understand one's own affair. When I ask, at each six months' reckoning, why we should always be in debt to them, they still remind me of new and newer printing, and promise correspondent profits at last. By sending you this account I make it entirely an affair between you and them. You will have all the facts which any of us know. I am only concerned as having advanced the sums which are charged in the account for the payment of paper and printing, and which promise to liquidate themselves soon, for Munroe declares he shall have \$550 to pay me in a few days. For the benefit of all parties bid your clerk sift them. One word more and I have done with this matter, which shall not be weary if it comes to good, — the account of the London five hundred *French Revolution* is not yet six months old, and so does not come in. Neither does that of the second edition of the first and second volumes of the *Miscellanies*, for the same reason. They will come in due time. I have very good hope that my friend Margaret Fuller's Journal — after many false baptisms now saying it will be called *The Dial*, and which is to appear in July — will give you a better knowledge of our young people than any you have had. I will see that it goes to you when the sun first shines on its face. You asked me if I read German, and I forget if I have answered. I have contrived to read almost every volume of Goethe, and I have fifty-five, but I have read nothing else: but I have not now looked even into Goethe for a long time. There is no great need that I should discourse to you on books, least of all on *his* books; but in a lecture on Literature, in my course last winter, I blurted all my nonsense on that subject, and who knows but Margaret Fuller may be glad to print it and send it to you? I know not.

A Bronson Alcott, who is a great man if he cannot write well, has come to Concord with his wife and three children and taken a cottage and an acre of ground to get his living by the help of God and his own spade. I see that some of the Education people in England have a school called "Alcott House" after my friend. At home here he is despised and rejected of men as much as was ever Pestalozzi. But the creature thinks and talks, and I am glad and proud of my neighbor. He is interested more than need is in the Editor Heraud. So do not fail to tell me of him. Of Landor I would gladly know your knowledge. And now I think I will release your eyes.

Yours always,
R.W. Emerson

LIV. Emerson to Carlyle

Concord, 30 June, 1840

My Dear Carlyle, — Since I wrote a couple of letters to you, — I know not exactly when, but in near succession many weeks ago, — there has come to me *Wilhelm Meister* in three volumes, goodly to see, good to read, — indeed quite irresistible; — for though I thought I knew it all, I began at the beginning and read to the end of the *Apprenticeship*, and no doubt shall despatch the *Travels*, on the earliest holiday. My conclusions and inferences therefrom I will spare you now, since I appended them to a piece I had been copying fairly for Margaret Fuller's *Dial*, — "Thoughts on Modern Literature," and which is the substance of a lecture in my last winter's course. But I learn that my paper is crowded out of the first Number, and is not to appear until October. I will not reckon the accidents that threaten the ghost of an article through three months of pre-existence! Meantime, I rest your glad debtor for the good book. With it came Sterling's *Poems*, which, in the interim, I have acknowledged in a letter to him. Sumner has since brought me a gay letter from yourself, concerning, in part, Landor and Heraud; in which as I know justice is not done to the one I suppose it is not done to the other. But Heraud I give up freely to your tender mercies: I have no wish to save him. Landor can be shorn of all that is false and foolish, and yet leave a great deal for me to admire. Many years ago I have read a hundred fine memorable things in the *Imaginary Conversations*, though I know well the faults of that book, and the *Pericles* and *Aspasia* within two years has given me delight. I was introduced to the man Landor when I was in Florence, and he was very kind to me in answering a multitude of questions. His speech, I remember, was below his writing. I love the rich variety of his mind, his proud taste, his penetrating glances, and the poetic loftiness of his sentiment, which rises now and then to the meridian, though with the flight, I own, rather of a rocket than an orb, and terminated sometimes by a sudden tumble. I suspect you of very short and dashing reading in his books; and yet I should think you would like him, — both of you such glorious haters of cant. Forgive me, I have put you two together twenty times in my thought as the only writers who have the old briskness and vivacity. But you must leave me to my bad taste and my perverse and whimsical combinations.

I have written to Mr. Milnes who sent me by Sumner a copy of his article with a note. I addressed my letter to him at "London," — no more. Will it ever reach him? I told him that if I should print more he would find me worse than ever with my rash, unwhipped generalization. For my journals, which I dot here

at home day by day, are full of disjointed dreams, audacities, unsystematic irresponsible lampoons of systems, and all manner of rambling reveries, the poor drupes and berries I find in my basket after endless and aimless rambles in woods and pastures. I ask constantly of all men whether life may not be poetic as well as stupid?

I shall try and persuade Mr. Calvert, who has sent to me for a letter to you, to find room in his trunk for a poor lithograph portrait of our Concord "Battlefield," so called, and village, that you may see the faint effigy of the fields and houses in which we walk and love you. The view includes my Grandfather's house (under the trees near the Monument), in which I lived for a time until I married and bought my present house, which is not in the scope of this drawing. I will roll up two of them, and, as Sterling seems to be more nomadic than you, I beg you will send him also this particle of foreign parts.

With this, or presently after it, I shall send a copy of the *Dial*. It is not yet much; indeed, though no copy has come to me, I know it is far short of what it should be, for they have suffered puffs and dulness to creep in for the sake of the complement of pages; but it is better than anything we had; and I have some poetry communicated to me for the next number which I wish Sterling and Milnes to see. In this number what say you to the *Elegy* written by a youth who grew up in this town and lives near me, — Henry Thoreau? A criticism on Persius is his also. From the papers of my brother Charles, I gave them the fragments on Homer, Shakespeare, Burke: and my brother Edward wrote the little *Farewell*, when last he left his home. The Address of the Editors to the Readers is all the prose that is mine, and whether they have printed a few verses for me I do not know. I am daily expecting an account for you from Little and Brown. They promised it at this time. It will speedily follow this sheet, if it do not accompany it. But I am determined, if I can, to send one letter which is not on business. Send me some word of the Lectures. I have yet seen only the initial notices. Surely you will send me some time the D'Orsay portrait. Sumner thinks Mrs. Carlyle was very well when he saw her last, which makes me glad. — I wish you both to love me, as I am affectionately Yours,

— R.W. Emerson

LV. Carlyle to Emerson

Chelsea, London, 2 July, 1840

My Dear Emerson, — Surely I am a sinful man to neglect so long making any acknowledgment of the benevolent and beneficent Arithmetic you sent me! It is many weeks, perhaps it is months, since the worthy citizen — your Host as I understood you in some of your Northern States — stepped in here, one mild evening, with his mild honest face and manners; presented me your Bookseller Accounts; talked for half an hour, and then went his way into France. Much has come and gone since then; Letters of yours, beautiful Disciples of yours: — I pray you forgive me! I have been lecturing; I have been sick; I have been beaten about in all ways. Nay, at bottom, it was only three days ago that I got the *Bibliopoliana* back from Fraser; to whom, as you recommended, I, totally inadequate like yourself to understand such things, had straightway handed them for examination. I always put off writing till Fraser should have spoken. I did not urge him, or he would have spoken any day: there is my sin.

Fraser declares the Accounts to be made out in the most beautiful manner; intelligible to any human capacity; correct so far as he sees, and promising to yield by and by a beautiful return of money. A precious crop, which we must not cut in the blade; mere time will ripen it into yellow nutritive ears yet. So he thinks. The only point on which I heard him make any criticism was on what he called, if I remember, “the number of Copies *delivered*,” — that is to say, delivered by the Printer and Binder as actually available for sale. The edition being of a Thousand, there have only 984 come bodily forth; 16 are “waste.” Our Printers, it appears, are in the habit of *adding* one for every fifty beforehand, whereby the *waste* is usually made good, and more; so that in One Thousand there will usually be some dozen called “Author’s copies” over and above. Fraser supposes your Printers have a different custom. That is all. The rest is apparently every-way *right*; is to be received with faith; with faith, charity, and even hope, — and packed into the bottom of one’s drawer, never to be looked at more except on the outside, as a memorial of one of the best and helpfulest of men! In that capacity it shall lie there.

My Lectures were in May, about *Great Men*. The misery of it was hardly equal to that of former years, yet still was very hateful. I had got to a certain feeling of superiority over my audience; as if I had something to tell them, and would tell it them. At times I felt as if I could, in the end, learn to speak. The beautiful people listened with boundless tolerance, eager attention. I meant to tell them, among other things, that man was still alive, Nature not dead or like to

die; that all true men continued true to this hour, — Odin himself true, and the Grand Lama of Thibet himself not wholly a lie. The Lecture on Mahomet (“the Hero as Prophet”) astonished my worthy friends beyond measure. It seems then this Mahomet was not a quack? Not a bit of him! That he is a better Christian, with his “bastard Christianity,” than the most of us shovel-hatted? I guess than almost any of you! — Not so much as Oliver Cromwell (“the Hero as King”) would I allow to have been a Quack. All quacks I asserted to be and to have been Nothing, *chaff* that would not grow: my poor Mahomet “was *wheat* with barn sweepings”; Nature had tolerantly hidden the barn sweepings; and as to the *wheat*, behold she had said Yes to it, and it was growing! — On the whole, I fear I did little but confuse my esteemed audience: I was amazed, after all their reading of me, to be understood so ill; — gratified nevertheless to see how the rudest *speech* of a man’s heart goes into men’s hearts, and is the welcomest thing there. Withal I regretted that I had not six months of preaching, whereby to learn to preach, and explain things fully! In the fire of the moment I had all but decided on setting out for America this autumn, and preaching far and wide like a very lion there. Quit your paper formulas, my brethren, — equivalent to old wooden idols, *undivine* as they: in the name of God, understand that you are alive, and that God is alive! Did the Upholsterer make this Universe? Were you created by the Tailor? I tell you, and conjure you to believe me literally, No, a thousand times No! Thus did I mean to preach, on “Heroes, Hero-worship, and the Heroic”; in America too. Alas! the fire of determination died away again: all that I did resolve upon was to write these Lectures down, and in some way promulgate them farther. Two of them accordingly are actually written; the Third to be begun on Monday: it is my chief work here, ever since the end of May. Whether I go to preach them a second time extempore in America rests once more with the Destinies. It is a shame to talk so much about a thing, and have it still hang *in nubibus*: but I was, and perhaps am, really nearer doing it than I had ever before been. A month or two now, I suppose, will bring us back to the old nonentity again. Is there, at bottom, in the world or out of it, anything one would like so well, with one’s whole heart *well*, as PEACE? Is lecturing and noise the way to get at that? Popular lecturer! Popular writer! If they would undertake in Chancery, or Heaven’s Chancery, to make a wise man Mahomet Second and Greater, “Mahomet of Saxondom,” not reviewed only, but worshiped for twelve centuries by all Bulldom, Yankee-doodle-doodom, Felondom New Zealand, under the Tropics and in part of Flanders, — would he not rather answer: Thank you; but in a few years I shall be dead, twelve Centuries will have become Eternity; part of Flanders Immensity: we will sit still

here if you please, and consider what quieter thing we can do! Enough of this.

Richard Milnes had a Letter from you, one morning lately, when I met him at old Rogers's. He is brisk as ever; his kindly *Dilettantism* looking sometimes as if it would grow a sort of Earnest by and by. He has a new volume of Poems out: I advised him to try Prose; he admitted that Poetry would not be generally read again in these ages, — but pleaded, “It was so convenient for veiling commonplace!” The honest little heart! — We did not know what to make of the bright Miss — here; she fell in love with my wife; — the *contrary*, I doubt, with me: my hard realism jarred upon her beautiful rose-pink dreams. Is not all that very morbid, — unworthy the children of Odin, not to speak of Luther, Knox, and the other Brave? I can do nothing with vapors, but wish them *condensed*. Kennet had a copy of the English *Miscellanies* for you a good many weeks ago: indeed, it was just a day or two *before* your advice to try Green henceforth. Has the *Meister* ever arrived? I received a Controversial Volume from Mr. Ripley: pray thank him very kindly. Somebody borrowed the Book from me; I have not yet read it. I did read a Pamphlet which seems now to have been made part of it. Norton* surely is a chimera; but what has the whole business they are jarring about become? As healthy *worshiping* Paganism is to Seneca and Company, so is healthy worshiping Christianity to — I had rather not work the sum! — Send me some swift news of yourself, dear Emerson. We salute you and yours, in all heartiness of brotherhood.

Yours ever and always —
T. Carlyle

* Professor Andrews Norton. The controversy was that occasioned by Professor Norton's Discourse on “The Latest Form of Infidelity.”

LVI. Emerson to Carlyle

Concord, 30 August, 1840

My Dear Carlyle, — I fear, nay I know, that when I wrote last to you, about the 1st of July, I promised to follow my sheet immediately with a bookseller's account. The bookseller did presently after render his account, but on its face appeared the fact — which with many and by me unanswerable reasons they supported — that the balance thereon credited to you was not payable until the 1st of October. The account is footed “Net sales of *French Revolution* to 1 July, 1840, due October 1, \$249.77.” Let us hope then that we shall get, not only a new page of statement, but also some small payment in money a month hence. Having no better story to tell, I told nothing.

But I will not let the second of the Cunard boats leave Boston without a word to you. Since I wrote by Calvert came your letter describing your lectures and their success: very welcome news, for a good London newspaper, which I consulted, promised reports, but gave none. I have heard so oft of your projected trip to America, that my ear would now be dull, and my faith cold, but that I wish it so much. My friend, your audience still waits for you here willing and eager, and greatly larger no doubt than it would have been when the matter was first debated.

Our community begin to stand in some terror of Transcendentalism, and the *Dial*, poor little thing, whose first number contains scarce anything considerable or even visible, is just now honored by attacks from almost every newspaper and magazine; which at least betrays the irritability and the instincts of the good public. But they would hardly be able to fasten on so huge a man as you are any party badge. We must all hear you for ourselves. But beside my own hunger to see and know you, and to hear you speak at ease and at large under my own roof, I have a growing desire to present you to three or four friends, and them to you. Almost all my life has been passed alone. Within three or four years I have been drawing nearer to a few men and women whose love gives me in these days more happiness than I can write of. How gladly I would bring your Jovial light upon this friendly constellation, and make you too know my distant riches! We have our own problems to solve also, and a good deal of movement and tendency emerging into sight every day in church and state, in social modes and in letters. I sometimes fancy our cipher is larger and easier to read than that of your English society.

You will naturally ask me if I try my hand at the history of all this, — I who have leisure, and write. No, not in the near and practical way in which they seem

to invite. I incline to write philosophy, poetry, possibility, — anything but history. And yet this phantom of the next age limns himself sometimes so large and plain that every feature is apprehensible, and challenges a painter. I can brag little of my diligence or achievement this summer. I dot evermore in my endless journal, a line on every knowable in nature; but the arrangement loiters long, and I get a brick kiln instead of a house. — Consider, however, that all summer I see a good deal of company, — so near as my fields are to the city. But next winter I think to omit lectures, and write more faithfully. Hope for me that I shall get a book ready to send you by New-Year's-day.

Sumner came to see me the other day. I was glad to learn all the little that he knew of you and yours. I do not wonder you set so lightly by my talkative countryman. He has brought nothing home but names, dates, and prefaces. At Cambridge last week I saw Brown for the first time. I had little opportunity to learn what he knew. Mr. Hume has never yet shown his face here. He sent me his Poems from New York, and then went South, and I know no more of him.

My Mother and Wife send you kind regards and best wishes, — to you and all your house. Tell your wife that I hate to hear that she cannot sail the seas. Perhaps now she is stronger she will be a better sailor. For the sake of America will she not try the trip to Leith again? It is only twelve days from Liverpool to Boston. Love, truth, and power abide with you always!

— R.W.E.

LVII. Carlyle to Emerson Chelsea, London, 26 September, 1840

My Dear Emerson, — Two Letters of yours are here, the latest of them for above a week: I am a great sinner not to have answered sooner. My way of life has been a thing of petty confusions, uncertainties; I did not till a short while ago see any definite highway, through the multitude of byelanes that opened out on me, even for the next few months. Partly I was busy; partly too, as my wont is, I was half asleep: — perhaps you do not know the *combination* of these two predicables in one and the same unfortunate human subject! Seeing my course now for a little, I must speak.

According to your prognosis, it becomes at length manifest that I do *not* go to America for the present. Alas, no! It was but a dream of the fancy; projected, like the French shoemaker's fairy shoes, "in a moment of enthusiasm." The nervous flutter of May Lecturing has subsided into stagnancy; into the feeling that, of all things in the world, public speaking is the hatefulest for me; that I ought devoutly to thank Heaven there is no absolute compulsion laid on me at present to speak! My notion in general was but an absurd one: I fancied I might go across the sea, open my lips wide; go raging and lecturing over the Union like a very lion (too like a frothy mountebank) for several months; — till I had gained, say a thousand pounds; therewith to retire to some small, quiet cottage by the shore of the sea, at least three hundred miles from this, and sit silent there for ten years to come, or forever and a day perhaps! That was my poor little day dream; — incapable of being realized. It appears, I have to stay here, in this brick Babylon; tugging at my chains, which will not break for me: the less I tug, the better. Ah me! On the whole, I have written down my last course of lectures, and shall probably print them; and you, with the aid of proof-sheets, may again print them; that will be the easiest way of lecturing to America! It is truly very weak to speak about that matter so often and long, that matter of coming to you; and never to come. *Frey ist das Herz*, as Goethe says, *doch ist der Fuss gebunden*. After innumerable projects, and invitations towards all the four winds, for this summer, I have ended about a week ago by — simply going nowhither, not even to see my dear aged Mother, but sitting still here under the Autumn sky such as I have it; in these vacant streets I am lonelier than elsewhere, have more chance for composure than elsewhere! With Sterne's starling I repeat to myself, "I can't get out." — Well, hang it, stay in then; and let people alone of it!

I have parted with my horse; after an experiment of seven or eight months, most assiduously prosecuted, I came to the conclusion that, though it did me

some good, there was not *enough* of good to warrant such equestrianism: so I plunged out, into green England, in the end of July, for a whole week of riding, an *explosion* of riding, therewith to end the business, and send off my poor quadruped for sale. I rode over Surrey, — with a leather valise behind me and a mackintosh before; very singular to see: over Sussex, down to Pevensy where the Norman Bastard landed; I saw Julius Hare (whose *Guesses at Truth* you perhaps know), saw Saint Dunstan's stithy and hammer, at Mayfield, and the very tongs with which he took the Devil by the nose; — finally I got home again, a right wearied man; sent my horse off to be sold, as I say; and finished the writing of my Lectures on Heroes. This is all the rustication I have had, or am like to have. I am now over head and ears in *Cromwellian* Books; studying, for perhaps the fourth time in my life, to see if it be possible to get any credible face-to-face acquaintance with our English Puritan period; or whether it must be left forever a mere hearsay and echo to one. Books equal in dulness were at no epoch of the world penned by unassisted man. Nevertheless, courage! I have got, within the last twelve months, actually, as it were, to *see* that this Cromwell was one of the greatest souls ever born of the English kin; a great amorphous semi-articulate *Baresark*; very interesting to me. I grope in the dark vacuity of Baxters, Neales; thankful for here a glimpse and there a glimpse. This is to be my reading for some time.

The *Dial* No. 1 came duly: of course I read it with interest; it is an utterance of what is purest, youngest in your land; pure, ethereal, as the voices of the Morning! And yet — you know me — for me it is *too* ethereal, speculative, theoretic: all theory becomes more and more confessedly inadequate, untrue, unsatisfactory, almost a kind of mockery to me! I will have all things condense themselves, take shape and body, if they are to have my sympathy. I have a *body* myself; in the brown leaf, sport of the Autumn winds, I find what mocks all prophesyings, even Hebrew ones, — Royal Societies, and Scientific Associations eating venison at Glasgow, not once reckoned in! Nevertheless go on with this, my Brothers. The world has many most strange utterances of a prophetic nature in it at the present time; and this surely is worth listening to among the rest. Do you know English Puseyism? Good Heavens! in the whole circle of History is there the parallel of that, — a true worship rising at this hour of the day for Bands and the Shovel-hat? Distraction surely, incipience of the “final deliration” enters upon the poor old English Formulism that has called itself for some two centuries a Church. No likelier symptom of its being soon about to leave the world has come to light in my time. As if King Macready should quit Covent-Garden, go down to St. Stephen's, and insist on saying, *Le*

roi le veut! — I read last night the wonderfulest article to that effect, in the shape of a criticism on myself, in the *Quarterly Review*. It seems to be by one Sewell, an Oxford doctor of note, one of the chief men among the Pusey-and-Newman Corporation. A good man, and with good notions, whom I have noted for some years back. He finds me a very worthy fellow; “true, most true,” — except where I part from Puseyism, and reckon the shovel-hat to be an old bit of felt; then I am false, most false. As the Turks say, *Allah akbar!*

I forget altogether what I said of Landor; but I hope I did not put him in the Heraud category: a cockney windbag is one thing; a scholar and bred man, though incontinent, explosive, half-true, is another. He has not been in town, this year; Milnes describes him as *eating* greatly at Bath, and perhaps even cooking! Milnes did get your Letter: I told you? Sterling has the Concord landscape; mine is to go upon the wall here, and remind me of many things. Sterling is busy writing; he is to make Falmouth do, this winter, and try to dispense with Italy. He cannot away with my doctrine of *Silence*; the good John. My Wife has been better than usual all summer; she begins to shiver again as winter draws nigh. Adieu, dear Emerson. Good be with you and yours. I must be far gone when I cease to love you. “The stars are above us, the graves are under us.” Adieu.

— T. Carlyle

LVIII. Emerson to Carlyle Concord, 30 October, 1840

My Dear Friend, — My hope is that you may live until this creeping bookseller's balance shall incline at last to your side. My rude ciphering, based on the last account of this kind which I sent you in April from J. Munroe & Co., had convinced me that I was to be in debt to you at this time L40 or more; so that I actually bought L40 the day before the "Caledonia" sailed to send you; but on giving my new accounts to J.M. & Co., to bring the statement up to this time, they astonished me with the above written result. I professed absolute incredulity, but Nichols* labored to show me the rise and progress of all my blunders. Please to send the account with the last to your Fraser, and have it sifted. That I paid, a few weeks since, \$481.34, and again, \$28.12, for printing and paper respectively, is true. — C.C. Little & Co. acknowledge the sale of 82 more copies of the London Edition *French Revolution* since the 187 copies of July 1; but these they do not get paid for until January 1, and we it seems must wait as long. We will see if the New-Year's-day will bring us more pence.

* Partner in the firm of J. Munroe & Co.

I received by the "Acadia" a letter from you, which I acknowledge now, lest I should not answer it more at large on another sheet, which I think to do. If you do not despair of American booksellers send the new proofs of the Lectures when they are in type to me by John Green, 121 Newgate Street (I believe), to the care of J. Munroe & Co. He sends a box to Munroe by every steamer. I sent a *Dial*, No. 2, for you, to Green. Kennet, I hear, has failed. I hope he did not give his creditors my *Miscellanies*, which you told me were there. I shall be glad if you will draw Cromwell, though if I should choose it would be Carlyle. You will not feel that you have done your work until those devouring eyes and that portraying hand have achieved England in the Nineteenth Century. Perhaps you cannot do it until you have made your American visit. I assure you the view of Britain is excellent from New England.

We are all a little wild here with numberless projects of social reform. Not a reading man but has a draft of a new Community in his waistcoat pocket. I am gently mad myself, and am resolved to live cleanly. George Ripley is talking up a colony of agriculturists and scholars, with whom he threatens to take the field and the book.* One man renounces the use of animal food; and another of coin; and another of domestic hired service; and another of the State; and on the whole we have a commendable share of reason and hope.

— * Preliminary to the experiment of Brook Farm, in 1841. — I am ashamed to tell you, though it seems most due, anything of my own studies, they seem so

desultory, idle, and unproductive. I still hope to print a book of essays this winter, but it cannot be very large. I write myself into letters, the last few months, to three or four dear and beautiful persons, my country-men and women here. I lit my candle at both ends, but will now be colder and scholastic. I mean to write no lectures this winter. I hear gladly of your wife's better health; and a letter of Jane Tuckerman's, which I saw, gave the happiest tidings of her. We do not despair of seeing her yet in Concord, since it is now but twelve and a half days to you.

I had a letter from Sterling, which I will answer. In all love and good hope for you and yours, your affectionate — R.W. Emerson

LIX. Carlyle to Emerson

Chelsea, 9 December, 1840

Dear Emerson, — My answer on this occasion has been delayed above two weeks by a rigorous, searching investigation into the procedure of the hapless Book-conveyer, Kennet, in reference to that copy of the *Miscellanies*. I was deceived by hopes of a conclusive response from day to day; not till yesterday did any come. My first step, taken long ago, was to address a new copy of the Book, not to you, luckless man, but to *Lydia* Emerson, the fortunate wife; this copy Green now has lying by him, waiting for the January Steamer (we sail only once a month in this season); before the New Year has got out of infancy the Lady will be graciously pleased to make a few inches of room on her bookshelves for this celebrated performance. And now as to Kennet, take the brief outcome of some dozen visitations, judicial interrogatories, searches of documents, and other piercing work on the part of methodic Fraser, attended with demurrers, pleadings, false denials, false affirmings, on the part of innocent chaotic Kennet: namely, that the said Kennet, so urged, did in the end of the last week, fish up from his repositories your very identical Book directed to Munroe's care, duly booked and engaged for, in May last, but left to repose itself in the Covent-Garden crypts ever since without disturbance from gods or men! Fraser has brought back the Book, and you have lost it; — and the Library of my native village in Scotland is to get it; and not Kennet any more in this world, but Green ever henceforth is to be our Book Carrier. There is a history. Green, it seems, addresses also to Munroe; but the thing, I suppose, will now shift for itself without watching.

As to the bibliopolic Accounts, my Friend! we will trust them, with a faith known only in the purer ages of Roman Catholicism, — when Papacy had indeed become a Dubiety, but was not yet a Quackery and Falsehood, was a thing *as* true as it could manage to be! That really may be the fact of this too. In any case what signifies it much? Money were still useful; but it is not now so indispensable. Booksellers by their knavery or their fidelity cannot kill us or cure us. Of the truth of Waldo Emerson's heart to me, there is, God be thanked for it, no doubt at all.

My Hero-Lectures lie still in Manuscript. Fraser offers no amount of cash adequate to be an outward motive; and inwardly there is as yet none altogether clear, though I rather feel of late as if it were clearing. To fly in the teeth of English Puseyism, and risk such shrill welcome as I am pretty sure of, is questionable: yet at bottom why not? Dost thou not as entirely reject this new

Distraction of a Puseyism as man can reject a thing, — and couldst utterly abjure it, and even abhor it, — were the shadow of a cobweb ever likely to become momentous, the cobweb itself being *beheaded*, with axe and block on Tower Hill, two centuries ago? I think it were as well to *tell* Puseyism that it has something of good, but also much of bad and even worst. We shall see. If I print the thing, we shall surely take in America again; either by stereotype or in some other way. Fear not that! — Do you attend at all to this new *Laudism* of ours? It spreads far and wide among our Clergy in these days; a most notable symptom, very cheering to me many ways; whether or not one of the fatalest our poor Church of England has ever exhibited, and betokening swifter ruin to it than any other, I do not inquire. Thank God, men do discover at last that there is still a God present in their affairs, and must be, or their affairs are of the Devil, naught, and worthy of being sent to the Devil! This once given, I find that all is given; daily History, in Kingdom and in Parish, is an *experimentum crucis* to show what is the Devil's and what not. But on the whole are we not the *formalest* people ever created under this Sun? Cased and overgrown with Formulas, like very lobsters with their shells, from birth upwards; so that in the man we see only his breeches, and believe and swear that wherever a pair of old breeches are there is a man! I declare I could both laugh and cry. These poor good men, merciful, zealous, with many sympathies and thoughts, there do they vehemently appeal to me, *Et tu, Brute?* Brother, wilt thou too insist on the breeches being old, — not ply a needle among us here? — To the naked Caliban, gigantic, for whom such breeches would not be a glove, who is stalking and groping there in search of new breeches and accoutrements, sure to get them, and to tread into nonentity whoever hinders him in the search, — they are blind as if they had no eyes. Sartorial men; ninth-parts of a man: — enough of them.

The second Number of the *Dial* has also arrived some days ago. I like it decidedly better than the first; in fact, it is right well worth being put on paper, and sent circulating; — I find only, as before that it is still too much of a soul for circulating as it should. I wish you could in future contrive to mark at the end of each Article who writes it, or give me some general key for knowing. I recognize Emerson readily; the rest are of [Greek] for most part. But it is all good and very good as a *soul*; wants only a body, which want means a great deal! Your Paper on Literature is incomparably the worthiest thing hitherto; a thing I read with delight. Speak out, my brave Emerson; there are many good men that listen! Even what you say of Goethe gratifies me; it is one of the few things yet spoken of him from personal insight, the sole kind of things that should be spoken! You call him *actual*, not *ideal*; there is truth in that too; and yet at bottom is not the

whole truth rather this: The actual well-seen *is* the ideal? The *actual*, what really is and exists: the past, the present, the future no less, do all lie there! Ah yes! one day you will find that this sunny-looking, courtly Goethe held veiled in him a Prophetic sorrow deep as Dante's, — all the nobler to me and to you, that he *could* so hold it. I believe this; no man can *see* as he sees, that has not suffered and striven as man seldom did. — Apropos of *this*, Have you got Miss Martineau's *Hour and Man*? How curious it were to have the real History of the Negro Toussaint, and his *black* Sansculottism in Saint Domingo, — the most atrocious form Sansculottism could or can assume! This of a "black Wilberforce-Washington," as Sterling calls it, is decidedly something. Adieu, dear Emerson: time presses, paper is done. Commend me to your good wife, your good Mother, and love me as well as you can. Peace and health under clear winter skies be with you all.

— T. Carlyle

My Wife rebukes me sharply that I have "forgot her love." She is much better this winter than of old.

Having mentioned Sterling I should say that he is at Torquay (Devonshire) for the winter, meditating new publication of Poems. I work still in Cromwellism; all but desperate of any feasible issue worth naming. I "enjoy bad health" too, considerably!

LX. Carlyle to Mrs. Emerson

Chelsea, London, 21 February, 1841

Dear Mrs. Emerson, — Your Husband's Letter shall have answer when some moment of leisure is granted me; he will wait till then, and must. But the beautiful utterance which you send over to me; melodious as the voice of flutes, of Aeolian Harps borne on the rude winds so *far*, — this must have answer, some word or growl of answer, be there leisure or none! The "Acadia," it seems, is to return from Liverpool the day after tomorrow. I shove my paper-whirlpools aside for a little, and grumble in pleased response.

You are an enthusiast; make Arabian Nights out of dull foggy London Days; with your beautiful female imagination, shape burnished copper Castles out of London Fog! It is very beautiful of you; — nay, it is not foolish either, it is wise. I have a guess what of truth there may be in that; and you the fair Alchemist, are you not all the richer and better that you know the *essential* gold, and will not have it called pewter or spelter, though in the shops it is only such? I honor such Alchemy, and love it; and have myself done something in that kind. Long may the talent abide with you; long may I abide to have it exercised on me! Except the Annandale Farm where my good Mother still lives, there is no House in all this world which I should be gladder to see than the one at Concord. It seems to stand as only over the hill, in the next Parish to me, familiar from boyhood. Alas! and wide-waste Atlantics roll between; and I cannot walk over of an evening! — I never give up the hope of getting thither some time. Were I a little richer, were I a little healthier; were I this and that — ! — One has no Fortunatus' "Time-annihilating" or even "Space-annihilating Hat": it were a thing worth having in this world.

My Wife unites with me in all kindest acknowledgments: she is getting stronger these last two years; but is still such a *sailor* as the Island hardly parallels: had she the *Space-annihilating Hat*, she too were soon with you. Your message shall reach Miss Martineau; my Dame will send it in her first Letter. The good Harriet is not well; but keeps a very courageous heart. She lives by the shore of the beautiful blue Northumbrian Sea; a "many-sounding" solitude which I often envy her. She writes unweariedly, has many friends visiting her. You saw her *Toussaint l'Ouverture*: how she has made such a beautiful "black Washington," or "Washington-Christ-Macready," as I have heard some call it, of a rough-handed, hard-headed, semi-articulate gabbling Negro; and of the horriest phasis that "Sansculottism" *can* exhibit, of a Black Sansculottism, a musical Opera or Oratorio in pink stockings! It is very beautiful. Beautiful as a

child's heart, — and in so shrewd a head as that. She is now writing express Children's-Tales, which I calculate I shall find more perfect.

Some ten days ago there went from me to Liverpool, perhaps there will arrive at Concord by this very "Acadia," a bundle of Printed Sheets directed to your Husband: pray apprise the man of that. They are sheets of a Volume called *Lectures on Heroes*; the Concord Hero gets them without direction or advice of any kind. I have got some four sheets more ready for him here; shall perhaps send them too, along with this. Some four again more will complete the thing. I know not what he will make of it; — perhaps wry faces at it?

Adieu, dear Mrs. Emerson. We salute you from this house. May all good which the Heavens grant to a kind heart, and the good which they never *refuse* to one such, abide with you always. I commend myself to your and Emerson's good Mother, to the mischievous Boys and — all the Household. Peace and fair Spring-weather be there!

Yours with great regard,
T. Carlyle

LXI. Emerson to Carlyle Concord, 28 February, 1841

My Dear Carlyle, — Behold Mr. George Nichols's new digest and exegesis of his October accounts. The letter seems to me the most intelligible of the two papers, but I have long been that man's victim, semi-annually, and never dare to make head against his figures. You are a brave man, and out of the ring of his enchantments, and withal have magicians of your own who can give spell for spell, and read his incantations backward. I entreat you to set them on the work, and convict his figures if you can. He has really taken pains, and is quite proud of his establishment of his accounts. In a month it will be April, and he will have a new one to fender. Little and Brown also in April promise a payment on *French Revolution*, — and I suppose something is due from *Chartism*. We will hope that a Bill of Exchange will yet cross from us to you, before our booksellers fail.

I hoped before this to have reached my last proofsheets, but shall have two or three more yet. In a fortnight or three weeks my little raft will be afloat.* Expect nothing more of my powers of construction, — no shipbuilding, no clipper, smack, nor skiff even, only boards and logs tied together. I read to some Mechanics' Apprentices a long lecture on Reform, one evening, a little while ago. They asked me to print it, but Margaret Fuller asked it also, and I preferred the *Dial*, which shall have the dubious sermon, and I will send it to you in that. — You see the bookseller reverendizes me notwithstanding your laudable perseverance to adorn me with profane titles, on the one hand, and the growing habit of the majority of my correspondents to clip my name of all titles on the other. I desire that you and your wife will keep your kindness for — R. W. Emerson ——— ——— — * The first series of *Essays*. ——— ——— —

LXII. Emerson to Carlyle Boston, 30 April, 1841

My Dear Carlyle, — Above you have a bill of exchange for one hundred pounds sterling drawn by T.W. Ward & Co. on the Messrs. Barings, payable at sight. Let us hope it is but the first of a long series. I have vainly endeavored to get your account to be rendered by Munroe & Co. to the date of the 1st of April. It was conditionally promised for the day of the last steamer (15 April). It is not ready for that which sails tomorrow and carries this. Little & Co. acknowledge a debt of \$607.90 due to you 1st of April, and just now paid me; and regret that their sales have been so slow, which they attribute to the dulness of all trade among us for the last two years. You shall have the particulars of their account from Munroe's statement of the account between you and me. Munroe & Co. have a long apology for not rendering their own account; their book keeper left them at a critical moment, they were without one six weeks, &c.; — but they add, if we could give you it, to what use, since we should be utterly unable to make you any payment at this time? To what use, surely? I am too much used to similar statements from our booksellers and others in the last few years to be much surprised; nor do I doubt their readiness or their power to pay all their debts at last; but a great deal of mutual concession and accommodation has been the familiar resort of our tradesmen now for a good while, a vice which they are all fain to lay at the doors of the Government, whilst it belongs in the first instance, no doubt, to the rashness of the individual traders. These men I believe to be prudent, honest, and solvent, and that we shall get all our debt from them at last. They are not reckoned as rich as Little and Brown. By the next steamer they think they can promise to have their account ready. I am sorry to find that we have been driven from the market by the New York Pirates in the affair of the Six Lectures.* The book was received from London and for sale in New York and Boston before my last sheets arrived by the "Columbia." Appleton in New York braved us and printed it, and furthermore told us that he intends to print in future everything of yours that shall be printed in London, — complaining in rude terms of the monopoly your publishers here exercise, and the small commissions they allow to the trade, &c., &c. Munroe showed me the letter, which certainly was not an amiable one. In this distress, then, I beg you, when you have more histories and lectures to print, to have the manuscript copied by a scrivener before you print at home, and send it out to me, and I will keep all Appletons and Corsairs whatsoever out of the lists. Not only these men made a book (of which, by the by, Munroe sends you by this steamer a copy, which you will find at John Green's, Newgate Street), but the New York newspapers print

the book in chapters, and you circulate for six cents per newspaper at the corners of all streets in New York and Boston; gaining in fame what you lose in coin. — The book is a good book, and goes to make men brave and happy. I bear glad witness to its cheering and arming quality.

* “Heroes and Hero-Worship.”

I have put into Munroe’s box which goes to Green a *Dial* No. 4 also, which I could heartily wish were a better book. But Margaret Fuller, who is a noble woman, is not in sufficiently vigorous health to do this editing work as she would and should, and there is no other who can and will.

Yours affectionately,

R.W. Emerson

LXIII. Carlyle to Emerson

Chelsea, London, 8 May, 1841

My Dear Emerson, — Your last letter found me on the southern border of Yorkshire, whither Richard Milnes had persuaded me with him, for the time they call “Easter Holidays” here. I was to shake off the remnants of an ugly *Influenza* which still hung about me; my little portmanteau, unexpectedly driven in again by perverse accidents, had stood packed, its cowardly owner, the worst of all travelers, standing dubious the while, for two weeks or more; Milnes offering to take me as under his cloak, I went with Milnes. The mild, cordial, though something dilettante nature of the man distinguishes him for me among men, as men go. For ten days I rode or sauntered among Yorkshire fields and knolls; the sight of the young Spring, new to me these seven years, was beautiful, or better than beauty. Solitude itself, the great Silence of the Earth, was as balm to this weary, sick heart of mine; not Dragons of Wantley (so they call Lord Wharncliffe, the wooden Tory man), not babbling itinerant Barrister people, fox-hunting Aristocracy, nor Yeomanry Captains cultivating milk-white mustachios, nor the perpetual racket, and “dinner at eight o’clock,” could altogether countervail the fact that green Earth was around one and unadulterated sky overhead, and the voice of waters and birds, — not the foolish speech of Cockneys at *all* times! — On the last morning, as Richard and I drove off towards the railway, your Letter came in, just in time; and Richard, who loves you well, hearing from whom it was, asked with such an air to see it that I could not refuse him. We parted at the “station,” flying each his several way on the wings of Steam; and have not yet met again. I went over to Leeds, staid two days with its steeple-chimneys and smoke-volcano still in view; then hurried over to native Annandale, to see my aged excellent Mother yet again in this world while she is spared to me. My birth-land is always as the Cave of Trophonius to me; I return from it with a haste to which the speed of Steam is slow, — with no smile on my face; avoiding all speech with men! It is not yet eight-and-forty hours since I got back; your Letter is among the first I answer, even with a line; your new Book — But we will not yet speak of that....

My Friend, I *thank* you for this Volume of yours; not for the copy alone which you send to me, but for writing and printing such a Book. *Euge!* say I, from afar. The voice of one crying in the desert; — it is once more the voice of a *man*. Ah me! I feel as if in the wide world there were still but this one voice that responded intelligently to my own; as if the rest were all hearsays, melodious or unmelodious echoes; as if this alone were true and alive. My blessing on you,

good Ralph Waldo! I read the Book all yesterday; my Wife scarcely yet done with telling me her news. It has rebuked me, it has aroused and comforted me. Objections of all kinds I might make, how many objections to superficialities and detail, to a dialect of thought and speech as yet imperfect enough, a hundred-fold too narrow for the Infinitude it strives to speak: but what were all that? It is an Infinitude, the real vision and belief of one, seen face to face: a “voice of the heart of Nature” is here once more. This is the one fact for me, which absorbs all others whatsoever. Persist, persist; you have much to say and to do. These voices of yours which I likened to unembodied souls, and censure sometimes for having no body, — how can they have a body? They are light-rays darting upwards in the East; they will yet make much and much to have a body! You are a new era, my man, in your new huge country: God give you strength, and speaking and silent faculty, to do such a work as seems possible now for you! And if the Devil will be pleased to set all the Popularities *against* you and evermore against you, — perhaps that is of all things the very kindest any *Angel* could do.

Of myself I have nothing good to report. Years of sick idleness and barrenness have grown wearisome to me. I do nothing. I waver and hover, and painfully speculate even now as to health, and where I shall spend the summer out of London! I am a very poor fellow; — but hope to grow better by and by. Then this *alluvies* of foul lazy stuff that has long swum over me may perhaps yield the better harvest. *Esperons!* — Hail to all of you from both of us.

Yours ever,
T. Carlyle

LXIV. Carlyle to Emerson Chelsea, London, 21 May, 1841

My Dear Emerson, — About a week ago I wrote to you, after too long a silence. Since that there has another Letter come, with a Draft of L100 in it, and other comfortable items not pecuniary; a line in acknowledgment of the money is again very clearly among my duties. Yesterday, on my first expedition up to Town, I gave the Paper to Fraser; who is to present the result to me in the shape of cash tomorrow. Thanks, and again thanks. This L100, I think, nearly clears off for me the outlay of the second *French Revolution*; an ill-printed, ill-conditioned publication, the prime cost of which, once all lying saved from the Atlantic whirlpools and hard and fast in my own hand, it was not perhaps well done to venture thitherward again. To the new trouble of my friends withal! We will now let the rest of the game play itself out as it can; and my friends, and my one friend, must not take more trouble than their own kind feelings towards me will reward.

The Books, the *Dial* No. 4, and Appleton's pirated *Lectures*, are still expected from Green. In a day or two he will send them: if not, we will jog him into wakefulness, and remind him of the *Parcels Delivery Company*, which carries luggage of all kinds, like mere letters, many times a day, over all corners of our Babylon. In this, in the universal British *Penny Post*, and a thing or two of that sort, men begin to take advantage of their crowded ever-whirling condition in these days, which brings such enormous disadvantages along with it *unsought* for. — Biblioplist Appleton does not seem to be a "Hero," — except after his own fashion. He is one of those of whom the Scotch say, "Thou wouldst do little for God if the Devil were dead!" The Devil is unhappily dead, in that international bibliopolic province, and little hope of his reviving for some time; whereupon this is what Squire Appleton does. My respects to him even in the Bedouin department, I like to see a complete man, a clear decisive Bedouin.

For the rest, there is one man who ought to be apprised that I can now stand robbery a little better; that I am no longer so very poor as I once was. In Fraser himself there do now lie vestiges of money! I feel it a great relief to see, for a year or two at least, the despicable bugbear of Beggary driven out of my sight; for *which* small mercy, at any rate, be the Heavens thanked. Fraser himself, for these two editions, One thousand copies each, of the *Lectures* and *Sartor*, pays me down on the nail L150; consider that miracle! Of the other Books which he is selling on a joint-stock basis, the poor man likewise promises something, though as yet, ever since New-Year's-day, I cannot learn what, owing to a grievous

sickness of his, — for which otherwise I cannot but be sorry, poor Fraser within the Cockney limits being really a worthy, accurate, and rather friendly creature. So you see me here provided with bread and water for a season, — it is but for a season one needs either water or bread, — and rejoice with me accordingly. It is the one useful, nay, I will say the one *innocuous*, result of all this trumpeting, reviewing, and dinner-invitationing; from which I feel it indispensable to withdraw myself more and more resolutely, and altogether count it as a thing not there. Solitude is what I long and pray for. In the babble of men my own soul goes all to babble: like soil you were forever *screening*, tumbling over with shovels and riddles; in *which* soil no fruit can grow! My trust in Heaven is, I shall yet get away “to some cottage by the sea-shore”; far enough from all the mad and mad making things that dance round me here, which I shall then look on only as a theatrical phantasmagory, with an eye only to the *meaning* that lies hidden in it. You, friend Emerson, are to be a Farmer, you say, and dig Earth for your living? Well; I envy you that as much as any other of your blessednesses. Meanwhile, I sit shrunk together here in a small *dressing-closet*, aloft in the back part of the house, excluding all cackle and cockneys; and, looking out over the similitude of a May grove (with little brick in it, and only the minarets of Westminster and gilt cross of St. Paul’s visible in the distance, and the enormous roar of London softened into an enormous hum), endeavor to await what will betide. I am busy with Luther in one Marheinecke’s very long-winded Book. I think of innumerable things; steal out westward at sunset among the Kensington lanes; would this *May* weather last, I might be as well here as in any attainable place. But June comes; the rabid dogs get muzzles; all is brown-parched, dusty, suffocating, desperate, and I shall have to run! Enough of all that. On my paper there comes, or promises to come, as yet simply nothing at all. Patience; — and yet who can be patient?

Had you the happiness to see yourself not long ago, in *Fraser’s Magazine*, classed *nominatim* by an emphatic earnest man, not without a kind of splay-footed strength and sincerity, — among the chief Heresiarchs of the — world? Perfectly right. Fraser was very anxious to know what I thought of the Paper, — “by an entirely unknown man in the country.” I counseled “that there was something in him, which he ought to improve by holding his peace for the next five years.”

Adieu, dear Emerson; there is not a scrap more of Paper. All copies of your *Essays* are out at use; with what result we shall perhaps see. As for me I love the Book and man, and their noble rustic heroism and manhood: — one voice as of a living man amid such jabberings of galvanized corpses: *Ach Gott!*

Yours evermore,
T. Carlyle

LXV. Emerson to Carlyle Concord, 80 May, 1841

My Dear Friend, — In my letter written to you on the 1st of May (enclosing a bill of exchange of L100 sterling, which, I hope, arrived safely) I believe I promised to send you by the next steamer an account for April. But the false tardy Munroe & Co. did not send it to me until one day too late. Here it is, as they render it, compiled from Little and Brown's statement and their own. I have never yet heard whether you have received their *Analysis* or explanation of the last abstract they drew up of the mutual claims between the great houses of T.C. and R.W.E., and I am impatient to know whether you have caused it to be examined, and whether it was satisfactory. This new one is based on that, and if that was incorrect, this must be also. I am daily looking for some letter from you, which is perhaps near at hand. If you have not written, write me exactly and immediately on this subject, I entreat you. You will see that in this sheet I am charged with a debt to you of \$184.29. I shall tomorrow morning pay to Mr. James Brown (of Little and Brown), who should be the bearer of this letter, \$185.00, which sum he will pay you in its equivalent of English coin. I give Mr. Brown an introductory letter to you, and you must not let slip the opportunity to make the man explain his own accounts, if any darkness hang on them. In due time, perhaps, we can send you Munroe, and Nichols also, and so all your factors shall render direct account of themselves to you. I believe I shall also make Brown the bearer of a little book written some time since by a young friend of mine in a very peculiar frame of mind, — thought by most persons to be mad, — and of the publication of which I took the charge.* Mr. Very requested me to send you a copy. — I had a letter from Sterling, lately, which rejoiced me in all but the dark picture it gave of his health. I earnestly wish good news of him. When you see him, show him these poems, and ask him if they have not a grandeur.

* *Essays and Poems*, by Jones Very, — a little volume, the work of an exquisite spirit. Some of the poems it contains are as if written by a George Herbert who had studied Shakespeare, read Wordsworth, and lived in America.

When I wrote last, I believe all the sheets of the Six Lectures had not come to me. They all arrived safely, although the last package not until our American pirated copy was just out of press in New York. My private reading was not less happy for this robbery whereby the eager public were supplied. Odin was all new to me; and Mahomet, for the most part; and it was all good to read, abounding in truth and nobleness. Yet, as I read these pages, I dream that your audience in London are less prepared to hear, than is our New England one. I

judge only from the tone. I think I know many persons here who accept thoughts of this vein so readily now, that, if you were speaking on this shore, you would not feel that emphasis you use to be necessary. I have been feeble and almost sick during all the spring, and have been in Boston but once or twice, and know nothing of the reception the book meets from the Catholic Carlylian Church. One reader and friend of yours dwells now in my house, and, as I hope, for a twelvemonth to come, — Henry Thoreau, — a poet whom you may one day be proud of; — a noble, manly youth, full of melodies and inventions. We work together day by day in my garden, and I grow well and strong. My mother, my wife, my boy and girl, are all in usual health, and according to their several ability salute you and yours. Do not cease to tell me of the health of your wife and of the learned and friendly physician.

Yours,
R.W. Emerson

LXVI. Carlyle to Emerson

Chelsea, London, 25 June, 1841

Dear Emerson, — Now that there begins again to be some program possible of my future motions for some time, I hastily despatch you some needful outline of the same.

After infinite confused uncertainty, I learn yesternight that there has been a kind of country-house got for us, at a place called Annan, on the north shore of the Solway Frith, in my native County of Dumfries. You passed through the little Burgh, I suppose, in your way homeward from Craigenputtock: it stands about midway, on the great road, between Dumfries and Carlisle. It is the place where I got my schooling; — consider what a *preternatural* significance such a scene has now got for me! It is within eight miles of my aged Mother's dwelling-place; within riding distance, in fact, of almost all the Kindred I have in the world. — The house, which is built since my time, and was never yet seen by me, is said to be a reasonable kind of house. We get it for a small sum in proportion to its value (thanks to kind accident); the three hundred miles of travel, very hateful to me, will at least entirely obliterate all traces of *this* Dust-Babel; the place too being naturally almost ugly, as far as a green leafy place in sight of sea and mountains can be so nicknamed, the whole gang of picturesque Tourists, Cockney friends of Nature, &c., &c., who penetrate now by steam, in shoals every autumn, into the very centre of the Scotch Highlands, will be safe over the horizon! In short, we are all bound thitherward in few days; must cobble up some kind of gypsy establishment; and bless Heaven for solitude, for the sight of green fields, heathy moors; for a silent sky over one's head, and air to breathe which does not consist of coal-smoke, finely powdered flint, and other beautiful *etceteras* of that kind among others! God knows I have need enough to be left altogether alone for some considerable while (*forever*, as it at present seems to me), to get my inner world, and my poor bodily nerves, both all torn to pieces, set in order a little again! After much vain reluctance therefore; disregarding many considerations, — disregarding *finance* in the front of these, — I am off; and calculate on staying till I am heartily *sated* with country, till at least the last gleam of summer weather has departed. My way of life has all along hitherto been a resolute *staying at home*: I find now, however, that I must alter my habits, cost what it may; that I cannot live all the year round in London, under pain of dying or going rabid; — that I must, in fact, learn to travel, as others do, and be hanged to me! Wherefore, in brief, my Friend, our address for

the next two or three months is “Newington Lodge, Annan, Scotland,” — where a letter from Emerson will be a right pleasant visitor! *Faustum sit*.

My second piece of news, not less interesting I hope, is that *Emerson’s Essays*, the Book so called, is to be reprinted here; nay, I think, is even now at press, — in the hands of that invaluable Printer, Robson, who did the *Miscellanies*. Fraser undertakes it, “on *half-profits*”; — T. Carlyle writing a Preface,* — which accordingly he did (in rather sullen humor, — not with you!) last night and the foregoing days. Robson will stand by the text to the very utmost; and I also am to read the Proof sheets. The edition is of Seven Hundred and Fifty; which Fraser thinks he will sell. With what joy shall I then sack up the small Ten Pounds Sterling perhaps of “Half-Profits,” and remit them to the man Emerson; saying: There, Man! Tit for tat, the reciprocity *not* all on one side! — I ought to say, moreover, that this was a volunteer scheme of Fraser’s; the risk is all his, the origin of it was with him: I advised him to have it reviewed, as being a really noteworthy Book; “Write you a Preface,” said he, “and I will reprint it”; — to which, after due delay and meditation; I consented. Let me add only, on this subject, the story of a certain Rio,** a French Breton, with long, distracted, black hair. He found your Book at Richard Milnes’s, a borrowed copy, and could not borrow it; whereupon he appeals passionately to me; carries off my Wife’s copy, this distracted Rio; and is to “read it *four times*” during this current autumn, at Quimperle, in his native Celtdom! The man withal is a *Catholic*, eats fish on Friday; — a great lion here when he visits us; one of the *naivest* men in the world: concerning whom nevertheless, among fashionables, there is a controversy, “Whether he is an Angel, or partially a Windbag and *Humbug*?” Such is the lot of loveliness in the World! A truer man I never saw; how *windless*, how windy, I will not compute at present. Me he likes greatly (in spite of my unspeakable contempt for his fish on Friday); likes, — but withal is apt to bore.

* The greater part of this interesting Preface is reprinted in Mr. George Willis Cooke’s excellent book on the *Life, Writings, and Philosophy of Emerson*, Boston, 1881, p. 109.

** The author of a book once much admired, *De ‘l’Art Chretien*. In a later work entitled *Epilogue a l’Art Chretien*, but actually a sort of autobiography, written in the naivest spirit of personal conceit and pious sentimentalism, M. Rio gives an exceedingly entertaining account of his intercourse with Carlyle. —

— —
Enough, dear Emerson; and more than enough for a day so hurried. Our Island is all in a ferment electioneering: Tories to come in; — perhaps not to come in; at all events not to stay long, without altering their figure much! I sometimes ask myself rather earnestly, What is the duty of a citizen? To be as I have been hitherto, a pacific *Alien*? That is the *easiest*, with my humor! — Our brave Dame here, just rallying for the *remove*, sends loving salutations. Good be with you all always. Adieu, dear Emerson.

— T. Carlyle

Appleton's Book of *Hero-Worship* has come; for which pray thank Mr. Munroe for me: it is smart on the surface; but printed altogether scandalously!

LXVII. Emerson to Carlyle

Concord, 31 July, 1841

My Dear Carlyle, — Eight days ago — when I had gone to Nantasket Beach, to sit by the sea and inhale its air and refresh this puny body of mine — came to me your letter, all bounteous as all your letters are, generous to a fault, generous to the shaming of me, cold, fastidious, ebbing person that I am. Already in a former letter you had said too much good of my poor little arid book, — which is as sand to my eyes, — and now in this you tell me it shall be printed in London, and graced with a preface from the man of men. I can only say that I heartily wish the book were better, and I must try and deserve so much favor from the kind gods by a bolder and truer living in the months to come; such as may perchance one day relax and invigorate this cramp hand of mine, and teach it to draw some grand and adequate strokes, which other men may find their own account and not their good-nature in repeating. Yet I think I shall never be killed by my ambition. I behold my failures and shortcomings there in writing, wherein it would give me much joy to thrive, with an equanimity which my worst enemy might be glad to see. And yet it is not that I am occupied with better things. One could well leave to others the record, who was absorbed in the life. But I have done nothing. I think the branch of the “tree of life” which headed to a bud in me, curtailed me somehow of a drop or two of sap, and so dwarfed all my florets and drupes. Yet as I tell you I am very easy in my mind, and never dream of suicide. My whole philosophy — which is very real — teaches acquiescence and optimism. Only when I see how much work is to be done, what room for a poet — for any spiritualist — in this great, intelligent, sensual, and avaricious America, I lament my fumbling fingers and stammering tongue. I have sometimes fancied I was to catch sympathetic activity from contact with noble persons; that you would come and see me; that I should form stricter habits of love and conversation with some men and women here who are already dear to me, — and at some rate get off the numb palsy, and feel the new blood sting and tingle in my fingers’ ends. Well, sure I am that the right word will be spoken though I cut out my tongue. Thanks, too, to your munificent Fraser for his liberal intention to divide the profits of the *Essays*. I wish, for the encouragement of such a bookseller, there were to be profits to divide. But I have no faith in your public for their heed to a mere book like mine. There are things I should like to say to them, in a lecture-room or in a “steeple house,” if I were there. Seven hundred and fifty copies! Ah no!

And so my dear brother has quitted the roaring city, and gone back in peace

to his own land, — not the man he left it, but richer every way, chiefly in the sense of having done something valiantly and well, which the land, and the lands, and all that wide elastic English race in all their dispersion, will know and thank him for. The holy gifts of nature and solitude be showered upon you! Do you not believe that the fields and woods have their proper virtue, and that there are good and great things which will not be spoken in the city? I give you joy in your new and rightful home, and the same greetings to Jane Carlyle! with thanks and hopes and loves to you both.

— R.W. Emerson

As usual at this season of the year, I, incorrigible spouting Yankee, am writing an oration to deliver to the boys in one of our little country colleges, nine days hence.* You will say I do not deserve the aid of any Muse. O but if you knew how natural it is to me to run to these places! Besides, I always am lured on by the hope of saying something which shall stick by the good boys. I hope Brown did not fail to find you, with thirty-eight sovereigns (I believe) which he should carry you.

— — —
* “The Method of Nature. An Address to the Society of the Adelpi, in Waterville College, Maine, August 11, 1841.”
— — —

LXVIII. Carlyle to Emerson

Newby, Annan, Scotland, 18 August, 1841

My Dear Emerson, — Two days ago your Letter, direct from Liverpool, reached me here; only fifteen days after date on the other side of the Ocean: one of the swiftest messengers that have yet come from you. Steamers have been known to come, they say, in nine days. By and by we shall visibly be, what I always say we virtually are, members of neighboring Parishes; paying continual visits to one another. What is to hinder huge London from being to universal Saxondom what small Mycale was to the Tribes of Greece, — a place to hold your [Greek] in? A meeting of *All the English* ought to be as good as one of All the Ionians; — and as Homeric “equal ships” are to Bristol steamers, so, or somewhat so, may New York and New Holland be to Ephesus and Crete, with their distances, relations, and etceteras! — Few things on this Earth look to me greater than the Future of that Family of Men.

It is some two months since I got into this region; my Wife followed me with her maid and equipments some five weeks ago. Newington Lodge, when I came to inspect it with eyes, proved to be too rough an undertaking: upholsterers, expense and confusion, — the Cynic snarled, “Give me a whole Tub rather! I want nothing but shelter from the elements, and to be let alone of all men.” After a little groping, this little furnished cottage, close by the beach of the Solway Frith, was got hold of: here we have been, in absolute seclusion, for a month, — no company but the corn-fields and the everlasting sands and brine; mountains, and thousand-voiced memories on all hands, sending their regards to one, from the distance. Daily (sometimes even nightly!) I have swashed about in the sea; I have been perfectly idle, at least inarticulate; I fancy I feel myself considerably sounder of body and of mind. Deeply do I agree with you in the great unfathomable meaning of a colloquy with the dumb Ocean, with the dumb Earth, and their eloquence! A Legislator would prescribe some weeks of that annually as a religious duty for all mortals, if he could. A Legislator will prescribe it for himself, since he can! You too have been at Nantasket; my Friend, this great rough purple sea-flood that roars under my little garret-window here, this too comes from Nantasket and farther, — swung hitherward by the Moon and the Sun.

It cannot be said that I feel “happy” here, which means joyful; — as far as possible from that. The Cave of Trophonius could not be grimmer for one than this old Land of Graves. But it is a sadness worth any hundred “happineses.” *N'en parlons plus*. By the way, have you ever clearly remarked withal what a

despicable function “view-hunting” is. Analogous to “philanthropy,” “pleasures of virtue,” &c., &c. I for my part, in these singular circumstances, often find an honestly ugly country the preferable one. Black eternal peat-bog, or these waste-howling sands with mews and seagulls: you meet at least no Cockney to exclaim, “How charming it is!”

One of the last things I did in London was to pocket Bookseller Brown’s L38: a very honest-looking man, that Brown; whom I was sorry I could not manage to welcome better. You asked in that Letter about some other item of business, — Munroe’s or Brown’s account to acknowledge? — something or other that I was to *do*: I only remember vaguely that it seemed to me I had as good as done it. Your Letter is not here now, but at Chelsea.

Three sheets of the *Essays* lay waiting me at my Mother’s, for correction; needing as good as none. The type and shape is the same as that of late *Lectures on Heroes*. Robson the Printer, who is a very punctual intelligent man, a scholar withal, undertook to be himself the corrector of the other sheets. I hope you will find them “exactly conformable to the text, *minus* mere Typographical blunders and the more salient American spellings (labor for labour, &c.).” The Book is perhaps just getting itself subscribed in these very days. It should have been out before now: but poor Fraser is in the country, dangerously ill, which perhaps retards it a little; and the season, at any rate, is at the very dullest. By the first conveyance I will send a certain Lady two copies of it. Little danger but the Edition will sell; Fraser knows his own Trade well enough, and is as much a “desperado” as poor Attila Schmelzle was! Poor James, I wish he were well again; but really at times I am very anxious about him. — The Book will sell; will be liked and disliked. Harriet Martineau, whom I saw in passing hitherward, writes with her accustomed enthusiasm about it. Richard Milnes too is very warm. John Sterling scolds and kisses it (as the manner of the man is), and concludes by inquiring, whether there is any procurable Likeness of Emerson? Emerson himself can answer. There ought to be.

— Good Heavens! Here came my Wife, all in tears, pointing out to me a poor ship, just tumbled over on a sand-bank on the Cumberland coast; men still said to be alive on it, — a Belfast steamer doing all it can to get in contact with it! Moments are precious (say the people on the beach), the flood runs ten miles an hour. Thank God, the steamer’s boat is out: “eleven men,” says a person with a glass, “are saved: it is an American timber-ship, coming up without a Pilot.” And now — in ten minutes more — there lies the melancholy mass alone among the waters, wreck-boats all hastening towards it, like birds of prey; the poor Canadians all up and away towards Annan. What an end for my Letter, which

nevertheless must end! Adieu, dear Emerson. Address to Chelsea next time. I can say no more.

Yours ever,
T.C.

LXIX. Emerson to Carlyle Concord, 30 October, 1841

My Dear Carlyle, — I was in Boston yesterday, and found at Munroe's your promised packet of the two London Books. They are very handsome, — that for my wife is beautiful, — and I am not so old or so cold but that I can feel the hope and the pleasure that lie in this gift. It seems I am to speak in England — great England — fortified by the good word of one whose word is fame. Well, it is a lasting joy to be indebted to the wise and generous; and I am well contented that my little boat should swim, whilst it can, beside your great galleys, nor will I allow my discontent with the great faults of the book, which the rich English dress cannot hide, to spoil my joy in this fine little romance of friendship and hope. I am determined — so help me all Muses — to send you something better another day.

But no more printing for me at present. I have just decided to go to Boston once more, with a course of lectures, which I will perhaps baptize "On the Times," by way of making once again the experiment whether I cannot, not only speak the truth, but speak it truly, or in proportion. I fancy I need more than another to speak, with such a formidable tendency to the lapidary style. I build my house of boulders; somebody asked me "if I built of medals." Besides, I am always haunted with brave dreams of what might be accomplished in the lecture-room, — so free and so unpretending a platform, — a Delos not yet made fast. I imagine an eloquence of infinite variety, — rich as conversation can be, with anecdote, joke, tragedy, epics and pindarics, argument and confession. I should love myself wonderfully better if I could arm myself to go, as you go, with the word in the heart and not in a paper.

When I was in Boston I saw the booksellers, the children of Tantalus, — no, but they who trust in them are. This time, Little and Brown render us their credit account to T.C. \$366 (I think it was), payable in three months from 1 October. They had sold all the London *French Revolutions* but fifteen copies. May we all live until 1 January. J. Munroe & Co. acknowledge about \$180 due and now rightfully payable to T.C., but, unhappily, not yet paid. By the help of brokers, I will send that sum more or less in some English Currency, by the next steamship, which sails in about a fortnight, and will address it, as you last bade me, to Chelsea.

What news, my dear friend, from your study? what designs ripened or executed? what thoughts? what hopes? you can say nothing of yourself that will not greatly interest us all. Harriet Martineau, whose sicknesses may it please God to heal! wrote me a kind, cheerful letter, and the most agreeable notice of

your health and spirit on a visit at her house. My little boy is five years old today, and almost old enough to send you his love.

With kindest greetings to Jane Carlyle, I am her and your friend, — R.W.E.

LXX. Emerson to Carlyle Concord, 14 November, 1841

My Dear Carlyle, — Above, you have a bill of exchange for forty pounds sterling, with which sum you must credit the Munroe account. The bill, I must not fail to notice, is drawn by a lover of yours who expresses great satisfaction in doing us this courtesy; and courtesy I must think it when he gives me a bill at sight, whilst of all other merchants I have got only one payable at some remote day. — is a beautiful and noble youth, of a most subtle and magnetic nature, made for an artist, a painter, and in his art has made admirable sketches, but his criticism, I fancy, was too keen for his poetry (shall I say?); he sacrificed to Despair, and threw away his pencil. For the present, he buys and sells. I wrote you some sort of letter a fortnight ago, promising to send a paper like this. The hour when this should be despatched finds me by chance very busy with little affairs. I sent you by an Italian, Signor Gambardella,* — who took a letter to you with good intent to persuade you to sit to him for your portrait, — a *Dial*, and some copies of an oration I printed lately. If you should have any opportunity to send one of them to Harriet Martineau, my debts to her are great, and I wish to acknowledge her abounding kindness by a letter, as I must. I am now in the rage of preparation for my Lectures “On the Times;” which begin in a fortnight. There shall be eight, but I cannot yet accurately divide the topics. If it were eighty, I could better. In fear lest this sheet should not safely and timely reach its man, I must now write some duplicate.

Farewell, dear friend.

R.W. Emerson ——— * Spiridione Gambardella was born at Naples. He was a refugee from Italy, having escaped, the story was, on board an American man-of-war. He had been educated as a public singer, but he had a facile genius, and turned readily to painting as a means of livelihood. He painted some excellent portraits in Boston, between 1835 and 1840, among them one of Dr. Channing, and one of Dr. Follen; both of these were engraved. He had some success for a time as a portrait-painter in London. ——— —

LXXI. Carlyle to Emerson

Chelsea, London, 19 November, 1841

Dear Emerson, — Since that going down of the American Timber-ship on one of the Banks of the Solway under my window, I do not remember that you have heard a word of me. I only added that the men were all saved, and the beach all in agitation, certain women not far from hysterics; — and there ended. I did design to send you some announcement of our return hither; but fear there is no chance that I did it! About ten days ago the Signor Gambardella arrived, with a Note and Books from you: and here now is your Letter of October 30th; which, arriving at a moment when I have a little leisure, draws forth an answer almost instantly.

The Signor Gambardella, whom we are to see a second time tonight or tomorrow, amuses and interests us not a little. His face is the very image of the Classic God Pan's; with horns, and cloven feet, we feel that he would make a perfect wood-god; — really, some of Poussin's Satyrs are almost portraits of this brave Gambardella. I will warrant him a right glowing mass of Southern-Italian vitality, — full of laughter, wild insight, caricature, and every sort of energy and joyous savagery: a most profitable element to get introduced (in moderate quantity), I should say, into the general current of your Puritan blood over in New England there! Gambardella has behaved with magnanimity in that matter of the Portrait: I have already sat, to men in the like case, some four times, and Gambardella knows it is a dreadful weariness; I directed him, accordingly, to my last painter, one Laurence, a man of real parts, whom I wished Gambardella to know, — and whom I wished to know Gambardella withal, that he might tell me whether there was any probability of a *good* picture by him in case one did decide on encountering the weariness. Well: Gambardella returns with a magnanimous report that Laurence's picture far transcends any capability of his; that whoever in America or elsewhere will have a likeness of the said individual must apply to Laurence, not to Gambardella, — which latter artist heroically throws down his brush, and says, Be it far from me! The brave Gambardella! if I can get him this night to dilate a little farther on his Visit to the *Community of Shakers*, and the things he saw and felt there, it will be a most true benefit to me. Inextinguishable laughter seemed to me to lie in Gambardella's vision of that Phenomenon, — the sight and the seer, but we broke out too loud all at once, and he was afraid to continue. — Alas! there is almost no laughter going in the world at present. True laughter is as rare as any other truth, — the sham of it frequent and detestable, like all other shams. I know nothing wholesomer; but it

is rarer even than Christmas, which comes but once a year, and does always come once.

Your satisfactions and reflections at sight of your English Book are such as I too am very thankful for. I understand them well. May worse guest never visit the Drawing-room at Concord than that bound Book. Tell the good Wife to rejoice in it: she has all the pleasure; — to her poor Husband it will be increase of pain withal: nay, let us call it increase of valiant labor and endeavor; no evil for a man, if he be fit for it! A man must learn to digest praise too, and not be poisoned with it: some of it *is* wholesome to the system under certain circumstances; the most of it a healthy system will learn by and by to throw into the slop-basin, harmlessly, without any *trial* to digest it. A thinker, I take it, in the long run finds that essentially he must ever be and continue *alone*; — *alone*: “silent, rest over him the stars, and under him the graves”! The clatter of the world, be it a friendly, be it a hostile world, shall not intermeddle with him much. The Book of *Essays*, however, does decidedly “speak to England,” in its way, in these months; and even makes what one may call a kind of appropriate “sensation” here. Reviews of it are many, in all notes of the gamut; — of small value mostly; as you might see by the two Newspaper specimens I sent you. (Did you get those two Newspapers?) The worst enemy admits that there are piercing radiances of perverse insight in it; the highest friends, some few, go to a very high point indeed. Newspapers are busy with extracts; — much complaining that it is “abstruse,” neological, hard to get the meaning of. All which is very proper. Still better, — though poor Fraser, alas, is dead, (poor Fraser!), and no help could come from industries of the Bookshop, and Books indeed it seems were never selling worse than of late months, — I learn that the “sale of the *Essays* goes very steadily forward,” and will wind itself handsomely up in due time, we may believe! So Emerson henceforth has a real Public in Old England as well as New. And finally, my Friend, do *not* disturb yourself about turning better, &c., &c.; write as it is given you, and not till it be given you, and never mind it a whit.

The new *Adelphi* piece seems to me, as a piece of Composition, the best *written* of them all. People cry over it: “Whitherward? What, What?” In fact, I do again desiderate some *concretion* of these beautiful *abstracta*. It seems to me they will never be *right* otherwise; that otherwise they are but as prophecies yet, not fulfilments.

The Dial too, it is all spirit-like, aeriform, aurora-borealis like. Will no *Angel* body himself out of that; no stalwart Yankee *man*, with color in the cheeks of him, and a coat on his back! These things I *say*: and yet, very true, you alone can

decide what practical meaning is in them. Write you always *as* it is given you, be it in the solid, in the aeriform, or whatsoever way. There is no other rule given among men. — I have sent the criticism on Landor* to an Editorial Friend of L.'s, by whom I expect it will be put into the Newspapers here, for the benefit of Walter Savage; he is not often so well praised among us, and deserves a little good praise.

—— * From the Dial for October, 1841. —— ——

You propose again to send me Moneys, — surprising man! I am glad also to hear that that beggarly misprinted *French Revolution* is nearly out among you. I only hope farther your Booksellers will have an eye on that rascal Appleton, and not let *him* reprint and deface, if more copies of the Book turn out to be wanted. Adieu, dear Emerson! Good speed to you at Boston, and in all true things. I hope to write soon again.

Yours ever,
T. Carlyle

LXXII. Carlyle to Emerson Chelsea, 6 December, 1841

Dear Emerson, — Though I wrote to you very lately, and am in great haste today, I must lose no time in announcing that the Letter with the L40 draught came to hand some mornings ago; and now, this same morning, a second Letter round by Dumfriesshire, which had been sent as a duplicate, or substitute in case of accident, for the former. It is all right, my friend — — ‘s paper has got itself changed into forty gold sovereigns, and lies here waiting use; thanks, many thanks! Sums of that kind come always upon me like manna out of the sky; surely they, more emphatically than any others, are the gift of Heaven. Let us receive, use, and be thankful. I am not so poor now at all; Heaven be praised: indeed, I do not know, now and then when I reflect on it, whether being rich were not a considerably harder problem. With the wealth of Rothschild what farther good thing could one get, — if not perhaps some but to live in, under free skies, in the country, with a horse to ride and have a little less pain on? *Angulus ille ridet!* — I will add, for practical purposes in the future, that it is in general of little or no moment whether an American Bill be at sight or after a great many days; that the paper can wait as conveniently here as the cash can, — if your New England House and Baring of Old England will forbear bankruptcy in the mean while. By the bye, will you tell me some time or other in *what* American funds it is that your funded money, you once gave me note of, now lies? I too am creditor to America, — State of Illinois or some such State: one thousand dollars of mine, which some years ago I had no use for, now lies there, paying I suppose for canals, in a very obstructed condition! My Brother here is continually telling me that I shall lose it all, — which is not so bad; but lose it all by my own unreason, — which is very bad. It struck me I would ask where Emerson’s money lies, and lay mine there too, let it live or perish as it likes!

Your *Adelphi* went straightway off to Miss Martineau with a message. Richard Milnes has another; John Sterling is to have a third, — had certain other parties seen it first. For the man Emerson is become a person to be *seen* in these times. I also gave a *Morning-Chronicle* Editor your brave eulogy on Landor, with instructions that it were well worth publishing there, for Landor’s and others’ sake. Landor deserves more praise than he gets at present; the world too, what is far more, should hear of him oftener than it does. A brave man after his kind, — though considerably “flamed on from the Hell beneath.” He speaks notable things; and at lowest and worst has the faculty too of holding his peace.

The “Lectures on the Times” are even now in progress? Good speed to the Speaker, to the Speech. Your Country is luckier than most at this time; it has still

real Preaching; the tongue of man is not, whensoever it begins wagging, entirely sure to emit babblement, twaddlement, sincere — cant, and other noises which awaken the passionate wish for silence! That must alter everywhere the human tongue is no wooden watchman's-rattle or other *obsolete* implement; it continues forever new and useful, nay indispensable.

As for me and my doings — *Ay de mi!**

—— — * The signature has been cut off. —— —

LXXIII. Emerson to Carlyle

New York, 28 February, 1842

My Dear Friend, — I enclose a bill of exchange for forty-eight pounds sterling, payable by Baring Brothers & Co. after sixty days from the 25th of February.

This Sum is part of a payment from Little and Brown on account of sales of your London *French Revolution and of Chartism*. As another part of their payment they asked me if they might not draw on the estate of James Fraser for a balance due from his house to them, and pay you so. I, perhaps unwisely, consented to make the proffer to you, with the distinct stipulation, however, that if it should not prove perfectly agreeable to you, and exactly as available as another form of money, you should instantly return it to me, and they shall pay me the amount, \$41.57, or L8 12s. 5d. in cash. My mercantile friend, Abel Adams, did not admire my wisdom in accepting this bill of Little and Brown; so I told them I should probably bring it back to them, and if there is a shadow of inconvenience in it you will send it back to me by the next steamer. For they have no claims on us. I decide not to enclose the Little and Brown bill in this sheet, — but to let it accompany this letter in the same packet.

I grieve to hear that you have bought any of our wretched Southern Stocks. In New England all Southern and Southwestern debt is usually regarded as hopeless, unless the debtor is personally known. Massachusetts stock is in the best credit of any public stock. Ward told me that it would be safest for you to keep your Illinois stock, although he could say nothing very good of it.

Our city banks in Boston are in better credit than the banks in any other city here, yet one in which a large part of my own property is invested has failed, for the two last half-years, to pay any dividend, and I am a poor man until next April, when, I hope, it will not fail me again. If you wish to invest money here, my friend Abel Adams, who is the principal partner in one of our best houses, Barnard, Adams, & Co., will know how to give you the best assistance and action the case admits.

My dear friend, you should have had this letter and these messages by the last steamer; but when it sailed, my son, a perfect little boy of five years and three months, had ended his earthly life.* You can never sympathize with me; you can never know how much of me such a young child can take away. A few weeks ago I accounted myself a very rich man, and now the poorest of all. What would it avail to tell you anecdotes of a sweet and wonderful boy, such as we solace and sadden ourselves with at home every morning and evening? From a perfect

health and as happy a life and as happy influences as ever child enjoyed, he was hurried out of my arms in three short days by Scarlatina. — We have two babes yet, — one girl of three years, and one girl of three months and a week, but a promise like that Boy's I shall never see. How often I have pleased myself that one day I should send to you this Morning Star of mine, and stay at home so gladly behind such a representative. I dare not fathom the Invisible and Untold to inquire what relations to my Departed ones I yet sustain. Lidian, the poor Lidian, moans at home by day and by night. You too will grieve for us, afar. I believe I have two letters from you since I wrote last. I shall write again soon, for Bronson Alcott will probably go to London in about a month, and him I shall surely send to you, hoping to atone by his great nature for many smaller one, that have craved to see you. Give me early advice of receiving these Bills of Exchange.

* The memory of this Boy, "born for the future, to the future lost;" is enshrined in the heart of every lover of childhood and of poetry by his father's impassioned *Threnody*. —

Tell Jane Carlyle our sorrowing story with much love, and with all good hope for her health and happiness. Tell us when you write, with as much particularity as you can, how it stands with you, and all your household; with the Doctor, and the friends; what you do, and propose to do, and whether you will yet come to America, one good day?

Yours with love,
R. Waldo Emerson

LXXIV. Carlyle to Emerson

Templand, Thornhill, Dumfries, Scotland 28 March, 1842

My Dear Friend, — This is heavy news that you send me; the heaviest outward bereavement that can befall a man has overtaken you. Your calm tone of deep, quiet sorrow, coming in on the rear of poor trivial worldly businesses, all punctually despatched and recorded too, as if the Higher and Highest had not been busy with you, tells me a sad tale. What can we say in these cases? There is nothing to be said, — nothing but what the wild son of Ishmael, and every thinking heart, from of old have learned to say: God is great! He is terrible and stern; but we know also He is good. “Though He slay me, yet will I trust in Him.” Your bright little Boy, chief of your possessions here below, is rapt away from you; but of very truth he is with God, even as we that yet live are, — and surely in the way that was best for him, and for you, and for all of us. — Poor Lidian Emerson, poor Mother! To her I have no word. Such poignant unspeakable grief, I believe, visits no creature as that of a Mother bereft of her child. The poor sparrow in the bush affects one with pity, mourning for its young; how much more the human soul of one’s Friend! I cannot bid her be of comfort; for there is as yet no comfort. May good Influences watch over her, bring her some assuagement. As the Hebrew David said, “We shall go to him, he will not return to us.”

I also am here in a house rendered vacant and sacred by Death. A sore calamity has fallen on us, or rather has fallen on my poor Wife (for what am I but like a spectator in comparison?): she has lost unexpectedly her good Mother, her sole surviving Parent, and almost only relative of much value that was left to her. The manner too was almost tragic. We had heard of illness here, but only of commonplace illness, and had no alarm. The Doctor himself, specially applied to, made answer as if there was no danger: his poor Patient, in whose character the like of that intimately lay, had rigorously charged him to do so: her poor Daughter was far off, confined to her room by illness of her own; why alarm her, make her wretched? The danger itself did seem over; the Doctor accordingly obeyed. Our first intimation of alarm was despatched on the very day which proved the final one. My poor Wife, casting sickness behind her, got instantly ready, set off by the first railway train: traveling all night, on the morrow morning at her Uncle’s door in Liverpool she is met by tidings that all is already ended. She broke down there; she is now home again at Chelsea, a cheery, amiable younger Jane Welsh to nurse her: the tone of her Letters is still full of disconsolateness. I had to proceed hither, and have to stay here till this

establishment can be abolished, and all the sad wrecks of it in some seemly manner swept away. It is above three weeks that I have been here; not till eight days ago could I so much as manage to command solitude, to be left altogether alone. I lead a strange life; full of sadness, of solemnity, not without a kind of blessedness. I say it is right and fitting that one be left entirely alone now and then, alone with one's own griefs and sins, with the mysterious ancient Earth round one, the everlasting Heaven over one, and what one can make of these. Poor rustic businesses, subletting of Farms, disposal of houses, household goods: these strangely intervene, like matter upon spirit, every day; — wholesome this too perhaps. It is many years since I have stood so in close contact face to face with the reality of Earth, with its haggard ugliness, its divine beauty, its depths of Death and of Life. Yesterday, one of, the stillest Sundays, I sat long by the side of the swift river Nith; sauntered among woods all vocal only with rooks and pairing birds.* The hills are often white with snow-powder, black brief spring-tempests rush fiercely down from them, and then again the sky looks forth with a pale pure brightness, — like Eternity from behind Time. The *Sky*, when one thinks of it, is *always* blue, pure changeless azure; rains and tempests are only for the little dwellings where men abide. Let us think of this too. Think of this, thou sorrowing Mother! Thy Boy has escaped many showers.

* “Templand has a very fine situation; old Walter's walk, at the south end of the house, was one of the most picturesque and pretty to be found in the world. Nith valley (river half a mile off, winding through green holms, now in its border of clean shingle, now lost in pleasant woods and rushes) lay patent to the South. “Carlyle's Reminiscences,” Vol. II. p. 137.

In some three weeks I shall probably be back at Chelsea. Write thitherward so soon as you have opportunity; I will write again before long, even if I do not hear from you. The moneys, &c. are all safe here as you describe: if Fraser's' Executors make any demur, your Bookseller shall soon hear of it.

I had begun to write some Book on Cromwell: I have often begun, but know not how to set about it; the most unutterable of all subjects I ever felt much meaning to lie in. There is risk yet that, with the loss of still farther labor, I may have to abandon it; — and then the great dumb Oliver may lie unspoken forever; gathered to the mighty *Silent* of the Earth; for, I think, there will hardly ever live another man that will believe in him and his Puritanism as I do. To *him* small matter.

Adieu, my good kind Friend, ever dear to me, dearer now in sorrow. My Wife when she hears of your affliction will send a true thought over to you also. The poor Lidian! — John Sterling is driven off again, setting out I think this very day

for Gibraltar, Malta, and Naples. Farewell, and better days to us.

Your affectionate
T. Carlyle

LXXV. Emerson to Carlyle

Concord, 81 March, 1842

My Dear Carlyle, — I wrote you a letter from my brother's office in New York nearly a month ago to tell you how hardly it had fared with me here at home, that the eye of my home was plucked out when that little innocent boy departed in his beauty and perfection from my sight. Well, I have come back hither to my work and my play, but he comes not back, and I must simply suffer it. Doubtless the day will come which will resolve this, as everything gets resolved, into light, but not yet.

I write now to tell you of a piece of life. I wish you to know that there is shortly coming to you a man by the name of Bronson Alcott. If you have heard his name before, forget what you have heard. Especially if you have ever read anything to which this name was attached, be sure to forget that; and, inasmuch as in you lies, permit this stranger when he arrives at your gate to make a new and primary impression. I do not wish to bespeak any courtesies or good or bad opinion concerning him. You may love him, or hate him, or apathetically pass by him, as your genius shall dictate; only I entreat this, that you do not let him go quite out of your reach until you are sure you have seen him and know for certain the nature of the man. And so I leave contentedly my pilgrim to his fate.

I should tell you that my friend Margaret Fuller, who has edited our little *Dial* with such dubious approbation on the part of you and other men, has suddenly decided a few days ago that she will edit it no more. The second volume was just closing; shall it live for a third year? You should know that, if its interior and spiritual life has been ill fed, its outward and bibliopolic existence has been worse managed. Its publishers failed, its short list of subscribers became shorter, and it has never paid its laborious editor, who has been very generous of her time and labor, the smallest remuneration. Unhappily, to me alone could the question be put whether the little aspiring starveling should be reprieved for another year. I had not the cruelty to kill it, and so must answer with my own proper care and nursing for its new life. Perhaps it is a great folly in me who have little adroitness in turning off work to assume this sure vexation, but the *Dial* has certain charms to me as an opportunity, which I grudge to destroy. Lately at New York I found it to be to a certain class of men and women, though few, an object of tenderness and religion. You cannot believe it?

Mr. Lee,* who brings you this letter, is the son of one of the best men in Massachusetts, a man whose name is a proverb among merchants for his probity, for his sense and his information. The son, who bears his father's name, is a

favorite among all the young people for his sense and spirit, and has lived always with good people.

* Mr. Henry Lee. ——— ———

I have read at New York six out of eight lectures on the Times which I read this winter in Boston. I found a very intelligent and friendly audience. The penny papers reported my lectures, somewhat to my chagrin when I tried to read them; many persons came and talked with me, and I felt when I came away that New York is open to me henceforward whenever my Boston parish is not large enough. This summer, I must try to set in order a few more chapters from these rambling lectures, one on "The Poet" and one on "Character" at least. And now will you not tell me what you read and write? Is it Cromwell still? For I supposed from the *Westminster* piece that the laborer must be in that quarter.

I send herewith a new *Dial*, No. 8, and the last of this dispensation. I hope you have received every number. They have been sent in order. I have written no line in this Number. I send a letter for Sterling, as I do not know whether his address is still at Falmouth. Is he now a preacher? By the "Acadia" you should have received a letter of exchange on the Barings, and another on James Fraser's estate.

With constant good hope for yourself and for your wife, I am your friend,

— R.W. Emerson

VOLUME II

“To my friend I write a letter, and from him I receive a letter. It is a spiritual gift, worthy of him to give, and of me to receive.” — Emerson “What the writer did actually mean, the thing he then thought of, the thing he then was.” — Carlyle

LXXVI. Emerson to Carlyle

Concord, 1 July, 1842

My Dear Carlyle, — I have lately received from our slow friends, James Munroe & Co., \$246 on account of their sales of the *Miscellanies*, — and I enclose a bill of Exchange for L51, which cost \$246.50. It is a long time since I sent you any sketch of the account itself, and indeed a long time since it was posted, as the booksellers say; but I will find a time and a clerk also for this.

I have had no word from you for a long space. You wrote me a letter from Scotland after the death of your wife's mother, and full of pity for me also; and since, I have heard nothing. I confide that all has gone well and prosperously with you; that the iron Puritan is emerging from the Past, in shape and stature as he lived; and you are recruited by sympathy and content with your picture; and that the sure repairs of time and love and active duty have brought peace to the orphan daughter's heart. My friend Alcott must also have visited you before this, and you have seen whether any relation could subsist betwixt men so differently excellent. His wife here has heard of his arrival on your coast, — no more.

I submitted to what seemed a necessity of petty literary patriotism, — I know not what else to call it, — and took charge of our thankless little *Dial*, here, without subscribers enough to pay even a publisher, much less any laborer; it has no penny for editor or contributor, nothing but abuse in the newspapers, or, at best, silence; but it serves as a sort of portfolio, to carry about a few poems or sentences which would otherwise be transcribed and circulated; and always we are waiting when somebody shall come and make it good. But I took it, as I said, and it took me, and a great deal of good time, to a small purpose. I am ashamed to compute how many hours and days these chores consume for me. I had it fully in my heart to write at large leisure in noble mornings opened by prayer or by readings of Plato or whomsoever else is dearest to the Morning Muse, a chapter on Poetry, for which all readings, all studies, are but preparation; but now it is July, and my chapter is rudest beginnings. Yet when I go out of doors in the summer night, and see how high the stars are, I am persuaded that there is time enough, here or somewhere, for all that I must do; and the good world manifests very little impatience.

Stearns Wheeler, the Cambridge tutor, a good Grecian, and the editor, you will remember, of your American Editions, is going to London in August probably, and on to Heidelberg, &c. He means, I believe, to spend two years in Germany, and will come to see you on his way; a man whose too facile and good-natured manners do some injustice to his virtues, to his great industry and

real knowledge. He has been corresponding with your Tennyson, and editing his Poems here. My mother, my wife, my two little girls, are well; the youngest, Edith, is the comfort of my days. Peace and love be with you, with you both, and all that is yours.

— R. W. Emerson

In our present ignorance of Mr. Alcott's address I advised his wife to write to your care, as he was also charged to keep you informed of his place. You may therefore receive letters for him with this.

LXXVII. Carlyle to Emerson

Chelsea, London, 19 July, 1842

My Dear Emerson, — Lest Opportunity again escape me, I will take her, this time, by the forelock, and write while the matter is still hot. You have been too long without hearing of me; far longer, at least, than I meant. Here is a second Letter from you, besides various intermediate Notes by the hands of Friends, since that Templand Letter of mine: the Letter arrived yesterday; my answer shall get under way today.

First under the head of business let it be authenticated that the Letter enclosed a Draft for L51; a new, unexpected munificence out of America; which is ever and anon dropping gifts upon me, — to be received, as indeed they partly are, like Manna dropped out of the sky; the gift of unseen Divinities! The last money I got from you changed itself in the usual soft manner from dollars into sovereigns, and was what they call “all right,” — all except the little Bill (of Eight Pounds and odds, I think) drawn on Fraser’s Executors by Brown (Little and Brown?); which Bill the said Executors having refused for I know not what reason, I returned it to Brown with note of the dishonor done it, and so the sum still stands on his Books in our favor. Fraser’s people are not now my Booksellers, except in the matter of your *Essays* and a second edition of *Sartor*; the other Books I got transferred to a certain pair of people named “Chapman and Hall, 186 Strand”; which operation, though (I understand) it was transacted with great and vehement reluctance on the part of the Fraser people, yet produced no *quarrel* between them and me, and they still forward parcels, &c., and are full of civility when I see them: — so that whether this had any effect or none in their treatment of Brown and his Bill I never knew; nor indeed, having as you explained it no concern with Brown’s and their affairs, did I ever happen to inquire. I avoid all Booksellers; see them rarely, the blockheads; study never to think of them at all. Book-sales, reputation, profit, &c., &c.; all this at present is really of the nature of an encumbrance to me; which I study, not without success, to sweep almost altogether out of my head. One good is still possible to me in Life, one only: To screw a little more work out of myself, my miserable, despicable, yet living, acting, and so far imperial and celestial *self*; and this, God knows, is difficulty enough without any foreign one!

You ask after *Cromwell*: ask not of him; he is like to drive me mad. There he lies, shining clear enough to me, nay glowing, or painfully burning; but far down; sunk under two hundred years of Cant, Oblivion, Unbelief, and Triviality of every kind: through all which, and to the top of all which, what mortal

industry or energy will avail to raise him! A thousand times I have rued that my poor activity ever took that direction. The likelihood still is that I may abandon the task undone. I have bored through the dreariest mountains of rubbish; I have visited Naseby Field, and how many other unintelligible fields and places; I have &c., &c.: — alas, what a talent have I for getting into the Impossible! Meanwhile my studies still proceed; I even take a ghoulish kind of pleasure in raking through these old bone-houses and burial-aisles now; I have the strangest fellowship with that huge Genius of DEATH (universal president there), and catch sometimes, through some chink or other, glimpses into blessed *ulterior* regions, — blessed, but as yet altogether *silent*. There is no use of writing of things past, unless they can be made in fact things present: not yesterday at all, but simply today and what it holds of fulfilment and of promises is *ours*: the dead ought to bury their dead, ought they not? In short, I am very unfortunate, and deserve your prayers, — in a quiet kind of way! If you lose tidings of me altogether, and never hear of me more, — consider simply that I have gone to my natal element, that the Mud Nymphs have sucked me in; as they have done several in their time!

Sterling was here about the time your Letters to him came: your American reprint of his pieces was naturally gratifying him much.* He seems getting yearly more restless; necessitated to find an outlet for himself, unable as yet to do it well. I think he will now write Review articles for a while; which craft is really, perhaps, the one he is fittest for hitherto. I love Sterling: a radiant creature; but very restless; — incapable either of rest or of effectual motion: aurora borealis and sheet lightning; which if it could but *concentrate* itself, as I [say] always — ! — We had much talk; but, on the whole, even his talk is not much better for me than silence at present. *Me miserum!*

—— — * “The Poetical Works of John Sterling,” Philadelphia, 1842.

Directly about the time of Sterling’s departure came Alcott, some two weeks after I had heard of his arrival on these shores. He has been twice here, at considerable length; the second time, all night. He is a genial, innocent, simple-hearted man, of much natural intelligence and goodness, with an air of rusticity, veracity, and dignity withal, which in many ways appeals to one. The good Alcott: with his long, lean face and figure, with his gray worn temples and mild radiant eyes; all bent on saving the world by a return to acorns and the golden age; he comes before one like a kind of venerable Don Quixote, whom nobody can even laugh at without loving!....

My poor Wife is still weak, overshadowed with sorrow: her loss is great, the

loss almost as of the widow's mite; for except her good Mother she had almost no kindred left; and as for friends — they are not rife in this world. — God be thanked withal they are not entirely non-extant! Have I not a Friend, and Friends, though they too are in sorrow? Good be with you all.

— T. Carlyle.

By far the valuablest thing that Alcott brought me was the Newspaper report of Emerson's last Lectures in New York. Really a right wholesome thing; radiant, fresh as the *morning*; a thing *worth* reading; which accordingly I clipped from the Newspaper, and have in a state of assiduous circulation to the comfort of many. — I cannot bid you quit the *Dial*, though it, too, alas, is Antinomian somewhat! *Perge, perge*, nevertheless. — And so now an end.

— T. C.

LXXVIII. Carlyle to Emerson

Chelsea, London, 29 August, 1842

My Dear. Emerson, — This, morning your new Letter, of the 15th August, has arrived;* exactly one fortnight old: thanks to the gods and steam-demons! I already, perhaps six weeks ago, answered your former Letter, — acknowledging the manna-gift of the L51, and other things; nor do I think the Letter can have been lost, for I remember putting it into the Post-Office myself. Today I am on the eve of an expedition into Suffolk, and full of petty business: however, I will throw you one word, were it only to lighten my own heart a little. You are a kind friend to me, and a precious; — and when I mourn over the impotence of Human Speech, and how each of us, speak or write as he will, has to stand *dumb*, cased up in his own unutterabilities, before his unutterable Brother, I feel always as if Emerson were the man I could soonest *try* to speak with, — were I within reach of him! Well; we must be content. A pen is a pen, and worth something; though it expresses about as much of a *man's* meaning perhaps as the stamping of a hoof will express of a horse's meaning; a very poor expression indeed!

* This letter of 15th August is missing.

Your bibliopolic advice about Cromwell or my next Book shall be carefully attended, if I live ever to write another Book! But I have again got down into primeval Night; and live alone and mute with the *Manes*, as you say; uncertain whether I shall ever more see day. I am partly ashamed of myself; but cannot help it. One of my grand difficulties I suspect to be that I cannot write *two Books at once*; cannot be in the seventeenth century and in the nineteenth at one and the same moment; a feat which excels even that of the Irishman's bird: "Nobody but a bird can be in two places at once!" For my heart is sick and sore in behalf of my own poor generation; nay, I feel withal as if the one hope of help for it consisted in the possibility of new Cromwells and new Puritans: thus do the two centuries stand related to me, the seventeenth *worthless* except precisely in so far as it can be made the nineteenth; and yet let anybody try that enterprise! Heaven help me. — I believe at least that I ought *to hold my tongue*; more especially at present.

Thanks for asking me to write you a word in the *Dial*. Had such a purpose struck me long ago, there have been many things passing through my head, — march-marching as they ever do, in long drawn, scandalous Falstaff-regiments (a man ashamed to be seen passing through Coventry with such a set!) — some one of which, snatched out of the ragged rank, and dressed and drilled a little, might

perhaps fitly have been saved from Chaos, and sent to the *Dial*. In future we shall be on the outlook. I love your *Dial*, and yet it is with a kind of shudder. You seem to me in danger of dividing yourselves from the Fact of this present Universe, in which alone, ugly as it is, can I find any anchorage, and soaring away after Ideas, Beliefs, Revelations, and such like, — into perilous altitudes, as I think; beyond the curve of perpetual frost, for one thing! I know not how to utter what impression you give me; take the above as some stamping of the fore-hoof. Surely I could wish you *returned* into your own poor nineteenth century, its follies and maladies, its blind or half-blind, but gigantic toilings, its laughter and its tears, and trying to evolve in some measure the hidden Godlike that lies in it; — that seems to me the kind of feat for literary men. Alas, it is so easy to screw one's self up into high and ever higher altitudes of Transcendentalism, and see nothing under one but the everlasting snows of Himmalayah, the Earth shrinking to a Planet, and the indigo firmament sowing itself with daylight stars; easy for *you*, for me: but whither does it lead? I dread always, To inanity and mere injuring of the lungs!— “Stamp, Stamp, Stamp!” — Well, I do believe, for one thing, a man has no right to say to his own generation, turning quite away from it, “Be damned!” It is the whole Past and the whole Future, this same cotton-spinning, dollar-hunting, canting and shrieking, very wretched generation of ours. Come back into it, I tell you; — and so for the present will “stamp” no more....

Adieu, my friend; I must not add a word more. My Wife is out on a visit; it is to bring her back that I am now setting forth for Suffolk. I hope to see Ely too, and St. Ives, and Huntingdon, and various *Cromwelliana*. My blessings on the Concord Household now and always. Commend me expressly to your Wife and your Mother. Farewell, dear friend.

— T. Carlyle

LXXIX. Emerson to Carlyle

Concord, 15 October, 1842

My Dear Carlyle, — I am in your debt for at least two letters since I sent you any word. I should be well content to receive one of these stringent epistles of bark and steel and mellow wine with every day's post, but as there is no hope that more will be sent without my writing to signify that these have come, I hereby certify that I love you well and prize all your messages. I read with special interest what you say of these English studies, and I doubt not the Book is in steady progress again. We shall see what change the changed position of the author will make in the book. The first *History* expected its public; the second is written to an expecting people. The tone of the first was proud, — to defiance; we will see if applauses have mitigated the master's temper. This time he has a hero, and we shall have a sort of standard to try, by the hero who fights, the hero who writes. Well; may grand and friendly spirits assist the work in all hours; may impulses and presences from that profound world which makes and embraces the whole of humanity, keep your feet on the Mount of Vision which commands the Centuries, and the book shall be an indispensable Benefit to men, which is the surest fame. Let me know all that can be told of your progress in it. You shall see in the last *Dial* a certain shadow or mask of yours, "another Richmond," who has read your lectures and profited thereby.* Alcott sent me the paper from London, but I do not know the name of the writer.

As for Alcott, you have discharged your conscience of him manfully and knightly; I absolve you well... He is a great man and was made for what is greatest, but I now fear that he has already touched what best he can, and through his more than a prophet's egotism, and the absence of all useful reconciling talents, will bring nothing to pass, and be but a voice in the wilderness. As you do not seem to have seen in him his pure and noble intellect, I fear that it lies under some new and denser clouds.

—— — * An article on Cromwell, in the *Dial* for October, 1842. ——

For the *Dial* and its sins, I have no defence to set up. We write as we can, and we know very little about it. If the direction of these speculations is to be deplored, it is yet a fact for literary history, that all the bright boys and girls in New England, quite ignorant of each other, take the world so, and come and make confession to fathers and mothers, — the boys that they do not wish to go into trade, the girls that they do not like morning calls and evening parties. They are all religious, but hate the churches; they reject all the ways of living of other

men, but have none to offer in their stead. Perhaps, one of these days, a great Yankee shall come, who will easily do the unknown deed.

The booksellers have sent me accounts lately, but — I know not why — no money. Little and Brown from January to July had sold very few books. I inquired of them concerning the bill of exchange on Fraser's Estate, which you mention, and they said it had not been returned to them, but only some information, as I think, demanded by Fraser's administrator, which they had sent, and, as they heard nothing again, they suppose that it is allowed and paid to you. Inform me on this matter.

Munroe & Co. allow some credits, but charge more debits for binding, &c., and also allege few sales in the hard times. I have got a good friend of yours, a banking man, to promise that he will sift all the account and see if the booksellers have kept their promises. But I have never yet got all the papers in readiness for him. I am looking to see if I have matter for new lectures, having left behind me last spring some half-promises in New York. If you can remember it, tell me who writes about Loyola and Xavier in the *Edinburgh*. Sterling's papers — if he is near you — are all in Mr. Russell's hands.* I played my part of Fadladeen with great rigor, and sent my results to Russell, but have not now written to J. S.

Yours,
R.W.E.

* Mr. A.L. Russell, who had been instrumental in procuring the American edition of Sterling's *Poetical Works*.

LXXX. Carlyle to Emerson

Chelsea, London, 19 November, 1842

My Dear Emerson, — Your Letter finds me here today; busied with many things, but not likely to be soon more at leisure; wherefore I may as well give myself the pleasure of answering it on the spot. The Fraser Bill by Brown and Little has come all right; the Dumfries Banker apprises me lately that he has got the cash into his hands. Pray do not pester yourself with these Bookseller unintelligibilities: I suppose their accounts are all reasonably correct, the cheating, such as it is, done according to rule: what signifies it at any rate? I am no longer in any vital want of money; alas, the want that presses far heavier on me is a want of faculty, a want of *sense*; and the feeling of that renders one comparatively very indifferent to money! I reflect many times that the wealth of the Indies, the fame of ten Shakespeares or ten Mahomets, would at bottom do me no good at all. Let us leave these poor slaves of the Ingot and slaves of the Lamp to their own courses, — within a *certain* extent of halter!

What you say of Alcott seems to me altogether just. He is a man who has got into the Highest intellectual region, — if that be the Highest (though in that too there are many stages) wherein a man can believe and discern for himself, without need of help from any other, and even in opposition to all others: but I consider him entirely unlikely to accomplish anything considerable, except some kind of crabbed, semi-perverse, though still manful existence of his own; which indeed is no despicable thing. His “more than prophetic egoism,” — alas, yes! It is of such material that Thebaid Eremites, Sect-founders, and all manner of cross-grained fanatical monstrosities have fashioned themselves, — in very *high*, and in the highest regions, for that matter. Sect-founders withal are a class I do not like. No truly great man, from Jesus Christ downwards, as I often say, ever founded a Sect, — I mean wilfully intended founding one. What a view must a man have of this Universe, who thinks “*he* can swallow it all,” who is not doubly and trebly happy that he can keep it from swallowing him! On the whole, I sometimes hope we have now done with Fanatics and Agonistic Posture-makers in this poor world: it will be an immense improvement on the Past; and the “New Ideas,” as Alcott calls them, will prosper greatly the better on that account! The old gloomy Gothic Cathedrals were good; but the great blue Dome that hangs over all is better than any Cologne one. — On the whole, do not tell the good Alcott a word of all this; but let him love me as he can, and live on vegetables in peace; as I, living *partly* on vegetables, will continue to love him!

The best thing Alcott did while he staid among us was to circulate some

copies of your *Man the Reformer*.* I did not get a copy; I applied for one, so soon as I knew the right fountain; but Alcott, I think, was already gone. And now mark, — for this I think is a novelty, if you do not already know it: Certain Radicals have reprinted your Essay in Lancashire, and it is freely circulating there, and here, as a cheap pamphlet, with excellent acceptance so far as I discern. Various Newspaper reviews of it have come athwart me: all favorable, but all too shallow for sending to you. I myself consider it a *truly excellent* utterance; one of the best words you have ever spoken. Speak many more such. And whosoever will distort them into any “vegetable” or other crotchet, — let it be at his own peril; for the word itself is *true*; and will have to make itself a *fact* therefore; though not a distracted *abortive* fact, I hope! *Words* of that kind are not born into Facts in the *seventh month*; well if they see the light full-grown (they and their adjuncts) in the *second century*; for old Time is a most deliberate breeder! — But to speak without figure, I have been very much delighted with the clearness, simplicity, quiet energy and veracity of this discourse; and also with the fact of its spontaneous appearance here among us. The prime mover of the Printing, I find, is one Thomas Ballantyne, editor of a Manchester Newspaper, a very good, cheery little fellow, once a Paisley weaver as he informs me, — a great admirer of all worthy things.

— — —
* “A Lecture read before the Mechanics’ Apprentices’ Library Association, Boston, January 25, 1841.”
— — —

My paper is so fast failing, let me tell you of the writer on Loyola. He is a James Stephen, Head Under-Secretary of the Colonial Office, — that is to say, I believe, real governor of the British Colonies, so far as they have any governing. He is of Wilberforce’s creed, of Wilberforce’s kin; a man past middle age, yet still in full vigor; reckoned an enormous fellow for “despatch of business,” &c., especially by Taylor (*van Artevelde*) and others who are with him or under him in Downing Street.... I regard the man as standing on the confines of Genius and Dilettantism, — a man of many really good qualities, and excellent at the despatch of business. There we will leave him. — A Mrs. Lee of Brookline near you has made a pleasant Book about Jean Paul, chiefly by excerpting.* I am sorry to find Gunderode & Co. a decided weariness!** Cromwell — Cromwell? Do not mention such a word, if you love me! And yet — Farewell, my Friend, tonight!

Yours ever,
T. Carlyle

I will apprise Sterling before long: he is at Falmouth, and well; urging me much to start a Periodical here!

Gambardella promises to become a real Painter; there is a glow of real fire in the wild southern man: next to no *articulate* intellect or the like, but of inarticulate much, or I mistake. He has tried to paint *me* for you; but cannot, he says!

* “Life of Jean Paul Frederic Richter. Compiled from various Sources. Together with his Autobiography. Translated from the German.” In Two Volumes. Boston, 1842. This book, which is one of the best in English concerning Jean Paul, was the work of the late Mrs. Thomas (Eliza Buckminster) Lee.

** In the *Dial*, for January, 1842, is an article by Miss Fuller on “Bettine Brentano and Gunderode,” — a decided weariness. The Canoness Gunderode was a friend of Bettine’s, older and not much wiser than herself.

LXXXI. Carlyle to Emerson Chelsea, London, 11 March, 1848

Dear Emerson, — I know not whose turn it is to write; though a suspicion has long attended me that it was yours, and above all an indisputable wish that you would do it: but this present is a cursory line, all on business, — and as usual all on business of my own.

I have finished a Book, and just set the Printer to it; one solid volume (rather bigger than one of the *French Revolution* Volumes, as I compute); it is a somewhat fiery and questionable “Tract for the Times,” *not* by a Puseyite, which the terrible aspect of things here has forced from me, — I know not whether as preliminary to *Oliver* or not; but it had gradually grown to be the preliminary of anything possible for me: so there it is written; and I am a very sick, but withal a comparatively very free man. The Title of the thing is to be *Past and Present*: it is divided into Four Books, “Book I. Proem,” “Book II. The Ancient Monk,” “Book III. The Modern Worker,” and “Book IV. Horoscope” (or some such thing): — the size of it I guessed at above.

The practical business, accordingly, is: How to cut out that New York scoundrel, who fancies that because there is no gallows it is permitted to steal? I have a distinct desire to do that; — altogether apart from the money to be gained thereby. A friend’s goodness ought not to be frustrated by a scoundrel destitute of gallows. — You told me long since how to do the operation; and here, according to the best way I had of fitting your scheme into my materials, is my way of attempting it.

The Book will not be out here for six good weeks from this date; it could be kept back for a week or two longer, if that were indispensable: but I hope it may not. In three weeks, half of it will be printed; I, in the meanwhile, get a correct manuscript Copy of the latter half made ready: joining the printed sheets and this manuscript, your Bookseller will have a three weeks’ start of any rival, if I instantly despatch the Parcel to him. Will this do? this with the announcement of the Title as given above? Pray write to me straightway, and say. Your answer will be here before we can publish; and the Packet of Proof-sheets and Manuscript may go off whether there be word from you or none. — And so enough of *Past and Present*. And indeed enough of all things, for my haste is excessive in these hours.

The last *Dial* came to me about three weeks ago *as a Post-Letter*, charged something like a guinea of postage, if I remember; so it had to be rejected, and I have not yet seen that Number; but will when my leeway is once brought up a little again. The two preceding Numbers were, to a marked extent, more like life

than anything I had seen before of the *Dial*. There was not indeed anything, except the Emersonian Papers alone, which I know by the first ring of them on the tympanum of the mind, that I properly speaking *liked*; but there was much that I did not dislike, and did half like; and I say, “*I fausto pede*; that will decidedly do better!” By the bye, it were as well if you kept rather a strict outlook on Alcott and his English *Tail*, — I mean so far as we here have any business with it. Bottomless imbeciles ought not to be seen in company with Ralph Waldo Emerson, who has already men listening to him on this side of the water. The “Tail” has an individual or two of that genus, — and the rest is mainly yet undecided. For example, I knew old — myself; and can testify, if you will believe me, that few greater blockheads (if “blockhead” may mean “exasperated imbecile” and the ninth part of a thinker) broke the world’s bread in his day. Have a care of such! I say always to myself, — and to you, which you forgive me.

Adieu, my dear Emerson. May a good Genius guide you; for you are *alone*, *alone*; and have a steep pilgrimage to make, — leading *high*, if you do not slip or stumble!

Ever your affectionate,
T. Carlyle

LXXXII. Carlyle to Emerson

Chelsea, 1 April, 1843

My Dear Carlyle, — Along with this Letter there will go from Liverpool, on the 4th instant, the promised Parcel, complete Copy of the Book called *Past and Present*, of which you already had two simultaneous announcements.* The name of the Steam Packet, I understand, is the “Britannia.” I have addressed the Parcel to the care of “Messrs. Little and Brown, Booksellers, Boston,” with your name atop: I calculate it will arrive safe enough.

* The letter making the second announcement, being very similar to the preceding, is omitted.

About one hundred pages of the Manuscript Copy have proved superfluous, the text being there also in a printed shape; I had misestimated the Printer’s velocity; I was anxious too that there should be no failure as to time. The Manuscript is very indifferent in that section of it; the damage therefore is smaller: your press-corrector can acquaint himself with the *hand*, &c. by means of it. A poor young governess, confined to a horizontal posture, and many sad thoughts, by a disease of the spine, was our artist in that part of the business: her writing is none of the distinctest; but it was a work of Charity to give it her. I hope the thing is all as correct as I could make it. I do not bethink me of anything farther I have to add in the way of explanation.

In fact, my prophecy rather is at present that the gibbetless thief at New York, will beat us after all! Never mind if he do. To say truth, I myself shall almost be glad: there has been a botheration in this anxious arrangement of parts correcting of scrawly manuscript copies of what you never wished to read more, and insane terror withal of having your own Manuscript burnt or lost, — that has exceeded my computation. Not to speak of this trouble in which I involve you, my Friend; which, I truly declare, makes me ashamed! True one *is* bound to resist the Devil in all shapes; if a man come to steal from you, you will put on what locks and padlocks are at hand, and not on the whole say, “Steal, then!” But if the locks prove insufficient, and the thief do break through, — that side of the alternative also will suit you very well; and, with perhaps a faint prayer for gibbets when they are necessary, you will say to him, next time, “*Macte virtute*, my man.”

All is in a whirl with me here today; no other topic but this very poor one can be entered upon. I hope for a letter from your own hand soon, and some news about still more interesting matters.

Adieu, my Friend; I feel still as if, in several senses, you stood alone with me under the sky at present!*

— * The signature to this letter has been cut off. —

LXXXIII. Emerson to Carlyle

Concord, 29 April, 1843

My Dear Carlyle, — It is a pleasure to set your name once more at the head of a sheet. It signifies how much gladness, how much wealth of being, that the good, wise, man-cheering, man-helping friend, though unseen, lives there yonder, just out of sight. Your star burns there just below our eastern horizon, and fills the lower and upper air with splendid and splendescant auroras. By some refraction which new lenses or else steamships shall operate, shall I not yet one day see again the disk of benign Phosphorus? It is a solid joy to me, that whilst you work for all, you work for me and with me, even if I have little to write, and seldom write your name.

Since I last wrote to you, I found it needful, if only for the household's sake, to set some new lectures in order, and go to new congregations of men. I live so much alone, shrinking almost cowardly from the contact of worldly and public men, that I need more than others to quit home sometimes, and roll with the river of travelers, and live in hotels. I went to Baltimore, where I had an invitation, and read two lectures on New England. On my return, I stopped at Philadelphia, and, my Course being now grown to four lectures, read them there. At New York, my snowball was larger, and I read five lectures on New England. 1. Religion; 2. Trade; 3. Genius, Manners and Customs; 4. Recent literary and spiritual influences from abroad; 5. Domestic spiritual history. — Perhaps I have not quite done with them yet, but may make them the block of a new and somewhat larger structure for Boston, next winter. The newspaper reports of them in New York were such offensive misstatements, that I could not send you, as I wished, a sketch. Between my two speeches at Baltimore, I went to Washington, thirty-seven miles, and spent four days. The two poles of an enormous political battery, galvanic coil on coil, self-increased by series on series of plates from Mexico to Canada, and from the sea westward to the Rocky Mountains, here meet and play, and make the air electric and violent. Yet one feels how little, more than how much, man is represented there. I think, in the higher societies of the Universe, it will turn out that the angels are molecules, as the devils were always Titans, since the dulness of the world needs such mountainous demonstration, and the virtue is so modest and concentrating.

But I must not delay to acknowledge the arrival of your Book. It came ten or eleven days ago, in the "Britannia," with the three letters of different dates announcing it. — I have read the superfluous hundred pages of manuscript, and find it only too popular. Beside its abundance of brilliant points and proverbs,

there is a deep, steady tide taking in, either by hope or by fear, all the great classes of society, — and the philosophic minority also, by the powerful lights which are shed on the phenomenon. It is true contemporary history, which other books are not, and you have fairly set solid London city aloft, afloat in bright mirage in the air. I quarrel only with the popular assumption, which is perhaps a condition of the Humor itself, that the state of society is a new state, and was not the same thing in the days of Rabelais and of Aristophanes, as of Carlyle. Orators always allow something to masses, out of love to their own art, whilst austere philosophy will only know the particles. This were of no importance, if the historian did not so come to mix himself in some manner with his erring and grieving nations, and so saddens the picture; for health is always private and original, and its essence is in its unmixableness. — But this Book, with all its affluence of wit, of insight, and of daring hints, is born for a longevity which I will not now compute. — In one respect, as I hinted above, it is only too good, so sure of success, I mean, that you are no longer secure of any respect to your property in our freebooting America.

You must know that the cheap press has, within a few months, made a total change in our book markets. Every English book of any name or credit is instantly converted into a newspaper or coarse pamphlet, and hawked by a hundred boys in the streets of all of our cities for 25, 18, or 12 cents; Dickens's Notes for 12 cents, *Blackwood's Magazine* for 18 cents, and so on. Three or four great New York and Philadelphia printing-houses do this work, with hot competition. One prints Bulwer's novel yesterday, for 35 cents; and already, in twenty-four hours, another has a coarser edition of it for 18 cents, in all thoroughfares. — What to do with my sealed parcel of manuscripts and proofs? No bookseller would in these perilous circumstances offer a dollar for my precious parcel. I inquired of the lawyers whether I could not by a copyright protect my edition from piracy until an English copy arrived, and so secure a sale of a few weeks. They said, no; yet advised the taking a certificate of copyright, that we might try the case if we wished. After much consulting and balancing for a few hours, I decided to print, as heretofore, on our own account, an edition, but cheap, to make the temptation less, to retail at seventy-five cents. I print fifteen hundred copies, and announce to the public that it is your edition, and all good men must buy this. I have written to the great Reprinters, namely to Park Benjamin, and to the Harpers, of New York, to request their forbearance; and have engaged Little and Brown to publish, because, I think, they have something more of weight with Booksellers, and are a little less likely to be invaded than Munroe. If we sell a thousand copies at seventy-five cents, it will only yield you about two hundred dollars; if we should be invaded, we can then

afford to sell the other five hundred copies at twenty-five cents, without loss. In thus doing, I involve you in some risk; but it was the best course that occurred. — Hitherto, the *Miscellanies* have not been reprinted in the cheap forms; and in the last year, James Munroe & Co. have sold few copies; all books but the cheapest being unsold in the hard times; something has however accrued to your credit there. J.M. & Co. fear that, if the new book is pirated at New York and the pirate prospers, instantly the *Miscellanies* will be plundered. We will hope better, or at least exult in that which remains, to wit, a Worth unplunderable, yet infinitely communicable.

I have hardly space left to say what I would concerning the *Dial*. I heartily hoped I had done with it, when lately our poor, good, publishing Miss Peabody, ... wrote me that its subscription would not pay its expenses (we all writing for love). But certain friends are very unwilling it should die, and I a little unwilling, though very unwilling to be the life of it, as editor. And now that you are safely through your book, and before the greater Sequel rushes to its conclusion, send me, I pray you, that short chapter which hovers yet in the limbo of contingency, in solid letters and points. Let it be, if that is readiest, a criticism on the *Dial*, and this too Elysian race, not blood, and yet not ichor. — Let Jane Carlyle be on my part, and, watchful of his hours, urge the poet in the golden one. I think to send you a duplicate of the last number of the *Dial* by Mr. Mann,* who with his bride (sister of the above-mentioned Miss Peabody) is going to London and so to Prussia. He is little known to me, but greatly valued as a philanthropist in this State. I must go to work a little more methodically this summer, and let something grow to a tree in my wide straggling shrubbery. With your letters came a letter from Sterling, who was too noble to allude to his books and manuscript sent hither, and which Russell all this time has delayed to print; I know not why, but discouraged, I suppose, in these times by booksellers. I must know precisely, and write presently to J.S.

Farewell.

R.W. Emerson**

— * The late Horace Mann.

** The following passages from Emerson's Diary relating to *Past and Present* seem to have been written a few days after the preceding letter:— "How many things this book of Carlyle gives us to think! It is a brave grappling with the problem of the times, no luxurious holding aloof, as is the custom of men of letters, who are usually bachelors and not husbands in the state, but Literature here has thrown off his gown and descended into the open lists. The gods are

come among us in the likeness of men. An honest Iliad of English woes. Who is he that can trust himself in the fray? Only such as cannot be familiarized, but nearest seen and touched is not seen and touched, but remains inviolate, inaccessible, because a higher interest, the politics of a higher sphere, bring him here and environ him, as the Ambassador carries his country with him. Love protects him from profanation. What a book this in its relation to English privileged estates! How shall Queen Victoria read this? how the Primate and Bishops of England? how the Lords? how the Colleges? how the rich? and how the poor? Here is a book as full of treason as an egg is full of meat, and every lord and lordship and high form and ceremony of English conservatism tossed like a football into the air, and kept in the air with merciless rebounds and kicks, and yet not a word in the book is punishable by statute. The wit has eluded all official zeal, and yet these dire jokes, these cunning thrusts, — this flaming sword of cherubim waved high in air illuminates the whole horizon and shows to the eyes of the Universe every wound it inflicts. Worst of all for the party attacked, it bereaves them beforehand of all sympathy by anticipating the plea of poetic and humane conservation and impressing the reader with the conviction that Carlyle himself has the truest love for everything old and excellent, and a genuine respect for the basis of truth in those whom he exposes. Gulliver among the Lilliputians...

“Carlyle must write thus or nohow, like a drunken man who can run, but cannot walk. What a man’s book is that! no prudences, no compromises, but a thorough independence. A masterly criticism on the times. Fault perhaps the excess of importance given to the circumstance of today. The poet is here for this, to dwarf and destroy all merely temporary circumstance, and to glorify the perpetual circumstance of men, *e.g.* dwarf British Debt and raise Nature and social life.

“But everything must be done well once; even bulletins and almanacs must have one excellent and immortal bulletin and almanac. So let Carlyle’s be the immortal newspaper.” — — —

LXXXIV. Carlyle to Emerson

27 August, 1843

Dear Emerson, — The bearer of this is Mr. Macready, our celebrated Actor, now on a journey to America, who wishes to know you. In the pauses of a feverish occupation which he strives honestly to make a noble one, this Artist, become once more a man, would like well to meet here and there a true American man. He loves Heroes as few do; and can recognize them, you will find, whether they have on the *Cothurnus* or not. I recommend him to you; bid you forward him as you have opportunity, in this department of his pilgrimage.

Mr. Macready's deserts to the English Drama are notable here to all the world; but his dignified, generous, and every-way honorable deportment in private life is known fully, I believe, only to a few friends. I have often said, looking at him as a manager of great London theatres, "This Man, presiding over the unstablest, most chaotic province of English things, is the one public man among us who has dared to take his stand on what he understood to be *the truth*, and expect victory from that: he puts to shame our Bishops and Archbishops." It is literally so.

With continued kind wishes, yours as of old.

T. Carlyle

LXXXV. Emerson to Carlyle

Concord, 30 October, 1843

My Dear Friend, — I seize the occasion of having this morsel of paper for twenty-five pounds sterling from the booksellers to send you, (and which fail not to find enclosed, as clerks say,) to inquire whether you still exist in Chelsea, London, and what is the reason that my generous correspondent has become dumb for weary months. I must go far back to resume my thread. I think in April last I received your Manuscript, &c. of the Book, which I forthwith proceeded to print, after some perplexing debate with the booksellers, as I fully informed you in my letter of April or beginning of May. Since that time I have had no line or word from you. I must think that my letter did not reach you, or that you have written what has never come to me. I assure myself that no harm has befallen you, not only because you do not live in a corner, and what chances in your dwelling will come at least to my ears, but because I have read with great pleasure the story of Dr. Francia,* which gave the best report of your health and vivacity.

* Carlyle's article on Dr. Francia in the *Foreign Quarterly Review*, No. 62. Reprinted in his *Miscellanies*.

I wrote you in April or May an account of the new state of things which the cheap press has wrought in our book market, and specially what difficulties it put in the way of our edition of *Past and Present*. For a few weeks I believed that the letters I had written to the principal New York and Philadelphia booksellers, and the Preface, had succeeded in repelling the pirates. But in the fourth or fifth week appeared a mean edition in New York, published by one Collyer (an unknown person and supposed to be a mask of some other bookseller), sold for twelve and one half cents, and of this wretched copy several thousands were sold, whilst our seventy-five cents edition went off slower. There was no remedy, and we must be content that there was no expense from our edition, which before September had paid all its cost, and since that time has been earning a little, I believe. I am not fairly entitled to an account of the book from the publishers until the 1st of January.... I have never yet done what I have thought this other last week seriously to do, namely, to charge the good and faithful E.P. Clark, a man of accounts as he is a cashier in a bank, with the total

auditing and analyzing of these accounts of yours. My hesitation has grown from the imperfect materials which I have to offer him to make up so long a story. But he is a good man, and, do you know it? a Carlylese of that intensity that I have often heard he has collected a sort of album of several volumes, containing illustrations of every kind, historical, critical, &c., to the *Sartor*. I must go to Boston and challenge him. Once when I asked him, he seemed willing to assume it. No more of accounts tonight.

I send you by this ship a volume of translations from Dante, by Doctor Parsons of Boston, a practising dentist and the son of a dentist. It is his gift to you. Lately went Henry James to you with a letter from me. He is a fine companion from his intelligence, valor, and worth, and is and has been a very beneficent person as I learn. He carried a volume of poems from my friend and nearest neighbor, W. Ellery Channing, whereof give me, I pray you, the best opinion you can. I am determined he shall be a poet, and you must find him such.* I have too many things to tell you to begin at the end of this sheet, which after all this waiting I have been compelled to scribble in a corner, with company waiting for me. Send me instant word of yourself if you love me, and of those whom you love, and so God keep you and yours.

— R. Waldo Emerson

—— ——— — * In the second number of the *Dial*, in October, 1840, Emerson had published, under the title of “New Poetry,” an article warmly commending Mr. Channing’s then unpublished poems. —— —— —

LXXXVI. Carlyle to Emerson

Chelsea, London, 31 October, 1843

My Dear Emerson, — It is a long weary time since I have had the satisfaction of the smallest dialogue with you. The blame is all my own; the reasons would be difficult to give, — alas, they are properly no-reasons, children not of *Something*, but of mere Idleness, Confusion, Inaction, Inarticulation, of *Nothing* in short! Let us leave them there, and profit by the hour which yet is.

I ran away from London into Bristol and, South Wales, when the heats grew violent, at the end of June. South Wales, North Wales, Lancashire, Scotland: I roved about everywhere seeking some Jacob's-pillow on which to lay my head, and dream of things heavenly; — yes, that at bottom was my modest prayer, though I disguised it from myself and the result was, I could find no pillow at all; but sank into ever meaner restlessness, blacker and blacker biliary gloom, and returned in the beginning of September thoroughly eclipsed and worn out, probably the weariest of all men living under the sky. Sure enough I have a fatal talent of converting all Nature into Preternaturalism for myself: a truly horrible Phantasm-Reality it is to me; what of heavenly radiances it has, blended in close neighborhood, in intimate union, with the hideousness of Death and Chaos; — a very ghastly business indeed! On the whole, it is better to hold one's peace about it. I flung myself down on sofas here, — for my little Wife had trimmed up our little dwelling-place into quite glorious order in my absence, and I had only to lie down: there, in reading books, and other make-believe employments, I could at least keep silence, which was an infinite relief. Nay, gradually, as indeed I anticipated, the black vortexes and deluges have subsided; and now that it is past, I begin to feel myself better for my travels after all. For one thing, articulate speech having returned to me, — you see what use I make of it.

On the table of the London Library, voted in by some unknown benefactor whom I found afterwards to be Richard Milnes, there lay one thing highly gratifying to me: the last two Numbers of the *Dial*. It is to be one of our Periodicals henceforth; the current Number lies on the Table till the next arrive; then the former goes to the Binder; we have already, in a bound volume, all of it that Emerson has had the editing of. This is right. Nay, in Edinburgh, and indeed wherever ingenuous inquisitive minds were met with, I have to report that the said Emerson could number a select and most loving public; select, and I should say fast growing: for good and indifferent reasons it may behove the man to assure himself of this. Farther, to the horror of poor Nickerson (Bookseller Fraser's Successor), a certain scoundrel interloper here has reprinted *Emerson's*

Essays on grayish paper, to be sold at two shillings, — distracting Nickerson with the fear of change! I was glad at this, if also angry: it indicates several things. Nickerson has taken his measures, will reduce the price of his remaining copies; indeed, he informs me the best part of his edition was already sold, and he has even some color of money due from England to Emerson through me! With pride enough will I transmit this mournful, noble peculium: and after that, as I perceive, such chivalrous international doings must cease between us. *Past and Present*, some one told me, was, in spite of all your precautions, straightway sent forth in modest gray, and your benevolent speculation ruined. Here too, you see, it is the same. Such chivalries, therefore, are now impossible; for myself I say, “Well, let them cease; thank God they once were, the Memory of that can never cease with us!”

In this last Number of the *Dial* which by the bye your Bookseller never forwarded to me, I found one little Essay, a criticism on myself,* which, if it should do me mischief, may the gods forgive you for! It is considerably the most dangerous thing I have read for some years. A decided likeness of myself recognizable in it, as in the celestial mirror of a friend’s heart; but so enlarged, exaggerated, all *transfigured*, — the most delicious, the most dangerous thing! Well, I suppose I must try to assimilate it also, to turn it also to good, if I be able. Eulogies, dyslogies, in which one finds no features of one’s own natural face, are easily dealt with; easily left unread, as stuff for lighting fires, such is the insipidity, the wearisome *nonentity* of pabulum like that: but here is another sort of matter! “The beautifulest piece of criticism I have read for many a day,” says every one that speaks of it. May the gods forgive you! — I have purchased a copy for three shillings, and sent it to my Mother: one of the *indubitablest* benefits I could think of in regard to it.

* A criticism by Emerson of *Past and Present*, in the *Dial* for July, 1843. It embodies a great part of the extract from Emerson’s Diary given in a preceding note, and is well worth reading in full for its appreciation of Carlyle’s powers and defects.

There have been two friends of yours here in these very days: Dr. Russell, just returning from Paris; Mr. Parker, just bound thither.* We have seen them rather oftener than common, Sterling being in town withal. They are the best figures of strangers we have had for a long time; possessions, both of them, to fall in with in this pilgrimage of life. Russell carries friendliness in his eyes, a most courteous, modest, intelligent man; an English intelligence too, as I read, the best of it lying unspoken, not as a logic but as an instinct. Parker is a most hardy, compact, clever little fellow, full of decisive utterance, with humor and

good humor; whom I like much. They shine like suns, these two, amid multitudes of watery comets and tenebrific constellations, too sorrowful without such admixture on occasion!

—— ——— * Dr. Le Baron Russell; Theodore Parker. —— ——

As for myself, dear Emerson, you must ask me no questions till — alas, till I know not when! After four weary years of the most unreadable reading, the painfulest poking and delving, I have come at last to the conclusion — that I must write a Book on Cromwell; that there is no rest for me till I do it. This point fixed, another is not less fixed hitherto, That a Book on Cromwell is *impossible*. Literally so: you would weep for me if you saw how, between these two adamantine certainties, I am whirled and tumbled. God only knows what will become of me in the business. Patience, Patience!

By the bye, do you know a “Massachusetts Historical Society,” and a James Bowdoin, seemingly of Boston? In “Vol. II. third series” of their *Collections*, lately I met with a disappointment almost ludicrous. Bowdoin, in a kind of dancing, embarrassed style, gives long-winded, painfully minute account of certain precious volumes, containing “Notes of the Long Parliament,” which now stand in the New York Library; poises them in his assaying balance, speculates, prophesies, inquires concerning them: to me it was like news of the lost Decades of Livy. Good Heavens, it soon became manifest that these precious Volumes are nothing whatever but a wretched broken old dead manuscript copy of part of our printed *Commons Journals!* printed since 1745, and known to all barbers! If the Historical Society desired it, any Member of Parliament could procure them the whole stock, *Lords and Commons*, a wheelbarrowful or more, with no cost but the carriage. Every Member has the right to demand a copy, and few do it, few will let such a mass cross their door-threshold! This of Bowdoin’s is a platitude of some magnitude. — Adieu, dear Emerson. Rest not, haste not; you have work to do.

— T. Carlyle

LXXXVII. Carlyle to Emerson

Chelsea, London, 17 November, 1843

Dear Emerson, — About this time probably you will be reading a Letter I hurried off for you by Dr. Russell in the last steamer; and your friendly anxieties will partly be set at rest. Had I kept silence so very long? I knew it was a long while; but my vague remorse had kept no date! It behoves me now to write again without delay; to certify with all distinctness that I have safely received your Letter of the 30th October, safely the Bill for L25 it contained; — that you are a brave, friendly man, of most serene, beneficent way of life; and that I — God help me! —

By all means appoint this Mr. Clark to the honorary office of Account-keeper — if he will accept it! By Parker's list of questions from him, and by earlier reminiscences recalled on that occasion, I can discern that he is a man of lynx eyesight, of an all-investigating curiosity: if he will accept this sublime appointment, it will be the clearest case of elective affinity. Accounts to you must be horrible; as they are to me: indeed, I seldom read beyond the *last* line of them, if I can find the last; and one of the insupportabilities of Bookseller Accounts is that nobody but a wizard, or regular adept in such matters, can tell where the last line, and final net result of the whole accursed babblement, is to be found! By all means solicit Clark; — at all events, do you give it up, I pray you, and let the Booksellers do their own wise way. It really is not material; let the poor fellows have length of halter. Every new Bill from America comes to me like a kind of heavenly miracle; a reaping where I never sowed, and did not expect to reap: the quantity of it is a thing I can never bring in question. — For your English account with Nickerson I can yet say nothing more; perhaps about Newyear's-day the poor man will enable me to say something. I hear however that the Pirate has sold off, or nearly so, his Two-shillings edition of the *Essays*, and is preparing to print another; this, directly in the teeth of Cash and double-entry book-keeping, I take to be good news.

James is a very good fellow, better and better as we see him more. Something shy and skittish in the man; but a brave heart intrinsically, with sound, earnest sense, with plenty of insight and even humor. He confirms an observation of mine, which indeed I find is hundreds of years old, that a stammering man is never a worthless one. Physiology can tell you why. It is an excess of delicacy, excess of sensibility to the presence of his fellow-creature, that makes him stammer. Hammond l'Estrange says, "Who ever heard of a stammering man that was a fool?" Really there is something in that. — James is now off to the Isle of

Wight; will see Sterling at Ventnor there; see whether such an Isle or France will suit better for a winter residence.

W.E. Channing's *Poems* are also a kind gift from you. I have read the pieces *you had cut up for me*: worthy indeed of reading! That *Poem on Death* is the utterance of a valiant, noble heart, which in rhyme or prose I shall expect more news of by and by. But at bottom "Poetry" is a most suspicious affair for me at present! You cannot fancy the oceans of Twaddle that human Creatures emit upon me, in these times; as if, when the lines had a jingle in them, a Nothing could be Something, and the point were gained! It is becoming a horror to me, — as all speech without meaning more and more is. I said to Richard Milnes, "Now in honesty what is the use of putting your accusative *before* the verb, and otherwise entangling the syntax; if there really is an image of any object, thought, or thing within you, for God's sake let me have it the *shortest* way, and I will so cheerfully excuse the *omission* of the jingle at the end: cannot I do without that!" — Milnes answered, "Ah, my dear fellow, it is because we have no thought, or almost none; a little thought goes a great way when you put it into rhyme!" Let a man try to the very uttermost to *speak* what he means, before *singing* is had recourse to. Singing, in our curt English speech, contrived expressly and almost exclusively for "despatch of business," is terribly difficult. Alfred Tennyson, alone of our time, has proved it to be possible in some measure. If Channing will persist in melting such obdurate speech into music he shall have my true wishes, — my augury that it will take an enormous *heat* from him! — Another Channing,* whom I once saw here, sends me a Progress-of-the-Species Periodical from New York. *Ach Gott!* These people and their affairs seem all "melting" rapidly enough, into thaw-slush or one knows not what. Considerable madness is visible in them. *Stare super antiquas vias*: "No," they say, "we cannot stand, or walk, or do any good whatever there; by God's blessing, we will fly, — will not you! — here goes!" And their *flight*, it is as the flight of the unwinged, — of oxen endeavoring to fly with the "wings" of an ox! By such flying, universally practised, the "ancient ways" are really like to become very deep before long. In short, I am terribly sick of all that; — and wish it would stay at home at Fruitland, or where there is good pasture for it. Friend Emerson, alone of all voices, out of America, has sphere-music in him for me, — alone of them all hitherto; and is a prophecy and sure dayspring in the East; immeasurably cheering to me. God long prosper him; keep him duly apart from that bottomless hubbub which is not, at all cheering! And so ends my Litany for this day.

—— * The Reverend William Henry Channing. —— ——

The Cromwell business, though I punch daily at it with all manner of levers, remains immovable as Ailsa Crag. Heaven alone knows what I shall do with it. I see and say to myself, It is heroical; Troy Town was probably not a more heroic business; and this belongs to thee, to thy own people, — must it be dead forever? — Perhaps yes, — and kill me too into the bargain. Really I think it very shocking that we run to Greece, to Italy, to &c., &c., and leave all at home lying buried as a nonentity. Were I absolute Sovereign and Chief Pontiff here, there should be a study of the Old *English* ages first of all. I will pit Odin against any Jupiter of them; find Sea-kings that would have given Jason a Roland for his Oliver! We are, as you sometimes say, a book-ridden people, — a phantom-ridden people. — All this small household is well; salutes you and yours with love old and new. Accept this hasty messenger; accept my friendliest farewell, dear Emerson.

Yours ever,
T. Carlyle

LXXXVIII. Emerson to Carlyle

Concord, 31 December, 1843

My Dear Friend, — I have had two good letters from you, and it is fully my turn to write, so you shall have a token on this latest day of the year. I rejoice in this good will you bear to so many friends of mine, — if they will go to you, you must thank yourself. Best when you are mutually contented. I wished lately I might serve Mr. Macready, who sent me your letter. — I called on him and introduced him to Sam G. Ward, my friend and the best man in the city, and, besides all his personal merits, a master of all the offices of hospitality. Ward was to keep himself informed of Macready's times, and bring me to him when there was opportunity. But he stayed but a few days in Boston, and, Ward said, was in very good hands, and promised to see us when he returns by and by. I saw him in Hamlet, but should much prefer to see him as Macready.

I must try to entice Mr. Macready out here into my pines and alder bushes. Just now the moon is shining on snow-drifts, four, five, and six feet high, but, before his return, they will melt; and already this my not native but ancestral village, which I came to live in nearly ten years ago because it was the quietest of farming towns, and off the road, is found to lie on the directest line of road from Boston to Montreal, a railroad is a-building through our secretest woodlands, and, tomorrow morning, our people go to Boston in two hours instead of three, and, next June, in one. This petty revolution in our country matters was very odious to me when it began, but it is hard to resist the joy of all one's neighbors, and I must be contented to be carted like a chattel in the cars and be glad to see the forest fall. This rushing on your journey is plainly a capital invention for our spacious America, but it is more dignified and man-like to walk barefoot. — But do you not see that we are getting to be neighbors? a day from London to Liverpool; twelve or eleven to Boston; and an hour to Concord; and you have owed me a visit these ten years.

I mean to send with your January *Dial* a copy of the number for Sterling, as it contains a review of his tragedy and poems, by Margaret Fuller. I have not yet seen the article, and the lady affirms that it is very bad, as she was ill all the time she was writing; but I hope and believe better. She, Margaret Fuller, is an admirable person, whose writing gives feeble account of her. But I was to say that I shall send this *Dial* for J.S. to your care, as I know not the way to the Isle of Wight.

Enclosed in this letter I send a bill of exchange for L32 8s. 2d. payable by Baring & Co. It happens to represent an exact balance on Munroe's books, and

that slow mortal should have paid it before. I have not yet got to Clark, I who am a slow mortal, but have my eye fixed on him. Remember me and mine with kindest salutations to your wife and brother.

Ever yours,

R.W. Emerson

LXXXIX. Carlyle to Emerson

Chelsea, 31 January, 1844

Dear Emerson, Some ten days ago came your Letter with a new Draft of L32 and odd money in it: all safe; the Draft now gone into the City to ripen into gold and silver, the Letter to be acknowledged by some hasty response now and here. America, I say to myself looking at these money drafts, is a strange place; the highest comes out of it and the lowest! Sydney Smith is singing dolefully about doleful American repudiation, “*disowning of the soft impeachment*”; and here on the other hand is an American man, in virtue of whom America has become definable withal as a place from which fall heavenly manna-showers upon certain men, at certain seasons of history, when perhaps manna-showers were not the unneedfulest things! — We will take the good and the evil, here as elsewhere, and heartily bless Heaven.

But now for the Draft at the top of this leaf. One Colman,* a kind of Agricultural Missionary, much in vogue here at present, has given it me; it is Emerson’s, the net produce hitherto (all but two cents) of *Emerson’s Essays*. I enclose farther the Bookseller’s hieroglyph papers; unintelligible as all such are; but sent over to you for scrutiny by the expert. I gather only that there are some Five Hundred and odd of the dear-priced edition sold, some Two Hundred and odd still to sell, which the Bookseller says are (in spite of pirates) slowly selling; and that the half profit upon the whole adventure up to this date has been L24 15s. 11d. sterling, — equal, as I am taught, at \$4.88 per pound sterling, to \$121.02, for which, all but the cents, here is a draft on Boston, payable at sight. Pray have yourself straightway *paid*; that if there be any mistake or delay I may rectify it while time yet is. — I add, for the intelligence of the Bookseller-Papers, that Fraser, with whom the bargain originally stood, was succeeded by Nickerson; these are the names of the parties. And so, dear Friend; accept this munificent sum of Money; and expect a blessing with it if good wishes from the heart of man can give one. So much for that.

* The Reverend Henry Colman.

Did you receive a Dumfries Newspaper with a criticism in it? The author is one Gilfillan, a young Dissenting Minister in Dundee; a person of great talent, ingenuousness, enthusiasm, and other virtues; whose position as a Preacher of bare old Calvinism under penalty of death sometimes makes me tremble for him. He has written in that same Newspaper about all the notablest men of his time; Godwin, Corn-law Elliott and I know not all whom: if he publish the Book, I will take care to send it you.* I saw the man for the first time last autumn, at

Dumfries; as I said, his being a Calvinist Dissenting Minister, economically fixed, and spiritually with such germinations in him, forces me to be very reserved to him.

— * The sketches were published the next year in a volume under the title of *The Gallery of Literary Portraits*. —

John Sterling's *Dial* shall be forwarded to Ventnor in the Isle of Wight, whenever it arrives. He was here, as probably I told you, about two months ago, the old unresting brilliantly radiating man. He is now much richer in money than he was, and poorer by the loss of a good Mother and good Wife: I understand he is building himself a brave house, and also busy writing a poem. He flings too much "sheet-lightning" and unrest into me when we meet in these low moods of mine; and yet one always longs for him back again: "No doing with him or without him," the dog!

My thrice unfortunate Book on Cromwell, — it is a real descent to Hades, to Golgotha and Chaos! I feel oftenest as if it were possible to die one's self than to bring it into life. Besides, my health is in general altogether despicable, my "spirits" equal to those of the ninth part of a dyspeptic tailor! One needs to be able to go on in all kinds of spirits, in climate sunny or sunless, or it will never do. The planet Earth, says Voss, — take four hexameters from Voss:

Journeys this Earth, her eye on a Sun, through the heavenly spaces;
Joyous in radiance, or joyless by fits and swallowed in tempests;
Falters not, alters not, equal advancing, home at the due hour:
So thou, weather-proof, constant, may, equal with day, March!

I have not a moment more tonight; — and besides am inclined to write unprofitables if I persist. Adieu, my friend; all blessings be with you always.

Yours ever truly,
T. Carlyle

XC. Emerson to Carlyle Concord, 29 February, 1844

My Dear Carlyle, — I received by the last steamer your letter, and its prefixed order for one hundred and twenty-one dollars, which order I sent to Ward, who turned it at once into money. Thanks, dear friend, for your care and activity, which have brought me this pleasing and most unlooked for result. And I beg you, if you know any family representative of Mr. Fraser, to express my sense of obligation to that departed man. I feel a kindness not without some wonder for those good-natured five hundred Englishmen who could buy and read my miscellany. I shall not fail to send them a new collection, which I hope they will like better. My faith in the Writers, as an organic class, increases daily, and in the possibility to a faithful man of arriving at statements for which he shall not feel responsible, but which shall be parallel with nature. Yet without any effort I fancy I make progress also in the doctrine of Indifferency, and am certain and content that the truth can very well spare me, and have itself spoken by another without leaving it or me the worse. Enough if we have learned that music exists, that it is proper to us, and that we cannot go forth of it. Our pipes, however shrill and squeaking, certify this our faith in Tune, and the eternal Amelioration may one day reach our ears and instruments. It is a poor second thought, this literary activity.

Perhaps I am not made obnoxious to much suffering, but I have had happy hours enough in gazing from afar at the splendors of the Intellectual Law, to overpay me for any pains I know. Existence may go on to be better, and, if it have such insights, it never can be bad. You sometimes charge me with I know not what sky-blue, sky-void idealism. As far as it is a partiality, I fear I may be more deeply infected than you think me. I have very joyful dreams which I cannot bring to paper, much less to any approach to practice, and I blame myself not at all for my reveries, but that they have not yet got possession of my house and barn. But I shall not lose my love for books. I only worship Eternal Buddh in the retirements and intermissions of Brahma. — But I must not egotize and generalize to the end of my sheet, as I have a message or two to declare.

I enclose a bill of exchange on the Barings for thirty-six pounds; which is the sum of two recent payments of Munroe and of Little and Brown, whereof I do not despair you shall yet have some account in booksellers' figures. I have got so far with Clark as to have his consent to audit the accounts when I shall get energy and time enough to compile them out of my ridiculous Journal. Munroe begs me to say what possibly I have already asked for him, that, when the *History of Cromwell* is ready to be seen of men, you will have an entire copy of

the Manuscript taken, and sent over to us. Then will he print a cheap edition such as no one will undersell, and secure such a share of profit to the author as the cheap press allows. Perhaps only thirty or forty pounds would make it worth while to take the trouble. A valued friend of mine wishes to know who wrote (perhaps three years ago) a series of metaphysical articles in *Blackwood* on Consciousness. Can you remember and tell me? And now I commend you to the good God, you and your History, and the true kind wife who is always good to the eager Yankees, and am yours heartily, — R.W. Emerson

XCI. Carlyle to Emerson

Chelsea, 8 April, 1844

Dear Emerson, — Till within five minutes of the limit of my time, I had forgotten that this was the 3d of the Month; that I had a Letter to write acknowledging even money! Take the acknowledgment, given in all haste, not without a gratitude that will last longer: the Thirty-six pounds and odd shillings came safe in your Letter, a new unlooked-for Gift. America, I think, is like an amiable family teapot; you think it is all out long since, and lo, the valuable implement yields you another cup, and another! Many thanks to you, who are the heart of America to me.

Republishing for one's friend's sake, I find on consulting my Bookseller, is out here; we have Pirates waiting for every American thing of mark, as you have for every British; to the tender mercies of these, on both sides, I fancy the business must be committed. They do good too; as all does, even carrion: they send you *faster* abroad, if the world have any use for you; — oftenest it only thinks it has. Your *Essays*, the *Pirated Essays*, make an ugly yellow tatter of a Pamphlet, price 1s. 6d.; but the edition is all sold, I understand: and even Nickerson has not entirely ceased to sell. The same Pirate who pounced upon you made an attempt the other day on my poor *Life of Schiller*, but I put the due spoke in his wheel. They have sent me Lowell's *Poems*; they are bringing out Jean Paul's *Life*, &c., &c.; the hungry *Canaille*. It is strange that men should feel themselves so entirely at liberty to steal, simply because there is no gallows to hang them for doing it. Your new Book will be eagerly waited for by that class of persons; and also by another class which is daily increasing here.

The only other thing I am "not to forget" is that of the *Essay on Consciousness* in *Blackwood*. The writer of those Papers is one Ferrier, a Nephew of the Edinburgh Miss Ferrier who wrote *Marriage* and some other Novels; Nephew also of Professor Wilson (Christopher North), and married to one of his daughters. A man of perhaps five-and-thirty; I remember him in boyhood, while he was boarded with an Annandale Clergyman; I have seen him since manhood, and liked him well: a solid, square-visaged, dark kind of man, more like your Theodore Parker than any mutual specimen I can recollect.

He got the usual education of an Edinburgh Advocate; but found no practice at the Bar, nor sought any with due anxiety, I believe; addicted himself to logical meditations; — became, the other year, Professor of Universal History, or some such thing, in the Edinburgh University, and lectures with hardly any audience: a

certain *young* public wanted me to be that Professor there, but I knew better, —
Is this enough about Ferrier?

I will not add another word; the time being *past*, irretrievable except by half-
running!

Write us your Book; and be well and happy always!*

—— — * The signature has been cut off. —— —

XCII. Carlyle to Emerson

Chelsea, 5 August, 1844

Dear Emerson, — There had been a long time without direct news from you, till four days ago your Letter arrived. This day I understand to be the ultimate limit of the American Mail; yesterday, had it not been Sunday, would have been the limit: I write a line, therefore, though in very great haste.

Poor Sterling, even I now begin to fear, is in a very bad way. He had two successive attacks of spitting of blood, some three months ago or more; the second attack of such violence, and his previous condition then so weak, that the Doctor as good as gave up hope, — the poor Patient himself had from the first given it up. Our poor Friend has had so many attacks of that nature, and so rapidly always rallied from them, I gave no ear to these sinister prognostics; but now that I see the summer influences passing over him without visible improvement, and our good weather looking towards a close without so much strength added as will authorize even a new voyage to Madeira; — I too am at last joining in the general discouragement; all the sadder to me that I shut it out so long. Sir James Clark, our best-accredited Physician for such diseases, declares that Life, for certain months, may linger, with great pain; but that recovery is not to be expected. Great part of the lungs, it appears, is totally unserviceable for respiration; from the remainder, especially in times of coughing, it is with the greatest difficulty that breath enough is obtained. Our poor Patient passes the night in a sitting posture; cannot lie down: that fact sticks with me ever since I heard it! He is very weak, very pale; still “writes a great deal daily”; but does not wish to see anybody; declines to “see even Carlyle,” who offered to go to him. His only Brother, Anthony Sterling, a hardy soldier, lately withdrawn from the Army, and settled in this quarter, whom we often communicate with, is about going down to the Isle of Wight this week: he saw John four days ago, and brings nothing but bad news, — of which indeed this removal of his to the neighborhood of the scene is a practical testimony. The old Father, a Widower for the last two years, and very lonely and dispirited, seems getting feebler and feebler: he was here yesterday: a pathetic kind of spectacle to us. Alas, alas! But what can be said? I say Nothing; I have written only one Note to Sterling: I feel it probable that I shall never see him more, — nor his like again in this world. His disease, as I have from of old construed it, is a burning of him up by his own fire. The restless vehemence of the man, struggling in all ways these many years to find a legitimate outlet, and finding, except for transitory, unsatisfactory coruscations, none, has undermined its Clay Prison in

the weakest point (which proves to be the lungs), and will make outlet *there*. My poor Sterling! It is an old tragedy; and very stern whenever it repeats itself of new.

Today I get answer about Alfred Tennyson: all is right on that side. Moxon informs me that the Russell Books and Letter arrived duly, and were duly forwarded and safely received; nay, farther, that Tennyson is now in Town, and means to come and see me. Of this latter result I shall be very glad: Alfred is one of the few British or Foreign Figures (a not increasing number I think!) who are and remain beautiful to me; — a true human soul, or some authentic approximation thereto, to whom your own soul can say, Brother! — However, I doubt he will not come; he often skips me, in these brief visits to Town; skips everybody indeed; being a man solitary and sad, as certain men are, dwelling in an element of gloom, — carrying a bit of Chaos about him, in short, which he is manufacturing into Cosmos!

Alfred is the son of a Lincolnshire Gentleman Farmer, I think; indeed, you see in his verses that he is a native of “moated granges,” and green, fat pastures, not of mountains and their torrents and storms. He had his breeding at Cambridge, as if for the Law or Church; being master of a small annuity on his Father’s decease, he preferred clubbing with his Mother and some Sisters, to live unpromoted and write Poems. In this way he lives still, now here, now there; the family always within reach of London, never in it; he himself making rare and brief visits, lodging in some old comrade’s rooms. I think he must be under forty, not much under it. One of the finest-looking men in the world. A great shock of rough dusty-dark hair; bright-laughing hazel eyes; massive aquiline face, most massive yet most delicate; of sallow-brown complexion, almost Indian-looking; clothes cynically loose, free-and-easy; — smokes infinite tobacco. His voice is musical metallic, — fit for loud laughter and piercing wail, and all that may lie between; speech, and speculation free and plenteous: I do not meet, in these late decades, such company over a pipe! — We shall see what he will grow to. He is often unwell; very chaotic, — his way is through Chaos and the Bottomless and Pathless; not handy for making out many miles upon. (O Paper!)

I trust there is now joy in place of pain in the House at Concord, and a certain Mother grateful again to the Supreme Powers! We are all in our customary health here, or nearly so; my Wife has been in Lancashire, among her kindred there, for a month lately: our swollen City is getting empty and still; we think of trying an Autumn *here* this time. — Get your Book ready; there are readers ready for it! And be busy and victorious!

Ever Yours,
T. Carlyle

My *History* is frightful! If I live, it is like to be completed; but whether I shall live, and not rather be buried alive, broken-hearted, in the Serbonian Quagmires of English Stupidity, and so sleep beside Cromwell, often seems uncertain. Erebus has no uglier, brutaler element. Let us say nothing of it. Let us do it, or leave it to the Devils. *Ay de mi!*

XCIII. Emerson to Carlyle Boston, 1 September, 1844

My Dear Carlyle, — I have just learned that in an hour Mr. Wilmer's mail-bag for London, by the "Acadia," closes, and I will not lose the occasion of sending you a hasty line: though I had designed to write you from home on sundry matters, which now must wait. I send by this steamer some sheets, to the bookseller John Chapman, — proofsheets of my new book of Essays. Chapman wrote to me by the last steamer, urging me to send him some manuscript that had not yet been published in America, and he thought he could make an advantage from printing it, and even, in some conditions, procure a copyright, and he would publish for me on the plan of half-profits. The request was so timely, since I was not only printing a book, but also a pamphlet (an Address to citizens of some thirteen towns who celebrated in Concord the negro Emancipation on 1st August last), that I came to town yesterday, and hastened the printers, and have now sent him proofs of all the Address, and of more than half the book. If you can give Chapman any counsel, or save me from any nonsense by enjoining on him careful correction, you shall.

I looked eagerly for a letter from you by the last steamer, to give me exact tidings of Sterling. None came; but I received a short note from Sterling himself, which intimated that he had but a few more days to live. It is gloomy news. I beg you will write me everything you can relate of him, by the next mail. If you can learn from his friends whether the packet of his Manuscripts and printed papers, returned by Russell and sent by me through Harnden's Express to Ventnor, arrived safely, it would be a satisfaction.

Yours affectionately,
R.W. Emerson

XCIV. Carlyle to Emerson

Chelsea, 29 September, 1844

Dear Emerson, — There should a Letter have come for you by that Steamer; for I wrote one duly, and posted it in good time myself: I will hope therefore it was but some delay of some subaltern official, such as I am told occasionally chances, and that you got the Letter after all in a day or two. It would give you notice, more or less, up to its date, of all the points you had inquired about there is now little to be added; except concerning the main point, That the catastrophe has arrived there as we foresaw, and all is ended.

John Sterling died at his house in Ventnor on the night of Wednesday, 18th September, about eleven o'clock; unexpectedly at last, and to appearance without pain. His Sister-in-law, Mrs. Maurice; had gone down to him from this place about a week before; other friends were waiting as it were in view of him; but he wished generally to be alone, to continue to the last setting his house and his heart more and more in order for the Great Journey. For about a fortnight back he had ceased to have himself formally dressed; had sat only in his dressing-gown, but I believe was still daily wheeled into his Library, and sat very calmly sorting and working there. He sent me two Notes, and various messages, and gifts of little keepsakes to my Wife and myself: the Notes were brief, stern and loving; altogether noble; never to be forgotten in this world. His Brother Anthony, who had been in the Isle of Wight within call for several weeks, had now come up to Town again; but, after about a week, decided that he would run down again, and look. He arrived on the Wednesday night, about nine o'clock; found no visible change; the brave Patient calm as ever, ready to speak as ever, — to say, in direct words which he would often do, or indirectly as his whole speech and conduct did, "God is Great." Anthony and he talked for a while, then took leave for the night; in few minutes more, Anthony was summoned to the bedside, and at eleven o'clock, as I said, the curtain dropt, and it was all ended. — *Euge!*

Whether the *American Manuscripts* had arrived I do not yet know, but probably shall before this Letter goes; for Anthony is to return hither on Tuesday, and I will inquire. Our Friend is buried in Ventnor Churchyard; four big Elms overshadow the little spot; it is situated on the southeast side of that green Island, on the slope of steep hills (as I understand it) that look toward the Sun, and are close within sight and hearing of the Sea. There shall he rest, and have fit lullaby, this brave one. He has died as a man should; like an old Roman, yet with the Christian Bibles and all newest revelations present to him. He

refused to see friends; men whom I think he loved as well as any, — me for one when I obliquely proposed it, he refused. He was even a little stern on his nearest relatives when they came to him: Do I need your help to die? Phocion-like he seemed to feel degraded by physical decay; to feel that he ought to wrap his mantle round him, and say, “I come, Persephoneia; it is not I that linger!” — His Sister-in-law, Anthony’s Wife, probably about a month ago, while they were still in Wight, had begged that she might see him yet once; her husband would be there too, she engaged not to speak. Anthony had not yet persuaded him, when she, finding the door half open, went in: his pale changed countenance almost made her shriek; she stepped forward silently, kissed his brow in silence; he burst into tears. Let us speak no more of this. — A great quantity of papers, I understand, are left for my determination; what is to be done with them I will sacredly endeavor to do.

I have visited your Bookseller Chapman; seen the Proof-sheets lying on his table; taken order that the reprint shall be well corrected, — indeed, I am to read every sheet myself, and in that way get acquainted with it, before it go into stereotype. Chapman is a tall, lank youth of five-and-twenty; full of good will, but of what other equipment time must yet try. By a little Book of his, which I looked at some months ago, he seemed to me sunk very deep in the dust-hole of extinct Socinianism; a painful predicament for a man! He is not sure of saving much copyright for you; but he will do honestly what in that respect is doable; and he will print the Book correctly, and publish it decently, I saying *imprimatur* if occasion be, — and your ever-increasing little congregation here will do with the new word what they can. I add no more today; reserving a little nook for the answer I hope to get two days hence. Adieu, my Friend: it is silent Sunday; the populace not yet admitted to their beer-shops, till the respectabilities conclude their rubric-mummeries, — a much more audacious feat than beer! We have wet wind at Northeast, and a sky somewhat of the dreariest: — Courage! a *little* way above it reigns mere blue, and sunshine eternally! — T.C.

Wednesday, October 2d. — The Letter had to wait till today, and is still in time. Anthony Sterling, who is yet at Ventnor, apprises me this morning that according to his and the Governess’s belief the Russell Manuscripts arrived duly, and were spoken of more than once by our Friend. — On Monday I received from this same Anthony a big packet by Post; it contains among other things all your Letters to John, wrapt up carefully, and addressed in his hand, “Emerson’s Letters, to be returned through the hands of Carlyle”: they shall go towards you next week, by Mr. James, who is about returning. Among the other Papers was one containing seven stanzas of verse addressed to T. Carlyle, 14th September; full of love and enthusiasm; — the Friday before his death: I was visiting the old

City of Winchester that day, among the tombs of Canutes and eldest noble ones:
you may judge how sacred the memory of those hours now is!

I have read your Slavery Address; this morning the first *half*-sheet, in Proof,
of the *Essays* has come: perfectly correct, and right good reading.

Yours ever,
T. Carlyle

XCV. Emerson to Carlyle

Concord, 30 September, 1844 My Dear Friend, — I enclose a bill of exchange for thirty pounds sterling which I procured in town today at \$5 each pound, or \$150; so high, it seems, is the rate at present, higher, they said, than for years. It is good booksellers' money from Little and Brown, and James Munroe & Co., in unequal proportions. If you wish for more accurate information and have a great deal of patience, there is still hope that you may obtain it before death; for I this day met E.P. Clark in Washington Street, and he reported some progress in auditing of accounts, and said that when presently his family should return to town for the winter, he would see to the end of them, *i.e.* the accounts.

I received with great satisfaction your letter of July, which came by a later steamer than it was written for, but gave me exact and solid information on what I most wished to know. May you live forever, and may your reports of men and things be accessible to me whilst I live! Even if, as now in Sterling's case, the news are the worst, or nearly so, yet let whatever comes for knowledge be precise, for the direst tragedy that is accurately true must share the blessing of the Universe. I have no later tidings from Sterling, and I must still look to you to tell me what you can. I dread that the story should be short. May you have much good to tell of him, and for many a day to come! The sketch you drew of Tennyson was right welcome, for he is an old favorite of mine, — I owned his book before I saw your face; — though I love him with allowance. O cherish him with love and praise, and draw from him whole books full of new verses yet. The only point on which you never give precise intelligence is your own book; but you shall have your will in that; so only you arrive on the shores of light at last, with your mystic freight fished partly out of the seas of time, and partly out of the empyrean deeps.

I have much regretted a sudden note I wrote you just before the steamer of 1 September sailed, entreating you to cumber yourself about my proofsheets sent to the London bookseller. I heartily absolve you from all such vexations. Nothing could be more inconsiderate. Mr. Chapman is undoubtedly amply competent to ordinary correction, and I much prefer to send you my little book in decent trim than in rags and stains and deformities more than its own. I have just corrected and sent to the steamer the last sheets for Mr. Chapman, who is to find English readers if he can. I shall ask Mr. Chapman to send you a copy, for his edition will be more correct than mine. What can I tell you better? Why even this, that this house rejoices in a brave boy, now near three months old. Edward we call him, and my wife calls him Edward Waldo. When shall I show him to

you? And when shall I show you a pretty pasture and wood-lot which I bought last week on the borders of a lake which is the chief ornament of this town, called Walden Pond? One of these days, if I should have any money, I may build me a cabin or a turret there high as the tree-tops, and spend my nights as well as days in the midst of a beauty which never fades for me.

Yours with love,

R.W. Emerson

XCVI. Carlyle to Emerson

Chelsea, 3 November, 1844

Dear Emerson, — By the clearest law I am bound to write you a word today, were my haste even greater than it is. The last American fleet or ship, about the middle of last month, brought me a Draft for Thirty Pounds; which I converted into ready cash, and have here, — and am now your grateful debtor for, as of old. There seems to be no end to those Boston Booksellers! I think the well is dry; and straightway it begins to run again. Thanks to you: — it is, I dare say, a thing you too are grateful for. We will recognize it among the good things of this rather indifferent world. — By the way, if that good Clark *like* his business, let him go on with it; but if not, stop him, poor fellow! It is to me a matter of really small moment whether those Booksellers' accounts be ever audited in this world, or left over to the General Day of Audit. I myself shudder at the sight of such things; and make my bargain here so always as to have no trade with them, but to be *netto* from the first. Why should I plague poor Clark with them, if it be any plague to him? The Booksellers will never *know* but we examine them! The very terror of Clark's name will be as the bark of chained Mastiff, — and no need for actual biting! Have due pity on the man.

Your English volume of *Essays*, as Chapman probably informs you by this Post, was advertised yesterday, “with a Preface from me.” That is hardly accurate, that latter clause. My “Preface” consists only of a certificate that the Book is correctly printed, and sent forth by a Publisher of your appointment, whom therefore all readers of yours ought to regard accordingly. Nothing more. There proves, I believe, no visible real vestige of a copyright obtainable here; only Chapman asserts that he *has* obtained one, and that he will take all contraveners into Chancery, — which has a terrible sound; and indeed the Act he founds on is of so distracted, inextricable a character, it may mean anything and all things, and no Sergeant Talfourd whom we could consult durst take upon him to say that it meant almost anything whatever. The sound of “Chancery,” the stereotype character of this volume, and its cheap price, may perhaps deter pirates, — who are but a weak body in this country as yet. I judged it right to help in that; and impertinent, at this stage of affairs, to go any farther. The Book is very fairly printed, onward. at least to the Essay *New England Politics*, where my “perfect-copy” of the sheets as yet stops. I did not read any of the Proofs except two; finding it quite superfluous, and a sad waste of time to the hurried Chapman himself. I have found yet but one error, and that a very correctable one, “narvest” for “harvest”; — no other that I recollect at present.

The work itself falling on me by dribblets has not the right chance yet — not till I get it in the bound state, and read it all at once — to produce its due impression on me. But I will say already of it, It is a *sermon* to me, as all your other deliberate utterances are; a real *word*, which I feel to be such, — alas, almost or altogether the one such, in a world all full of jargons, hearsays, echoes, and vain noises, which cannot pass with me for *words*! This is a praise far beyond any “literary” one; literary praises are not worth repeating in comparison. For the rest, I have to object still (what you will call objecting against the Law of Nature) that we find you a Speaker indeed, but as it were a *Soliloquizer* on the eternal mountain-tops only, in vast solitudes where men and their affairs lie all hushed in a very dim remoteness; and only the man and the stars and the earth are visible, — whom, so fine a fellow seems he, we could perpetually punch into, and say, “Why won’t you come and help us then? We have terrible need of one man like you down among us! It is cold and vacant up there; nothing paintable but rainbows and emotions; come down, and you shall do life-pictures, passions, facts, — which *transcend* all thought, and leave it stuttering and stammering! To which he answers that he won’t, can’t, and doesn’t want to (as the Cockneys have it): and so I leave him, and say, “You Western Gymnosophist! Well, we can afford one man for that too. But — ! — By the bye, I ought to say, the sentences are very *brief*; and did not, in my sheet reading, always entirely cohere for me. Pure genuine Saxon; strong and simple; of a clearness, of a beauty — But they did not, sometimes, rightly stick to their foregoers and their followers: the paragraph not as a beaten ingot, but as a beautiful square *bag of duck-shot* held together by canvas! I will try them again, with the Book deliberately before me. — There are also one or two utterances about “Jesus,” “immortality,” and so forth, which will produce wide-eyes here and there. I do not say it was wrong to utter them; a man obeys his own Daemon in these cases as his supreme law. I dare say you are a little bored occasionally with “Jesus,” &c., — as I confess I myself am, when I discern what a beggarly Twaddle they have made of all that, what a greasy Cataplasm to lay to their own poltrooneries;- -and an impatient person may exclaim with Voltaire, in serious moments: “*Au nom de Dieu, ne me parlez plus de cet homme-la!* I have had enough of him; — I tell you I am alive too!”

Well, I have scribbled at a great rate; regardless of Time’s flight! — My Wife thanks many times for M. Fuller’s Book. I sent by Mr. James a small Packet of *your* letters — which will make you sad to look at them! Adieu, dear friend.

— T. Carlyle

XCVII. Emerson to Carlyle Concord, 31 December, 1844

My Dear Friend, — I have long owed you a letter and have much to acknowledge. Your two letters containing tidings, the first of the mortal illness, and the second of the death of Sterling, I had no heart to answer. I had nothing to say. Alas! as in so many instances heretofore, I knew not what to think. Life is somewhat customary and usual; and death is the unusual and astonishing; it kills in so far the survivor also, when it ravishes from him friendship and the most noble and admirable qualities. That which we call faith seems somewhat stoical and selfish, if we use it as a retreat from the pangs this ravishment inflicts. I had never seen him, but I held him fast; now I see him not, but I can no longer hold him. Who can say what he yet is and will be to me? The most just and generous can best divine that. I have written in vain to James to visit me, or to send me tidings. He sent me, without any note, the parcel you confided to him, and has gone to Albany, or I know not whither.

I have your notes of the progress of my London printing, and, at last, the book itself. It was thoughtless in me to ask your attention to the book at all in the proof state; the printer might have been fully trusted with corrected printed pages before him. Nor should Chapman have taxed you for an advertisement; only, I doubt not he was glad of a chance to have business with you; and, of course, was too thankful for any Preface. Thanks to you for the kind thought of a "Notice," and for its friendly wit. You shall not do this thing again, if I should send you any more books. A Preface from you is a sort of banner or oriflamme, a little too splendid for my occasion, and misleads. I fancy my readers to be a very quiet, plain, even obscure class, — men and women of some religious culture and aspirations, young, or else mystical, and by no means including the great literary and fashionable army, which no man can count, who now read your books. If you introduce me, your readers and the literary papers try to read me, and with false expectations. I had rather have fewer readers and only such as belong to me.

I doubt not your stricture on the book as sometimes unconnected and inconsecutive is just. Your words are very gentle. I should describe it much more harshly. My knowledge of the defects of these things I write is all but sufficient to hinder me from writing at all. I am only a sort of lieutenant here in the deplorable absence of captains, and write the laws ill as thinking it a better homage than universal silence. You Londoners know little of the dignities and duties of country lyceums. But of what you say now and heretofore respecting the remoteness of my writing and thinking from real life, though I hear

substantially the same criticism made by my countrymen, I do not know what it means. If I can at any time express the law and the ideal right, that should satisfy me without measuring the divergence from it of the last act of Congress. And though I sometimes accept a popular call, and preach on Temperance or the Abolition of Slavery, as lately on the 1st of August, I am sure to feel, before I have done with it, what an intrusion it is into another sphere, and so much loss of virtue in my own. Since I am not to see you from year to year, is there never an Englishman who knows you well, who comes to America, and whom you can send to me to answer all my questions? Health and love and joy to you and yours.

— R.W. Emerson

XCVIII. Emerson to Carlyle Concord, 31 January, 1845

My Dear Carlyle, — Carey and Hart of Philadelphia, booksellers, have lately proposed to buy the remainder of our Boston edition of your *Miscellanies*, or to give you a bonus for sanctioning an edition of the same, which they propose to publish. On inquiry, I have found that only thirteen entire sets of four volumes remain to us unsold; whilst we have 226 copies of Volume III., and 243 copies of Volume IV., remaining.

In replying to Mr. Carey, I proposed that, besides the proposed bonus, he should buy of me these old volumes, which are not bound but folded, at 25 cents a volume, (Monroe having roughly computed the cost at 40 cents a volume,) but this he declines to do, and offers fifty pounds sterling for his bonus. I decided at once to accept his offer, thinking it a more favorable winding up of our account than I could otherwise look for; as Mr. Carey knows much better how to defend himself from pirates than I do. So I am to publish that his edition is edited with your concurrence. Our own remaining copies of entire sets I shall sell at once to Monroe, at a reduced price, and the odd volumes I think to dispose of by giving them a new and independent title-page. In the circumstances of the trade here, I think Mr. Carey's offer a very liberal one, and he is reputed in his dealings eminently just and generous.

My friend William Furness, who has corresponded with me on Carey's behalf, has added now another letter to say that Mr. Carey wishes to procure a picture of Mr. Carlyle to be engraved for this edition. "He understands there is a good head by Laurence, and he wishes to employ some London artist to make a copy of it in oil or water colors, or in any way that will suffice for the engraver; and he proposes to apply to Mr. Carlyle for permission through Inman the American artist who is now in England." Furness goes on to ask for my "good word" with you in furtherance of this design. Well, I heartily hope you will not resist so much good nature and true love; for Mr. Furness and Mr. Griswold, and others who compose a sort of advising committee to Mr. Carey, are sincere lovers of yours. One more opportunity this crisis in our accounts will give to that truest of all Carlylians, E.P. Clark, to make his report. I called at his house two nights ago, in Boston; he promised immediate attention, but quickly drew me aside to his "Illustrations of Carlyle," an endless train of books, and portfolios, and boxes of prints, in which every precious word of that master is explained or confirmed.

Affectionately yours,

R.W. Emerson

XCIX. Carlyle to Emerson Chelsea, 16 February, 1845

Dear Emerson, — By the last Packet, which sailed on the 3d of the month, I forgot to write to you, though already in your debt one Letter; and there now has another Letter arrived, which on the footing of mere business demands to be answered. I write straightway; not knowing how the Post-Office people will contrive the conveyance, or whether it can be sooner than by the next Steam ship, but willing to give them a chance.

You have made another brave bargain for me with the Philadelphia people; to all of which I can say nothing but “*Euge! Papae!*” It seems to me strange, in the present state of Copyright, how my sanction or the contrary can be worth L50 to any American Bookseller; but so it is, to all appearance; let it be so, therefore, with thanks and surprise. The Messrs. Carey and Lea distinguish themselves by the beauty of their Editions; a poor Author does not go abroad among his friends in dirty paper, full of misprints, under their guidance; this is as handsome an item of the business as any. As to the Portrait too, I will be as “amiable” as heart could wish; truly it will be worth my while to take a little pains that the kind Philadelphia Editors do once for all get a faithful Portrait of me, since they are about it, and so prevent counterfeits from getting into circulation. I will endeavor to do in that matter whatsoever they require of me; to the extent even of sitting two days for a Crayon Sketch such as may be engraved, — though this new sacrifice of patience will not be needed as matters are. It stands thus: there is no Painter, of the numbers who have wasted my time and their own with trying, that has indicated any capability of catching a true Likeness, but one Samuel Lawrence; a young Painter of real talent, not quite so young now, but still only struggling for complete mastership in the management of colors. He does crayon sketches in a way to please almost himself; but his oil paintings, at least till within a year or two, have indicated only a great faculty still crude in that particular. His oil portrait of me, which you speak of, is almost terrible to behold! It has the look of a Jotun, of a Scandinavian Demon, grim, sad, as the angel of Death; — and the coloring is so *brickish*, the finishing so coarse, it reminds you withal of a flayed horse’s head! “*Dinna speak o’t.*” But the preparatory crayon-sketch of this, still in existence, is admired by some judges; poor John Sterling bought it from the Painter, and it is now here in the hands of his Brother, who will readily allow any authorized person to take a drawing of it. Lawrence himself, I imagine, would be the fittest man to employ; or your Mr. Ingham [Inman], if he be here and a capable person: one or both of these might superintend the Engraving of it here, and not part with the plate till it were

pronounced satisfactory. In short, I am willing to do “anything in reason”! Only if a Portrait is to be, I confess I should rather avoid going abroad under the hands of bunglers, at least of bunglers sanctioned by myself. There is a Portrait of me in some miserable farrago called *Spirit of the Age*;* a farrago unknown to me, but a Portrait known, for poor Lawrence brought it down to me with sorrow in his face; it professes to be from his painting; is a “Lais *without* the beauty” (as Charles Lamb used to say); a flayed horse’s head without the spiritualism, good or bad, — and simply figures on my mind as a detestability; which I had much rather never have seen. These poor *Spirit of the Age* people applied to me; I described myself as “busy,” &c.; shoved them off me; and this monster of iniquity, resembling Nothing in the Earth or under it, is the result. In short, I am willing, I am willing; and so let us not waste another drop of ink on it at present! — On the whole, are not you a strange fellow? You apologize as if with real pain for “trouble” I had, or indeed am falsely supposed to have had, with Chapman here; and forthwith engage again in correspondences, in speculations, and negotiations, and I know not what, on my behalf! For shame, for shame! Nay, you have done one very ingenious thing; to set Clark upon the Boston Booksellers’ accounts: it is excellent; Michael Scott setting the Devil to twist ropes of sand, “There, my brave one; see if you don’t find work there for a while!” I never think of this Clark without love and laughter. Once more, *Euge!* Chapman is fast selling your Books here; striking off a new Five Hundred from his Stereotypes. You are wrong as to your Public in this Country; it is a very pretty public; extends pretty much, I believe, through all ranks, and is a growing one, — and a truly *aristocratic*, being of the bravest inquiring minds we have. All things are breaking up here, like Swedish Frost in the end of March; *gachis epouvantable*. Deep, very serious eternal instincts, are at work; but as yet no serious word at all that I hear, except what reaches me from Concord at intervals. Forward, forward! And you do not know what I mean by calling you “unpractical,” “theoretic.” *O caeca corda!* But I have no room for such a theme at present.

—————
* “A new Spirit of the Age. Edited by R.H. Horne.” In Two Volumes. London, 1844.

————— The reason I tell you nothing about Cromwell is, alas, that there is nothing to be told. I am day and night, these long months and years, very miserable about it, — nigh broken-hearted often. Such a scandalous accumulation of Human Stupidity in every form never lay before on such a

subject. No history of it can be written to this wretched, fleering, sneering, canting, twaddling, God-forgetting generation. How can you explain men to Apes by the Dead Sea?* And I am very sickly too, and my Wife is ill all this cold weather, — and I am sunk in the bowels of Chaos, and scarce once in the three months or so see so much as a possibility of ever getting out! Cromwell's own *Letters and Speeches* I have gathered together, and washed clean from a thousand ordures: these I do sometimes think of bringing out in a legible shape; — perhaps soon. Adieu, dear friend, with blessings always.

— T. Carlyle Poor Sydney Smith is understood to be dying; water on the chest; past hope of Doctors. Alas!

* The dwellers by the Dead Sea who were changed to apes are referred to in various places by Carlyle. He tells the story of the metamorphosis, which he got from the introduction to Sale's Koran, in *Past and Present*, Book III. Ch. 3.

C. Emerson to Carlyle*

Concord, June 29, 1845

My Dear Friend, — I grieve to think of my slackness in writing, which suffers steamer after steamer to go without a letter. But I have still hoped, before each of the late packets sailed, that I should have a message to send that would enforce a letter. I wrote you some time ago of Mr. Carey's liberal proposition in relation to your *Miscellanies*. I wrote, of course, to Furness, through whom it was made to me, accepting the proposition; and I forwarded to Mr. Carey a letter from me to be printed at the beginning of the book, signifying your good-will to the edition, and acknowledging the justice and liberality of the publishers. I have heard no more from them, and now, a fortnight since, the newspaper announces the death of Mr. Carey. He died very suddenly, though always an invalid and extremely crippled. His death is very much regretted in the Philadelphia papers, where he bore the reputation of a most liberal patron of good and fine arts. I have not heard from Mr. Furness, and have thought I should still expect a letter from him. I hope our correspondence will stand as a contract which Mr. Carey's representatives will feel bound to execute. They had sent me a little earlier a copy of Mr. Sartain's engraving from their water-color copy of Laurence's head of you. They were eager to have the engraving pronounced a good likeness. I showed it to Sumner, and Russell, and Theodore Parker, who have seen you long since I had, and they shook their heads unanimously and declared that D'Orsay's profile was much more like.

** From the rough draft.

I creep along the roads and fields of this town as I have done from year to year. When my garden is shamefully overgrown with weeds, I pull up some of them. I prune my apples and pears. I have a few friends who gild many hours of the year. I sometimes write verses. I tell you with some unwillingness, as knowing your distaste for such things, that I have received so many applications from readers and printers for a volume of poems that I have seriously taken in hand the collection, transcription, or scription of such a volume, and may do the enormity before New Year's day. Fear not, dear friend, you shall not have to read one line. Perhaps I shall send you an official copy, but I shall appeal to the tenderness of Jane Carlyle, and excuse your formidable self, for the benefit of us both. Where all writing is such a caricature of the subject, what signifies whether the form is a little more or less ornate and luxurious? Meantime, I think to set a few heads before me, as good texts for winter evening entertainments. I wrote a

deal about Napoleon a few months ago, after reading a library of memoirs. Now I have Plato, Montaigne, and Swedenborg, and more in the clouds behind. What news of Naseby and Worcester?

CI. Carlyle to Emerson

Chelsea, 29 August, 1845

Dear Emerson, — Your Letter, which had been very long expected, has been in my hand above a month now; and still no answer sent to it. I thought of answering straightway; but the day went by, days went by; — and at length I decided to wait till my insupportable Burden (the “Stupidity of Two Centuries” as I call it, which is a heavy load for one man!) were rolled off my shoulders, and I could resume the habit of writing Letters, which has almost left me for many months. By the unspeakable blessing of Heaven that consummation has now arrived, about four days ago I wrote my last word on *Cromwell’s Letters and Speeches*; and one of the earliest uses I make of my recovered freedom is to salute you again. The Book is nearly printed: two big volumes; about a half of it, I think, my own; the real utterances of the man Oliver Cromwell once more legible to earnest men. Legible really to an unexpected extent: for the Book took quite an unexpected figure in my hands; and is now a kind of Life of Oliver, the best that circumstances would permit me to do: — whether either I or England shall be, in my time, fit for a better, remains submitted to the Destinies at present. I have tied up the whole Puritan Paper-Litter (considerable masses of it still unburnt) with tight strings, and hidden it at the bottom of my deepest repositories: there shall *it*, if Heaven please, lie dormant for a time and times. Such an element as I have been in, no human tongue can give account of. The disgust of my Soul has been great; a really *pious* labor: worth very little when I have done it; but the best I could do; and that is quite enough. I feel the liveliest gratitude to the gods that I have got out of it alive. The Book is very dull, but it is actually legible: all the ingenious faculty I had, and ten times as much would have been useful there, has been employed in elucidation; in saying, and chiefly in forbearing to say, — in annihilating continents of brutal wreck and dung: *Ach Gott!* — But in fact you will see it by and by; and then form your own conclusions about it. They are going to publish it in October, I find: I tried hard to get you a complete copy of the sheets by this Steamer; but it proves to be flatly impossible; — perhaps luckily; for I think you would have been bothering yourself with some new Bookseller negotiation about it; and that, as copyright and other matters now stand, is a thing I cannot recommend. — Enough of it now: only let all my silences and other shortcomings be explained thereby. I am now off for the North Country, for a snatch still at the small remnants of Summer, and a little free air and sunshine. I am really far from well, though I have been riding diligently for three months back, and doing what I could to help

myself.

Very glad shall I be, my Friend, to have some new utterances from you either in verse or in prose! What you say about the vast *imperfection* of all modes of utterance is most true indeed. Let a man speak and sing, and do, and sputter and gesticulate as he may, — the meaning of him is most ineffectually shown forth, poor fellow; rather *indicated* as if by straggling symbols, than *spoken* or visually expressed! Poor fellow! So the great rule is, That he *have* a good manful meaning, and then that he take what “mode of utterance” is honestly the readiest for him. — I wish you would take an American Hero, one whom you really love; and give us a History of him, — make an artistic bronze statue (in good words) of his Life and him! I do indeed. — But speak of what you will, you are welcome to me. Once more I say, No other voice in this wide waste world seems to my sad ear to be *speaking* at all at present. The more is the pity for us.

I forbid you to plague yourself any farther with those Philadelphia or other Booksellers. If you could hinder them to promulgate any copy of that frightful picture by Lawrence, or indeed any picture at all, I had rather stand as a shadow than as a falsity in the minds of my American friends: but this too we are prepared to encounter. And as for the money of these men, — if they will pay it, good and welcome; if they will not pay it, let them keep it with what blessing there may be in it! I have your noble offices in that and in other such matters already unforgetably sure to me; and, in real fact, that is almost exactly the whole of valuable that could exist for me in the affair. Adieu, dear Friend. Write to me again; I will write again at more leisure.

Yours always,
T. Carlyle

CII. Emerson to Carlyle Concord, 15 September, 1845

My Dear Friend, — I have seen Furness of Philadelphia, who was, last week, in Boston, and inquired of him what account I should send you of the new Philadelphia edition. “Has not Mr. Carey paid you?” he said. — No. “Then has he not paid Carlyle directly?” No, as I believe, or I should have heard of it. — Furness replied, that the promised fifty pounds were sure, and that the debt would have been settled before this time, if Mr. Carey had lived. So as this is no longer a Three Blind Callenders’ business of Arabian Nights, I shall rest secure. I have doubted whether the bad name which Philadelphia has gotten in these times would not have disquieted you in this long delay. If you have ever heard directly from Carey and Hart, you will inform me.

I am to read to a society in Boston presently some lectures, — on Plato, or the Philosopher; Swedenborg, or the Mystic; Montaigne, or the Sceptic; Shakespeare, or the Poet; Napoleon, or the Man of the World; — if I dare, and much lecturing makes us incorrigibly rash. Perhaps, before I end it, my list will be longer, and the measure of presumption overflowed. I may take names less reverend than some of these, — but six lectures I have promised. I find this obligation usually a good spur to the sides of that dull horse I have charge of. But many of its advantages must be regarded at a long distance.

I have heard nothing from you for a long time, — so may your writing prosper the more. I wish to hear, however, concerning you, and your house, and your studies, when there is little to tell. The steamers come so fast — to exchange cards would not be nothing. My wife and children and my mother are well. Peace and love to your household.

— R.W. Emerson

CIII. Emerson to Carlyle Concord, 30 September, 1845

My Dear Friend, — I had hardly sent away my letter by the last steamer, when yours full of good news arrived. I greet you heartily on the achievement of your task, and the new days of freedom obtained and deserved. Happiest, first, that you can work, which seems the privilege of the great, and then, also, that thereby you can come at the sweetness of victory and rest. Yes, flee to the country, ride, run, leap, sit, spread yourself at large; and in all ways celebrate the immense benevolence of the Universe towards you; and never complain again of dyspepsia, crosses, or the folly of men; for in giving you this potent concentration, what has been withholden? I am glad with all men that a new book is made, that the gentle creation as well as the grosser goes ever on. Another month will bring it to me, and I shall know the secrets of these late silent years. Welcome the child of my friend! Why should I regret that I see you not, when you are forced thus intimately to discover yourself beyond the intimacy of conversation?

But you should have sent me out the sheets by the last steamer, or a manuscript copy of the book. I do not know but Munroe would have printed it at once, and defied the penny press. And slow Time might have brought in his hands a most modest reward.

I wrote you the other day the little I had to say on affairs. Clark, the financial Conscience, has never yet made any report, though often he promised. Half the year he lives out of Boston, and unless I go to his Bank I never see his face. I think he will not die till he have disburdened himself of this piece of arithmetic. I pray you to send me my copy of this book at the earliest hour, and to offer my glad congratulations to Jane Carlyle, on an occasion, I am sure, of great peace and relief to her spirit. And so farewell.

— R.W. Emerson

CIV. Carlyle to Emerson

Chelsea, 11 November, 1846

My Dear Emerson, — I have had two Letters from you since I wrote any; the latest of them was lying here for me when I returned, about three weeks ago; the other I had received in Scotland: it was only the last that demanded a special answer; — which, alas, I meant faithfully to give it, but did not succeed! With meet despatch I made the Bookseller get ready for you a Copy of the unpublished *Cromwell* Book; hardly complete as yet, it was nevertheless put together, and even some kind of odious rudiments of a *Portrait* were bound up with it; and the Packet inscribed with your address was put into Wiley and Putnam's hands in time for the Mail Steamer; — and I hope has duly arrived? If it have not, pray set the Booksellers a-hunting. Wiley and Putnam was the Carrier's name; this is all the indication I can give, but this, I hope, if indeed any prove needful, will be enough. One may hope you have the Book already in your hands, a fortnight before this reaches you, a month before any other Copy can reach America. In which case the Parcel, *without* any Letter, must have seemed a little enigmatic to you! The reason was this: I miscounted the day of the month, unlucky that I was. Sitting down one morning with full purpose to write at large, and all my tools round me, I discover that it is no longer the third of November; that it is already the *fourth*, and the American Mail-Packet has already lifted anchor! Irrevocable, irremediable! Nothing remained but to wait for the 18th; — and now, as you see, to take Time by the forelock, — *queue*, as we all know, he has none.

My visit to Scotland was wholesome for me, tho' full of sadness, as the like always is. Thirty years mow away a Generation of Men. The old Hills, the old Brooks and Houses, are still there; but the Population has marched away, almost all; it is not there any more. I cannot enter into light talk with the survivors and successors; I withdraw into silence, and converse with the old dumb crags rather, in a melancholy and abstruse manner. — Thank God, my good old Mother is still there; old and frail, but still young of heart; as young and strong *there*, I think, as ever. It is beautiful to see affection survive where all else is submitting to decay; the altar with its sacred fire still burning when the outer walls are all slowly crumbling; material Fate saying, "*They* are mine!" — I read some insignificant Books; smoked a great deal of tobacco; and went moping about among the hills and hollow water-courses, somewhat like a shade in Hades. The Gospel which this World of Fact does preach to one differs considerably from

the sugary twaddle one gets the offer of in Exeter-Hall and other Spouting-places! Of which, in fact, I am getting more and more weary; sometimes really impatient. It seems to me the reign of Cant and Spoonyism has about lasted long enough. Alas, in many respects, in this England I too often feel myself sorrowfully in a “minority of one”; — if in the whole world, it amount to a minority of two, that is something! These words of Goethe often come into my mind, “*Verachtung ja Nicht-achtung.*” Lancashire, with its Titanic Industries, with its smoke and dirt, and brutal stupor to all but money and the five mechanical Powers, did not excite much admiration in me; considerably less, I think, than ever! Patience, and shuffle the cards!

The Book on Cromwell is not to come out till the 22d of this month. For many weeks it has been a real weariness to me; my hope, always disappointed, that now is the last time I shall have any trade with it. Even since I began writing, there has been an Engraver here, requiring new indoctrination, — poor fellow! Nay, in about ten days it *must* be over: let us not complain. I feel it well to be worth *nothing*, except for the little fractions or intermittent fits of pious industry there really were in it; and my one wish is that the human species would be pleased to take it off my hands, and honestly let me hear no more about it! If it please Heaven, I will rest awhile still, and then try something better.

In three days hence, my Wife and I are off to the Hampshire coast for a winter visit to kind friends there, if in such a place it will prosper long with us. The climate there is greatly better than ours; they are excellent people, well affected to us; and can be lived with, though of high temper and ways! They are the Lord Ashburtons, in fact; more properly the younger stratum of that house; partly a kind of American people, — who know Waldo Emerson, among other fine things, very well! I think we are to stay some three weeks: the bustle of moving is already begun.

You promise us a new Book soon? Let it be soon, then. There are many persons here that will welcome it now. To one man here it is ever as an *articulate voice* amid the infinite cackling and cawing. That remains my best definition of the effect it has on me. Adieu, my friend. Good be with you and your Household always. *Vale.*

— T.C.

CV. Carlyle to Emerson Chelsea, 3 January, 1846

Dear Emerson, — I received your Letter* by the last Packet three or four days ago: this is the last day of answering, the monthly Packet sails towards you again from Liverpool tomorrow morning; and I am in great pressure with many writings, elsewhither and thither: therefore I must be very brief. I have just written to Mr. Hart of Philadelphia; his Draft (as I judge clearly by the Banker's speech and silence) is accepted, all right; and in fact, means *money* at this time: for which I have written to thank him heartily. Do you very heartily thank Mr. Furness for me; — Furness and various friends, as Transatlantic matters now are, must accept a *silent* gratitude from me. The speech of men and American hero-worshippers is grown such a babblement: in very truth, *silence* is the thing that chiefly has meaning, — there or here....

* Missing To my very great astonishment, the Book *Cromwell* proves popular here; and there is to be another edition very soon. Edition with improvements — for some fifty or so of new (not *all* insignificant) Letters have turned up, and I must try to do something rational with them; — with which painful operation I am again busy. It will make the two volumes about *equal* perhaps, — which will be one benefit! If any American possibility lie in this, I will take better care of it. — Alas, I have not got one word with you yet! Tell me of your Lectures; — of all things. Ever yours, T. Carlyle We returned from Hampshire exactly a week ago; never passed six so totally idle weeks in our lives. — Better in health a little? Perhaps.

CVI. Carlyle to Emerson

Chelsea, 3 February, 1848

Dear Emerson, — One word to you before the Packet sail; — on business of my own, once more; in such a state of *haste* as could hardly be greater. The Printers are upon me, and I have not a moment.

Contrary to all human expectation, this Book on Cromwell proves salable to mankind here, and a second Edition is now going forward with all speed. The publication of the First has brought out from their recesses a *new* heap of Cromwell Letters; — which have been a huge embarrassment to me; for they are highly unimportant for most part, and do not tend to alter or materially modify anything. Some Fifty or Sixty new Letters in all (many of them from Printed Books that had escaped me) the great majority, with others yet that may come in future time, I determine to print simply as an Appendix; but several too, I think about twenty in all, are to be fitted into the Text, chiefly in the early part of the First Volume, as tending to bring some matters into greater clearness there. I am busy with that even now; sunk deep into the Dust-abysse again! — Of course I have made what provision I could for printing a Supplement, &c. to the possessors of the First Edition: but I find this Second will be the *Final* standing Edition of the Book; decidedly preferable to the First; not to be touched by me *again*, except on very good cause indeed. New letters, except they expressly contradict me, shall go at once into the back apartment, or Appendix, in future.

The Printers have sent me some five or six sheets, they send me hitherto a sheet daily; but perhaps there are not above three or two in a perfect state: so I trouble you with none of them by this Packet. But by next Packet (3d of March), unless I hear to the contrary, I will send you all the Sheets that are ready; and so by the following Packets, till we are out of it; — that you, on the scene there, may do with them once for all whatsoever you like. If *nothing* can be done with them, believe me I shall be very glad of that result. But if you can so much as oblige any honest Bookseller of your or my acquaintance by the gift of them, let it be done; let Pirates and ravenous Bipedes of Prey be excluded from participating: that of itself will be a comfortable and a proper thing! — You are hereby authorized to promulgate in any way you please, That the Second Edition will be augmented, corrected, as aforesaid; and that Mr. (Any Son of Adam you please to name) is, so far as I have any voice in the matter, appointed by me, to the exclusion of all and sundry others on what pretext soever, to print and vend the same to my American Friends. And so it stands; and the Sheets (probably near thirty in number) will be out with the March Packet: — and if nothing can

come of it, I for one shall be very glad! The Book is to be in Three Volumes now; the first ends at p. 403, Vol. I.; the third begins at p. 155, Vol. II., of the present edition.

What are you doing? Write to me: how the Lectures went, how all things went and go! We are over head and ears in Anti-Corn-Law here; the Aristocracy struck almost with a kind of horror at sight of that terrible Millocracy, rising like a huge hideous Frankenstein up in Lancashire, — seemingly with boundless ready-money in its pocket, and a very fierce humor in its stomach! To me it is as yet almost uglier than the Aristocracy; and I will not fire guns when this small victory is gained; I will recommend a day of Fasting rather, that such a victory required such gaining.

Adieu, my Friend. Is it likely we shall meet in “Oregon,” think you? That would be a beautiful affair, on the part of the most enlightened Nation!

Yours ever,
T. Carlyle

CVII. Carlyle to Emerson

Chelsea, 3 March, 1846

Dear Emerson, — I must write you a word before this Packet go, tho' my haste is very great. I received your two Newspapers (price only twopence); by the same Ship there came, and reached me some days later, a Letter from Mr. Everett enclosing the *Cromwell* portions of the same printed-matter, clipt out by scissors; written, it appeared, by Mr. Everett's nephew; some of whose remarks, especially his wish that I might once be in New England, and see people "praying," amused me much! The Cotton Letter, &c., I have now got to the bottom of; Birch's copy is in the Museum here, — a better edition than I had. Of "Levered" and the other small American Documents — alas, I get cartloads of the like or better tumbled down at my door, and my chief duty is to front them resolutely with a *shovel*. "Ten thousand tons" is but a small estimate for the quantity of loose and indurated lumber I have had to send sounding, on each hand of me, down, down to the eternal deeps, never to trouble *me* more! The jingle of it, as it did at last get under way, and go down, was almost my one consolation in those unutterable operations. — I am again over head and ears; but shall be out soon: never to return more.

By this Packet, according to volunteer contract, there goes out by the favor of your Chapman a number of sheets, how many I do not exactly know, of the New Edition: Chapman First and Chapman Second (yours and mine) have undertaken to manage the affair for this month and for the following months; — many thanks to them both for taking it out of my hands. What you are to do with the Article you already know. If no other customer present himself, can you signify to Mr. Hart of Philadelphia that the sheets are much at his service, — his conduct on another occasion having given him right to such an acknowledgment from me? Or at any rate, *you* will want a new Copy of this Book; and can retain the sheets for that object. — Enough of them.

From Mr. Everett I learn that your Boston Lectures have been attended with renown enough: when are the Lectures themselves to get to print? I read, last night, an Essay on you, by a kind of "Young Scotland," as we might call it, in an Edinburgh Magazine; very fond of you, but shocked that you were Antichristian: — really not so bad. The stupidities of men go crossing one another; and miles down, at the bottom of all, there is a little veinlet of sense found running at last!

If you see Mr. Everett, will you thank him for his kind remembrance of me, till I find leisure (as I have vainly hoped today to do) to thank him more in form. A dignified, compact kind of man; whom I remember with real pleasure.

Jargon abounds in our Newspapers and Parliament Houses at present; — with which “the present Editor,” and indeed I think the Public at large, takes little concern, beyond the regret of being *bored* by it. The Corn-Laws are going very quietly the way of all deliriums; and then there will at least be one delirium less, and we shall start upon new ones.

Not a word more today, but my blessings and regards. God be with you and yours always.

Ever your affectionate,
T. Carlyle

CVIII. Carlyle to Emerson

Chelsea, 18 April, 1846

Dear Emerson, — Your two Letters* have both come to hand, the last of them only three days ago. One word in answer before the Packet sail; one very hasty word, rather than none.

— * Missing. — — — —

You have made the best of Bargains for me; once again, with the freest contempt of trouble on my behalf; which I cannot sufficiently wonder at! Apparently it is a fixed-idea of yours that the Bibliopolic Genus shall not cheat me; and you are decided to make it good. Very well: let it be so, in as far as the Fates will.

Certainly I will conform in all points to this Wiley-and-Putnam Treaty, and faithfully observe the same. The London Wileys have not yet sent me any tidings; but when they do, I will say Your terms on the other side of the sea are the Law to us, and it is a finished thing. — No sheets, I think, will go by this mid-month Packet, the Printer and Bookseller were bidden not mind that: but by the Packet of May 3d, I hope the Second Volume will go complete; and, if the Printers make speed, almost the whole remainder may go by the June one. There is to be a “Supplement to the First Edition,” containing all the new matter that is *separable*: of this too the Wileys shall have their due Copy to reprint: it is what I could do to keep my faith with purchasers of the First Edition here; but, on the whole, there will be no emulating of the Second Edition except by a reprint of the whole of it; changes great and small have had to introduce themselves everywhere, as these new Letters were woven in. — I hope before May 3d I shall have ascertained whether it will not be the simplest way (as with my present light it clearly appears) to give the sheets direct to the Wiley and Putnam here, and let *them* send them? In any case, the cargo shall come one way or other.

Furthermore, — Yes, you shall have that sun-shadow, a Daguerreotype likeness, as the sun shall please to paint it: there has often been talk of getting me to that establishment, but I never yet could go. If it be possible, we will have this also ready for the 3d of May. *Provided* you, as you promise, go and do likewise! A strange moment that, when I look upon your dead shadow again; instead of the living face, which remains unchanged within me, enveloped in beautiful clouds, and emerging now and then into strange clearness! Has your head grown grayish? On me are “gray hairs here and there,” — and I do “know it.” I have lived half a century in this world, fifty years complete on the 4th of

December last: that is a solemn fact for me! Few and evil have been the days of the years of thy servant, — few for any good that was ever done in them. *Ay de mi!*

Within late weeks I have got my Horse again; go riding through the loud torrent of vehiculatory discords, till I get into the fields, into the green lanes; which is intrinsically a great medicine to me. Most comfortless riding it is, with a horse of such *kangaroo* disposition, till I do get to the sight of my old ever-young green-mantled mother again; but for an hour there, it is a real blessing to me. I have company sometimes, but generally prefer solitude, and a dialogue with the trees and clouds. Alas, the speech of men, especially the witty-speech of men, is oftentimes afflictive to me: “in the wide Earth,” I say sometimes with a sigh, “there is none but Emerson that responds to me with a voice wholly human!” All “Literature” too is become I cannot tell you how contemptible to me. On the whole, one’s blessedness is to do as Oliver: Work while the sun is up; work *well* as if Eternities depended on it; and then sleep, — if under the guano-mountains of Human Stupor, if handsomely *forgotten* all at once, that latter is the handsome thing! I have often thought what W. Shakespeare would say, were he to sit one night in a “Shakespeare Society,” and listen to the empty twaddle and other long-eared melody about him there! — Adieu, my Friend. I fear I have forgotten many things: at all events, I have forgotten the inexorable flight of the minutes, which are numbered out to me at present.

Ever yours,
T. Carlyle

I think I recognize the Inspector of Wild-beasts, in the little Boston Newspaper you send!* A small hatchet-faced, gray-eyed, good-humored Inspector, who came with a Translated Lafontaine; and took his survey not without satisfaction? Comfortable too how rapidly he fathomed the animal, having just poked him up a little. *Ach Gott!* Man is forever interesting to men; — and all men, even Hatchet-faces, are globular and complete!

* This probably refers to a letter of Mr. Elizur Wright’s, describing a visit to Carlyle.

CIX. Carlyle to Emerson Chelsea, 30 April, 1846

Dear Emerson, — Here is the *Photograph* going off for you by Bookseller Munroe of Boston; the Sheets of *Cromwell*, all the second and part of the last volume, are to go direct to New York: both Parcels by the Putnam conveyance. For Putnam has been here since I wrote, making large confirmations of what you conveyed to me; and large Proposals of an ulterior scope, — which will involve you in new trouble for me. But it is trouble you will not grudge, inasmuch as it promises to have some issue of moment; at all events the negotiation is laid entirely into your hands: therefore I must with all despatch explain to you the essentials of it, that you may know what Wiley says when he writes to you from New York.

Mr. Putnam, really a very intelligent, modest, and reputable-looking little fellow, got at last to sight of me about a week ago; — explained with much earnestness how the whole origin of the mistake about the First Edition of *Cromwell* had lain with Chapman, my own Bookseller (which in fact I had already perceived to be the case); and farther set forth, what was much more important, that he and his Partner were, and had been, ready and desirous to *make good* said mistake, in the amplest, most satisfactory manner, — by the ready method of paying me *now* ten percent on the selling-price of all the copies of *Cromwell* sent into the market by them; and had (as I knew already) covenanted with you to do so, in a clear, *bona-fide*, and to you satisfactory manner, in regard to that First Edition: in consequence of which you had made a bargain with them of like tenor in regard to the Second. To all which I could only answer, that such conduct was that of men of honor, and would, in all manner of respects, be satisfactory to me. Wherefore the new Sheets of *Cromwell* should now go by *his* Package direct to New York, and the other little Parcel for you he could send to Munroe: — that as one consequence? “Yes, surely,” intimated he; but there were other consequences, of more moment, behind that.

Namely, that they wanted (the Wiley & Putnam house did) to publish certain other Books of mine, the List of which I do not now recollect; under similar conditions: *viz.* that I was to certify, in a line or two prefixable to each Book, that I had read it over in preparation for their Printer, and did authorize them to print and sell it; — in return for which Ten percent on the sale-price (and all manner of facilities, volunteered to convince even Clark of Boston, the Lynx-eyed Friend now busy for me looking through millstones, that all was straight, and

said Ten percent actually paid on every copy sold); This was Putnam's Offer, stated with all transparency, and in a way not to be misunderstood by either of us.

To which I answered that the terms seemed clear and square and every way good, and such as I could comply with heartily, — so far as I was at liberty, but not farther. Not farther: for example, there was Hart of Philadelphia (I think the Wileys do not want the *Miscellanies*), there were Munroe, Little and Brown, &c.; — in short, there was R.W. Emerson, who knew in all ways how far I was free and not free, and who would take care of my integrity and interest at once, and do what was just and prudent; and to *him* I would refer the whole question, and whatever he engaged for, that and no other than that I would do. So that you see how it is, and what a coil you have again got into! Mr. Putnam would have had some "Letter," some "exchange of Letters," to the effect above-stated: but I answered, "It was better we did not write at all till the matter was clear and liquid with you, and then we could very swiftly write, — and act. I would apprise you how the matter stood, and expect your answer, and bid you covenant with Mr. Wiley what you found good, prompt I to fulfil whatever *you* undertook for me." — This is a true picture of the affair, the very truest I can write in haste; and so I leave it with you — *Ach Gott!*

If your Photograph succeed as well as mine, I shall be almost *tragically* glad of it. This of me is far beyond all pictures; really very like: I got Laurence the Painter to go with me, and he would not let the people off till they had actually made a likeness. My Wife has got another, which she asserts to be much "more amiable-looking," and even liker!* O my Friend, it is a strange Phantasmagory of a Fact, this huge, tremendous World of ours, Life of ours! Do you bethink you of Craigenputtock, and the still evening there? I could burst into tears, if I had that habit: but it is of no use. The Cromwell business will be ended about the end of May, — I do hope!

You say not a word of your own affairs: I have vaguely been taught to look for some Book shortly; — what of it? We are well, or tolerably well, and the summer is come: adieu. Blessings on you and yours.

— T.C.

— — —

* The engraved portrait in the first volume of this Correspondence is from a photograph taken from this daguerrotype.

CX. Emerson to Carlyle Concord, 14 May, 1846

Dear Friend, — I daily expect the picture, and wonder — so long as I have wished it — I had never asked it before. I was in Boston the other day, and went to the best reputed Daguerreotypist, but though I brought home three transcripts of my face, the house-mates voted them rueful, supremely ridiculous. I must sit again; or, as true Elizabeth Hoar said, I must not sit again, not being of the right complexion which Daguerre and iodine delight in. I am minded to try once more, and if the sun will not take me, I must sit to a good crayon sketcher, Mr. Cheney, and send you his draught....

Good rides to you and the longest escapes from London streets. I too have a new plaything, the best I ever had, — a wood-lot. Last fall I bought a piece of more than forty acres, on the border of a little lake half a mile wide and more, called Walden Pond, — a place to which my feet have for years been accustomed to bring me once or twice a week at all seasons. My lot to be sure is on the further side of the water, not so familiar to me as the nearer shore. Some of the wood is an old growth, but most of it has been cut off within twenty years and is growing thriftily. In these May days, when maples, poplars, oaks, birches, walnut, and pine are in their spring glory, I go thither every afternoon, and cut with my hatchet an Indian path through the thicket all along the bold shore, and open the finest pictures.

My two little girls know the road now, though it is nearly two miles from my house, and find their way to the spring at the foot of a pine grove, and with some awe to the ruins of a village of shanties, all overgrown with mullein, which the Irish who built the railroad left behind them. At a good distance in from the shore the land rises to a rocky head, perhaps sixty feet above the water. Thereon I think to place a hut; perhaps it will have two stories and be a petty tower, looking out to Monadnoc and other New Hampshire Mountains. There I hope to go with book and pen when good hours come. I shall think there, a fortnight might bring you from London to Walden Pond. — Life wears on, and do you say the gray hairs appear? Few can so well afford them. The black have not hung over a vacant brain, as England and America know; nor, white or black, will it give itself any Sabbath for many a day henceforward, as I believe. What have we to do with old age? Our existence looks to me more than ever initial. We have come to see the ground and look up materials and tools. The men who have any positive quality are a flying advance party for reconnoitring. We shall yet have a right work, and kings for competitors. With ever affectionate remembrance to your wife, your friend, — R.W. Emerson

CXI. Emerson to Carlyle

Concord, 31 May, 1846

My Dear Friend, — It is late at night and I have postponed writing not knowing but that my parcel would be ready to go, — and now a public meeting and the speech of a rarely honest and eloquent man have left me but a span of time for the morning's messenger.

The photograph came safely, to my thorough content. I have what I have wished. This head is to me out of comparison more satisfying than any picture. I confirm my recollections and I make new observations; it is life to life. Thanks to the Sun. This artist remembers what every other forgets to report, and what I wish to know, the true sculpture of the features, the angles, the special organism, the rooting of the hair, the form and the placing of the head. I am accustomed to expect of the English a securing of the essentials in their work, and the sun does that, and you have done it in this portrait, which gives me much to think and feel.* I was instantly stirred to an emulation of your love and punctuality, and, last Monday, which was my forty-third birthday, I went to a new Daguerreotypist, who took much pains to make his picture right. I brought home three shadows not agreeable to my own eyes. The machine has a bad effect on me. My wife protests against the imprints as slanderous. My friends say they look ten years older, and, as I think, with the air of a decayed gentleman touched with his first paralysis. However I got yesterday a trusty vote or two for sending one of them to you, on the ground that I am not likely to get a better. But it now seems probable that it will not get cased and into the hands of Harnden in time for the steamer tomorrow. It will then go by that of the 16th.

* From Emerson's Diary, May 23, 1846:— "In Carlyle's head (photograph), which came last night, how much appears! How unattainable this truth to any painter! Here have I the inevitable traits which the sun forgets not to copy, and which I thirst to see, but which no painter remembers to give me. Here have I the exact sculpture, the form of the head, the rooting of the hair, thickness of the lips, the man that God made. And all the Laurences and D'Orsays now serve me well as illustration. I have the form and organism, and can better spare the expression and color. What would I not give for a head of Shakespeare by the same artist? of Plato? of Demosthenes? Here I have the jutting brow, and the excellent shape of the head. And here the organism of the eye full of England, the valid eye, in which I see the strong executive talent which has made his thought available to the nations, whilst others as intellectual as he are pale and powerless. The photograph comes dated 25 April, 1846, and he writes, 'I am

fifty years old.””

I am heartily glad that you are in direct communication with these really energetic booksellers, Wiley and Putnam. I understood from Wiley's letter to me, weeks ago, that their ambition was not less than to have a monopoly of your books. I answered, it is very desirable for us too; saving always the rights of Mr. Hart in Philadelphia. — I told him you had no interest in Munroe's *Sartor*, which from the first was his own adventure, and Little and Brown had never reprinted *Past and Present* or *Chartism*. The *French Revolution*, *Past and Present*, *Chartism*, and the *Sartor*, I see no reason why they should not have. Munroe and L. & B. have no real claims, and I will speak to them. But there is one good particular in Putnam's proffer to you, which Wiley has not established in his (first and last) agreement with me, namely, that you shall have an interest in what is already sold of their first edition of *Cromwell*. By all means close with Putnam of the good mind, exempting only Hart's interest. I have no recent correspondence with Wiley and Putnam. And I greatly prefer that they should deal directly with you. Yet it were best to leave an American reference open for audit and umpirage to the stanch E.P. Clark of the New England Bank.

Ever yours,

R.W. Emerson

CXII. Carlyle to Emerson

Chelsea, 18 June, 1846

Dear Emerson, — I have had two letters of yours, the last of them (31st May) only two days, and have seen a third written to Wiley of New York. Yesterday Putnam was here, and we made our bargain, — and are to have it signed this day at his Shop: two copies, one of which I mean to insert along with this, and give up to your or E.P. Clark's keeping. For, as you will see, I have appointed Clark my representative, economic plenipotentiary and factotum, if he will consent to act in that sublime capacity, — subject always to your advice, to your control in all *ultra-economic* respects, of which you alone are cognizant of the circumstances or competent to give a judgment. Pray explain this with all lucidity to Mr. Clark: and endeavor to impress upon him that it is (to all appearance) a real affair of business we are now engaged in; that I would have him satisfy his own sharp eyes (by such methods as he finds convenient and sufficient, by examination at New York or how he can) that the conditions of this bargain *are* fairly complied with by the New York Booksellers, — who promise “every facility for ascertaining *how many* copies are printed,” &c., &c.; and profess to be of the integrity of Israelites indeed, in all respects whatever! If so, it may be really useful to us. And I would have Mr. Clark, if he will allow me to look upon him as my *man of business* in this affair, take reasonable pains, be at any reasonable expense, &c. (by himself or by deputy) to ascertain that it is so in very fact! In that case, if something come of it, we shall get the something and be thankful; if nothing come of it, we shall have the pleasure of caring nothing about it. — I have given Putnam two Books (*Heroes* and *Sartor*) ready, corrected; the others I think will follow in the course of next month; — *F. Revolution* waits only for an Index which my man is now busy with. The *Cromwell*, Supplement and all, he has now got, — published two days ago, after sorrowful delays. Your Copy will be ready *this afternoon*, — too late, I fear, by just one day: it will lie, in that case, for a fortnight, and then come. Wiley will find that he has no resource but to reprint the Book; he will reprint the Supplement too, in justice to former purchasers; but this is the *final* form of the Book, this second edition; and to this all readers of it will come at last.

We expect the Daguerreotype by next Steamer; but you take good care not to prepossess us on its behalf! In fact, I believe, the only satisfactory course will be to get a Sketch done too; if you have any Painter that can manage it tolerably, pray set about that, as the true solution of the business — out of the two together

we shall make a likeness for ourselves that will do. Let the Lady Wife be satisfied with it; then we shall pronounce it genuine! —

I envy you your forest-work, your summer umbrages, and clear silent lakes. The weather here is getting insupportable to us for heat. Indeed, if rain do not come within two weeks, I believe we must wind up our affairs, and make for some shady place direct: — Scotland is perhaps likeliest; but nothing yet is fixed: you shall duly hear. — Directly after this, I set off for Putnam's in Waterloo Place; sign his paper there; stick one copy under a cover for you, and despatch. — Send me word about all that you are doing and thinking. Be busy, be still and happy.

Yours ever,
T. Carlyle

CXIII. Emerson to Carlyle Concord, 15 July, 1846

My Dear Carlyle, — I received by the last steamer your letter with the copy of the covenant with Wiley and Putnam, which seems unexceptionable. I like the English side of those men very well; that is, Putnam seems eager to stand well and rightly with his fellow-men. Wiley at New York it was who provoked me, last winter, to write him an angry letter when he declared his intention to reprint our new matter without paying for it. When he thought better of it, and came to terms, I had not got so far as to be affectionate, and have never yet resumed the correspondence I had with him a year ago, about my own books. I hope you found my letter to them, though I do not remember which, properly cross. I believe I only enumerated difficulties. I have talked with Little and Brown about their editions of *Chartism*, and *Past and Present*; they have made no new sales of the books since they were printed on by the pirates, and say that the books lie still on their shelves, as also do a few copies of the London and Boston edition of *French Revolution*. I prayed them immediately to dispose of these things by auction, or at their trade sales, at whatever prices would sell them, and leave the market open for W. & P.; which they promise to do.

To Munroe I went, and learn that he has bought the stereotype-plates of the New York pirate edition of *Sartor*, and means to print it immediately. He is willing to stop if W. & P. will buy of him his plates at their cost. I wrote so to them, but they say no. And I have not spoken again with Munroe. I was in town yesterday, and carried the copy of the Covenant to E.P. Clark, and read him your message. His Bank occupies him entirely just now, for his President is gone to Europe, and Clark's duties are the more onerous. But finding that the new responsibilities delegated to him are light and tolerable, and, at any rate, involve no retrospection, he very cheerfully signified his readiness to serve you, and I graciously forbore all allusions to my heap of booksellers' accounts which he has had in keeping now — for years, I believe. He told me that he hopes at no distant day to have a house of his own, — he and his wife are always at board, — and, whenever that happens, he intends to devote a chamber in it to his "Illustrations of Mr. Carlyle's Writings," which, I believe, I have told you before, are a very large and extraordinary collection of prints, pictures, books, and manuscripts. I sent you the promised Daguerrotype with all unwillingness, by the steamer, I think of 16 June. On 1 August, Margaret Fuller goes to England and the Continent; and I shall not fail to write to you by her, and you must not fail to give a good and faithful interview to this wise, sincere, accomplished, and most entertaining of women. I wish to bespeak Jane Carlyle's friendliest ear to

one of the noblest of women. We shall send you no other such.

I was lately inquired of again by an agent of a huge Boston society of young men, whether Mr. Carlyle would not come to America and read Lectures, on some terms which they could propose. I advised them to make him an offer, and a better one than they had in view. Joy and Peace to you in your new freedom.

— R.W.E.

CXIV. Carlyle to Emerson

Chelsea, 17 July, 1846

Dear Emerson, — Since I wrote last to you, I think, with the Wiley-and-Putnam Covenant enclosed, — the Photograph, after some days of loitering at the Liverpool Custom-house, came safe to hand. Many thanks to you for this punctuality: this poor Shadow, it is all you could do at present in that matter! But it must not rest there, no. This Image is altogether unsatisfactory, illusive, and even in some measure tragical to me! First of all, it is a bad Photograph; no eyes discernible, at least one of the eyes not, except in rare favorable lights then, alas, Time itself and Oblivion must have been busy. I could not at first, nor can I yet with perfect decisiveness, bring out any feature completely recalling to me the old Emerson, that lighted on us from the Blue, at Craigenputtock, long ago, — *ehou!* Here is a genial, smiling, energetic face, full of sunny strength, intelligence, integrity, good humor; but it lies imprisoned in baleful shades, as of the valley of Death; seems smiling on me as if in mockery. “Dost know me, friend? I am dead, thou seest, and distant, and forever hidden from thee; — I belong already to the Eternities, and thou recognizest me not!” On the whole, it is the strangest feeling I have: — and practically the thing will be, that you get us by the earliest opportunity some *living* pictorial sketch, chalk-drawing or the like, from a trustworthy hand; and send *it* hither to represent you. Out of the two I shall compile for myself a likeness by degrees: but as for this present, we cannot put up with it at all; to my Wife and me, and to sundry other parties far and near that have interest in it, there is no satisfaction in this. So there will be nothing for you but compliance, by the first fair chance you have: furthermore, I bargain that the *Lady* Emerson have, within reasonable limits, a royal veto in the business (not absolute, if that threaten extinction to the enterprise, but absolute within the limits of possibility); and that she take our case in hand, and graciously consider what can and shall be done. That will answer, I think.

Of late weeks I have been either idle, or sunk in the sorrowfulest cobbling of old shoes again; sorrowfully reading over old Books for the Putnams and Chapmans, namely. It is really painful, looking in one's own old face; said “old face” no longer a thing extant now! — Happily I have at last finished it; the whole Lumber-troop with clothes duly brushed (*French Revolution* has even got an Index too) travels to New York in the Steamer that brings you this. *Quod faustum sit*: — or indeed I do not much care whether it be faustum or not; I grow to care about an astonishingly small number of things as times turn with me!

Man, all men seem radically *dumb*; jabbering mere jargons and noises from the teeth outwards; the inner meaning of them, — of them and of me, poor devils, — remaining shut, buried forever. If almost all Books were burnt (my own laid next the coal), I sometimes in my spleen feel as if it really would be better with us! Certainly could one generation of men be forced to live without rhetoric, babblement, hearsay, in short with the tongue well cut out of them altogether, — their fortunate successors would find a most improved world to start upon! For Cant does lie piled on us, high as the zenith; an Augean Stable with the poisonous confusion piled so high: which, simply if there once could be nothing said, would mostly dwindle like summer snow gradually about its business, and leave us free to use our eyes again! When I see painful Professors of Greek, poring in their sumptuous Oxfords over dead *Greek* for a thousand years or more, and leaving live *English* all the while to develop itself under charge of Pickwicks and Sam Wellers, as if it were nothing and the other were all things: this, and the like of it everywhere, fills me with reflections! Good Heavens, will the people not come out of their wretched Old-Clothes Monmouth-Streets, Hebrew and other; but lie there dying of the basest pestilence, — dying and as good as dead! On the whole, I am very weary of most “Literature”: — and indeed, in very sorrowful, abstruse humor otherwise at present.

For remedy to which I am, in these very hours, preparing for a sally into the green Country and deep silence; I know not altogether how or whitherward as yet; only that I must tend towards Lancashire; towards Scotland at last. My Wife already waits me in Lancashire; went off, in rather poor case, much burnt by the hot Town, some ten days ago; and does not yet report much improvement. I will write to you somewhere in my wanderings. The address, “Scotsbrig, Ecclefechan, N.B.,” if you chance to write directly or soon after this arrives, will, likely, be the shortest: at any rate, that, or “Cheyne Row” either, is always sure enough to find me in a day or two after trying.

By a kind of accident I have fallen considerably into American History in these days; and am even looking out for American Geography to help me. Jared Sparks, Marshall, &c. are hickory and buckskin; but I do catch a credible trait of human life from them here and there; Michelet’s genial champagne *froth*, — alas, I could find no fact in it that would stand handling; and so have broken down in the middle of *La France*, and run over to hickory and Jared for shelter! Do you know Beriah Green?* A body of Albany newspapers represent to me the people quarreling in my name, in a very vague manner, as to the propriety of being “governed,” and Beriah’s is the only rational voice among them. Farewell, dear Friend. Speedy news of you!

— T. Carlyle

* The Reverend Beriah Green, President for some years of Oneida Institute, a manual-labor school at Whitesboro, N.Y. He was an active reformer, and a leading member of the National Convention which met in Philadelphia, December 4th, 1833, to form the American Antislavery Society. He died in 1874, seventy-nine years old.

CXV. Emerson to Carlyle Concord, 31 July, 1846

My Dear Friend, — The new edition of *Cromwell* in its perfect form and in excellent dress, and the copy of the Appendix, came munificently safe by the last steamer. When thought is best, then is there most, — is a faith of which you alone among writing men at this day will give me experience. If it is the right frankincense and sandal-wood, it is so good and heavenly to give me a basketful and not a pinch. I read proudly, a little at a time, and have not yet got through the new matter. But I think neither the new letters nor the commentary could be spared. Wiley and Putnam shall do what they can, and we will see if New England will not come to reckon this the best chapter in her Pentateuch.

I send this letter by Margaret Fuller, of whose approach I believe I wrote you some word. There is no foretelling how you visited and crowded English will like our few educated men or women, and in your learned populace my luminaries may easily be overlooked. But of all the travelers whom you have so kindly received from me, I think of none, since Alcott went to England, whom I so much desired that you should see and like, as this dear old friend of mine. For two years now I have scarcely seen her, as she has been at New York, engaged by Horace Greeley as a literary editor of his *Tribune* newspaper. This employment was made acceptable to her by good pay, great local and personal conveniences of all kinds, and unbounded confidence and respect from Greeley himself, and all other parties connected with this influential journal (of 30,000 subscribers, I believe). And Margaret Fuller's work as critic of all new books, critic of the drama, of music, and good arts in New York, has been honorable to her. Still this employment is not satisfactory to me. She is full of all nobleness, and with the generosity native to her mind and character appears to me an exotic in New England, a foreigner from some more sultry and expansive climate. She is, I suppose, the earliest reader and lover of Goethe in this Country, and nobody here knows him so well. Her love too of whatever is good in French, and specially in Italian genius, give her the best title to travel. In short, she is our citizen of the world by quite special diploma. And I am heartily glad that she has an opportunity of going abroad that pleases her.

Mr. Spring, a merchant of great moral merits, (and, as I am informed, an assiduous reader of your books,) has grown rich, and resolves to see the world with his wife and son, and has wisely invited Miss Fuller to show it to him. Now, in the first place, I wish you to see Margaret when you are in special good humor, and have an hour of boundless leisure. And I entreat Jane Carlyle to abet and exalt and secure this satisfaction to me. I need not, and yet perhaps I need

say, that M.F. is the safest of all possible persons who ever took pen in hand. Prince Metternich's closet not closer or half so honorable. In the next place, I should be glad if you can easily manage to show her the faces of Tennyson and of Browning. She has a sort of right to them both, not only because she likes their poetry, but because she has made their merits widely known among our young people. And be it known to my friend Jane Carlyle, whom, if I cannot see, I delight to name, that her visitor is an immense favorite in the parlor, as well as in the library, in all good houses where she is known. And so I commend her to you.

Yours affectionately,
R.W. Emerson

CXVI. Carlyle to Emerson

Chelsea, 18 December, 1846

Dear Emerson, — This is the 18th of the month, and it is a frightful length of time, I know not how long, since I wrote to you, — sinner that I am! Truly we are in no case for paying debts at present, being all sick more or less, from the hard cold weather, and in a state of great temporary puddle but, as the adage says, “one should own debt, and crave days”; — therefore accept a word from me, such as it may be.

I went, as usual, to the North Country in the Autumn; passed some two extremely disconsolate months, — for all things distress a wretched thin-skinned creature like me, — in that old region, which is at once an Earth and a Hades to me, an unutterable place, now that I have become mostly a *ghost* there! I saw Ireland too on my return, saw black potato-fields, a ragged noisy population, that has long in a headlong baleful manner followed the *Devil's* leading, listened namely to blustering shallow-violent Impostors and Children of Darkness, saying, “Yes, we know *you*, you are Children of Light!” — and so has fallen all out at elbows in body and in soul; and now having lost its *potatoes* is come as it were to a crisis; all its windy nonsense cracking suddenly to pieces under its feet: a very pregnant crisis indeed! A country cast suddenly into the melting-pot, — say into the Medea's-Caldron; to be boiled into horrid *dissolution*; whether into new *youth*, into sound healthy life, or into eternal death and annihilation, one does not yet know! Daniel O'Connell stood bodily before me, in his green Mullaghmart Cap; haranguing his retinue of Dupables: certainly the most *sordid* Humbug I have ever seen in this world; the emblem to me, he and his talk and the worship and credence it found, of all the miseries that can befall a Nation. I also conversed with Young Ireland in a confidential manner; for Young Ireland, really meaning what it says, is worth a little talk: the Heroism and Patriotism of a new generation; welling fresh and new from the breasts of Nature; and already poisoned by O'Connellism and the *Old* Irish atmosphere of bluster, falsity, fatuity, into one knows not what. Very sad to see. On the whole, no man ought, for any cause, to speak lies, or have anything to do with *lies*; but either hold his tongue, or speak a bit of the truth: that is the meaning of a *tongue*, people used to know! — Ireland was not the place to console my sorrows. I returned home very sad out of Ireland; — and indeed have remained one of the saddest, idlest, most useless of Adam's sons ever since; and do still remain so. I care not to *write* anything more, — so it seems to me at present. I am in my vacant interlunar cave

(I suppose that is the truth); — and I ought to wrap my mantle round me, and lie, if dark, *silent* also. But, alas, I have wasted almost all your poor sheet first! —

Miss Fuller came duly as you announced; was welcomed for your sake and her own. A high-soaring, clear, enthusiast soul; in whose speech there is much of all that one wants to find in speech. A sharp, subtle intellect too; and less of that shoreless Asiatic dreaminess than I have sometimes met with in her writings. We liked one another very well, I think, and the Springs too were favorites. But, on the whole, it could not be concealed, least of all from the sharp female intellect, that this Carlyle was a dreadfully heterodox, not to say a dreadfully savage fellow, at heart; believing no syllable of all that Gospel of Fraternity, Benevolence, and *new* Heaven-on-Earth, preached forth by all manner of “advanced” creatures, from George Sand to Elihu Burritt, in these days; that in fact the said Carlyle not only disbelieved all that, but treated it as poisonous cant, — *sweetness* of sugar-of-lead, — a detestable *phosphorescence* from the dead body of a Christianity, that would not admit itself to be dead, and lie buried with all its unspeakable putrescences, as a venerable dead one ought! — Surely detestable enough. — To all which Margaret listened with much good nature; though of course with sad reflections not a few.* — She is coming back to us, she promises. Her dialect is very vernacular, — extremely exotic in the London climate. If she do not gravitate too irresistibly towards that class of New-Era people (which includes whatsoever we have of prurient, esurient, morbid, flimsy, and in fact pitiable and unprofitable, and is at a sad discount among men of sense), she may get into good tracks of inquiry and connection here, and be very useful to herself and others. I could not show her Alfred (he has been here since) nor Landor: but surely if I can I will, — that or a hundred times as much as that, — when she returns. — They tell me you are about collecting your Poems. Well, though I do not approve of rhyme at all, yet it is impossible Emerson in rhyme or prose can put down any thought that was in his heart but I should wish to get into mine. So let me have the Book as fast as may be. And do others like it if you will take circumbendibuses for sound’s sake! And excuse the Critic who seems to you so unmusical; and say, It is the nature of beast! Adieu, dear Friend: write to me, write to me.

Yours ever,
T. Carlyle

—— — * Miss Fullers impressions of Carlyle, much to this effect, may be found in the “Memoirs of Margaret Fuller Ossoli,” Boston, 1852, Vol. II. pp.

184-190.

CXVII. Emerson to Carlyle

Concord, 31 January, 1847

My Dear Carlyle, — Your letter came with a blessing last week. I had already learned from Margaret Fuller, at Paris, that you had been very good and gentle to her; — brilliant and prevailing, of course, but, I inferred, had actually restrained the volleys and modulated the thunder, out of true courtesy and goodness of nature, which was worthy of all praise in a spoiled conqueror at this time of day. Especially, too, she expressed a true recognition and love of Jane Carlyle; and thus her visit proved a solid satisfaction; to me, also, who think that few people have so well earned their pleasures as she.

She wrote me a long letter; she has been very happy in England, and her time and strength fully employed. Her description of you and your discourse (which I read with lively curiosity also) was the best I have had on that subject.

I tried hard to write you by the December steamer, to tell you how forward was my book of Poems; but a little affair makes me much writing. I chanced to have three or four items of business to despatch, when the steamer was ready to go, and you escaped hearing of them. I am the trustee of Charles Lane, who came out here with Alcott and bought land, which, though sold, is not paid for.

Somebody or somebodies in Liverpool and Manchester* have proposed once or twice, with more or less specification, that I should come to those cities to lecture. And who knows but I may come one day? Steam is strong, and Liverpool is near. I should find my account in the strong inducement of a new audience to finish pieces which have lain waiting with little hope for months or years.

—— — * Mr. Alexander Ireland, who had made the acquaintance of Emerson at Edinburgh, in 1833, was his Manchester correspondent. His memorial volume on Emerson contains an interesting record of their relations.

Ah then, if I dared, I should be well content to add some golden hours to my life in seeing you, now all full-grown and acknowledged amidst your own people, — to hear and to speak is so little yet so much. But life is dangerous and delicate. I should like to see your solid England. The map of Britain is good reading for me. Then I have a very ignorant love of pictures, and a curiosity about the Greek statues and stumps in the British Museum. So beware of me, for on that distant day when I get ready I shall come.

Long before this time you ought to have received from John Chapman a copy of Emerson's Poems, so called, which he was directed to send you. Poor man,

you need not open them. I know all you can say. I printed them, not because I was deceived into a belief that they were poems, but because of the softness or hardness of heart of many friends here who have made it a point to have them circulated.* Once having set out to print, I obeyed the solicitations of John Chapman, of an ill-omened street in London, to send him the book in manuscript, for the better securing of copyright. In printing them here I have corrected the most unpardonable negligences, which negligences must be all stereotyped under his fair London covers and gilt paper to the eyes of any curious London reader; from which recollection I strive to turn away.

* In the rough draft the following sentence comes in here "I reckon myself a good beginning of a poet, very urgent and decided in my bent, and in some coming millennium I shall yet sing."

Little and Brown have just rendered me an account, by which it appears that we are not quite so well off as was thought last summer, when they said they had sold at auction the balance of your books which had been lying unsold. It seems now that the books supposed to be sold were not all taken, and are returned to them; one hundred *Chartism*, sixty-three *Past and Present*. Yet we are to have some eighty-three dollars (\$83.68), which you shall probably have by the next steamer.

Yours affectionately,

R.W. Emerson

CXVIII. Carlyle to Emerson

Chelsea, London, 2 March, 1847

Dear Emerson, — The Steamer goes tomorrow; I must, though in a very dim condition, have a little word for you conveyed by it. In the miscellaneous maw of that strange Steamer shall lie, among other things, a friendly *word!*

Your very kind Letter lay waiting me here, some ten days ago; doubly welcome, after so long a silence. We had been in Hampshire, with the Barings, where we were last year; — some four weeks or more; totally idle: our winter had been, and indeed still is, unusually severe; my Wife's health in consequence was sadly deranged; but this idleness, these Isle-of-Wight sea-breezes, have brought matters well round again; so we cannot grudge the visit or the idleness, which otherwise too might have its uses. Alas, at this time my normal state is to be altogether *idle*, to look out upon a very lonely universe, full of grim sorrow, full of splendor too; and not to know at all, for the moment, on what side I am to attack it again! — I read your Book of Poems all faithfully, at Bay House (our Hampshire quarters); where the obstinate people, — with whom you are otherwise, in prose, a first favorite, — foolishly *refused* to let me read aloud; foolishly, for I would have made it mostly all plain by commentary: — so I had to read for myself; and can say, in spite of my hard-heartedness, I did gain, though under impediments, a real satisfaction and some tone of the Eternal Melodies sounding, afar off, ever and anon, in my ear! This is fact; a truth in Natural History; from which you are welcome to draw inferences. A grand View of the Universe, everywhere the sound (unhappily *far of*, as it were) of a valiant, genuine Human Soul: this, even under rhyme, is a satisfaction worth some struggling for. But indeed you are very perverse; and through this perplexed undiaphanous element, you do not fall on me like radiant summer rainbows, like floods of sunlight, but with thin piercing radiances which affect me like the light of the *stars*. It is so: I wish you would become *concrete*, and write in prose the straightest way; but under any form I must put up with you; that is my lot. — Chapman's edition, as you probably know, is very beautiful. I believe there are enough of ardent silent seekers in England to buy up this edition from him, and resolutely study the same: as for the review multitude, they dare not exactly call it "unintelligible moonshine," and so will probably hold their tongue. It is my fixed opinion that we are all at sea as to what is called Poetry, Art, &c., in these times; laboring under a dreadful incubus of *Tradition*, and mere "Cant heaped balefully on us up to the very Zenith," as men, in nearly all other provinces of their Life, except perhaps the railway province, do now labor and stagger; — in

a word, that Goethe-and-Schiller's "*Kunst*" has far more brotherhood with Pusey-and-Newman's *Shovelhattery*, and other the like deplorable phenomena, than it is in the least aware of! I beg you take warning: I am more serious in this than you suppose. But no, you will not; you whistle lightly over my prophecies, and go your own stiff-necked road. Unfortunate man! —

I had read in the Newspapers, and even heard in speech from Manchester people, that you were certainly coming this very summer to lecture among us: but now it seems, in your Letter, all postponed into the vague again. I do not personally know your Manchester negotiators, but I know in general that they are men of respectability, insight, and activity; much connected with the lecturing department, which is a very growing one, especially in Lancashire, at present; — men likely, for the rest, to *fulfil* whatsoever they may become engaged for to you. My own ignorant though confident guess, moreover, is, that you would, in all senses of the word, *succeed* there; I think, also rather confidently, we could promise you an audience of British aristocracy in London here, — and of British commonalty all manner of audiences that you liked to stoop to. I heard an ignorant blockhead (or mainly so) called — bow-wowing here, some months ago, to an audience of several thousands, in the City, one evening, — upon Universal Peace, or some other field of balderdash; which the poor people seemed very patient of. In a word, I do not see what is to hinder you to come whenever you can resolve upon it. The adventure is perfectly promising: an adventure familiar to you withal; for Lecturing is with us fundamentally just what it is with you: Much prurient curiosity, with some ingenuous love of wisdom, an element of real reverence for the same: everywhere a perfect openness to any man speaking in any measure things manful. Come, therefore; gird yourself together, and come. With little or no peradventure, you will realize what your modest hope is, and more; — and I, for my share of it, shall see you once again under this Sun! O Heavens, there *might* be some good in that! Nay, if you will travel like a private quiet person, who knows but I, the most unlocomotive of mortals, might be able to escort you up and down a little; to look at many a thing along with you, and even to open my long-closed heart and speak about the same? — There is a spare-room always in this House for you, — in this heart, in these two hearts, the like: bid me hope in this enterprise, in all manner of ways where I can; and on the whole, get it rightly put together, and embark on it, and arrive!

The good Miss Fuller has painted us all *en beau*, and your smiling imagination has added new colors. We have not a triumphant life here; very far indeed from that, *ach Gott!* — as you shall see. But Margaret is an excellent

soul: in real regard with both of us here. Since she went, I have been reading some of her Papers in a new Book we have got: greatly superior to all I knew before; in fact the undeniable utterances (now first undeniable to me) of a true heroic mind; — altogether unique, so far as I know, among the Writing Women of this generation; rare enough too, God knows, among the writing Men. She is very narrow, sometimes; but she is truly high: honor to Margaret, and more and more good-speed to her. — Adieu dear Emerson. I am ever yours,

— T.C.

CXIX. Carlyle to Emerson Chelsea, 18 March, 1847

Dear Emerson, — Yesterday morning, setting out to breakfast with Richard Milnes (Milnes's breakfast is a thing you will yet have to experience) I met, by the sunny shore of the Thames, a benevolent Son of Adam in blue coat and red collar, who thrust into my hand a Letter from you. A truly miraculous Son of Adam in red collar, in the Sunny Spring Morning! — The Bill of Seventeen Pounds is already far on its way to Dumfries, there to be kneaded into gold by the due artists: today is American Post-day; and already in huge hurry about many things, I am scribbling you some word of answer.... The night *before* Milnes's morning, I had furthermore seen your Manchester Correspondent, Ireland, — an old Edinburgh acquaintance too, as I found. A solid, dark, broad, rather heavy man; full of energy, and broad sagacity and practicality; — infinitely well affected to the man Emerson too. It was our clear opinion that you might come at any time with ample assurance of "succeeding," so far as wages went, and otherwise; that you ought to come, and must, and would, — as he, Ireland, would farther write to you. There is only one thing I have to add of my own, and beg you to bear in mind, — a date merely. *Videlicet*, That the time for lecturing to the London West-End, I was given everywhere to understand, is *from the latter end of April* (or say April altogether) *to the end of May*: this is a fixed Statistic fact, all men told me: of this you are in all arrangements to keep mind. For it will actually do your heart good to look into the faces, and speak into minds, of really Aristocratic Persons, — being one yourself, you Sinner, — and perhaps indeed this will be the greatest of all the *novelties* that await you in your voyage. Not to be seen, I believe, at least never seen by me in any perfection, except in London only. From April to the end of May; during those weeks you must be *here*, and free: remember that date. Will you come in Winter then, next Winter, — or when? Ireland professed to know you by the Photograph too; which I never yet can. — I wrote by last Packet: enough here. Your friend Cunningham has not presented himself; shall be right welcome when he does, — as all that in the least belong to you may well hope to be. Adieu. Our love to you all.

Ever Yours,
T. Carlyle

CXX. Emerson to Carlyle Concord, 30 April, 1847

My Dear Carlyle, — I have two good letters from you, and until now you have had no acknowledgment. Especially I ought to have told you how much pleasure your noble invitation in March gave me. This pleasing dream of going to England dances before me sometimes. It would be, I then fancy, that stimulation which my capricious, languid, and languescent study needs. At home, no man makes any proper demand on me, and the audience I address is a handful of men and women too widely scattered than that they can dictate to me that which they are justly entitled to say. Whether supercilious or respectful, they do not say anything that can be heard. Of course, I have only myself to please, and my work is slighted as soon as it has lost its first attraction. It is to be hoped, if one should cross the sea, that the terror of your English culture would scare the most desultory of Yankees into precision and fidelity; and perhaps I am not yet too old to be animated by what would have seemed to my youth a proud privilege. If you shall fright me into labor and concentration, I shall win my game; for I can well afford to pay any price to get my work well done. For the rest, I hesitate, of course, to rush rudely on persons that have been so long invisible angels to me. No reasonable man but must hold these bounds in awe: — I — much more, — who am of a solitary habit, from my childhood until now. — I hear nothing again from Mr. Ireland. So I will let the English Voyage hang as an afternoon rainbow in the East, and mind my apples and pears for the present.

You are to know that in these days I lay out a patch of orchard near my house, very much to the improvement, as all the household affirm, of our homestead. Though I have little skill in these things, and must borrow that of my neighbors, yet the works of the garden and orchard at this season are fascinating, and will eat up days and weeks, and a brave scholar should shun it like gambling, and take refuge in cities and hotels from these pernicious enchantments. For the present, I stay in the new orchard.

Duyckinck, a literary man in New York, who advises Wiley and Putnam in their publishing enterprises, wrote me lately, that they had \$600 for you, from *Cromwell*. So may it be.

Yours,
R.W.E.

CXXI. Carlyle to Emerson

Chelsea, 18 May, 1847

Dear Emerson, — ...My time is nearly up today; but I write a word to acknowledge your last Letter (30 April), and various other things. For example, you must tell Mr. Thoreau (is that the exact name? for I have lent away the printed pages) that his Philadelphia Magazine with the *Lecture** in two pieces was faithfully delivered here, about a fortnight ago; and carefully read, as beseemed, with due entertainment and recognition. A vigorous Mr. Thoreau, — who has formed himself a good deal upon one Emerson, but does not want abundant fire and stamina of his own; — recognizes us, and various other things, in a most admiring great-hearted manner; for which, as for *part* of the confused voice from the jury bog (not yet summed into a verdict, nor likely to be summed till Doomsday, nor needful to sum), the poor prisoner at the bar may justly express himself thankful! In plain prose, I like Mr. Thoreau very well; and hope yet to hear good and better news of him: — only let him not “turn to foolishness”; which seems to me to be terribly easy, at present, both in New England and Old! May the Lord deliver us all from *Cant*; may the Lord, whatever else he do or forbear, teach us to look Facts honestly in the face, and to beware (with a kind of shudder) of smearing *them* over with our despicable and damnable palaver, into irrecognizability, and so *falsifying* the Lord’s own Gospels to his unhappy blockheads of children, all staggering down to Gehenna and the everlasting Swine’s-trough for *want* of Gospels. — O Heaven, it is the most accursed sin of man; and done everywhere, at present, on the streets and high places, at noonday! Very seriously I say, and pray as my chief orison, May the Lord deliver us from it. —

— — —
* On Carlyle, published in *Graham’s Magazine* in March and April, 1847.
— — —

About a week ago there came your neighbor Hoar; a solid, sensible, effectual-looking man, of whom I hope to see much more. So soon as possible I got him under way for Oxford, where I suppose he was, last week; — *both* Universities was too much for the limits of his time; so he preferred Oxford; — and now, this very day, I think, he was to set out for the Continent; not to return till the beginning of July, when he promises to call here again. There was something

really pleasant to me in this Mr. Hoar: and I had innumerable things to ask him about Concord, concerning which topic we had hardly got a word said when our first interview had to end. I sincerely hope he will not fail to keep his time in returning.

You do very well, my Friend, to plant orchards; and fair fruit shall they grow (if it please Heaven) for your grandchildren to pluck; — a beautiful occupation for the son of man, in all patriarchal and paternal times (which latter are patriarchal too)! But you are to understand withal that your coming hither to lecture is taken as a settled point by all your friends here; and for my share I do not reckon upon the smallest doubt about the *essential* fact of it, simply on some calculation and adjustment about the circumstantial. Of Ireland, who I surmise is busy in the problem even now, you will hear by and by, probably in more definite terms: I did not see him again after my first notice of him to you; but there is no doubt concerning his determinations (for all manner of reasons) to get you to Lancashire, to England; — and in fact it is an adventure which I think you ought to contemplate as *fixed*, — say for this year and the beginning of next? Ireland will help you to fix the dates; and there is nothing else, I think, which should need fixing. — Unquestionably you would get an immense quantity of food for ideas, though perhaps not at all in the way you anticipate, in looking about among us: nay, if you even thought us *stupid*, there is something in the godlike indifference with which London will accept and sanction even that verdict, — something highly instructive at least! And in short, for the truth must be told, London is properly your Mother City too, — verily you have about as much to do with it, in spite of Polk and Q. Victory, as I had! And you ought to come and look at it, beyond doubt; and say to this land, “Old Mother, how are you getting on at all?” To which the Mother will answer, “Thankee, young son, and you?” — in a way useful to both parties! That is truth.

Adieu, dear Emerson; good be with you always. Hoar gave me your *American Poems*: thanks. *Vale et me ama.*

— T. Carlyle

CXXII. Emerson to Carlyle Concord, 4 June, 1847

Dear Carlyle, — I have just got your friendliest letter of May 18, with its varied news and new invitations. Really you are a dangerous correspondent with your solid and urgent ways of speaking. No affairs and no studies of mine, I fear, will be able to make any head against these bribes. Well, I will adorn the brow of the coming months with this fine hope; then if the rich God at last refuses the jewel, no doubt he will give something better — to both of us. But thinking on this project lately, I see one thing plainly, that I must not come to London as a lecturer. If the plan proceed, I will come and see you, — thankful to Heaven for that mercy, should such a romance looking reality come to pass, — I will come and see you and Jane Carlyle, and will hear what you have to say. You shall even show me, if you will, such other men and women as will suffer themselves to be seen and heard, asking for nothing again. Then I will depart in peace, as I came.

At Mr. Ireland's "Institutes," I will read lectures; and possibly in London too, if, when there, you looking with your clear eyes shall say that it is desired by persons who ought to be gratified. But I wish such lecturing to be a mere contingency, and nowise a settled purpose. I had rather stay at home, and forego the happiness of seeing you, and the excitement of England, than to have the smallest pains taken to collect an audience for me. So now we will leave this egg in the desert for the ostrich Time to hatch it or not.

It seems you are not tired of pale Americans, or will not own it. You have sent our Country-Senator* where he wanted to go, and to the best hospitalities as we learn today directly from him. I cannot avoid sending you another of a different stamp. Henry Hedge is a recluse but Catholic scholar in our remote Bangor, who reads German and smokes in his solitary study through nearly eight months of snow in the year, and deals out, every Sunday, his witty apothegms to the lumber-merchants and township-owners of Penobscot River, who have actually grown intelligent interpreters of his riddles by long hearkening after them. They have shown themselves very loving and generous lately, in making a quite munificent provision for his traveling. Hedge has a true and mellow heart, ... and I hope you will like him.

—— — * The Hon. E. Rockwood Hoar. —— —— I have seen lately a Texan, ardent and vigorous, who assured me that Carlyle's Writings were read with eagerness on the banks of the Colorado. There was more to tell, but it is too late.

Ever yours,
R.W. Emerson

CXXIII. Emerson to Carlyle Concord, 31 July, 1847

Dear Carlyle, — In my old age I am coming to see you. I have written this day, in answer to sundry letters brought me by the last steamer, from Mr. Ireland and Mr. Hudson of Leeds, that I mean in good earnest to sail for Liverpool or for London about the first of October; and I am disposing my astonished household — astonished at such a Somerset of the sedentary master — with that view.

My brother William was here this week from New York, and will come again to carry my mother home with him for the winter; my wife and children three are combining for and against me; at all events, I am to have my visit. I pray you to cherish your good nature, your mercy. Let your wife cherish it, — that I may see, I indolent, this incredible worker, whose toil has been long since my pride and wonder, — that I may see him benign and unexacting, — he shall not be at the crisis of some over-labor. I shall not stay but an hour. What do I care for his fame? Ah! how gladly I hoped once to see Sterling as mediator and amalgam, when my turn should come to see the Saxon gods at home: Sterling, who had certain American qualities in his genius; — and now you send me his shade. I found at Munroe's shop the effigy, which, he said, Cunningham, whom I have not seen or heard from, had left there for me; a front face, and a profile, both — especially the first — a very welcome satisfaction to my sad curiosity, the face very national, certainly, but how thoughtful and how friendly! What more belongs to this print — whether you are editing his books, or yourself drawing his lineaments — I know not.

I find my friends have laid out much work for me in Yorkshire and Lancashire. What part of it I shall do, I cannot yet tell. As soon as I know how to arrange my journey best, I shall write you again.

Yours affectionately,

R.W. Emerson

CXXIV. Carlyle to Emerson

Rawdon, Near Leeds, Yorkshire 31 August, 1847

Dear Emerson, — Almost ever since your last Letter reached me, I have been wandering over the country, enveloped either in a restless whirl of locomotives, view-hunting, &c., or sunk in the deepest torpor of total idleness and laziness, forgetting, and striving to forget, that there was any world but that of dreams; — and though at intervals the reproachful remembrance has arisen sharply enough on me, that I ought, on all accounts high and low, to have written you an answer, never till today have I been able to take pen in hand, and actually begin that operation! Such is the naked fact. My Wife is with me; we leave no household behind us but a servant; the face of England, with its mad electioneerings, vacant tourist diletantings, with its shady woods, green yellow harvest-fields and dingy mill-chimneys, so new and old, so beautiful and ugly, every way so *abstruse* and *unspeakable*, invites to silence; the whole world, fruitful yet disgusting to this human soul of mine, invites me to silence; to sleep, and dreams, and stagnant indifference, as if for the time one had *got* into the country of the Lotos-Eaters, and it made no matter what became of anything and all things. In good truth, it is a wearied man, at least a dreadfully slothful and slumberous man, eager for *sleep* in any quantity, that now addresses you! Be thankful for a few half-dreaming words, till we awake again.

As to your visit to us, there is but one thing to be said and repeated: That a prophet's chamber is ready for you in Chelsea, and a brotherly and sisterly welcome, on whatever day at whatever hour you arrive: this, which is all of the Practical that I can properly take charge of, is to be considered a given quantity always. With regard to Lecturing, &c., Ireland, with whom I suppose you to be in correspondence, seems to have awakened all this North Country into the fixed hope of hearing you, — and God knows they have need enough to hear a man with sense in his head; — it was but the other day I read in one of their Newspapers, "We understand that Mr. Emerson the distinguished &c. is certainly &c. this winter," all in due Newspaper phrase, and I think they settled your arrival for "October" next. May it prove so! But on the whole there *is* no doubt of your coming; that is a great fact. And if so, I should say, Why not come at once, even as the Editor surmises? You will evidently do no other considerable enterprise till this voyage to England is achieved. Come therefore; — and we shall see; we shall hear and speak! I do not know another man in all the world to whom I can *speak* with clear hope of getting adequate response from him: if I speak to you, it will be a breaking of my silence for the last time

perhaps, — perhaps for the first time, on some points! *Allons*. I shall not always be so roadweary, lifeweary, sleepy, and stony as at present. I even think there is yet another Book in me; “Exodus from Houndsditch” (I think it might be called), a peeling off of fetid *Jewhood* in every sense from myself and my poor bewildered brethren: one other Book; and, if it were a right one, rest after that, the deeper the better, forevermore. *Ach Gott!* —

Hedge is one of the sturdiest little fellows I have come across for many a day. A face like a rock; a voice like a howitzer; only his honest kind gray eyes reassure you a little. We have met only once; but hope (mutually, I flatter myself) it may be often by and by. That hardy little fellow too, what has he to do with “Semitic tradition” and the “dust-hole of extinct Socinianism,” George-Sandism, and the Twaddle of a thousand Magazines? Thor and his Hammer, even, seem to me a little more respectable; at least, “My dear Sir, endeavor to clear your mind of Cant.” Oh, we are all sunk, much deeper than any of us imagines. And our worship of “beautiful sentiments,” &c., &c. is as contemptible a form of long-ears as any other, perhaps the most so of any. It is in fact damnable. — We will say no more of it at present. Hedge came to me with tall lank Chapman at his side, — an innocent flail of a creature, with considerable impetus in him: the two when they stood up together looked like a circle and tangent, — in more senses than one.

Jacobson, the Oxford Doctor, who welcomed your Concord Senator in that City, writes to me that he has received (with blushes, &c.) some grand “Gift for his Child” from that Traveler; whom I am accordingly to thank, and blush to, — Jacobson not knowing his address at present. The “address” of course is still more unknown to *me* at present: but we shall know it, and the man it indicates, I hope, again before long. So, much for that.

And now, dear Emerson, Adieu. Will your next Letter tell us the *when*? O my Friend! We are here with Quakers, or Ex-Quakers rather; a very curious people, “like water from the crystal well”; in a very curious country too, most beautiful and very ugly: but why write of it, or of anything more, while half asleep and lotos-eating! Adieu, my Friend; come soon, and let us meet again under this Sun.

Yours,
T. Carlyle

CXXV. Emerson to Carlyle

Concord, 30 September, 1847

My Dear Carlyle, — The last steamer brought, as ever, good tidings from you, though certainly from a new habitat, at Leeds, or near it. If Leeds will only keep you a little in its precinct, I will search for you there; for it is one of the parishes in the diocese which Mr. Ireland and his friends have carved out for me on the map of England.

I have taken a berth in the packet-ship “Washington Irving,” which leaves Boston for Liverpool next week, 5 October; having decided, after a little demurring and advising, to follow my inclination in shunning the steamer. The owners will almost take oath that their ship cannot be out of a port twenty days. At Liverpool and Manchester I shall take advice of Ireland and his officers of the “Institutes,” and perhaps shall remain for some time in that region, if my courage and my head are equal to the work they offer me. I will write you what befalls me in the strange city. Who knows but I may have adventures — I who had never one, as I have just had occasion to write to Mrs. Howitt, who inquired what mine were?

Well, if I survive Liverpool, and Manchester, and Leeds, or rather my errands thither, I shall come some fine day to see you in your burly city, you in the centre of the world, and sun me a little in your British heart. It seems a lively passage that I am entering in the old Dream World, and perhaps the slumbers are lighter and the Morning is near. Softly, dear shadows, do not scatter yet. Knit your panorama close and well, till these rare figures just before me draw near, and are greeted and known.

But there is no more time in this late night — and what need? since I shall see you and yours soon.

Ever yours,
R.W.E.

CXXVI. Carlyle to Emerson

Chelsea, 15 October, 1847

My Dear Emerson, — Your Letter from Concord, of the 31st of July, had arrived duly in London; been duly forwarded to my transient address at Buxton in Derbyshire, — and there, by the faithless Postmaster, *retained* among his lumber, instead of given to me when I called on him! We staid in Buxton only one day and night; two Newspapers, as I recollect, the Postmaster did deliver to me on my demand; but your Letter he, with scandalous carelessness, kept back, and left me to travel forwards without: there accordingly it lay, week after week, for a month or more; and only by half-accident and the extraordinary diligence and accuracy of our Chelsea Postman, was it recovered at all, not many days ago, after my Wife's return hither. Consider what kind of fact this was and has been for us! For now, if all have gone right, you are approaching the coast of England; Chelsea and your fraternal House *hidden* under a disastrous cloud to you; and I know not so much as whitherward to write, and send you a word of solution. It is one of the most unpleasant mistakes that ever befell me; I have no resource but to enclose this Note to Mr. Ireland, and charge him by the strongest adjurations to have it ready for you the first thing when you set foot upon our shores.*

—— ——— * Mr. Ireland, in his Recollections of Emerson's Visit to England, p. 59, prints Carlyle's note to himself, enclosing this letter, and adds: "The ship reached Liverpool on the 22d of October, and Mr. Emerson at once proceeded to Manchester. After spending a few hours in friendly talk, he was 'shot up,' as Carlyle had desired, to Chelsea, and at the end of a week returned to Manchester, to begin his lectures."

Know then, my Friend, that in verity your Home while in England is *here*; and all other places, whither work or amusement may call you, are but inns and temporary lodgings. I have returned hither a day or two ago, and free from any urgent calls or businesses of any kind; my Wife has your room all ready; — and here surely, if anywhere in the wide Earth, there ought to be a brother's welcome and kind home waiting you! Yes, by Allah! — An "Express Train" leaves Liverpool every afternoon; and in some six hours will set you down here. I know not what your engagements are; but I say to myself, Why not come at once, and rest a little from your sea-changes, before going farther? In six hours you can be out of the unstable waters, and sitting in your own room here. You shall not be bothered with talk till you repose; and you shall have plenty of it, hot and hot, when the appetite does arise in you. "No. 5 Great Cheyne Row, Chelsea": come

to the "London Terminus," from any side; say these magic words to any Cabman, and by night or by day you are a welcome apparition here, — foul befall us otherwise! This is the fact: what more can I say? I make my affidavit of the same; and require you in the name of all Lares and Penates, and Household Gods ancient and modern which are sacred to men, to consider it and take brotherly account of it! —

Shall we hear of you, then, in a day or two: shall we not perhaps see you in a day or two! That depends on the winds and the chances; but our affection is independent of such. Adieu; *au revoir*, it now is! Come soon; come at once.

Ever yours,
T. Carlyle

Extracts from Emerson's Diary
October, 1847

"I found at Liverpool, after a couple of days, a letter which had been seeking me, from Carlyle, addressed to 'R.W.E. on the instant when he lands in England,' conveying the heartiest welcome and urgent invitation to house and hearth. And finding that I should not be wanted for a week in the Lecture-rooms I came down to London on Monday, and, at ten at night, the door was opened by Jane Carlyle, and the man himself was behind her with a lamp in the hall. They were very little changed from their old selves of fourteen years ago (in August), when I left them at Craigenputtock. 'Well,' said Carlyle, 'here we are shoveled together again.' The floodgates of his talk are quickly opened, and the river is a plentiful stream. We had a wide talk that night until nearly one o'clock, and at breakfast next morning again. At noon or later we walked forth to Hyde Park and the Palaces, about two miles from here, to the National Gallery, and to the Strand, Carlyle melting all Westminster and London into his talk and laughter, as he goes. Here, in his house, we breakfast about nine, and Carlyle is very prone, his wife says, to sleep till ten or eleven, if he has no company. An immense talker, and altogether as extraordinary in that as in his writing; I think, even more so; you will never discover his real vigor and range, or how much more he might do than he has ever done, without seeing him. My few hours discourse with him, long ago, in Scotland, gave me not enough knowledge of him; and I have now at last been taken by surprise by him."

"C. and his wife live on beautiful terms. Their ways are very engaging, and, in her bookcase, all his books are inscribed to her, as they came from year to year, each with some significant lines."

"I had a good talk with C. last night. He says over and over, for months, for

years, the same thing. Yet his guiding genius is his moral sense, his perception of the sole importance of truth and justice; and he, too, says that there is properly no religion in England. He is quite contemptuous about '*Kunst*,' also, in Germans, or English, or Americans;* and has a huge respect for the Duke of Wellington, as the only Englishman, or the only one in the Aristocracy, who will have nothing to do with any manner of lie."

—— — * See *English Traits*, Ch. XVI.; and *Life of Sterling*, Part II. Ch. VII. "Among the windy gospels addressed to our poor century there are few louder than this of Art." —— —

The following sentences are of later date than the preceding: —

"Carlyle had all the *kleinstädtlich* traits of an islander and a Scotsman, and reprimanded with severity the rebellious instincts of the native of a vast continent which made light of the British Islands."

"Carlyle has a hairy strength which makes his literary vocation a mere chance, and what seems very contemptible to him. I could think only of an enormous trip-hammer with an 'Aeolian attachment.'"

"In Carlyle as in Byron, one is more struck with the rhetoric than with the matter. He has manly superiority rather than intellectuality, and so makes good hard hits all the time. There is more character than intellect in every sentence, herein strongly resembling Samuel Johnson."

"England makes what a step from Dr. Johnson to Carlyle! what wealth of thought and science, what expansion of views and profounder resources does the genius and performance of this last imply! If she can make another step as large, what new ages open!"

CXXVII. Emerson to Carlyle

Mrs. Massey's, Manchester, 2 Fenny Place, Fenny St.
November 5, 1847

Ah! my dear friend, all these days have gone, and you have had no word from me, when the shuttles fly so swiftly in your English loom, and in so few hours we may have tidings of the best that live. At last, and only this day for the first day, I am stablished in my own lodgings on English ground, and have a fair parlor and chamber, into both of which the sun and moon shine, into which friendly people have already entered.

Hitherto I have been the victim of trifles, — which is the fate and the chief objection to traveling. Days are absorbed in precious nothings. But now that I am in some sort a citizen, of Manchester, and also of Liverpool (for there also I am to enter on lodgings tomorrow, at 56 Stafford Street, Islington), perhaps the social heart of this English world will include me also in its strong and healthful circulations. I get the best letters from home by the last steamers, and was much occupied in Liverpool yesterday in seeing Dr. Nichol of Glasgow, who was to sail in the “Acadia,” and in giving him credentials to some Americans. I find here a very kind reception from your friends, as they emphatically are, — Ireland, Espinasse, Miss Jewsbury, Dr. Hodgson, and a circle expanding on all sides outward, — and Mrs. Paulet at Liverpool. I am learning there also to know friendly faces, and a certain Roscoe Club has complimented me with its privileges. The oddest part of my new position is my alarming penny correspondence, which, what with welcomes, invitations to lecture, proffers of hospitality, suggestions from good Swedenborgists and others for my better guidance touching the titles of my discourses, &c., &c., all requiring answers, threaten to eat up a day like a cherry. In this fog and miscellany, and until the heavenly sun shall give me one beam, will not you, friend and joy of so many years, send me a quiet line or two now and then to say that you still smoke your pipe in peace, side by side with wife and brother also well and smoking, or able to smoke? Now that I have in some measure calmed down the astonishment and consternation of seeing your dreams change into realities, I mean, at my next approximation or perihelion, to behold you with the most serene and sceptical calmness.

So give my thanks and true affectionate remembrance to Jane Carlyle, and my regards also to Dr. Carlyle, whose precise address please also to send me.

Ever your loving
R.W.E.

The address at the top of this note is the best for the present, as I mean to make
this my centre.

CXXVIII. Carlyle to Emerson

Chelsea, 13 November, 1847

Dear Emerson, — Your Book-parcels were faithfully sent off, directly after your departure: in regard to one of them I had a pleasant visit from the proprietor in person, — the young Swedenborgian Doctor, whom to my surprise I found quite an agreeable, accomplished secular young gentleman, much given to “progress of the species,” &c., &c.; from whom I suppose you have yourself heard. The wandering umbrella, still short of an owner, hangs upon its peg here, without definite outlook. Of yourself there have come news, by your own Letter, and by various excerpts from Manchester Newspapers. *Gluck zu!* —

This Morning I received the Enclosed, and send it off to you without farther response. Mudie, if I mistake not, is some small Bookseller in the Russell-Square region; pray answer him, if you think him worthy of answer. A dim suspicion haunts me that perhaps he was the Republisher (or Pirate) of your first set of *Essays*: but probably he regards this as a mere office of untutored friendship on his part. Or possibly I do the poor man wrong by misremembrance? Chapman could tell.

I am sunk deep here, in effete Manuscripts, in abstruse meditations, in confusions old and new; sinking, as I may describe myself, through stratum after stratum of the Inane, — down to one knows not what depth! I unfortunately belong to the Opposition Party in many points, and am in a minority of one. To keep silence, therefore, is among the principal duties at present.

We had a call from Bancroft, the other evening. A tough Yankee man; of many worthy qualities more tough than musical; among which it gratified me to find a certain small under-current of genial *humor*, or as it were *hidden laughter*, not noticed heretofore.

My Wife and all the rest of us are well; and do all salute you with our true wishes, and the hope to have you here again before long. Do not bother yourself with other than voluntary writing to me, while there is so much otherwise that you are obliged to write. If on any point you want advice, information, or other help that lies within the limits of my strength, command me, now and always. And so Good be with you; and a happy meeting to us soon again.

Yours ever truly,
T. Carlyle

CXXIX. Carlyle to Emerson Chelsea, 30 November, 1847

Dear Emerson, — Here is a word for you from Miss Fuller; I send you the Cover also, though I think there is little or nothing in that. It contained another little Note for Mazzini; who is wandering in foreign parts, on paths unknown to me at present. Pray send my regards to Miss Fuller, when you write.

We hear of you pretty often, and of your successes with the Northern populations. We hope for you in London again before long. — I am busy, if at all, altogether *inarticulately* in these days. My respect for *silence*, my distrust of *Speech*, seem to grow upon me. There is a time for both, says Solomon; but we, in our poor generation, have forgotten one of the “times.”

Here is a Mr. Forster* of Rawdon, or Bradford, in Yorkshire; our late host in the Autumn time; who expects and longs to be yours when you come into those parts.

I am busy with William Conqueror’s *Domesday Book* and with the commentaries of various blockheads on it: — Ah me!

All good be with you, and happy news from those dear to you.

Yours ever,

T. Carlyle — * Now the Rt. Hon. W E. Forster, M.P. —

CXXX. Emerson to Carlyle 2 Fenny Street, Higher Broughton, Manchester
28 December, 1847

Dear Carlyle, — I am concerned to discover that Margaret Fuller in the letter which you forwarded prays me to ask you and Mrs. Carlyle respecting the Count and Countess Pepoli, who are in Rome for the winter, whether they would be good for her to know? — That is pretty nearly the form of her question. As one third of the winter is gone, and one half will be, before her question can be answered, I fear, it will have lost some of its pertinence. Well, it will serve as a token to pass between us, which will please me if it do not Margaret. — I have had nothing to send you tidings of. Yet I get the best accounts from home of wife and babes and friends. I am seeing this England more thoroughly than I had thought was possible to me. I find this lecturing a key which opens all doors. I have received everywhere the kindest hospitality from a great variety of persons. I see many intelligent and well-informed persons, and some fine geniuses. I have every day a better opinion of the English, who are a very handsome and satisfactory race of men, and, in the point of material performance, altogether incomparable. I have made some vain attempts to end my lectures, but must go on a little longer. With kindest regards to the Lady Jane, Your friend,

R.W.E.

Margaret Fuller's address, if anything is to be written, is, Care of Maquay,
Pakenham & Co., Rome.

CXXXI. Carlyle to Emerson

Chelsea, 30 December, 1847

My Dear Emerson, — We are very glad to see your handwriting again, and learn that you are well, and doing well. Our news of you hitherto, from the dim Lecture-element, had been satisfactory indeed, but vague. Go on and prosper.

I do not much think Miss Fuller would do any great good with the Pepolis, — even if they are still in Rome, and not at Bologna as our advices here seemed to indicate. Madam Pepoli is an elderly Scotch lady, of excellent commonplace vernacular qualities, hardly of more; the Count, some years younger, and a much airier man, is on all sides a beautiful *Dilettante*, — little suitable, I fear, to the serious mind that can recognize him as such! However, if the people are still in Rome, Miss Fuller can easily try: Bid Miss Fuller present my Wife's compliments, or mine, or even *yours* (for they know all our domesticities here, and are very intimate, especially Madam with *My* dame); upon which the acquaintance is at once made, and can be continued if useful.

This morning Richard Milnes writes to me for your address; which I have sent. He is just returned out of Spain; home swiftly to “vote for the Jew Bill”; is doing hospitalities at Woburn Abbey; and I suppose will be in Yorkshire (home, near Pontefract) before long. See him if you have opportunity: a man very easy to *see* and get into flowing talk with; a man of much sharpness of faculty, well tempered by several inches of “Christian *fat*” he has upon his ribs for covering. One of the idlest, cheeriest, most gifted of fat little men.

Tennyson has been here for three weeks; dining daily till he is near dead; — setting out a Poem withal. He came in to us on Sunday evening last, and on the preceding Sunday: a truly interesting Son of Earth, and Son of Heaven, — who has almost lost his way, among the will-o'-wisps, I doubt; and may flounder ever deeper, over neck and nose at last, among the quagmires that abound! I like him well; but can do next to nothing for him. Milnes, with general co-operation, got him a Pension; and he has bread and tobacco: but that is a poor outfit for such a soul. He wants a *task*; and, alas, that of spinning rhymes, and naming it “Art” and “high Art,” in a Time like ours, will never furnish him.

For myself I have been entirely *idle*, — I dare not even say, too abstrusely *occupied*; for I have merely been *looking* at the Chaos even, not by any means working in it. I have not even read a Book, — that I liked. All “Literature” has grown inexpressibly unsatisfactory to me. Better be silent than talk farther in this mood.

We are going off, on Saturday come a week, into Hampshire, to certain Friends you have heard me speak of. Our address, till the beginning of February, is “Hon. W.B. Baring, Alverstoke, Gosport, Hants.” My Wife sends you many kind regards; remember us across the Ocean too; — and be well and busy till we meet.

Yours ever,
T. Carlyle

Last night there arrived No. 1 of the *Massachusetts Review*: beautiful paper and print; and very promising otherwise. In the Introduction I well recognized the hand; in the first Article too, — not in any of the others. *Faustum sit.*

CXXXII. Emerson to Carlyle Ambleside, 26 February, 1848

My Dear Carlyle, — I am here in Miss Martineau's house, and having seen a good deal of England, and lately a good deal of Scotland too, I am tomorrow to set forth again for Manchester, and presently for London. Yesterday, I saw Wordsworth for a good hour and a half, which he did not seem to grudge, for he talked freely and fast, and — bating his cramping Toryism and what belongs to it — wisely enough. He is in rude health, and, though seventy-seven years old, says he does not feel his age in any particular. Miss Martineau is in excellent health and spirits, though just now annoyed by the hesitations of Murray to publish her book;* but she confides infinitely in her book, which is the best fortune. But I please myself not a little that I shall in a few days see you again, and I will give you an account of my journey. I have heard almost nothing of your late weeks, — but that is my fault, — only I heard with sorrow that your wife had been ill, and could not go with you on your Christmas holidays. Now may her good days have come again! I say I have heard nothing of your late days; of your early days, of your genius, of your influence, I cease not to hear and to see continually, yea, often am called upon to resist the same with might and main. But I will not pester you with it now. — Miss Martineau, who is most happily placed here, and a model of housekeeping, sends kindest remembrances to you both.

Yours ever,

R. W. Emerson.

* “Eastern Life, Past and Present.”

CXXXIII. Carlyle to Emerson Chelsea, 28 February, 1848

Dear Emerson, — We are delighted to hear of you again at first hand: our last traditions represented you at Edinburgh, and left the prospect of your return hither very vague. I have only time for one word tonight: to say that your room is standing vacant ever since you quitted it, — ready to be lighted up with all manner of physical and moral *fires* that the place will yield; and is in fact *your* room, and expects to be accounted such. — I know not specially what your operations in this quarter are to be; but whatever they are, or the arrangements necessary for them, surely it is here that you must alight again in the big Babel, and deliberately adjust what farther is to be done. Write to us what day you are to arrive; and the rest is all already managed.

Jane has never yet got out since the cold took her; but she has at no time been so ill as is frequent with her in these winter disorders; she is now steadily improving, and we expect will come out with the sun and the green leaves, — as she usually does. I too caught an ugly cold, and, what is very uncommon with me, a kind of cough, while down in Hampshire; which, with other inarticulate matters, has kept me in a very mute abstruse condition all this while; so that, for many weeks past, I have properly had no history, — except such as trees in winter, and other merely passive objects may have. That is not an agreeable side of the page; but I find it indissolubly attached to the other: no historical leaf with me but has them *both!* Reading does next to nothing for me at present, neither will thinking or even dreaming rightly prosper; of no province can I be quite master except of the *silent* one, in such a case. One feels there, at last, as if quite annihilated; and takes up arms again (the poor goose-quill is no great things of a weapon to arm with!) as if in a kind of sacred despair.

All people are in a sort of joy-dom over the new French Republic, which has descended suddenly (or shall we say, *ascended* alas?) out of the Immensities upon us; showing once again that the righteous Gods do yet live and reign! It is long years since I have felt any such deep-seated pious satisfaction at a public event. Adieu: come soon; and warn us when.

Yours ever,
T. Carlyle

CXXXIV. Emerson to Carlyle 2 Fenny St., Manchester, 2 March, Thursday
Dear Friend, — I hope to set forward today for London, and to arrive there some time tonight. I am to go first to Chapman's house, where I shall lodge for a time.

If it is too noisy, I shall move westward. But I hope you are to be at home tomorrow, for if I prosper, I shall come and beg a dinner with you, — is it not at five o'clock? I am sorry you have no better news to tell me of your health, — your own and your wife's. Tell her I shall surely report you to Alcott, who will have his revenge. Thanks that you keep the door so wide open for me still. I shall always come in.

Ever yours,
R.W.E.

CXXXV. Emerson to Carlyle
Monday, P.M., 19 June, 1848

Dear Carlyle, — Mrs. Crowe of Edinburgh, an excellent lady, known to you and to many good people, wishes me to go to you with her.

I tell her that I believe you relax the reins of labor as early as one hour after noon, and I propose one o'clock on Thursday for the invasion. If you are otherwise engaged, you must send me word. Otherwise, we shall come.

It was sad to hear no good news last evening from Jane Carlyle. I heartily hope the night brought sleep, and the morning better health to her.

Yours always,
R.W. Emerson

CXXXVI. Carlyle to Emerson

Chelsea, 20 June, 1848

Dear Emerson, — We shall be very glad to become acquainted with Mrs. Crowe, of whom already by report we know many favorable things. Brown (of Portobello, Edinburgh) had given us intimation of her kind purposes towards Chelsea; and now on Thursday you (please the Pigs) shall see the adventure achieved. Two o'clock, not one, is the hour when labor ceases here, — if, alas, there be any “labor” so much as got begun; which latter is often enough the sad case. But at either hour we shall be ready for you.

I hope you penetrated the Armida Palace, and did your devoir to the sublime Duchess and her Luncheon yesterday! I cannot without a certain internal amusement (foreign enough to my present humor) represent to myself such a conjunction of opposite stars! But you carry a new image off with you, and are a gainer, you. *Allons*.

My Papers here are in a state of distraction, state of despair!
I see not what is to become of them and me.

Yours ever truly,
T. Carlyle

My Wife arose without headache on Monday morning; but feels still a good deal beaten; — has not had “such a headache” for several years.

CXXXVII. Carlyle to Emerson Chelsea, Friday [23 June, 1848]

Dear Emerson, — I forgot to say, last night, that you are to dine with us on Sunday; that after our call on the Lady Harriet* we will take a stroll through the Park, look at the Sunday population, and find ourselves here at five o'clock for the above important object. Pray remember, therefore, and no excuse! In haste.

Yours ever truly,

T. Carlyle — * Lady Ashburton —

CXXXVIII. Carlyle to Emerson

Chelsea, 6 December, 1848

Dear Emerson, — We received your Letter* duly, some time ago, with many welcomes; and have as you see been too remiss in answering it. Not from forgetfulness, if you will take my word; no, but from many causes, too complicated to articulate, and justly producing an indisposition to put pen to paper at all! Never was I more silent than in these very months; and, with reason too, for the world at large, and my own share of it in small, are both getting more and more unspeakable with any convenience! In health we of this household are about as well as usual; — and look across to the woods of Concord with more light than we had, realizing for ourselves a most mild and friendly picture there. Perhaps it is quite as well that you are left alone of foreign interference, even of a Letter from Chelsea, till you get your huge bale of English reminiscences assorted a little. Nobody except me seems to have heard from you; at least the rest, in these parts, all plead destitution when I ask for news. What you saw and suffered and enjoyed here will, if you had once got it properly warehoused, be new wealth to you for many years. Of one impression we fail not here: admiration of your pacific virtues, of gentle and noble tolerance, often sorely tried in this place! Forgive me my ferocities; you do not quite know what I suffer in these latitudes, or perhaps it would be even easier for you. Peace for me, in a Mother of Dead Dogs like this, there is not, was not, will not be, — till the battle itself end; which, however, is a sure outlook, and daily growing a nearer one.

—— — * The letter is missing, but a fragment of the rough draft of it exists, dated Concord, 2 October, 1848. Emerson had returned home in July, and he begins: “‘T is high time, no doubt, long since, that you heard from me, and if there were good news in America for you, you would be sure to hear. All goes at heavy trot with us... I fell again quickly into my obscure habits, more fit for me than the fine things I had seen. I made my best endeavor to praise the rich country I had seen, and its excellent, energetic, polished people. And it is very easy for me to do so. England is the country of success, and success has a great charm for me, more than for those I talk with at home. But they were obstinate to know if the English were superior to their possessions, and if the old religion warmed their hearts, and lifted a little the mountain of wealth. So I enumerated the list of brilliant persons I had seen, and the [break in MS.]. But the question returned. Did you find kings and priests? Did you find sanctities and beauties that took away your memory, and sent you home a changed man with new aims, and with a discontent of your old pastures?”

Here the fragment ends. Emerson's answer to these questions may be found in the chapter entitled "Results," in his *English Traits*. — — —

Nay, there is another practical question, — but it is from the female side of the house to the female side, — and in fact concerns Indian meal, upon which Mrs. Emerson, or you, or the Miller of Concord (if he have any tincture of philosophy) are now to instruct us! The fact is, potatoes having vanished here, we are again, with motives large and small, trying to learn the use of Indian meal; and indeed do eat it daily to meat at dinner, though hitherto with considerable despair. Question *first*, therefore: Is there by nature a *bitter* final taste, which makes the throat smart, and disheartens much the apprentice in Indian meal; — or is it accidental, and to be avoided? We surely anticipate the latter answer; but do not yet see how. At first we were taught the meal, all ground on your side of the water, had got fusty, *raw*; an effect we are well used to in oaten and other meals but, last year, we had a bushel of it ground *here*, and the bitter taste was there as before (with the addition of much dirt and sand, our millstones I suppose being too soft); — whereupon we incline to surmise that there is, perhaps, as in the case of oats, some pellicle or hull that ought to be *rejected* in making the meal? Pray ask some philosophic Miller, if Mrs. Emerson or you do not know; — and as a corollary this *second* question: What is the essential difference between *white* (or brown-gray-white) Indian Meal and *yellow* (the kind we now have; beautiful as new Guineas, but with an ineffaceable tastekin of *soot* in it)? — And question *third*, which includes all: How to cook *mush* rightly, at least without bitter? *Long*-continued boiling seems to help the bitterness, but does not cure it. Let some oracle speak! I tell all people, our staff of life is in the Mississippi Valley henceforth; — and one of the truest benefactors were an American Minerva who could teach us to cook this meal; which our people at present (I included) are unanimous in finding nigh uneatable, and loudly exclaimable against! Elihu Burritt had a string of recipes that went through all newspapers three years ago; but never sang there oracle of longer ears than that, — totally destitute of practical significance to any creature here!

And now enough of questioning. Alas, alas, I have a quite other batch of sad and saddest considerations, — on which I must not so much as enter at present! Death has been very busy in this little circle of ours within these few days. You remember Charles Buller, to whom I brought you over that night at the Barings' in Stanhope Street? He died this day week, almost quite unexpectedly; a sore loss to all that knew him personally, and his gladdening sunny presence in many circles here; a sore loss to the political people too, for he was far the cleverest of

all Whig men, and indeed the only genial soul one can remember in that department of things.* We buried him yesterday; and now see what new thing has come. Lord Ashburton, who had left his mother well in Hampshire ten hours before, is summoned from poor Buller's funeral by telegraph; hurries back, finds his mother, whom he loved much, already dead! She was a Miss Bingham, I think, from Pennsylvania, perhaps from Philadelphia itself. You saw her; but the first sight by no means told one all or the best worth that was in that good Lady. We are quite bewildered by our own regrets, and by the far painfuller sorrow of those closely related to these sudden sorrows. Of which let me be silent for the present; — and indeed of all things else, for *speech*, inadequate mockery of one's poor meaning, is quite a burden to me just now!

* The reader of Carlyle's *Reminiscences*, and of Froude's volumes of his biography, is familiar with the close relations that had existed between Buller and Carlyle. — — —

Neuberg* comes hither sometimes; a welcome, wise kind of man. Poor little Espinasse still toils cheerily at the oar, and various friends of yours are about us. Brother John did send through Chapman all the *Dante*, which we calculate you have received long ago: he is now come to Town; doing a Preface, &c., which also will be sent to you, and just about publishing. — Helps, who has been alarmingly ill, and touring on the Rhine since we were his guests, writes to me yesterday from Hampshire about sending you a new Book of his. I instructed him How.

Adieu, dear Emerson; do not forget us, or forget to think as kindly as you can of us, while we continue in this world together.

Yours ever affectionately,
T. Carlyle

* Mr. Ireland, in his *Recollections*, p. 62, gives an interesting account of Mr. Neuberg, — a highly cultivated German, who assisted Carlyle in some of the later literary labors of his life. Neuberg died in 1867, and in a letter to his sister of that year Carlyle says: "No kinder friend had I in this world; no man of my day, I believe, had so faithful, loyal, and willing a helper as he generously was to me for the last twenty or more years." —

CXXXIX. Emerson to Carlyle

Boston, 28 January, 1849

My Dear Carlyle, — Here in Boston for the day, though in no fit place for writing, you shall have, since the steamer goes tomorrow, a hasty answer to at least one of your questions....

You tell me heavy news of your friends, and of those who were friendly to me for your sake. And I have found farther particulars concerning them in the newspapers. Buller I have known by name ever since he was in America with Lord Durham, and I well remember his face and figure at Mr. Baring's. Even England cannot spare an accomplished man.

Since I had your letter, and, I believe, by the same steamer, your brother's *Dante*,* complete within and without, has come to me, most welcome. I heartily thank him. 'T is a most workmanlike book, bearing every mark of honest value. I thank him for myself, and I thank him, in advance, for our people, who are sure to learn their debt to him, in the coming months and years. I sent the book, after short examination, the same day, to New York, to the Harpers, lest their edition should come out without Prolegomena. But they answered, the next day, that they had already received directly the same matter; — yet have not up to this time returned my book. For the Indian corn, — I have been to see Dr. Charles T. Jackson (my wife's brother, and our best chemist, inventor of etherization), who tells me that the reason your meal is bitter is, that all the corn sent to you from us is kiln-dried here, usually at a heat of three hundred degrees, which effectually kills the starch or diastase (?) which would otherwise become sugar. This drying is thought necessary to prevent the corn from becoming musty in the contingency of a long voyage. He says, if it should go in the steamer, it would arrive sound without previous drying. I think I will try that experiment, shortly on a box or a barrel of our Concord maize, as Lidian Emerson confidently engages to send you accurate recipes for johnny-cake, mush, and hominy.

* The *Inferno* of Dante, a translation in prose by John Carlyle; an excellent piece of work, still in demand.

Why did you not send me word of Clough's hexameter poem, which I have now received and read with much joy.* But no, you will never forgive him his metres. He is a stout, solid, reliable man and friend, — I knew well; but this fine poem has taken me by surprise. I cannot find that your journals have yet discovered its existence. With kindest remembrances to Jane Carlyle, and new thanks to John Carlyle, your friend,

— R.W. Emerson

—— ——— — * “The Bothie of Tober-na-Vuolich.” —— —— —

CXL. Carlyle to Emerson

Chelsea, 19 April, 1849

My Dear Emerson, — Today is American Postday; and by every rule and law, — even if all laws but those of Cocker were abolished from this universe, — a word from me is due to you! Twice I have heard since I spoke last: prompt response about the Philadelphia Bill; exact performance of your voluntary promise, — Indian Corn itself is now here for a week past....

Still more interesting is the barrel of genuine Corn ears, — Indian Cobs of edible grain, from the Barn of Emerson himself! It came all safe and right, according to your charitable program; without cost or trouble to us of any kind; not without curious interest and satisfaction! The recipes contained in the precedent letter, duly weighed by the competent jury of housewives (at least by my own Wife and Lady Ashburton), were judged to be of decided promise, reasonable-looking every one of them; and now that the stuff itself is come, I am happy to assure you that it forms a new epoch for us all in the Maize department: we find the grain *sweet*, among the sweetest, with a touch even of the taste of *nuts* in it, and profess with contrition that properly we have never tasted Indian Corn before. Millers of due faculty (with millstones of *iron*) being scarce in the Cockney region, and even cooks liable to err, the Ashburtons have on their resources undertaken the brunt of the problem one of their own Surrey or Hampshire millers is to grind the stuff, and their own cook, a Frenchman commander of a whole squadron, is to undertake the dressing according to the rules. Yesterday the Barrel went off to their country place in Surrey, — a small Bag of select ears being retained here, for our own private experimenting; — and so by and by we shall see what comes of it. — I on my side have already drawn up a fit proclamation of the excellences of this invaluable corn, and admonitions as to the benighted state of English eaters in regard to it; — to appear in *Fraser's Magazine*, or I know not where, very soon. It is really a small contribution towards World-History, this small act of yours and ours: there is no doubt to me, now that I taste the real grain, but all Europe will henceforth have to rely more and more upon your Western Valleys and this article. How beautiful to think of lean tough Yankee settlers, tough as gutta-percha, with most occult unsubduable fire in their belly, steering over the Western Mountains, to annihilate the jungle, and bring bacon and corn out of it for the Posterity of Adam! The Pigs in about a year eat up all the rattlesnakes for miles round: a most judicious function on the part of the Pigs. Behind the Pigs comes Jonathan with his all-conquering ploughshare, — glory to him too! Oh, if we were not a set of Cant-ridden

blockheads, there is no *Myth* of Athene or Herakles equal to this *fact*; — which I suppose *will* find its real “Poets” some day or other; when once the Greek, Semitic, and multifarious other Cobwebs are swept away a little! Well, we must wait. — For the rest, if this skillful Naturalist and you will make any more experiments on Indian Corn for us, might I not ask that you would try for a method of preserving *the meal* in a sound state for us? Oatmeal, which would spoil directly too, is preserved all year by kiln-drying the grain before it is ground, — parching it till it is almost *brown*, sometimes the Scotch Highlanders, by intense parching, can keep their oatmeal good for a series of years. No Miller here at present is likely to produce such beautiful meal as some of the American specimens I have seen: — if possible, we must learn to get the grain over in the shape of proper durable meal. At all events, let your Friend charitably make some inquiry into the process of millerage, the possibilities of it for meeting our case; — and send us the result some day, on a separate bit of paper. With which let us end, for the present.

Alas, I have yet written nothing; am yet a long way off writing, I fear! Not for want of matter, perhaps, but for redundance of it; I feel as if I had the whole world to write yet, with the day fast bending downwards on me, and did not know where to begin, — in what manner to address the deep-sunk populations of the Theban Land. Any way my Life is very *grim*, on these terms, and is like to be; God only knows what farther quantity of braying in the mortar this foolish clay of mine may yet need! — They are printing a third Edition of *Cromwell*; that bothered me for some weeks, but now I am over with that, and the Printer wholly has it: a sorrowful, not now or ever a joyful thing to me, that. The *stupor* of my fellow blockheads, for Centuries back, presses too heavy upon that, — as upon many things, O Heavens! People are about setting up some *Statue of Cromwell*, at St. Ives, or elsewhere: the King-Hudson Statue is never yet set up; and the King himself (as you may have heard) has been *discovered* swindling. I advise all men not to erect a statue for Cromwell just now. Macaulay’s *History* is also out, running through the fourth edition: did I tell you last time that I had read it, — with wonder and amazement? Finally, it seems likely Lord John Russell will shortly walk out (forever, it is hoped), and Sir R. Peel come in; to make what effort is in him towards delivering us from the *pedant* method of treating Ireland. The *beginning*, as I think, of salvation (if he can prosper a little) to England, and to all Europe as well. For they will all have to learn that man does need government, and that an able-bodied starving beggar is and remains (whatever Exeter Hall may say to it) a *Slave* destitute of a *Master*; of which facts England, and convulsed Europe, are fallen foundly ignorant in these bad ages,

and will plunge ever deeper till they rediscover the same. Alas, alas, the Future for us is not to be made of *butter*, as the Platforms prophesy; I think it will be harder than steel for some ages! No noble age was ever a soft one, nor ever will or can be. — Your beautiful curious little discourse (report of a discourse) about the English was sent me by Neuberg; I thought it, in my private heart, one of the best words (for *hidden* genius lodged in it) I had ever heard; so sent it to the *Examiner*, from which it went to the *Times* and all the other Papers: an excellent sly little word.

Clough has gone to Italy; I have seen him twice, — could not manage his hexameters, though I like the man himself, and hope much of him. “Infidelity” has broken out in Oxford itself, — immense emotion in certain quarters in consequence, virulent outcries about a certain “Sterling Club,” altogether a secular society!

Adieu, dear Emerson; I had much more to say, but there is no room. O, forgive me, forgive me all trespasses, — and love me what you can!

Yours ever,
T. Carlyle

CXLI. Carlyle to Emerson

Scotsbrig, Ecclefechan, N.B., 13 August, 1849

Dear Emerson, — By all laws of human computation, I owe you a letter, and have owed, any time these seven weeks: let me now pay a little, and explain. Your *second* Barrel of Indian Corn arrived also perfectly fresh, and of admirable taste and quality; the very bag of new-ground meal was perfect; and the “popped corn” ditto, when it came to be discovered: with the whole of which admirable materials such order was taken as promised to secure “the greatest happiness to the greatest number”; and due silent thanks were tendered to the beneficence of the unwearied Sender: — but all this, you shall observe, had to be done in the thick of a universal packing and household bustle; I just on the wing for a “Tour in Ireland,” my Wife too contemplating a run to Scotland shortly after, there to meet me on my return. All this was seven good weeks ago: I hoped somewhere in my Irish wayfarings to fling you off a Letter; but alas, I reckoned there quite without my host (strict “host,” called *Time*), finding nowhere half a minute left to me; and so now, having got home to my Mother, not to see my Wife yet for some days, it is my *earliest* leisure, after all, that I employ in this purpose. I have been terribly knocked about too, — jolted in Irish cars, bothered almost to madness with Irish balderdash, above all kept on dreadfully short allowance of sleep; — so that now first, when fairly down to rest, all aches and bruises begin to be fairly sensible; and my clearest feeling at this present is the uncomfortable one, “that I am not Caliban, but a Cramp”: terribly cramped indeed, if I could tell you everything!

What the other results of this Irish Tour are to be for me I cannot in the least specify. For one thing, I seem to be farther from *speech* on any subject than ever: such masses of chaotic ruin everywhere fronted me, the general fruit of long-continued universal falsity and folly; and such mountains of delusion yet possessing all hearts and tongues I could do little that was not even *noxious*, except *admire* in silence the general “Bankruptcy of Imposture” as one there finds and sees it come to pass, and think with infinite sorrow of the tribulations, futile wrestlings, tumults, and disasters which yet await that unfortunate section of Adam’s Posterity before any real improvement can take place among them. Alas, alas! The Gospels of Political Economy, of *Laissez-faire*, No-Government, Paradise to all comers, and so many fatal Gospels, — generally, one may say, all the Gospels of this blessed “New Era,” — will first have to be tried, and found wanting. With a quantity of written and uttered nonsense, and of suffered and

inflicted misery, which one sinks fairly dumb to estimate! A kind of comfort it is, however, to see that "Imposture" *has* fallen openly "bankrupt," here as everywhere else in our old world; that no dexterity of human tinkering, with all the Parliamentary Eloquence and Elective Franchises in nature, will ever set it on its feet again, to go many yards more; but that *its* goings and currencies in this Earth have as good as ceased for ever and ever! God is great; all Lies do now, as from the first, travel incessantly towards Chaos, and there at length lodge! In some parts of Ireland (the Western "insolvent Unions," some twenty-seven of them in all), within a trifle of *one half* of the whole population are on Poor-Law rations (furnished by the British Government, L1,100 a week furnished here, L1,300 there, L800 there); the houses stand roofless, the lands unstocked, uncultivated, the landlords hidden from bailiffs, living sometimes "on the hares of their domain": such a state of things was never witnessed under this sky before; and, one would humbly expect, cannot last long! — What is to be done? asks every one; incapable of *hearing* any answer, were there even one ready for imparting to him. "*Blacklead* these two million idle beggars," I sometimes advised, "and sell them in Brazil as Niggers, — perhaps Parliament, on sweet constraint, will allow you to advance them to be Niggers!" In fact, the Emancipation Societies should send over a deputation or two to look at *these* immortal Irish "Freemen," the *ne plus ultra* of their class it would perhaps moderate the windpipe of much eloquence one hears on that subject! Is not this the most illustrious of all "ages"; making progress of the species at a grand rate indeed? Peace be with it.

Waiting for me here, there was a Letter from Miss Fuller in Rome, written about a month ago; a dignified and interesting Letter; requesting help with Booksellers for some "History of the late Italian Revolution" she is about writing; and elegiacally recognizing the worth of Mazzini and other cognate persons and things. I instantly set about doing what little seemed in my power towards this object, — with what result is yet hidden, and have written to the heroic Margaret: "More power to her elbow!" as the Irish say. She has a beautiful enthusiasm; and is perhaps in the right stage of insight for doing that piece of business well. — Of other persons or interests I will say nothing till a calmer opportunity; which surely cannot be very long in coming.

In four days I am to rejoin my wife; after which some bits of visits are to be paid in this North Country; necessary most of them, not likely to be profitable almost any. In perhaps a month I expect to be back in Chelsea; whither direct a word if you are still beneficent enough to think of such a Castaway!

Yours ever,
T. Carlyle

I got Thoreau's Book; and meant well to read it, but have not yet succeeded, though it went with me through all Ireland: tell him so, please. Too Jean-Paulish, I found it hitherto.

CXLII. Carlyle to Emerson

Chelsea, 19 July, 1850

My Dear Emerson, My Friend, my Friend, — You behold before you a remorseful man! It is well-nigh a year now since I despatched some hurried rag of paper to you out of Scotland, indicating doubtless that I would speedily follow it with a longer letter; and here, when gray Autumn is at hand again, I have still written nothing to you, heard nothing from you! It is miserable to think of: — and yet it is a fact, and there is no denying of it; and so we must let it lie. If it please Heaven, the like shall not occur again. “Ohone Arooh!” as the Irish taught me to say, “Ohone Arooh!”

The fact is, my life has been black with care and toil, — labor above board and far worse labor below; — I have hardly had a heavier year (overloaded too with a kind of “health” which may be called frightful): to “burn my own smoke” in some measure, has really been all I was up to; and except on sheer immediate compulsion I have not written a word to any creature. — Yesternight I finished the last of these extraordinary *Pamphlets*; am about running off somewhither into the deserts, of Wales or Scotland, Scandinavia or still remoter deserts; — and my first signal of revived reminiscence is to you.

Nay I have not at any time forgotten you, be that justice done the unfortunate: and though I see well enough what a great deep cleft divides us, in our ways of practically looking at this world, — I see also (as probably you do yourself) where the rock-strata, miles deep, unite again; and the two poor souls are at one. Poor devils! — Nay if there were no point of agreement at all, and I were more intolerant “of ways of thinking” than I even am, — yet has not the man Emerson, from old years, been a Human Friend to me? Can I ever forget, or think otherwise than lovingly of the man Emerson? No more of this. Write to me in your first good hour; and say that there is still a brother-soul left to me alive in this world, and a kind thought surviving far over the sea! — Chapman, with due punctuality at the time of publication, sent me the *Representative Men*; which I read in the becoming manner: you now get the Book offered you for a shilling, at all railway stations; and indeed I perceive the word “representative man” (as applied to the late tragic loss we have had in Sir Robert Peel) has been adopted by the Able-Editors, and circulates through Newspapers as an appropriate household word, which is some compensation to you for the piracy you suffer from the Typographic Letter-of-marque men here. I found the Book a most finished clear and perfect set of *Engravings in the line manner*; portraitures full

of *likeness*, and abounding in instruction and materials for reflection to me: thanks always for such a Book; and Heaven send us many more of them. *Plato*, I think, though it is the most admired by many, did least for me: little save Socrates with his clogs and big ears remains alive with me from it. *Swedenborg* is excellent in *likeness*; excellent in many respects; — yet I said to myself, on reaching your general conclusion about the man and his struggles: “Missed the consummate flower and divine ultimate elixir of Philosophy, say you? By Heaven, in clutching at *it*, and almost getting it, he has tumbled into Bedlam, — which is a terrible *miss*, if it were never so *near*! A miss fully as good as a mile, I should say!” — In fact, I generally dissented a little about the *end* of all these Essays; which was notable, and not without instructive interest to me, as I had so lustily shouted “Hear, hear!” all the way from the beginning up to that stage. — On the whole, let us have another Book with your earliest convenience: that is the modest request one makes of you on shutting this.

I know not what I am now going to set about: the horrible barking of the universal dog-kennel (awakened by these *Pamphlets*) must still itself again; my poor nerves must recover themselves a little: — I have much more to say; and by Heaven’s blessing must try to get it said in some way if I live. — Bostonian Prescott is here, infinitely *lionized* by a mob of gentlemen; I have seen him in two places or three (but forbore speech): the Johnny-cake is good, the twopence worth of currants in it too are good; but if you offer it as a bit of baked Ambrosia, *Ach Gott!* — Adieu, dear Emerson, forgive, and love me a little.

Yours ever,
T. Carlyle

CXLIII. Carlyle to Emerson Chelsea, 14 November, 1850

Dear Emerson, — You are often enough present to my thoughts; but yesterday there came a little incident which has brought you rather vividly upon the scene for me. A certain “Mr.— “ from Boston sends us, yesterday morning by post, a Note of yours addressed to Mazzini, whom he cannot find; and indicates that he retains a similar one addressed to myself, and (in the most courteous, kindly, and dignified manner, if Mercy prevent not) is about carrying it off with him again to America! To give Mercy a chance, I by the first opportunity get under way for Morley’s Hotel, the address of Mr. — ; find there that Mr. — , since morning, *has been* on the road towards Liverpool and America, and that the function of Mercy is quite extinct in this instance! My reflections as I wandered home again were none of the pleasantest. Of this Mr. — I had heard some tradition, as of an intelligent, accomplished, and superior man; such a man’s acquaintance, of whatever complexion he be, is and was always a precious thing to me, well worth acquiring where possible; not to say that any friend of yours, whatever his qualities otherwise, carries with him an imperative key to all bolts and locks of mine, real or imaginary. In fact I felt punished; — and who knows, if the case were seen into, whether I deserve it? What “business” it was that deprived me of a call from Mr. — , or of the possibility of calling on him, I know very well, — and — , the little dog, and others know! But the fact in that matter is very far different indeed from the superficial semblance; and I appeal to all the *gentlemen* that are in America for a candid interpretation of the same. “Eighteen million bores,” — good Heavens don’t I know how many of that species we also have; and how with us, as with you, the difference between them and the Eighteen thousand noble-men and non-bores is immeasurable and inconceivable; and how, with us as with you, the *latter* small company, sons of the Empyrean, will have to fling the former huge one, sons of Mammon and Mud, into some kind of chains again, reduce them to some kind of silence again, — unless the old Mud-Demons are to rise and devour us all? Truly it is so I construe it: and if — and the Eighteen millions are well justified in their anger at me, and the Eighteen thousand owe me thanks and new love. That is my decided opinion, in spite of you all! And so, along with — , probably in the same ship with him, there shall go my protest against the conduct of — ; and the declaration that to the last I will protest! Which will wind up the matter (without any word of yours on it) at this time. — For the rest, though — sent me his Pamphlet, it is a fact I have not read a word of it, nor shall ever read. My Wife read it; but I was away, with far other things in my head; and

it was “lent to various persons” till it died! — Enough and ten times more than enough of all that. Let me on this last slip of paper give you some response to the Letter* I got in Scotland, under the silence of the bright autumn sun, in my Mother’s house, and read there.

—— — * This letter is missing. —— —— You are bountiful abundantly in your reception of those *Latter Day Pamphlets*; and right in all you say of them; — and yet withal you are not right, my Friend, but I am! Truly it does behove a man to know the inmost resources of this universe, and, for the sake both of his peace and of his dignity, to possess his soul in patience, and look nothing doubting (nothing wincing even, if that be his humor) upon all things. For it is most indubitable there is good in all; — and if you even see an Oliver Cromwell assassinated, it is certain you may get a cartload of turnips from his carcass. Ah me, and I suppose we had too much forgotten all this, or there had not been a man like you sent to show it us so emphatically! Let us well remember it; and yet remember too that it is *not* good always, or ever, to be “at ease in Zion”; good often to be in fierce rage in Zion; and that the vile Pythons of this Mud-World do verily require to have sun-arrows shot into them and red-hot pokers struck through them, according to occasion: woe to the man that carries either of these weapons, and does not use it in their presence! Here, at this moment, a miserable Italian organ-grinder has struck up the *Marseillaise* under my window, for example: was the *Marseillaise* fought out on a bed of down, or is it worth nothing when fought? On those wretched *Pamphlets* I set no value at all, or even less than none: to me their one benefit is, my own heart is clear of them (a benefit not to be despised, I assure you!) — and in the Public, athwart this storm of curses, and emptyings of vessels of dishonor, I can already perceive that it is all well enough there too in reference to them; and the controversy of the Eighteen millions *versus* the Eighteen thousands, or Eighteen units, is going on very handsomely in that quarter of it, for aught I can see! And so, Peace to the brave that are departed; and, Tomorrow to fresh fields and pastures new! — I was in Wales, as well as Scotland, during Autumn time; lived three weeks within wind of St. Germanus’s old “College” (Fourteen Hundred years of age or so) and also not far from *Merthyr Tydvil*, Cyclops’ Hell, sootiest and horriddest avatar of the Industrial Mammon I had ever anywhere seen; went through the Severn Valley; at Bath stayed a night with Landor (a proud and high old man, who charged me with express remembrances for you); saw Tennyson too, in Cumberland, with his new Wife; and other beautiful recommendable and ‘questionable things; — and was dreadfully tossed about, and torn almost to tatters by the manifold brambles of my way: and so at length am here, a much-

lamed man indeed! Oh my Friend, have tolerance for me, have sympathy with me; you know not quite (I imagine) what a burden mine is, or perhaps you would find this duty, which you always do, a little easier done! Be happy, be busy beside your still waters, and think kindly of me there. My nerves, health I call them, are in a sad state of disorder: alas, that is nine tenths of all the battle in this world. Courage, courage! — My Wife sends salutations to you and yours. Good be with you all always.

Your affectionate,
T. Carlyle

CXLIV. Carlyle to Emerson

Chelsea, 8 July, 1851

Dear Emerson, — Don't you still remember very well that there is such a man? I know you do, and will do. But it is a ruinously long while since we have heard a word from each other; — a state of matters that ought immediately to *cease*. It was your turn, I think, to write? It was somebody's turn! Nay I heard lately you complained of bad eyes; and were grown abstinent of writing. Pray contradict me this. I cannot do without some regard from you while we are both here. Spite of your many sins, you are among the most human of all the beings I now know in the world; — who are a very select set, and are growing ever more so, I can inform you!

In late months, feeling greatly broken and without heart for anything weighty, I have been upon a *Life of John Sterling*; which will not be good for much, but will as usual gratify me by taking itself off my hands: it was one of the things I felt a kind of obligation to do, and so am thankful to have done. Here is a patch of it lying by me, if you will look at a specimen. There are four hundred or more pages (prophesies the Printer), a good many *Letters* and *Excerpts* in the latter portion of the volume. Already half printed, wholly written; but not to come out for a couple of months yet, — all trade being at a stand till this sublime "Crystal Palace" go its ways again. — And now since we are upon the business, I wish you would mention it to E.P. Clark (is not that the name?) next time you go to Boston: if that friendly clear-eyed man have anything to say in reference to it and American Booksellers, let him say and do; he may have a Copy for anybody in about a month: if *he* have nothing to say, then let there be nothing anywhere said. For, mark O Philosopher, I expressly and with emphasis prohibit *you* at this stage of our history, and henceforth, unless I grow poor again. Indeed, indeed, the commercial mandate of the thing (Nature's little order on that behalf) being once fulfilled (by speaking to Clark), I do not care a snuff of tobacco how it goes, and will prefer, here as elsewhere, my night's rest to any amount of superfluous money.

This summer, as you may conjecture, has been very noisy with us, and productive of little, — the "Wind-dust-ry of all Nations" involving everything in one inane tornado. The very shopkeepers complain that there is no trade. Such a sanhedrim of windy fools from all countries of the Globe were surely never gathered in one city before. But they will go their ways again, they surely will! One sits quiet in that faith; — nay, looks abroad with a kind of pathetic grandfatherly feeling over this universal Children's Ball which the British

Nation in these extraordinary circumstances is giving it self! Silence above all, silence is very behoveful! I read lately a small old brown French duodecimo, which I mean to send you by the first chance there is. The writer is a Capitaine Bossu; the production, a Journal of his experiences in “La Louisiane,” “Oyo” (*Ohio*), and those regions, which looks very genuine, and has a strange interest to me, like some fractional *Odyssey* or letter.* Only a hundred years ago, and the Mississippi has changed as never valley did: in 1751 older and stranger, looked at from its present date, than Balbec or Nineveh! Say what we will, Jonathan is doing miracles (of a sort) under the sun in these times now passing. — Do you know *Bartram’s Travels*? This is of the Seventies (1770) or so; treats of *Florida* chiefly, has a wondrous kind of floundering eloquence in it; and has also grown immeasurably *old*. All American libraries ought to provide themselves with that kind of book; and keep them as a kind of future *biblical* article. — Finally on this head, can you tell me of any *good* Book on California? Good: I have read several bad. But that too is worthy of some wonder; that too, like the Old Bucaniers, hungers and thirsts (in ingenuous minds) to have some true record and description given of it.

—— — * Bossu wrote two books which are known to the student of the history of the settlement of America; one, “Nouveaux Voyages aux Indes occidentales,” Paris, 1768; the other, “Nouveaux Voyages dans l’Amerique septentrionale,” Amsterdam (Paris), 1777. —— —

And poor Miss Fuller, was there any *Life* ever published of her? or is any competent hand engaged on it? Poor Margaret, I often remember her; and think how she is asleep now under the surges of the sea. Mazzini, as you perhaps know, is with us this summer; comes across once in the week or so, and tells me, or at least my Wife, all his news. The Roman revolution has made a man of him, — quite brightened up ever since; — and the best friend *he* ever saw, I believe, was that same Quack-President of France, who relieved him while it was still time.

My Brother is in Annandale, working hard over *Dante* at last; talks of coming up hither shortly; I am myself very ill and miserable in the *liver* regions; very tough otherwise, — though I have now got spectacles for small print in the twilight. *Eheu fugaces*, — and yet why *Eheu*? In fact it is better to be silent. — Adieu, dear Emerson; I expect to get a great deal brisker by and by, — and in the first place to have a Missive from Boston again. My Wife sends you many regards. I am as ever, — affectionately Yours,

— T. Carlyle

CXLV. Emerson to Carlyle

Concord, 28 July, 1851

My Dear Carlyle, — You must always thank me for silence, be it never so long, and must put on it the most generous interpretations. For I am too sure of your genius and goodness, and too glad that they shine steadily for all, to importune you to make assurance sure by a private beam very often. There is very little in this village to be said to you, and, with all my love of your letters, I think it the kind part to defend you from our imbecilities, — my own, and other men's. Besides, my eyes are bad, and prone to mutiny at any hint of white paper.

And yet I owe you all my story, if story I have. I have been something of a traveler the last year, and went down the Ohio River to its mouth; walked nine miles into, and nine miles out of the Mammoth Cave, in Kentucky, — walked or sailed, for we crossed small underground streams, — and lost one day's light; then steamed up the Mississippi, five days, to Galena. In the Upper Mississippi, you are always in a lake with many islands.

“The Far West” is the right name for these verdant deserts. On all the shores, interminable silent forest. If you land, there is prairie behind prairie, forest behind forest, sites of nations, no nations. The raw bullion of nature; what we call “moral” value not yet stamped on it. But in a thousand miles the immense material values will show twenty or fifty Californias; that a good ciphering head will make one where he is. Thus at Pittsburg, on the Ohio, the “Iron” City, whither, from want of railroads, few Yankees have penetrated, every acre of land has three or four bottoms; first of rich soil; then nine feet of bituminous coal; a little lower, fourteen feet of coal; then iron, or salt; salt springs, with a valuable oil called petroleum floating on their surface. Yet this acre sells for the price of any tillage acre in Massachusetts; and, in a year, the railroads will reach it, east and west. — I came home by the great Northern Lakes and Niagara.

No books, a few lectures, each winter, I write and read. In the spring, the abomination of our Fugitive Slave Bill drove me to some writing and speech-making, without hope of effect, but to clear my own skirts. I am sorry I did not print whilst it was yet time. I am now told that the time will come again, more's the pity. Now I am trying to make a sort of memoir of Margaret Fuller, or my part in one; — for Channing and Ward are to do theirs. Without either beauty or genius, she had a certain wealth and generosity of nature which have left a kind of claim on our consciences to build her a cairn. And this reminds me that I am to write a note to Mazzini on this matter; and, as you say you see him, you must charge yourself with delivering it. What we do must be ended by October. You

too are working for Sterling. It is right and kind. I learned so much from the New York *Tribune*, and, a few days after, was on the point of writing to you, provoked by a foolish paragraph which appeared in Rufus Griswold's Journal, (New York,) purporting that R.W.E. possessed important letters of Sterling, without which Thomas Carlyle could not write the Life. What scrap of hearsay about contents of Sterling's letters to me, or that I had letters, this paltry journalist swelled into this puff-ball, I know not. He once came to my house, and, since that time, may have known Margaret Fuller in New York; but probably never saw any letter of Sterling's or heard the contents of any. I have not read again Sterling's letters, which I keep as good Lares in a special niche, but I have no recollection of anything that would be valuable to you. For the American Public for the Book, I think it important that you should take the precise step of sending Phillips and Sampson the early copy, and at the earliest. I saw them, and also E.P. Clark, and put them in communication, and Clark is to write you at once.

Having got so far in my writing to you, I do not know but I shall gain heart, and write more letters over sea. You will think my sloth suicidal enough. So many men as I learned to value in your country, — so many as offered me opportunities of intercourse, — and I lose them all by silence. Arthur Helps is a chief benefactor of mine. I wrote him a letter by Ward, — who brought the letter back. I ought to thank John Carlyle, not only for me, but for a multitude of good men and women here who read his *Inferno* duly. W.E. Forster sent me his Penn Pamphlet; I sent it to Bancroft, who liked it well, only he thought Forster might have made a still stronger case. Clough I prize at a high rate, the man and his poetry, but write not. Wilkinson I thought a man of prodigious talent, who somehow held it and so taught others to hold it cheap, as we do one of those bushel-basket memories which school-boys and school-girls often show, — and we stop their mouths lest they be troublesome with their alarming profusion. But there is no need of beginning to count the long catalogue. Kindest, kindest remembrance to my benefactress, also in your house, and health and strength and victory to you.

Your affectionate,
Waldo Emerson

CXLVI. Carlyle to Emerson Great Malvern, Worcestershire, 25 August,
1851

Dear Emerson, — Many thanks for your Letter, which found me here about a week ago, and gave a full solution to my bibliopolic difficulties. However sore your eyes, or however taciturn your mood, there is no delay of writing when any service is to be done by it! In fact you are very good to me, and always were, in all manner of ways; for which I do, as I ought, thank the Upper Powers and you. That truly has been and is one of the possessions of my life in this perverse epoch of the world....

I have sent off by John Chapman a Copy of the *Life of Sterling*, which is all printed and ready, but is not to appear till the first week of October.... Along with the *Sheets* was a poor little French Book for you, — Book of a poor Naval *Mississippi* Frenchman, one “Bossu,” I think; written only a Century ago, yet which already seemed old as the Pyramids in reference to those strange fast-growing countries. I read it as a kind of defaced *romance*; very thin and lean, but all *true*, and very marvelous as such.

It is above three weeks since my Wife and I left London, (the Printer having done,) and came hither with the purpose of a month of what is called “Water Cure”; for which this place, otherwise extremely pleasant and wholesome, has become celebrated of late years. Dr. Gully, the pontiff of the business in our Island, warmly encouraged my purpose so soon as he heard of it; nay, urgently offered at once that both of us should become his own guests till the experiment were tried: and here accordingly we are; I water-curing, assiduously walking on the sunny mountains, drinking of the clear wells, not to speak of wet wrappages, solitary sad *steepages*, and other singular procedures; my Wife not meddling for her own behoof, but only seeing me do it. These have been three of the idlest weeks I ever spent, and there is still one to come: after which we go northward to Lancashire, and across the Border where my good old Mother still expects me; and so, after some little visiting and dawdling, hope to find ourselves home again before September end, and the inexpressible Glass Palace with its noisy inanity have taken itself quite away again. It was no increase of ill-health that drove me hither, rather the reverse; but I have long been minded to try this thing: and now I think the result will be, — *zero* pretty nearly, and one imagination the less. My long walks, my strenuous idleness, have certainly done me good; nor has the “water” done me any *ill*, which perhaps is much to say of it. For the rest, it is a strange quasi-monastic — godless and yet *devotional* — way of life which

human creatures have here, and useful to them beyond doubt. I foresee, this "Water Cure," under better forms, will become the *Ramadhan* of the overworked unbelieving English in time coming; an institution they were dreadfully in want of, this long while! — We had Twisleton* here (often speaking of you), who is off to America again; will sail, I think, along with this Letter; a semi-articulate but solid-minded worthy man. We have other officials and other *litterateurs* (T.B. Macaulay in his hired villa for one): but the mind rather shuns than seeks them, one finds solitary quasi-devotion preferable, and [Greek], as Pindar had it!

— * The late Hon. Edward Twisleton, a man of high character and large attainments, and with a personal disposition that won the respect and affection of a wide circle of friends on both sides of the Atlantic. He was the author of a curious and learned treatise entitled "The Tongue not Essential to Speech," and his remarkable volume on "The Handwriting of Junius" seems to have effectually closed a long controversy.

Richard Milnes is married, about two weeks ago, and gone to Vienna for a jaunt. His wife, a Miss Crewe (Lord Crewe's sister), about forty, pleasant, intelligent, and rather rich: that is the end of Richard's long first act. Alfred Tennyson, perhaps you heard, is gone to Italy with his wife: their baby died or was dead-born; they found England wearisome: Alfred has been taken up on the top of the wave, and a good deal jumbled about since you were here. Item Thackeray; who is coming over to lecture to you: a mad world, my Masters! Your Letter to Mazzini was duly despatched; and we hear from him that he will write to you, on the subject required, without delay. Browning and his wife, home from Florence, are both in London at present; mean to live in Paris henceforth for some time. They had seen something both of Margaret and her d'Ossoli, and appeared to have a true and lively interest in them; Browning spoke a long while to me, with emphasis, on the subject: I think it was I that had introduced poor Margaret to them. I said he ought to send these reminiscences to America, — that was the night before we left London, three weeks ago; his answer gave me the impression there had been some hindrance somewhere. Accordingly, when your Letter and Mazzini's reached me here, I wrote to Browning urgently on the subject: but he informs me that they *have* sent all their reminiscences, at the request of Mr. Story; so that it is already all well. — Dear Emerson, you see I am at the bottom of my paper. I will write to you again before long; we cannot let you lie fallow in that manner altogether. Have you got proper *spectacles* for your eyes? I have adopted that beautiful symbol of old age, and feel myself very venerable: take care of your eyes!

Yours ever,

T. Carlyle

CXLVII. Emerson to Carlyle Concord, 14 April, 1852

My Dear Carlyle, — I have not grown so callous by my sulky habit, but that I know where my friends are, and who can help me, in time of need. And I have to crave your good offices today, and in a matter relating once more to Margaret Fuller.... You were so kind as to interest yourself, many months ago, to set Mazzini and Browning on writing their Reminiscences for us. But we never heard from either of them. Lately I have learned, by way of Sam Longfellow, in Paris, brother of our poet Longfellow, that Browning assured him that he did write and send a memoir to this country, — to whom, I know not. It never arrived at the hands of the Fullers, nor of Story, Channing, or me; — though the book was delayed in the hope of such help. I hate that his paper should be lost.

The little French *Voyage*, &c. of Bossu, I got safely, and compared its pictures with my own, at the Mississippi, the Illinois, and Chicago. It is curious and true enough, no doubt, though its Indians are rather dim and vague, and “Messieurs Sauvages” Good Indians we have in Alexander Henry’s *Travels in Canada*, and in our modern Catlin, and the best Western America, perhaps, in F.A. Michaux, *Voyage a l’ouest des monts Alleghanis*, and in Fremont. But it was California I believe you asked about, and, after looking at Taylor, Parkman, and the rest, I saw that the only course is to read them all, and every private letter that gets into the newspapers. So there was nothing to say.

I rejoiced with the rest of mankind in the *Life of Sterling*, and now peace will be to his Manes, down in this lower sphere. Yet I see well that I should have held to his opinion, in all those conferences where you have so quietly assumed the palms. It is said: here, that you work upon Frederick the Great?? However that be, health, strength, love, joy, and victory to you.

— R.W. Emerson

CXLVIII. Carlyle to Emerson Chelsea, 7 May, 1852

Dear Emerson, — I was delighted at the sight of your hand again. My manifold sins against you, involuntary all of them I may well say, are often enough present to my sad thoughts; and a kind of remorse is mixed with the other sorrow, — as if I could have *helped* growing to be, by aid of time and destiny, the grim Ishmaelite I am, and so shocking your serenity by my ferocities! I admit you were like an angel to me, and absorbed in the beautifullest manner all thunder-clouds into the depths of your immeasurable ether; — and it is indubitable I love you very well, and have long done, and mean to do. And on the whole you will have to rally yourself into some kind of Correspondence with me again; I believe you will find that also to be a commanded duty by and by! To me at any rate, I can say, it is a great want, and adds perceptibly to the sternness of these years: deep as is my dissent from your Gymnosophist view of Heaven and Earth, I find an agreement that swallows up all conceivable dissents; in the whole world I hardly get, to my spoken human word, any other word of response which is authentically *human*. God help us, this is growing a very lonely place, this distracted dog-kennel of a world! And it is no joy to me to see it about to have its throat cut for its immeasurable devilries; that is not a pleasant process to be concerned in either more or less, — considering above all how many centuries, base and dismal all of them, it is like to take! Nevertheless *Marchons*, — and swift too, if we have any speed, for the sun is sinking.... Poor Margaret, that is a strange tragedy that history of hers; and has many traits of the Heroic in it, though it is wild as the prophecy of a Sibyl. Such a predetermination to *eat* this big Universe as her oyster or her egg, and to be absolute empress of all height and glory in it that her heart could conceive, I have not before seen in any human soul. Her “mountain me” indeed: — but her courage too is high and clear, her chivalrous nobleness indeed is great; her veracity, in its deepest sense, *a toute epreuve*. — Your Copy of the Book* came to me at last (to my joy): I had already read it; there was considerable notice taken of it here; and one half-volume of it (and I grieve to say only one, written by a man called Emerson) was completely approved by me and innumerable judges. The rest of the Book is not without considerable geniality and merits; but one wanted a clear concise Narrative beyond all other merits; and if you ask here (except in that half-volume) about any fact, you are answered (so to speak) not in words, but by a symbolic tune on the bagpipe, symbolic burst of wind-music from the brass band; — which is not the plan at all! — What can have become of Mazzini’s Letter, which he certainly did write and despatched to you, is not

easily conceivable. Still less in the case of Browning: for Browning and his Wife did also write; I myself in the end of last July, having heard him talk kindly and well of poor Margaret and her Husband, took the liberty on your behalf of asking him to put something down on paper; and he informed me, then and repeatedly since, he had already done it, — at the request of Mrs. Story, I think. His address at present is, “No. 138 Avenue des Champs Elysees, a Paris,” if your American travelers still thought of inquiring. — Adieu, dear Emerson, till next week.

Yours ever,

T. Carlyle ——— * “The Memoirs of Margaret Fuller Ossoli.” ———

CXLIX. Emerson to Carlyle*

Concord, May [?], 1852

You make me happy with your loving thoughts and meanings towards me. I have always thanked the good star which made us early neighbors, in some sort, in time and space. And the beam is twice warmed by your vigorous good-will, which has steadily kept clear, kind eyes on me.

—— — * From an imperfect rough draft. —— —— It is good to be born in good air and outlook, and not less with a civilization, that is, with one poet still living in the world. O yes, and I feel all the solemnity and vital cheer of the benefit. — If only the mountains of water and of land and the steeper mountains of blighted and apathized moods would permit a word to pass now and then. It is very fine for you to tax yourself with all those incompatibilities. I like that Thor should make comets and thunder, as well as Iduna apples, or Heimdal his rainbow bridge, and your wrath and satire has all too much realism in it, than that we can flatter ourselves by disposing of you as partial and heated. Nor is it your fault that you do a hero's work, nor do we love you less if we cannot help you in it. Pity me, O strong man! I am of a puny constitution half made up, and as I from childhood knew, — not a poet but a lover of poetry, and poets, and merely serving as writer, &c. in this empty America, before the arrival of the poets. You must not misconstrue my silences, but thank me for them all, as a true homage to your diligence which I love to defend...

She* had such reverence and love for Landor that I do not know but at any moment in her natural life she would have sunk in the sea, for an ode from him; and now this most propitious cake is offered to her Manes. The loss of the notes of Browning and of Mazzini, which you confirm, astonishes me.

* Margaret Fuller. The break in continuity is in the rough draft.

CL. Carlyle to Emerson

Chelsea, 25 June, 1852

Dear Emerson..... You are a born *enthusiast*, as quiet as you are; and it will continue so, at intervals, to the end. I admire your sly low-voiced sarcasm too; — in short, I love the sternly-gentle close-buttoned man very well, as I have always done, and intend to continue doing! — Pray observe therefore, and lay it to heart as a practical fact, that you are bound to persevere in writing to me from time to time; and will never get it given up, how sulky soever you grow, while we both remain in this world. Do not I very well understand all that you say about “apathized moods,” &c.? The gloom of approaching old age (approaching, nay arriving with some of us) is very considerable upon a man; and on the whole one contrives to take the very ugliest view, now and then, of all beautiful things; and to shut one’s lips with a kind of grim defiance, a kind of imperial sorrow which is almost like felicity, — so completely and composedly wretched, one is equal to the very gods! These too are necessary, moods to a man. But the Earth withal is verdant, sun-beshone; and the Son of Adam has his place on it, and his tasks and recompenses in it, to the close; — as one remembers by and by, too. On the whole, I am infinitely solitary; but not more heavy laden than I have all along been, perhaps rather less so; I could fancy even old age to be beautiful, and to have a real divineness: for the rest, I say always, I cannot part with you, however it go; and so, in brief, you must get into the way of holding yourself obliged as formerly to a kind of *dialogue* with me; and speak, on paper since not otherwise, the oftenest you can. Let that be a point settled.

I am not *writing* on Frederic the Great; nor at all practically contemplating to do so. But, being in a reading mood after those furious *Pamphlets* (which have procured me showers of abuse from all the extensive genus Stupid in this country, and not done me any other mischief, but perhaps good), and not being capable of reading except in a train and *about* some object of interest to me, — I took to reading, near a year ago, about Frederick, as I had twice in my life done before; and have, in a loose way, tumbled up an immense quantity of shot rubbish on that field, and still continue. Not with much decisive approach to Frederick’s *self*, I am still afraid! The man looks brilliant and noble to me; but how *love* him, or the sad wreck he lived and worked in? I do not even yet *see* him clearly; and to try making others see him — ? — Yet Voltaire and he *are* the celestial element of the poor Eighteenth Century; poor souls. I confess also to a real love for Frederick’s dumb followers: the Prussian *Soldiery*. — I often say

to myself, “Were not *here* the real priests and virtuous martyrs of that loud-babbling rotten generation!” And so it goes on; when to end, or in what to end, God knows.

Adieu, dear Emerson. A blockhead (by mistake) has been let in, and has consumed all my time. Good be ever with you and yours.

— T. Carlyle

CLI. Emerson to Carlyle Concord, 19 April, 1853

My Dear Friend, — As I find I never write a letter except at the dunning of the Penny Post, — which is the pest of the century, — I have thought lately of crossing to England to excuse to you my negligence of your injunction, which so flattered me by its affectionateness a year ago. I was to write once a month. My own disobedience is wonderful, and explains to me all the sins of omission of the whole world. The levity with which we can let fall into disuse such a sacrament as the exchange of greeting at short periods, is a kind of magnanimity, and should be an astonishing argument of the “Immortality”; and I wonder how it has escaped the notice of philosophers. But what had I, dear wise man, to tell you? What, but that life was still tolerable; still absurdly sweet; still promising, promising, to credulous idleness; — but step of mine taken in a true direction, or clear solution of any the least secret, — none whatever. I scribble always a little, — much less than formerly, — and I did within a year or eighteen months write a chapter on Fate, which — if we all live long enough, that is, you, and I, and the chapter — I hope to send you in fair print. Comfort yourself — as you will — you will survive the reading, and will be a sure proof that the nut is not cracked. For when we find out what Fate is, I suppose, the Sphinx and we are done for; and Sphinx, Oedipus, and world ought, by good rights, to roll down the steep into the sea.

But I was going to say, my neglect of your request will show you how little saliency is in my weeks and months. They are hardly distinguished in memory other than as a running web out of a loom, a bright stripe for day, a dark stripe for night, and, when it goes faster, even these run together into endless gray... I went lately to St. Louis and saw the Mississippi again. The powers of the River, the insatiate craving for nations of men to reap and cure its harvests, the conditions it imposes, — for it yields to no engineering, — are interesting enough. The Prairie exists to yield the greatest possible quantity of adipocere. For corn makes pig, pig is the export of all the land, and you shall see the instant dependence of aristocracy and civility on the fat four legs. Workingmen, ability to do the work of the River, abounded. Nothing higher was to be thought of. America is incomplete. Room for us all, since it has not ended, nor given sign of ending, in bard or hero. ‘T is a wild democracy, the riot of mediocrities, and none of your selfish Italies and Englands, where an age sublimates into a genius, and the whole population is made into Paddies to feed his porcelain veins, by transfusion from their brick arteries. Our few fine persons are apt to die. Horatio Greenough, a sculptor, whose tongue was far cunninger in talk than his chisel to

carve, and who inspired great hopes, died two months ago at forty-seven years. Nature has only so much vital force, and must dilute it, if it is to be multiplied into millions. "The beautiful is never plentiful." On the whole, I say to myself, that our conditions in America are not easier or less expensive than the European. For the poor scholar everywhere must be compromise or alternation, and, after many remorse, the consoling himself that there has been pecuniary honesty, and that things might have been worse. But no; we must think much better things than these. Let Lazarus believe that Heaven does not corrupt into maggots, and that heroes do not succumb.

Clough is here, and comes to spend a Sunday with me, now and then. He begins to have pupils, and, if his courage holds out, will have as many as he wants.... I have written hundreds of pages about England and America, and may send them to you in print. And now be good and write me once more, and I think I will never cease to write again. And give my homage to Jane Carlyle.

Ever yours,

R.W. Emerson

CLII. Carlyle to Emerson

Chelsea, 13 May, 1853

Dear Emerson, — The sight of your handwriting was a real blessing to me, after so long an abstinence. You shall not know all the sad reflections I have made upon your silence within the last year. I never doubted your fidelity of heart; your genial deep and friendly recognition of my bits of merits, and my bits of sufferings, difficulties and obstructions; your forgiveness of my faults; or in fact that you ever would forget me, or cease to think kindly of me: but it seemed as if practically *Old Age* had come upon the scene here too; and as if upon the whole one must make up one's mind to know that all this likewise had fallen silent, and could be possessed henceforth only on those new terms. Alas, there goes much over, year after year, into the regions of the Immortals; inexpressibly beautiful, but also inexpressibly sad. I have not many voices to commune with in the world. In fact I have properly no voice at all; and yours, I have often said, was the *unique* among my fellow-creatures, from which came full response, and discourse of reason: the *solitude* one lives in, if one has any spiritual thought at all, is very great in these epochs! — The truth is, moreover, I bought spectacles to myself about two years ago (bad print in candle-light having fairly become troublesome to me); much may lie in that! “The buying of your first pair of spectacles,” I said to an old Scotch gentleman, “is an important epoch; like the buying of your first razor.”— “Yes,” answered he, “but not quite so joyful perhaps!” — Well, well, I have heard from you again; and you promise to be again constant in writing. Shall I believe you, this time? Do it, and shame the Devil! I really am persuaded it will do yourself good; and to me I know right well, and have always known, what it will do. The gaunt lonesomeness of this Midnight Hour, in the ugly universal *snoring* hum of the overfilled deep-sunk Posterity of Adam, renders an articulate speaker precious indeed! Watchman, what sayest thou, then? Watchman, what of the night? —

Your glimpses of the huge unmanageable Mississippi, of the huge ditto Model Republic, have here and there something of the *epic* in them, — *ganz nach meinem Sinne*. I see you do not dissent from me in regard to that latter enormous Phenomenon, except on the outer surface, and in the way of peaceably instead of *unpeaceably* accepting the same. Alas, all the world is a “republic of the Mediocrities,” and always was; — you may see what *its* “universal suffrage” is and has been, by looking into all the ugly mud-ocean (with some old weathercocks atop) that now *is*: the world wholly (if we think of it) is the exact

stamp of men wholly, and of the *sincerest* heart-tongue-and-hand “suffrage” they could give about it, poor devils! — I was much struck with Plato, last year, and his notions about Democracy: mere Latter-Day Pamphlet *saxa et faeces* (read *faeces*, if you like) refined into empyrean radiance and lightning of the gods! — I, for my own part, perceive the use of all this too, the inevitability of all this; but perceive it (at the present height it has attained) to be disastrous withal, to be horrible and even damnable. That Judas Iscariot should come and slap Jesus Christ on the shoulder in a familiar manner; that all heavenliest nobleness should be flung out into the muddy streets there to jostle elbows with all thickest-skinned denizens of chaos, and get itself at every turn trampled into the gutters and annihilated: — alas, the *reverse* of all this was, is, and ever will be, the strenuous effort and most solemn heart-purpose of every good citizen in every country of the world, — and will *reappear* conspicuously as such (in New England and in Old, first of all, as I calculate), when once this malodorous melancholy “Uncle Tommery” is got all well put by! Which will take some time yet, I think. — And so we will leave it.

I went to Germany last autumn; not *seeking* anything very definite; rather merely flying from certain troops of carpenters, painters, bricklayers, &c., &c., who had made a lodgment in this poor house; and have not even yet got their incalculable riot quite concluded. Sorrow on them, — and no return to these poor premises of mine till I have quite left! — In Germany I found but little; and suffered, from six weeks of sleeplessness in German beds, &c., &c., a great deal. Indeed I seem to myself never yet to have quite recovered. The Rhine which I honestly ascended from Rotterdam to Frankfort was, as I now find, my chief Conquest the beautifulest river in the Earth, I do believe; and my first idea of a World-river. It is many fathoms deep, broader twice over than the Thames here at high water; and rolls along, mirror-smooth (except that, in looking close, you will find ten thousand little eddies in it), voiceless, swift, with trim banks, through the heart of Europe, and of the Middle Ages wedded to the Present Age: such an image of calm *power* (to say nothing of its other properties) I find I had never seen before. The old Cities too are a little beautiful to me, in spite of my state of nerves; honest, kindly people too, but sadly short of our and your *despatch-of-business* talents, — a really painful defect in the long run. I was on two of Fritz’s Battle-fields, moreover: Lobositz in Bohemia, and Kunersdorf by Frankfurt on the Oder; but did not, especially in the latter case, make much of that. Schiller’s death-chamber, Goethe’s sad Court-environment; above all, Luther’s little room in the *Wartburg* (I believe I actually had tears in my eyes there, and kissed the old oak-table, being in a very flurried state of nerves), my

belief was that under the Canopy there was not at present so *holy* a spot as that same. Of human souls I found none specially beautiful to me at all, at all, — such my sad fate! Of learned professors, I saw little, and that little was more than enough. Tieck at Berlin, an old man, lame on a Sofa, I did love, and do; he is an exception, could I have seen much of him. But on the whole *Universal Puseyism* seemed to me the humor of German, especially of Berlin thinkers; — and I had some quite portentous specimens of that kind, — unconscious specimens of four hundred quack power! Truly and really the Prussian Soldiers, with their intelligent *silence*, with the touches of effective Spartanism I saw or fancied in them, were the class of people that pleased me best. But see, my sheet is out! I am still reading, reading, most nightmare Books about Fritz; but as to writing, — *Ach Gott!* Never, never. — Clough is coming home, I hope. — Write soon, if you be not enchanted!

Yours ever,
T. Carlyle

CLIIa. Emerson to Carlyle
Concord, 10 August, 1853

My Dear Carlyle, — Your kindest letter, whose date I dare not count back to, — perhaps it was May, — I have just read again, to be deeply touched by its noble tragic tone of goodness to me, not without new wonder at my perversity, and terror at what both may be a-forging to strike me. My slowness to write is a distemper that reaches all my correspondence, and not that with you only, though the circumstance is not worth stating, because, if I ceased to write to all the rest, there would yet be good reason for writing to you. I believe the reason of this recusancy is the fear of disgusting my friends, as with a book open always at the same page. For I have some experiences, that my interest in thoughts — and to an end, perhaps, only of new thoughts and thinking — outlasts that of all my reasonable neighbors, and offends, no doubt, by unhealthy pertinacity. But though rebuked by a daily reduction to an absurd solitude, and by a score of disappointments with intellectual people, and in the face of a special hell provided for me in the Swedenborg Universe, I am yet confirmed in my madness by the scope and satisfaction I find in a conversation once or twice in five years, if so often; and so we find or pick what we call our proper path, though it be only from stone to stone, or from island to island, in a very rude, stilted, and violent fashion. With such solitariness and frigidities, you may judge I was glad to see Clough here, with whom I had established some kind of robust working-friendship, and who had some great permanent values for me. Had he not taken

me by surprise and fled in a night, I should have done what I could to block his way. I am too sure he will not return. The first months comprise all the shocks of disappointment that are likely to disgust a new-comer. The sphere of opportunity opens slowly, but to a man of his abilities and culture — rare enough here — with the sureness of chemistry. The Giraffe entering Paris wore the label, “Eh bien, messieurs, il n’y a qu’une bete de plus!” And Oxonians are cheap in London; but here, the eternal economy of sending things where they are wanted makes a commanding claim. Do not suffer him to relapse into London. He had made himself already cordially welcome to many good people, and would have soon made his own place. He had just established his valise at my house, and was to come — the gay deceiver — once a fortnight for his Sunday; and his individualities and his nationalities are alike valuable to me. I beseech you not to commend his unheroic retreat.

I have lately made, one or two drafts on your goodness, — which I hate to do, both because you meet them so generously, and because you never give me an opportunity of revenge, — and mainly in the case of Miss Bacon, who has a private history that entitles her to high respect, and who could be helped only by facilitating her Shakespeare studies, in which she has the faith and ardor of a discoverer. Bancroft was to have given her letters to Hallam, but gave one to Sir H. Ellis. Everett, I believe, gave her one to Mr. Grote; and when I told her what I remembered hearing of Spedding, she was eager to see him; which access I knew not how to secure, except through you. She wrote me that she prospers in all things, and had just received at once a summons to meet Spedding at your house. But do not fancy that I send any one to you heedlessly; for I value your time at its rate to nations, and refuse many more letters than I give. I shall not send you any more people without good reason.

Your visit to Germany will stand you in stead, when the annoyances of the journey are forgotten, and, in spite of your disclaimers, I am preparing to read your history of Frederic. You are an inveterate European, and rightfully stand for your polity and antiquities and culture: and I have long since forborne to importune you with America, as if it were a humorous repetition of Johnson’s visit to Scotland. And yet since Thackeray’s adventure, I have often thought how you would bear the pains and penalties; and have painted out your march triumphal. I was at New York, lately, for a few days, and fell into some traces of Thackeray, who has made a good mark in this country by a certain manly blurting out of his opinion in various companies, where so much honesty was rare and useful. I am sorry never once to have been in the same town with him whilst he was here. I hope to see him, if he comes again. New York would interest you, as I am told it did him; you both less and more. The “society” there

is at least self-pleased, and its own; it has a contempt of Boston, and a very modest opinion of London. There is already all the play and fury that belong to great wealth. A new fortune drops into the city every day; no end is to palaces, none to diamonds, none to dinners and suppers. All Spanish America discovers that only in the U. States, of all the continent, is safe investment; and money gravitates therefore to New York. The Southern naphtha, too, comes in as an ingredient, and lubricates manners and tastes to that degree, that Boston is hated for stiffness, and excellence in luxury is rapidly attained. Of course, dining, dancing, equipaging, *etc.* are the exclusive beatitudes, — and Thackeray will not cure us of this distemper. Have you a physician that can? Are you a physician, and will you come? If you will come, cities will go out to meet you.

And now I see I have so much to say to you that I ought to write once a month, and I must begin at this point again incontinently.

Ever yours,
R.W. Emerson

CLIII. Carlyle to Emerson

Chelsea, London, 9 September, 1853

Dear Emerson, — Your Letter came ten days ago; very kind, and however late, surely right welcome! You ought to stir yourself up a little, and actually begin to speak to me again. If we are getting old, that is no reason why we should fall silent, and entirely abstruse to one another. Alas, I do not find as I grow older that the number of articulate-speaking human souls increases around me, in proportion to the inarticulate and palavering species! I am often abundantly solitary in heart; and regret the old days when we used to speak oftener together.

I have not quitted Town this year at all; have resisted calls to Scotland both of a gay and a sad description (for the Ashburtons are gone to John of Groat's House, or the Scottish *Thule*, to rusticate and hunt; and, alas, in poor old Annandale a tragedy seems preparing for me, and the thing I have dreaded all my days is perhaps now drawing nigh, ah me!) — I felt so utterly broken and disgusted with the jangle of last year's locomotion, I judged it would be better to sit obstinately still, and let my thoughts *settle* (into sediment and into clearness, as it might be); and so, in spite of great and peculiar noises moreover, here I am and remain. London is not a bad place at all in these months, — with its long clean streets, green parks, and nobody in them, or nobody one has ever seen before. Out of La Trappe, which does not suit a Protestant man, there is perhaps no place where one can be so perfectly alone. I might study even but, as I said, there are noises going on; a *last* desperate spasmodic effort of building, — a new top-story to the house, out of which is to be made one "spacious room" (so they call it, though it is under twenty feet square) where there shall be air *ad libitum*, light from the sky, and no *sound*, not even that of the Cremorne Cannons, shall find access to me any more! Such is the prophecy; may the gods grant it! We shall see now in about a month; — then adieu to mortar-tubs to all Eternity: — I endure the thing, meanwhile, as well as I can; might run to a certain rural retreat near by, if I liked at any time; but do not yet: the worst uproar here is but a trifle to that of German inns, and horrible squeaking, choking railway trains; and one does not go to seek this, *this* is here of its own will, and for a purpose! Seriously, I had for twelve years had such a sound-proof inaccessible apartment schemed out in my head; and last year, under a poor, helpless builder, had finally given it up: but Chelsea, as London generally, swelling out as if it were mad, grows every year noisier; a *good* builder turned up, and with a last paroxysm of

enthusiasm I set him to. My notion is, he will succeed; in which case, it will be a great possession to me for the rest of my life. Alas, this is not the kind of *silence* I could have coveted, and could once get, — with green fields and clear skies to accompany it! But one must take such as can be had, — and thank the gods. Even so, my friend. In the course of about a year of that garret sanctuary, I hope to have swept away much litter from my existence: in fact I am already, by dint of mere obstinate quiescence in such circumstances as there are, intrinsically growing fairly sounder in nerves. What a business a poor human being has with those nerves of his, with that crazy clay tabernacle of his! Enough, enough; there will be all Eternity to rest in, as Arnauld said: “Why in such a fuss, little sir?”

You “apologize” for sending people to me: O you of little faith! Never dream of such a thing nay, whom *did* you send? The Cincinnati Lecturer* I had provided for with Owen; they would have been glad to hear him, on the Cedar forests, on the pigs making rattlesnakes into bacon, and the general adipocere question, under any form, at the Albemarle Street rooms; — and he never came to hand. As for Miss Bacon, we find her, with her modest shy dignity, with her solid character and strange enterprise, a real acquisition; and hope we shall now see more of her, now that she has come nearer to us to lodge. I have not in my life seen anything so tragically *quixotic* as her Shakespeare enterprise: alas, alas, there can be nothing but sorrow, toil, and utter disappointment in it for her! I do cheerfully what I can; — which is far more than she *asks* of me (for I have not seen a prouder silent soul); — but there is not the least possibility of truth in the notion she has taken up: and the hope of ever proving it, or finding the least document that countenances it, is equal to that of vanquishing the windmills by stroke of lance. I am often truly sorry about the poor lady: but she troubles nobody with her difficulties, with her theories; she must try the matter to the end, and charitable souls must further her so far.

* Mr. O.M. Mitchell, the astronomer.

Clough is settled in his Office; gets familiarized to it rapidly (he says), and seems to be doing well. I see little of him hitherto; I did not, and will not, try to influence him in his choice of countries; but I think he is now likely to continue here, and here too he may do us some good. Of America, at least of New England, I can perceive he has brought away an altogether kindly, almost filial impression, — especially of a certain man who lives in that section of the Earth. More power to his elbow! — Thackeray has very rarely come athwart me since his return: he is a big fellow, soul and body; of many gifts and qualities (particularly in the Hogarth line, with a dash of Sterne superadded), of enormous *appetite* withal, and very uncertain and chaotic in all points except his *outer*

breeding, which is fixed enough, and *perfect* according to the modern English style. I rather dread explosions in his history. A *big*, fierce, weeping, hungry man; not a strong one. *Ay de mi!* But I must end, I must end. Your Letter awakened in me, while reading it, one mad notion. I said to myself: Well, if I live to finish this Frederic impossibility, or even to fling it fairly into the fire, why should not I go, in my old days, and see Concord, Yankeeland, and that man again, after all! — Adieu, dear friend; all good be with you and yours always.

— T. Carlyle

CLIV. Emerson to Carlyle

Concord, 11 March, 1854

My Dear Carlyle, — The sight of Mr. Samuel Laurence, the day before yesterday, in New York, and of your head among his sketches, set me on thinking which had some pain where should be only cheer. For Mr. Laurence I hailed his arrival, on every account. I wish to see a good man whom you prize; and I like to have good Englishmen come to America, which, of all countries, after their own, has the best claim to them. He promises to come and see me, and has begun most propitiously in New York. For you, — I have too much constitutional regard and — , not to feel remorse for my short-comings and slow-comings, and I remember the maxim which the French stole from our Indians, — and it was worth stealing,— “Let not the grass grow on the path of friendship.” Ah! my brave giant, you can never understand the silence and forbearances of such as are not giants. To those to whom we owe affection, let us be dumb until we are strong, though we should never be strong. I hate mumped and measled lovers. I hate cramp in all men, — most in myself.

And yet I should have been pushed to write without Samuel Laurence; for I lately looked into *Jesuitism*, a Latter-Day Pamphlet, and found why you like those papers so well. I think you have cleared your skirts; it is a pretty good minority of one, enunciating with brilliant malice what shall be the universal opinion of the next edition of mankind. And the sanity was so manifest, that I felt that the over-gods had cleared their skirts also to this generation, in not leaving themselves without witness, though without this single voice perhaps I should not acquit them. Also I pardon the world that reads the book as though it read it not, when I see your inveterated humors. It required courage and required conditions that feuilletonists are not the persons to name or qualify, this writing Rabelais in 1850. And to do this alone. — You must even pitch your tune to suit yourself. We must let Arctic Navigators and deepsea divers wear what astonishing coats, and eat what meats — wheat or whale — they like, without criticism.

I read further, sidewise and backwards, in these pamphlets, without exhausting them. I have not ceased to think of the great warm heart that sends them forth, and which I, with others, sometimes tag with satire, and with not being warm enough for this poor world; — I too, — though I know its meltings to-me-ward. Then I learned that the newspapers had announced the death of your mother (which I heard of casually on the Rock River, Illinois), and that you and your brother John had been with her in Scotland. I remembered what you had

once and again said of her to me, and your apprehensions of the event which has come. I can well believe you were grieved. The best son is not enough a son. My mother died in my house in November, who had lived with me all my life, and kept her heart and mind clear, and her own, until the end. It is very necessary that we should have mothers, — we that read and write, — to keep us from becoming paper. I had found that age did not make that she should die without causing me pain. In my journeying lately, when I think of home the heart is taken out.

Miss Bacon wrote me in joyful fulness of the cordial kindness and aid she had found at your hands, and at your wife's; and I have never thanked you, and much less acknowledged her copious letter, — copious with desired details. Clough, too, wrote about you, and I have not written to him since his return to England. You will see how total is my ossification. Meantime I have nothing to tell you that can explain this mild palsy. I worked for a time on my English Notes with a view of printing, but was forced to leave them to go read some lectures in Philadelphia and some Western towns. I went out Northwest to great countries which I had not visited before; rode one day, fault of broken railroads, in a sleigh, sixty-five miles through the snow, by Lake Michigan, (seeing how prairies and oak-openings look in winter,) to reach Milwaukee; “the world there was done up in large lots,” as a settler told me. The farmer, as he is now a colonist and has drawn from his local necessities great doses of energy, is interesting, and makes the heroic age for Wisconsin. He lives on venison and quails. I was made much of, as the only man of the pen within five hundred miles, and by rarity worth more than venison and quails.

Greeley of the *New York Tribune* is the right spiritual father of all this region; he prints and disperses one hundred and ten thousand newspapers in one day, — multitudes of them in these very parts. He had preceded me, by a few days, and people had flocked together, coming thirty and forty miles to hear him speak; as was right, for he does all their thinking and theory for them, for two dollars a year. Other than Colonists, I saw no man. “There are no singing birds in the prairie,” I truly heard. All the life of the land and water had distilled no thought. Younger and better, I had no doubt been tormented to read and speak their sense for them. Now I only gazed at them and their boundless land.

One good word closed your letter in September, which ought to have had an instant reply, namely, that you might come westward when Frederic was disposed of. Speed Frederic, then, for all reasons and for this! America is growing furiously, town and state; new Kansas, new Nebraska looming up in these days, vicious politicians seething a wretched destiny for them already at Washington. The politicians shall be sodden, the States escape, please God! The

fight of slave and freeman drawing nearer, the question is sharply, whether slavery or whether freedom shall be abolished. Come and see. Wealth, which is always interesting, for from wealth power refuses to be divorced, is on a new scale. Californian quartz mountains dumped down in New York to be repiled architecturally along shore from Canada to Cuba, and thence west to California again. John Bull interests you at home, and is all your subject. Come and see the Jonathanization of John. What, you scorn all this? Well, then, come and see a few good people, impossible to be seen on any other shore, who heartily and always greet you. There is a very serious welcome for you here. And I too shall wake from sleep. My wife entreats that an invitation shall go from her to you.

Faithfully yours,

R.W. Emerson

CLV. Carlyle to Emerson

Chelsea, 8 April, 1854

Dear Emerson, — It was a morning not like any other which lay round it, a morning to be marked white, that one, about a week ago, when your Letter came to me; a word from you yet again, after so long a silence! On the whole, I perceive you will not utterly give up answering me, but will rouse yourself now and then to a word of human brotherhood on my behalf, so long as we both continue in this Planet. And I declare, the Heavens will reward you; and as to me, I will be thankful for what I get, and submissive to delays and to all things: all things are good compared with flat want in that respect. It remains true, and will remain, what I have often told you, that properly there is no voice in this world which is completely human to me, which fully understands all I say and with clear sympathy and sense answers to me, but your voice only. That is a curious fact, and not quite a joyful one to me. The solitude, the silence of my poor soul, in the centre of this roaring whirlpool called Universe, is great, always, and sometimes strange and almost awful. I have two million talking bipeds without feathers, close at my elbow, too; and of these it is often hard for me to say whether the so-called “wise” or the almost professedly foolish are the more inexpressibly unproductive to me. “Silence, Silence!” I often say to myself: “Be silent, thou poor fool; and prepare for that Divine Silence which is now not far!” — On the whole, write to me whenever you can; and be not weary of well-doing.

I have had sad things to do and see since I wrote to you: the loss of my dear and good old Mother, which could not be spared me forever, has come more like a kind of total bankruptcy upon me than might have been expected, considering her age and mine. Oh those last two days, that last Christmas Sunday! She was a true, pious, brave, and noble Mother to me; and it is now all over; and the Past has all become pale and sad and sacred; — and the all-devouring potency of Death, what we call Death, has never looked so strange, cruel and unspeakable to me. Nay not *cruel* altogether, let me say: huge, profound, *unspeakable*, that is the word. — You too have lost your good old Mother, who stayed with you like mine, clear to the last: alas, alas, it is the oldest Law of Nature; and it comes on every one of us with a strange originality, as if it had never happened before. — Forward, however; and no more lamenting; no more than cannot be helped. “Paradise is under the shadow of our swords,” said the Emir: “Forward!” —

I make no way in my Prussian History; I bore and dig toilsomely through the unutterablest mass of dead rubbish, which is not even English, which is German

and inhuman; and hardly from ten tons of learned inanity is there to be riddled one old rusty nail. For I have been back as far as Pytheas who, first of speaking creatures, beheld the Teutonic Countries; and have questioned all manner of extinct German shadows, — who answer nothing but mumblings. And on the whole Fritz himself is not sufficiently divine to me, far from it; and I am getting old, and heavy of heart; — and in short, it oftenest seems to me I shall never write any word about that matter; and have again fairly got into the element of the IMPOSSIBLE. Very well: could I help it? I can at least be honestly silent; and “bear my indigence with dignity,” as you once said. The insuperable difficulty of *Frederic* is, that he, the genuine little ray of Veritable and Eternal that was in him, lay imbedded in the putrid Eighteenth Century, such an Ocean of sordid nothingness, shams, and scandalous hypocrisies, as never weltered in the world before; and that in everything I can find yet written or recorded of him, he still, to all intents and purposes, most tragically *lies* THERE; — and ought not to lie there, if any use is ever to be had of him, or at least of *writing* about him; for as to him, he with his work is safe enough to us, far elsewhere. — Pity me, pity me; I know not on what hand to turn; and have such a Chaos filling all my Earth and Heaven as was seldom seen in British or Foreign Literature! Add to which, the Sacred Entity, Literature itself, is not growing more venerable to me, but less and ever less: good Heavens, I feel often as if there were no madder set of bladders tumbling on the billows of the general Bedlam at this moment than even the Literary ones, — dear at twopence a gross, I should say, unless one could *annihilate* them by purchase on those easy terms! But do not tell this in Gath; let it be a sad family secret.

I smile, with a kind of grave joy, over your American speculations, and wild dashing portraitures of things as they are with you; and recognize well, under your light caricature, the outlines of a right true picture, which has often made me sad and grim in late years. Yes, I consider that the “Battle of Freedom and Slavery” is very far from ended; and that the fate of poor “Freedom” in the quarrel is very questionable indeed! Alas, there is but one *Slavery*, as I wrote somewhere; and that, I think, is mounting towards a height, which may bring strokes to bear upon it again! Meanwhile, patience; for us there is nothing else appointed. — Tell me, however, what has become of your Book on England? We shall really be obliged to you for that. A piece of it went through all the Newspapers, some years ago; which was really unique for its quaint kindly insight, humor, and other qualities; like an etching by Hollar or Durer, amid the continents of vile smearing which are called “pictures” at present. Come on, Come on; give us the Book, and don’t loiter! —

Miss Bacon has fled away to *St. Alban's* (the *Great Bacon's* place) five or six months ago; and is there working out her Shakespeare Problem, from the depths of her own mind, disdainful apparently, or desperate and careless, of all *evidence* from Museums or Archives; I have not had an answer from her since before Christmas, and have now lost her address. Poor Lady: I sometimes silently wish she were safe home again; for truly there can no madder enterprise than her present one be well figured. Adieu, my Friend; I must stop short here. Write soon, if you have any charity. Good be with you ever.

— T. Carlyle

CLVI. Emerson to Carlyle

Concord, 17 April, 1855

My Dear Friend, — On this delicious spring day, I will obey the beautiful voices of the winds, long disobeyed, and address you; nor cloud the hour by looking at the letters in my drawer to know if a twelvemonth has been allowed to elapse since this tardy writing was due. Mr. Everett sent me one day a letter he had received from you, containing a kind message to me, which gave me pleasure and pain. I returned the letter with thanks, and with promises I would sin no more. Instantly, I was whisked, by “the stormy wing of Fate,” out of my chain, and whirled, like a dry leaf, through the State of New York.

Now at home again, I read English Newspapers, with all the world, and claim an imaginary privilege over my compatriots, that I revolve therein my friend’s large part. Ward said to me yesterday, that Carlyle’s star was daily rising. For C. had said years ago, when all men thought him mad, that which the rest of mortals, including the Times Newspaper, have at last got near enough to see with eyes, and therefore to believe. And one day, in Philadelphia, you should have heard the wise young Philip Randolph defend you against objections of mine. But when I have such testimony, I say to myself, the high-seeing austerely exigent friend whom I elected, and who elected me, twenty years and more ago, finds me heavy and silent, when all the world elects and loves him. Yet I have not changed. I have the same pride in his genius, the same sympathy with the Genius that governs his, the old love with the old limitations, though love and limitation be all untold. And I see well what a piece of Providence he is, how material he is to the times, which must always have a solo Soprano to balance the roar of the Orchestra. The solo sings the theme; the orchestra roars antagonistically but follows. — And have I not put him into my Chapter of “English Spiritual Tendencies,” with all thankfulness to the Eternal Creator, — though the chapter lie unborn in a trunk?

‘T is fine for us to excuse ourselves, and patch with promises. We shall do as before, and science is a fatalist. I follow, I find, the fortunes of my Country, in my privatest ways. An American is pioneer and man of all work, and reads up his newspaper on Saturday night, as farmers and foresters do. We admire the [Greek], and mean to give our boys the grand habit; but we only sketch what they may do. No leisure except for the strong, the nimble have none. — I ought to tell you what I do, or I ought to have to tell you what I have done. But what can I? the same concession to the levity of the times, the noise of America comes again. I have even run on wrong topics for my parsimonious Muse, and waste

my time from my true studies. England I see as a roaring volcano of Fate, which threatens to roast or smother the poor literary Plinys that come too near for mere purpose of reporting.

I have even fancied you did me a harm by the valued gift of Antony Wood; — which, and the like of which, I take a lotophagous pleasure in eating. Yet this is measuring after appearance, measuring on hours and days; the true measure is quite other, for life takes its color and quality not from the days, but the dawns. The lucid intervals are like drowning men's moments, equivalent to the foregoing years. Besides, Nature uses us. We live but little for ourselves, a good deal for our children, and strangers. Each man is one more lump of clay to hold the world together. It is in the power of the Spirit meantime to make him rich reprisals, — which he confides will somewhere be done. — Ah, my friend, you have better things to send me word of, than these musings of indolence. Is Frederic recreated? Is Frederic the Great?

Forget my short-comings and write to me. Miss Bacon sends me word, again and again, of your goodness. Against hope and sight she must be making a remarkable book. I have a letter from her, a few days ago, written in perfect assurance of success! Kindest remembrances to your wife and to your brother.

Yours faithfully,

R.W. Emerson

CLVII. Carlyle to Emerson

Chelsea, 18 May, 1855

Dear Emerson, — Last Sunday, Clough was here; and we were speaking about you, (much to your discredit, you need not doubt,) and how stingy in the way of Letters you were grown; when, next morning, your Letter itself made its appearance. Thanks, thanks. You know not in the least, I perceive, nor can be made to understand at all, how indispensable your Letters are to me. How you are, and have for a long time been, the one of all the sons of Adam who, I felt, completely understood what I was saying; and answered with a truly *human* voice, — inexpressibly consolatory to a poor man, in his lonesome pilgrimage, towards the evening of the day! So many voices are not human; but more or less bovine, porcine, canine; and one's soul dies away in sorrow in the sound of them, and is reduced to a dialogue with the "Silences," which is of a very abstruse nature! — Well, whether you write to me or not, I reserve to myself the privilege of writing to you, so long as we both continue in this world! As the beneficent Presences vanish from me, one after the other, those that remain are the more precious, and I will not part with them, not with the chief of them, beyond all.

This last year has been a grimmer lonelier one with me than any I can recollect for a long time. I did not go to the Country at all in summer or winter; refused even my Christmas at The Grange with the Ashburtons, — it was too sad an anniversary for me; — I have sat here in my garret, wriggling and wrestling on the worst terms with a Task that I cannot do, that generally seems to me not worth doing, and yet *must* be *done*. These are truly the terms. I never had such a business in my life before. Frederick himself is a pretty little man to me, veracious, courageous, invincible in his small sphere; but he does not rise into the empyrean regions, or kindle my heart round him at all; and his history, upon which there are wagon-loads of dull bad books, is the most dislocated, unmanageably incoherent, altogether dusty, barren and beggarly production of the modern Muses as given hitherto. No man of *genius* ever saw him with eyes, except twice Mirabeau, for half an hour each time. And the wretched Books have no *indexes*, no precision of detail; and I am far away from Berlin and the seat of information; — and, in brief, shall be beaten miserably with this unwise enterprise in my old days; *and* (in fine) will consent to be so, and get through it if I can before I die. This of obstinacy is the one quality I still show; all my other qualities (hope, among them) often seem to have pretty much taken leave of me; but it is necessary to hold by this last. Pray for me; I will complain no more at

present. General Washington gained the freedom of America — chiefly by this respectable quality I talk of; nor can a history of Frederick be written, in Chelsea in the year 1855, except as *against* hope, and by planting yourself upon it in an extremely dogged manner.

We are all wool-gathering here, with wide eyes and astonished minds, at a singular rate, since you heard last from me! “Balaklava,” I can perceive, is likely to be a substantive in the English language henceforth: it in truth expresses compendiously what an earnest mind will experience everywhere in English life; if his soul rise at all above cotton and scrip, a man has to pronounce it all a *Balaklava* these many years. A Balaklava now *yielding*, under the pressure of rains and unexpected transit of heavy wagons; champing itself down into mere mud-gulfs, — towards the bottomless Pool, if some flooring be not found. To me it is not intrinsically a new phenomenon, only an extremely hideous one. *Altum Silentium*, what else can I reply to it at present? The Turk War, undertaken under pressure of the mere mobility, seemed to me an enterprise worthy of Bedlam from the first; and this method of carrying it on, *without* any general, or with a mere sash and cocked-hat for one, is of the same block of stuff. *Ach Gott!* Is not Anarchy, and parliamentary eloquence instead of work, continued for half a century everywhere, a beautiful piece of business? We are in alliance with Louis Napoleon (a gentleman who has shown only *housebreaker* qualities hitherto, and is required now to show heroic ones, *or go to the Devil*); and under Marechal Saint-Arnaud (who was once a dancing-master in this city, and continued a *thief* in all cities), a Commander of the Playactor-Pirate description, resembling a *General* as Alexander Dumas does Dante Alighieri, — we have got into a very strange problem indeed! — But there is something almost grand in the stubborn thickside patience and persistence of this English People; and I do not question but they will work themselves through in one fashion or another; nay probably, get a great deal of benefit out of this astonishing slap on the nose to their self-complacency before all the world. They have not *done* yet, I calculate, by any manner of means: they are, however, admonished in an ignominious and convincing manner, amid the laughter of nations, that they are altogether on the wrong road this great while (two hundred years, as I have been calculating often), — and I shudder to think of the plunging and struggle they will have to get into the approximately right one again. Pray for them also, poor stupid overfed heavy-laden souls! — Before my paper quite end, I must in my own name, and that of a select company of others, inquire rigorously of R.W.E. why he does not *give* us that little Book on England he has promised so long? I am very serious in saying, I myself want much to see it; — and that I can see no

reason why we all should not, without delay. Bring it out, I say, and print it, *tale quale*. You will never get it in the least like what *you* wish it, clearly no! But I venture to warrant, it is good enough, — far too good for the readers that are to get it. Such a pack of blockheads, and disloyal and bewildered unfortunates who know not their right hand from their left, as fill me with astonishment, and are more and more forfeiting all respect from me. Publish the Book, I say; let us have it and so have done! Adieu, my dear friend, for this time. I had a thousand things more to write, but have wasted my sheet, and must end. I will take another before long, whatever you do. In my lonely thoughts you are never long absent: *Valete* all of you at Concord!

— T. Carlyle

CLVIII. Emerson to Carlyle Concord, 6 May, 1856

Dear Carlyle, — There is no escape from the forces of time and life, and we do not write letters to the gods or to our friends, but only to attorneys, landlords, and tenants. But the planes and platforms on which all stand remain the same, and we are ever expecting the descent of the heavens, which is to put us into familiarity with the first named. When I ceased to write to you for a long time, I said to myself, — If anything really good should happen here, — any stroke of good sense or virtue in our politics, or of great sense in a book, — I will send it on the instant to the formidable man; but I will not repeat to him every month, that there are no news. Thank me for my resolution, and for keeping it through the long night. — One book, last summer, came out in New York, a nondescript monster which yet had terrible eyes and buffalo strength, and was indisputably American, — which I thought to send you; but the book throve so badly with the few to whom I showed it, and wanted good morals so much, that I never did. Yet I believe now again, I shall. It is called *Leaves of Grass*, — was written and printed by a journeyman printer in Brooklyn, New York, named Walter Whitman; and after you have looked into it, if you think, as you may, that it is only an auctioneer's inventory of a warehouse, you can light your pipe with it.

By tomorrow's steamer goes Mrs. — to Liverpool, and to Switzerland and Germany, by the advice of physicians, and I cannot let her go without praying you to drop your pen, and shut up German history for an hour, and extend your walk to her chambers, wherever they may be. *There's* a piece of republicanism for you to see and hear! That person was, ten or fifteen years ago, the loveliest of women, and her speech and manners may still give you some report of the same. She has always lived with good people, and in her position is a centre of what is called good society, wherein her large heart makes a certain glory and refinement. She is one of nature's ladies, and when I hear her tell I know not what stories of her friends, or her children, or her pensioners, I find a pathetic eloquence which I know not where to match. But I suppose you shall never hear it. Every American is a little displaced in London, and, no doubt, her company has grown to her. Her husband is a banker connected in business with your — , and is a man of elegant genius and tastes, and his house is a resort for fine people. Thorwaldsen distinguished Mrs. — in Rome, formerly, by his attentions. Powers the sculptor made an admirable bust of her; Clough and Thackeray will tell you of her. Jenny Lind, like the rest, was captivated by her, and was married at her house. Is not Henry James in London? he knows her well. If Tennyson comes to London, whilst she is there, he should see her for his "Lays of Good

Women.” Now please to read these things to the wise and kind ears of Jane Carlyle, and ask her if I have done wrong in giving my friend a letter to her? I could not ask more than that each of those ladies might appear to the other what each has appeared to me.

I saw Thackeray, in the winter, and he said he would come and see me here, in April or May; but he is still, I believe, in the South and West. Do not believe me for my reticency less hungry for letters. I grieve at the want and loss, and am about writing again, that I may hear from you.

Ever affectionately yours,
R.W. Emerson

CLIX. Carlyle to Emerson Chelsea, 20 July, 1856

Dear Emerson; — Welcome was your Letter to me, after the long interval; as welcome as any human Letter could now well be. These many months and years I have been sunk in what disastrous vortexes of foreign wreck you know, till I am fallen sick and almost broken-hearted, and my life (if it were not this one interest, of doing a problem which I see to be impossible, and of smallish value if found doable!) is burdensome and without meaning to me. It is so rarely I hear the voice of a magnanimous Brother Man addressing any word to me: ninety-nine hundredths of the Letters I get are impertinent clutchings of me by the button, concerning which the one business is, How to get handsomely loose again; What to say that shall soonest *end* the intrusion, — if saying Nothing will not be the best way. Which last I often in my sorrow have recourse to, at what ever known risks. “We must pay our tribute to Time”: ah yes, yes; — and yet I will believe, so long as we continue together in this sphere of things there will always be a *potential* Letter coming out of New England for me, and the world not fallen irretrievably dumb. — The best is, I am about going into Scotland, in two days, into deep solitude, for a couple of months beside the Solway sea: I absolutely need to have the dust blown out of me, and my mad nerves rested (there is nothing else quite gone wrong): this unblest *Life of Frederick* is now actually to get along into the Printer’s hand; — a good Book being impossible upon it, there shall a bad one be done, and one’s poor existence rid of it: — for which great object two months of voluntary torpor are considered the fair preliminary. In another year’s time, (if the Fates allow me to live,) I expect to have got a great deal of rubbish swept into chaos again. Unlucky it should ever have been dug up, much of it! — Your Mrs. — should have had our best welcome, for the sake of him who sent her, had there been nothing more: but the Lady never showed face at all; nor could I for a long time get any trace — and then it was a most faint and distant one as if by *double* reflex — of her whereabouts: too distant, too difficult for me, who do not make a call once in the six months lately. I did mean to go in quest (never had an *address*); but had not yet rallied for the Enterprise, when Mrs. — herself wrote that she had been unwell, that she was going directly for Paris, and would see us on her return. So be it: — pray only I may not be absent next! I have not seen or distinctly heard of Miss Bacon for a year and half past: I often ask myself, what has become of that poor Lady, and wish I knew of her being safe among her friends again. I have even lost the address (which at any rate was probably not a lasting one); perhaps I could find it by the eye, — but it is five miles away; and my *non-plus-*

ultra for years past is not above half that distance. Heigho!

My time is all up and more; and Chaos come again is lying round me, in the shape of “packing,” in a thousand shapes! — Browning is coming tonight to take leave. Do you know Browning at all? He is abstruse, but worth knowing. — And what of the *Discourse on England* by a certain man? Shame! We always hear of it again as “out”; and it continues obstinately *in*. Adieu, my friend.

Ever yours,
T. Carlyle

CLX. Carlyle to Emerson

The Gill, Cummertrees, Annan, N.B. 28 August, 1856

Dear Emerson, — Your Letter alighted here yesterday;* like a winged Mercury, bringing “airs from Heaven” (in a sense) along with his news. I understand very well your indisposition to write; we must conform to it, as to the law of *Chronos* (oldest of the gods); but I will murmur always, “It is such a pity as of almost no other man!” — You are citizen of a “Republic,” and perhaps fancy yourself republican in an eminent degree: nevertheless I have remarked there is no man of whom I am so certain always to get something *kingly*: — and whenever your huge inarticulate America gets settled into *kingdoms*, of the New Model, fit for these Ages which are all upon the *Moult* just now, and dreadfully like going to the Devil in the interim, — then will America, and all nations through her, owe the man Emerson a *debt*, far greater than either they or he are in the least aware of at present! That I consider (for myself) to be an ascertained fact. For which I myself at least am thankful and have long been.

* It is missing now.

It pleases me much to know that this English [book], so long twinkling in our expectations and always drawn back again, is at last verily to appear: I wish I could get hold of my copy: there is no Book that would suit me better just now. But we must wait for four weeks till we get back to Chelsea, — unless I call find some trusty hand to extract it from the rubbish that will have accumulated there, and forward it by post. You speak as if there were something dreadful said of my own sacred self in that Book: Courage, my Friend, it will be a most miraculous occurrence to meet with anything said by you that does me *ill*; whether the immediate taste of it be sweet or bitter, I will take it with gratitude, you may depend, — nay even with pleasure, what perhaps is still more incredible. But an old man deluged for half a century with the brutally nonsensical vocables of his fellow-creatures (which he grows to regard soon as *rain*, “rain of frogs” or the like, and lifts his umbrella against with indifference), — such an old gentleman, I assure you, is grateful for a word that he can recognize perennial sense in; as in this case is his sure hope. And so be the little Book thrice welcome; and let all England understand (as some choice portion of England will) that there has not been a man talking about us these very many years whose words are worth the least attention in comparison.

“Post passing!” I must end, in mid-course; so much still untouched upon. Thanks for Sampson & Co., and let them go their course upon me. If I can see

Mrs. — about the end of September or after, I shall be right glad: — but I fear she will have fled before that? —

I am here in my native Country, riding, seabathing, living on country diet, — uttering no word, — now into the fifth week; have had such a “retreat” as no La Trappe hardly could have offered me. A “retreat” *without cilices*, thistle-mattresses; and with *silent* devotions (if any) instead of blockhead spoken ones to the Virgin and others! There is still an Excursion to the Highlands ahead, which cannot be avoided; — then home again to *peine forte et dure*. Good be with you always, dear friend.

— T. Carlyle

CLXI. Carlyle to Emerson

Chelsea, 2 December, 1856

Dear Emerson, — I am really grieved to have hurt the feelings of Mr. Phillips;* a gentleman to whom I, on my side, had no feelings but those of respect and good will! I pray you smooth him down again, by all wise methods, into at least good-natured indifference to me. He may depend upon it I could not mean to irritate him; there lay no gain for me in that! Nor is there anything of business left now between us. It is doubly and trebly evident those Stereotype Plates are not to him worth their prime cost here, still less, their prime cost plus any vestige of definite motive for me to concern myself in them: — whereupon the Project falls on its face, and vanishes forever, with apologies all round. For as to that other method, that is a game I never thought, and never should think of playing at! You may also tell him this little Biographical fact, if you think it will any way help. Some ten or more years ago, I made a similar Bargain with a New York House (known to you, and now I believe extinct): “10” or something “percent,” of selling price on the Copies Printed, was to be my return — not for four or five hundred pounds money laid out, but for various things I did, which gratis would by no means have been done; in fine, it was their own Offer, made and accepted in due form; “10 percent on the copies printed.”

* This refers to a proposed arrangement, which fell through, for the publication in America by Messrs. Phillips and Sampson, of Boston, of a complete edition of Carlyle’s works, to be printed from the stereotype plates of the English edition then in course of issue by Messrs. Chapman and Hall.

And how many were “printed,” thinks Mr. Phillips? I saw one set; dreadfully ugly Books, errors in every page; — and to this hour I have never heard of any other! The amount remains zero net; and it would appear there was simply one copy “printed,” the ugly one sent to myself, which I instantly despatched again somewhither! On second thought perhaps you had better *not* tell Mr. Phillips this story, at least not in this way. *His* integrity I would not even question by insinuation, nor need I, at the point where we now are. I perceive he sees in extraordinary brilliancy of illumination his own side of the bargain; and thinks me ignorant of several things which I am well enough informed about. In brief, make a perfect peace between us, O friend, and man of peace; and let the wampums be all wrapped up, and especially the tomahawks entirely buried, and the thing end forever! To you also I owe apologies; but not to you do I pay them, knowing from of old what you are to me. Enough, enough!

I got your Book by post in the Highlands; and had such a day over it as falls

rarely to my lot! Not for seven years and more have I got hold of such a Book; — Book by a real man, with eyes in his head; nobleness, wisdom, humor, and many other things, in the heart of him. Such Books do not turn up often in the decade, in the century. In fact I believe it to be worth all the Books ever written by New England upon Old. Franklin might have written such a thing (in his own way); no other since! We do very well with it here, and the wise part of us *best*. That Chapter on the Church is inimitable; “the Bishop asking a troublesome gentleman to take wine,” — you should see the kind of grin it awakens here on our best kind of faces. Excellent the manner of that, and the matter too dreadfully *true* in every part. I do not much seize your idea in regard to “Literature,” though I do details of it, and will try again. Glad of that too, even in its half state; not “sorry” at *any* part of it, — you Sceptic! On the whole, write *again*, and ever again at greater length: there lies your only fault to me. And yet I know, that also is a right noble one, and rare in our day.

O my friend, save always for me some corner in your memory; I am very lonely in these months and years, — sunk to the centre of the Earth, like to be throttled by the Pythons and Mudgods in my old days; — but shall get out again, too; and be a better boy! No “hurry” equals mine, and it is in permanence.

Yours ever,
T. Carlyle

CLXII. Emerson to Carlyle

Concord, 17 May, 1858

My Dear Carlyle, — I see no way for you to avoid the Americans but to come to America. For, first or last, we are all embarking, and all steering straight to your door. Mr. and Mrs. Joseph Longworth of Cincinnati are going abroad on their travels. Possibly, the name is not quite unknown to you. Their father, Nicholas Longworth, is one of the founders of the city of Cincinnati, a bigger town than Boston, where he is a huge land lord and planter, and patron of sculptors and painters. And his family are most favorably known to all dwellers and strangers, in the Ohio Valley, as people who have well used their great wealth. His chief merit is to have introduced a systematic culture of the wine-grape and wine manufacture, by the importing and settlement of German planters in that region, and the trade is thriving to the general benefit. His son Joseph is a well-bred gentleman of literary tastes, whose position and good heart make him largely hospitable. His wife is a very attractive and excellent woman, and they are good friends of mine. It seems I have at some former time told her that, when she went to England, she should see you. And they are going abroad, soon, for the first time. If you are in London, you must be seen of them.

But I hailed even this need of taxing once more your often taxed courtesy, as a means to break up my long contumacy to-you-ward. Please let not the wires be rusted out, so that we cannot weld them again, and let me feel the subtle fluid streaming strong. Tell me what is become of *Frederic*, for whose appearance I have watched every week for months? I am better ready for him, since one or two books about Voltaire, Maupertuis, and company, fell in my way.

Yet that book will not come which I most wish to read, namely, the culled results, the quintessence of private conviction, a *liber veritatis*, a few sentences, hints of the final moral you drew from so much penetrating inquest into past and present men. All writing is necessitated to be exoteric, and written to a human should instead of to the terrible is. And I say this to you, because you are the truest and bravest of writers. Every writer is a skater, who must go partly where he would, and partly, where the skates carry him; or a sailor, who can only land where sails can be safely blown. The variations to be allowed for in the surveyor's compass are nothing like so large as those that must be allowed for in every book. And a friendship of old gentlemen who have got rid of many illusions, survived their ambition, and blushes, and passion for euphony, and surface harmonies, and tenderness for their accidental literary stores, but have kept all their curiosity and awe touching the problems of man and fate and the

Cause of causes, — a friendship of old gentlemen of this fortune is looking more comely and profitable than anything I have read of love. Such a dream flatters my incapacities for conversation, for we can all play at monosyllables, who cannot attempt the gay pictorial panoramic styles.

So, if ever I hear that you have betrayed the first symptom of age, that your back is bent a twentieth of an inch from the perpendicular, I shall hasten to believe you are shearing your prodigal overgrowths, and are calling in your troops to the citadel, and I may come in the first steamer to drop in of evenings and hear the central monosyllables.

Be good now again, and send me quickly — though it be the shortest autograph certificate of....*

—— — * The end of this letter is lost. —— ——

CLXIII. Carlyle to Emerson

Chelsea, 2 June, 1858

Dear Emerson, — Glad indeed I am to hear of you on any terms, on any subject. For the last eighteen months I have pretty much ceased all human correspondence, — writing no Note that was not in a sense wrung from me; my one society the *Nightmares* (Prussian and other) all that while: — but often and often the image of you, and the thoughts of old days between us, has risen sad upon me; and I have waited to get loose from the Nightmares to appeal to you again, — to edacious Time and you. Most likely in a couple of weeks you would have heard from me again at any rate. — Your friends shall be welcome to me; no friend of yours can be other at any time. Nor in fact did anybody ever sent by you prove other than pleasant in this house, so pray no apologies on that small score. — If only these Cincinnati Patricians can find me here when they come? For I am off to the deepest solitudes discoverable (native Scotland probably) so soon as I can shake the final tag rags of Printer people off me;— “surely within three weeks now!” I say to myself. But I shall be back, too, if all prosper; and your Longworths will be back; and Madam will stand to her point, I hope.

That book on Friedrich of Prussia — first half of it, two swoln unlovely volumes, which treat mainly of his Father, &c., and leave him at his accession — is just getting out of my hands. One packet more of Proofs, and I have done with it, — thanks to all the gods! No job approaching in ugliness to it was ever cut out for me; nor had I any motive to go on, except the sad negative one, “Shall we be beaten in our old days, then?” — But it has thoroughly humbled me, — trampled me down into the *mud*, there to wrestle with the accumulated stupidities of Mankind, German, English, French, and other, for *all* have borne a hand in these sad centuries; — and here I emerge at last, not *killed*, but almost as good. Seek not to look at the Book, — nay in fact it is “not to be *published* till September” (so the man of affairs settles with me yesterday, “owing to the political &c., to the season,” &c.); my only stipulation was that in ten days I should be utterly out of it, — not to hear of it again till the Day of Judgment, and if possible not even then! In fact it is a bad book, poor, misshapen, feeble, *nearly* worthless (thanks to *past* generations and to me); and my one excuse is, I could not make it better, all the world having played such a game with it. Well, well! — How true is that you say about the skater; and the rider too depending on his vehicles, on his roads, on his et ceteras! Dismally true have I a thousand times felt it, in these late operations; never in any so much. And in short the business of writing has

altogether become contemptible to me; and I am become confirmed in the notion that nobody ought to write, — unless sheer Fate force him to do it; — and then he ought (if *not* of the mountebank genus) to beg to be shot rather. That is deliberately my opinion, — or far nearer it than you will believe.

Once or twice I caught some tone of you in some American Magazine; utterances highly noteworthy to me; in a sense, the only thing that is *speech* at all among my fellow-creatures in this time. For the years that remain, I suppose we must continue to grumble out some occasional utterance of that kind: what can we do, at this late stage? But in the *real* “Model Republic,” it would have been different with two good boys of this kind! —

Though shattered and trampled down to an immense degree, I do not think any bones are broken yet, — though age truly is here, and you may engage your berth in the steamer whenever you like. In a few months I expect to be sensibly improved; but my poor Wife suffers sadly the last two winters; and I am much distressed by that item of our affairs. Adieu, dear Emerson: I have lost many things; let me not lose you till I must in some way!

Yours ever,
T. Carlyle

P.S. If you read the Newspapers (which I carefully abstain from doing) they will babble to you about Dickens’s “Separation from Wife,” &c., &c.; fact of Separation I believe is true; but all the rest is mere lies and nonsense. No crime or misdemeanor specifiable on either side; *unhappy* together, these good many years past, and they at length end it. — Sulzer said, “Men are by nature *good*.” “Ach, mein lieber Sulzer, Er kennt nicht diese verdammte Race,” ejaculated Fritz, at hearing such an axiom.

CLXIII.* Carlyle to Emerson
Chelsea, London, 9 April, 1859

Dear Emerson, — Long months ago there was sent off for you a copy of *Friedrich* of Prussia, two big red volumes (for which Chapman the Publisher had found some “safe, swift” vehicle); and *now* I have reason to fear they are still loitering somewhere, or at least have long loitered sorrow on them! This is to say: If you have not *yet* got them, address a line to “Saml. F. Flower, Esq, Librarian of Antiquarian Society, Worcester, Mass.” (forty miles from you, they say), and that will at once bring them. In the Devil’s name! I never in my life was so near choked; swimming in this mother of Dead Dogs, and a long spell of it still ahead! I profoundly *pity myself* (if no one else does). You shall hear of me

again if I survive, — but really that is getting beyond a joke with me, and I ought to hold my peace (even to you), and swim what I can. Your little touch of Human Speech on *Burns** was charming; had got into the papers here (and been clipt out by me) before your copy came, and has gone far and wide since. Newberg was to give it me in German, from the *Allgemeine Zeitung*, but lost the leaf. Adieu, my Friend; very dear to me, tho' dumb.

— T. Carlyle (in such haste as seldom was).**

* Emerson's fine speech was made at the celebration of the Burns Centenary, Boston, January 25, 1859. See his *Miscellanies* (Works, vol. xi.), p. 363.

** The preceding letter was discovered in 1893, in a little package of letters put aside by Mr. Emerson and marked "Autographs."

CLXIV. Emerson to Carlyle*

Concord, 1 May, 1859

Dear Carlyle, — Some three weeks ago came to me a note from Mr. Haven of Worcester, announcing the arrival there of “King Friedrich,” and, after a fortnight, the good book came to my door. A week later, your letter arrived. I was heartily glad to get the crimson Book itself. I had looked for it with the first ships. As it came not, I had made up my mind to that hap also. It was quite fair: I had disentitled myself. He, the true friend, had every right to punish me for my sluggish contumacy, — backsliding, too, after penitence. So I read with resignation our blue American reprint, and I enclose to you a leaf from my journal at the time, which leaf I read afterwards in one of my lectures at the Music Hall in Boston. But the book came from the man himself. He did not punish me. He is loyal, but royal as well, and, I have always noted, has a whim for dealing *en grand monarque*. The book came, with its irresistible inscription, so that I am all tenderness and all but tears. The book too is sovereignly written. I think you the true inventor of the stereoscope, as having exhibited that art in style, long before we had heard of it in drawing.

—— — * This letter and the Extract from the Diary are printed from a copy of the original supplied to me by the kindness of Mr. Alexander Ireland, who first printed a portion of the letter in his “Ralph Waldo Emerson, a Biographical Sketch,” London, 1882. One or two words missing in the copy are inserted from the rough draft, which, as usual, varies in minor points from the letter as sent.

—— —

The letter came also. Every child of mine knows from far that handwriting, and brings it home with speed. I read without alarm the pathological hints of your sad plight in the German labyrinth. I know too well what invitations and assurance brought you in there, to fear any lack of guides to bring you out. More presence of mind and easy change from the microscopic to the telescopic view does not exist. I await peacefully your issue from your pretended afflictions.

What to tell you of my coop and byre? Ah! you are a very poor fellow, and must be left with your glory. You hug yourself on missing the illusion of children, and must be pitied as having one glittering toy the less. I am a victim all my days to certain graces of form and behavior, and can never come into equilibrium. Now I am fooled by my own young people, and grow old contented. The heedless children suddenly take the keenest hold on life, and foolish papas cling to the world on their account, as never on their own. Out of sympathy, we *make believe* to value the prizes of their ambition and hope. My,

two girls, pupils once or now of Agassiz, are good, healthy, apprehensive, decided young people, who love life. My boy divides his time between Cicero and cricket, knows his boat, the birds, and Walter Scott — verse and prose, through and through, — and will go to College next year. Sam Ward and I tickled each other the other day, in looking over a very good company of young people, by finding in the new comers a marked improvement on their parents. There, I flatter myself, I see some emerging of our people from the prison of their politics. The insolvency of slavery shows and stares, and we shall perhaps live to see that putrid Black-vomit extirpated by mere dying and planting.

I am so glad to find myself speaking once more to you, that I mean to persist in the practice. Be as glad as you have been. You and I shall not know each other on this platform as long as we have known. A correspondence even of twenty-five years should not be disused unless through some fatal event. Life is too short, and, with all our poetry and morals, too indigent to allow such sacrifices. Eyes so old and wary, and which have learned to look on so much, are gathering an hourly harvest, — and I cannot spare what on noble terms is offered me.

With congratulations to Jane Carlyle on the grandeur of the Book,

Yours affectionately,

R.W. Emerson

Extract From Diary*

Here has come into the country, three or four months ago, a *History of Frederick*, infinitely the wittiest book that ever was written, — a book that one would think the English people would rise up in mass and thank the author for, by cordial acclamation, and signify, by crowning him with oakleaves, their joy that such a head existed among them, and sympathizing and much-reading America would make a new treaty or send a Minister Extraordinary to offer congratulation of honoring delight to England, in acknowledgment of this donation, — a book holding so many memorable and heroic facts, working directly on practice; with new heroes, things unvoiced before; — the German Plutarch (now that we have exhausted the Greek and Roman and British Plutarchs), with a range, too, of thought and wisdom so large and so elastic, not so much applying as inosculating to every need and sensibility of man, that we do not read a stereotype page, rather we see the eyes of the writer looking into ours, mark his behavior, humming, chuckling, with under-tones and trumpet-tones and shrugs, and long-commanding glances, stereoscoping every figure that passes, and every hill, river, road, hummock, and pebble in the long perspective. With its wonderful new system of mnemonics, whereby great and insignificant men are ineffaceably ticketed and marked and modeled in memory by what they were, had, and did; and withal a book that is a Judgment Day, for its moral verdict on the men and nations and manners of modern times.

* In the first edition, this extract was printed from the original Diary; it is now printed according to the copy sent abroad. — —

And this book makes no noise; I have hardly seen a notice of it in any newspaper or journal, and you would think there was no such book. I am not aware that Mr. Buchanan has sent a special messenger to Great Cheyne Row, Chelsea, or that Mr. Dallas has been instructed to assure Mr. Carlyle of his distinguished consideration. But the secret wits and hearts of men take note of it, not the less surely. They have said nothing lately in praise of the air, or of fire, or of the blessing of love, and yet, I suppose, they are sensible of these, and not less of this book, which is like these.

CLXV. Emerson to Carlyle

Concord, 16 April, 1860

My Dear Carlyle, — Can booksellers break the seal which the gods do not, and put me in communication again with the loyalest of men? On the ground of Mr. Wight's honest proposal to give you a benefit from his edition,* I, though unwilling, allowed him to copy the Daguerre of your head. The publishers ask also some expression of your good will to their work....

—— — * Mr. O.W. Wight of New York, an upright "able editor," who, had just made arrangements for the publication of a very satisfactory edition of Carlyle's *Miscellaneous Essays*. —— ——

I commend you to the gods who love and uphold you, and who do not like to make their great gifts vain, but teach us that the best life-insurance is a great task. I hold you to be one of those to whom all is permitted, and who carry the laws in their hand. Continue to be good to your old friends. 'T is no matter whether they write to you or not. If not, they save your time. When *Friedrich* is once despatched to gods and men, there was once some talk that you should come to America! You shall have an ovation such, and on such sincerity, as none have had.

Ever affectionately yours,
R.W. Emerson

I do not know Mr. Wight, but he sends his open letter, which I fear is already old, for me to write in: and I will not keep it, lest it lose another steamer.

CLXVI. Carlyle to Emerson Chelsea, London, 30 April, 1860

Dear Emerson, — It is a special favor of Heaven to me that I hear of you again by this accident; and am made to answer a word *de Profundis*. It is constantly among the fairest of the few hopes that remain for me on the other side of this Stygian Abyss of a *Friedrich* (should I ever get through it alive) that I *shall then* begin writing to you again, who knows if not see you in the body before quite taking wing! For I feel always, what I have some times written, that there is (in a sense) but one completely human voice to me in the world; and that you are it, and have been, — thanks to you, whether you speak or not! Let me say also, while I am at it, that the few words you sent me about those first Two volumes are present with me in the far more frightful darknesses of these last Two; and indeed are often almost my one encouragement. That is a fact, and not exaggerated, though you think it is. I read some criticisms of my wretched Book, and hundreds of others I in the gross refused to read; they were in praise, they were in blame; but not one of them looked into the eyes of the object, and in genuine human fashion responded to its human strivings, and recognized it, — completely right, though with generous exaggeration! That was well done, I can tell you: a human voice, far out in the waste deeps, among the inarticulate sea-krakens and obscene monsters, loud-roaring, inexpressibly ugly, dooming you as if to eternal solitude by way of wages,— “hath exceeding much refreshment in it,” as my friend Oliver used to say.

Having not one spare moment at present, I will answer to *you* only the whole contents of that letter; you in your charity will convey to Mr. Wight what portion belongs to him. Wight, if you have a chance of him, is worth knowing; a genuine bit of metal, too thin and ringing for my tastes (hammered, in fact, upon the Yankee anvils), but recognizably of steel and with a keen fire-edge. Pray signify to him that he has done a thing agreeable to me, and that it will be pleasant if I find it will not hurt *him*. Profit to me out of it, except to keep his own soul clear and sound (to his own sense, as it always will be to mine), is perfectly indifferent; and on the whole I thank him heartily for showing me a chivalrous human brother, instead of the usual vulturous, malodorous, and much avoidable phenomenon, in Transatlantic Bibliopoly! This is accurately true; and so far as his publisher and he can extract encouragement from this, in the face of vested interests which I cannot judge of, it is theirs without reserve....

Adieu, my friend; I have not written so much in the Letter way, not, I think, since you last heard of me. In my despair it often seems as if I should never write more; but be sunk here, and perish miserably in the most undoable, least worthy,

most disgusting and heart breaking of all the labors I ever had. But perhaps also not, not quite. In which case — Yours ever truly at any rate,

T. Carlyle No time to re-read. I suppose you can decipher.

CLXVII. Carlyle to Emerson Chelsea, 29 January, 1861

Dear Emerson, — The sight of my hand-writing will, I know, be welcome again. Though I literally do not write the smallest Note once in a month, or converse with anything but Prussian Nightmares of a hideous [nature], and with my Horse (who is human in comparison), and with my poor Wife (who is altogether human, and heroically cheerful to me, in her poor weak state), — I must use the five minutes, which have fallen to me today, in acknowledgment, *due* by all laws terrestrial and celestial, of the last Book* that has come from you.

—— — * “The Conduct of Life.” —— —— I read it a great while ago, mostly in sheets, and again read it in the finely printed form, — I can tell you, if you do not already guess, with a satisfaction given me by the Books of no other living mortal. I predicted to your English Bookseller a great sale even, reckoning it the best of all your Books. What the sale was or is I nowhere learned; but the basis of my prophecy remains like the rocks, and will remain. Indeed, except from my Brother John, I have heard no criticism that had much rationality, — some of them incredibly irrational (if that matter had not altogether become a barking of dogs among us); — but I always believe there are in the mute state a great number of thinking English souls, who can recognize a Thinker and a Sayer, of perennially human type and welcome him as the rarest of miracles, in “such a spread of knowledge” as there now is: — one English soul of that kind there indubitably is; and I certify hereby, notarially if you like, that such is emphatically his view of the matter. You have grown older, more pungent, piercing; — I never read from you before such lightning-gleams of meaning as are to be found here. The finale of all, that of “Illusions” falling on us like snow-showers, but again of “the gods sitting steadfast on their thrones” all the while, — what a *Fiat Lux* is there, into the deeps of a philosophy, which the vulgar has not, which hardly three men living have, yet dreamt of! *Well done*, I say; and so let that matter rest.

I am still twelve months or so from the end of my Task; very uncertain often whether I can, even at this snail’s pace, hold out so long. In my life I was never worn nearly so low, and seem to get *weaker* monthly. Courage! If I do get through, you shall hear of me, again.

Yours forever,
T. Carlyle

CLXVIII. Emerson to Carlyle Concord, 16 April, 1861

My Dear Carlyle, — ...I have to thank you for the cordial note which brought me joy, many weeks ago. It was noble and welcome in all but its boding account of yourself and your task. But I have had experience of your labors, and these deplorations I have long since learned to distrust. We have settled it in America, as I doubt not it is settled in England, that *Frederick* is a history which a beneficent Providence is not very likely to interrupt. And may every kind and tender influence near you and over you keep the best head in England from all harm.

Affectionately,

R.W. Emerson

CLXIX. Emerson to Carlyle*

Concord, 8 December, 1862

My Dear Friend, — Long ago, as soon as swift steamers could bring the new book across the sea, I received the third volume of *Friedrich*, with your autograph inscription, and read it with joy. Not a word went to the beloved author, for I do not write or think. I would wait perhaps for happier days, as our President Lincoln will not even emancipate slaves, until on the heels of a victory, or the semblance of such. But he waited in vain for his triumph, nor dare I in my heavy months expect bright days. The book was heartily grateful, and square to the author's imperial scale. You have lighted the glooms, and engineered away the pits, whereof you poetically pleased yourself with complaining, in your sometime letter to me, clean out of it, according to the high Italian rule, and have let sunshine and pure air enfold the scene. First, I read it honestly through for the history; then I pause and speculate on the Muse that inspires, and the friend that reports it. 'T is sovereignly written, above all literature, dictating to all mortals what they shall accept as fated and final for their salvation. It is Mankind's Bill of Rights and Duties, the royal proclamation of Intellect ascending the throne, announcing its good pleasure, that, hereafter, *as heretofore*, and now once for all, the World shall be governed by Common Sense and law of Morals, or shall go to ruin.

* Portions of this and of the following letter of Emerson have been printed by Mr. Alexander Ireland in his "Ralph Waldo Emerson: Recollections of his Visits to England," &c. London, 1882. — — —

But the manner of it! — the author sitting as Demiurgus, trotting out his manikins, coaxing and bantering them, amused with their good performance, patting them on the back, and rating the naughty dolls when they misbehave; and communicating his mind ever in measure, just as much as the young public can understand; hinting the future, when it would be useful; recalling now and then illustrative antecedents of the actor, impressing, the reader that he is in possession of the entire history centrally seen, that his investigation has been exhaustive, and that he descends too on the petty plot of Prussia from higher and cosmical surveys. Better I like the sound sense and the absolute independence of the tone, which may put kings in fear. And, as the reader shares, according to his intelligence, the haughty *coup d'oeil* of this genius, and shares it with delight, I recommend to all governors, English, French, Austrian, and other, to double their guards, and look carefully to the censorship of the press. I find, as ever in your books, that one man has deserved well of mankind for restoring the

Scholar's profession to its highest use and dignity.* I find also that you are very wilful, and have made a covenant with your eyes that they shall not see anything you do not wish they should. But I was heartily glad to read somewhere that your book was nearly finished in the manuscript, for I could wish you to sit and taste your fame, if that were not contrary to law of Olympus. My joints ache to think of your rugged labor. Now that you have conquered to yourself such a huge kingdom among men, can you not give yourself breath, and chat a little, an Emeritus in the eternal university, and write a gossiping letter to an old American friend or so? Alas, I own that I have no right to say this last, — I who write never.

—— — * As long before as 1843 Emerson wrote in his Diary: “Carlyle in his new book” (*Past and Present*), “as everywhere, is a continuer of the great line of scholars in the world, of Horace, Varro, Pliny, Erasmus, Scaliger, Milton, and well sustains their office in ample credit and honor.”

Here we read no books. The war is our sole and doleful instructor. All our bright young men go into it, to be misused and sacrificed hitherto by incapable leaders. One lesson they all learn, — to hate slavery, *teterrima causa*. But the issue does not yet appear. We must get ourselves morally right. Nobody can help us. ‘T is of no account what England or France may do. Unless backed by our profligate parties, their action would be nugatory, and, if so backed, the worst. But even the war is better than the degrading and descending politics that preceded it for decades of years, and our legislation has made great strides, and if we can stave off that fury of trade which rushes to peace at the cost of replacing the South in the *status ante bellum*, we can, with something more of courage, leave the problem to another score of years, — free labor to fight with the Beast, and see if bales and barrels and baskets cannot find out that they pass more commodiously and surely to their ports through free hands, than through barbarians.

I grieved that the good Clough, the generous, susceptible scholar, should die. I read over his *Bothie* again, full of the wine of youth at Oxford. I delight in Matthew Arnold's fine criticism in two little books. Give affectionate remembrances from me to Jane Carlyle, whom— 's happiness and accurate reporting restored to me in brightest image.

Always faithfully yours,
R.W. Emerson

CLXX. Carlyle to Emerson Chelsea, 8 March, 1864

Dear Emerson, — This will be delivered to you by the Hon. Lyulph Stanley, an excellent, intelligent young gentleman whom I have known ever since his infancy, — his father and mother being among my very oldest friends in London; “Lord and Lady Stanley of Alderley” (not of Knowesley, but a cadet branch of it), whom perhaps you did not meet while here.

My young Friend is coming to look with his own eyes at your huge and hugely travelling Country; — and I think will agree with you, better than he does with me, in regard to that latest phenomenon. At all events, he regards “Emerson” as intelligent Englishmen all do; and you will please me much by giving him your friendliest reception and furtherance, — which I can certify that he deserves for his own sake, not counting mine at all.

Probably *he* may deliver you the Vol. IV. of *Frederic*; he will tell you our news (part of which, what regards my poor Wife, is very bad, though God be thanked not yet the worst); — and, in some six months, he may bring me back some human tidings from Concord, a place which always inhabits my memory, — though it is so dumb latterly!

Yours ever,
T. Carlyle

CLXXI. Emerson to Carlyle

Concord, 26 September, 1864

Dear Carlyle, — Your friend, young Stanley, brought me your letter now too many days ago. It contained heavy news of your household, — yet such as in these our autumnal days we must await with what firmness we can. I hear with pain that your Wife, whom I have only seen beaming goodness and intelligence, has suffered and suffers so severely. I recall my first visit to your house, when I pronounced you wise and fortunate in relations wherein best men are often neither wise nor fortunate. I had already heard rumors of her serious illness. Send me word, I pray you, that there is better health and hope. For the rest, the Colonna motto would fit your letter, “Though sad, I am strong.”

I had received in July, forwarded by Stanley, on his flight through Boston, the fourth Volume of *Friedrich*, and it was my best reading in the summer, and for weeks my only reading: One fact was paramount in all the good I drew from it, that whomsoever many years had used and worn, they had not yet broken any fibre of your force: — a pure joy to me, who abhor the inroads which time makes on me and on my friends. To live too long is the capital misfortune, and I sometimes think, if we shall not parry it by better art of living, we shall learn to include in our morals some bolder control of the facts. I read once, that Jacobi declared that he had some thoughts which — if he should entertain them — would put him to death: and perhaps we have weapons in our intellectual armory that are to save us from disgrace and impertinent relation to the world we live in. But this book will excuse you from any unseemly haste to make up your accounts, nay, holds you to fulfil your career with all amplitude and calmness. I found joy and pride in it, and discerned a golden chain of continuity not often seen in the works of men, apprising me that one good head and great heart remained in England, — immovable, superior to his own eccentricities and perversities, nay, wearing these, I can well believe, as a jaunty coat or red cockade to defy or mislead idlers, for the better securing his own peace, and the very ends which the idlers fancy he resists. England’s lease of power is good during his days.

I have in these last years lamented that you had not made the visit to America, which in earlier years you projected or favored. It would have made it impossible that your name should be cited for one moment on the side of the enemies of mankind. Ten days’ residence in this country would have made you the organ of the sanity of England and of Europe to us and to them, and have shown you the necessities and aspirations which struggle up in our Free States,

which, as yet, have no organ to others, and are ill and unsteadily articulated here. In our today's division of Republican and Democrat, it is certain that the American nationality lies in the Republican party (mixed and multiform though that party be); and I hold it not less certain, that, viewing all the nationalities of the world, the battle for Humanity is, at this hour, in America. A few days here would show you the disgusting composition of the Party which within the Union resists the national action. Take from it the wild Irish element, imported in the last twenty-five year's into this country, and led by Romish Priests, who sympathize, of course, with despotism, and you would bereave it of all its numerical strength. A man intelligent and virtuous is not to be found on that side. Ah! how gladly I would enlist you, with your thunderbolt, on our part! How gladly enlist the wise, thoughtful, efficient pens and voices of England! We want England and Europe to hold our people stanch to their best tendency. Are English of this day incapable of a great sentiment? Can they not leave caviling at petty failures, and bad manners, and at the dunce part (always the largest part in human affairs), and leap to the suggestions and finger-pointings of the gods, which, above the understanding, feed the hopes and guide the wills of men? This war has been conducted over the heads of all the actors in it; and the foolish terrors, "What shall we do with the negro?" "The entire black population is coming North to be fed," &c., have strangely ended in the fact that the black refuses to leave his climate; gets his living and the living of his employers there, as he has always done; is the natural ally and soldier of the Republic, in that climate; now takes the place of two hundred thousand white soldiers; and will be, as the conquest of the country proceeds, its garrison, till peace, without slavery, returns. Slaveholders in London have filled English ears with their wishes and perhaps beliefs; and our people, generals, and politicians have carried the like, at first, to the war, until corrected by irresistible experience. I shall always respect War hereafter. The cost of life, the dreary havoc of comfort and time, are overpaid by the vistas it opens of Eternal Life, Eternal Law, reconstructing and uplifting Society, — breaks up the old horizon, and we see through the rifts a wider. The dismal Malthus, the dismal DeBow, have had their night.

Our Census of 1860, and the War, are poems, which will, in the next age, inspire a genius like your own. I hate to write you a newspaper, but, in these times, 't is wonderful what sublime lessons I have once and again read on the Bulletin-boards in the streets. Everybody has been wrong in his guess, except good women, who never despair of an Ideal right.

I thank you for sending to me so gracious a gentleman as Mr. Stanley, who interested us in every manner, by his elegance, his accurate information of that

we wished to know, and his surprising acquaintance with the camp and military politics on our frontier. I regretted that I could see him so little. He has used his time to the best purpose, and I should gladly have learned all his adventures from so competent a witness. Forgive this long writing, and keep the old kindness which I prize above words. My kindest salutations to the dear invalid!

— R.W. Emerson

CLXXII. Carlyle to Emerson

Cummertrees, Annan, Scotland, 14 June, 1865

Dear Emerson, — Though my hand is shaking (as you sadly notice) I determine to write you a little Note today. What a severance there has been these many sad years past! — In the first days of February I ended my weary Book; a totally worn-out man, got to shore again after far the ugliest sea he had ever swam in. In April or the end of March, when the book was published, I duly handed out a Copy for Concord and you; it was to be sent by mail; but, as my Publisher (a *new* Chapman, very unlike the *old*) discloses to me lately an incredible negligence on such points, it is quite possible the dog may *not*, for a long while, have put it in the Post-Office (though he faithfully charged me the postage of it, and was paid), and that the poor waif may never yet have reached you! Patience: it will come soon enough, — there are two thick volumes, and they will stand you a great deal of reading; stiff rather than “light.”

Since February last, I have been sauntering about in Devonshire, in Chelsea, hither, thither; idle as a dry bone, in fact, a creature sinking into deeper and deeper *collapse*, after twelve years of such mulish pulling and pushing; creature now good for nothing seemingly, and much indifferent to being so in permanence, if that be the arrangement come upon by the Powers that made us. Some three or four weeks ago, I came rolling down hither, into this old nook of my Birthland, to see poor old Annandale again with eyes, and the poor remnants of kindred and loved ones still left me there; I was not at first very lucky (lost sleep, &c.); but am now doing better, pretty much got adjusted to my new element, new to me since about six years past, — the longest absence I ever had from it before. My Work was getting desperate at that time; and I silently said to myself, “We won’t return till *it* is done, or *you* are done, my man!”

This is my eldest living sister’s house; one of the most rustic Farmhouses in the world, but abounding in all that is needful to me, especially in the truest, *silently*-active affection, the humble generosity of which is itself medicine and balm. The place is airy, on dry waving knolls cheerfully (with such *water* as I never drank elsewhere, except at Malvern) all round me are the Mountains, Cheviot and Galloway (three to fifteen miles off), Cumberland and Yorkshire (say forty and fifty, with the Solway brine and sands intervening). I live in total solitude, sauntering moodily in thin checkered woods, galloping about, once daily, by old lanes and roads, oftenest latterly on the wide expanses of Solway shore (when the tide is *out!*) where I see bright busy Cottages far off, houses

over even in Cumberland, and the beautifullest amphitheatre of eternal Hills, — but meet no living creature; and have endless thoughts as loving and as sad and sombre as I like. My youngest Brother (whom on the whole I like best, a rustic man, the express image of my Father in his ways of living and thinking) is within ten miles of me; Brother John “the Doctor” has come down to Dumfries to a sister (twelve miles off), and runs over to me by rail now and then in few minutes. I have Books; but can hardly be troubled with them. Pitiful temporary babble and balderdash, in comparison to what the Silences can say to one. Enough of all that: you perceive me sufficiently at this point of my Pilgrimage, as withdrawn to *Hades* for the time being; intending a month’s walk there, till the muddy semi-solutions settle into sediment according to what laws they have, and there be perhaps a partial restoration of clearness. I have to go deeper into Scotland by and by, perhaps to try *sailing*, which generally agrees with me; but till the end of September I hope there will be no London farther. My poor Wife, who is again poorly since I left (and has had frightful sufferings, last year especially) will probably join me in this region before I leave it. And see here, This is authentically the way we figure in the eye of the Sun; and something like what your spectacles, could they reach across the Ocean into these nooks, would teach you of us. There are three Photographs which I reckon fairly *like*; *these* are properly what I had to send you today, — little thinking that so much surplusage would accumulate about them; to which I now at once put an end. Your friend Conway,* who is a boundless admirer of yours, used to come our way regularly now and then; and we always liked him well. A man of most gentlemanly, ingenious ways; turn of thought always loyal and manly, though tending to be rather *winged* than solidly ambulatory. He talked of coming to Scotland too; but it seems uncertain whether we shall meet. He is clearly rather a favorite among the London people, — and tries to explain America to them; I know not if with any success. As for me, I have entirely lost count and reckoning of your enormous element, and its enormous affairs and procedures for some time past; and can only wish (which no man more heartily does) that all may issue in as blessed a way as you hope. Fat — (if you know and his fat commonplace at all) amused me much by a thing he had heard of yours in some lecture a year or two ago. “The American Eagle is a mighty bird; but what is he to the American Peacock.” At which all the audience had exploded into laughter. Very good. Adieu, old Friend.

Yours ever,
T. Carlyle

* Mr. Moncure D. Conway.

CLXXIII. Emerson to Carlyle

Concord, 7 January, 1866

Dear Carlyle, — Is it too late to send a letter to your door to claim an old right to enter, and to scatter all your convictions that I had passed under the earth? You had not to learn what a sluggish pen mine is. Of course, the sluggishness grows on me, and even such a trumpet at my gate as a letter from you heralding in noble books, whilst it gives me joy, cannot heal the paralysis. Yet your letter deeply interested me, with the account of your rest so well earned. You had fought your great battle, and might roll in the grass, or ride your pony, or shout to the Cumberland or Scotland echoes, with largest leave of men and gods. My lethargies have not dulled my delight in good books. I read these in the bright days of our new peace, which added a lustre to every genial work. Now first we had a right to read, for the very bookworms were driven out of doors whilst the war lasted. I found in the book no trace of age, which your letter so impressively claimed. In the book, the hand does not shake, the mind is ubiquitous. The treatment is so spontaneous, self-respecting, defiant, — liberties with your hero as if he were your client, or your son, and you were proud of him, and yet can check and chide him, and even put him in the corner when he is not a good boy, freedoms with kings, and reputations, and nations, yes, and with principles too, — that each reader, I suppose, feels complimented by the confidences with which he is honored by this free-tongued, masterful Hermes. — Who knows what the [Greek] will say next? This humor of telling the story in a gale, — bantering, scoffing, at the hero, at the enemy, at the learned reporters, — is a perpetual flattery to the admiring student, — the author abusing the whole world as mad dunces, — all but you and I, reader! Ellery Channing borrowed my Volumes V. and VI., worked slowly through them, — midway came to me for Volumes I., II., III., IV., which he had long already read, and at last returned all with this word, “If you write to Mr. Carlyle, you may say to him, that I *have* read these books, and they have made it impossible for me to read any other books but his.”

‘T is a good proof of their penetrative force, the influence on the new Stirling, who writes “The Secret of Hegel.” He is quite as much a student of Carlyle to learn treatment, as of Hegel for his matter, and plays the same game on his essence-dividing German, which he has learned of you on *Friedrich*. I have read a good deal in this book of Stirling’s, and have not done with it.

One or two errata I noticed in the last volumes of *Friedrich*, though the books are now lent, and I cannot indicate the pages. Fort Pulaski, which is near

Savannah, is set down as near Charleston. Charleston, South Carolina, your printer has twice called Charlestown, which is the name of the town in Massachusetts in which Bunker Hill stands. — Bancroft told me that the letters of Montcalm are spurious. We always write and say Ticonderoga.

I am sorry that Jonathan looks so unamiable seen from your island. Yet I have too much respect for the writing profession to complain of it. It is a necessity of rhetoric that there should be shades, and, I suppose, geography and government always determine, even for the greatest wits, where they shall lay their shadows. But I have always ‘the belief that a trip across the sea would have abated your despair of us. The world is laid out here in large lots, and the swing of natural laws is shared by the population, as it is not — or not as much — in your feudal Europe. My countrymen do not content me, but they are susceptible of inspirations. In the war it was humanity that showed itself to advantage, — the leaders were prompted and corrected by the intuitions of the people, they still demanding the more generous and decisive measure, and giving their sons and their estates as we had no example before. In this heat, they had sharper perceptions of policy, of the ways and means and the life of nations, and on every side we read or heard fate-words, in private letters, in railway cars, or in the journals. We were proud of the people and believed they would not go down from this height. But Peace came, and every one ran back into his shop again, and can hardly be won to patriotism more, even to the point of chasing away the thieves that are stealing not only the public gold, but the newly won rights of the slave, and the new muzzles we had contrived to keep the planter from sucking his blood.

Very welcome to me were the photographs, — your own, and Jane Carlyle’s. Hers, now seen here for the first time, was closely scanned, and confirmed the better accounts that had come of her improved health. Your earlier tidings of her had not been encouraging. I recognized still erect the wise, friendly presence first seen at Craigenputtock. Of your own — the hatted head is good, but more can be read in the head leaning on the hand, and the one in a cloak.

At the end of much writing, I have little to tell you of myself. I am a bad subject for autobiography. As I adjourn letters, so I adjourn my best tasks.... My wife joins me in very kind regards to Mrs. Carlyle. Use your old magnanimity to me, and punish my stony ingratitude by new letters from time to time.

Ever affectionately and gratefully yours,
R.W. Emerson

CLXXIV. Emerson to Carlyle

Concord, 16 May, 1866

My Dear Carlyle, — I have just been shown a private letter from Moncure Conway to one of his friends here, giving some tidings of your sad return to an empty home. We had the first news last week. And so it is. The stroke long threatened has fallen at last, in the mildest form to its victim, and relieved to you by long and repeated reprieves. I must think her fortunate also in this gentle departure, as she had been in her serene and honored career. We would not for ourselves count covetously the descending steps after we have passed the top of the mount, or grudge to spare some of the days of decay. And you will have the peace of knowing her safe, and no longer a victim. I have found myself recalling an old verse which one utters to the parting soul, —

”For thou hast passed all chance of human life,
And not again to thee shall beauty die.”

It is thirty-three years in July, I believe, since I first saw her, and her conversation and faultless manners gave assurance of a good and happy future. As I have not witnessed any decline, I can hardly believe in any, and still recall vividly the youthful wife, and her blithe account of her letters and homages from Goethe, and the details she gave of her intended visit to Weimar, and its disappointment. Her goodness to me and to my friends was ever perfect, and all Americans have agreed in her praise. Elizabeth Hoar remembers her with entire sympathy and regard.

I could heartily wish to see you for an hour in these lonely days. Your friends, I know, will approach you as tenderly as friends can; and I can believe that labor — all whose precious secrets you know — will prove a consoler, — though it cannot quite avail, for she was the rest that rewarded labor. It is good that you are strong, and built for endurance. Nor will you shun to consult the awful oracles which in these hours of tenderness are sometimes vouchsafed. If to any, to you.

I rejoice that she stayed to enjoy the knowledge of your good day at Edinburgh, which is a leaf we would not spare from your book of life. It was a right manly speech to be so made, and is a voucher of unbroken strength, — and the surroundings, as I learn, were all the happiest, — with no hint of change.

I pray you bear in mind your own counsels. Long years you must still achieve, and, I hope, neither grief nor weariness will let you “join the dim choir

of the bards that have been,” until you have written the book I wish and wait for,
— the sincerest confessions of your best hours.

My wife prays to be remembered to you with sympathy and affection.

Ever yours faithfully,

R.W. Emerson

CLXXV. Carlyle to Emerson

Mentone, France, Alpes Maritimes 27 January, 1867

My Dear Emerson, — It is along time since I last wrote to you; and a long distance in space and in fortune, — from the shores of the Solway in summer 1865, to this niche of the Alps and Mediterranean today, after what has befallen me in the interim. A longer interval, I think, and surely by far a sadder, than ever occurred between us before, since we first met in the Scotch moors, some five and thirty years ago. You have written me various Notes, too, and Letters, all good and cheering to me, — almost the only truly human speech I have heard from anybody living; — and still my stony silence could not be broken; not till now, though often looking forward to it, could I resolve on such a thing. You will think me far gone, and much bankrupt in hope and heart; — and indeed I am; as good as without hope and without fear; a gloomily serious, silent, and sad old man; gazing into the final chasm of things, in mute dialogue with “Death, Judgment, and Eternity” (dialogue *mute* on *both* sides!), not caring to discourse with poor articulate-speaking fellow creatures on their sorts of topics. It is right of me; and yet also it is not right. I often feel that I had better be dead than thus indifferent, contemptuous, disgusted with the world and its roaring nonsense, which I have no thought farther of lifting a finger to help, and only try to keep out of the way of, and shut my door against. But the truth is, I was nearly killed by that hideous Book on Friedrich, — twelve years in continuous wrestle with the nightmares and the subterranean hydras; — nearly *killed*, and had often thought I should be altogether, and must die leaving the monster not so much as finished! This is one truth, not so evident to any friend or onlooker as it is to myself: and then there is another, known to myself alone, as it were; and of which I am best not to speak to others, or to speak to them no farther. By the calamity of April last, I lost my little all in this world; and have no soul left who can make any corner of this world into a *home* for me any more. Bright, heroic, tender, true and noble was that lost treasure of my heart, who faithfully accompanied me in all the rocky ways and climbings; and I am forever poor without her. She was snatched from me in a moment, — as by a death from the gods. Very beautiful her death was; radiantly beautiful (to those who understand it) had all her life been *quid plura*? I should be among the dullest and stupidest, if I were not among the saddest of all men. But not a word more on all this.

All summer last, my one solacement in the form of work was writing, and sorting of old documents and recollections; summoning out again into clearness old scenes that had now closed on me without return. Sad, and in a sense sacred;

it was like a kind of *worship*; the only *devout* time I had had for a great while past. These things I have half or wholly the intention to burn out of the way before I myself die: — but such continues still mainly my employment, — so many hours every forenoon; what I call the “work” of my day; — to me, if to no other, it is useful; to reduce matters to writing means that you shall know them, see them in their origins and sequences, in their essential lineaments, considerably better than you ever did before. To set about writing my own *Life* would be no less than horrible to me; and shall of a certainty never be done. The common impious vulgar of this earth, what has it to do with my life or me? Let dignified oblivion, silence, and the vacant azure of Eternity swallow *me*; for my share of it, that, verily, is the handsomest, or one handsome way, of settling my poor account with the *canaille* of mankind extant and to come. “Immortal glory,” is not that a beautiful thing, in the Shakespeare Clubs and Literary Gazettes of our improved Epoch? — I did not leave London, except for fourteen days in August, to a fine and high old Lady-friend’s in Kent; where, riding about the woods and by the sea-beaches and chalk cliffs, in utter silence, I felt sadder than ever, though a little less *miserably* so, than in the intrusive babblements of London, which I could not quite lock out of doors. We read, at first, Tennyson’s *Idyls*, with profound recognition of the finely elaborated execution, and also of the inward perfection of *vacancy*, — and, to say truth, with considerable impatience at being treated so very like infants, though the lollipops were so superlative. We gladly changed for one Emerson’s *English Traits*; and read that, with increasing and ever increasing satisfaction every evening; blessing Heaven that there were still Books for grown-up people too! That truly is a Book all full of thoughts like winged arrows (thanks to the Bowyer from us both): — my Lady-friend’s name is Miss Davenport Bromley; it was at Wooton, in her Grandfather’s House, in Staffordshire, that Rousseau took shelter in 1760; and one hundred and six years later she was reading Emerson to me with a recognition that would have pleased the man, had he seen it.

About that same time my health and humors being evidently so, the Dowager Lady Ashburton (not the high Lady you saw, but a Successor of Mackenzie-Highland type), who wanders mostly about the Continent since her widowhood, for the sake of a child’s health, began pressing and inviting me to spend the blade months of Winter here in her Villa with her; — all friends warmly seconding and urging; by one of whom I was at last snatched off, as if by the hair of the head, (in spite of my violent No, no!) on the eve of Christmas last, and have been here ever since, — really with improved omens. The place is beautiful as a very picture, the climate superlative (today a sun and sky like very

June); the *hospitality* of usage beyond example. It is likely I shall be here another six weeks, or longer. If you please to write me, the address is on the margin; and I will answer. Adieu.

— T. Carlyle

CLXXVI. Carlyle to Emerson

5 Cheyne Row, Chelsea, 18 November, 1869

Dear Emerson, — It is near three years since I last wrote to you; from Mentone, under the Ligurian Olive and Orange trees, and their sombre foreign shadows, and still more sombre suggestings and promptings; the saddest, probably, of all living men. That you made no answer I know right well means only, “Alas, what can I say to him of consolatory that he does not himself know!” Far from a fault, or perhaps even a mistake on your part; — nor have I felt it otherwise. Sure enough, among the lights that have gone out for me, and are still going, one after one, under the inexorable Decree, in this now dusky and lonely world, I count with frequent regret that our Correspondence (not by absolute hest of Fate) should have fallen extinct, or into such abeyance: but I interpret it as you see; and my love and brotherhood to you remain alive, and will while I myself do. Enough of this. By lucky chance, as you perceive, you are again to get one written Letter from me, and I a reply from you, before the final Silence come. The case is this.

For many years back, a thought, which I used to check again as fond and silly, has been occasionally present to me, — Of testifying my gratitude to New England (New England, acting mainly through one of her Sons called Waldo Emerson), *by bequeathing to it my poor Falstaf Regiment, latterly two Falstaf Regiments of Books*, those I purchased and used in writing *Cromwell*, and ditto those on *Friedrich the Great*. “This could be done,” I often said to myself; “this *could* perhaps; and this would be a real satisfaction to me. But who then would march through Coventry with such a set!” The extreme insignificance of the Gift, this and nothing else, always gave me pause.

Last Summer, I was lucky enough to meet with your friend C.E. Norton, and renew many old Massachusetts recollections, in free talk with [him]....; to him I spoke of the affair; candidly describing it, especially the above questionable feature of it, so far as I could; and his answer, then, and more deliberately afterwards, was so hopeful, hearty, and decisive, that — in effect it has decided me; and I am this day writing to him that such is the poor fact, and that I need farther instructions on it so soon as you two have taken counsel together.

To say more about the infinitesimally small value of the Books would be superfluous: nay, in truth, many or most of them are not without intrinsic value, one or two are even excellent as Books; and all of them, it may perhaps be said, have a kind of *symbolic* or *biographic* value; and testify (a thing not useless) on

what slender commissariat stores considerable campaigns, twelve years long or so, may be carried on in this world. Perhaps you already knew of me, what the *Cromwell* and *Friedrich* collection might itself intimate, that much *buying* of Books was never a habit of mine, — far the reverse, even to this day!

Well, my Friend, you will have a meeting with Norton so soon as handy; and let me know what is next to be done. And that, in your official capacity, is all I have to say to you at present.

Unofficially there were much, — much that is mournful, but perhaps also something that is good and blessed, and though the saddest, also the highest, the lovingest and best; as beseems Time's sunset, now coming nigh. At present I will say only that, in bodily health, I am not to be called Ill, for a man who will be seventy-four next month; nor, on the spiritual side, has anything been laid upon me that is quite beyond my strength. More miserable I have often been; though as solitary, soft of heart, and sad, of course never.

Publisher Chapman, when I question him whether you for certain *get* your Monthly Volume of what they call "The Library Edition," assures me that "it is beyond doubt": — I confess I should still like to be *better* assured. If all is *right*, you should, by the time this Letter arrives, be receiving or have received your thirteenth Volume, last of the *Miscellanies*. Adieu, my Friend.

Ever truly yours,
T. Carlyle

CLXXVII. Carlyle to Emerson Chelsea, 4 January, 1870

Dear Emerson, — A month ago or more I wrote, by the same post, to you and to Norton about those Books for Harvard College; and in late days have been expecting your joint answer. From Norton yesternight I receive what is here copied for your perusal; it has come round by Florence as you see, and given me real pleasure and instruction. From you, who are possibly also away from home, I have yet nothing; but expect now soon to have a few words. There did arrive, one evening lately, your two pretty *volumes* of *Collected Works*, a pleasant salutation from you — which set me upon reading again what I thought I knew well before: — but the Letter is still to come.

Norton's hints are such a complete instruction to me that I see my way straight through the business, and might, by Note of "Bequest" and memorandum for the Barings, finish it in half an hour: nevertheless I will wait for your Letter, and punctually do nothing till your directions too are before me. Pray write, therefore; all is lying ready here. Since you heard last, I have got two Catalogues made out, approximately correct; one is to lie here till the Bequest be executed; the other I thought of sending to you against the day? This is my own invention in regard to the affair since I wrote last. Approve of it, and you shall have your copy by Book-post at once. "*Approximately correct*"; absolutely I cannot get it to be. But I need not doubt the Pious Purpose will be piously and even sacredly fulfilled; — and your Catalogue will be a kind of evidence that it is. Adieu, dear Emerson, till your Letter come.

Yours ever,
Thomas Carlyle

CLXXVIII. Emerson to Carlyle

Concord, 23 January, 1870*

My Dear Carlyle,— 'T is a sad apology that I have to offer for delays which no apology can retrieve. I received your first letter with pure joy, but in the midst of extreme inefficiency. I had suddenly yielded to a proposition of Fields & Co. to manufacture a book for a given day. The book was planned, and going on passably, when it was found better to divide the matter, and separate, and postpone the purely literary portion (criticism chiefly), and therefore to modify and swell the elected part. The attempt proved more difficult than I had believed, for I only write by spasms, and these ever more rare, — and daemons that have no ears. Meantime the publication day was announced, and the printer at the door. Then came your letter in the shortening days. When I drudged to keep my word, *invita Minerva*.

* This letter is printed from an imperfect rough draft.

I could not write in my book, and I could not write a letter. Tomorrow and many morrows made things worse, for we have indifferent health in the house, and, as it chanced, unusual strain of affairs, — which always come when they should not. For one thing — I have just sold a house which I once built opposite my own. But I will leave the bad month, which I hope will not match itself in my lifetime. Only 't is pathetic and remorseful to me that any purpose of yours, especially, a purpose so inspired, should find me imbecile.

Heartily I delight in your proposed disposition of the books. It has every charm of surprise, and nobleness, and large affection. The act will deeply gratify a multitude of good men, who will see in it your real sympathy with the welfare of the country. I hate that there should be a moment of delay in the completing of your provisions, — and that I of all men should be the cause! Norton's letter is perfect on his part, and needs no addition, I believe, from me. You had not in your first letter named *Cambridge*, and I had been meditating that he would probably have divided your attention between Harvard and the Boston Public Library, — now the richest in the country, at first founded by the gifts of Joshua Bates (of London), and since enriched by the city and private donors, Theodore Parker among them. But after conversation with two or three friends, I had decided that Harvard College was the right beneficiary, as being the mother real or adoptive of a great number of your lovers and readers in America, and because a College is a seat of sentiment and cosmical relations. The Library is outgrown by other libraries in the Country, counts only 119,000 bound volumes in 1868; the several departments of Divinity, Law, Medicine, and Natural

Science in the University having special libraries, that together add some 40,000 more. The College is newly active (with its new President Eliot, a cousin of Norton's) and expansive in all directions. And the Library will be relieved through subscriptions now being collected among the Alumni with the special purpose of securing to it an adequate fund for annual increase.

I shall then write to Norton at once that I concur with him in the destination of the books to Harvard College, and approve entirely his advices in regard to details. And so soon as you send me the Catalogue I shall, if you permit, communicate your design to President Eliot and the Corporation.

One thing I shall add to the Catalogue now or later (perhaps only by bequest), your own prized gift to me, in 1848, of Wood's *Athenae Oxonienses*, which I have lately had rebound, and in which every pen and pencil mark of yours is notable.

The stately books of the New Edition have duly come from the unforgetting friend. I have *Sartor*, *Schiller*, *French Revolution*, 3 vols., *Miscellanies*, Numbers 1, 2, 3, 4, 5, — ten volumes in all, excellently printed and dressed, and full of memories and electricity.

I have much to say, but of things not opportune at this moment, and in spite of my long contumacy dare believe that I shall quickly write again my proper letter to my friend, whose every word I watchfully read and remember.

CLXXIX. Carlyle to Emerson Melchet Court, Romsey, 14 February, 1870

Dear Emerson, — Three days ago I at last received your Letter; with very great pleasure and thankfulness, as you may suppose. Indeed, it is quite strangely interesting to see face to face my old Emerson again, not a feature of him changed, whom I have known all the best part of my life.

I am very glad, withal, to find that you agree completely with Norton and myself in regard to that small Harvard matter.

This is not Chelsea, as you perceive, this is a hospitable mansion in Hampshire; but I expect to be in Chelsea within about a week; once there, I shall immediately despatch to you one of the three Catalogues I have, with a more deliberate letter than I at present have the means of writing or dictating.

Yours ever truly,
T. Carlyle

CLXXX. Carlyle to Emerson Chelsea, 24 February, 1870

Dear Emerson, — At length I have got home from those sumptuous tumults (“Melchet Court” is the Dowager Lady Ashburton’s House, whose late Husband, an estimable friend of mine, and *half American*, you may remember here); and I devote to ending of our small Harvard Business, small enough, but true and kindly, — the first quiet hour I have.

Your Copy of the Catalogue, which accompanies by Book-Post of today, is the correctest I could manage to get done; all the Books mentioned in it I believe to be now here (and indeed, except five or six *tiny* articles, have *seen* them all, in one or other of the three rooms where my Books now stand, and where I believe the insignificant trifle of “tinies” to be): all these I can expect will be punctually attended to when the time comes, and proceeded with according to Norton’s scheme and yours; — and if any more “tinies,” which I could not even remember, should turn up (which I hardly think there will), these also will *class* themselves (as *Cromwelliana* or *Fredericana*), and be faithfully sent on with the others. For benefit of my *Survivors* and *Representatives* here, I retain an exact *Copy* of the Catalogue now put into your keeping; so that everything may fall out square between them and you when the Time shall arrive.

I mean to conform in every particular to the plan sketched out by Norton and you, — unless, in your next Letter, you have something other or farther to advise: — and so soon as I hear from you that Harvard accepts my poor widow’s mite of a *Bequest*, I will proceed to put it down in due form, and so finish this small matter, which for long years has hovered in my thoughts as a thing I should like to do. And so enough for this time.

I meant to write a longish Letter, touching on many other points, — though you see I am reduced to *pencil*, and “write” with such difficulty (never yet could learn to “dictate,” though my little Niece here is promptitude itself, and is so swift and legible, — useful here as a cheerful rushlight in this now sombre element, sombre, sad, but also beautiful and tenderly solemn more and more, in which she bears me company, good little “Mary”!). But, in bar of all such purposes, Publisher Chapman has come in, with Cromwell Engravings and their hindrances, with money accounts, &c., &c.; and has not even left me a moment of time, were nothing else needed!

Vol. XIV. (*Cromwell*, I.) ought to be at Concord about as soon as this. In our Newspapers I notice your Book announced, “half of the Essays new,” — which I hope to get *quam primum*, and illuminate some evenings with, — so as nothing

else can, in my present common mood.

Adieu, dear old Friend. I am and remain yours always, — T. Carlyle

CLXXXI. Emerson to Carlyle

Concord, 21 March, 1870

My Dear Carlyle, — On receiving your letter and catalogue I wrote out a little history of the benefaction and carried it last Tuesday to President Eliot at Cambridge, who was heartily gratified, and saw everything rightly, and expressed an anxiety (most becoming in my eyes after my odious shortcomings) that there should be no moment of delay on our part. “The Corporation would not meet again for a fortnight: — but he would not wait, — would call a special meeting this week to make the communication to them.” He did so: the meeting was held on Saturday and I have received this (Monday) morning from him enclosed letter and record.

It is very amiable and noble in you to have kept this surprise for us in your older days. Did you mean to show us that you could not be old, but immortally young? and having kept us all murmuring at your satires and sharp homilies, will now melt us with this manly and heart-warming embrace? Nobody could predict and none could better it. And you shall even go your own gait henceforward with a blessing from us all, and a trust exceptional and unique. I do not longer hesitate to talk to such good men as I see of this gift, and it has in every ear a gladdening effect. People like to see character in a gift, and from rare character the gift is more precious. I wish it may be twice blest in continuing to give you the comfort it will give us.

I think I must mend myself by reclaiming my old right to send you letters. I doubt not I shall have much to tell you, could I overcome the hesitation to attempt a reasonable letter when one is driven to write so many sheets of mere routine as sixty-six (nearly sixty-seven) years enforce. I shall have to prate of my daughters; — Edith Forbes, with her two children at Milton; Ellen Emerson at home, herself a godsend to this house day by day; and my son Edward studying medicine in Boston, — whom I have ever meant and still mean to send that he may see your face when that professional curriculum winds up.

I manage to read a few books and look into more. Herman Grimm sent me lately a good one, Goethe’s *Unterhaltungen* with Muller, — which set me on Varnhagen and others. My wife sends old regards, and her joy in this occasion.

Yours ever,

R.W. Emerson

P.S. Mr. Eliot took my rough counting of Volumes as correct. When he sends me back the catalogue, I will make it exact. I sent you last week a little book

me back the catalogue, I will make it exact. — I sent you last week a little book
by book-post.

CLXXXII. Carlyle to Emerson

5 Cheyne Row, Chelsea, 24 March, 1870

My Dear Emerson, — The day before yesterday, I heard incidentally of an unfortunate Mail Steamer, bound for America, which had lost its screw or some essential part of it; and so had, instead of carrying its Letters forward to America, been drifting about like a helpless log on the shores of Ireland till some three days ago, when its Letters and Passengers were taken out, and actually forwarded, thither. By industrious calculation, it appears probable to us here that my Letter to you may have been tumbling about in that helpless Steamer, instead of getting to Concord; where, if so, said Letter cannot now arrive till the lingering of it have created some astonishment there.

I hastily write this, however, to say that a Letter was duly forwarded a few days after yours [of January 23] arrived, — enclosing the *Harvard Catalogue*, with all necessary *et ceteras*; indorsing all your proposals; and signifying that the matter should be authentically completed the instant I should hear from you again. I may add now that the thing is essentially completed, — all signed and put on paper, or all but a word or two, which, for form's sake, waits the actual arrival of your Letter.

I have never yet received your Book;* and, if it linger only a few days more, mean to provide myself with a copy such as the Sampson and Low people have on sale everywhere.

I had from Norton, the other day, a very kind and friendly Letter.

This is all of essential that I had to say. I write in utmost haste. But am always, dear Emerson, Yours sincerely,

T. Carlyle ——— * “Society and Solitude.” ——— ———

CLXXXIII. Carlyle to Emerson

Chelsea, 6 April, 1870

Dear Emerson, — The day before yesterday your welcome Letter came to hand, with the welcome news in it; yesterday I put into my poor Document here the few words still needed; locked everything into its still repository (your Letter, President Eliot's, Norton's, &c., &c.); and walked out into the sunshine, piously thankful that a poor little whim, which had long lain fondly in my heart, had realized itself with an emphasis I could never hope, and was become (thanks to generous enthusiasm on New England's part) a beautiful little fact, lying done there, so far as I had to do with it. Truly your account of matters threw a glow of *life* into my thoughts which is very rare there now; altogether a gratifying little Transaction to me, — and I must add a surprising, for the enthusiasm of goodwill is evidently great, and the occasion is almost infinitesimally small! Well, well; it is all finished off and completed, — (you can tell Mr. Eliot, with many thanks from me, that I did introduce the proper style, "President and Fellows," &c., and have forgotten nothing of what he said, or of what he *did*); — and so we will say only, *Faustum sit*, as our last word on the subject; — and to me it will be, for some days yet, under these vernal skies, something that is itself connected with THE SPRING in a still higher sense; a little white and red-lipped bit of *Daisy* pure and poor, scattered into TIME's Seedfield, and struggling above ground there, uttering *its* bit of prophecy withal, among the ox-hoofs and big jungles that are everywhere about and not prophetic of much! —

One thing only I regret, that you *have* spoken of the affair! For God's sake don't; and those kindly people to whom you have, - -swear them to silence for love of me! The poor little *Daisykin* will get into the Newspapers, and become the nastiest of Cabbages: — silence, silence, I beg of you to the utmost stretch of your power! Or is the case already irremediable? I will hope not. Talk about such things, especially Penny Editor's talk, is like vile coal-smoke filling your poor little world; silence alone is azure, and has a sky to it. — But, enough now.

The "little Book" never came; and, I doubt, never will: it is a fate that seems to await three fourths of the Books that attempt to reach me by the American Post; owing to some *informality in wrapping* (I have heard); — it never gave me any notable *regret* till now. However, I had already bought myself an English copy, rather gaudy little volume (probably intended for the *railways*, as if *it* were a Book to be read there), but perfectly printed, ready to be read anywhere by the open eye and earnest mind; — which I read here, accordingly, with great

attention, clear assent for most part, and admiring recognition. It seems to me you are all your old self here, and something *more*. A calm insight, piercing to the very centre; a beautiful sympathy, a beautiful *epic* humor; a soul peaceably irrefragable in this loud-jangling world, of which it sees the ugliness, but *notices* only the huge new *opulences* (still so anarchic); knows the electric telegraph, with all its vulgar botherations and impertinences, accurately for what it is, and ditto ditto the oldest eternal Theologies of men. All this belongs to the Highest Class of thought (you may depend upon it); and again seemed to me as, in several respects, the one perfectly Human Voice I had heard among my fellow-creatures for a long time. And then the “style,” the treatment and expression, — yes, it is inimitable, best — Emersonian throughout. Such brevity, simplicity, softness, homely grace; with such a penetrating meaning, *soft* enough, but irresistible, going down to the depths and up to the heights, as *silent electricity* goes. You have done *very well*; and many will know it ever better by degrees. — Only one thing farther I will note: How you go as if altogether on the “Over-Soul,” the Ideal, the Perfect or Universal and Eternal in this life of ours; and take so little heed of the frightful quantities of *friction* and perverse impediment there everywhere are; the reflections upon which in my own poor life made me now and then very sad, as I read you. Ah me, ah me; what a vista it is, mournful, beautiful, *unfathomable* as Eternity itself, these last fifty years of Time to me. —

Let me not forget to thank you for that *fourth* page of your Note; I should say it was almost the most interesting of all. News from yourself at first hand; a momentary glimpse into the actual Household at Concord, face to face, as in years of old! True, I get vague news of you from time to time; but what are these in comparison? — If you *will*, at the eleventh hour, turn over a new leaf, and write me Letters again, — but I doubt *you won't*. And yet were it not worth while, think you? [Greek] — will be here *anon*. — My kindest regards to your wife. Adieu, my ever-kind Old Friend.

Yours faithfully always,
T. Carlyle

CLXXXIV. Emerson to Carlyle

Concord, 17 June, 1870

My Dear Carlyle, — Two* unanswered letters filled and fragrant and potent with goodness will not let me procrastinate another minute, or I shall sink and deserve to sink into my dormouse condition. You are of the Anakim, and know nothing of the debility and postponement of the blonde constitution. Well, if you shame us by your reservoir inexhaustible of force, you indemnify and cheer some of us, or one of us, by charges of electricity.

—— — * One seems to be missing. —— ——

Your letter of April came, as ever-more than ever, if possible — full of kindness, and making much of our small doings and writings, and seemed to drive me to instant acknowledgment; but the oppressive engagement of writing and reading eighteen lectures on Philosophy to a class of graduates in the College, and these in six successive weeks, was a task a little more formidable in prospect and in practice than any foregoing one. Of course, it made me a prisoner, took away all rights of friendship, honor, and justice, and held me to such frantic devotion to my work as must spoil that also.

Well, it is now ended, and has no shining side but this one, that materials are collected and a possibility shown me how a repetition of the course next year — which is appointed — will enable me partly out of these materials, and partly by large rejection of these, and by large addition to them, to construct a fair report of what I have read and thought on the subject. I doubt the experts in Philosophy will not praise my discourses; — but the topics give me room for my guesses, criticism, admirations and experiences with the accepted masters, and also the lessons I have learned from the hidden great. I have the fancy that a realist is a good corrector of formalism, no matter how incapable of syllogism or continuous linked statement. To great results of thought and morals the steps are not many, and it is not the masters who spin the ostentatious continuity.

I am glad to hear that the last sent book from me arrived safely. You were too tender and generous in your first notice of it, I fear. But with whatever deductions for your partiality, I know well the unique value of Carlyle's praise. Many things crowd to be said on this little paper. Though I could see no harm in the making known the bequest of books to Cambridge, — no harm, but sincere pleasure, and honor of the donor from all good men, — yet on receipt of your letter touching that, I went back to President Eliot, and told him your opinion on newspapers. He said it was necessarily communicated to the seven persons composing the Corporation, but otherwise he had been very cautious, and it

would not go into print.

You are sending me a book, and Chapman's Homer it is? Are you bound by your Arabian bounty to a largess whenever you think of your friend? And you decry the book too. 'T-is long since I read it, or in it, but the apotheosis of Homer, in the dedication to Prince Henry, "Thousands of years attending," &c., is one of my lasting inspirations. The book has not arrived yet, as the letter always travels faster, but shall be watched and received and announced.

But since you are all bounty and care for me, where are the new volumes of the Library Edition of Carlyle? I received duly, as I wrote you in a former letter, nine Volumes, — *Sartor*; *Life of Schiller*; five Vols. of *Miscellanies*; *French Revolution*; these books oddly addressed to my name, but at *Cincinnati*, Massachusetts. Whether they went to Ohio, and came back to Boston, I know not. Two volumes came later, duplicates of two already received, and were returned at my request by Fields & Co. with an explanation. But no following volume has come. I write all this because you said in one letter that Mr. Chapman assured you that every month a book was despatched to my address.

But what do I read in our Boston Newspapers twice in the last three days? That "Thomas Carlyle is coming to America," and the tidings cordially greeted by the editors; though I had just received your letter silent to any such point. Make that story true, though it had never a verisimilitude since thirty odd years ago, and you shall make many souls happy and perhaps show you so many needs and opportunities for beneficent power that you cannot be allowed to grow old or withdraw. Was I not once promised a visit? This house entreats you earnestly and lovingly to come and dwell in it. My wife and Ellen and Edward E. are thoroughly acquainted with your greatness and your loveliness. And it is but ten days of healthy sea to pass.

So wishes heartily and affectionately,

R.W. Emerson

CLXXXV. Carlyle to Emerson

5 Cheyne Row, Chelsea, 28 September, 1870

Dear Emerson, — Your Letter, dated 15 June, never got to me till about ten days ago; when my little Niece and I returned out of Scotland, and a long, rather empty Visit there! It had missed me here only by two or three days; and my highly *infelicitous* Selectress of Letters to be forwarded had left *it* carefully aside as undeserving that honor, — good faithful old Woman, one hopes she is greatly stronger on some sides than in this literary-selective one. Certainly no Letter was forwarded that had the hundredth part of the right to be so; certainly, of all the Letters that came to me, or were left waiting here, this was, in comparison, the one which might *not* with propriety have been left to lie stranded forever, or to wander on the winds forever! — One of my first journeys was to Chapman, with vehement *rebuke* of this inconceivable “Cincinnati-Massachusetts” business. *Stupiditas stupiditatum*; I never in my life, not even in that unpunctual House, fell in with anything that equaled it. Instant amendment was at once undertaken for, nay it seems had been already in part performed: “Ten volumes, following the nine you already had, were despatched in Field & Co.’s box above two months ago,” so Chapman solemnly said and asseverated to me; so that by this time you ought actually to have in hand nineteen volumes; and the twentieth (first of *Friedrich*), which came out ten days ago, is to go in Field & Co.’s Box this week, and ought, not many days after the arrival of this Letter, to be in Boston waiting for you there. The *Chapman’s Homer* (two volumes) had gone with that first Field Packet; and would be handed to you along with the ten volumes which were overdue. All this was solemnly declared to me as on Affidavit; Chapman also took extract of the Massachusetts passage in your Letter, in order to pour it like ice-cold water on the head of his stupid old Chief-Clerk, the instant the poor creature got back from his rustication: alas, I am by no means certain that it will make a new man of him, nor, in fact, that the whole of this amendatory programme will get itself performed to equal satisfaction! But you must write to me at once if it is not so; and done it shall be in spite of human stupidity itself. Note, withal, these things: Chapman sends no Books to America *except* through Field & Co.; he does not regularly send a Box at the middle of the month; but he does “almost monthly send one Bog”; so that if your monthly Volume do not start from London about the 15th, it is due by the very *next* Chapman-Field box; and if it at any time don’t come, I beg of you very

much to make instant complaint through Field & Co., or what would be still more effectual, direct to myself. My malison on all Blockheadisms and torpid stupidities and infidelities; of which this world is full! — Your Letter had been anxiously enough waited for, a month before my departure; but we will not mention the delay in presence of what you were engaged with then. *Faustum sit*; that truly was and will be a Work worth doing your best upon; and I, if alive, can promise you at least one reader that will do his best upon your Work. I myself, often think of the Philosophies precisely in that manner. To say truth, they do not otherwise rise in esteem with me at all, but rather sink. The last thing I read of that kind was a piece by Hegel, in an excellent Translation by Stirling, right well translated, I could see, for every bit of it was intelligible to me; but my feeling at the end of it was, “Good Heavens, I have walked this road before many a good time; but never with a Cannon-ball at each ankle before!” Science also, Science falsely so called, is — But I will not enter upon that with you just now.

The Visit to America, alas, alas, is pure Moonshine. Never had I, in late years, the least shadow of intention to undertake that adventure; and I am quite at a loss to understand how the rumor originated. One Boston Gentleman (a kind of universal Undertaker, or Lion’s Provider of Lecturers I think) informed me that “*the Cable*” had told him; and I had to remark, “And who the devil told the Cable?” Alas, no, I fear I shall never dare to undertake that big Voyage; which has so much of romance and of reality behind it to me; *zu spat, zu spat*. I do sometimes talk dreamily of a long Sea-Voyage, and the good the Sea has often done me, — in times when good was still possible. It may have been some vague folly of that kind that originated this rumor; for rumors are like dandelion-seeds; and *the Cable* I dare say welcomes them all that have a guinea in their pocket.

Thank you for blocking up that Harvard matter; provided it don’t go into the Newspapers, all is right. Thank you a thousand times for that thrice-kind potential welcome, and flinging wide open your doors and your hearts to me at Concord. The gleam of it is like sunshine in a subterranean place. Ah me, Ah me! May God be with you all, dear Emerson.

Yours ever,
T. Carlyle

CLXXXVI. Emerson to Carlyle

Concord, 15 October, 1870

My Dear Carlyle, — I am the ignoblest of all men in my perpetual shortcomings to you. There is no example of constancy like yours, and it always stings my stupor into temporary recovery and wonderful resolution to accept the noble challenge. But “the strong hours conquer us,” and I am the victim of miscellany, — miscellany of designs, vast debility, and procrastination.

Already many days before your letter came, Fields sent me a package from you, which he said he had found a little late, because they were covered up in a box of printed sheets of other character, and this treasure was not at first discovered. They are, — *Life of Sterling; Latter Day Pamphlets; Past and Present; Heroes; 5 Vols. Cromwell's Letters and Speeches*. Unhappily, Vol. II. of *Cromwell* is wanting, and there is a duplicate of Vol. V. instead of it. Now, two days ago came your letter, and tells me that the good old gods have also inspired you to send me Chapman's Homer! and that it came — heroes with heroes — in the same enchanted box. I went to Fields yesterday and demanded the book. He ignored all, — even to the books he had already sent me; called Osgood to council, and they agreed that it must be that all these came in a bog of sheets of Dickens from Chapman, which was sent to the Stereotypers at Cambridge; and the box shall be instantly explored. We will see what tomorrow shall find. As to the duplicates, I will say here, that I have received two: first, the above-mentioned Vol. II. of *Cromwell*; and, second, long before, a second copy of *Sartor Resartus*, apparently instead of the Vol. I. of the *French Revolution*, which did not come. I proposed to Fields to send back to Chapman these two duplicates. But he said, “No, it will cost as much as the price of the books.” I shall try to find in New York who represents Chapman and sells these books, and put them to his credit there, in exchange for the volumes I lack. Meantime, my serious thanks for all these treasures go to you, — steadily good to my youth and my age.

Your letter was most welcome, and most in that I thought I read, in what you say of not making the long-promised visit hither, a little willingness to come. Think again, I pray you, of that Ocean Voyage, which is probably the best medicine and restorative which remains to us at your age and mine. Nine or ten days will bring you (and commonly with unexpected comfort and easements on the way) to Boston. Every reading person in America holds you in exceptional regard, and will rejoice in your arrival. They have forgotten your scarlet sins before or during the war. I have long ceased to apologize for or explain your

savage sayings about American or other republics or publics, and am willing that anointed men bearing with them authentic charters shall be laws to themselves as Plato willed. Genius is but a large infusion of Deity, and so brings a prerogative all its own. It has a right and duty to affront and amaze men by carrying out its perceptions defiantly, knowing well that time and fate will verify and explain what time and fate have through them said. We must not suggest to Michel Angelo, or Machiavel, or Rabelais, or Voltaire, or John Brown of Osawatomie (a great man), or Carlyle, how they shall suppress their paradoxes and check their huge gait to keep accurate step with the procession on the street sidewalk. They are privileged persons, and may have their own swing for me.

I did not mean to chatter so much, but I wish you would come out hither and read our possibilities now being daily disclosed, and our actualities which are not nothing. I shall like to show you my near neighbors, topographically or practically. A near neighbor and friend, E. Rockwood Hoar, whom you saw in his youth, is now an inestimable citizen in this State, and lately, in President Grant's Cabinet, Attorney-General of the United States. He lives in this town and carries it in his hand. Another is John M. Forbes, a strictly private citizen, of great executive ability, and noblest affections, a motive power and regulator essential to our City, refusing all office, but impossible to spare; and these are men whom to name the voice breaks and the eye is wet. A multitude of young men are growing up here of high promise, and I compare gladly the social poverty of my youth with the power on which these draw. The Lowell race, again, in our War yielded three or four martyrs so able and tender and true, that James Russell Lowell cannot allude to them in verse or prose but the public is melted anew. Well, all these know you well, have read and will read you, yes, and will prize and use your benefaction to the College; and I believe it would add hope, health, and strength to you to come and see them.

In my much writing I believe I have left the chief things unsaid.
But come! I and my house wait for you.

Affectionately,

R.W. Emerson

CLXXXVIa. Emerson to Carlyle

Concord, 10 April, 1871

My Dear Friend, — I fear there is no pardon from you, none from myself, for this immense new gap in our correspondence. Yet no hour came from month to month to write a letter, since whatever deliverance I got from one web in the last

year served only to throw me into another web as pitiless. Yet what gossamer these tasks of mine must appear to your might! Believe that the American climate is unmanning, or that one American whom you know is severely taxed by Lilliput labors. The last hot summer enfeebled me till my young people coaxed me to go with Edward to the White Hills, and we climbed or were dragged up Agiocochook, in August, and its sleet and snowy air nerved me again for the time. But the booksellers, whom I had long ago urged to reprint Plutarch's *Morals*, claimed some forgotten promise, and set me on reading the old patriarch again, and writing a few pages about him, which no doubt cost me as much time and pottering as it would cost you to write a History. Then an "Oration" was due to the New England Society in New York, on the 250th anniversary of the Plymouth Landing, — as I thought myself familiar with the story, and holding also some opinions thereupon. But in the Libraries I found alcoves full of books and documents reckoned essential; and, at New York, after reading for an hour to the great assembly out of my massy manuscript, I refused to print a line until I could revise and complete my papers; — risking, of course, the nonsense of their newspaper reporters. This pill swallowed and forgotten, it was already time for my Second "Course on Philosophy" at Cambridge, — which I had accepted again that I might repair the faults of the last year. But here were eighteen lectures, each to be read sixteen miles away from my house, to go and come, — and the same work and journey twice in each week, — and I have just got through the doleful ordeal.

I have abundance of good readings and some honest writing on the leading topics, — but in haste and confusion they are misplaced and spoiled. I hope the ruin of no young man's soul will here or hereafter be charged to me as having wasted his time or confounded his reason.

Now I come to the raid of a London bookseller, Hotten, (of whom I believe I never told you,) on my forgotten papers in the old *Dials*, and other pamphlets here. Conway wrote me that he could not be resisted, — would certainly steal good and bad, — but might be guided in the selection. I replied that the act was odious to me, and I promised to denounce the man and his theft to any friends I might have in England; but if, instead of printing then, he would wait a year, I would make my own selection, with the addition of some later critical papers, and permit the book. Mr. Ireland in Manchester, and Conway in London, took the affair kindly in hand, and Hotten acceded to my change. And that is the next task that threatens my imbecility. But now, ten days ago or less, my friend John M. Forbes has come to me with a proposition to carry me off to California, the Yosemite, the Mammoth trees, and the Pacific, and, after much resistance, I have surrendered for six weeks, and we set out tomorrow. And hence this sheet of

confession, — that I may not drag a lengthening chain. Meantime, you have been monthly loading me with good for evil. I have just counted twenty-three volumes of Carlyle's Library Edition, in order on my shelves, besides two, or perhaps three, which Ellery Channing has borrowed. Add, that the precious Chapman's *Homer* came safely, though not till months after you had told me of its departure, and shall be guarded henceforward with joy.

Wednesday, 13, Chicago. — Arrived here and can bring this little sheet to the post-office here. My daughter Edith Forbes, and her husband William H. Forbes, and three other friends, accompany me, and we shall overtake Mr. Forbes senior tomorrow at Burlington, Iowa.

The widow of one of the noblest of our young martyrs in the War, Col. Lowell,* cousin [nephew] of James Russell Lowell, sends me word that she wishes me to give her a note of introduction to you, confiding to me that she has once written a letter to you which procured her the happiest reply from you, and I shall obey her, and you will see her and own her rights. Still continue to be magnanimous to your friend,

— R.W. Emerson

* Charles Russell Lowell, to be remembered always with honor in company with his brother James Jackson Lowell and his cousin William Lowell Putnam,
— a shining group among the youths who have died for their country.

CLXXXVII. Carlyle to Emerson

5 Cheyne Row, Chelsea, 4 June, 1871

Dear Emerson, — Your Letter gave me great pleasure. A gleam of sunshine after a long tract of lowering weather. It is not you that are to blame for this sad gap in our correspondence; it is I, or rather it is my misfortunes, and miserable inabilities, broken resolutions, etc., etc. The truth is, the winter here was very unfriendly to me; broke ruinously into my sleep; and through that into every other department of my businesses, spiritual and temporal; so that from about New-Year's Day last I have been, in a manner, good for nothing, — nor am yet, though I do again feel as if the beautiful Summer weather might perhaps do something for me. This it was that choked every enterprise; and postponed your Letter, week after week, through so many months. Let us not speak of it farther!

Note, meanwhile, I have no disease about me; nothing but the gradual decay of any poor digestive faculty I latterly had, — or indeed ever had since I was three and twenty years of age. Let us be quiet with it; accept it as a mode of exit, of which always there must be *some* mode.

I have got done with all my press-correctings, editionings, and paltry bother of that kind: Vol. 30 will embark for you about the middle of this month; there are then to follow (“uniform,” as the printers call it, though in smaller type) a little volume called *General Index*; and three more volumes of *Translations from the German*; after which we two will reckon and count; and if there is any *lacuna* on the Concord shelf, at once make it good. Enough, enough on that score.

The Hotten who has got hold of you here is a dirty little pirate, who snatches at everybody grown fat enough to yield him a bite (paltry, unhardened creature); so that in fact he is a symbol to you of your visible rise in the world here; and, with Conway's vigilance to help, will do you good and not evil. Glad am I, in any case, to see so much new spiritual produce still ripening around you; and you ought to be glad, too. Pray Heaven you may long *keep your right hand* steady: you, too, I can perceive, will never, any more than myself, learn to “write by dictation” in a manner that will be supportable to you. I rejoice, also, to hear of such a magnificent adventure as that you are now upon. Climbing the backbone of America; looking into the Pacific Ocean too, and the gigantic wonders going on there. I fear you won't see Brigham Young, however? He also to me is one of the products out there; — and indeed I may confess to you that the doings in that region are not only of a big character, but of a great; — and

that in my occasional explosions against “Anarchy,” and my inextinguishable hatred of *it*, I privately whisper to myself, “Could any Friedrich Wilhelm, now, or Friedrich, or most perfect Governor you could hope to realize, guide forward what is America’s essential task at present faster or more completely than ‘anarchic America’ herself is now doing?” *Such* “Anarchy” has a great deal to say for itself, — (would to Heaven ours of England had as much!) — and points towards grand *anti*-Anarchies in the future; in fact, I can already discern in it huge quantities of Anti-Anarchy in the “impalpable-powder” condition; and hope, with the aid of centuries, immense things from it, in my private mind!

Good Mrs. — has never yet made her appearance; but shall be welcome whenever she does.

Did you ever hear the name of an aged, or elderly, fantastic fellow-citizen of yours, called J. Lee Bliss, who designates himself O.F. and A.K., *i.e.* “Old Fogey” and “Amiable Kuss”? He sent me, the other night, a wonderful miscellany of symbolical shreds and patches; which considerably amused me; and withal indicated good-will on the man’s part; who is not without humor, in sight, and serious intention or disposition. If you ever did hear of him, say a word on the subject next time you write.

And above all things *write*. The instant you get home from California, or see this, let me hear from you what your adventures have been and what the next are to be. Adieu, dear Emerson.

Yours ever affectionately,
T. Carlyle

Mrs. — sends a note from Piccadilly this new morning (June 5th); *call* to be made there today by Niece Mary, card left, etc., *etc.* Promises to be an agreeable Lady.

Did you ever hear of such a thing as this suicidal Finis of the French “Copper Captaincy”; gratuitous Attack on Germany, and ditto Blowing-up of Paris by its own hand! An event with meanings unspeakable, — deep as the. *Abyss*. —

If you ever write to C. Norton in Italy, send him my kind remembrances.

— T. C. (with about the velocity of Engraving — on lead!)*

* The letter was dictated, but the postscript, from the first signature, was written in a tremulous hand by Carlyle himself.

CLXXXVIII. Emerson to Carlyle

Concord, 30 June, 1871

My Dear Carlyle,— 'T is more than time that you should hear from me whose debts to you always accumulate. But my long journey to California ended in many distractions on my return home. I found Varioloid in my house... and I was not permitted to enter it for many days, and could only talk with wife, son, and daughter from the yard... I had crowded and closed my Cambridge lectures in haste, and went to the land of Flowers invited by John M. Forbes, one of my most valued friends, father of my daughter Edith's husband. With him and his family and one or two chosen guests, the trip was made under the best conditions of safety, comfort, and company, I measuring for the first time one entire line of the Country.

California surprises with a geography, climate, vegetation, beasts, birds, fishes even, unlike ours; the land immense; the Pacific sea; Steam brings the near neighborhood of Asia; and South America at your feet; the mountains reaching the altitude of Mont Blanc; the State in its six hundred miles of latitude producing all our Northern fruits, and also the fig, orange, and banana. But the climate chiefly surprised me. The Almanac said April; but the day said June; — and day after day for six weeks uninterrupted sunshine. November and December are the rainy months. The whole Country, was covered with flowers, and all of them unknown to us except in greenhouses. Every bird that I know at home is represented here, but in gayer plumes.

On the plains we saw multitudes of antelopes, hares, gophers, — even elks, and one pair of wolves on the plains; the grizzly bear only in a cage. We crossed one region of the buffalo, but only saw one captive. We found Indians at every railroad station, — the squaws and papooses begging, and the "bucks," as they wickedly call them, lounging. On our way out, we left the Pacific Railroad for twenty-four hours to visit Salt Lake; called on Brigham Young — just seventy years old — who received us with quiet uncommitting courtesy, at first, — a strong-built, self-possessed, sufficient man with plain manners. He took early occasion to remark that "the one-man-power really meant all-men's-power." Our interview was peaceable enough, and rather mended my impression of the man; and, after our visit, I read in the Deseret newspaper his Speech to his people on the previous Sunday. It avoided religion, but was full of Franklinian good sense. In one point, he says: "Your fear of the Indians is nonsense. The Indians like the white men's food. Feed them well, and they will surely die." He is clearly a sufficient ruler, and perhaps civilizer of his kingdom of blockheads ad interim;

but I found that the San Franciscans believe that this exceptional power cannot survive Brigham.

I have been surprised — but it is months ago — by a letter from Lacy Garbett, the Architect, whom I do not know, but one of whose books, about “Design in Architecture,” I have always valued. This letter, asking of me that Americans shall join Englishmen in a Petition to Parliament against pulling down Ancient Saxon buildings, is written in a way so wild as to suggest insanity, and I have not known how to answer it. At my “Saturday Club” in Boston I sat at dinner by an English lord, — whose name I have forgotten, — from whom I tried to learn what laws Parliament had passed for the repairs of old religious Foundations, that could make them the victims of covetous Architects. But he assured me there were none such, and that he himself was President of a Society in his own County for the protection of such buildings. So that I am left entirely in the dark in regard to the fact and Garbett’s letter. He claims to speak both for Ruskin and himself.

I grieve to hear no better account of your health than your last letter gives. The only contradiction of it, namely, the power of your pen in this reproduction of thirty books, — and such books, — is very important and very consoling to me. A great work to be done is the best insurance, and I sleep quietly, notwithstanding these sad bulletins, — believing that you cannot be spared.

Fare well, dear friend,

R.W. Emerson

CLXXXIX. Emerson to Carlyle Concord, 4 September, 1871

My Dear Carlyle, — I hope you will have returned safely from the Orkneys in time to let my son Edward W.E. see your face on his way through London to Germany, whither he goes to finish his medical studies, — no, not finish, but prosecute. Give him your blessing, and tell him what he should look for in his few days in London, and what in your Prussia. He is a good youth, and we can spare him only for this necessity. I should like well to accompany him as far as to your hearthstone, if only so I could persuade you that it is but a ten-days ride for you thence to mine, — a little farther than the Orkneys, and the outskirts of land as good, and bigger. I read gladly in your letters some relentings toward America, — deeper ones in your dealing with Harvard College; and I know you could not see without interest the immense and varied blossoming of our possibilities here, — of all nationalities, too, besides our own. I have heard from Mrs. — twice lately, who exults in your kindness to her.

Always affectionately, Yours,
R.W. Emerson

CXC. Emerson to Carlyle Baltimore, Md., 5 January, 1872

My Dear Carlyle, — I received from you through Mr. Chapman, just before Christmas, the last rich instalment of your Library Edition; viz. Vols. IV.-X. *Life of Friedrich*; Vols. L-III. *Translations from German*; one volume General Index; eleven volumes in all, — and now my stately collection is perfect. Perfect too is your Victory. But I clatter my chains with joy, as I did forty years ago, at your earliest gifts. Happy man you should be, to whom the Heaven has allowed such masterly completion. You shall wear your crown at the Pan-Saxon Games with no equal or approaching competitor in sight, — well earned by genius and exhaustive labor, and with nations for your pupils and praisers. I count it my eminent happiness to have been so nearly your contemporary, and your friend, — permitted to detect by its rare light the new star almost before the Easterners had seen it, and to have found no disappointment, but joyful confirmation rather, in coming close to its orb. Rest, rest, now for a time; I pray you, and be thankful. Meantime, I know well all your perversities, and give them a wide berth. They seriously annoy a great many worthy readers, nations of readers sometimes, — but I heap them all as style, and read them as I read Rabelais's gigantic humors which astonish in order to force attention, and by and by are seen to be the rhetoric of a highly virtuous gentleman who *swears*. I have been quite too busy with fast succeeding *jobs* (I may well call them), in the last year, to have read much in these proud books; but I begin to see daylight coming through my fogs, and I have not lost in the least my appetite for reading, — resolve, with my old Harvard professor, “to retire and read the Authors.”

I am impatient to deserve your grand Volumes by reading in them with all the haughty airs that belong to seventy years which I shall count if I live till May, 1873. Meantime I see well that you have lost none of your power, and I wish that you would let in some good Eckermann to dine with you day by day, and competent to report your opinions, — for you can speak as well as you can write, and what the world to come should know...

Affectionately,

R.W. Emerson

CXCI. Carlyle to Emerson

5 Cheyne Row, Chelsea, 2 April, 1872

Dear Emerson, — I am covered with confusion, astonishment, and shame to think of my long silence. You wrote me two beautiful letters; none friendlier, brighter, wiser could come to me from any quarter of the world; and I have not answered even by a sign. Promptly and punctually my poor heart did answer; but to do it outwardly, — as if there had lain some enchantment on me, — was beyond my power. The one thing I can say in excuse or explanation is, that ever since Summer last, I have been in an unusually dyspeptic, peaking, pining, and dispirited condition; and have no right hand of my own for writing, nor, for several months, had any other that was altogether agreeable to me. But in fine I don't believe you lay any blame or anger on me at all; and I will say no more about it, but only try to repent and do better next time.

Your letter from the Far West was charmingly vivid and free; one seemed to attend you personally, and see with one's own eyes the *notabilia*, human and other, of those huge regions, in your swift flight through them to and from. I retain your little etching of Brigham Young as a bit of real likeness; I have often thought of your transit through Chicago since poor Chicago itself vanished out of the world on wings of fire. There is something huge, painful, and almost appalling to me in that wild Western World of yours; — and especially I wonder at the gold-nuggeting there, while plainly every gold-nuggeter is no other than a criminal to Human Society, and has to *steal* the exact value of his gold nugget from the pockets of all the posterity of Adam, now and for some time to come, in this world. I conclude it is a bait used by All-wise Providence to attract your people out thither, there to build towns, make roads, fell forests (or plant forests), and make ready a Dwelling-place for new Nations, who will find themselves called to quite other than nugget-hunting. In the hideous stew of Anarchy, in which all English Populations present themselves to my dismal contemplation at this day, it is a solid consolation that there will verily, in another fifty years, be above a hundred million men and women on this Planet who can all read Shakespeare and the English Bible and the (also for a long time biblical and noble) history of their Mother Country, — and proceed again to do, unless the Devil be in them, as their Forebears did, or better, if they have the heart! —

Except that you are a thousand times too kind to me, your second

Letter also was altogether charming....

Do you read Ruskin's *Fors Clavigera*, which he cheerily tells me gets itself reprinted in America? If you don't, *do*, I advise you. Also his *Munera Pulveris*, Oxford-Lectures on Art, and whatever else he is now writing, — if you can manage to get them (which is difficult here, owing to the ways he has towards the bibliopolic world!). There is nothing going on among us as notable to me as those fierce lightning-bolts Ruskin is copiously and desperately pouring into the black world of Anarchy all around him. No other man in England that I meet has in him the divine rage against iniquity, falsity, and baseness that Ruskin has, and that every man ought to have. Unhappily he is not a strong man; one might say a weak man rather; and has not the least prudence of management; though if he can hold out for another fifteen years or so, he may produce, even in this way, a great effect. God grant it, say I. Froude is coming to you in October. You will find him a most clear, friendly, ingenious, solid, and excellent man; and I am very glad to find you among those who are to take care of him when he comes to your new Country. Do your best and wisest towards him, for my sake, withal. He is the valuablest Friend I now have in England, nearly though not quite altogether the one man in talking with whom I can get any real profit or comfort. Alas, alas, here is the end of the paper, dear Emerson; and I had still a whole wilderness of things to say. Write to me, or even do not write, and I will surely write again.

I remain as ever Your Affectionate Friend,
T. Carlyle

In November, 1872, Emerson went to England, and the two friends met again. After a short stay he proceeded to the Continent and Egypt, returning to London in the spring of 1873. For the last time Carlyle and he saw each other. In May, Emerson returned home. After this time no letters passed between him and Carlyle. They were both old men. Writing had become difficult to them; and little was left to say.

Carlyle died, eighty-five years old, on the 5th of February, 1881. Emerson died, seventy-nine years old, on the 27th of April, 1882.

The Journals

Harvard Divinity School, Cambridge, Massachusetts, which Emerson attended and in October 1826 he was “approved to preach”. Years later, on July 15, 1838, the famous lecturer was invited back to Divinity Hall for the school’s graduation address, which came to be known as his “Divinity School Address”.

SELECTED JOURNALS

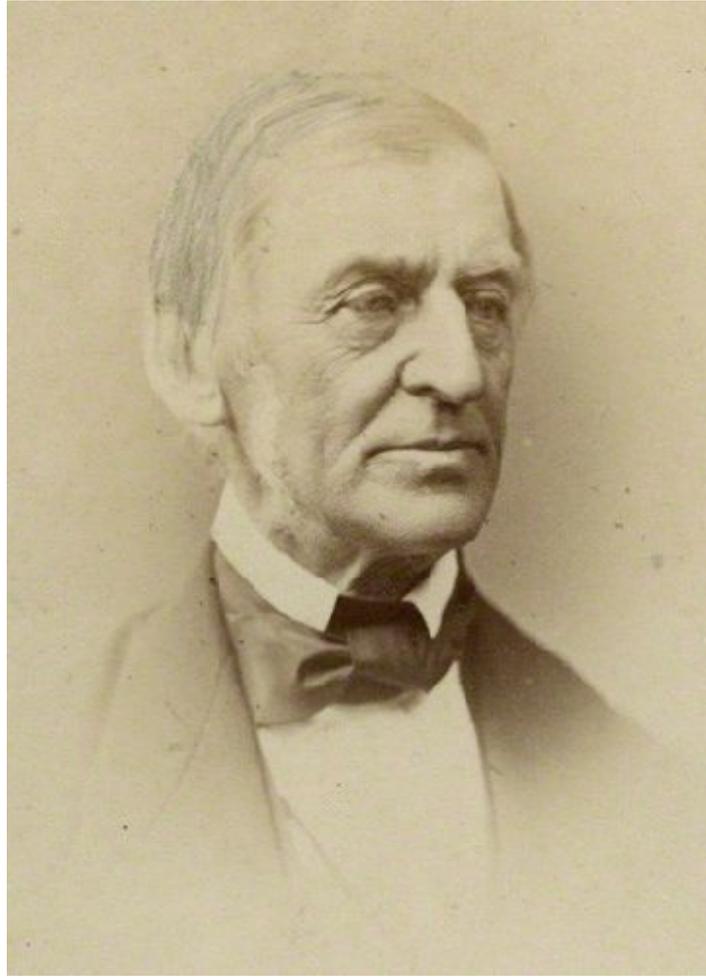

In October 1817, aged 14, Emerson went to Harvard College and was appointed freshman messenger for the president. Midway through his junior year, he began keeping a list of books he had read and started a journal in a series of notebooks that would later be titled “Wide World”. The keeping of a journal from that point would become a lifetime commitment for the young man.

Twenty years later, when he befriended Henry David Thoreau in 1837, Emerson asked Thoreau, “Do you keep a journal?” The question went on to have a lifelong inspiration for Thoreau, who also produced a large collection of journals charting the various stages of his own life.

In 1867 Emerson’s health was declining and due to this he wrote much less in his journals. Beginning as early as the summer of 1871, Emerson suffered memory problems and by 1879 the problem was so serious that he occasionally forgot his own name, making him unable to write as fluidly or succinctly as he was able to in earlier times. Nevertheless, the remaining sixty-seven journals bear witness to one of the most original and gifted minds of American literature, recording innovative, revealing and inspirational studies of nature, philosophy and the beauty of ordinary life, which some critics have now declared as being in fact Emerson’s greatest literary achievement.

Emerson’s complete journals fill sixteen large volumes in the definitive Harvard University Press edition published between 1960 and 1982. This Delphi edition of Emerson’s works provides a comprehensive selection from Emerson’s early, middle and last journals.

INTRODUCTION by Edward W. Emerson.

IN the year 1902 Messrs. Houghton, Mifflin and Company asked me whether Mr. Emerson's journals could not be published, to follow the annotated edition of the Works which they were to bring out in honour of the approaching Centenary. This question was referred to Mr. Cabot, whom Mr. Emerson, trusting to his good judgment and taste, had made his literary executor. Mr. Cabot, after a little consideration, said "Yes." Many persons, he agreed, would gladly see Emerson's first record of his thoughts, come nearer to the man than in the essays carefully purged of personality, and also trace the growth of his powers of expression in prose or rhyme, and the expansion of his mind during the fifty years or more that the journals cover.

Mr. Cabot said that he was too old to undertake further literary work, and expressed his wish that I should be the editor: "Only take time enough," he said; "do not allow yourself to be hurried." A few months later, Mr. Cabot died. I was deprived of his important and valued counsel.

The journals were postponed until the Centenary Edition with its additions and notes was published; then the consideration of them began. Mr. Emerson's grandson, Mr. Waldo Emerson Forbes, expressed his willingness to share the labour of editing the journals. This aid has been of great importance.

At first the plan included only the journals from the time of Mr. Emerson's new departure in life and writing after his return from his first visit to Europe in the autumn of 1833; but, on carefully reading the journals for the fourteen years preceding that time, — for the boy faithfully kept them from the age of seventeen onwards, — it seemed well to the editors to introduce large extracts from these. Before deciding to do so, however, they showed specimens of the boyish entries to several persons in whose taste and literary judgment they confided, and were confirmed in the plan by their less partial opinions. For we believe that those who care about Emerson, his thought and ideals, may wish to look beyond the matured and sifted work that he left in his books, and see the youth in his apprenticeship, the priest in his noviciate and in his full office caring for his people; his studies, questionings and hopes; his final sacrifice; meantime, the warmth and tenderness that came into this monastic life with his love for Ellen Tucker and his marriage, soon followed by her death and the sad wreck of the new home; then, after the parting with his church, the pilgrimage over-sea to restore his health and see certain men whose written words had helped him.

The extracts from the early journals are not chosen for their merit alone: they show the soil out of which Emerson grew, the atmosphere around, his habits and

mental food, his doubts, his steady, earnest purpose, and the things he outgrew. His frankness with himself is seen, and how he granted the floor to the adversary for a fair hearing. Also the ups and downs of the boy's health appear in the school-keeping days, and why, beyond all reasonable hope, considering the neglect of the body, he lived to a healthy middle life and old age by his rambling tendencies, by quietness, and bending to the blast which shattered the health of his more unyielding brothers.

In these years the young Emerson was reading eagerly and widely, and learned to find what the author or the college text-book had *for him*, and leave the rest. The growth of his literary taste, his style, independence of thought, and originality in writing verse can be traced.

But from first to last appears the value to him of his strange aunt, Miss Mary Moody Emerson, in her constant interest and stimulating influence: poor, remote, only self-educated, hungry for knowledge, extraordinarily well-read, exalted in her religious thought, critical but proud of her nephews, especially Ralph, and a tireless correspondent. The boy prized her letters, and they put him on his mettle. His most careful youthful writing is in his answers; he holds his own in them. Large extracts from her letters and his answers occur, especially in the earlier journals. He admired her rhetoric, now poetical, now fiery, now sarcastic, — always her own.

It was Mr. Emerson's habit often in later years to copy into his journal passages from his letters to others in which he had conveyed his thought with care.

It was as natural to this boy to write as to another to play ball, or go fishing, or experiment with the tools of a neighbour carpenter, or feel out tunes on a musical instrument. When recitations were over, and study did not press, or he was not walking in Mount Auburn woods or the wild country around Fresh Pond, he betook himself to his journal. It was his confidential friend: his ambitions, his disappointments, his religious meditations, his mortifications, his romantic imaginings, his sillinesses, his trial-flights in verse, his joy in Byron and Scott, or Everett's orations, the ideas gathered from serious books, — all went in, everything but what might be expected in a boy's diary; for of incidents, of classmates, of students' doings, there is hardly an entry.

Throughout, and increasingly in later years, these are journals, not of incidents and persons, but of thoughts.

With the biography of Mr. Emerson in mind or in hand, the outward conditions, or relations with people or public events which suggested a train of thought, may perhaps be found. A talk, or ramble with a friend, or the reading of a book, may be mentioned, but soon the thought takes its own direction. More

often the thoughts were on the great, the abiding questions.

The journals of exile in Florida and of the visit to Europe in 1833 are exceptional, as being real records of daily life, of voyages in a packet ship, of sight-seeing, of travel in Malta, Sicily, the Italian cities, through the Brenner Pass, to Paris, the sights as well as thoughts there; then of the visits in England, and the voyage home. Much of the account of the visits to Landor, Coleridge, Wordsworth, and Carlyle is omitted in these volumes, as it is printed in *English Traits*. The notes of the second trip abroad are less full. Mr. Emerson printed many of them in that book, and others have been given in the notes to that volume in the Centenary Edition. During his third journeying abroad, in 1871-72, when, sent by his friends, Mr. Emerson visited England, France, Italy and Egypt, he took no notes, as his health and spirits were far below their usual standard.

After 1833, the journals are of greater interest, for Mr. Emerson was entering on a new life and founding his new home, whither he brought his wife, Lidian Jackson, and where their children were born. One finds the mention of the planting of trees, the gradually added fields, orchard, and — best for him — woodland by Walden. Turning his back on tradition, he sought the living God in Nature and the soul. The book *Nature* sped well and was soon published. Day by day, the journal was the storehouse of the thoughts given him in the wood.

Wandering voices in the air

And murmurs in the wold
Speak what I cannot declare,
Yet cannot all withhold.

These journals are reflections, sometimes dim, sometimes clear, of the inner life as stirred by the outer. The study of Nature led to increasing interest in Natural History, but always as a key to unlock chambers of thought. The first lectures after his European trip were on this subject.

Mr. Emerson often preached by invitation in various towns for several years, with good acceptance. But when, in 1837 and 1838, he spoke for free thought in letters and religion before chosen audiences gathered at the University, reaction followed and he stood condemned by many of the elder professors, clergy, and leading citizens, as visionary, dangerous, or insane. The journals show that, however bravely Mr. Emerson stood against the tide which then looked so strong, it seemed at the time as if he might be outlawed as speaker and writer, and have to turn to the soil for a living. The event quickly did away with such a fear. Societies at country colleges, apparently unaware of his heresies, asked him, year by year, to speak to them; his Boston lectures won him increasing audiences, and new friends, and the spread of the Lyceums from East to West gave him a hearing wide as could be desired. The bases of these lectures, which, thus tested and sifted, became the essays, came from these day-book entries of thoughts, sights, experiences, and the fine passages of his reading.

Now new friends appear one by one: the young Thoreau, loyal and skilful helper in all practical matters, yet keeping his fine independence, the Platonic Alcott, Jones Very the mystic, Father Taylor, Dr. Hedge, and always the beautiful and sisterly presence of Miss Elizabeth Hoar, who should have been the wife of Charles Emerson. The new home had been saddened by the death of the two brilliant younger brothers, Edward fading away in Porto Rico, and Charles, not two years later, in Concord. A few years later Samuel Gray Ward is often alluded to, to whom the "Letters to a Friend" were written; then Margaret Fuller came, and Charles Newcomb from Providence, a youth for whom Emerson cared much, and later, Ellery Channing and Hawthorne became his neighbours.

The earlier friends, of course, appear: the venerable Doctor Ripley and his beneficent son Rev. Samuel, of Waltham, his gifted wife, Sarah Bradford, and her brother George, whom Mr. Cabot speaks of as the only "crony" that Mr. Emerson ever had. At this period Waldo, the little son so soon to be taken away, comes into the Journal, a delight to his father.

The Transcendental Epoch meantime comes on, with its star-led souls, but

also many reformers of small and strange pattern, uncomfortable creatures who had hitched their wagons to the smallest asteroids. These were hospitably heard and fed, — Mr. Emerson's humanity, as appears in the journals, helped out by his sense of humour. Always the friend across the sea, Carlyle, remains a planet in his heaven, though sometimes with smoky and lurid light.

Goethe's wide range of thought was stimulating, especially in the domain of Art, but the New England conscience could not accept the man.

A little earlier than the days of the *Dial*, the Neo-platonists stirred Mr. Emerson by their mysticism and strange imagery, and from them he followed upward the stream of thought that had influenced these to their remote sources in the scriptures of the ancient East. He found delight by the way in the gardens of Persia, with Saadi and Hafiz. In the verse-books many trial-renderings of their poems (from the German) are found. Traces of all these influences appear in his notes.

In 1848, Mr. Emerson, setting his face towards home after his stay in England, wrote "Boundless freedom in America," but was forced to add "in the North," for from that time on for thirteen years the cloud of Slavery grew darker, and the attitude of Northern politicians and merchants was sadly subservient, while the "comfortable classes" seemed indifferent, even the clergy and the scholars. Certain of the journals show how heavily the load of the Country's shame lay on Emerson, and in them are found his notes of opinions given by great men of law, which he had sought out, on the basal rights of man and the supremacy of the moral law. In these days, although he well knew that the law of Compensation was sleeplessly working, out of sight — already the rifts made by Conscience were running through the parties, — its slow action tried even his brave philosophy. He saw too far to devote his life to abate this special evil, but his aid was never wanting at a time of danger, as a strong ally to those brave men who did. Loyal to the ideal Republic, disregarding coldness or hostility, there was no tremor in his voice as it rang out clearly for the eternal rights. In those years he had the relief each winter, given by his lecturing journeys afar, of seeing the new country of youth and courage, and speaking a word for Freedom as he passed.

The war came, and he rejoiced in the clearing of the heavens once more, though grieving at the wreck left by the cruel storm. In the journal of January, 1862, when Mr. Emerson gave before the Smithsonian Institute in Washington his lecture "Civilization at a Pinch," in which he earnestly urged Emancipation, he wrote out, in detail unusual for him, the story of his meeting President Lincoln, Seward, Chase, Sumner, and others of the leading actors in the great drama.

Peace returned, and the Country seemed one to be proud of as never before. Mr. Emerson's relief and his high hopes appear in the journals, and reappear in the poems and later essays. Then began a calmer, pleasanter chapter in his life. Years ago he had "planted himself on his thought," and now "the world had come round to him." He was now widely known on both sides of the ocean through his words and work, and welcomed as a helper. But the increasing call for lectures from a newer West beyond the Mississippi allowed no abatement of work, and the journeying, though less exposing, was greater. His material was still accumulating, but the arrangement of the choice pieces into a harmonious mosaic was growing more difficult than ever for him. One day he met the God of Bounds, who said, —

No more!

No farther shoot
Thy broad, ambitious branches and thy root.
Fancy departs: no more invent;

Contract thy firmament
To compass of a tent.

A little while
Still plan and smile,
And — fault of novel germs —
Mature the unfallen fruit.

“Timely wise,” he accepted the terms; but, until he told of this meeting, no one had found out that he was growing old. His powers failed so gradually that not until the shock and exposure, culminating in serious illness, at the time of the burning of his house, did anyone realize that his strength was failing. But the journals show it, for although in the middle period of his life the entries in these were not so many as when his time was freer, after the war they are much fewer. The fact that *Society and Solitude*, and *May Day*, the second book of poems, were in preparation partly accounts for this.

Mr. Emerson had great happiness in that period in giving rein to his poetic instinct, now refined, and in “crooning rhymes” as he walked in the woods, — lines for “May Day,” “Waldeinsamkeit,” “My Garden,” and other fragments. The verse-book filled as the journal shrank.

With the illness of 1872 the journals practically came to an end, nor after that time did Mr. Emerson do any original work except endeavouring to mend or arrange passages in unpublished lectures for the promised volume *Letters and Social Aims*; but he felt his inability for this task, and consented to the calling in by his family of Mr. Cabot’s willing and admirable aid.

A few things remain to be said: —

1. — In these volumes are selections; not the whole, but the greater part of the contents of the journals.

2. — During his most productive years Mr. Emerson used in his books a great part of the thoughts set down in the journals, often with little or no change in form. Such paragraphs are for the most part left out, but sometimes, if important, are referred to. In some instances it seems well to give the original form, which may show the conditions.

3. — Most of the personal references, unless too private, are given. Mr. Emerson’s notes are free from offence in this particular.

4. — The passages in which “Osman” appears are not to be taken as exact autobiography, though they come near being so. “Osman” represents, not Emerson himself, but an ideal man whose problems and experiences are like his own.

5. — In some cases where Mr. Emerson quotes passages from memory erroneously, the true version has been given.

6. — The reading of the youth, as shown by the quotations, seems to have been so wide, and his love of certain authors so great and constant, that it seemed well to give lists of the books referred to or authors mentioned in each year up to 1833. Of course many of these quotations were at second hand, yet led the eager scholar to seek out the original work. Plutarch, Shakspeare, Milton, Montaigne, Jonson, Newton, Burke, Scott, Byron, Wordsworth, are quoted so often that we have in the lists, year by year, set down their recurring names to show his love for them. After 1833 only the notable books of the newer reading will be mentioned.

It is interesting to see on the pages of the early journals how the boy's hand instinctively strayed from writing to drawing heads. A few of these are given in the illustrations which seem to show that Emerson had some gift in that direction, had he chosen to follow it.

The cordial thanks of the editors are due to those friends who have helped them in their task by their valuable counsel.

EDWARD W. EMERSON.

September, 1909.

Selection of Early Journals: 1820-1823

JOURNAL

COLLEGE

“‘In the morning, solitude,’ said Pythagoras. By all means give the youth solitude, that Nature may speak to his imagination, as it does never in company; and for the like reason give him a chamber alone; — and that was the best thing I found in college.”

Emerson’s Journal, 1859.

“I don’t think he ever engaged in boys’ plays; not because of any physical inability, but simply because, from his earliest years, he dwelt in a higher sphere. My one deep impression is, that, from his earliest childhood, our friend lived and moved and had his being in an atmosphere of letters, quite apart by himself. I can as little remember when he was not literary in his pursuits as when I first made his acquaintance.”

From a letter about Emerson by his earliest friend, Dr, William H. Furness

JOURNAL I "NO. XVII"

1820

[This "Blotting-Book" rather than Journal, simply marked "No. XVII," showing that it had predecessors, though these are gone, was begun almost with the year 1820. Emerson was then a Junior, living in Hollis Hall, No. 15. A rude but faithful little picture in water-colours of that room, apparently done by him, is found in "The Wide World," No. 1. Its bare floor, uncurtained window, cheap paper, and Spartan furniture, fairly represent the brave simplicity of those days. The pictures are probably such engravings of eminent divines as could be spared from home, — George Whitefield, Dr. Samuel Cooper, Rev. Charles Chauncy, or other lights of that ministry for which the boy was already destined. His chum was John Gaillard Keith Gourdin (pronounced *Godyne*): yet strangely no mention of him occurs in the jottings of that year. Dr. Holmes, in his memoir of Emerson, says: "The two Gourdins, Robert and John Gaillard Keith, were dashing young fellows, as I recollect them, belonging to Charleston, South Carolina. The 'Southerners' were the reigning college *elegans* of that time, the *merveilleux*, the *mirliflores*, of their day. Their swallow-tail coats tapered to an arrow-point angle, and the prints of their little delicate calf-skin boots in the snow were objects of great admiration to the village boys of the period. I cannot help wondering what brought Emerson and the showy, fascinating John Gourdin together as room-mates." Emerson was writing a dissertation on the Character of Socrates, for which he received a Bowdoin Prize. This, with a later prize-dissertation, "On the Present State of Ethical Culture," were recently printed, with a sketch of Emerson's life, by Dr. Edward Everett Hale, in a small volume published in Boston by the Unitarian Association. For the latter essay Emerson only received the second prize; his classmate, Josiah Quincy, won the first. The book is full of miscellaneous scraps of prose and verse written by the boy, and also quoted from a variety of sources, given below. Many lines from Shakspeare, Byron, Scott, Dryden, and Moore, classified by the initial letter, are stored away there for use in a game, now becoming obsolete, called "Capping verses." The following passages from a study for the paper on Socrates, together with some "Phrases Poetical" which the young author stored to adorn his sentences or enlarge his vocabulary, and a song for a Club festival, are all that seem worth while to print.]

January, 1820. (Age, 16.) The ostentatious ritual of India which worshipped

God by outraging nature, though softened as it proceeded West, was still too harsh a discipline for Athenian manners to undergo. — Socrates had little to do with these and perhaps his information on the subject was very limited. He was not distinguished for knowledge or general information, but for acquaintance with the mind and its false and fond propensities, its springs of action, its assailable parts; in short, his art laid open its deepest recesses, and he handled it and moulded it at will. Indeed we do not have reason to suppose that he was intimately versed in his own national literature, Herodotus, Homer, Thucydides, Pindar, *etc.* — His profession in early life had perhaps imparted a little of poetic inspiration, but his leading feature seems to have been sagacity — little refinement, little erudition. His genius resembled Æsop.

The greatness of the philosopher shines forth in its fullest lustre when we examine the originality, the bold and unequalled sublimity of his conceptions. His powerful mind had surmounted the errors of education and had retained useful acquisitions, whilst it discarded what was absurd or unprofitable. He studied Nature with a chastised enthusiasm, and the constant activity of his mind endowed him with an energy of thought little short of inspiration. When he speaks of the immortality of the soul, or when he enters on considerations of the attributes or nature of the deity, he leaves the little quibblings of the sophists, and his own inferior strains of irony, and his soul warms and expands with his subject; we forget that he is man — he seems seated like Jupiter Creator moulding magnificent forms and clothing them with beauty and grandeur....

What is God? said the disciples, and Plato replied, It is hard to learn and impossible to divulge....

In Athens, learning was not loved for its own sake, but for sinister ends. It was prized as a saleable commodity. The Sophists bargained their literature, such as it was, for a prize which, always exorbitant, was regulated by the ability of the disciple. And this must always happen more or less in the infancy of letters. In a moneymaking community literature will soon thrive. It must always follow, not precede, successful trade. The first wants to be supplied are the native ones of animal subsistence and comfort, and when these are more than provided for, and luxury and ease begin to look about them for new gratification, the mind then urges its claim to cultivation....

For use — PHRASES POETICAL rescuing and crowning virtue. “coldest complexion of age.” ill-conditioned, cameleon, zeal, booked in alphabet,

cushioned, compunction, beleaguered, halidom galloping, whortleberry, spikenard, staunch, council-chamber, star-crossed, till its dye was doubled on the crimson cross, countless multitudes, abutments panoply, sycophant smile, kidnapping, beheaded demigods, signal (adjective). Cleopatra, ambidexter register (verb), defalcation.

SONG

You may say what you please of the current rebellion, Tonight the Conventicle
drink to a real one; The annals of ages have blazoned its fame

And paeans are chanted to hallow its name.

Derry down, etc.

Alas for the windows the Sophs have demolished!

Alas for the Laws that they are not abolished!

And that *Dawes* could abide the warm battle's brunt, And the Government
vote it was Gay, Lee and Blunt.

Derry down.

But this shock of the Universe who could control?

Aghast in despair was each Sophomore's soul, Save one, who alone in his
might could stand forth To grapple with elements — Mr. Danforth.

Derry down.

could be looked down on smilingly by Juniors who had, the year before,
been more or less involved in a "real one" celebrated in that epic, *The Re be
Iliad*, which has been from time to time reprinted; also described in Josiah
Quincy's *Figures of the Past*.

Let the Earth and the Nations to havoc go soon, And the world tumble
upward to mix with the moon Old Harvard shall smile at the rare conflagration,
The Coventicle standing her pledge of salvation.

Derry down.

JOURNAL II

THE WIDE WORLD, NO. I 1820

[The journals from February, 1820, to July, 1824, bear the name "The Wide World," and extracts from all of these are given here, excepting No. 6, which is missing.]

February, 1820.

Mixing with the thousand pursuits and passions and objects of the world as personified by Imagination, is profitable and entertaining. These pages are intended at their commencement to contain a record of new thoughts (when they occur); for a receptacle of all the old ideas that partial but peculiar peepings at antiquity can furnish or furbish; for tablet to save the wear and tear of weak Memory, and, in short, for all the various purposes and utility, real or imaginary, which are usually comprehended under that comprehensive title *Common Place book*. O ye witches, assist me! enliven or horrify some midnight lucubration or dream (whichever may be found most convenient) to supply this reservoir when other resources fail. Pardon me, Fairy Land! rich region of fancy and gnomery, elvery, sylphery, and Queen Mab! pardon me for presenting my first petition to your enemies, but there is probably one in the chamber who maliciously influenced me to what is irrevocable; pardon and favour me! — And finally, Spirits of Earth, Air, Fire, Water, wherever ye glow, whatsoever you patronize, whoever you inspire, hallow, hallow this devoted paper — Dedicated and Signed January 25, 1820, JUNIO.

After such a dedication, what so proper to begin with as reflections on or from Edward Search? It is a fine idea which he either intends to convey, or else the form of expression unintentionally did (pray let us believe the latter for the credit of originality) that those parts of the world which man cannot or does not inhabit are the abodes of other orders of sentient being, invisible or unperceived by him. To amplify: Perhaps the inferiour centre of the earth, the bottomless depths and the upper paths of Ocean, the lands circumjacent to the poles, the high rock and clefts of the rock, are peopled by higher beings than ourselves; — animals cast in more refined mould; not subject to the inconveniences, woes, etc., of our species — to whom, as to us, this world appears made only for them, and among whom our very honest and honourable species are classed only as the highest order of brutes — perhaps called of the *bee* kind. When Imagination has formed this class of beings and given them the name of Supromines, it will be perfectly convenient to rise again to an order higher than these last, holding our self-

complacent friends, the Supromines, in as utter contempt as they us, or as we the beasts, and then she may rise to another and another, till, for aught I know, she may make this world one of the Mansions of heaven, and in parts of it, though in and around, yet thoroughly unknown to us, the seraphim and cherubim may live and enjoy. I have now already fallen into an error, which may be a very common one, to hunt an idea down, when obtained, in such a remorseless manner as to render dull and flat an idea originally plump, round and shining.

Perhaps our system and all the planets, stars, we can discover, nay, the whole interminable Universe, is moving on, as has been supposed, in one grand circle round the centre of light, and since the world began it has never completed a single revolution. It is an improvement on the grandeur of this supposition to suppose there is a source of light before us and the whole vast machinery has been forever and is now sweeping forward in a direct line through the interminable fields — extensions of space. It is a singular fact that we cannot present to the imagination a longer space than just so much of the world as is bounded by the visible horizon; so that, even in this stretching of thought to comprehend the broad path lengthening itself and widening to receive the rolling Universe, stern necessity bounds us to a little extent of a few miles only. But what matters it? we can talk and write and think it out.... Chateaubriand's "the universe is the imagination of the deity made manifest" is worthy him.

"Mount on thy own path to Fame, nor swerve for man or more than man" says Caswallon (in "Samor"), and it will be a fine motto by striking out the last four words.

INDEPENDENCE; PULPIT ELOQUENCE

Let us suppose a pulpit Orator to whom the path of his profession is yet untried, but whose talents are good and feelings strong, and his independence, as a man, in opinion and action is established; let him ascend the pulpit for the first time, not to please or displease the multitude, but to expound to them the words of the book and to waft their minds and devotions to heaven. Let him come to them in solemnity and strength, and when he speaks he will claim attention with an interesting figure and an interested face. To expand their views of the sublime doctrines of the religion, he may embrace the universe and bring down the stars from their courses to do homage to their Creator.

Here is a fountain which cannot fail them. Wise Christian orators have often and profitably magnified the inconceivable power of the Creator as manifested

in his works, and thus elevated and sobered the mind of the people and gradually drawn them off from the world they have left by the animating ideas of Majesty, Beauty, Wonder, which these considerations bestow. Then when life and its frivolities is fastly flowing away from before them, and the spirit is absorbed in the play of its mightiest energies, and their eyes are on him and their hearts are in heaven, then let him discharge his fearful duty, then let him unfold the stupendous designs of celestial wisdom, and whilst admiration is speechless, let him minister to their unearthly wants, and let the ambassador of the Most High prove himself worthy of his tremendous vocation. Let him gain the tremendous eloquence which stirs men's souls, which turns the world upside down, but which loses all its filth and retains all its grandeur when consecrated to God. When a congregation are assembled together to hear such an apostle, you may look round and you will see the faces of men bent forward in the earnestness of expectation, and in this desirable frame of mind the preacher may lead them whithersoever he will; they have yielded up their prejudices to the eloquence of the lips which the archangel hath purified and hallowed with fire, and this first sacrifice is the sin-offering which cleanseth them.

WEBSTER

February 7th.

Mr. K., a lawyer of Boston, gave a fine character of a distinguished individual in private conversation, which in part I shall set down. "Webster is a rather large man, about five feet, seven, or nine, in height, and thirty-nine or forty years old — he has a long head, very large black eyes, bushy eyebrows, a commanding expression, — and his hair is coal-black, and coarse as a crow's nest. His voice is sepulchral — there is not the least variety or the least harmony of tone — it commands, it fills, it echoes, but is harsh and discordant. — He possesses an admirable readiness, a fine memory and a faculty of perfect abstraction, an unparalleled impudence and a tremendous power of concentration — he brings all that he has ever heard, read or seen to bear on the case in question. He growls along the bar to see who will run, and if nobody runs he WILL fight. He knows his strength, has a perfect confidence in his own powers, and is distinguished by a spirit of fixed determination; he marks his path out, and will cut off fifty heads rather than turn out of it; but is generous and free from malice, and will never move a step to make a severe remark. His genius is such that, if he descends to be pathetic, he becomes ridiculous. He has no wit and never laughs, though he is

very shrewd and sarcastic, and sometimes sets the whole court in a roar by the singularity or pointedness of a remark. His imagination is what the light of a furnace is to its heat, a necessary attendant — nothing sparkling or agreeable, but dreadful and gloomy.” — This is the finest character I have ever heard portrayed, and very truly drawn, with little or no exaggeration. With respect to the cause of a town’s condition of bad society he said well, “There is stuff to make good society, but they are discordant atoms,” and regarding the contrasting and comparing the worthy and great dead,— “you may not tell a man ‘your neighbor’s house is higher than yours,’ but you may measure gravestones and see which is the tallest.”

Cambridge, *March nth*, 1820.

Thus long I have been in Cambridge this term (three or four weeks) and have not before this moment paid my devoirs to the Gnomes to whom I dedicated this quaint and heterogeneous manuscript. Is it because matter has been wanting? — no — I have written much elsewhere in prose, poetry, and miscellany — let me put the most favourable construction on the case and say that I have been better employed. Beside considerable attention, however unsuccessful, to college studies, I have finished Bisset’s life of Burke, as well as Burke’s “Regicide Peace,” together with considerable variety of desultory reading, generally speaking, highly entertaining and instructive. The Pythologian poem does not proceed very rapidly, though I have experienced some poetic moments. Could I seat myself in the alcove of one of those public libraries which human pride and literary rivalry have made costly, splendid and magnificent, it would indeed be an enviable situation. I would plunge into the classic lore of chivalrous story and of the fairy-land bards, and unclosing the ponderous volumes of the firmest believers in magic and in the potency of consecrated crosier or elfin ring, I would let my soul sail away delighted into their wildest phantasies. Pendragon is rising before my fancy, and has given me permission to wander in his walks of Fairy-land and to present myself at the bower of Gloriana. I stand in the fair assembly of the chosen, the brave and the beautiful; honour and virtue, courage and delicacy are mingling in magnificent joy. Unstained knighthood is sheathing the successful blade in the presence of unstained chastity. And the festal jubilee of Fairy-land is announced by the tinkling of its silver bells. The halls are full of gorgeous splendour and the groves are joyous with light and beauty. The birds partake and magnify the happiness of the green-wood shades and the music of the harp comes swelling on the gay breezes. Or other views more real, scarcely less beautiful, should attract, enchain me. All the stores of Grecian and Roman literature may be unlocked and fully displayed — or, with the Indian enchanters,

send my soul up to wander among the stars till “the twilight of the gods.”

April 2d.

Spring has returned and has begun to unfold her beautiful array, to throw herself on wild-flower couches, to walk abroad on the hills and summon her songsters to do her sweet homage. The Muses have issued from the library and costly winter dwelling of their votaries, and are gone up to build their bowers on Parnassus, and to melt their ice-bound fountains. Castalia is flowing rapturously and lifting her foam on high. The hunter and the shepherd are abroad on the rock and the vallies echo to the merry, merry horn. The Poet, of course, is wandering, while Nature’s thousand melodies are warbling to him. This soft bewitching luxury of vernal gales and accompanying beauty overwhelms. It produces a lassitude which is full of mental enjoyment and which we would not exchange for more vigorous pleasure. Although so long as the spell endures, little or nothing is accomplished, nevertheless, I believe it operates to divest the mind of old and worn-out contemplations and bestows new freshness upon life, and leaves behind it imaginations of enchantment for the mind to mould into splendid forms and gorgeous fancies which shall long continue to fascinate, after the physical phenomena which woke them have ceased to create delight.

April 4th.

Judging from opportunity enjoyed, I ought to have this evening a flow of thought, rich, abundant and deep; after having heard Mr.

Everett deliver his Introductory Lecture, in length one and one half hour, having read much and profitably in the Quarterly Review, and lastly having heard Dr. Warren’s introductory lecture to anatomy, — all in the compass of a day — and the mind possessing a temperament well adapted to receive with calm attention what was offered. Shall endeavor to record promiscuously received ideas: — Though the literature of Greece gives us sufficient information with regard to later periods of their commonwealth, as we go back, before the light of tradition comes in, the veil drops. “All tends to the mysterious East.”... From the time of the first dispersion of the human family to the time of Grecian rise, everything in the history of man is obscure, and we think ourselves sufficiently fortunate “if we can write in broad lines the fate of a dynasty,” though we know nothing of the individuals who composed it. The cause is the inefficiency and uncertainty of tradition in those early and ignorant times when the whole history of a tribe was lodged in the head of its patriarch, and in his death their history was lost. But even after the invention of letters, much, very

much, has never reached us. This we need not regret. What was worth knowing was transmitted to posterity, the rest buried in deserved forgetfulness. Everything was handed down which ought to be handed down. The Phenicians gave the Greeks their *Alphabet*, yet not a line of all which they wrote has come down, while their pupils have built themselves an imperishable monument of fame. I here make a resolution to make myself acquainted with the Greek language and antiquities and history with long and serious attention and study; (always with the assistance of circumstances.) To which end I hereby dedicate and devote to the down-putting of sentences quoted or original, which regard Greece, historical, poetical and critical, page 47 of this time-honored register. By the way, I devote page 45 to the notation of *Inquirenda* and of books to be sought.

Signed, JUNIO.

April 30th,... Ethereal beings to whom I dedicated the pages of my “Wide World,” do not, I entreat you, neglect it; when I sleep waken me; when I weary animate! Wander after moonbeams, fairies! but bring them home here. Indeed, you cannot imagine how it would gratify me to wake up from an accursed Enfield lesson and find a page written in characters of light by a moonbeam of Queen Mab! I will give you a subject — a thousand if you wish; — for instance “Pendragon,” your own Pendragon; record his life and his glories. “Prince Arthur” if it is not too trite; or “the Universe,” or a broom-stick; either or all of these, or fifty thousand more.

June 7th.

A very singular chance led me to derive very sensible answers to the two questions I proposed to Virgil. For the first I opened to the line — *O crudelis Alexi, nihil mea carmina curas*.

For the other I opened to a line, Dryden’s translation of which is ——

“Go, let the gods and temples claim thy care.”

Have been of late reading patches of Barrow and Ben Jonson; and what the object — not curiosity? no — nor expectation of edification intellectual or moral — but merely because they are authors where vigorous phrases and quaint, peculiar words and expressions may be sought and found, the better “to rattle out the battle of my thoughts.” I shall now set myself to give a good sentence of

Barrow's (the whole beauty of which he has impaired by a blundering collocation) in purer and more fashionable English; — Obvious manifestations may be sometimes seen of the ruling government of God. Sometimes in the career of triumphant guilt when things have come to such a pass that iniquity and outrage do exceedingly prevail, so that the life of the offender becomes intolerably grievous, a change comes upon the state of things, however stable and enduring in appearance, a revolution in a manner sudden and strange, and flowing from causes mean and unworthy, which overturneth the towering fabric of fortune and reduces its gigantic dimensions; and no strugglings of might, no fetches of policy, no circumspection or industry of man availing to uphold it: there is outstretched an invisible hand checking all such force and crossing all such devices — a stone cut out of the mountain without hands and breaking to pieces the iron and the brass and the clay and [the] silver and the gold. — In looking over the sentence however, though the grand outline of the whole was originally the Rev. Isaac Barrow's, yet we very self-complacently confess that great alterations have rendered it editorially Mr. Ralph Emerson's, and I intend to make use of it hereafter, after another new modelling, for it is still very susceptible of improvement.

June 19th.

When those magnificent masses of vapour which load our horizon are breaking away, disclosing fields of blue atmosphere, there is an exhilaration awakened in the system of a susceptible man which so invigorates the energies of mind, and displays to himself such manifold power and joy superiour to other existences, that he will triumph and exult that he is a man.... We feel at these times that eternal analogy which subsists between the external changes of nature, and scenes of good and ill that chequer human life. Joy cometh, but is speedily supplanted by grief, and we look at the approach of transient verities like the mists of the morning, fearful and many, but the fairies are in them and *White Ladies* beckoning.

August 8th.

I have been reading the *Novum Organum*. Lord Bacon is indeed a wonderful writer; he condenses an unrivaled degree of matter in one paragraph. He never suffers himself "to swerve from the direct forthright," or to babble or speak unguardedly on his proper topic, and withal writes with more melody and rich cadence than any writer (I had almost said, of England) on a similar subject. Although I have quoted in my "Universe" of composition (by which

presumptuous term I beg leave to remind myself that nothing was meant but to express wideness and variety of range), yet I will add here a fine little sentence from the thirtieth section of the second volume of the *Novum Organum*. Speaking of bodies composed of two different species of things, he says: “but these instances may be reckoned of the singular or heteroclite kind, as being rare and extraordinary in the universe; yet for their dignity they ought to be separately placed and treated. For they excellently indicate the composition and structure of things; and suggest the cause of the number of the ordinary species of the universe; and lead the understanding from that which is, to that which may be.” There is nothing in this sentence which should cause it to be quoted more than another. It does not stand out from the rest; but it struck me accidentally as a very different sentence from those similarly constructed in ordinary writers. For instance, in the last three clauses (beginning “For they excellently”) it is common to see an author construct a fine sentence in this way, with idle repetitions of the same idea, embellished a little for the sake of shrouding the deception. In this, they all convey ideas determinate, but widely different and all beautiful and intelligent. — But, says Sterne, “the cant of criticism is the most provoking.”

There is a strange face in the Freshman class whom I should like to know very much. He has a great deal of character in his features and should be a fast friend or bitter enemy. His name is — I shall endeavour to become acquainted with him and wish, if possible, that I might be able to recall at a future period the singular sensations which his presence produced at this.

When we see an exquisite specimen of painting — whence does the pleasure we experience arise? From the *resemblance*, it is immediately answered, to the works of nature. It is granted that this is in part the cause, but it can't explain the whole pleasure we enjoy; for we see more perfect resemblances (as a stone apple or fruit) without this pleasure. No, it arises from the *power* which we immediately recollect to be necessary to the creation of the painting.

August 21st.

In the H [arvard] C[ollege] Athenæum I enjoyed a very pleasant hour reading the life of Marlborough in the “Quarterly Review.” I was a little troubled there by vexatious trains of thought; but once found myself stopping entirely from my reading and occupied in throwing guesses into futurity while I was asking myself if, when, ten or a dozen years hence, I am gone far on the bitter, perplexing roads of life, when I shall then recollect these moments, now thought so miserable, shall I not fervently wish the possibility of their return, and to find myself again

thrown awkwardly on the tilted chair in the Athenæum study with my book in my hand; the snuffers and lamps and shelves around; and Motte coughing over his newspaper near me, and ready myself to saunter out into gaiety and Commons when that variously-meaning *bell* shall lift up his *tongue*.

“Sed fugit interea, fugit irreparabile tempus.”

August 23, 1820.

To-morrow finishes the Junior year. As it is time to close our accounts, we will conclude likewise this book which has been formed from the meditations and fancies which have sprinkled the miscellany-corner of my mind for two terms past. It was begun in the winter vacation. I think it has been an improving employment decidedly. It has not encroached upon other occupations and has afforded seasonable aid at various times to enlarge or enliven scanty themes, *etc.* Nor has it monopolized the energies of composition for literary exercises. Whilst I have written in it, I have begun and completed my Pythologian Poem of 260 lines, — and my Dissertation on the Character of Socrates. It has prevented the *ennui* of many an idle moment and has perhaps enriched my stock of language for future exertions. Much of it has been written with a view to their preservation, as hints for a peculiar pursuit at the distance of years. Little or none of it was elaborate — its office was to be a hasty, sketchy composition, containing at times elements of graver order.

So fare ye well, gay Powers and Princedoms! To you the sheets were inscribed. Light thanks for your tutelary smiles. Grim witches from Valhalla, and courteous dames from Faery-land, whose protection was implored and whose dreams were invoked to furnish forth the scroll, adieu to you all; — you have the laughing poet's benison and malison, his wish and his forgetfulness. Abandoning your allegiance, he throws you to the winds, recklessly defying your malice and fun. Pinch the red nose; lead him astray after Will-o'-the-wisp over wilderness and fen; fright him with ghastly hobgoblins — wreak your vengeance as you will — He gives you free leave on this sole condition, — if you can.

JUNTO.

August 24, 1820.

Books to be Sought Wordsworth's *Recluse*; *Quarterly Review*, September, 1819; Liber VIII, of Buchanan's *Scotland* — Wallace; Spenser's *View of the State of Ireland*; Camden's *Annals of Queen Elizabeth*; Kennet's *Life and*

Extent, history of the *Troubadours*. — *Pendragon*. — Sir Walter Raleigh's concept of the "Faery Queen." — Valhalla. — Archipelago. — Paestum. — Taillefer at the battle of Hastings.

— Illumination (graphic). — *Griselda* of Boccace. — Walter Raleigh's account of Theories of Paradise. — Water-spouts.

Extracts from the Record of the (PYTHOLOGIAN?) SOCIETY, of which Emerson was for a time Secretary. 1819-1821

[Although in the Secretary's book no name is given to the Society, and in the record of the meeting of June 13, 1819, the committee appointed to consider the subject reported that "it is best that the society should have no name," and that report was accepted, it there appears that Emerson was appointed to prepare a poem for the celebration of the first anniversary of the Society, and read one, as the accompanying extracts show. In the journal covering this period, however, he twice mentions the writing of his "Pythologian Poem."]

Several members of the Sophomore class met at Gourdin's room, April 24th, 1819, for the purpose of forming a society, for exercise in composition and discussion: Present, Blood, Emerson, Frye, Gourdin 2d, Hill 2d, James, Reed, and Wood. The question, whether it be expedient to form a society for this purpose, was proposed and debated. Voted unanimously, to form a society, for these purposes; Hill 2d, Wood and Emerson, were chosen to prepare regulations and laws, to be presented at the next meeting. They adjourned to meet at Frye's room on the second of May, at half-past 7, p. M.

LAWS AND REGULATIONS OF THE —

The great design of public education is to qualify men for usefulness in active life, and the principal arts by which we can be useful are those of writing and speaking.

We are told by those from whose decision there is no appeal that by constant, unwearied practice only can facility and excellence in these arts be attained. We believe that societies, when well regulated, and supported with spirit, are of great use towards acquiring these important qualifications. We therefore agree to form ourselves into a society for writing and extemporaneous speaking, to be called We engage to endeavour to promote the interests of the society and the mutual

improvement of each other by freely receiving and imparting instructions, and we pledge our honour to be governed by the following laws and regulations: — *Article 1.* The society shall consist of no more than twelve members, and no person shall be admitted without the consent of every member.

Article 4. Six members shall read compositions at every regular meeting, upon subjects given out by the society, as they are called upon by the Moderator, and six shall discuss subjects proposed at the preceding meeting, each upon the subject assigned him by the society.

Article 5. Two members shall be chosen from those who read compositions to decide the question, and, in case of disagreement, the Moderator shall decide it.

Article 6. Four members shall be chosen by the society to read essays before the society upon subjects of their own choice, two at the meeting nearest the middle of each term to perform at the meeting nearest the middle of the next term, and two at the end of each term to perform at the last meeting of the succeeding term. Any member neglecting or refusing to read a composition or discuss, shall be fined twelve and one-half cents; for neglecting to read an essay, fifty cents. Disorderly or disrespectful conduct shall subject the offender to a fine of six and one-quarter cents; non-attendance shall be fined twelve and one-half cents. Any member coming after the meeting shall be fined six and one-quarter cents.

JOHN ANGIER — GEO. B. JAMES

OLIVER BLOOD — BENJ. T. REED

WARREN BURTON — CHARLES W. UPHAM

RALPH W. EMERSON — NATHL. WOOD

Enoch Frye — Edward Kent John G. K. Gourdin Saml. H. Lyon JOSEPH B. HILL — JOHN M. CHENEY JN. B. HILL

October 25th, 1819.

The next meeting being that of the essays, a committee of three were chosen to provide for the evening: Blood, Gourdin and Lyon. It was found necessary by the society to have a particular sum of money agreed on to be expended essay evenings.

Accordingly, it was voted that two dollars should be the sum; that what the

finer did latter also studied law, but was successively a printer, teacher and Presbyterian preaching elder, mainly in Tennessee. During the Civil War he was a field agent of the U. S. Christian Commission and died in that service at Chattanooga.

Charles W. Upham studied divinity and was a minister in Salem. Later, he was mayor of that city and was sent to Congress. His book on the Salem witchcraft is well known.

Edward Kent, a handsome, forcible, and dignified man, was born in Concord, N. H. He studied law and moved to Bangor, Maine, of which city he was mayor. He was twice Governor of Maine, later, Consul at Rio Janeiro, and finally a justice of the Supreme Court of Maine.

John M. Cheney lived in Concord, like Emerson, and was for most of his life cashier of the bank there. not cancel should be paid by an assessment upon the members. Voted to adjourn till Monday evening, 6 o'clock, to Br. Gourdin's room, November 7th.

Nathaniel Wood, Sec'y.

Monday Ev'g., *March 6th*, [1820]. Met at Br. Wood's room according to adjournment. Proceeded to confer on the admission of a new member, *vice* Upham. Cheney was nominated and elected, and Br. Wood appointed to inform him and invite him to join. Proceeded to the reading of themes. Brs. Lyon and Gourdin being absent, chose by lot as voluntary discussers Blood, *vice* Gourdin, and Wood, *vice* Lyon. The first discussion between Kent and Frye was decided in favour of Kent by Blood and Reed judges. After discussion, chose Brs. Kent and Hill 1st to appoint subjects for discussion; Brs. Wood and Burton for themes. The committee for discussions report: — 1st: Which is most conducive to individual happiness, a state of celibacy or matrimony? — Burton and Reed.

2d: Whether Daddy Tracy can be justified in spending his days in Cambridge? — Wood and Blood.

3d: Which is the strongest passion, Love or Ambition? — Emerson.

Committee for themes report, "Envy wishes, and then believes." Both reports accepted.

Br. Reed requested that the fine which he had paid for non-performance of Essay might be refunded, as he had been sick for three weeks previous to the evening on which it was due, and was then sick and out of town. Much warm debate ensuing, he withdrew the request and it was *Voted*, That the members of the society as individuals in the situation of Br. Reed would consider an essay as due from them.

Adjourned till Monday evening, a fortnight hence, to meet at 7 o'clock at Br. Emerson's room.

Attest, R. W. Emerson.

Monday Evg., *March noth* [1820].

Met according to adjournment, Br. Kent in the chair. Proceeded to reading themes, then to discussion. On account of the absence of Brs. Hill 1st, Gourdin and Lyon, it was *Voted* that Brs. Frye and Hill 2d be judges of all the discussions. Question arising with regard to the expediency of choosing by lot one who should voluntarily discuss with Br. Emerson, it was *Voted*, That in the present or a similar instance the single discussor should speak alone. The judges decided the first discussion in favour of Br. Reed (for celibacy!). On examination of the second, the judges reported indecision, and the Moderator decided for Br. Wood. After discussion, proceeded to hear Br. Wood's report as committee, who reported that Mr. Cheney will join the society with pleasure, but cannot appear till the next meeting. Proceeded to committees. Brs. Blood and Burton, committee for discussions, report: — 1st: Whether the accession of the Canadas to the territory of the U. S. A. would be for the best interest of this country. — Frye and Hill 1st.

2d: Whether Commons be honourable to the progress of College literature. — Kent and Hill 2d.

3d: Whether Cicero or Demosthenes be the greatest orator. — Gourdin and Lyon.

Committee of themes report "Futurity."

Voted, That the anniversary of this society, the 24th of April next, be celebrated by Oration and Poem. Chose Br. Kent Orator, and Br. Emerson Poet. As the next meeting is Essay night, chose Br. Burton and Emerson committee of arrangements.

Adjourned to Monday Evg., 7 o'clock, to meet at Br. Burton's room.

Attest, R. W. Emerson, Sec'y.

Monday Evg., *April 3d* [1820].

Met according to adjournment. Br. Lyon in the chair. Proceeded to hear Br. Hill 1st's Essay *Voted*, that the thanks of the society be presented to Br. Hill for his elegant and ingenious performance. Br. Gourdin not being present, proceeded to the convivial business of the evening. Afterwards Br. Gourdin appearing, on account of the lateness of the time, and other considerations, it was *Voted*, That Br. G.'s Essay should be read at the next ordinary meeting of the

society.

Appointed Brs. Hill 2d and Wood to be the Essayists at the meeting in the middle of next term.

Adjourned till April 24th, the anniversary of the Society, to meet at Br. Emerson's Room, to hear the Oration and Poem.

Attest, R. W. Emerson, Sec'y.

April 26th, 1820.

Met by mistake two days later than the anniversary. *Voted*, that Br. Gourdin be requested to read his Essay this evening to the society. Proceeded to initiate Br. Cheney, then to hear the Essay. *Voted*, that the thanks of the society be presented to Br. Gourdin, for his correct and elegant essay. Br. Blood presented Br. Kent's excuse for non-attendance, and it was *Voted*, that Br. Emerson be a committee to request Br. Kent to deliver his oration to the society at the earliest convenient opportunity. Proceeded to hear the poem. A treat was then given to the society by the liberality of Brs. Reed and Lyon.

Voted that the thanks of the society be given to Brs. Reed and Lyon for their *unexampled munificence*. Adjourned to a fortnight from next Monday evening.

Sec. R. W. Emerson.

November 18, 1820.

After several unsuccessful efforts, on the part of the Secretary, to call the society together, a few of the members (affording an instance of disinterestedness and self denial, which reflects the highest honour on themselves) met this evening at Br. Hill's room. After spending some time in lively conversation, a sufficient number were found present to form a quorum; and, accordingly, the meeting was opened, when, agreeably to the object of the meeting, the Essays were called for.

But Br. Gourdin, from whom one has been some time due, not appearing, his of course was omitted; as was Br. Blood's for the same reason. The Essayists, whose performances became due this evening, were Brs. Cheney and Emerson. Br. Cheney was, therefore, called upon, and delivered a very *elegant and patriotic Essay*; for which the sincere thanks of the society were bestowed upon him; a mark of honour incomparably more valuable than medals, which time will tarnish and destroy, or statues, which violence will deface, and barbarism overthrow. — Here the Secretary would gladly close the record of this evening, and let the critics of Posterity suppose that what he has written above is merely a fragment of what he recorded; and exercise their learning and ingenuity in

supplying the deficiency, but truth and fidelity forbid. For (O tempora! O mores!) no sooner had Br. Cheney delivered his Essay, and received the thanks of the Society, as above recorded, than some of the members present began to express uneasiness at being any longer detained; and that, although Br. Emerson was prepared to read the Essay due from him. Strange infatuation! But such was their desire to depart that it was found impossible to keep them together any longer. The meeting was therefore adjourned. — Attest, — E. FRYE, Secretary.

February 26th, 1821.

Wonderful to relate! within an hour of the time appointed, a larger number of the members than have attended any meeting since I have had the honour to be Sec'y, met at No. 4 Holworthy Hall to hear the *Essays* due last time, and the *anniversary oration* due from time not quite immemorial, but so long that it should have been delivered almost a year ago. — The meeting was then opened (with Br. Kent in the chair) and the oration called for. But Br. Kent, not having had sufficient time, we may suppose, to prepare himself since he was chosen Orator, desired that it might be postponed till the next anniversary (April 24th); which was agreed to by the society. We shall then verify the old proverb, by killing two birds with one stone. Having settled this business, Br. Burton was called on for his Essay, which has been due almost as long as the Oration. But not being prepared, it was *Voted*, after hearing his excuse, “*that it be delivered on the evening of the Monday nearest the fifteenth of April.*” — Br. Gourdin being absent, his Essay of course was not read. Br. Blood, whose Essay was due at the same time with Br. Gourdin's, was next called on. — But it appearing that, by some fatal mistake, he had left it in Sterling, or elsewhere, a vote was passed to hear it with Br. Burton's. Thus we despatch business. No Essay now remained to be heard except Br. Emerson's; which was not read last term on account of circumstances mentioned page 46 of this volume. He was, therefore, called on to read now. And, oh! how the Secretary's heart beat with joy, when he actually saw him arise from his seat, and, taking a roll of paper from his pocket, seat himself by the table! Rejoice with me, my Brethren, for we shall yet hear an Essay this evening. — He accordingly read a very “*Elegant and appropriate Essay*” for which he received the unanimous and (let me add) the most sincere thanks of the society.

All business relative to performances being thus finished, Br. Hill 2d was chosen committee of one to wait on Br. Gourdin, and inform him that, unless he, in future, attend the meetings of *the* society more regularly than in times past, he *shall be expelled*. Br. Blood was likewise chosen committee of one to wait on

Br. Lyon for the same purpose....

And now, as my term of service has expired, I must leave it with him [Hill, the new Secretary] to transmit to posterity the very interesting proceedings of this society, while I with true firmness of mind (Oh! the sweets of power!), will descend to a private station. So farewell to all my greatness; Frye's occupation's gone!

Attest, Enoch Frye, Sec'y.

Wednesday, *March* 21, 1821.

Met at Br. Blood's, and let us look up, for the day of restoration draweth nigh. With rapture do I record the proceedings of this joyful evening.

Imprimis: Br. Wood filled the chair with superior dignity, in which gravity and imposing majesty were predominant. The house was then called to order, and we were favoured with a most ingenious, amusing, and humorous performance by Br. Blood, entitled, "journal travels, etc" in the country. The effect which this produced upon us was — I can not tell how powerful — and therefore shall not attempt to describe it, — it baffled description. Therefore we will drop that subject and turn to a milder atmosphere, and calmer sky. — Br. Emerson next advanced, with a neat, concise and *pithy* comparison of country and city life, much to the edification of the Brotherhood. Br. Wood then obliged us with an original and, no doubt, very accurate description of "country life," in which he drew aside the curtain, that is, opened the door and introduced us, at once, into the interior of a Yeoman's dwelling. We were very much pleased with the mistake which the master of the house, "good easy soul" made, by taking his guest at first for an Ass, or some other outlandish beast. But on awaking from his nap, he saw his error, and gave him such a cordial reception, that we were charmed with "country life." Themes being despatched, proceeded to discussion. The first, Hill *2d solus*, Gourdin absent, decided in his favour of course. Then the important Dowling question was discussed by Kent and Frye. In the progress of which the former displayed an interest, an eloquence, warmth of feeling, and sensibility in defence of Patrick Dowling, a Catholic Irishman, which did equal honour to his head and his heart. He even rose to the Sublime in defence of this great and much injured man, interlarded with specimens of the most beautiful Pathos. His feelings indeed were so much affected, that they choked his utterance, but his expressive countenance did more for his cause than all the letters in the alphabet. Brother Frye on the contrary produced many "knockdown" arguments, which had a manifest tendency to disprove all his opponent had advanced. He assailed him with invectives and contradictions in

abundance. Displayed much sophistry, satire, humour, in his attack upon the maculate Dowling. He would even gladly have buried him in a hole of his own digging, into which a fit of intoxication had plunged him. This being a case of peculiar importance, instead of committing the decision, as usual, to two members only, the secretary formally took the opinion of all present; and notwithstanding the obstinate virulence, and the position of Mr. Attorney Frye, the Patrick was cleared by a majority of one. So may intemperance triumph!

Committees: Kent and Hill 2d, For Discussions, reported the following which were accepted.

1: Whether it be beneficial to the students to spend much time in the acquisition of the polite accomplishment. — Burton and Emerson.

2: A Conference. On the comparative interest excited by the lectures of Ware, Willard and Everett. — Blood, Cheney and Wood.

Blood and Cheney, for themes, reported: “The miseries of human life.” Accepted.

Voted to adjourn to the 5 April next, to meet at Burton’s, at 7 o’clock p. M.

April 5, 1821.

Met at Burton’s....

Kent and Hill 2d, judges of the discussion by Burton and Emerson, decided in the negative, in favour of Burton.

Attest, Jos. B. HILL, Sec.

May 1st, 1821.

Met at Brother Blood’s to hear Br. Kent’s anniversary oration. Liberal provision had been made for social conviviality, to which two bottles of wine, handed over by brother Emerson, not a little contributed, and for which by a public vote the society bestowed their warmest thanks to brother Emerson. Br. Cheney filled the chair, and after a cheerful glass the orator held forth on — [Here the records of the society come to an abrupt end, excepting certain accounts in the end of the books, and the following official declaration: —]

I, R.W. Emerson, committee of arrangements, have received of R. W. Emerson, Secretary, the sum of two dollars for each essay-meeting in the past term collected from fine and assessment, and likewise the donations made to the society on the anniversary meeting, &c., and have faithfully expended the same for the *best interests* of the society, as far as my limited apprehension would assist me. There remains in the Treasury the sum of *one cent*, being the donation

of Br. Oliver Blood to the Society — which I shall pay on the demand of the new Secretary.

Signed, R. W. Emerson.

JOURNAL III "NO. XVIII"

1820

[Between, or contemporary with "Wide Worlds," Nos. 1 and 2, is a manuscript book, marked as above, a few specimens from which are here given. Besides these, it contains notes on College lectures, and extracts copied from the books he was reading; also some very juvenile criticism of Wordsworth, especially the "Excursion," and notes for his prize dissertation "On the Present State of Ethical Philosophy," which, as has been said, Rev. Dr. Edward Everett Hale printed, with that on Socrates, accompanying his sketch of Emerson.

The note-book also has fragments on the Religion of the Middle Ages, Religious Tendencies of Different States of Society, on Poetry, et cætera. Of romance also there are a few pages, "The Magician," and an unnamed one about a witch-wife; also various scraps of verse, including part of a ballad on King Richard.

But much space is given in this and some of the following "Wide Worlds" to a discussion of the Drama, especially in America. He attacks it in a daring and violent manner, praising the Greek tragedies, but his youthful sense of morality is outraged by the grossness of passages in the Elizabethan dramatists, and his taste disgusted by the degeneracy of the later drama. It must be borne in mind, however, first, that it is doubtful whether the youth had ever been inside of a play-house; second, that the writings in question were probably prepared for a debate in the Pythologian Society, in which he had his part assigned; hence, do not exactly represent Emerson's views at the time, especially as, somewhat later, he adopts a much less stringent tone, and believes that the Theatre in America might be reformed, and become an elevating influence, from which, however, Shakespeare with all his charms, must be excluded, unless severely expurgated.]

"NO. XVIII"

Boston, *September 22d*, 1820.

Where dost thou careless lie
Buried in ease and sloth?
Knowledge that sleeps doth die; And this security,

It is the common moth Which eats on wits and arts, and quite destroys them both.

Are all the Aonian springs
Dried up? Lies Thespia waste?
Does Clarius' harp want strings?
That not a nymph now sings,
Or droop they as disgraced
To see their seats and bowers by chattering pies defaced?

BEN JONSON TO HIMSELF.

DRAMA Campbell, the poet, said to Professor Everett that the only chance which America has for a truly national literature is to be found in the Drama; we are bound to reverence such high authority, and at least to examine the correctness of the position.

Few speculations have such a charm in their nature as this, whose object is, how to conduct a dialogue between a man and his fellow just far enough removed from common life to avoid disgust while it must claim the attention and elevate the tone of feeling.

In the nation which has always been regarded as the model in all the arts, the fountain of all polished letters, and the pattern of all time, the Drama was invented, and there alone succeeded perfectly. All inquiries therefore upon this subject begin from Greece. The history and influence of tragedy, its modes and machines of operation, must be explained from these sources.

Tragedy, by exciting the emotions of fear and of pity, tends to correct the same affections in the soul. This has been all along esteemed the philosophy of tragedy, with what correctness we shall not pretend to determine; but these ends were answered in Greece, and more than this, a respect for the gods was effectually inculcated. The thralldom of superstition was made useful to shackle those whom the light and law of natural religion could not guide, and he whom the beauty of moral rectitude could not win, was afraid to face the temple of the Furies, and averted his head as he passed by it. But by whom was this powerful influence created over a people whose refined taste kept a watchful eye on the artist, so that it should not be seduced unawares, and never yielded save to the irresistible might of genius? In what schools did they purchase the subtle art which became in their hands an instrument of such power? This question is the most important which can be asked, for it develops the causes of their preeminence. It was not the robed disciple at ease in the Academy who gained

the prize of tragedy, but Æschylus was a son of the republic who had fought valiantly at Marathon and Plataea, and came bleeding from the battle, to assemble in a simple natural plot the personages of old traditions, and attribute to them the feelings he had just felt, and place them in circumstances in which himself had been placed. Miraculous effects have been recorded of their representation; but by whom and how were they performed? In answer to this we all know how the primitive stage differed from the modern; that all was on a magnificent scale, that the actors were transformed to giants, and the strength of their voices increased by a metallic mouthpiece. But that which formed their chief distinction were their independent habits of feeling, of sentiment, of invention. This is illustrated by an anecdote of their theatre. Polus, the first actor on the stage, was preparing to perform the part of Electra. In this piece Electra embraces the urn supposed to hold the remains of Orestes. The Greek actor ordered that the urn containing the ashes of his own son should be brought from the tomb and conveyed to the theatre; and when, on the stage, this urn was offered to him and the father bent over it, he rent the air with no mimic grief or insincere howlings, but the whole audience was melted with the moving picture of his grief and lamentation.

When the light had failed from the Greek theatre which those masters had poured upon it, it would have violated the common order of events had an equal illumination been rekindled. The frivolous Comic Muse, hitherto of slight esteem, grew into favour and trode fast on the steps of sceptred Tragedy. The witty and offensive Aristophanes parodied the eloquent declamation of Euripides, mimicked the awful port of princes and gods, and converted the general satire of the old comedians into a vicious personal ribaldry. Finally the civil authority interfered to stop its flagrant abuses.

The tragedy was not inherited by Rome, which scrupulously incorporated all the arts of Athens. It was too delicate a treasure to be lightly transmitted by instruction or won with the spoils.

In France, during the dark ages, the castle of feudal chieftains witnessed a second rude drama, the name and character of which is all that remains. The "Mysteries" served to shew that it was a natural expression of the human feelings.

In England, the progress was somewhat similar, but the first productions which were marked for fame are works of prodigious power and their origin is sudden and unaccountable. From an obscurity which none had illuminated since Chaucer's era, there suddenly issued a series of elegant and original performances equal in power to the masterpieces of Greece, and adorned by a strain of such delicate feeling, and the wisdom of solid and rare philosophy, in

verse wherein was breathed the very melody of nature to arrest the soul withal.

Over all this fair miracle a hideous corruption was spread which made every page offensive. It is wonderful how intimately health and poison, beauty and destruction, can combine, and nowhere shall we find such a fatal illustration. The inhabitants of England have sat down rejoicing in the light which Shakspeare's genius hath shed around them, unconscious or careless of the defilement which attends us....

Shall we be told that Shakspeare painted nature as he found it, that we only see here what we see elsewhere in the scenes of life daily? No, he paints nature, not in innocence and its primitive condition, but not until it has become depraved itself, and its exhibition will deprave others. Nor is the general moral which is to be deduced from the whole pure....

Shakspeare assumed the commanding attitude of bold unrivalled genius; men saw that the inspiration was genuine, and few were so scrupulous as to ask if all were here....

The statue is colossal but its diabolical features poison our admiration for the genius which conceived and the skilful hand which carved it.

[THE EXACT SCIENCES]

Of all the sciences the science of the Mind is necessarily the most worthy and elevating. But it cannot precede the others. Natural Philosophy and Mathematics must be sought in order to gain first, the comforts of civilized life, and then the data whence our moral reasonings proceed. It is an old saying that all are a circle, and necessarily depend on one another; that great improvements in Astronomy involve a knowledge of Mathematics, and so of the others. We exist to moral purposes and are proud to call ourselves intellectual beings! Hence, one would say, Leave matter to the beasts that are only matter, and indulge your peculiar and distinguishing faculties. But then our reason and all our mental powers are called into as active exercise in demonstrating the properties of matter as the properties of mind, and the beasts are alike incapable of both. So your plea confutes itself.

With regard then to the study of Natural Philosophy, I do not think any one study so contributes to expand the mind as our first correct notions of this science; — when we first know that the sky is not a shell, but a vacant space, that the world is not still and a plain, but a little globe, performing, as one of a system, immense revolutions....

DEDICATION

Quem fugia? aut quis te nostris complexibus arcet?
Hacc memorans, cinerem et sopitos suscitât ignes.
Virgilian lot.

(This song to one whose unimproved talents and unattained friendship have interested the writer in his character and fate.) By the unacknowledged tie
Which binds us to each other,
By the pride of feeling high
Which friendship's name can smother; By the cold encountering eyes
Whose language deeply thrilling Rebelled against the prompt surmise Which
told the heart was willing; By all which you have felt and feel, My eager glance
returning,
I offer to this silent zeal
On youthful altars burning.

All the classic hours which fill The little urn of honour; Minerva guide and
pay the pen Your hand conferred upon her.

TRANSLATION OF MONTAIGNE TO MONSIEUR CHARRON

May fortune bless thee
And friends caress thee
Remote from care, but loved by me; The gifts of Pleasure
In boundless treasure
Not withheld, but poured on thee.
Garlanded with roses
At eve thy friend reposes,
Yet looks for joys that boundless be.

R. W. E.

When Jove's grey daughter, beldame Care, On crimson couches first was laid,
Her thousand wrinkled children there Scowled on poor Man — to all betrayed.

There was a little Fairy then
Of crooked form, whose name was S, Who bade the miscreants join to form
A smiling cherub, hight *Caress*.

“Doth not the Queen of the woods gather the secrets of futurity when she
reads the decaying oak leaves, and can she not tell the young man how to guide
his steps in life?”

JOURNAL IV

THE WIDE WORLD, NO. 2

[Emerson was now a Senior, seventeen years old, and with his loved brother, Edward Bliss Emerson, who had just entered the Freshman class, occupied room No. 9 Hollis.]

October, 1820.

I have determined to grant a new charter to my pen, having finished my commonplace book, which I commenced in January, and with as much success as I was ambitious of — whose whole aim was the small utility of being the exchequer to the accumulating store of organized verbs, nouns and substantives, to wit, sentences. It has been a source of entertainment, and accomplished its end, and on this account has induced me to repeat or rather continue the experiment. Wherefore, On!

To forget for a season the world and its concerns, and to separate the soul for sublime contemplation till it has lost the sense of circumstances, and is decking itself in plumage drawn out from the gay wardrobe of Fancy, is a recreation and a rapture of which few men can avail themselves. But this privilege, in common with other great gifts of Nature, is attainable if not inborn. It is denied altogether to three classes at least of mankind, viz.: the queer, the downright, and the ungainly. This is by no means a careless or fanciful classification, although rather a restricted sense belongs to these epithets. By “the queer” I understand those animals of oddity whose disgusting eccentricity flows from a conceited character and the lack of common sense. I characterize “the downright” only as people who do *jobs*. And “the ungainly” points exclusively at some quaint lantern countenances who have at one time and another shocked my nerves and nauseated my taste by their hideous aspects. With cautious explanation we advance from these degraded stages of intellect, this doleful frontispiece of creation, to prouder orders of mind. Ordinary men claim the intermittent exercise of this power of beautiful abstraction; but to the souls only of the mightiest is it given to command the disappearance of land and sea, and mankind and things, and they vanish. Then comes the Enchanter illuminating the glorious vision with hues from heaven, granting thoughts of other worlds gilded with lustre of ravishment and delight, till the Hours, teeming with loveliness and Joy, roll by uncounted. Exulting in the exercise of this prerogative, the poet, truly called so, has entreated the reluctant permission.

“And forever shalt thou dwell
In the spirit of this spell.”
October 6th, 1820

I have listened this evening to an eloquent lecture of the elegant Professor of French and Spanish Literature on the subject of the extent of the language, a subject which bears on the face of it dullness and dread — every soul present warmly acknowledged the force of delineation when the great deluge of the French language, sweeping down all the feeble barriers of ephemeral dialects, carried captive the languages and literature of all Europe, while in the commotions of politics the German thrones were dashed to pieces against each other on this great and wide sea.

When bounding Fancy leaves the clods of earth
To riot in the regions of her birth,

Where, robed in light, the Genii of the Stars
Launch in refulgent space their diamond cars,
Or in pavilions of celestial pride,
Serene above all influence beside,
Vent the bold joy which swells the glorious soul
Rich with the rapture of secure controul,
Onward, around, their golden visions stray
Till only Glory can their range delay.

Well, I began with prose and have mustered up ten lines of poetry, which will answer rarely to lighten the labour of the next theme. It is half past 10, and time to put away *The Wide World* and its concerns, and consign my indolent limbs to comfortable repose. *Ergo* cease, my pen, “To witch the world with noble penmanship!”

October 12th.

I should write a theme this morning, but cruel Destiny forbids the thought of rainbow colours to rise. I want to write poetry to add to “When bounding,” *etc.*

October 15th. Different mortals improve resources of happiness which are entirely different. This I find more apparent in the familiar instances obvious at college recitations. My more fortunate neighbours exult in the display of

mathematical study, while I, after feeling the humiliating sense of dependence and inferiority, which, like the goading, soul-sickening sense of extreme poverty, palsy effort, esteem myself abundantly compensated, if with my pen, I can marshal whole catalogues of nouns and verbs, to express to the life the imbecility I felt....

Mr. Everett says:— “the shout of admiration is lost ere it reaches the arches of heaven, but there is an all-seeing eye which looks deep down into the recesses of the obscurest heart. It is a small matter to abstain from vice to which there is no temptation, or to perform a virtue which is standing by you with crowns for your head; but it is the obscure, struggling and unsuccessful virtue which meets with reward.” *Exhibition night*. This tumultuous day is done. The character of its thought-weather is always extremely singular. Fuller than any other day of great thoughts and poets’ dreams, of hope and joy and pride, and then closed with merriment and wine, evincing or eliciting gay, fraternal feeling enough; but brutalized and defiled with excess of physical enjoyment; leaving the mind distracted and unfit for pursuits of soberness. Barnwell’s Oration contained sublime images. — One was of great power — a terrible description of the fire-tempest which overshadowed Sodom and Gomorrha — another description of the waterspout of the Pacific was noble. A great struggle of ambition is going on between Barnwell and Upham. Thundering and lightning are faint and tame descriptions of the course of astonishing eloquence. You double the force of painting if you describe it as it is.

The flashing eye, that fills up the chasms of language, the living brow, throwing meaning and intellect into every furrow and every frown; the stamping foot, the labouring limbs, the desperate gesture, these must all be seen in their strong exercise, before the vivid conception of their effect can be adequately felt. And then a man must separate and discipline and intoxicate his mind before he can enjoy the glory of the orator, when mighty thoughts come crowding on the soul; he must learn to harrow up unwelcome recollections and concentrate woe and horror and disgust till his own heart sickens; he must stretch forth his arm and array the bright ideas which have settled around him till they gather to forceful and appalling sublimity.

October 24th.

I begin to believe in the Indian doctrine of eye-fascination. The cold blue eye of — has so intimately connected him with my thoughts and visions that a dozen times a day, and as often by night, I find myself wholly wrapt up in conjectures of his character and inclinations. We have had already two or three long profound stares at each other. Be it wise or weak or superstitious, I must know

him.

Perhaps thy lot in life is higher
Than the Fates assign to me,
While they fulfil thy large desire,
And bid my hopes as visions flee.

But grant me still in joy or sorrow,
In grief or hope, to claim thy heart,
And I will then defy the morrow
Whilst I fulfil a loyal part.

October 25.

I find myself often idle, vagrant, stupid and hollow. This is somewhat appalling and, if I do not discipline myself with diligent care, I shall suffer severely from remorse and the sense of inferiority hereafter. All around me are industrious and will be great, I am indolent and shall be insignificant. Avert it, heaven! avert it, virtue! I need excitement.

November 1.

My opinion of — was strangely lowered by hearing that he was “proverbially idle.” This was redeemed by learning that he was a “superior man.” This week, a little eventful in college, has brought a share of its accidents to him.

November 2.

What a grand man was Milton! so marked by nature for the great Epic Poet that was to bear up the name of these latter times. In “Reason of Church Government urged against Prelaty,” written while young, his spirit is already communing with itself and stretching out in its colossal proportions and yearning for the destiny he was appointed to fulfil.

November 10.

“The Abbot” must be to its author “a source of unmixed delight and unchastened pride.”

November 10.

Young Waldo, when in your thick-coming whims, you feel an itching to *engrave*, take a piece of glass and cover it with a thin film of wax or isinglass and trace the proposed figure with a steel point. Place this over a vessel containing a mixture of powdered fluor-spar, and sulphuric acid gently heated. The acid gas coming into contact with the uncovered parts of the glass combines with and removes the silex, as well probably as the alkali with which it is united, and lines more or less deep are thus formed — according to Gorham's Chemistry (Article, *Silicon*), page 265, volume one.

Observe this. Mr. Everett notices that a temperate climate has always been found necessary to a high national character.

Also, Mr. Waldo, if you would like to find the sublimest attainable sayings on the destruction of nations, *Vide* 4th book of the Sybilline Collections.

November 18th.

I shall subjoin some recipes for the terrible void which ruins ever and anon the mind's peace, and is otherwise called Unhappiness.

1. — Take Scott's Novels and read carefully the mottoes of the chapters; or, if you prefer reading a novel itself, take the "Bride of Lammermoor." 1

2. — Sometimes (seldom) the finest parts of Cowper's "Task" will answer the purpose. I refer to the home-scenes.

3. — For the same reason that I would take Scott's mottoes, I would also take an old tragedy such as Ben Jonson's, Otway's, Congreve's; in short, any thing of that kind which leads as far as possible from the usual trains of thought.

4. — Make recipes to add to this list.

December 4th, 1820.

Here at Cambridge in my cheerless schoolroom. Sunday Evening I heard Mr. Everett preach at the Old South a charity sermon — one of his most (perhaps the most) eloquent efforts.

December 5th.

It appears to me that it is a secret of the art of eloquence to know that a powerful aid would be derived from the use of forms of language which were generally known to men in their infancy, and which now, under another and unknown garb, but forcibly reminding them of early impressions, are likely to be mistaken for opinions whose beginning they cannot recollect, and therefore suppose them innate. At least, if by such operation they cannot convince the mind, they may serve to win attention by this awakening but ambiguous charm.

By these forms of language I mean a paraphrase of some sentence in a *Primer* or other child's book common to the country. The spell would be more perfect, perhaps, if, instead of such a paraphrase, the words of a sentence should be modulated to the cadence of the aforesaid infant literature. I dare not subjoin an example.

The human soul, the world, the universe are labouring on to their magnificent consummation. We are not fashioned thus marvellously for naught. The straining conceptions of man, the monuments of his reason and the whole furniture of his faculties is [sic] adapted to mightier views of things than the mightiest he has yet beheld. Roll on, then, thou stupendous Universe, in sublime, incomprehensible solitude, in an unbeheld but sure path. The finger of God is pointing out your way. And when ages shall have elapsed and time is no more, while the stars shall fall from heaven and the Sun become darkness and the moon blood, human intellect, purified and sublimed, shall mount to perfection of unmeasured and ineffable enjoyment of knowledge and glory. Man shall come to the presence of Jehovah. (In the manner of Chateaubriand.) *December 15th.*

I claim and clasp a moment's respite from this irksome school to saunter in the fields of my own wayward thought. The afternoon was gloomy and preparing to snow, — dull, ugly weather. But when I came out from the hot, steaming, stoved, stinking, dirty, A-B spellingschool-room, I almost soared and mounted the atmosphere at breathing the free magnificent air, the noble breath of life. It was a delightful exhilaration; but it soon passed off.

It is impossible that the distribution of rewards hereafter should not be in gradation. How inconsistent with justice would it be that all the boundless varieties of desert and condition should be levelled to a single lot — all, from the agonized martyr, who was sawn asunder for the faith, to the deathbed of a modern Christian, where a soul which was never tempted, and a sinless innocence which was never tried, has sighed out a harmless life on beds of down and accompanied and piloted to heaven by the prayerful sympathy of the saints on earth. (In the manner of Everett.) The other day read Edinburgh Review of Drummond's "Academic Questions." The review and the reviewed are both beautiful specimens of an elegant metaphysical style.

Attended Mr. Ticknor's Lecture on Voltaire.

1821

January 9th, 1821. Have heard to-day another consecrated display of genius — of the insinuating and overwhelming effect of eloquent manners and style, when

made sacred and impregnable by the subject which they are to enforce — Mr. Everett's sermon before the Howard Benevolent Society. He told a very affecting anecdote. "I have known a woman in this town go out to work with her own hands to pay for the wooden coffin which was to enclose the dust of her only child. I prayed with her when there was none to stand by her but he who was to bear that dust to the tomb."

There was a vast congregation, but while he spoke as silent as death. Unluckily, in the pauses, however, they shook the house with their hideous convulsions; for when he raised his handkerchief to his face after a pause in the sermon, it seemed almost a concerted signal for the Old South to cough.

Let those now cough who never coughed before, And those who always cough, cough now the more.

February 7th.

The religion of my Aunt is the purest and most sublime of any I can conceive. It appears to be based on broad and deep and remote principles of expediency and adequateness to an end — principles which few can comprehend and fewer feel. It labours to reconcile the apparent insignificance of the field to the surpassing grandeur of the Operator, and founds the benignity and Mercy of the Scheme on adventurous but probable comparisons of the condition of other orders of being. Although it is an intellectual offspring of beauty and splendour, if that were all, it breathes a practical spirit of rigid and austere devotion. It is independent of forms and ceremonies, and its ethereal nature gives a glow of soul to her whole life. She is the Weird-woman of her religion, and conceives herself always bound to walk in narrow but exalted paths, which lead onward to interminable regions of rapturous and sublime glory.

March 14th.

I am reading Price, on Morals, and intend to read it with care and commentary. I shall set down here what remarks occur to me upon the matter or manner of his argument. On the 56th page, Dr. Price says that right and wrong are not determined by any reasoning or deduction, but by the ultimate perception of the human mind. It is to be desired that this were capable of satisfactory proof, but, as it is in direct opposition to the sceptical philosophy, it cannot stand unsupported by strong and sufficient evidence. I will however read more and see if it is proved or no. — He saith that the Understanding is this ultimate determiner.

CAMBRIDGE, *March 25.*

Sabbath.

I am sick — if I should die what would become of me? We forget ourselves and our destinies in health, and the chief use of temporary sickness is to remind us of these concerns. I must improve my time better. I must prepare myself for the great profession I have purposed to undertake. I am to give my soul to God and withdraw from sin and the world the idle or vicious time and thoughts I have sacrificed to them; and let me consider this as a resolution by which I pledge myself to act in all variety of circumstances, and to which I must recur often in times of carelessness and temptation, to measure my conduct by the rule of conscience.

CAMBRIDGE, *April 1.*

It is Sabbath again, and I am for the most part recovered. Is it a wise dispensation that we can never know what influence our own prayers have in restoring the health we have prayed God to restore? It has been thought by some that in these immediate effects they have no influence; in general, that their good is prospective and that the world is governed by Providence through the instrumentality of general laws, which are only broken on the great occasions of the world or other portions of the Creator's works. But what have I wandered from? I think that it infinitely removes heavenly dispensations from earthly ones. This manner of giving gifts without expressing the reason for which they are bestowed, and leaving it to the heart to make the application, and to discover the giver, is worthy of a supreme, ineffable intelligence.

Well, I am sorry.... The anecdote which I accidentally heard of — shews him more like his neighbours than I should wish him to be. I shall have to throw him up after all, as a cheat of fancy. Before I ever saw him, I wished my *friend* to be different from any individual I had seen. I invested him with a solemn cast of mind, full of poetic feeling, and an idolater of friendship, and possessing a vein of rich sober thought.

For a year I have entertained towards him the same feelings and should be sorry to lose him altogether before we have ever exchanged above a dozen words.

May 2.

I am more puzzled than ever with— 's conduct. He came out to meet me yesterday, and I, observing him, just before we met, turned another corner and

most strangely avoided him. This morning I went out to meet him in a different direction, and stopped to speak with a lounger, in order to be directly in— ‘sway; but — turned into the first gate and went towards Stoughton. All this [took place (?)] without any apparent design and as [soberly (?)] as if both were intent on some tremendous affair.

May 10th.

Huzza for my Magician! he engages me finely. I am as interested in the tale and as anxious to know the end as any other reader could be. By the by, this tale of mine might be told with powerful effect by a man of good voice and natural eloquence.

June 10.

Mr. Everett in his Artillery Election sermon, to preface his own prophecy that the century now begun (i e. third century since the Plymouth landing) will be the most important in determining the future fates of America, told this story: — In 1417, when Huss was bound to the stake at Prague, he declared amid his tortures that after a hundred years a retribution should be made on papacy. The inhabitants of Prague wrote his words “*Post centum annos*” upon their standard and in their records, and in 1517 the Reformation by Luther began.

Books Lent

Kett’s Elements, both vols., to Angier. Telemaque, to Stackpole I.

Lacroix, to Gutterson.

Locke, 2. Vol., to Hill.

III and IV Cantoes of Childe Harold, — both lost.

Guy Mannering, to Lane.

Rhyming Dictionary, to Williams, A. B. Blair’s Rhetoric (abridgement), to Hooper.

Lay of the Last Minstrel, Lothrop.

Lady of the Lake, to *Idem*.

Adams’s Antiquities.

Books Inquirenda Mather’s Magnalia.

Dunlop’s History of Fiction.

Mattaire.

Swift. Froissart.

Davy's Chemistry.
Teignmouth's life of Jones.
Simmon's life of Milton. 3 Vol of Brit. Plutarch.
Chaucer.
Montaigne's Essays.
Germany (Stael).
Drummond's Academical Questions.
Price, on Morals.
Humboldt's Work on America.
Smith's Virginia.
Robertson's S. America.
History of Philip II.
Life of Shakspeare.

Subjects for Themes

Destruction of a city; poetry.
(Forensic) Whether Civil Government be founded on a compact expressed or implied.
The domestic relations as restraints on an adventurous spirit.
Influence of weather on intellectual temperament.
Character of any fancy portrait, as for instance.

AUTHORS OR BOOKS QUOTED OR REFERRED TO IN JOURNALS OF
1820 AND 1821

Bible, *Apocrypha*.

Pythagoras; Anaxagoras; Aristotle; Xenophon's and Plato's accounts of Socrates; Homer; Æschylus; Sophocles; Euripides; Aristophanes; Archelaus; Theocritus (*apud Kennet's Greek Poets*).

Cicero; Lucretius; Virgil; Horace; Epictetus; Arrian; Marcus Antoninus; Epicurus; Zendavesta, (*apud Gibbon*); Arthurian Romances; De Joinville, *Chronicle of St. Louis*; Plays and Masques of Shakespeare, Ben Jonson (The Alchymist), Beaumont and Fletcher, Massinger, Otway; Bacon, *Novum Organum*; Milton, *Paradise Lost*, *Comus*, *Samson Agonis tes*; Rev. Isaac Barrow; Montaigne, *Essays*; Montesquieu, *Lettres Persanes*; Chateaubriand; Cowper, *Task*; Dryden, *Absalom and Achitophel*; Corneille; Racine; Hobbes; Swift; Sterne; Addison; Pope; Descartes; Cudworth; Locke; Woolaston; Shaftsbury; Mosheim; Hume, *Essays*; Priestly; Paley; Dugald Stewart; Dr. Reid; Dr. Price, *On Morals*; Mellen, *On Divine Vengeance*; Forsyth, *Principles of*

Moral Science; Bishop Hall.

Johnson, *Lives of the Poets*; Gibbon, *Decline and Fall of the Roman Empire*; Burke, *Regicide Peace*; Bissel, *Life of Burke*; Edward Search's [Abraham Tucker] Writings.

Sismondi, *History of the Italian Republics*; Scott, *Guy Mannering*, *Old Mortality*, *Monastery*, and *Minstrelsy of the Scottish Border*; Lockhart, *Spanish Ballads*; Moore, *Lalla Rookh*; Campbell, *Poems*; Wordsworth, *Excursion*; Southey, *Curse of Kehama*; Byron, *Manfred*, *Corsair*, and *Childe Harold*; Charles Lamb, *Essays*; Maclaurin, *Life of Sir Isaac Newton*; Dean Milman, *Samor, the Lord of the Bright City*, and *Fall of Jerusalem*; Hillhouse, *Percy's Masque*; Bryant, *Waterfowl*, and *Murdered Traveller*; Edward Everett's Lectures; Edinburgh and Quarterly Reviews.

THE UNIVERSE

[During the years 1820 and 1821 Emerson kept a Quotation Book, named as above, made up of passages from his miscellaneous reading in the College Library or whatever other treasure-houses of letters were open to him. These passages are neatly copied in a small hand on folio sheets, numbered, which were afterwards folded once and placed in a cover. The range is somewhat remarkable and a list is given below.]

Spenser's *View of the State of Ireland*, *apud* Warton.

Diversions of Queen Elizabeth's maids of honor; Harrison, *apud* Hollinshed's *Chronicle*.

Verses of Homer, sung by him and a chorus of boys before the houses of the rich men in Samos; original Greek and a metrical rendering, *apud* Basil Kennet's *Lives and Characters of the Greek Poets*, 1697.

Pope Gregory VII's Excommunication of the Emperor Henry IV, *apud* Berington's *Abelard and Heloisa*.

Queen Elizabeth's infatuation for the Earl of Leicester, *apud* Camden's *Annales Elizabethae*.

Extract from a scene in Byron's *Manfred*.

Chaucer's account of his sufferings in prison.

Extract from letter of Cicero to Plancus, Middleton's *Cicero*.

Extract from poem by Cornwall, describing a pauper's burial.

Close of the conference between the Jewess Rebecca and Brian de Bois

Gilbert, in Scott's *Ivanhoe*.

Death and funeral of Spenser, *Camden*.

Erasmus's (Latin) epigram to Sir T. More, when he did not return the borrowed horse of the latter.

Alleged epitaph written by Virgil for himself.

The pedantry of the times of Queen Elizabeth, Warton.

On the Art of Rhetorick, Richard Wilson, *apud* Burnett.

On Bessarion, by Marcus Ficinus, *apud* Hody, *De Graecis Illustribus*.

Suppressed passage from Soliloquy of Bertram in play by Maturin, *apud* Edinburgh Review.

Passage from Shipwreck in Byron's *Don Juan*.

Extract from Sermon of Rev. Isaac Barrow, on comparative ineffectiveness of Human Laws.

Concerning Shakespeare. Ben Jonson's *Discoveries*.

Concerning Bacon.

Collins's *Ode*, "How sleep the brave."

Extract from *Hebrew Melodies*, Byron.

Meg Merrilies' denunciation of the Laird of Ellangowan. Her prophecy of good to his son. *Guy Mannering*.

On shaking off Cupid's yoke, and on Emulation; Shakespeare's *Troilus and Cressida*.

Song of Runic Bard [quoted later in "Poetry and Imagination" in *Letters and Social Aims*, p. 59], Godwin.

Sforza's speech on his misfortunes. *Duke of Milan*; Massinger.

Meditation on *Conscience*; Bishop Hall.

Concluding passage of C. W. Upham's Oration, Exhibition, Aug. 1820.

The shadowing out of *Paradise Lost*; a long extract from Milton's *Reason of Church Government urged against Prelaty*, beginning "Although a poet, soaring in the high region of his fancies, with his garland and singing robes about him" etc.

Speech of Sir Bohort over the dead body of Lancelot. Ellis's *Specimens of Early English Romances*.

The Mourning Bride; Congreve.

The power of Chance in human inventions; Bacon's *Novum Organum* (Part 2 Section II).

Epitaph on Pizarro; Southey.

Long Extract from *Idealist*; Drummond's *Academical Questions*.

Reasonings *a priori*; *Moral Outline*, Dugald Stewart.

The angels the guides of the heavenly bodies; sermon of Jeremy Taylor.

Dialogue between a tyrant and a Stoic; Arrian, Priestley's translation.

Favourite passage, beginning "The unearthly voices ceased" in Scott's *Lay of the Last Minstrel*, Canto I.

Dreams, from *The Castle of Indolence*, Thomson.

Extracts from Scenes between Viola and the Duke, in *Twelfth Night*, Shakespeare.

Spenser's lamentation; *Mother Hubbard's Tale*.

The Nightingale; Thomson's *Seasons*.

Extract from the *Magnalia Christi* of Cotton Mather, as to the number of settlers in Massachusetts Bay.

Lord Bacon's expostulation with Queen Elizabeth, in a letter to the Earl of Devonshire.

Song from *Gipsies Metamorphosed*, Ben Jonson.

"Ode to Melancholy"; *The Passionate Madman*, Beaumont and Fletcher.

Extract from *Lord Herries's Complaint*, C. K. Sharpe, *apud* Drake's *Essays*.

The Origin of Fable; *Éloge de Fontaine*.

The Mariner's Dream.

Song of the Clown, *Twelfth Night*.

The Lombards' loss of opportunity to establish federated republics; Hallam's *Middle Ages*.

Decline of Ecclesiastical Power of Rome; Hallam's *Middle Ages*.

The defensive power and successes of federated republics. Sismondi, *Histoire des Républiques Italiens du Moyen Age*.

The bad omens attending the commencement of hostilities when Charles I set up his standard at Nottingham; *Clarendon's History*.

The character of Cromwell; *Clarendon's History*.

To the herb Rosemary; H. Kirke White.

Preface to one of Elizabeth's costly masques; Ben Jonson.

To a Waterfowl, William Cullen Bryant.

Close of the *Decline and Fall of the Roman Empire*; from Gibbon's *Memoirs of his own Life and Writings*.

A student's thought compared to a river which one undertakes to dam; Tucker's ("Edward Search") *Light of Nature*.

Deliberation and investigation compared to the hunting of a hound; Tucker.

JOURNAL

TEACHER

JOURNAL V

THE WIDE WORLD, NO. 3

[EMERSON seems to have kept no journal for the last half of 1821.

He had graduated in the summer of 1821, number thirty in a class of fifty-nine. His actual scholarship in the required branches must have been much lower, for it must be remembered that any misconduct might remove a greater or less number of marks for recitations. Hence a boy of quiet disposition might stand in the end much higher than a brilliant but disorderly one. But Emerson, none the less, had, night and day, been educating himself in his own way. He came just within the number of those to whom “parts” at Commencement were assigned, and in those days they were always delivered. His was the *Character of John Knox*, in a Colloquy on Knox, Penn, and Wesley, in which function he is said to have been rather negligent. He was Class Poet, a doubtful honour, as at least six had been asked before him, and refused.

His brother William, who graduated in 1818, was doing his best to maintain the family, and it became Waldo’s duty to help, for the case was urgent. William, aged twenty-two, had recently opened a finishing school for young ladies, in Boston, at his mother’s house, and now offered his brother, aged eighteen, the place of assistant. It was a trying place for a bashful boy, unused to girls, but he accepted. (See Cabot’s Memoirs, pages 69-72 and 86.)]

BOSTON, *January* 12, 1822.

After a considerable interval I am still willing to think that these commonplace books are very useful and harmless things, — at least sufficiently so, to warrant another trial.

CONTRAST

The principle of Contrast which we find engraven within — ... how came it there, whence did we derive it? Either the Deity has written it as one of his laws upon the human mind, or we have derived it from an observation of the invariable course of human affairs....

In this principle is lodged the safety of human institutions and human life. For suppose ambition excite against the peace of the world one of those incarnate fiends which have, at different periods, arisen to destroy the peace and good order of one community after another, and of nation after nation. Gradually the

lust of excess engendered by sudden prosperity debauches every virtue and steals away the Moral sense. The insolence of power tramples upon the laws of God and the rights of man.... Here, when the day of triumph burns with consuming splendour — here, the mind itself pauses to anticipate change near at hand. The victor must cease. Else would the very stones cry out. Day and Night contend against him; the Elements which he wielded rebel and crush him; the clouds nurse their thunders to blast him; he is lifted up on rebellious spears between heaven and earth unworthy and abhorred of both, to perish.

TNAMURYA (anagram of Aunt Mary)

“When that spell which can only be felt is thrown over the soul by the magic of genius, ‘Now lettest thou thy servant depart where all is boundless genius — or let us tarry forever in this grave, if thus illuminated,’ is the adoring language of the heart. Is it not a well known principle of human nature that moments of enthusiasm can produce sacrifices which demand no proportionate virtue to those which never pretend to fame?”...

RELIGION

The invisible connection between heaven and earth, the solitary principle which unites intellectual beings to an account and makes of men moral beings — religion — is distinct and peculiar, alike in its origin and in its end, from all other relations. It is essential to the Universe. You seek in vain to contemplate the order of things apart from its existence. You can no more banish this than you can separate from yourself the notions of Space and Duration. Through all the perverse mazes and shadows of infidelity the from remote New England towns where she boarded, were one of the strongest influences of the earlier part of his life, quickening and enlarging his thoughts and also provoking him to defend its independence. His deep debt to her he always acknowledged. See “Mary Moody Emerson,” in his *Lectures and Biographical Sketches*.

Light still makes itself visible, until the reluctant mind shudders to acknowledge the eternal encompassing presence of Deity. If you can abstract it from the Universe, the Soul is bewildered by a system of things of which no account can be given; instances of tremendous power — and no hand found to form them; a thousand creations in a thousand spheres all pointing upward to a single point — and no object there to see and receive — it is all a vast anomaly. Restore Religion and you give to those energies a sublime object....

The History of Religion involves circumstances of remarkable interest, and it is almost all that we are able to trace in the passage of the remote ages of the world. It is a beautiful picture, and just as it should be, that in the character of Noah, of Abraham, and the early denizens of the world, we trace no feature which does not belong peculiarly to their religion; — it was their life. It was natural that when the mountains were just swelling upward under the hand of the Creator, when his bow was just built and painted in the sky, when the stone-tables were yet unbroken by Moses which now lie mouldering in fragments upon Sinai — that Men should walk with God. As we come downward and leave the immediate precincts of the tabernacle, although we become sensible of the progressive departure from the truth, yet each superstition retains the inherent beauty of the first form, disguised and defaced, in some degree, by ill-adjusted and needless apparel. Indeed, the only records by which the early ages of any nation are remembered is their religion. We know nothing of the first empires which grasped the sceptre of the earth in Egypt, Assyria, or Persia, but their modes of worship. And this fact forcibly suggests the idea that the only true and legitimate vehicle of immortality, the only bond of connection which can traverse the long duration which separates the ends of the world and unites the first people to the knowledge and sympathy of the last people, is religion.

We have said that the first nations were remembered by their religion; and in tracing down their history a little farther until the time of written languages, we find that the first efforts which the human genius made to commit its ideas to permanent signs were exercised upon the great topic which stood uppermost in an unperverted mind. Poetry attempted to fashion a probable picture of the Creation, to explore the character of Providence, to impress upon mankind the enlightened views of a moral government in the world which had been disclosed to her own eye.

But the date of *writing* marks the second age in the history of Religion, and we have parted from the more attractive memory of the first. The naked savage who ascends the mountain, — because the dusky summit inclines him to believe that the Great Spirit inhabits there, — and erects a stone as his simple and sincere tribute to the Majesty of that being, is an object infinitely more agreeable to our imagination and feelings than the loftier and more excellent offering of lettered Science. And although reason teaches us that the deliberate devotion of a philosophic mind is more worth than the vague fears of a superstitious one, yet we are apt to inquire if the pride of learning has not been known to harden the mind even to the plain proofs of Divine Providence.

The difference between the primitive forms of religion and the second dispensation (and likewise the first) consisted in this, that the first were the

voluntary offerings of the imagination and the understanding to a sublime but unseen Spirit, and the last were the implicit submissions of duty, of custom, of fear. For this reason we sympathize more with the savage.

It is somewhat remarkable that, in the simple institutions of the barbarous nations, God was worshipped through sublime and awful images, and nothing mean and disgusting was attributed to his character. It were needless to repeat that Caesar found the German nations without idols, deeming it unworthy to build a house for him that made the Universe; — or to transcribe the Indian creed of the Great Spirit, so scrupulously pure that it rejected what it could not reconcile of an evil world to a Benevolent Cause, and created an opposite active evil Principle on which to pile the sin and the storm, pain and death which beset human life. Such also was the Persian faith, which thought the Fire no unfit emblem of Divinity; and if the Druid sacrificed men on the altar, an oak forest was the temple, and it was not offered to an ox or an ass, but to an adequate notion of the Supreme Being. In all these the ways of Providence were traced in the hurricane, the sea, the cloud, or the earthquake, and therefore the mind must needs be elevated that would converse with them. But as civilized life advanced, and civil and social institutions were erected, and life became more intellectual, devotion was degraded by a profane and vulgar idolatry;... The gods and demigods went fast below the standard of human respectability, until the worship of superior beings, the holiest feeling of which the human soul is capable, and that perhaps for which it was made, seems to have almost passed out of repute and name among honest patriots, and Olympus needed to be cleaned of its impurities, and the thrones of heaven to be subverted for the peace of society. This fact, that the seeds of corruption are buried in the causes of improvement strikes us everywhere in the political, moral, and national history of the world. It seems to indicate the intentions of Providence to limit human perfectibility and to bind together good and evil, like life and death, by indissoluble connection.... The idea of *power* seems to have been everywhere at the bottom of the Theology; the human mind has a propensity to refer all its higher feelings, all its veneration for virtue and greatness, to something wherein this attribute is supposed to reside. Cause and Effect is another name for the direction of this sentiment.... What are Honour, Mercy, Pride, Humility, Revenge — but sensations which have reference to in-dwelling *power*? Honour is the worthiness which it gives; Mercy, the temperate forbearance of its exercise; Pride, the self-respect which attends its possession; Humility, the acknowledgement of its existence; Revenge, a barbarous use to which it is put. It is shared among all beings, but in all has a limit and a beginning, on which the mind's eye eagerly fastens, with an immediate attempt to trace the sources

whence the subtle principle was derived. It is a great flood which encircles the universe and is poured out in unnumbered channels to feed the fountains of life and the wants of Creation, but everywhere runs back again and is swallowed up in its eternal source. That source is God.

Will the disputes upon the Nature of God, upon Trinitarianism and Unitarianism, never yield to a purer pursuit and to practical inquiry? It is possible, for all we know to the contrary, that God may exist in a threefold Unity; but if it were so, since it is inconceivable to us, he would never have revealed to us such an existence which we cannot describe or comprehend. Infinite Wisdom established the foundations of knowledge in the mind, so that twice two could never make anything else than four. As soon as this can be otherwise, our faith is loosened and science abolished. Three may be one, and one three.

OF POETRY

It is the language of the passions which do not ordinarily find their full expression in the sober strains of prose. We should rest our argument on this: that there seems to be a tendency in the passions to clothe fanciful views of objects in beautiful language. It seems to consist in the pleasure of finding out a connection between a material image and a moral sentiment. Few men are safe when they begin to describe poetry; they talk at random, or hardly prevent the ends of the lines from rhyming, and are like the mimic of a madman who went mad himself. Poetry never offers a distinct set of sensations. Science penetrates the sky, Philosophy explains its adaptation to our wants, and Poetry grasps at its striking phenomena and combines them with the moral sentiment which they naturally suggest. Its images are nothing but the striking occurrences selected from Nature and Art and clothed in an artful combination of sounds.... But poetical expression constitutes to half the world the beauty of poetry and in this it seems to resemble Algebra, for both make language an instrument and depend solely upon it without having any abstracted use.

There are few things which the well-wishers of American literature have more at heart than our national poetry. For every thing else, for science, and morals and art they are willing to wait the gradual development, but they are in haste to pluck the bright blossoms from the fair tree which grows fast by the hill of Parnassus. For when a nation has found time for the luxury and refinement of poetry it takes off the reproach of a sluggish genius and of ignorant indifference.

Poetical expression serves to embellish dull thoughts, but we love better to follow the poet, when the muse is so ethereal and the thought so sublime that language sinks beneath it.

DRAMA

Saturday Evening, *January 19th.*

When a species of composition has been written with success in a brilliant period, and in another and remote land has been likewise known, and after having been discontinued and forgotten is revived in another age and another country — we have every right to say that such an art is agreeable to the dictates of nature. This is the history of the Drama, and it has every reasonable indication that it will every where flourish under favourable circumstances. It is easy also to distinguish between those parts of it which are unnatural and the forced production of a state of society, and those which are the genuine offspring of the human spirit. In the Mysteries, — the French Drama of the Middle Ages, — such personages were introduced upon the stage as “Such/* “Each One,” and “Both,” and performed their parts as gravely and as much to the satisfaction of a perverted public taste as did ever the most accomplished Iphigenia, Electra, Caesar. Such a folly as this is evidently the appropriate spawn of the age of the Schools and the pleasantry of confirmed pedantry. It does not follow that, if anything be out of the common course of human experience, it is not natural to the drama and may not talk with ordinary agents. The representation of the dead consorts perfectly with the feelings of the most refined taste, and in every age has formed a part of dramatic entertainment. For the belief in unseen agents is so universal, and indeed is a consequence of a belief in God, that no mind ever revolts at the idea.

A constituent part of the Drama from its very invention was the ornament of scenery.

This suggests itself unavoidably as an important element of the plan which acts altogether by deceiving the audience into the conviction that the actors really *are* the persons whom they represent. The illusion could be best promoted by removing all extraneous circumstances and affording the imagination the help of all the senses. Independently of this, it is a high gratification to be suddenly removed from all the common objects of daily occurrence, and admitted to a spectacle of shining cities, of imposing mountain scenery, of thrones, and of magnificent apparel.

May.

I rejoice in Shakspeare's empire as far as it is reckless of that learning which some dotards make a merit of; but, as sustained on the sensual, regret and abhor his dominion. It is for a still brighter era to erase his deformities, and possibly set a mightier magician over the witcheries of fancy. But to me — to his old admirers, nothing could supply his place....

[A VENTURE IN ROMANCE]

I was the pampered child of the East. I was born where the soft western gale breathed upon me the fragrance of cinnamon groves, and through the seventy windows of my hall the eye fell on the Arabian harvest. An hundred elephants, apparelled in cloth of gold, carried my train to war, and the smile of the Great King beamed upon Omar. But now — the broad Indian moon looks through the broken arches of my tower, and the wing of Desolation fans me with poisonous airs; the spider's threads are the tapestry which adorns my walls, and the rain of the night is heard in my halls for the music of the daughters of Cashmere. Wail, wail for me, ye who put on honour as gay drapery!

IDEALISM

Deep in the soul a strong delusion dwells, A curious round of fairly fashioned dreams; Yet, quietly the pleasant vision swells Its gay proportions far around, the streams Of the wide universe their wealth supply, Their everlasting sources furnish forth The fabled splendours, whose immortal dye Colours the scene with hues which mock the summer sky.

And oh how sweetly in youth's seraph soul, That vision, like the light of heaven, doth rest.

Its name is Life; its Hours their circle roll Like angels in the robes of morning drest; And every phantom of the train is blest Who shakes his plumes upon the odorous air, Or lights a star upon his azure crest; And while the lovely beam reposes there, Joy in the guileless heart his welcome will prepare.

The circle of the sciences is no more firmly bound together than the circle of

the virtues; but, in the first, a man cannot hope to be thoroughly acquainted with all, for they are in some degree incompatible; whereas, in the last, his character will be defective if it do not combine the whole, and form that harmony which results from all.

JOURNAL VI THE WIDE WORLD, NO. 4

DEDICATION

BOSTON, *February 22*, 1822.

I have invoked successively the Muse, the fairies, the witches, and Wisdom to preside over my creations; I have summoned Imagination from within, and Nature from without; I have called on Time, and assembled about the slight work the Hours of his train — But the Powers were unpropitious; fate was averse. Some other spell must be chaunted, some other melody sung. I will devote it to the dead. The mind shall anticipate a few fleeting hours, and borrow its tone from what all that have been are, and all that are will shortly be. All that adorns this world are the gifts which they left in their passage through it. To these monuments which they bequeathed, and to their shades which watch in the universe, I apply for excitement, and I dedicate my shortlived flowers.

CONTINUATION OF SOME REMARKS UPON PROVIDENCE

Saturday Eve., *February 23*.

No elaborate argument can remove the fact which strikes the senses, and which is the first and chief difficulty in the way of the belief of an omnipotent good Principle, namely, the existence of evil in the world, and next, the great share it has in the texture of human life, and its successful opposition to virtue and happiness. If we suppose the character of the Author to be unmixed Goodness, the work must be likewise pure, and an ultimate failure of success subtracts Wisdom and Omnipotence (if indeed the one be not involved in the other) from the qualities of the forming Being, that is, — demonstrates him not to be God. Human wisdom sees the imperfection of the part, and labours to make out the perfection of the whole from the analogies of the universe which fall under its eye, from its judgments upon the language which testimony attributes to this Creator, and from the intuitive and acquired conclusions which it forms upon Nature.

But another great testimony to which the mind will naturally turn to confirm or efface its convictions of a superintending hand, is History; to see if Time will fulfil any larger part of that Justice which should take place than falls under the life of one man. And this is an evidence which grows with every year of time,

which could not be open to the primitive races of mankind, and which, if its weight be found favourable, will develop to the last ages the connecting bonds which unite the fate of many generations, — the plan, of ample outline and intricate parts, on Emerson, that he would not look on the dark side of the world, on evil, on sin. His attempts to deal with such problems he later considered as among the diseases of childhood.

In “Spiritual Laws” (*Essays*, 1st Series) he said: “The intellectual life may be kept clean and healthful, if a man will live the life of nature, and not import into his mind difficulties which are none of his. No man need be perplexed in his speculations. Let him do and say what strictly belongs to him, and though very ignorant of books, his nature shall not yield him any intellectual obstructions and doubts. Our young people are diseased with the theological problems of original sin, predestination and the like. These never presented a practical difficulty to any man, — never darkened across any man’s road who did not go out of his way to seek them. These are the soul’s mumps and measles and whooping-cough, and those who have not caught them cannot describe their health or prescribe the cure. A simple mind will not know these enemies.” which will reveal the obscure relations between one and another remote scene, whereby a succession of misfortune and suffering is counterbalanced by an equal sum of happiness, and the unnatural success of vice and its undue preponderance over ages and nations of the world, is set right again by the triumphs of virtue over other ages and nations. Moralists have regarded the adjustment of this great and perplexing variety in human condition as the exhibition to the Universe of a great picture, in which, for the harmony of the whole, much is encompassed with deep shade; and the painted figures may not complain to the Artist because they have been arranged and coloured in such or such a manner. But is this a fair view? are free agents nothing more than painted emblems? are — (but I have left my proper course of thought and must return to it again) — I was about to say that it is history alone which can determine whether the means answer the end, and whether the design be fully accomplished in those schemes whose fulfilment involves many ages; e g. to discover the typical and direct relations between the Jewish and Christian dispensations; and to watch the fulfilment of prophecy. But whether these schemes be answered or not, the question still recurs — why did a good Providence permit at all the existence of evil, or why does any one individual suffer from the vice of others, or the sickness and unhappiness which he did not bring on himself, but which is incident to his nature? The reply which each individual finds himself able to make to this question will go far to doubt or to justify his idea of Providence.

It may be well by way of solving this question to propose and answer two

more — What is evil? and, What is its origin?

What is evil? There is an answer from every corner of this globe — from every mountain and valley and sea. The enslaved, the sick, the disappointed, the poor, the unfortunate, the dying, the surviving, cry out, It is here. Every man points to his dwelling or strikes his breast to say, It is here. An enumeration of some of the most prominent evils in society will illustrate the variety and malignity of this disease.

What is its origin? The sin which Adam brought into the world and entailed upon his children.

One of the finest chapters in the Old Testament is the song of Deborah and Barak, Judges V. q v.!!

[NOVELS]

The novelist must fasten the skirts of his tale to scenes or traditions so well known as to make it impossible to disbelieve, and so obscure as not to obtrude repugnant facts upon the finished deception he weaves.

[COLLEGE REVISITED]

I have not much cause, I sometimes think, to wish my Alma Mater well, personally; I was not often highly flattered by success, and was every day mortified by my own ill fate or ill conduct. Still, when I went today to the ground where I had had the brightest thoughts of my little life and filled up the little measure of my knowledge, and had felt sentimental for a time, and poetical for a time, and had seen many fine faces, and traversed many fine walks, and enjoyed much pleasant, learned, or friendly society, — I felt a crowd of pleasant thoughts, as I went posting about from place to place, and room to chapel.

February 28, 1822.

Few of my pages have been filled so little to my own satisfaction as these — and why? — because the air has been so fine, and my visits so pleasant, and myself so full of pleasant social feelings, for a day or two past, that the mind has not possessed sufficiently the cold, frigid tone which is indispensable to become so *oracular* as it hath been of late. *Etsi mearum cogitationum laus(et honor?) non tam magna quam ante a fuit, tamen gaudium voluptatemque majorem accipit, quoniam sentire principia amoris me credebam. Vidi amicum etsi*

veterem, ignotum; alteram vidi notam et noscendam; ambo, forsitan, si placet Deo, partem vitae, partem mei facient. Pcenitet mei res magnas narrare cum verbis qualibus tyro uti solet.

At mid day in the crowd of care,
The unbidden thought will come,
And force the obedient blush prepare Reluctant welcome home;
And in the corners of the heart,
And in the Passions' cell,
It bids my thoughts to battle start, Which fain would peaceful dwell.
Peace, Pleasure, Pride, and Joy, and Grief, Awake the chaos wild, — But
worse and cursed the relief

Which sense and strife beguiled. (To-wit, Indifference.) So much poetry for peculiar sources of pride, old and inveterate, and perhaps hereafter unintelligible. Still one's feelings are well worth speculation and I am desirous of remembering a date, (as that of the last page)...

A beautiful thought struck me suddenly, without any connection which I could trace with my previous trains of thought and feeling. It had no analogy to any notion I ever remembered to have formed; it surpassed all others in the energy and purity in which it clothed itself; it put by all others by the novelty it bore, and the grasp it laid upon every fibre; for the time, it absorbed all other thoughts; — all the faculties — each in his cell, bowed down and worshipped before this new Star. — Ye who roam among the living and the dead, over flowers or among the cherubims, in real or ideal universes, do not whisper my thought!

SOCIAL FEELINGS

... Solitude has but few sacrifices to make, and may be innocent, but can hardly be greatly virtuous like Abraham, like Job, like the Roman Regulus or the apostle Paul. Great actions, from their nature, are not done in the closet; they are performed in the face of the sun, and in behalf of the world....

Sabbath, *March 3.*

Animi ardor, de quo supra dixi, non extinctus est, sed mihi videtur non esse tam potens, tam clarus, tam magnus quam antea. Timeo ne caderet. Spero ut

viveret.

March 4.

VISION

A breathless solitude in a cottage in the woods beneath the magnificent splendour of this moonlight and with this autumnal coolness might drive one mad with excitement. Precipitous and shadowy mountains, thick forests and far winding rivers should sleep under the light, and add their charm to the fascination. The silence broken only by the far cry of the night bird; or disturbed by the distant shout of the peasant, or, at intervals, by those melancholy moanings of the wind which speak so expressively to the ear, — who would not admire? Let the Hours roll by uncounted, let the universe sleep on in this grand repose, but be the spell unbroken by aught of this world, by vulgar and disquieting cares; by a regret or a thought which might remind us of aught but Nature. Here is her Paradise, here is her throne. The stars in their courses roll silently; the oaks rock in their forests to the voice of the sighing breeze; the wall flowers on the top of the cliff nod over its giddy edge, and the worshipping enthusiast stands at the door of his tent mute and happy, while the leaves rustle down from the topmost boughs and cover his feet. A cry in the wilderness! the shriek and sudden sound of desolation! howl for him that comes riding on darkness through the midnight; that puts his hand forth to darken the moon, and quenches all the stars. Lo! where the awful pageantry rolleth now to the corners of the heaven; the fiery form shrouds his terrible brow behind the fragment of a stormy cloud, and the eyes of Creation gaze after the rushing chariot. Lo! he stands up in the Universe and with his hands he parts the firmament asunder from side to side. And as he trode upon the dragons, I saw the name which burned underneath. Wake, oh wake, ye who keep watch in the Universe! Time, Space, Eternity, ye Energies that live, — for his name is DESTRUCTION! — who keep the *Sceptre* of its eternal order, for He hath reached unto your treasures, and he feeleth after your sceptre to break it in pieces. Another cry went up, like the crash of broken spheres, the voice of dying worlds. It is night. — An exceeding noisy vision!

GREATNESS

Never mistake yourself to be great, or designed for greatness, because you have been visited by an indistinct and shadowy hope that something is reserved for you beyond the common lot. It is easier to aspire than to do the deeds. The very idleness which leaves you leisure to dream of honour is the insurmountable obstacle between you and it. Those who are fitly furnished for the weary passage from mediocrity to greatness seldom find time or appetite to indulge that hungry and boisterous importunity for excitement which weaker intellects are prone to display. That which helps them on to eminence is in itself sufficient to engross the attention of all their powers, and to occupy the aching void. Greatness never comes upon a man by surprise, and without his exertions or consent; No, it is another sort of Genii who traverse your path suddenly; it is *Poverty* which travels like an armed man; it is *Contempt* which meets you in the corners and for the New England boy. In later years Mr. Emerson used to recite to his children, imitating the manner, some fragments of their college oratory which still remained in his memory. highways with a hiss, and *Anger* which treads you down as with the lightning. Greatness is a property for which no man gets credit too soon; it must be possessed long before it is acknowledged. Nor do I think this to be so absolutely rare and unattainable as it is commonly esteemed. This very *hope*, and panting after it, which was alluded to, is, in some sort, an earnest of the possibility of success. God doubtless designed to form minds of different mould, and to create distinctions in intellect; still the extraordinary effects of education attest a capacity of improvement to an indefinite degree....

Newton was often at a loss when the conversation turned upon his own discoveries; Shakspeare was indifferent or opposed to the publication of his works, and idly left his books, careless himself, for others, for Britain, or the world to boast of. It is impossible to make arithmetical computation of *mind*. Still this indifference to trifles, and the sensibility to them, trace a very broad line of distinction between the first and second orders....

I am not sure but that the highest order of greatness, that which abandons earthly consanguinity, and allies itself to immortal minds, is that which exists in obscurity and is least known among mankind. For superiour intellects are only drawn out into society by the action of those inducements which society holds up to them. If, therefore, there are any who are above the solicitation of wealth, honour, and influence, and who can laugh even at the love of Fame, that last infirmity of noble minds, there will be nothing left worth offering them, to attract them from their solitudes; they must pass on through their discipline and education of life, unsympathized with, unknown, or perhaps, ignorantly despised. Thus the archangels pass among us unseen, for, if known, they could

not be appreciated, and having faculties and energies which our organs can never measure, it is better that we never meet.

March 7.

BALLAD

The Knight rode up to the castle-gate, But a grisly hag was there,
She chattered in spite, with muttered threat, And twisted her thin gray hair.

Her half-bald pate was a sorry sight, But her eyes went wide askew;
Two long dog-teeth, like dim twilight, Shone over her lips so blue.

“Fair ladye of love!” the Knight exclaimed, And bent his body low, “Thou
flower of beauty, widely famed, Roses feed thee, I trow.

“The boy Cupide attendeth thee,
The Graces thy sisters be;
Oh give me a lock of thy golden hair And make a faithful knight of me.”

The maiden clenched her shrivelled fist, And her eyes grew red with rage: —
“You may mock, Sir Simple, as loud as you list, But you *shall be* my (chosen)
page.

“I’ll give you a lock of the hair that’s left, Three hairs I’ll give to thee;
Beëlzebub knows, when I ‘m bereft, I will the stronger be.”

She plucked three hairs from her pye-bald head, And shrieked like a fishhorn
loud, — Straight of those hairs three snakes were made, That leaped on the
champion good; And one twined round his armed neck, And one twined round
each hand,

And the tails of the three in a black braid met In the grisly haggis hand.

And the hag she turned to a dragon green, With these she flew away, — And
never again those two were seen, Until the Judgement Day.

This book, in ordinary, is peculiarly devoted to original ideas, but I cannot resist the pleasure of setting down, in black and white, verses which I have repeated so often. It is a charm in one of Ben Jonson's Masques.

“The faery beam upon you,
The stars to glister on you,
A moon of light,
In the noon of night,
Till the fire-drake hath oer-gone you.

The wheel of Fortune guide you,
The Boy with the bow beside you
Run aye in the way,
Till the bird of day,
And the luckier lot betide you.”

SOCIAL FEELINGS

... It is in itself a most noble and magnificent subject, and one to which all others seem tributary,... how the combined energies of many millions of co-existent agents may be brought to act, with their proper infinite influence, continually in the direction of their sure interests, for time and eternity; and how the improvement which is gained may be kept, and the separate and conflicting energies may be reconciled, and, that Mind shall reap all the fruits of the toiling of the body....

[DEATH]

March 8.

... Life is the spark which kindles up a soul and opens its capacities to receive the great lessons which it is appointed to learn of the Universe — of Good — of Evil — of accountability — of Eternity; of Beauty, of Happiness. The inestimable moment in which the history of past ages is opened, its own relations to the Universe explained, its dependence and independence shewn; the time to reach itself the affections, and to gratify them, to ally itself in kindly bonds with other beings of like destiny; the time to educate a citizen of unknown spheres;

the time to serve the Lord.

And is it good to die? to exchange this precious consciousness capable of such sublime purposes for an unknown state (of which all that is seen is appalling); perhaps for a gloomy sleep? Is it good to be forced away against our will and through extreme suffering, from the vital body, and give up that organ of our enjoyment and sufferings to the worms, while what shall befall the soul we cannot tell? We shudder when the question is made, and terror, terror breaks down the vain refinements of philosophy, and the fences of affectation.

Reason bids us ask, who is the being that forces away the mind into this unknown state? Nature and Revelation have taught us something of this being. We are reduced to put our views of death entirely upon His character and will, and Death will become more or less terrible according to our notions of the Lord of Death.

Thus have I fulfilled enough of my design in this book to authorize my dedication on the first page. This shall not prevent me from resuming the topics upon the slightest indications of my Noometer.

DRAMA *March 9.*

In connexion with the remarks on the Drama [*Wide World, No. 3*] it should be further said, that this art is the most attractive, naturally, of all. The others speak to man from a distance, through cold and remote associations. The literature of a generation generally addresses but a scanty portion of society; of their contemporaries, history and poetry are confined to a few readers; philosophy and science to still fewer; but the buskined muse comes out impatient from these abstractions, to repeat in a popular and intelligible form the productions of the closet, to copy the manners of high and low life, to act upon the heart; and succeeds, by thus avoiding the haughty port of the Parnassian queens, to draw the multitude by the cords of love. Folly wins where wisdom fails; and the policy of adding to our attractions even at the cost of some wit, is seldom repented. This is the excellence of the drama which pretends to nothing more than to be a true picture of life.

FICTION

The origin of Fiction is buried in the darkness of the remotest ages. If it were a question of any importance, perhaps its secret springs are not yet beyond the reach of the inquirer. To paint what is not should naturally seem less agreeable

to the mind than to describe what is. "Nothing" (said the author of the Essay on the Human Understanding) "is so beautiful to the eye, as truth to the mind." But if we look again, I apprehend we shall find that the source of fable, is *human misery*; that to relieve one hour of life, by exciting the sympathies to a tale even of imaginary joy, was accounted a praiseworthy accomplishment; and honour and gold were due to him, whose rare talent took away, for the moment, the memory of care and grief. Fancy, which is ever a kind of contradiction to life and truth, set off in a path remote as possible from all human scenes and circumstances; and hence the first legends dealt altogether in monstrous scenes, and peopled the old mythology, and the nursery lore, with magicians, griffins, and metamorphoses which offend the ear of taste, and could only win away the credulity of a savage race, and the simplicity of a child. Reason, however, soon taught the bard that the deception was infinitely improved by being reduced within the compass of probability; and the second fictions introduced imaginary persons into the manners and dwellings of real life.

PROPHECY

March 10.

No talent is more prized, in society, than that sagacity which, from passing events draws just and profound conclusions regarding their future termination. The names of Burke, Fox and Pitt deservedly rank high in the world's esteem from the success of their political predictions. For it argues a singular elevation of mind to generalize so calmly in the conflicting interests and partialities of fortune, to see something inevitable in the almost fortuitous concurrence of affairs, to cast a die into the whirl of events, and rest in confidence of its return. This, however, is but a faint approach to the majesty of that remarkable foresight which was exhibited in the early ages of the world, and termed Prophecy. For the one is of inferior origin, and depends altogether upon a shrewd comparison of present with past events, and a critical attention to the bias and results of a form of government, of a national character, of a popular excitement. The other grasps at indications which are invisible to other eyes, and possesses a new faculty of communication with the universe. It does not follow the general progress of things to a general result, but singles out, with admirable distinctness, the one man or event, for which its lips were opened; and, entirely destitute of any manifest clue to its knowledge, describes, with a precision not to be mistaken, the character, circumstances and use of things which are buried in a futurity of

many ages. It sensibly elevates our notions of the human mind, to discover in it this latent capacity of reaching through the accidents of time, to ascertain a destiny beyond the possibility of cross accidents to change. It is a capacity which every soul looks to enjoy hereafter, and its development here is a signal distinction from the hand of Providence, and an earnest to the soul of an unclouded vision to come....

[Wide World, No. 5, is missing from the Journals.]

JOURNAL VII THE WIDE WORLD, NO. 6

“*Maximus partus temporis*,” quoth giggling Vanity. “Burn the trash,” saith Fear.

There the Northern light reposes
With ruddy flames in circles bright
Like a wreath of ruby roses
On the dusky brow of night.

DEDICATION

BOSTON, *April 14*, 1822.

In aforetime, while to the inhabitants of Europe the existence of America was yet a secret in the heart of time, there dwelled a giant upon the South Mountain Chimborazo, who extended a beneficent dominion over hills and clouds and continents, and sustained a communication with his mother Nature. He lived two hundred years in that rich land, causing peace and justice, and he battled with the Mammoths and slew them. Upon the summit of the mountain, amid the snows of all the winters, was the mouth of a cave which was lined with golden ore. This cavity, termed “The Golden Lips,” admitted downwards into the centre of the mountain, which was a vast and spacious temple, and all its walls and ceilings glowing with pure gold. Man had never polluted it with his tools of art. Nature fashioned the mighty tenement for the bower of her son. At midday, the vertical sun was perpendicular to the cavity, and poured its full effulgence upon the mirror floor; its reflected beams blazed on all sides, from the fretted roof, with a lustre which eclipsed the elder glory of the temple of Solomon. In the centre of this gorgeous palace, bareheaded and alone, the Giant Califo performed the incommunicable rite, and studied the lines of destiny. When the sun arrived at the meridian, a line of light traced this inscription upon the wall:— “A thousand years, a thousand years, and the Hand shall come, and shall tear the Veil for all.” Two thousand years have passed, and the mighty progress of improvement and civilization have been forming the force which shall reveal Nature to Man. To roll about the outskirts of this Mystery and ascertain and describe its pleasing wonders — be this the journey of my Wideworld. The *Hand* shall come; — I traced its outline in the mists of the morning.

VAIN WORLD

Tuesday Evening, *April* 16.

It is strange that a world should be so dear which speculatively and seriously we acknowledge to be so unsatisfying and so dark. Not all its most glorious array when Nature is apparelled in her best, and when Art toils to gratify, — not the bright sun itself, and the blazing firmament wherein he stands as chief — can prevent a man, at certain moments, from saying to his soul— “It is vanity.” No wild guesses, no elaborate reasoning can surmount this testimony to the familiar truth, that the human spirit hath a higher origin than matter, a higher home than the earth; that it is too capacious to be always cheated with trifles, and too long-lived to amalgamate with mortality....

It was found by philosophy that luminous matter wastes itself ever; it is true without a metaphor of this shining world which goes on decaying, and still attracting by its false lustre.

[POPULACE]

It is a matter of great doubt to me whether or not the *populace* of all ages is essentially the same in character. I am not a competent judge to decide if inconsistent institutions will affect and alter the prominent features of the moral character. There can be no question that from both the poles to the Equator, under every sun, man will be found *selfish* and comparatively indifferent to the general welfare, whenever it is put in competition with private interest. But in China, as in Venice, will faction and cabal always watch to check the continuance of every administration, good or bad? Will vulgar blood always rebel and rail, and against honourable, virtuous and opulent members of the same society? Will the good always be in peril from the misdeeds and menaces of the bad? In the answer to these interrogations, truth leads reluctantly towards the affirmative. This is certain — that war is waged in the Universe, without truce or end, between Virtue and Vice; they are Light and Darkness, they cannot harmonize. Upon Earth they are forcibly consorted, and the perpetual struggle which they make, separates by a distinct line man from man throughout the world.

MARTYRDOM

Saturday Evening. *April.*

I rejoice in the full and unquestionable testimony which certifies the sufferings of Martyrs, as the most undeniable merit of the human race; it proves the existence of a consistency and force of character which might else to common minds appear chimerical.... In those moments when a desperate view of the wrong side of society will sometimes totally unsettle our convictions, and reason almost leans to doubt and Atheism, because the world is frail or mad, this saving recollection comes up like an angel of light to assure us that men have suffered the fierceness of the torture, have endured, and died for the faith.... To keep inviolate the divine law, they have broken over the law of nature and the native fears of man and have dared to immolate this mysterious existence and to try the gulfs of futurity....

HABIT

Habit is a thing of compound character which forges chains for human nature at the same time that it announces its consistency and independence. It is a thorough and perfect servitude, but man voluntarily imposed it upon himself. It is a noble foresight which at once determines upon actions that will be perpetually proper, and makes one resolution answer for a thousand, and once made, binds with divine force. When we consider it as an *instrument* — put into the hands of Vice and Virtue, which both may wield to certain, to vast advantage, we shall have an adequate idea of its importance in the constitution of human life. In childhood it is given into the power of all to make choice between Virtue and Vice, to whom he will commit the service of this Magic Wand.

Each movement of the Archangel is perhaps free and independent of every former one.

Tuesday Evening. *May 7.*

Amid my diseases and aches and qualms I will write to see if my brains are gone. For a day or two past we have had a wind precisely *annual*; which I discovered by *this*, that I have a return of the identical thoughts and temperament which I had a year ago. But this sun shines upon, and these ill winds blow over a changed person in condition, in hope. I was then delighted with my recent honours, traversing my chamber (Hollis 9) flushed and proud of a poet's fancies,

and the day when they were to be exhibited; pleased with ambitious prospects, and careless because ignorant of the future. But now I am a hopeless Schoolmaster, just entering upon years of trade to which no distinct limit is placed; toiling through this miserable employment even without the poor satisfaction of discharging it well, for the good suspect me, and the geese dislike me. Then again look at this: there was pride in being a collegian, and a poet, and somewhat romantic in my queer acquaintance with — , and poverty presented nothing mortifying in the meeting of two young men whom their common relation and character as scholars equalized; But when one becomes a droning schoolmaster, and the other is advancing his footing in good company and fashionable friends, the cast of countenance on meeting is somewhat altered. Hope, it is true, still hangs out, though at further distance, her gay banners; but I have found her a cheat once, twice, many times, and shall I trust the deceiver again? And what am I the better for two, four, six years delay? Nine months are gone, and except some rags of Wideworlds, half a dozen general notions, etc., I am precisely the same World's humble servant that left the University in August. Good people will tell me that it is a Judgment and lesson for my character, to make me fitter for the office whereto I aspire; but if I come out a dispirited, mature, broken-hearted miscreant, — how will man or myself be bettered? Now I have not thought, all this time, that I was complaining at Fate although I suppose it amounts to the same; these are the suggestions only of a disappointed spirit brooding over the fall of castles in the air. My fate is enviable contrasted with that of others; I have only to blame myself who had no right to build them. — WALDO E.

“And there is a great difference whether the tortoise gathers herself within her shell hurt or unhurt.”

I shall bless Cadmus, or Chad, or Hermes, for inventing letters and written language — you, my dear little Wideworld, deducing your pedigree from that pretty event.

May 13.

In twelve days I shall be nineteen years old; which I count a miserable thing. Has any other educated person lived so many years and lost so many days? I do not say acquired so little, for by an ease of thought and certain looseness of mind I have perhaps been the subject of as many ideas as many of mine age. But mine approaching maturity is attended with a goading sense of emptiness and wasted

capacity; with the conviction that vanity has been content to admire the little circle of natural accomplishments, and has travelled again and again the narrow round, instead of adding sedulously the gems of knowledge to their number. Too tired and too indolent to travel up the mountain path which leads to good learning, to wisdom and to fame, I must be satisfied with beholding with an envious eye the labourious journey and final success of my fellows, remaining stationary myself, until my inferiors and juniors have reached and outgone me. And how long is this to last? How long shall I hold the little acclivity which four or six years ago I flattered myself was enviable, but which has become contemptible now? It is a child's place, and if I hold it longer, I may quite as well resume the bauble and rattle, grow old with a baby's red jockey on my grey head and a picture-book in my hand, instead of Plato and Newton. Well, and I am he who nourished brilliant visions of future grandeur which may well appear presumptuous and foolish now. My infant imagination was idolatrous of glory, and thought itself no mean pretender to the honours of those who stood highest in the community, and dared even to contend for fame with those who are hallowed by time and the approbation of ages. It was a little merit to conceive such animating hopes, and afforded some poor prospect of the possibility of their fulfilment. This hope was fed and fanned by the occasional lofty communications which were vouchsafed to me with the Muses' Heaven, and which have at intervals made me the organ of remarkable sentiments and feelings which were far above my ordinary train. And with this lingering earnest of better hope (I refer to this fine exhilaration which now and then quickens my clay) shall I resign every aspiration to belong to that family of giant minds which live on earth many ages and rule the world when their bones are slumbering, no matter whether under a pyramid or a primrose? No, I will yet a little while entertain the angel.

Look next from the history of my intellect to the history of my heart. A blank, my lord. I have not the kind affections of a pigeon. Ungenerous and selfish, cautious and cold, I yet wish to be romantic; have not sufficient feeling to speak a natural, hearty welcome to a friend or stranger, and yet send abroad wishes and fancies of a friendship with a man I never knew. There is not in the whole wide Universe of God (my relations to Himself I do not understand) one being to whom I am attached with warm and entire devotion, — not a being to whom I have joined fate for weal or wo, not one whose interests I have nearly and dearly at heart; — and this I say at the most susceptible age of man. Perhaps at the distance of a score of years, if I then inhabit this world, or still more, if I do not, these will appear frightful confessions; they may or may not, — it is a true picture of a barren and desolate soul.

(Be it remembered that it was last evening that I heard that prodigious display of eloquence in Faneuil Hall, by Mr Otis, which astonished and delighted me above any thing of the kind I ever witnessed.) I love my Wide Worlds.

My body weighs 144 pounds. — In a fortnight I intend, *Deo volente*, to make a journey on foot.

A month hence I will answer the question whether the pleasure was only in the *hope*.

MARATHON

Go hide the shields of war,
The clarion and the spear,
The plume of pride and scimeter,
Vain trophies of a bier.
They have digged a thousand graves
In Marathon today;
Their dirge is sounded by the waves
Which wash the slain away.

The hearth is forsaken, the Furies are fed, — Wake, Maidens of Athens! your wail for the dead.

The Persian's golden car,
And image of the Sun
In flashing light rolled fast and far O'er echoing Marathon.
He mourns his quenched beam,
His slain and broken host,
He curses glory's dream Which lured him to be lost.

His rose-wreath is dyed with a bloody stain And the Genius of Asia shrieks
Shame! to the slain.

Io! Minerva! Hail!
What Argive Harp is dumb?
The triumph loads the gale,
The laurelled victors come!

There's a light in Victory's eye
Which none but God can give;
And a name can never die —
Apollo bids it live.

The daughters of Music have learned your name, And Athens, and Earth,
shall reecho your fame.

May 24, 1822.

And now it is Friday at even, and I am come to take leave of my pleasant Wideworld, for a little time, and commence my journey tomorrow. I look to many pleasures in my fortnight's absence, but neither is my temperament so volatile and gay, nor my zeal so strong as to make my expectations set aside the possibility of disappointment. I am so young an adventurer, that I am alive to regret and sentiment upon so little an occasion as this parting; though one would judge from my late whispered execrations of the school that a short suspension of its mortifications would be exceedingly delightful. I may also observe here that I had never suspected myself of so much feeling as rose within me at taking leave of Mrs. E. at the water side and seeing so delicate a lady getting into a boat from those steep wharf-stairs among sailors and labourers; and leaving her native shore for Louisiana without a single friend or relation attending her to the shore, and seeing her depart. — For myself I was introduced to her upon the wharf. Her husband behaved very well. God speed them!

Mem. Certain lines in *Anthony and Cleopatra* about a "hoop of affection so staunch," etc.; find it. How noble a masterpiece is the tragedy of Hamlet: it can only be spoken of and described by superlatives. There is a deep and subtle wit, with an infinite variety, and every line is golden.

Sunday Evening, *June 9*.

If a man could go into the country but once, as to some raree-shew, or if it were indulged by God but to a single individual to behold the majesty of nature, I think the credit and magnificence of Art would fall suddenly to the ground. For take away the cheapness and ease of acquisition which lessen our estimation of its value, and who could suddenly find himself alone in the green fields where the whole firmament meets the eye at once, and the pomp of woods and clouds and hills is poured upon the mind — without an unearthly animation? Upon a mountain solitude a man instantly feels a sensible exaltation and a better claim to his rights in the universe. He who wanders in the woods perceives how natural it was to pagan imagination to find gods in every deep grove and by each fountain

head. Nature seems to him not to be silent but to be eager and striving to break out into music. Each tree, flower and stone, he invests with life and character; and it is impossible that the wind which breathes so expressive a sound amid the leaves — should mean nothing.... The embowered cottage and solitary farmhouse display to you the same mingled picture of frankness and meanness, pride and poverty of feeling, fraud and charity, which are encompassed with brick walls in the city. Every pleasant feature is balanced by somewhat painful. To the stranger, the simplicity of manners is delightful and carries the memory back to the Arcadian reign of Saturn; and the primitive custom of saluting every passenger is an agreeable acknowledgement of common sympathies, and a common nature. But from the want of an upper class in society, from the admirable republican equality which levels one with all, results a rudeness and sometimes a savageness of manners which is apt to disgust a polished and courtly man.

DRAMA

June 10.

There are two natures in man, — flesh and spirit, — whose tendencies are wide as the universe asunder, and from whose miraculous combination it arises that he is urged alway by the visible eloquent image of Truth, toward immortal perfection, and allured aside from the painful pursuit by gross but fascinating pleasure. The worst form under which temptation entices our weakness, is when it plots to make the soul a pander to the sense, by winning the mind to the pleasures of lofty sentiment and sublime fiction, and insinuating amid this parade of moral beauty its pernicious incentives to crime, and invitations to folly. It is a fatal twilight, in which darkness is sown with light, until the perverted judgment learns to think that the whole spectacle is more harmonious, and better accommodated to his feeble human sense. But be assured, the light shall grow less and less, and shade shall be added to shade....

The Platonist... did not widely err who proclaimed the existence of two warring principles, the incorruptible mind, and the mass of malignant matter. This was a creed which was often damned as heresy by the infallible church; happy if they had never devised a worse. In their attempts to escape from this inherent corruption, and correct the imperfection of nature, they went wrong with delirious zeal; but eternal truth founded the basis of their belief....

The theory of the drama is, in itself, so beautiful, and so well designed to

work good, that we feel forcibly what a pity it is, that its concentrating interest, its unequalled power of conveying instruction and the delight inspired by its ordinary decorations should be so miserably perverted to the service of sin. It might aid Virtue, and lend its skilful powers to the adornment of truth; its first form was a hymn to the gods, and a monitory voice to human frailty, and human passion. Now, it seduces to Pleasure and leads on to Death, and the shadows of Eternity settle over its termination.

I think it is pretty well known that more is gained to a man's business by one half hour's conversation with his friend, than by very many letters; for, face to face, each can distinctly state his own views; and each chief objection is started and answered; and, moreover, a more definite notion of one's sentiments and intentions, with regard to the matter, are gathered from his look and tones, than it is possible to gain from paper. It is therefore a hint borrowed from Nature, when a lesson of morals is conveyed to an audience in the engaging form of a dialogue, instead of the silence of a book, or the cold soliloquy of an orator. When this didactic dialogue is improved by the addition of pathetic or romantic circumstances, and, in the place of indifferent speakers, we are presented with the characters of great and good men, of heroes and demigods, thus adding to the sentiments expressed the vast weight of virtuous life and character — the wit of the invention is doubled. Lastly, a general moral is drawn from an event where all the parts of the piece are made to tend and terminate; this is what is called the distribution of poetical justice, and is nothing but an inevitable inference of some great moral truth, which the mind readily makes, upon the turn of affairs. For greater delight, we add music, painting and poetry, well aware that the splendour of embellishment will fix the eye, after the mind grows weary. These are the advantages comprehended in the dramatic art. Truths otherwise impertinent, are told with admirable effect in this little epitome of life; and every philosophic Christian must be loth to lose to religion, an instrument of such tried powers.

GOD

... Simonides said well, "Give me twice the time, for the more I think, the more it enlarges"; and it is only mathematical truth; for when the subject is infinite, it must be, that, in proportion as discipline enlarges the capacity of the powers to comprehend a portion of the line, so much the more of the line will be continually discerned, extending above and beyond the straining orbs of imagination. It is, nevertheless, apparent in the munificent endowment of the

human intellect, that provision has been made to enable it to proceed to some distinct knowledge of this Being whom in darkness we adore. Witness some of those admirable demonstrations of the *existence and attributes* which various minds in various ages have fallen upon, and which we record as the best monuments of human wit. And I regard this rather as a glimpse and earnest of the light which shall break upon the soul when its cumbering flesh bond is broken, — of the glory that shall be revealed — than as any solitary or fortuitous discovery which may stand unconnected with the past or the future. For is it not natural to believe that — out of earth, and men of clay — the Deity is the great engrossing theme which absorbs the wonder as well as the devotion of the disembodied spirits that people his creation? And is it not to be presumed that the soul will be furnished with some understanding of his strength when she enters on the scene where his divinity is displayed? The lisping infant, on earth, stammers the name of God; and shall the Archangel, whose gigantic intelligence displays the education of heaven, stand silent beneath the very Cloud? Mankind have naturally conceived the joy of that spiritual estate to consist in the satisfaction and delight of certain high intellectual exercises, of which our best and loftiest contemplations afford some faint symbol. And this notion is natural and consistent with their condition; for they have left the obstruction of a material universe, and dwell now in the majesty of thought, in a grand inconceivable dependence of mind upon the great Source of intelligence, and are therefore in a situation to pursue those inquiries which mocked the researches of finite beings, but which invite the study of those to whom the sources of wisdom, and the riches of the unseen state are laid open. In this state and with these opportunities, a little meditation will make it plain, that there can be, in heaven or earth, no thought which can so concentrate and absorb the living spirit as the idea of God.

What will divert our attention, and attach our affections in the long, long Day wherein the faculties shall enjoy an eternal exercise? Perhaps in the communion of departed wisdom and virtue; in the society of Socrates, Plato, and St. Paul. Be it so; it is a rational and authorized hope. We respect and admire the life and character of these eminent individuals; they appeared to possess an intimate familiarity with the profoundest principles of philosophy, and at the same time a power to express them with the most perfect simplicity in their conversation and in their books. It is natural to look to these great masters of mankind as qualified in another state to give us our introduction to its mysteries and joys.

But consider a moment, if a celestial spirit could be so besotted as to prefer the little flights of a spirit which is its peer, to the inconceivable intellect which kindles all and overwhelms all. Let it compare for a moment the history of the

two Beings. One lived upon earth its span, and was then swallowed into the multitude of men, leaving no trace of its existence, except, perhaps, a little book, or its name, or its monument. But if your mind be strung to an elevated tone, try to comprehend the history of the Other; — A stream without a source, an age without an infancy, — the mind resorts in vain to its highest antiquity to seek the commencement of the Ancient of Days. It can only pursue a few days of his history in the immensity of his works. In a few days he built the world and the firmament, and in the darkness of the Universe he lit the sun; he created man and beast; he arranged the seasons and provided for the preservation of the Order established; he arched the rainbow and gathered the clouds, the granaries of his hail, of the lightning and thunder. That immeasurable existence upon such an insignificant portion of which the eye of all mankind rests with wonder — we conceive to have been spent in similar employment throughout his infinite kingdom; and that Being is well worthy of prostrate adoration to whom we ascribe an eternity, every moment of which hath been signalized by a scheme of preserving providence, by a plan of redemption, by the informing of angelic intellect, or by the creation of a world. One chief reason why the human soul is so prone to neglect or avoid this idea, is because it is so unsatisfactory, being almost entirely above the attainment of our weak powers; but, in the upper state, when this weakness is removed, and our faculties are taught to soar up to the very Throne — I need not ask if the mind could be so blind as to admire the spark, in the presence of that fire whence it came.

Sunday Morn.

On such employments we anticipate the happiness of heaven to depend. That any approximation to such spiritual elevation can be made on earth, will be believed by some and denied by others. The reasons why we are no more strongly attracted, are plainly seen, and are lodged within ourselves. [For] the mind does not yet exist but in an infant state, and waits for a development in another world. But there have been men at various intervals, in the world, who by some remarkable fortune, or remarkable effort, have rendered themselves less liable to the suggestions of sense, and have, in a manner, departed from the pursuits and habits of men to hold strict conversation with the attributes of Deity, and, in the emphatic language of the Hebrew historian, *to walk with God*. And there are certain facilities for this enlarged communion which sometimes occur, to give direction and aid to the feebleness of nature. The astronomer who, by reason of the littleness of the earth, would be able to learn next to nothing of the distance and magnitudes of the heavenly bodies, can yet take advantage of its revolutions around the Sun, and thus move his instruments about in the universe,

across the vast orbit of his planet; so the lapse of ages may sometimes enable the devout philosopher to trace the design of Providence, otherwise above his comprehension, by reducing to a miniature view, a magnificent course of events.

The Being which we adore must of necessity be adorable. Where gat we the idea — so different from our other ideas — of somewhat so transcendant and sublime?... The only answer which we are compelled to receive is that the Intelligence who formed our minds adjusted them in such manner as to admit suitable notions of himself from the exhibition of his works, or from the consciousness of our own existence. What must be that existence to which every star, every leaf, every drop in the creation testifies, by their strange and unaccountable formation! Towards that object the eyes of all generations have successively turned, by an universal instinctive impulse; and we are actuated by a portion of the same inspiration when we pronounce the great name of God. And when the mute creation with irresistible force points our inquiries to Him, it becomes a truly admirable spectacle to behold this wise sympathy throughout nature, of imperfect beings consenting to adore perfection.

Si ulla fuit genitalis origo

Terrarumet coeli, semperque aeterna fuere, Cur supra bellum Thebanum, et funera Trojae, Non alias alii quoque res cecinere poetae?

LUCRETIVS.

I know nothing more fit to conclude the remarks which have been made in the last pages than certain fine pagan strains.

... “Of dew-bespangled leaves and blossoms bright Hence! vanish from my sight,

Delusive pictures! unsubstantial shews!

My soul absorbed, one only Being knows, Of all perceptions, one abundant source, Hence every object, every moment flows, Suns hence derive their force, Hence planets learn their course;

But suns and fading worlds I view no more, God only I perceive, God only I adore!”

[Narayana; *Sir William Jones's translation.*]

DIFFERING RANK OF NATIONS

July 6.

What imparted that impulse to Greece which may be said to have created literature, which has been communicated through Rome to the world?

It is a curious spectacle to a contemplative man to observe a little population of twelve or twenty thousand men for a couple of generations setting their minds at work more diligently than men were accustomed, and effecting something altogether new and strange; to see them lie quietly down again in darkness, while all the nations of the world rise up to do them a vain reverence; and all the wisest among them exhausting their powers to make a faint imitation of some one excellence of Greece in her age of glory; to see this admiration continued and augmented as the world grows older, and with all the advantages of an experience of 6000 years to find those departed artists never paralleled. It certainly is the most manly literature in the world, being composed of histories, orations, poems, and dramatic pieces, in which no sign of accommodation is discovered to the whims of fashion or patronage. Simplicity is a remarkable characteristic of the productions of all the ancient masters. Upon their most admirable statue they were content to engrave, "Apollodorus the Ephesian made it"; and we respect the republican brevity which, in the place of a studied eulogium upon a drama which had been represented with unbounded applause, simply wrote, "Placuit" (it pleased).

LICOÖ

"Let us plait the garland and weave the chi, While the wild waves dash on our iron strand; Tomorrow, these waves may wash our graves, And the moon look down on a ruined land."

The islanders who sung this melancholy song, presaging the evil fates which waited for them — have passed away. No girdled chieftain sits upon their grim rocks to watch the dance of his tribe beneath the yellow lustre of the Moon; the moan of the waves is the only voice in their silent-land; the moan of the waves is the only requiem of the brave who are buried on the seashore or in the main. But their memory has not failed from among men; the mournful notes

which foreboded their fall have given it immortality. For there is a charm in poetry, which binds the world, and finds its effect in the East and in the West.

“Let me not, like a worm, go by the way.”

CHAUCER.

JOURNAL VIII THE WIDE WORLD, NO. 7

DEDICATION

BOSTON, *July 11, 1822.*

I dedicate my book to the Spirit of America. I dedicate it to that living soul, which doth exist somewhere beyond the Fancy, to whom the Divinity hath assigned the care of this bright corner of the Universe. I bring my little offering, in this month, which covers the continent with matchless beauty, to the shrine, which distant generations shall load with sacrifice, and distant ages shall admire afar off. With a spark of prophetic devotion, I hasten to hail the Genius, who yet counts the tardy years of childhood, but who is increasing unawares in the twilight, and swelling into strength, until the hour when he shall break the cloud, to shew his colossal youth, and cover the firmament with the shadow of his wings.

Evening.

It is a slow patriotism which forgets to love till all the world have set the example. If the nations of Europe can find anything to idolize in their ruinous and enslaved institutions, we are content, though we are astonished at their satisfaction. But let them not ignorantly mock at the pride of an American, as if it were misplaced or unfounded, when that freeman is giving an imperfect expression to his sense of his condition. He rejoices in the birthright of a country where the freedom of opinion and action is so perfect that every man enjoys exactly that consideration to which he is entitled, and each mind, as in the bosom of a family, institutes and settles a comparison of its powers with those of its fellow, and quietly takes that stand which nature intended for it. He points to his native land as the only one where freedom has not degenerated to licentiousness; in whose well-ordered districts education and intelligence dwell with good morals; whose rich estates peacefully descend from sire to son, without the shadow of an interference from private violence, or public tyranny; whose offices of trust and seats of science are filled by minds of republican strength and elegant accomplishments. Xenophon and Thucydides would have thought it a theme better worthy of their powers, than Persia or Greece; and her Revolution would furnish Plutarch with a list of heroes. If the Constitution of the United States outlives a century, it will be matter of deep congratulation to the human race; for the Utopian dreams which visionaries have pursued and sages exploded, will find their beautiful theories rivalled and outdone by the reality,

which it has pleased God to bestow upon United America.

Saturday Evening, *July 13.*

(Continued from *Wide World*, No. 6) I have proposed to attempt the consideration of those different aspects, under which we are accustomed to view the Divinity. I shall endeavour first to give some account of his relation to us as the founder of the Moral law.

It is not necessary to describe that law, otherwise than by saying that it is the sovereign necessity which commands every mind to abide by one mode of conduct and to reject another, by joining to the one a perfect satisfaction, while it pursues the other with indefinite apprehensions.

Its divine origin is fully shown by its superiority to all the other principles of our nature. It seems to be more essential to our constitution than any other feeling whatever. It dwells so deeply in the human nature that we feel it to be implied in consciousness. Other faculties fail, — Memory sleeps; Judgment is impaired or ruined; Imagination droops, — but the moral sense abides there still. In our very dreams, it wakes and judges amid the Chaos of the rest. The depths of its foundations in the heart, and the subtilty of its nature in eluding investigations into its causes and character, distinguish it eminently above other principles. If you compare it, for example, with the phenomena of taste, which also appear to be universal, we shall readily discern a considerable distinction withdrawing from the one its transient resemblance. The judgment which determines a circle to be more beautiful than a square, or a rose to be fairer than a clod, is not founded upon aught existing in the mind independent of the senses, but is manifestly derived from the humble sources of the material world. It is nothing but a power to decide upon the pleasures of sense. If this be not the limit of the province of taste, if it ever rise to the judgment of questions which seem to involve moral beauty, it is only where it begins to blend with the moral sense and becomes ennobled by its connection. But that sovereign sense whereof we speak leaves the material world and its subordinate knowledge to subordinate faculties, and marshals before its divine tribunal the motives of action, the secrets of character and the interests of the universe. It has no taint of mortality in the purity and unity of its intelligence; it is perfectly spiritual. It sometimes seems to sanction that Platonic dream, that the soul of the individual was but an emanation from the Abyss of Deity, and about to return whence it flowed. So it seems to predict, on SUPREME AUTHORITY, that fate which is to be declared, when Time shall cease. It seems to be the only human thought which is admitted to partake of the counsels of the eternal world, and to give note already to man, of the event and the sentence to which he is doomed....

GOD

We have one remarkable evidence to the character, from eternity, of that Being, in the divine determination to make man *in the image of God*. In all the insignificance and imperfection of our nature, in the guilt to which we are liable, and the calamity which guilt has accumulated, — man triumphs to remember that he bears about him a spark which all beings venerate [and] acknowledge to be the emblem of God, — which may be violated, but which cannot be extinguished. And we remark with delight the confirmations of this belief in the opening features of human character. And the little joy of the child who plants a seed and sees himself instrumental in the creation of a flower, forcibly reminds us of that beneficence which built the heavens and the earth, and saw that it was good.

THE RIVER

Among the bulrushes I lay

Which deck the river's murmuring tide; Upon those banks no men abide,
But swans come sailing in their pride And graceful float into the quiet bay.

Fast sailed the golden fishes by,

And some leaped out to see the sky, Nor saw the bird that stooped from high
Until he broke the wave's white crest And bore the flapping fish aloft unto his nest.

An April cloud blew o'er the stream And cast its big drops down,

They oped the lily's covering brown And shed its steaming perfume round,
And golden insects flew unto that flower supreme.

DRAMA

July.

... The grand object of the Drama is to claim the affections by awakening... sympathy. It represents an accumulation of human we with gorgeous pomp to move the pity and indignation of a susceptible audience. Its triumph is complete, when the passions of the multitude, which naturally move in unison, at last aid each other to some general utterance, and consent to the weakness of feelings, which in an individual would be ridiculous. From the Theatre, then, drive out the buyers and sellers of corruption who have made it a den of vice, and make it an Oracle of those opinions and sentiments which multiply and strengthen the bonds of society.

The more we reflect upon the subject, the more thoroughly we shall be convinced how practicable it is to produce a Theatre of an actively useful character. It is a mistake to suppose that only vicious gratification can raise sufficient excitement to draw men together around a stage. On the contrary, what an inextinguishable thirst for *eloquence*, however rude, exists in every breast!...

It is natural that we pant to feel those thrilling sensations of a most agreeable character which passionate and powerful declamation never fails to move. They are akin to the emotions produced by *the sublime*, in sense or thought. And for these, the fictitious distresses of exalted personages, amid the passage of wonderful events, such as a *pure play* will freely admit, seem to afford every desirable facility.... Besides we have direct testimony of the certainty of success, in the instance of the Greek Tragedy, which, without impurity, was universally popular at Athens...

REASON

Sunday, *September 7*.

[As for] that hoary-headed error which considers Reason as opposed to Scripture, and which frequently and loudly condemns Reason as an adversary and a seducer, as unbelieving and profane.... Instead of placing idiots in his universe, capable only of sensual gratification, able only to obey instincts, and requiring every moment a new direction from heaven to prevent them from grovelling in the dirt, or being destroyed by the beasts, God has peopled it with images of himself, and kindled within them the light of his own understanding — a portion of that ray which illuminates, as it formed, the Creation. He has communicated to them an intelligence by which they are enabled to see their

way in a universe where other beings are blind; to behold *him*, and their relation to him; to read and understand all those communications which in past or future time he is pleased to make; it is an intelligence by which they find themselves distinguished from his other creations. There are about and amidst them a thousand different properties; there are hills and waters, trees and flowers, the living forms of nature and the stars of the firmament; — but they are still and brutish — there is no eye and voice within them to detect and declare the stupendous glory which surrounds them; they lack that living spirit which opens the eyes of man, and without which the Universe is as if it were not, and the glory of Deity is darkness. It is an intelligence which soars above these charms of the material world, and can contemn them in the comparison with the objects which it is capable of enjoying. In fine, it is an intelligence which reveals to man another condition of existence, and a nearer approach to the Supreme Being. This intelligence is *Reason*.

Yet some there are who tell you, as if it involved no inconsistency, and certainly no sin, to avoid profaning the revelations of God by submitting them to the tribunal of man's reason, — who seek to walk implicitly by a law which they do not and will not understand, because they refuse to apply to its explanation that light with which their maker has furnished them. It is not only a wilful perversion and abuse of a priceless gift, but it is a most ungrateful neglect of divine mercy, and a neglect which incurs a tremendous responsibility....

DRAMA (*continued*) *October*.

In proposing schemes of reformation in so important a matter as the Drama, one should be cautious to avoid running into systems too visionary for popular understanding. The scholar in his closet must beware lest his poetical imaginations of the beauty of Tragedy lead him into fields beyond the track of common opinion, and to render his speculations of no use. Nevertheless, it appears to me that the bold and beautiful personification in Milton's *Penseroso* is not an unapt description of the true drama: — Sometime let gorgeous Tragedy

With sceptred pall come sweeping by, Presenting Thebes and Pelops' line
And the tale of Troy divine.

For we wish that Tragedy should take advantage of that weakness, or perhaps virtue, in our nature which bears such an idolatrous love for the emblems of royalty, and that its moral lessons should be couched in the grand and pathetic fables which antiquity affords. Owing to the identity of human character in all

ages, there is as much instruction in the tale of Troy as in the Annals of the French Revolution....

There is an embellishment which I would recommend, though out of place here. I mean the introduction of prophecies. The author of *Guy Mannering* and the *Bride of Lammermoor* knew the value of the charm and has made fine use of the fascination. It is the most beautiful use of supernatural machinery in fiction.

ORGAN

October, Thursday Evening.

When I was a lad, said the bearded islander, we had commonly a kind of vast musical apparatus in the Pacific islands which must appear as fabulous to you as it proved fatal to us. On the banks of the rivers there were abundance of siphar trees, which consist of vast trunks perforated by a multitude of natural tubes without having any external verdure. When the roots of these were connected with the waters of the river, the water was instantly sucked up by some of the tubes and discharged again by others, and, when properly echoed, the operation [was] attended by the most beautiful musical sounds in the world. My countrymen built their churches to the Great Zoa upon the margin of the water and enclosed a suitable number of these trees, hoping to entertain the ears of the god with this sweet harmony. Finding however by experience that the more water the pipes drew the more rich and various were the sounds of the Organ, they constructed a very large temple with high walls of clay and stone to make the echoes very complete, and enclosed a hundred siphars. When the edifice was complete, six thousand people assembled to hear the long expected song. After they had waited a long time and the waters of the river were beginning to rise, the Instrument suddenly began to emit the finest notes imaginable. Through some of the broader pipes the water rushed with the voice of thunder, and through others with the sweetness of one of your lutes. In a short time the effect of the music was such that it seemed to have made all the hearers mad. They laughed and wept alternately, and began to dance, and such was their delight, that they did not perceive the disaster which had befallen their Organ. Owing to the unusual swell of the River and to some unaccountable irregularity in the ducts, the pipes began to discharge their contents within the chapel. In a short time the evil became but too apparent, for the water rose in spouts from the top of the larger ducts and fell upon the multitude within. Meantime the music swelled louder and louder, and every note was more ravishing than the last. The

inconvenience of the falling water which drenched them, was entirely forgotten, until finally the whole host of pipes discharged, every one, a volume of water upon the charmed congregation. The faster poured the water, the sweeter grew the music, and the floor being covered with the torrent, the people began to float upon it with intolerable extacies. Finally the whole multitude swam about in this deluge, holding up their heads with open mouths and ears as if to swallow the melody, whereby they swallowed much water. Many hundreds were immediately drowned and the enormous pipes, as they emptied the river, swelled their harmony to such perfection that the ear could no longer bear it, and they who escaped the drowning died of the exquisite music. Thenceforward there was no more use of the Siphar trees in the Pacific islands.

THE LAND OF NOT

... It is now nineteen years since I left the Land of Not, and I may safely say that, in the countries in which I have passed my time since that period, it has been invariably true that there is more crime, misery and vexation in every one of them, in the course of a single year, than transpires in the peaceful Land of Not in the lapse of many centuries. Except for the existence of one single institution which has been established from time immemorial, there is no question that a vast tide of emigration would rapidly flow into that country. This institution is a rigorous Alien Act which ordains that no man who leaves the limits of the country shall ever be permitted to set foot within it again. But, to my knowledge, many who have left it have often afterwards looked back to its pleasant abodes, and desired in vain to return....

Saturday Evening, *November*.

My adventurous and superficial pen has not hesitated to advance thus far upon these old but sublime foundations of our faith; and thus, without adding a straw to the weight of evidence or making the smallest discovery, it has still served to elevate somewhat my own notions by bringing me within prospect of the labours of the sages. After the primitive apostles, I apprehend that Christianity is indebted to those who have established the grounds upon which it rests; to Clarke, Butler, and Paley; to Sherlock, and to the incomparable Newton. And when it shall please my wayward Imagination to suffer me to go drink of these chrysal fountains; or when my better judgment shall have at last triumphed over the daemon Imagination, and shall itself conduct me thither, — I

shall be proud and glad of the privilege. For the present, I must be content to make myself wiser as I may, by the same loose speculations upon divine themes...

CONCLUSION

I have come to the close of the sheets which I dedicated to the Genius of America, and notice that I have devoted nothing in my book to any peculiar topics which concern my country.

But is not every effort that her sons make to advance the intellectual interests of the world, and every new thought which is struck out from the mines of religion and morality, a forward step in the path of her greatness? Peace be with her progressive greatness, — and prosperity crown her giant minds. A victory is achieved today for one, whose name perchance is written highest in the volume of futurity.

JOURNAL IX

THE WIDE WORLD, NO. 8

DEDICATION

BOSTON, *November 6, 1822.*

To glory which is departed, to majesty which hath ceased, to intellect which is quenched — I bring no homage, — no, not a grain of gold. For why seek to contradict the voice of Nature and of God, which saith over them, “It is finished,” by wasting our imaginations upon the deaf ear of the dead? Turn rather to the mighty multitude, the thunder of whose footsteps shakes now the earth; whose faces are flushed by the blood of life; whose eye is enlightened by a living soul. Is there none in this countless assembly who hath a claim on the reverence of the sons of Minerva?

I have chosen one from the throng. Upon his brow have the Muses hung no garland. His name hath never been named in the halls of fashion, or the palaces of state; but I saw Prophecy drop the knee before him, and I hastened to pay the tribute of a page.

VISION OF SLAVERY

In my dreams I departed to distant climes and to different periods, and my fancy presented before me many extraordinary societies, and many old and curious institutions. I sat on the margin of the River of Golden Sands when the thirsty leopard came thither to drink. It was just dawn and the shades were chased rapidly from the Eastern firmament by the golden magnificence of day. As I contemplated the brilliant spectacle of an African morning I thought on those sages of this storied land who instructed the infancy of the world. Meanwhile the sun arose and cast a full light over a vast and remarkable landscape. About the river, the country was green and its bed reflected the sunbeams from pebbles and gold. Far around was an ample plain with a soil of yellow sand, glittering everywhere with dew and interspersed with portions of forest, which extended into the plain from the mountains which surrounded this wide Amphitheatre. The distant roar of lions ceased to be heard, and I saw the leopard bathing his spotted limbs and swimming towards the woods which skirted the water. But his course

was stopped; an arrow from the wood pierced his head, and he floated lifeless ashore. I looked then to see whence the slayer should have come, and beheld not far off a little village of huts built of canes. Presently I saw a band of families come out from their habitations; and these naked men, women and children sung a hymn to the sun, and came merrily down to the river with nets in their hands to fish. And a crimson bird with a yellow crest flew over their heads as they went, and lighted on a rock in the midst of the river and sung pleasantly to the savages while he brushed his feathers in the stream. The boys plunged into the river and swam towards the rock. But upon a sudden I saw many men dressed in foreign garb run out from the wood where the leopard had been killed; and these surrounded the fishers, and bound them with cords, and hastily carried them to their boats, which lay concealed behind the trees. So they sailed down the stream, talking aloud and laughing as they went; but they that were bound gnashed their teeth and uttered so piteous a howl that I thought it were a mercy if the river had swallowed them.

In my dream, I launched my skiff to follow the boats and redeem the captives. They went in ships to other lands and I could never reach them, albeit I came near enough to hear the piercing cry of the chained victims, which was louder than the noise of the Ocean. In the nations to which they were brought they were sold for a price, and compelled to labour all the day long, and scourged with whips until they fell dead in the fields, and found rest in the grave.

Canst thou ponder the vision, and shew why Providence suffers the land of its richest productions to be thus defiled? Do human bodies lodge immortal souls, — and is this tortured life of bondage and tears a fit education for the bright ages of heaven and the commerce of angels? Is man the Image of his Maker, — and shall this fettered and broken frame, this marred and brutalized soul become perfect as He is perfect? This slave hath eat the bread of captivity and drank the waters of bitterness, and cursed the light of the sun as it dawned on his bed of straw, and worked hard and suffered long, while never an idea of God hath kindled in his mind from the hour of his birth to the hour of his death; and yet thou sayest that a merciful Lord made man in his benevolence to live and enjoy, to take pleasure in his works and worship him forever. Confess that there are secrets in that Providence which no human eye can penetrate, which darken the prospect of Faith, and teach us the weakness of our Philosophy.

November 8.

At least we may look farther than to the simple fact and perhaps aid our faith by freer speculation. I believe that nobody now regards the maxim “that all men are born equal,” as any thing more than a convenient hypothesis or an

extravagant declamation. For the reverse is true, — that all men are born unequal in personal powers, and in those essential circumstances, of time, parentage, country, fortune. The least knowledge of the natural history of man adds another important particular to these; namely, what class of men he belongs to — European, Moor, Tartar, African? Because Nature has plainly assigned different degrees of intellect to these different races, and the barriers between are insurmountable.

This inequality is an indication of the design of Providence that some should lead, and some should serve. For when an effect invariably takes place from causes which Heaven established, we surely say with safety, that Providence designed that result.

Throughout society there is therefore not only the direct and acknowledged relation of king and subject, master and servant, but a secret dependence quite as universal, of one man upon another, which sways habits, opinions, conduct. This prevails to an infinite extent and, however humbling the analogy, it is nevertheless true, that the same pleasure and confidence which the dog and horse feel when they rely upon the superior intelligence of man, is felt by the lower parts of our own species with reference to the higher.

Now, with these concessions, the question comes to this: whether this known and admitted assumption of power by one part of mankind over the other, can ever be pushed to the extent of total possession, and that without the will of the slave?

It can hardly be said that the whole difference of the *will* divides the *natural* servitude of which we have spoken from the forced servitude of “slavery.” For it is not voluntary, on my part, that I am born a subject; contrariwise, if my opinion had been consulted, it is ten to one I should have been the Great Mogul. The circumstances in which every man finds himself he owes to fortune and not to himself. And those men who happen to be born in the lowest caste in India, suffer much more perhaps than the kidnapped African, with no other difference in their lot than this, that God made the one wretched, and man, the other. Except that there is a dignity in suffering from the ordinances of Supreme Power — which is not at all common to the other class — one lot is as little enviable as the other.

When all this is admitted, the question may still remain entirely independent and untouched — apart from the consideration of slavery as agreeable or contradictory to the analogies of nature — whether any individual has a right to deprive any other individual of freedom without his consent; or whether he may continue to withhold the freedom which another hath taken away?

Upon the first question, — whether one man may forcibly take away the

freedom of another, — the weakness and incapacity of Africans would seem to have no bearing; though it may affect the second. Still it may be advanced that the beasts of the field are all evidently subjected to the dominion of man, and, with the single restriction of the laws of humanity, are left entirely at his will. And why are they, and how do we acquire this declaration of heaven? Manifestly from a view of the perfect adaptation of these animals to the necessities of man, and of the advantage which in any of them find in leaving the forest for the barnyard. If they had reason, their strength would be so far superior to ours, that, besides our inability to use them, it would be inconsistent with nature. So that these three circumstances are the foundation of our dominion; viz their want of reason; their adaptation to our wants; and their own advantage (when domesticated). But these three circumstances may very well apply to the condition of the Blacks, and it may be hard to tell exactly where the difference lies. Is it in *Reason*? If we speak in general of the two classes, Man and Beast, we say that they are separated by the distinction of Reason, and the want of it; and the line of this distinction is very broad. But if we abandon this generalization, and compare the classes of one with the classes of the other, we shall find our boundary line growing narrower and narrower, and individuals of one species approaching individuals of the other, until the limits become finally lost in the mingling of the classes....

November 14.

If we pursue a revolting subject to its greatest lengths, we should find that in all those three circumstances which are the foundations of our dominion over the beasts, very much may be said to apply them to the African species; even in the last, viz., the advantage which they derive from our care; for the slaveholders violently assert that their slaves are happier than the freedmen of their class; and the slaves refuse oftentimes the offer of their freedom. Nor is this owing merely to the barbarity which has placed them out of the power of attaining a competence by themselves. For it is true that many a slave under the warm roof of a humane master, with easy labours and regular subsistence, enjoys more happiness than his naked brethren, parched with thirst on a burning sand, or endangered in the crying wilderness of their native land.

This is all that is offered *in behalf* of slavery; we shall next attempt to knock down the hydra.

To establish, by whatever specious argumentation, the perfect expediency of the worst institution on earth is *prima facie* an assault upon Reason and Common Sense. No ingenious sophistry can ever reconcile the unperverted mind

to the pardon of *slavery*; nothing but tremendous familiarity, and the bias of private *interest*. Under the influence of better arguments than can be offered in support of slavery we should sustain our tranquillity by the confidence that no surrender of our opinion is ever demanded, and that we are only required to discover the lurking fallacy which the disputant acknowledges to exist. It is an old dispute, which is not now and never will be totally at rest, whether the human mind be or be not a free agent. And the asserter of either side must be scandalized by the bare naming of the theory that man may impose servitude on his brother. For if he is himself free, and it offends the attributes of God to have him otherwise, it is manifestly a bold stroke of impiety to wrest the same liberty from his fellow. And if he is not free, then this inhuman barbarity ascends to derive its origin from the author of all necessity.

A creature who is bound by his hopes of salvation to imitate the benevolence of better beings, and to do all the kindness in his power, fastens manacles on his fellow with an ill grace. A creature who holds a little lease of life upon the arbitrary tenure of God's good pleasure improves his moment strangely by abusing God's best works, his own peers.

MORAL LAW

Saturday Evening, *November 16*.

The child who refuses to pollute its little lips with a lie, and the archangel who refuses with indignation to rebel in the armies of heaven against the Most High, act alike in obedience to a law which pervades all intelligent beings. This law is the Moral Sense; a rule coëxtensive and coëval with Mind. It derives its existence from the eternal character of the Deity, of which we spoke above; and seems of itself to imply, and therefore to prove his Existence.... Whence comes this strong universal feeling that approves or abhors actions? Manifestly not from *matter*, which is altogether unmoved by it, and the connection of which with it is a thing absurd — but from a *Mindy* of which it is the essence. That Mind is God.

This Sentiment which we bear within us, is so subtle and unearthly in its nature, so entirely distinct from all sense and matter, and hence so difficult to be examined, and withal so decisive and invariable in its dictates — that it clearly partakes of another world than this, and looks forward to it in the end. It is further to be observed of it, that its dictates are never blind, are never capricious, but, however they may seem to differ, are always discovered on a close and

profound examination to point to a faultless and unattainable perfection. They seem to refer to a sublime course of life and action which nowhere exists, or to which we are not privy; and to be an index of the Creator's character lent to mankind in vindication or illustration of the command, "Be ye perfect as He is perfect."

This Sentiment differs from the affections of the heart and from the faculties of the mind. The affections are indiscriminating and capricious. The Moral Sense is not. The powers of the intellect are sometimes wakeful and sometimes dull, alive with interest to one subject and dead to the charm of another. There are no ebbs and flows, no change, no contradiction in *this*. Its lively approbation never loses its pleasure; its aversion never loses its sting. Its oracular answers might be sounded through the world, for they are always the same. Motives and characters are amenable to it; and the golden rules which are the foundation of its judgments we feel and acknowledge, but do not understand....

JUSTICE

"Even handed Justice Commends the ingredients of our poisoned chalice To our own lips."

The bold misdoer who transgresses the law of Justice grapples with he knows not what. He has offended against an essential attribute of the Divinity, which will plead against him inexorably until it be avenged. His rash hand has disordered a part of the moral machinery of the Universe and he is in peril of being crushed by the mischief he has caused.

... How shall man reconcile his freedom with that eternal necessary chain of cause and consequence which binds him and Nature down to an irreversible decree? How shall he reconcile his freedom with that prophetic omniscience which beheld his end long before the infant entered on the world? Perhaps he is a slave — and men have worn his limbs with irons, and his soul with suffering; the name of virtue and the smile of kindness never have stooped to alleviate his hard and bitter bondage; but ere his little day of apathy and distress was done, he cursed God and died; — hath he descended into hell? Or how dost thou reconcile the creation and destiny of this being with that Infinite and benevolent Justice that would not abuse its Omnipotence, and would not create a mind to be miserable?

Tell not that man of those feelings and thoughts which give a joy to *your* existence and warm your heart to the world; for it will be but to mock his

wretchedness. Tell him not of the dignity of human nature, of its *benevolence* and *philanthropy*, — he will clank his chains at the word. He scoffs bitterly at your pictures of the golden gates of Heaven, for they are closed on him.

The man is bold who undertakes to answer beyond a doubt these perplexing questions. But theology would be a vain science, unworthy of our attention, if it left them all in their full force, without notice or solution.

If an ignorant man were carried from his closet to the prisons and penitentiaries of a vast kingdom and shewn a multitude of men confined and scourged and forced to labour, and informed that this was the act of the government, if he knew nothing more of that state and perhaps foolishly conceived that its limits extended no further than the walls wherein he stood, it would be a very plain conclusion that this government was a savage and outrageous tyranny; while perhaps at that very moment the government was the most perfect and beneficent in the world. Our rash conclusions from the dark side of human affairs are analogous to these, and like these are to be corrected by broader views of the system which we misunderstand.

The questions we have named, are incidental to the subject, but of such importance, that we shall digress from the main topic to attempt to answer them. The endeavour is always laudable to clear up the darkness which settles around portions of the system. God in heaven is answerable for his works, to those principles which he hath set within us to judge of them. To the discussion of some of them, our nature is incompetent.

One of the best satires upon women is the popular opinion of the third century, that they who took wives were of all others the most subject to the influence of evil demons.... Men's minds visit heaven as they visit earth, and hence the Turkish heaven is a Harem; the Scandinavian, a hunting field; the Arabian, a place of wheaten cakes and murmuring fountains. We've supple understandings and so it comes that a new religion ever suits itself to the state in which 'tis born, whether despotism or democracy, as Montesquieu has remarked.

Four daughters make the family of Time,
But rosy Summer is the darling child.

BENEVOLENCE

Saturday Evening, *November 23.*

The hours of social intercourse, of gratified hope, of the festive board, have just now yielded to quieter pleasures of the closet and the pen. This tender flesh is warmly clad, the blood leaps in the vessels of life, Health and Hope write their results on the passing moment, — and these cushions of Benevolence a few pages farther on. In the latter of these his favourite doctrine of Compensation appears. things make the pleasure of a mortal, bodily, mental being. There are in the world at this moment one hundred million men whose history today may match with mine, not counting the numberless ones whose day was happier. There are also in existence here a countless crowd of inferior animals who have had their lesser cup filled full with pleasure. The sunny lakes reflect the noonday beams from the glittering tribes which cover its bottom, rapid as thought in their buoyant motions, leaping with the elasticity and gladness of life. The boundless Ocean supports in its noisy waves its own great population, — the beautiful dolphin, the enormous whale, and huge sea-monsters of a thousand families and a thousand uncouth gambols dash through its mighty domain in the fulness of sensual enjoyment. The air is fanned by innumerable wings, the green woods are vocal with the song of the insect and the bird; the beasts of the field fill all the lands untenanted by man, and beneath the sod the mole and the worm take their pleasure. All this vast mass of animated matter is moving and basking under the broad orb of the sun, — is drinking in the sweetness of the air, is feeding on the fruits of nature, — is pleased with life, and loth to lose it. All this pleasure flows from a source. That source is the Benevolence of God.

This is the first superficial glance at the economy of the world and necessarily leaves out a thousand circumstances. Let us take a closer view, and begin with the human mind. I find within me a motley array of feelings that have no connection with my clayey frame, and I call them my *mind*. Every day of my life, this mind draws a thousand curious conclusions from the different things which it beholds. With a wanton variety which tires of sameness, it throws all its thoughts into innumerable lights, and changes the fantastic scene by varying its own operations upon it; by combining and separating, by comparing and judging, by remembering and inventing all things. Every one of these little changes within, produces a pleasure, the pleasure of power or of sight. But besides the mere fact that the mind acts, there is a most rich variety in thought, and I grossly undervalue the gift I possess, if I limit its capacity to the puny round of every day's sensations. It is a ticket of admission to another world of ineffable grandeur — to unknown orders of things which are as *real* as they are stupendous. As soon as it has advanced a little in life it opens its eye to thoughts which tax its whole power, and delight it by their greatness and novelty. These suggest kindred conceptions, which give birth to others, and thus draw the mind

on in a path which it perceives is interminable, and is of interminable joy. To this high favoured intellect is added an intuition that it can never end, and that with its choice it can go forward to take the boon of immortal Happiness. These are causes and states of pleasure which no reason can deny. But this is the true history of all the individuals of the mighty nations that breathe today. These point also to a source — which is the Benevolence of God.

But a groan of the dying, a cry of torture from the diseased, the sob of the mourner, answer to this thanksgiving of human nature and produce a discord in our anthem of praise. If God is good, why are any of his creatures unhappy?...

Those who consider the foundations of human happiness find that it is a contrasted and comparative thing.... High and multiplied sources of pleasure are often in our possession, without being enjoyed, for they never were lacking; God disturbs or removes them for a time; and he is dull, who sees no wisdom in this mode of giving them value and sharpening the blunted edge of appetite. Thus Health and Peace are insipid goods, until you have been able to compare them with the torments of Pain and the visitation of War. And after this comparison has once been made, man runs riot in holding them.

Next, it should be remembered that we wisely assume the righteousness of the Creator in placing man in a probationary state. We do not seek with vain ambition to question the abstruse and unsearchable ground of this ordination, because it is plain matter of fact that we are incompetent to the discussion. This being assumed, there is no longer any doubt of the Divine Benevolence arising from the existence of evil. Evil is the rough and stony foundation of human Virtue; weaning man away from the seductive dangers of vicious, transient, destructive pleasures to a hold and security of Paradise where they are perpetual and perfect.

Of Professor N., Shakespeare long ago wrote the good and bad character: Oh it is excellent To have a giant's strength, but it is tyrannous To use it like a giant.

[SOLITARY FANCIES]

Rich in the playful joys of solitude

The peaceful Muse begins her jubilee

When Night's black car, sprinkled with golden stars, Has chased the Sun's magnificence away.

Pleased with the closet's motley furniture,

And broken shadows, where the elves and gnomes

Fight with the rats for noise or victory,

The Muse roves boldly on her vagrant wing,

Disdains the recent times and days of dwarfs,
And this cold land Apollo never knew;
Abandons with proud plumes the passing hour,
And follows Fancy through a thousand worlds.

It is a curious spectacle, to see
‘The panorama of unnumbered hues
That her wild journey marshals round her eye.
But icy Reason scowls upon the shew, —

And its gay battlements and beaming towers
And shining forms all vanish at his frown.
Yet I, who never bowed obedient neck
To Reason’s iron yoke, will still rebel
And vex the tyrant in his ancient halls.

I’ll ponder pleasantly the changing scenes And tell their wonders loudly on the lyre. of him as “a man of acute intellect and commanding personality and, I suppose, the foremost theologian of the liberal Christians.” Sixteen years later, Emerson, after the delivery of his Divinity School Address, felt the weight of this giant’s attack.

November 29, 1822.

The ardour of my college friendship for — is nearly extinct, and it is with difficulty that I can now recall those sensations of vivid pleasure which his presence was wont to waken spontaneously for a period of more than two years. To be so agreeably excited by the features of an individual personally unknown to me, and for so long a time, was surely a curious incident in the history of so cold a being, and well worth a second thought. At the very beginning of our singular acquaintance, I noticed the circumstance in my *Wide World*, with an expression of curiosity with regard to the effect which time would have upon those feelings. To this day, our glance at meeting is not that of indifferent persons, and were he not so thoroughly buried in his martial cares, I might still entertain the hope of departed hours. Probably the abatement of my solitary enthusiasm is owing to the discouraging reports which I have gathered of his pursuits and character, so entirely inconsistent with the indications of his face. But it were much better that our connexion should stop, and pass off, as it now will, than to have had it formed, and then broken by the late discovery of

insurmountable barriers to friendship. From the first, I preferred to preserve the terms which kept alive so much sentiment rather than a more familiar intercourse which I feared would end in indifference.

benevolence (*continued*)

Saturday Evening, *November 30.*

Heraclitus was a fool, who wept always for the miseries of human life. Or was he blind and deaf to beauty and melody? In his day, was the sky black, and were snakes instead of flowers coiled in his path? Was his mind reversed in its organization; — had he Despair for Hope, and Remorse for Memory? Could his disordered eye discern a *savage* Power sitting in this Splendid Universe, thwarting the *good* chances of Fortune and promoting the *bad*, sowing seeds of *sorrow* for *glory*> turning grace and tranquillity to desolation, and heaven to hell? Then let him weep on. True philosophy hath a clearer sight, and remarks amid the vast disproportions of human condition a great equalization of happiness; an intimate intermingling of pleasure with every gradation, down to the very lowest of all. Pleasant and joyous are the connexions of our sympathy and affection— 'tis proved by the very tear which marks their dissolution; and even that pang of separation and loss is relieved by its own indulgence....

Happiness lies at our own door. Misery is further away. Until I know by bitter personal experience that the world is the accursed seat of all misfortunes, and as long as I find it a garden of delights — I am bound to adore the Beneficent Author of my life.... No representations of foreign misery can liquidate your debt to Heaven. You must join the choral hymn to which the Universe resounds in the ear of Faith, and I think, of Philosophy....

The mind can perceive a harmonious whole, combined and overruled by a sublime Necessity, which embraces in its mighty circle the freedom of the individuals, and without subtracting from any, directs all to their appropriate ends. It perceives a purpose to pain, and sees how the instruction and perfection of myriads is brought about by the spectacle of guilt and its punishment. That great and primeval Necessity may make impossible an Universe without evil, and perhaps finds happiness *everywhere*, as *here*, upon the contrast of suffering. This question lies at the sources of things, and we are only indulged with an intimation that may make out the just goodness of the Deity.

(This connection may be deeper and more intimate than we are apt to imagine, and the circumstances observed just now, seem to indicate that it is. That connection, which subsists *here* in *character*, will subsist in *condition* hereafter. And some plan will be developed, in which the good of *Evil* will be

made plain on the general scale, that cannot be explained upon the particular.)...

GREATNESS

Every man who enumerates the catalogue of his acquaintance is privately conscious, however reluctant to confess the inferiority, of a certain number of minds which do outrun and command his own, in whose company, despite the laws of good breeding and the fences of affectation, his own spirit bows like the brothers' sheaves to Joseph's sheaf. He remembers the soothsayer's faithful account of Antony's guardian genius which among other men was high and unmatched, but quailed before Caesar's. He remembers also other some of his companions, over whom his own spirit exercises the same mastery. And let no man complain of the inequality of such an ordination, or call Fortune partial in the distribution of her blessings.

AMERICA *December 21.*

There is everything in America's favour, to one who puts faith in those proverbial prophecies of the Westward progress of the Car of Empire. Though there may be no more barbarians left to overrun Europe and extinguish forever the memory of its greatness, yet its rotten states, like Spain, may come to their decline by the festering and inveteracy of the faults of government. Aloof from the contagion during the long progress of their decline, America hath ample interval to lay deep and solid foundations for the greatness of the New World. And along the shores of the South Continent, to which the dregs of corruption of European society had been unfortunately transplanted, the fierceness of the present conflict for independence will, no doubt, act as a powerful remedy to the disease, by stirring up the slumbering spirits of those indolent zones to a consciousness of their "power and destiny. Here, then, new Romes are growing, and the Genius of man is brooding over the wide boundaries of infant empires, where yet are to be drunk the intoxicating draughts of honour and renown; here are to be played over again the bloody games of human ambition, bigotry and revenge, and the stupendous Drama of the passions to be repeated. Other Cleopatras shall seduce, Alexanders fight, and Cæsars die. The pillars of social strength, which we occupy ourselves in founding thus firmly to endure to future ages as the monuments of the wisdom of this, are to be shaken on their foundations with convulsions proportioned to their adamantine strength. The time is come, the hour is struck; already the actors in this immense and

tremendous scene have begun to assemble. The doors of life in our mountain-land are opened, and the vast swarm of population is crowding in, bearing in their hands the burden of Sorrow and Sin, of glory, and science, which are to be mingled in their future fates. In the events and interests of these empires, the old tales of history and the fortunes of departed nations shall be thoroughly forgotten and the name of Rome or Britain fall seldom on the ear.

In that event, when the glory of Plato of Greece, of Cicero of Rome, and of Shakspeare of England shall have died, who are they that are to write their names where all time shall read them, and their words be the oracle of millions? Let those who would pluck the lot of Immortality from Fate's Urn, look well to the future prospects of America.

Friday Evg. *Bee*. 21, 1822. Authors or Books quoted or referred to in Journals of 1822 Homer; Simonides; Heraclitus; Sophocles, *Electra*; Thucydides; Demosthenes; Bible; Zoroaster; Cicero; Lucretius; Horace; Plutarch; Tacitus, *Germania*; Seneca; Marcus Aurelius; Mediæval Mystery Plays; Chaucer; Shakspeare; Ben Jonson; Bacon; Milton, *Paradise Lost*; Boileau; Locke, *On the Human Understanding*; William Sherlock, *Sermon on Faith*; Newton; Burnet, *Memorial*; Fontenelle; Pope; Richardson, *Novels*; Montesquieu; Butler, *Analogy*; Voltaire; David Hartley, *Observations on Man*; Dr. Johnson, *Vanity of Human Wishes*; Samuel Clarke; Priestly; Gibbon, *Beeline and Fall of the Roman Empire*; Paley; Logan, *Tarrow*; *Speeches* of Pitt, Burke, Fox; Dugald Stewart, *Philosophy of the Mind*; Claudius Buchanan, *Christian Researches in India*; Abernethy; Buckminster, *Sermons*; Arabian Nights; Scott, *The Pirate, Minstrelsy*; Byron, *Corsair, Childe Harold*; Fearing, *Travels in the United States*; Sismondi, *Italian Republics*; Leigh Hunt, *Song*.

JOURNAL X

THE WIDE WORLD, NO. 9

“Pass not unblest the Genius of the place.”

Saturday Evening, *December 21, 1822.*

To the Genius of the Future, I dedicate my page.

“Incipe. Vivendi qui recte prorogat horam,
Rusticus expectat dum defluat amnis; at ille
Labitur et labetur in omne volubilis aevum.”

[GOOD HOPE]

... If the misanthrope take refuge in *analogy* — it will fail him. For though we bewail the imperfection of sublunary things, yet all things in the mineral, vegetable and animal kingdom have a *perfection*, which, though not attained in the hundred instances, — *is* attained in the thousand; is attained much oftener than not. Man in many trials has failed;... But now a preparation is made for another experiment which begins with infinite advantages. I need not name the daily blessings which are diffused over the present generation and distinguish them above antiquity. I notice only that they possess Christianity and a civilization more deeply ingrafted in the mind (by reason of the extraordinary aids it derives from inventions and discoveries) than ever it has before been. It is the nature of these advantages to multiply themselves. Providence ordains that every improvement extend an influence of infinite extent over the face of society. For centuries back, the progress of human affairs has appeared to indicate some better era; and finally when all events were prepared, God has opened a new theatre for this ultimate trial. This country is daily rising to a higher comparative importance and attracting the eyes of all the rest of the world to the development of its embryo greatness.

ALFRED THE GREAT

Christmas, *December 25.*

If (as saith Voltaire) all that is related of Alfred the Great be true, I know not the man that ever lived, more worthy of the gratitude of posterity. I hope the

reservation means nothing. There is not one incredible assertion made either of his abilities, his character, or his actions. Besides it was not an age, nor were Saxon monks the men, to invent and adorn another Cyropaedia. Sharon Turner, an ambitious flashing writer, and elsewhere a loon, hath done well by Alfred. His praise rests not upon monkish eulogy or vague tradition, but upon *facts*....

December 26, 1822.

I have heard this evening and shall elsewhere record Prof. Everett's lecture upon Eleusinian mysteries, Dodona, and St. Sophia's temple....

Though the lecture contained nothing original, and no very remarkable views, yet it was an account of antiquities bearing everywhere that "fine Roman hand," and presented in the inimitable style of *our Cicero*. "Bigotry and Philosophy are the opposite poles of the judgment, and the scepticism of Hume and Gibbon is as different as the superstition of the Catholics from the freedom of the Protestant." (Professor E.) Saturday Evening, *January 11*.

"My bosom's lord sits lightly on his throne"; I cannot distinctly discern the cause; tomorrow he will sit heavily there; and after a few days more, he shall cease to be. The connexions which he nursed with earthly society shall be broken off, and the memory of his individual influence shall be obliterated from human hearts. It may chance that he will resume his thought elsewhere; that while the place from whence he passed forgets him, he shall nourish the fires of a pure ambition in some freer sanctuary than this world holds. It is possible that the infinity of another world may so crowd his conception, as to divest him of that cumbrous sense of *self* that weighs him down, — until he lose his individual existence in his efforts for the Universe.

TIME

... The years of infancy fled, and those toys dwindled away to make room for the splendid hopes and enthusiastic resolutions of youth. The sky was not so bright, and alas! not so changeable as its promises. It revelled in the sight of beauty, and the sound of music, in the motion of the limbs, in the intercourse of friends, and in all the joys of a pleasant and gorgeous world. But the crimson flush went from its cheek and the joyous light from its eye; its bones hardened into manhood, and its years departed beyond the flood. Reason watched them as they departed, and was bitterly mortified to find how insignificant they became

in the view. Those changes and events which had engaged the mind by their gigantic greatness sunk now to pigmy dimensions, and so dim were their images upon the memory that it was hard to believe they were not altogether a dream.

After a few more turnings of the globe in its orbit, manhood, age and life itself will have passed, and as I advance, that which I have left behind will continually grow less and less. As I reach and pass successively the several epochs of existence, the things of former pursuit will degenerate in my esteem. All, all, will be unremembered as if they had never been. The mind writes daily, in its recollections of the past, but one epitaph upon Time— “Vanity of Vanities, all is Vanity!” God forbid that this be the faithful history of the Universe....

MORAL SENSE

... There is one distinction amid these fading phenomena — one decided distinction which is real and eternal and which will survive nature —— I mean the distinction of Right and Wrong. Your opinions upon all other topics, and your feelings with regard to this world, in childhood, youth, and age, perpetually change. Your perceptions of right and wrong never change. You can dismiss the world from your mind, and almost abolish in your imagination the dominion of sense; but you can never bury in your breast the sense of offended Justice....

The mind may lose its acquaintance with other minds, and may abandon, without a sigh, this glorious universe, as a tent of the night to dwell in; but it cannot part with its moral principle, by which it becomes akin to the extraordinary intelligences that are to accompany its everlasting journey to the throne of God. If there be anything real under heaven, or in heaven, the perception of right and wrong relates to that reality. Dogmatists and philosophers may easily convince me that my mind is but the abode of many passing shadows by the belief of whose existence about me I am mocked. I shall not very sturdily combat this ancient scepticism because, to my mind and to every mind, it has often seemed problematical whether or not it was cheated by an unsubstantial edifice of thought. But it is in the constitution of the mind to rely with firmer confidence upon the *moral principle*, and I reject at once the idea of a delusion in this. This is woven vitally into the thinking substance itself, so that it cannot be diminished or destroyed without dissipating forever that spirit which it inhabited. Upon the foundation of my *moral* sense I ground my faith in the immortality of the soul, in the existence and activity of good beings, and in the promise of rewards accommodated hereafter to the vicious or virtuous

dispositions which were cultivated here. The great citizenship of the universe, which all souls partake, has *this* for its common bond and charter, which none may violate, without taking upon themselves the peril of losing its infinite privileges. Upon the bounded field of this earth, nations upon nations of men have expired in succession, and borne to other and unseen countries the minds that dwelled here for a space; and all the individuals of this host have consented together in one respect alone, namely, the acknowledgement of this inward tribunal of thought and action. They obeyed or disobeyed its law, they suffered or rejoiced, as they might; but not one ever escaped from this high, unyielding, universal thralldom which the Author of Mind has created upon the mind.

ENTHUSIASM

January 19, 1823.

The ideas of Deity and religious worship readily find admission to the mind, and are readily abused. The clown on a dunghill can exalt his capacity to these truths and is delighted and flattered by this consciousness of a new and transcendent power. God is infinitely above the whole creation, and he that aspires to worship Him, feels that his mounting spirit leaves the rest of the Universe beneath his feet. Enthusiasm is therefore apt to generate in uncultivated minds a rash and ignorant contempt for the slow modes of education and the cautious arts of reasoning by which enlightened men arrive at wisdom — because they have themselves acquired this surpassing conception without the irksome toil of the intermediate steps. The boor becomes philosopher at once, and boldly issues the dogmas of a religious creed from the exuberance of a coarse imagination. The tumults of a troubled mind are mistaken for the inspiration of an apostle, and the strength of excited feelings is substituted for the dispassionate and tardy induction, the comparison of scripture and reason, which sanctions the devotions of moderate and liberal men.

This has been everywhere found to be the history of religious error; not merely in the fanaticism of sects, but in the mistakes and superstitions of individuals. Every man's heaven is different; and is coloured by the character and tone of feeling most natural to his mind. And, in like manner, his conceptions of the Divine Being will vary with the narrowness or justness of his modes of thinking. A mind which is remarkable for the truth and grandeur of its views in physical or metaphysical science will seldom be found the dupe of an unrelenting bigotry in its religious faith.... Intellectual habits are not the sudden

productions of an accident, but are formed slowly, and confirmed from day to day by the influence of events, until they acquire an immutable strength that may outlast the period of this life. We think of God, therefore, as we think of man. Our views of human nature are liable to mistake; so are our views of the divine.

prayer

... The origin of prayer is no doubt to be traced in our comparison of finite beings with the infinite Being. To obtain bread, we prayed our neighbour to impart from his store. But to obtain more than bread, — to obtain our health or the life of a friend, to change the course of events, is beyond our neighbour's power. Man remembered in his hour of need that there was a Power above him, and uttered an ejaculation of his distress and his hopes, dictated by precisely the same emotions which moved him to address his earthly friend. Thus far the analogy is unexceptionable, but if pursued farther it fails. A judge has decreed the death of a criminal; the father and friends of the unfortunate man come before the tribunal to pray for his life, and plead with such importunity and eloquence that the judge consents to set aside the sentence. The character of the culprit is not amended, but the free course of justice is stopped, and society wronged, by the earnestness of the supplication. (In the ancient Persian religion, it is forbidden to petition for blessings to themselves individually; the prayer must extend to the whole Persian nation.) In like manner, men came to their Maker to ask the favour of a partial event, a particular blessing that will prove prejudicial to the whole; and reasoning erroneously from human experience, they concluded that there was a certain force in prayer that would extend some controul even over the Mind of Deity. Pity and irresolution in the human judge triumphed over his knowledge and his virtue, and the worshipper flattered himself with the hope that even God might be induced to hesitate by the offering of hecatombs and clamorous petition. The idolatry of every nation has had a tendency towards this belief, that the arm of omnipotence could be chained down by sacrifice and entreaty, which the Hindoo mythology has pursued to extravagant lengths. Prayer and penance by their intrinsic virtue will raise the worshipper above the power of gods and men, until it hurls the Highest from his throne to make room for the devout usurper. Such a creed shocks the mind; but a secret bias to this belief is by no means uncommon in Christian countries. We are prone to think that the prayers of righteous men avail with God to check or change the course of events, which implies either that those events were ill-ordered before, or that they will take a wrong direction now; but both these hypotheses are inconsistent with our trust in the superintendence of Providence over human affairs....

The opposition of a General to a Particular Providence is often implied in

prayer. Antiquity viewed the gods as the Particular, Fate as the General Providence, and reconciles them by making Fate absolute in the administration of the Universe. Our perplexity springs from the union of both in the hands of One God.

... When God has ordained a change of events and the aspect of the world, suggesting the benefits of such a change to the mind, induces man to pray for it, in this case, the event coincides with the prayer, and is interpreted as an especial interposition. With this solitary exception, men's prayers and the succession of events have no direct connexion at all with each other....

Human curiosity is forever engaged in seeking out ways and means of making a connection between the mind and the world of matter without, or the world of mind that has subsisted here, or an uniting bridge which shall join to future ages our own memory and deeds. This laudable curiosity should not neglect the formation of a bond which proposes to unite it, not to men, to matter, or to beasts, but to the Unseen Spirit of the Universe. Our native delight in the intercourse of other beings urges us to cultivate with assiduity the friendship of great minds. But there is a Mind to whom all their greatness is vanity and nothing; who did himself create and communicate all the intellect that exists; and there is a mode of intercourse provided by which we can approach this excellent majesty. That Mind is God; and that Mode is Prayer.

“And if by prayer
Incessant I could hope to change the will
Of Him who all things can, I would not cease
To weary Him with my assiduous cries.
But prayer against his absolute decree
No more avails than breath against the wind
Blown stifling back on him that breathes it forth.”

Paradise Lost, Book XI.

HISTORY

In reading History it is hard to keep the eye steadily fixed upon any distinct moral view of the species, to which we may readily refer all the facts recorded of individuals. When we lay aside the book, and think of man, our habitual theories regard him as a being in a state of probation, and we elevate the whole human

race to an exalted equality of condition and destiny. Resume the page, and you are convinced at once, that whatever opinions you are yourself pleased to entertain concerning them, — it never entered the minds of the majority of mankind in past ages that any such equality prevailed, or that they sustained any very sublime rank in the scale of creation. They have themselves shewn a melancholy apathy (that is madness in the eye of a philanthropist) to every supposed nobleness of moral or intellectual design; they — that is the majority — have uniformly preferred the body to the mind, have permitted the free and excessive enjoyment of their sensual appetites, and chained down in torpid dreams the noble appetites of the soul. Instead of eating to live, men have lived to eat, to drink, and to be merry; and when ordinary means failed to bring about these grand purposes, then the extraordinary means of lies; murder and robbery have been resorted to. No doubt good men are also found in the dramatic variety of the tale, to recall the mind to the theory from which it has wandered; but a good man in the world is aptly represented by a stag in the chase, as the one mark and victim at whose cost the enjoyment of all the rest is procured.... It seems to be a mockery to send us to this howling wilderness to pluck roses and fruits. The rose is blooming there and the wild flowers hanging luxuriantly, but they cast their perfume in the tiger's den. Fanciful men, heated by the new wine of their imaginations, have attempted to woo the indignant Reason into a better love of this darkened world; Epicurean pencils have painted it as perfectly accommodated to our powers of enjoyment, as fraught with every luxury, grace and good which we desire to gain, as the palace of beauty and love, the vast mart of thought, friendship, society and distinction, the home of Virtue and the End of Hope. So it is pictured, and so we believe in childhood; but our first mature glance at the actual state of society falls upon so much real deformity and such low moral and intellectual turpitude that the fair fabric of the imagination is speedily undermined. We find it difficult or impossible to reconcile the phenomena which we observe with any plausible hypotheses that heaven or earth have told us of their design; but humanity always resembles itself, and we readily recognize the imposture that attempts to describe better beings than men. For this more brilliant and seductive faith concerning man and the earth is deduced from false and partial representations of human nature, and makes only momentary converts when it is aided by the gay exhilaration which nature within and without awakens in youth, or by the few hours or moments that happen in a man's life, when the heart is swelled and imagination is feasted at seasons of revel, magnificence and public joy. Whereas the times when the contrary conviction is forced upon the soul, outnumber these moments a thousand fold....

history (*continued*)

The history of America since the Revolution is meagre because it has been all that time under better government, better circumstances of religious, moral, political, commercial prosperity than any nation ever was before. History will continually grow less interesting as the world grows better. Professor Playfair of Edinburgh, the greatest, or one of the greatest men of his time, died without a biography, for there was no incident in the life of a great and good man worth recording. Nelson and Bonaparte, men of abilities without principles, found four or five biographies apiece.

The true epochs of history should be those successive triumphs which, age after age, the communities of men have achieved, such as the Reformation, the Revival of letters, the progressive Abolition of the slave-trade.

Whoever considers what kind of a spirit it is which prompts men to write, will remark the improbability that a knowledge of the domestic manners of an ancient people should be transmitted to a remote age, by any but the most fortuitous event. Literature grew out of the necessity of written monuments, and in its first expansion into an elegant art, while yet its mechanical advantages were rude and poor, it was devoted only to those great features on the face of the world which first forced themselves on the mind of the writer, — to the history of laws, of colonies, of wars, and of religion. For his illustrations, the writer appealed to nature, and upon the early discovery of the delight given by these appeals, was formed a new department of the Art which was called poetry.

DOMESTIC MANNERS

... If we had a series of faithful portraits of private life in Egypt, Assyria, Greece and Rome, we might relinquish without a sigh their national annals. The great passions which move a whole nation, and the common sense of mankind, are alike everywhere, and these determine the foreign relations and the political counsels of men. But private life hath more delicate varieties, which differ in unlike circumstances;...

... Our vague and pompous outlines of history serve but to define in geographical and chronological limits, the faint vestiges we possess of former nations. But of what mighty moment is it that we know the precise scene of a Virtue or a Vice? Give us the bare narrative of the *moral* beings engaged, the *moral* feelings concerned, and the result — and you have answered all our purpose, all the ultimate design which leads the mind to explore the past. (That is of a speculative mind — apart from all purposes of government and policy —

for the purposes of another world, rather than for this.) For the history of nations is but the history of private Virtues and Vices collected in a more splendid field, a wider sky. To little purpose you would shew the curious philosopher a mighty forest, extending at a distance its thousand majestic trees; a single branch, a stem, a leaf, in his hand is of more value to him for all the purposes of science. Even the Eternal Geometer, in the fancy of Leibnitz, deduces the past and present condition of the Universe from the examination of the single atom.

SOLITUDE

The gods and wild beasts are both, to a proverb, fond of solitude; thought makes the difference between the solitude of the god and that of the lion.

[imagination *versus* thought]

In the entry of the saloon there has been considerable bustle; but an individual now stood there to throw off his blue cloak, whose figure arrested at once the whole attention of two or three guests who chanced to be looking towards the door. A whisper instantly circulated to inform the party of the presence of a most distinguished and welcome guest. Every one rose at his entrance, and the stranger advanced with an air of dignified majesty towards the centre of the hall. Franklin saluted him with evident respect and introduced him to the company as the first American President. There was no brilliant sparkle in his eye which attracted notice, nor rapid change of expression in his countenance; his countenance was composed and a graceful dignity marked every motion, so that he was rather the Jupiter than the Apollo of the group. This however was manifest, that from the time of his entrance, during all that long conference, the first place in that society was invariably, and of right, as it seemed, conceded to him. A most melodious voice which rolled richly on the ear and was that of Cicero, addressed the last mentioned person. "I esteem myself happy to stand in the company of one to whom Heaven seems to have united me by a certain similarity of fortune and the common glory of saving a state. But the fates have given you an advantage, O most illustrious man, above my lot, in granting you an honourable decline and death amid the regrets of your country, while I fell by the vengeance of the flagitious Antony." Gibbon put up his lip at this speech; and Franklin, who sat with his hands upon his knees between Washington and Gibbon, &c. &c.

"Tush!" he said, "thoughts and imaginations! I tell thee, man, that I, who have

got my bread and fame by informing the world, can write, in twenty lines, all the *thoughts* that ever I had, while the imaginations would fill a thousand fair pages.”

[ANIMALS]

March 6, 1823.

My brother Edward asks me, Whether I have a right to make use of animals? I answer “Yes,” and shall attempt to give my reasons. A poor native of Lapland found himself in midwinter destitute of food, of clothing and light, and without even a bow to defend himself from the beasts. In this perplexity he met with a reindeer, which he killed and conveyed to his hut. He now found himself supplied with oil to light his lamp, with a warm covering for his body and with wholesome and strengthening food, and with bowstrings withal, whereby he could again procure a similar supply. Does any mind question the innocence of this starving wretch in thus giving life and comfort to a desolate family in that polar corner of the world?...Now there is a whole *nation* of men precisely in this condition, all reduced to the alternative of killing the beasts, or perishing themselves. Let the tender-hearted advocate of the brute creation go there, and choose whether he would make the beasts *his* food, or be himself *theirs*....

[BODY AND SOUL]

March 10.

The mixture of the body and soul is the great wonder in the world, and our familiarity with this puts us at ease with all that is unaccountable in our condition. Providence, no doubt, scrupulously observes the proportions of this mixture, and requires for the soundness of both, a fixed equilibrium. The gross appetites of the body are sometimes indulged until the mind by long disuse loses the command of her noble faculties, and one after another, star after star, they are gradually extinguished. Those passages and conduits of thought, of divine construction, through which God intended that the streams of intellect should flow in various directions, — because they have never been used, have fallen to ruin, and are choked up; Mind, from being the free born citizen of the Universe and the inheritor of glory, has become the caterer and the pander of sense. Even the body, from being the upright lord of the lower creation and the temperate owner of a thousand pleasures, has abused his liberties, until he is the slave of those pleasures, and the imitator and peer of the beasts. This is one mode of

destroying the balance that Nature fixed in our compound frame....

Ascetic mortification and an unintermitting, livelong martyrdom of all the sensual appetites, although far more innocent than the contrary extreme, is nevertheless unwise, because it fails of its intended effect. Hermits, who believed that by this merciless crucifixion of the lusts of the body they should succeed in giving to the winds the rags and tatters of a corrupt nature, and elevate and purge the soul in exact proportion to the sufferings of the flesh, have been disappointed in their hopes; at least, if they have succeeded in deceiving themselves, they have grievously disappointed the world....

But these golden dreams of a rapid amelioration of the world to issue from the prayers and penances that stormed heaven from these solitudes, vanished away. The solitary man was as other men are. His sufferings had soured his temper, or inflamed his pride; the current of thought had been checked and frozen. His powers and dispositions were diverted from useful ends and were barren and selfish. Instead of the blessed plant which they thought had sprung for the healing of the nations, was a dry and withered branch; it was sundered from its root; producing neither blossoms, nor leaves, nor fruits, 't was fit only for the fire.

March 12.

... But there was an elder scripture, a prior command; Love thy neighbor; amid your righteous war against your passions, forget not that you are a man; that you are one individual of a great and immortal company, who, with you, are labouring on to attainment of objects which demand all and more than all their faculties to appreciate and reach; that thousands of these are fainting or falling by the way, and will task your utmost benevolence to lend them needful aid. And when a man has duly considered,... I think he will be led to undervalue the precious qualities of that man's virtue who, like the priest and the Levite of the parable, goes on the other side and extricates himself as he can from the importunity of want or the cries of the dying.... The earth which supports him upon her bosom, the common mother of us all, has a right to ask at his hands some return for her bounties, and what immunity it is entitles him to nurse his own unprofitable existence, without putting his shoulder to the wheel or bearing his part of the burden of life; without giving help to the weary or pouring one drop of balm into the wounded heart. I am persuaded that God enforces the law... to make the perfection of man's nature consist in a fixed equilibrium of the body and the mind. Those masters of the moral world, who have preserved an undisputed lordship over good minds for ages after they themselves have died, have not gained that rare fortune by any extraordinary manners of life, or any

unseemly defiance of the elements, or of death. Temperate, unassuming men, they have conformed to the fashions of the times in which they fell, without effort or contempt. God, in their minds, removed the ancient landmarks of thought, or else gave them strength to overleap the boundary, so that they took in a mightier vision of the state of man than their fellows had done. In all this they did not see *differently* from them, but *saw beyond* the common limit. Accordingly it was no part of their pride to be at discord with men upon common matters of every day's observation. Upon trifles of time and sense they all thought alike. Deeper thoughts and remote consequences, far beyond the ken of vulgar judgments, and yet intimately connected with the progress and destinies of society, were the points they fixed their eyes upon; and upon the distinctness with which they were able to detect these, they chiefly valued themselves. It is a delightful relief in the afflicting history of the world, it is a crystal fountain gushing in the wilderness — to remember the men who exercised this peaceful and sublime dominion over human hearts not cemented by the blood nor shaken by the curses of enemies. Bound like other men to the complicated machine of society, and their fortunes perhaps inseparably linked to the greatness of another house — these minds quietly founded a kingdom of their own, which should long outlast the ruins of that transient dynasty in which it grew.... Men of God they were, — children of a clearer day, walking upon earth, keeping in their hands the urns of immortality out of which there streamed a light which reached to far distant generations that they might follow in their track. The Pagan also blest them, “*Pauci quos aequus amavit*

Juppiter, aut ardens virtus ad sidera tollit.”

March 13.

And what a motley patchwork of feelings may be found in the crew of their admirers behind them. How many brows are knit, how many hearts yearn, of those who resolve to follow, or are content to worship them! Upon what meat did these Caesars feed, that they have grown so great? Did God or Man, time, or place, or chance, sow the immortal seed? And how many seats at the Table of the Gods are yet vacant? And the storehouses of genius and goodness from which each child of the Universe may pluck out his share — are they yet exhausted or locked up? And shall those hearts which have throbbled to the secret urgency of the spirit, (perchance it was the same spirit that urges all existence) shall they faint in the outset? Onward, onward, the Sun is already high over your head! Or fearest thou because the day is waxed late that time shall lack? I tell thee, the race is for Eternity. The windows of heaven are opened, and they whose faces are as the day, Seraphim and Cherubim, beckon to the children

of Man and bid him “Be bold!”

“Incipe. Vivendi qui recte prorogat horam,

JOURNAL
FIRST ESSAYS
PRINTED REFORMS

JOURNAL XXXII

1841

(From Journals E, F, G, H, and J)

[IN January, Mr. Emerson — his book of Essays sent to the printer — had to prepare the lecture “Man the Reformer,” which he delivered before the Mechanics’ Apprentices’ Library Association in Boston on the 25th of the month. His sedentary work and the severe winter seem to have left him in bad condition in the spring, and in April a pleasant and successful alliance was made with Henry Thoreau, then twenty-four years old, which lasted for two years.

Thoreau became, as it were, an elder son in the family, attended to the gardening, established a poultry-yard, grafted the trees, and skilfully did odd jobs and repairs in the house. He was man of the house during Mr. Emerson’s absences, and was most respectfully attentive to Mrs. Emerson, to whom he always looked up as a sort of lady-abbess. He was a delightful friend to the children, and had great gifts of amusing and helping them. He reserved what time he wished for studies, afield and at home. Sometimes he walked with Mr. Emerson and showed him Nature’s secrets in the woods or swamps or on the river. Mr. Emerson’s lack of skill in gardening or household emergencies was admirably supplemented by his young friend.]

(From E)

January 1, 1841.

I begin the year by sending my little book of Essays to the press. What remains to be done to its imperfect chapters I will seek to do justly. I see no reason why we may not write with as much grandeur of spirit as we can serve or suffer. Let the page be filled with the character, not with the skill of the writer.

Goethe is right in his mode of treating colors, i.e., poetically, humanly. Beethoven is too proud, yet is grand.

(From F)

I wondered at the continence of Nature under the glittering night sky, and truly Pan ought to be represented in the Mythology as the most continent of Gods. But not less admirable is the phlegm of the good ghost that inhabits it. For can I, can any, spare the next day, the next year of our lives? Can any consent to die now? Are we not always expecting that this marvellous moderation which refuses to blab the secret, and yields us no rapturous intelligence such as all feel must lie behind there, will give way at last to the necessity of imparting the Divine

Miracle?

This reserve and taciturnity of time.

January 11.

The Confessional. — Does Nature, my friend, never show you the wrong side of the tapestry? Never come to look dingy and shabby? Do you never say, “Old stones! old rain! old landscape! you have done your best; there is no more to be said; praise wearies; you have pushed your joke a little too far”? — Or, on the other hand, do you find Nature always transcending and as good as new every day? I know, I know, how nimble it is, — the good monster. You have quite exhausted its power to please, and to-day you come into a new thought, and lo! in an instant there stands the entire world converted suddenly into the cipher or exponent of that very thought, and chanting it in full chorus from every leaf and drop of water. It has been singing that song every day since the Creation in your deaf ears.

Away with your prismatic, I want a spermatic book. Plato, Plotinus, and Plutarch are such..

It is necessary in considering the nature of everything to direct our attention to the purity of it. (Plotinus.)

Every soul pays a guardian attention to that which is inanimate. (Plato in *Phædrus*.)

Necessity indeed is in intellect, but persuasion in soul. (Plotinus.)

(From E)

January 17.

It appears sometimes what Prudence stands for. The true prudence is no derogation from the lofty character. The man who moved by interrupted impulses of virtue would lead a violent and unfortunate life. These continent, persisting, immoveable persons who are scattered up and down for the blessing of the world, howsoever named, Osiris or Washington or Samuel Hoar, have in this phlegm or gravity of their nature a quality which answers to the fly-wheel in a mill which distributes the motion equably over all the wheels and hinders it from falling unequally and suddenly in destructive shocks....

He did not get it from the books, but where the bookmaker got it.

Books lead us from ecstasy.

We look at the mercury to know the heat, but Nature is the mercury of our

progress. Do we dissolve the sun or the sun us? do we freeze the January, or January us?

We have exhausted Nature, but we read one of the masters and instantly are made aware of new classes of laws, and the world casts itself into types so smiling grand and so equal to the sense that we get a new idea of wealth, and grow impatient of our words and think we will never use them again; like boys who have had a rocking-horse or boat and then are mounted on a live horse or a sailboat — they despise their toys.

Powerful influence should never let us go; never be out of the mind, sleeping or waking: his name is on our lips, though we do not frequent his society.

Thou, O Truth, never lettest us go.

The love of Nature, — what is that but the presentiment of intelligence of it? Nature preparing to become a language to us.

Mechanics easily change their trades, for that which they learn in their apprenticeship is the use of tools, and, having learned that, they can readily turn themselves to any new work. All knowledge is thus eccentric, and of course the progress of knowledge geometric. Are there three rates of increase, arithmetical, geometrical, and circumferential, or from the centre on all sides out?

January 20.

Of these unquiet daemons that fly or gleam across the brain what trait can I hope to draw in my sketch-book? Wonderful seemed to me as I read in Plotinus the calm and grand air of these few cherubim — great spiritual lords who have walked in the world — they of the old religion — dwelling in a worship that makes the sanctities of Christianity *parvenues* and merely popular...

“Blessed,” said the Review which pleased me so well, “is the man who has no powers, and, as I had written long ago, Happy is the man who hears: unhappy the man who speaks. The reason is obvious: it is better to be poor and helpless in doing, because our heart is preoccupied and astonished with the immensities of God, than to be at leisure to adorn and finish our trivial works because communication with the Deity is no longer open to us. Therefore very wisely did the ancients represent the Muses as daughters of Memory. But when vision and union come, there is no leisure for memory or muses.

The ploughman and the ox, or a rider and his horse, indicate the natural

society of wisdom and strength: each is necessary to the other.

January 21.

A man should think much of himself because he is a necessary being: a link was wanting between two craving parts of Nature and he was hurled into being as the bridge, over that yawning need...

When I look at the sweeping sleet amid the pine woods, my sentences look very contemptible, and I think I will never write more: but the words prompted by an irresistible charity, the words whose path from the heart to the lips I cannot follow, — are fairer than the snow. It is pitiful to be an artist...

We are to come into Nature from a higher law, and classify it anew. There is no mire, no dirt to chemistry: the ignorant, the foul, know of dirt: the chemist sees all dissolved into a chain of immaterial, immortal, irresistible laws. Even so must we come into Nature, that is, so walk and work and build and associate. We must not scold, we must not lay hands on men, but, being inspired, must awe their violence and lead them by our eye into harmonic choirs.

A man is a poor, liminary benefactor...

January 31.

God gives us facts and does not tell us why; but the reason lives in the fact; we are sure their order is right: there is no interpolation: and they only await our riper insight to become harmonious in their order and proportion. God knows all the while their divine reason. Swedenborg writes history after ideas. If he names Jew or Persian, Moravian or Lutheran, Papist or African, he gives us the reason in their character for the fact he names. I hope that day will come when no man will pretend to write history but he who does so by divine right. A man being born to see the order of certain facts, is born to write that history. Every other person, not so qualified, who affects to do this work is a pretender, and the work is not done....

All my thoughts are foresters. I have scarce a day-dream on which the breath of the pines has not blown, and their shadows waved. Shall I not then call my little book *Forest Essays*?

Ecstasy, religion, are essentially self-relying, the entranced instantly speak down as from an immeasurable height to him who but yesterday was walking at their side. They ask no sympathy. But the soul which enters its noviciate in the

temple, when it has prayed or chaunted inquires of its old friends, whether this was verily prayer and music?

The Present. — Cannot all literature, and all our own remote experience avail to teach us that the To-day which seems so trivial, the task which seems so unheroic, the inexpressive blank look of the Present moment,... cannot all avail to teach us that these are wholly deceptive appearances, and that as soon as the irrecoverable Years have placed their Blue between these and us, these things shall glitter and attract us, seeming to be the wildest romance, and — as far as we allowed them in passing to take their own way and natural shape — the homes of beauty and poetry?

Novels. — To find a story which I thought I remembered in *Quentin Durward*, I turned over the volume until I was fairly caught in the old foolish trap and read and read to the end of the novel. Then, as often before, I feel indignant to have been duped and dragged after a foolish boy and girl, to see them at last married and portioned, and I instantly turned out of doors like a beggar that has followed a gay procession into the castle. Had one noble thought opening the abysses of the intellect, one sentiment from the heart of God been spoken by them, I had been made a participator of their triumph, I had been an invited and an eternal guest, but this reward granted them is property, all-excluding property, a little cake baked for them to eat and for none other, nay, which is rude and insulting to all but the owner. In *Wilhelm Meister*, I am a partaker of the prosperity.

Yet a novel may teach one thing as well as my choosings at the corner of the street which way to go, — whether to my errand or whether to the woods, — this, namely, that action inspires respect; action makes character, power, man, God.

These novels will give way, by and by, to diaries or autobiographies; — captivating books, if only a man knew how to choose among what he calls his experiences that which is really his experience, and how to record truth truly!

February 4.

I am dispirited by the lameness of an organ: if I have a cold, and the thought I would utter to my friend comes forth in stony, sepulchral tones, I am disgusted, and I will not speak more. But, as the drunkard who cannot walk can run, so I can speak my oration to an assembly, when I cannot without pain answer a question in the parlor. But lately it is a sort of general winter with me. I am not

sick that I know, yet the names and projects of my friends sound far off and faint and unaffecting to my ear, as do, when I am sick, the voices of persons and the sounds of labor which I overhear in my solitary bed. A puny, liminary creature am I, with only a small annuity of vital force to expend, which if I squander in a few feast-days, I must feed on water and moss the rest of the time. I went to the Rainers' concert last night in our Court-House. When I heard them in Boston, I had some dreams about music: last night, nothing. Last night I enjoyed the audience. I looked with a great degree of pride and affection at the company of my townsmen and townswomen, and dreamed of that kingdom and society of Love which we preach.

His virtues were virtues of the senses. You can't tell how much good nature and generosity is to be ascribed to a good dinner, and how much to the character. There is a great deal of poetry and fine sentiment in a chest of tea....

If I judge from my own experience I should unsay all my fine things, I fear, concerning the manual labor of literary men. They ought to be released from every species of public or private responsibility. To them the grasshopper is a burden. I guard my moods as anxiously as a miser his money; for company, business, my own household chares, untune and disqualify me for writing. I think then the writer ought not to be married; ought not to have a family. I think the Roman Church with its celibate clergy and its monastic cells was right. If he must marry, perhaps he should be regarded happiest who has a shrew for a wife, a sharp-tongued notable dame who can and will assume the total economy of the house, and, having some sense that her philosopher is best in his study, suffers him not to intermeddle with her thrift. He shall be master but not mistress, as Elizabeth Hoar said.

February 10.

Prudence. — What right have I to write on Prudence whereof I have but little and that of the negative sort?...

February 12.

There is no Time. — If the world would only wait one moment, if a day could now and then be intercalated, which should be no time, but pause and landing-place, a vacation during which sun and star, old age and decay, debts and interest of money, claims and duties, should all intermit and be suspended for the halcyon trance, so that poor man and woman could throw off the harness and

take a long breath and consider what was to be done, without being fretted by the knowledge that new duties are gathering for them in the moment when they are considering the too much accumulated old duties! But this on, on, forever onward, wears out adamant. All families live in a perpetual hurry. Every rational thing gets still postponed and is at last slurred and ill-done or huddled out of sight and memory.

March 1.

In March many weathers. March always comes if it do not come till May. May generally does not come at all.

The poorness or recentness of my experience must not deter me from affirming the law of the soul: nay, although there was never any life which in any just manner represented the facts. We are bound to say what already is, and is explained and demonstrated by every right and every wrong of ours, though we are far enough from that inward health which would make this true order appear to be the order of our lives.

What a coxcomb is our experience which decides that such a fact or character cannot be because it has never been, as if that was not the reason why it should now be.

March 19.

Sent copies of my essays to Nathaniel L. Frothingham, Sam G. Ward, J. G. Palfrey, N. I. Bowditch, Margaret Fuller, Caroline Sturgis, W. H.

Furness, [Rev.] Dr. Francis, Samuel Ripley, F. H. Hedge, George Ripley, Abel Adams, J. R. Lowell, Dr. James Jackson, Dr. Charles T. Jackson, [Aunt] Mary Moody Emerson, William Emerson, Henry Ware, Jr., George P. Bradford, D[avid] H[enry] Thoreau, A. B. Alcott, W. Ware, Mrs. Lucy C. Brown, F. A. Farley, Elizabeth Hoar, William Henry Channing, W. E. Channing, Jr., [Rev.] Barzillai Frost, J. M. Cheney, Rockwood Hoar, Mother, Lidian, H. Colman, Thomas W. Haskins, Sarah Searle, Edward Palmer, William Wordsworth, Thomas Carlyle, John Sterling, Harriet Martineau, J. W. Marston, Sophia Peabody [Mrs. Hawthorne], Wm. M. Jackson, H. Bulfinch, Mary Russell, M. W. Willis, *N. T. Review, Knickerbocker.*

April 10.

Do not judge the poet's life to be sad because of his plaintive verses and confessions of despair. Because he was able to cast off his sorrows into these

writings, therefore went he onward free and serene to new experiences. You must be a poet also to draw any just inference as to what he was from all the records, be they never so rich, which he has left. Did you hear him speak? His speech did great injustice to his thought. It was either better or worse. He gave you the treasures of his memory, or he availed himself of a topic rich in allusions to express hopes gayer than his life entertains, or sorrows poured out with an energy and religion which was an intellectual play and not the habit of his character. You shall not know his love or his hatred from his speech and behaviour. Cold and silent he shall be in the circle of those friends who, when absent, his heart walks with and talks with evermore. Face to face with that friend who for the time is unto him the essence of night and morning, of the sea and the land, the only equal and worthy incarnation of Thought and Faith, — silence and gloom shall overtake him; his talk shall be arid and trivial. There is no deeper dissembler than the sincerest man. Do not trust his blushes, for he blushes not at his affection, but at your suspicion. Do not trust his actions, for they are expiations and fines often, with which he has amerced himself, and not the indications of his desire. Do not conclude his ignorance or his indifference from, his silence. Do not think you have his thought, when you have heard his speech to the end. Do not judge him worldly and vulgar, because he respects the rich and the well-bred, for to him the glittering symbol has a surpassing beauty which it has not to other eyes, and fills his eye, and his heart dances with delight in which no envy and no meanness are mixed. Him the circumstance of life dazzles and overpowers whilst it passes because he is so delicate a meter of every influence. You shall find him noble at last, noble in his chamber.

France.— “But Gymnast said, ‘My sovereign lord, such is the nature and complexion of the French that they are worth nothing but at the first push.’” — (Rabelais.)

I read with joy the life of Pythagoras by Iamblichus; and the use of certain melodies to awaken in the disciple now purity, now valor, now gentleness. That *Life* is itself such a melody, and proper to these holy offices. Especially I admire the patience and longanimity of the probation of the novice. His countenance, his gait, his manners, diet, conversation, associates, employments, were all explored and watched; then the long discipline, the long silence was imposed, the new and vast doctrines taught, and then his vivacity and capability of virtue explored again. — If all failed, then his property (otherwise made common) was restored to him, a tomb built to his memory, and he was thenceforward spoken of and regarded by the School as *dead*. The long patience in this fugitive world is itself

an affecting argument of the eternity of soul, affirms the faith of those who thus greatly slight our swift almanacs. He who treats human beings as centennial, millennial natures, convinces me of his faith.... Yet how much I admire their use of music as a medicine. But for me, with deaf ears, Order and Self-control are the “melodies” which I should use to mitigate and tranquillize the ferocity of my animal and foreign elements.

I saw with great pleasure the plates of the French artist of the ruins of Palenqua in Mexico: Cyclopean remains of a simple and original architecture that compares at once with what is best of Egyptian, Doric, or Gothic. Its great value to the eye is the emancipation of the spirit which it works. Everything is again possible. We are no longer forced to reproduce buildings in one of five or six foolish styles, but are as free as dreams, free as wishes, free as new necessities can make us.

Seest thou not how social and intrusive is the nature of all things? Ever they seek to penetrate and overpower each the nature of every other creature, and itself alone in all modes and throughout space and spirit to prevail and possess....

Man is the tender, irritable, susceptible matrix or receiver. The pollen of all these grand flowers, these savage forests, blows up and down and is lodged in him, and he bears a universal variegated blossom, rich with the qualities of every nature.

There is nothing man meditates but he tends presently to re - create, — whether a gallery of sculpture, or economical machines, or a government, or a bank, or the starry heaven, or a field of flowers, — a ship or a picture, music or a farm, a whaling voyage, or a war. Soft and facile all images float freely over his retina: the poet is he who can fix the grandest image and keep the vividness of a brisk conversation to a millennium. What are all these artists and masters of commerce, war, science, art, who go up and down so energetically, but the celebrators and worshippers and minions, one may say, each of some substance or relation in Nature? That shining, alluring property did first sing in his ear a syren song, was his seducer and sycophant, that it might in the end utterly possess and infuriate him in its service.

April 13.

In the unwelcome great snowstorm of this day I must blot a line to acknowledge the value of those social tests to which we all are brought in turn to be approved or damned. Precisely as the chemist submits the new substance to

the action of oxygen, hydrogen, electricity, vegetable blue, etc., each soul in our little Massachusetts *coterie* is passed through the ordinary series of social reagents, the market, the church, the parlour, the literary circle, writing, speaking, the ball, the reforms, etc., to ascertain his distinctive powers. Those tests which call out our latent powers and give us leave to shine, we love and applaud; those which detect our deficiencies we hate and malign. The poet who is paralysed in the company of the young and beautiful, where he would so gladly shine, revenges himself by satire and taxing that with emptiness and display. It is but fair that they for whose friendship we are candidates, and they who are candidates for ours, — and such are all men and all women, — should have the opportunity of putting and of being put into all the crucibles.

But when we have been tried and found wanting in any one, the wise heart will cherish that mortification until the flower grows out of the noisome pit. It will learn that not by seeking to do, as others do, that thing for which it was shown that we had no faculty, but by pious waiting from month to month, from year to year, and ever new effort after greater self-truth, will the new way at last appear by which we are to do the correspondent act in our circle.

I read alternately in Doctor Nichol and in Saint-Simon, that is, in the Heavens and in the Earth, and the effect is grotesque enough...

I am of the Maker and of the Made. The vastness of the Universe, the portentous year of Mizar and Alcor are no vastness, no longevity to me. In the eternity of truth, in the almightiness of love, I slight these monsters. Through all the running sea of forms, I am truth, I am love, and immutable I transcend form as I do time and space.

Is a service of plate a fit reward of a virtuous action? or, is the friend whom it has won, and the insight it has given, and the reaction it has caused, the fit reward? And is Science to be learned always in laboratories, or will it one day be eaten and drunken, be smelled and tested, be digged and swum and walked and dreamed?

Every man tries his hand at poetry somewhere, but most men do not know which their poems are.

April 19.

Saint-Simon paints Fénelon as he sees him from the army and the saloons of Versailles, so that his Fénelon is a Saint-Simon in surplice, and no Fénelon at all.

I am tempted lately to wish, for the benefit of our literary society, that we had

the friendly institution of the *Cafe*. How much better than Munroe's bookshop would be a coffee-room wherein one was sure at one o'clock to find what scholars were abroad taking their walk after the morning studies were ended.

Education. — We assume a certain air of holiness when we go to deal with our children, and appeal at that moment to a principle to which we do 'not appeal at other times. Of course, we do not succeed: the child feels the fraud. Simply the Holy Spirit is not there, and the effects cannot appear.

April 20.

Would it not be well to write for the young men at Waterville a history of our present literary and philosophical crisis, a portrait of the parties, and read the augury of the coming hours? In England, ethics and philosophy have died out. How solitary is Coleridge and how conspicuous, not so much from his force as from his solitude. In this country, a throng of eager persons read and hear every divine word. Yet for the most part there is great monotony in the history of our young men of the liberal or reforming class. They have only got as far as rejection, not as far as affirmation. They seem therefore angry and railers: they have nothing new or memorable to offer; and that is the vice of their writings, — profuse declamation, but no new matter: after a very short time, this becomes to the reader insufferably wearisome, and the fine young men and women who looked but the other day in that direction, with eyes of hope like the first rays of morning, are turning away with a kind of bitterness from the saturation of talk, of promise, and of preaching. Silence, personal prowess, cheerfulness, solid doing, seem to be the natural cures.

We are a puny and fickle folk. Hesitation and following are our diseases. The rapid wealth which hundreds in the community acquire in trade or by the incessant expansions of our population and arts, enchants the eyes of all the rest, the luck of one is the hope of thousands, and the whole generation is discontented with the tardy rate of growth which contents every European community. America is... the country of small adventures, of short plans, of daring risks, not of patience, not of great combinations, not of long, persistent, close-woven schemes, demanding the utmost fortitude, temper, faith, and poverty. Our books are tents, not pyramids: our reformers are slight and wearisome talkers, not man-subduing, immutable, all-attracting; discharging their own task and so "charming the eye with dread," and persuading without knowing that they do so. There are no Duke Wellingtons, no George Washingtons, no Miltons, Bentleys, or Hearn among our rapid and dashing

race; but abundance of Murats, of Rienzis, of Wallers, and that slight race who put their whole stake on the first die they cast.

The great men bequeath never their projects to their sons to finish: these eat too much pound cake.

The most interesting class of people are those who have genius by accident and are powerful obliquely....

Beautiful to me, among so many ordinary and mediocre youths as I see, was Sam Ward when I first fairly encountered him, and in this way just named.

There are two theories of life, — one, for the demonstration of our talent, and the other for the education of the man. The life of politics, of the college, of the city, is very seductive, as it invites to the former, but sincerity counts all the time spent in the former lost, or all but a little. But obey the Genius when he seems to lead to uninhabitable deserts, penetrate to the bottom of the fact which draws you, although no newspaper, no poet, no man, has ever yet found life and beauty in that region, and presently when men are whispered by the gods to go and hunt in that direction, they shall find that they cannot get to the point which they would reach without passing over that highway which you have built. Your hermit's lodge shall [be] the Holy City and the Fair of the whole world.

War was courteously carried on, as a tournament of the aristocracy, in Louis Quatorze's time. Duc de Saint-Simon relates that when the Maréchal de Lorges, general of the army on the Rhine, fell sick, Louis of Baden, the general of the enemy, sent by trumpet offers of his physicians, of supplies, and every courtesy and attention in his power.

April 21.

America, and not Europe, is the rich man. According to De Tocqueville, the column of our population on the western frontier from Lake Superior to the Gulf of Mexico (twelve hundred miles as the bird flies) advances every year a mean distance of seventeen miles. He adds, "This gradual and continuous progress of the European race towards the Rocky Mountains has the solemnity of a providential event; it is like a deluge of men rising unabatedly, and daily driven onward by the hand of God."

Animals. — Pirates do not live on nuts and herbs. The use of animal food marks the extremely narrow limits of our ideas of justice. We confine our justice to men alone, according to Porphyry's remark. Certainly our whole life ought to be a benefit, and the heliotrope and sweetbriar and thyme should not smell

sweeter.

April 22.

Whenever the Church is restored, the culture of the Intellect will be enjoined in it, not, as now, with an apology and reservations, but conscientiously and to the shame and repentance of our fat, sluggish, and trivial modes of living. And I think that the labor in a college should be as strenuous and rugged, I may say as audacious as any labor that is undertaken in agriculture or in war. And the student ought to feel a poignant shame if when he reads the marches of Hannibal or Napoleon across the Alps, or the hardships of Hudson and Parry in their polar voyages, or the patience of Columbus, these eminent pieces of endurance appear to him to indicate a greater manhood and resolution, a more incessant industry, or a ruder courage than that which he exercises in his silent library. Does he wish to be a placid smiler, a demure, inoffensive reader of such books as the newspapers applaud, to be helped over a fence when he walks with a man, as if he were a girl (like my dear Rev. Mr. A.), — I see not how he is better than a lacquey hired to read, instead of one hired to wait on table or to polish boots. His courage is not that of a soldier or a sailor, but that of a scholar, and as worthy of their admiration as theirs is worthy of his.

Should not man be sacred to man? What are these thoughts we utter but the reason of our incarnation? To utter these thoughts we took flesh, missionaries of the everlasting Word which will be spoken.

April 23.

Do not cast about for reasons among their shop of reasons, but adduce yourself as the only reason. We forget daily our high call to be discoverers — we forget that we are embarked on a holy, unknown sea in whose blue recesses we have a secret warrant that we shall yet arrive at the Fortunate Isles hid from men; and at each saucy wood-craft or revenue cutter or rum-boat that hails us, we are astonished, and put off from our purpose, and ready to return to the rotten towns we have left, and quit our seeking of the Virgin Shore.

No great man ever complains of want of opportunity, — no, nor of any want except of being wanting to himself. All that he lays to the charge of his fortune accuses himself only. Want of opportunity! Why, did not divine necessity create him? Did he not come into being because something must there be, and be done, which thing he and none other is and does? If *I see*, the world is visible enough, clothed in brightness and prismatic hues. If again I see from a deeper energy, —

I pierce the gay surface on all sides, and every mountain and rock and man and operation grows transparent before me...

When I wish, it is permitted me to say, These hands, this body, this history of Waldo Emerson are profane and wearisome, but I, I descend not to mix myself with that, or with any man. Above his life, above all creatures, I flow down forever, a sea of benefit into races of individuals. Nor can the stream ever roll backward, or the sin or death of a man taint the immutable energy which distributes itself into men, as the sun into rays, or the sea into drops.

When Coleridge converses, or Scott romances, or Wordsworth writes poems, there is an admirable fact; and now the activity of the engineer, of the railroad builder, and the manufacturer is real and inventive, and deserves regard. Commerce, speculation overflow their old boundaries and run into new paths. Reform is to-day creative and not slavish. But the only rule and condition of merit and noteworthiness is not renown, nor number, nor property, nor geography, but only vitality. Its title to be studied is not to be measured by anything but persons.... If you would know what was done long ago, examine the institutions, the millions, the wealth, the laws. If you would know what God now hath at heart, behold the bright eye, hear the melodious speech, mark the irresistible hand which that energy now flows into. It matters not what topic men prefer, but what subject or instance they select to study the same upon. Not divination or ethics or astronomy is better than farriery or the rules of chess, but the one object of study is a great man. A great personal ascendancy is an inundation of reason, and therein they shall read the laws of gods and men and atoms. But scholars who should be diviners, Ephori, Judges, Eyes and Souls, bow to badges and officers, and do not require of every man whom they meet, that he should be the Founder of a Family, or a Profession, the Inventor of a way of life. Geology, Chemistry, Animal Dynamics, Electricity, the law of day and night, and of all material relation is being read aloud.

We must distinguish between the hero's greatness and his foible, and not consecrate so much nonsense as we do because it was allowed by great men. There is none without his foible...

April 24.

I beheld him and he turned his eyes on me, his great serious eyes Then a current of spiritual power ran through me, and I looked farther and wider than I

was wont, and the visages of all men were altered and the semblances of things. The men seemed to me as mountains, and their faces seamed with thought, and great gulfs between them, and their tops reached high into the air. And when I came out of his sight, it seemed to me as if his eyes were a great river, like the Ohio or the Danube, which was always pouring a torrent of strong, sad light on some men, wherever he went, and tingeing them with the quality of his soul.

The balance must be kept, — the power to generalize and the power to individualize must coexist to make a poet; Will and Abandonment, the social and the solitary humour, man and opportunity.

Beauty is the only sure sign, so that if your word threatens me, I know it is a bully, I know it is weak, I know there is a better word discoverable and returnable. That word only which is fair and fragrant, which blooms and rejoices, which runs before me like verdure and a flowering vine, sowing an Eden in the path, is truth. I hate, therefore, to hear that a cloud always hangs on an American's brow.

I frequently find the best part of my ride in the Concord Coach from my house to Winthrop Place to be in Prince Street, Charter Street, Ann Street, and the like places at the North End of Boston. The dishabille of both men and women, their unrestrained attitudes and manners, make pictures greatly more interesting than the clean-shaved and silk-robed procession in Washington and Tremont streets. I often see that the attitudes of both men and women engaged in hard work are more picturesque than any which art and study could contrive, for the Heart is in these first. I say *picturesque*; because when I pass these groups, I instantly know whence all the fine pictures I have seen had their origin: I feel the painter in me: these are the traits which make us feel the force and eloquence of *form* and the sting of color. But the painter is only *in* me; it does not come to the fingers' ends. But whilst I see a true painting, I feel how it was made; I feel that genius organizes, or it is lost. It is the gift of God; as Fanny Elssler can dance and Braham can sing, when many a worthy citizen and his wife, however disposed, can by no culture either paint, dance, or sing. Do not let them be so ridiculous as to try, but know thou, know all, that no citizen, or citizen's wife, no soul, is without organ. Each soul is a soul or an individual in virtue of its having, or I may say being, a power to translate the universe into some particular language of its own:... into something great, human, and adequate which, if it do not contain in itself all the dancing, painting, and poetry that ever was, it is

because the man is faint-hearted and untrue.

Wouldest thou see the wonders of art and the graces of society without a sense of inferiority, make thy life secretly beautiful.

[Here follow passages on genius and on talent, which are printed in “The Method of Nature” (pp. 204 and 218). The following reference to Miss Mary Moody Emerson occurs, in the Journal, in the middle of the latter passage.]

May 4.

Aunt Mary, whose letters I read all yesterday afternoon, is Genius always new, subtle, frolicsome, musical, unpredictable. All your learning of all literatures and states of society, Platonistic, Calvinistic, English or Chinese, would never enable you to anticipate one thought or expression. She is embarrassed by no Moses or Paul, no Angelo or Shakspeare, after whose type she is to fashion her speech: her wit is the wild horse of the desert, who snuffs the sirocco and scours the palm-grove without having learned his paces in the Stadium or at Tattersall’s. What liberal, joyful architecture, liberal and manifold as the vegetation from the earth’s bosom, or the creations of frostwork on the window! Nothing can excel the freedom and felicity of her letters, — such nobility is in this self-rule, this absence of all reference to style or standard: it is the march of the mountain winds, the waving of flowers, or the flight of birds. But a man can hardly be a reader of books without acquiring their average tone, as one who walks with a military procession involuntarily falls into step.

In every family is its own little body of literature, divinity, and personal biography, — a common stock which their education and circumstance have furnished, and from which they all draw allusion and illustration to their conversation whilst it would be unintelligible (at least in the emphasis given to it) to a stranger. Thus, in my youth, after we had brought home *Don Juan* and learned to pester Aunt Mary with grave repetition of the lines from the shipwreck: “They grieved for those who perished in the cutter, And likewise for the biscuit-casks and butter,”

— these became the byword for the mean spirit of derision that characterised the present age, in contrast with the alleged earnest and religious spirit of the Puritans, and especially the austere saints of Concord and Malden, she was so swift to remember.

I find a letter of hers to Charles, dated Waterford, October, 1831:— “could

you be here this afternoon — not a creature but the dog and me — we don't go to four-days-meeting There's been one at the Methodists', closing to-day, and such a rush from the other society. But such a day! Here's one balm-of-gilead tree — but a few leaves left, as though on purpose to catch the eye to see them play in the wind day after day, — and the deserted nest. Ah! where are its anxious parents and their loved brood? Dead? Where the mysterious principle of life?... Past nine o'clock. The vision of beauty has changed — a white mist has risen which hides the venerable mount, but shows the trees in fine picturesque, and the deserted nest is sheltered with a soft pall, like the oblivion which rests on the miseries of the wretched. Just after the house was left for the evening vigils at the chapel, a man came for me to write a note he was going to carry. The peculiarity of notes here, is, a friend asks for another's conversion — thus the best of human feelings are brought into action. But note the *Cracker's*; I brought down by mistake the only pen which is good of the four (one which I don't use to you or Brother S.) and I persuaded him to shorten his petitions; and, as he was satisfied, surely there was no harm. And here comes a living voice — the charm too is gone from the moon — she rides full brightly — the tarn has gathered her misty wanderers in her bosom, and the trees stretch their naked arms to the skies like the scathed martyrs of Persecution.”

New England Theology. — The new relations we form we are apt to prefer, as *our own ties*, to those natural ones which they have supplanted. Yet how strict these are, we must learn later, when we recall our childhood and youth with vivid affection, and feel a poignant solitude, even in the multitude of modern friends. In reading these letters of M. M. E. I acknowledge (with surprise that I could ever forget it) the debt of myself and my brothers to that old religion which, in those years, still dwelt like a Sabbath peace in the country population of New England, which taught privation, self-denial, and sorrow A man was born, not for prosperity, but to suffer for the benefit of others, like the noble rock-maple tree which all around the villages bleeds for the service of man. Not praise, not men's acceptance of our doing, but the Spirit's holy errand through us, absorbed the thought.

How dignified is this! how all that is called talents and worth in Paris and in Washington dwindles before it! How our friendships and the complaisances we use, shame us now, — they withdraw, they disappear, and the gay and accomplished associates, — and our elder company, the dear children and grave relatives with whom we played and studied and repented, they return and join hands again. I feel suddenly that my life is frivolous and public; I am as one

turned out of doors, I live in a balcony, or on the street; I would fain quit my present companions as if they were thieves or pot-companions, and betake myself to some Thebais, some Mount Athos, in the depths of New Hampshire or Maine, to bewail my innocency and to recover it, and with it the power to commune again with these sharers of a more sacred idea. I value Andover, Yale, and Princeton as altars of this same old fire, though I fear they have done burning cedar and sandalwood there also, and have learned to use chips and pine.

But I meant to say above, that we are surprised to find that we are solitary, that what is holiest in our character and faculty is unappreciated by those who stand around us, and so lies uncalled for and dormant, and that it needs that our dear ghosts should return, or such as they, to challenge us to right combats.

Charles and Edward. — I ought to record the pleasure I found, amid all this letter-reading, in some letters to C. C. E. from his college mates, in the uniform tone of affection and respect with which these boys — for such they still were — accost him. Edward also was respected, admired by his mates, but, I suspect, never loved, — not comprehended, not felt, — he puzzled them. Yet I still remember with joy Charles's remark when he returned from visiting Edward at Porto Rico, that the tone of conversation there was the most frivolous and low that could be, yet that Edward never suffered anything unworthy to be said in his presence, without speaking for the right, and so good-humoredly and so well, as invariably to command respect, and be a check on the company. But Charles always, from his school days, had this *following*, and that of the best who were about him; it was true, leal service, homage to something noble and superior, which the giver felt it was a compliment to himself to pay. Thus he brought boarders to the houses where he went, to Danforth's in Cambridge, and Pelletier's in Boston.

May 6.

These letters revive my faded purpose of writing the oft-requested memoir of Charles. That certainly would have been unfit: it was right for the young and the dear friend to ask: it had been wrong in me to undertake; the very nobleness of the promise should make us more reluctant to recite the disappointment of the promise. Let us not stoop to write the annals of sickness and disproportion. Charles delighted in strength, in grace, in poetry, in success; — shall we wrong promise, only one evidence of which was his standing at the head of his college class at graduation. I recall a tender and most impressive tribute of Mr. Everett's

to his memory at one of our annual B K meetings. He spoke of the blow which had jarred the strings of his fine intellect and made them return a sound, him so far as to make him the unwilling object of pity, the centre of a group of pain, a caryatid statue in our temple of Destiny? Yet now, as I read these yellowing letters of Aunt Mary, I begin to entertain the project in a new form. I doubt if the interior and spiritual history of New England could be trulier told than through the exhibition of family history such as this, the picture of this group of Aunt Mary and the boys, mainly Charles. The genius of that woman, the key to her life is in the conflict of the new and the old ideas in New England. The heir of whatever was rich and profound and efficient in thought and emotion in the old religion which planted and peopled this land. She strangely united to this passionate piety the fatal gifts of penetration, a love of philosophy, an impatience of words, and was thus a religious skeptic. She held on with both hands to the faith of the past generation as to the Palladium of all that was good and hopeful in the physical and metaphysical worlds; and in all companies, and on all occasions, and especially with these darling nephews of her hope and pride, extolled and poetised this beloved Calvinism. Yet all the time she doubted and denied it, and could not tell whether to be more glad or sorry to find that these boys were irremediably born to the adoption and furtherance of the new ideas. She reminds me of Margaret Graeme, the enthusiast in Scott's *Abbott* who lives to infuse into the young Roland her enthusiasm for the Roman Church; only that *our* Margaret doubted whilst she loved. Milton and Young were the poets endeared to the generation she represented. Of Milton they were proud, but I fancy their religion has never found so faithful a picture as in the *Night Thoughts*. These combined traits in Aunt Mary's character gave the new direction to her hope, that these boys should be richly and holily qualified and bred to purify the old faith of what narrowness and error adhered to it, and import all its fire into the new age, — such a gift should her Prometheus bring to men. She hated the poor, low, thin, unprofitable, unpoetical Humanitarians as the devastators of the Church and robbers of the soul, and never wearies with piling on them new terms of slight and weariness. "Ah!" she said, "what a poet would Byron have been, if he had been born and bred a Calvinist."

Sunday.

Beautiful, eloquent day, rich with more than I have skill to tell, though I have attempted it in verses. We rightly call the woods enchanting, they so confound all our measures, and upset our whole system of tradition... Here reigns eternal Sabbath, and the hours so ample and profound, they seem to stretch to

centuries.... How far off is man and his works; Babylon and Britain draw very near together, and are not to be discriminated. The Circumstance is here emphatically felt to be nothing.

The Present Age will perhaps be characterised long hence by the importance now for several centuries attached to two words, namely, *Gentleman* and *Christian*. Yet see how this is the prevalence or inundation of an idea, and not of any person or purpose. Who did this? Who elevated these two words to their dignity in the metaphysical and practical world? Was any man a party to this exaggeration? Plainly no man, but all men. Well, there is no fact and no thought which shall not equally come in turn to the top and be celebrated.

General Harrison was neither Whig nor Tory, but the Indignation President; and, what was not at all surprising in this puny generation, he could not stand the excitement of seventeen millions of people, but died of the Presidency in one month. A man should have a heart and a trunk vascular and on the scale of the Aqueducts or the Cloaca Maxima of Rome to bear the friction of such a Mississippi stream.

The dew-drops which are only superficial, what a depth do they give to the aspect of the morning meadows as you walk! So do manners, so do social talents to frivolous society.

We know as little of men as we do of plants. We doubt not that every weed in our soil hath its uses, and each no doubt excellent and admirable uses; yet now how poorly they figure in our *Materia Medica*! And is not a man better than a mullein or a buckthorn? I walked in my dream with a pundit who said,... he could not speak with me many words, for the life of incarnate natures was short, but that the vice of men was old age, which they ought never to know; for, though they should see ten centuries, yet would they be younger than the waters, which — hearken unto their sound! how young is it, and yet how old! Neither, said he, ought men ever to accept grief from any external event; for, poverty, death, deluges, fires, are flaws of cold wind or a passing vapor which do not affect a constant soul. He added, that, as the river flows, and the plant flows (or emits odours), and the sun flows (or radiates), and the mind is a stream of thoughts, so was the universe the emanation of God... Therefore, he added, they mistake who seek to find only one meaning in sacred words and images, in the name of gods, as Jove, Apollo, Osiris, Vishnu, Odin: or in the sacred names of

Western Europe and its colonies, as Jesus and the Holy Ghost: for these symbols are like coins of different countries, adopted from local proximity or convenience, and getting their cipher from some forgotten accident, the name of a consul, or the whim of a goldsmith; but they all represent the value of corn, wool, and labor, and are readily convertible into each other, or into the coin of any new country. That sense which is conveyed to one man by the name and rites of Pan or Jehovah, is found by another in the study of earthquakes and floods, by another in the forms and habits of animals; by a third in trade, or in politics; by a fourth in electromagnetism. Let a man not resist the law of his mind and he will be filled with the divinity which flows through all things. He must emanate; he must give all he takes, nor desire to appropriate and to stand still.

He also said, that the doctrine of Pantheism or the Omnipresence of God would avail to abolish the respect of circumstance, or the treating all things after the laws of time and place, and would accustom men to a profounder insight. Thus Hospitality, he said, was an external fact. The troops of guests who succeed each other as inmates of our houses and messmates at our tables, week after week, are recording angels who inspect and report our domestic behaviour, our temperance, our conversation, and manners. Therefore, the pure in heart, having nothing to hide, are the most hospitable, or keep always open house. But to those who have somewhat to conceal, every guest is unwelcome.

A man is a gate betwixt Hell and Heaven. Through his heart streams a procession, when he wills good, of all angels and might; when he wills evil, of all cattle and devils. Thou saidst of thy heart just now that it was cold, that it was broken, and thou wonderest why God should create it to be pained; and other the like things. What is the Heart, but the power to give and receive which varies every moment with the action? Whoso blesseth all beings or any being, ——— to him, to her, bend all the world of Spirits, as the brothers' sheaves to Joseph's sheaf. Whoso curseth any, by word or deed, from him, from her, all spirits in all worlds turn their backs. You cannot will without turning the key of Nature and opening or shutting the door of Light and of Darkness. There where you are, create value, and you publish yourself on the wings of every wind, every ray of light becomes your advertisement, and all souls shall bid on you until your just wages are paid.

I owe to genius always the same debt of lifting the curtain from the common, and showing me that gods are sitting disguised in this seeming gang of gypsies and pedlars And why should I owe it to a book or a friend, and not myself pierce the thin *incognito*? A question I may well ask, but I must ask it of my hands and of my will. Holiness is the only stair to the mount of God. Yet am I continually

tempted to sacrifice genius to talent, the hope and promise of insight (through the sole door of better being) to the lust of a freer play and demonstration of those gifts I have. We seek that pleasurable excitement which unbinds our faculties and gives us every advantage for the display of that skill we possess, and we buy this freedom to glitter by the loss of general health. Humility, patience, abstinence, mortification, nakedness (stripping off these clothes of law, custom, fortune, and friends), they can teach a philosophy, a rhetoric, and a poetry which the world has not heard these thousand years. Coffee is good for talent, but genius wants prayer. — Dost thou not fear that this perception, so keen, of right and wrong thou hast, of the true and the ridiculous in reform, will some time vanish and not be, and dost thou not wish to hold it to thee? I know thou dost. Do then what thou knowest...

What is strong but goodness, and what is energetic but the presence of a good man? It is time that this doctrine of the Presence...

The crystal sphere of thought is as concentrical as the geological globe we inhabit...

The various matters which men magnify, as trade, law, creeds, sciences, paintings, coins, manuscripts, histories, poems, are all pieces of *virtu* which serve well enough to unfold the talents of the man, but are all diversions from the insight of the soul. Saints' worship is one of these, — the worship of Mahomet or Jesus, — like all the rest, a fine field of ingenuity wherein to construct theories: a fine, capacious platform whereon to build institutions and societies, poetry, eloquence, and reputation — nay, a drug, a specific for the present distress, a crutch for fainting virtue, a lozenge for the sick; — but, seriously and sadly considered, a remedy more dangerous than the disease. The soul will none of this roving. Why goest thou boswellizing this saint or that? It is *lèse-majesté* it is the razor to the throat: here art thou, with whom so long the universe travailed in labor. Darest thou to think meanly of thyself — thee whom the stalwart Fate brought forth to unite his ragged sides; to shoot the gulf; to reconcile the erst irreconcilable? As long as thou magnifiest anything, thou accusest thyself of trifling, of dallying and postponing thy own deed, for, when once thou graspest the handles of thy plough, thou wilt put all names behind thee as living nature forces us to put all dead bodies under ground. In the infinite disparity between the soul and any one incarnation of it, though holiest and grandest, all differences between one and another disappear, — they have no parallax at a distance so vast.

In every pulse of virtue, in every revelation, tho' slightest, of the soul, the soul affirmeth the kingdom of the universe, the descent of itself into man.

May 28.

Can I not learn that there is nothing settled in manners?...

Good sense is the leader of fashion as of everything else. A man has strong sense to write or to command armies, but he makes no figure in society, simply because there his sense does not work, — is dismounted by his self-consciousness, or excessive desire to please, or some other superstition; but the reason why he yields so readily to the victors of the carpet is, that he feels and sees that they carry the matter more sensibly than he.

[In his letter to Carlyle, May 30, Mr. Emerson said: —

“One reader and friend of yours dwells now in my house, and, as I hope, for a twelvemonth to come, — Henry Thoreau, — a poet whom you may one day be proud of; — a noble, manly youth, full of melodies and inventions. We work together day by day in my garden, and I grow well and strong.” — (*Carlyle-Emerson Correspondence*, vol i, Letter LX.)]

June 6.

I am sometimes discontented with my house because it lies on a dusty road, and with its sills and cellar almost in the water of the meadow. But when I creep out of it into the Night or the Morning and see what majestic and what tender beauties daily wrap me in their bosom, how near to me is every transcendent secret of Nature’s love and religion, I see how indifferent it is where I eat and sleep. This very street of hucksters and taverns the moon will transform to a Palmyra, for she is the apologist of all apologists, and will kiss the elm trees alone and hides every meanness in a silver-edged darkness. Then the good river-god has taken the form of my valiant Henry Thoreau here and introduced me to the riches of his shadowy, starlit, moonlit stream, a lovely new world lying as close and yet as unknown to this vulgar trite one of streets and shops as death to life, or poetry to prose. Through one field only we went to the boat and then left all time, all science, all history, behind us, and entered into Nature with one stroke of a paddle. Take care, good friend! I said, as I looked west into the sunset overhead and underneath, and he with his face toward me rowed towards it, — take care; you know not what you do, dipping your wooden oar into this enchanted liquid, painted with all reds and purples and yellows, which glows under and behind you. Presently this glory faded, and the stars came and said, “Here we are”; began to cast such private and ineffable beams as to stop all conversation. A holiday *villeggiatura*, a royal revel, the proudest, most magnificent, most heart-rejoicing festival that valor and beauty, power and poetry ever decked and enjoyed — it is here, it is this. These stars signify it and

proffer it: they gave the idea and the invitation,... these beguiling stars, soothsaying, flattering, persuading, who, though their promise was never yet made good in human experience, are not to be contradicted, not to be insulted, nay, not even to be disbelieved by us. All experience is against them, yet their word is Hope and shall still forever leave experience a liar....

Yes, bright Inviters! I accept your eternal courtesy...

But on us, sitting darkling or sparkling there in the boat, presently rose the moon, she cleared the clouds and sat in her triumph so maidenly and yet so queenly, so modest yet so strong, that I wonder not that she ever represents the Feminine to men. There is no envy, no interference in Nature. The beauty and sovereignty of the moon, the stars, or the trees, do not envy; they know how to make it all their own. As we sail swiftly along, and so cause the moon to go, now pure through her amber vault, and now through masses of shade, and now half-hid through the plumes of an oak or a pine, each moment, each aspect is sufficient and perfect; there is no better or worse, no interference, no preference; but every virtuous act of man or woman accuses other men and women; shames me; and the person of every man or woman as in my varying love slighted or preferred. Blessed is Law. This moon, the hill, the plant, the air, obey a law, they are but animated geometry and numbers; to them is no intemperance; these are through law born and ripened and ended in beauty: but we through the transgression of Law sicken and inveterate.

June 7.

[Here follow several sentences from the "Chaldæan Oracles" attributed to Zoroaster.]

Things divine are not attainable by mortals who understand body; But only as many as are lightly armed arrive at the summit.

It is not proper to understand the Intelligible with vehemence But with the extended flame of an extended mind measuring all things Except that Intelligible. But it profits to understand this For if you incline your mind you will understand it Not earnestly, but it becomes you to bring with you a pure and inquiring eye; To extend the void mind of your soul to the Intelligible Because it subsists beyond mind.

You will not understand it as when understanding some particular thing.

There is a certain Intelligible which it becomes you to understand with the flower of the mind.

Let the immortal depth of your soul lead you.

Enlarge not thy destiny.

To every tree its own leaf and fruit, and every man; are you a juniper or are you an orange: but if the tree is pruned and exposed to the South wind and manured, then it will bear a cartload of oranges; if neglected, few and bad. So it seems more the pity if you are a man of genius, the sweetest of all poets, that you should pine in bad condition and yield one song in a year.

We are too civil to books. For a few golden sentences we will turn over and actually read a volume of four or five hundred pages. Even the great books,—“Come,” say they, “we will give you the key to the world.” — Each poet, each philosopher says this, and we expect to go like a thunder-bolt to the centre... Ever and forever Heraclitus is justified, who called the world an eternal inchoation.

Critics. — The borer on our peach trees bores that she may deposit an egg: but the borer into theories and institutions and books bores that he may bore.

The man of practical or worldly force requires of the preacher a talent, a force like his own...

You defy anybody to have things as good as yours. Hafiz defies you to show him or put him in a condition inopportune and ignoble. Take all you will, and leave him but a corner of Nature, a lane, a den, a cowshed, out of cities, far from letters and taste and culture; he promises to win to that scorned spot, the light of moon and stars, the love of men, the smile of beauty, the homage of art. It shall be painted, and carved, and sung and celebrated and visited by pilgrimage in all time to come.

(From G)

July.

The Actual. — O Protean Nature, whose energy is change evermore, thou hurlest thyself into a berry or a drop, thou lodgest all thought in a word, all moral quality in the glance of an eye, but tell me, art thou only such a creator as bards and orators? Is thy power only for display? Or canst thou change the form of this waste and unnecessary day into an hour of love and fitness? When I see what waste strength is in friendship and in the writing and reading of modern society, the world seems to exist to dilettantism.

OSMAN AND SCHILL

Schill, No tea! no wine! How are you the better or how am I the worse?

Osman. You are wise for me now. I am dull and you are inspired. But I know what you say, and shall remember it when you cannot.

Schill, How mean you that?

Osman. Time is my friend and not yours. The vital force is more ductile than gold, and the coin which you throw into a gambler's hand may be beaten into a leaf which shall gild the globe.

Schill, Whilst I confess I come eating and drinking, I praise your self-denial which I also think is *ton* and *tournure* which makes kings vulgar.

Osman. It is no virtue in me, Sir. My father gave me a good constitution, which makes the taste of berries as grateful to me as pears or pineapples to you; and my temperance is no more to be imputed to me for righteousness than is the fact that a straw hat protects my head for all these years as well as an iron helmet. I think myself master of Assyrian luxury when I walk in the woods through sweet-fern and sassafras, or pass to the leeward of an elder bush in flower, or blacken my teeth with the betel nuts we have now plucked. One thing fell from you just now concerning fashion, which, though I did not quite understand it, may be the same thing which I have often thought, — that the best teachers of elegance are the stars which shine so delicately in yonder amber sky; and in the presence of the woodland flowers and the birds, I am ashamed to be coarse in my costume or behavior.

Character. — A word warm from the heart written or spoken, *that* enriches me. I surrender at discretion;...

I value my welfare too much to pay you any longer the compliment of attentions. I shall not draw the thinnest veil over my defects, but if you are here, you shall see me as I am. You will then see that, though I am full of tenderness, and born with as large hunger to love and to be loved as any man can be, yet its demonstrations are not active and bold, but are passive and tenacious. My love has no flood and no ebb, but is always there under my silence, under displeasure, under cold, arid, and even weak behavior.

I think not of mean ages, but of Chaldaean, Egyptian, or Teutonic ages, when man was not featherbrained, or French, or servile, but, if he stooped, he stooped under Ideas: times when the earth spoke and the heavens glowed, when the actions of men indicated vast conceptions, and men wrote histories of the world in prison, and builded like Himmaleh and the Alleghany chains. I think that only

is real which men love and rejoice in...

Men do not to-day believe in one who ascribes to man the attributes of the soul: even they who speak that speech will scarcely stick to it, and if a man assert that great mystery, every little scribbler in the newspaper shall make great eyes, and point at his own little brain, and say, He is mad; and it may and does happen that the man who spoke it shall flee before the word of this newspaper written by some shallow boy in the dark, who wrote he knew not what, dipping his pen in mire and darkness. And yet night and morning, earth and heaven, and the soul of man are not to be so easily disposed of. It is true that there is another side to man. The other side, of fugitiveness, of frailty, that man is moth, or bubble, or gossamer, they readily hear and say: but that man is necessary and eternal they unwillingly hear. A man must reach the whole extent from Heaven to Earth. But it is possible that a man may come to subsist in some other way than that which the prudent think of. Hateful it is that transcendent men should only come to us in obscure and lurid forms, and not like sunshine and blue sky. Yet when they come, they will not be reported: they will affect men in a rapturous and extraordinary way, and the last thing they will think of will be to take notes.

The Age once more should appear capacious, undefinable, far retreating, still renewing, as the depths of the horizon do when seen from the hills.

You have many coats in your wardrobe, for you are rich. You need many for your conversation; and your action I am heartily tired of, — old, musty, and stale. But Godfrey, who has but one coat to his back, has as many to his thought as Nature has days or plants or transformations.

July 6.

Ah, ye old ghosts! Ye builders of dungeons in the air! Why do I ever allow you to encroach on me a moment; a moment, to win me to your hapless company? In every week there is some hour when I read my commission in every cipher of Nature, and know that I was made for another office, a professor of the Joyous Science, a detector and delineator of occult harmonies and unpublished beauties, a herald of civility, nobility, learning, and wisdom; an affirmer of the One Law, yet as one who should affirm it in music or dancing. A priest of the Soul, yet one who would better love to celebrate it through the beauty of health and harmonious power.

My trees teach me the value of our circumstance or limitation. I have a load of manure, and it is mine to say whether I shall turn it into strawberries, or peaches, or carrots. I have a tree which produces these golden delicious cones

called Bartlett pears, and I have a plant of strong common-sense called a Potato. The pear tree is certainly a fine genius, but with all that wonderful constructive power it has, of turning air and dust, yea, the very dung to Hesperian fruit, it will very easily languish and bear nothing, if I starve it, give it no southern exposure, and no protecting neighborhood of other trees. How differs it with the tree-planter? He too may have a rare constructive power to make poems, or characters, or nations, perchance, but though his power be new and unique, if he be starved of his needful influences, if he have no love, no book, no critic, no external call, no need or market for that faculty of his, then he may sleep through dwarfish years and die at last without fruit.

Colombe prefers to take work of Edmund Hosmer by the job, “for the days are damn long.”

Sunday.

If I were a preacher, I should carry straight to church the remark Lidian made to-day, that “she had been more troubled by piety in her help than with any other fault. The girls that are not pious, she finds kind and sensible, but the church members are scorpions, too religious to do their duties, and full of wrath and horror at her if she does them.”

Every man has had one or two moments of extraordinary experience, has met his soul, has thought of something which he never afterwards forgot, and which revised all his speech, and moulded all his forms of thought.

I resent this intrusion of alterity. That which is done, and that which does, is somehow, I know, part of me. The Unconscious works with the Conscious, — tells somewhat which I consciously learn to have been told. What I am has been conveyed secretly from me to another whilst I was vainly endeavoring to tell him it. He has heard from me what I never spoke.

If I should or could record the true experience of my late years, I should have to say that I skulk and play a mean, shiftless, subaltern part much the largest part of the time. Things are to be done which I have no skill to do, or are to be said which others can say better, and I lie by, or occupy my hands with something which is only an apology for idleness, until my hour comes again.

But woe to him who is always successful, who still speaks the best word, and does the handiest thing, for that man has no heavenly moment.

I find an analogy also in the Asiatic sentences to this fact of life. The Oriental genius has no dramatic or epic turn, but ethical, contemplative, delights in Zoroastrian oracles, in Vedas, and Menu and Confucius. These all embracing

apophthegms are like these profound moments of the heavenly life.

Lidian says that the only sin which people never forgive in each other is a difference of opinion.

Carlyle with his inimitable ways of saying the thing is next best to the inventor of the thing. "I King Saib built this pyramid. I, when I had built it, covered it with satin. Let him that cometh after me and says he is equal to me cover it with mats."

[DURING this year it is evident that Mr. Emerson's forces had ebbed, in spite of the gardening hours with his friend Henry Thoreau, and the change to the lonely hostelry on Nantasket Beach, whither he went to write his "Waterville Address," was important. In Mr. Cabot's Memoir of Emerson he gives several letters written from Nantasket to Mr. Emerson's wife and friends with pleasant mention of that fortnight's sojourn]

NANTASKET BEACH, *July 10.*

You shall not love beautiful objects ardently: you will not, if you are beautiful. He who is enamoured of a statue, a picture, a tune, or even of the stars and the ocean, finds in them some contrast to his own life. His own life is ugly, and he sickly prefers some marble Antinous or Cupid to the living images of his father and mother, and whole towns of his countrymen dwelling around him. But when a man's life is concordant with Nature, he will behold all that is most beautiful in the universe with a fraternal regard unsurprised.

(From loose sheet)

[The following, though undated, was evidently written in July at Nantasket.]

We have two needs, Being and Organization. See how much pains we take here in Plato's dialogues to set in order the One Fact in two or three or four steps, and renew as oft as we can the pleasure, the eternal surprise of coming at the last fact, as children run up steps to jump down, or up a hill to coast down on sleds, or run far for one slide, or as we get fishing-tackle and go many miles to a watering-place to catch fish, and having caught one and learned the whole mystery, we still repeat the process for the same result, though perhaps the fish are thrown overboard at the last. The merchant plays the same game on 'Change, the card-lover at whist, — and what else does the scholar? He knows how the poetry, he knows how the novel or the demonstration will affect him, — no new

result but the oldest of all, yet he still craves a new book and bathes himself anew with the plunge at the last. The young men here, this morning, who have tried all the six or seven things to be done, namely, the sail, the bowling-alley, the ride to Hull and to Cohasset, the bath, and the spyglass, they are in a rage just now to do something: these itching fingers, this short activity, these nerves, this plasticity or creativeness accompanies forever and ever the Profound Being.

And yet the secret is kept.

It is only known to Plato that we can do without Plato. Being costs me nothing. I need not be rich, nor pay taxes, nor leave home, nor buy books for that. It is the organizing that costs. And the moment I *am*, I despise city and the seashore, yes, earth and the galaxy also.

“When Nature is forsaken by her lord, be she ever so great, she doth not survive.” — VEESHNOO SARMA.

Too feeble fall the impressions of our sense upon us to make us artists. Every touch should thrill: now ‘t is good for life, not for poetry. It seems as if every man ought to be so much an artist that he could report in conversation what has befallen him.

Aristotle defined Space as a certain immoveable vessel in which things were contained.

Every sensual pleasure is private and mortal: every spiritual action is public and generative.

The Church aërates my good neighbors and serves them as a somewhat stricter and finer ablution than a clean shirt or a bath or a shampooing. The minister is a functionary and the meeting-house a functionary: they are one and, when they have spent all their week in private and selfish action, the Sunday reminds them of a need they have to stand again in social and public and ideal relations beyond neighborhood, — higher than the town-meeting — to their fellow men. They marry, and the minister who represents this high public, celebrates the fact; their child is baptized, and again they are published by his intervention. One of their family dies, he comes again, and the family go up publicly to the church to be publicised or churched in this official sympathy of mankind. It is all good as far as it goes. It is homage to the Ideal Church, which they have not: which the actual Church so foully misrepresents. But it is better so than nohow. These people have no fine arts, no literature, no great men to

boswellize, no fine speculation to entertain their family board or their solitary toil with. Their talk is of oxen and pigs and hay and corn and apples. Whatsoever liberal aspirations they at any time have, whatsoever spiritual experiences, have looked this way, and the Church is their fact for such things. It has not been discredited in their eyes as books, lectures, or living men of genius have been. It is still to them the accredited symbol of the religious Idea. The Church is not to be defended against any spiritualist clamoring for its reform, but against such as say it is expedient to shut it up and have none, this much may be said. It stands in the history of the present time as a high school for the civility and mansuetude of the people (I might prefer the Church of England or of Rome as the medium of those superior ablutions described above, only that I think the Unitarian Church, like the Lyceum, as yet an open and uncommitted organ, free to admit the ministrations of any inspired man that shall pass by: whilst the other churches are committed and will exclude him.) I should add that, although this is the real account to be given of the church-going of the farmers and villagers, yet it is not known to them, only felt. Do you not suppose that it is some benefit to a young villager who comes out of the woods of New Hampshire to Boston and serves his apprenticeship in a shop, and now opens his own store, to hang up his name in bright gold letters afoot long? His father could not write his name: it is only lately that he could: the name is mean and unknown: now the sun shines on it: all men, all women, fairest eyes read it. It is a fact in the great city. Perhaps he shall be successful and make it wider known: shall leave it greatly brightened to his son. His son may be head of a party: governor of the state: a poet: a powerful thinker: and send the knowledge of this name over the habitable earth. By all these suggestions, he is at least made responsible and thoughtful by this public relation of a seen and aërated name.

Let him modestly accept those hints of a more beautiful life which he meets with; how to do with few and easily gotten things: but let him seize with enthusiasm the opportunity of doing what he can, for the virtues are natural to each man and the talents are little perfections.

Let him hope infinitely with a patience as large as the sky.

Nothing is so young and untaught as time.

Cities of men are like the perpetual succession of shells on the beach.

This world is a palace whose walls are lined with mirrors.

[Of a] Preacher. "There he has been at it, as tight as he could spring for an hour and a half."

A vulgar man in leaving the eaves of his house has left the moral law and the gods. At Paris, at New Orleans he gives himself up to his appetite.

The theory of the Whig, carried out, requires that government should be paternal, and teach Paddy where is land, and how he should till it, that he may get bread. But the governments that now are, are improvident. The Spiritualist who goes for principles, and for the high and pure self, has none of this tenderness for individuals.

Do not waste yourself in rejection; do not bark against the bad, but chant the beauty of the good. I take pleasure only in coming near to people. What avails any conversation but the sincere? Uncover thy face, uncover thy heart to me, be thou who thou may, and the purpose of purposes is answered to us both. We may well play together, or eat or swim or travel or labor together, if this is the result: if this is not, all that we have accomplished together is naught. Is plain dealing the summit of human well-being? What serenity and independence proceed out of it! Then I have not lost the day: then I have not lived in vain. To be a lover with a lover, to be a god with a god, seems to be only this happiness, no more, namely, the being truer: with a broader and deeper Yes and No. Is this also a fortune, a felicity, coming by the grace of God, and not to be compassed by any effort or genius, when it does not descend on us like beauty or light? I cannot establish it with all, or with most, or with many; then I could be happy with all: no, but only with a few.

Travel, I think, consists really and spiritually in sounding all the stops of our instrument. If I have had a good indignation and a good complacency with my brother, if I have had reverence and compassion, had fine weather and good luck in my fishing excursion, and profound thought in my studies at home, seen a disaster well through, and wrought well in my garden, nor failed in my part at a banquet, then I have travelled, though all was within the limits of a mile from my house. Domestication consists in the unique art of living in the fact, and not in the appearance. Who has learned to root himself in being, and wholly to cease from seeming, he is domestic, he is at the heart of Nature. He must be sustained by the sense of having labored, or nothing can yield him cheerfulness.

Facts. All is for thee; but thence results the inconvenience that all is against thee which thou dost not make thine own. Victory over things is the destiny of

man; of course, until it be accomplished, it is the war and insult of things over him. He may have as much time as he pleases, as long as he likes to be a coward, and a disgraced person, so long as he may delay to fight, but there is no escape from the alternative. I may not read Schleiermacher or Plato, I may even rejoice that Germany and Greece are too far off in time and space than that they can insult over my ignorance of their works, I may even have a secret joy that the heroes and giants of intellectual labor, say, for instance, these very Platos and Schleiermachers are dead, and cannot taunt me with a look: my soul knows better: they are not dead, for the nature of things is alive, and that passes its fatal word to me that these men shall yet meet me and shall yet tax me line for line, fact for fact, with all my pusillanimity.

All that we care for in a man is the tidings he gives us of our own faculty through the new conditions under which he exhibits the common soul. I would know how calm, how grand, how playful, how helpful, I can be.

Yet we care for individuals, not for the waste universality. It is the same ocean everywhere... So can Dante or Plato call the nations about them to hear what the Mind would say of those particulars which it happened to meet in their personality.

Lobster-car, boat, or fish-basket,
Peeps, noddies, old-squaws, or quail, —
To Musketaquid what from Nantasket,
What token of greeting and hail?

We cannot send you our thunder,
Pulse-beat of the sea on the shore,
Nor our rainbow, the daughter of Wonder,
Nor our rock, New England's front door.

White pebbles from Nantasket beach
Whereon to write the maiden's name,

Shells, sea-eggs, sea-flowers, — could they teach
Thee the fair haunts from whence they came!

Shall I write a sincerity or two? — I, who never write anything else, except dullness? And yet all truth is ever the new morn risen on noon. But I shall say that I think no persons whom I know could afford to live together on their merits. Some of us, or of them, could much better than others live together, but not by their power to command respect, but because of their easy, genial ways: that is, could live together by aid of their weakness and inferiority.

Understand that the history of modern improvements is good as matter of boast only for the twelve or twenty or two hundred who made them, not for those who adopted them and said We. The smallest sign of moral force in any person countervails all the models in Quincy Hall. The inventor may indeed show his model as sign of a moral force of some sort, but not the user.

I only need to meet one agreeable person, boy or man or woman, to make my journey a happy one. But lately it has been my misfortune to meet young men with a certain impudence on their brow, and who speak and answer with that offensive assumption, that what I say I say to fill up the time, and not that I mean anything. Not so with that fair and noble boy, whom I saw at Nantasket, and whom all good auguries attend!

Ascending souls sing a pæan. We will not exhort, but study the natural history of souls, and congratulate one another on the admirable harmonies.

Rich, say you? Are you rich? how rich? rich enough to help anybody? rich enough to succor the friendless, the unfashionable, the eccentric, rich enough to make the Canadian in his wagon, the travelling beggar with his written paper which recommends him to the charitable, the Italian foreigner with his few broken words of English, the ugly, lame pauper hunted by overseers from town to town, even the poor insane or half-insane wreck of man or woman, feel the noble exception of your presence and your house, from the general bleakness and stoniness; to make such feel that they were greeted with a voice that made them both remember and hope? What is vulgar but to refuse the claim? What is gentle but to allow it?

He is very young in his education who needs distinguished men in order to see grand traits. If there is grandeur in you, you will detect grandeur in laborers and washerwomen. And very fine relations are always established between a

clear spirit and all the bystanders. Do you think there is no tie but your dollar between you and your landlord or your merchant? Have these made no distinction between their customers or guests?

Be calm, sit still in your chair, though the company be dull and unworthy. Are you not there? There then is the choir of your friends; for subtle influences are always arriving at you from them, and you represent them, do you not? to all who stand here.

It is not a word, that "I am a gentleman and the king is no more," but is a fact expressed in every passage between the king and a gentleman.

With our faith that every man is a possessed person having that admirable Prompter at his ear, is it not a little superfluous to go about to reason with a person so advised?

We treat him as a detachment.

Do people expect the world to drop into their mouths like a peach.

I wish I could see a child go to school or a boy carrying a basket without a feeling of envy, but now I am so idle that everybody shames me.

Tropes. The metamorphosis of Nature shows itself in nothing more than this, that there is no word in our language that cannot become typical to us of Nature by giving it emphasis. The world is a Dancer; it is a Rosary; it is a Torrent; it is a Boat; a Mist; a Spider's Snare; it is what you will; and the metaphor will hold, and it will give the imagination keen pleasure. Swifter than light the world converts itself into that thing you name, and all things find their right place under this new and capricious classification. There is nothing small or mean to the soul. It derives as grand a joy from symbolizing the Godhead or his universe under the form of a moth or a gnat as of a Lord of Hosts. Must I call the heaven and the earth a maypole and country fair with booths, or an anthill, or an old coat, in order to give you the shock of pleasure which the imagination loves and the sense of spiritual greatness? Call it a blossom, a rod, a wreath of parsley, a tamarisk-crown, a cock, a sparrow, the ear instantly hears and the spirit leaps to the trope.

The doctrine of Necessity or Destiny is the doctrine of Toleration, but every moment, whilst we think of this offending person that he is ridden by a devil and go to pity him, comes in our sensibility to persuade us that the person is the devil, then the poison works, the devil jumps on our neck, and back again wilder on the other: jumps from neck to neck, and the kingdom of hell comes in.

The Age. What is the reason to be given for this extreme attraction which persons have for us but that they are the Age? Well, now we have some fine figures in the great group and many who promise to be fine. I think the nobility

of the company or period is always to be estimated from the depth of the ideas. Here is great variety and great richness of mysticism.... But how many mysticisms of alchemy, magic, second sight and the like, can a grand genius like Leibnitz, Newton, or Milton dispose of amongst his shining parts, and be never the worse?

Motley assemblage on the planet; no conspiring as in an anthill. Every one his own huckster to the ruin of the rest, for aught he cares. In perspective one may find symmetry, and unconscious furtherance....

As soon as a man gets his suction-hose down into the great deep he belongs to no age, but is eternal man. And as soon as there is elevation of thought we leave the Times.

I will add to the portrait of Osman that he was never interrupted by success: he had never to look after his fame and his compliments, his claps and editions. In very sooth shall I not say that one of the wisest men I have known was one who began life as fool, at least, with a settled reputation of being underwitted?

“To me men are for what they are,
They wear no masks for me.”

When I was praised I lost my time, for instantly I turned round to look at the work I had thought slightly of, and that day I made nothing new.

The dissipation of praise, the dissipation of newspapers, and of evening parties.

It is the blue sky for background that makes the fine building.

Ideal. I think there are better things to be said for the conservative side than have yet been said. Certainly the *onus* of proving somewhat striking and grand should be with the Idealist. His defects are the strength of the man of the world.

Nothing but God can root out God. The whole contest between the Present and the Past is one between the Divinity entering and the Divinity departing. Napoleon said that he had always noticed that Providence favored the heaviest battalion.

Optimates. Elizabeth Hoar says that the fine young people break off all their flowers and leave none to ripen to fruit. So we have fine letters and a too imaginative and intellectual period, but no deep and well adapted character.

Scholar. We all know enough to be endless writers. Those who have written best are not those who have known most, but those to whom writing was natural and necessary.

Let us answer a book of ink with a book of flesh and blood.
All writing comes by the grace of God.

Character. I do not wish to appear at one time great, at another small, but to be of a stellar and undiminishable light.

Superlative. The greatest wit, the most space. It is the little wit that is always in extremes and sees no alternative but revelry or daggers.

Scale. We are to each other results. As your perception or sensibility is exalted, you see the genesis of my action and of my thought, you see me in my debt and fountains, and to your eye instead of a little pond of the water of life I am a rivulet fed by rills from every plain and height in nature and antiquity and deriving a remote origin from the foundation of all things.

August 22.

Measure is a virtue which society always appreciates, and it is hard to excuse the want of it...

Society may well value measure, for all its law and order is nothing else. There is a combat of opposite instincts and a golden mean, that is Right. What is the argument for marriage but this? What for a church, a state, or any existing institution, but just this — We must have a mean?

Genius unsettles everything. It is fixed (is it?) that after the reflective age arrives there can be no quite rustic and united man born. Yes, quite fixed. Ah, this unlucky Shakspeare! and ah, this hybrid Goethe! Make a new rule, my dear, can you not? and to-morrow Genius shall stamp on it with his starry sandal.

“Then it is very easy to write as Mr. Pericles writes. Why, I have been reading the books he read before he wrote his Dialogue, and I have traced him in them all and know where he got the things you most admire.” Yes, and the turnip grows in the same soil with the strawberry; knows all the nourishment that it gets, and feeds on the very same itself; yet is a turnip still.

All histories, all times, equally furnish examples of the spiritual economy; so

does every kitchen and hen-coop. But I may choose then to use those which have got themselves well written. The annals of Poland would be as good to a philosopher as those of Greece, but these last are well composed.

Portableness. The meaner the type by which a spiritual law is expressed, the more pungent it is, and the more lasting in the memories of men, just as we value most the smallest box or case in which any needful utensil can be carried.

The telescope is a screen: that is all. “And when Adam heard the voice of the Lord God in the garden he hid himself.”

“Remember to be sober and *to be disposed to believe*; for these are the nerves of wisdom.” The reformer affirms the tendency, the law. Vulgar people show much acuteness in stating exceptions. He is not careful to answer them or to show that they are only exceptions. Enough for him that he has an advocate in their consciences also declaring the law. They ought, instead of cavilling, to arm his hands, to thank him in the name of mankind, to see that he is the friend of humanity against their foolish brawling.

Humoring. I weary of dealing with people, each cased in his several insanity. Here is a fine person with wonderful gifts, but mad as the rest, and madder, and, by reason of his great genius, which he can use as weapon too, harder to deal with. I would gladly stand to him in relation of a benefactor as screen and defence to me, thereby having him at some advantage and on my own terms — that so his frenzy may not annoy me. I know well that this wish is not great but small, is mere apology for not treating him frankly and manlike: but I am not large man enough to treat him firmly and unsympathetically as a patient, and, if treated equally and sympathetically as sane, his disease makes him the worst of bores.

Quarrels are not composed on their own grounds, but only by the growth of the character which subverts their place and memory. We form in the life of a new idea new relations to all persons; we have become new persons and do not inherit the wars or the friendships of that person we were.

“If the misunderstanding could be healed, it would not have existed,” added L.

Unity. Nature is too thin a screen: the glory of the One breaks through everywhere.

I remember, when a child, in the pew on Sundays amusing myself with saying

over common words as “black,”

“white,”

“board,” etc., twenty or thirty times, until the word lost all meaning and fixedness, and I began to doubt which was the right name for the thing, when I saw that neither had any natural relation, but all were arbitrary. It was a child’s first lesson in Idealism.

August 27.

How noble in secret are the men who have never stooped nor betrayed their faith! The two or three rusty, perchance wearisome, souls, who could never bring themselves to the smallest composition with society, rise with grandeur in the background like statues of the gods, whilst we listen in the dusty crowd to the adroit flattery and literary politics of those who stoop a little. If these also had stooped a little, then had we no examples, our ideas had been all unexecuted: we had been alone with the mind. The solitary hours — who are their favorites? Who cares for the summer fruit, the “sopsavines” that are early ripe by help of the worm at the core? Give me the winter apple, the russetin and pippin, cured and sweetened by all the heat and all the frost of the year.

In regard to H — I suppose we all feel alike that we care very little what he says, provided only that he says it well. What he establishes with so much ingenuity to-day, we know he will demolish with equal ingenuity to-morrow, not valuing any position or any principle, but only the tactics or method of the fight. Intellectual play is his delight, the question is indifferent. He is a warrior, and so only there be war, he is not scrupulous on which side his aid is wanted. In his oration there was universal attack, chivalry all round the field, but he cut up all so fast and with right good will that he left himself no ground to stand on; universal offence, but no power of retreat or resistance in him, so that we agreed it was a triumphant success for his troop, but no sincerity, a devastation and no home. It was the profoundness of superficiality, the most universal and triumphant seeming. The sentence which began with an attack on the conservatives ended with a blow at the reformers: the first clause was applauded by one party, and the other party had their revenge and gave their applause before the period was closed.

It is not to be denied that the pious youth who in his closet espouses some rude and harsh reform, such as Antislavery or the abstinence from animal food, lays himself open to the witty attacks of the intellectual man; is partial; and apt to magnify his own: yes, and the prostrate penitent also, he is not comprehensive, he is not philosophical in those tears and groans. Yet I feel that

under him and his partiality and exclusiveness is the earth and sea and all that in them is, and the axis around which the eternal universe revolves passes through his body there where he stands, while the outcast that affects to pity his narrowness and chains is a wanderer, free as the unloved and the unloving are free and independent of the state, just as bachelors and beggars are homeless, companionless, useless. The heart detects immediately, whether the head find it out or not, whether you exist for purposes of exhibition or are holden by all the force of God to the place you occupy and the thing you do. This abuse of the conservative to win the reformer, and abuse of the reformer to win the conservator, may deceive the head, but not the heart. The heart knows that it is the fear and love of Beacon Street which got this bottle-green flesh-fly, and that only the love and the terror of the Eternal God begets the Angel which it waiteth for.

There is no depth to the intellectual pleasure which this speculation gives. But let in one of those men of love in the shade there, whom you affect to compassionate, and you shall feel instantly how shallow all this entertainment was, for he shall exercise your affection as well as your thought, and confront you with the realities that analyze Heaven and Hell.

Long ago I said, I have every inch of my merits allowed me, and was sad because my success was more than I deserved, — sad for others who had less. Now the beam trembles, and I see with some bitterness the slender claims I can make on fortune and the inevitable parsimony with which they will be answered.

Robin went to the house of his uncle, who was a clergyman, to assist him in the care of his private scholars. The boys were nearly or quite as old as he and they played together on the ice and in the field. One day the uncle was gone all day and the lady with whom they boarded called on Robin to say grace at dinner. Robin was at his wits' end; he laughed, he looked grave, he said something, nobody knew what, and then laughed again, as if to indemnify himself with the boys for assuming one moment the cant of a man. And yet at home perhaps Robin had often said grace at dinner.

The woman spoken of to-day who finds beauty in every household work is right. And why not beauty in the Sunday church? I never wonder that the people like to go thither. I am interested in every shoe that goes into the meeting-house.

Yes, love relieves us of all timidities and superstitious fears by the most confident, mutual prophecy of each other: so that it is suicidal to this extent, that

it can do without interviews, which once it existed for.

[Here follows much that is printed in “Manners” (*Essays*, Second Series).]

Character is the one counterpoise to all artificial, or say rather surface distinctions. Let a man be self-reposed and he shames a whole court, a whole city, who are not so. Do not care for society, and you put it away into your pocket.

I saw a young man who had a rare gift for pulpit eloquence: his whole constitution seemed to qualify him for that office, and to see and hear him produced an effect like a strain of music: not what he said, but the pleasing efflux of the spirit of the man through his sentences and gesture, suggested a thousand things, and I enjoyed it as I do a painting or poetry, and said to myself, “Here is creation again.” I was touched and taken out of my numbness and unbelief, and wished to go out and speak and write all things. After months I heard the favored youth speak again. Perhaps I was critical, perhaps he was cold. But too much praise I fancied had hurt him, had given to his flowing gesture the slightest possible fixedness; to his glowing rhetoric an artful return. It was later in the season, yet the plant was all in flower still, and no signs of fruit. Could the flowers be barren, or was an artificial stimulus kept upon the plant to convert all the leaves and fruit-buds to flowers? We love young bachelors and maidens, but not old bachelors and old maids. It seemed to me that I had seen before an example of the finest graces of youthful eloquence, hardened by the habit of haranguing, into grimace. It seemed that if, instead of the certainty of a throng of admirers, the youth had felt assured every Sunday that he spoke to hunger and debt, to lone women and poor boys, to grief, and to the friends of some sick or insane or felonious person, he would have lopped some of these redundant flowers, and given us with all the rest one or two plain and portable propositions. Praise is not so safe as austere exactors, and of all teachers of eloquence the best is a man’s own penitence and shame.

There are some public persons born not for privacy, but for publicity, who are dull and even silly in a *tete-a-tete*, but the moment they are called to preside, the form dilates, the senatorial teeth appear, the eye brightens, a certain majesty sits on the shoulders, and they have a wit and happy deliverance you should never have found in them in the closet.

August 31.

I know not why Landor should have so few readers. His book seems to me as original in its form as in its substance. He has no dramatic, no epic power, but he

makes sentences, which, though not gravitation and electricity, is still vegetation. After twenty years I still read his strange dialogues with pleasure, not only sentences, but, page after page, the whole discourse...

I value a book which like this or Montaigne proves the existence of a literary world. What boundless leisure, what original jurisdiction, what new heavens and new earth! The old constellations have set, new and brighter have arisen: we have eaten lotus, we have tasted nectar. O that the dream might last! There is no man in this age who so truly belongs to this dispensation as Landor. To the performer this appears luxury; well, when he has quite got his new views through, when he sees how he can mend the old house, we will quit this entertainment. Until then, leave us the land where Horace and Ovid, Erasmus and Scaliger, Izaak Walton and Ben Jonson, Dryden and Pope had their whole existence.

“In the afternoon we came unto a land
In which it seemed always afternoon.”

But consider, O Reformers, ere you denounce the House of Fame and the land whose intoxications Homer and Milton, Plato and Shakspeare have partaken, that a shade of uncertainty still hangs over all that is actual. Alas, that I must hint to you that poverty is not an unmixed good; that labor may easily exceed. The sons of the rich have finer forms and in some respects a better organization than the sons of the laborer. The Irish population in our towns is the most laborious, but neither the most moral nor the most intelligent: the experience of the colleagues of Brook Farm was unanimous, “We have no thoughts.”

He who serves some, shall be served by some: he who serves all, shall be served by all.

When we quarrel, O then we wish we had always kept our appetites in rein, that we might speak so coolly and majestically from unquestionable heights of character.

Black and White Art. The sibyl treats every person with some art, flatters them, respects popular prejudices, accuses rum and slavery, and so appears cunning. The little boy who walks with me to the woods, has no design in his questions, the question which is asked in his mind he articulates to me, — over him, over me, — we exist in an element of awe and singleness. Not all children

do so. Some have a fraud under their tongue before they can speak plain. But the art of the artist, how differs that from the art of sin? He too has a design on us, but it is not for his benefit, but for ours. That which first charms him and still charms him, he endeavors to convey, so that it shall work on us its legitimate effect. That is worship still.

Well for us that we cannot make good apologies. If I had skill that way, I should spend much of my time at that. Not being able, I leave it with Nature, who makes the best; meantime I am doing something new, which crowns the apology.

Whitewashing. We embellish involuntarily all stories, facts, and persons. In Nature there is no emphasis. By detaching and reciting a fact, we already have added emphasis to it and begun to give a wrong impression, which is inflamed by the new point given every time it is told. All persons exist to society by some shining trait of beauty or utility they have. We borrow the proportions of the man from that one fine feature we see, and finish the portrait symmetrically, which is false; for the rest of his body is small or deformed.

Concord Fight. I had occasion, in 1835, to inquire for the facts that befel on the Nineteenth April, 1775. Doctor Ripley carried me to Abel Davis and Jonas Buttrick and Master Blood. The Doctor carried in his mind what he wished them to testify, and extorted, where he could, their assent to his forewritten History. I, who had no theory, was anxious to get at their recollections, but could learn little. Blood's impression plainly was that there was no great courage exhibited, except by a few. I suppose we know how brave they were by considering how the present inhabitants would behave in the like emergency. No history is true but that which is always true. It is plain that there is little of "*the two o'clock in the morning courage*" which, Napoleon said, he had known few to possess.

These thoughts of which the Universe is the celebration are, no doubt, as readily and thoroughly denoted in the nature and habits of animals and in those of plants as in men. The words dog and snake and crocodile are very significant to us.

At Cambridge, the last Wednesday, I met twenty members of my college class and spent the day with them. Governor Kent of Maine presided, Upham, Quincy, Lowell, Gardner, Loring, Gorham, Motte, Wood, Blood, Cheney,

Withington, Bulfinch, Reed, Burton, Stetson, Lane, Angier, Hilliard, Farnsworth, Dexter, Emerson. It was strange how fast the company returned to their old relation, and the whole mass of college nonsense came back in a flood. They all associated perfectly, were an unit for the day — men who now never meet. Each resumed his old place. The change in them was really very little in twenty years, although every man present was married, and all but one fathers. I too resumed my old place and found myself as of old a spectator rather than a fellow. I drank a great deal of wine (for me) with the wish to raise my spirits to the pitch of good fellowship, but wine produced on me its old effect, and I grew graver with every glass. Indignation and eloquence will excite me, but wine does not.

One poor man came whom fortune had not favored, and we carried round a hat, and collected one hundred and fifteen dollars for him in two minutes.

Almost all these were prosperous men, but there was something sad and affecting in their prosperity. Very easy it was to see that each owed his success to some one trait or talent not supported by his other properties. There is no symmetry in great men of the first or of the tenth class. Often the division of talents is very minute. One man can pronounce well; another has a voice like a bell and the “orotund tone.” Edward Everett’s beautiful elocution and rhetoric had charms for the dull. I remember Charles Jarvis in my class, who said “he did not care what the subject was; he would hear him lecture on Hebrew or Persian.”

There is this pleasure in a class meeting. Each has been thoroughly measured and known to the other as a boy, and they are not to be imposed upon by later circumstances and acquisitions. One is a governor of a state, one is a president of a college, one is president of a senate, two or three are bank presidents. They have removed from New Hampshire or from Massachusetts or from Vermont into the State where they live. Well, all these are imposing facts in the new neighborhood, in the imaginations of the young men among whom they come; but not for us. When they come into the presence of either of their old mates, off goes every disguise, and the boy meets the boy as of old. This was ludicrously illustrated in the good story Wood told us of his visit to Moody in his office among his clients at Bangor. “How are you, Moody?” with a slap on the back.— “How do you do, sir?” with a stare and a civil but formal bow. “Sir, you have the advantage of me.”— “Yes, and I mean to keep it. But I am in no hurry. Go on with your business. I will sit here and look at this newspaper until your client is gone.” M. looked up every now and then from his bond and his bondsman, but could not recollect the stranger. By and by they were left alone. “Well,” said Wood, “and you have not found me out?”— “Hell!” cried Moody, with the utmost prolongation of accent, “it’s Wood!”

What you owe to me — you will vary the phrase — but I shall still recognize my thought. But what you say from the same idea, will have to me also the expected unexpectedness which belongs to every new work of Nature.

Amongst us only the face is well alive: the trunk and limbs have an inferior and subsidiary life, seeming to be only supporters to the head. The head is finished, the body only blocked. Now and then in a Southerner we see a body which is also alive, as in young Eustis. So is it with our manners and letters.

A beautiful woman varies her dress with her mood, as our lovely Walden Pond wears a new weather each time I see it, and all are so comely that I can prefer none. But there must be agreement between the mood and the dress. Vain and forgotten are the fine things if there is no holiday in the eye.

Tropes. Every gardener can change his flowers and leaves into fruit and so is the genius that today can upheave and balance and toss every object in Nature for his metaphor, capable in his next manifestation of playing such a game with his hands instead of his brain. An instinctive suspicion that this may befall, seems to have crept into the mind of men. What would happen to us who live on the surface, if this fellow in some new transmigration should have acquired power to do what he now delights to say? He must be watched.

For me, what I may call the autumnal style of Montaigne keeps all its old attraction.

Your reading you may use in conversation, but your writing should stop with your own thought.

The whole history of Sparta seems to be a picture or text of self-reliance.

Waldo's diplomacy in giving account of Ellen's loud cries declares that she put her foot into his sandhouse, and got pushed.

Democracy. Caius Gracchus, Plutarch says, first among the Romans turned himself in addressing the people from facing the senate-house, as was usual, and faced the Forum.

The trumpet-like lowing of a cow — what does that speak to in me? Not to my understanding. No. Yet somewhat in me hears and loves it well. I am glad to have guests who can entertain each other, and if I cannot find a second guest in our narrow village to keep the first in play, then I would have pictures, statues, an observatory and telescope, a garden, — somewhat that can bear the brunt of the stranger's arrival and allow me to play a second part and be a guest in my own house. But when the friend shall come, then the smallest closet in my house

is wide enough for our entertainment.

Has not Pedantry been defined, a transference of the language of one district of thought or action to another district, not in the way of rhetoric, but from a bigoted belief that it is intrinsically preferable? I remember some remark of Coleridge that is tantamount to this. I easily see that the spirit of life finds equal exercise in war, in chemistry, or in poetry. I see the law of Nature equally exemplified in bar-room and in a saloon of philosophers. I get instruction and the opportunities of my genius indifferently in all places, companies and pursuits, so only that there be antagonism. Yet there would be the greatest practical inconvenience, if, because the same law appears indifferently in all, we should bring the philosophers of the bar-room and of the saloon together. Like to like.

[Here follows most of the matter printed in the first two pages of "Character" (*Essays, Second Series*).]

Character is that reserved force which acts only by *Presence*, and not by visible or analysable methods. Samuel Hoar accomplishes everything by the aid of this weapon, not by talent, not by eloquence, not by magnetism. We feel that the largest part of the man has never yet been brought into action. As modern warfare is war of posts and not of battles, so these victories are by demonstration of superiority and not by conflict.

If one should go into State Street or much lower places, he would find that the battle there also is fought and won by the same grand agents...

Lord Bacon's method in his books is of the Understanding, but his sentences are lighted by Ideas.

The fame of Burns also is too great for the facts.

Lotus-eaters. I suppose there is no more abandoned epicure or opium-eater than I. I taste every hour of these autumn days. Every light from the sky, every shadow on the earth, ministers to my pleasure. I love this gas. I grudge to move or to labor or to change my book or to will, lest I should disturb the sweet dream.

Our people are easily pleased: but I wonder to see how rare is any deviation from the routine.... If Mr and Mrs. Wigglesworth go to walk with their family in the mornings they are the speculation of Boston.

The moment is all. The boys like to have their swing of peaches once in the season, and it suffices them; or of plums, or cherries. We like to be rested; we

like to be thoroughly tired by labor; I sit on a stone and look at the pond and feel that having basked in a nature so vast and splendid I can afford to de cease, and yet the antecedent generations have not quite lost their labor. “In the heat of the battle Pericles smiled on me, and passed on to another detachment.”

I find a few passages in my biography noticeable. But it is the present state of mind which selects those anecdotes, and the selection characterizes the state of mind. All the passages will in turn be brought out.

Dr. Osgood said of P’s sermon that it was patty cake.

In history the soul spreads itself, enormous, eccentric and allows no rash inductions. The men who evince the force of the moral sentiment and of genius are not normal, canonical people, but wild and Ishmaelitic — Cromwells, Napoleons, Shakspeares, and the like.

The fine doctrine of *availableness* which gave the Whig party John Tyler for their President reaches into the politics of every parish and school district.

In Plutarch’s Life of Demosthenes it is quoted from the philosopher that through all his orations runs one idea, that Virtue secures its own success.

Dandies of Moral Sentiment. I, credulous, listened to his fine sentiment and wondered what must be the life of which the ornaments were so costly: and coming again, he lived there no longer: he was now such a tradesman as other tradesmen are, and he recognized my face with patronage and pity.

The fancies of the boy exceed a hundredfold the fruitions of the man.

(From E)

September.

A poet is very rare. I spoke the other day to Ellery’s ambition and said, Think that in so many millions, perhaps there is not another one whose thought can flow into music. Will you not do what you are created to do?... But Ellery, though he has fine glances and a poetry that is like an exquisite nerve communicating by thrills, yet is a very imperfect artist, and, as it now seems, will never finish anything. He does not even like to distinguish between what is good and what is not, in his verses, would fain have it all pass for good, — for the best, — and claim inspiration for the worst lines. But he is very good company, with his taste, and his cool, hard, sensible behaviour, yet with the capacity of melting to emotion, or of wakening to the most genial mirth. It is no

affectation in him to talk of politics, of knives and forks, or of sanded floors, if you will; indeed, the conversation always begins low down, and, at the least faltering or excess on the high keys, instantly returns to the weather, the Concord Reading Room, and Mr. Rice's shop. Now and then something appears that gives you to pause and think. First, I ask myself if it is real, or only a flitting shade of thought, spoken before it was half realized; then, if it sometimes appears, as it does, that there is in him a wonderful respect for mere humours of the mind, for very gentle and delicate courses of behaviour, then I am tempted to ask if the poet will not be too expensive to the man; whether the man can afford such costly self-denials and finenesses to the poet. But his feeling, as his poetry, only runs in veins, and he is, much of the time, a very common and unedifying sort of person.

(From G)

September 4.

Rightly says Elizabeth, that we do not like to hear our authors censured, for we love them by sympathy as well as for cause, and do not wish to have a reason put in the mouth of their enemies. It is excellent criticism and I will write it into my piece.

September 11.

The Poet, The Maker. It is much to write sentences: it is more to add method, and write out the spirit of your life symmetrically. Of all the persons who read good books and converse about them, the greater part are content to say, I was pleased; or I was displeased; it made me active or inactive; and rarely does one eliminate and express the peculiar quality of that life which the book awoke in him. So rare is a general reflection. But to arrange many general reflections in their natural order so that I shall have one homogeneous piece, a *Lycidas*, an *Allegro*, a *Penseroso*, a *Hamlet*, a *Macbeth*, a *Midsummer - Night's Dream*, — this continuity is for the great. The wonderful men are wonderful hereby. The observations that Pythagoras made respecting sound and music are not in themselves unusually acute; but he goes on: adds fact to fact, makes two steps, three, or even four, and every additional step counts a thousand years to his fame.

September 12.

Osman said that when he went a-berrying the devil got into the blueberries and tempted him to eat a bellyful, but if he came to a spring of water he would

wash his hands and mouth and promise himself that he would eat no more. Instantly the devil would come to him again in the shape of larger and fairer berries than any he had yet found, and if he still passed them by, he would bring him blackberries, and if that would not serve, then grapes. He said, of one thing he was persuaded, that wisdom and berries grew on the same bushes, but that only one could ever be plucked at one time.

Optimates. Sir, said Heavenborn, the amount of labor you have spent on that piece is disgraceful. For me, not even my industry shall violate my sentiment. I will sit down in that corner and perish, unless I am commanded by the universe to rise and work.

And what became of Heavenborn? What a pragmatism question! Nothing to tell of: yet I suppose the new spirit that animates this crop of young philosophers, and perhaps the fine weather at this very hour, this thoughtful autumnal air, may be some of his work, since he is now, as we say, dead.

Osman. Our low and flat experiences have no right to speak of what is sacred. Out of a true reverence, which is all the good we have left us, we do not recognize the existence of God and Nature, but do what we can to exterminate them from the category of being. If I should ever be better, I will grant you their existence.

But I sympathize with all the sad angels who on this planet of ours are striking work and crying, O for something worthy to do!...

Life. Osman. We are all of us very near to sublimity. As one step freed Wordsworth's Recluse on the mountains from the blinding mist and brought him to the view of "Glory beyond all glory ever seen," so near are all to a vision of which Homer and Shakspeare are only hints and types, and yet cannot we take that one step. It does not seem worth our while to toil for anything so pitiful as skill to do one of the little feats we magnify so much, when presently the dream will scatter and we shall burst into universal power. The reason of all idleness and of all crime is the same. Whilst we are waiting, we beguile the time, one with jokes, one with sleep, one with eating, one with crimes.

It is pedantry to give such importance to property. Whoso does shows how much he desires it. Can I not play the game with these counters as well as with those? with land and money as well as with brown bread and serge? A good wrestler does not need the costume of the ring, and it is only indifferent writers who are so hard to be suited with a pen.

"I will not sign any petition that Mr. D. may hold his office: he and his party

have been doing all they could to destroy my business, and drive me to saw wood for a living, and now he may saw wood himself,” said my neighbor the manufacturer. And that is the repute in which “the solid part of the community” hold labor. To such men no wonder that the fact of George Ripley’s association should appear wonderful, men of the highest cultivation leaving their libraries and going out in blue frocks and cowhide boots into the barnyard and peat-bog. They think it a freak, but when they find it lasting, and that the plans of years are based on it, they revise their own positions. Antony and Cleopatra, and old King George III drest themselves in kersey and went out *incogniti*.

Jones Very told George Bradford that “he valued his poems, not because they were his, but because they were not.”

“The Transcendentalists do not err in excess, but in defect, if I understand the case. They do not hold wild dreams for realities: the vision is deeper, broader, more spiritual than they have seen. They do not believe with too strong faith: their faith is too dim of sight, too feeble of grasp, too wanting in certainty.” (Rev.) Thomas T. Stone’s letter to M. M. E., June, 1841.

September 21.

Dr. Ripley died this morning The fall of this oak of ninety years makes some sensation in the forest, old and doomed as it was. He has identified himself with the forms at least of the old church of the New England Puritans, his nature was eminently loyal, not in the least adventurous or democratical; and his whole being leaned backward on the departed, so that he seemed one of the rear-guard of this great camp and army which have filled the world with fame, and with him passes out of sight almost the last banner and guidon flag of a mighty epoch. For these Puritans, however in our last days they have declined into ritualists, solemnized the heyday of their strength by the planting and the liberating of America.

Great, grim, earnest men, I belong by natural affinity to other thoughts and schools than yours, but my affection hovers respectfully about your retiring footprints, your unpainted churches, strict platforms, and sad offices; the iron-gray deacon and the wearisome prayer rich with the diction of ages.

Well, the new is only the seed of the old. What is this abolition and non-resistance and temperance but the continuation of Puritanism, though it operate inevitably the destruction of the church in which it grew, as the new is always making the old superfluous?... He was a punctual fulfiller of all duties. What order, what prudence! No waste, and no stint, always open-handed; just and

generous. My little boy, a week ago, carried him a peach in a calabash, but the calabash brought home two pears. I carried him melons in a basket, but the basket came home with apples. He subscribed to all charities; he was the most public-spirited citizen in this town. He gave the land for the monument. He knew the value of a dollar as well as another man. Yet he always sold cheaper than any other man....

“Woe that the linden and the vine should bloom
And a just man be gathered to the tomb.”

But out of his own ground he was not good for aught. To talk with the insane he was as mad as they; to speculate with the thoughtful and the haters of forms he was lost and foolish.... Credulous and opinionative, a great browbeater of the poor old fathers who still survived from the Nineteenth of April in order to make them testify to his history as he had written it. A man of no enthusiasm, no sentiment. His horror at the doctrine of non-resistance was amusing — He was a man very easy to read, for his whole life and conversation was consistent and transparent.... In college, F. King told me from Governor Gore, who was the Doctor’s classmate, he was called “Holy Ripley,” perhaps in derision, perhaps in sadness, and now in his old age when all the antique Hebraism and customs are going to pieces, it is fit he too should depart, most fit that in the fall of laws a loyal man should die.

Shall I not say in general of him, that, given his constitution, his life was harmonious and perfect?

His body is a handsome and noble spectacle. My mother was moved just now to call it “the beauty of the dead.” He looks like a sachem fallen in the forest, or rather like “a warrior taking his rest with his martial cloak around him.” I carried Waldo to see him, and he testified neither repulsion nor surprise, but only the quietest curiosity. He was ninety years old the last May, yet this face has the tension and resolution of vigorous manhood. He has been a very temperate man. A man is but a little thing in the midst of these great objects of Nature, the mountains, the clouds, and the cope of the horizon, and the globes of heaven, yet a man by moral quality may abolish all thoughts of magnitude and in his manners equal the majesty of the world.

September 28.

Temperament. Every man, no doubt, is eloquent once in his life. The only difference betwixt us is that we boil at different degrees of the thermometer. This

man is brought to the boiling-point by the excitement of conversation in the parlor; that man requires the additional caloric of a large meeting, a public debate; and a third needs an antagonist, or a great indignation; a fourth must have a revolution; and a fifth nothing less than the grandeur of absolute Ideas, the splendors of Heaven and Hell, the vastness of truth and love.

The whole state of society of course depends on that law of the soul which all must read sooner or later, — as I am, so I see; my state for the time must always get represented in my companion's nuptial, mercantile, or municipal, as well as in my face and my fortunes.

“A new friend is like new wine; when it is old thou shalt drink it with pleasure.”
(Ecclesiasticus ix, 10.)
(From H)

“One avenue was shaded from thine eyes
Through which I wandered to eternal truth.”

Acquiescence, patience, have a large part to play. The plenty of the poorest place is too great, — the harvest cannot be gathered. The thought that I think excludes me from all other thoughts. Culture is to cherish a great susceptibility, to turn the man into eyes, but as the eye can see only that which is eye-form, or of its own state, we tumble on our walls in every part of the universe, and must take such luck as we find, and be thankful. Let us deserve to see. Too feeble and faint fall the impressions of Nature on the sense. Let us not dull them by intemperance and sleep. Too partially we utter them again: the symbols in which I had hoped to convey a universal sense are rejected as partial. What remains but to acquiesce in the faith that by not lying, nor being angry, we shall at last acquire the voice and language of a man.

Sun and moon are the tablets on which the name and fame of the good are inscribed.

Nature is a silent man.

It would be well if at our schools some course of lessons in Idealism were given by way of showing each good Whig the gunpowder train which lies under the ground on which he stands so firmly. Let him know that he speaks to ghosts and phantasms, let him distinguish between a true man and a ghost.

“We do not wake up every morning at four to write what all the world thinks,” said the good German.

The Inevitableness of the new Spirit is the grand fact, and that no man lays to heart, or sees how the hope and palladium of mankind is there; but one blushes and timidly insinuates palliating circumstances, and one jeers at the foible or absurdity of some of its advocates, — but on comes the God to confirm and to destroy, to work through us if we be willing, to crush us if we resist. No great cause is ever defended on its merits.

If I should take the sum of the Annual Registers, of the Red Books, of the Scientific Associations, of the Lloyds' Lists, and Bicknell's Reporters, I should not get the Age which this pine wood speaks of.

Boston. Natural History Society; Athenæum and Galleries; Lowell Institute; Lyceum; Mechanics' Fair; Cambridge College; Father Taylor; Statehouse; Faneuil Hall; Bookshops; Tremont Theatre.

Men. Taylor, Webster, Bancroft, Frothingham, Reed, Ward.

There is a great destiny which comes in with this as with every age, which is colossal in its traits, terrible in its strength, which cannot be tamed, or criticised, or subdued. It is shared by every man and woman of the time, for it is by it they live. As a vast, solid phalanx the generation comes on, they have the same features, and their pattern is new in the world. All wear the same expression, but it is that which they do not detect in each other. It is this one life which ponders in the philosophers, which drudges in the laborers, which basks in the poets, which dilates in the love of the women. Fear not but this is full of romance, the wildest sea, or mountain, or desert — life is not more instinct with aboriginal force. This is that which inspires every new exertion that is made. It is this which makes life sweet to them; this which the ambitious seek power that they may control; this they wish to be rich that they may buy; when they marry, it is out of love of this; when they study, it is this which they pore after, and would read, or would write. It is new in the universe, it is the attraction of time: it is the wonder of the Infinite: this is the last painting of the Creator: calm and perfect it lies on the brow of the enormous Eternity, and if, in the superior recesses of Nature there be any abode for permanent spectators, what is there they would study but this, — the cumulative result, the new morning with all its dews, rich with the spoils of all foregoing time? Is there not something droll to see the first-born of this age ignorant of the deep, prophetic charm that makes the individual nothing; interrupting the awe and gladness of the time with their officious lamentations that they are critical, and know too much? Are they not torn up in a whirlwind, — borne by its force, they know not whence, they know not whither, yet settling

their robes and faces in the moment they fly by me with this self-crimination of *ennui*? If ever anybody had found out how so much as a rye-straw is made! Feeble persons are occupied with themselves, — with what they have knowingly done, and what they propose to do, and they talk much hereof with modesty and fear. The strong persons look at themselves as facts, in which the involuntary part is so much as to fill all their wonder, and leave them no countenance to say anything of what is so trivial as their private thinking and doing. I can well speak of myself as a figure in a panorama so absorbing.

The whole game at which the philosopher busies himself every day, year in, year out, is to find the upper and the under side of every block in his way. Nothing so large and nothing so thin but it has two sides, and when he has seen the outside, he turns it over to see the other face. We never tire of this game, because ever a slight shudder of astonishment pervades us at the exhibition of the other side of the button, — at the contrast of the two sides. The head and the tail are called in the language of philosophy *Finite* and *Infinite*. Visible and Spiritual, Relative and Absolute, Apparent and Eternal, and many more fine names.

The Poet. I was astonished one morning by tidings that Genius had appeared in a youth who sat near me at table...

It is strange how fast *Experience* and *Idea*, the wonderful twins, the Castor and Pollux of our firmament, change places; one rises and the other instantaneously sets. To-day and for a hundred days Experience has been in the ascendant, and Idea has lurked about the life merely to enhance sensation, the firework-maker, master of the revels, and hired poet of the powers that be: but in a moment a revolution! the dream displaces the working day and working world, and they are now the dream and this the reality. All the old landmarks are swept away in a flood, and geography and history, the laws and manners, aim and method of society are as fugitive as the colors which chase each other when we close our eyes. All experience has become mere language now. Idea drags it now, a chained poet, to adorn and sing his triumph.

Chilmark. Sir, I have your note for a small debt, can you pay it to-day?

Hyannis. Far otherwise: perhaps you have brought me money.

Chil. No.

Hy. I contracted that debt when I bought and sold; now I protest against the

market. The word *pay* is immoral.

Chil. "It is best to be off wi' the old love, Before ye be on wi' the new."

In Berlin it was publicly reported at the tea-tables that Fichte had declared his disbelief in the existence of Heinrich Schlossen, who was worth two hundred thousand thalers. Nay, it was currently whispered that he did not credit the existence of Madame Fichte.

I stood one day in the Court House talking with Luther Lawrence when the sheriff introduced through the crowd a number of women who were witnesses in the trial that was pending. As they filed rapidly through the crowd, Mr. Lawrence said, "There go the light troops!" Neither Plato, Mahomet, nor Goethe have said a severer thing on our fair Eve. Yet the old lawyer did not mean to be satanic. The ridicule lies in the misplacement of our good Angel, in the violence of direction with which this string of maids and matrons are coming with hot heads to testify what gossip they know about Mr. Gulliver or Mrs. Veal, — being quite dislodged from that shrine of sanctity, sentiment, and solitude in which they make courts and forums appear absurd...I remember Edward Taylor's indignation at the kind admonitions of Dr. P. The right answer is, 'My friend, a man can neither be praised nor insulted.'

On rolls the old world, and these fugitive colors of political opinion, like doves' neck lustres, chase each other over the wide encampments of mankind, Whig, Tory; Pro-and Antislavery; Catholic, Protestant; the clamor lasts for some time, but the persons who make it change; the mob remains, the persons who compose it change every moment. The world hears what both parties say and swear, accepts both statements, and takes the line of conduct recommended by neither, but a diagonal line of advance which partakes of both courses.

Aster solidagineus or solidago bicolor.

The Poet. The Idealist at least should be free of envy; for every poet is only a ray of his wit, and every beauty is his own beauty reflected. He is ever a guest in his own house and his house is the biggest possible.

Exaggeration is a law of Nature. As we have not given a peck of apples or potatoes, until we have heaped the measure, so Nature sends no creature, no man into the world without adding a small excess of his proper quality... Every sentence hath some falsehood of exaggeration in it. For the infinite diffuseness

refuses to be epigrammatized, the world to be shut in a word. The thought being spoken in a sentence becomes by mere detachment falsely emphatic.

G.W. Tyler patronizes Providence.... The Whig party in the Universe concedes that the Radical enunciates the primal law, but makes no allowance for friction, and this omission makes their whole doctrine impertinent. The Whig assumes sickness, and his social frame is a hospital, his total legislation is for the present distress, — a universe in slippers and flannels, with bib and pap-spoon, swallowing pills and herb-tea. Whig preaching, Whig poetry, Whig philosophy, Whig marriages. No rough, truth-telling Miltons, Rousseaus.

Blue Heron, loon, and sheldrake come to Fairhaven Pond; raccoon and otter to Walden.

The merchant will not allow a book in the counting-house, suspects every taste and tendency but that for goods, has no conversation, no thought but cotton, qualities of cotton, and its advance or fall a penny or a farthing. What a cramping of the form in wooden cap, wooden belt, and wooden shoes, is this, and how should not the negro be more a man than one of these victims? — the negro, who, if low and imperfect in organization, is yet no wooden sink, but a wild cedar swamp, rich with all vegetation of grass and moss and confervæ and ferns and flags, with rains and sunshine; mists and moonlight, birds and insects filling its wilderness with life and promise.

It is plain that none should be rich but those who understand it. Cushings and Perkinses ought to be rich, who incline to subscribe to college and railroad, to endow Athenaeums, and open public gardens, and buy and exhibit pictures, liberalities which very good and industrious men, who have earned their money a penny or a shilling at a time, would never think of. Yet what are rich men for? It is a most unnecessarily large and cumbrous apparatus for anybody who has not a genius for it to produce no other result than the most simple contrivance of an acre and a cabin.

Every nation, to emerge from barbarism, must have a foreign impulse, a graft on the wild stock, and every man must. He may go to college for it, or to conversation, or to affairs, or to the successes and mortifications of his private biography, war, politics, fishing, or love, — some antagonism he must have as projectile force to balance his centripetence.

Master Cheney says there is the eight-rowed corn, and the twelve-rowed, and the brindled, and the Badger corn, and the Canada corn, and the sweet, and the white, and the Missouri.

Fifty pounds to the bushel makes corn merchantable, and he weighed a bushel of the Bigelow (?) corn and there were seventy pounds.

O Master Cheney! I catch the tune in your talk, and see well that you have no need of poetry. I see its silver thread gleaming in your homespun. You do not break off your flowers. You plough your crops in.

G. W. Tyler came here with all his rattle. The attributes of God, he said, were two, power and risibility. It was the duty of every pious man, he said, to keep up the hoax the best he could, and so to patronize Whiggism, Piety, and Providence, and wherever he saw anything that would help keep the people in order, schools or churches, or poetry, or what-not, he must cry Hist-a-boy! and urge the game on. It was like Eli Robbins's theory of amusements. He sleeps four hours, from three to seven. He outwitted Mr. Greenleaf in the courts. He practised medicine somewhere in the barracks, and, at St. Johns, having in a freak called himself a Free-will Baptist, he was immediately carried off to preach at a meeting, which he did for fifty-five minutes, and left the audience in tears, and got up a revival. A pound and a half of coffee to a pint of water, he drinks every night, of the thickness of molasses, and when he had headache, he piled a peck of ice on his head, by means of an iron hoop.

“Fame is the spur that the clear spirit doth raise
To scorn delights and live laborious days.”

The philosopher sat with his face to the East until cobwebs were spun over the brim of his pot of porridge. Intemperance is the only vulgarity.

Inaptitude. I will never wonder at Mr. Pickens, who said “he would not go to Mr. R— 's church until the interesting times were quite over”* (i e., until the ordination and personal topics were exhausted). People's personality, their biography, their brother and sister, uncle and aunt, are sadly in the way.

The novel of *De Clifford* gave me to think of aristocracy. I should like to have this and *Pericles and Aspasia* circulate freely in this country as lessons in the beauty of behavior which we greatly need, — lessons on personal merit and manners; but this book is superstitious and has no conception of the despotic

power of character... But, in Miss Edgeworth, and in this story of *De Clifford*, the hero in the crisis speaks with the utmost spirit and nature, and so the scene is blood-warm, and does your heart good.

This hold we have on the selfish man, that he always values consequences, reputation, or after-clap of some sort; but the benevolent man never looks so far. Let the self-seeker be never so sharp, this unlucky trick of Nature is sharper than he, and has him on the hip. False connections have some good in them. All our solitudes yield a precious fruit, and this is the most remarkable of all our solitudes. I value the tenderness of a stern nature more than all the tenderness of the susceptible. When such a one is moved, the tears are precious. The only bribe the "community" has for us, is that it permits the association of friends without any compromise on any part, as our other hospitalities do not. We see now sundry persons whose slowness of friendship makes it plain that life is not long enough, with its rare opportunities, that we and they should ever be anything valuable to each other. They are constitutionally good and great, yet only by living in the house with them for years, could we realize the promise we read in their eye. They now are only the Lord's pledge to us that worth exists, and will somewhere be available to us. What has life more to offer me than assurance?

I can forgive anything to a deep nature, for they outlive all their foibles and pedantries, and are just as good ten years hence and much better. Strange it is so hard to find good ones: the profound nature will have a savage rudeness, the delicate one will be shallow or have a great crack running through it, and so every piece has a flaw. I suppose that, if I should see all the gentry of England pass in review, I should find no gentleman and no lady... It must be genius which takes that direction [i e., friendship]: it must be not courteous, but courtesy; not tasteful, but taste; not gilt, but gold. O men of buckram and women of blonde, is civilization buckram and is gentleness blonde?

Sarah Alden Ripley is a bright foreigner: she signalizes herself among the figures of this masquerade. I do not hope when I see her to gain anything, any thought: she is choked, too, by the multitude of all her riches, Greek and German, Biot and Bichat, chemistry and philosophy. All this is bright obstruction. But capable she is of high and calm intelligence, and of putting all the facts, all life aloof, as we sometimes have done. But when she does not, and only has a tumultuous time, it is time well wasted. I think her worth throwing time away upon.

Eupatorium, white and red.

I see only two or three persons and allow them all their room: they spread themselves at large to the horizon. If I looked at many, as you do, or compared these habitually with others, these would look less. Yet are they not entitled to this magnificence? Is it not their own? And is not munificence the only insight?

We cannot rectify marriage, because it would introduce such carnage into our social relations, and it seems the most rabid Radical is a good Whig in relation to the theory of marriage.

Yet perhaps we can see how the facts stand in Heaven. Woman hides her form from the eyes of men in our world: they cannot, she rightly thinks, be trusted. In a right state the love of one, which each man carried in his heart, should protect all women from his eyes as by an impenetrable veil of indifference. The love of one should make him indifferent to all others, or rather their protector and saintly friend, as if for her sake. But now there is in the eyes of all men a certain evil light, a vague desire which attaches them to the forms of many women, whilst their affections fasten on some one. Their natural eye is not fixed into coincidence with their spiritual eye.

Spiræa tomentosa.

Why do I write another line, since my best friends assure me that in every line I repeat myself? Yet the God must be obeyed even to ridicule. The criticism of the public is, as I have often noted, much in advance of its invention. The ear is not to be cheated. A continuous effect cannot be produced by discontinuous thought, and when the eye cannot detect the juncture of the skilful mosaic, the spirit is apprised of disunion simply by the failure to affect the spirit. This other thing I will also concede, — that the man Fingal is rather too swiftly plastic, or, shall I say, works more in the spirit of a cabinetmaker, than of an architect. The thought which strikes him as great and Dantesque, and opens an abyss, he instantly presents to another transformed into a chamber or a neat parlor, and degrades ideas.

I told Henry Thoreau that his freedom is in the form, but he does not disclose new matter. I am very familiar with all his thoughts, — they are my own quite originally drest. But if the question be, what new ideas has he thrown into circulation, he has not yet told what that is which he was created to say. I said to

him what I often feel, I only know three persons who seem to me fully to see this law of reciprocity or compensation, — himself, Alcott, and myself: and 't is odd that we should all be neighbors, for in the wide land or the wide earth I do not know another who seems to have it as deeply and originally as these three Gothamites.

Poetry. But now of poetry I would say, that when I go out into the fields in a still sultry day, in a still sultry humor, I do perceive that the finest rhythms and cadences of poetry are yet unfound, and that in that purer state which glimmers before us, rhythms of a faery and dreamlike music shall enchant us, compared with which the finest measures of English poetry are psalm-tunes. I think now that the very finest and sweetest closes and falls are not in our metres, but in the measures of eloquence, which have greater variety and richness than verse.... Now, alas, we know something too much about our poetry, — we are not part and parcel of it: it does not descend like a foreign conqueror from an unexpected quarter of the horizon upon us, carry us away with our flocks and herds into a strange and appalling captivity, to make us, at a later period, adopted children of the Great King, and, in the end, to disclose to us that he was our real parent, and this realm and palace is really our native country. Yet I please myself with thinking that there may yet be somewhere such elation of heart, such continuity of thought, that a man shall see the little sun and moon whisk about, making day and night, making month and month, without heed, in the grandeur of his absorption. Now we know not only when it is day, and when night, but we hear the dinner-bell ring with the most laudable punctuality. I am not such a fool but that I taste the joy which comes from a new and prodigious person, from Dante, from Rabelais, from Piranesi, flinging wide to me the doors of new modes of existence, and even if I should intimate by a premature nod my too economical perception of the old thrum, that the basis of this joy is at last the instinct, that I am only let into my own estate, that the poet and his book and his story are only fictions and semblances in which my thought is pleased to dress itself, I do not the less yield myself to the keen delight of difference and newness.

I think that the importance of fine scenery is usually greatly exaggerated, for the astonishing part of every landscape is the meeting of the sky and the earth...

A man in black came in while I spoke and my countenance fell. Then I said, Surely I see that the Swedenborgian finds a sweetness in his church and is enveloped by it in a love and society that haunts him by night and by day, but if the Unitarian is invited to go out and preach to Unitarians at Peoria, Illinois, I see no question so fit or inevitable as that he should ask whether they will pay the expense of his journey and maintain him well...

In good society, — say among the angels in Heaven, — is not everything spoken by indirection and nothing quite straight as it befall?

It seems as if the day was not wholly profane, in which I have seen with interest a natural object.... At least these things are not drenched in our personalities and village ambition, pay no tax, own no City Bank stock, and need not engage their wood to be sawed. And yet whilst they rescue me from my village, I know that they attract me for somewhat which they symbolize: that they are not foreign as they seem, but related. Wait a little, and I shall see the return even of this remote and hyperbolic curve.

Margaret Fuller talked of ballads, and our love for them: strange that we should so value the wild man, the Ishmaelite, and his slogan, claymore, and tomahawk rhymes, and yet every step we take, everything we do, is to tame him. It is like Farley's pioneer hatred of civilization, and absconding from it to cut down trees all winter and comfort himself that he was preparing for civilization! Margaret does not think, she says, in the woods, only "finds herself expressed."

One of my stories promised above to embody the history of the times— 'A Life and Times'

— should be that of little Edward Webster, who asked his father one day, after grace had been said at dinner, "Who would say *wis-wis* at dinner when he should be gone to Washington?"

Another of like import in the Chapter of Religion would be Lieutenant Bliss's reply to me when I asked him if they had morning prayers at West Point as at a college? He said, "We have *reveille* beat, which is the same thing."

Of the best jokes of these days is that told of poor Bokum, that when he went to hire a horse and chaise at a stable in Cambridge, and the man inquired whether he should put in a buffalo? "My God! no," cried the astonished German, "put in a horse!"

I value Shakspeare, yes, as a Metaphysician, and admire the unspoken logic which upholds the structure of Iago, Macbeth, Antony, and the rest. Is it the real poverty at the bottom of all this seeming affluence, the headlong speed with which in London, Paris, and Cochin China, each seeing soul comes straight through all the thin masquerade on the old fact, is it the disgust at this indigence of Nature which makes these raging livers like Napoleon, Timour, Byron, Trelawney, and John Quincy Adams drive their steed so hard, in the fury of

living to forget the *soupe maigre* of life?...

It is a bad fact that our editors fancy they have a right to call on Daniel Webster to resign his office, or, much more, resign his opinion and accept theirs. That is the madness of party. I account it a good sign, indicative of public virtue in the Whigs, that there are so many opinions among them, and that they are not organized and drilled.

There are two directions in which souls move: one is trust, religion, consent to be nothing for eternity, entranced waiting, the worship of Ideas: the other is activity, the busybody, the following of that practical talent which we have, in the belief that what is so natural, easy, and pleasant to us and desirable to others will surely lead us out safely: in this direction lies usefulness, comfort, society, low power of all sorts. The other is solitary, grand, secular. I see not but these diverge from every moment, and that either may be chosen. When I was in college John L. Gardiner said one day that "he had serious thoughts of becoming religious next week, but perhaps he should join the Porcellians.' It is no joke: I have often thought the same thing. Whether does Love reconcile these two divergencies? for it is certain that every impulse of that sentiment exalts, and yet it brings all practical power into play. Here I am in a dark corner again. We have no one example of the poetic life realized, therefore all we say seems bloated. If life is sad and do not content us, if the heavens are brass, and rain no sweet thoughts on us, and especially we have nothing to say to shipwrecked and self-tormenting and young-old people, let us hold our tongues.... And if to my soul the day does not seem dark, nor the cause lost, why should I use such ruinous courtesy as to concede that God has failed, because the plain colors or the storm-suit of grey clouds in which the day is drest, do not please the rash fancy of my companions? Patience and truth, patience with our own frosts and negations, and few words must serve.... If our sleeps are long, if our flights are short, if we are not plumed and painted like orioles and Birds of Paradise, but like sparrows and plebeian birds, if our taste and training are earthen, let that fact be humbly and happily borne with. The wise God beholds that also with complacency. Wine and honey are good, but so are rice and meal. Perhaps all that is not performance is preparation, or performance that shall be.

October 8.

Exclusives. The close communion Baptists have a crowded communion: the open communion Unitarians have an empty table. If you wish to fill your house, make the door so narrow that a fat man cannot get in, and you shall be sure to be crammed with company.

The “Champion of England” is never called on until what new boxer has appeared has beaten all others who have met him in the ring. Then the existing “Champion” must appear, or forfeit his dignity and his pension. So the wise man need never trouble himself about the writings of the philosophers of the day until they have hit the white, and come within his bolt.

“O golden lads and lasses must,
Like chimney sweepers come to dust.”

Riches. Few may be trusted to speak of wealth. Quicksilver is our gauge of temperature of air and water, clay is our pyrometer, silver our photometer, feathers our electrometer, catgut our hygrometer, — but what is our meter of man, our anthropometer? Poverty is the mercury. Wealth seems the state of man.

The view taken of Transcendentalism in State Street is that it threatens to invalidate contracts.

Plutarch’s heroes are my friends and relatives.

As we drive it, the artist is in some degree sacrificed. Michel Angelo, to paint Sistine frescoes, must lose for a time the power to read without holding the book over his head, and Doctor Herschel, to keep his eyes for nocturnal observation, must shield them from daylight.

Thomas H. Benton’s speeches, and the Protocols of Vienna and St. Petersburg are as much in the circuit of to-day’s Universe — have got to be accounted for as are the most vital and beautiful appearance; and the theory of Heaven and Earth can be equally established on the lowest and the highest fact. The permissive as much characterises God as the beloved.

As I looked at the Madonnas and Magdalens in the Athenæum, I saw that for the most part the painter seemed to draw from models, and from such beauties, therefore, as models are likely to be, flesh and color and emotion; but from lordly, intellectual, spiritual beauties, “the great seraphic lords and cherubim” of the sex, no sign but in Raphaels. Yet two or three Greek women, clear, serene, and organically noble as any forms which remain to us on vase or temple, adorn my group and picture of life. And we demand that character shall have nothing muddy or turbid, but shall be transparent, — sublime as God pleases, but not eccentric.

Saturday, *October 9.*

Hippomachus knew a good wrestler by his gait in the street, and an old stager like myself will recognize the subtle Harlequin in his most uncouth frocks, in an Olmsted stove, in a horned ox, in a parliamentary speech, or a bushel of cranberries.

Hurrah for the camera obscura! the less we are, the better we look.

Books, — yes, if worst comes to worst: but not yet. A cup of tea, or a cup of wrath, or a good book will kindle the tinderbox. The poultry must have gravel or egg shells, the swallow and bluebird must have a thread or a wisp of straw for his nest. Have you got the whole beaver, before you have seen his amphibious house? The man is only half himself. Let me see the other half, namely, his expression. Strange, strange, we value this half the most. We worship expressors; we forgive every crime to them. Full expression is very rare. Music, sculpture, painting, poetry, speech, action, war, trade, manufacture is expression. A portrait is this translation of the thing into a new language. What passion all men have to see it done for themselves or others. Now see how small is the list of memorable expressions by book, picture, house, or institution, after so many millions have panted under the Idea!

Elizabeth Hoar consecrates. I have no friend whom I more wish to be immortal than she, an influence I cannot spare, but must always have at hand for recourse. When Margaret mentioned “an expression of unbroken purity,” I said, “That is hers.” M. replied, “Yes, but she knows.” I answer, — Know or know not, the impression she makes is that her part is taken, she has joined herself irrevocably to the sanctities, — to the Muses, and the Gods. Others suggest often that they still balance; their genius draws them to happiness; they contemplate experiment; they have not abdicated the power of election. Opium and honey, the dagger and madness, they like should still lie there in the background, as shadows and possibilities. But Elizabeth’s mind is made up, and she has soared into another firmament, and these exist not for her. Bonaparte did not like ideologists: Elizabeth is no poet, but her holiness is substantive and must be felt, like the heat of a stove, or the gravity of a stone: and Bonaparte would respect her.

Life. Is identity tedious? Not if we can see to the life. That always stupefies us

with sweet astonishment. A million times since the sun rose have the words “I thank you” been spoken. Yet are they just as graceful and musical in my ear when spoken with living emotion as if now first coined.

Riches. People say law, but they mean wealth.

Genius. The observations of talent are punctures; but, of genius, shafts which unite at the bottom of the mine. But ah! this scud of opinions.

Hope. We sit chatting here in the dark, but do we not all know that the sun will yet again shine, and we shall depart each to our work? God will resolve all doubts, fill all measures. I would have my book read as I have read my favorite books, not with explosion and astonishment, a marvel and a rocket, but a friendly and agreeable influence stealing like the scent of a flower, or the sight of a new landscape on a traveller. I neither wish to be hated and defied by such as I startle, nor to be kissed and hugged by the young whose thoughts I stimulate.

Partridge berry, white alder or *Prinos*.

The sum of life ought to be valuable when the fractions and particles are so sweet.

The Daguerreotype is good for its authenticity. No man quarrels with his shadow, nor will he with his miniature when the sun was the painter. Here is no interference, and the distortions are not the blunders of an artist, but only those of motion, imperfect light, and the like.

October 12.

I would that I could, I know afar off that I cannot, give the lights and shades, the hopes and outlooks that come to me in these strange, cold-warm, attractive - repelling conversations with Margaret, whom I always admire, most revere when I nearest see, and sometimes love, — yet whom I freeze, and who freezes me to silence, when we seem to promise to come nearest *October 14.*

(From a loose sheet in G)

It is not the proposition, but -the tone that signifies. Is it a man that speaks, or the mimic of a man? Universal Whiggery is tame and weak. Every proclamation, dinner-speech, report of victory, or protest against the government it publishes

betrays its thin and watery blood. It is never serene nor angry nor formidable, neither cool nor red hot. Instead of having its own aims passionately in view, it cants about the policy of a Washington and a Jefferson. It speaks to expectation, and not the torrent of its wishes and needs, waits for its antagonist to speak that it may have something to oppose, and, failing that, having nothing to say, is happy to hurrah. What business have Washington or Jefferson in this age?... They lived in the greenness and timidity of the political experiment. The kitten's eyes were not yet opened. They shocked their contemporaries with their daring wisdom: have you not something which would have shocked *them*? If not, be silent, for others have.

Passion, appetite, seem to have self-reliance and reality; but Whiggery is a great fear.

(From H)

I saw in Boston Fanny Elssler in the ballet of *Nathalie*. She must show, I suppose, the whole compass of her instrument, and add to her softest graces of motion or "the wisdom of her feet," the feats of the rope-dancer and tumbler: and perhaps on the whole the beauty of the exhibition is enhanced by this that is strong and strange, as when she stands erect on the extremities of her toes or on one toe, or "performs the impossible" in attitude. But the chief beauty is in the extreme grace of her movement, the variety and nature of her attitude, the winning fun and spirit of all her little coquetries, the beautiful erectness of her body, and the freedom and determination which she can so easily assume, and, what struck me much, the air of perfect sympathy with the house, and that mixture of deference and conscious superiority which puts her in perfect spirits and equality to her part. When she courtesies, her sweet and slow and prolonged salaam which descends and still descends whilst the curtain falls, until she seems to have invented new depths of grace and condescension, — she earns well the profusion of bouquets of flowers which are hurled on to the stage.

As to the morals, as it is called, of this exhibition, that lies wholly with the spectator. The basis of this exhibition, like that of every human talent, is moral, is the sport and triumph of health or the virtue of organization. Her charm for the house is that she dances for them or they dance in her, not being (fault of some defect in their forms and educations) able to dance themselves. We must be expressed. Hence all the cheer and exhilaration which the spectacle imparts and the intimate property which each beholder feels in the dancer, and the joy with which he hears good anecdotes of her spirit and her benevolence. They know that such surpassing grace must rest on some occult foundations of inward harmony.

But over and above her genius for dancing are the incidental vices of this individual, her own false taste or her meretricious arts to please the groundlings and which must displease the judicious. The immorality the immoral will see; the very immoral will see that only; the pure will not heed it, — for it is not obtrusive, — perhaps will not see it at all. I should not think of danger to young women stepping with their father or brother out of happy and guarded parlors into this theatre to return in a few hours to the same; but I can easily suppose that it is not the safest resort for college boys who have left metaphysics, conic sections, or Tacitus to see these tripping satin slippers, and they may not forget this graceful, silvery swimmer when they have retreated again to their baccalaureate cells.

It is a great satisfaction to see the best in each kind, and as a good student of the world, I desire to let pass nothing that is excellent in its own kind unseen, unheard.

In town I also heard some admirable music. It seemed, as I groped for the meaning, as if I were hearing a history of the adventures of fairy knights, — some Wace, or Monstrelet, or Froissart, was telling, in a language which I very imperfectly understood, the most minute and laughable particulars of the tournaments and loves and quarrels and religion and tears and fate of airy adventurers, small as moths, fine as light, swifter than shadows, — and these anecdotes were illustrated with all sorts of mimicry and scene-painting, all fun and humor and grief, and, now and then, the very persons described broke in and answered and danced and fought and sung for themselves. I saw Webster on the street, — but he was changed since I saw him last, — black as a thunder-cloud, and careworn; the anxiety that withers this generation among the young and thinking class had crept up also into the great lawyer's chair, and too plainly, too plainly he was one of us. I did not wonder that he depressed his eyes when he saw me, and would not meet my face. The cankerworms have crawled to the topmost bough of the wild elm and swing down from that. No wonder the elm is a little uneasy.

WATER

The water understands Civilization well —

It wets my foot, but prettily;

It chills my life, but wittily;

It is not disconcerted,

It is not broken-hearted.

Well used, it decketh joy,

Adorneth, doubleth joy.

Ill used, it will destroy;

In perfect time and measure
With a face of golden pleasure
Elegantly destroy.

On the great Rarity of good Expressions. Fanny Elssler is a good expression. She can say in her language what her neighbors cannot say in theirs. Part of the reason why Elssler is so bewitching to the gay people is, that they are pinched and restrained by the decorums of city life, and she shows them freedom. They walk through their cotillions in Papanti's assemblies, but Fanny's arms, head and body dance as well as her feet, and they are greatly refreshed to see.

I rode to town with some insane people: the worst of such company is that they always bite you, and then you run mad also.

The aim of aristocracy is to secure the ends of good sense and beauty without vulgarity, or deformity of any kind, but they use a very operose method. What an apparatus of means to secure a little conversation...

It would give me no pleasure to sit in your house, it would give me none to be caressed by you, so long as this infernal infantry [fine clothes, dinners, and servants] hinder me from that dear and spiritual conversation that I desire. There will come a time when these obstructions, arising from I know not what cause, will pass away; if it is a poorness of spirit in me, I shall be warmed with the wine of God, and shall walk with a firmer step; if it is some unreasonable demand in you, experience will have reduced your terms to the level of practicability. The tone, the tone is all....

In writing, the casting moment is of greatest importance, just as it avails not in Daguerre portraits that you have the very man before you, if his expression has escaped.

October 21.

Yet is it not ridiculous, this that we do in this languid idle trick that we have gradually fallen into of writing and writing without end? After a day of humiliation and stripes, if I can write it down, I am straightway relieved and can sleep well. After a day of joy, the beating heart is calmed again by the diary. If grace is given me by all angels and I pray, if then I can catch one ejaculation of humility or hope and set it down in syllables, devotion is at an end.

When the great man comes, he will have that social strength which Doctor Kirkland or Doctor Franklin or Robert Burns had, and will so engage us to the moment that we shall not suspect his greatness until late afterward in some dull hour we shall say, I am enlarged: how dull was I! Is not of late my horizon wider and new? This man! this man! whence came he!

One thing more. As the solar system moves forward in the heavens, certain stars open before us, and certain stars close up behind us. So is man's life...

October 22.

Would Jesus be received at Almacks? Would the manners of Adam and Eve be admired at the Thuilleries? In the lonely woods I remember London, and think I should like to be initiated in the exclusive circles. There are two ways: one, to conquer them and go as Attila to Rome, or as Napoleon married into the House of Austria: it has this condition that it be of the greatest kind, such conquest as grand genius makes, and so the individual demonstrates his natural aristocracy, best of the best... It must hold its place subject to this condition of refreshing instantly old merits with new ones or making its first stroke one of those strokes for empire which perpetuates position....

Fashion is a large region and reaches from the precincts of Heaven to the purlieu of Hell. Mr. Philip Sidney is the presiding deity.

Inhumanity. You come into this company meanly. How so? We have come for the love of seeing each other and of conversing together. You have come to give us things which are written already in your note-books (and when you have told them, you are spent). The best of our talk is invented here, and we go hence greater than we came by so much life as we have awakened in each other; but you, when your quiver is emptied, must sit dumb and careful the rest of the evening. Everything you say makes you poorer, and everything we say makes us richer: you go home, when the company breaks up, forlorn: we go home (without a thought on ourselves) full of happiness to pleasant dreams.

To be sure there is a class of discreet citizens like secret-keeping men, good providers for their households, whom you know where to find: but do not measure by their law this wild influence which I found, to be sure, in space and time, but knew at once it could not be there imprisoned; a nature that lay enormous, indefinite, hastening every moment out of all limitation and to be treated like oxygen and hydrogen, of a diffusive, universal, irrevocable elasticity. He could keep no secret, he could keep no property, he could keep no law but his own.

Margaret is “a being of unsettled rank in the universe.” So proud and presumptuous, yet so meek; so worldly and artificial and with keenest sense and taste for all pleasures of luxurious society, yet living more than any other for long periods in a trance of religious sentiment; a person who, according to her own account of herself, expects everything for herself from the Universe.

October 23.

Milton describes religion in his time as leaving the tradesman when he goes into his shop to meet him again when he comes out... In so pure a church as the Swedenborgian I cannot help feeling the neglect which leaves holiness out of trade. These omissions damn the church.

We forget in taking up a contemporary book that we see the house that is building and not the house that is built. A glance at my own manuscripts might teach me that all my poems are unfinished, heaps of sketches but no masterpiece, yet when I open a printed volume of poems I look imperatively for art.

I think Society has the highest interest in seeing that this movement called the Transcendental is no boys' play or girls' play, but has an interest very near and dear to him; that it has a necessary place in history, is a Fact not to be overlooked, not possibly to be prevented, and, however discredited to the heedless and to the moderate and conservative persons by the foibles or inadequacy of those who partake the movement, yet is it the pledge and the herald of all that is dear to the human heart, grand and inspiring to human faith.

I think the genius of this age more philosophical than any other has been, righter in its aims, truer, with less fear, less fable, less mixture of any sort.

October 24.

Permanence is the nobility of human beings. We love that lover whose gayest love-song, whose fieriest engagement of romantic devotion is made good by all the days of all the years of strenuous long-suffering, ever-renewing benefit. The old Count said to the old Countess of Ilchester, “I know that wherever thou goest, thou wilt both trust and honor me, and thou knowest that wherever I am, I shall honor thee.”

We read either for antagonism or for confirmation. It matters not which way the book works on us, whether to contradict and enrage, or to edify and inspire. “Bubb Dodington” is of the first class, which I read to-day. A good indignation brings out all one's powers.

Everybody, old men, young women, boys, play the doctor with me and prescribe for me. They always did so.

Life in Boston; A play in two acts. Youth and Age. Toys, dancing school, sets, parties, picture-galleries, sleigh-rides, Nahant, Saratoga Springs, lectures, concerts, — sets through them all; solitude and poetry, friendship, *ennui*, desolation, decline, meanness; plausibility, old age, death.

In the republic must always happen what happened here, that the steamboats and stages and hotels vote one way and the nation votes the other: and it seems to every meeting of readers and writers as if it were intolerable that Broad Street Paddies and bar-room politicians, the sots and loafers and all manner of ragged and unclean and foulmouthed persons without a dollar in their pocket should control the property of the country and make the lawgiver and the law. But is that any more than their share whilst you hold property selfishly? They are opposed to you: yes, but first you are opposed to them: they, to be sure, malevolently, menacingly, with songs and rowdies and mobs; you cunningly, plausibly, and well-bred; you cheat and they strike; you sleep and eat at their expense; they vote and threaten and sometimes throw stones, at yours.

Were you ever daguerrotyped, O immortal man? And did you look with all vigor at the lens of the camera, or rather, by the direction of the operator, at the brass peg a little below it, to give the picture the full benefit of your expanded and flashing eye? and in your zeal not to blur the image, did you keep every finger in its place with such energy that your hands became clenched as for fight or despair, and in your resolution to keep your face still, did you feel every muscle becoming every moment more rigid; the brows contracted into a Tartarean frown, and the eyes fixed as they are fixed in a fit, in madness, or in death? And when, at last you are relieved of your dismal duties, did you find the curtain drawn perfectly, and the coat perfectly, and the hands true, clenched for combat, and the shape of the face and head? — but, unhappily, the total expression escaped from the face and the portrait of a mask instead of a man? Could you not by grasping it very tight hold the stream of a river, or of a small brook, and prevent it from flowing? I told Garrison that I thought he must be a very young man, or his time hang very heavy on his hands, who can afford to think much and talk much about the foibles of his neighbors, or ‘*denounce*,’ and play ‘the son of thunder’ as he called it. I am one who believe all times to be

pretty much alike, and yet I sympathize so keenly with this. We want to be expressed, yet you take from us war, that great opportunity which allowed the accumulations of electricity to stream off from both poles, the positive and the negative, — well, now you take from us our cup of alcohol, as before you took our cup of wrath. We had become canting moths of peace, our helm was a skillet, and now we must become temperance water-sops. You take away, but what do you give? Mr. Jefts has been preached into tipping up his barrel of rum into the brook, but day after to-morrow when he wakes up cold and poor, will he feel that he has somewhat for somewhat! No, this is mere thieving.... If I could lift him by happy violence into a religious beatitude, or into a Socratic trance and imparadise him in ideas, or into the pursuit of human beauty, a divine lover, then should I have greatly more than indemnified him for what I have taken. I should not take; he would put away, or rather ascend out of this litter and sty, in which he had rolled, to go up clothed and in his right mind into the assembly and conversation of men. I fight in my fashion, but you, O Paddies and roarers, must not fight in yours. I drink my tea and coffee, but as for you and your cups, here is the pledge and the Temperance Society. I walk on Sundays, and read Aristophanes and Rabelais in church hours: but for you, Go to church. Good vent or bad we must have for our nature.... Make love a crime, and we shall have lust. If you cannot contrive to raise us up to the love of science and make brute matter our antagonist which we shall have joy in handling, mastering, penetrating, condensing to adamant, dissolving to light, then we must brawl, carouse, gamble, or go to bull-fights. If we can get no full demonstration of our heart and mind, we feel wronged and incarcerated: the philosophers and divines we shall hate most, as the upper turnkeys. We wish to take the gas which allows us to break through your wearisome proprieties, to plant the foot, to set the teeth, to fling abroad the arms, and dance and sing.

[Here follow many passages printed in “The Transcendentalism” and the “Lecture on the Times.”]

Society ought to be forgiven if it do not love its rude unmaskers. The Council of Trent did not love Father Paul Sarpi. “But I show you,” says the philosopher, “the leprosy which is covered by these gay coats.”

“Well, I had rather see the handsome mask than the unhandsome skin,” replies Beacon Street. Do you not know that this is a masquerade? Did you suppose I took these harlequins for the kings and queens, the gods and goddesses they represent? I am not such a child. There is a terrific skepticism at the bottom of the determined conservers.

The Rhine of our Divinity School has strangely lost itself in the sands. A man enters the Divinity School, but knows not what shall befall him there, or where he shall come out of its tortuous track. Some reappear in trade, some in the navy, some in Swedenborg chapels, some in landscape painting.

Confide to the end in spiritual, and not in carnal weapons. It needs not to fight the battle of anti-slavery on the question of the seat in the cars: the doctrine advances every day among all people that a high chair, a platform, a strip of gold lace, a sword, a title, is not to protect an individual; but himself alone, his ability, his knowledge, his character. A clown, an idiot, may sit next him: he is begirt with an army of guards in the faculties and influences of his spirit: how can they contaminate him? Presently a man will commonly put his pride in sitting in low seats, in mean dress, in mean company, with mulattoes and blacks; and the legislature or the anti-slavery society will not need to interfere.

“What are you doing, Zeke?” said Judge Webster to his eldest boy.

“Nothing.”

“What are you doing, Daniel?”

“Helping Zeke.”

A tolerably correct account of most of our activity to-day.

It seems to me sometimes that we get our education ended a little too quick in this country. As soon as we have learned to read and write and cipher, we are dismissed from school and we set up for ourselves. We are writers and leaders of opinion and we write away without check of any kind, play whatsoever mad prank, indulge whatever spleen, or oddity, or obstinacy, comes into our dear head, and even feed our complacency thereon, and thus fine wits come to nothing, as good horses spoil themselves by running away and straining themselves. I cannot help seeing that Doctor Channing would have been a much greater writer had he found a strict tribunal of writers, a graduated intellectual empire established in the land, and knew that bad logic would not pass, and that the most severe exaction was to be made on all who enter these lists. Now, if a man can write a paragraph for a newspaper, next year he writes what he calls a history, and reckons himself a classic incontinently, nor will his contemporaries in critical Journal or Review question his claims. It is very easy to reach the degree of culture that prevails around us; very hard to pass it, and Doctor Channing, had he found Wordsworth, Southey, Coleridge, and Lamb around him, would as easily have been severe with himself and risen a degree higher as he has stood where he is. I mean, of course, a genuine intellectual tribunal, not a literary junto of Edinburgh wits, or dull conventions of Quarterly or Gentleman's

Reviews. Somebody offers to teach me mathematics. I would fain learn. The man is right. I wish that the writers of this country would begin where they now end their culture.

Are the writers, then, to be reproached with writing to the English public? No, but to be congratulated. It shows they oversee their own, and propose to themselves the best existing standard.

Our Contemporaries. As Charles said, we have one set. It takes time to learn their names and allow for their humors so as to draw the most advantage from them. We all know the same stories, have read the same books, know the same politics, churches, geniuses, felons, bores, hoaxes, gossip, so that there is nothing to explain, but we can fall into conversation very quickly and get and give such information by the road as we want without needing to collect lexicons and dragomans when we wish to ask the way to the next village.

October 28.

Good not to let the Conscience sleep, but to keep it irritated by the presence and reiterated action of reforms and ideas.

Ellen H. asks “whether Reform is not always in bad taste?” Oh no, the poet, the saint are not only elegant, but elegance. It is only the half poet, the half saint, who disgust. Thus now, the saint in us proposes, but the sinner in us executes so lamely. But who can be misled who trusts to a thought? That profound deep whereunto it leads is the Heaven of Heavens. On that pillow, softer than darkness, he that falls can never be bruised.

I told C. and M. that Aunt Mary was no easy flute, but a quite national and clanlike instrument; a bagpipe, for instance, from which none but a native Highlandman could draw music. I sometimes fancy that the bitterness and prosaic side of our condition only obtrude in our conversation, or attempt to paint our portrait to another. Silent and alone, I have no such sad, unredeemed side.

Remove two miles, if you suffer from the influences of Fashion...

Why should I still postpone my existence and not take the ground to which I already feel that I am at last entitled? Why do I suffer a reference to others, and to *such* others, to keep me out of that which is most mine? Because, dear friend, it is as yet a thought, and not yet a spirit. You have not quite served up to it.

A foundation and cellar are good when one is going to build a house, but what is a foundation without a house but an offence to the eye and a stumbling-

block to the feet? Sensation is good as the organ, the servant, the body of the Soul, but a world of sensations is a world of men without heads. Once they dined, that they might pray and praise, and so dining the function itself was prayer and praise: now they dine that they may dine again, and pray and praise (as they call it) in order that they may dine. Hence the appearance — which everywhere strikes the eye of an aimless society, an aimless nation, an aimless world. The earth is sick with that sickness. The man was made for activity, and action to any end has some health and pleasure for him.

Calculation, if that would only go far enough, would go for enthusiasm too. We only ask arithmetic to go on, not to stop and bolt, and the conclusions of the broker and of the poet shall be one. We are not Manichæans, not believers in two hostile principles, but we think evil arises from disproportion, interruption, mistake of means for end. Is Transcendentalism so bad? And is there a Christian, or a civilian, a lawyer, a naturalist, or a physician so bold as not to rely at last on Transcendental truths? He dares not say it, the blind man.

We can well enough discuss this topic with any one because we believe we are all too deeply implicated for any man to give himself airs and talk down to the rest...

“Donde hai tupigliato tante coglionerie?” And where did you pick up all this heap of fripperies, Messer Lodovico Ariosto? said the duke to the poet. “Here in your court, your Highness,” he replied. I own that all my universal pictures are nothing but very private sketches; that I live in a small village, and am obliged to guess at the composition of society from very few and very obscure specimens, and to tell Revolutions of France by anecdotes, etc., etc. Yet I supposed myself borne out in my confidence that each individual stands for a class by my own experience. Few as I have seen, I could do with fewer, and I shrink from seeing thousands when in fifteen or twenty I have already many duplicates.

We are very near to greatness: one step and we are safe: can we not take the leap?

Daguerre. The strangeness of the discovery is that Daguerre should have known that a picture was there when he could not see any. When the plate is taken from the camera, it appears just as when it was put there spotless silver: it is then laid over steaming mercury and the picture comes out.

‘T is certain that the Daguerreotype is the true Republican style of painting. The artist stands aside and lets you paint yourself. If you make an ill head, not he

but yourself are responsible, and so people who go Daguerreotyping have a pretty solemn time. They come home confessing and lamenting their sins. A Daguerreotype Institute is as good as a national Fast.

False valuations are not in Nature; a pound of water in the ocean tempest or in the landflood has no more momentum than in a midsummer pond....

We are equal to something, if it is only silence, waiting, and dying. Let us do that. The piece must have shades too. When the musicians are learning their first scores, every one wishes to scream, and country orchestras usually have a reasonable volume of voice. Afterwards, they learn to be still and to sing underparts. Perhaps we may trust the Composer of our great music to give us voice when our aid is needed, and to apply the bellows to other stops when we should mar the harmony....

Do what you can, and the world will feel you: speak what you must, and only that, and the echoes will ring with music.

There is so much *ennui* that I am persuaded if any sign could appear in Nature of decay, imperfect chemistry, or the like, men are very ready to believe that the best age is gone. But the youth of Nature which astounds the imagination repudiates the thought.

There are three wants which can never be satisfied: that of the traveller, who says, "*Anywhere but here*"; that of the rich who wants *something more*; and that of the sick who wants *something different*.

The willing or acquiescent are certainly better candidates for that idea which is creating the new world than the recalcitrating.

Steam should be solid.

Every man somewhere solid.

Poor men at six hours, six weeks, six months, six years.

Scholars should not carry their memories to balls.

Do you not believe that advertisements are given you continually of that which most imports you to know; but you, in the din and buzz of the senses, do not regard the vision? Miracles are continually occurring in the privatest spiritual experience which the man heeds not in his headlong partisan fury to celebrate and assert the miracles of the Church. By attention and obedience to the

heavenly vision he would bring his perception to a finer delicacy.

Why Cupid did not assault the Muses may be found in Rabelais, 3d vol., p. 25.

October 30.

On this wonderful day when Heaven and Earth seem to glow with magnificence, and all the wealth of all the elements is put under contribution to make the world fine, as if Nature would indulge her offspring, it seemed ungrateful to hide in the house. Are there not dull days enough in the year for you to write and read in, that you should waste this glittering season when Florida and Cuba seem to have left their seats and come to visit us, with all their shining Hours, and almost we expect to see the jasmine and the cactus burst from the ground instead of these last gentians and asters which have loitered to attend this latter glory of the year? All insects are out, all birds come forth, — the very cattle that lie on the ground seem to have great thoughts, and Egypt and India look from their eyes.

“How dare I go to a person who will look at me only as a psychological fact?” said the thread-woman of G. R., and said well. But alas, that this awe which the writers inspire should prove at last to be so ill-founded! They ought to inspire most reverence when seen, and when they can thunder so loud at a distance not cheep so small in the chamber. “Ah! if they knew John as well as I!” said Mrs. M — Good Paul whose letter was so mighty, and whose bodily presence mean and contemptible, has too many imitators.

The Age. Shelley is wholly unaffected to me. I was born a little too soon: but his power is so manifest over a large class of the best persons, that he is not to be overlooked.

There are tests enough of character if we really dare to apply them. Are you setting your expectation of happiness on any circumstance or event not within your control?

Vagueness of Character. I overheard Jove one day talking of destroying the Earth...

Soldier. Can one nowadays see a soldier without a slight feeling — the

slightest possible — of the ridiculous?

The spiritual measure of inspiration is the depth of the thought: How deep? — how great its power to agitate and lift me? and never, *Who* said it? But the world answers, “Paul was inspired,” and would crave a space and indulgence for him in my consciousness. I reply, I do not know the man. It makes then a claim for Jesus. But the great soul says, He shall not come in, no man shall come in, how amiable, how holy soever.

Skepticism esteems ignorance organic and irremovable, believes in the existence of pure malignity, believes in a poor decayed God who does what he can to keep down the nuisances, and to keep the world going for our day. It believes the actual to be necessary; it argues habitually from the exception instead of the rule; and, if it went to the legitimate extreme, the earth would smell with suicide.

To believe in luck, if it were not a solecism so to use the word *believe*, is skepticism.

Sickness also has its hero and brilliant vindication. Fontenelle, born feeble, a puny delicate creature, by care and nursing was preserved for a hundred years to be the delight of France and of Europe — laid up, they said, like a vase of porcelain in a cabinet and railed up and guarded to hold the softest and most volatile of perfumes. Mr. Pope also was born sick and a cripple, yet by care and study of these facts, and engaging, wherever he went, nursing and rubbing from the domestics, he lived long and enjoyed much and gave others much to enjoy.

Dandies of Moral Sentiment. Our contemporaries do not always contemporize us, but now one is continually surprised to find some stranger, who has been educated in the most different manner, dreaming the same dream.

We like all the better to see some graceful youth, free and beautiful as a palm or a pine tree, who hears with curiosity and intelligence our theory of the world and has his own, and does not hiss with our hiss, but only has the same mother-tongue.

Yet do not mistake a fine tulip for good timber. Do not fancy when you have vivacity and innocence and the charm of youthful manners, and have got for the time the ear of such an one to the gravest themes, do not rely on this polite and facile stripling as on a native and hereditary scholar. The newcomer for the moment casts all merits into eclipse, and the heart gives itself so gladly to the

hope of indefinite and paradisaical times at hand. But none can adhere but the men that are born of that idea which they express.

But there are ways of anticipating time. Always this cry of “Time, Time; give us time: men are not ready for it,” means deficiency of spiritual force. Time is an inverse measure of the amount of spirit. If you are sure of your truth, if you are sure of yourself, you ascend now into eternity; you have already arrived at that, and that *takes place* with you which other men promise themselves.

In poetry we say we require the miracle. The bee flies among the flowers and gets mint and marjoram, and generates a new product which is not mint or marjoram but honey: and the chemist mixes hydrogen and oxygen to yield a new product which is not hydrogen or oxygen but water: and the poet listens to all conversations and receives all objects of Nature to give back, not them, but a new and perfect and radiant whole.

We concede, O Miss P., there is a difference between the spirit in which these poor men struggling to emancipate themselves from the yoke of a traditional worship, and crying out in their sorrow and hope, speak at the Chardon Street Convention, and the spirit in which he who is long already free from these fears turns back and knowingly shoots sarcasms at the old and venerated names.

“That Influence which every Strong Mind has over a Weak One.” You believe in magnetism, in new and preternatural powers, powers contrary to all experience, and do you not think then that Cæsar in irons can shuffle off the irons?...

The new vegetable is always made out of the materials of the decomposed vegetable, and the triumph of thought to-day is over the ruin of some old triumph of thought. I saw a man who religiously burned his Bible and other books: and yet the publication of the Bible and Milton and the rest was the same act, namely, the burning of the then books of the world which had also once been a cremation of more.

Our American geography is so large that the noisy make no noise. Whoever hears of the American army? or of the formidable Sophomores who are said to rebel in our colleges? or of the Law Students, or the Medical Students, or of any other local village incendiaries who, when we were young, filled whole

neighborhoods with alarm? The American Government is fast becoming quite as innocent.

What can be affirmed of magnetisable subjects? To-day, seen unaffected, they are larvae; they are so low and earthy and bestial, they bark and neigh, a good man or a poet is repelled who goes near them, as if they would one day be his executioners. But to-morrow, a great spirit chances to approach them in a happy and unsuspected way, and they receive 'his light and influence into all the channels of their being and are filled with him, enriched and ennobled by this virtue, they are godlike, and he too is twice himself. Straightway the earth seems to have emerged from the primal curse and a new day has dawned.

Great causes are never tried, assaulted, or defended on their merits: they need so long perspective, and the habits of the race are marked with so strong a tendency to particulars. The stake is Europe or Asia, and the battle is for some contemptible village or dog-hutch. A man shares the new light that irradiates the world and promises the establishment of the Kingdom of Heaven, — and ends with champing unleavened bread or devoting himself to the nourishment of a beard, or making a fool of himself about his hat or his shoes. A man is furnished with this superb case of instruments, the senses, and perceptive and executive faculties, and they betray him every day. He transfers his allegiance from Instinct and God to this adroit little committee. A man is an exaggerator. In every conversation see how the main end is still lost sight of by all but the best, and with slight apology or none, a digression made to a creaking door or a buzzing fly. What heavenly eloquence could hold the ear of an audience if a child cried! A man with a truth to express is caught by the beauty of his own words and ends with being a rhymester or critic. And Genius is sacrificed to talent every day.

[Here follows the passage about Osman, the ideal man, and the broad hospitality to persons half-crazed with poor reforms which is printed in the last pages of "Manners."]

November 10.

Genius is very well, but it is enveloped and undermined by Wonder. The last fact is still Astonishment, — mute, bottomless, boundless, endless wonder. When we meet an intelligent soul, all that we wish to ask him — phrase it how we will — is, 'Brother have you wondered? Have you seen the Fact?' To come

out from a forest in which we have always lived, unexpectedly on the ocean, startles us, for it is a symbol of this....

Originality. All originality is relative.

The young people complain that everything around them must be denied, and therefore, if feeble, it takes all their strength to deny, before they can begin to lead their own life. Aunt Betsey and Uncle Gulliver insist on their respect to this Sabbath and that Rollin's History or Fragment Society or some other school, or charity, or morning call, which, to preserve their integrity, they resist.

Nature never troubles herself with the difficulty which Language finds in expressing her.

Man begets man who begets man, heedless of the world of contradictions which the metaphysician finds in this cotemporaneous procession of body, soul, and mind.

Is Character an educated will? "But bad thoughts," said M., "Who could dare to uncover all the thoughts of a single hour?" Indeed! is it so bad? I own that to a witness worse than myself and less intelligent, I should not willingly put a window into my breast, but to a witness more intelligent and virtuous than I, or to one precisely as intelligent and well intentioned, I have no objection to uncover my heart.

Certainly the progress of character is in that direction, namely, to introduce Beauty, the order of Beauty, into that invisible and private world of my thoughts, and make them public and heavenly in their discipline. It is a part of friendship with me to carry its courtesies and sacred boundaries into my silent solitude, and not confound distinctions in my fancy which I respect in my reason.

November 13.

Originality. The great majority of men are not original, for they are not primary, have not assumed their own vows, but are secondaries, — grow up and grow old in seeming and following; and when they die they occupy themselves to the last with what others will think, and whether Mr. A and Mr. B will go to their funeral. The poet has pierced the shows and come out on the wonder which envelopes all: more, he has conspired with the high cause and felt the holy glee with which man detects the ultimate oneness of the Seer and the spectacle....

As to the *Miracle*, too, of Poetry. There is truly but one miracle, the perpetual fact of Being and Becoming, the ceaseless saliency, the transit from the Vast to the particular, which miracle, one and the same, has for its most universal name the word *God*. Take one or two or three steps where you will, from any fact in Nature or Art, and you come out full on this fact; as you may penetrate the forest in any direction and go straight on, you will come to the sea. But all the particulars of the poet's merit, his sweetest rhythms, the subtlest thoughts, the richest images, if you could pass into his consciousness, or rather if you could exalt his consciousness, would class themselves in the common chemistry of thought, and obey the laws of the cheapest mental combinations.

In every moment and action and passion, you must be a man, must be a whole Olympus of gods. I surprised you, O Waldo Emerson, yesterday eve hurrying up one page and down another of a little book of some Menzel, panting and straining after the sense of some mob, better or worse, of German authors. I thought you had known better. Adhere, sit fast, lie low.

Anti-Transcendentalists. Yet we must not blame those who make the outcry against these refiners. It comes from one of two causes: either an instinctive fear that this philosophy threatens property and sensual comfort; or a distrust of the sincerity and virtue of persons who preach an impracticable elevation of life.

If from the first, it is a good sign, an eulogy of the innovators which should encourage them. And let them not be too anxious to show how their new world is to realize itself to men, but know that, as the Lord liveth, it shall be well with them who obey a spiritual law.

If from the second, — why, perhaps the world is in the right, and the reformer is not sound. There is an instinct about this too. It is in vain that you gild gold and whiten snow in your preaching, if, when I see you, I do not look through your pure eye into a society of angels and angelic thoughts within.

No man can write anything who does not think that what he writes is for the time the history of the world,... or do anything well who does not suppose his work to be of greatest importance. My work may be of none, but I must not think it of none, or I shall not do it with impunity.

Whoso does what he thinks mean, is mean.

How finely we are told in the Hebrew story that the anger of the Lord was kindled against David because he had made a census of the people. Philosophy also takes an inventory of her possessions: and an inventory is of pride: it is the

negative state. But Poetry is always affirmative, and Prayer is affirmative.

How much of life is affirmative? How many dare show their whole hand? For the most part we hide, and parry as we can the inquisition of each other. I am for preserving all those religious writings which were in their origin poetic, ecstatic expressions which the first user of did not know what he said, but they were spoken through him and from above, not from his level; things which seemed a happy casualty, but which were no more random than the human race are a random formation. "It is necessary," says Iamblichus, "that ancient prayers, like sacred *asyla*, should be preserved invariably the same, neither taking anything from them nor adding anything to them which is elsewhere derived." This is the reason, doubtless, why Homer declares that Jove loved the Ethiopians. And Iamblichus in answer to the query, "Why of significant names we prefer such as are barbaric to our own?" says, among other reasons: "Barbarous names have much emphasis, great conciseness, and less ambiguity, variety, and multitude and then afterwards: "But the Barbarians are stable in their manners, and firmly continue to employ the same words. Hence they are dear to the gods, and proffer words which are grateful to them." And the ancients spoke of the Egyptians and Chaldæans as "sacred nations."

Now the words "God," "Grace," "Prayer," "Heaven," "Hell," are these barbarous and sacred words, to which we must still return, whenever we would speak an ecstatic and universal sense? There are objections to them, no doubt, for academical use, but when the professor's gown is taken off, Man will come back to them.

The granite comes to the surface and towers into the highest mountains, and if we could dig down we should find it below all the superficial strata...

The question of Property wants seers.... The staunchest Whig and the poorest philosopher are all on the Property side, all abettors of the present abuse, all either owners or enviers: no man is on the other side, no man can give us any insight into the remedy, no man deserves to be heard against Property; only Love, only an Idea, is on the right side against Property as we hold it.

Good scholar, what are you for but for hospitality to every new thought of your time? Have you property, have you leisure, have you accomplishments and the eye of command, you shall be the Maecenas of every new thought, every untried project that proceeds from good will and honest seeking. The

newspapers, of course, will defame what is noble, and what are you for but to withstand the newspapers and all the other tongues of to-day? You do not hold of to-day, but of an age, as the rapt and truly great man holds of all ages or of Eternity. If you defer to the newspaper, where is the scholar?

Hints, fragments, scintillations of men enough and more than enough, but men valiant and who can execute the project they learned of no man, but which was born with them, there are none. Perfect and execute yourself an Orson, if Orson; a Valentine, if Valentine. Let us see at least a good Orson, and know the best and worst of that.

(From H)

November 18.

Queenie's dream of the statue so beautiful that the blooming child who was in the room looked pale and sallow beside it, and of the speech of the statue, which was not quite speech either, but something better, which seemed at last identical with the thing itself spoken of. It described to the fair girl who sat by, and whose face became flushed with her earnest attention, —— life and being; — and then, by a few slight movements of the head and body, it gave the most forcible picture of decay and death and corruption, and then became all radiant again with the signs of resurrection. I thought it a just description of that Eloquence to which we are all entitled — are we not? — which shall be no idle tale, but the suffering of the action, and the action it describes. That shall make intent and privileged hearers.

The blue vault silver-lined with hills of snow.

(From G)

November 22.

Ediths There came into the house a young maiden, but she seemed to be more than a thousand years old. She came into the house naked and helpless, but she had for her defence more than the strength of millions. She brought into the day the manners of the Night.

[On the second day of December, Mr. Emerson began his course of lectures on "The Times," in the Masonic Temple in Boston:

I, — The "Introductory," is printed in the first volume of the Works as "Lecture on the Times"; II, — , "The Conservative"; III, "The Poet" (much of the matter is in "Poetry and Imagination," in *Lectures and Biographical*

Sketches); IV, "The Transcendentalist"; V, "Manners"; VI, "Character"; VII, "Relation to Nature"; VIII, "Prospects."]

(From J)

Robin Hood. Little John asks Robin "Where shall we take? Where shall we leave? Where shall we rob and beat and bind?" Robin says: —

"Look ye do no husband harm
That tilleth with his plough.

"These bishops and these archbishops
Ye shall them beat and bind;
The high sheriff of Nottingham,
Him holde in your mind."

When Jones Very was in Concord, he said to me, "I always felt when I heard you speak or read your writings that you saw the truth better than others, yet I felt that your spirit was not quite right. It was as if a vein of colder air blew across me." He seemed to expect from me a full acknowledgment of his mission and a participation of the same. Seeing this, I asked him if he did not see that my thoughts and my position were constitutional, that it would be false and impossible for me to say his things or try to occupy his ground as for him to usurp mine? After some frank and full explanation, he conceded this. When I met him afterwards one evening at my lecture in Boston, I invited him to go home to Mr. Adams's with me and sleep, which he did. He slept in the chamber adjoining mine. Early the next day, in the grey dawn, he came into my room and talked whilst I dressed. He said, "When I was at Concord I tried to say you were also right; but the spirit said, you were not right. It is just as if I should say, It is not morning; but the morning says, It is the morning."

"Use what language you will," he said, "you can never say anything but what you are."

All writing is by the grace of God. People do not deserve to have good writing, they are so pleased with bad. In these sentences that you show me, I can find no beauty, for I see death in every clause and every word. There is a fossil or a mummy character which pervades this book. The best sepulchres, the vastest catacombs, Thebes and Cairo, Pyramids, are sepulchres to me. I like gardens and nurseries. Give me initiative, spermatic, prophesying, man-making

words.

I am probably all the better spectator that I am so indifferent an actor. Some who hear or read my reports misjudged me as being a good actor in the scene which I could so well describe; but, when they came to talk with me, even those who fancied they strictly sympathized with me found I was dumb for them as well as for others. In this, both I and they must be passive and acquiescent, and take our fortune. And now that I have said it, I shall not suffer again from this misadventure.

It is never worth while to worry people with your contritions We shed our follies and absurdities as fast as the rosebugs drop off in July and leave the apple tree which they so threatened. Nothing dies so fast as a fault and the memory of a fault. I am awkward, sour, saturnine, lumpish, pedantic, and thoroughly disagreeable and oppressive to the people around me. Yet if I am born to write a few good sentences or verses, these shall endure, and my disgraces utterly perish out of memory.

Woman should not be expected to write, or fight, or build, or compose scores; she does all by inspiring man to do all. The poet finds her eyes anticipating all his ode, the sculptor his god, the architect his house. She looks at it. She is the requiring genius.

We ask to be self-sustained, nothing less.

The rude reformer rose from his bed of moss and dry leaves, gnawed his roots and drank water, and went to Boston. There he met fair maidens who smiled kindly on him, then gentle mothers with their babes at their breasts who told them how much love they bore them and how they were perplexed in their daily walk. What! he said, and this on rich, embroidered carpets, with fine marbles and costly woods!

Who is up so high as to receive a gift well? We are either glad or sorry at a gift...

(From J)

December 12.

We cannot forgive another for not being ourselves. Yet that is not all my dream just now; but this also, that only the affirmative is good, and methinks that is as much in what is called Whiggery as in Protestantism, for the latter falls into cold recusances, and love is the affirmative. Whigs love; Protestants have a good

deal of hating to do. Loyalty is affirming; Idleness is denying. But out on your exhibitions! There is somewhat a little scenic and showy in your lecturing. Those who take up thus much thought into action, have nothing to say, no rhetoric to please with, but it is elemental, strong. It is like that great quantity of heat which ice absorbs in becoming water without any indication on the thermometer....

And yet Raphael's picture is bold and beautiful, affirming, and the *Midsummer Night's Dream*, and every thought of mine which I naturally and happily speak. Let me not be witty, but only faithful and bold and happy, and I put all Nature in the wrong.

We lose time in trying to be like others, accusing ourselves because we are not like others. If something surprises us from our propriety, we act well and strong, because we lose in our fright the recollection of others.

Those who defend the establishment are less than it. Those who speak from a thought must always be greater than any actual fact. I see behind the Whig no mighty matter, nothing but a very trite fact of his land titles and certificates of stock. But through the eyes of the theorist stares at me a formidable, gigantic spirit who will not undo if I bid him, who has much more to say and do than he has yet told, and who can do great things with the same facility as little.

In the feudal table the humblest retainer sat in the company of his lord, and so had some indemnity for his thralldom in the education he derived from the spectacle of the wit, the grace, and the valor of his superiors.

Mr. Frost thought that there would not be many of these recusants who declared against the state, *etc.* I told him he was like the good man of Noah's neighbors who said, "Go to thunder with your old ark! I don't think there'll be much of a shower."

Osman. Seemed to me that I had the keeping of a secret too great to be confided to one man; that a divine man dwelt near me in a hollow tree.

A Dandy, *Godelureau* in French, a favorite word with Napoleon. Napoleon was calm, serious, and well calculated to stand the gaze of millions: and d'Abrantès describes the splendor of his smile.

And cakes by female hands wrought artfully,

Well steep'd in the liquid of the gold-wing'd bee.

PLUTARCH.

Atque ego peccati vellem modo conscius essem;
Aequo animo poenam qui meruere ferunt.
Ovid, *Amor* 2, VII, 11.

Historians of reform are not necessarily lovers of reform among their contemporaries.

Among the powers of circumstance none so striking as the provocation of thought in particular companies. Every art may be learned for itself, as, e g., that of composure and good behavior in all companies; but a better way is to be inspired by a sentiment which shall ennoble the behaviour without intention.

The man is yet to arise who eats angels' food; who, working for universal aims, finds himself fed, he knows not how, and clothed he knows not how, and yet it is done by his own hands. The squirrel hoards nuts, and the bee gathers honey, each without knowing what he does, and thus they are provided, without any degradation or selfishness. In the man, I should look to see it adorned, beyond this innocency, with conscious efforts for the general good.

Trees draw nineteen twentieths of their nourishment from their aërial roots, the leaves.

The *pis aller* of Romanism for Tieck, Winckelmann, Schlegel, Schelling, Montaigne, Dana, Coleridge-men.

Midsummer Night entertainment can easily seem to me profane and I shall do penance for having delighted in such toys: and Dante must shrink before a great life, and appear a permitted greatness.

To those who have been accustomed to lead, it is not quite indifferent to find their word or deed for the first time unimportant to society. Yet a human being always has the indemnity of acting religiously, and then he exchanges an *eclat* with the society of his town, for a reputation and weight with the society of the

Universe.

Every word we speak is million-faced, or convertible to an indefinite number of applications. If it were not so, we could read no book. Your remark would only fit your case, not mine. And Dante, who described his circumstance, would be unintelligible now. But a thousand readers in a thousand different years shall read his story and find it a picture of their story by making, of course, a new application of every word.

All Bernardo's wit and study did not enable him to answer M. de Gullivere's question. As it happened once, so it happened twenty times. M. de Gullivere asked pointedly of the scholar for information which he should certainly have supplied; but poor Bernardo always wondered that he should have failed to inform himself of just that particular fact. Afterwards he found that it was just the same with his actions: he was very able and very willing to do a thousand things: but the particular action which must now be done, he was not ready for: and so he played at crosspurposes with all men in this world. One thing more Bernardo remarked, and said as much to Xavier, — that he was convinced it was a chance and not a right that he had received the laurel of the Sorbonne: "For I," said he, "was not made by Nature for an original genius, but to take delight in the genius of others. I was made to read Virgil, and not to write Bucolics of my own; for always if I have anything to say, it clothes itself in the language of some poet or author I have been reading, or perhaps of one of my friends with whom I daily converse. The thought is not born sufficiently vigorous to clothe itself."

Credit, it seems, is to be abolished...

December 18.

We believe in the existence of matter, not because we can touch it or conceive of it, but because it agrees with ourselves, and the Universe does not jest with us, but is in earnest.

A man founding a reputation for benevolence on his expenditure! a great blunder...

How much one person sways us, we have so few. The presence or absence of Milton will very sensibly affect the result of human history: the presence or absence of Jesus, how greatly! Well, to-morrow a new man may be born, not

indebted like Milton to the Old, and more entirely dedicated than he to the New, yet clothed like him with beauty.

As we take our stand on Necessity or on Ethics, shall we go for the Conservative or the Reformer?... The view of Necessity is always good-tempered, permits wit and pleasantry. The view of Liberty is sour and dogmatical. Both may be equally free of personal consideration. we unto me if I preach not the gospel.

I like the spontaneous persons of both classes: and those in the Conservative side have as much truth and progressive force as those on the Liberal.

Do not be so grand with your one objection. Do you think there is only one? If I should go out of church whenever I hear a false sentiment, I could never stay there five minutes...

According to Boehmen, the world was nothing else than the *relievo*, the print of a seal of an invisible world concealed in his own bosom. (See Penhoen, vol i, p. 123.)

When, in our discontent with the pedantry of scholars, we prefer farmers, and when, suspecting their conservatism, we hearken after the hard words of drovers and Irishmen, this is only subjective or relative criticism, this is alkali to our acid, or shade to our too much sunshine; but abide with these and you will presently find they are the same men you left. A coat has cheated you.

What a plague is this perplexity. We are so sharpsighted — that we are miserable and, as E. H. says, can neither read Homer, nor not read him.

“Kepler’s science was a strange alliance of that sublime science of antiquity which proceeded by inspiration with that modern science which measures, compares, analyses.” (Penhoen.)

Leibnitz predicted the Zoophytes; Kant predicted the asteroids; Newton the decomposition of the diamond; Swedenborg, Uranus. (Penhoen, vol i, p. 159.)

They say that the mathematics leave the mind where they found it. What if life or experience should do the same?

Writing, also, is a knack and leaves the man where it found him. And Literature and Nature and Life.

All that a man hath will he give for his erect demeanor, that he may never more be ashamed, — society the measure. I go to you and I expand, and I go to another and I contract.

Look out of the window and it is Eternal Now. Look in faces of men and it varies every minute.

Reading Herrick, I feel how rich is Nature. This art of poetry, — I see that here is work and beauty enough to justify a man for quitting all else and sitting down with the Muses. Did not Cæsar say to the Egyptian priest, Come, I will quit army, Empire, and all if you will show me the fountains of the Nile? Well, all topics are indifferent: you may reach the centre by boring a shaft from any point on the surface, with equal ease. And yet in this instance of poetry the provocation is not that the Law is there, but the means are alluring.

AUTHORS OR BOOKS QUOTED OR REFERRED TO IN THE JOURNAL
FOR 1841

(including also books mentioned in letters)

Vishnu Sarna; Zoroaster; Confucius; Hesiod; Heraclitus; Empedocles; Æschylus; Plato, *Banquet* and *Phædrus*; Aristophanes; Aristotle; Ovid, *Ars Amatoria*; Lucan, *Pharsalia*; Hermes Trismegistus; Plotinus; Porphyry (Taylor's), *On Abstinence from Animal Food*; Iamblichus, *Life of Pythagoras*; Synesius; Proclus; Olympiodorus; Robert Wace; Tante, *Paradiso*; Saadi; Hafiz; Monstrelet; Froissart, *Chronicles*; Ariosto; Rabelais; Fra Paolo Sarpi; Kepler; Burton; Boehme (Behmen), *the Aurora*; Herrick; Izaak Walton; Waller; Dryden; Locke; Leibnitz, *apud* Penhoen; Fontenelle; Rollin, *History*; Bentley; Thomas Hearne; Pitt (Lord Chatham); Winckelmann, *History of Ancient Art*; Merck, *Correspondence with Goethe*; Laplace; Fox; William Pitt; Goethe; Burns; Saint-Simon; Dodington; Duchesse d'Abrantès, *Mémoires, ou Souvenirs sur Napoleon, la Revolution, etc.*; Canning; Shelley; Southey; Schleiermacher; Schlegel; Tieck; Schelling; Menzel, *apud* George Ripley's *Specimens of Foreign Literature*; Ritter; Sir William Edward Parry, *Arctic Voyages*; Charles Lamb, *Essays*; Manzoni, *Promessi Sposi*; Dr. Channing, *Milton and Napoleon*; Carlyle, *Heroes and Hero Worship, French Revolution*; Nichol, *Architecture of the Heavens*; Miss Edgeworth, *Novels*; Béranger, *Chansons*; George Sand, *Letters*; De Tocqueville; Barchon de Penhoen, *History of German Philosophy from Leibnitz to Hegel*; Westland Martin, *The Patrician's Daughter*; Robert P. Ward, *De Clifford*; Tennyson, *The Lotus-Eaters, Locksley Hall*; Hawthorne; Frederic Henry Hedge; William Lloyd Garrison.

JOURNAL

WALDO'S DEATH

COURSES IN PROVIDENCE AND NEW YORK

ALCOTT VISITS ENGLAND

HAWTHORNE COMES TO CONCORD

ALCOTT'S RETURN

JOURNAL XXXIII

1842

(From Journals E, J, K, and N)

Betrayed me to a book and wrapped me in a gown.

HERBERT.

[THE year opened happily. A daughter (Edith) had come safely into the family. Little Ellen, the eldest, was thriving. Waldo, now five years old, gave to his father and mother every promise for the future, while

“Gentlest guardians marked serene
His early hope, his liberal mien,”

for every friend that came to the house, and Henry Thoreau, who then formed one of the family, delighted in the child. Mr. Emerson was going once a week to Boston, by the stage which passed his door, giving the last lectures of the course on “The Times.” Suddenly malignant scarlet fever struck the little boy and he lived but a few days. Bowed down by the blow, Mr. Emerson yet had to fulfil his engagements for lectures in Providence and also for a short course in New York. These were a fortunate distraction for him, away from associations that met him at home at every turn, and he met at his lectures new and earnest young friends. His brother William, with his good and refined wife (Susan Haven of Portsmouth), received him into their home at Staten Island. Of him Mr. Emerson wrote to his wife, “William is not the isolated man I used to find or fancy him, but, under the name of ‘the judge,’ seems to be an important part of the web of life here at the island.”]

(From J)

January 28, 1842.

Yesterday night, at fifteen minutes after eight, my little Waldo ended his life.

January 30.

What he looked upon is better; what he looked not upon is insignificant. The morning of Friday, I woke at three o'clock, and every cock in every barnyard was shrilling with the most unnecessary noise. The sun went up the morning sky with all his light, but the landscape was dishonored by this loss. For this boy, in whose remembrance I have both slept and awaked so oft, decorated for me the morning star, the evening cloud, how much more all the particulars of daily economy; for he had touched with his lively curiosity every trivial fact and circumstance in the household, the hard coal and the soft coal which I put into my stove; the wood, of which he brought his little quota for grandmother's fire; the hammer, the pincers and file he was so eager to use; the microscope, the magnet, the little globe, and every trinket and instrument in the study; the loads of gravel on the meadow, the nests in the hen-house, and many and many a little visit to the dog-house and to the barn. — For everything he had his own name and way of thinking, his own pronunciation and manner. And every word came mended from that tongue. A boy of early wisdom, of a grave and even majestic deportment, of a perfect gentleness.

Every trampler that ever tramped is abroad, but the little feet are still.

He gave up his little innocent breath like a bird.

He dictated a letter to his Cousin Willie on Monday night, to thank him for the magic lantern which he had sent him, and said, "I wish you would tell Cousin Willie that I have so many presents that I do not need that he should send me any more unless he wishes to very much."

The boy had his full swing in this world; never, I think, did a child enjoy more; he had been thoroughly respected by his parents and those around him, and not interfered with; and he had been the most fortunate in respect to the influences near him, for his Aunt Elizabeth had adopted him from his infancy and treated him ever with that plain and wise love which belongs to her and, as she boasted, had never given him sugarplums. So he was won to her, and always signalized her arrival as a visit to him, and left playmates, playthings, and all to go to her. Then Mary Russell had been his friend and teacher for two summers, with true love and wisdom. Then Henry Thoreau had been one of the family for the last year, and charmed Waldo by the variety of toys, — whistles, boats, popguns, — and all kinds of instruments which he could make and mend; and possessed his love and respect by the gentle firmness with which he always treated him. Margaret Fuller and Caroline Sturgis had also marked the boy and caressed and conversed with him whenever they were here.

Meantime every day his grandmother gave him his reading-lesson and had by patience taught him to read and spell; by patience and by love, for she loved him

dearly.

Sorrow makes us all children again, — destroys all differences of intellect. The wisest knows nothing.

It seems as if I ought to call upon the winds to describe my boy, my fast receding boy, a child of so large and generous a nature that I cannot paint him by specialties, as I might another.

“Are there any other countries?”

“Yes. I wish you to name the other countries”; so I went on to name London, Paris, Amsterdam, Cairo, *etc.* But Henry Thoreau well said, in allusion to his large way of speech, that “his questions did not admit of an answer; they were the same which you would ask yourself.”

He named the parts of the toy house he was always building by fancy names which had a good sound, as “the interspeglum” and “the coridaga,” which names, he told Margaret, the children could not understand.”

If I go down to the bottom of the garden it seems as if some one had fallen into the brook. Every place is handsome or tolerable where he has been. Once he sat in the pew.

His house he proposed to build in summer of burrs and in winter of snow.

“My music,” he said, “makes the thunder dance,” for it thundered when he was blowing his willow whistle.

“Mamma, may I have this bell which I have been making, to stand by the side of my bed?”

“Yes, it may stand there.”

“But, Mamma, I am afraid it will alarm you. It may sound in the middle of the night, and it will be heard over the whole town; it will be louder than ten thousand hawks; it will be heard across the water, and in all the countries. It will be heard all over the world. It will sound like some great glass thing which falls down and breaks all to pieces.”

Masses; is the attraction of cohesion the same as the attraction of gravity? Is the law of masses one with the law of particles. And there is a certain momentum of mass which I recognize readily enough in literature. Chaucer affects me when I read many pages of *Romaunt of Love* or the *Canterbury Tales* by his mass, as much as by the merit of single passages. So does Shakspeare eminently: he adds architecture to costliness of material, and beauty of single chambers and chapels. So does Milton. Then, as I have remarked of Pythagoras, so I feel in reference to all great masters, that they are chiefly distinguished by the power of adding a second, a third, and perhaps a fourth step in a continuous

line. Many a man had taken their first step. With every additional step you enhance immensely the value of your first. It is like the price which is sometimes set on a horse by jockeys; a price is agreed upon in the stall, and then he is turned into a pasture and allowed to roll, and for every time he shall roll himself over, ten dollars are added to the price.

Masses again. If you go near to the White Mountains, you cannot see them; you must go off thirty or forty miles to get a good view. Well, so is it with men, and with all that is high in our life, it is a total and distant effect, a *mass effect*, that instructs us, and not the first apprehension of them.

Then our relation to our friends is not only one of particular good offices, but one of the purest pleasures of life is the mutual consciousness of a long and uniform exchange of good offices between two persons; so that a good man seems to draw both simple and compound interest from his capital of love, both a particular and a mass benefit from his good deeds.

Will is a particular, Habit a massive force; Speech a particular, Manners a mass.

Take thy body away that I may see thee. Thou showest me this mask all the time.

I have seen the poor boy, when he came to a tuft of violets in the wood, kneel down on the ground, smell of them, kiss them, and depart without plucking them.

As if one needed eyes in order to see. Look at yonder tree which the sun has drawn out of the ground by its continual love and striving towards him, and which now spreads a hundred arms, a thousand boughs, in gratitude, basking in his presence. Does that not see? It sees all over, with every leaf and every blossom.

I am not a man to read books, but one receiving that which books are written to report, said the poet.

My thoughts run about vainly seeking to arrive at those distant persons. Then I see Facts or objects which serve me as horses. Each of my thoughts seizes one of these, and, being mounted, rides directly to men.

When Osman came to read a page of Proclus, he was impatient of reading, and wished to hear the horn sound from the farmhouse that he might put in

practice what he had learned of the elegance of dancing in a temperate life, but the horn delaying to sound, he bethought himself that his temperance should begin now and he would establish tranquillity and order in his thoughts.

Bores are good, too. They may help you to a good indignation, if not to a sympathy; to a “mania better than temperance,” as Proclus would say. Long Beard and Short Beard, who came hither the other day with intent as it seemed to make Artesian Wells of us, taught me something.

Ben Jonson is rude and Tennyson is fine, but Ben’s beauty is worth more than Tennyson’s....

My life is optical, not practical. I go out to walk for exercise and not to answer a necessity. I speculate on virtue, not burn with love. Is not this as if one should quiz Michael and Gabriel through an opera-glass?

It would be easy, would it not, to give your own color and character to any meeting, if your spirit and insight was better than that of the speakers. Wait till the noisy man has done, and then speak and leave him out: he will feel that he is left out. What takes place in every parlor will take place there, that the less will yield to the greater and feel that his contribution is unnecessary.

Such a sense as dwells in these purple deeps of Proclus transforms every page into a slab of marble, and the book seems monumental. They suggest what magnificent dreams and projects. They show what literature should be. Rarely, rarely, does the Imagination awake; he alone knows Astronomy and Geology, the laws of Chemistry and Animation. He, the Imagination, knows why the plain or meadow of Space is strown with these flowers we call suns, moons, and stars: why the great Deep is adorned with animals, with men and Gods; for in every word he speaks he rides on them as the horses of thought.

I see, in reading this, that a man ought to renounce writing for his townsmen or his countrymen and express his spiritual history and motions in such images as have a private significance to him.

Hither came a lady with as much remoteness, fromness, or aversation expressed in her countenance as it could carry. All her speech was in the dialect of her church, and as unintelligible to others as a flash conversation. Such a person ceases to be a woman that she may be a church-member, and is necessarily treated like the insane in all companies. Yet every one must respect

her eminent truth.

Nature is very clear in her teachings on one point, that you shall not accept any man's person; for just as much as she distinguishes any man for wit or character, to the same extent she deforms him in some particular to the eye.

And see the mountainous greatness of Shakspeare is given to a man of a common life, and not himself, it would seem, aware of his possession.

(From K)

Friday evening, *February 4.*

I have heard that Sheridan made a good deal of *experimental writing* with a view to take what might fall, if any wit should transpire in all the waste pages. I, in my dark hours, may scratch the page, if perchance any hour of recent life may project a hand from the darkness and inscribe a record. Twice to-day it has seemed to me that truth is our only armor in all passages of life and death.... I will speak the truth also in my secret heart, or, *think the truth* against what is called God. Born and bred as we are in traditions, we easily find ourselves denying what seems to us sacred. I must resist the tradition, however subtle and encroaching, and say, Truth against the universe. Truth has its holidays which seem to come but once in a century, when she absolves her children with triumph to all souls.

Saturday morn, *February 5.*

Character. There are many gross and obscure natures whose bodies seem impure as shambles or grocers' shops, but character makes flesh and blood comely and alive. A meek allegiance to the Supreme Law consecrates youth and age alike, refines the whole body, gives a charm to wrinkles and silver hairs.... Character, in short, is conquest, and if there is not *that*, there is not character.

February 21.

Home again from Providence to the deserted house. Dear friends find I, but the wonderful Boy is gone. What a looking for miracles have I! As his walking into the room where we are would not surprise Ellen, so it would seem to me the most natural of all things.

In Providence I found Charles Newcomb, who made me happy by his

conversation and his reading of his tales.

March 18.

Home from New York, where I read six lectures on the Times, viz., Introductory; The Poet; The Conservative; The Transcendentalist; Manners; Prospects. They were read in the "Society Library," were attended by three or four hundred persons, and after all expenses were paid yielded me about two hundred dollars.

In New York I became acquainted with Henry James, John James, William Greene, Mrs. Rebecca Black, Thomas Truesdale, Horace Greeley, Albert Brisbane, J. L. H. McCracken, Mr. Field, Maxwell, Mason, Nathan, Delf, Eames, besides Bryant and Miss Sedgwick, whom I knew before.

Letters from beloved persons found me there. My lectures had about the same reception there as elsewhere: very fine and poetical, but a little puzzling. One thought it "as good as a kaleidoscope." Another, a good Staten Islander, would go hear, "for he had heard I was a rattler."

March 20.

The *Dial* is to be sustained or ended, and I must settle the question, it seems, of its life or death. I wish it to live, but do not wish to be its life. Neither do I like to put it in the hands of the Humanity and Reform Men, because they trample on letters and poetry; nor in the hands of the Scholars, for they are dead and dry. I do not like the *Plain Speaker* so well as the *Edinburgh Review*. The spirit of the last may be conventional and artificial, but that of the first is coarse, sour, indigent, dwells in a cellar kitchen, and goes to make suicides.

In New York, Thomas Delf modestly inquired, as if the question lay hard on his conscience, whether there could not be in every number of the *Dial* at least one article which should be a statement of principles, good for doctrine, good for edification, so that there should be somewhat solid and distinct for the eye of the constant reader to rest upon, and an advancing evolution of truth. A very reasonable question.

Life goes headlong....

When I read the "Lord of the Isles" last week at Staten Island, and when I

meet my friend, I have the same feeling of shame at having allowed myself to be a mere huntsman and follower. Why art thou disquieted, O Soul?

In New York lately, as in cities generally, one seems to lose all substance, and become surface in a world of surfaces. Everything is external, and I remember my hat and coat, and all my other surfaces, and nothing else. If suddenly a reasonable question is addressed to me, what refreshment and relief! I visited twice and parted with a most polite lady without giving her reason to believe that she had met any other in me than a worshipper of surfaces, like all Broadway. It stings me yet.

“What are brothers for?” said Charles G. Loring, when somebody praised a man who helped his brother. William Emerson is a faithful brother.

The least differences in intellect are immeasurable. This beloved and now departed Boy, this Image in every part beautiful, how he expands in his dimensions in this fond memory to the dimensions of Nature!

Ellen asks her grandmother “whether God can’t stay alone with the angels a little while and let Waldo come down?”

The chrysalis which he brought in with care and tenderness and gave to his mother to keep is still alive, and he, most beautiful of the children of men, is not here.

I comprehend nothing of this fact but its bitterness. Explanation I have none, consolation none that rises out of the fact itself; only diversion; only oblivion of this, and pursuit of new objects.

March 23.

To-day Nelly thinks “the snow is on the ground and the trees so white as a tablecloth and so white as parched corn.”

The scholar is a man of no more account in the street than another man; as the sound of a flute is not louder than the noise of a saw. But as the tone of the flute is heard at a greater distance than any noise, so the fame of the scholar reaches farther than the credit of the banker.

Osric was always great in the Present time....

Tecumseh: A Poem. A well-read, clerical person, with a skilful ear and with

Scott and Campbell in full possession of his memory, has written this poem in the feeling that the delight he has experienced from Scott's effective list of names might be reproduced in America from the enumeration of sweet or sonorous Indian names. The costume, as is usual in all such essays, crowds the man out of nature. The most Indian thing about the Indian is surely not his moccasins or his calumet, his wampum or his stone hatchet, but traits of character and sagacity, skill or passion which would be intelligible to all men and which Scipio or Sidney or Colonel Worth or Lord Clive would be as likely to exhibit as Osceola and Black Hawk. As Johnson remarked that there was a middle style in English above vulgarity and below pedantry, which never became obsolete and in which the plays of Shakspeare were written, so is there in human language a middle style, proper to all nations and spoken by Indians and by Frenchmen, so they be men of personal force.

Colonel Worth has lately declared Halleck Tastenugge one of the best infantry officers, and William Greene said he found the spirit among the Indians.

Hell is better than Heaven, if the man in Hell knows his place, and the man in Heaven does not. It is in vain you pretend that you are not responsible for the evil law because you are not a magistrate, or a party to a civil process, or do not vote. You eat the law in a crust of bread, you wear it in your hat and shoes. The Man — it is his attitude: the attitude makes the man.

Instead of wondering that there is a Bible, I wonder that there are not a thousand.

Toiling in the naked fields
Where no bush a shelter yields,
Needy Labor dithering stands,
Beats and blows his numbing hands,

And upon the crumping snows
Stamps in vain to warm his toes.

Though all's in vain to keep him warm,
Poverty must brave the storm;
Friendship none its aid to lend —
Constant health his only friend;
Granting leave to live in pain,
Giving strength to toil in vain.

CLARE.

for a time a preacher. In the Civil War, Colonel Greene commanded the 14th Infantry, M. V.

Brisbane in New York pushed his Fourierism with all the force of memory, talent, honest faith, and impudence. It was the sublime of mechanics....

Here prepares now the good Alcott to go to England, after so long and strict acquaintance as I have had with him for seven years. I saw him for the first time in Boston in 1835.

What shall we say of him to the wise Englishman?

He is a man of ideas, a man of faith. Expect contempt for all usages which are simply such. His social nature and his taste for beauty and magnificence will betray him into tolerance and indulgence, even, to men and to magnificence, but a statute or a practice he is condemned to measure by its essential wisdom or folly.

He delights in speculation, in nothing so much, and is very well endowed and weaponed for that work with a copious, accurate and elegant vocabulary; I may say poetic; so that I know no man who speaks such good English as he, and is so inventive withal. He speaks truth truly; or the expression is adequate. Yet he knows only this one language. He hardly needs an antagonist, — he needs only an intelligent ear. Where he is greeted by loving and intelligent persons, his discourse soars to a wonderful height, so regular, so lucid, so playful, so new and disdainful of all boundaries of tradition and experience, that the hearers seem no longer to have bodies or material gravity, but almost they can mount into the air at pleasure, or leap at one bound out of this poor solar system. I say this of his speech exclusively, for when he attempts to write, he loses, in my judgment, all his power, and I derive more pain than pleasure from the perusal. The *Post* expresses the feeling of most readers in its rude joke, when it said of his *Orphic*

Sayings that they “resembled a train of fifteen railroad cars with one passenger.” He has moreover the greatest possession both of mind and of temper in his discourse, so that the mastery and moderation and foresight, and yet felicity, with which he unfolds his thought, are not to be surpassed. This is of importance to such a broacher of novelties as he is, and to one baited, as he is very apt to be, by the sticklers for old books or old institutions. He takes such delight in the exercise of this faculty that he will willingly talk the whole of a day, and most part of the night, and then again tomorrow, for days successively, and if I, who am impatient of much speaking, draw him out to walk in the woods or fields, he will stop at the first fence and very soon propose either to sit down or to return. He seems to think society exists for this function, and that all literature is good or bad as it approaches colloquy, which is its perfection. Poems and histories may be good, but only as adumbrations of this; and the only true manner of writing the literature of a nation would be to convene the best heads in the community, set them talking, and then introduce stenographers to record what they say. He so swiftly and naturally plants himself on the moral sentiment in any conversation that no man will ever get any advantage of him, unless he be a saint, as Jones Very was. Every one else Alcott will put in the wrong.

It must be conceded that it is speculation which he loves, and not action. Therefore he dissatisfies everybody and disgusts many. When the conversation is ended, all is over. He lives tomorrow, as he lived to-day, for further discourse, not to begin, as he seemed pledged to do, a new celestial life. The ladies fancied that he loved cake; very likely; most people do. Yet in the last two years he has changed his way of living, which was perhaps a little easy and self-indulgent for such a Zeno, so far as to become ascetically temperate. He has no vocation to labor, and, although he strenuously preached it for a time, and made some efforts to practise it, he soon found he had no genius for it, and that it was a cruel waste of his time. It depressed his spirits even to tears.

He is very noble in his carriage to all men, of a serene and lofty aspect and deportment in the street and in the house. Of simple but graceful and majestic manners, having a great sense of his own worth, so that not willingly will he give his hand to a merchant, though he be never so rich, — yet with a strong love of men, and an insatiable curiosity concerning all who were distinguished either by their intellect or by their character. He is the most generous and hospitable of men, so that he has been as munificent in his long poverty as Mr. Perkins in his wealth, or I should say much more munificent. And for his hospitality, every thing in the form of man that entered his door as a suppliant would be made master of all the house contained. Moreover, every man who

converses with him is presently made sensible that, although this person has no faculty or patience for our trivial hodiernal labors, yet if there were a great courage, a great sacrifice, a self-immolation to be made, this and no other is the man for a crisis, — and with such grandeur, yet with such temperance in his mien.

Such a man, with no talent for household uses, none for action, and whose taste is for precisely that which is most rare and unattainable, could not be popular, — he could never be a doll, nor a beau, nor a bestower of money or presents, nor even a model of good daily life to propose to virtuous young persons. His greatness consists in his attitude merely; of course he found very few to relish or appreciate him; and very many to dispraise him. Somebody called him a “moral Sam Patch.”

Another circumstance marks this extreme love of speculation. He carries all his opinions and all his condition and manner of life in his hand, and, whilst you talk with him, it is plain he has put out no roots, but is an air-plant, which can readily and without any ill consequence be transported to any place. He is quite ready at any moment to abandon his present residence and employment, his country, nay, his wife and children, on very short notice, to put any new dream into practice which has bubbled up in the effervescence of discourse. If it is so with his way of living, much more so is it with his opinions. He never remembers. He never affirms anything to-day because he has affirmed it before. You are rather astonished, having left him in the morning with one set of opinions, to find him in the evening totally escaped from all recollection of them, as confident of a new line of conduct and heedless of his old advocacy. *Sauve qui peut.*

Another effect of this speculation is that he is preternaturally acute and ingenious to the extent sometimes of a little jesuitry in his action. He contemns the facts so far that his poetic representations have the effect of a falsehood, and those who are deceived by them ascribe the falsehood to him: and sometimes he plays with actions unimportant to him in a manner not justifiable to any observers but those who are competent to do justice to his real magnanimity and conscience.

Like all virtuous persons he is destitute of the appearance of virtue, and so shocks all persons of decorum by the imprudence of his behavior and the enormity of his expressions....

This man entertained in his spirit all vast and magnificent problems. None came to him so much recommended as the most universal. He delighted in the fable of Prometheus; in all the dim, gigantic pictures of the most ancient mythology; in the Indian and Egyptian traditions; in the history of magic, of

palmistry, of temperaments, of astrology, of whatever showed any impatience of custom and limits, any impulse to dare the solution of the total problem of man's nature, finding in every such experiment an implied pledge and prophecy of worlds of science and power yet unknown to us. He seems often to realize the pictures of the old alchemists: for he stood brooding on the edge of discovery of the Absolute from month to month, ever and anon affirming that it was within his reach, and nowise discomfited by uniform shortcomings.

The other tendency of his mind was to realize a reform in the Life of Man. This was the steadily returning, the monotonous topic of years of conversation. This drew him to a constant intercourse with the projectors and saints of all shades, who preached or practised any part or particle of reform, and to a continual coldness, quarrel, and non-intercourse with the scholars and men of refinement who are usually found in the ranks of conservatism. Very soon the Reformers whom he had joined would disappoint him; they were pitiful persons, and, in their coarseness and ignorance, he began to pine again for literary society. In these oscillations from the Scholars to the Reformers, and back again, he spent his days.

His vice, an intellectual vice, grew out of this constitution, and was that to which almost all spiritualists have been liable, — a certain brooding on the private thought which produces monotony in the conversation, and egotism in the character. Steadily subjective himself, the variety of facts which seem necessary to the health of most minds, yielded him no variety of meaning, and he quickly quitted the play on objects, to come to *the Subject*, which was always the same, viz., *Alcott in reference to the World of To-day*.

From a stray leaf I copy this: —

Alcott sees the law of man truer and farther than any one ever did. Unhappily, his conversation never loses sight of his own personality. He never quotes; he never refers; his only illustration is his own biography. His topic yesterday is Alcott on the 17th October; to-day, Alcott on the 18th October; tomorrow, on the 19th. So will it be always. The poet, rapt into future times or into deeps of nature admired for themselves, lost in their law, cheers us with a lively charm; but this noble genius discredits genius to me. I do not want any more such persons to exist.

What for the visions of the night? Our life is so safe and regular that we hardly know the emotion of terror. Neither public nor private violence, neither natural catastrophes, as earthquake, volcano, or deluge; nor the expectation of supernatural agents in the form of ghosts, or of purgatory and devils and hell fire, disturb the sleepy circulations of our blood in these calm, well-spoken days. And yet dreams acquaint us with what the day omits. Eat a hearty supper, tuck

up your bed tightly, put an additional bedspread over your three blankets, and lie on your back, and you may, in the course of an hour or two, have this neglected part of your education in some measure supplied. Let me consider: I found myself in a garret disturbed by the noise of some one sawing wood. On walking towards the sound, I saw lying in a crib an insane person whom I very well knew, and the noise instantly stopped: there was no saw, a mere stirring among several trumpery matters, fur muffs and empty baskets that lay on the floor. As I tried to approach, the muffs swelled themselves a little, as with wind, and whirled off into a corner of the garret, as if alive, and a kind of animation appeared in all the objects in that corner. Seeing this, and instantly aware that here was Witchcraft, that here was a devilish Will which signified itself plainly enough in the stir and the sound of the wind, I was unable to move; my limbs were frozen with fear; I was bold and would go forward, but my limbs I could not move; I mowed the defiance I could not articulate, and woke with the ugly sound I made. After I woke and recalled the impressions, my brain tingled with repeated vibrations of terror; and yet was the sensation pleasing, as it was a sort of rehearsal of a Tragedy.

What room for Fourier phalanxes, for large and remote schemes of happiness, when I may be in any moment surprised by contentment?

Here was Edward Palmer, with somewhat ridiculous, yet much nobility, always combined in his person and conversation, truth, honesty, love, independence, yet this listening to men, and this credulity in days and conventions and Brisbane projects. His look has somewhat too priestly and ecclesiastic in its cut. He looks like an Universalist minister. But though his intellect is something low and liminary, prosaic, and a good roadster, yet he has great depth of character, and grows on your eye. Pathetic it was to hear of his little circle of six young men who met one evening long ago in a little chamber in Boston, and talked over his project of *No-Money* until all saw that it was true, and had new faith in the Omnipotence of love. In Alabama and Georgia, he seems to have stopped in every printing-house, and the only signs of hope and comfort he found were Newspapers, like Brisbane's "Future," which he found in these dusky universities. When shall we see a man whose image blends with nature? so that when he is gone, he shall not seem a little ridiculous, that same small man!

Edmund Hosmer is a noble creature, so manly, so sweet-tempered, so faithful, so disdainful of all appearances, who always looks respectable and excellent to

you in his old shabby cap and blue frock bedaubed with the slime of the marsh, and makes you respect and honor him through all. A man to deal with who always needs to be watched lest he should cheat himself; with his admiration of his wife, harried by the care of her poor household and ten children. Edmund says, the first time he saw her, he did not observe that she was much different from other women, but now he thinks her the handsomest woman he ever saw! And so you come to think also when you see [her]... in her house at her work, or hear her artless stories of her sufferings and her works and opinions and tastes.

Friendship, five people; yes; Association and grand phalanx of the best of the human race....

Opus super abat materiem, said the Transcendentalist to the man who gave him money: or, All my concern is with the expenditure.

“The Devil is the Lord’s bulldog,” said the good Dow.

April 3.

“The peculiarity of divine souls is shown by Parmenides to consist in their being younger and at the same time older both than themselves and other things.” — PROCLUS.

The population of the world is a conditional population. These are not the best, but the best that could live in the existing state of soils, gases, animals, and morals.

Shall the new thought make the magnificence of England rags?

An immense deduction is to be made from the doctrine of the wisest man to arrive at his truth. All his dogmatick is mere flourish and grammar. What a mass of nonsense in St. Paul, and again in Swedenborg, that has no relation to rain and sun and bird. Yet truth will resolve a magpie as well as a creed when once you get it pure.

He should not see poorest culinary stove but he saw its relation to the charity which is the fountain of nature.

Swedenborg a right poet. Everything protean to his eye.... In his eye the eternal flux of things goes always on, there is no material kernel, only a spiritual centre.

April 5.

Alcott brought here this day a manuscript paper written by his brother Junius, which had three good things in it, — first, that it was a Prayer, written in this prayerless age; second, that he thanks God for the continuance of their love, the one for the other; and third, he thanks him for the knowledge he has attained of him by his Sons.

'Truth; Realism. Are you not scared by seeing that the Gypsies are more attractive to us than the Apostles? For though we love goodness and not stealing, yet also we love freedom and not preaching.

The feeblest babe is a channel through which the tremendous energies stream which we call Life, Fate, Love, Conscience, Thought, Hope, Sensibility.

I began to write of Poetry and was driven at once to think of Swedenborg as the person who, of all the men in the recent ages, stands eminently for the translator of Nature into thought. I do not know a man in history to whom things stood so uniformly for words. Before him the Metamorphosis continually plays. And if there be in Heaven Museums of Psychology, the most scientific angel could scarcely find a better example than the brain of Swedenborg, of the tendency to interpret the moral by the material. „..

Swedenborg never indicates any emotion, — a cold, passionless man.

What we admire is the majestic and beautiful Necessity which necessitated him to see these Heavens and Hells of his. The Heaven, which overpowered his and every human mind in proportion to the apprehensiveness of each, is more excellent than his picture; the Hell, which is its negation, is more formidable than he had skill to draw.

Very dangerous study will Swedenborg be to any but a mind of great elasticity. Like Napoleon as a military leader, a master of such extraordinary extent of nature, and not to be acted on by any other, that he must needs be a god to the young and enthusiastic.

April 6.

Having once learned that in some one thing, although externally small, greatness might be contained, so that in doing that, it was all one as if I had builded a world; I was thereby taught, that every thing in nature should represent total nature; and that whatsoever thing did not represent to me the sea and sky,

day and night, was something forbidden or wrong.
Heroes.

Heaven's exiles straying from the orb of light.

EMPEDOCLES.

Pericles, the father of these youths, has beautifully and well instructed them in those things which are taught by masters; but in those things in which he is wise he has neither instructed them himself, nor has he sent them to another to be instructed; but they, feeding, as it were, without restraint, wander about, to see if they can casually meet with virtue. — PLATO, in *Protagoras*.

You should never ask me what I can do. If you do not find my gift without asking, I have none for you. Would you ask a woman wherein her loveliness consists? Those to whom she is lovely will not discover it so. Such questions are but curiosity and gossip. Besides, I cannot tell you what my gift is unless you can find it without my description.

THE POET

On that night the poet went

From the lighted halls

Beneath the darkling firmament
To the seashore, to the old sea walls.
Dark was night upon the seas,
Darker was the poet's mind;

For his shallow suppleness
Black abyss of penitence.
The wind blew keen, the poet threw
His cloak apart, to feel the cold;
The wind, he said, is free and true,
But I am mean and sold.
Out shone a star between the clouds,
The constellation glittered soon, —
You have no lapse: so have ye glowed
But once in your dominion.
And I to whom your light has spoken,
I pining to be one of you,
I fall, my faith is broken;
Ye scorn me from your deeps of Blue —
And yet, dear stars, I know ye shine
Only by needs and loves of mine;
Light-loving, light-asking life in me
Feeds those eternal lamps I see.

The history of Christ is the best document of the power of Character which we have. A youth who owed nothing to fortune and who was “hanged at Tyburn,” — by the pure quality of his nature has shed this epic splendor around the facts of his death which has transfigured every particular into a grand universal symbol for the eyes of all mankind ever since.

He did well. This great Defeat is hitherto the highest fact we have. But he that shall come shall do better. The mind requires a far higher exhibition of character, one which shall make itself good to the senses as well as to the soul; a success to the senses as well as to the soul. This was a great Defeat; we demand Victory. More character will convert judge and jury, soldier and king; will rule human and animal and mineral nature; will command irresistibly and blend with the course of Universal Nature.

In short, there ought to be no such thing as Fate. As long as we use this word, it is a sign of our impotence and that we are not yet ourselves.... Whilst I adore this ineffable life which is at my heart, it will not condescend to gossip with me, it will not announce to me any particulars of science, it will not enter into the details of my biography, and say to me why I have a son and daughters born to me, or why my son dies in his sixth year of joy. Herein, then, I have this latent omniscience coexistent with omnignorance. Moreover, whilst this Deity glows at the heart, and by his unlimited presentiments gives me all Power, I know that

tomorrow will be as this day, I am a dwarf, and I remain a dwarf. That is to say, I believe in Fate. As long as I am weak, I shall talk of Fate; whenever the God fills me with his fulness, I shall see the disappearance of Fate.

I am *Defeated* all the time; yet to Victory I am born.

But the objection to idolatry of which all Christendom is guilty, why do you not feel? viz., that it is retrospective, whilst all the health and power of man consists in the prospective eye. A saint, an angel, a chorus of saints, a myriad of Christs, are alike worthless and forgotten by the soul, as the leaves that fall, or the fruit that was gathered in the garden of Eden in the golden age. A new day, a new harvest, new duties, new men, new fields of thought, new powers call you, and an eye fastened on the past unsuns nature, bereaves me of hope, and ruins me with a squalid indigence which nothing but death can adequately symbolize.

The Poet should not only be able to use nature as his hieroglyphic, but he should have a still higher power, namely, an adequate message to communicate; a vision fit for such a faculty. Therefore, when we speak of Poet in the great sense, we seem to be driven to such examples as Ezekiel and Saint John and Menu with their moral burdens; and all those we commonly call Poets become rhymesters and poetasters by their side.

All our works which we do not understand are symbolical. If I appear to myself to carry rails into the shed under my barn, if I appear to myself to dig parsnips with a dung-fork, there is reason, no doubt, in these special appearances as much as in the study of metaphysics or mythology, in which I do not see meaning.

We are greatly more poetic than we know; poets in our drudgery, poets in our eyes, and ears, and skin.

The schoolboys went on with their game of baseball without regard to the passenger, and the ball struck him smartly in the back. He was angry. Little cared the boys. If you had learned how to play when you was at school, they said, you would have known better than to be hit. If you did not learn then, you had better stop short where you are, and learn now. Hit him again, Dick!

Sunday eve.

I say that he will render the greatest service to criticism which has been

known for ages who shall draw the line of relation that subsists between Shakspeare and Swedenborg....

Always there is this Woman as well as this Man in the mind; Affection as well as Intellect.

You might know beforehand that your friends will not succeed, since you have never been able to find the Institution in the Institutor.

“If he who brings corn to sale be entitled to a remunerating price for it by law, by what just law is he disentitled to a remunerating price who likewise brings his property to sale — his labour?” — LORD NUGENT.

If I go into the churches in these days, I usually find the preacher in proportion to his intelligence to be cunning, so that the whole institution sounds hollow. X, the ablest of all the Unitarian clergy, spread popular traps all over the lecture which I heard in the Odeon. But in the days of the Pilgrims and the Puritans, the preachers were the victims of the same faith with which they whipped and persecuted other men, and their sermons are strong, imaginative, fervid, and every word a cube of stone.

As soon as my guests are gone, they show like dreams.

Mr. Clapp, of Dorchester, to whom I described the Fourier project, thought it must not only succeed, but that agricultural association must presently fix the price of bread, and drive single farmers into association in self-defence, as the great commercial and manufacturing companies had done.

Last night I read many pages in Chester Dewey's *Report of Herbaceous Plants in Massachusetts*. With what delight we always come to these images! The mere names of reeds and grasses, of the milkweeds, of the mint tribe and the gentians, of mallows and trefoils, are a lively pleasure. The odorous waving of these children of beauty soothes and heals us. The names are poems often. *Erigeron*, because it grows old early, is thus named the Old Man of the Spring. The *Pyrola umbellata* is called *Chimaphila*, Lover of Winter, because of its bright green leaves in the snow; called also Prince's Pine. The Plantain (*Plantago major*), which follows man wherever he builds a hut, is called by the Indians "White Man's Foot." And it is always affecting to see Lidian or one of her girls stepping outside the door with a lamp at night to gather a few plantain

leaves to dress some slight wound or inflamed hand or foot. What acres of *Houstonia* whiten and ripple before the eye with innumerable pretty florets at the mention of May. My beloved *Liatris* in the end of August and September acquires some added interest from being an approved remedy for the bite of serpents, and so called “Rattlesnake’s Master.” The naming of the localities comforts us— “ponds,” “shady roads,” “sandy woods,” “wet pastures,” *etc.* I begin to see the sun and moon, and to share the life of Nature, as under the spell of the sweetest pastoral Poet.

Fireweed, a *Hieracium* which springs up abundantly on newly cleared land. The aromatic fields of dry *Gnaphalium*; the sweet flags live in my memory this April day. But this dull country professor insults some of my favorites, as the well beloved *Lespedeza*, for instance. The beautiful *Epigæa*, pride of Plymouth woods, he utterly omits. He who loves a flower, though he knows nothing of its botany or medicine, is nearer to it than one of these catalogue-makers....

These are our Poetry. What, I pray thee, O Emanuel Swedenborg, have I to do with jasper, sardonyx, beryl, and chalcedony?...

One would think that God made fig trees and dates, grapes and olives, but the Devil made Baldwin apples and pound-pears, cherries and whortleberries, Indian corn and Irish potatoes.

I tell you, I love the peeping of a *Hyla* in a pond in April, or the evening cry of a whip-poor-will, better than all the bellowing of all the Bulls of Bashan or all the turtles of whole Palestina. The

County of Berkshire is worth all Moab, Gog, and Kadesh, put together.

When Swedenborg described the roads leading up from the “world of spirit” into Heaven as not visible at first to any Spirit, but after some time visible to such as are pure, he figuratively reports a familiar truth in relation to the history of thought. The gates of thought, — how slow and late they discover themselves! Yet when they appear, we see that they were always there, always open.

April 13.

Read last night Mr. Colman’s *Fourth Report of the Agriculture of Massachusetts*. The account he gives of the fat cattle raised on Connecticut River and sold at Brighton is pathetic almost. The sale sometimes will not pay the note the farmer gave for the money with which he bought his stock in the fall. The miseries of Brighton would make a new chapter in Porphyry on “Abstinence from Animal Food.” The Maple Sugar business is far more

agreeable to read of. One tree may be tapped for eighty or ninety years and not injured. One man can tap three hundred in a day. I read with less pleasure that a principal crop of Franklin County is broomcorn.

The babe is not disconcerted. I delight in her eyes? they receive good-humoredly everything that appears before them, but give way to nothing. Scrap as she is, she is never displaced, as older children are.

I like a meeting of gentlemen; for they also bring each one a certain cumulative result. From every company they have visited, from every business they have transacted, they have brought away something which they wear as a certain complexion or permanent coat, and their manners are a certificate, a trophy of their culture. What we want when you come to see us is country culture. We have town culture enough and to spare. Show us your own, inimitable and charming to us, O Countryman!

At New York I saw Mrs. Black, a devout woman bred in the Presbyterian Church, but who had left it and come out into the light, as she said, "in a moment of time." She was spiritual and serene. The contemplation of the presence and perfection of the Moral Law contented her. She had read Madame Guion and Jacob Behmen, and now, lately, the Book of Esdras, the author of which she said was an impatient spirit, but yet wise. She quoted Scripture a good deal, but in the poetic and original way of Jones Very. I was greatly contented with her, at my first interview; but at the second I asked her, "Had she no temptations?" No. "Had she no wish to serve some creature who could only be served by her involving herself in affairs?" No. For herself she satisfied me pretty well, but I soon felt that she had no answers to give the Inquirers whom I usually meet. She only said, they must be willing to be fools. "Yes," I said, "but they already are fools and have been so a long time, and now they begin to whimper, How long, O Lord!"

Goodness is not good enough, unless it has insight, universal insights, results that are of universal application.

Men whom we see are whipped through the world;... The most private is the most public energy. We shall see that quality atones for quantity; that creative action in one outvalues feeble exhibition and philanthropic declamation to crowds; and that grandeur of character acts in the dark, and succors them who never saw it.

I ought to be obeyed. The reason I am not is because I am not real. Let me be a lover, and no man can resist me. I am not united, I am not friendly to myself, I bite and tear myself. I am ashamed of myself. When will the day dawn, of peace and reconciliation, when, self-united and friendly, I shall display one heart and energy to the world?

“Every intellect,” says Proclus, “is an impartible essence.” Very likely and very unimportant; but that every intellect is an impartible essence, or is communicable in the same proportion with its amount or depth, — is a theme for the song of angels.

Quotation. It is a great advantage to come first in time. He that comes second must needs quote him that came first. You say that Square never quotes: you say something absurd. Let him speak a word, only to say “chair,”

“table,”

“fire,”

“bread,” — what are these but quotations from some ancient savage?

I have sometimes fancied my friend’s wisdom rather corrective than initiative, an excellent element in conversation to counteract the common exaggerations and preserve the sanity, but chiefly valuable so, and not for its adventure and exploration or for its satisfying peace.

(From E)

April 14.

If I should write an honest diary, what should I say? Alas, that life has halfness, shallowness.

I have almost completed thirty-nine years, and I have not yet adjusted my relation to my fellows on the planet, or to my own work. Always too young or too old, I do not justify myself; how can I satisfy others?

Christianity. I do not wonder that there was a Christ; I wonder that there were not a thousand.

Dull, cheerless business this of playing lion and talking down to people. Rather let me be scourged and humiliated; then the exaltation is sure and speedy.

(From K)

— *April 19.*

My daily life is miscellaneous enough, but when I read Plato or Proclus, or, without Plato, when I ascend to thought, I do not at once arrive at satisfactions, as when I drink being thirsty, or go to the fire being cold; no; I am only apprized at first of my vicinity to a new and most bright region of life....

Life. Where do we find ourselves?...

April 12.

This afternoon I found Edmund Hosmer in his field, after traversing his orchard where two of his boys were grafting trees; Mr. Hosmer was ploughing and Andrew driving the oxen. I could not help feeling the highest respect as I approached this brave laborer. Here is the Napoleon, the Alexander of the soil, conquering and to conquer, after how many and many a hard-fought summer's day and winter's day, not like Napoleon of sixty battles only, but of six thousand, and out of every one he has come victor.... I am ashamed of these slight and useless limbs of mine before this strong soldier....

True it is, I thought, as he talked, that Necessity farms it, that Necessity finds out when to go to Brighton, and when to feed in stall, better than Mr. Colman.

Elizabeth gives me two Proverbs to-day, which are both bucolic poetry: —

“When the oaks are in the grey,
Then, Farmers, plant away.”

And the other: —

“The Mistress makes the morning,
But the Lord makes the afternoon.”

Strange that what I have not is always more excellent than what I have, and that Beauty, no, not Beauty, but *a* beauty instantly deserts possession, and flies to an object in the horizon.

If I could put my hand on the Evening Star, would it be as beautiful?

In the fields, this lovely day, I was ashamed of the inhospitality of disputing.

Very hoarsely sounds the parlor debate on theology from the lonely, sunny hill,
or the meadow where the children play.

As sings the pine tree in the wind,
So sings in the wind a sprig of the pine.

As Proclus ascribes to the Deity the property of being in contact, and of not being in contact at the same moment of time, so we demand of men that they should exhibit a conduct which is at once continence and abandonment; “a wanton heed, and giddy cunning.”

We look wishfully to emergencies, to eventful revolutionary times from the desert of our ennui, and think how easy to have taken our part when the drum was rolling and the house was burning over our heads. But is not Peace greater than War, and has it not greater wars and victories? Is there no progress? To wish for war is atheism.

When I saw the sylvan youth, I said, “ Very good promise, but I cannot now watch any more buds: like the good Grandfather when they brought him the twentieth babe, he declined the dandling, he had said ‘Kitty, Kitty’ long enough.”

Queenie says, “Save me from magnificent souls. I like a small common-sized one.”

As they say that when your razor is dull, lay it away in your drawer and use another until that becomes dull, then take the old one and you shall find it sharp again, so I have heard scholars remark of their skill in languages, that by putting away the Greek or German book for a time, when they resumed it afterwards, they were surprised at their own facility.

(From J)

April 28.

Q. Why not great and good?

Ans. Because I am not what I ought to be.

Q. But why not what you ought?

Ans. The Deity still solicits me, but this self, this individuality, this will resists.

Q. Well for you that it does: if it did yield, you would die, as it is called. But

why does it resist?

Ans. I can only reply, God is great: it is the will of God. When he wills, he enters: when he does not will, he enters not.

(From K)

May 1.

“And the most difficult of tasks to keep Heights which the soul is competent to gain.”

These lines of Wordsworth are a sort of elegy on these times. When I read Proclus, I am astonished with the vigor and breadth of his performance. Here is no epileptic modern muse, with short breath and short flight, but an Atlantic strength which is everywhere equal to itself and dares great attempts, because of the life with which it feels itself filled. —

There will come a day when a man shall appear who will so draw men to him as a mistress or a friend draws a lover or a friend, making it the happiness and honor of the other party to serve him. In that way character will inspire the kindness it requires, and will not need to provide in the direct way for its bodily wants. Then every man will “live by his strength and not by his weakness,” as A said. God hates inquisitiveness, said Euclides.

Boldness we wish to see, — boldness in any kind, whether in behavior and action, or in thought or poetry or music or building. But whence is boldness? What is it but the badge and sign of Life, of Spirit? And sometimes that wind bloweth here, and sometimes there, none can tell why, or how, or when, it listeth. Am I master of any of the conditions of its presence, or must I fold my hands and wait until I be bold?

Now is our salvation nearer than when we believed.

Doctor James Jackson said it always took some time to learn the scale of patients and nurses; what they meant by “*violent pain.*”

“feeling that they should die,” etc., etc. Almost all persons delight in the superlative, and for this reason seize upon an exaggeration, as on sugar, in all their actual observations of each character. ‘It proceeds from the want of skill to detect quality that they hope to move your admiration by quantity: for they feel that here in this or that person is somewhat remarkable.

A reading man, or a child self-entertained, is the serpent with its tail in the

mouth. Let Saadi sit alone.

The Surfaces threaten to carry it in Nature. The fox and musquash, the hawk and snipe and bittern, when near by seen, are found to have no more root than man, to be just such superficial tenants in the globe. Then this new molecular philosophy goes to show that there are astronomical interspaces betwixt atom and atom; the world is all outside; it has no inside.

Atom from atom yawns as far
As moon from earth, as star from star.

Elizabeth Hoar says, when we spoke of the beauty of morning and the beauty of evening, — — “I go a beggar to the sunset, but in the morning I am equal to Nature.”

(From J)

May 6.

Here is a proposition for the formation of a good neighborhood: Hedge shall live at Concord, and Mr. Hawthorne; George Bradford shall come then; and Mrs. Ripley afterward. Who knows but Margaret Fuller and Charles Newcomb would presently be added? These, if added to our present kings and queens, would make a rare, an unrivalled company. If these all had their hearth and home here, we might have a solid social satisfaction, instead of the disgust and depression of visitation. We might find that each of us was more completely isolated and sacred than before. You may come — no matter how near in place, so that you have metes and bounds, instead of the confounding and chaos of visiting.

May 15.

The instruction at church seemed very infantile. Calvinism seems complexional merely;...

In general, I recognize, in stagecoach and elsewhere, the constitutional Calvinist, the inconvertible. And in all companies we find those who are self-accused, who live in their memories and charge themselves with the seven deadly sins daily, like my Queen without guile; and the other class, who cumber themselves never with contrition, but appeal from their experience always hopefully to their faith.

Our poetry reminds me of the catbird, who sings so affectedly and vaingloriously to me near Walden. Very sweet and musical! very various! fine execution! but so conscious, *such a performer!* not a note is his own, except at last, *Miou, miou.*

Of recent men, one may say that Milton's opinion might be adduced on Marriage, and Swedenborg's and even Shelley's. Goethe gave none that I remember, and no others occur to me.

"Abou ben Adhem" seems to promise its own immortality beyond all the contemporary poems. And how long will one search books to find as good a story as that of the woman of Alexandria with her torch and bucket of water to burn Heaven and extinguish Hell?

Stick to thy affirming, how faint and feeble soever. A poet is an affirmer. Such loud and manifold denial as certain chemists, astronomers, and geologists make, imposing on me and all, and we think they will do wonders. Years pass and they are still exposing errors, and some quiet body has done in a corner the deed which they must worship.

It seems a mark of rarest genius to be able to distinguish the affirmative talent. Such geniuses as we know are deceived every day, as grossly almost as common society.

June 14.

Talent makes comfort. I propose to set an Athenæum on foot in this village; but to what end? We know very well what is its utmost, to make, namely, such agreeable and adorned men as we ourselves, but not to open doors into Heaven, as genius does in every deed of genius. This goes rather to fix and to content with fixedness; the comfort of talent. London is the kingdom of Talent. Every paper and book and journal comes from that tree. Civilization is Talent's version of human life.

A highly endowed man with good intellect and good conscience is a Man-woman and does not so much need the complement of woman to his being as another. Hence his relations to the sex are somewhat dislocated and unsatisfactory. He asks in woman sometimes the woman, sometimes the man.

As when I have walked long in one direction, and then, if I turn around, discover that a large fair star has long risen and shined on me, I feel a kind of wonder that I should be so long in such a presence without knowing it, so feel I when a fine genius, which has been born and growing to full age in my neighborhood, now first turns its full deep light on my eyes.

June 15.

To-day. The ascetic of every day is how to keep me at the top of my condition; because a good day of work is too important a possession to be risked for any chance of good days to come.

Shut your eyes and hear a military band play on the field at night and you shall have kings and queens and all regal behavior and beautiful society, all chivalry walking visibly before you....

Doctor Bradford said it was a misfortune to be born when children were nothing and live until men were nothing.

June 16.

Literary criticism, how beautiful to me, and I am shocked lately to detect such omnipresent egotism in my things. My prayer is that I may be never deprived of a fact, but be always so rich in objects of study as never to feel this impoverishment of remembering myself.

That the Intellect grows by moral obedience seems to me the Judgment Day. Let that fact once obtain credence and all wrongs are righted; sorrow and pity are no more, nor fear nor hatred; but a justice as shining and palpable as the best we know of kings and caliphs and ordeals, and what we call "poetical justice," — that is, thorough justice, justice to the eye and justice to the mind — takes place.

Friendship.

For Gods are to each other not unknown.

Odyssey, v, 79.

The same depth which dew gives to the morning meadow, the fireflies give to the evening meadow. Fire, though a spark on the chimney-back, is always a deep.

I read the *Timæus* in these days, but am never sufficiently in a sacred and holiday health for the task. The man must be equal to the book. A man does not know how fine a morning he wants until he goes to read Plato and Proclus.

Elizabeth Hoar says that Shelley is like shining sand; it always looks attractive and valuable, but, try never so many times, you cannot get anything good. And yet the mica-glitter will still remain after all.

I admire the unerring instinct with which, like an arrow to its mark, the newborn fine genius always flies to the geniuses. Here is this young stripling darting upon Shakspeare, Dante, Spenser, Coleridge, and can see nothing intervening.

Charles King Newcomb took us all captive. He had grown so fast that I told him I should not show him the many things I had bribed him with. Why tease him with multitude? Multitude is for children. I should let him alone. His criticism in his “Book-Journal” was captivating and in its devotion to the author, whether Æschylus, Dante, Shakspeare, Austin, or Scott, as feeling that he had a stake in that book,— “who touches that, touches me”; — and in the total solitude of the critic, the Patmos of thought from which he writes, in total unconsciousness of any eyes that shall ever read this writing, he reminds me of Aunt Mary. Charles is a Religious Intellect. Let it be his praise that when I carried his manuscript story to the woods, and read it in the armchair of the upturned root of a pine tree, I felt for the first time since Waldo’s death some efficient faith again in the repairs of the Universe, some independency of natural relations whilst spiritual affinities can be so perfect and compensating.

Robert Bartlett defined the church as “the organic medium of life from the Lord to the Divine Humanity.” He and Weiss gave an amusing account of the truckman who came with the square-cap mob to the college yard and bullied for an hour. It was the richest swearing, the most aesthetic, fertilizing, — and they took notes.

Nelly waked and fretted at night and put all sleep of her seniors to rout. Seniors grew very cross, but Nell conquered soon by the pathos and eloquence of childhood and its words of fate. Thus, after wishing it would be morning, she

broke out into sublimity: "Mother, it must be morning." Presently after, in her sleep, she rolled out of bed; I heard the little feet running round on the floor, and then, "O dear! Where 's my bed?"

She slept again, and then woke: "Mother, I am afraid; I wish I could sleep in the bed beside of you. I am afraid I shall tumble into the waters — it is all water!" What else could papa do? He jumped out of bed and laid himself down by the little mischief, and soothed her the best he might.

I think that language should aim to describe the fact, and not merely suggest it. If you, with these sketchers and *dilettanti*, give me some conscious, indeterminate compound word, it is like a daub of color to hide the defects of your drawing. Sharper sight would see and indicate the true line. The poet both draws well, and colors at the same time.

When C. says, "If I were a Transcendentalist I should not seal my letters," what does he truly say but that he sees he ought not to seal his letters?

"When I shall be deserted," said the scholar. And he told his thoughts and read his favorite pieces to many visitors, and when he saw the club-moss, or when he saw the night heaven, and when he saw his dead mistress, he knew that this, though fair and sorrowful, was good for his song; and it seemed then as if what had been a sphere of polished steel became a surface, or a convex mirror. Then he defended copyright until the Muse left him, and Apollo said, He may die. Yet before this befel, he had been a lover of things which he did not know how to praise, nor suspected they were loved by others. Again the scholar will come to scorn this putting his gods at *vendue*. The loosestrife waved over him its pagoda of yellow bells.

None longs for a church so much as he who stays at home.

But my increasing value of the present moment, to which I gladly abandon myself when I can, is destroying my Sunday respects, which always, no doubt, have some regard to the state and conservatism. But when to-day is great I fling all the world's future into the sea.

In June, about the time when Alcott sailed for England, Manlius C. Clarke, a lawyer, came to Elizabeth Peabody and told her that he was going to sell seven hundred and fifty copies of Alcott's *Conversations on the Gospels* in sheets, for the sum of fifty dollars to trunkmakers for waste paper. There are nine hundred pounds and they are sold at five cents a pound.

I hear with pleasure that a young girl in the midst of rich, decorous Unitarian

friends in Boston is well-nigh persuaded to join the Roman Catholic Church. Her friends, who are also my friends, lamented to me the growth of this inclination. But I told them that I think she is to be greatly congratulated on the event. She has lived in great poverty of events. In form and years a woman, she is still a child, having had no experiences, and although of a fine, liberal, susceptible, expanding nature, has never yet found any worthy object of attention; has not been in love, nor been called out by any taste, except lately by music, and sadly wants adequate objects. In this church, perhaps, she shall find what she needs, in a power to call out the slumbering religious sentiment. It is unfortunate that the guide who has led her into this path is a young girl of a lively, forcible, but quite external character, who teaches her the historical argument for the Catholic faith. I told A. that I hoped she would not be misled by attaching any importance to that. If the offices of the church attracted her, if its beautiful forms and humane spirit draw her, if St. Augustine and St. Bernard, Jesus and Madonna cathedral music and masses, then go, for thy dear heart's sake, but do not go out of this icehouse of Unitarianism, all external, into an icehouse again of external. At all events, I charged her to pay no regard to dissenters, but to suck that orange thoroughly.

In Boston I saw the new second volume of Tennyson's *Poems*. It had many merits, but the question might remain whether it has *the* merit. One would say it was the poetry of an exquisite; that it was prettiness carried out to the infinite, but with no one great heroic stroke; a too vigorous exclusion of all mere natural influences.

In reading aloud, you soon become sensible of a monotony of elegance. It wants a little northwest wind, or a northeast storm; it is a lady's bower — garden-spot; or a lord's conservatory, aviary, apiary, and musky greenhouse. And yet, tried by one of my tests, it was not found wholly wanting — I mean that it was liberating; it slipped or caused to slide a little "this mortal coil." The poem of "Locksley," and "The Talking Oak," — I bear cheerful witness both gave me to feel a momentary sense of freedom and power.

In town I also talked with Sampson Reed, of Swedenborg, and the rest. "It is not so in your experience, but is so in the other world." — Other world? I reply, there is no other world; here or nowhere is the whole fact, all the universe over, there is but one thing, — this old double, Creator-creature, mind-matter, right-wrong. He would have devils, objective devils. I replied, That pure malignity exists, is an absurd proposition.... In regard to Swedenborg, I commended him as a grand poet. Reed wished that if I admired the poetry, I should feel it as a fact. I

told him, All my concern is with the subjective truth of Jesus's or Swedenborg's or Homer's remark, not at all with the object. To care too much for the object were low and gossiping. He may and must speak to his circumstance and the way of events and of belief around him; he may speak of angels, or Jews, or gods, or Lutherans, or gypsies, or whatsoever figures come next to his hand; I can readily enough translate his rhetoric into mine.

Every consciousness repeats mine and is a sliding scale from Deity to Dust. Sometimes the man conspires with the Universe, and sometimes he is at the other extreme and abides there, a criminal confessing sin. The moment he begins to speak I apprehend his whole relations and fix him at his point in the scale.

One seems in debate to play a foolish game for mastery, so inconvertible men are....

There is a formula well known to children, "Did," "Didn't," "Did," "Didn't," etc.

Three Classes. I had occasion to say the other day to Elizabeth Hoar that I like best the strong and worthy persons like her father, who support the social order without hesitation or misgiving. I like these: they never incommode us by exciting grief, pity, or perturbation of any sort.

But my conscience, my unhappy conscience, respects that hapless class who see the faults and stains of our social order and who pray and strive incessantly to right the wrong. This annoying class of men and women commonly find the work altogether beyond their faculty, and though their honesty is commendable, their results are for this present distressing. But there is a third class who are born into a new heaven and earth with organs for the new element, and who from that Better behold this bad world in which the million grope and suffers. By their life and happiness in the new, I am assured of the doom of the old, and these, therefore, I love and worship.

July 12.

Looking in the wrong directions for light.

Obedience is the only ladder to the throne.

It is sad to outgrow our preachers, our friends, and our books, and find them no longer potent. Proclus and Plato last me still, yet I do not read them in a manner to honor the writer....

I read these English tracts with interest. Goodwyn Barmby is another

Ebenezer Elliot, but more practical. Revolution is no longer formidable when the Radicals are amiable. If Jack Cade loves poetry, and goes for "Love Marriage" with Milton and Shelley, for community, phalanxes, dietetics, and so forth, I no longer smell fagots. Strange it is that Carlyle should skip this remarkable class of Dissenters and Radicals so near him, Lane, Owen, Wright, Fry, etc., etc.

It probably arises from that necessity of isolation which genius so often feels. He must stand on his glass tripod if he would keep his electricity. Keep them off, then, my brave Carlyle, thou worshipper of Beauty, and publisher of beauty to the world. Every sentence of thine is joyful proclamation that Beauty the Creator, Venus Creatrix, yet exists; the sentences are written for no utility, to no moral, but for the joy of writing.

Yes, Carlyle represents very well the literary man, makes good the place of and function of Erasmus and Johnson, of Dryden and Swift, to our generation. He is thoroughly a gentleman and deserves well of the whole fraternity of scholars, for sustaining the dignity of his profession of Author in England. Yet I always feel his limitation, and praise him as one who plays his part well according to his light, as I praise the Clays and Websters. For Carlyle is worldly, and speaks not out of the celestial region of Milton and Angels.

July 16.

Chaucer is such a poet as I have described Saadi, possessing that advantage of being the most cultivated man of the times. So he speaks always sovereignly and cheerfully. For the most part, the poet nature, being very susceptible, is overacted on by others. The most affecting experience, that of the religious sentiment, goes to teach the immensity of every moment, the indifferency of magnitudes. The present moment is all that the soul is God; — a great, ineffable lesson whose particulars are innumerable.

Yet experience shows that, great as is this lesson, great and greatest, yet this discipline also has its limits. One must not seek to dwell always in contemplation of the Spirit. So should the man decline into an indolent and unskilful person and stop short of his possible enlargement into a gloomy person; under churches are tombs, but Intellect is cheerful.

As bookbinders separate each sheet or each set of sheets in a large pile, by interposing a small block of pasteboard, so it seemed as if some genius had laid a ray of light underneath every thought and fact in nature to this man's eye, so that all things separated themselves according to their laws before him and he never confounded the similar with the same.

July 21.

Profound meaning of “ Good will makes insight.” It is as when one finds his way to the sea by embarking on a river; or finds a passage for the mind through a lump of matter by following the path of electricity, or magnetism, or heat, or light, through it; anyhow, knows the nature by sharing the nature; is at once victim and victor.

All our days are so unprofitable whilst they pass.

Very often there seems so little affinity between the man and his works that it seems as if the wind wrote the book and not he.

Put dittany in your greenhouse, asphodel, nepenthe, moly, poppy, rue, self-heal.

Rosebugs of splendid fate living on apple trees and roses and dying by an apoplexy of sweet sensations in the golden days, middle days of July.

He hoed the desert, his potatoes were poled, his asparagus grew to trees, his melons and gourds ran for miles, and had roots like oak trees.

The Telescope. The greatest genius adds nothing; he only detaches from the mass of life a particle not before detached, so that I see it separated.

Fate takes in the holidays and the work-minutes; it was writ on your brow before you were born; the watch was wound up to go seventy years, and here to stop, and there to hasten. Just this neuralgia and that typhus fever, this good October and that most auspicious friendship were all rolled in. The little barrel of the music-box revolves until all its ditties are played.

Wright, Lane, Barmby, Harwood, Heraud, Doherty, Barham, Greaves, Marston, Owen.

August 2.

Zanoni. We must not rail if we read the book. Of all the ministers to luxury these novelwrights are the best. It is a trick, a juggle. We are cheated into

laughter or wonder by feats which only oddly combine acts that we do every day.

England. Many of them gave hospitable reception to Mr. Alcott and his ideas. H. G. Wright was the head of the Alcott House School in Surrey; he, with Charles Lane and his son, came to America with Mr. Alcott on his return; Goodwyn Barmby was editor of the *Promethean, or Communitarian Apostle*; Harwood wrote for some of the reform journals; John A. Heraud was the editor of the *London Monthly Magazine*, to which journal Mr. Emerson gave some praise in vol iii of the *Dial*. In the editorial Record of the Months of this magazine of January, 1843, a *Life of Charles Fourier*, by Hugh Doherty, is mentioned; also the *London Phalanx* as from him. Francis Barham wrote dramatic poetry, *The Death of Socrates, etc.* He was editor of *The Alist*, a *monthly magazine of Divinity and Universal Literature*. John Pierrepont Greaves has been already mentioned in these notes as a retired merchant who became the friend of Pestalozzi and of Strauss and devoted himself, on returning to England, to improvement of English schools, especially the establishment of Infant Schools: he died in 1842. J. Westland Marston has been praised in this Journal for his dramatic poem *The Patrician's Daughter*. Robert Owen, brother of the great anatomist, was the promoter of community life in England and America.

In the *Dial* of October, 1842, in a paper called "English Reformers" Mr. Emerson tells of most of these men.

There is no new element, no power, no furtherance. It is only confectionery, not the raising of new corn; and being such, there is no limit to its extension and multiplication. Mr. Babbage will presently invent a Novel-writing machine. The old machinery cannot be disguised, however gaily vamped. Money and killing and the Wandering Jew, these are the mainsprings still; new names, but no new qualities in the *dramatis personæ*. Italics and capitals are the stale substitutes for natural epigram and the revelations of loving speech. Therefore the vain endeavor to keep any bit of this fairy gold which has rolled like a brook through our hands. A thousand thoughts awoke, great rainbows seemed to span the sky. A morning among the mountains; but as we close the book, we end the remembrance, nothing survives, not a ray.

The power to excite which the page for moments possessed is derived from you. You read it as you read words in a dictionary, or hear a sonorous name of some foreigner and invest the stranger with some eminent gifts. But because there was not wisdom in the book, nothing fixes itself; all floats, hovers, and is dissipated forever.

The young men are the readers and victims of *Vivian Grey*.... One would say of *Vivian Grey* that it was written by a person of lively talent who had rare opportunities of society and access to the best anecdotes of Europe. Beckendorf is a sketch after nature, and whoever was the model was a strong head, a strong humorist, who deserved his empire for a day over these college boys.

Bulwer evidently is the dissolute Alcibiades, who has been the pupil once of Socrates, and now and then recites a lesson which his master taught him. But the worst of Bulwer is that he has no style of his own; he is always a collector, and neither contributes flash, nor low life, nor learning, nor poetry, nor religion, nor description, from his own stores.

August 3.

Our eagerness for anecdotes of the face, form, manners, dress, dwelling, etc., of any remarkable mind should teach us that the man should make all these anew, and not borrow them from Custom.

A noble brain, a searching eye, but alas! he hath no hands.

Work in every hour; paid or unpaid, see only that thou work;...

Some play at chess, some at cards, some at the Stock Exchange. I prefer to play at Cause and Effect.

Bettine is more real, more witty than George Sand or Mme de Staël; as profound and greatly more readable.

Gold represents labor and rightly opens all doors, but labor is higher and opens secreter doors, opens man, and finds new place in the kingdom of intelligence.

We read *Zanoni* with pleasure because magic is natural; ...

A mean, obscure weed by the doorstep, trodden by every foot that entered the house, was the plantain, yet, when the master's foot was wounded and lame, they went out at night with a lamp to seek its leaves, and it brought refreshment and healing. Temperance is the poor plantain, a mean virtue in its daily details, but what an interest — compound on compound interest — it yields at last.

Our Concord Athenæum ought to be celebrated in the town's newspaper. What shall we say but that it is good for us to club our newspapers and journals, that it will liberalize the village to make readers here, that it will give a new and handsome hospitality to our guests: and that we shall value small subscriptions more than large ones, for they always look sincere and affectionate.

(From E)

August.

The only poetic fact in the life of thousands and thousands is their death. No wonder they specify all the circumstances of the death of another person.

To give eminency to facts: to select facts, requires genius. Indigence of egotists.

Phi Beta Kappa. Nine cold hurrahs at Cambridge to Lord Ashburton. Pity they should lie so about their keen sensibility to cold hurrahs. Men of the world value truth in proportion to their ability. Of such, and especially of diplomatists, one has a right to [expect] wit and ingenuity to avoid the lie, if they must comply with the form. Elizabeth Hoar repeats Colonel Shattuck's toast to poor K — : "The orator of the day. His *subject* deserves the attention of every agriculturist." It does honor to Colonel Shattuck. I wish the great lords and diplomatists at Cambridge had only as much ingenuity and respect for truth. The speeches froze me to my place. At last Bancroft thawed the ice, and released us, and I inwardly thanked him.

Balzac has two merits, talent and Paris. The doctrine in which the world has acquiesced (has it not?) on this much agitated question of the Classic and Romantic is, that it is not a question of times, nor of forms, but of methods; that the Classic is creative and the Romantic is aggregative; that the Greek in the Christian

Germany would have built a Cathedral; and that the Romantic in our time builds a Parthenon Custom House.

We stopped at a farmhouse at Lincoln, and asked for milk, and when we came away I offered money, but this was wrong. We injure everybody with this money, both ourselves and the receivers. We owe men a great behavior, and knowing that we have half a dollar in our pocket, we skulk and idle and misbehave, and do not put ourselves on our courtesy and sentiment.

Never look at my book and perhaps it will be better worth looking at. My thought to-day was how rightly Swedenborg pictured each man with a sphere, for we use for moral qualities the word *great*, and really conceive of Socrates, Milton, or Goethe, as a large personality.

But this also occurred as the security of the institution of marriage against the Shelleys of the time, that we need in these twilights of the gods all the conventions of the most regulated life to crutch our lame and indigent loves. The least departure from the usage of marriage would bring too strong a tide against us for so weak a reed as modern love to withstand. Its frigidities, its ebbs already need all the protection and humoring they can get from the forms and manners.

(From J)

August 11.

Yes, they are all children, and when we speak of actual parties, that must be borne in mind.

Queenie says that, according to Edmund Hosmer, it was a piece of weak indulgence in the good God to make plums and peaches.

August 20.

Last night a walk to the river with Margaret, and saw the moon broken in the water, interrogating, interrogating. Thence followed the history of the surrounding minds. Margaret said she felt herself amidst Tendencies: did not regret life, nor accuse the imperfections of her own or their performance whilst these strong native Tendencies so appeared, and in the children of all of us will be ripened. I told her that I could not discern the least difference between the first experience and the latest in my own case. I had never been otherwise than indolent, never strained a muscle, and only saw a difference in the circumstance, not in the man; at first a circle of boys — my brothers at home, with aunt and cousins, or the schoolroom; all agreed that my verses were obscure nonsense; and now a larger public say the same thing, “obscure nonsense,” and yet both conceded that the boy had wit. A little more excitement now, but the fact identical, both in my consciousness and in my relations.

Margaret would beat with the beating heart of Nature; I feel that underneath the greatest life, though it were Jove’s or Jehovah’s, must lie an astonishment that embosoms both action and thought.

In talking with W. Ellery Channing on Greek mythology as it was believed at Athens, I could not help feeling how fast the key to such possibilities is lost, the key to the faith of men perishes with the faith. A thousand years hence it will seem less monstrous that those acute Greeks believed in the fables of Mercury and Pan, than that these learned and practical nations of modern Europe and America, these physicians, metaphysicians, mathematicians, critics, and merchants, believed this Jewish apologue of the poor Jewish boy, and how they contrived to attach that accidental history to the religious idea, and this famous dogma of the Triune God, etc., etc.

Nothing more facile, so long as the detachment is not made; nothing so wild and incredible the moment after that shall happen.

Lecturers. Bancroft, Giles, Mann, Rantoul, Longfellow, Theodore Parker, Doctor [S. G.] Howe, Doctor [Charles T.] Jackson, George B. Emerson.

(From E)

September 1.

A walk in the most wonderful sunset this afternoon with W. E. Channing. The sunset is very unlike anything that is underneath it. But it must always seem unreal, until it has figures that are equal to it. The sunset wanted men. But unutterable is all we know of Nature. How well we know certain winds, certain lights, certain aspects of the soil and the grove. Yet no words can begin to convey that which they express to us monthly and daily.

The reason why lunatics swear is because their exaggerated sensation requires an exaggerated speech. But Nature never swears, loves temperate expressions and sober colors, green grass, fawns and drabs, greys and blues and dark mixed; now and then a grim Acherontian fungus. Yet the sunset was vows of love of the angels. Swearing has gone out of vogue on the earth, because society, which means discriminating persons, rejects unmeasured speech. Oaths never go out of fashion, but are always beautiful and thrilling; but the sham of them, which is called profane swearing, is rightly voted a bore. Sham damns we do not like.

Results. Report of a Committee of One on the Subject of Nature. If this is the age of Criticism, let it be written greatly from a point of view that is at least Olympian or super-Olympian, and treats gods and men alike.... It must be roundly told the upper power that, though there is a landscape, it is not yet peopled; that Nature is not enjoyed or enjoyable until man finds his completion; that we have examined very carefully both sides of the Thing, and have

ascertained and do here declare that there is no Reconcilement; Want is always larger than Have, Idea than Fact. Consider also that our practical Pyrrhonism is increased by our observation that the most lamented circumstance is the source of new power, and that we owe our wisdom to our folly.

It is much to know that poetry has been written this very day, under this very roof, by your side....

We may well be slow of belief concerning Genius, since we give up all to it as soon as we know it. I pardon everything to it: everything is trifling before it; I will wait for it for years, and sit in contempt before the doors of that inexhaustible blessing.

You say, perhaps Nature will yet give me the joy of friendship. But our pleasures are in some proportion to our forces. I have so little vital force that I could not stand the dissipation of a flowing and friendly life; I should die of consumption in three months. But now I husband all my strength in this bachelor life I lead; no doubt shall be a well-preserved old gentleman.

September 4.

A few noble victims life shows us who do and suffer with temper and proportion; the rest are slight people, and shirk work, to use the common phrase. But every deed deepens the literature and exalts the art of the doer, and the soul doubles, triples, quadruples, and infinitely multiplies itself.

Marston's Tragedy, *The Patrician's Daughter*. When we have such a gift, let us read it and thank God. Undoubtedly it may have faults, but what a benefit to speak to my imagination and paint with electric pencil a new form, new forms on my vacant sky. This is refreshing to read, — written with so 'much simplicity and spirit; the character of Mordaunt very natural and familiar to English experience in the Cannings, Pulteneys, Burkes, Foxes: the Lady Mabel also well and easily conceived. Pity that the catastrophe should be wrought by a wholesale lie on the part of the Lady Lydia, which lovers can so easily pierce. It is a weak way of making a play whose crises ought, as in life, to grow out of the faults and the conditions of the parties, as in Goethe's *Tasso*. The play seems on all accounts but one, namely, the lapse of five years between two acts, to be eminently fit for representation. The "No" of Mordaunt is wonderful for the stage.

[Passages from “Experience,” on Nature and Books, and on optical illusion about persons, followed (*Essays*, Second Series, pp. 50 and 52).]

I remember that Mr. [Samuel] Ripley said to the young coxcomb from the South, “Fiddle, faddle,” in reply to all his brag. Pity that we do not know how to say Fiddle faddle to people who take our time and do not exercise our wit. Most men are dupes of the hour, dupes of the nearest object: they cannot put things in perspective; but the nearest is still the largest. They talk with inferiors and do not know it, do not know that they are talking down. As on a mountain, you must level your gun at another mountain and see if the shot run out of the barrel, to know that the summit is lower than yours. The eye cannot measure it.

The poor Irish Mary Corbet, whose five weeks’ infant died here three months ago, sends word to Lidian that “she cannot send back her bandbox (in which the child’s body was carried to Boston): she must please give it to her; and she cannot send back the little handkerchief (with which its head was bound up): she must please give it to her.”

Nathaniel Hawthorne’s reputation as a writer is a very pleasing fact, because his writing is not good for anything, and this is a tribute to the man.

Sam Ward says, “I like women, they are so finished.”

Edmund Hosmer’s suffrage on Sunday evening to Alcott was good, so qualified and so strong. I said to him, what is really Alcott’s distinction, that, rejoicing or desponding, this man always trusts his principle, never deserts it, never mistakes the convenient, customary way of doing the thing for the right and might, whilst all vulgar reformers, like these Community people, after sounding their sentimental trumpet, rely on the arm of money and the law. It is the effect of his nature, of his natural clearness of spiritual sight, which makes this confusion of thought impossible to him. I have a company who travel with me in the world, and one or other of whom I must still meet, whose office none can supply to me: Edward Stubler; my Methodist Tarbox; Wordsworth’s Pedlar; Mary Rotch; Alcott; Manzoni’s Fra Cristoforo; Swedenborg; Mrs. Black; and now Greaves, and his disciple Lane; supreme people who represent, with whatever defects, the Ethical Idea. Elizabeth Hoar, the true Elizabeth Hoar, that is, felt the element of self in her intellectual and in her devout friends; the former loved truth, but loved self in the truth; the latter would make sacrifices, but never

forgot their claims. Strange, all is strange. O Edith small, thyself strange, life is strange, and God the greatest strange and stranger in his universe.

The lady said that S — never forgot himself, he was affected, but his affectation was natural to him; also that the only thing she was afraid of was of being frightened. Mr. C — sold his Boston house, and went to live in the country, because he found he could not make a bow. It was a very sensible reason, and yet Charles's criticism on it was, that he should have raised his ceiling and made his rooms larger; because an awkward man in the area of the State House, or on the Common, is no longer awkward. Large space, high rooms, have the same exhilarating and liberating quality as great light. A dance in a half-lighted ballroom would be a sad affair, but make the light intense, and the spirits of the party all rise instantly. There are two choices for one who is unhappy in an evening party: one, to go no more into such companies, which is flight; the other, to frequent them until their law is wholly learned and they become indifferent, which is conquest. O fine victim, martyrchild! clowns and scullions are content with themselves, and thou art not.

Intellect always puts an interval between the subject and the object. Affection would blend the two. For weal or for woe, I clear myself from the thing I contemplate: I grieve, but am not a grief. I love, but am not a love.

Marriage in what is called the spiritual world is impossible, because of the inequality between every subject and every object....

Young S — went out tutor in the family travelling through Italy. It would have been so easy to have made his life joyful, — one human creature made happy; yet they contrived to make him feel that he was a servant, and poisoned every day, and he has come back with a fixed disgust at aristocracy. Too happy if he has. Too cheap the price he paid, if he has really attained to despise or to pity their joyless joys. But I doubt, I doubt.

I hate this sudden crystallization in my poets. A pleasing poem, but here is a rude expression, a feeble line, a wrong word. "I am sorry," returns the poet, "but it stands so written."

"But you can alter it," I say. "Not one letter," replies the hardened bard.

I question when I read Tennyson's *Ulysses*, whether there is taste in England to do justice to the poet; whether the riches of Dante's greatness would find an equal apprehension. Yet it seems feeble to deny it. The poet and the lover of poetry are born at one instant twins; and when Wordsworth wrote *Laodamia*, Landor found it out and celebrated it, and so did an Edinboro' critic....

We are dissipated with our fine reading, we have too many fine books, and as those who have had too much cake and candy long for a brown crust, so we like the *Albany Cultivator*,

(From N)

September.

There is reality, however, in our relations to our friend, is there not?

Yes, and I hail the grander lights and hints that proceed from these, as the worthiest fruits of our being, thus far.

But do not these show that the existence you so loved is not closed?

I have no presentiment of that.

Alas, my friend, you have no generosity; you cannot give yourself away. I see the law of all your friendships. It is a bargain. You tell your things, your friend tells his things, and as soon as the inventory is complete, you take your hats.

Do you see that kitten chasing so prettily her own tail? If you could see with her eyes, you would see her surrounded with hundreds of figures performing complex dramas....

How slowly, how slowly we learn that witchcraft and ghostcraft, palmistry and magic, and all the other so-called superstitions, which, with so much police, boastful skepticism, and scientific committees, we had finally dismissed to the moon as nonsense, are really no nonsense at all, but subtle and valid influences, always starting up, mowing, muttering in our path, and shading our day. The things are real, only they have shed their skin which with much insult we have gibbeted and buried. One person fastens an eye on us, and the very graves of the memory render up their dead....

It is with Literature as it is with the Faculty of Medicine. The poor man catches the disease and dies, nobody knows how; the rich man takes the same disease and dies also, but has the honor and the satisfaction of having the disease named by his physician and a council of physidans. It is a great matter to have the thing named.

Chemistry, Entomology, Conic Sections, Medicine, each science, each province of science, will come to satisfy all demands: the whole of poetry, of mythology, of ethics, of demonology, will be expressed by it: a new rhetoric, new methods of philosophy, perhaps new political parties, will celebrate the culmination of each one.

Just to fill the hour, that is happiness....

It pains me never that I cannot give you an accurate answer to the question, What is God? What is the operation we call Providence? and the like. There lies the answer: there it exists, present, omnipresent to you, to me....

I woke up and found the dear old world, wife, babe and mother, Concord and Boston, the dear old spiritual world, and even the dear old Devil not far off.

“Blind Love,” yes, Love lives in the stratum of the Relative and is blind to the Absolute. But Self is blind too, and not lovelily but odiously. As far as that element comes in, we *run on* about ourselves and never perceive that we have long lost the ear of our companion.

Transcendental Criticism. With this eternal demand for *more* which belongs to our modest constitutions, how can we be helped? The gods themselves could not help us, they are just as badly off themselves.

T. P. has beautiful fangs, and the whole amphitheatre delights to see him worry and tear his victim.

Rings and jewels are not gifts, but apologies for gifts. The only gift is a portion of thyself....

That were a right problem for a dramatist to solve; *given* a bandit, the strongest temptation and opportunity for violence or plunder, — how to bring off the man of wit by his wit only, exercised not immediately, but directly through speech. It is a problem perfectly easy to solve in action whenever the right Cæsar comes. He does not exert courage but wit. The Corsair has caught a Captain.

Sterling writes well of sculpture, and if I were rich, I would have my reception-room for my friends filled with statues or casts of all the gods, to preach serenity to me, and my friends. But it is vain to make a matter of conscience of calmness; a man will not become grand by accusing himself, but grandeur will come in where God wills, like a fine day.

T. sells me peat or wood or apples for more money than he sells the same to Hosmer, who can use certain test questions or examinations which I cannot apply. Well, do I not exclude T. also from the use of certain test questions and examinations in reference to other matters more important to his honor and

standing as a man than are his peat and apples to me?

The highest criticism should be written in poetry.

Goethe received four, Fichte five, and Richter seven louis d'ors a sheet for their best works. A louis = \$4.00.

I have a kind of promise to write, one of these days, a verse or two to the praise of my native city, which in common days we often rail at, yet which has great merits to usward. That, too, like every city, has certain virtues, as a museum of the arts. The parlors of private collectors; the Athenaeum Gallery; and the College; become the city of the City. Then a city has this praise, that, as the bell or band of music is heard outside, beyond the din of carts, so the beautiful in architecture, or in political and social institutions, endures: all else comes to nought. So that the antiquities and permanent things in each city are good and fine.

In London, Alcott saw Carlyle, Lane, O'Connell; Robert Owen, Heraud, Marston, Wright, Barham, Browning, Milnes, W. J. Fox, Harwood, Doctor Bowring, Doctor Elliotson, Morgan, Doherty, Barmby, George Thompson.

All persons are puzzles until at last we find in some word or act the key to the man, to the woman; straightway all their past words and actions lie in light before us.

Men are so gregarious that they have no solitary merits. They all — the reputed leaders and all — lean on some other, — and this superstitiously, and not from insight of his merit. They follow a fact, they follow success, and not skill. Therefore, as soon as the success stops, fails, and Mr. Jackson blunders in building Pemberton Square, they quit him; already they remember that long ago they suspected Mr. Jackson's judgment, and they transfer the repute of judgment to the next succeeder who has not yet blundered.

Vegetables, Plants, are the young of the Universe, the future men, but not yet ripe for that rank in Nature. Yet they are all handsome, and men, let them once be fifteen years old, are for the most part unsightly. The reason is that the men, though young, are already dissipated, but the maples and ferns are not. Yet, no doubt, when they come to it, they, too, will curse and swear. In the wood I heard the laughter of the crows.

Milnes brought Carlyle to the railway, and showed him the departing train. Carlyle looked at it and then said, "These are our poems, Milnes." Milnes ought to have answered, "Aye, and our histories, Carlyle."

But it is worth noticing how fast the poet can dispose of these formidable facts. One sees the Factory village and the Railway, and thinks of Wordsworth and what will be his dismay. Wordsworth has the sense to see that this also falls in, *un bete de plus*, with the known multitude of mechanical facts and that all Mechanics have not gained a grain's weight from the addition. The spiritual Fact alike remains Unalterable by many or by few particulars, as no mountain is of any appreciable height to break the curve of the sphere.

Men are great in their own despite. They achieve a certain greatness, but it was while they were toiling to achieve another conventional one. The boy at college apologizes for not learning the tutor's task, and tries to learn it, but stronger Nature gives him Otway and Massinger to read, or betrays him into a stroll to Mount Auburn in study hours. The poor boy, instead of thanking the gods and slighting the mathematical tutor, ducks before the functionary, and poisons his own fine pleasures by a perpetual penitence. Well, at least let that one never brag of the choice he made; as he might have well done, if he had known what he did when he was doing it.

Alcott, when he went to England, wished to carry with him miniatures of Elizabeth Peabody, of Margaret Fuller, and of me. — I remember once that A. thought that the head would soon put off from it the trunk, which would perish, whilst the brain would unfold a new and higher organization.

(From a loose sheet)

I am most of the time a very young child who does not pretend to oversee Nature and dictate its law. I play with it, like other infants, as my toy. I see sun and moon and river without asking their causes. I am pleased by the mysterious music of falling water or the rippling and washing against the shores, without knowing why. Yet, child as I am, I know that I may in any moment wake up to the sense of authority and deity herein. A seer, a prophet, passing by, will bring me to it; poetry will; nay, I shall think it in the austere woods and they will tremble and turn to dreams.

(From N)

Richter said, " In the great world I despise the men and their joyless joys, but I

esteem the women; in them alone can one investigate the spirit of the times.”

I think that in my house where there are no ears, no fine person should be so much wronged as to be asked to sing.

White Lies. It shall be the law of this Society that no member shall be reckoned a liar who is a sportsman, and indicates the wrong place when asked where he shot his partridge; or who is an angler, and misremembers where he took his trout; or who is an engineer, and misdirects his inquiring friends as to the best mill privilege; or who is a merchant, and forgets in what stock he proposes to invest; or who is an author, and being asked if he wrote an anonymous book, replies in the negative.

Ghost (under the floor). It shall not be the law.

[The account of Edward Everett, which occupies the following nine pages of the Journal, seems to have been written at this time. Mr. Emerson introduced almost all of it into a lecture delivered in the later years of his active life (perhaps 1867 and later) after Everett's death. This, called "Historic Notes of Life and Letters in New England," Mr. Cabot first published in the Riverside Edition of the Works, in the volume *Lectures and Biographical Sketches*, a year or two after Mr. Emerson died.

The opening passage of the journal entry, and one or two others that showed his young enthusiasm for Everett, also one or two not printed in the posthumous volume, are here given.]

Edward Everett. There was an influence on the young people from Everett's genius which was almost comparable to that of Pericles in Athens. That man had an inspiration that did not go beyond his head, but which made him the genius of elegance. He had a radiant beauty of person, of a classic style, a heavy, large eye, marble lids, which gave the impression of mass which the slightness of his form needed, sculptured lips, a voice of such rich tones, such precise and perfect utterance that, although slightly nasal, it was the most mellow and beautiful and correct of all the instruments of the time. The word that he spoke, in the manner in which he spoke it, became current and classical in New England.

Especially beautiful were his poetic quotations. He quoted Milton; more rarely Byron; and sometimes a verse from Watts, and with such sweet and perfect modulation that he seemed to give as much beauty as he borrowed, and what ever he had quoted will seldom be remembered by any who heard him

without inseparable association with his voice and genius. This eminently beautiful person was followed like an Apollo from church to church, wherever the fame that he would preach led, by all the most cultivated and intelligent youths with grateful admiration. His appearance in any pulpit lighted up all countenances with delight. The smallest anecdote of his behavior or conversation was eagerly caught and repeated, and every young scholar could repeat brilliant sentences from his sermons with mimicry; good or bad, of his voice.... The church was dismissed, but the bright image of that eloquent form followed the boy home to his bedchamber, and not a sentence was written in a theme, not a declamation attempted in the College Chapel, but showed the omnipresence of his genius to youthful heads. He thus raised the standard of taste in writing and speaking in New England.

Meantime all this was a pure triumph of Rhetoric. This man had neither intellectual nor moral principles to teach. He had no thoughts. It was early asked, when Massachusetts was full of his fame, what truths he had thrown into circulation, and how he had enriched the general mind, and agreed that only in graces of manner, only in a new perception of Grecian beauty, had he opened our eyes. It was early observed that he had no warm personal friends. Yet his genius made every youth his defender and boys filled their mouths with arguments to prove that the orator had a heart....

Everett's fame had the effect of giving a new lustre to the University — which it greatly needed. Students flocked thither from the South and the West, from the remote points of Georgia, Tennessee, Alabama, and Louisiana.

Well, this bright morning had a short continuance. Mr. Everett was soon attracted by the vulgar prizes of politics, and quit coldly the splendid career which opened before him (and which, not circumstances, but his own genius had made) for the road to Washington, where it is said he has had the usual fortune of flattery and mortification, but is wholly lost to any real and manly usefulness.

Everett had as lief his manuscript was in your pocket, he read so well.

In every conversation, even the highest, there is a certain trick, one may say, which may be soon learned by an acute person, and then that particular style be continued indefinitely. This is true of Very's, Alcott's, Lane's, and all such specialists or mystics; more true of these than of other classes.

Sam Ward said that men died to break up their styles; but Nature had no objection to Goethe's living, for he did not form one.

September 27 was a fine day, and Hawthorne and I set forth on a walk. We went first to the Factory where Mr. Damon makes Domett cloths, but his mills

were standing still, his houses empty. Nothing so small but comes to honor and has its shining moment somewhere; and so was it here with our little Assabet or North Branch; it was falling over the rocks into silver, and above was expanded into this tranquil lake. After looking about us a few moments, we took the road to Stow. The day was full of sunshine, and it was a luxury to walk in the midst of all this warm and colored light. The days of September are so rich that it seems natural to walk to the end of one's strength, and then fall prostrate, saturated with the fine floods, and cry, *Nunc dimittis me*. Fringed gentians, a thornbush with red fruit, wild apple trees whose fruit hung like berries, and grapevines were the decorations of the path. We scarcely encountered man or ; boy in our road nor saw any in the fields. This depopulation lasted all day. But the outlines of the landscape were so gentle that it seemed as if we were in a very cultivated country, and elegant persons must be living just over yonder hills. Three or four times, or oftener, we saw the entrance to their lordly park. But nothing in the farms or in the houses made this good. And it is to be considered that when any large brain is born in these towns, it is sent, at sixteen or twenty years, to Boston or New York, and the country is tilled only by the inferior class of the people, by the second crop or *rowan* of the Men. Hence all these shiftless poverty-struck pig-farms. In Europe, where society has an aristocratic structure, the land is full of men of the best stock, and the best culture, whose interest and pride it is to remain half of the year at least on their estates and to fill these with every convenience and ornament. Of course these make model-farms and model-architecture, and are a constant education to the eye and hand of the surrounding population.

Our walk had no incidents. It needed none, for we were in excellent spirits, had much conversation, for we were both old collectors who had never had opportunity before to show each other our cabinets, so that we could have filled with matter much longer days. We agreed that it needed a little dash of humor or extravagance in the traveller to give occasion to incident in his journey. Here we sober men, easily pleased, kept on the outside of the land and did not by so much as a request for a cup of milk creep into any farmhouse. If want of pence in our pocket or some vagary in our brain drove us into these "huts where poor men lie," to crave dinner or night's lodging, it would be so easy to break into some mesh of domestic romance, learn so much pathetic private history, perchance see the first blush mantle on the cheeks of the young girl when the mail stage came or did not come, or even get entangled ourselves in some thread of gold or grey. Then again the opportunities which the taverns once offered the traveller, of witnessing and even sharing in the joke and the politics of the teamster and farmers on the road, are now no more. The Temperance Society emptied the bar-

room. It is a cold place. Hawthorne tried to smoke a cigar, but I observed he was soon out on the piazza. After noon we reached Stow, and dined, and then continued our journey towards Harvard, making our day's walk, according to our best computation, about twenty miles. The last miles, however, we rode in a wagon, having been challenged by a friendly, fatherly gentleman, who knew my name, and my father's name and history, and who insisted on doing the honors of his town to us, and of us to his townsmen; for he fairly installed us at the tavern, introduced us to the Doctor, and to General — , and bespoke the landlord's best attention to our wants. We get the view of the Nashua River Valley from the top of Oak Hill, as we enter Harvard village. Next morning we began our walk at 6.30 o'clock for the Shaker Village, distant three and a half miles. Whilst the good Sisters were getting ready our breakfast, we had a conversation with Seth Blanchard and Cloutman of the Brethren, who gave an honest account, by yea and by nay, of their faith and practice. They were not stupid, like some whom I have seen of their Society, and not worldly like others. The conversation on both parts was frank enough; with the downright I will be downright, thought I, and Seth showed some humor. I doubt not we should have had our own way with them to a good extent (not quite after the manner of Hayraddin Maugrabin with the Monks of Liège) if we could have stayed twenty-four hours; although my powers of persuasion were crippled by a disgraceful barking cold, and Hawthorne inclined to play Jove more than Mercurius. After breakfast Cloutman showed us the farm, vineyard, orchard, barn, pressing-room, *etc.* The vineyard contained two noble arcades of grapes, both white and Isabella, full of fruit; the orchard, fine varieties of pears and peaches and apples.

They have fifteen hundred acres here, a tract of woodland in Ashburnham, and a sheep pasture somewhere else, enough to supply the wants of the two hundred souls in this family. They are in many ways an interesting Society, but at present have an additional importance as an experiment of Socialism which so falls in with the temper of the times. What improvement is made is made forever; this Capitalist is old and never dies, his subsistence was long ago secured, and he has gone on now for long scores of years in adding easily compound interests to his stock. Moreover, this settlement is of great value in the heart of the country as a model-farm, in the absence of that rural nobility we talked of yesterday. Here are improvements invented, or adopted from the other Shaker communities, which the neighboring farmers see and copy. From the Shaker Village we came to Littleton and thence to Acton, still in the same redundance of splendor. It was like a day of July, and from Acton we sauntered leisurely homeward, to finish the nineteen miles of our second day before four in the afternoon.

In a town which you enter for the first time at late sunset, the trees and houses look pictorial in the twilight, but you can never play tricks with old acquaintances.

There is something very agreeable in fatigue. I am willing to die, having had my swing of the fair day; and seven times in his life, I suppose, every man sings, Now, Lord, let thy servant depart.

Landor, though like other poets he has not been happy in love, has written admirable sentences on the passion. Perhaps, said Hawthorne, their disappointment taught them to write these things. Well, it is probable. One of Landor's sentences was worth a divorce; "Those to whom love is a secondary thing love more than those to whom it is a primary."

This thought appeared in all the Shakers said about admission of members to their Society, that people came and proved themselves; they soon showed what they were, and remained or departed, as the Spirit made manifest, alike *to themselves* and to the Society. No man should join them for a living; and no man should be turned off because he was poor or bedridden, but only for not being of them.

Cloutman told us their hospitality was costly, for they entertain without price all the friends of any member who visit them.

We talked of Scott. There is some greatness in defying posterity and writing for the hour, and so being a harper.

Piety, like chivalry, has no stationary exemplar, but is evanescent and receding like rainbows. You cannot find any specimen of a religious man now in your society; you hear the fame of one; you go far and find him; and he begins, "I had a friend in my youth," *etc.* Yet it seems as if nothing would make such good picture in national sketches as genuine Connecticut, if you could lay your hand on it.

At night the frogs were loud, but the eagle was silent in his cliff.

If in this last book of Wordsworth there be dulness, it is yet the dulness of a great and cultivated mind.

We have our culture, like Allston, from Europe, and are Europeans. Perhaps we must be content with this and thank God for Europe for a while yet, and there shall be no great Yankee, until, in the unfolding of our population and power, England kicks the beam, and English authors write to America; which must happen ere long.

I have not yet begun to regret much the omission to see any particular part of nature or art, but perhaps, as we live longer, we begin to compare more narrowly the chances of life with the things to be seen in it, and count the Niagaras we

have not visited. For me, not only Niagara, but the Prairie, and the Ohio and the Mississippi rivers are still only names. And yet, better see nothing beyond your village than to go coldly and hardly to work to see the Meccas of the mind. It were indeed an enlargement, a duplication of life, if, in fit company and with good reason, I can go to Italy; but Florence is not Florence if the visit is forced.

Avarice, ambition, almost all talents, are restless and vagrant; they go up to the cities; but Religion is a good rooter.

October 8.

The commercial relations of the world are so intimately drawn to London, that it seems as if every dollar in the world contributed to strengthen the English government.

It is ridiculous to quote solemnly what the young W. said in his sermon as decisive of his faith in this or that. These young preachers are but chipping birds, who chirp now on the bushes, now on the ground, but do not mean anything by their chirping. He must be very green who would go to infer anything in respect to their character from what they say.

What does the extraordinary taste for Indian names which now appear on every Hotel and every Omnibus, betoken?

Edward Washburn told me that at Andover they sell shelvesful of Coleridge's *Aids to Reflection* in a year.

Queenie says that Edie spends half her time in looking innocent, and the other half in looking dignified. Nelly, asleep in her bed, had the air and attitude of one who rides a horse of Night.

Edmund Hosmer thinks there is a good deal of unnecessary labor spent to feed the animals, — especially the pig and horse. Many a farmer is but a horse's horse or a pig's pig.

At the Shakers' house in Harvard I found a spirit-level on the window-seat, a very good emblem for the Society; but, unfortunately, neither the table nor the shelf nor the window-seat were plumb.

It appears that there are people, both men and women, who transgress every rule of prudence, and yet have unexceptional health and bring much to pass; and it seems just as well, if one can get on a good exception, to live off the road as to keep the highway.

The sons of great men should be great; if they are little, it is because they eat too much pound cake, which is an accident; or, because their fathers married dolls.

“The spring of her economy fed the fountain of her bounty.”

October 12.

The merit of a poem or tragedy is a matter of experience. An intelligent youth can find little wonderful in the Greeks or Romans. These tragedies, these poems, are cold and tame. Nature and all the events passing in the street are more to him, he says, than the stark, unchangeable crisis of the *Iliad* or the *Antigone*; and as for thoughts, his own thoughts are better and are more numerous. So says one, so say all. Presently, each of them tries his hand at expressing his thought; — but there is a certain stiffness, or a certain extravagance in it. All try, and all fail, each from some peculiar and different defect. The whole age of authors tries; many ages try; and in the millions and millions of experiments these confessedly tame and stark-poems of the Ancient are still the best. It seems to be certain that they will go on discontenting yet excelling the intelligent youths of the generations to come.

But always they will find their admirers, not in the creative and enthusiastic few, who will always feel their ideal inferiority, but in the elegant, cultivated and conservative class.

You praise Homer and disesteem the art that makes the tragedy. To me it seems higher — the unpopular and austere muse that casts human life into a high tragedy, *Prometheusy* *Ædipus*, *Hamlet* (midway between the Epic and the Ode) — than the art of the epic poet, which condescends more to common humanity, and approaches the ballad. Man is nine parts fool for one part wise, and therefore Homer and Chaucer more read than *Antigone*, *Hamlet*, or *Comus*.

Making Money. Men think there is some magic about this....

The worst times that ever fell were good times to somebody. There is always some one in the gap.

He is shallow who rails at men and their contrivances and does not see Divinity behind all their institutions and all their fetiches, even behind such as are odious and paltry; they are documents of beauty also. The practice of Prayer is not philosophical, — there is somewhat of absurd and ridiculous in it to the eye of science; it is juvenile, and, like plays of children, though nonsense, yet very useful and educative nonsense. Well, so with all our things....

The prosperity of Boston is an unexpected consequence of Steam - communication. The frightful expenses of steam make the greater neighborhood of Boston to Europe a circumstance of commanding importance, — and the ports of Havre and Liverpool are two days nearer to Boston than to New York. This superiority for the steam-post added to the contemporaneous opening of its great lines of railroad, like iron rivers, which already are making it the dépôt for flour from Western New York, Michigan, Illinois, promise a great prosperity to that city.

I woke with a regret that I had made a bargain at B. and had not rather thrown myself wholly on their sense of justice. The Olympian must be Olympian in carriage and deeds wherever he can be symmetrically, not rudely, — and he must dare a little, and try Olympian experiments. Well, courage, and do better again.

A man cannot free himself by any self-denying ordinances, neither by water nor potatoes nor by violent passivities, by refusing to swear, refusing to pay taxes, by going to jail, or by taking another man's crop or squatting on his land, — by none of these ways can he free him self; no, nor by paying his debts with money; only by obedience to his own genius; only by the freest activity in the way constitutional to him, does an angel seem to arise and lead him by the hand out of all wards of the prison.

Pecunia est alter Sanguis.

The seamstress' wax,
The woodman's axe, —
These pay the tax.

I think Doctor Channing was intellectual by dint of his fine moral sentiment, and not primarily.... His paper on Milton contained the true doctrine of Inspiration; "Milton observes higher laws than he transgresses."

When the friend has newly died, the survivor has not yet grief, but the expectation of grief. He has not long enough been deprived of his society to feel yet the want of it. He is surprised, and is now under a certain intellectual excitement, being occupied and in a manner amused by the novelty of the event, and is exploring his changed condition. This defends him from sorrow. It is not until the funeral procession has departed from his doors, and the mourners have all returned to their ordinary pursuits, and forgotten the deceased, that the grief of the friend begins. In the midst of his work, in the midst of his leisure, in his thoughts which are now uncommunicated, in his successes which are now in vain, in his hopes which now are quickly checked and run low, he sees with bitterness how poor he is. As it is with the mourner, so it is with the man of Virtue in respect to the practice of virtue. The evil practice of the country and the time is exposed by some preacher of righteousness, and after some time the land is filled with the noise of the reform. Men congratulate themselves on the great evil they have escaped and on the signal progress of society. But it is not until after this tumult is over, and all have, one after another, come in to the new practice, and the reaction has occurred, and great numbers are disgusted and have gone back again, not until then does the true reformer, the noble man, begin to find his virtue and advantage. Through the clamor he has said nothing,

—— he embraced the right which was shown, at once and forever. Now society is back again where it was before, but he has added this beauty to his life.

Le Peau d'Ane. You can do two things at a time; and when you have got your pockets full of chestnuts, and say I have lost my half-hour, behold you have got something besides, for the tops of the Silver Mountains of the White Island loomed up whilst you stood under the tree, and glittered for an instant; therefore there is no *peau de chagrin*.

Life. Everything good, we say, is on the highway. A *virtuoso* hunts up with great pains a landscape of Guercino, a crayon sketch of Salvator, but the Transfiguration, The Last Judgment, The Communion, are on the walls of the Vatican where every footman may see them without price. You have got for five hundredpounds an autograph receipt of Shakspeare; but for nothing a schoolboy can read *Hamlet*, and, if he has eyes, can detect secrets yet unpublished and of highest concernment therein. I think I will never read any but the commonest of all books: the Bible, Shakspeare, Milton, Dante, Homer,

Somebody cried to him out of the walnut woods, "Ho! Ho! Be sure not to get

imposed upon. Ho! Ho!” And Arthur rubbed his eyes, looked round him, and bethought him that he would not again. But at night he found the whole journey was a blunder, and he was a dupe. The next morning when he woke, he heard his old neighbor calling to the cattle in the yard under his window, and when Arthur looked out, the man said, “Ho! Ho! Be sure you don’t get imposed upon. Ho! Ho!” Forewarned, thought Arthur once more.

The sannup and the squaw do not get drunk at the same time. They take turns in keeping sober, and husband and wife should never be low-spirited at the same time, but each should be able to cheer the other.

We learn with joy and wonder this new and flattering art of language, deceived by the exhilaration which accompanies the attainment of each new word. We fancy we gain somewhat. We gain nothing. It seemed to men that words come nearer to the thing; described the fact; were the fact. They learn later that they only suggest it. It is an operose, circuitous way of putting us in mind of the thing, — of flagellating our attention. But this was slowly discovered. With what good faith these old books of barbarous men record the genesis of the world. Their best attempts to narrate how it is that star and earth and man exist, run out into some gigantic mythology, which, when it is ended, leaves the beautiful principal facts where they were, and the stupid gazing fabulist just as far from them as at first. Garrulity is our religion and philosophy. They wonder and are angry that some persons slight their books and prefer the thing itself. But with all progress this happens, that speech becomes less, and finally ceases in a noble silence.

I, oh, I am only here to see. Droll privilege of Spectatorship that we all feel; I have an unquestioning presumption, on hearing that a good man is coming by, that this man is true, consistent, and his conscience greatly more faithful and effective than mine. And unluckily he has the same feeling respecting me and others, that not he, but I and they, are the responsible persons.

In our parties there is no great difference: the Democratic Party is not more human than the

Whig. I think the leaders, in my little experience, to be worse men than the Whig leaders. I think their democracy no more principled than the conservatism; that it is only a little worse Whiggism. They have no higher objects. To vote at all for either party is Whiggism, and it is only a little more to vote for those whose bias is conservatism. I have many points of sympathy with the Whigs in

these “ dregs of Romulus,” and I cannot for a moment permit these profligate Tammany Hall and *Morning Post* adventurers to represent the cause of humanity and love.

It is odious that our fine geniuses should all have this imperfection, that they cannot do anything useful....

Cheerfulness is so much the order of nature that the superabundant glee of a child lying on its back and not yet strong enough to get up or to sit up, yet cooing, warbling, laughing, screaming with joy, is an image of independence which makes power no part of independence. Queenie looks at Edie kicking up both feet into the air, and thinks that Edie says “the world was made on purpose to carry round the little baby; and the world goes round the sun only to bring tittyttime and creeping - on - the - floor - time to the Baby.”

Ogden respected nothing in — so much as this tenacious trick of asking at breakfast and on’Change, at work and at bedtime, between glasses of wine or drops taken for fever, questions touching God and duty, the salvation of the soul. The Devil take you and your soul! said Ogden; but on second thought nothing seemed to him that he had met within Marseilles more respectable than this determined curiosity and thoughtfulness in a being in so many ways inferior, in one so superior.

And really and truly, — so ought a person to end, — we cannot spare any the coarsest muniment of virtue, and the purest sense of justice that lives in any human breast needs a law founded on force as index and remembrancer.

Margaret [Fuller] described E. as hobgoblin nature and full of indirections. But he is a good vagabond and knows how to take a walk. The gipsy talent is inestimable in the country, and so rare. In a woman it would be bewitching. Margaret Fuller has not a particle, and only the possibility. And yet this is a relative talent, and to each there doubtless exists a gipsy-maker. I told Hawthorne yesterday that I think every young man at some time inclines to make the experiment of a dare-God and dare-devil originality like that of Rabelais. He would jump on the top of the nearest fence and crow. He makes the experiment, but it proves like the flight of pig-lead into the air, which cannot cope with the poorest hen. Irresistible custom brings him plump down, and he finds himself, instead of odes, writing gazettes and leases. Yet there is imitation and model, or suggestion, to the very archangels, if we knew their history, and if we knew Rabelais’s reading we should see the rill of the Rabelais river. Yet his hold of his place in Parnassus is as firm as Homer’s. A jester, but his is the jest

of the world, and not of Touchstone or Clown or Harlequin. His wit is universal, not accidental, and the anecdotes of the time, which made the first butt of the satire and which are lost, are of no importance, as the wit transcends any particular mark, and pierces to permanent relations and interests. His joke will fit any town or community of men.

The style at once decides the high quality of the man. It flows like the river Amazon, so rich, so plentiful, so transparent, and with such long reaches, that longanimity or longsightedness which belongs to the Platos. No sand without lime, no short, chippy, indigent epigrammatist or proverbialist with docked sentences, but an exhaustless affluence.

It is only a young man who supposes there is anything new in Wall Street. The merchant who figures there, so much to his own satisfaction and to the admiration or fear or hatred of the younger or weaker competitors, is a very old business. You shall find him, his way, that is, of thinking concerning the world and men and property and eating and drinking and marriage and education and religion and government, — the whole concatenation of his opinions, the very shade of their color, the same laughter, the same knowingness, the same unbelief, and the same ability and taste, in Rabelais and Aristophanes. Panurge was good Wall Street. Pyrrhonism and Transcendentalism are just as old; and I am persuaded that by and by we shall find them in the chemical element, that excess of oxygen makes the sinner, and of hydrogen the saint.

“My evening visitors,” said that excellent Professor Fortinbras, “if they cannot see the clock should find the time in my face. As soon as it is nine, I begin to curse them with internal execrations that are minute-guns.” And yet, he added, “The devil take half-hospitalities, this self-protecting civility whose invitations to dinner are determined exclusions from the heart of the inviter, as if he said, ‘ I invite you to eat, because I will not converse with you.’ If he dared only say it, that exception would be hospitality of angels, an admission to the thought of his heart.”

Mary Rotch inclined to speak of the spirit negatively and instead of calling it a light, “an oracle,” a “leading,” she said, “When she would do that she should not, she found an objection.”

Sad the swiftness with which life culminates and the humility of the expectations of the greatest part of men....

In the Indian summers, of which we have eight or ten every year, you can almost see the Indians under the trees in the wood. These are the reconciling days which come to graduate the autumn into winter, and to comfort us after the first attacks of the cold. Soothsayers, prediction as well as memory, they look over December and January into the crepuscular light of March and April.

This feeling I have respecting Homer and Greek, that in this great, empty continent of ours, stretching enormous almost from pole to pole, with thousands of long rivers and thousands of ranges of mountains, the rare scholar, who, under a farmhouse roof, reads Homer and the Tragedies, adorns the land. He begins to fill it with wit, to counterbalance the enormous disproportion of the unquickened earth. He who first reads Homer in America is its Cadmus and Numa, and a subtle but unlimited benefactor.

Rabelais is not to be skipped in literary history, as he is the source of so much proverb, story, and joke which are derived from him into all modern books in all languages. He is the Joe Miller of modern literature.

Thou shalt read Homer, Æschylus, Sophocles, Euripides, Aristophanes, Plato, Proclus, Plotinus, Jamblichus, Porphyry, Aristotle, Virgil, Plutarch, Apuleius, Chaucer, Dante, Rabelais, Montaigne, Cervantes, Shakspeare, Jonson, Ford, Chapman, Beaumont and Fletcher, Bacon, Marvell, More, Milton, Molière, Swedenborg, Goethe.

Every spinner is not a spider. Society — what a delicate result! No matter how good the associates, the society is sure to spoil, if the least overdone,... Do not let us meet to argue; let us meet to rest. Let us dispose quite unceremoniously of these obstreperous selves and of their vain talents, and dwell, for a little, in the great Peace. Self-respect and brotherly love seem equally to demand silence.

You shall have joy, or you shall have power, said God; you shall not have both.

Books. Theophrastus said “that the most illiterate were able to speak in the presence of the most elegant persons, while they spake nothing but truth and reason.”

Every man writes after a trick, and you need not read many sentences to learn his whole trick. Richter is a perpetual exaggeration and I get nervous.

October is come, and the harvest home, and the need that the journalist should make his indexes for the winter's preelections. Let us consider....

Our fine cousin reminded us of a fierce terrier who conceives it a duty for a dog of honor to bark at every passer-by, whether poet or reformer, and do the honors of the house by barking him out of sight.

Men are delicate ware to bring across the sea, more delicate than Sèvres porcelain and glass, or than tropical fruit, for the least non-reception of them in the thought and heart of those to whom they come makes cruelty, futility, and confusion. The thought that at once occurred when the strangers came was, Have you been victimized in being brought hither? Yea or nay? Or, prior to that, answer me this, Are you victimizable? Then, Will you waste my time? Or, Are you afraid I shall waste yours? If so, we shall agree like lovers.

(From E)

October 19.

To his Aunt Mary. Nothing has occurred to interest us so much as Doctor Channing's departure, and perhaps it is saddest that this should interest us no more. Our broad country has few men; none that one would die for; worse, none that one could live for. If the great God shined so near in the breast that we could not look aside to other manifestations, such defamation of our Channings and Websters would be joy and praise; but if we are neither pious nor admirers of men — I wish you would write me what you think, after so long a perspective as his good days have afforded, of your old preacher. For a sick man, he has managed to shame many sound ones, and seems to have made the most of his time, and was bright to the last month and week. A most respectable life; and deserves the more praise that there is so much merely external, and a sort of creature of society, in it; — that sort of merit of which praise is the legitimate fee. He seems sometimes as the sublime of calculation, as the nearest that mechanism could get to the flowing of genius. His later years — perhaps his earlier — have been adorned by a series of sacrifices.... He has been, whilst he lived, the Star of the American Church, and has left no successor in the pulpit.... The sternest Judges of the Dead, who shall consider our wants and his austere self-application to them, and his fidelity to his lights, will absolve this Soul as it passes, and say, This man has done well. Perhaps I think much better things of him too. His *Milton* and *Napoleon* were excellent for the time (the want of drill

and thorough breeding as a writer from which he suffered, being considered), and will be great ornaments of his biography.

We are very ungrateful, but we do not willingly give the name of poet to any the rarest talents, or industry and skill in metre. Here is Tennyson, a man of subtle and progressive mind, a perfect music-box for all manner of delicate tones and rhythms, to whom the language seems plastic, so superior and forceful in his thought. — But is he a poet? We read Burns and said, He is a poet. We read Tennyson and do him the indignity of asking the question, Is he poet? I feel in him the misfortune of the time. He is a strict contemporary, not Eternal Man. He does not stand out of our low limitations like a Chimborazo under the line, running up from the torrid base through all the climates of the globe on its high and mottled sides with rings of the herbage of every latitude, but in him as in the authors of *Paracelsus*, and *Festus*, I hear through all the varied music the native tones of an ordinary, to make my meaning plainer, say, of a vulgar man. They are men of talents who sing, but they are not the children of music. The particular which under this generality deserves most notice is this (and it is a black ingratitude to receive it so), that the argument of the poem is secondary, the finish of the verses primary. It is the splendor of the versification that draws me to the sense, and not the reverse. Who that has read the “Ode to Memory,” the “Poet,” the “Confessions of a Sensitive Mind,” the “Two Voices,” remembers the scope of the poem when it is named, and does not rather call to mind some beautiful lines; or, when reading it, does not need some effort of attention to find the thought of the writer, which is also rather poor and mean? Even in “Locksley Hall,” which is in a prouder tone, I have to keep a sharp lookout for the thought, or it will desert me. It is the merit of a poet to be unanalyzable. We cannot sever his word and thought. We listen because we must, and become aware of a crowd of particular merits, after we have been thoroughly commanded and elevated. I should not go to these books for a total diversion, and the stimulus of thought, as I should go to the Catskills or the Sea, or to Homer, Chaucer, or Shakspeare.

To the makers of artificial flowers, we say

“the better, the worse.” The best verse-maker, not inspired, is accountable for the sentiment and spirit of his piece; it never exceeds his own dimensions. But the inspired writer, let his verse be never so frivolous in its subject, or treatment, — a mere catch or street verse, — is yet not accountable for the piece, but it came as if out of a spiracle of the great animal world. Therefore, these little pieces about owls and autumn gardens and the sea are not tinged with London

philosophy, which makes all the best pieces “disconsolate preachers,” but are quite independent of Mr. Alfred Tennyson, and are natural.

A poor man had an insufficient stove which it took him a great part of the winter to tend: he was up early to make the fire and very careful to keep it from going out. He interrupted his work at all hours of the day to feed it: he kept it late into the night, that the chamber walls need not get hopelessly cold. But it never warmed the room, he shivered over it, hoping it would be better, but he lost a great deal of time and comfort.

Once Latin and Greek had a strict relation to all the science and culture there was in Europe, and the mathematics had a momentary importance at some era of activity in physical science. These things became stereotyped as *Education*.

Life is so much greater than thought, that when we talk on an affair of grave personal interest with one with whom hitherto we have had only intellectual discourse, we use lower tones, much less oratory, but we come much nearer and are quickly acquainted.

(From N)

October 26.

Boston is not quite a mean place, since in walking yesterday in the street I met George Bancroft, Horatio Greenough, Sampson Reed, Sam Ward, Theodore Parker, George Bradford, and had a little talk with each of them.

I doubt if I recorded what pleased me so well, when Jones Very related it, years ago, that at the McLean Asylum the patients severally thanked him when he came away, and told him that he had been of great service to them.

The strangers have brought with them a complete library of the mystical writers, and the first feeling I have in looking at them is, I am too old for so many books. These are for younger men, and what fuel, what food for an open youth is here! Then comes the suggestion of our old plan of the University, but these men, though excellent, are none of them gifted for leaders. They are admirable instruments for a master’s hand, if some instituting Pythagoras, some marshalling Mirabeau, some royal Alfred were here; he could not have better professors than Alcott and Lane and Wright. But they are too desultory, ignorant, imperfect, and whimsical to be trusted for any progress, — excellent

springs, worthless regulators. Alcott is a singular person, a natural Levite, a priest forever after the order of Melchizedek, whom all good persons would readily combine, one would say, to maintain as a priest by voluntary contribution to live in his own cottage, literary, spiritual, and choosing his own methods of teaching and action. But for a founder of a family or institution, I would as soon exert myself to collect money for a madman.

Read Cornelius Agrippa this morning on the Vanity of Arts and Sciences; another specimen of that scribaciousness which distinguishes the immense readers of his time. Robert Burton is the head of the class.... One cannot afford to read for a few sentences. He will learn more by praying. They are good to read... for suggestion, I use them much for that. Plato or Shakspeare are not suggestive. Their method is so high and fine, that they take too much possession of us.

The communities will never have men in them, but only halves and quarters. They require a sacrifice of what cannot be sacrificed without detriment. The Community must always be ideal....

Men talk about ideas all the time, not persons; they name persons, but it is only illustratively, they are really pursuing thoughts — the men they speak of are like metaphors which will not bear to be too hard driven — will not go on all fours, as we say. Thus they praise the farmer's life, but it is only to express their sense of some wrong in the merchants: praise the farmers a little more, you shall find they do not like it. A man is a partiality.

To-day I think the common people very right, and literary justice to be certain. These London Newspapers are sure to be just to each new book. Books full of matter they accept; for the matter is like the atmosphere or bread, and small thanks to the author of the book. But other books of thought, of poetry, of taste, in which the author mainly appears, they readily damn, if they are not admirable; and if they are not admirable, such books are damnable. But the people — no thanks to them — are always nearly right, have a low sort of right, that of common sense and instinct; and the man of talent and transcendent ingenuity is wrong.

“Waste not thy gifts
In profitless waiting for the gods' descent.”

“Would God translate me to his throne, believe
That I should only listen to his words

To further my own aims.”

Paracelsus is written for a natural history of a scholar, who, following his ambition through great successes, at last finds himself arrived at being a quack. He is too proud for this, very impatient of quackery, and tells his friend that he cannot afford to spare the luxury of being sincere to one friend, so unbosoms himself to him and in all scorn and bitterness depicts the quackery and the barrenness of his results and the despair into which he seems sinking. And here the Poet leaves him, a disease without a remedy. The laws of disease are as beautiful as the laws of health, say the physicians, and the poet is of that mind, and so contents himself with painting with great accuracy and eloquence the symptoms. But the poem is withering, the wolfish hunger for knowledge for its own sake.

Lane and Wright, our friends, have brought with them a thousand volumes, making, no doubt, one of the best mystical libraries in the world, and twelve manuscript volumes of J. P. Greaves, and his head in a plaster cast; and with these professions they think they have brought England with them; that the England they have left behind is a congregation of nothings, spiritless, and therefore not to be taxed or starved or whipped into revolution.

Could they not die? or succeed? or help themselves? or draw others? in any manner, I care not how, could they not be disposed of, and cease to hang there in the horizon an unsettled appearance, too great to be neglected, and not great enough to be of any aid or comfort to this great craving humanity?

Few strokes and much color: they draw a lion, and then a lion, and then a small red lion! there is a fact in the mind of the writer, but so near to the known facts in other minds that he does not venture to say it quite simply lest it should not prove worth saying, but partly conceals it in rich dress and figures.

Yet each near fact, like these which Paracelsus celebrates and which George Bradford bemoans, the wolfish hunger for knowledge which still leaves us hungry, and the defaced and degraded condition of the scholar, as if his heart and bowels had been drawn out, deserves nearest study, for this way of seeing it in men, in

Carlyle, or whatever dried and so-called dead scholar, is only the announcement of the shortcomings of the Universe. Nature itself has not been able, up to this moment, to drive her tendencies farther: and the Bulletin or

Gazette in which always she announces her news is a man. So Carlyle, Browning, Bradford, must represent the Court of God up to the latest dates.

We do not care for the topic, but for the speaker. Mr. Webster, or Mr. Allston, may give me his opinions on what he will, I shall learn his philosophy; for really every point is equidistant from the centre, whether it be beets, rutabaga, or the Gnostic sect.

The material is nothing; proportion is all.

Fourier our Paracelsus.

Oh, if they could take a second step, and a third! The reformer is so confident, that all are erect whilst he puts the finger on your special abuse, and tells you your great want in America. I tell him, yea, but not in America only, but in the Universe ever since it was known, just this defect has appeared. But when he has anatomized the evil, he will be called out of the room, or have got something else in his head. Remedied it never will be. But Charles Lane gives a very good account of his conversation with Brownson, who would drive him to an argument. He took his paper and pencil out of his pocket, and asked Brownson to give him the names of the profoundest men in America. Brownson stopped, and gave him one, and then another, and then his own for a third. Brownson never will stop and listen, neither in conversation, but what is more, not in solitude.

Men of aim must always rule the aimless. And yet there will always be singing-birds.

Union. Many voices call for it, Fourier, Owen, Alcott, Channing. And its effect will be magical. That is it which shall renovate institutions and destroy drudgery. But not in the way these men think, in none of their ways. But only in a method that combines union with isolation: silent union, actual separateness; ideal union, actual independence.

If a man will kick a fact out of the window, when he comes back he finds it again in the chimney corner.

Time respects only what he has himself made.

The Englishmen remarked that the greatest interior advantage which they observed in our Community over theirs was in the Women. In England the

women were quite obtuse to any liberal thought; whilst here they are intelligent and ready.

Henry Thoreau made, last night, the fine remark that, as long as a man stands in his own way, everything seems to be in his way, governments, society, and even the sun and moon and stars, as astrology may testify.

“T is a pity that we should fail in our ambition to live well, since, I suppose, all considerate persons must agree that, although there is selfishness and frivolity, yet the general purpose in the great number of people is fidelity... Each of us, too, has at home in the shape of woman (who is naturally good) a directing conscience to hold him in the right. And yet we do no better; yet we get on so little way; it seems as if there must be mountains of difficulty to lift.

November 11.

The selfish man suffers more from his selfishness than he from whom that selfishness withholds some important benefit....

To-day I have the feeling, to a degree not experienced by me before, that discussions, like that of yesterday and many the like in which I have participated, invade and injure me. I often have felt emptiness and restlessness to a sort of hatred of the human race after such prating by me and my fellows, but, never so seriously as now, that absence from them is better for me than the taking an active part in them.

You may associate on what grounds you like, for economy, or for good neighborhood, for a school, or for whatever reason, only do not say that the Divine Spirit enjoins it. The Spirit detaches you from all associations, and makes you, to your own astonishment, secretly a member of the Universal Association, but it descends to no specialties, draws up no Articles of a Society, but leaves you just as you were for that matter, to be guided by your particular convenience and circumstance whether to join with others, or whether to go alone.

It seems to be true that our New England population was settled by the most religious and ideal of the Puritans of England. It is natural enough that we should be more ideal than old England.

It is taking a great liberty with a man to offer to lend him a book, as if he also

had not access to that truth to which the bookmaker had access. Each of the books, if I read, invades me, displaces me; the law of it is, that it should be first, that I should give way to it; I, who have no right to give way, and, if I would be tranquil and divine again, I must dismiss the book.

And yet I expect a great man to be a good reader, or in proportion to the spontaneous power should be the assimilating power.

Every book serves us at last only by adding some one word to our vocabulary, or perhaps two or three. And perhaps that word shall not be in the volume, or shall only be the author's name. And yet there are books of no vulgar origin, but the work and the proof of faculties so comprehensive, so nearly equal to the universe which they paint, that although one shuts them also with meaner ones, yet he says with a sigh the while, This were to be read in long thousands of years by some stream in Paradise.

Do not gloze and prate and mystify. Here is our dear, grand Alcott says, You shall dig in my field for a day and I will give you a dollar when it is done, and it shall not be a business transaction! It makes me sick. Whilst money is the measure *really* adopted by us all as the most convenient measure of all material values, let us not affectedly disuse the name, and mystify ourselves and others; let us not "say no, and take it." We may very well and honestly have theoretical and practical objections to it; if they are fatal to the use of money and barter, let us disuse them; if they are less grave than the inconvenience of abolishing traffic, let us not pretend to have done with it, whilst we eat and drink and wear and breathe it.

Do not be too timid and squeamish about your actions. All life is an experiment. The more experiments you make the better. What if they are a little coarse, and you may get your coat soiled or torn? What if you do fail, and get fairly rolled in the dirt once or twice? Up again, you shall never be so afraid of a tumble. This matter of the lectures, for instance. The engagement drives your thoughts and studies to a head, and enables you to do somewhat not otherwise practicable; that is the action. Then there is the reaction; for when you bring your discourse to your auditory, it shows differently. You have more power than you had thought of, or less. The thing fits, or does not fit; is good or detestable.

It is a peculiar feature of New England that young farmers and mechanics who work all summer on the soil, or in a shop, take a school in the winter months. Mr. Fay, the pump-maker in this town, goes to Marlborough this winter

for that purpose; young Wheeler and Wood do the same thing.

Edmund Hosmer was willing to sell his farm five years ago for \$3800 and go to the West. He found and still finds that the Irish, of which there are two hundred in this town, are underselling him in labor, and he does not see how he and his boys can do those things which only he is willing to do; for, go to market he will not, nor shall his boys with his consent do any of those things for which high wages are paid, as, for example, take any shop, or the office of foreman or agent in any corporation wherein there seems to be a premium paid for faculty, as if it were paid for the faculty of cheating. He does not see how he and his children are to prosper here, and the only way for them is to run, the Caucasian before the Irishman.

I call the terror of starving, Skepticism, and say that I do not believe that I can be put in any condition in which I cannot honestly maintain myself, and honestly be rich, that is, not be poor. It is in vain that you put to me any case of misfortune or calamity — the extremest, the Manchester weaver, the Carolina slave; I doubt not that in the history of the individual is always an account of his condition, and he knows himself to be party to his present estate. Put me in his condition, and I should see its outlets and reliefs, though now I see them not. The main and capital remedy of the religious sentiment and all the abundance of its counsels for his special distresses, it were atheism to doubt. But do not require of me, sitting out here, to say what he, within there, ought to do. I can never meddle with other people's facts, I have enough of my own. But this one thing I know, that, if I do not clear myself, I am in fault, and that my condition is matched, point for point, with every other man's. I can only dispose of my own facts.

Last night Henry Thoreau read me verses which pleased, if not by beauty of particular lines, yet by the honest truth, and by the length of flight and strength of wing; for most of our poets are only writers of lines or of epigrams. These of Henry's at least have rude strength, and we do not come to the bottom of the mine. Their fault is, that the gold does not yet flow pure, but is drossy and crude. The thyme and marjoram are not yet made into honey; the assimilation is imperfect. It seems as if the poetry was all written before time was.... But it is a great pleasure to have poetry of the second degree also, and mass here, as in other instances, is some compensation for superior quality, for I find myself stimulated and rejoiced like one who should see a cargo of sea-shells discharged on the wharf, whole boxes and crates of conchs, *cypræas*, cones, *neritas*, *cardiums*, *murexes*, though there should be no pearl-oyster nor one shell of great rarity and value among them.

Time is the little grey man who takes out of his breast-pocket first a pocketbook, then a Dollond telescope, then a Turkey carpet, then four saddled and bridled nags and a sumptuous canvas tent. We are accustomed to chemistry and it does not surprise us. But chemistry is but a name for changes and developments as wonderful as those of this Breast-Pocket.

I was a little chubby boy trundling a hoop in Chauncy Place, and spouting poetry from Scott and Campbell at the Latin School. But Time, the little grey man, has taken out of his vest-pocket a great, awkward house (in a corner of which I sit down and write of him), some acres of land, several full-grown and several very young persons, and seated them close beside me; then he has taken that chubbiness and that hoop quite away (to be sure he has left the declamation and the poetry), and here left a long, lean person threatening to be a little grey man, like himself.

Religion has failed! Yes, the religion of another man has failed to save me. But it has saved him. We speak of the Past with pity and reprobation, but through the enormities, evils, and temptations of the past, saints and heroes slipped into heaven. There is no spot in Europe but has been a battle-field; there is no religion, no church, no sect, no year of history, but has served men to rise by, to scale the walls of heaven, and enter into the banquets of angels. Our fathers are saved. The same, precisely the same conflicts have always stood as now, with slight shiftings of scene and costume.

(From Z)

November 19.

I should willingly give you an account of one of these conversations. For example, we had one yesterday afternoon. I begged Alcott to paint out his project, and he proceeded to say that there should be found a farm of a hundred acres in excellent condition, with good buildings, a good orchard, and grounds which admitted of being laid out with great beauty; and this should be purchased and given to them, in the first place. I replied, You ask too much. This is not solving the problem; there are hundreds of innocent young persons, whom, if you will thus establish and endow and protect, will find it no hard matter to keep their innocency. And to see their tranquil household, after all this has been done for them, will in no wise instruct or strengthen me. But he will instruct and strengthen me, who, there where he is, unaided, in the midst of poverty, toil, and traffic, extricates himself from the corruptions of the same and builds on his land

a house of peace and benefit, good customs, and free thoughts. But, replied Alcott, how is this to be done? How can I do it who have a wife and family to maintain? I answered that he was not the person to do it, or he would not ask the question. When he that shall come is born, he will not only see the thing to be done, but invent the life, invent the ways and means of doing it. The way you would show me does not commend itself to me as the way of greatness.

The Spirit does not stipulate for land and exemption from taxes, but, in great straits and want, or even on no land, nowhere to lay its head, it manages, without asking for land, to occupy and enjoy all land, for it is the law by which land exists; it classifies and distributes the whole creation anew. If you ask for application to particulars of this *Way of the Spirit*, I shall say that the cooperation you look for is such cooperation as colleges and all secular institutions look for, — money. True cooperation comes in another manner. A man quite unexpectedly shows me that which I and all souls looked for, and I cry, “That is it; Take me and mine; I count it my chief good, to do in my way that very thing.” — That is real cooperation, unlimited, uncalculating, infinite cooperation.

The Spirit is not half so slow or mediate, or needful of conditions or organs, as you suppose. A few persons in the course of my life have at certain moments appeared to me, not measured men of five feet, five or ten inches, but large, enormous, indefinite; but these were not great proprietors, nor heads of communities, nor men in office, or in any action which affected large numbers of men, but, on the contrary, nothing could be more private, they were in some want, or affliction, or other relation which called out the emanation of the Spirit, which dignified and transfigured them to my eye. And the good Spirit will burn and blaze in the cinders of your condition, in the drudgeries of your endeavor, — in the very process of extricating us from the evils of want and of a bad society.

This fatal fault in the logic of our friends still appears: Their whole doctrine is spiritual, but they always end with saying, Give us much land and money. If I should give them anything, it would be facility and not beneficence. Unless one should say after the maxims of the world, Let them drink their own error to saturation, and this will be the best hellebore. I know the Spirit *by its victorious tone*.

An immense force has that man whose part is taken, and who does not wait for society in any part of his conduct of life. Now it is plain, of our three adventurers, that this gives them the most of their importance with us, and the deductions to be made from each are the hesitations at the plunge, the reserves which they still make and the reliances and expectations they still cherish on the arm of flesh, the aid of others.

A reformer must be born; he can never be made such by reasons. All reform, like all form, is by the grace of God, and not otherwise.

You ask, O Theanor, said Amphitryon, that I should go forth from this palace with my wife and my children and that you and your family may enter and possess it. The same request in substance has been often made to me before by numbers of persons. Now I also think that I and my wife ought to go forth from this house, and work all day in the fields, and lie at night under some thicket, but I am waiting where I am, only until some god shall point out to me which among all these applicants, yourself or some other, is the rightful claimant.

Transcendentalism is the Saturnalia of faith. It is faith run mad. Nature is transcendental...

Lethe. It seemed strange to men that they should thus forget so fast, that they became suspicious, that there was some treachery, and began to suspect their food that perhaps the bread they eat, or' the flesh, was narcotic. Hence rose Graham societies.

Government should find its perfectness in its obedience and good conduction of the elemental fluids. Because persons will have their effect, and things theirs — we are safe anyhow.

I think the power of things such that property's will is done whether by law, or against law, openly or underhand. It was obviously the feeling and the right of a ruder age to say persons must make law for persons, property for property. But now we begin to feel that persons are the only interest, and that property will follow them; that a special care need not be given to the farm. Let us be wise, and the culture of men being the end of government, love will write the law, and the law which has been so given will be gentle.

Since I have been here in New York I have grown less diffident of my political opinions. I supposed once the Democracy must be right. I see that they are aimless. Whigs have the best men, Democrats the best cause. But the last are destructive, not constructive. What hope, what end have they?

(From K)

November 25.

Yesterday I read Dickens's *American Notes*. It answers its end very well,

which plainly was to make a readable book, nothing more. Truth is not his object for a single instant, but merely to make good points in a lively sequence, and he proceeds very well. As an account of America it is not to be considered for a moment: it is too short, and too narrow, too superficial, and too ignorant, too slight, and too fabulous, and the man totally unequal to the work. A very lively rattle on that nuisance, a sea voyage, is the first chapter; and a pretty fair example of the historical truth of the whole book. We can hear throughout every page the dialogue between the author and his publisher,— “Mr. Dickens, the book must be entertaining — that is the essential point. Truth? Damn truth! I tell you, it must be entertaining.” As a picture of American manners nothing can be falsier. No such conversations ever occur in this country in real life, as he relates. He has picked up and noted with eagerness each odd local phrase that he met with, and, when he had a story to relate, has joined them together, so that the result is the broadest caricature; and the scene might as truly have been laid in Wales or in England as in the States. Monstrous exaggeration is an easy secret of romance. But Americans who, like some of us Massachusetts people, are not fond of spitting, will go from Maine to New Orleans, and meet no more annoyance than we should in Britain or France. So with “yes,” so with “fixings,” so with soap and towels; and all the other trivialities which this trifler detected in travelling over half the world. The book makes but a poor apology for its author, who certainly appears in no dignified or enviable position....

November 26.

The young people, like Brownson, Channing, Greene, Elizabeth P. Peabody, and possibly

Bancroft, think that the vice of the age is to exaggerate individualism, and they adopt the word *l'humanité* from Le Roux, and go for “*the race*.” Hence the Phalanx, Owenism, Simonism, the Communities. The same spirit in theology has produced the Puseyism, which endeavors to rear “the Church” as a balance and overpoise to the conscience.

London, New York, Boston, are phalanxes ready-made, where you shall find concerts, books, balls, medical lectures, prayers, or Punch and Judy, according to your fancy, on any night or day.

It is indifferent whether you show a new object to the child, or a new relation in an old object. You may give him another toy, or you may show him the iron block among his blocks is a magnet. The avaricious man seeks to add to the

number of his toys, the scientific man to find new relations.

You never can hurt us by new ideas. God speed you, gentlemen reformers.

Bancroft and Bryant are historical democrats who are interested in dead or organized, but not in organizing, liberty. Bancroft would not know George Fox, whom he had so well eulogized, if he should meet him in the street. It is like Lyell's science, who did not know by sight, when George B. Emerson showed him them, the shells he has described in his Geology.

I think four walls one of the best of our institutions. A man comes to me, and oppresses me by his presence; he looks very large and unanswerable. I cannot dispose of him whilst he stays; he quits the room, and passes, not only out of the house, but, as it were, out of the horizon; he is a mere phantom or ghost. I think of him no more. I recover my sanity, the universe dawns on me again.

W. H. Channing thinks that, not in solitude, but in love, in the actual society of beloved persons, have been his highest intuitions. To me it sounds like shallow verbs and nouns; for in closest society a man is by thought wrapt into remotest isolation.

No man can be criticised but by a greater than he. Do not, then, read the reviews.

Wordsworth dismisses a whole regiment of poets from their vocation.

The world is waking up to the idea of Union.... [But] the Union is only perfect when all the Unities are absolutely isolated. Each man being the Universe, if he attempt to join himself to others, he instantly is jostled, crowded, cramped, halved, quartered, or on all sides diminished of his proportion, and, the stricter the union, the less and more pitiful he is. But let him go alone, and recognizing the Perfect in every moment with entire obedience, he will go up and down doing the works of a true *member*, and, to the astonishment of all, the whole work will be done with concert, though no man spoke; government will be adamantine without any governor.

Union ideal, — in actual individualism, actual union; then would be the culmination of science, useful art, fine art, and culmination on culmination.

The tongue of flame, the picture the newspapers give, at the late fire in Liverpool, of the mountains of burning cotton over which the flame arose to twice their height, the volcano also from which the conflagration rises toward the zenith an appreciable distance toward the stars, — these are the most

affecting symbols of what man should be. A spark of fire is infinitely deep, but a mass of fire reaching from earth upward into the heaven, this is the fire of the robust, united, burning, radiant fuel.

Fate, yes, our music-box only plays certain tunes, and never a sweeter strain but we are assured that our barrel is not a dead, but a live barrel, — nay, is only a part of the tune, and changes like that.

Conservatism stands on this, that a man cannot jump out of his skin; and well for him that he cannot, for his skin is the world; and the stars of heaven do hold him there: in the folly of men glitters the wisdom of God.

This old Bible, if you pitch it out of the window with a fork, it comes bounce back again.

Several Steps. A man's greatness is to advance on a line. Simple reciprocity is the virtue of Space not of Man; to him belongs progress, he builds himself on himself. Angelo, Dante, Milton, Swedenborg, Pythagoras, Paracelsus were men of great robustness; they built, not only with energy but symmetry, and their work could be called architecture. Napoleon lately was an architect....

(From E)

December.

The trick of every man's conversation we soon learn. In one, this remorseless Buddhism lies all around, threatening with death and night. We make a little fire in our cabin, but we dare not go abroad one furlong into the murderous cold. Every thought, every enterprise, every sentiment, has its ruin in this horrid Infinite which circles us and awaits our dropping into it. If killing all Buddhists would do the least good, we would have a slaughter of the Innocents directly.

In Orpheus, the Demiurgus interrogates Night, thus, —
“Tell me how all things will as one subsist,
Yet each its nature separate preserve.”

It is the problem proposed to the Fourierist.

The blue sky is a fit covering for a cottage or a market and for the meeting of supernatural forms and events of magic and of fairyland. Could my most poetic

dream fall true and realize itself to my faith in some golden moment in the presence and by the concurrence of all gods, I should look upward into the identical web of blue depth which I see as I trudge along the road to the Post-Office. And yet no dream could have that sky. It is like the touch of God, it discerns between shadow and substance. The look of the zenith, — would not our friend Lane reckon that a “*real* experience”?

There was a conversation last evening at our good Mrs. B.’s on “the Family,” which was quite too narrowing and exclusive. There was a very unnecessary hostility in a great deal of the talk. A hostility in the hearers was presumed, and we were valiant men full of fight, ready and able to break a lance for our faith. Lane is so skilful, instant, and witty, there is no loitering or repetition in his speech, that I delight to hear him and forgive everything to so much ability: yet he is very provoking and warlike in his manner. He rails at trades and cities, and yet it is obvious in every word he says how much he is the debtor to both. There is a wisdom of life about them, a toughness and solidity of experience, that makes them always entertaining and makes Alcott’s words look pale and lifeless.

I came away from the company in better spirits than from any party this long time, for I did not speak one word. Perhaps the proper reply to the tone of dogmatism should have been, Shall there be no more cakes and ale? Why so much stress?

‘*Two Meals a Day*. A poet may eat bread for his breakfast, and bread and flesh for his dinner, but for his supper he must eat stars only.

Romeo was minister of Raymond Béranger, Count of Provence. He managed the affairs of his master so well that each one of his four daughters became a queen. Margaret, the eldest, was married to Louis IX of France; Eleanor, the next, to Henry III, of England; Sancha, the third, to Richard, Henry’s brother, and King of the Romans; and Beatrice, the youngest, to Charles I, King of Naples and Sicily, and brother to Louis. The Provençal Barons, enviers of Romeo, instigated the Count his master to demand of him an account of the revenues he had so carefully husbanded, and the Prince as lavishly disbursed. Then Romeo demanded the little mule, the staff, and the scrip, with which he had first entered into the Count’s service, a stranger pilgrim from the shrine of St. James in Galicia, and departed as he came, nor was it ever known whence he was, or whither he went. (See Dante, *Paradiso*, Canto VI.)

O what would Nature say?

She spared no speech to-day;
The fungus and the bulrush spoke,
Answered the pine-tree and the oak,
The wizard South blew down the glen,
Filled the straits and filled the wide;
Each maple leaf turned up its silver side.
The south wind blows; I leave my book.
I need not bide in nature long,
Could I transfer my life to song;

It needs the lapsing centuries

To tell you the wit of the passing breeze.
And yet the landscape taunts me,
Advancing, then receding....

“Full many a glorious morning have I seen.” That is a bold saying. Few men have seen many mornings. This day when I woke I felt the peace of the morning, and knew that I seldom behold it.

I hear the whistle of the locomotive in the woods. Wherever that music comes it has its sequel. It is the voice of the civility of the Nineteenth Century saying, “Here I am.” It is interrogative: it is prophetic: and this Cassandra is believed:” Whew! Whew! Whew! How is real estate here in the swamp and wilderness? Ho for Boston! Whew! Whew! Down with that forest on the side of the hill. I want ten thousand chestnut sleepers. I want cedar posts, and hundreds of thousands of feet of boards. Up! my masters of oak and pine! You have waited long enough — a good part of a century in the wind and stupid sky. Ho for axes and saws, and away with me to Boston! Whew! Whew! I will plant a dozen houses on this pasture next moon, and a village anon; and I will sprinkle yonder square mile with white houses like the broken snow-banks that strow it in March.”

History. Something gets possession and elbows all the rest aside. Yet there hang these clouds of dissenters and fanatics and prophets, like Arabs in the horizon or on the mountains waiting their turn and kingdom. Fixtures none. The world is the prey and dominion of thoughts. History is a foolish, pragmatic misstatement. As easily might you survey a cloud, which is now as big as your hat, and before you have measured its first angle, covers ten acres. Thoughts work and make what you call the world. Heroes are the lucky individuals who stand at the pole and are the largest and ripest. —

Miracle comes to the miraculous, not to the arithmetician.... These [idealists] have no memory, no retrospect, no baggage-waggon of a tradition at their back, but have their eye forward and their foot forward, for their whole attention is to the fact of creation, — of Creation now being and to be.

The world is too rich for us. We have hardly set our hearts on one toy, say a house and land, before a poetic reputation seems the high prize, then eloquence, then political power, then asceticism, and then art; and thus each of many things

draws us aside from the other. If in choosing one, we could drink a cup of Lethe to the others, we should not be robbed of satisfaction.

(From Z)

December 10.

A good visit to Boston, and saw Sam Ward and Ellery to advantage, and my Parian sister. Ellery has such an affectionate speech, and a tone that is tremulous with emotion, that he is a flower in the wind. He says he has an immense dispersing power. Ward is wise and beautiful: and said and admitted the best things. He had found out, he said, why people die: it is to break up their style.

Life would not be worth taking or keeping, if it were not full of surprises. I wake in the morning, and go to my window, and see the day break, and receive from the spectacle a new secret of Nature that goes to compromise all my past manner of living, and invite me to a new.

I am filled with a great tranquillity. I seek to express this somehow and find that I have cut out a Hesperus in marble. Wonderful is the Alembic of Nature through which the sentient mind of tranquillity becomes the figure of a youth; but the feeling manages somehow to shed itself over the stone, as if that were porous to love and truth. Yet is not that figure final or adequate; it is a prison rather of the thought, of the emotion, if I am contented with it. The thought scorns it, mocks at it as some wretched caricature; the thought has already transcended it, is already something else, has taken twenty thousand shapes, whilst poor Hans was hammering at this one. The oak leaf is perfect, a kind of absolute realized, but every work of art is only relatively good; — the artist advances, and finds all his fine things naught.

Nature tends to a Fact. She will be expressed. Then scholars are her victims of expression.

You who see the artist, the orator, the poet too near, and find them victims of *partiality*,... pronounce them failures...

Very hard it is to keep the middle point. It is a very narrow line.

W. said, that there was a great deal of deferring and a great deal of wondering and quoting, but of calm affirming very little. Cannot a man only communicate that which he knows? But Nature hates calm system-makers, her methods are

saltatory, impulsive. Man lives by pulses, all his organic movements are such, and all chemical, and ethereal; even seem to be undulatory or alternate. And so with the mind, it antagonizes ever, and gets on so.

The Yankee is one who if he once gets his teeth set on a thing, all creation can't make him let go; who, if he can get hold anywhere of a rope's end or a spar, will not let it go, but will make it carry him; if he can but find so much as a stump or a log, will hold on to it and whittle out of it a house and barn, a farm and stock, a mill-seat and a village, a railroad and a bank, and various other things equally useful and entertaining, — a seat in Congress or a foreign mission, for example. But these no doubt are inventions of the enemy.

C.'s eyes are a compliment to the human race; that steady look from year to year makes Phidian sculpture and Poussin landscape still real and contemporary.

The harvest will be better preserved and go farther, laid up in private bins, in each farmer's corn-barn, and each woman's basket, than if it were kept in national granaries. In like manner, an amount of money will go farther if expended by each man and woman for their own wants, and in the feeling that this is their all, than if expended by a great Steward, or National Commissioners of the Treasury. Take away from me the feeling that I must depend on myself, give me the least hint that I have good friends and backers there in reserve who will gladly help me, and instantly I relax my diligence. I obey the first impulse of generosity that is to cost me nothing, and a certain slackness will creep over my conduct of my affairs. Here is a bank-note found of one hundred dollars. Let it fall into the hands of an easy man who never earned the estate he spends, and see how little difference it will make in his affairs. At the end of the year he is just as much behindhand as ever, and could not have done at all without that hundred. Let it fall into the hands of a poor and prudent woman, and every shilling and every cent of it tells, goes to reduce debt, or to add to instant and constant comfort, mends a window, buys a blanket or a pelisse, gets a stove instead of the old cavernous fireplace, all chimney.

All the Channings are men of the world; have a little silex in their composition, which gives a good edge, and protects them like a coat of mail. Ellery has the manners and address of a merchant.

Elizabeth Hoar affirms that religion bestows a refinement which she misses in the best-bred people not religious, and she considers it essential therefore to the flower of gentleness.

Come dal fuoco il caldo, esser diviso
Non puô'I bel dall' eterno.

MICHEL ANGELO.

I have no thoughts to-day; What then? What difference does it make? It is only that there does not chance to-day to be an antagonism to evolve them, the electricity is the more accumulated; a week hence you shall meet somebody or something that shall draw from you a shower of sparks.

Travelling is a very humiliating experience to me. I never go to any church like a railroad car for teaching me my deficiencies.

For any grandeur of circumstance length of time seems an indispensable element. Who can attach anything majestic to creatures so shortlived as we men? The time that is proper to spend in mere musing is too large a fraction of threescore years and ten to be indulged to that greatness of behavior. The brevity of human life gives a melancholy to the profession of the architect.

There is a comparative innocence in this country and a corresponding health. We do not often see bald boys and gray-haired girls; children victims of gout and apoplexy; the street is not full of near-sighted and deaf people; nor do we see those horrid mutilations and disgusting forms of disease as leprosy and undescribed varieties of plague which European streets exhibit, stumps of men.

Charles Lane said that our people do not appear to him to have that steadfastness that can be calculated on. Thus, Green may be a trader, or a priest, or a soldier as probably as a progressive reformer. And so Davis and Robbins and the rest. This results from the greater freedom of circumstance. English and Europeans are guided as with iron belt of condition.

The fine and finest young people despise life;...

Naming, yes, that is the office of the newspapers of the world, these famous editors from Moses, Homer, Confucius, and so on, down to Goethe and Kant: they name what the people have already done, and the thankful people say, "Doctor, 't is a great comfort to know the disease whereof I die."

JOURNAL

LECTURES IN NEW YORK AND BALTIMORE

VISIT TO WASHINGTON

EDITING DIAL

WEBSTER IN CONCORD

BROOK FARM

JOURNAL XXXIV

1843

(From Journals Z, R, and U)

Secondo alia fede di ciascuno.

And whatsoever soul has perceived anything of truth shall be safe from harm until another period. — Plato, *Phoedrus*.

[IN January, Mr. Emerson set forth on a long lecturing trip. He went to Philadelphia, probably visiting there his friend and loving schoolmate, Rev. William H. Furness; thence by rail to Baltimore, where he gave two lectures, visiting Washington, between them, after an interval of sixteen years. He then gave his course on “New England” in New York, in February before the Berean Society: I, Genius of the Anglo-Saxon Race; II, Trade; III, Manners and Customs of New England; IV, Recent Literature and Spiritual Influences; V, Results.

Meantime Henry Thoreau, chivalrous, universally helpful, witty, and kind, had manned the wall at home for his absent friend, and had also relieved him of much editorial work for the *Dial*. This will appear in the *Familiar Letters of Henry David Thoreau*, edited by Mr. F. B. Sanborn, for that period.]

(From Z)

BALTIMORE, BARNUM’S HOTEL, *January 7, 1843.*

Here to-day from Philadelphia. The railroad, which was but a toy coach the other day, is now a dowdy, lumbering country wagon. Yet it is not prosaic, as people say, but highly poetic, this strong shuttle which shoots across the forest, swamp, river, and arms of the sea, binding city to city. The Americans take to the little contrivance as if it were the cradle in which they were born.

AT PHILADELPHIA.

Philosophy shakes hands at last with the simplest Methodist and teaches one fact with him, namely, that it is the grace of God, — all grace,

— no inch of space left for the impertinence of human will. Everything is good which a man does naturally, and nothing else: and sitting in railroad cars, happy is he who is moved to talk, and knows nothing about it; and happy he who is moved to sit still, and knows not that he sits still; but I hate him with a perfect

hatred who thinks of himself. Let a man hate eddies, hate the sides of the river, but keep the middle of the stream. The hero did nothing apart and odd, but travelled on the highway and went to the same tavern as the whole people, and was very heartily and naturally there, no dainty, protected person.

“Every bullet will hit its mark if it is first dipped in the marksman’s blood.”

It makes men very bad to talk good.

An American is served like a noble in these city hotels; and his individuality as much respected; and he may go imperially along all the highways of iron or of water. I like it very well that in the heart of democracy I find such practical illustration of high theories.

Mrs. Siddons said to her niece, Fanny Kemble, “You are an extraordinary girl, but you are not Mrs. Siddons yet, though many will tell you that you are.”

AT WASHINGTON, *January 11, 12, 13, 14.*

“The Winter Arrangement to the South” advertises “the great central mail route through from Baltimore to Charleston, with *but three changes of Person and Baggage.*”

January 16.

So much novel-reading ought not to leave the young men of the land quite unaffected, and doubtless does idealize them. They must study noble behavior, and this dignity of hotel armchairs is not quite unsupported by inward dignity.

I understand poverty much better than riches; and it is odd that one of my friends who is rich seems to me always accidentally so, and in character made to be poor.

I do not observe that many men can aid others in the direct way.

Commonly every man occupies every inch of his ground. The poor or the middle class can better help than the richer.

Giles Waldo told me of one of his friends who gambled, not for winnings, but for bread, and with the members of the Legislature of Indiana; and the men whose money he won liked him so well that they one day made him clerk of the House of Representatives, much to his surprise, and, if he had remained in that country, would have made him Secretary of State.

In Philadelphia, they play chess in all houses. At the Athenæum, a game goes on behind a screen at all hours, and whenever I was in the room I noticed several spectators watching the moves of the players.

NEW YORK, *February 7.*

I am greatly pleased with the merchants. In rail car and hotel it is common to meet only the successful class, and so we have favorable specimens: but these discover more manly power of all kinds than scholars; behave a great deal better, converse better, and have inexpensive and sufficient manners.

Dreamlike travelling on the railroad. The towns through which I pass between Philadelphia and New York make no distinct impression. They are like pictures on a wall. The more, that you can read all the way in a car a French novel.

February 7.

Nature. Nature asked, Whether troop and baggage be two things; whether the world is all troop or all baggage, or whether there be any troop that shall not one day be baggage? Easy, she thinks it, to show you the Universal Soul: we have all sucked that orange; but would you please to mention what is an Individual? She apologized for trifling with you in your nonage, and adding a little sugar to your milk that you might draw the teat, and a little glory afterward to important lessons, but declared she would never tell you another fib, if you had quite settled that Buddhism was better than hands and feet, and would keep that conviction in the presence of two persons. As for *far* and *too far*, she wondered what it meant. She admires people who read, and people who look at pictures, but if they read until they write, or look at pictures until they draw them, she curses them up and down. She has the oddest tastes and behavior. An onion, which is all coat, she dotes on; and among birds she admires the godwit; but when I hinted that a blue weed grew about my house called *Self-heal*, she said, — a coxcomb named it; but she teaches cobwebs to resist the tempest, and when a babe's cries drove away a lion, she almost devoured the darling with kisses.. She says her office of Dragoman is vacant, though she has been much pestered with applications, and if you have a talent of asking questions, she will play with you all your life; but if you can answer questions, she will propose one, which, if you answer, she will die first. She hates authors, but likes Montaigne.

Webster. Webster is very dear to the Yankees because he is a person of very commanding understanding with every talent for its adequate expression. The American, foreigners say, always reasons, and he is the most American of the Americans. They have no abandonment, but dearly love logic, as all their churches have so long witnessed. His external advantages are very rare and admirable; his noble and majestic frame, his breadth and projection of brows, his coal-black hair, his great cinderous eyes, his perfect self-possession, and the rich and well-modulated thunder of his voice (to which I used to listen, sometimes, abstracting myself from his sense merely for the luxury of such noble explosions of sound) distinguish him above all other men. In a million you would single him out. In England, he made the same impression by his personal advantages as at home, and was called the Great Western. In speech he has a great good sense, — is always pertinent to time and place, and has an eye to the simple facts of nature, — to the place where he is, to the hour of the day, to the sun in heaven, to his neighborhood to the sea or to the mountains, — but very sparingly notices these things, and clings closely to the business part of his speech with great gravity and faithfulness. “I do not inflame,” he said on one occasion, “I do not exaggerate; I avoid all incendiary allusion.” He trusts to his simple strength of statement — in which he excels all men — for the attention of his assembly. His statement is lucid throughout, and of equal strength. He has great fairness and deserves all his success in debate, for he always carries a point from his adversary by really taking superior ground, as in the Hayne debate. There are no puerilities, no tricks, no academical play in any of his speeches, — they are all majestic men of business. Every one is a first-rate Yankee.

He has had a faithful apprenticeship to his position, for he was born in New Hampshire, a farmer’s son, and his youth spent in those hardships and privations which add such edge to every simple pleasure and every liberalizing opportunity. The Almanac does not come unnoticed, but is read and committed to heart by the farmer’s boys. And when it was announced to him by his father that he would send him to college he could not speak. The struggles, — brothers and sisters in poor men’s houses in New England are dear to each other, and the bringing up of a family involves many sacrifices, each for the other.

The faults that shade his character are not such as to hurt his popularity. He is very expensive, and always in debt; but this rather commends him, as he is known to be generous, and his countrymen make for him the apology of Themistocles, that to keep treasure undiminished is the virtue of a chest and not of a man. Then there is in him a large share of good nature and a sort of *bonhomie*. It is sometimes complained of him that he is a man of pleasure, and all his chosen friends are easy epicures and debauchees. But this is after

Talleyrand's taste, who said of his foolish wife that he found nonsense very refreshing: so Webster, after he has been pumping his brains in the courts and the Senate, is, no doubt, heartily glad to get among cronies and gossips where he can stretch himself at his ease and drink his mulled wine. They also quote as his *three rules* of living: (1) Never to pay any debt that can by any possibility be avoided; (2) Never to do anything to-day that can be put off till to-morrow; (3) Never to do anything himself which he can get anybody else to do for him.

All is forgiven to a man of such surpassing intellect, and such prodigious powers of business which have so long been exerted. There is no malice in the man, but broad good humor and much enjoyment of the hour; so that Stetson said of him, "It is true that he sometimes commits crimes, but without any guilt."

A great man is always entitled to the most liberal interpretation, and the few anecdotes by which his opponents have most deeply stabbed at his reputation admit of explanation. I cannot but think, however, that his speech at Richmond was made to bear a meaning by his Southern backers which he did not intend, and I have never forgiven him that he did not say, Not so fast, good friends, I did not mean what you say.

He has misused the opportunity of making himself the darling of the American world in all coming time by abstaining from putting himself at the head of the Anti-slavery interest, by standing for New England and for man against the bullying and barbarism of the South.

I should say of him that he was not at all majestic, but the purest intellect that was ever applied to business. He is Intellect applied to affairs. He is the greatest of lawyers; but a very indifferent statesman for carrying his points. He carries points with the bench, but not with the caucus. No following has he, no troop of friends, but those whose intellect he fires. No sweaty mob will carry him on their shoulders. And yet all New England to the remotest farmhouse, or lumberers' camp in the woods of Maine, delights to tell and hear of anecdotes of his forensic eloquence. What he said at Salem, at the Knapp trial; and how in Boston he looked a witness out of court, — once, he set his great eyes on him, and searched him through and through; then as the cause went on, and this prisoner's perjury was not yet called for, he looked round on him as if to see if he was safe and ready for the inquisition he was preparing to inflict on him. The witness felt for his hat, and edged towards the door; a third time he looked on him, and the witness could sit no longer, but seized his opportunity, fled out of court, and could nowhere be found, such was the terror of those eyes.

People think that in our license of construing the Constitution, and the

despotism of Public Opinion, we have no anchor, and one Frenchman thinks he has found it in our Marriage, and one in our Calvinism. But the fact of two poles is universal; the fact of two forces, centripetal and centrifugal, is universal, and each develops the other, each by its own activity. Wild liberty develops iron conscience; want of liberty strengthens decorous and convenient law, which supersedes in a measure the native conscience.

Queenie makes herself merry with the Reformers who make unleavened bread, and are foes to the death to fermentation. Queenie says, God made yeast as well as wheat, and loves fermentation just as dearly as he loves vegetation; that the fermentation develops the saccharine element in the grain, and makes it more palatable and more digestible. But that they wish the “pure wheat” and will die but it shall not ferment. Stop, dear Nature, these incessant advances; let me scotch these ever-rolling wheels.

Earth Spirit, living, a black river like that swarthy stream which rushes through the human body is thy nature, demoniacal, warm, fruitful, sad, nocturnal.

February 8.

As we go along the street, the eyes of all the passengers either ask, ask, continually of all they meet, or else assert, assert to all. Only rarely do we meet a face which has the balance of expression, neither asking leave to be, nor rudely egotistic, but equally receptive and affirmative. W. A. Tappan says, that when a man is looked at, he instantly assumes a new expression, and strangers whom he meets every day in the street grow angry at being regarded.

Strict conversation with a friend is the magazine out of which all good writing is drawn.

[Here follow the passages from “ Experience” on God’s delight in isolating us and hiding the past and future; on the eye making the horizon, and the mind’s eye deifying persons; and on Scepticisms as limitations of the affirmative. See *Essays*, Second Series, pp. 67, 68; 76, 77; 75]

Men may affect modesty as much as they will, every speaker wants the most intelligent audience, wants genius to hear him.

It is very funny to go in to a family where the father and mother are devoted to the children. You flatter yourself for an instant that you have secured your friend's ear, for his countenance brightens; then you discover that he has just caught the eye of his babe over your shoulder, and is chirruping to him.

The moral must have its origin from inward fountains, but must have its objects in the variety of social life; how much we are domesticated by the *moral*. "I feel at home," said Mrs. B., "more than among my relations, for you are *honest* people." So in my experience with the praying traveller at the hotel. So when I go abroad, if I enter a church, the first godly sentiment makes me truly at home. The source must not be the expectations of others, but a delight in serving, an effusion of good will, a delight in serving and not in being seen to serve, not the feeling of duty, but the wish to make happy.

A man going out of Constantinople met the Plague coming in, who said he was sent thither for twenty thousand souls. Forty thousand persons were swept off, and when the traveller came back, he met the Plague coming out of the city. "Why did you kill forty thousand?" he asked. "I only killed twenty," replied the Pest; "Fear killed the rest."

Mr. Adams chose wisely and according to his constitution, when, on leaving the Presidency, he went into Congress. He is no literary old gentleman, but a bruiser, and loves the *melee*. When they talk about his age and venerableness and nearness to the grave, he knows better, he is like one of those old cardinals, who, as quick as he is chosen Pope, throws away his crutches and his crookedness, and is as straight as a boy. He is an old *roue* who cannot live on slops, but must have sulphuric acid in his tea.

There is no line that does not return; I suppose the mathematicians will tell us that what are called straight lines are lines with long curves, but that there is no straight line in nature. If, as you say, we are destroying number by affirming the strict infinite, why then I concede that number also is swallowable, and that one of these days we shall eat it like custard.

National characteristics stand no chance beside intellectual. Physicians say every constitution makes a new case of fever. So it is with persons. Our national traits may appear so long as we are drowsy and have headache, but put me in good spirits, search me with thought, and all nations are men together. The first

Englishman I met in travelling was a frank, affectionate fellow, and the first Frenchman was a mystic.

Major Davezac at the Carlton House, New

York, told me of Father Antoine at New Orleans, the only man left attached to the Spanish Government when the Americans took possession of the city. He never dined at home, but when the noon came, went into the nearest house wherever he walked, and said, "My child, I have come to dine with you." Then they made festival. After dinner, he smoked a cigar, slept half an hour, blessed the house, and departed.

When he fell sick, hourly bulletins were issued of his health: when he died, all shops were shut, all courts and legislatures adjourned. Two shillings were found in his desk, and his testament begged all his children of all sects — for he would not separate in this instrument those whom in heart he had never separated — to kneel down for five minutes and pray that his term of purgatory might be shortened. And Protestant and Catholic knelt down and prayed. He preached a crusade against the English during the siege. And General Jackson came and thanked him, and told him that his prayers and urgent addresses were as good to him as a thousand men. He had *Te Deum* sung in the church.

Abness of the Ursuline Convent and her bell of St. Victoire. A vow of a bell of one thousand pounds' weight, not if the victory, but *because* the victory. The book opened of itself to the prayer of the day, it was the prayer to St. Victoire. General Jackson said, "This was very extraordinary, Major Davezac, and I tell you, sir, that something very remarkable has attended this campaign. Ever since the battle on the night of the 23 d, until the retreat of the British, I have had the sense that these things had occurred to me before, and been obliterated; and when I observed it, I was sure of success, for I knew that God would not give me previsions of disaster, but signs of victory. He said, This ditch can never be passed. It cannot be done."

We are all chemists who only know our own gold. Men cast pearls about in large companies where I go, and none but I seems to know that they are pearls.

Society. I feel and own your power, but I lament that your power smothers mine. This I regret, not for my sake, for I am well content to lie hid a year, but for yours, that it prevents me making that just return which your merit demands; and I should like to justify to you your good deed and will towards me.

Democracy with us is charged with being malignant, and I think it seems aimless, selfish resistance, pulling down, and wild wish to have physical

freedom, — but for what? Only for freedom; not to any noble end. Vethake thought that society was fast arriving at the excess of democracy, — universal abolition, I think, he called it, which he thought the absolute extinction of the feminine principle. Then woman will say, I cannot stand this death, and will rise in indignation and end that epoch. Mr. V's opinion was that Mahomet had tried power, and Jesus, or, I think, John, persuasion; that Mahomet had felt that persuasion, this John-persuasion had miserably failed, was a pretty poor shift or system of shifts, this expediency or system of coaxing and example and so forth, precisely that against which nowadays we write essays and lectures; and he said, I will try this Oriental weapon, the sword, which never, never will go West; and he said to Ayesha, "I have found out how to work it. This Woman element will not bear the sword; well, I will dispose of woman: she may exist; but henceforward I will veil it:" so he veiled Woman. Then the sword could work and eat. A man and a woman he thought the true social unit, born of the community, and that the old and the young could only exist in a state of tutelage or protection; that the only holders of property were the married couple, who should not take either the name of husband or wife, but a new name common to both, and have but one vote. Three ways of killing there were. In the third, I smelt fagots: Society, he said, should not put to death, but should say, this cannot be, and it would cease. I remembered what I have heard or dreamed, that the most terrific of hierarchs would be a mystic. Beware of Swedenborg *in power*. Swedenborg in minority, Swedenborg contemplative, is excellent company; but Swedenborg executive would be the Devil in crown and sceptre. Fagots!

In the capacious leisures of the spirit I think we may beguile the time by the play of the understanding and the use of the hands, and yet be candidates for the divine succors and the use of divine methods as truly as if we should fold our hands and rely on transcendent methods only.

Cheap literature makes new markets. We have thought only of a box audience, or at most of box and pit; but now it appears there is also slip audience, and galleries one, two, three; and back stairs, and street listeners, besides. Greeley tells me that *Graham's Magazine* has seventy thousand subscribers, and I may write a lecture, if I will, to seventy thousand readers.

Like Vethake, Brisbane thought the Democracy did not wish to build, but only to tear down; "to tear down," as he said, "God and the Bank, and everything else they could see."

CONCORD, *March 12.*

Home again from my long journey to count my treasures old and new, and, might it be, to impart them.

The world has since the beginning an incurable trick of taking care of itself, or every hilltop in America would have counsel to offer. We sit and think how richly ornamented the wide champaign and yonder woodlands to the foot of those blue mountains shall be, and meanwhile here are ready and willing thousands strong and teachable who have no land to till. If Government in our present clumsy fashion must go on, — could it not assume the charge of providing each citizen, on his coming of age, with a pair of acres, to enable him to get his bread honestly? Perhaps one day it will be done by the State's assuming to distribute the estates of the dead. In the United States almost every State owns so much public land, that it would be practicable to give what they have, and devise a system by which the State should continue to possess a fund of this sort.

Gypsies and militia captains, Paddies and Chinese, all manner of cunning and pragmatical men and a few fine women, — a strange world made up of such oddities; the only beings that belong to the horizon being the fine women.

Cheap is the humiliation of to-day which gives wit, eloquence, poetry to-morrow.

All work for me. I and my day. Some persons use my language, but are foreign to me, and others who use a language foreign to me are very near me. Events are the clothes of the Spirit. Why should we try to steal and strip them. And we know God so, as we know each other by our garments. "You flee fast, but the pursuers flee after you as fast." So said to me Mrs. Rebecca Black in New York.

At the Five Points I heard a woman swearing very liberally as she talked with her companions; but when I looked at her face, I saw that she was no worse than other women; that she used the dialect of her class, as all others do, and are neither better nor worse for it; but under this bad costume was the same repose, the same probity as in Broadway. Nor was she misinterpreted by her mates. There is a virtue of vice as well as of virtue.

And the Spirit drove him apart into a solitary place. This does the Spirit for

every man.

(From R)

I find it easier to read Goethe than Mundt, and it must always be easier to understand a sensible than a weak man in a foreign tongue, because things themselves translate for the one, and not for the other. Yet very pleasant is the progress which we make in a new language, the medium through which we explore the thoughts ever growing rarer, until at last we become unconscious of its presence in its transparency.

Ellery's verses should be called poetry for poets, they touch the fine pulses of thought and will be the cause of more poetry and of verses more finished and better turned than them selves; but I cannot blame the *North Americans* and *Knickerbockers* if they should not suspect his genius. When the rudder is invented for the balloon, railroads will be superseded. And when Ellery's muse finds an aim, whether some passion or some fast faith, any kind of thing on which all these wild and sometimes brilliant beads can be strung, we shall have a poet. Now he *fantasies* merely, as *dilettanti* in music. He breaks faith continually with the intellect. The sonnet has merits, fine lines, gleams of deep thought; well worth sounding, worth studying, if only I could confide that he had any steady meaning before him, that he kept faith with himself; but I fear that he changed his purpose with every verse; was led up and down, to this or that, with the exigencies of the rhyme, and only wanted to write and rhyme somewhat, careless how or what, and stopped when he came to the end of the paper. He breaks faith with the reader; wants integrity. Yet for Poets it will be a better book than a whole volume of Bryant and Campbell. Miss Peabody has beautiful colors to sell, but her shop has no attraction for house-builders and merchants: Mr. Allston and Mr. Cheney will probably find the way to it.

A man of genius is privileged only as far as he is a genius. His dulness is as insupportable as any other dulness. Only success will justify a departure and a license. But Ellery has freaks which are entitled to no more charity than the dulness and madness of others, which he despises. He uses a license continually which would be just in oral improvisation, but is not pardonable in written verses. He *fantasies* on his piano.

E. H. said, that he was a wood-elf which one of the maids in a story fell in love with, and then grew uneasy, desiring that he might be baptized. Margaret said, he reminded one of a great Genius with a little wretched boy trotting beside him.

“For in thee hides a matchless light
That splendors all the dreaming night;
Thy bark shall be a precious stone
In whose red veins deep magic hides,
Thy ecstasies be known to none,

Except those vast ethereal tides

That circulate our being round
But whisper not the slightest sound.”
“Away, away, thou starlit breath!
On bended knees I pray thee go;
O bind thy temples not with death,
Nor let thy shadow fall on snow.”

Jock could not eat rice, because it came west, nor molasses because it came north, nor put on leathern shoes because of the methods by which leather was procured, nor indeed wear a woolen coat. But Dick gave him a gold eagle that he might buy wheat and rye, maple sugar and an oaken chest, and said, This gold-piece, unhappy Jock! is molasses, and rice, and horsehide and sheepskin.

[Here follow sentences from *The Chinese Classical Work*, commonly called *The Four Books*, translated by Rev. David Collier. These and other Oriental religious sayings were printed in the *Dial*, there called “Ethnical Scriptures.”]

Criticism. So the Gothic cathedral and the Shakspeare perfection is as wild and unaccountable as a geranium or a rabbit or an ornithorhynchus. It is done, and we must go to work and do something else, that undone something which is now hinting and working and impatient here in and around us.

Drawing, M. R. said from Mr. Cheney, was only a good eye for distances; and the descriptive talent in the poet seems to depend on a certain lakelike passiveness to receive the picture of the whole landscape in its native proportions, uninjured, and then with sweet heedfulness the caution of love, to transfer it to the tablet of language.

Health. Health is the most objective of subjects. The Vishnu Sarna said, “It is the same to him who wears a shoe as if the whole earth were covered with leather.” So I spread my health over the whole world and make it strong, happy, and serviceable. To the sick man, the world is a medicine chest.

Poet. It is true that when a man writes poetry, he appears to assume the high feminine part of his nature. We clothe the poet, therefore, in robes and garlands, which are proper to woman. The Muse is feminine. But action is male. And a king is draped almost in feminine attire.

The philosophers at Fruitlands have such an image of virtue before their eyes, that the poetry of man and nature they never see; the poetry that is in man's life, the poorest pastoral clownish life; the light that shines on a man's hat, in a child's spoon, the sparkle on every wave and on every mote of dust, they see not.

Lectures. "Aristo said, that neither a bath nor a lecture did signify anything unless they scoured and made men clean."

Pride is a great convenience,... so much handsomer and cheaper than vanity, but proud people are intolerably selfish, and the vain are gentle and giving.

Translations. I thank the translators....

March 23.

Two brave chanticleers go up and down stripping the plumes from all the fine birds, showing that all are not in the best health. It makes much unhappiness on all sides; much crowing it occasions on the part of the two cockerels who so shrewdly discover and dismantle all the young beaux of the aviary. But alas, the two valiant cocks who strip are no better than those who are stripped, only they have sharper beak and talons. In plain prose, I grieved so much to hear the most intellectual youth I have met, Charles Newcomb, so disparaged, and our good and most deserving scholar, Theodore Parker, threatened as a morsel to be swallowed when he shall come to-morrow, and all this by my brave friends, who are only brave, not helpful, not loving, not creative, — that I said, Cursed is preaching, — the better it is, the worse. A preacher is a bully: I who have preached so much, — by the help of God will never preach more.

We want the fortification of an acknowledgment of the good in us. "The girl is the least part of herself"; God is in the girl. That is the reason why fools can be so beloved by sages; that, under all the corsets and infirmities, is life, and the revelation of Reason and of Conscience.

Margaret. A pure and purifying mind, self-purifying also, full of faith in men, and inspiring it. Unable to find any companion great enough to receive the rich effusions of her thought, so that her riches are still unknown and seem unknowable. It is a great joy to find that we have underrated our friend, that he or she is far more excellent than we had thought. All natures seem poor beside

one so rich, which pours a stream of amber over all objects, clean and unclean, that lie in its path, and makes that comely and presentable which was mean in itself. We are taught by her plenty how lifeless and outward we were, what poor Laplanders burrowing under the snows of prudence and pedantry. Beside her friendship, other friendships seem trade, and by the firmness with which she treads her upward path, all mortals are convinced that another road exists than that which their feet know. The wonderful generosity of her sentiments pours a contempt on books and writing at the very time when one asks how shall this fiery picture be kept in its glow and variety for other eyes. She excels other intellectual persons in this, that her sentiments are more blended with her life; so the expression of them has greater steadiness and greater clearness. I have never known any example of such steady progress from stage to stage of thought and of character. An inspirer of courage, the secret friend of all nobleness, the patient waiter for the realization of character, forgiver of injuries gracefully waving aside folly, and elevating lowness, — in her presence all were apprised of their fettered estate and longed for liberation, of ugliness and longed for their beauty; of meanness and panted for grandeur.

Her growth is visible. All the persons whom we know have reached their height, or else their growth is so nearly at the same rate with ours, that it is imperceptible, but this child inspires always more faith in her. She rose before me at times into heroic and godlike regions, and I could remember no superior women, but thought of Ceres, Minerva, Proserpine, and the august ideal forms of the foreworld. She said that no man gave such invitation to her mind as to tempt her to full expression; that she felt a power to enrich her thought with such wealth and variety of embellishment as would, no doubt, be tedious to such as she conversed with. And there is no form that does not seem to wait her beck, — dramatic, lyric, epic, passionate, pictorial, humorous.

She has great sincerity, force, and fluency as a writer, yet her powers of speech throw her writing into the shade. What method, what exquisite judgment, as well as energy, in the selection of her words; what character and wisdom they convey! You cannot predict her opinion. She sympathizes so fast with all forms of life, that she talks never narrowly or hostilely, nor betrays, like all the rest, under a thin garb of new words, the old droning cast-iron opinions or notions of many years' standing. What richness of experience, what newness of dress, and fast as Olympus to her principle. And a silver eloquence, which inmost Polymnia taught. Meantime, all this pathos of sentiment and riches of literature, and of invention, and this march of character threatening to arrive presently at the shores and plunge into the sea of Buddhism and mystic trances, consists with a boundless fun and drollery, with light satire, and the most entertaining

conversation in America.

Her experience contains, I know, golden moments, which, if they could be fitly narrated, would stand equally beside any histories of magnanimity which the world contains; and whilst Dante's *Nuova Vita* is almost unique in the literature of Sentiment, I have called the imperfect record she gave me of two of her days, "Nuovissima Vita."

A working King is one of the best symbols. Alfred and Ulysses are such. And we see them now and then in society; — oftener off the throne, of course, than on it. This is the right country for them.

A chamber of flame in which the martyr passes is more magnificent than any royal apartment; and this martyr palace may be built up on any waste place instantly.

Persons are fine things, but they cost so much! for *thee* I must pay *me*.

Fine constellation of people; rare force of character and wealth of truth; they ought to cluster and shine and illuminate the nation and the nations. Alcott said reasonable words about the *Dial*, that it ought to be waited for by all the newspapers and journals, the Abolitionists ought to get their leading from it, and not be able to spurn it as they do. It should lead. Here the sceptre is offered us, and we refuse it from poorness of spirit.

When I see what fine people we have, I think it a sort of King Rene period: there is no doing, but rare and shrilling prophecy from bands of competing minstrels and the age shall not sneak out, but affirm all the beauty and truth in its heart.

"*Dial* has not piety."

The same persons should not constitute a Standing Committee on Reform. A man may say, I am the chief of sinners, but once. He is already damned, if having come once to the insight of that condition, he remains there to say it again. But the Committee on Reform should be made of new persons every day; of those just arrived at the power of comparing the state of society with their own daily expanding spirit. Fatal to discuss reform weekly! The poorest poet or young beginner in the fine arts hesitates to speak of the design he wishes to execute, lest it die in your cold fingers. And this art of life has the same pudency

and will not be exposed.

It is a great joy to get away from persons, and live under the dominion of the Multiplication Table.

Milton is the most literary man in literature.

We are greatly vexed when poets, who are by excellence the thinking and feeling of the world, are deficient in truth of intellect and of affection. Then is Feeling unfeeling and Thought unwise.

The conversation turned upon the state and duties of Woman. As always, it was historically considered, and had a certain falseness so. For me, to-day, Woman is not a degraded person with duties forgotten, but a docile daughter of God with her face heavenward endeavoring to hear the divine word and to convey it to me.

I read again the verses of Margaret with the new commentary of beautiful anecdotes she had given, freshly in my mind. Of course the poems grew golden, the twig blossomed in my hands: but a poem should not need its relation to life to explain it; it should be a new life, not still half engaged in the soil, like the new created lions in Eden.

Do you know how diamonds and other gems were invented? Rim, wishing to go on the errands of Ormuzd through the Kingdoms of Ariman without discovery, received from Ormuzd in a pod of lupine seven days in the form of seven diamonds. He used each of them as a lamp, which, spent, gave him a sharp and wise light for his path for twenty-four degrees of the way. On other occasions, Ormuzd gave him spring days in the form of emeralds, midsummer days in the shape of rubies, and autumn in topazes. All these stones are Children of Day.

The world must be new as we know it, for see how lately it has bethought itself of so many articles of the simplest convenience; as, for example, wooden clothes-pins to pinch the clothes to the line, instead of metallic pins, were introduced since the Peace of 1783. My mother remembers when her sister, Mrs. Inman, returned from England at that time, and brought these articles with her furniture, then new in this country; then the india-rubber shoe; the railroad; the steamboat; and the air-tight stove; the friction match; and cut nails.

The difference between Talent and Genius is, that Talent says things which he has never heard but once, and Genius things which he has never heard.

Genius is power; Talent is applicability. A human body, an animal, is an applicability; the Life, the Soul is Genius.

“Mamma,” said the child, ” they have begun again!”

Elizabeth Hoar says, “I love Henry, but do not like him.” Young men, like Henry Thoreau, owe us a new world, and they have not acquitted the debt. For the most part, such die young, and so dodge the fulfilment. One of our girls said, that Henry never went through the kitchen without coloring.

Do not mince your speech. Power fraternizes with power....

Montaigne. In Roxbury, in 1825, I read Cotton’s translation of Montaigne. It seemed to me as if I had written the book myself in some former life, so sincerely it spoke my thought and experience. No book before or since was ever so much to me as that. How I delighted afterward in reading Cotton’s dedication to Halifax, and the reply of Halifax, which seemed no words, of course, but genuine suffrages. Afterwards I went to Paris in 1833, and to the Pere le Chaise, and stumbled on the tomb of Auguste Collignon, who, said the stone, formed himself to virtue on the essays of Montaigne. Afterwards John Sterling wrote a loving criticism on Montaigne in the *Westminster Review*, with a journal of his own pilgrimage to Montaigne’s estate and chateau, — and, soon after, Carlyle writes me word that this same lover of Montaigne is a lover of me. Now, I have been introducing to his genius two of my friends, James and Tappan, who both warm to him as to their brother.

Reference. We praise the pine because it looks like a palm, the oriole because it looks like equatorial birds, and all our view of Nature is adjusted to a tropical standard. The man under the line delights as much in the Alpine and Arctic type and dreams of the cool water and the apple and pear and peach of the Temperate climates where Nature serves man. Endless weak reference. Grief and Joy, Charity and Faith get derivative and referring. Dire Necessity is good and strong; — I love him, I hate him; I like, I dislike. Once there was a race that subsisted, but these seeming, spectral fellows that ask even when they curse and swear — or but affect to curse and swear! I wish there was no more good nature left in the world; tomahawks are better. I think the reason why we value mystics so much

is, as oaks indicate a strong soil, so a thick crop of mystics shows like redemption from our universal supplication of each other.

Of Books. He is a poor writer who does not teach courage of treatment.

The Brook Farm Community is an expression in plain prose and actuality of the theory of impulse. It contains several bold and consistent philosophers, both men and women, who carry out the theory, odiously enough, inasmuch as this centripetence of theirs is balanced by no centrifugence; this wish to obey impulse is guarded by no old, old Intellect — or that which knows metes and bounds. The young people who have been faithful to this, their testimony, have lived a great deal in a short time, but have come forth with shattered constitutions. It is an intellectual Sansculottism. Happily, Charles Newcomb and George Bradford have been there, and their presence could not but be felt as sanitary and retentive. Charles Newcomb, I hear, was greatly respected, and his conduct, even in trifles, observed and imitated, — the quiet, retreating, demoniacal youth. Nathaniel Hawthorne said that Burton felt the presence of Newcomb all the time.

I read in Ward's Chinese book, the other day, of bards; many sentences purporting that bards love wine. Tea and coffee are my wine, and I have finer and lighter wines than these. But some nectar an intellectual man will naturally use. For he will soon learn the secret that beside the energy of his conscious intellect, his intellect is capable of new energy by abandonment to the nature of things.... All persons avail themselves of such means as they can to add this extraordinary power to their normal powers. One finds it in music, one in war, one in great pictures or sculpture; one in travelling; one in conversation; in politics, in mobs, in fires, in theatres, in love, in science; in animal intoxication. I take many stimulants and often make an art of my inebriation. I read Proclus for my opium; it excites my imagination to let sail before me the pleasing and grand figures of gods and daemons and demoniacal men. I hear of rumors rife among the most ancient gods, of azonic gods who are itinerants, of daemons with fulgid eyes, of the unenvying and exuberant will of the gods; the aquatic gods, the Plain of Truth, the meadow, the nutriment of the gods, the paternal port, and all the rest of the Platonic rhetoric quoted as household words. By all these and so many rare and brave words I am filled with hilarity and spring, my heart dances, my sight is quickened, I behold shining relations between all beings, and am impelled to write and almost to sing. I think one would grow handsome who read Proclus much and well.

But of this inebriation I spoke of, it is an old knowledge that Intellect by its

relation to what is prior to Intellect is a god. This is inspiration.

They [the Neoplatonists] speak of the Gods with such pictorial distinctness often that one would think they had actually been present, Swedenborg-like, at the Olympic feasts; e g., “This is that which emits the intelligible light, that, when it appeared, astonished the intellectual gods and made them admire their father, as Orpheus says.”

How often I have said, what this morning I must say once more, that the conscience of the coming age will put its surveillance on the intellect. We accuse ourselves that we have been useless, but not that we have been thoughtless.

Thou oughtest to have listened, will it say, so shouldest thou have heard the oracles, which would elevate every day of life.

It is not in the power of God to make a communication of his will to a Calvinist. For to every inward revelation he holds up his silly book, and quotes chapter and verse against the BookMaker and Man-Maker, against that which quotes not, but is and cometh. There is a light older than intellect, by which the intellect lives and works, always new, and which degrades every past and particular shining of itself. This light, Calvinism denies, in its idolatry of a certain past shining.

Swedenborg, Behmen, Spinoza, will appear original to uninstructed and thoughtless persons.... A thinker, or a man through whom shineth that light which is older than intellect and through which alone intellect is a god, will undervalue each reporter when he beholds the splendor of the truth itself. And though such a person will; do justice to the good intention of one of these men of God who strove to say truly what they had seen, yet he will see that to such as quote their words instead of listening to the truth itself, they falsify the truth: for his book is not truth, but truth Swedenborgized or Behmenized or Spinozised.

Much poor talk concerning woman, which at least had the effect of revealing the true sex of several of the party who usually go disguised in the form of the other sex. Thus Mrs. B. is a man. The finest people marry the two sexes in their own person. Hermaphrodite is then the symbol of the finished Soul. It was agreed that in every act should appear the married pair: the two elements should mix in every act.

To me it sounded hoarsely, the attempt to prescribe didactically to woman her duties. Man can never tell woman what her duties are: he will certainly end in describing a man in female attire, as Harriet Martineau, a masculine woman,

solved her problem of Woman. No, Woman only can tell the heights of feminine nature, and the only way in which man can help her, is by observing woman reverently, and whenever she speaks from herself, and catches him in inspired moments up to a heaven of honor and religion, to hold her to that point by reverential recognition of the divinity that speaks through her.

I can never think of woman without gratitude for the bright revelations of her best nature which have been made to me, unworthy. The angel who walked with me in younger days shamed my ambition and prudence by her generous love in our first interview. I described my prospects. She said, I do not wish to hear of your prospects.

April 10.

The slowly retreating snow blocks the roads and wood paths and shuts me in the house. But yesterday the warm south wind drew me to the top of the hill, like the dove from the ark, to see if these white waters were abated, and there was place for the foot. The grass springs up already between the holes in the snow, and I walked along the knolls and edges of the hill wherever the winter bank was melted, but I thrust my cane into the bank two feet perpendicular. I greeted the well-known pine grove which I could not reach; the pine tops seemed to cast a friendly gold-green smile of acquaintance toward me, for it was in my heart that I had not yet quite got home from my late journey, until I had revisited and rejoined these vegetable daemons. The air was kind and clear, the sky southward was full of comets, so white and fan-shaped and ethereal lay the clouds, as if the late visit of this foreign wonder had set the fashion for the humbler meteors. And all around me the new-come sparrows, robins, bluebirds, and blackbirds were announcing their arrival with great spirit.

The Transcendentalist or Realist is distinguished from the Churchman herein, that he limits his affirmation to his perception, and never goes beyond the warrant of his experience (spiritual and sensuous) in his creed. Whilst the Churchman affirms many things received on testimony as of equal value with the moral intuitions.

I told Mr. Means that he need not consult the Germans, but, if he wished at any time to know what the Transcendentalists believed, he might simply omit what in his own mind he added from the tradition, and the rest would be Transcendentalism.

The Church affirms this and that fact of time and place; describes

circumstances; a circumstantial heaven; a circumstantial hell. The way of the Spirit is different. It never antedates its revelations, it does not tell you when or how; but it says, *Be thus and thus*, and in our doing, it opens the path, shines in the way we are to go, and creates around us new unpredicted relations.

Daniel Webster is a great man with a small ambition. Nature has built him and holds him forth as a sample of the heroic mould to this puny generation. He was virtual President of the United States from the hour of the Speech on Foot's Resolutions in the United States Senate in 1832, being regarded as the Expounder of the Constitution and the Defender of Law. But this did not suffice; he wished to be an officer, also; wished to add a title to his name, and be a President. That ruined him. He should have learned from the Chinese that "it has never been the case that, when a man in a place where no mulberry trees yet grew could cause the aged to wear silks, and where there were no breeders of fowls or hogs or sheep could cause the aged to eat flesh and the young did not suffer hunger or cold, — he did not become Emperor."

The Drop of Nectar. In Nature the "woodness" or tendency to make an idle savage and idiot of a man, through the seduction of forests, mountains, and waters, is a conspicuous example of the bias or small excess of force which is always added in the vital directions.

Buddhism. Winter, Night, Sleep, are all the invasions of eternal Buddh, and it gains a point every day. Let be, *laissez-faire*, so popular now in philosophy and in politics, that is bald Buddhism; and then very fine names has it got to cover up its chaos withal, namely, trances, raptures, abandonment, ecstasy, — all Buddh, naked Buddh.

Travelling, forsooth! as if every traveller did not feel himself an impertinence when he came among the diligent in their places. Do you suppose there is any country where they do not scald the milkpans, and clout the infants, and burn the brushwood? And yet Humboldt may travel, or any other man, when the state seems to travel in his legs, as these railway levellers whom I met this afternoon.

Nature is the strictest economist,...

Ellen wishes to know if she may come and see when the railroad goes by?
"Father, what makes the railroad grow worse?"

I said she must come in, for it was damp, and she would get sick, and I could not spare my little daughter. She answered, "Could you not spare her to God?"

It is a compensation for the habitual moderation of Nature in these Concord fields and the want of picturesque outlines, the ease of getting about. I long sometimes to have mountains, ravines, and flumes like that in Lincoln, New Hampshire, within reach of my eyes and feet; but the thickets of the forest and the fatigue of mountains are spared me and I go through Concord as through a park.

Concord is a little town, and yet has its honors. We get our handful of every ton that comes to the city. We have had our share of Everett and Webster, who have both spoken here. So has Edward Taylor. So did George Bancroft, and Bronson Alcott, and Charles Lane, and Garrison and Phillips, the Abolition orators. We have had our shows and processions, conjurors, and beargardens, and here, too, came Herr Driesbach with his cats and snakes, lying down on a lioness, and kissing a tiger, and rolling himself up, not in leopard-skins, but in live leopards, and his companion with his tippet of anacondas.

Hither come in summer the Penobscot Indians, and make baskets for us on the river-bank.

Doctor Channing and Harriet Martineau were here and — what I think much more — here was Aunt Mary, Ellen, Edward, and Charles; here is Elizabeth Hoar; here have been, or are, Margaret Fuller, Sam and Anna Ward, Caroline Sturgis, Charles Newcomb George Bradford, Ellery Channing, Nathaniel Hawthorne, Sarah Alden Ripley; Henry Thoreau, James Elliot Cabot.

In the old time, John Winthrop, John Eliot, Peter Bulkeley; then Whitefield; then Hancock, Adams and the College were here in 1775.

[Mr. Emerson, years later, added the following: —]

Kossuth spoke to us in the court-house in 1852. Agassiz, Greenough, Clough, Jeffries Wyman, Samuel Hoar, Lafayette.

April 17.

How sincere and confidential we can be, saying all that lies in the mind, and yet go away feeling that we have spun a rope of sand, that all is yet unsaid, from the incapacity of the parties to know each other, *although they use the same words....* Could they but once understand that I loved to know that they existed and heartily wished them Godspeed, yet out of my poverty of life and thought, had no word or welcome for them when they came to see me, and could well consent to their living in another town, from any claim that I felt on them, — it

would be great satisfaction. Not this, but something like this, I said, and then, as the discourse, as so often, touched Character, I added, that they were both intellectual, they assumed to be substantial and centra], to be the thing they said, but were not; but only intellectual, or the scholars, the learned, of the Spirit or Central Life. If they were that, if the centres of their life were coincident with the Centre of Life, I should bow the knee, I should accept without gainsaying all that they said, as if I had said it: just as our saint (though morbid), Jones Very, had affected us with what was best in him, but I felt in them the slight dislocation of these Centres which allowed them to stand aside and speak of these facts *knowingly*. Therefore, I was at liberty to look at them, not as the commanding fact, but as one of the whole circle of facts. They did not like pictures, marbles, woodlands, and poetry; I liked all these, and Lane and Alcott too, as one figure more in the various landscape.

And now, I said, will you not please to pound me a little before I go, just by way of squaring the account, that I may not remember that I alone was saucy? Alcott contented himself with quarrelling with the injury done to greater qualities in my company, by the tyranny of my Taste; — which certainly was very soft pounding. And so I departed from the divine lotus-eaters.

Veracity. Almost every writing of a liberal kind when at last it is done assumes the air of an escapade, it is done to get rid of it, done for editors, booksellers, and all miscellaneous occasions, and not out of a dire or divine intrinsic necessity. So much deduction from veracity.

Intellectual race are the New Englanders. Mrs. Ripley at Brook Farm said that the young women who came thither from farms elsewhere would work faithfully and do whatever was given them without grumbling, but there was no heart in it, but their whole interest was in their intellectual culture.

“Open the mouth of the cave, and bring out those five kings unto me out of the cave” (Joshua x, 22), was Dr. Frothingham’s text on the five points of Calvinism.

Carlyle esteems all living men mice and rats, but that is one of the conditions of his genius. Take away that feeling, and you would possibly make him dumb.

Carlyle in his new book, as everywhere, is a continuer of the great line of scholars in the world, of Horace, Varro, Pliny, Erasmus, Scaliger, Milton, and well sustains their office in ample credit and honor. If the good Heaven have any truth to impart, there he is at his post, a fit organ to say it well. Not a prophet, not

a poet, but a master of that cunning art which can clothe any fact with a fine robe of words. first in Waltham, and, in her later years, in Concord, Sarah Alden Bradford Ripley, wife of Rev. Samuel Ripley.

Nature gives me precious signs in such persons as William Tappan, Nathaniel Hawthorne, and now eminently in L. M. W., that in democratic America, she will not be democratized. How cloistered and constitutionally sequestered from the market and gossips!

Second Advent. I read of an excellent Millerite who gives out that he expects the second advent of the Lord in 1843, but there is any error in his computation, — he shall look for him until he comes.

The hurts of the husbandmen are many. As soon as the heat bursts his vine-seed and the cotyledons open, the striped yellow bugs and the stupid squash-bug, smelling like a decomposing pear, sting the little plants to death and destroy the hope of melons. And as soon as the grass is well cut and spread on the ground, the thunderclouds, which are the bugs of the haymakers, come growling down the heaven and make tea of his hay.

We cannot forgive you that worst want of tact which incapacitates you from discriminating between what is to be disputed, and what is to be revered or cherished in your friend's communications. The babe of a Choctaw, the cub of a lion, may be strangled by a boy: and the ablest genius, if he trust you with his yet unripe fancies, casts himself helpless on your compassion. Life and death are in your hands, let his power and renown be what they may. There is no part then to be taken but to throw yourself as much as possible into the neutral state of mind and entertain his thought as far as you can; and where you cannot, be satisfied that you cannot, without criticism. It is, though you can kill it, the babe of a Choctaw, the cub of a lion, and will yet approve its sinewy stock.

I wrote to Thomas Carlyle of his new book, *Past and Present*...

I went to Washington and spent four days. The two poles of an enormous political battery, galvanic coil on coil, self-increased by series on series of plates from Mexico to Canada and from the sea westward to the Rocky Mountains, here terminate and play and make the air electric and violent. Yet one feels how little, more than how much, Man is represented there. I think, in the higher societies of the universe, it will turn out that the angels are molecules, as the devils were always Titans, since the dulness of the world needs such

mountainous demonstration, and the virtue is so modest and concentrating.

May 1.

Yesterday I read an old file of Aunt Mary's letters, and felt how she still gains by all comparison with later friends. Never any gave higher counsels, as Elizabeth Hoar most truly said, nor played with all the household incidents with more wit and humor. My life and its early events never look trivial in her letters, but full of eyes, and acquire deepest expression.

In America, out-of-doors all seems a market, in-doors an air-tight stove of conventionalism. Everybody who comes into the house savors of these precious habits: the men, of the market; the women, of the custom. In every woman's conversation and total influence, mild or acid, lurks the *conventional devil*. They look at your carpet, they look at your cap, at your salt-cel lar, at your cook and waiting-maid, conventionally, — to see how close they square with the customary cut in Boston and Salem and New Bedford. But Aunt Mary and Elizabeth do not bring into a house with them a platoon of conventional devils.

May 7.

Yesterday George Bradford walked and talked of the Community and cleared up some of the mists which gossip had made: and expressed the conviction, shared by himself and his friends there, that plain dealing was the best defence of manners and morals between the sexes. I suppose that the danger arises whenever bodily familiarity grows up without a spiritual intimacy. The reason why there is purity in marriage is, that the parties are universally near and helpful, and not only near bodily. If their wisdoms come near and meet, there is no danger of passion. Therefore, the remedy of impurity is to come nearer.

Many events on the light-winged hours. Alcott and Lane make ready to depart. Channing has brought his Lares to Concord, and Henry Thoreau is gone yesterday to New York — whence come the warm south winds.

At Brook Farm this peculiarity, that there is no head. In every family, a paterfamilias; in every factory, a foreman; in a shop, a master; in a boat, a boatswain; but in Brook Farm, no authority, but each master and mistress of their own actions, — happy, hapless, *sansculottes*.

Yesterday, English visitors, and I waited all day when they should go.

If we could establish the rule that each man was a guest in his own house, and when we had shown our visitors the passages of the house, the way to fire, to bread, and water, and thus made them as much at home as the inhabitant, did then leave them to the accidents of intercourse, and went about our ordinary business, a guest would no longer be formidable.

At Brook Farm again, I understand the authority of Mr and Mrs. Ripley is felt unconsciously by all; and this is ground of regret to individuals, who see that this particular power is thrown into the conservative scale. But Mr and Mrs. Ripley are the only ones who have identified themselves with the Community. They have married it, and they are it. The others are experimenters who will stay by this if it thrives, being always ready to retire, but these have burned their ships, and are entitled to the moral consideration which this position gives. The young people agree that they have had more rapid experiences than elsewhere befel them; have lived faster.

May 10.

This morning sent away L. M. W.'s manuscript with some regret that my wild flowers must ever go back. Their value is as a relief from literature, these unhackneyed fresh draughts from the sources of sentiment and thought, far, far from shop and market, or the aim at effect. It is read as we read in an age of polish and criticism the first lines of written prose and verse in a nation.

George Bradford yesterday dug with mein the swamp his young larches, and we sat with the sphagnum and the budding coptis and the blooming white violet, sweet-scented. He talks happily of his new friends. But it is not enough that people should be intelligent and interested in themselves. They must also make me feel that they have a controlling happy Future opening before them and inevitably bright, and brightening their present hour. Edward Lowell and Charles Emerson suggested their promise in their salutation, or in the least transaction. Freedom is frivolous beside the tyranny of our genius.

The blue sky in the zenith is the point in which romance and reality meet. If we should be rapt away into all that we dream of heaven, and should converse with Gabriel, Michael, Uriel, the blue sky would be all that would remain of our furniture. — I have written this or the like of this somewhere else, I know not

where.

Ellery has reticency, Carlyle has not. How many things this book of Carlyle gives us to think. It is a brave grappling with the problem of the times, no luxurious holding aloof, as is the custom of men of letters, who are usually bachelors and not husbands in the state, but Literature here has thrown off his gown and descended into the open lists. *The gods are come among us in the likeness of men.* An honest Iliad of English woes. Who is he that can trust himself in the fray? Only such as cannot be familiarized, but, nearest seen and touched, is not seen and touched, but remains inviolate, inaccessible, because a higher interest, the politics of a higher sphere bring him here and environ him, as the ambassador carries his country with him. Love protects him from profanation. What a book this is in its relation to English privileged estates!...

Gulliver among the Lilliputians. This book comes so near to life and men, that one can hardly help looking ahead a little and inquiring whether this strong brain will always be shut up in a scholar's library; whether the most intelligent Englishman will nourish no ambition to do that which he describes, and when the hour comes that these volleys of pungent counsels shall have got thoroughly sunk into the ear and heart of the population, and the population is Carlyle's, whether our vigorous Samson will not have a ruler's part to play. Yet nobody, neither law-sergeant nor newspaper, yet cries "Cromwell."

A Londoner must exaggerate the social problem.

Brook Farm Again! The freaks of the young philosophers show how much life they have, as jockeys, when a horse rolls on the ground, add a gold eagle to his price for every turn he makes. But nothing will take the place of fidelity. The final result will be the same to Mrs. Ripley and the true workers. Yet one would fain say to the dear youths, that pride and bearing will serve for a year or two, but are serpents' eggs, and will end in serpents, though they look now like alabaster and the egg of Jove's eagle; that God has suffered us to be represented in Genius, but in Virtue we must appear in person.

Brook Farm will show a few noble victims, who act and suffer with temper and proportion, but the larger part will be slight adventurers and will shirk work.

May 18.

I set out yesterday, by the hands of Cyrus Warren, nineteen young pine trees

west of my house and four in the triangle.

I never see a quite unmusical character. Beautiful results are everywhere lodged.

All intercourse is random and remote, yet what fiery and consoling friendships we have! The Ideal journeying always with us, the heaven without rent or seam. We never know while the days pass which day is valuable. The surface is vexation, but the serene lies underneath.

Nature lives by making fools of us all, adds a drop of nectar to every man's cup.

Machinery and Transcendentalism agree well. Stage-Coach and Railroad are bursting the old legislation like green withes.

My garden is an honest place. Every tree and every vine are incapable of concealment, and tell after two or three months exactly what sort of treatment they have had. The sower may mistake and sow his peas crookedly: the peas make no mistake, but come up and show his line.

No matter how long you are silent. Silence is only postponement: the retained thought takes a softer form.... You must hear the birds sing without attempting to render it into verbs and nouns. Let it lie a while and at night you shall find you have transferred its expression into the history of the day. Our American lives are somewhat poor and pallid, Franklins and Washingtons, no fiery grain; staid men, like our pale and timid flora. We have too much freedom, need an austerity, need some iron girth.

The poets, the great, have been illustrious wretches who have beggared the world which has beggared them.

Work on; the bee works all day, all summer, not knowing whom he works for, until the hive is full. Then comes a higher being, Man, and takes the store. As long as you feel the voracity of reading, read in God's name, asking no questions of why and whereto. By and by, some man or men, a continent, or perhaps a higher sphere of beings, will be served by you.

May 19.

A youth of the name of Ball, a native, as he told me, of Concord, came to me yesterday, who towered away in such declamatory talk that at first I thought it rhodomontade and we should soon have done with each other. But he turned out to be a prodigious reader, and writer, too (for he spoke of whole volumes of prose and poetry barrelled away), and discovered great sagacity and insight in his criticisms, — a great impatience of our strait New England ways, and a wish to go to the Ganges, or at the least to live in Greece and Italy. There was little precision in his thinking, great discontent with metaphysics, and he seemed of a musical rather than a mathematical structure. With a little more repose of thought, he would be a great companion. He thought very humbly of most of his contemporaries: and Napoleon he thought good to turn periods with, but that he could see through him; but Lord Bacon he could not pardon for not seeing Shakspeare, for, said he, “As many Lord Bacons as could stand in Concord could find ample room in Shakspeare’s brain”; and Pope’s mean thought and splendid rhetoric he thought “resembled rats’ nests in kings’ closets, made up in a crown and purple robe and regalia.” He knows Greek well, and reads Italian, German, and Spanish. He spent five hours with me and carried off a pile of books. He had never known but one person of extraordinary promise, a youth at Dartmouth of the name of Hobart.

Critical. Do not write modern antiques like Landor’s *Pericles*, or Goethe’s *Iphigenia*, or Wieland’s *Abderites*, or Coleridge’s *Ancient Mariner*, or Scott’s *Lay of the Last Minstrel*. They are paste jewels. You may well take an ancient subject where the form is incidental merely, like Shakspeare’s plays, and the treatment and dialogue is simple, and most modern. But do not make much of the costume. For such things have no verity; no man will live or die by them: The way to write is to throw your body at the mark when your arrows are spent, like Cupid in Anacreon. Shakspeare’s speeches in *Lear* are in the very dialect of 1843.

High speech of Demiurgus to his gods in the *Timaeus*. Goethe’s World-Soul is a sequel of the same thought. And that does the Intellect; it goes *ordering*, *distributing*, and by order making beauty.

This creative vortex has not spun over London, over our modern Europe, until now in Carlyle. Humboldt is magnificent, too, as a distributing eye. His glance is stratification; geography of plants, *etc.*

May 20.

Walked with Ellery. In the landscape felt the magic of color; the world is all opal, and those ethereal tints the mountains wear have the finest effects of music on us. Mountains are great poets, and one glance at this fine cliff scene undoes a great deal of prose, and reinstates us wronged men in our rights. All life, all society begins to get illuminated and transparent, and we generalize boldly and well. Space is felt as a great thing. There is some pinch and narrowness to us, and we laugh and leap to see the world, and what amplitudes it has of meadow, stream, upland, forest, and sea, which yet are but lanes and crevices to the great Space in which the world swims like a cockboat in the sea. A little canoe with three figures put out from a creek into the river and sailed downstream to the Bridge, and we rejoiced in the Blessed Water inviolable, magical, whose nature is Beauty, which instantly began to play its sweet games, all circles and dimples and lovely gleaming motions, — always Ganges, the Sacred River, and which cannot be desecrated or made to forget itself. But there below are these farms, yet are the farmers unpoetic. The life of labor does not make men, but drudges. Pleasant it is, as the habits of all poets may testify, to think of great proprietors, to reckon this grove we walk in a park of the noble; but a continent cut up into ten-acre farms is not desirable to the imagination. The Farmer is an enchanted laborer, and after toiling his brains out, sacrificing thought, religion, taste, love, hope, courage at the shrine of toil, turns out a bankrupt as well as the merchant. It is time to have the thing looked into, and with a transpiercing criticism settled whether life is worth having on such terms....

Ellery said, “ The village [of Concord] did not look so very bad from our point; — the three churches looked like geese swimming about in a pond.”

All the physicians I have ever seen call themselves believers, but are materialists; they believe only in the existence of matter, and not in matter as an appearance, but as substance, and do not contemplate a cause. Their idea of spirit is a chemical agent.

The stars I think the antidotes of pyrrhonism. In the fuss of the sunlight and the rapid succession of moods, one might doubt his identity; but these expressive points, always in their place so immutable, are the tranquillizers of men. No narcotic so sedative or sanative as this.

Man sheds grief as his skin sheds rain. A preoccupied mind an immense protection. There is a great concession on all hands to the ideal decorum in grief, as well as joy, but few hearts are broken.

Edward Everett did long ago for Boston what Carlyle is doing now for England and Europe, in rhetoricizing the conspicuous objects.

Reform. Chang Tsoo and Kee Neih retired from the state to the fields on account of misrule, and showed their displeasure at Confucius who remained in the world. Confucius sighed and said, "I cannot associate with birds and beasts. If I follow not man, whom shall I follow? If the world were in possession of right principles, I should not seek to change it." See *The Four Books*; translated from the Chinese by Rev. D. Collier, Malacca, 1828.

[H ere follow several extracts from the same work.]

I enjoy all the hours of life. Few persons have such susceptibility to pleasure; as a countryman will say, " I was at sea a month and never missed a meal," so I eat my dinner and sow my turnips, yet do I never, I think, fear death. It seems to me so often a relief, a rendering-up of responsibility, a quittance of so many vexatious trifles.

How poetic this wondrous web of property! J. P. sitting in his parlor talking of philanthropy has his pocket full of papers, representing dead labor done long ago, not by him, not by his ancestor, but by hands which his ancestor had skill to set at work and get the certificates of. And now these signs of the work of hands, long ago mouldered in the grave, are honored by all men, and for them J. P. can get what vast amounts of work done by new young hands, — canals, railways, houses, gardens, coaches, pastures, sheep, oxen, and corn.

One great wrong must soon disappear, — this right to burden the unborn with state loans.

It is folly to imagine that there can be anything very bad in the position of woman compared with that of man, at any time; for since every woman is a man's daughter, and every man is a woman's son, every woman is too near to man, was too recently a man, than that possibly any wide disparity can be. As is the man will be the woman; and as is the woman, the man.

It is greatest to believe and to hope well of the world, because he who does so, quits the world of experience, and makes the world he lives in.

It is very odd that Nature should be so unscrupulous. She is no saint;...

Luther said he “preached coarsely; that giveth content to all: Hebrew, Greek, and Latin I spare until we learned ones come together, and then we make it so curled and finical that God himself wondereth at us.”

Reform, people hate the sound of now that they have begun to think it is like reading novels, which, when they are done, leave them just where they were, carpenters, and merchants, and debtors, and poor ladies — only they disbelieved the novel, and believed at first the reformer. But with any faith that would give a new face to the world for poor old eyes, lank hair, and wrinkled brows — as Millerism and Fourierism and other of our superstitions attest.

The smallest piece of God in a man makes him as attractive as loadstone. A scholar shines and immediately draws many youth around him, and, if he have not God enough in him to know how to say No, he finds himself inconveniently attractive. The Man, the God, is awakening; the door bolt will be broken, the iron fence melted in the forge; a man will yet measure his acres by his need and ability. I can manage ten and do take ten; I forty, and take forty; I a hundred, and will farm a hundred. He will know how to stand in his garden and in his house as steward, and say, This is right that you should take; this is wrong; therefore, leave it, O guest! And by his just standing there, as a channel of law and not of Self, the human race will feel that they occupy it by his occupation, they are excluded in his departure.

In dreamy woods, what forms abound
That elsewhere never poet found!
Here voices ring, and pictures burn,
And grace on grace, where'er I turn.

In the dreaming woods, I find what is nowhere else, and pictures on pictures whithersoever I turn. Over our little “God’s Pond” the birds flitted spectrally; nothing could look more elysian and unreal. I think that at some Parliament of Beauty, Fire and Water will contend for the apple which mistaken Paris gave, and it will be adjudged to neither but to Animal, who is the child of both. For the red bird is fire and the running horse is water.

It is agreeable and picturesque to see a man drink water and eat bread; not so, coffee and cake.

It is not travelling, it is not residence, it is relations that make life much or

little. A few grand persons coming to us and weaving duties and offices between us and them, shall make our bread ambrosial. — But now it seems to me that I know persons enough of the first class, if only they were necessarily related. Three, four, five, six, seven, or eight persons, who look at nature and existence with no unworthy eye, but they are players, and rather melancholy players in the world, for want of work. I have seen no one who wore on his face an expression of habitual energy, but rather of indolence, the great faculties lie idle, whilst the hands and feet bustle.

We do not live by times; we do not belong to this or that century; but we live by qualities. A new style of face, a new person, would be a new age and regeneration to us. Nature, a mountain walk, always gives us to suspect the poverty of life, and we believe that we have run along only one thread of experience out of millions of varied threads which we were competent to combine with that single-string of ours.

Life must look forlorn, if we have nothing above us. Paddy values life, and it looks solid to him, because he sees and feels so much and so many above him. It looks to us sad enough that not even a superstition should remain to us, no ghosts in the broad land and social system of millions, no play for the imagination of millions; and yet it has so appeared to all peoples, for no man knew his superstition as superstition. And we who lie under this enchantment of desiring money, may find ours there, when we consider that the net result of the life which is bestowed on drudging for an estate, and of that which is merrily trifled away, does not much vary. The farmer, as we passed, was leading a small company of men in their Eleusinian mysteries along the furrows of the field. One step each and then seeds were dropped and the soil smoothed and then another step and no man lifted his face from the ground.

This country must be filled with incident, and then how will the landscape look! Now our houses and towns are like mosses and lichens, so thin laid on the rock. One day they will get rooted like oaks and be a part of the globe.

I think we are not quite yet fit for Flying Machines, and therefore there will be none....

The mountains in the horizon acquaint us with more exalted relations to our friends than any we sustain.

Carlyle must write thus or nohow, like a drunken man who can run, but cannot walk. What a *man s book* is that! no prudences, no compromises, but a

thorough independence. A masterly criticism on the times. Fault perhaps the excess of importance given to the circumstance of to-day. The poet is here for this, to dwarf and destroy all merely temporary circumstance, and to glorify the perpetual circumstance of men, e g., dwarf British Debt and raise Nature and social life.

May 25.

Criticism. It is for the novelist to make no character act absurdly, but only absurdly as seen by the others....

The sky is the daily bread of the eyes. What sculpture in these hard clouds; what expression of immense amplitude in this dotted and rippled rack, here firm and continental, there vanishing into plumes and auroral gleams. No crowding; boundless, cheerful, and strong.

Men Representative. Nothing is dead. Men and things feign themselves dead....

The gods are jealous, and their finest gifts of men they deface with some shrewd fault, that we may hate the vessel which holds the nectar. And hence men have in all ages suffered the heralds of Heaven to starve and struggle with evils of all kinds; for the gods will not have their heralds amiable; lest men should love the cup and not the nectar.

My friends are leaving the town, and I am sad at heart that they cannot have that love and service from me to which they seem by their aims and the complexion of their minds, and by their unpopularity, to have rich claims. Especially Charles Lane I seem to myself to have treated with the worst inhospitality, inasmuch as I have never received that man to me — not for so much as one moment. A pure, superior, mystical, intellectual, and gentle soul, free and youthful, too, in character, and treating me ever with marked forbearance, he so formidable, — a fighter in the ring, — yet he has come, and has stayed so long in my neighborhood an alien: for his nature and influence do not invite mine, but always freeze me. It sometimes seems to me strange that English and New Englanders should be so little capable of blending. Their methods and temperaments so differ from ours. They strike twelve the first time. Our people have more than meets the ear. This man seems to me born a warrior, the most expert swordsman we have ever seen; good when the trumpet sounds.

Metallic in his nature, not vegetable enough. No eye for Nature, and his hands as far from his head as Alcott's own. — We are not willing to trust the Universe to give the hospitality of the Omnipresent to the good, but we, too, must assume to do the honors with offices, money, and clatter of plates.

O Poet, by rock and bird is conferred a new nobility, and not in palaces any longer. Would you know the conditions, hard but equal? Thou shalt leave the world and know the Muse only....

[This, the concluding passage off “ The Poet” (*Essays*, Second Series) varies, it seems to the editors for the better, in the *Journal*, in the following passage: —]

For the time of towns is measured by funeral chimes, and every hour is tolled away from the world, but in Nature the merry hours are dialled by flowers on the hillside and growth of joy on joy. Thou shalt have a new census and calendar; for a long September day between sun and sun shall hold centuries in its rosy and yellow deeps, and thy calendar shall be thoughts and thy action *as thou ought*. God wills also that thou abdicate a manifold and duplex life ... And a tomb is all that shall be denied thee. For the Universe is thy house to live in and thou shalt not die.

If thou keep these laws, thou shalt have a leader's eye, or live always in the mountain, seeing all the details, but seeing them all in their place and tendency. And thou shalt be greeted by omens that are prosperity and fill thee with light.

And thou shalt serve the God Terminus, the bounding Intellect, and love Boundary or Form; believing that Form is an oracle which never lies.

And every man shall be to thee for all men, each man being alone in the vast Desert; and thou shalt worship him, for he is the Universe in a mask.

June 10.

Hawthorne and I talked of the number of superior young men we have seen. H. said, that he had seen several from whom he had expected much, but they had not distinguished themselves; and he had inferred that he must not expect a popular success from such; he had in nowise lost his confidence in their power.

I am often refreshed by seeing marks of excellence, and of excellence which makes no impression on people at large, who reckon it a bar-room wit, and swaggering intellect, not presentable, and of no great value. — Then I take comfort that these gifts are so cheap, and it would seem that all men are great, only some are adjusted to the delicate mean of this world and can swim in it wherever put.

June 11.

Pride. Pride is so handsome, pride is so economical, pride eradicates so many vices — ...

The men show the quality of the land.

My Chinese book does not forget to record of Confucius, that his night-gown was one length and a half of his body.

There are some persons from whom we always expect fairy gifts. Let us not cease to expect them.

June 18.

Yesterday at Bunker Hill, a prodigious concourse of people, but a village green could not be more peaceful, orderly, sober, and even affectionate. Webster gave us his plain statement like good bread, yet the oration was feeble compared with his other efforts, and even seemed poor and Polonius-like with its indigent conservations. When there is no antagonism, as in these holiday speeches, and no religion, things sound not heroically. It is a poor oration that finds Washington for its highest mark. The audience give one much to observe, they are so light-headed and light-timbered, every man thinking more of his inconveniences than of the objects of the occasion, and the hurrahs are so slight and easily procured. Webster is very good America himself.

Wonderful multitudes: on the top of a house I saw a company protecting themselves from the sun by an old large map of the United States. A charitable lumber merchant near the Bridge had chalked up over his counting-room door “500 seats for ladies, free”; and there the five hundred sat in white tiers. The ground within the square at the monument was arranged to hold 80,000 persons.

It was evident that there was the Monument and here was Webster, and he knew well that a little more or less of rhetoric signified nothing:... He was there as the representative of the American continent, there in his Adamitic capacity, and that is the basis of the satisfaction the people have in hearing him, that he alone of all men does not disappoint the eye and ear, but is a fit figure in the landscape.

June 22.

I was at Brook Farm and had a cheerful time. Some confidences were granted me; and grief softened the somewhat hard nature of Mrs. George Ripley, so that I had never seen her to such advantage. Fine weather, cheerful uplands, and every person you meet is a character and in free costume. Charles Newcomb I saw, and was relieved to meet again on something of the old footing, after hearing of so much illness and sensitiveness. But Charles is not a person to be seen on a holiday or in holiday places, but one should live in solitude and obscurity, with him for the only person in the county to speak to. Also George Bradford let me a little into the spiritual history and relations that go forward, but one has this feeling in hearing of their spiritualism, — ah! had they never heard of it first! and did not know it was spiritualism.

The scholars are the true hierarchy, only that now they are displaced by hypocrites, that is, sciolists. For is not that the one want of the man, to meet a brother who, being fuller of God than he, can hold him steady to a truth until he has made it his own? O with what joy I begin to read a poem which I confide in as an inspiration....

[Under the ink writing of this page in the Journal can be traced the pencilled lines on "The Poet," beginning —

But oh, to see his solar eyes
Like meteors which chose the way
And rived the dark like a new day, *etc.*

which form the end of the first division of the verses with that title printed in the Appendix to the *Poems*.]

The Chinese are as wonderful for their etiquette as the Hebrews for their piety.

Those men who are noised all their lifetime as on the edge of some great discovery, never discover anything. But nobody ever heard of Monsieur Daguerre until the Daguerreotype appeared. And now I do not know who invented the railroad.

Dante's *Vita Nuova* reads like the Book of Genesis, as if written before literature, whilst truth yet existed. A few incidents are sufficient, and are

displayed with Oriental amplitude and leisure. It is the Bible of Love.

The Interim. So many things are unsettled which it is of the first importance to settle — and, pending their settlement, we will do as we do....

Variety. [Here follows the passage on the successive delights that various authors have given, which is printed in “Experience.”] *Pero si muove.* And when at night I look at moon and stars, I seem stationary and they to hurry.

THE THREE DIMENSIONS

Room! cried the spheres when first they shined,
And dived into the ample sky:
Room! room! cried the new mankind,
And took the oath of Liberty:
Room! room! willed the opening mind,
And found it in Variety.

Life. Fools and clowns and sots make the fringes of every one's tapestry of life, and give a certain reality to the picture. What could we do in Concord without Bigelow's and Wesson's bar-rooms and their dependencies? What without such fixtures as Uncle Sol, and old Moore who sleeps in Doctor Hurd's barn, and the red charity-house over the brook? Tragedy and comedy always go hand in hand.

Life itself is an interim and a transition; this, O Indur, is my one and twenty thousandth form, and already I feel the old Life sprouting underneath in the twenty thousand and first, and I know well that he builds no new world but by tearing down the old for materials.

[In July, Mr. Emerson, by invitation, gave an address to the Temperance Society at Harvard, Massachusetts. The extract which Mr. Cabot gives in the Appendix to his Memoir shows that he treated his subject largely and by no means in the usual narrow and specific way.]

July 8.

The sun and the evening sky do not look calmer than Alcott and his family at Fruitlands. They seemed to have arrived at the fact, to have got rid of the show, and so to be serene. Their manners and behavior in the house and in the field were those of superior men, of men at rest. What had they to conceal? What had they to exhibit? And it seemed so high an attainment that I thought, as often before, so now more, because they had a fit home or the picture was fitly framed, that these men ought to be maintained in their place by the Country for its culture. Young men and young maidens, old men and women, should visit them and be inspired. I think there is as much merit in beautiful manners as in hard work.

I will not prejudge them successful. They look well in July. We will see them

in December. I know they are better for themselves than as partners. One can easily see that they have yet to settle several things. Their saying that things are clear, and they sane, does not make them so. If they will in every deed be lovers and not selfish; if they will serve the town of Harvard, and make their neighbors feel them as benefactors wherever they touch them, they are as safe as the sun.

We spend our money for that which is not *help* and have the inconvenience of the reputation of money without its advantage. Those who have no appearance to keep up, the dowdy farmer's wife who meets you at her door, broom in hand, or pauses at her washtub to answer your question, — their house is serene and majestic, if their natures are; but ours is not, let our ideas be what they may, whilst we may not appear except in costume, and our immunity at the same time is bought by money and not by love and nature.

And far away the purple morn
Concealed by intervening fruits and flowers
Lies buried in the abundance of the hours.

July 10.

Ellery Channing railed an hour in good set terms at the usurpation of the past, at the great hoaxes of the Homers and Shakspeares, hindering the books and the men of to-day of their just meed. Oh certainly; I assure him that oaks and horse-chestnuts are entirely obsolete, that the Horticultural Society are about to recommend the introduction of cabbages as a shade tree, so much more convenient and every way comprehensible; all grown from the seed upward to its most generous crumpled extremity within one's own short memory; past contradiction the ornament of the world, and then so good to eat, as acorns and horse-chestnuts are not. Shade trees for breakfast! Then this whole business of one man taking the praise of all or more than his share of the praise. As all are alike in nature and possibility, it is absurd that any should pretend to exhibit more reason or virtue than I do. A man of genius, did you say? A man of virtue? I tell you both are malformations, painful inflammations of the brain and of the liver and such shall be punishable in the new Commonwealth. And if any such appear they shall be dealt with as all reasonable Spartans and Indians do with lame and deformed infants, toss them into the river and the average of the race improved. Nothing that is not *ex tempore* shall now be tolerated: pyramids and cities shall give place to tents. The man, the skeleton and body, which many years have built up, shall go for nothing: his dinner, the mutton and rice he ate

two hours ago, now fast flowing into chyle, that is all we consider; and the problem how to detach new dinner from old man — what we respect from what we scorn — deserves the study of the scientific.

[The poem “Blight” follows.]

The clergy are the etiquette or Chinese Empire of our American Society. They are here that we may not be fed and bedded and die and be buried as dogs, but, in the want of dignity, we may be treated to a sufficiency of parade and gentle gradations of salutation at coming and parting. If anybody dies and grieves us to the heart, so that the people might be melted to tears by a hearty word, the minister shuts his lips and preaches on the miracles, or the parables, or Solomon’s Temple, because the family have not *had up their note*; if any new outrage on law or any pregnant event fills the mind of people with queries and omens, the pulpit is dumb.

Ellery, who hopes there will be no cows in Heaven, has discovered what cows are for, namely, to give the farmers something to do in summertime. All this haying comes at midsummer between planting and harvest, when all hands would be idle, but for this cow and ox, which must be fed and mowed for; and thus Intemperance and the progress of Crime is prevented!

July 16.

Montaigne has the *de quoi* which the French cherubs had not, when the courteous Archbishop implored them to sit down. His reading was Plutarch.

‘T is high time we had a Bible that should be no provincial record, but should open the history of the planet and bind all tendencies and dwarf all the Epics and Philosophies we have. It will have no Books of Ruth and Esther, no Song of Solomon, nor excellent, sophistical Pauls.

As if any taste or imagination could supply identity. The old duty is the old God.

Readiness is youthfulness; to hold the old world in our hand, awaiting our new errand, and to be rebuked by a child, by a sot, by a philistine, and thankfully take a new course. The Moral Sentiment is well called the Newness, for it is never other than a surprise, and the oldest angels are the boys whom it doth whip

and scourge, though its scars give the gladness of the Martyr flame.

I have got in my barn a carpenter's bench and two planes, a shave, a saw, a chisel, a vise, and a square. These planes seem to me great institutions, whose inventor no man knoweth, yet what a stroke of genius was each of these tools! When you have them, you must watch a workman for a month, or a year, or seven years, as our boys do, to know all his tricks with them. Great is Tubal Cain. A good pen is a finer, stronger instrument, and a language, an algebra, a calculus, music, or poetic metre, more wondrous tools yet, for this polygon or pentagon that is called Man. Thanks, too, to Pythagoras for the multiplication table.

To lay down the heavy burden
Of herself as woman would.

August 5.

Home from Plymouth, where I spent a fine day in an excursion to Half Way Pond, dining at the house of Mrs. R — . Mary and Lucia Russell made the party for us, and Abraham Jackson and Helen Russell accompanied us. Mrs. R. was a genuine Yankee, and so fluent in her provincial English that Walter Scott or Dickens could not desire a better sample of local life. Mr. Faunce, Mr. Swift, and Mr. Stetson, her ministers at "Ponds" (meaning Monument Ponds), baptism by immersion and by sprinkling, Mr. Whitefield's "sarmons," the "Univarsallers," the Schools, and the Reformation of the Church at Ponds and elsewhere, and the drowning of her son Allen in a vessel loaded with paving-stones which sunk in a tempest near Boston Light, and the marriage of her son's widow, were the principal events of her life, and the topics of her conversation. She lives alone in this pleasing, tranquil scene at the head of a pond, and never is uneasy except in a tempest in the night.

I cannot well say what I found at Plymouth, beyond the uneasiness of seeing people. Every person of worth, man or woman, whom I see, gives me a pain as if I injured them, because of my incapacity to do them justice in the intercourse that passes between us. Two or more persons together deoxygenate the air, apathize and paralyze me. I twist like the poor eel in the exhausted receiver, and my conviction of their sense and virtue only makes matters worse for me by accusing my injustice. I am made for chronic relations, not for moments, and am wretched with fine people who are only there for an hour.

It is a town of great local and social advantages, Plymouth; lying on the sea

with this fine, broken, inland country, pine-covered and scooped into beds of two hundred lakes. Their proverb is that there is a pond in Plymouth for everyday of the year. Billington Sea is the best of all, and yet this superb chain of lakes which we pass in returning from Half Way Pond might content one a hundred years.

The botany of the region is rare. The *Epigæa*, named Mayflower at Plymouth, is now found elsewhere. The beautiful and fragrant *Sabbatia*, the *Empetrum*, the sun-dew, the *Rhinanthus* or Yellow-Rattle and other plants are almost peculiar to this spot. Great linden trees lift their green domes above the town, as seen from the sea, and the graveyard hill shows the monuments of the Pilgrims and their children as far out to sea as we could see anything of the town. The virtues of the Russells are as eminent and fragrant here, at this moment, as ever were the glories of that name in England: and *L* — is a flower of the sweetest and softest beauty which real life ever exhibited. These people know so well how to live, and have such perfect adjustment in their tastes and their power to gratify them, that the ideal life is necessarily thrown into the shade, and I have never seen a strong conservatism appear so amiable and wise. We saw their well-built houses which an equal and generous economy warmed and animated; and their good neighborhood was never surpassed: the use of the door-bell and knocker seems unknown. And the fine children who played in the yards and piazzas appeared to come of a more amiable and gentle stock.

[Concord was, until about 1852, a “shire town” and the courts, later transferred to Lowell, were held there. In the summer of 1843 a somewhat notable case, *Commonwealth vs. Wyman*, from the eminence of the counsel employed, was tried there, an officer of a Charlestown bank having been charged with misappropriation of its funds. Several passages of this entry were used by Mr. Emerson in 1854 in his address in New York on “The Fugitive Slave Law”; but it seemed best to keep them here, not to interrupt the continuity of the text. (See *Miscellanies*, pp. 222, 223.)]

August 17.

Webster at Concord. Mr. Webster loses nothing by comparison with brilliant men in the legal profession: he is as much before them as before the ordinary lawyer. At least I thought he appeared among these best lawyers of the Suffolk Bar, like a schoolmaster among his boys.

His wonderful organization, the perfection of his elocution, and all that

thereto belongs, — voice, accent, intonation, attitude, manner, — are such as one cannot hope to see again in a century; then he is so thoroughly simple and wise in his rhetoric. Understanding language and the use of the positive degree, all his words tell, and his rhetoric is perfect, so homely, so fit, so strong. Then he manages his matter so well, he hugs his fact so close, and will not let it go, and never indulges in a weak flourish, though he knows perfectly well how to make such exordiums and episodes and perorations as may give perspective to his harangue, without in the least embarrassing his plan or confounding his transitions. What is small, he shows as small, and makes the great, great. In speech he sometimes roars, and his words are like blows of an axe. His force of personal attack is terrible, he lays out his strength so directly in honest blows, and all his powers of voice, arm, eye, and whole man are so heartily united and bestowed on the adversary that he cannot fail to be felt.

His “Christian religion” is always weak, being merely popular, and so most of his religion. Thus, he spoke of the value of character; it was simply mercantile; it was to defend a man in criminal prosecutions, and the like; and bear him up against the inspection of all BUT the Almighty, *etc.* And in describing Wyman’s character, he said, he wanted that sternness of Christian principle which teaches to “avoid even the appearance of evil.” And one feels every moment that he goes for the actual world, and never one moment for the ideal. He is the triumph of the Understanding and is undermined and supplanted by the Reason for which yet he is so good a witness, being all the time fed therefrom, and his whole nature and faculty presupposing that, that I felt as if the children of Reason might gladly see his success as a homage to their law, and regard him as a poor, rude soldier hired for sixpence a day to fight their battles. I looked at him sometimes with the same feeling with which I see one of these strong Paddies on the railroad. Perhaps it was this, perhaps it was a mark of having outlived some of my once finest pleasures, that I found no appetite to return to the Court in the afternoon and hear the conclusion of his argument. The green fields on my way home were too fresh and fair, and forbade me to go again.

His splendid wrath, when his eyes became fires, is as good to see, so intellectual it is, and the wrath of the fact and cause he espouses, and not at all personal to himself.

Rockwood Hoar said, nothing amused him more than to see Mr. Webster adjourn the Court every day, which he did by rising, and taking his hat and looking the Judge coolly in the face; who then bade the Crier adjourn the Court.

Choate and Webster. Rufus Choate is a favorite with the bar, and a nervous, fluent speaker, with a little too much fire for the occasion, yet with a certain

temperance in his fury and a perfect self-command; but he uses the superlative degree, and speaks of affairs altogether too rhetorically. This property of \$300,000, the property of a bank, he speaks of as “vast,” and quite academically. And there was no perspective in his speech; the transitions were too slight and sudden. But the cast-iron tones of the man of men, the perfect machine that he is for arguing a case, dwarfed instantly Choate and all the rest of the learned counselors.

Webster behaves admirably well in society. These village parties must be dishwater to him, yet he shows himself just good-natured, just nonchalant *enough*, and has his own way without offending any one or losing any ground. He told us that he never read by candle-light.

Judge Allen told me last night that he had great and increasing confidence in juries, and thought that in nine cases out of ten they rendered a satisfactory and a right verdict. He appealed to Mr. Hoar, who thought this true in five cases out of six.

“Sir Walter Raleigh was such a person every way, that, as King Charles I says of the Lord Strafford, a prince would rather be afraid of than ashamed of. He had that awfulness and ascendancy in his aspect over other mortals, that the King—“and here Aubrey’s manuscript stops.

Webster quite fills our little town, and I doubt if I shall get settled down to writing until he is well gone from the county. He is a natural Emperor of men; they remark in him the kingly talent of remembering persons accurately, and knowing at once to whom he has been introduced, and to whom not.

He has lately bought his father’s farm in

Franklin (formerly Salisbury), New Hampshire, as Waller the poet wished to buy his birthplace, Winchmore Hill, saying to his Cousin Hampden, “A stag, when he is hunted and near spent, always returns home.”

Elizabeth Hoar says that she talked with him, as one likes to go behind the Niagara Falls, so she tried to look into those famed caverns of eyes, and see how deep they were, and the whole man was magnificent. Mr. Choate told her that he should not sleep for a week when a cause like this was pending, but that when they met in Boston on Saturday afternoon to talk over the matter, the rest of them were wide awake, but Mr. Webster went fast asleep amidst the consultation.

It seems to me the Quixotism of Criticism to quarrel with Webster because he

has not this or that fine evangelical property. He is no saint, but the wild olive wood, ungrafted yet by grace, but according to his lights a very true and admirable man. His expensiveness seems to be necessary to him. Were he too prudent a Yankee it would be a sad deduction from his magnificence. I only wish he would never truckle; I do not care how much he spends.

Webster's force is part of nature and the world, like any given amount of azote or electricity.... After all his great talents have been told, there remains that perfect propriety, which belongs to every world-genius, which animates all the details of action and speech with the character of the whole so that his beauties of detail are endless. Great is life.

I cannot consent to compare him [Webster] with his competitors, but when the Clay men and Van Buren men and the Calhoun men have had all their way and all their political objections have been conceded, and they have settled their little man, whichever it be, on the top of the martin-box of state, then and not before will we begin to state the claims of this world's man, this strong Paddy of the times and laws and state, to his place in history.

Nature. In Nature the doubt occurs whether the man is the cause or the effect. Are beasts and plants degradations of man? or are these the prophecies and preparations of Nature practising herself for her master-piece in Man? Culminate we do not; but that point of imperfection which we occupy — is it on the way *up* or *down*?

Again, is the world (according to the old doubt) to be criticized otherwise than as the best possible in the existing system: and the population of the world the best that soils, climates, and animals permit?

“Will is the measure of Power.” — PROCLUS on *Timaeus*.

“Prudence is a medium between intellect and opinion.” — *Idem*.

“Intellect is that by which we know terms or boundaries.” — ARISTOTLE.

“Beauty swims on the light of forms.” — PROCLUS.

“Intellect,” according to Amelius, “is threefold, that which is, that which has, and that which sees.” — PROCLUS.

“Law is the distribution of intellect.” — PROCLUS.

“Every soul pays a guardian attention to that which is inanimate.” — PLATO, in *Phoedrus*.

It is a pathetic thing to meet a friend prepared to love you, to whom yet, from some inaptitude, you cannot communicate yourself with that grace and power

which only love will allow. You wish to repay his goodness by showing him the dear relations that subsist between you and your chosen friends, but you feel that he cannot conceive of you whom he knows so slow and cold, under these sweet and gentle aspects.

Confide in your power, whether it be to be a wet-nurse or a wood-sawyer, lion-taming Van Amburgh, or Stewart maker of steam candy, keep your shop, magnify your office. Fear smears our work, and ignorance gilds our neighbor's, but the sure years punish our faint-heartedness.

[Here follow many extracts from the *She-King*, the third member of the pentateuch of most ancient Chinese Classics. A few are here given.]

“The way of Chow is even as a whetstone and as straight as an arrow. Superior men tread in it and inferior men view it as their pattern.”

“Sorry sorry is my heart; I am hated by the low herd.”

“He who neither errs nor forgets is the man who accords with the ancient canons.”

“Let the rain descend first on our public and then on our private fields.”

(From U)

Apparent imitations of unapparent natures.

Victurus Genium debet habere liber. — MARTIAL.

I wish to speak with all respect of persons, but sometimes I find it needs much heedfulness to preserve the due decorum, they melt so fast into each other....

August 25.

The railroad whose building I inspected this afternoon brings a multitude of picturesque traits into our pastoral scenery.

There is nothing in history to parallel the influence of Jesus Christ. The Chinese books say of Wan Wang, one of their kings, “From the west, from the east, from the south, and from the north there was not one thought not brought in subjection to him.” This can be more truly said of Jesus than of any mortal.

Mencius says, “A sage is the instructor of a hundred ages. When the manners of Pih E are heard of, the stupid become intelligent and the wavering

determined.”

Fourier carries a whole French Revolution in his head, and much more. This is arithmetic with a vengeance.

In the points of good breeding, what I most require and insist upon is deference. I like that every chair should be a throne and hold a king. And what I most dislike is a low sympathy of each with his neighbor’s palate.... I respect cats, they seem to have so much else in their heads besides their mess.... I prefer a tendency to stateliness to an excess of fellowship.

In all things I would have the island of a man inviolate. No degree of affection is to invade this religion....

The charge which a lady in much trust made to me against her companions was that people on whom beforehand all persons would put the utmost reliance were not responsible. They saw the necessity that the work must be done, and did it not; and it of course fell to be done by herself and the few principals. I replied, that in my experience good people were as bad as rogues, that the conscience of the conscientious ran in veins, and the most punctilious in some particulars were latitudinarian in others.

Henry Thoreau sends me a paper with the old fault of unlimited contradiction. The trick of his rhetoric is soon learned: it consists in substituting for the obvious word and thought its diametrical antagonist. He praises wild mountains and winter forests for their domestic air; snow and ice for their warmth; villagers and wood-choppers for their urbanity, and the wilderness for resembling Rome and Paris. With the constant inclination to dispraise cities and civilization, he yet can find no way to know woods and woodmen except by paralleling them with towns and townsmen. Channing declared the piece is excellent: but it makes me nervous and wretched to read it, with all its merits.

The thinker looks for God in the direction of the consciousness, the churchman out of it. If you ask the former for his definition of God, he would answer, “My possibility”; for his definition of Man, “My actuality.”

“Stand up straight,” said the stage-coachman, “and the rain won’t wet you a mite.”

We like the strong objectiveness of Homer and of the primitive poems of each country, ballads and the Chinese and Indian sentences, but that cannot be preserved in a large and civilized population. The scholar will inevitably be detached from the mechanic, and will not dwell in the same house, nor see his handiworks so near by, and must adopt new classification and a more metaphysical vocabulary. Hawthorne boasts that he lived at Brook Farm during its heroic age: then all were intimate and each knew the other's work: priest and cook conversed at night of the day's work. Now they complain that they are separated and such intimacy cannot be; there are a hundred souls.

It seems as if we had abundance of insight and a great taste for writing in this country: only the describers wanted subjects. But that is deceptive. The great describer is known hereby, that he finds topics.

The farmer whom I visited this afternoon works very hard and very skillfully to get a good estate, and gets it. But by his skill and diligence and that of thousands more, his competitors, the wheat and milk by which I live are made so cheap that they are within reach of my scanty monies, and I am not yet forced to go to work and produce them for myself. Tuttle told me that he had once carried forty-one hundredweight of hay to Boston and received \$61.50 for the load. But it is no part of T.'s design to keep down the price of hay or wheat or milk.

How long shalt thou stay,
Thou devastator of thy friend's day?

Each substance and relation

In Nature's operation
Hath its unit and metre;
And the new compounds are multiples of that.
But the unit of the visit,
Or the meeting of friends,
Is the meeting of their eyes.

The founders of Brook Farm ought to have this praise, that they have made what all people try to make, an agreeable place to live in. All comers, and the most fastidious, find it the pleasantest of residences.

If you look at these railroad laborers and hear their stories, their fortunes appear as little controlled as those of the forest leaves. One is whirled off to Albany, one to Ohio, one digs on the levee at New Orleans and one at Walden Pond; others on the wharves in Boston or the woods in Maine, and they have too little foresight and too little money to leave them any more election of whither to go or what to do than the poor leaf which is blown into this dike or that brook to perish. "To work from dark to dark for fifty cents the day," as the poor woman in the shanty told us, is but pitiful wages for a married man.

Few people know how to spend a large fortune. A beauty of wealth is power without pretension, a despotism under the quietest speech and under the plainest garb, neither rich nor poor.... The money-lord should have no fine furniture or fine equipage, but should open all doors, be warm, be cool, ride, fly, execute or suspend execution, at his will, and see what he willed come to pass.

Ellery's poetry shows the Art, though the poems are imperfect, as the first Daguerres are grim things, yet show that a great engine has been invented.

Superiority of *Vathek* over *Vivian Grey*. Is life a thunderstorm that we can see now by a flash the whole horizon, and then cannot see our right hand?

Families should be formed on a higher method than by the Intelligence Office. A man will come to think it as absurd to send thither for his nurse or farmer, as for a wife. Domestic pass in silence through the social rooms and recover their tongues at the kitchen door — to bless you?

September 3.

Representative. We pursue ideas, not persons, the man momentarily stands for the thought....

My friend came hither and satisfied me in many ways, and, as usual, dissatisfied me with myself. She increased 'my knowledge of life, and her sketches of manners and persons are always valuable, she sees so clearly and steadily through the veils. But best of all is the admonition that comes to me from a demand of beauty so naturally made wheresoever her eye rests, that our ways of life, our indolences, our indulgences, our want of heroic action are shamed. Yet I cordially greet the reproof. When that which is so fair and noble passes, I seem enlarged; all my thoughts are spacious; the chambers of the brain and the lobes of the heart are bigger. How am I cheered always by traits of that "vis superba formae" which inspires art and genius but not passion: there is that in beauty which cannot be caressed, but which demands the utmost wealth of nature in the beholder properly to meet it.

We cannot quite pull down and degrade our life and divest it of poetry. The day-laborer is popularly reckoned as standing at the foot of the social scale: yet, talk with him, he is saturated with the beautiful laws of the world....

Any form of government would content me in which the rulers were gentlemen, but it is in vain that I have tried to persuade myself that Mr. Calhoun or Mr. Clay or Mr. Webster were such; they are underlings, and take the law from the dirtiest fellows. In England it usually appears as if the power were confided to persons of superior sentiment, but they have not treated Russia as they ought in the affair of Poland. It is true these fellows should hear the truth from other quarters than the Anti-slavery papers and Whig papers and Investigators and all other committed organs. We have allowed them to take a certain place in private society as if they were at the head of their countrymen. They must be told that they have dishonored themselves and it can be allowed no longer, they are not now to be admitted to the society of scholars.

The capital defect of my nature for society (as it is of so many others) is the want of animal spirits. They seem to me a thing incredible, as if God should raise the dead. I hear of what others perform by their aid, with fear. It is as much out of my hospitality as the prowess of Cœur de Lion, or an Irishman's day's work on the railroad. Animal spirits seem the power of the Present, and their feats equal to the Pyramids of Karnac. Before them what a base mendicant is

Memory with his leathern badge. I cannot suddenly form my relation to my friend, or rather, can very slowly arrive at its satisfaction. I make new friendships on the old: we shall meet on higher and higher platforms until our first intercourse shall seem like an acquaintance of tops, marbles, and ball-time. I am an architect and ask a thousand years for my probation. Meantime I am very sensible to the deep flattery of Omens.

Has the South European more animal spirits than we, that he is so joyous a companion?

A visit to the railroad yesterday, in Lincoln, showed me the laborers — how grand they are; all their postures, their air, and their very dress. They are men, manlike employed, and the art of the sculptor is to take these forms and set on them a cultivated face and head. But cultivation never, except in war, makes such forms and carriage as these.

I think it will soon become the pride of the country to make gardens and adorn country-houses. That is the fine art which especially fits us. Sculpture, painting, music, architecture, do not thrive with us....

The other day came C. S., with eyes full of Naushon and Nahant and Niagara, dreaming by day and night of canoes, and lightning, and deer-parks, and silver waves, and could hardly disguise her disdain for our poor cold, low life in Concord, like rabbits in a warren. Yet the interiors of our woodland which recommend the place to us, she did not see.... The great sun equalizes all places, — the sun and the stars. The grand features of Nature are so identical that, whether in a mountain or a waterfall, or whether in a flat meadow, the presence of the great agents makes the presence or absence of the inferior features insignificant. With the sun, with morning and evening.

The difference between men, if one could accept exterior tests, is in power of face....

But it is easy to see that as soon as one acts for large masses, the moral element will and must be allowed for, will and must work. Daniel O'Connell is no saint, yet at this vast meeting on the hill of Tara, eighteen miles from Dublin, of five hundred thousand persons, he almost preaches; he goes for temperance, for law and order, and suggests every reconciling, gentiling, humanizing consideration. There is little difference between him and Father Mathew, when the audience is thus enormously swelled.

Ellery says that at Brook Farm they keep Curtis and Charles Newcomb and a few others as decoy-ducks.

Life. A great lack of vital energy; excellent beginners, infirm executors. I should think there were factories above us which stop the water....

God will have life to be real; we will be damned, but it shall be theatrical.

Fear haunts the building railroad, but it will be American power and beauty, when it is done. And these peaceful shovels are better, dull as they are, than pikes in the hands of these Kernes; and this stern day's work of fifteen or sixteen hours, though deplored by all the humanity of the neighborhood, and, though all Concord cries Shame! on the contractors, is a better police than the sheriff and his deputies to let off the peccant humors.

The appeal to the public indicates infirm faith.... Yet this must be said in defense of Alcott and Lane, that their appeal to the public is a recognition of mankind as proof of abiding interest in other men, of whom they wish to be saviours.

It is in vain to tell me that you are sufficient to yourself, but have not anything to impart. I know and am assured that whoever is sufficient to himself will, if only by existing, suffice me also.

'Tis a great convenience to be educated for a time in a counting-room or attorney's business; then you may safely be a scholar the rest of your life, and will find the use of that partial thickening of the skin every day as you will of your shoes or your hat. What mountains of nonsense will you have cleared your brain of forever!

We admire the tendency, but the men who exhibit it are grass and waves, until they are conscious of that which they share: then it is still admirable in them, as out of them; yea, how much more dear!

There is no chance for the aesthetic village....

September 26.

This morning Charles Lane left us after a two days' visit. He was dressed in linen altogether, with the exception of his shoes, which were lined with linen, and he wore no stockings. He was full of methods of an improved life: valued

himself chiefly just now on getting rid of the animals; thinks there is no economy in using them on a farm. He said that they could carry on their Family at Fruitlands in many respects better, no doubt, if they wished to play it well. He said that the clergy for the most part opposed the Temperance Reform, and conspicuously this simplicity in diet, because they were alarmed, as soon as such nonconformity appeared, by the conviction that the next question people would ask, would be, "Of what use are the clergy?" In the College he found an arithmetic class, Latin, German, Hebrew classes, but no Creative Class. He had this confidence, namely, that *§hii facit per alium, facit per se*: that it was of no use to put off upon a second or third person the act of serving or of killing cattle; as in cities, for example, it would be sure to come back on the offending party in some shape, as in the brutality of the person or persons you have brutalized.

[Here follow some trial lines for the "Ode to Beauty."]

The poet should walk in the fields, drawn on by new scenes, supplied with vivid pictures and thoughts, until insensibly the recollection of his home was crowded out of his mind, and all memory obliterated, and he was led in triumph by Nature.

When he spoke of the stars he should be innocent of what he said; for it seemed that the stars, as they rolled over him, mirrored themselves in his mind as in a deep well, and it was their image and not his thought that you saw.

It is of no importance to real wisdom how many propositions you add on the same platform, but only what new forms. I knew somewhat concerning the American Revolution, the action at Bunker Hill, the battle of Monmouth, of Yorktown, *etc.* To-day I learn new particulars of General Greene, of Lee, of Rochambeau.

But now that I think of that event with a changed mind and see what a compliment to England is all this self-glorification, and betrays a servile mind in us who think it so overgreat an action; it makes the courage and the wit of the admirers suspected, who ought to look at such things as things of course.

Let us shame the fathers by the virtue of the sons, and not belittle us by brag.

We ought to thank the nonconformist for everything good he does. Who has a right to ask him why he compounds with this or that wrong?

Certainly the objection to Reform is the common sense of mankind, which seems to have settled several things; as traffic, and the use of the animals for

labor and food. But it will not do to offer this by way of argument, as *that* is precisely the ground of dispute.

Read Montaigne's journey into Italy, which is an important part of his biography. I like him so well that I value even his register of his disease. Is it that the valetudinarian gives the assurance that he is not ashamed of himself? Then what a treasure, to enlarge my knowledge of his friend by his narrative of the last days and the death of Etienne de la Boëtie. In Boston, when I heard lately Chandler Robbins preach so well the funeral sermon of Henry Ware, I thought of Montaigne, who would also have felt how much this surface called Unitarianism admits of being opened and deepened, and that this was as good and defensible a post of life to occupy as any other. It was a true cathedral music and brought chancels and choirs, surplices, ephods and arks and hierarchies into presence. Certainly Montaigne is the antagonist of the fanatic reformer. Under the oldest, mouldiest conventions he would prosper just as well as in the newest world. His is the common sense which, though no science, is fairly worth the Seven.

A newspaper lately called Daniel Webster "a steam engine in breeches," and the people are apt to speak of him as "Daniel," and it is a sort of proverb in New England of a vast knowledge— "if I knew as much as Daniel Webster." *Os, oculosque Jovi par.*

Henry Ware, with his benevolence and frigid manners, reminded men how often of a volcano covered with snow. But there was no deep enthusiasm.... All his talent was available, and he was a good example of the proverb, no doubt a hundred times applied to him, of "a free steed driven to death." He ought to have been dead ten years ago, but hard work had kept him alive. A very slight and puny frame he had, and the impression of size was derived from his head. Then he was dressed with heroical plainness. I think him well entitled to the dangerous style of Professor of Pulpit eloquence, — none but Channing so well, and he had ten times the business valor of Channing. This was a soldier that flung himself into all risks at all hours, not a solemn martyr kept to be burned once and make the flames proud. In calm hours and friendly company, his face expanded into broad simple sunshine; and I thought *le bon Henri* a pumpkin-sweeting.

Plato paints and quibbles, and by and by a sentence that moves the sea and land.

George B. Emerson read me a criticism on Spenser, who makes twenty trees of different kinds grow in one grove, whereof the critic says it was an imaginary grove. George, however, doubts not it was after nature, for he knows a piece of natural woodland near Boston, wherein twenty-four different trees grow together in a small grove.

New England cannot be painted without a portrait of Millerism with the new advent of hymns.

“You will see the Lord a-coming
To the old churchyards,
With a band of music, *etc.*

“He’ll awake all the nations
In the old churchyards.

“We will march into the city
From the old churchyards.”

Hard clouds, and hard expressions, and hard manners, I love.

Aristocracy. In Salem, the aristocracy is often merchants; even the lawyers are a second class. In Boston, is aristocracy of families which have inherited their wealth and position, and of lawyers and of merchants. In Charleston, the merchants are an inferior class, the planters are the aristocracy. In England, the aristocracy, incorporated by law and education, degrades life for the unprivileged classes. Long ago they wrote on placards in the streets,” Of what use are the lords?” And now that the misery of Ireland and of English manufacturing counties famishes and growls around the park fences of Lord Shannon, Lord Cork, and Sir Robert Peel, a park and a castle will be a less pleasant abode.... I must nevertheless respect this *Order* as “a part of the order of Providence,” as my good Aunt used to say of the rich, when I see, as I do everywhere, a class born with these attributes of rule. The class of officers I recognize everywhere in town or country. These gallants come into the world to ruffle it, and by rough or smooth to find their way to the top. When I spoke to Nathaniel Hawthorne of the class who hold the keys of State Street and are yet excluded from the best Boston circles, he said, “Perhaps he has a heavy wife.”

The Reformer (after the Chinese). There is a class whom I call the thieves of virtue. They are those who mock the simple and sincere endeavorers after a better way of life, and say, These are pompous talkers; but when they come to act they are weak, nor do they regard what they have said. These mockers are continually appealing to the ancients, and they say, Why make ourselves singular? Let those who are born in this age, act as men of this age. Thus they secretly obtain the flattery of the age.... The multitude all delight in them and they confuse virtue.

Chin Seang praised Heu Tsze to Mencius as a prince who taught and exemplified a righteous life. A truly virtuous prince, he added, will plough along with his people, and while he rules will cook his own food.

Mencius. Does Heu Tsze sow the grain which he eats?

Seang. Yes.

M. Does Heu Tsze weave cloth and then wear it?

S. No: Heu Tsze wears coarse hair-cloth.

M. Does Heu Tsze wear a cap?

S. Yes.

M. What sort of a cap?

S. A coarse cap.

M. Does he make it himself?

S. No: he gives grain in exchange for it.

M. Why doesn't he make it himself?

S. It would be injurious to his farming.

M. Does he use earthenware in cooking his victuals, or iron utensils in tilling his farm?

S. Yes.

M. Does he make them himself?

S. No, he gives grain in barter for them.

M. Why does not Heu Tsze act the potter, and take everything from his own shop he wants to use? Why should he be in the confused bustle exchanging articles with the mechanics? He is not afraid of labor, surely?

S. The work of the mechanic and that of the husbandman ought not to be united.

M. Oh, then the government of the Empire and the labor of the husbandman are the only employments that ought to be united. Were every man to do all kinds of work, it would be necessary that he should first make his implements,

and then use them: thus all men would constantly crowd the roads. Some men labor with their minds, and some with bodily strength. Those who labor with their strength are ruled by men. Those who are governed by others, feed others. This is a general rule under the whole heavens.

Mencius proceeds to instance Yu, who, after the deluge, was eight years abroad directing the opening of channels to let off the inundation into the sea, and the burning of forests and marshes to clear the land of beasts of prey, so that he had no time to go home even, but passed his own door repeatedly without entering; and asks if he had leisure for husbandry, if he had been inclined? Yu and Shun employed their whole minds in governing the Empire, yet they did not plough the fields....

Gonzalo in the *Tempest* anticipates our Reformers.

Gonzalo, Had I plantation of this isle, my lord, And were the king of it, what would I do?

In the commonwealth I would by contraries Execute all things; for no kind of traffic Would I admit; no name of magistrate; Letters should not be known; riches, poverty, And use of service none; contract, succession, Bourn, bound of land, tilth, vineyard, none; No use of metal, corn, or wine, or oil:

No occupation; all men idle, all; And women too; but innocent and pure:

No sovereignty.

Sebastian. Yet he would be king on't.

Gon. All things in common nature should produce Without sweat or endeavour: treason, felony, Sword, pike, knife, gun, or need of any engine, Would I not have; but nature should bring forth,

Of its own kind, all foison, all abundance,

To feed my innocent people.

I would with such perfection govern, sir,

To excel the golden age.

Act II, Scene 1.

Queenie thinks the Fruitlands People far too gross in their way of living. She prefers to live on snow.

Aristocracy. In solitude, — in the woods, for example, — every man is a noble, and we cannot prize too highly the staid and erect and plain manners of our farmers.

Nature seems a little wicked and to delight in mystifying us. Everything

changes in ourselves and our relations, and for twenty or thirty years I shall find some old cider barrel or well-known rusty nail or hook, or rag of dish clout unchanged.

The only straight line in Nature that I remember is the spider swinging down from a twig.

The rainbow and the horizon seen at sea are good curves.

For laughter never looked upon his brow.

GILES FLETCHER.

In Saadi's *Gulistan*, I find many traits which comport with the portrait I drew. He replied to Nizan: "It was rumored abroad that I was penitent and had forsaken wine, but this was a gross calumny, for what have I to do with repentance?" Like Montaigne, he learns manners from the unmannerly, and he says "there is a tradition of the prophet that poverty has a gloomy aspect in this world and in the next!" There is a spice of Gibbon in him when he describes a schoolmaster so ugly and crabbed that the sight of him would damage the ecstasies of the orthodox.

Like Homer and Dante and Chaucer, Saadi possessed a great advantage over poets of cultivated times in being the representative of learning and thought to his countrymen. These old poets felt that all wit was their wit, they used their memory as readily as their invention, and were at once the librarian as well as the poet, historiographer as well as priest of the Muses.

"The blow of our beloved has the relish of raisins."

"The dervish in his prayer is saying, O God! have compassion on the wicked; for thou hast given all things to the good in making them good."

Saadi found in a mosque at Damascus an old Persian of an hundred and fifty years, who was dying, and was saying to himself, "I said, I will enjoy myself for a few moments; alas! that my soul took the path of departure. Alas! at the variegated table of life, I partook a few mouthfuls, and the fates said, Enough!"

"Take heed that the orphan weep not; for the throne of the Almighty is shaken to and fro when the orphan sets a-crying."

[In 1865, at the request of the publishers, Mr. Emerson wrote the Introduction to the American edition of Gladwin's translation of the *Gulistan*. This explains the omission of any account of Saadi in the essay on "Persian Poetry," printed in *Letters and Social Aims*.]

Saadi was long a Sacayi or Water-drawer in the Holy Land, “till found worthy of an introduction to the prophet Khizr (Elias, or the Syrian and Greek Hermes) who moistened his mouth with the water of immortality.” Somebody doubted this and saw in a dream a host of angels descending with salvers of glory in their hands. On asking one of them for whom those were intended, he answered, “ For Shaikh Saadi of Shiraz, who has written a stanza of poetry that has met with the approbation of God Almighty.”

“Khosraw of Delhi asked Khzir for a mouthful of this inspiring beverage; but he told him, that Saadi had got the last of it.”

“It was on the evening of Friday in the Month *Showal*, of the Arabian year 690, that the eagle of the immaterial soul of Shaikh Saadi shook from his plumage the dust of his body.”

No wonder the farmer is so stingy of his dollar....

Ellery says, Wordsworth writes like a man who takes snuff.

Tennyson is a master of metre, but it is as an artist who has learned admirable mechanical secrets. He has no wood-notes. Great are the dangers of education.

I will say it again to-day, — I am very much struck in literature by the appearance that one person wrote all the books....

Immense benefit of party I feel to-day in seeing how it reveals faults of character in such an idol as Webster.... The great men dull their palm by entertainment of those they dare not refuse. And lose the tact of greeting the wits with sincerity, but give that odious brassiness to those who would forgive coldness, silence, dislike, — everything but simulation and duping.

In Goethe is that sincerity which makes the value of literature and is that one voice or one writer who wrote all the good books. In *Helena*, Faust is sincere and represents actual, cultivated, strong-natured Man; the book would be farrago without the sincerity of Faust. I think the second part of *Faust* the grandest enterprise of literature that has been attempted since the *Paradise Lost*. It is a philosophy of history set in Poetry....

FAME

Her house is all of echo made
Where never dies the sound,
And as her brows the clouds invade
Her feet do strike the ground.

BEN JONSON.

The skeptic says: how can any man love any woman, except by delusion, and ignorance? Brothers do not wish to marry sisters because they see them too nearly, and all attractiveness, like fame, requires some distance. But the lover of nature loves nature in his mistress or his friend; he sees the faults and absurdities of the individual as well as you. No familiarity can exhaust the chasm. It is not personalities but universalities that draw him. The like is true of life. It seems to me that he has learned its lesson who has come to feel so assured of his well-being as to hold lightly all particulars of to-day and to-morrow, and to count death amongst the particulars. He must have such a grasp of the whole as to be willing to be ridiculous and unfortunate.

Literature is the only art that is ashamed of itself. The poet should be delivered as much as may be from routine, to increase his chances. It is a game of luck that he plays, and he must be liberated and ready to use the opportunities. Every one of them has been a high gambler.

Ellery says, that writers never do anything: they are passive observers. Some of them seem to do, but they do not; H. will never be a writer; he is as active as a shoemaker.

It is vain to attempt to get rid of the children by not minding them, ye parents dear; for the children measure their own life by the reaction, and if purring and humming is not noticed, they begin to squeal; if that is neglected, to screech; then, if you chide and console them, they find the experiment succeeds, and they begin again. The child will sit in your arms if you do nothing, contented; but if you read, it misses the reaction, and commences hostile operations: "*pourvu seulement qu'un s'occupe d'eux*" is the law.

I thought yesterday, as I read letters of Aunt Mary's, that I would attempt the

arrangement of them. With a little selection and compiling and a little narrative thinly veiled of the youth of Ellen and Charles, and, if brought far enough, with letters from Charles and later letters from my sweet saint, there should be a picture of a New England youth and education, so connected with the story of religious opinion in New England as to be a warm and bright life picture.

Autobiography. My great-grandfather was Rev. Joseph Emerson of Malden, son of Edward Emerson, Esq., of Newbury(port). I used often to hear that when William, son of Joseph, was yet a boy walking before his father to church, on a Sunday, his father checked him: “ William, you walk as if the earth was not good enough for you.”

“I did not know it, Sir,” he replied, with the utmost humility. This is one of the household anecdotes in which I have found a relationship. ‘T is curious, but the same remark was made to me, by Mrs. Lucy Brown, when I walked one day under her windows here in Concord.

What confidence can I have in a fine behavior and way of life that requires riches to bear it out? Shall I never see a greatness of carriage and thought combined with a power that actually earns its bread and teaches others to earn theirs?

We come down with free thinking into the dear institutions, and at once make carnage amongst them. We are innocent of any such fell purpose as the sequel seems to impute to us. We were only smoking a cigar, but it turns out to be a powder-mill that we are promenading.

If one could have any security against moods!...

The best yet, or T. T.’s last. My divine Thomas Taylor in his translation of *Cratylus* (p. 30, note) calls Christianity “a certain most irrational and gigantic impiety,”

People came, it seems, to my lectures with expectation that I was to realize the Republic I described, and ceased to come when they found this reality no nearer. They mistook me. I am and always was a painter. I paint still with might and main, and choose the best subjects I can. Many have I seen come and go with false hopes and fears, and dubiously affected by my pictures. But I paint on. I count this distinct vocation which never leaves me in doubt what to do, but in all times, places, and fortunes gives me an open future, to be the great felicity of my lot. Doctor C. T. J., too, was born to his chemistry and his minerals.

“Men who in the present life knew the particular deity from whom they descended, and gave themselves always to their proper employment, were called by the ancient, *divine men*.” See Taylor’s *Cratylus*, p. 32.

Yet what to say to the sighing realist as he passes and comes to the vivid painter with a profound assurance of sympathy, saying, “He surely must be charmed to scale with me the silver mountains whose dim enchantments he has so affectionately sketched.” The painter does not like the realist; sees his faults; doubts his means and methods; in what experiments they make, both are baffled; no joy. The painter is early warned that he is jeopardizing his genius in these premature actualizations.

Very painful is the discovery we are always making that we can only give to each other a rare and partial sympathy; for as much time as we have spent in looking over into our neighbor’s field and chatting with him is lost to our own, and must be made up by haste and renewed solitude.

“L’esprit est une sorte de luxe qui détruit le bon sens, comme le luxe détruit la fortune

Alcott came, the magnificent dreamer, brooding, as ever, on the renewal or reëdification of the social fabric after ideal law, heedless that he had been uniformly rejected by every class to whom he has addressed himself, and just as sanguine and vast as ever; — the most cogent example of the drop too much which Nature adds of each man’s peculiarity. To himself he seems the only realist, and whilst I and other men wish to deck the dullness of the months with here and there a fine action or hope, he would weave the whole, a new texture of truth and beauty.... Very pathetic it is to see this wandering Emperor from year to year making his round of visits from house to house of such as do not exclude him, seeking a companion, tired of pupils.

We early men at least have a vast advantage: we are up at four o’clock in the morning and have the whole market, — we Enniuses and Venerable Bedes of the empty American Parnassus.

Wish not a man from England.

Henry V.

It is hardly rhetoric to speak of the guardian angels of children. How beautiful they are, so protected from all infusions of evil persons, from vulgarity and second thought. Well-bred people ignore trifles and unsightly things; but heroes do not see them, through an attention preëngaged to beauty.

“That is musk, which discloses itself by its smell, and not what the perfumers impose upon us,” said Saadi.

I began to write Saadi’s sentence above as a text to some homily of my own which muttered aloud as I walked this morning, to the effect, that the force of character is quite too faint and insignificant. The good are the poor, but if the poor were but once rich, how many fine scruples would melt away; how many blossoming reforms would be nipped in the bud. I ought to see that you must do that you say, as tomato-vines bear tomatoes and meadows yield grass. But I find the seed comes in the manure, and it is your condition, not your genius, which yields all this democratical and tender-hearted harvest.

November 5.

To genius everything is permitted, and not only that, but it enters into all other men’s labors. A tyrannical privilege to convert every man’s wisdom or skill, as it would seem, to its own use, or to show for the first time what all these fine and complex preparations were for.

See how many libraries one master absorbs. Who hereafter will go gleaning in those contemporary and anterior books, from each of which he has taken the only grain of truth it had, and has given it tenfold value by placing it? The railroad was built for him; for him history laboriously registered; for him arms and arts and politics and commerce waited, like so many servants until the heir of the manor arrived, which he quite easily administers.

Genius is a poor man and has no house; but see this proud landlord, who has built the great house and furnished it delicately, opens it all to him and beseeches him respectfully to make it honorable by entering there and eating bread.

Some philosophers went out of town, founded a community in which they proposed to pay talent and labor at one rate, say, ten cents the hour!...

Punctuality. On the dinner bell was written, “I laughed at them and they believed me not.”

The sect is the stove, gets old, worn out, there are a hundred kinds, but the fire keeps its properties. Calvinism is a fine history to show you how peasants, Paddies, and old country crones may be liberalized and beatified.

The reformers wrote very ill. They made it a rule not to bolt their flour, and

unfortunately neglected also to sift their thoughts. But Hesiod's great discovery, *πλέον ἡμῖσιν πάντος*, is truest in writing, where half is a great deal more than the whole. Give us only the eminent experiences.

Alcott and Lane want feet: they are always feeling of their shoulders to find if their wings are sprouting; but next best to wings are cowhide boots, which society is always advising them to put on.

Married women uniformly decided against the communities.

November 12.

It is wiser to live in the country and have poverty instead of pauperism. Yet citizens or cockneys are a natural formation also, a secondary formation, and their relation to the town is organic, — but there are all shades of it, and we dwellers in the country are only half countrymen. As I run along the yard from my woodpile I chance to see the sun as he rises or as he hangs in beauty over a cloud, and am apprised how far off from that beauty I live, how careful and little I am. He calls me to solitude.

Where does the light come from that shines on things? From the soul of the sufferer, of the enjoyer. *Minerva and Telemachus*, PLOTINUS, 452.

I have known a person of extraordinary intellectual power, on some real or supposed imputation of weakness of her reasoning faculty from another party, enter with heat into a defence of the same by naming the eminent individuals who had trusted and respected her genius. The moment we quote a man to prove our sanity, we give up all. No authority can establish it, and if I have lost confidence in myself I have the Universe against me.

Five minutes of to-day, as I used to preach, are worth as much to me as five minutes a million years hence.

We fathers of American nations should not set the bad example of Repudiation to the centuries. The Years are the moments of the life of this nation.

Common sense knows its own, and so recognizes the fact at first sight in chemical experiment. The common sense of Dalton, Davy, Black, is that common sense which made these arrangements which now it discovers.

Eternity of the World. The different ages of man, in Hesiod's *Works and Days*, signify the mutations of human lives from virtue to vice and from vice to virtue. There are periods of fertility and of sterility of souls; sometimes men descend for the benevolent purpose of leading back apostate souls to right principles. Hades signified the profound union of the soul with the present body. See Taylor's *Cratylus*.

Euclid, Plato, and the multiplication table are spheres in your thought. Bail up with a spoon and you shall get Mrs. Glass or the newspaper: bail up with a bucket and you shall have purer water: dive yourself and you shall come to the immortal deeps.

Therefore, we feel that one man wrote all the books of literature. It will certainly so appear at a distance. Neither is any dead, neither Christ nor Plato.

Each man reserves to himself alone the right of being tedious.

There are many audiences in every public assembly....

[Early in December, Mr. Emerson wrote to his brother William that he had had, for the second time, an application from a bookseller to print a volume of poems. He had, at the request of Rev. James Freeman Clarke, allowed him to print several in the *Western Messenger*, at Louisville, Kentucky; and he had contributed several to the *Dial*, and many friends urged their publication.]

December 25.

At the performing of Handel's *Messiah* I heard some delicious strains and understood a very little of all that was told me. My ear received but a little thereof.... The genius of Nature could well be discerned. By right and might we should become participant of her invention, and not wait for morning and evening to know their peace, but prepossess it.

I walked in the bright paths of sound, and liked it best when the long continuance of a chorus had made the ear insensible to the music, made it as if there was none; then I was quite solitary and at ease in the melodious uproar. Once or twice in the solos, when well sung, I could play tricks, as I like to do, with my eyes, — darken the whole house and brighten and transfigure the central singer, and enjoy the enchantment.

This wonderful piece of music carried us back into the rich, historical past. It is full of the Roman Church and its hierarchy and its architecture. Then, further,

it rests on and requires so deep a faith in Christianity that it seems bereft of half and more than half its power when sung to-day in this unbelieving city.

We love morals until they come to us with mountainous melancholy and grim overcharged rebuke: then we so gladly prefer intellect, the light-maker. Dear sir, you treat these fantastical fellow men too seriously, you seem to believe that they exist.

The solid earth exhales a certain permanent average gas which we call the atmosphere; and the spiritual solid sphere of Mankind emits the volatile sphere of literature of which books are single and inferior effects.

December 31.

The year ends, and how much the years teach which the days never know!... but the individual is always mistaken.

At the Convention of Socialists in Boston last week Alcott was present, and was solicited to speak, but had no disposition, he said, to do so.

Although none of the representatives of the "Communities" present would probably admit it, yet in truth he is more the cause of their movements than any other man. He feels a certain parental relation to them without approving either of their establishments. His presence could not be indifferent to any speaker, and has not been nothing to any of them in the past years.

A true course of English literary history would contain what I may read the Wartons and not learn: e g., of Marlowe's mighty line; of Crashaw's *Musician and Nightingale*; of Ben Jonson's visit to Drummond; of Wotton's list of contemporaries; of the history of John Dennis; of the *Rehearsal*; of the *Critic*; a history of Bishop Berkeley; of the Scriblerus Club; of Wood, and Aubrey; of Shakspeare at the last dates; of Cotton's Montaigne; of the translators of Plutarch; of the forgeries of Chatterton, Landor, and Ireland; of Robert of Gloucester; of the Roxburgh Club; of Thomas Taylor.

We rail at trade, but the historian of the world will see that it was the principle of liberty; that it settled America, and destroyed feudalism, and made peace and keeps peace; that it will abolish slavery.

Belief and Unbelief. Kant, it seems, searched the metaphysics of the Self-reverence which is the favorite position of modern ethics, and demonstrated to the Consciousness that itself alone exists.

The two parties in life are the believers and unbelievers, variously named. The believer is poet, saint, democrat, theocrat, free-trade, no church, no capital punishment, idealist.

The unbeliever supports the church, education, the fine arts, etc., as *amusements*.

But the unbelief is very profound: Who can escape it? I am nominally a believer: yet I hold on to property: I eat my bread with unbelief. I approve every wild action of the experimenters. I say what they say concerning celibacy, or money, or community of goods, and my only apology for not doing their work is preoccupation of mind. I have a work of my own which I know I can do with some success. It would leave that undone if I should undertake with them, and I do not see in myself any vigor equal to such an enterprise. My genius loudly calls me to stay where I am, even with the degradation of owning bank-stock and seeing poor men suffer, whilst the Universal Genius apprises me of this disgrace and beckons me to the martyrs and redeemer's office.

This is belief, too, this debility of practice, this staying by our work. For the obedience to a man's genius is the *particular* of Faith: by and by, shall I come to the *universal* of Faith.

I take the law on the subject of Education to read thus, *The Intellect sees by moral obedience.* (Thomas Taylor's translations.)

Alypius in Iamblichus had the true doctrine of money.

AUTHORS OR BOOKS QUOTED OR REFERRED TO IN JOURNAL FOR 1843

The *She-King*; *The Four Books* (Chinese Classics), translated by Rev. D. Collier, Malacca; *Vishnu Sarna*; *The Desatir* (Persian), translation of Mr. Duncan, Bombay; AEschylus, *Prometheus Bound*; Martial; Marcus Terentius Varro; Pliny the Elder; Plotinus, Iamblichus, Synesius, Proclus (Thomas Taylor's translations);

William Lorriss and Jean de Meung, *Roman de la Rose*; Dante; Saadi; Erasmus; Calvin; Scaliger; Raleigh; Marlowe; *Behmen*; *Giles Fletcher, Christ's Victory and Triumph*; *Crashaw, Musician and Nightingale*; *Anthony à Wood*;

Spinoza; Swift, Gulliver s Travels; Berkeley; Beckford, Vathek; Joseph and Thomas Warton; Beaumarchais; Wieland, The Abderites; Goethe, Iphigenia, Faust (second part), Wilhelm Meister; Chatterton; William H. Ireland; Thomas Taylor, translations of the Cratylus and the Neoplatonists; O'Connell; Campbell; Ludwig Borne; Bettina von Arnim; Webster; Carlyle, Past and Present; Rev. Henry Ware; Rev. Lyman Beecher; Rev. Nathaniel Frothingham; Eugene Bernouf; George Borrow, The Zincali; Disraeli, Vivian Grey; Theodore Mundt; John Sterling; Nathaniel Hawthorne; Rev. Chandler Robbins; Goodwyn Barmby; Margaret Fuller; Thoreau; William Ellery Channing.

1869

(From Journals NY and ML)

[IN January, Mr. Emerson seems to have made a shorter lecturing trip than usual, going no farther West than Cleveland.]

(From NY)

In this proposition lately brought to me by a class, it occurs that I could by readings show the difference between good poetry and what passes for good; that I could show how much so-called poetry is only eloquence; that I could vindicate the genius of Wordsworth, and show his distinctive merits. I should like to call attention to the critical superiority of Arnold, his excellent ear for style, and the singular poverty of his poetry, that in fact he has written but one poem, "Thyrsis," and that on an inspiration borrowed from Milton. A topic would be this Welsh genius (and Arnold, too, has been attracted to that) which I recognized to-day in reading this new translator, Skene, and which I find, as long ago, far more suggestive, contagious, or I will say, more inoculating the reader with poetic madness, than any poet I now think of, except Hafiz. I can easily believe this an idiosyncrasy of mine, and, to describe it more accurately, I will add that I place these as not equal, but *of like kind* in genius and influence with the Zoroastrian sentences, and those of the *Bhagavat Geeta* and the *Vishnu Purana*.

There is always a height of land which, in a walk for pleasure or business, the party seek as the natural centre, or point of view; and there is in every book, whether poem or history, or treatise of philosophy, a height which attracts more than other parts, and which is best remembered. Thus, in *Morte d'Arthur*, I remember nothing so well as Merlin's cry from his invisible, inaccessible prison. To be sure, different readers select by natural affinity different points. In the proposed class, it would be my wish to indicate such points in literature, and thus be an "old guide," like Stephen, who shows, after ten years' daily trudging through the subterranean holes, the best wonders of the Mammoth Cave.

The gripe of Byron has not been repeated, and the delightful romance which came from Scott to young America has not. Tennyson has finer, more delicate beauty and variety, but does not possess men as the others did. Tennyson has a perfect English culture, and its petulance.

Homer has this prerogative, that he never discovers in the *Iliad* a preference to the Greeks over the Trojans.

It were good to contrast the hospitality of Abu Bekr in the *Sahara* with that of Admetus in Euripides's *Alcestis*. That of the Arab is at once noble, yet human; that of the king in the play is overstrained to absurdity.

I have said above that tone, rather than lines, marks a genuine poem. Wolfe's "Not a drum was heard, not a funeral note," is an example, so is Sterling's "Dædalus," so "Dinas Emlinn" of Scott, and Scott always has that merit; and Byron's Incantation in "Manfred," and the whole of [the poem] charms, in spite of its shallowness, by that unity; and Beaumont and Fletcher's "Melancholy." I think the vice of the French, their notorious incapacity of poetic power, is the total want of this music, which all their brilliant talent cannot supply. Voltaire could see wholes as well as parts, and his testimony to French unpoeticalness is distinct. "*Si le roi in avait donné,*" etc., has right tone, and that little carol is still their best poem. Many poems owe their fame to tone, as others to their sense.

But Victor Hugo has genius in *Le Semeur*, and the *star-piece*, which I have saved. And, I must repeat, that one genial thought is the source of every true poem. I have heard that a unity of this kind pervades Beethoven's great pieces in music. And why, but because tone gives unity?

In the matter of religion, men eagerly fasten their eyes on the differences between their own creed and yours; whilst the charm of the study is in finding the agreements and identities in all the religions of men.

The few stout and sincere persons, whom each one of us knows, recommend the country and the planet to us. 'Tis not a bad world this, as long as I know that John M. Forbes or William H. Forbes and Judge Hoar, and Agassiz, and my three children, and twenty other shining creatures whose faces I see looming through the mist, are walking in it. Is it the thirty millions of America, or is it your ten or twelve units that encourage your heart from day to day?

Of immortality, I should say that it is at least equally and perhaps better seen in little than in large angles. I mean, that in a calm and clear state of mind, we have no fears, no prayers, even; that we feel all is well. We have arrived at an enjoyment so pure, as to imply and affirm its perfect accord with the nature of things, so that it alone appears durable, and all mixed or inferior states accidental and temporary.

The managers of the public conventions, political and other, understand well that they must set the fire going by ready popular speakers, like Wilson, and Russell, and Swift, who will crackle and kindle, and afterwards they may venture to pile on the slow anthracite of argumentative judges and political economists; kindlings first, and then hard coal.

Shakspeare. I think, with all due respect to Aubrey, and Dyce, and Delia Bacon, and Judge Holmes, that it is not by discovery of contemporary documents, but by more cunning reading of the Book itself, that we shall at last eliminate the true biography of Shakspeare.

[On March 1, Mr. Emerson read before the Woman's Club an account of his aunt, Mary Moody Emerson, with some extracts from her letters and journal. (See *Lectures and Biographical Sketches.*)]

Montaigne says that "Socrates's virtue does seem to have been ever on the rack to perform its actions, but to have done them naturally and gracefully. 'T was a better born virtue than other men's."

In my visit to New York I saw one remarkable person new to me, Richard Hunt, the architect. His conversation was spirited beyond any that I could easily remember, loaded with matter, and expressed with the vigour and fury of a member of the Harvard boat or ball club relating the adventures of one of their matches; inspired, meantime, throughout, with fine theories of the possibilities of art. Yet the tone of his voice and the accent of his conversation so strongly reminded me of my rural neighbour Sam Staples as to be in ludicrous contrast with the Egyptian and Greek grandeurs he was hinting or portraying. I could only think of the immense advantage which a thinking soul possesses when horsed on a robust and vivacious temperament. The combination is so rare of an Irish labourer's nerve and elasticity with Winckelmann's experience and cultivation as to fill one with immense hope of great results when he meets it in the New York of to-day.

[Mr. Emerson's friend, James T. Fields, the genial publisher and author, and his son-in-law, Colonel William H. Forbes, did him the friendly office of arranging for him a "Class," to whom he read, in Chickering Hall, on ten Saturday afternoons in the spring, his favourite pieces of prose or verse, with some short introduction. Among the subjects were, Chivalry (extracts from Old Chronicles); Chaucer; Shakspeare; Ben Jonson and Lord Bacon; Herrick;

Donne; Herbert; Vaughan; Marvell; Milton; Johnson; Gibbon; Burke; Cowper; Wordsworth.

These readings were much enjoyed by the Class, but, in this wealth of material and the limits of an hour, many things that Mr. Emerson wished to read were not included, as appears from the following entry, which yet tells of many that were.]

(From ML)

March 21, 1869.

Readings at Chickering Hall. Yesterday finished the Tenth Reading at Chickering Hall. Many good things were read in these ten Saturdays, and some important passages that had been selected were not read. Read nothing of Byron but the lines, "I twine my hopes of being remembered," etc., from "Childe Harold"; nothing of Sterling but "Alfred the Harper"; nothing of Wordsworth but "Helvellyn,"

"Dion," and verses from the "Ode"; nothing from Coleridge, prose or verse. From Scott, I read the Abbot and Bruce in *Lord of the Isles*; "Helvellyn"; "Look not thou when beauty's charming." Read nothing from Blake but "Persecution." From Gray, nothing. From Campbell, nothing. From Clough, Thoreau, Channing, Brownell, Mellen, Longfellow, Arnold, Willis, Sprague, nothing. Of Moore, nothing.

I had designed to read some pages on the art of writing, on Language, Compression, etc.; but with the exception of a page or two on *the dire*, TO *Seivov*, omitted them. Little searching criticism was given. I meant to show some *inspired prose* from Charles K. Newcomb, Sampson Reed, Mary Moody Emerson, etc., but did not.

I meant to have one Ethical Reading, and one Oriental: but they came not. Nothing from Goethe except the "Song of the Parcae" in *Iphigenia*. Nothing from Horatio Greenough. Did not read the proposed hymns of Watts, and Barbauld, or Sir Thomas Browne. I designed to read from Montaigne, of "Friendship," of "Socrates," but did not. From Goethe, *West-Ostlichen Divan*. From Coleridge, *Lay Sermons*, *Literary Biography*, *Friend*. From Plutarch's *Morals*; Synesius; Plotinus. From James Hogg, read only "Kilmeny"; had wished to read "The Witch of Fife." Of Samuel Ferguson, should have read "Forging of the Anchor"; of Frederic H. Hedge, should have read *Lines in the Dial*; and from Brownell, "The Old Cove"; and from Ellen Hooper, "Sweep Ho!"

What selections from Plato I might read! e g., *Theages*, and the beginning and end of *Phadon*, and the naivetes of the *Apology*. Carlyle's portrait of Webster in letter to me. Story of Berthollet, and examples of Courage; Fra Cristoforo, in! *Promessi Sposi*. And, in American Poets remember Sarah Palfrey's "Sir Pavon," and Helen Hunt's "Thought." Eugène Fromentin on Arab Hospitality; Lord Carnarvon's speech in the House of Lords on the impeachment of the Earl of Danby; Faryabi, in D'Herbelot; The Cid's arraignment of his sons-in-law before the Cortes; Romeo, in Cary; Lord Bacon's "Young Scholar,"

"Ships of Time," Speech for Essex; Earl of Devonshire, from Coleridge's "Puritan Soldier"; *Lay Sermons*; Story of Marvell's refusal of royal bounty. Gibbon's Conception and Conclusion of the *History*. Hobbes's definition of Laughter (not read); Hobbes's barbarous society (not read); John Quincy Adams's Peroration; Behmen, *Life of Christ*. Milton, Prose and Poetry. Charles K. Newcomb, of Swedenborg and Brook Farm; Dr. Johnson, "Iona"; Hindoo Books; Chivalry, Lord Herbert; Chief Justice Crewe; Merlin in *Morte d'Arthur*; the lion story; "Celinda"; Cid; Horn of Roland in *Chanson de Roland*; Voltaire on French Poetry; Niebuhr's *View of Poetry*; Creation of new characters; Pepys's notices of Shakspeare and Clarendon.

Poetry. "Dædalus," unread; Wordsworth, "The intellectual power from words to things Went sounding on, a dim and perilous way"; "Russian Snow," not read; Beaumont and Fletcher, "Melancholy,"

"Lines on *An Honest Man's Fortune*"; Speech of Caratach in *Bonduca*, Scene I; Gray and Collins — inimitable skill in perfectly modern verse; had digested their classics. Jones Very's two poems, "The Strangers" and "Barberry Bush," with notes of Jones Very. William Blake's "Persecution," and Allingham's "Touchstone"; Clough; Henry Kirke White's "Herb Rosemary"; Waller's "Rose," and Bayly's "Round my own lovely Rose," and Mrs. Hemans's "Nightingale"; Hogg's "Witch of Fife"; Tennyson's "Memory"; Byron's "Shipwreck," and "Out upon Time"; Bryant's "Waterfowl."...

Coup-de-force poetry, Everett; Lapidary or gem-carving; Eloquent; Biblical; Sculpturesque, M. Angelo; *Vers de Société*, Daniel Webster. —

The Mountain

Seemed, though the soft sheen all enchants,
Cheers the rough crag and mournful dell,
As if on such stern forms and haunts
A wintry storm more fitly fell.

Et vocatus et non vocatus Deus aderit. Invoked or uninvoked, the God will be present.

Who was the king to whom the sophist wished to teach the art of memory, and who replied, that he would give him a greater reward if he could teach him to forget?

No more irreconcilable persons brought to annoy and confound each other in one room than are sometimes actually lodged by Nature in one man's skin.

Memory. It sometimes occurs that memory has a personality of its own, and volunteers or refuses its information at *its* will, not at mine. I ask myself, Is it not some old aunt who goes in and out of the house, and occasionally recites anecdotes of old times and persons, which I recognize as having heard before, — and she being gone again, I search in vain for any trace of the anecdotes?

March 29.

Alcott came, and talked Plato and Socrates, extolling them with gravity. I bore it long, and then said, that was a song for others, not for him. He should find what was the equivalent for these masters in our times; for surely the world was always equal to itself, and it was for him to detect what was the counterweight and compensation to us. Was it natural science? Was it the immense dilution of the same amount of thought into nations? I told him to shut his eyes, and let his thoughts run into reverie or whithersoever, — and then take an observation. He would find that the current went outward from man, not to man. Consciousness was upstream.

Bunsen's physiognomy, as I remember him in London, suggested not a noble, but the common German scholar, with marked sentimentalism, or, as we commonly say, *gushing*; and these prayers, and violent conventicle utterances to which he runs in his correspondence and diary, betray that temperament. Yet he had talent and generosity, and appears to have been highly useful.

May 5, died Philip Physick Randolph, son of the late Jacob Randolph, M. D.

[On May 17, Mr. Emerson read a paper on Religion at the house of the Rev. J.T. Sargent; and on May 28, spoke at the second annual meeting of the Free Religious Association.]

God had infinite time to give us; but how did He give it? In one immense tract of a lazy millennium? No, but He cut it up into neat succession of new mornings, and, with each, therefore, a new idea, new inventions, and new applications.

“The door of intercourse is closed between those confined and those unconfined by space,” say the Ali Ilahi An. — DABISTAN.

The religions are the amusements of the intellect.

June.

Yesterday, Saturday, June 12, the committee on scale of merit and discipline met at Dr. Walker's in Cambridge. Present, Dr. Walker, Professor Runkle, Theodore Lyman, and I. Rev. Mr. Hale alone was absent. Dr. Walker gave some details of the manner in which the scale is made up, and stated that the Faculty were for the most part contented with it as it stands, and do not wish any alteration. He added that there is question and inconvenience in regard to elective studies. For the poor men, it is matter of grave importance that they shall have rank sufficient to obtain a scholarship, that is, an income; and when elective studies are proposed, they do not choose that which they wish to learn, but that which will give the most marks, that is, highest rank. It was stated that the idle boys would choose botany, or some other study which cost no thought and little attention, and it was not quite fair that for such idle reading they should receive equally high marks with those who elected severer studies as trigonometry, or metaphysics, or advanced studies in Greek. Mr. Lyman said the state of study was much superior at present to that which he remembered when in college, and alluded to the performance of young Hill at the examination.

Some of the professors, as Mr. Lowell and Mr. Peirce, Senior, do not keep a daily account of merits of the students, but make up a general average, each in a way of his own. It was suggested that whilst each teacher should keep a daily record of the quality of recitations, he should by no means present that in his final report, but should correct it by his growing knowledge of the depth of real merit of the student, as shown to him by his proficiency and power, or his want of success, as made known in decisive strokes from time to time.

It is the necessary result of the existing system the mixing of the record of deportment with that of scholarship, and thus degrading a good scholar, if by neglect of prayers or recitations he had incurred a “public admonition,” or raising the rank of a dull scholar if he was punctual and in deportment blameless.

President Hosmer, of Antioch College, tells me that there they do not mark for merit; and that, for discipline they organize the students in the Dormitory into

a Society for noting and resisting all breaches of order. The students have a president and other officers, and when any disturbance occurs they examine, and vote perhaps to recommend the expulsion of the offenders, — which the College Government then considers and decides.

At present, the friends of Harvard are possessed in greater or less degree by the idea of making it a University for men, instead of a College for boys.

One would say that this better moral record should only serve to give the casting vote in favour of good behaviour, where the marks for scholarship were equal.

I think every one who has had any experience in marking a series of recitations has found how uncertainly his 6, and 7, and 8 are given. His first attempt will be worthless except in the extreme numbers, and can only be approximately trustworthy in a great number of days.

July 1.

Judge Hoar, in his speech at the Alumni dinner at Cambridge yesterday, was a perfect example of Coleridge's definition of genius, "the carrying the feelings of youth into the powers of manhood"; and the audience were impressed and delighted with the rare combination of the innocence of a boy with the faculty of a hero.

(From loose sheets of uncertain date)

Charles Sumner. Clean, self-poised, great-hearted man, noble in person, incorruptible in life, the friend of the poor, the champion of the oppressed. Of course, Congress must draw from every part of the country swarms of individuals intent only on their private interests, eager only for private interests who could not love his stern justice. But if they gave him no high employment, he made low work high by the dignity of honesty and truth. But men cannot long do without faculty and perseverance, and he rose, step by step, to the mastery of all affairs entrusted to him, and by those lights and upliftings with which the Spirit that makes the Universe rewards labour and brave truth. He became learned and adequate to the highest questions, and the counsellor of every correction of old errors and of every noble reform. How nobly he bore himself in disastrous times! Every reform he led or assisted. In the shock of the war his patriotism never failed.

A man of varied learning and accomplishments. He held that every man is to be judged by the horizon of his mind, and Fame he defined as the shadow of excellence, but that which follows him, not which he follows after. A tragic

character, like Algernon Sydney; a man of conscience and courage, but without humour. Fear did not exist for him.

Sumner has been collecting his works. They will be the history of the Republic for the last twenty-five years, as told by a brave, perfectly honest, and well-instructed man with social culture and relation to all eminent persons. Diligent and able workman, without humour, but with persevering study while reading, excellent memory, high sense of honour, disdaining any bribe, any compliances, and incapable of falsehood. His singular advantages of person, of manners, and a statesman's conversation, impress every one favourably. He has the foible of most public men, the egotism which seems almost unavoidable at Washington. I sat in his room once at Washington whilst he wrote a weary succession of letters, — he writing without pause as fast as if he were copying. He outshines all his mates in historical conversation and is so public in his regards that he cannot be relied on to push an office-seeker, so that he is no favourite with politicians. But wherever I have met with a dear lover of the Country and its moral interests, he is sure to be a supporter of Sumner.

It characterizes a man for me that he hates Charles Sumner: for it shows that he cannot discriminate between a foible and a vice. Sumner's moral instinct and character are so exceptionally pure that he must have perpetual magnetism for honest men; his ability and working energy such, that every good friend of the Republic must stand by him. Those who come near him and are offended by his egotism, or his foible (if you please) of using classic quotations, or other bad taste, easily forgive these whims, if themselves are good; or magnify them into disgust, if they themselves are incapable of his virtue. And when he read one night in Concord a lecture on Lafayette we felt that of all Americans he was best entitled by his own character and fortunes to read that eulogy.

Every Pericles must have his Creon; Sumner had his adversaries, his wasps and backbiters. We almost wished that he had not stooped to answer them. But he condescended to give them truth and patriotism, without asking whether they could appreciate the instruction or not.

A man of such truth that he can be truly described: he needs no exaggerated praise.

Not a man of extraordinary genius, but a man of great heart, of a perpetual youth, incapable of any fraud, little or large; loving his friend, and loving his Country, with perfect steadiness to his purpose, shunning no labour that his aim required; and his works justified him by their scope and thoroughness.

He had good masters, who quickly found that they had a good scholar. He read law with Judge Story, who was at the head of the Law School of Harvard University, and who speedily discovered the value of his pupil, and called him to

his assistance in the Law School.

He had great talent for labour, and spared no time and no research to make himself master of his subject. His treatment of every question was faithful and exhaustive and marked always by the noble sentiment.

(From NY)

July 26.

This morning sent my six prose volumes, revised and corrected, to Fields and Company for their new edition in two volumes.

Landor says, "A single man of genius hath never appeared in the whole extent of Austria, an extent several thousand times greater than our city (Florence); and this very street has given birth to fifty." — *Works*, vol i, p. 191.

"Annibal Caracci said to his scholar, *What you do not understand, you must darken*" — LANDOR.

At Walden, the other day, with George Bradford, I was struck, as often, with the expression of refinement which Nature wears often in such places; — the bright sunshine reflected by the agreeable forms of the water, the shore-line, and the forest, the soft lapping sound of the water.

At my Club, I suppose I behave very ill in securing always, if I can, a place by a valued friend, and, though I suppose (though I have never heard it) that I offend by this selection, sometimes too visible, my reason is that I, who rarely see, in ordinary, select society, must make the best use of this opportunity, having, at the same time, the feeling that

"I could be happy with either,
Were the other dear charmer away."

I am interested not only in my advantages, but in my disadvantages, that is, in my fortunes proper; that is, in watching my fate, to notice, after each act of mine, what result. Is it prosperous? Is it adverse? And thus I find a pure entertainment of the intellect, alike in what is called good or bad.

In Xenophon's *Banquet*, Critobulus says, "I swear by all the gods, I would not choose the power of the Persian King in preference to beauty."

Washington City. I notice that they who drink for some time the Potomac

water lose their relish for the water of the Charles River, the Merrimack, and the Connecticut. But I think the public health requires that the Potomac water should be corrected by copious infusions of these provincial streams. Rockwood Hoar retains his relish for the Musketaquid.

Sumner cites Cato as saying “that Kings were carnivorous animals.”

In looking into Hesiod’s *Works and Days*, I am reminded how much harm our clocks and almanacs do us by withdrawing our attention from the stars, the annual winds, and rains, habits of animals, and whatever primary observations of Nature the ancient nations relied on. Their year was throughout religious and imaginative.

“Sit in the shade, and drink moreover dark-hued wine — Pour in three cups of water first and add the fourth of wine.” — HESIOD.

“You, Perses, flattered much the bribe-swallowing judges. Fools, they know neither how much half exceeds the whole, nor how great advantage is in mallow and asphodel.” — Bohn’s HESIOD, p. 76.

“Sow stripped, plough stripped, and reap stripped, if thou wouldst gather the works of Ceres.” — Idem, p. 95.

The same periodicity — shall I say — reigns in fable, and brings the wildest curve round to a true moral, as works in electricity, gravitation, and the crystal. And this is also expressed in tone and rhythm.

[The Boston Society of Natural History celebrated, on September 14, the Centennial Anniversary of the birth of Alexander von Humboldt. Mr. Emerson was invited to speak, and an abstract of his remarks is printed in the *Miscellanies*. Some additional sentences are given in what follows.]

September.

Humboldt one of those wonders of the world like Aristotle, like Crichton, like Newton, appearing now and then as if to show us the possibilities of the *genus Homo* the powers of the eye, the range of the faculties; whose eyes are natural telescopes and microscopes and whose faculties are so symmetrically joined that they have perpetual presence of mind, and can read Nature by bringing instantly their insight and their momentary observation together; whilst men ordinarily are, as it were, astonished by the new object, and do not on the instant bring their knowledge to bear on it. Other men have memory which they can ransack, but Humboldt’s memory was wide awake to assist his observation. Our faculties are

a committee that slowly, one at a time, give their attention and opinion, — but his, all united by electric chain,... You could not lose him. He was the man of the world, if ever there was one. You could not lose him; you could not detain him; you could not disappoint him. The tardy Spaniards were months in getting their expedition ready and it was a year that he waited; but Spain or Africa or Asia were all harvest-fields to this armed eye, to this Lyncaeus who could see through the earth, and through the ocean, who knew how mountains were built, and seas drained....

Agassiz never appeared to such advantage as in his Biographical Discourse on Humboldt, at the Music Hall in Boston, yesterday. What is unusual for him, he read a written discourse, about two hours long; yet all of it strong, nothing to spare, not a weak point, no rhetoric, no falsetto; — his personal recollections and anecdotes of their intercourse, simple, frank, and tender in the tone of voice, too, no error of egotism or of self-assertion, and far enough from French sentimentalism. He is quite as good a man as his hero, and not to be duplicated, I fear. I admire his manliness, his equality always to the occasion, to any and every company, — never a fop, never can his manners be separated from himself.

I never could get beyond five steps in my enumeration of intellectual powers; say, Instinct, Perception, Memory, Imagination (including Fancy as a subaltern), Reasoning or Understanding. Some of the lower divisions, as Genius, Talent, Logic, Wit, and Humour, Pathos, can be dealt with more easily.

The person who commands the servant successfully is the one who does not think of the manner, solely thinking that this thing must be done. Command is constitutional.

October 19.

Carried to Fields and Company to-day the copy of the four first chapters of my so-called new book, *Society and Solitude*.

I read a good deal of experimental poetry in the new books. The author has said to himself, "*Who knows but this may please, and become famous? Did not Goethe experiment? Does not this read like the ancients?*" But good poetry was not written thus, but it delighted the poet first; he said and wrote it for joy, and it pleases the reader for the same reason.

October 21,

I wish I could recall my singular dream of last night with its physics, metaphysics, and rapid transformations, — all impressive at the moment, that on waking at midnight I tried to rehearse them, that I might keep them till morn. I fear 'tis all vanished. I noted how we magnify the inward world, and emphasize it to hypocrisy by contempt of house and land and man's condition, which we call shabby and beastly. But in a few minutes these have their revenge, for we look to their chemistry and perceive that they are miracles of combination of ethereal elements, and do point instantly to moral causes.

General Wayne was the commissioner of the Government who first saw the importance of the nook of land at the foot of Lake Michigan round which the road to the northwest must run, and managed to run the boundary line of Illinois in such manner as to include this swamp, called Chicago, within it.

Aunt Mary held a relation to good society not very uncommon. She was strongly drawn to it as to the reputed theatre for genius, but her eccentricity disgusted it, and she was quite too proud and impulsive to sit and conform. So she acquiesced, and made no attempt to keep place, and knew it only in the narratives of a few friends like Mrs. George Lee, Mrs. Mary Schalkwic, Miss Searle, etc., with whom she had been early intimate, and who for her genius tolerated or forgave her oddities. But her sympathy and delight in its existence daily appear through all her disclaimers and fine scorn.

Good writing. All writing should be selection in order to drop every dead word. Why do you not save out of your speech or thinking only the vital things, — the spirited *mot* which amused or warmed you when you spoke it, — because of its luck and newness? I have just been reading, in this careful book of a most intelligent and learned man, any number of flat conventional words and sentences. If a man would learn to read his own manuscript severely, — becoming really a third person, and search only for what interested him, he would blot to purpose, — and how every page would gain! Then all the words will be sprightly, and every sentence a surprise.

I will tell you what it is to be immortal, — this, namely, that I cannot read Plutarch without perpetual reminders of men and women whom I know.

Dr. Hedge tells us that the Indian asked John Eliot, "Why God did not kill the devil?" One would like to know what was Eliot's answer.

December 8.

The scholar wants not only time but *warm time*, good anthracite or cannel coal to make every minute in the hour avail.

“Harmony latent is of greater value than that which is visible.” — HERACLITUS.

Calvinism. There is a certain weakness in solemnly threatening the human being with the revelations of the Judgment Day, as Mrs. Stowe winds up her appeal to the executors of Lady Byron. An honest man would say, Why refer it? All that is true and weighty with me has all its force now.

We meet people who seem to overlook and read us with a smile, but they do not tell us what they read. Now and then we say things to our mates, or hear things from them, which seem to put it out of the power of the parties to be strangers again. Especially if any one show me a stroke of courage, a piece of inventive wit, a trait of character, or a pure delight in character when shown by others, henceforward I must be that man's or that woman's debtor, as one who has discovered to me among perishing men somewhat more clean and incorruptible than the light of these midnight stars. Indeed, the only real benefit of which we are susceptible is (is it not?) to have man dignified for us.

“To declare war against length of time.” — SIMONIDES.

Compensation of failing memory in age by the increased power and means of generalization.

I asked Theodore Lyman on Saturday how it was exactly with Agassiz's health. He said “that no further paralysis had appeared, and that he seemed not threatened. It was not apoplexy, but a peculiarity of his constitution, — these turns of insensibility which had occurred. It was *hysteria*.” I replied that I had often said that Agassiz appeared to have two or three men rolled up into his personality, but I had never suspected there was any woman also in his make. Lyman replied that he had himself seen hysteria oftener in men than in women.

AUTHORS OR BOOKS QUOTED OR REFERRED TO IN JOURNAL FOR 1869

Zoroaster; Hesiod, *Works and Days*; Simonides; Heracleitus; Euripides, *Alcestis*; Xenophon, *Banquet*; Cato the Elder; Proclus; *Arthurian Romances*; *Dabistan*; James (“the Admirable”) Crichton; Sir Philip Sidney, *Life of*, by Lord

Brooke; De Retz; Aubrey; Sprat, *Death of Cromwell*, apud Johnson; Addison, *Cato*; Voltaire; Winckelmann; Humboldt; Rev. W. E. Channing; Varnhagen von Ense; Haydon; Chevalier Bunsen; Alexander Dyce; Alcott; Victor Hugo, *Le Semeur*; Agassiz; Tennyson; Crabbe Robinson, *Diary*; *La Cit'e Antique*; Charles Sumner; Harriet Beecher Stowe, *Lady Byron Vindicated*; Fromentin, *Un Été dans le Sahara*; W. Ellery Channing, *Poems*; Matthew Arnold, *Poems*; M. H. Cobb, *Outward Bound*; O. W. Holmes, Jr.

1870

(From Journals NY and ST)

[DURING January, Mr. Emerson was preparing his preface to a new translation, by Professor William Watson Goodwin, of *Plutarch's Morals*. This, by the kindness of Messrs. Little and Brown, the publishers, is included in the works (*Lectures and Biographical Sketches*).]

(From NY)

February 3, 1870.

The last proof-sheet of *Society and Solitude* comes back to me to-day for correction.

Mr. Charles P. Ware tells Edward that the night before the Cambridge Commemoration Day he spent at Mr. Hudson's room, in Cambridge, and woke from a dream which he could not remember, repeating these words, — *And what they dare to dream of, dare to die for.*

He went to the Pavilion Dinner, and there heard Mr. Lowell read his poem, and when he came to the lines: —

“Those love her best who to themselves are true And what” —

Ware said, “Now I know what's coming, — but it won't rhyme;” and Mr. Lowell proceeded, —

“they dare to dream of, dare to do.”

[No mention of lectures is found until the spring, except before Lyceums in neighboring towns, and one in Philadelphia, February 7, an excursion always pleasant, for there Mr. Emerson met his old schoolmates of his Boston boyhood, Rev. William H. Furness and Mr. Samuel Bradford.]

February 24.

Bettine, in Varnhagen's *Diary*, reminds me continually of Aunt Mary, though the first is ever helping herself with a lie, which the other abhorred. But the

dwelling long with grief and with genius on your wrongs and wrongdoers, exasperating the offender with habitual reproaches, puts the parties in the worst relation and at last incapacitates the complaining woman from seeing what degree of right or of necessity there is on the side of her offender, and what good reason he has to complain of her wrath and insults.

This ever-increasing bias of the injured party has all the mischief of lying.

February 27.

At Club yesterday, Lowell, Longfellow, Cabot, Brimmer, Appleton, Hunt, James, Forbes, Fields. Erastus Bigelow was a guest.

How dangerous is criticism. My brilliant friend cannot see any healthy power in Thoreau's thoughts. At first I suspect, of course, that he oversees me, who admire Thoreau's power. But when I meet again fine perceptions in Thoreau's papers, I see that there is defect in his critic that he should undervalue them. Thoreau writes, in his *Field Notes*, "I look back for the era of this creation not into the night, but to a dawn for which no man ever rose early enough." A fine example of his affirmative genius.

March 15.

My new book sells faster, it appears, than either of its foregoers. This is not for its merit, but only shows that old age is a good advertisement. Your name has been seen so often that your book must be worth buying.

I hate protection of trade in our politics, and now I recall in what Stillman said of the Greek war, — that the English opposition to the independence of Greece is merely out of fear of its depriving them of the Eastern trade.

A gentleman, English, French, or American, is rare; I think I remember every one I have ever seen.

March 16.

Musagetes. After the Social Circle had broken up, last night, and only two remained with me, one said that a cigar had uses. If you found yourself in a hotel with writing to do, — fire just kindled in a cold room, — it was hard to begin;

but light a cigar, and you were presently comfortable, and in condition to work. Mr.

Simon Brown then said, that he had never smoked, but as an editor (of the *New England Farmer*) he had much writing, and he often found himself taking up a little stick and whittling away on it, and, in a short time, brought into tune and temper by that Yankee method.

Alvah Crocker gave me in the cars a history of his activity in the matter of the Fitchburg Railroad, beginning, I think, in 1837. He is the author of the road. He was a paper manufacturer, and could not get the material for making paper for less than eight cents a pound, — whilst in Boston and elsewhere it could be got for two, three, and four cents. He must find a way to bring Fitchburg nearer to Boston. He knew the country round him and studied the possibilities of each connection. He found he must study the nearest practicable paths to tidewater. No man but he had faith in the rivers; Nashua River.

After studying the Hoosac Mountains well, he decided that the mountain must be perforated. He must see Loammi Baldwin, who was the best engineer in the State. He could not get at that busy man. He knew that his own mother's dearest friend had been the lady who was now Mr. Baldwin's wife. To her he went, and told her who he was, and that he wished of all things to see Mr. Baldwin. The lady said, "I loved your mother dearly, but I know nothing of you; but for her sake, I will take care that you shall see him. Come here, say, next Sunday after dinner, about 3 o'clock, — that is the right time, and I will see that Mr. Baldwin shall answer all your questions." He did so.

Dream. The waking from an impressive dream is a curious example of the jealousy of the gods. There is an air as if the sender of the illusion had been heedless for a moment that the Reason had returned to its seat, and was startled into attention. Instantly, there is a rush from some quarter to break up the drama into a chaos of parts, then of particles, then of ether, like smoke dissolving in a wind; it cannot be disintegrated fast enough or fine enough. If you could give the waked watchman the smallest fragment, he could reconstruct the whole; for the moment, he is sure he can and will; but his attention is so divided on the disappearing parts, that he cannot grasp the least atomy, and the last fragment or film disappears before he could say, "I have it."

"Aimer a lire, c'est faire un échange des heures d'ennui que? on doit avoir en sa vie, contre des heures délicieuses." — MONTESQUIEU, *Pensées*.

March.

In “Clubs” I ought to have said that men being each a treasure-house of valuable experiences, — and yet the man often shy and daunted by company into dumbness, — it needs to court him, to put him at his ease, to make him laugh or weep, and so at last to get his *naturel* confessions, and his best experience.

The blinded Arago’s “Ardent Age” — “Sa vieillesse est aussi remarquable que celle de M. de Humboldt, elle est même -plus ardente.” — VARNHAGEN, vol x, p. 100.

I ought to have had Arago among my heroes in “Old Age,” and Humboldt, and Agesilaus.

March 23.

On the 31st, I received President Eliot’s letter signifying the acceptance of Carlyle’s bequest of the Cromwellian and Friedrich books by the Corporation of Harvard College, and enclosing the vote of the Corporation. I wrote to Carlyle the same day enclosing the President’s letter to me, and the record of their vote, and mailed it yesterday morning to him.

“Study for eternity smiled on me.”

Varnhagen says, “Goethe once said to me, ‘How can the narrative be always right? The things themselves are not always right’ and Varnhagen adds: “A microscopic history is not better than one seen with the natural, unarmed eye; — not the rightness of the now invisible littles, but the gross impression is the main thing.” — VARNHAGEN, vol x, p. 174.

At Wiesbaden, an Englishman being addressed by another guest at the table, called the waiter, and said to him aloud, “Waiter, say to that gentleman that I won’t speak with him.” This delighted Varnhagen, and he adds, “Worthy of imitation. Nothing more odious than *table d’hôte* conversation.”

1 For the account of the generous gift which Carlyle felt moved to make to the college, see the *Carlyle-Emerson Correspondence*.

The widow of General Charles Russell Lowell (sister of Colonel Robert G. Shaw) had visited Carlyle with a letter of introduction from Mr. Emerson, had talked freely with him about our war and sent him the *Harvard Memorial*

Biographies to enlighten him on the cause and its heroes.

Musagetes. Goethe's fly. Read not in your official professional direction too steadily, — rather less and less, but, where you find excitement, awakening, for every surface is equally near to the centre. Every one has his own experience, — but I find the contrasts most suggestive.

[Under the new and more liberal dispensation of President Eliot's administration, courses of "University Lectures" were established, and Mr. Emerson was invited to give a course of sixteen in the Philosophical Department in April and May. These were: — I, Introductory, The Praise of Knowledge; II, Transcendency of Physics; III and IV, Perception; V and VI, Memory; VII, Imagination; VIII, Inspiration; IX, Genius; X, Common Sense; XI, Identity; XII, XIII, Metres of Mind; XIV, The Platonists; XV, Conduct of Intellect; XVI, Relation of Intellect to Morals.]

Identity. Bias. The best identity is the practical one, as in the pure satisfaction felt in finding that we have long since said, written, or done somewhat quite true and fit for ourselves.

Steffens relates that he went into Schelling's lecture-room at Jena (?). Schelling said, "Gentlemen, think of the wall." All the class at once took attitudes of thought; some stiffened themselves up; some shut their eyes; all concentrated themselves. After a time, he said, "Gentlemen, think of that which thought the wall." Then there was trouble in all the camp.

The scholar who abstracted himself with pain to make the analysis of Hegel is less enriched than when the beauty and depth of any thought by the wayside has commanded his mind and led to new thought and action; for this is healthy, and these thoughts light up the mind. He is made aware of the walls, and also of the open way leading outward and upward, whilst the other analytic process is cold and bereaving, and, — shall I say it? — somewhat mean, as spying.

The delicate lines of character in Aunt Mary, Rahel, Margaret Fuller, Sarah A. Ripley, need good metaphysic, better than Hegel's, to read and delineate.

There is one other reason for dressing well than I have ever considered, namely, that dogs respect it, and will not attack you in good clothes.

The strength of his moral convictions is the charm of the character of Fichte.

Autograph letters. Wise was the Turkish *cadi* who said, "O my friend, my liver, the questioner is one, and the answer is another."

I find Plutarch a richer teacher of rhetoric than any modern.

Plutarch quotes, as a true judgment, this,— “That this courteous, gentle, and benign disposition and behaviour is not so acceptable, so obliging, and delightful to any of those with whom they converse, as it is to those who have it.” — PLUTARCH, *Morals*, vol i, p. 59.

Old age. Here is a good text from Montesquieu: “*Les vieillards qui ont étudié dans leur jeunesse n’ont besoin que de se ressouvenir, et non d’apprendre. Cela est bien heureux.*” — *Pensées*, p. 232.

June 9.

I find Philip Randolph almost if not quite on a level with my one or two Olympic friends in his insight, — as shown in his manuscript, which I have been reading. He made that impression on me once and again in our interviews whilst he lived, and in his paper which was promised to the *North American Review*. But in these papers on science, philosophy, poetry, painting, and music, the supremacy of his faith purely shines.

How much it ever pleases me that this pure spiritualist was the best chess-player in Philadelphia, and, according to Evan Randolph’s account to me, had beaten the best players in Paris!

Plutarch rightly tells the anecdote of Alexander (badly remembered and misrelated usually) that he wept when he heard from Anaxarchus that there was an infinite number of worlds; and his friends asking if any accident had befallen him, he replied, “Don’t you think it a matter for my lamentation, that, when there is such a vast multitude of them, I have not yet conquered one?” — Plutarch, *Morals*, vol i, P-134—Were I professor of rhetoric, I would urge my class to read Plutarch’s *Morals* in English, and Cotton’s Montaigne for their English style.

We think we do a great service to our country in publishing this book if we hereby force our public men to read the “Apophthegms of Great Commanders,” before they make their speeches to caucuses and conventions. If I could keep the secret, and communicate it only to one or two chosen youths, I should know that they would by this noble infiltration easily carry the victory over all competitors. But as it was the desire of these old patriots to fill Rome or Sparta with this majestic spirit, and not a few leaders only, we desire to offer them to the American people.

The reason of a new philosophy or philosopher is ever that a man of thought finds that he cannot read in the old books. I can't read Hegel, or Schelling, or find interest in what is told me from them, so I persist in my own idle and easy way, and write down my thoughts, and find presently that there are congenial persons who like them, so I persist, until some sort of outline or system grows. 'Tis the common course: ever a new bias. It happened to each of these, Heraclitus, or Hegel, or whosoever.

June 30.

I cannot but please myself with the recoil when Plutarch tells me that “the Athenians had such an abhorrence of those who accused Socrates that they would neither lend them fire, nor answer them any question, nor wash with them in the same water, but commanded the servants to pour it out as polluted, till these sycophants, no longer able to bear up under the pressure of this hatred, put an end to their own lives.” — PLUTARCH, *Morals*, vol ii, p. 96.

I find *Nouvelle Biographie Générale* a perpetual benefactor, — almost sure on every consultation to answer promptly and well. Long live M. le Docteur Hofer! Just now he has answered fully on Plutarch, Suetonius, Amyot, but I dared not believe he would know Dr. Philemon Holland, — yet he answered at once joyfully concerning him; and even cites the epigram upon him: —
He cannot let Suetonius be Tranquillus.”

July 14.

Here at Nantasket Beach, with Ellen, I wonder that so few men do penetrate what seems the secret of the innkeeper. He furs along the coast, and perceives that by buying a few acres, well chosen, of the seashore, which cost no more or not so much as good land elsewhere, and building a good house, he shifts upon Nature the whole duty of filling it with guests, the sun, the moon, the stars, the rainbow, the sea, the islands, the whole horizon, — not elsewhere seen, ships of all nations. All of these (and all unpaid) take on themselves the whole charge of entertaining his guests, and filling and delighting their senses with shows; and it were long to tell in detail the attractions which these furnish. Everything here is picturesque: the long beach is every day renewed with pleasing and magical shows, with variety of colour, with the varied music of the rising and falling

water, with the multitudes of fishes, and the birds and men that prey on them; with the strange forms of the radiates sprawling on the beach; with shells; with the beautiful variety of sea-rolled pebbles, — of quartz, porphyry, sienite, mica, and limestone. The man buys a few acres, but he has all the good and all the glory of a hundred square miles, by the cunning choice of the place; for the storm is one of the grand entertainers of his company; so is the sun, and the moon, and all the stars of heaven, since they who see them here, in all their beauty, and in the grand area or amphitheatre which they need for their right exhibition, feel that they have never rightly seen them before.

The men and women who come to the house, and swarm or scatter in groups along the spacious beach, or in yachts, or boats, or in carriages, or as bathers, never appeared before so gracious and inoffensive. In these wide stretches, the largest company do not jostle one another. Then to help him, even the poor Indians from Maine and Canada creep on to the outskirts of the hotel to pitch their tents, and make baskets and bows and arrows to add a picturesque feature. Multitudes of children decorate the piazza, and the grounds in front, with their babble and games; and in this broad area every individual from least to largest is inoffensive and an entertaining variety. To make the day complete, I saw from the deck of our boat this morning, coming out of the bay, the English steamer which lately made the perilous jump on Minot's Ledge, and this afternoon I saw the turret monitor, *Miantonomoh*, sailing into Boston.

The parlours, chambers, and the table of the Rockland House were all good, but the supreme relish of these conveniences was this superb panorama which the wise choice of the place on which the house was built afforded. This selection of the site gives this house the like advantage over other houses that an astronomical observatory has over other towers, — namely, that this particular tower leads you to the heavens, and searches depths of space before inconceivable.

July 21.

I am filling my house with books which I am bound to read, and wondering whether the new heavens which await the soul (after the fatal hour) will allow the consultation of these.

I honour the author of the "Battle Hymn," and of "The Flag." She was born in the city of New York. I could well wish she were a native of Massachusetts. We have had no such poetess in New England.

August 7.

This morning I think no subject so fit for poetry as Home, the Massachusetts or the American Home.

I find my readings of Aunt Mary ever monitory and healthful as of old, and for the reason that they are moral inspirations. All the men and women whose talents challenge my admiration from time to time lack this depth of source, and are therefore comparatively shallow. They amuse, they may be inimitable; I am proud of them as countrymen and contemporaries; but it is as music or pictures, — and other music and pictures would have served me as well; but they do not take rank hold of me as consolers, uplifters, and hinderers from sleep. But the moral muse is eternal, and wakes us to eternity, — pervades the whole man. Socrates is not distant; Sparta is nearer than New York; Marcus Antoninus is of no age; Plotinus and Porphyry, Confucius and Menu had a deeper civilization than Paris or London; and the deeply religious men and women in or out of our churches are really the salt of our civilization, and constitute the nerve and tension of our politics in Germany, England, and America. The men of talent see the power of principle, and the necessity of respecting it, but they deal with its phenomena, and not with the source. It is learned and wielded as an accomplishment and a weapon.

As I have before written, that no number of *Nays* will help, — only one *Tea*, and this is moral. Strength enters according to the presence of the moral element. There are no bounds to this power. If it have limits, we have not found them. It domesticates. They are not our friends who are of our household, but they who think and see with us. But it is ever wonderful where the moral element comes from.

The Christian doctrine not only modifies the individual character, but the individual character modifies the Christian doctrine in Luther, in Augustine, in Fénelon, in Milton. — Something like this I read in Lévêque or Antoninus.

September 1.

With Edward took the 7.30 a. m. train from Boston to Portland, thence to South Paris, where we took a carriage and reached Waterford, Mr. Houghton's inn, at 5 p. m. Thence, the next afternoon, to South Paris, carried by Mr. Wilkins, and took the train for Gorham, and thence immediately the stage to the Glen House, Mount Washington, where we arrived near 9 o'clock in the evening.

Spent Sunday, September 4, and on Monday, September 5, at 8 o'clock, ascended the mountain in open carriage; descended in the railway [funicular] car, at 3, and reached the Crawford House. Next morning, September 6, took stage to Whitefield, arriving to dine, thence by railway to Plymouth, arriving at 9 p m. Next morning, at 5 o'clock, took railroad, and arrived in Boston at 11.30 and home in an hour.

[To fill out this rather bald itinerary, it may be said that Mr. Emerson's family, seeing that the Philosophy course (sixteen lectures in a few weeks) had been a tax on his strength, betrayed him into a journey to Maine on the plea of showing to his son the village of Waterford, of which Mr. Emerson had a happy remembrance from the days long past when he went there to visit his Haskins relations, and his Aunt Mary. His consent was won, and reaching Waterford we climbed Bear Mountain and from its sheer cliff looked down into the blue lake below. Then he eagerly led the way to a broad brook whose clear waters, rushing over smooth ledges and boulders, had long delighted him in memory, and now gave like joy.

We were glad to find at Gorham, where we passed Sunday, Mr. James Bryce, now noted, who had lately brought his letter of introduction to Concord. Next morning he and young Emerson climbed the mountain, and Mr. Emerson followed in the stage from the great heat and moisture below into a fierce, cold snow-squall which blew almost dangerously on the top. We saw nothing but that, shivered through dinner, and gladly descended to Crawford's Notch, where Mr. Emerson had stayed with Ellen Tucker and her family some forty years before.

—— *E. IV. Emerson.*]

Very much afflicted in these days with stupor:

—— acute attacks whenever a visit is proposed or made.

Montesquieu's prediction is fulfilled, "*La France se perdra par les gens de guerre.*" — *Pens'ees.*

September 24.

On Saturday, at the Club; present, Sumner, Longfellow, Lowell, Hoar, James, Brimmer, Fields, Estes Howe, Holmes, R. W. E., and, as guests, Mr. Cataczy, the Russian Minister, Hon. Samuel Hooper, and Henry Lee, Esq.

September 26.

Chivalry, I fancied, this afternoon, would serve as a good title for many topics, and some good readings which I might offer to the Fraternity [Course of Lectures] on December 6. George Ticknor, Hallam, and Renan (in his paper on the Paris Exposition) have each given me good texts; Fauriel has others; and the wonderful mythology and poetry of Wales, of Brittany, of Germany (in the *Nibelungenlied*), and Scott and Joinville and Froissart can add their stores. It might be called "Imagination" as well, and what we call chivalry be only a rich illustration. Every reading boy has marched to school and on his errands, to fragments of this magic, and swinging a cut stick for his broadsword, brandishing it, and plunging it into the swarm of airy enemies whom his fancy arrayed on his right and left.

The life of the topic, of course, would be the impatience in every man of his limits; the inextinguishableness of the imagination. We cannot crouch in our hovels or our experience. We have an immense elasticity. Every reader takes part with the king, or the angel, or the god, in the novel or poem he reads, and not with dwarfs and cockneys. That healthy surprise which a sunset sky gives to a man coming out on it alone, and from his day's work; or which the stars unexpectedly seen give.

(From ST)

October 2.

La portée, the range of a thought, of a fact observed, and thence of the word by which we denote it, makes its value. Only whilst it has new values does it warm and invite and enable to write. And this range or ulterior outlook appears to be rare in men; — a slight primitive difference, but essential to the work. For this possessor has the necessity to write,— 'Tis easy and delightful to him; the other, finding no continuity, — must begin again uphill at every step. Now Plutarch is not a deep man, and might well not be personally impressive to his contemporaries; but, having this facile association in his thought, — a wide horizon to every fact or maxim or character which engaged him, every new topic reanimated all his experience or memory, and he was impelled with joy to begin a new chapter. Then there is no such chord in Nature for fagoting thoughts as well as actions, as *religion*, which means *fagoting*. Plutarch had a commanding moral sentiment, which, indeed, is common to all men, but in very unlike degree, so that in multitudes it appears secondary, as if aped only from eminent

characters, and not native. But in Plutarch was his genius. This clear *morale* is the foundation of genius in Milton, in Burke, in Herbert, in Socrates, in Wordsworth, Michael Angelo, and, I think, also in many men who like to mask or disguise it in the variety of their powers, — as Shakespeare and Goethe. Indeed, we are sure to feel the discord and limitation in men of rare talent in whom this sentiment has not its healthy or normal superiority; as, Byron, Voltaire, Daniel Webster.

The writer is an explorer. Every step is an advance into new land.

Memory. The compensation of failing memory is, — the assistance of increased and increasing generalization.

“Old age stands not in years, but in directed activity.”

Among my mnemonics I recorded that I went into France just three hundred years after Montaigne did. He was born, 1533; I visited it in 1833.

[During this year the Government of Harvard University determined that it should no longer discredit itself by conferring the degree of Master of Arts on any graduate who should have survived five years and have five dollars to pay into the treasury for receiving it. Mr. Emerson was appointed one of a Committee of Harvard teachers to prepare a plan for conferring that degree. He was also made one of the Committee to visit the Academic Department of the University.]

October 6.

To-day at the laying of the corner-stone of the “Memorial Hall,” at Cambridge. All was well and wisely done. The storm ceased for us, the company was large, — the best men and the best women all there, — or all but a few; — the arrangements simple and excellent, and every speaker successful. Henry Lee, with his uniform sense and courage, the Manager; the Chaplain, Rev. Phillips Brooks, offered a prayer, in which not a word was superfluous, and every right thing was said. Henry Rogers, William Gray, Dr. Palfrey, made each his proper Report. Luther’s Hymn in Dr. Hedge’s translation was sung by a great choir, the corner-stone was laid, and then Rockwood Hoar read a discourse of perfect sense, taste, and feeling, — full of virtue and of tenderness. After this, an original song by Wendell Holmes was given by the Choir. Every part in all these performances was in such true feeling that people praised them with broken voices, and we all proudly wept. Our Harvard soldiers of the war were in their

uniforms, and heard their own praises, and the tender allusions to their dead comrades. General Meade was present, and “adopted by the College,” as Judge Hoar said, and Governor Claflin sat by President Eliot. Our English guests, Hughes, Rawlins, Dicey, and Bryce, sat and listened. cc I bear no ill will to my contemporaries,” said Cumberland. “After you, ma’am, in manners,” said Swett. The only point in which I regret priority of departure is that I, as every one, keep many stories of which the etiquette of contemporariness forbids the airing, and which burn uncomfortably being untold. I positively resolve not to kill A. nor C. nor N.

—— but I could a tale unfold, like Hamlet’s father.

Now a private class gives just this liberty which in book or public lecture were unparliamentary, and of course because here, at least, one is safe from the unamiable presence of reporters. Another point. I set great value in culture on foreign literature — the farther off the better —— much on French, on Italian, on German, or Welsh — more on Persian or Hindu, because if one read and write only English, he soon slides into narrow conventions, and believes there is no other way to write poetry than as Pope or Milton. But a quite foreign mind born and grown in different latitude and longitude, —— nearer to the pole or to the equator, — a child of Mount Hecla, like Sturluson, or of the Sahara, like Averroës, astonishes us with a new nature, gives a fillip to our indolence, and we promptly learn that we have faculties which we have never used.

How right is Couture’s rule ‘of looking three times at the object, for one at your drawing, — of looking at Nature, and not at your whim; and William Hunt’s emphasis, after him, on the mass, instead of the details! And how perfectly (as I wrote upon Couture long ago) the same rule applies in rhetoric or writing! Wendell Holmes hits right in every affectionate poem he scribbles, by his instinct at obeying a just perception of what *is* important, instead, of feeling about how he shall write some verses touching the subject: and eminently this is true in Rockwood Hoar’s mind, — his tendency to the integrity of the thing!

What a lesson on culture is drawn from every day’s intercourse with men and women. The rude youth or maid comes as a visitor to a house, and at the table cannot understand half the conversation that passes, — so many allusions to books, to anecdotes, to persons, — hints of a song, or a fashion of the War, or the College, or the boatmen, or a single French or 1 In his admirable *Méthode et entretiens d’ atelier*.

Latin word to suggest a line or sentence familiar to inmates, unknown to the stranger, — so that practically’t is as if the family spoke another language than

the guest. Well, there is an equal difference if their culture is better, in all their ways, and the like abbreviation by better methods, and only long acquaintance, that is, slow education, step by step, in their arts and knowledge can breed a practical equality. The like difference, of course, must appear in the father, the son, the grandson, and the great-grandson, if better opportunities of education are provided to each successor than his parent enjoyed.

Greatness. “They deride thee, O Diogenes!” He replied, “But I am not derided.” — PLUTARCH, *Morals*.

But, *memo.* I must procure a Greek Grammar. O for my old Gloucester again!

A passage in the *Convito* of Dante testifies that he knew Greek too imperfectly to read Homer in the original. (See *Biographie Générale.*) *Objection to Metaphysics.* The poet sees wholes, and avoids analysis. Ellery Channing said to me, he would not know the botanical name of the flower, for fear he should never see the flower again. The metaphysician, dealing, as it were, with the mathematics of the mind, puts himself out of the way of the Inspiration, loses that which is the miracle, and which creates the worship.

America. We get rid in this Republic of a great deal of nonsense which disgusts us in European biography. There a superior mind, a Hegel, sincerely and scientifically exploring the laws of thought, is suddenly called by a necessity of pleasing some king, or conciliating some Catholics, to give a twist to his universal propositions to fit these absurd people, and not satisfying them even by these sacrifices of truth and manhood; another great genius, Schelling, is called in, when Hegel dies, to come to Berlin, and bend truth to the crotchets of the king and rabble. Not so here. The paucity of population, the vast extent of territory, the solitude of each family and each man, allow some approximation to the result that every citizen has a religion of his own, — is a church by himself, — and worships and speculates in a new, quite independent fashion.

Plutarch treats every subject except Art. He is ingenious to draw medical virtue from every poison, to detect the good that may be made of evil.

An admirable passage concerning Plato’s expression “that God geometrizes,” in Plutarch’s *Symposiacs*. (See especially in the Old Edition, vol iii, p. 434.) In the History of opinion, the pinch of falsehood shows itself, not first in argument and formal protest, but in insincerity, indifference, and abandonment of the church, or the scientific or political or economic institution, for other better or worse forms. Then good heads, feeling or observing this loss, formulate the fact

in protest and argument, and suggest the correction and superior form. Rabelais, Voltaire, Heine, are earlier reformers than Huss, and Luther, and Strauss, and Parker, though less solemn and to less solemn readers.

Voltaire's Spinoza,— "*Je soupçonne, entre nous, que vous n'existez pas.*" — *Satires. Les Systèmes.*

It really appears that the Latin and Greek continue to be forced in education, just as chignons must be worn, in spite of the disgust against both, for fashion. If a wise traveller should visit England to study the causes of her power, it is not the universities in which he would find them; but Mr. Owen, Mr. Armstrong, Mr. Airy, Mr. Stephenson, Sir John Lubbock, Mr. Huxley, Mr. Scott Russell, Boulton, Watt, Faraday, Tyndall, Darwin. If any of these were college men, 't is only the good luck of the universities, and not their normal fruit. What these men have done, they did not learn there.

"Plato says that Time had its original from an intelligence." — PLUTARCH, *Morals*, vol iii, P-158 — Micrew (and I remember that Mr. Tom Lee complained of Margaret Fuller that she remembered things); "and the ancients used to consecrate Forgetfulness, with a ferula in hand, to Bacchus, thereby intimating that we should either not remember any irregularity committed in mirth and company, or should apply a gentle and childish correction to the faults." — *Idem.*

Plutarch loves apples like our Thoreau, and well praises them. — See *Morals*, vol iii, p. 362.

Let a scholar begin to read something to a few strangers in a parlour, and he may find his voice disobedient, and he reads badly. Let him go to an assembly of intelligent people in a public hall, and his voice will behave beautifully, and he is another person, and contented.

A scholar forgives everything to him whose fault gives him a new insight, a new fact.

Peter Oliver, in the *Puritan Commonwealth*, insists like a lawyer on the duty the Pilgrims owed to their Charter, and the presumed spirit and intent in which it was given. He overlooks the irresistible instruction which the actual arrival in the new continent gave. That was a greater king than Charles, and insisted on making the law for those who live in it. They could not shut their eyes on the terms on which alone they could live in it. The savages, the sands, the snow, the mutineers, and the French were antagonists who must be dealt with on the

instant, and there was no clause in the Charter that could deal with these. No lawyer could help them to read the pitiless alternative which Plymouth Rock offered them, — Self-help or Ruin: come up to the real conditions, or die.

November 30.

Judge W — of Rhode Island was not a great man, and resented some slight he received from Tristram Burgess at the Bar, by asking him if he knew before whom he was speaking. He replied, “Yes, your honour; before the inferior Court of the inferior Bench of the inferior State of Rhode Island.”

Mr. Weeden told me, that his old aunt said of the people whom she knew in her youth that “they had to hold on hard to the huckleberry bushes to hinder themselves from being translated.”

I delight ever in having to do with the drastic class, the men who can do things, as Dr. Charles T. Jackson; and Jim Bartlett, and Boynton. Such was Thoreau. Once out of doors, the poets paled like ghosts before them. I met Boynton in Rochester, New York, and was cold enough to a popular and unscientific lecturer on Geology. But I talked to him of the notice I had read of repulsion of incandescent bodies, and new experiments. “O,” he said, “nothing is plainer: I have tried it”; and, on my way to Mr. Ward’s, he led me into a forge, where a stream of melted iron was running out of a furnace, and he passed his finger through the streamlet again and again, and invited me to do the same. I said, “Do you not wet your finger?”

“No,” he said, “the hand sweats a little and that suffices.”

Parnassus.

So words must sparks be of those fires they strike.

I saw that no pressman could lay his sheets so deftly but that under every one a second sheet was inadvertently laid; and no bookbinder could bind so carefully but that a second sheet was bound in the book: then I saw that if the writer was skilful, every word he wrote sank into the inner sheet, and there remained indelible; and if he was not skilful, it did not penetrate, and the ink faded, and the writing was effaced.

Quoique aderant vates rebar adesse Deos.1 — OVID.

AUTHORS OR BOOKS QUOTED OR REFERRED TO IN JOURNAL FOR
1870

Menu; Confucius; Heracleitus; Ovid; Suetonius; Marcus Aurelius; Plotinus; Porphyry; St. Augustine; Averroës (Ibn Roshd); Snorre Sturluson; *Nibelungenlied*; De Joinville, *Chronicle of Saint Louis*; Froissart, *Chronicles*; Huss; Luther; Michel Angelo; Rabelais; Amyot, Philemon Holland (translators of Plutarch's *Morals* into French and English respectively); Thomas Stanley, *History of Philosophy*; Spinoza; Fénelon; Montesquieu, *Pensées*; Voltaire; Peter Oliver, *The Puritan Commonwealth*; Matthew Boulton; James Watt; Goethe; Eckermann, *Conversations with Goethe*; Dumont, *Souvenirs sur Mirabeau*; Fichte; Richter; Alexander von Humboldt; Hegel; Heinrich Steffens, Review of Schelling's Philosophy; Fauriel; Schelling; Hallam; Varnhagen von Ense, *Tagebucher*; Arago; George Ticknor; Faraday; John G. Palfrey, *History of New England*; Carlyle; Heine; George B. Airy; George Sand; Richard Owen; Strauss; John Scott Russell; O. W. JOURNAL LXII

1871

(From Journal ST)

[Mr. EMERSON seems to have lectured in some Massachusetts towns; also at Buffalo, Cleveland, and New Brunswick, New Jersey, during January.

On February 3, he spoke by request at a meeting held for the purpose of organizing the Museum of Fine Arts in Boston. In a letter of thanks, Mr. Martin Brimmer expressed his belief that the good effects of this speech in awakening substantial interest in the Museum soon appeared.

But through the winter Mr. Emerson had the serious task of preparing for a course of lectures on Philosophy for a new class at the University. According to Mr. Cabot, the lectures were mainly the same as those given in the previous Spring, except that "Identity" and "The Platonists" were omitted, but "Wit and Humour,"

"Demonology," and another on "The Conduct of the Intellect" were added. A large part of the new matter in this course was later used in "Poetry and Imagination," in *Letters and Social Aims*, the next published volume.]

January, 1871.

Old age. "Man is oldest when he is born, and is younger and younger continually." — TALIESSIN, *apud* Skene.

February 10.

I do not know that I should feel threatened or insulted if a chemist should take his protoplasm or mix his hydrogen, oxygen, and carbon, and make an animalcule incontestably swimming and jumping before my eyes. I should only feel that it indicated that the day had arrived when the human race might be trusted with a new degree of power, and its immense responsibility; for these steps are not solitary or local, but only a hint of an advanced frontier supported by an advancing race behind it.

What at first scares the Spiritualist in the experiments of Natural Science — as if thought were only finer chyle, fine to aroma — now redounds to the credit of matter, which, it appears, is impregnated with thought and heaven, and is

really of God, and not of the Devil, as he had too hastily believed. All is resolved into Unity again. My chemistry, he will say, was blind and barbarous, but my intuition is, was, and will be true.

I believe that every man belongs to his time, if our Newtons and philosophers belong also to the next age which they help to form.

“Our progress appears great, only because the future of Science is hidden from us.” — PHILIP RANDOLPH.

Of gravitation, John Mill said to Carlyle, “A force can act but where it is.”

“With all my heart,” replied Carlyle, “but where is it?”

March 5.

Dr. E. B. Pusey of Oxford surprised me two or three days ago with sending me, “with greetings,” a book, *Lectures on Daniel and the Prophets*, with the following inscription written on the blank leaf, — To the unwise and wise A debtor I.

‘T is strange if true, And yet the old Is often new.

When in England, I did not meet him, but I remember that, in Oxford, Froude one day, walking with me, pointed to his window, and said, “There is where all our light came from.”

I ought also to have recorded that Max Müller, on last Christmas Day, surprised me with the gift of a book.

Coleridge says, “The Greeks, except perhaps in Homer, seem to have had no way of making their women interesting, but by unsexing them, as in the instances of the tragic Medea, Electra, etc. Contrast such characters with Spenser’s Una, who exhibits no prominent feature, has no particularization, but produces the same feeling that a statue does, when contemplated at a distance.

‘From her fair head her fillet she undight,
And laid her stole aside: her angel’s face
As the great eye of Heaven shined bright,
And made a sunshine in a shady place:

Did never mortal eye behold such heavenly grace?’”

Greatness. Chateaubriand says that President Washington granted him an audience in Philadelphia, and adds, “Happy am I that the looks of Washington

fell on me. I felt myself warmed by them for the rest of my life.” Calvert gives the anecdote.

None is so great but finds one who apprehends him, and no historical person begins to content us; and this is our pledge of a higher height than he has reached. And when we have arrived at the question, the answer is already near.

April 7.

[Mr. Emerson’s good friend Mr. John M. Forbes, hearing that he seemed worn and jaded by the strain of his Philosophy lectures, — two or more a week, — invited him to be his guest on an excursion in a private car to California. In the party, besides Mr and Mrs. Forbes and their youngest daughter, were Colonel Forbes, with his wife (Mr. Emerson’s daughter Edith), Mrs. George Russell, James B. Thayer (late Royall Professor of Law at Cambridge), Garth Wilkinson James, late the adjutant of Colonel Robert Shaw, and wounded on the slopes of Fort Wagner. Mr. Emerson’s inborn reluctance to receive favours even from near friends, and his scruples about leaving his work, stood in the way, but at last he yielded to Mr. Forbes’s tactful ingenuity of plea, and to his daughter’s urgency, and went. The journey across the prairie, mountains, and desert (including a short stay at Salt Lake City and conversation with Brigham Young), the weeks in California in its spring freshness and sheets of flowers, were to Mr. Emerson an unforeseen delight and refreshment. The good friends in the party, with their tactful and affectionate care of him, each contributed to his pleasure, and his respect and admiration for the quality of his host grew with each day. Professor Thayer in a little volume gave a pleasant account of the journey.

Mr. Emerson was enjoying the rest, and did little writing. But few notes of the trip occur.]

California Notes. Irrigation. Tea, impossible culture where labor is dear as in America. Silk (?) Wine is not adulterated; because grapes at one cent a pound are cheaper than any substitute.

Cape Donner. Golden Gate, named of old from its flowers. Asia at your doors and South America. Inflamed Expectation haunting men. Henry Pierce’s opinion of the need of check, calamity, punishment, to teach economy. Nickels [for] cents.

Mission Dolores. Flora. The altered Year. (See Hittel on California.)

John Muir. General Sumner.

Antelopes, prairie-dogs, elk-horns, wolves, eagles, vultures, prairie-hen, owls.

Sequoias generally have marks of fire: having lived thirteen hundred years must have met that danger, and every other, in turn. Yet they possess great power of resistance to fire. (See Cronise, pp. 507-508.) *Sarcodes Sanguinea*, snow plant growing in the snow, a parasite from decayed wood; *monotropa*. *Cæanothus*; Wild lilac; Madrona; — *Arbutus Menziesii*; Manzanita; *Acrostaphylos glaucus*.

Black sand at Lake Tahoe, and carnelians. Mono Lake. Glaciers; Clarence King. Volcanic mountains, cones, Enneo County.

The attraction and superiority of California are in its days. It has better days, and more of them, than any other country.

Mount Shasta, 14,440 feet high, in northeastern corner of the State. Mount Whitney, 15,000 feet, in Tulare County. In Yosemite, grandeur of these mountains perhaps unmatched in the globe; for here they strip themselves like athletes for exhibition, and stand perpendicular granite walls, showing their entire height, and wearing a liberty cap of snow on their head.

Sequoia Gigantea, *Pinus Lambertiana*, Sugar pine, 10 feet diameter; 300 feet height; cones 18 inches. *Pinus Ponderosa*, yellow pine. *Pinus Albicaulis*.

May 12.

At the request of Galen Clark, our host at Mariposa, and who is, by State appointment, the protector of the trees, and who went with us to the Mammoth Groves, I selected a *Sequoia Gigantea*, near Galen's Hospice, in the presence of our party, and named it *Samoset*, in memory of the first Indian ally of the Plymouth Colony, and I gave Mr. Clark directions to procure a tin plate, and have the inscription painted thereon in the usual form of the named trees: and paid him its cost: — *Samoset*. 12 May 1871.

The tree was a strong healthy one; girth, at 2 1/2 feet from the ground, 50 feet.

What they once told me at St. Louis is truer in California, that there is no difference between a boy and a man: as soon as a boy is "that high" [high as the table], he contradicts his father. When introduced to the stranger, he says, "I am happy to make your acquaintance," and shakes hands like a senior.

California is teaching in its history and its poetry the good of evil, and confirming my thought, one day in Five Points in New York, twenty years ago, that the ruffians and Amazons in that district were only superficially such, but

carried underneath this bronze about the same morals as their civil and well-dressed neighbours.

Gifts. The pleasing humiliation of gifts.

The saying is attributed to Sir Isaac Newton that “they who give nothing before their death never in fact give at all.”

We are sometimes startled by coincidences so friendly as to suggest a guardian angel: and sometimes, when they would be so fit, and every way desirable, nothing but disincidences occur. ‘T is perhaps thus; the coincidence is probably the rule, and if we could retain our early innocence, we might trust our feet uncommanded to take the right path to our friend in the woods....

[Mr. Emerson reached home in the last week in May, much refreshed, and having had pleasure in the company of his good friends.

Perhaps on the journey, he wrote, at her request, the following]

Inscription for Mrs. Sarah Swain Forbes’s Memorial Fountain: —

Fall, Stream! to bless. Return to Heaven as well: So, did our sons, Heaven met them as they fell.

What was the name of the nymph “Whom young Apollo courted for her hair”? That fable renews itself every day in the street and in the drawing-room. Nothing in nature is more ideal than the hair. Analyze it by taking a single hair, and it is characterless and worthless: but in the mass it is recipient of such variety of form, and momentary change from form to form, that it vies in expression with the eye and the countenance. The wind and the sun play with it and enhance it, and its coils and its mass are a perpetual mystery and attraction to the young poet. But the doleful imposture of buying it at the shops is suicidal, and disgusts.

Nature lays the ground-plan of each creature, — accurately, sternly fit for all his functions, — then veils it.

(From NY)

My Men. Thomas Carlyle, Louis Agassiz, E. Rockwood Hoar, J. Elliot Cabot, John M. Forbes, Charles K. Newcomb, Philip P. Randolph, Richard Hunt, Alvah Crocker, William B. Ogden, Samuel G. Ward, J. R. Lowell, Sampson Reed, Henry D. Thoreau, A. B. Alcott, Horatio Greenough, Oliver Wendell Holmes, John Muir.

[In June, Mr. Emerson had been chosen a member of the Massachusetts Historical Society, and on August 15, when the Society celebrated the Centennial Anniversary of Scott's birth, Mr. Emerson spoke. What he said is printed in *Miscellanies*.]

(From ST)

Scott said to Mr. Cheney, "Superstition is very picturesque, and I make it at times stand me in great stead; but I never allow it to interfere with interest or conscience." — LOCKHART, vol viii, p. 81.

I think he spoke honestly and well, but his superstition was dearer to him and more comprehensive than he well knew: I mean that it made him a sterner royalist, churchman, and conservative than his intellect should allow.

Correlation of forces is an irrepressible hint which must compel the widest application of it. It gives unforeseen force to the old word of Cicero's *aliquid commune vinculum*, and we realize the correlation of sciences. But poetry correlates men, and genius, and every fine talent, and men the most diverse; and men that are enemies hug each other when they hear from that once hated neighbour the synonym of their own cherished belief.

The splendors of this age outshine all other recorded ages. In my lifetime have been wrought five miracles, — namely, 1, the Steamboat; 2, the Railroad; 3, the Electric Telegraph; 4, the application of the Spectroscope to astronomy; 5, the Photograph; — five miracles which have altered the relations of nations to each other. Add cheap postage; and the mowing-machine and the horse-rake. A corresponding power has been given to manufactures by the machine for pegging shoes, and the power-loom, and the power-press of the printers. And in dentistry and in surgery, Dr. Jackson's discovery of Anaesthesia. It only needs to add the power which, up to this hour, eludes all human ingenuity, namely, a rudder to the balloon, to give us the dominion of the air, as well as of the sea and the land. But the account is not complete until we add the discovery of Oersted, of the identity of Electricity and Magnetism, and the generalization of that conversion by its application to light, heat, and gravitation. The geologist has found the correspondence of the age of stratified remains to the ascending scale of structure in animal life. Add now, the daily predictions of the weather for the next twenty-four hours for North America, by the Observatory at Washington.

Poetry. "The newness." Every day must be a new morn. Clothe the new

object with a coat that fits it alone of all things in the world. I can see in many poems that the coat is second-hand. Emphasis betrays poverty of thought, as if the man did not know that all things are full of meaning, and not his trumpery thing only.

'T is one of the mysteries of our condition that the poet seems sometimes to have a mere talent, — a chamber in his brain into which an angel flies with divine messages, but the man, apart from this privilege, commonplace. Wordsworth is an example (and Channing's poetry is apart from the man). Those who know and meet him day by day cannot reconcile the verses with their man.

Ah, not to me these heights belong;
A better voice sings through my song.

[In July, at the Commencement Dinner at Harvard College, it being the fiftieth year since Mr. Emerson graduated, Mr. William Gray, who presided, called upon him to speak. He did so, but what he said is not preserved.]

Rhetoric. All conversation and writing is rhetoric, and the great secret is to know thoroughly, and not to be affected, and to have a steel spring.

The English write better than we, but I fancy we read more out of their books than they do.

For *History of Liberty*. There was a great deal of Whig poetry written in Charles and Cromwell's time: not a line of it has survived.

In certain minds Thought expels Memory. I have this example, — that, eager as I am to fix and record each experience, the interest of a new thought is sometimes such that I do not think of pen and paper at all, and the next day I puzzle myself in a vain attempt to recall the new perception that had so captivated me.

Channing's poetry does not regard the reader. It is written to himself; is his strict experience, the record of his moods, of his fancies, of his observations and studies, and will interest good readers as such. He does not flatter the reader by any attempt to meet his expectation, or to polish his record that he may gratify him, as readers expect to be gratified. He confides entirely in his own bent or bias for meditation and writing. He will write as he has ever written, whether he

has readers or not. But his poems have to me and to others an exceptional value for this reason. We have not been considered in their composition, but either defied or forgotten, and therefore read them securely, as original pictures which add something to our knowledge, and with a fair chance to be surprised and refreshed by novel experience.

George Bradford said that Mr. Alcott once said to him, "that as the child loses, as he comes into the world, his angelic memory, so the man, as he grows old, loses his memory of this world."

October 18.

Bret Harte's visit. Bret Harte referred to my essay on Civilization, that the piano comes so quickly into the shanty, etc., and said, "Do you know that, on the contrary, it is vice that brings them in? It is the gamblers who bring in the music to California. It is the prostitute who brings in the New York fashions of dress there, and so throughout." I told him that I spoke also from Pilgrim experience, and knew on good grounds the resistless culture that religion effects.

October 21.

Ruskin is a surprise to me. This old book, *Two Paths*, is original, acute, thoroughly informed, and religious.

"Wie der Fischer aus dem Meer
Fische zieht die niemand sah."

As the fisher from the sea
Pulls the fish that no man saw.

Names should be of good omen, of agreeable sound, commending the person in advance, and, if possible, keeping the old belief of the Greeks, "that the name borne by each man and woman has some connection with their part in the drama of life." The name, then, should look before and after.

We have two or three facts of natural education: I. First, the common sense of merciless dealing of matter with us, punishing us instantly for any mistake about fire, water, iron, food, and poison. 2. And this world perfectly symmetrical, so

that its laws can be reduced to one law. 3. Then we have the world of thought, and its laws, like Niagara currents. 4. Then the astonishing relation between these two.

The necessity of the mind is poetic.... It is plain that Kepler, Hunter, Bonnet, Buffon, Geoffrey Saint-Hilaire, Linnaeus, Haüy, Oken, Goethe, and Faraday were poets in science as compared with Cuvier.

The physicists in general repel me. I have no wish to read them, and thus do not know their names. But the anecdotes of these men of ideas wake curiosity and delight. Thus Goethe's and Oken's theory of the skull as a metamorphosed vertebra; and Hunter's "arrested development"; and Oersted's "correlation of forces"; and Hay's theory of the form of vases; and Garbett's and Ruskin's architectural theories; and Vitruvius's relation between the human form and the temple; and Peirce's showing that the orbits of comets (parabolics) make the forms of flowers; and Kepler's relation of planetary laws to music; and Franklin's kite.

Reality, however, has a sliding floor.

Look sharply after your thoughts. They come unlooked for, like a new bird seen on your trees, and, if you turn to your usual task, disappear; and you shall never find that perception again; never, I say, — but perhaps years, ages, and I know not what events and worlds may lie between you and its return!

In the novel, the hero meets with a person who astonishes him with a perfect knowledge of his history and character, and draws from him a promise that, whenever and wherever he shall next find him, the youth shall instantly follow and obey him. So is it with you, and the new thought.

“For deathless powers to verse belong,
And they like demigods are strong
On whom the Muses smile.”

In Twistleton's *Handwriting of Junius* (p xiv) I find the quotation from Johnson, of Bacon's remark, "Testimony is like an arrow shot from a long bow: the force of it depends on the strength of the hand that draws it. Argument is like an arrow from a cross-bow, which has equal force, though shot by a child."

Tibullus (on Sulpicia) says of Venus: — *Illam, quidquid a git, quoquo vestigia vertit, Componit furtim, subsequiturque decor.*

Then Twistleton's motto from Epicharmus is good —

NoOs *opr*) *κ*άι νοῦ? ἀκούει, ταλλὰ κωφά και τυφλά.

Geoffroy Saint-Hilaire is a true hero. Read his behaviour, in August, 1792, when his masters Lhomonde and Haiiy, professors in his college of Cardinal-Lemoine, and all the rest of the professors were arrested and sent to the prison of Saint-Firmin....

[Here follows the account of his repeated attempts, at desperate risk to himself, and his final success in accomplishing the escape of twelve of his friends.]

Saint-Hilaire was very ill in consequence of these exertions. Haiiy wrote to him: "Leave your problems of crystals, rhomboids, and *dodkaedres*; stick to plants, which are full of beauty; a course of botany is pure hygiene." He went with Bonaparte to Egypt, and saved the scientific results, by a brilliant stroke of heroism. In the debate in the Académie des Sciences, in 1830 (?), July 19, the contest between Cuvier and Geoffroy Saint-Hilaire broke out, and reminded of the old sects of philosophers who shook the world with their contests. The austere and regulated thinkers, men of severe science, took part with Cuvier; the bold minds ranged themselves with Geoffroy. What changes have come into the contests of Churches! The debates of the Ecumenical Council are only interesting to the Catholics and a few abnormal readers, interested as the billiard players in the contests of the billiard champions.

Culture. The wide diffusion of taste for poetry is a new fact. We receive twelve newspapers in this house every week, and eleven of them contain a new poem or poems, — all of these respectable, — perhaps one or two fit to clip from the paper, and put into your anthology. Many of these poems are quite as good as many of the pieces in Aikin's or Anderson's standard collections, and recall Walter Scott's reply when Tom Moore said, "Now, Scott, it seems to me that these young fellows write better poetry than we did, and nobody reads it. See how good this poetry is of so many young writers, and the public takes no note of them." Scott replied, "Egad, man, we were in the luck of time." Verses of conversation are now written in a hundred houses, or [for] "picnics" or "private theatricals," which would have made reputation a century ago, but are now unknown out of some family circle. Webster wrote excellent lines in an Album; Macaulay did the same, his "God": then Byrch's "Riddle on the Letter H."

George Bartlett's wit and luck in the privatist "Game parties" are charming.

Yet the public never heard of his name. Arthur Gilman, too. In England, in France, appear the Frères, Tom Taylors, Luttrells, Hendersons (Newton's Cotes, too, of whom but for Newton's one remark we should have never heard).

Yet good poetry is as rare as ever.

What a benediction of Heaven is this cheerfulness which I observe with delight, — which no wrath and no fretting and no disaster can disturb, but keeps its perfect key and heals insanity in all companies and crises.

“Little boys should be seen, and not heard”: Very well, but Poets are not to be seen. Look at the foolish portraits of Herrick and Gray, one a butcher, and the other silly. The Greek form answered to the Greek character, but Poets are divided from their forms, — live an official life. Intellect is impersonal.

The father cannot control the child, from defect of sympathy. The man with a longer scale of sympathy, the man who feels the boy's sense and piety and imagination, and also his rough play and impatience and revolt, — who knows the whole gamut in himself, — knows also a way out of the one into the other, and can play on the boy, as on a harp, and easily lead him up from the Scamp to the Angel.

America. Oxford, working steadily now for a thousand years, — or the Sorbonne in France, — and a royal court steadily drawing for centuries men and women of talent and grace throughout the kingdom to the capital city, might give an impulse and sequence to learning and genius. And the history of this country has been far less friendly to a rich and polished literature than England and France. Count our literary men, and they are few, and their works not commanding. But if the question be not of books, but of men, — question of intellect, not of literature, — there would be no steep inferiority. For every one knows men of wit and special or general power, whom to compare with citizens of any nation. Edward Taylor lavished more wit and imagination on his motley congregation of sailors and caulkers than you might find in all France. The coarsest experiences he melted and purified, like Shakspeare, into eloquence. Wendell Phillips is a Pericles whilst you hear him speaking. Beecher, I am sure, is a master in addressing an assembly, though I have never heard such good speeches of his as I have read. Webster was majestic in his best days: and the better audience these men had, the higher would be the appreciation. Neither of them could write as well as he spoke. Appleton's wit is quite as good as Frère's

or Selby's or Luttrell's, who shine in the biographies. And England has no Occasional Poet to surpass Holmes. Dr. Channing, I must believe, had no equal as a preacher in the world of his time. Then we have men of affairs, who would rule wherever there were men, — masters in commerce, in law, in politics, in society. Every civil country has such, but I doubt if any has more or better than we.

Add, that the Adamases have shown hereditary skill in public affairs, and Judge Hoar is as good a lawyer, a statesman, and an influence in public and in private, as any city could hope to find.

I pass over my own list of thinkers and friends [often referred to], and only add, that I believe our soil yields as good women, too, as England or France, though we have not a book from them to compare with *Allemagne*. Yet Aunt Mary's journals shine with genius, and Margaret Fuller's conversation did.

[The burning of Chicago occurred in early October. Mr. Emerson had not meant to go on a far journey to lecture again, but could not resist the appeal to go there and speak, which he did, and incidentally lectured in other cities.]

Home again from Chicago, Quincy, Springfield, and Diibuque, which I had not believed I should see again, yet found it easier to visit than before, and the kindest reception in each city.

JOURNAL LXIII

1872

(From Journal ST)

[In January, Mr. Emerson gave a course of four lectures in Baltimore, and at Washington, where he was the guest of Senator Sumner, was asked to speak to the students (Freedmen) of Howard University. The address was partly *extempore*, but he probably, to help out the address, read them some sheets from his lecture on Books, to guide the reading of the more earnest, and intellectual among them. The occasion was reported in all the papers,¹ and, after his return, Mr. Emerson was almost annoyed, but soon rather amused, by the many letters which he received. He told his family that the speech was “very poor; merely talking against time.” In the course of it he praised George Herbert’s *Poems* as “a Sunday book, and a Monday book, too,” asked if it were in their library, and said he should have the privilege of giving it to them.

When he went to the bookstore in Boston to buy it he was told, “There isn’t a Herbert to be had, Sir. Since your speech was published there has been such a demand for them that they are all sold out, and none left in Boston.” However, he found one, and came home better pleased with the result of his speech than he had ever thought to be. Then more letters came, one suggesting that he should write on the subject of Books. Comparatively few persons had probably then read *Society and Solitude*, the volume published nearly two years before.

Mr. James T. Fields, who, with Colonel Forbes, had arranged the Saturday afternoon readings of English Prose and Verse in 1869, again kindly bestirred himself (Colonel Forbes having gone to Europe with his family) to have such another course. This plan was most successful, and the tickets were in great demand for the six Readings, in Mechanics’ Hall, Boston, beginning in the middle of April. Mr. Emerson enjoyed sharing with an audience of friends, old and young, the pleasure that he had in these selections, made from his boyhood on. The poems and selections were of authors of various periods, and on widely differing themes. Mr. Emerson read his favorites, whether recent, or dear from the associations of his youth, not caring greatly whether all were illustrations of the short discourse at the beginning. As his memory was now imperfect, he, once at least, read a sheet which he had already read a few minutes before. His daughter Ellen, who had always accompanied him, was troubled at this and begged him always to read his lectures to her in advance. But he answered, “Things that go wrong-about these lectures don’t disturb me, because I know

that everyone knows that I am worn out and passed by, and that it is only my old friends come for friendship's sake to have one last season with me."

The course, however, seems to have been very successful, and to have given great pleasure week by week to a large number of the best of Boston and the neighborhood.

What follows may have been some notes for the last of these readings, or possibly for some Sunday address to the Parker Society at the Music Hall.]

'T is becoming in the Americans to dare in religion to be simple, as they have been in government, in trade, in social life.

Christianity is pure Deism.

"Hunger and thirst after righteousness."

"The kingdom of God cometh not by observation"; is "received as a little child."

"God considers integrity, not munificence." — SOCRATES.

Power belongeth unto God, but his secret is with them that fear him.

Schleiermacher said, "The human soul is by nature a Christian."

One thing is certain: the religions are obsolete when the reforms do not proceed from them.

You say, the Church is an institution of God. Yes, but are not wit, and wise men, and good judgment whether a thing be so or no, — also institutions of God, and older than the other?

Concord Lyceum. For that local lecture which I still propose to read at our Town Hall [remember to speak] concerning the hanging of private pictures, each for one month, in the Library, etc., etc.

Remember that a scholar wishes that every book, chart, and plate belonging to him should draw interest every moment by circulation: for "No man is the lord of anything

Till he communicate his part to others;

Nor doth he of himself know them for aught

Till he behold them formed in the applause Where they 're extended; where, like an arch, reverberates The voice again, or, like a gate of steel Fronting the sun, receives and renders back The figure and its heat."

(*Troilus and Cressida.*)

When a boy I used to go to the wharves, and pick up shells out of the sand

which vessels had brought as ballast, and also plenty of stones, gypsum, which I discovered would be luminous when I rubbed two bits together in a dark closet, to my great wonder; — and I do not know why luminous to this day. That, and the magnetizing my penknife, till it would hold a needle; and the fact that blue and gamboge would make green in my pictures of mountains; and the charm of drawing vases by scrawling with ink heavy random lines, and then doubling the paper, so as to make another side symmetrical, — what was chaos, becoming symmetrical; then halloing to an echo at the pond, and getting wonderful replies.

Still earlier, what silent wonder is waked in the boy by blowing bubbles from soap and water with a pipe!

Old Age. We spend a great deal of time in waiting.

“No more I seek, the prize is found;
I furl my sail, the voyage is o’er.”

Whose lines? Mine, I believe, part of translation of some Latin lines for Mrs. Drury.

The good writer is sure of his influence, because, as he is always copying not from his fancy, but from real facts, — when his reader afterwards comes to like experiences of his own he is always reminded of the writer. Nor do I much care for the question whether the Zend-Avesta or the Desatir are genuine antiques, or modern counterfeits, as I am only concerned with the good sentences; and it is indifferent how old a truth is, whether an hour or five centuries, whether it first shot into the mind of Adam, or your own. If it be truth it is certainly much older than both of us.

Shakspeare. Parallax, as you know, is the apparent displacement of an object from two points of view; — less and less of the heavenly bodies, because of their remoteness, — and of the fixed stars, none at all. Well it is thus that we have found Shakspeare to be a fixed star.

Because all sorts of men have in three centuries found him still unapproachable. The merit of a poem is decided by long experience.

May 16, 1872.

Yesterday, my sixty-ninth birthday, I found myself on my round of errands in Summer Street, and, though close on the spot where I was born, was looking into

a street with some bewilderment and read on the sign *Kingston Street*, with surprise, finding in the granite blocks no hint of Nathaniel Goddard's pasture and long wooden fence, and so of my nearness to my native corner of Chauncy Place. It occurred to me that few living persons ought to know so much of the families of this fast-growing city, for the reason, that Aunt Mary — whose manuscripts I had been reading to Hedge and Bartol, on Friday evening — had such a keen perception of character, and taste for aristocracy, and I heard in my youth and manhood every name she knew. It is now nearly a hundred years since she was born, and the founders of the oldest families that are still notable were known to her as retail - merchants, milliners, tailors, distillers, as well as the ministers, lawyers, and doctors of the time. She was a realist, and knew a great man or "a whale - hearted woman" — as she called one of her pets — from a successful money-maker.

If I should live another year, I think I shall cite still the last stanza of my own poem, "The World-Soul."

Walk in the city for an hour, and you shall see the whole history of female beauty. Here are the school-girls in the first profusion of their hair covering them to the waist, and now and then one maiden of eighteen or nineteen years, in the moment of her perfect beauty. Look quick and sharply, — this is her one meridian day. To find the like again, you must meet, on your next visit, one who is a month younger to-day. Then troops of pleasing, well-dressed ladies, sufficiently good-looking and graceful, but without claims to the prize of the goddess of Discord.

I Spring still makes spring in the mind
When sixty years are told;
Love wakes anew this throbbing heart,
And we are never old.
Over the winter glaciers
I see the summer glow,
And through the wild-piled snowdrift
The warm rosebuds below.

"No sign that our mighty rocks had ever tingled with earthquake," said John Muir.

He said he slept in a wrinkle of the bark of a Sequoia on the night after we left him.

June 12.

Sarah Clarke gratified us with her visit of twenty-six hours, ever the same peaceful, wise, just, and benevolent spirit, open, gentle, skilful, without a word of self-assertion. I regret that I did not recall and testify to her my oft recollection of her noble and oft-needed and repeated sisterly aid to Margaret Fuller, in old times, in her cruel headaches. We talked of many friends of both of us, but of Charles Newcomb it seems she knew nothing. Of Greenough she did not know much. I was glad, in describing his last visit to me, to add that he was one who to his varied perception added the rare one of to *Seivov* (the dire).

What proof of Goethe's wealth of mind like the *Sprüche*?...

July 11.

Yesterday read my paper on "Character" or "Greatness" to the "Social Union" comprising the four Classes at Amherst College. Stayed with Ellen at President Stearns's house, there finding Henry Ward Beecher, Judge Lord, and other gentlemen, with Miss Gleason, Miss Goodman, of Lenox, Miss Annie Lee, of Charlestown, and the daughters of President Stearns.

Visited the Boltwoods, and with Professor Charles U. Shepard, went through his rich collection of minerals in the Walker Hall.

'T is easy to write the technics of poetry, to discriminate Imagination and Fancy, etc.; but the office and power which that word poetry covers and suggests are not so easily reached and defined. What heaven and earth and sea and the forms of men and women are speaking or hinting to us in our healthiest and most impressionable hours, — what fresh perceptions a new day will give us of the old problems of our own being and its hidden source; what is this Sky of Law, and what the Future hides.

Wednesday, July 24.

House burned.

[The above is all the record that Mr. Emerson left of the temporary destruction of his home. By unhappy chance not one of their children was at hand to help their father and mother when, on a rainy morning, they were waked by the crackling of fire in the walls of their room. Their daughter Ellen was

visiting friends at the seashore; Mrs. Forbes (Edith) was, with her husband and family, on the homeward voyage from England, and Edward, then convalescent from a surgical operation, had remained there, to pursue his medical studies. But the immediate neighbours, and soon a great number of the townspeople as well as the fire-company, were quickly on the spot, men and boys with great energy and courage saving property and fighting the fire, and women and girls sorting and gathering the household goods intelligently and quickly and saving them from the rain by carrying them to the houses near by. The occurrences at a fire in a village and the actions of kind-hearted but inexperienced neighbours have been a stock subject for ridicule in newspapers and stories, but here was an occasion when good sense and brave and affectionate neighbourly action reached a high water mark, and never did the *town family*, as it used to exist in simpler days, and still in a measure remains, show forth more finely. The fire originated in the attic, almost surely from a kerosene lamp charring the timbers hot and dry from the summer. A woman, engaged the day before for domestic service, had apparently spent a part of the night in prowling among the chests and trunks there. When help began to arrive the house was filling with choking black smoke, making it hard to save furniture and clothing upstairs. By the time this was done and the falling ceilings drove out the men, the lower storey was so filled with smoke that, when the books in Mr. Emerson's study were remembered, they were *felt* there by brave boys, who rushed in, holding their breath, and pulled them out into baskets or blankets and all were saved; happily the manuscripts also.

Mr and Mrs. Emerson, imperfectly clothed, wet by the rain, fatigued and worn by excitement, were taken home and cared for by Judge Keyes and his family, and the next day were welcomed to the Manse, — the ancestral home, dear to Mr. Emerson from his boyhood, — by his cousin, Miss Elizabeth Ripley. All sorts of exciting and some dangerous incidents occurred during the fire. When a hole chopped in the roof let out the smoke and let in the water which put out the fire, the roof and the top of the walls of the main house were ruined and the interior greatly damaged by smoke and water.

Mr. Cabot, in the *Memoir*, gives some account of the fire and its effects on Mr. Emerson, and he also prints in Appendix E of the second volume Dr. Le Baron Russell's moving story of the "friendly conspiracy," the instant and unsolicited action of friends old and new, some of them hardly known to Mr. Emerson, in testimony of affection and gratitude, to rebuild his house and send him abroad for rest and recreation meanwhile. There also, in Judge Hoar's letter to Dr. Russell, appears the Judge's happy and affectionate wit in presenting the matter to Mr. Emerson, as ambassador of his friends, in such a way that the gift

was impossible to refuse, though Mr. Emerson pleaded for time to consider it, saying that thus far in life he "had been allowed to stand on his own feet."

Mr. Emerson seemed brave and cheerful during the fire, and for more than a week afterwards it looked as if he had suffered no harm. His daughter wrote that it did not seem as if that experience would seriously affect him. "There is no doubt," she wrote, "that it was a tragedy to him at the time, and that he suffered very much. Nothing ever showed me so distinctly how faithful he is never to mention himself, as this week has."

A room in the Court-House was secured for Mr. Emerson, to which his manuscripts and needed books were brought, and there he tried to work at the anxious and unwelcome task of preparing a new volume. This had been forced upon him by an English publishing-house who, otherwise, proposed to print earlier scattered works of his (from the *Dial* and elsewhere), but they consented to desist if in a very short time he would let them, in connection with his Boston publishers, bring out in England a new volume of his essays.

But, about a fortnight after the fire, Mr. Emerson began to be very unwell, and, though he kept about, a low feverish condition with cough and weakness came on. Growing no better, he went for a day or two to Rye Beach with his daughter and thence to Waterford, Maine. Improvement came slowly; he was distressed about the urgency of the publishers for the new volume on which he was quite unable to work. At Waterford he began to think that possibly the end of his life might be at hand, and to consider what would become of his manuscripts and journals, saying that, if his son were a scholar, they would be most valuable to him, "Otherwise they are worthless." He dreaded their falling into the hands of the wrong persons. His friend Mr. J. Elliot Cabot and Dr. Frederic H. Hedge were the only persons that he would consider, but he did not feel that he could ask either of them to leave their work for his, should his powers fail. It was explained to the publishers in London and here that it was absolutely out of the question for Mr. Emerson to do any work upon *Letters and Social Aims* until he had recovered his health by entire rest. Next year, Mr. Cabot most kindly arranged the material for it and prepared it for the press.

Not long after the fire, Miss Emerson wrote to Dr. Edward H. Clarke, whom her father was about to consult, a letter telling of the failure of his memory and working powers, which now the family began to realize had been imperceptibly coming on him for five or six years, — Mr. Emerson had calmly recognized this in 1866, when he wrote "Terminus." The fire and subsequent illness had increased this trouble, and now *aphasia*, the difficulty of associating the fit word to the idea, appeared, though not at first seriously, and also being very variable

according to the state of his health.]

NORWAY, MAINE, *August 20.*

Forgot, in leaving home, twenty necessities, — forgot to put Horace, or Martial, or Cicero's Letters, *La Cité Antique*, or Taine's *England*, in my wallet: forgot even the sacred chocolate satchel itself, to hold them or their like. Well, at the dear Vale, eleven miles off yet, I may recall or invoke things as good. Yet I should there remember that letters are due... [to many dear friends who had joined in the generous provision for restoring the house and giving a restful vacation]. Perhaps I will venture on a letter of proposals of a voyage to Elliot Cabot, and a letter to the kindly Alexander Ireland is more than due.

[Colonel William Forbes and his wife and children had returned from abroad, and Mr. Emerson, now recovered from his acute attack, joyfully accepted his daughter's invitation to spend a month with them on the Forbes's beautiful island, Mrs. Emerson and their daughter Ellen going too.]

NAUSHON, *August 31.*

I thought to-day, in these rare seaside woods, that if absolute leisure were offered me, I should run to the college or the scientific school which offered best lectures on Geology, Chemistry, Minerals, Botany, and seek to make the alphabets of those sciences clear to me. How could leisure or labour be better employed. 'Tis never late to learn them, and every secret opened goes to authorize our æsthetics. Cato learned Greek at eighty years, but these are older bibles and oracles than Greek. Certainly this were a good *pis aller* if Elliot Cabot and Athens and Egypt should prove an abortive dream.

I think one must go to the tropics to find any match to this enchanting isle of Prospero. It needs and ought to find its Shakspeare. What dells! what lakelets! what groves! what clumps of historic trees of unknown age, hinting annals of white men and Indians, histories of fire and of storm and of peaceful ages of social growth! Nature shows her secret wonders, and seems to have impressed her fortunate landlords with instant and constant respect for her solitudes and centennial growths. Where else do such oaks and beeches and vines grow, which the winds and storms seem rather to adorn than spoil by their hurts and devastations, touching them as with Fate, and not wanton interference? And the sea binds the Paradise with its grand belt of blue, with its margin of beautiful

pebbles, with its watching herons and hawks and eagles, and its endless fleet of barques, steamers, yachts, and fishers' boats.

The island compels them — glad to be compelled — to be skilful sailors, yachtsmen, fishermen, and swimmers, thus adding all the charm of the sea to their abode, and adds the surprise and romance of hunting.

[It was not quite easy to persuade Mr. Emerson to go abroad for the winter and spring. The thought of seeing a few friends, old and new, in England, attracted him, but he always held himself as unfit for visiting and society, and now the limitations and growing infirmities of age were mortifying. Yet the thought of seeing the ancient Nile, and perhaps Greece, drew him, and at last he was persuaded to sail, in the last week in October, with his daughter Ellen, for Liverpool, leaving Mrs. Emerson with their daughter Mrs. Forbes. Mr and Miss Emerson were met on arriving in England by his son Edward, then a student at St. Thomas's Hospital in London, whither, after a short rest at Chester, they went early in November. Edward then had to sail for home.

Mr. Emerson and his daughter were most affectionately welcomed on their arrival in London, and every delicate aid and guidance was given them by American friends who should be here mentioned. Colonel Henry Lee, who had in the winter lost two of his daughters by diphtheria in Florence, whose wife was ill, and his oldest son then struggling between life and death with typhoid fever, yet came daily to see them, and, keeping back his own troubles, cheered them with his friendly and witty talk; Mr. Charles Eliot Norton who, within a year, had lost his beautiful wife, was then resident in London with his family, and gave help and wise counsel as to planning the trip to France and Italy on the way to Egypt. His sister, too, gave sisterly help to Miss Emerson, who was temporarily lame; Rev. William Henry Channing, then a Unitarian preacher in Kensington, with affectionate zeal did everything possible to make their stay in London in their invalid condition easy and pleasant, as did also Mr. Moncure D. Conway, then minister of the South Place Ethical Society. Mr. Emerson had also the unexpected pleasure of meeting Charles K. Newcomb, the valued friend of many years ago.

Of English friends, first came Mr. Thomas Hughes, then Dean Stanley and Lady Augusta his wife, the admirable surgeon (soon after knighted) William MacCormac, who had taken care of young Emerson, and, best valued, Carlyle, though old, broken, and sad. In Chester, and in London, as far as his friends would allow, Mr. Emerson took great comfort in absence of responsibility and quiet, declared that "*idlesse* is the business of age. I love above all things to do nothing"; he said he never before had discovered this privilege of seventy years:

also that he finds “there is a convenience of having a name, — it serves one as well as having a good coat.” He began to eat better than he had for a long time, and made long nights, saying, “A warm bed is the best medicine, — and one gets such good sleep in this country, — good strong sleep.” At the table he said, “The land of England desires much food in its inhabitants.” When plans were made for him, he would smile and say, “Old age loves leisure.” Nevertheless, in this short stay, though he felt reluctant to go into company, he enjoyed in moderation seeing the sights of London.

Mr. Norton, during the last year, as far as possible had sunk his own sorrows in cheering Ruskin and Carlyle, both sick and utterly downhearted, and had made himself much beloved by them. Carlyle said to him, speaking of a letter from Emerson acknowledging the last volumes of the completed *Frederick the Great*, “I have a letter received from him, after a long silence, and though there were few words in it that did not give me pain, it says the only thing that has been said about my book that was worth saying; and therefore, when I had read it through, I wrapped it up in a piece of paper and put it inside the book, and there it will stay till I am dead and it will fall into other hands than mine.” This interesting sentence Miss Emerson, whose verbal memory was excellent, wrote in a letter to her sister soon after Mr. Norton’s visit. It probably refers to Letter CLV (January 7, 1866) of the *Carlyle-Emerson Correspondence*, and yet what is said of the pain-giving words might well refer to the letter from Emerson preceding it (CLIII, September 26, 1864), referring to Carlyle’s perverse hostility to the North during the War. The last letters that passed between them were most friendly.

After staying but one week of chill and rainy November in London, Mr. Emerson and his daughter moved on to Canterbury — so attractive that he proposed they should send for Mrs. Emerson and settle there. However, after two days they went direct to Paris. There they had a happy week at the same hotel with Mr and Mrs. James Russell Lowell and the charming Mr. John Holmes (brother of the Doctor), whose acquaintance Mr. Emerson had made fourteen years before at their Adirondac Camp. In Paris they were joined by the admirable Swiss travelling servant recommended to them by Dean Stanley, without whose services their farther journeyings would have been spoiled by cares and difficulties, thus avoided. They went thence by rail to Marseilles and Nice and by boat to Genoa, and thence again by boat to Leghorn. Making but short stays at Pisa and Florence, they reached Rome on the last day of November.

The weather was fine, they met friends, and had especial good fortune in being the guests during their last week of Baron von Hoffman and his wife, who

was the daughter of Samuel Gray Ward, of Boston, Mr. Emerson's early and valued friend. Their villa and garden high on the Caelian Hill were most beautiful and commanded a wonderful view of the Campagna and distant mountains. Under the Baron's admirable guidance they saw the ancient city to best advantage. Thence they went to Naples, and after four days sailed for Egypt. Christmas found them in Alexandria, and in the last days of the year they proceeded to Cairo.]

AUTHORS OR BOOKS QUOTED OR REFERRED TO IN JOURNAL FOR
1872

Zend-Avesta; Heracleitus; Socrates; Cicero; Martial; Taliessin; Saadi; Leonardo da Vinci; Vasari, *Life of Raphael*; Spenser, *Muiopotmos*; Ben Jonson, *Ode to Himself*; John Fletcher, *Epilogue to An Honest Man's Fortune*; Waller, *Apology for having loved before*; Montrose, *Love Song*; Richard Lovelace, *To Althea*; Crashaw, *Sospetto d'Herode*; Bishop Berkeley; Pope; David Lewis, *Lines to Pope*; Thomson, *Seasons*; John Wesley, Hymn, *O draw me, Father, after Thee*; John Hunter; Sir William Jones, translation of Hindu poem, *To Narayena*; Goethe, *Sprüche West-Ostlichen Divan*; Schleiermacher; Wordsworth, *Sonnet to Schill, The Force of Prayer*; Scott, *Songs of the White Lady of Avenel*; Ballad, *Thomas the Rhymer*; Byron, *Murat in Ode to Napoleon, When coldness wraps this suffering clay*; Varnhagen von Ense; Boucher de Perthes, *De l'homme antédiluvien*; Josiah Conder, *The Modern Traveller*; Translations of Klephtic Ballads (from the *Dial*), *A Romaic Lochinvar*, and *Olympus and Kissarvos*; *Arab Ballad*; Agassiz; Tennyson, *Maud*; Richard Monckton Milnes, *The Lay of the Humble*; Julia C. R. Dorr, *Outgrown*; Mrs. Caroline Tappan, *Lines to the Poet*; J. G. Saxe; Thoreau, *Inspiration*; Ruskin, *Sesame and Lilies*; J. R. Lowell; Coventry Patmore; Herman Grimm, *Leben Raphaels*; Henry Timrod, *Ode to the Confederate Dead*; Edmund C. Stedman, *John Brown of Ossawatomie*; Helen Hunt, *Thought*.

JOURNAL

THE NILE ROME, FLORENCE, PARIS

THREE WEEKS OF LONDON

OXFORD

RETURN HOME

JOURNAL LXIV

1873

(From Journal ST)

[IN spite of rest, friendly faces, and interesting scenes, the old feeling of the unprofitableness of travel for travel's sake, which has appeared so often in Mr. Emerson's writings, would assert itself, especially in the early part of the journey. His daughter records some of the "dismally witty remarks" that he made on the Delta as they passed through it to Cairo: "Could anything argue wilder insanity than leaving a country like ours to see this bareness of mud? — Look! there is some water, and see! there is a crowd of people. They have collected with a purpose of drowning themselves." Although he would have been quite willing to go home, he said that he would gladly spend a fortnight with Mr. Lowell in Paris, and desired to find in England Tennyson, Ruskin, and Browning before his return. Also, before leaving home, when Egypt was suggested, he said, "Yes, I should like to see the tomb of 'him who sleeps at Phylæ.'" At Cairo, he was pleased to find Mr. Bancroft, and went about the city with him. Mr. Charles G. Leland and Mr. Augustus Julius Hare were also agreeable. General Charles Stone (formerly of the United States Army, then Chief-of-Staff of the Turkish force in Egypt) and his family showed great courtesy to Mr. Emerson and his daughter.]

SHEPHEARD'S HOTEL, CAIRO,

January, 1873.

Nothing has struck me more in the streets here than the erect carriage and walking of the Copts (I suppose them); better and nobler in figure and movement than any passengers in our cities at home.

On Tuesday, January 7, we sailed from Cairo for Philæ, in the dahabeah *Aurora*, with Mahmoud Bedowa, dragoman; a *rets* or captain, and his mate; ten oarsmen, two cooks, a factotum boy, a head waiter named Marzook, and second waiter Hassan, — in all eighteen: The company in the cabin were Mr and Mrs. Whitwell, Miss May Whitwell, and Miss Bessie Whitwell, Miss Farquhar [a Scotch lady], Ellen, and I.

Egypt very poor in trees: we have seen hardly an orange tree. Palms are the chief tree along the banks of the river, from Cairo to Assuan; acacias, the fig. In Cairo, we had a banian with its boughs planting themselves around it under my window at Shepherd's Hotel.

Egypt is the Nile and its shores. The cultivated land is a mere green ribbon on either shore of the river. You can see, as you sail, its quick boundary in rocky mountains or desert sands. Day after day and week after week of unbroken sunshine, and though you may see clouds in the sky, they are merely for ornament, and never rain.

The Prophet says of the Egyptians, "It is their strength to sit still."

Papyrus is of more importance to history than cotton.

All this journey is a perpetual humiliation, satirizing and whipping our ignorance. The people despise us because we are helpless babies who cannot speak or understand a word they say; the sphinxes scorn dunces; the obelisks, the temple walls, defy us with their histories which we cannot spell. Every new object only makes new questions which each traveller asks of the other, and none of us can answer, and each sinks lower in the opinion of his companion. The people, whether in the boat, or out of it, are a perpetual study for the excellence and grace of their forms and motion. No people walk so well, so upright as they are, and strong, and flexible; and for studying the nude, our artists should come here and not to Paris. Every group of the country people on the shores, as seen from our dahabeah, look like the ancient philosophers going to the School of Athens.

In swimming, the Arabs show great strength and speed, all using what at Cambridge we used to call the "Southern stroke," alternating the right arm and the left.

All the boys and all the babes have flies roosting about their eyes, which they do not disturb, nor seem to know their presence. It is rare to find sound eyes among them. Blind beggars appear at every landing led about by their children.

From the time of our arrival at Cairo to our return thither, six weeks, we have had no rain; — unclouded summer on the Nile to Assuan and back, and have required the awning to be spread over us on the deck from 10 A. M. till late in the afternoon.

In Egypt the sandstone or limestone instructs men how to build, — stands in square blocks, and they have only to make a square door for tombs, and the shore is a pair or a series of steps or stairs. The lateen sail is the shadow of a

pyramid; and the pyramid is the simplest copy of a mountain, or of the form which a pile of sand or earth takes when dropped from a cart.

—— I saw a crocodile in the Nile at a distance.

We arrived at Thebes 19th January; Esne (?), 24th; and at Assuan, 28th January; visited Philæ, on Wednesday, 29th January; arrived in Cairo Thursday, 13th February, making 38 days for our expedition and return.

The magnet is the mystery which I would fain have explained to me, though I doubt if there be any teachers. It is the wonder of the child and not less of the philosopher. Goethe says, “The magnet is a primary phenomenon, which we must only express in order to have it explained. Thereby is it then also a symbol for all besides for which we use to speak no word or name.”

See Plutarch, *Morals*, vol i, p. 156, old copy [edition].

Tuesday, *January 28*.

Met Mr. George L. Owen at Assuan, our party and his exchanging visits. I found him a very intelligent and agreeable companion. In the dahabeah in which we found him on the Nile, he shared the cabin with only one companion, Mr. Ralph Elliot.

[This meeting with Mr. Owen (also a second, soon after, in going down the Nile) was a very agreeable episode. Mr. Emerson’s health was steadily improving, and with it his enjoyment.

At Cairo, Mr. Emerson and his daughter parted from their friendly travelling companions, took ship for Italy — in passing he enjoyed the sight of Crete, and its mountains, birthplace of Zeus, and after landing hastened on to Rome. They had little time for sightseeing in eleven days, but received constant visits and kind attentions. Mr. Marsh, the American Minister, and his wife were very kind, and they saw their friends the Yon Hoffmans; also the Storys, the Howitts, Lady Ashburton, Mr. Tilton the artist, Miss Sarah Clarke, and Dr. Wister, of Philadelphia.]

In Florence, I hoped to find Herman Grimm, who, as I had heard, was residing there to complete his *Life of Raffaele*. Immediately on my arrival, I sent Curnex [the travelling servant] to the German bookstores to inquire his address. Neither of these knew of his presence in the city. In the street, I met Mr. Bigelow, our American Minister at Paris, and asked him for news of Grimm. He

did not know that he was here. On my return to the Hotel du Nord, I found Mr. Bigelow's card saying that, immediately after leaving me, he had met Grimm in the street, and learned his address which he had written out for me on his card: and Grimm had also called and left his own. I went at once to Grimm, and was received and introduced to Gisela his wife, and invited them to dine with us that evening, which they did, to the great satisfaction of Ellen and me. He speaks English very well, and Gisela, who does not, talked with Ellen in German.

[Mr. Emerson had never met Grimm, although he and his wife (daughter of Bettine [Brentano] von Arnim) had corresponded with him occasionally for years. The meeting was very pleasant and fortunate, as Mr. Emerson and his daughter were to set out for Paris the next morning.

In Herman Grimm's *Essays* is a very interesting account of how he first became acquainted with Emerson's writings.

Grimm's comments to Miss Emerson on her father's appearance are interesting as showing not only the benefit of the Egyptian voyage, but what a wholesome looking man he was, even to the time of his last illness, and how much certain pictures belied him. His daughter, writing home from Florence, said, "Herman now began telling me of his pleasure in beholding Father, and said every photograph did him great injustice;— 'they all represent a feeble old man of seventy; he looks a strong man of fifty. They look as if he were made of iron, of copper. He looks as if he were made of steel. He has a fine sharp, manly face; and such bright colouring, which is all lost, of course, in the photographs.'"]

[*March 16 to April.*]

In the Hotel de Lorraine, Rue de Beaune, Paris, where Ellen and I took rooms for some weeks during both our visits to Paris, we lived with James R. Lowell and his wife, and John Holmes, to our great satisfaction. There also I received, one evening, a long and happy visit from Mr. James Cotter Morison, who is writing the *Life of Comte*. At the house of Mr. Laugel, I was introduced to Ernest Renan; to Henri Taine; to Elie de Beaumont; and to some other noted gentlemen. M. Taine sent me, the next day, his *Littérature anglaise*, in five volumes.

The enjoyment of travel is in the arrival at a new city, as Paris, or Florence, or Rome, — the feeling of free adventure, you have no duties, — nobody knows you, nobody has claims, you are like a boy on his first visit to the Common on Election Day. Old Civilization offers to you alone this huge city, all its wonders, architecture, gardens, ornaments, galleries, which had never cost you so much as

a thought. For the first time for many years you wake master of the bright day, in a bright world without a claim on you; — only leave to enjoy. This dropping, for the first time, the doleful bundle of Duty creates, day after day, a health as of new youth.

In Paris, your mere passport admits you to the vast and costly public galleries on days on which the natives of the city cannot pass the doors. Household cares you have none: you take your dinner, lunch, or supper where and when you will: cheap cabs wait for you at every corner, — guides at every door, magazines of sumptuous goods and attractive fairings, unknown hitherto, solicit your eyes. Your health mends every day. Every word spoken to you is a wonderful and agreeable riddle which it is a pleasure to solve, — a pleasure and a pride. Every experience of the day is important, and furnishes conversation to you who were so silent at home.

[Mr. Emerson now, as witnessed above, was greatly improved in health, and his memory and power of finding the right word in conversation had so far returned towards the normal that he no longer shrank from going into society.

He and his daughter arrived in London on Saturday, April 5, and went to comfortable lodgings. They remained in the city three weeks. On their previous stay, London had been comparatively empty of persons whom they would naturally have seen, but now friends and visitors were most attentive and they had little time for sightseeing, as they had daily invitations to lunches and dinners. Of course the meeting with his oldest and best friend in England was what was foremost in Mr. Emerson's mind. Of the call on Carlyle Miss Emerson wrote, "He was in more amiable and cheerful humour than he had been a few days before when Father walked with him, and Father has been very happy in the remembrance of this call." Just before leaving London, she writes, "Father, after breakfast with Mr. Gladstone, spent the forenoon with Mr. Carlyle with real comfort, bade him good-bye, and then went to the Howards' and lunched with Mrs. Lewes."]

April.

In London, I saw Fergusson the architect; Browning the poet; John Stuart Mill; Sir Henry Holland; Huxley; Tyndall; Lord Houghton; Mr. Gladstone; Dean Stanley; Lecky; Froude; Thomas Hughes; Lyon Playfair; Sir Arthur Helps; the Duke of Argyle; the Duke of Cleveland; the Duke of Bedford; Sir Frederick Pollock; Charles Reade; Mr. Dasent; — with the Amberleys I paid a visit to Lord Russell at his house, and lunched there. I failed to see Garth Wilkinson, though I called on him twice, and he left his card twice at my door, in my

absence. William H. Channing was, as always, the kindest of friends. Moncure Conway was incessant in his attentions, and William Allingham gave us excellent aid. George Howard, who will one day, I hope, be Earl of Carlisle, was the most attentive and generous of friends.

Mr. Thomas Hughes introduced me to the Cosmopolitan Club, which meets every Sunday and Wednesday night at 10 o'clock, and there I saw on two evenings very agreeable gentlemen, Sir Frederick Pollock, Fergusson, Lord Houghton, William Story, and others. Professor Tyndall procured me the privileges of the Athenæum, which is still the best of the great London Clubs; and also of the Royal Shelley, except in the case of "The Skylark" and perhaps one or two more.

Institution, in Albemarle Street, where he presides since the death of Faraday.
Visited John Forster at his own house, Palace Gate House, Kensington, West.

[From London Mr. Emerson and his daughter went to Chester for a day or two, the guests of Lord and Lady Amberley, who showed them Tintern Abbey, and thence they went to Cyfarthra Castle to visit Mr and Mrs. Crawshay.]

At Oxford [April 30 to May 3] I was the guest of Professor Max Müller, and was introduced to Jowett and to Ruskin and to Mr. Dodgson, author of *Alice in Wonderland*, and to many of the University dignitaries. Prince Leopold was a student, and came home from Max Müller's lecture to lunch with us, and then invited Ellen and me to go to his house, and there showed us his pictures and his album, and there we drank tea. The next day I heard Ruskin's lecture, and we then went home with Ruskin to his chambers, where he showed us his pictures, and told us his doleful opinions of modern society. In the evening we dined with Vice-Chancellor Liddell and a large company.

[On May 3, the Emersons left Oxford for Warwick, where, after seeing the castle, they were met by Mr. E. F. Flower, an old friend, who took them to his home at Stratford-upon-Avon, where they spent ten days.

On Sunday, at the door of the church, they were met by the Clerk, who led them to seats in the chancel near Shakspeare's tomb.

Before sailing for home they made a short visit to Edinburgh, but no record appears in Journal or letters.

The presence of Mr. Norton and his family helped to make the homeward voyage pleasant. On the morning of Mr. Emerson's seventieth birthday his friend met him on deck and put into his hands the following verses.]

To R. W. Emerson

Blest of the highest gods are they who die Ere youth is fled. For them their mother Fate, Claspings from happy earth to happier sky, Frees life, and joy, and love from dread of date. But thee, revered of men, the gods have blest With fruitful years. And yet for thee, in sooth, They have reserved of all their gifts the best; — And, thou, though full of days, shalt die in youth. *May 25, 1873.* — Charles E. Norton.

[Mr. Emerson landed in Boston, May 27. Before sailing, his home in Concord had been burned, and now from the steamer he looked on his native city, which since his departure had been devastated by fire even to his birthplace, which was where the great establishment of C. F. Hovey & Co now stands. That was in the autumn, and now the statelier building was rapidly advancing.

When he and his daughter got out of the cars at Concord, to their astonishment they found a large part of the population assembled there to greet them. They welcomed the two returned travellers with a cheer, echoed from the passengers in the train as it moved on. Then, as the reunited family entered the carriages, the local band played, and, escorted by the children of all the schools and many friends and neighbors, they drove home, passing under a welcoming triumphal arch. There stood the house among the trees, except for its freshness looking without and within as if nothing had ever happened. Mr. Emerson entered and saw; then turned, rapidly walked to the gate and said such words of joy and gratitude as his emotion would allow. The smiling crowd dispersed' and he re-entered his home to realize its restoration and greet his nearer friends.]

Egypt. Mrs. Helen Bell, it seems, was asked, “What do you think the Sphinx said to Mr. Emerson?”

“Why,” replied Mrs. Bell, “the Sphinx probably said to him, ‘You’re another.’”

For the writers on Religion, — none should speak on this matter polemically: it is the *Gai Science* and only to be chanted by troubadours.

Professor Max Muller has dedicated his new book to me, and sent me a copy. I have read it, and though I am too dull a scholar to judge of the correctness of his courageous deductions from resembling names, or to relish this as I did his earlier books, I respect and thank his erudition and its results.

[Mr. Emerson was invited to make the Address at the opening of the Concord

Free Public Library, in September, built and given to the town by one of its sons, William Munroe. The following paragraphs were written while he was preparing for this occasion. The Address is printed in *Miscellanies*.]

Be a little careful about your Library. Do you foresee what you will do with it? Very little, to be sure. But the real question is, What it will do with you? You will come here and get books that will open your eyes, and your ears, and your curiosity, and turn you inside out or outside in. You will find a book here that will tell you such news of what has been seen lately at the observatories in the sun and the other stars that you will not rest until you find a telescope to see the eclipse with your own eyes. 'T is only the other day that they found out what the stars are made of: what chemical elements, identical with those that are in our planet, are found in Saturn; what in the sun; and that human life could not exist in the moon.

They have just learned that Italy had people before the Romans, before the Etruscans, who made just such arrow-heads as we find in Concord, and all their tools were stone: Mr. Marsh told me he picked them up in Africa as in Vermont; and they find these all over the world, — and the world, instead of being six thousand years old, has had men on it a hundred thousand years.

All the new facts of science are not only interesting for themselves, but their best value is the rare effect on the mind, the electric shock; each new law of Nature speaks to a related fact in our thought: for every law of Chemistry has some analogon in the soul, and however skilful the chemist may be, and how much soever he may push and multiply his researches, he is a superficial trifler in the presence of the student who sees the strict analogy of the experiment to the laws of thought and of morals.

We read a line, a word, that lifts us: we rise into a succession of thoughts that is better than the book. The old saying of Montluc, that “one man is worth a hundred, and a hundred are not worth one,” is quite as true of books.

Our reading sometimes seems guided. I open a book which happens to be near me, — a book I had not thought of before, — and, seeing the name of a known writer, I sit down to read the chapter, which presently fixes my attention as if it were an important message directly sent to me.

Darwin's *Origin of Species* was published in 1859, but Stallo, in 1849, writes, “animals are but foetal forms of man.”

Stallo quotes Liebig as saying, “The secret of all those who make discoveries is that they regard nothing as impossible.”

“The lines of our ancestry run into all the phenomena of the material world.”
— STALLO.

Théologic mysteries. Our theology ignores the identity of the worshipper; he has fallen in another, he rises in another. Can identity be claimed for a being whose life is so often vicarious, or belonging to an age or generation?

Harvard College. My new term as overseer begun at the close of Commencement Day, 1873, and ends at the close of Commencement Day, 1879.

Life. “We do not take into account what life is in the concrete, — the agreeable habit of working and doing, as Goethe names it, — the steadily engaging, incessant in-streaming of sensations into the bodily comfortableness.” — HEGEL, *apud* Varnhagen.

[The latter half of the year was quietly passed in Concord by Mr. Emerson, except for a visit to his daughter Mrs. Forbes and her husband at Naushon. As the English publisher with whom he had had dealings, and, as it were, an enforced arrangement about a new volume (only suspended by his illness), had died, that matter was not troubling him.

On December 16, the Centennial Anniversary of the “Boston Tea Party,” Mr. Emerson completed his poem “Boston,” so long meditated, and, by request, read it at the celebration in Faneuil Hall.]

AUTHORS OR BOOKS QUOTED OR REFERRED TO IN JOURNAL FOR 1873

[The greater part of the authors mentioned in this list are included because Mr. Emerson met them upon his recent journey, principally in England.]

Kalevala of the Finns; Edward, Lord Herbert, *Autobiography*; Heeren, *Ancient World, Egypt*; Hegel; Stendhal (M. H. Bayle); Sir Henry Holland; Elie de Beaumont; Thomas Carlyle; Earl Russell; George Bancroft; Richard Owen; Liebig; Francis W.

Newman; J. S. Mill; James Fergusson; R. M. Milnes; Gladstone; Charles Darwin; Vice-Chancellor Liddell; Dean Church; Robert Browning; J. J. Garth Wilkinson; Dr. W. B. Carpenter; Charles Reade; Daniel Kirkwood, *Comets and Meteors*; Dean Stanley; Henry Lewes and Mrs. Lewes (George Eliot); Sir Arthur Helps; Jowett; Dasent; Turgénieff; Froude; William W. Story; Lyon Playfair; Ruskin; J. R. Lowell; Alexander C. Fraser; Thomas Hughes; Max Müller; Stallo; Duke of Argyle; Sir Frederick Pollock; Dr. Hinton; Ernest Renan; Charles G. Leland; Huxley, *Lay Sermons*; Charles E. Norton; William Allingham; Moncure D. Conway; Herman Grimm; Taine; Canon Liddon; Charles Flower; Professor

Lecky; Smalley.

JOURNAL

DEATH OF SUMNER

ABEL ADAMS

FRANCIS C. LOWELL

CANDIDACY FOR LORD RECTORSHIP OF GLASGOW UNIVERSITY

PARNASSUS

JOURNAL LXV

1874

(From Journal ST)

[No longer pledged to far-away lecture engagements, but at home with his family, Mr. Emerson passed his days in his study looking over the sheets of manuscript still unprinted, which might or might not have done duty in lectures or occasional speeches, selecting and planning for their use, but making little progress, for arrangement of sibylline leaves, always difficult, was now almost impossible. He hardly realized this, but was under no pressure, and so undisturbed. He took pleasure in reading; he kept up his afternoon solitary walk, and enjoyed the monthly meeting with his friends at the dinner of the Saturday Club.

The Journal was almost entirely neglected. The following entry is the first, and must have been in latter March, after receiving the letter from Judge Hoar which follows it.] to the dark times of 1850 and see the position of Boston and its eminent men.

WASHINGTON, *March* 11, 1874. My DEAR Mr. EMERSON: — Sumner is dead, as the telegraph will have told you before you receive this. He died at thirteen minutes before three this afternoon. I held his hand when he died; and, except his secretary and the attending physician, was the only one of his near friends who was in the room.

His last words (except to say “Sit down” to Mr. Hooper, who came to his bedside, but had gone out before his death) were these: “Judge, tell Emerson how much I love and revere him.” I replied, “He said of you once that he never knew so *white* a soul.”

During the morning, he had repeated to several persons, to me among the rest, “You must take care of The Civil Rights Bill.” That was his last public thought.

Very sorrowfully and affectionately yours, — E. R. HOAR.

[Mr. Emerson, being asked for some lines that would be appropriate to be read or printed with regard to Senator Sumner, took these from his poem in memory of his own brother Edward Bliss Emerson. (See “In Memoriam E. B. E.,” *Poems.*)]

All inborn power that could

Consist with homage to the good
Flamed from his martial eye;...
Fronting foes of God and man,
Frowning down the evil-doer,
Battling for the weak and poor.
His from youth the leader's look
Gave the law which others took,
And never poor beseeching glance
Shamed that sculptured countenance.

[Two notices of valued and early friends who died about this time follow. Mr. Abel Adams, of the firm of Barnard and Adams, was Mr. Emerson's parishioner, and neighbor in his Chardon Street housekeeping. He was also his business adviser, and was so troubled that the venture in Vermont and Canada Railroad stock turned out ill that he insisted on assuming the expenses of Edward Emerson in college, a great help to Mr. Emerson in the hard times of the war.]

I ought to have many notes of my pleasant memories of Abel Adams, one of the best of my friends, whose hospitable house was always open to me by day or by night for so many years in Boston, Lynn, or West Roxbury. His experiences as a merchant were always interesting to me. I think I must have somewhere recorded the fact, which I recall to-day, that he told me that he and two or three merchants had been counting up, in the Globe Bank, out of a hundred Boston merchants how many had not once failed, and they could only count three. Abel Adams was the benefactor of Edward W. E. in College, and of all of us in his last will.

September (?).

The death of Francis Cabot Lowell is a great loss to me. Now for fifty-seven years since we entered college together, we have been friends, meeting sometimes rarely, sometimes often; seldom living in the same town, we have always met gladly on the old simple terms. He was a conservative, I always of a speculative habit; and often in the wayward politics of former years, we had to compare our different opinions. He was a native gentleman, thoroughly true, and of decided opinions, always frank, considerate, and kind. On all questions his opinions were his own, and deliberately formed. One day he came to Concord to read to me some opinions he had written out in regard to the education now given at Cambridge. He did not leave the paper with me and I regret that I

cannot recall its substance. However you might differ from him, he always inspired respect and love. I have never known a man of more simplicity and truth.

I heard gladly, long since, from Dr. Hobbs, of Waltham, what I had never heard from himself, — the story of Lowell's relation to the Chemical Mills in Waltham. His father, Mr. Frank Lowell, Senior, had founded them, and his son inherited in them an important interest. From whatever causes, the property had sadly depreciated. But Mr. Lowell undertook the charge of them himself, studied chemistry with direct reference to the work done in this mill, made himself master of all the processes required; corrected the mistakes; and against all advice stayed therein until its depreciated shares came up to par; then he sold his shares in the property and retired. A man of a quiet inward life, silent and grave, but with opinions and purposes which he quietly held and frankly stated, when his opinion was asked; — gently, but with a strong will, and a perseverance which at last carried his point. Mr. Henry Lee Higginson told me how scrupulously honest he was, how slow to avail himself of the right to take up mortgages, the terms of which had not been kept. Mr. H. thought him romantically honest. And his truth was of the like strain. He said to me, at his house, that when his Club had lately met there, several gentlemen expressed to him their satisfaction at being his guests; and this led him to say that he did not believe he had ever expressed to any man more regard for the person than he really felt. Exact and literal in affairs and in intercourse, he was the most affectionate parent, and his children's children filled the house with their joy.

His generosity was quiet, but sure and effective. Very strict in its direction, but ample in amount. He was the friend in need, silent but sure, and the character of the giver added rare value to the gift, as if an angel brought you gold. I may well say this, when I recall the fact that on the next day after my house was burned, he came to Concord to express his sympathy in my misfortune, and a few days afterward surprised me with a munificent donation from himself and his children which went far to rebuild it.

In college, I well remember the innocence of the youth when we first met; — and the perfect simplicity of his manners he never lost. Yet long years afterward I well remember that when we stood together to witness a marriage in the Stone Chapel, my wife inquired who was the gentleman who stood by me, and who looked so like a king; I was delighted by the perception.

I dearly prize the photograph taken from Rowse's drawing of his head, which is an admirable likeness, my gift from his daughter, Georgina Lowell. His daughter tells me that he thought he did not interest his acquaintances. I believe he always had their entire respect, and a friendship akin to love.

Fortunate in his birth and education, accustomed always to a connection of excellent society, he was never confounded with others by the facility of interest and neighbourhood, but remained as independent in his thought as if he had lived alone.

PARKER HOUSE,

Monday night, *November*.

The secret of poetry is never explained, — is always new. We have not got farther than mere wonder at the delicacy of the touch, and the eternity it inherits. In every house a child that in mere play utters oracles, and knows not that they are such. ‘T is as easy as breath. ‘T is like this gravity, which holds the Universe together, and none knows what it is.

“The arch is the parent of the vault, the vault is the parent of the cupola.” —
EDWARD A. FREEMAN.

The boy grew to man and never asked a question, for every problem quickly developed its law.

[In the Spring, Mr. Emerson had been surprised by an invitation from the Independent Club of the University of Glasgow to accept their nomination as candidate for the office of Lord Rector for that year, the duty involved being the delivery of the annual address. Mr. Emerson was pleased with the compliment, and, after some consideration, and consultation with near friends, sent his acceptance, but with little expectation of election — especially as Disraeli was the candidate of the Conservative body of students. The campaign, as shown by manifestoes, songs, etc., constantly sent to Mr. Emerson through the mail by his enthusiastic adherents, was conducted with great spirit and excitement. In November he was notified of the result. He had received more than five hundred votes, and Disraeli was chosen Lord Rector by a majority of some two hundred.

In December, the collection of poems, *Parnassus*, was published, which owes its existence to the urgency and activity through several years of Mr. Emerson’s younger daughter. She loved to hear her father read poems and fragments collected through years in his “Black Anthology” (so called from its leather covers) and another. As his favourites were often hard to find, especially those

from the older poets, and not in such collections as were at hand, the idea of publishing such a volume pleased him, when suggested, and he said, and, when urged again another year, repeated, "We must." Then the zealous school - girl began herself to seize occasions to bring volumes of the poets to her father in his study and insist on his choosing, and began herself to copy the favourites. This went on through several years until she became Mrs. Forbes, and then, whenever she was with her father either in Milton or Concord, she succeeded in commanding attention to the work, and herself had the copying done. Thus, when the lecturing ceased, there was more time to attend to the selections. It should be said also that Mr. Emerson became less exacting in his criticisms of newer verses. In the preface to *Parnassus* he gives in the first paragraph an account of his selection of poems from his early youth, followed by a short essay on the poets.]

AUTHORS OR BOOKS QUOTED OR REFERRED TO IN JOURNAL FOR
1874

Alexis, *Lines on Sleep*; Plotinus; Dr. Charles R. Lowell; Charles Sumner; Edward A. Freeman, *Cathedral Architecture*; William Morris, *Proem to the Earthly Paradise*; Charles Warren Stoddard; Titus M. Coan, *The Tree of Life*.

JOURNAL

CABOT THE HELPER

MEETING OF OLD SCHOOLMATES

THE MINUTE MAN

LIFE AND THE CHILD

CARLYLE'S BIRTHDAY

JOURNAL LXVI

1875

(From Journal ST)

[The flame of Mr. Emerson's powers of writing, faint in the last three years, now flickered to extinction in the journals of this and the following year. Yet the instinct of work remained, and he passed most of each day in his study still working at arranging his manuscripts, and his daughter Ellen helped him as far as she could. In the year before, the question of who should deal with his manuscripts when he was gone had been in his thought, and Mr. Cabot's name was the one which he wistfully mentioned, but felt that the favour was so great that he could not venture to ask it from his friend. But now the case became urgent, for the promised book was called for by the successors of the English publishers who had first wrung consent from Mr. Emerson by threatening to collect a book of old *Dial* papers, and other rejected material, out of copyright. So, with Mr. Emerson's permission, the matter was presented for Mr. Cabot's consideration. He consented with entire kindness to give what help he could, and thus lifted the last load from Mr. Emerson's shoulders. The relief was complete and rendered his remaining years happy. At last he could see and come near to the friend whom he had valued at a distance for years. Mr. Cabot's frequent visits, often for several days at a time, were a great pleasure. Just how large Mr. Cabot's share in preparing for the press *Letter's and Social Aims* was he tells with entire frankness in the preface to that volume. Mr. Emerson furnished the matter, — almost all written years before, — but Mr. Cabot the arrangement and much of the selection. All was submitted to Mr. Emerson's approval, but he always spoke to his friend of the volume as "your book." Early in the year his crony of the Boston school - boy days, Dr. William H. Furness, wrote to him begging him to accept an invitation to lecture in Philadelphia and to be his guest. In the affectionate letter in answer, given in full in Mr. Cabot's *Memoir*, Mr. Emerson writes: "Well, what shall I say in defence of my stolid silence at which you hint? Why, only this:... that the gods have given you some draught of their perennial cup, and withheld the same from me. I have, for the last two years, written nothing in my once diurnal manuscripts; and never a letter that I could omit... Now comes your new letter with all your affectionate memories and preference fresh as roses.... I must obey it. My daughter Ellen, who goes always with my antiquity, insists that we shall.... My love to Sam Bradford." They went and the three playfellows had a happy reunion.

On March 18, Mr. Emerson read in Boston a lecture "True Oratory," probably nearly the same as the chapter "Eloquence" in *Letters and Social Aims*.

On the Nineteenth of April, the town celebrated the one hundredth anniversary of Concord Fight. President Grant and members of his Cabinet were present, the Governors of all the New England States with their escorting regiments, the Massachusetts General Court, the eminent writers of New England, and an immense concourse of people. At the end of the North Bridge (built anew for the occasion), where stood the American force, the bronze Minute Man made by Daniel C. French had been placed, and, when the throng arrived, Mr. Emerson unveiled it and made a short speech, the last he ever composed. Then, in the tent beyond, Lowell and Curtis delivered respectively the admirable Ode and Address.

Mr. Emerson's speech was not included in the *Works*. It is to be found in the Boston papers of the next day, the *Commonwealth* of April 27, and in the Concord pamphlet recording that celebration.]

In 1775, the patriotism in Massachusetts was so hot that it melted the snow, and the rye waved on the 19th April. Our farmers have never seen it so early. The very air and the soil felt the anger of the people.

It occurs that the short limit of human life is set in relation to the instruction man can draw of Nature. No one has lived long enough to exhaust its laws.

The delicacy of the touch and the eternity it inherits — In every house a child that in mere play utters oracles, and knows not that they are such: 't is as easy as breathing. 'T is like gravity which holds the universe together, and none knows what it is.

[It should be mentioned that Mr. Emerson had been appointed a member of the sub-committee on Philosophy at Harvard University for the year.]

"Eichhorn would have the order of studies and the establishment of rigor therein in our universities increased. Others agreed. Then Schleiermacher quite simply said, he did not see how each must prescribe the way by which he came to his knowledge: the routine was in our ways of study so demolished, the rules of all kinds so heaped, that to him nothing seemed better to do than to pull down all the universities. 'And what to put in their place?' they asked: 'That would it find of itself at once, and quite rightly,' answered Schleiermacher." — VARNHAGEN VON ENSE. *Blatter aus der preussischen Geschichte*, v, 44.

December 5, 1875.

Thomas Carlyle's 80th birthday.

JOURNAL

CARLYLE

MEDAL

UNIVERSITY OF VIRGINIA

LATIN SCHOOL

CENTENARY

ALLINGHAM'S POEM

JOURNAL LXVII

1876

(From Journal ST)

ON Saturday, February 5, received through the post-office a packet containing a silver medal, on one face bearing the profile of Carlyle, with the name "Thomas Carlyle" inscribed; on the other face, "In Commemoration 1875 December 4."

A card enclosed reads, "To R. W. Emerson from Alexander Macmillan" [London]; for which welcome and precious gift I wish to write immediately my thanks to the kind sender.

[In March, Mr. Emerson read a lecture in Lexington. An invitation from the Washington and Jefferson literary societies of the University of Virginia to give an address at their Commencement pleased him as a token from the South and he accepted it, and went with his daughter to Charlottesville in June. He was hospitably received, and read there "The Scholar" (in *Lectures and Biographical Sketches*).

On November 8, at a meeting of the Latin School Association in Boston, celebrating the hundredth anniversary of the reopening of the school after the evacuation of the city by the British, he gave his pleasant reminiscences of his school-days. His remarks were reported in the Boston papers of next day.

The year's journal, hardly begun, — or rather the journal of more than half a century, — closes with a poem of William Allingham, sent and signed by the Author, whom Mr. Emerson valued, enclosed between the leaves. It might seem, perhaps, a grateful tribute of a disciple to a master.]

POESIS HUMANA

What is the Artist's duty?

His work, however wrought,
Shape, color, word or tone
Is to make better known
(Himself divinely taught),

To praise and celebrate,
Because his love is great,
The lovely miracle
Of Universal Beauty.
This message would he tell.

This message is his trust,
Amidst the day's crude strife,
With all his heart and soul,
With all his skill and strength
Seeking to add at length, —

(Because he may and must, —)

Some atom to the whole
Of man's inheritance;
Some fineness to the glance,
Some richness to the life.

If he shall deal perforce
With evil and with pain,
With horror and affright,
He does it to our gain;
Makes felt the mighty course
Of law — whose atmosphere
Is beauty and delight;
Nay, these its very source.

His work, however small,
Itself hath rounded well, —

Even like Earth's own ball
In softly tinted shell
Of air. His magic brings
The mystery of things;
It gives dead substance wings;
It shows in little, much;

And by an artful touch
Conveys the hint of all.

(From Ledgers of uncertain date)

[Mr. Emerson, with all the temperamental difficulty he found in arrangement of the abundant material received from Nature and man, had something of business method in his bookkeeping. Besides his Journals — day-books — he had also a few books which might be called ledgers, into which irregularly he copied, or wrote, good material according to subject. Such were IL (Intellect), PY (Poetry), PH (Philosophy), LI (Literature), TO (Tolerance?) and others less easily guessed.

The editors have ventured to give here a few concluding passages, of uncertain date, from some of these manuscripts, which they do not find among the journal selections, or in the *Works*.]

(From PH)

Idealism. Is it thought that to reduce the Divine mode of existence to a state of ideas is deducting with a high hand of idealism and unfastening the logic of the Universe? We are mammals of a higher element, and, as the whale must come to the top of the water for air, we must go to the top of the air, now and then, for thought.

The guiding star to the arrangement and use of facts is in your leading thought. The heaven of Intellect is profoundly solitary, it is unprofitable, it is to be despised and rejected of men. If I recall the happiest hours of existence, those which really make a man an inmate of a better world, it is a lonely and undescribed joy, but it is the door that leads to joys ear hath not heard nor eye seen.

Each power of the mind is well in itself; as, perception, or memory: but we are first sensible of the miracle when these powers combine or interact. Mathematic combinations are potent only in the first degree, until powerful memory is joined to them; then you have Archimedes and Laplace.

Sensibility. The poorest place has all the wealth of the richest, as soon as genius arrives.... Ah, could I quicken your attention to your society by whispering to you its immense wealth of nature, and genius's possibility. There are persons who might take their seat on the throne of this globe without real or false shame.

The real estate of the Universe is Space and Matter; the proprietor is Intellect,

and what belongs to Intellect, Will or Good Will.

Abnormal Minds. William Blake, Swedenborg, Behmen, and what other men of abnormal experience, — as, for example, some trustworthy second-sighted or forewarned seers or dreamers who are apprised in one country of the death or danger of their twin or brother in another country (if ever one could get a proven fact of this kind), — are important examples each to the metaphysician; Blake [also], who affirmed that he did not see the phenomenon, as the marble, the harp, or the cloud, but looked ever through it, and saw its meaning. The Zoroasters and Sibyls and oracular men to whom we owe some profoundest sentences are essential parts of our knowledge of the Human Mind, or the possible omnificence (latent but for these flashes) of the Intellect. The Hindu specimens have their value. Every such mind is a new key to the secret of Mind.

Wonder. The most advanced man in his most advanced moment — contemplating himself and Nature — sees how rude an idiot he is, how utterly unknown is the Cause and the Necessity, — its roots and its future all unknown, — a gigantic dream.

Divination. I think that not by analytic inspection, but by sympathy and piety, we correct our metaphysics. Thus Hegel and Kant have become possible by the extraordinary wealth of all natural sciences, which waked and tested every faculty of thought, and thus finer distinctions could be felt and expressed.

The analysis of Intellect and Nature which the grand masters, Heraclitus, Parmenides, Plato, Spinoza, Hume, Kant, Schelling, Hegel, have attempted are of primary value to Science, like the work of the great geometers and mathematicians, and cannot be spared or over praised: they are dear to us as vindications of the sufficiency of the intellect, and pledges of future advances. They seem to the scholar to degrade all inferior and less ambitious observation as needless and of no worth. They freeze his invention and hope. They write *Ne plus ultra* on the dizzy pinnacle to which in the thin air their almost winged footsteps have climbed.

They have marked, once for all, distinctions which are inherent in the sound mind, and which we must henceforth respect.

The instinct that led Heraclitus and Parmenides and Lucretius to write in verse was just, however imperfect their success. The world lies so in heaps that it is not strange that there should yet be no painters, no Homer of our thoughts, far higher than the Homer of Greek thoughts.

Intellect. There is no age to Intellect. Read Plato at twenty or at sixty years, the impression is about equal.

The joy of the thinker in detecting his errors:

— I have more enjoyed, in the last hours of finishing a chapter, the insight attained of how the truths really stand, than I suffer from seeing the confusion I had left in the statement.

Inspiration. Our music-box only plays certain tunes, and rarely a sweeter strain: but we are assured that our barrel is not a dead, but a live barrel, nay, is only a part of the tune, and changes like that. A larger dialectic conveys a sense of power and feeling of terror unknown; and Henry Thoreau said, “that a thought would destroy most persons,” and yet we apologize for the power, and bow to the persons.

I want an electrical machine. Slumbering power we have, but not excited, collected, and discharged. If I should be honest, I should say, my exploring of life presents little or nothing of respectable event or action, or, in myself, of a personality. Too composite to offer a positive unity: but it is a recipiency, a percipiency. And I, and far weaker persons (if it were possible) than I, who pass for nothing but imbeciles, do yet affirm by our own percipiency the presence and perfection of Law, as much as all the martyrs.

A man’s style is his mind’s voice. Wooden minds, wooden voices. Truth is shrill as a fife, various as a panharmonium.

Transition. Transition the organic destiny of the mind.

The value of a trope is that the hearer is one. ‘T is the great law of Nature, that the more transit, the more continuity; or, we are immortal by force of transits. We ask a selfish, selfsame immortality. Nature replies by steeping us in the sea which girds the seven worlds, and makes us free of them all. At any pitch, a higher pitch. What we call the Universe to-day is only a symptom or omen of that to which we are passing. Every atom is on its way onward. The universe circulates in thought. Every thought is fleeting. Our power lies in transition, there is said to be a certain infinite of power which is availed us in the power-press.

There’s not only your talent, but your spirit. Easy to give your colour or character to any assembly, if your spirit is better than the speaker’s. [My brother] Edward, with his wit, never failed to check any trifling with morals in his

presence. 'T is impossible that the Divine Order be broken without resistance, and the remorse, wraths, indecisions, violence, and runnings away into solitude of men are the checks and recoils.

The wonder of the world in good hours — I might say whenever we go home from the streets — is, that so many men of various talent, including men of eminent special ability, do not recognize the supreme value of character. In history we appreciate it fully. We all read Plutarch with one mind, and unanimously take sides with Agesilaus in Sparta, with Aristides, Phocion, Demosthenes, in Athens, with Epaminondas in Thebes, and wonder how the Athenians could be such fools as to take such bravos as the Créons against these grave, just, and noble heroes. In Rome, we give our suffrages again to Scipio, Regulus, Paulus Æmilius and Cato, and Trajan, and Marcus Aurelius against their profligate rivals. In England, we know the worth of Sidney, Alfred, of More, of Burke. In America, we see the purity and exceptional elevation of Washington. And, at this moment, we see in the English Minister at the head of the Government the immense comfort and trust reposed in a competent minister of a high and blameless character.

Nature. The secret of Nature glimmers to all eyes in these days, namely, that her ulterior meaning dwarfs all her wonders before the grandeur to which she leads us on. For she apprises man that he converses with reality, with the cause of causes, and her fairest pictures are only part of the immense procession of effects.

Mind and Nature. On this (unity) the emphasis of heaven and earth is laid. Nature is brute, but as this animates it, — only a language, a noun, for the poet. Nature always the effect; Mind the flowing cause. Nature, we find, is as is our sensibility; hostile to ignorance, — plastic, transparent, delightful to knowledge. Mind contains the law; History is the slow and atomic unfolding: the Universe, at last, only prophetic, or, shall we say, symptomatic of vaster interpretation and result.

(From TO)

'T is fine, that Hegel “dared not unfold or pursue the surprising revolutionary conclusions ‘ of his own method,” but not the less did the young Hegelians consummate the work, so that quickly, in all departments of life, in natural sciences, politics, ethics, laws, and in art, the rigorous Dogma of Immanent Necessity exterminated all the old tottering, shadowy forms. 'Tis like Goethe

and Wordsworth disowning their poetry.

Room must be allowed for the skepticism. It was always in use that certain belligerent minds had a suicidal, a scorpion-sting-scorpion talent, as, it is said, the gastric juices sometimes eat up the stomach: so these have the whim to go behind the Institutions also, and ask the foundation of the foundation, "the guide of my guide," as M. R. asked me. And there is, as my brother Edward said, in boyhood, always "the other way"; or, as Shakspeare says, "A plague of opinion! a man can wear on both sides, like a leather jerkin."

They are all cracked; every one of them has his egotism, or mania, or gluttony, or vulgarity, or flattery of some kind, as he has his rheumatism, or scrofula, or sixth toe, or other flaw in his body. All I want is his sanity, his specialty of acuteness, his fluency, his knack; and I should as soon think of asking after the old shoes of an observer as after his gluttonies, or his debts, or his conceit, or whatever infirmities. "Did the troops carry the battery?"

"Sire, here is the list of the wounded."

"Take that to the surgeon. Did they carry the battery? *Vive la France!*"

Allowance always for the exempts, who, by strong call of Nature, [haunt] the pond-sides, groping for plants (as Bishop Turpin for the talisman which Charlemagne threw into the pond): or, lost in the allurements of colour, mix pigments on a pallet; or study the surfaces and mantles and runes on seashells, heedless of France or England or Prussia, or what the Pope, the Emperor, the Congress, or the stock exchange, may do; or Carnot buried in his mathematics; or Kant in his climbing from round to round the steps of the mysterious ladder which is the scale of metaphysic powers. These are always justified sooner or later: point for point, the whole noisy fracas of politics or interest is truly and divinely recognized and counted for them, there in their spiritual coil or *cælum*. There is Sardinia, and London, Rome, and Vienna, and Washington, sternly abstracted into its salt and essence.

Transition. Ever the ascending effort. The Greeks and the Scandinavians hold that men had one name and the gods another for heaven, hell, water, cloud, and mountain. And the Edda, when it has named and dealt with the Asa and the Elfin, speaks of the "higher gods." See the ascending scale of Plato and especially of Plotinus.

Natural Sciences have made great stride by means of Hegel's dogma which put Nature, and thought, matter and spirit, in right relation, one the expression or

externalization of the other. Observation was the right method, and metaphysics was Nature and subject to observation also. But (Hegel and all his followers) shunned to apply the new arm to what most of all belonged to it, to anthropology, morals, politics, *etc.* For this at once touched conservatism, church, jurisprudence, *etc.* Therefore the Natural Sciences made great progress and philosophy none. But Natural Science, without philosophy, without ethics, was unsouled. Presently Natural Science, which the governments have befriended, will disclose the liberalizing as well as the dynamic strength; then Natural Science will be presented as, e g., geology, astronomy, ethnology, as contradicting the Bible. Difference of the two is: Natural Sciences, a circle, Morals and Metaphysics a line of advance; one the basis, the other the completion.

Not only Transition but Melioration. The good soul took you up, and showed you for an instant of time something to the purpose. Well, in this way, it educates the youth of the Universe, — warms, suns, refines each particle; then drops the little channel, through which the life rolled beatific, to the ground, — touched and educated by a moment of sunshine, to be the fairer material for future channels, through which the old glory shall dart again in new directions, until the Universe shall have been shot through and through, tilled with light.

With this eternal demand for more which belongs to our modest constitutions, how can we be helped? The gods themselves cannot help us; they are just as badly off themselves.

Genius unsettles everything. It is fixed, is it? that after the reflective age arrives, there can be no quite rustic and united man born? Yes, quite fixed. Ah! this unlucky Shakspeare! and ah! this hybrid Goethe! make a new rule, my dear, can you not? and to-morrow Genius shall stamp on it with his starry sandals.

Genius consists neither in improvising, nor in remembering, but in both.

Writing should be like the settlement of dew on the leaf, of stalactites on the cavern wall, the deposit of flesh from the blood, of woody fibre from the sap. The poem is made up of lines each of which filled the sky of the poet in its turn; so that mere synthesis produces a work quite superhuman. For that reason, a true poem by no means yields all its virtue at the first reading, but is best when we have slowly and by repeated attention felt the truth of all the details.

Fame is a signal convenience. Do we read all the authors, to grope our way to the best? No, but the world selects for us the best, and we select from the best, our best.

Mankind have ever a deep common sense that guides their judgments, so that

they are always right in their fames. How strange that Jesus should stand at the head of history, the first character of the world, without doubt, but the unlikeliest of all men, one would say, to take such a ground in such a world. Yet he dates our chronology. Well, as if to indemnify themselves for this vast concession to truth, they must put up the militia — Alexander, Caesar, Napoleon, *etc.* — into the next place of proclamation. Yet 'tis a pit to Olympus, this fame to that; or were by the place of Plato, Homer, Pindar, *etc.*

Thoughts. Against Fate, Thought; for, though that force be infinitely small, infinitesimal against the bulky masses of Nature, and the universal chemistry, 't is of that subtlety that it homeopathically doses the system.

Thought is nothing but the circulations made harmonious. Every thought, like every man, wears, at its first emergence from the creative night, its rank stamped on it: — this is a witticism, and this is a power....

Thoughts come to those who have thoughts, as banks lend to capitalists and not to paupers. Every new thought which makes day in our souls has its long morning twilight to announce its coming. Add the aurora that precedes a beloved name.

The distinction of a man is that he thinks. Let that be so. For a man cannot otherwise compare with a steam-engine or the self-acting spinning-mule which is never tired, and makes no fault. But a man thinks and adapts. A man is not a man, then, until he have his own thoughts: that first; then, that he can detach them. But what thoughts of his own are in Abner or Guy? They are clean, well-built men enough to look at, have money, and houses and books, but they are not yet arrived at humanity, but remain idiots and minors.

[*Language.*] You can find an old philosopher who has anticipated most of your theses; but, if you cannot find the Antisthenes or the Proclus that did, you can find in *language* that some unknown man has done it, inasmuch as words exist which cover your thought.

Thus there is a day when the boy arrives at wanting a word to express his sense of relation between two things or two classes of things and finds the word *analogy* or identity of ratio. A day comes when men of all countries are compelled to use the French word *solidarité* to signify inseparable individualities.

(From IL)

Genius. Genius loves truth, and clings to it, so that what it says and does is not in

a byroad visited only by curiosity, but on the great highways of the world, which were before the Appian Way, and will long outlast it, and which all souls must travel.

Genius delights in statements which are themselves true, which attack and wound any who opposes them.

They called Ideas Gods, and worshipped intellect. They dared not contravene with knacks and talents the divinity which they recognized in genius.

When the Greeks in the Iliad perceived that the gods mixed in the fray, they drew off.

Wonderful is the Alembic of Nature, through which the sentiment of tranquillity in the mind of the sculptor becomes, at the end of his fingers, a marble Hesperus: but the feeling manages somehow to shed itself over the stone, as if that were porous to love and truth.

Truth. Truth does not come with jangle and contradiction, but it is what all sects accept, what recommends their tenets to right-minded men. Truth is mine, though I never spoke it.

“Unquestionable truth is sweet, though it were the announcement of our dissolution.” — H. D. Thoreau.

People value thoughts, not truths; truth, not until it has passed through the mould of some man's mind, and so is a curiosity, and an individualism. But ideas, as powers, they are not up to valuing. We say that the characteristic of the Teutonic race is, to prefer an idea to a phenomenon; and of the Celtic, to prefer the phenomenon to the idea. Higher is it to prize the power above the thought, i e., above the idea individualized or domesticated.

Subjectiveness. Dangerously great, immoral even in its violence of power. The man sees as he is. Add the least power of vision, and the tyranny of duties slackens. I am afraid to trust you with the statement. The genius of Bonaparte gilds his crimes to us; but that is only a hint of what it was to him. It converts every obstruction into facilities and fuel of force; dwarfs into giants. His aim, so dim before, beams like the morning star, and every cloud is touched by its rays....

Subjectiveness itself is the question, and Nature is the answer: the Universe is the blackboard on which we write. Philosophy is called the homesickness of the soul.

Automatic Action of Thought. There is a process in the mind analogous to crystallization in the mineral. I think of some fact. In thinking of it, I am led to more thoughts, which show themselves, first partially, and afterwards more fully. But in them I see no order. When I would present them to others, they have no beginning. Leave them now, and return later. Do not force them into arrangement, and by and by you shall find they will take their own order, and the order they assume is divine.

Thought has its own foregoers and followers, that is, its own current. Thoughts have a life of their own. A thought takes its own true rank in the memory by surviving other thoughts that were preferred.

But also thought ranks itself at its first emergence.

Religion. Religion is the perception of that power which constructs the greatness of the centuries out of the paltriness of the hours.

Fancy and Imagination. Examples. Henry Thoreau writes, —

“The day has gone by with its wind, like the wind of a cannon ball, and now far in the west it blows; by that dim - colored sky you may track it.” (June 18, 1853.) “The Solidago Nemoralis now yellows the dry fields with its recurved standard a little more than a foot high, marching to the holy land, a countless host of crusaders.” (August 23.) Flight of eagle. “Circling, or rather looping along westward.”

“And where are gone the bluebirds, whose warble was wafted to me so lately like a blue wavelet through the air?”

“The air over these fields is a foundry full of moulds for casting the bluebird’s warbles.” (Feb. 18, 1857.)

“The bird withdrew by his aërial turnpikes.” (Oct. 5, 1857.)

Scholar s Creed. I believe that all men are born free and equal *quoad* the laws.

That all men have a right to their life, *quoad* the laws.

I believe in freedom of opinion religious and political.

I believe in universal suffrage, in public schools, in free trade.

I believe the soul makes the body.

I believe that casualty is perfect.

(From EO)

Fate. The opinions of men lose all worth to him who observes that they are accurately predictable from the ground of their sect.

Well, they are still valuable as representatives of that fagot of circumstances, if they are not themselves primary parties. But even the chickens running up and down, and pecking at each white spot and at each other as ridden by chicken nature, seem ever and anon to have a pause of consideration, then hurry on again to be chickens. Men have more pause.

We are to each other results. As my perception or sensibility is exalted, I see the genesis of your action, and of your thought. I see you in your debt, and fountains; and, to my eye, instead of a little pond of life, you are a rivulet fed by rills from every plain and height in Nature and antiquity; and reviving a remote origin from the source of things.

May and must. The *musts* are a safe company to follow, and even agreeable. If we are whigs, let us be whigs of Nature and Science, and go for the necessities. The *must* is as fixed in civil history and political economy as in chemistry. How much will has been expended to extinguish the Jews! Yet the tenacities of the race resist and prevail. So the Negro sees with glee, through all his miseries, his future possession of the West Indies (and of the Southern States of America) assured. For he accumulates and buys, whilst climate, etc., favour him, against the white.

Souls with a certain quantity of light are in excess, and, once for all, belong to the moral class, — what animal force they may retain, to the contrary, notwithstanding. Souls with less light, — it is chemically impossible that they be moral, what talent or good they have, to the contrary notwithstanding; and these belong to the world of Fate, or animal good: the minors of the universe, not yet twenty-one, — not yet voters, — not robed in the *toga virilis*.

Fate. We are talkative, but Heaven is silent. I have puzzled myself like a mob of writers before me in trying to state the doctrine of Fate for the printer. I wish to sum the conflicting impressions by saying that all point at last to an Unity which inspires all, but disdains words and passes understanding.... The First Cause; as soon as it is uttered, it is profaned. The thinker denies personality out of piety, not out of pride. It refuses a personality which is instantly imprisoned in human measures.

“It stands written on the Gate of Heaven Woe to him who suffers himself to be betrayed by Fate.”

HAFIZ.

I have heard that they seem fools who allow themselves to be engaged and compromised in undertakings, but that at last it appears quite otherwise, and to the gods otherwise from the first. I affix a like sense to this text of Hafiz: for he who loves is not betrayed, but makes an ass of Fate.

(From PY)

[*Man's Eastern Horizon.*] The men in the street fail to interest us, because at first view they seem thoroughly known and exhausted. As if an inventory of all man's parts and qualities had been taken.... But after the most exact count has been taken, there remains as much more, which no tongue can tell. This remainder is that which genius works upon. This is that which the preacher, the poet, the artist, and Love, and Nature, speak unto, the region of power and aspiration. These men have a secret persuasion, that, as little as they pass for in the world, they are immensely rich in expectancy and power. The best part of truth is certainly that which hovers in gleams and suggestions unpossessed before man. His recorded knowledge is dead and cold. But this chorus of thoughts and hopes, these dawning truths, like great stars just lifting themselves into his horizon, they are his future, and console him for the ridiculous brevity and meanness of his civic life.

Psychology is fragmentarily taught. One man sees a sparkle or shimmer of the truth, and reports it, and his saying becomes a legend or golden proverb for all ages. And other men see and try to say as much, but no man wholly and well.

We see what we make. We can see only what we make. All our perceptions, all our desires, are procréant. Perception has a destiny....

[In the last six years of his life, after the journals had no entries save for a few memoranda, Mr. Emerson, though he wrote nothing, — could hardly answer a letter, — still, occasionally, when urged, read a discourse near home, among old friends. On these occasions his daughter always sat near him to make sure that the sheets of his manuscript did not get out of order, or even to prompt him, in case he mistook a word.

In April, 1877, he read his affectionate paper on his native city “Boston” at the Old South Church, and, a year later, in the same place, “The Fortune of the Republic.”

In the Spring of 1879, he read “Eloquence” at Cambridge, and also “The Preacher” in The Divinity School Chapel, where, forty-one years before, he had startled his hearers with the Address which banished him from the University for so many years.

The School of Philosophy was established in Concord in that year by Mr. Alcott's friends, and there Mr. Emerson read “Memory,” and in the following

year, "Aristocracy," to its assembled company.

In 1880, it has been said, Mr. Emerson read his hundredth lecture to his townsfolk in The Concord Lyceum.

His last public reading was probably his paper on Carlyle (See *Lectures and Biographical Sketches*) before the Massachusetts Historical Society.

It is a pleasant circumstance to remember that in his last years Mr. Emerson took from the study shelves the volumes of his own printed works. They seemed new to him, and when his daughter came in, he looked up, smiling, and said, "Why, these things are really very good."

To readers of these journals — talks of a poet and scholar, who was also a good citizen of the Republic, with himself in varying moods — the words of the East Indian Mozoomdar may seem appropriate: — "Yes, Emerson had all the wisdom and spirituality of the Brahmans. Brahmanism is an acquirement, a state of being rather than a creed."]

NOTE.

My thanks are due to the members of Mr. Emerson's family, and the other friends who kindly assisted me by lending interesting letters and furnishing valuable information.

The Index, carefully made by Mr. J.H. Wiggin, was revised and somewhat abridged by myself.

OLIVER WENDELL HOLMES.

BOSTON, November 25, 1884.

*”Thou wert the morning star among the living,
Ere thy fair light had fled:
Now, having died, thou art as Hesperus, giving
New splendor to the dead.”*

INTRODUCTION.

“I have the feeling that every man’s biography is at his own expense. He furnishes not only the facts, but the report. I mean that all biography is autobiography. It is only what he tells of himself that comes to be known and believed.”

So writes the man whose life we are to pass in review, and it is certainly as true of him as of any author we could name. He delineates himself so perfectly in his various writings that the careful reader sees his nature just as it was in all its essentials, and has little more to learn than those human accidents which individualize him in space and time. About all these accidents we have a natural and pardonable curiosity. We wish to know of what race he came, what were the conditions into which he was born, what educational and social influences helped to mould his character, and what new elements Nature added to make him Ralph Waldo Emerson.

He himself believes in the hereditary transmission of certain characteristics. Though Nature appears capricious, he says, “Some qualities she carefully fixes and transmits, but some, and those the finer, she exhales with the breath of the individual, as too costly to perpetuate. But I notice also that they may become fixed and permanent in any stock, by painting and repainting them on every individual, until at last Nature adopts them and bakes them in her porcelain.”

*

We have in New England a certain number of families who constitute what may be called the Academic Races. Their names have been on college catalogues for generation after generation. They have filled the learned professions, more especially the ministry, from the old colonial days to our own time. If aptitudes for the acquisition of knowledge can be bred into a family as the qualities the sportsman wants in his dog are developed in pointers and setters, we know what we may expect of a descendant of one of the Academic Races. Other things being equal, he will take more naturally, more easily, to his books. His features will be more pliable, his voice will be more flexible, his whole nature more plastic than those of the youth with less favoring antecedents. The gift of genius is never to be reckoned upon beforehand, any more than a choice new variety of pear or peach in a seedling; it is always a surprise, but it is born with great advantages when the stock from which it springs has been long under cultivation.

These thoughts suggest themselves in looking back at the striking record of the family made historic by the birth of Ralph Waldo Emerson. It was remarkable for the long succession of clergymen in its genealogy, and for the large number of college graduates it counted on its rolls.

A genealogical table is very apt to illustrate the “survival of the fittest,” — in the estimate of the descendants. It is inclined to remember and record those ancestors who do most honor to the living heirs of the family name and traditions. As every man may count two grandfathers, four great-grandfathers, eight great-great-grandfathers, and so on, a few generations give him a good chance for selection. If he adds his distinguished grandmothers, he may double the number of personages to choose from. The great-grandfathers of Mr. Emerson at the sixth remove were thirty-two in number, unless the list was shortened by intermarriage of relatives. One of these, from whom the name descended, was Thomas Emerson of Ipswich, who furnished the staff of life to the people of that wonderfully interesting old town and its neighborhood.

His son, the Reverend Joseph Emerson, minister of the town of Mendon, Massachusetts, married Elizabeth, daughter of the Reverend Edward Bulkeley, who succeeded his father, the Reverend Peter Bulkeley, as Minister of Concord, Massachusetts.

Peter Bulkeley was therefore one of Emerson’s sixty-four grandfathers at the seventh remove. We know the tenacity of certain family characteristics through long lines of descent, and it is not impossible that any one of a hundred and twenty-eight grandparents, if indeed the full number existed in spite of family admixtures, may have transmitted his or her distinguishing traits through a series of lives that cover more than two centuries, to our own contemporary. Inherited qualities move along their several paths not unlike the pieces in the game of chess. Sometimes the character of the son can be traced directly to that of the father or of the mother, as the pawn’s move carries him from one square to the next. Sometimes a series of distinguished fathers follows in a line, or a succession of superior mothers, as the black or white bishop sweeps the board on his own color. Sometimes the distinguishing characters pass from one sex to the other indifferently, as the castle strides over the black and white squares. Sometimes an uncle or aunt lives over again in a nephew or niece, as if the knight’s move were repeated on the squares of human individuality. It is not impossible, then, that some of the qualities we mark in Emerson may have come from the remote ancestor whose name figures with distinction in the early history of New England.

The Reverend Peter Bulkeley is honorably commemorated among the worthies consigned to immortality in that precious and entertaining medley of fact and fancy, enlivened by a wilderness of quotations at first or second hand, the *Magnolia Christi Americana*, of the Reverend Cotton Mather. The old chronicler tells his story so much better than any one can tell it for him that he must be allowed to speak for himself in a few extracts, transferred with all their typographical idiosyncrasies from the London-printed, folio of 1702.

“He was descended of an Honourable Family in *Bedfordshire*. — He was born at *Woodhil* (or *Odel*) in *Bedfordshire*, *January 31st*, 1582.

“His *Education* was answerable unto his *Original*; it was *Learned*, it was *Genteel*, and, which was the top of all, it was very *Pious*: At length it made him a *Batchellor of Divinity*, and a Fellow of *Saint John’s Colledge* in *Cambridge*.

“When he came abroad into the World, a good benefice befel him, added unto the estate of a Gentleman, left him by his Father; whom he succeeded in his Ministry, at the place of his Nativity: Which one would imagine *Temptations* enough to keep him out of a *Wilderness*.”

But he could not conscientiously conform to the ceremonies of the English Church, and so, —

”When Sir *Nathaniel Brent* was Arch-Bishop *Laud’s* General, as Arch-Bishop *Laud* was *another’s*, Complaints were made against Mr. *Bulkly*, for his Non-Conformity, and he was therefore Silenced.

“To *New-England* he therefore came, in the Year 1635; and there having been for a while, at *Cambridge*, he carried a good Number of Planters with him, up further into the *Woods*, where they gathered the *Twelfth Church*, then formed in the Colony, and call’d the Town by the Name of *Concord*.

“Here he *buried* a great Estate, while he *raised* one still, for almost every Person whom he employed in the Affairs of his Husbandry. —

“He was a most excellent *Scholar*, a very-*well read* Person, and one, who in his advice to young Students, gave Demonstrations, that he knew what would go to make a *Scholar*. But it being essential unto a *Scholar* to love a *Scholar*, so did he; and in Token thereof, endowed the Library of *Harvard-Colledge* with no small part of his own.

“And he was therewithal a most exalted *Christian* — In his Ministry he was another *Farel*, *Quo nemo tonuit fortius* — And the observance which his own

People had for him, was also paid him from all sorts of People throughout the Land; but especially from the Ministers of the Country, who would still address him as a *Father*, a *Prophet*, a *Counsellor*, on all occasions.”

These extracts may not quite satisfy the exacting reader, who must be referred to the old folio from which they were taken, where he will receive the following counsel: —

“If then any Person would know what Mr. *Peter Bulkly* was, let him read his Judicious and Savory Treatise of the *Gospel Covenant*, which has passed through several Editions, with much Acceptance among the People of God.” It must be added that “he had a competently good Stroke at Latin Poetry; and even in his Old Age, affected sometimes to improve it. Many of his Composure are yet in our Hands.”

It is pleasant to believe that some of the qualities of this distinguished scholar and Christian were reproduced in the descendant whose life we are studying. At his death in 1659 he was succeeded, as was mentioned, by his son Edward, whose daughter became the wife of the Reverend Joseph Emerson, the minister of Mendon who, when that village was destroyed by the Indians, removed to Concord, where he died in the year 1680. This is the first connection of the name of Emerson with Concord, with which it has since been so long associated.

Edward Emerson, son of the first and father of the second Reverend Joseph Emerson, though not a minister, was the next thing to being one, for on his gravestone he is thus recorded: “Mr. Edward Emerson, sometime Deacon of the first church in Newbury.” He was noted for the virtue of patience, and it is a family tradition that he never complained but once, when he said mildly to his daughter that her dumplings were somewhat harder than needful,— “*but not often.*” This same Edward was the only break in the line of ministers who descended from Thomas of Ipswich. He is remembered in the family as having been “a merchant in Charlestown.”

Their son, the second Reverend Joseph Emerson, Minister of Malden for nearly half a century, married Mary, the daughter of the Reverend Samuel Moody, — Father Moody, — of York, Maine. Three of his sons were ministers, and one of these, William, was pastor of the church at Concord at the period of the outbreak of the Revolutionary War.

As the successive generations narrow down towards the individual whose life we are recalling, the character of his progenitors becomes more and more important and interesting to the biographer. The Reverend William Emerson, grandfather of Ralph Waldo, was an excellent and popular preacher and an ardent and devoted patriot. He preached resistance to tyrants from the pulpit, he

encouraged his townsmen and their allies to make a stand against the soldiers who had marched upon their peaceful village, and would have taken a part in the Fight at the Bridge, which he saw from his own house, had not the friends around him prevented his quitting his doorstep. He left Concord in 1776 to join the army at Ticonderoga, was taken with fever, was advised to return to Concord and set out on the journey, but died on his way. His wife was the daughter of the Reverend Daniel Bliss, his predecessor in the pulpit at Concord. This was another very noticeable personage in the line of Emerson's ancestors. His merits and abilities are described at great length on his tombstone in the Concord burial-ground. There is no reason to doubt that his epitaph was composed by one who knew him well. But the slabs which record the excellences of our New England clergymen of the past generations are so crowded with virtues that the reader can hardly help inquiring whether a sharp bargain was not driven with the stonecutter, like that which the good Vicar of Wakefield arranged with the portrait-painter. He was to represent Sophia as a shepherdess, it will be remembered, with as many sheep as he could afford to put in for nothing.

William Emerson left four children, a son bearing the same name, and three daughters, one of whom, Mary Moody Emerson, is well remembered as pictured for us by her nephew, Ralph Waldo. His widow became the wife of the Reverend Ezra Ripley, Doctor of Divinity, and his successor as Minister at Concord.

The Reverend William Emerson, the second of that name and profession, and the father of Ralph Waldo Emerson, was born in the year 1769, and graduated at Harvard College in 1789. He was settled as Minister in the town of Harvard in the year 1792, and in 1799 became Minister of the First Church in Boston. In 1796 he married Ruth Haskins of Boston. He died in 1811, leaving five sons, of whom Ralph Waldo was the second.

The interest which attaches itself to the immediate parentage of a man like Emerson leads us to inquire particularly about the characteristics of the Reverend William Emerson so far as we can learn them from his own writings and from the record of his contemporaries.

The Reverend Dr. Sprague's valuable and well-known work, "Annals of the American Pulpit," contains three letters from which we learn some of his leading characteristics. Dr. Pierce of Brookline, the faithful chronicler of his time, speaks of his pulpit talents as extraordinary, but thinks there was not a perfect sympathy between him and the people of the quiet little town of Harvard, while he was highly acceptable in the pulpits of the metropolis. In personal appearance he was attractive; his voice was melodious, his utterance distinct, his manner agreeable. "He was a faithful and generous friend and knew how to forgive an

enemy. — In his theological views perhaps he went farther on the liberal side than most of his brethren with whom he was associated. — He was, however, perfectly tolerant towards those who differed from him most widely.”

Dr. Charles Lowell, another brother minister, says of him, “Mr. Emerson was a handsome man, rather tall, with a fair complexion, his cheeks slightly tinted, his motions easy, graceful, and gentlemanlike, his manners bland and pleasant. He was an honest man, and expressed himself decidedly and emphatically, but never bluntly or vulgarly. — Mr. Emerson was a man of good sense. His conversation was edifying and useful; never foolish or undignified. — In his theological opinions he was, to say the least, far from having any sympathy with Calvinism. I have not supposed that he was, like Dr. Freeman, a Humanitarian, though he may have been so.”

There was no honester chronicler than our clerical Pepys, good, hearty, sweet-souled, fact-loving Dr. John Pierce of Brookline, who knew the dates of birth and death of the graduates of Harvard, starred and unstarred, better, one is tempted to say (*Hibernice*), than they did themselves. There was not a nobler gentleman in charge of any Boston parish than Dr. Charles Lowell. But after the pulpit has said what it thinks of the pulpit, it is well to listen to what the pews have to say about it.

This is what the late Mr. George Ticknor said in an article in the “Christian Examiner” for September, 1849.

“Mr. Emerson, transplanted to the First Church in Boston six years before Mr. Buckminster’s settlement, possessed, on the contrary, a graceful and dignified style of speaking, which was by no means without its attraction, but he lacked the fervor that could rouse the masses, and the original resources that could command the few.”

As to his religious beliefs, Emerson writes to Dr. Sprague as follows: “I did not find in any manuscript or printed sermons that I looked at, any very explicit statement of opinion on the question between Calvinists and Socinians. He inclines obviously to what is ethical and universal in Christianity; very little to the personal and historical. — I think I observe in his writings, as in the writings of Unitarians down to a recent date, a studied reserve on the subject of the nature and offices of Jesus. They had not made up their own minds on it. It was a mystery to them, and they let it remain so.”

Mr. William Emerson left, published, fifteen Sermons and Discourses, an Oration pronounced at Boston on the Fourth of July, 1802, a Collection of Psalms and Hymns, an Historical Sketch of the First Church in Boston, besides

his contributions to the “Monthly Anthology,” of which he was the Editor.

Ruth Haskins, the wife of William and the mother of Ralph Waldo Emerson, is spoken of by the late Dr. Frothingham, in an article in the “Christian Examiner,” as a woman “of great patience and fortitude, of the serenest trust in God, of a discerning spirit, and a most courteous bearing, one who knew how to guide the affairs of her own house, as long as she was responsible for that, with the sweetest authority, and knew how to give the least trouble and the greatest happiness after that authority was resigned. Both her mind and her character were of a superior order, and they set their stamp upon manners of peculiar softness and natural grace and quiet dignity. Her sensible and kindly speech was always as good as the best instruction; her smile, though it was ever ready, was a reward.”

The Reverend Dr. Furness of Philadelphia, who grew up with her son, says, “Waldo bore a strong resemblance to his father; the other children resembled their mother.”

Such was the descent of Ralph Waldo Emerson. If the ideas of parents survive as impressions or tendencies in their descendants, no man had a better right to an inheritance of theological instincts than this representative of a long line of ministers. The same trains of thought and feeling might naturally gain in force from another association of near family relationship, though not of blood. After the death of the first William Emerson, the Concord minister, his widow, Mr. Emerson’s grandmother, married, as has been mentioned, his successor, Dr. Ezra Ripley. The grandson spent much time in the family of Dr. Ripley, whose character he has drawn with exquisite felicity in a sketch read before The Social Circle of Concord, and published in the “Atlantic Monthly” for November, 1883. Mr. Emerson says of him: “He was identified with the ideas and forms of the New England Church, which expired about the same time with him, so that he and his coevals seemed the rear guard of the great camp and army of the Puritans, which, however in its last days declining into formalism, in the heyday of its strength had planted and liberated America.... The same faith made what was strong and what was weak in Dr. Ripley.” It would be hard to find a more perfect sketch of character than Mr. Emerson’s living picture of Dr. Ripley. I myself remember him as a comely little old gentleman, but he was not so communicative in a strange household as his clerical brethren, smiling John Foster of Brighton and chatty Jonathan Homer of Newton. Mr. Emerson says, “He was a natural gentleman; no dandy, but courtly, hospitable, manly, and public-spirited; his nature social, his house open to all men. — His brow was serene and open to his visitor, for he loved men, and he had no studies, no occupations, which company could interrupt. His friends were his study, and to

see them loosened his talents and his tongue. In his house dwelt order and prudence and plenty. There was no waste and no stint. He was open-handed and just and generous. Ingratitude and meanness in his beneficiaries did not wear out his compassion; he bore the insult, and the next day his basket for the beggar, his horse and chaise for the cripple, were at their door." How like Goldsmith's good Dr. Primrose! I do not know any writing of Mr. Emerson which brings out more fully his sense of humor, — of the picturesque in character, — and as a piece of composition, continuous, fluid, transparent, with a playful ripple here and there, it is admirable and delightful.

Another of his early companionships must have exercised a still more powerful influence on his character, — that of his aunt, Mary Moody Emerson. He gave an account of her in a paper read before the Woman's Club several years ago, and published in the "Atlantic Monthly" for December, 1883. Far more of Mr. Emerson is to be found in this aunt of his than in any other of his relations in the ascending series, with whose history we are acquainted. Her story is an interesting one, but for that I must refer the reader to the article mentioned. Her character and intellectual traits are what we are most concerned with. "Her early reading was Milton, Young, Akenside, Samuel Clarke, Jonathan Edwards, and always the Bible. Later, Plato, Plotinus, Marcus Antoninus, Stewart, Coleridge, Herder, Locke, Madam De Staël, Channing, Mackintosh, Byron. Nobody can read in her manuscript, or recall the conversation of old-school people, without seeing that Milton and Young had a religious authority in their minds, and nowise the slight merely entertaining quality of modern bards. And Plato, Aristotle, Plotinus, — how venerable and organic as Nature they are in her mind!"

There are many sentences cited by Mr. Emerson which remind us very strongly of his own writings. Such a passage as the following might have come from his Essay, "Nature," but it was written when her nephew was only four years old.

"Malden, 1807, September. — The rapture of feeling I would part from for days devoted to higher discipline. But when Nature beams with such excess of beauty, when the heart thrills with hope in its Author, — feels it is related to Him more than by any ties of creation, — it exults, too fondly, perhaps, for a state of trial. But in dead of night, nearer morning, when the eastern stars glow, or appear to glow, with more indescribable lustre, a lustre which penetrates the spirits with wonder and curiosity, — then, however awed, who can fear?" — "A few pulsations of created beings, a few successions of acts, a few lamps held out in the firmament, enable us to talk of Time, make epochs, write histories, — to do more, — to date the revelations of God to man. But these lamps are held to

measure out some of the moments of eternity, to divide the history of God's operations in the birth and death of nations, of worlds. It is a goodly name for our notions of breathing, suffering, enjoying, acting. We personify it. We call it by every name of fleeting, dreaming, vapping imagery. Yet it is nothing. We exist in eternity. Dissolve the body and the night is gone; the stars are extinguished, and we measure duration by the number of our thoughts, by the activity of reason, the discovery of truths, the acquirement of virtue, the approval of God."

Miss Mary Emerson showed something of the same feeling towards natural science which may be noted in her nephews Waldo and Charles. After speaking of "the poor old earth's chaotic state, brought so near in its long and gloomy transmutings by the geologist," she says: —

"Yet its youthful charms, as decked by the hand of Moses' Cosmogony, will linger about the heart, while Poetry succumbs to science."— "And the bare bones of this poor embryo earth may give the idea of the Infinite, far, far better than when dignified with arts and industry; its oceans, when beating the symbols of countless ages, than when covered with cargoes of war and oppression. How grand its preparation for souls, souls who were to feel the Divinity, before Science had dissected the emotions and applied its steely analysis to that state of being which recognizes neither psychology nor element."— "Usefulness, if it requires action, seems less like existence than the desire of being absorbed in God, retaining consciousness.... Scorn trifles, lift your aims; do what you are afraid to do. Sublimity of character must come from sublimity of motive."

So far as hereditary and family influences can account for the character and intellect of Ralph Waldo Emerson, we could hardly ask for a better inborn inheritance, or better counsels and examples.

*

Having traced some of the distinguishing traits which belong by descent to Mr. Emerson to those who were before him, it is interesting to note how far they showed themselves in those of his own generation, his brothers. Of these I will mention two, one of whom I knew personally.

Edward Bliss Emerson, who graduated at Harvard College in 1824, three years after Ralph Waldo, held the first place in his class. He began the study of the law with Daniel Webster, but overworked himself and suffered a temporary disturbance of his reason. After this he made another attempt, but found his health unequal to the task and exiled himself to Porto Rico, where, in 1834, he died. Two poems preserve his memory, one that of Ralph Waldo, in which he

addresses his memory, —

“Ah, brother of the brief but blazing star,”

the other his own “Last Farewell,” written in 1832, whilst sailing out of Boston Harbor. The lines are unaffected and very touching, full of that deep affection which united the brothers in the closest intimacy, and of the tenderest love for the mother whom he was leaving to see no more.

I had in my early youth a key furnished me to some of the leading traits which were in due time to develop themselves in Emerson’s character and intelligence. As on the wall of some great artist’s studio one may find unfinished sketches which he recognizes as the first growing conceptions of pictures painted in after years, so we see that Nature often sketches, as it were, a living portrait, which she leaves in its rudimentary condition, perhaps for the reason that earth has no colors which can worthily fill in an outline too perfect for humanity. The sketch is left in its consummate incompleteness because this mortal life is not rich enough to carry out the Divine idea.

Such an unfinished but unmatched outline is that which I find in the long portrait-gallery of memory, recalled by the name of Charles Chauncy Emerson. Save for a few brief glimpses of another, almost lost among my life’s early shadows, this youth was the most angelic adolescent my eyes ever beheld. Remembering what well-filtered blood it was that ran in the veins of the race from which he was descended, those who knew him in life might well say with Dryden, —

”If by traduction came thy mind
Our wonder is the less to find
A soul so charming from a stock so good.”

His image is with me in its immortal youth as when, almost fifty years ago, I spoke of him in these lines, which I may venture to quote from myself, since others have quoted them before me.

Thou calm, chaste scholar! I can see thee now,
The first young laurels on thy pallid brow,
O’er thy slight figure floating lightly down
In graceful folds the academic gown,
On thy curled lip the classic lines that taught
How nice the mind that sculptured them with thought,
And triumph glistening in the clear blue eye,
Too bright to live, — but O, too fair to die.

Being about seven years younger than Waldo, he must have received much of his intellectual and moral guidance at his elder brother's hands. I told the story at a meeting of our Historical Society of Charles Emerson's coming into my study, — this was probably in 1826 or 1827, — taking up Hazlitt's "British Poets" and turning at once to a poem of Marvell's, which he read with his entrancing voice and manner. The influence of this poet is plain to every reader in some of Emerson's poems, and Charles' liking for him was very probably caught from Waldo. When Charles was nearly through college, a periodical called "The Harvard Register" was published by students and recent graduates. Three articles were contributed by him to this periodical. Two of them have the titles "Conversation," "Friendship." His quotations are from Horace and Juvenal, Plato, Plutarch, Bacon, Jeremy Taylor, Shakespeare, and Scott. There are passages in these Essays which remind one strongly of his brother, the Lecturer of twenty-five or thirty years later. Take this as an example: —

"Men and mind are my studies. I need no observatory high in air to aid my perceptions or enlarge my prospect. I do not want a costly apparatus to give pomp to my pursuit or to disguise its inutility. I do not desire to travel and see foreign lands and learn all knowledge and speak with all tongues, before I am prepared for my employment. I have merely to go out of my door; nay, I may stay at home at my chambers, and I shall have enough to do and enjoy."

The feeling of this sentence shows itself constantly in Emerson's poems. He finds his inspiration in the objects about him, the forest in which he walks; the sheet of water which the hermit of a couple of seasons made famous; the lazy Musketaquid; the titmouse that mocked his weakness in the bitter cold winter's day; the mountain that rose in the horizon; the lofty pines; the lowly flowers. All talked with him as brothers and sisters, and he with them as of his own household.

The same lofty idea of friendship which we find in the man in his maturity, we recognize in one of the Essays of the youth.

"All men of gifted intellect and fine genius," says Charles Emerson, "must entertain a noble idea of friendship. Our reverence we are constrained to yield where it is due, — to rank, merit, talents. But our affections we give not thus easily.

"The hand of Douglas is his own."

— "I am willing to lose an hour in gossip with persons whom good men hold cheap. All this I will do out of regard to the decent conventions of polite life. But my friends I must know, and, knowing, I must love. There must be a daily beauty in their life that shall secure my constant attachment. I cannot stand upon the footing of ordinary acquaintance. Friendship is aristocratical — the

affections which are prostituted to every suitor I will not accept.”

Here are glimpses of what the youth was to be, of what the man who long outlived him became. Here is the dignity which commands reverence, — a dignity which, with all Ralph Waldo Emerson’s sweetness of manner and expression, rose almost to majesty in his serene presence. There was something about Charles Emerson which lifted those he was with into a lofty and pure region of thought and feeling. A vulgar soul stood abashed in his presence. I could never think of him in the presence of such, listening to a paltry sentiment or witnessing a mean action without recalling Milton’s line,

“Back stepped those two fair angels half amazed,”

and thinking how he might well have been taken for a celestial messenger.

No doubt there is something of idealization in all these reminiscences, and of that exaggeration which belongs to the *laudator temporis acti*. But Charles Emerson was idolized in his own time by many in college and out of college. George Stillman Hillard was his rival. Neck and neck they ran the race for the enviable position of first scholar in the class of 1828, and when Hillard was announced as having the first part assigned to him, the excitement within the college walls, and to some extent outside of them, was like that when the telegraph proclaims the result of a Presidential election, — or the Winner of the Derby. But Hillard honestly admired his brilliant rival. “Who has a part with at this next exhibition?” I asked him one day, as I met him in the college yard. “* the Post,” answered Hillard. “Why call him *the Post*?” said I. “He is a wooden creature,” said Hillard. “Hear him and Charles Emerson translating from the Latin *Domus tota inflammata erat*. The Post will render the words, ‘The whole house was on fire.’ Charles Emerson will translate the sentence ‘The entire edifice was wrapped in flames.’” It was natural enough that a young admirer should prefer the Bernini drapery of Charles Emerson’s version to the simple nudity of “the Post’s” rendering.

*

The nest is made ready long beforehand for the bird which is to be bred in it and to fly from it. The intellectual atmosphere into which a scholar is born, and from which he draws the breath of his early mental life, must be studied if we would hope to understand him thoroughly.

When the present century began, the elements, thrown into confusion by the long struggle for Independence, had not had time to arrange themselves in new combinations. The active intellects of the country had found enough to keep

them busy in creating and organizing a new order of political and social life. Whatever purely literary talent existed was as yet in the nebular condition, a diffused luminous spot here and there, waiting to form centres of condensation.

Such a nebular spot had been brightening in and about Boston for a number of years, when, in the year 1804, a small cluster of names became visible as representing a modest constellation of literary luminaries: John Thornton Kirkland, afterwards President of Harvard University; Joseph Stevens Buckminster; John Sylvester John Gardiner; William Tudor; Samuel Cooper Thacher; William Emerson. These were the chief stars of the new cluster, and their light reached the world, or a small part of it, as reflected from the pages of "The Monthly Anthology," which very soon came under the editorship of the Reverend William Emerson.

The father of Ralph Waldo Emerson may be judged of in good measure by the associates with whom he was thus connected. A brief sketch of these friends and fellow-workers of his may not be out of place, for these men made the local sphere of thought into which Ralph Waldo Emerson was born.

John Thornton Kirkland should have been seen and heard as he is remembered by old graduates of Harvard, sitting in the ancient Presidential Chair, on Commencement Day, and calling in his penetrating but musical accents: "*Expectatur Oratio in Lingua Latina*" or "*Vernacula*," if the "First Scholar" was about to deliver the English oration. It was a presence not to be forgotten. His "shining morning face" was round as a baby's, and talked as pleasantly as his voice did, with smiles for accents and dimples for punctuation. Mr. Ticknor speaks of his sermons as "full of intellectual wealth and practical wisdom, with sometimes a quaintness that bordered on humor." It was of him that the story was always told, — it may be as old as the invention of printing, — that he threw his sermons into a barrel, where they went to pieces and got mixed up, and that when he was going to preach he fished out what he thought would be about enough for a sermon, and patched the leaves together as he best might. The Reverend Dr. Lowell says: "He always found the right piece, and that was better than almost any of his brethren could have found in what they had written with twice the labor." Mr. Cabot, who knew all Emerson's literary habits, says he used to fish out the number of leaves he wanted for a lecture in somewhat the same way. Emerson's father, however, was very methodical, according to Dr. Lowell, and had "a place for everything, and everything in its place." Dr. Kirkland left little to be remembered by, and like many of the most interesting personalities we have met with, has become a very thin ghost to the grandchildren of his contemporaries.

Joseph Stevens Buckminster was the pulpit darling of his day, in Boston. The

beauty of his person, the perfection of his oratory, the finish of his style, added to the sweetness of his character, made him one of those living idols which seem to be as necessary to Protestantism as images and pictures are to Romanism.

John Sylvester John Gardiner, once a pupil of the famous Dr. Parr, was then the leading Episcopal clergyman of Boston. Him I reconstruct from scattered hints I have met with as a scholarly, social man, with a sanguine temperament and the cheerful ways of a wholesome English parson, blest with a good constitution and a comfortable benefice. Mild Orthodoxy, ripened in Unitarian sunshine, is a very agreeable aspect of Christianity, and none was readier than Dr. Gardiner, if the voice of tradition may be trusted, to fraternize with his brothers of the liberal persuasion, and to make common cause with them in all that related to the interests of learning.

William Tudor was a chief connecting link between the period of the "Monthly Anthology," and that of the "North American Review," for he was a frequent contributor to the first of these periodicals, and he was the founder of the second. Edward Everett characterizes him, in speaking of his "Letters on the Eastern States," as a scholar and a gentleman, an impartial observer, a temperate champion, a liberal opponent, and a correct writer. Daniel Webster bore similar testimony to his talents and character.

Samuel Cooper Thacher was hardly twenty years old when the "Anthology" was founded, and died when he was only a little more than thirty. He contributed largely to that periodical, besides publishing various controversial sermons, and writing the "Memoir of Buckminster."

There was no more brilliant circle than this in any of our cities. There was none where so much freedom of thought was united to so much scholarship. The "Anthology" was the literary precursor of the "North American Review," and the theological herald of the "Christian Examiner." Like all first beginnings it showed many marks of immaturity. It mingled extracts and original contributions, theology and medicine, with all manner of literary chips and shavings. It had Magazine ways that smacked of Sylvanus Urban; leading articles with balanced paragraphs which recalled the marching tramp of Johnson; translations that might have been signed with the name of Creech, and Odes to Sensibility, and the like, which recalled the syrupy sweetness and languid trickle of Laura Matilda's sentimentalities. It talked about "the London Reviewers" with a kind of provincial deference. It printed articles with quite too much of the license of Swift and Prior for the Magazines of to-day. But it had opinions of its own, and would compare well enough with the "Gentleman's Magazine," to say nothing of "My Grandmother's Review, the British." A writer in the third volume (1806) says: "A taste for the belles lettres is rapidly spreading in our

country. I believe that, fifty years ago, England had never seen a Miscellany or a Review so well conducted as our 'Anthology,' however superior such publications may now be in that kingdom."

It is well worth one's while to look over the volumes of the "Anthology" to see what our fathers and grandfathers were thinking about, and how they expressed themselves. The stiffness of Puritanism was pretty well relaxed when a Magazine conducted by clergymen could say that "The child," — meaning the new periodical,— "shall not be destitute of the manners of a gentleman, nor a stranger to genteel amusements. He shall attend Theatres, Museums, Balls, and whatever polite diversions the town shall furnish." The reader of the "Anthology" will find for his reward an improving discourse on "Ambition," and a commendable schoolboy's "theme" on "Inebriation." He will learn something which may be for his advantage about the "Anjou Cabbage," and may profit by a "Remedy for Asthma." A controversy respecting the merits of Sir Richard Blackmore may prove too little exciting at the present time, and he can turn for relief to the epistle "Studiosus" addresses to "Alcander." If the lines of "The Minstrel" who hails, like Longfellow in later years, from "The District of Main," fail to satisfy him, he cannot accuse "R.T. Paine, Jr., Esq.," of tameness when he exclaims: —

"Rise Columbia, brave and free,
Poise the globe and bound the sea!"

But the writers did not confine themselves to native or even to English literature, for there is a distinct mention of "Mr. Goethe's new novel," and an explicit reference to "Dante Aligheri, an Italian bard." But let the smiling reader go a little farther and he will find Mr. Buckminster's most interesting account of the destruction of Goldau. And in one of these same volumes he will find the article, by Dr. Jacob Bigelow, doubtless, which was the first hint of our rural cemeteries, and foreshadowed that new era in our underground civilization which is sweetening our atmospheric existence.

The late President Josiah Quincy, in his "History of the Boston Athenaeum," pays a high tribute of respect to the memory and the labors of the gentlemen who founded that institution and conducted the "Anthology." A literary journal had already been published in Boston, but very soon failed for want of patronage. An enterprising firm of publishers, "being desirous that the work should be continued, applied to the Reverend William Emerson, a clergyman of the place, distinguished for energy and literary taste; and by his exertions several gentlemen of Boston and its vicinity, conspicuous for talent and zealous for

literature, were induced to engage in conducting the work, and for this purpose they formed themselves into a Society. This Society was not completely organized until the year 1805, when Dr. Gardiner was elected President, and William Emerson Vice-President. The Society thus formed maintained its existence with reputation for about six years, and issued ten octavo volumes from the press, constituting one of the most lasting and honorable monuments of the literature of the period, and may be considered as a true revival of polite learning in this country after that decay and neglect which resulted from the distractions of the Revolutionary War, and as forming an epoch in the intellectual history of the United States. Its records yet remain, an evidence that it was a pleasant, active, high-principled association of literary men, laboring harmoniously to elevate the literary standard of the time, and with a success which may well be regarded as remarkable, considering the little sympathy they received from the community, and the many difficulties with which they had to struggle.”

The publication of the “Anthology” began in 1804, when Mr. William Emerson was thirty-four years of age, and it ceased to be published in the year of his death, 1811. Ralph Waldo Emerson was eight years old at that time. His intellectual life began, we may say, while the somewhat obscure afterglow of the “Anthology” was in the western horizon of the New England sky.

The nebula which was to form a cluster about the “North American Review” did not take definite shape until 1815. There is no such memorial of the growth of American literature as is to be found in the first half century of that periodical. It is easy to find fault with it for uniform respectability and occasional dulness. But take the names of its contributors during its first fifty years from the literary record of that period, and we should have but a meagre list of mediocrities, saved from absolute poverty by the genius of two or three writers like Irving and Cooper. Strike out the names of Webster, Everett, Story, Sumner, and Cushing; of Bryant, Dana, Longfellow, and Lowell; of Prescott, Ticknor, Motley, Sparks, and Bancroft; of Verplanck, Hillard, and Whipple; of Stuart and Robinson; of Norton, Palfrey, Peabody, and Bowen; and, lastly, that of Emerson himself, and how much American classic literature would be left for a new edition of “Miller’s Retrospect”?

These were the writers who helped to make the “North American Review” what it was during the period of Emerson’s youth and early manhood. These, and men like them, gave Boston its intellectual character. We may count as symbols the three hills of “this darling town of ours,” as Emerson called it, and say that each had its beacon. Civil liberty lighted the torch on one summit, religious freedom caught the flame and shone from the second, and the lamp of

the scholar has burned steadily on the third from the days when John Cotton preached his first sermon to those in which we are living.

The social religious influences of the first part of the century must not be forgotten. The two high-caste religions of that day were white-handed Unitarianism and ruffled-shirt Episcopalianism. What called itself "society" was chiefly distributed between them. Within less than fifty years a social revolution has taken place which has somewhat changed the relation between these and other worshipping bodies. This movement is the general withdrawal of the native New Englanders of both sexes from domestic service. A large part of the "hired help," — for the word servant was commonly repudiated, — worshipped, not with their employers, but at churches where few or no well-appointed carriages stood at the doors. The congregations that went chiefly from the drawing-room and those which were largely made up of dwellers in the culinary studio were naturally separated by a very distinct line of social cleavage. A certain exclusiveness and fastidiousness, not reminding us exactly of primitive Christianity, was the inevitable result. This must always be remembered in judging the men and women of that day and their immediate descendants, as much as the surviving prejudices of those whose parents were born subjects of King George in the days when loyalty to the crown was a virtue. The line of social separation was more marked, probably, in Boston, the headquarters of Unitarianism, than in the other large cities; and even at the present day our Jerusalem and Samaria, though they by no means refuse dealing with each other, do not exchange so many cards as they do checks and dollars. The exodus of those children of Israel from the house of bondage, as they chose to consider it, and their fusion with the mass of independent citizens, got rid of a class distinction which was felt even in the sanctuary. True religious equality is harder to establish than civil liberty. No man has done more for spiritual republicanism than Emerson, though he came from the daintiest sectarian circle of the time in the whole country.

Such were Emerson's intellectual and moral parentage, nurture, and environment; such was the atmosphere in which he grew up from youth to manhood.

CHAPTER I. BIRTHPLACE. — BOYHOOD. — COLLEGE LIFE.

1803-1823. TO AET. 20.

Ralph Waldo Emerson was born in Boston, Massachusetts, on the 25th of May, 1803. He was the second of five sons; William, R.W., Edward Bliss, Robert Bulkeley, and Charles Chauncy. His birthplace and that of our other illustrious Bostonian, Benjamin Franklin, were within a kite-string's distance of each other. When the baby philosopher of the last century was carried from Milk Street through the narrow passage long known as Bishop's Alley, now Hawley Street, he came out in Summer Street, very nearly opposite the spot where, at the beginning of this century, stood the parsonage of the First Church, the home of the Reverend William Emerson, its pastor, and the birthplace of his son, Ralph Waldo. The oblong quadrangle between Newbury, now Washington Street, Pond, now Bedford Street, Summer Street, and the open space called Church Green, where the New South Church was afterwards erected, is represented on Bonner's maps of 1722 and 1769 as an almost blank area, not crossed or penetrated by a single passageway.

Even so late as less than half a century ago this region was still a most attractive little *rus in urbe*. The sunny gardens of the late Judge Charles Jackson and the late Mr. S.P. Gardner opened their flowers and ripened their fruits in the places now occupied by great warehouses and other massive edifices. The most aristocratic pears, the "Saint Michael," the "Brown Bury," found their natural homes in these sheltered enclosures. The fine old mansion of Judge William Prescott looked out upon these gardens. Some of us can well remember the window of his son's, the historian's, study, the light from which used every evening to glimmer through the leaves of the pear-trees while "The Conquest of Mexico" was achieving itself under difficulties hardly less formidable than those encountered by Cortes. It was a charmed region in which Emerson first drew his breath, and I am fortunate in having a communication from one who knew it and him longer than almost any other living person.

Mr. John Lowell Gardner, a college classmate and life-long friend of Mr. Emerson, has favored me with a letter which contains matters of interest concerning him never before given to the public. With his kind permission I have made some extracts and borrowed such facts as seemed especially worthy of note from his letter.

"I may be said to have known Emerson from the very beginning. A very low fence divided my father's estate in Summer Street from the field in which I

remember the old wooden parsonage to have existed, — but this field, when we were very young, was to be covered by Chauncy Place Church and by the brick houses on Summer Street. Where the family removed to I do not remember, but I always knew the boys, William, Ralph, and perhaps Edward, and I again associated with Ralph at the Latin School, where we were instructed by Master Gould from 1815 to 1817, entering College in the latter year.

“... I have no recollection of his relative rank as a scholar, but it was undoubtedly high, though not the highest. He never was idle or a loungeur, nor did he ever engage in frivolous pursuits. I should say that his conduct was absolutely faultless. It was impossible that there should be any feeling about him but of regard and affection. He had then the same manner and courtly hesitation in addressing you that you have known in him since. Still, he was not prominent in the class, and, but for what all the world has since known of him, his would not have been a conspicuous figure to his classmates in recalling College days.

“The fact that we were almost the only Latin School fellows in the class, and the circumstance that he was slow during the Freshman year to form new acquaintances, brought us much together, and an intimacy arose which continued through our College life. We were in the habit of taking long strolls together, often stopping for repose at distant points, as at Mount Auburn, etc.... Emerson was not talkative; he never spoke for effect; his utterances were well weighed and very deliberately made, but there was a certain flash when he uttered anything that was more than usually worthy to be remembered. He was so universally amiable and complying that my evil spirit would sometimes instigate me to take advantage of his gentleness and forbearance, but nothing could disturb his equanimity. All that was wanting to render him an almost perfect character was a few harsher traits and perhaps more masculine vigor.

“On leaving College our paths in life were so remote from each other that we met very infrequently. He soon became, as it were, public property, and I was engrossed for many years in my commercial undertakings. All his course of life is known to many survivors. I am inclined to believe he had a most liberal spirit. I remember that some years since, when it was known that our classmate —— was reduced almost to absolute want by the war, in which he lost his two sons, Emerson exerted himself to raise a fund among his classmates for his relief, and, there being very few possible subscribers, made what I considered a noble contribution, and this you may be sure was not from any Southern sentiment on the part of Emerson. I send you herewith the two youthful productions of Emerson of which I spoke to you some time since.”

The first of these is a prose Essay of four pages, written for a discussion in which the Professions of Divinity, Medicine, and Law were to be weighed

against each other. Emerson had the Lawyer's side to advocate. It is a fair and sensible paper, not of special originality or brilliancy. His opening paragraph is worth citing, as showing the same instinct for truth which displayed itself in all his after writings and the conduct of his life.

“It is usual in advocating a favorite subject to appropriate all possible excellence, and endeavor to concentrate every doubtful auxiliary, that we may fortify to the utmost the theme of our attention. Such a design should be utterly disdained, except as far as is consistent with fairness; and the sophistry of weak arguments being abandoned, a bold appeal should be made to the heart, for the tribute of honest conviction, with regard to the merits of the subject.”

From many boys this might sound like well-meaning commonplace, but in the history of Mr. Emerson's life that “bold appeal to the heart,” that “tribute of honest conviction,” were made eloquent and real. The boy meant it when he said it. To carry out his law of sincerity and self-trust the man had to sacrifice much that was dear to him, but he did not flinch from his early principles.

It must not be supposed that the blameless youth was an ascetic in his College days. The other old manuscript Mr. Gardner sends me is marked “‘Song for Knights of Square Table,’ R.W.E.”

There are twelve verses of this song, with a chorus of two lines. The Muses and all the deities, not forgetting Bacchus, were duly invited to the festival.

”Let the doors of Olympus be open for all
To descend and make merry in Chivalry's hall.”

*

Mr. Sanborn has kindly related to me several circumstances told him by Emerson about his early years.

The parsonage was situated at the corner of Summer and what is now Chauncy streets. It had a yard, and an orchard which Emerson said was as large as Dr. Ripley's, which might have been some two or three acres. Afterwards there was a brick house looking on Summer Street, in which Emerson the father lived. It was separated, Emerson said, by a brick wall from a garden in which *pears* grew (a fact a boy is likely to remember). Master Ralph Waldo used to *sit on this wall*, — but we cannot believe he ever got off it on the wrong side, unless politely asked to do so. On the occasion of some alarm the little boy was carried

in his nightgown to a neighboring house.

After Reverend William Emerson's death Mrs. Emerson removed to a house in Beacon Street, where the Athenaeum Building now stands. She kept some boarders, — among them Lemuel Shaw, afterwards Chief Justice of the State of Massachusetts. It was but a short distance to the Common, and Waldo and Charles used to drive their mother's cow there to pasture.

*

The Reverend Doctor Rufus Ellis, the much respected living successor of William Emerson as Minister of the First Church, says that R.W. Emerson must have been born in the old parsonage, as his father (who died when he was eight years old) lived but a very short time in "the new parsonage," which was, doubtless, the "brick house" above referred to.

*

We get a few glimpses of the boy from other sources. Mr. Cooke tells us that he entered the public grammar school at the age of eight years, and soon afterwards the Latin School. At the age of eleven he was turning Virgil into very readable English heroics. He loved the study of Greek; was fond of reading history and given to the frequent writing of verses. But he thinks "the idle books under the bench at the Latin School" were as profitable to him as his regular studies.

Another glimpse of him is that given us by Mr. Ireland from the "Boyhood Memories" of Rufus Dawes. His old schoolmate speaks of him as "a spiritual-looking boy in blue nankeen, who seems to be about ten years old, — whose image more than any other is still deeply stamped upon my mind, as I then saw him and loved him, I knew not why, and thought him so angelic and remarkable." That "blue nankeen" sounds strangely, it may be, to the readers of this later generation, but in the first quarter of the century blue and yellow or buff-colored cotton from China were a common summer clothing of children. The places where the factories and streets of the cities of Lowell and Lawrence were to rise were then open fields and farms. My recollection is that we did not think very highly of ourselves when we were in blue nankeen, — a dull-colored fabric, too nearly of the complexion of the slates on which we did our ciphering.

Emerson was not particularly distinguished in College. Having a near connection in the same class as he, and being, as a Cambridge boy, generally familiar with the names of the more noted young men in College from the year when George Bancroft, Caleb Cushing, and Francis William Winthrop graduated

until after I myself left College, I might have expected to hear something of a young man who afterwards became one of the great writers of his time. I do not recollect hearing of him except as keeping school for a short time in Cambridge, before he settled as a minister. His classmate, Mr. Josiah Quincy, writes thus of his college days: —

“Two only of my classmates can be fairly said to have got into history, although one of them, Charles W. Upham [the connection of mine referred to above] has written history very acceptably. Ralph Waldo Emerson and Robert W. Barnwell, for widely different reasons, have caused their names to be known to well-informed Americans. Of Emerson, I regret to say, there are few notices in my journals. Here is the sort of way in which I speak of the man who was to make so profound an impression upon the thought of his time. ‘I went to the chapel to hear Emerson’s dissertation: a very good one, but rather too long to give much pleasure to the hearers.’ The fault, I suspect, was in the hearers; and another fact which I have mentioned goes to confirm this belief. It seems that Emerson accepted the duty of delivering the Poem on Class Day, after seven others had been asked who positively, refused. So it appears that, in the opinion of this critical class, the author of the ‘Woodnotes’ and the ‘Humble Bee’ ranked about eighth in poetical ability. It can only be because the works of the other five [seven] have been ‘heroically unwritten’ that a different impression has come to prevail in the outside world. But if, according to the measurement of undergraduates, Emerson’s ability as a poet was not conspicuous, it must also be admitted that, in the judgment of persons old enough to know better, he was not credited with that mastery of weighty prose which the world has since accorded him. In our senior year the higher classes competed for the Boylston prizes for English composition. Emerson and I sent in our essays with the rest and were fortunate enough to take the two prizes; but — Alas for the infallibility of academic decisions! Emerson received the second prize. I was of course much pleased with the award of this intelligent committee, and should have been still more gratified had they mentioned that the man who was to be the most original and influential writer born in America was my unsuccessful competitor. But Emerson, incubating over deeper matters than were dreamt of in the established philosophy of elegant letters, seems to have given no sign of the power that was fashioning itself for leadership in a new time. He was quiet, unobtrusive, and only a fair scholar according to the standard of the College authorities. And this is really all I have to say about my most distinguished classmate.”

Barnwell, the first scholar in the class, delivered the Valedictory Oration, and Emerson the Poem. Neither of these performances was highly spoken of by Mr. Quincy.

I was surprised to find by one of the old Catalogues that Emerson roomed during a part of his College course with a young man whom I well remember, J.G.K. Gourdin. The two Gourdins, Robert and John Gaillard Keith, were dashing young fellows as I recollect them, belonging to Charleston, South Carolina. The “Southerners” were the reigning College *elegans* of that time, the *merveilleux*, the *mirliflores*, of their day. Their swallow-tail coats tapered to an arrow-point angle, and the prints of their little delicate calfskin boots in the snow were objects of great admiration to the village boys of the period. I cannot help wondering what brought Emerson and the showy, fascinating John Gourdin together as room-mates.

CHAPTER II. 1823-1828. AET. 20-25.

Extract from a Letter to a Classmate. — School-Teaching. — Study of Divinity. — “Approbated” to Preach. — Visit to the South. — Preaching in Various Places.

We get a few brief glimpses of Emerson during the years following his graduation. He writes in 1823 to a classmate who had gone from Harvard to Andover: —

“I am delighted to hear there is such a profound studying of German and Hebrew, Parkhurst and Jahn, and such other names as the memory aches to think of, on foot at Andover. Meantime, Unitarianism will not hide her honors; as many hard names are taken, and as much theological mischief is planned, at Cambridge as at Andover. By the time this generation gets upon the stage, if the controversy will not have ceased, it will run such a tide that we shall hardly be able to speak to one another, and there will be a Guelf and Ghibelline quarrel, which cannot tell where the differences lie.”

“You can form no conception how much one grovelling in the city needs the excitement and impulse of literary example. The sight of broad vellum-bound quartos, the very mention of Greek and German names, the glimpse of a dusty, tugging scholar, will wake you up to emulation for a month.”

After leaving College, and while studying Divinity, Emerson employed a part of his time in giving instruction in several places successively.

Emerson’s older brother William was teaching in Boston, and Ralph Waldo, after graduating, joined him in that occupation. In the year 1825 or 1826, he taught school also in Chelmsford, a town of Middlesex County, Massachusetts, a part of which helped to constitute the city of Lowell. One of his pupils in that school, the Honorable Josiah Gardiner Abbott, has favored me with the following account of his recollections: —

The school of which Mr. Emerson had the charge was an old-fashioned country “Academy.” Mr. Emerson was probably studying for the ministry while teaching there. Judge Abbott remembers the impression he made on the boys. He was very grave, quiet, and very impressive in his appearance. There was something engaging, almost fascinating, about him; he was never harsh or severe, always perfectly self-controlled, never punished except with words, but exercised complete command over the boys. His old pupil recalls the stately, measured way in which, for some offence the little boy had committed, he turned on him, saying only these two words: “Oh, sad!” That was enough, for he had the faculty of making the boys love him. One of his modes of instruction

was to give the boys a piece of reading to carry home with them, — from some book like Plutarch's Lives, — and the next day to examine them and find out how much they retained from their reading. Judge Abbott remembers a peculiar look in his eyes, as if he saw something beyond what seemed to be in the field of vision. The whole impression left on this pupil's mind was such as no other teacher had ever produced upon him.

Mr. Emerson also kept a school for a short time at Cambridge, and among his pupils was Mr. John Holmes. His impressions seem to be very much like those of Judge Abbott.

My brother speaks of Mr. Emerson thus: —

“Calm, as not doubting the virtue residing in his sceptre. Rather stern in his very infrequent rebukes. Not inclined to win boys by a surface amiability, but kindly in explanation or advice. Every inch a king in his dominion. Looking back, he seems to me rather like a captive philosopher set to tending flocks; resigned to his destiny, but not amused with its incongruities. He once recommended the use of rhyme as a cohesive for historical items.”

In 1823, two years after graduating, Emerson began studying for the ministry. He studied under the direction of Dr. Charming, attending some of the lectures in the Divinity School at Cambridge, though not enrolled as one of its regular students.

The teachings of that day were such as would now be called “old-fashioned Unitarianism.” But no creed can be held to be a finality. From Edwards to Mayhew, from Mayhew to Channing, from Channing to Emerson, the passage is like that which leads from the highest lock of a canal to the ocean level. It is impossible for human nature to remain permanently shut up in the highest lock of Calvinism. If the gates are not opened, the mere leakage of belief or unbelief will before long fill the next compartment, and the freight of doctrine finds itself on the lower level of Arminianism, or Pelagianism, or even subsides to Arianism. From this level to that of Unitarianism the outlet is freer, and the subsidence more rapid. And from Unitarianism to Christian Theism, the passage is largely open for such as cannot accept the evidence of the supernatural in the history of the church.

There were many shades of belief in the liberal churches. If De Tocqueville's account of Unitarian preaching in Boston at the time of his visit is true, the Savoyard Vicar of Rousseau would have preached acceptably in some of our pulpits. In fact, the good Vicar might have been thought too conservative by some of our unharnessed theologians.

At the period when Emerson reached manhood, Unitarianism was the dominating form of belief in the more highly educated classes of both of the two

great New England centres, the town of Boston and the University at Cambridge. President Kirkland was at the head of the College, Henry Ware was Professor of Theology, Andrews Norton of Sacred Literature, followed in 1830 by John Gorham Palfrey in the same office. James Freeman, Charles Lowell, and William Ellery Channing were preaching in Boston. I have mentioned already as a simple fact of local history, that the more exclusive social circles of Boston and Cambridge were chiefly connected with the Unitarian or Episcopalian churches. A Cambridge graduate of ambition and ability found an opening far from undesirable in a worldly point of view, in a profession which he was led to choose by higher motives. It was in the Unitarian pulpit that the brilliant talents of Buckminster and Everett had found a noble eminence from which their light could shine before men.

Descended from a long line of ministers, a man of spiritual nature, a reader of Plato, of Augustine, of Jeremy Taylor, full of hope for his fellow-men, and longing to be of use to them, conscious, undoubtedly, of a growing power of thought, it was natural that Emerson should turn from the task of a school-master to the higher office of a preacher. It is hard to conceive of Emerson in either of the other so-called learned professions. His devotion to truth for its own sake and his feeling about science would have kept him out of both those dusty highways. His brother William had previously begun the study of Divinity, but found his mind beset with doubts and difficulties, and had taken to the profession of Law. It is not unlikely that Mr. Emerson was more or less exercised with the same questionings. He has said, speaking of his instructors: "If they had examined me, they probably would not have let me preach at all." His eyes had given him trouble, so that he had not taken notes of the lectures which he heard in the Divinity School, which accounted for his being excused from examination. In 1826, after three years' study, he was "approbated to preach" by the Middlesex Association of Ministers. His health obliging him to seek a southern climate, he went in the following winter to South Carolina and Florida. During this absence he preached several times in Charleston and other places. On his return from the South he preached in New Bedford, in Northampton, in Concord, and in Boston. His attractiveness as a preacher, of which we shall have sufficient evidence in a following chapter, led to his being invited to share the duties of a much esteemed and honored city clergyman, and the next position in which we find him is that of a settled Minister in Boston.

CHAPTER III. 1828-1833. AET. 25-30.

Settled as Colleague of Rev. Henry Ware. — Married to Ellen Louisa Tucker. — Sermon at the Ordination of Rev. H.B. Goodwin. — His Pastoral and Other Labors. — Emerson and Father Taylor. — Death of Mrs. Emerson. — Difference of Opinion with some of his Parishioners. — Sermon Explaining his Views. — Resignation of his Pastorate.

On the 11th of March, 1829, Emerson was ordained as colleague with the Reverend Henry Ware, Minister of the Second Church in Boston. In September of the same year he was married to Miss Ellen Louisa Tucker. The resignation of his colleague soon after his settlement threw all the pastoral duties upon the young minister, who seems to have performed them diligently and acceptably. Mr. Conway gives the following brief account of his labors, and tells in the same connection a story of Father Taylor too good not to be repeated: —

“Emerson took an active interest in the public affairs of Boston. He was on its School Board, and was chosen chaplain of the State Senate. He invited the anti-slavery lecturers into his church, and helped philanthropists of other denominations in their work. Father Taylor [the Methodist preacher to the sailors], to whom Dickens gave an English fame, found in him his most important supporter when establishing the Seaman’s Mission in Boston. This was told me by Father Taylor himself in his old age. I happened to be in his company once, when he spoke rather sternly about my leaving the Methodist Church; but when I spoke of the part Emerson had in it, he softened at once, and spoke with emotion of his great friend. I have no doubt that if the good Father of Boston Seamen was proud of any personal thing, it was of the excellent answer he is said to have given to some Methodists who objected to his friendship for Emerson. Being a Unitarian, they insisted that he must go to” — [the place which a divine of Charles the Second’s day said it was not good manners to mention in church].— “‘It does look so,’ said Father Taylor, ‘but I am sure of one thing: if Emerson goes to’” — [that place]— “‘he will change the climate there, and emigration will set that way.’”

In 1830, Emerson took part in the services at the ordination of the Reverend H.B. Goodwin as Dr. Ripley’s colleague. His address on giving the right hand of fellowship was printed, but is not included among his collected works.

The fair prospects with which Emerson began his life as a settled minister were too soon darkened. In February, 1832, the wife of his youth, who had been for some time in failing health, died of consumption.

He had become troubled with doubts respecting a portion of his duties, and it was not in his nature to conceal these doubts from his people. On the 9th of

September, 1832, he preached a sermon on the Lord's Supper, in which he announced unreservedly his conscientious scruples against administering that ordinance, and the grounds upon which those scruples were founded. This discourse, as his only printed sermon, and as one which heralded a movement in New England theology which has never stopped from that day to this, deserves some special notice. The sermon is in no sense "Emersonian" except in its directness, its sweet temper, and outspoken honesty. He argues from his comparison of texts in a perfectly sober, old-fashioned way, as his ancestor Peter Bulkeley might have done. It happened to that worthy forefather of Emerson that upon his "pressing a piece of *Charity* disagreeable to the will of the *Ruling Elder*, there was occasioned an unhappy *Discord* in the Church of *Concord*; which yet was at last healed, by their calling in the help of a *Council* and the *Ruling Elder's* Abdication." So says Cotton Mather. Whether zeal had grown cooler or charity grown warmer in Emerson's days we need not try to determine. The sermon was only a more formal declaration of views respecting the Lord's Supper, which he had previously made known in a conference with some of the most active members of his church. As a committee of the parish reported resolutions radically differing from his opinion on the subject, he preached this sermon and at the same time resigned his office. There was no "discord," there was no need of a "council." Nothing could be more friendly, more truly Christian, than the manner in which Mr. Emerson expressed himself in this parting discourse. All the kindness of his nature warms it throughout. He details the differences of opinion which have existed in the church with regard to the ordinance. He then argues from the language of the Evangelists that it was not intended to be a permanent institution. He takes up the statement of Paul in the Epistle to the Corinthians, which he thinks, all things considered, ought not to alter our opinion derived from the Evangelists. He does not think that we are to rely upon the opinions and practices of the primitive church. If that church believed the institution to be permanent, their belief does not settle the question for us. On every other subject, succeeding times have learned to form a judgment more in accordance with the spirit of Christianity than was the practice of the early ages.

"But, it is said, 'Admit that the rite was not designed to be perpetual.' What harm doth it?"

He proceeds to give reasons which show it to be inexpedient to continue the observance of the rite. It was treating that as authoritative which, as he believed that he had shown from Scripture, was not so. It confused the idea of God by transferring the worship of Him to Christ. Christ is the Mediator only as the

instructor of man. In the least petition to God “the soul stands alone with God, and Jesus is no more present to your mind than your brother or child.” Again: —

“The use of the elements, however suitable to the people and the modes of thought in the East, where it originated, is foreign and unsuited to affect us. The day of formal religion is past, and we are to seek our well-being in the formation of the soul. The Jewish was a religion of forms; it was all body, it had no life, and the Almighty God was pleased to qualify and send forth a man to teach men that they must serve him with the heart; that only that life was religious which was thoroughly good; that sacrifice was smoke and forms were shadows. This man lived and died true to that purpose; and with his blessed word and life before us, Christians must contend that it is a matter of vital importance, — really a duty to commemorate him by a certain form, whether that form be acceptable to their understanding or not. Is not this to make vain the gift of God? Is not this to turn back the hand on the dial?”

To these objections he adds the practical consideration that it brings those who do not partake of the communion service into an unfavorable relation with those who do.

The beautiful spirit of the man shows itself in all its noble sincerity in these words at the close of his argument: —

“Having said this, I have said all. I have no hostility to this institution; I am only stating my want of sympathy with it. Neither should I ever have obtruded this opinion upon other people, had I not been called by my office to administer it. That is the end of my opposition, that I am not interested in it. I am content that it stand to the end of the world if it please men and please Heaven, and I shall rejoice in all the good it produces.”

He then announces that, as it is the prevailing opinion and feeling in our religious community that it is a part of a pastor’s duties to administer this rite, he is about to resign the office which had been confided to him.

This is the only sermon of Mr. Emerson’s ever published. It was impossible to hear or to read it without honoring the preacher for his truthfulness, and recognizing the force of his statement and reasoning. It was equally impossible that he could continue his ministrations over a congregation which held to the ordinance he wished to give up entirely. And thus it was, that with the most friendly feelings on both sides, Mr. Emerson left the pulpit of the Second Church and found himself obliged to make a beginning in a new career.

CHAPTER IV. 1833-1838. AET. 30-35.

Section 1. Visit to Europe. — On his Return preaches in Different Places. — Emerson in the Pulpit. — At Newton. — Fixes his Residence at Concord. — The Old Manse. — Lectures in Boston. — Lectures on Michael Angelo and on Milton published in the “North American Review.” — Beginning of the Correspondence with Carlyle. — Letters to the Rev. James Freeman Clarke. — Republication of “Sartor Resartus.”

Section 2. Emerson’s Second Marriage. — His New Residence in Concord. — Historical Address. — Course of Ten Lectures on English Literature delivered in Boston. — The Concord Battle Hymn. — Preaching in Concord and East Lexington. — Accounts of his Preaching by Several Hearers. — A Course of Lectures on the Nature and Ends of History. — Address on War. — Death of Edward Bliss Emerson. — Death of Charles Chauncy Emerson.

Section 3. Publication of “Nature.” — Outline of this Essay. — Its Reception. — Address before the Phi Beta Kappa Society.

Section 1. In the year 1833 Mr. Emerson visited Europe for the first time. A great change had come over his life, and he needed the relief which a corresponding change of outward circumstances might afford him. A brief account of this visit is prefixed to the volume entitled “English Traits.” He took a short tour, in which he visited Sicily, Italy, and France, and, crossing from Boulogne, landed at the Tower Stairs in London. He finds nothing in his Diary to publish concerning visits to places. But he saw a number of distinguished persons, of whom he gives pleasant accounts, so singularly different in tone from the rough caricatures in which Carlyle vented his spleen and caprice, that one marvels how the two men could have talked ten minutes together, or would wonder, had not one been as imperturbable as the other was explosive. Horatio Greenough and Walter Savage Landor are the chief persons he speaks of as having met upon the Continent. Of these he reports various opinions as delivered in conversation. He mentions incidentally that he visited Professor Amici, who showed him his microscopes “magnifying (it was said) two thousand diameters.” Emerson hardly knew his privilege; he may have been the first American to look through an immersion lens with the famous Modena professor. Mr. Emerson says that his narrow and desultory reading had inspired him with the wish to see the faces of three or four writers, Coleridge, Wordsworth, Landor, De Quincey,

Carlyle. His accounts of his interviews with these distinguished persons are too condensed to admit of further abbreviation. Goethe and Scott, whom he would have liked to look upon, were dead; Wellington he saw at Westminster Abbey, at the funeral of Wilberforce. His impressions of each of the distinguished persons whom he visited should be looked at in the light of the general remark which, follows: —

“The young scholar fancies it happiness enough to live with people who can give an inside to the world; without reflecting that they are prisoners, too, of their own thought, and cannot apply themselves to yours. The conditions of literary success are almost destructive of the best social power, as they do not have that frolic liberty which only can encounter a companion on the best terms. It is probable you left some obscure comrade at a tavern, or in the farms, with right mother-wit, and equality to life, when you crossed sea and land to play bo-peep with celebrated scribes. I have, however, found writers superior to their books, and I cling to my first belief that a strong head will dispose fast enough of these impediments, and give one the satisfaction of reality, the sense of having been met, and a larger horizon.”

Emerson carried a letter of introduction to a gentleman in Edinburgh, who, being unable to pay him all the desired attention, handed him over to Mr. Alexander Ireland, who has given a most interesting account of him as he appeared during that first visit to Europe. Mr. Ireland’s presentation of Emerson as he heard him in the Scotch pulpit shows that he was not less impressive and attractive before an audience of strangers than among his own countrymen and countrywomen: —

“On Sunday, the 18th of August, 1833, I heard him deliver a discourse in the Unitarian Chapel, Young Street, Edinburgh, and I remember distinctly the effect which it produced on his hearers. It is almost needless to say that nothing like it had ever been heard by them before, and many of them did not know what to make of it. The originality of his thoughts, the consummate beauty of the language in which they were clothed, the calm dignity of his bearing, the absence of all oratorical effort, and the singular directness and simplicity of his manner, free from the least shadow of dogmatic assumption, made a deep impression on me. Not long before this I had listened to a wonderful sermon by Dr. Chalmers, whose force, and energy, and vehement, but rather turgid eloquence carried, for the moment, all before them, — his audience becoming like clay in the hands of the potter. But I must confess that the pregnant thoughts and serene self-possession of the young Boston minister had a greater charm for me than all the rhetorical splendors of Chalmers. His voice was the sweetest, the

most winning and penetrating of any I ever heard; nothing like it have I listened to since.

'That music in our hearts we bore
Long after it was heard no more.'"

Mr. George Gilfillan speaks of "the solemnity of his manner, and the earnest thought pervading his discourse."

As to the effect of his preaching on his American audiences, I find the following evidence in Mr. Cooke's diligently gathered collections. Mr. Sanborn says: —

"His pulpit eloquence was singularly attractive, though by no means equally so to all persons. In 1829, before the two friends had met, Bronson Alcott heard him preach in Dr. Channing's church on 'The Universality of the Moral Sentiment,' and was struck, as he said, with the youth of the preacher, the beauty of his elocution and the direct and sincere manner in which he addressed his hearers."

Mr. Charles Congdon, of New Bedford, well known as a popular writer, gives the following account of Emerson's preaching in his "Reminiscences." I borrow the quotation from Mr. Conway: —

"One day there came into our pulpit the most gracious of mortals, with a face all benignity, who gave out the first hymn and made the first prayer as an angel might have read and prayed. Our choir was a pretty good one, but its best was coarse and discordant after Emerson's voice. I remember of the sermon only that it had an indefinite charm of simplicity and wisdom, with occasional illustrations from nature, which were about the most delicate and dainty things of the kind which I had ever heard. I could understand them, if not the fresh philosophical novelties of the discourse."

Everywhere Emerson seems to have pleased his audiences. The Reverend Dr. Morison, formerly the much respected Unitarian minister of New Bedford, writes to me as follows: —

"After Dr. Dewey left New Bedford, Mr. Emerson preached there several months, greatly to the satisfaction and delight of those who heard him. The Society would have been glad to settle him as their minister, and he would have accepted a call, had it not been for some difference of opinion, I think, in regard to the communion service. Judge Warren, who was particularly his friend, and had at that time a leading influence in the parish, with all his admiration for Mr. Emerson, did not think he could well be the pastor of a Christian church, and so the matter was settled between him and his friend, without any action by the

Society.”

All this shows well enough that his preaching was eminently acceptable. But every one who has heard him lecture can form an idea of what he must have been as a preacher. In fact, we have all listened, probably, to many a passage from old sermons of his, — for he tells us he borrowed from those old sermons for his lectures, — without ever thinking of the pulpit from which they were first heard.

Among the stray glimpses we get of Emerson between the time when he quitted the pulpit of his church and that when he came before the public as a lecturer is this, which I owe to the kindness of Hon. Alexander H. Rice. In 1832 or 1833, probably the latter year, he, then a boy, with another boy, Thomas R. Gould, afterwards well known as a sculptor, being at the Episcopal church in Newton, found that Mr. Emerson was sitting in the pew behind them. Gould knew Mr. Emerson, and introduced young Rice to him, and they walked down the street together. As they went along, Emerson burst into a rhapsody over the Psalms of David, the sublimity of thought, and the poetic beauty of expression of which they are full, and spoke also with enthusiasm of the *Te Deum* as that grand old hymn which had come down through the ages, voicing the praises of generation after generation.

When they parted at the house of young Rice’s father, Emerson invited the boys to come and see him at the Allen farm, in the afternoon. They came to a piece of woods, and, as they entered it, took their hats off. “Boys,” said Emerson, “here we recognize the presence of the Universal Spirit. The breeze says to us in its own language, How d’ ye do? How d’ ye do? and we have already taken our hats off and are answering it with our own How d’ ye do? How d’ ye do? And all the waving branches of the trees, and all the flowers, and the field of corn yonder, and the singing brook, and the insect and the bird, — every living thing and things we call inanimate feel the same divine universal impulse while they join with us, and we with them, in the greeting which is the salutation of the Universal Spirit.”

We perceive the same feeling which pervades many of Emerson’s earlier Essays and much of his verse, in these long-treasured reminiscences of the poetical improvisation with which the two boys were thus unexpectedly favored. Governor Rice continues: —

“You know what a captivating charm there always was in Emerson’s presence, but I can never tell you how this line of thought then impressed a country boy. I do not remember anything about the remainder of that walk, nor of the after-incidents of that day, — I only remember that I went home wondering about that mystical dream of the Universal Spirit, and about what

manner of man he was under whose influence I had for the first time come....

“The interview left impressions that led me into new channels of thought which have been a lifelong pleasure to me, and, I doubt not, taught me somewhat how to distinguish between mere theological dogma and genuine religion in the soul.”

In the summer of 1834 Emerson became a resident of Concord, Massachusetts, the town of his forefathers, and the place destined to be his home for life. He first lived with his venerable connection, Dr. Ripley, in the dwelling made famous by Hawthorne as the “Old Manse.” It is an old-fashioned gambrel-roofed house, standing close to the scene of the Fight on the banks of the river. It was built for the Reverend William Emerson, his grandfather. In one of the rooms of this house Emerson wrote “Nature,” and in the same room, some years later, Hawthorne wrote “Mosses from an Old Manse.”

The place in which Emerson passed the greater part of his life well deserves a special notice. Concord might sit for its portrait as an ideal New England town. If wanting in the variety of surface which many other towns can boast of, it has at least a vision of the distant summits of Monadnock and Wachusett. It has fine old woods, and noble elms to give dignity to its open spaces. Beautiful ponds, as they modestly call themselves, — one of which, Walden, is as well known in our literature as Windermere in that of Old England, — lie quietly in their clean basins. And through the green meadows runs, or rather lounges, a gentle, unsalted stream, like an English river, licking its grassy margin with a sort of bovine placidity and contentment. This is the Musketaquid, or Meadow River, which, after being joined by the more restless Assabet, still keeps its temper and flows peacefully along by and through other towns, to lose itself in the broad Merrimac. The names of these rivers tell us that Concord has an Indian history, and there is evidence that it was a favorite residence of the race which preceded our own. The native tribes knew as well as the white settlers where were pleasant streams and sweet springs, where corn grew tall in the meadows and fish bred fast in the unpolluted waters.

The place thus favored by nature can show a record worthy of its physical attractions. Its settlement under the lead of Emerson’s ancestor, Peter Bulkeley, was effected in the midst of many difficulties, which the enterprise and self-sacrifice of that noble leader were successful in overcoming. On the banks of the Musketaquid was fired the first fatal shot of the “rebel” farmers. Emerson appeals to the Records of the town for two hundred years as illustrating the working of our American institutions and the character of the men of Concord:

“If the good counsel prevailed, the sneaking counsel did not fail to be

suggested; freedom and virtue, if they triumphed, triumphed in a fair field. And so be it an everlasting testimony for them, and so much ground of assurance of man's capacity for self-government."

What names that plain New England town reckons in the roll of its inhabitants! Stout Major Buttrick and his fellow-soldiers in the war of Independence, and their worthy successors in the war of Freedom; lawyers and statesmen like Samuel Hoar and his descendants; ministers like Peter Bulkeley, Daniel Bliss, and William Emerson; and men of genius such as the idealist and poet whose inspiration has kindled so many souls; as the romancer who has given an atmosphere to the hard outlines of our stern New England; as that unique individual, half college-graduate and half Algonquin, the Robinson Crusoe of Walden Pond, who carried out a school-boy whim to its full proportions, and told the story of Nature in undress as only one who had hidden in her bedroom could have told it. I need not lengthen the catalogue by speaking of the living, or mentioning the women whose names have added to its distinction. It has long been an intellectual centre such as no other country town of our own land, if of any other, could boast. Its groves, its streams, its houses, are haunted by undying memories, and its hillsides and hollows are made holy by the dust that is covered by their turf.

Such was the place which the advent of Emerson made the Delphi of New England and the resort of many pilgrims from far-off regions.

On his return from Europe in the winter of 1833-4, Mr. Emerson began to appear before the public as a lecturer. His first subjects, "Water," and the "Relation of Man to the Globe," were hardly such as we should have expected from a scholar who had but a limited acquaintance with physical and physiological science. They were probably chosen as of a popular character, easily treated in such a way as to be intelligible and entertaining, and thus answering the purpose of introducing him pleasantly to the new career he was contemplating. These lectures are not included in his published works, nor were they ever published, so far as I know. He gave three lectures during the same winter, relating the experiences of his recent tour in Europe. Having made himself at home on the platform, he ventured upon subjects more congenial to his taste and habits of thought than some of those earlier topics. In 1834 he lectured on Michael Angelo, Milton, Luther, George Fox, and Edmund Burke. The first two of these lectures, though not included in his collected works, may be found in the "North American Review" for 1837 and 1838. The germ of many of the thoughts which he has expanded in prose and verse may be found in

these Essays.

The *Cosmos* of the Ancient Greeks, the *piu nel' uno*, "The Many in One," appear in the Essay on Michael Angelo as they also appear in his "Nature." The last thought takes wings to itself and rises in the little poem entitled "Each and All." The "Rhodora," another brief poem, finds itself foreshadowed in the inquiry, "What is Beauty?" and its answer, "This great Whole the understanding cannot embrace. Beauty may be felt. It may be produced. But it cannot be defined." And throughout this Essay the feeling that truth and beauty and virtue are one, and that Nature is the symbol which typifies it to the soul, is the inspiring sentiment. *Noscitur a sociis* applies as well to a man's dead as to his living companions. A young friend of mine in his college days wrote an essay on Plato. When he mentioned his subject to Mr. Emerson, he got the caution, long remembered, "When you strike at a *King*, you must kill him." He himself knew well with what kings of thought to measure his own intelligence. What was grandest, loftiest, purest, in human character chiefly interested him. He rarely meddles with what is petty or ignoble. Like his "Humble Bee," the "yellow-breeched philosopher," whom he speaks of as

"Wiser far than human seer,"
and says of him,

"Aught unsavory or unclean
Hath my insect never seen,"

he goes through the world where coarser minds find so much that is repulsive to dwell upon,

"Seeing only what is fair,
Sipping only what is sweet."

Why Emerson selected Michael Angelo as the subject of one of his earliest lectures is shown clearly enough by the last sentence as printed in the Essay.

"He was not a citizen of any country; he belonged to the human race; he was a brother and a friend to all who acknowledged the beauty that beams in universal nature, and who seek by labor and self-denial to approach its source in perfect goodness."

Consciously or unconsciously men describe themselves in the characters they draw. One must have the mordant in his own personality or he will not take the color of his subject. He may force himself to picture that which he dislikes or even detests; but when he loves the character he delineates, it is his own, in some

measure, at least, or one of which he feels that its possibilities and tendencies belong to himself. Let us try Emerson by this test in his "Essay on Milton:" —

"It is the prerogative of this great man to stand at this hour foremost of all men in literary history, and so (shall we not say?) of all men, in the power to *inspire*. Virtue goes out of him into others." ... "He is identified in the mind with all select and holy images, with the supreme interests of the human race."— "Better than any other he has discharged the office of every great man, namely, to raise the idea of Man in the minds of his contemporaries and of posterity, — to draw after nature a life of man, exhibiting such a composition of grace, of strength, and of virtue as poet had not described nor hero lived. Human nature in these ages is indebted to him for its best portrait. Many philosophers in England, France, and Germany, have formally dedicated their study to this problem; and we think it impossible to recall one in those countries who communicates the same vibration of hope, of self-reverence, of piety, of delight in beauty, which the name of Milton awakes."

Emerson had the same lofty aim as Milton, "To raise the idea of man;" he had "the power to *inspire*" in a preëminent degree. If ever a man communicated those *vibrations* he speaks of as characteristic of Milton, it was Emerson. In elevation, purity, nobility of nature, he is worthy to stand with the great poet and patriot, who began like him as a school-master, and ended as the teacher in a school-house which had for its walls the horizons of every region where English is spoken. The similarity of their characters might be followed by the curious into their fortunes. Both were turned away from the clerical office by a revolt of conscience against the beliefs required of them; both lost very dear objects of affection in early manhood, and mourned for them in tender and mellifluous threnodies. It would be easy to trace many parallelisms in their prose and poetry, but to have dared to name any man whom we have known in our common life with the seraphic singer of the Nativity and of Paradise is a tribute which seems to savor of audacity. It is hard to conceive of Emerson as "an expert swordsman" like Milton. It is impossible to think of him as an abusive controversialist as Milton was in his controversy with Salmasius. But though Emerson never betrayed it to the offence of others, he must have been conscious, like Milton, of "a certain niceness of nature, an honest haughtiness," which was as a shield about his inner nature. Charles Emerson, the younger brother, who was of the same type, expresses the feeling in his college essay on Friendship, where it is all summed up in the line he quotes: —

"The hand of Douglas is his own."

It must be that in writing this Essay on Milton Emerson felt that he was listening in his own soul to whispers that seemed like echoes from that of the

divine singer.

*

My friend, the Rev. James Freeman Clarke, a lifelong friend of Emerson, who understood him from the first, and was himself a great part in the movement of which Emerson, more than any other man, was the leader, has kindly allowed me to make use of the following letters: —

TO REV. JAMES F. CLARKE, LOUISVILLE, KY.

PLYMOUTH, MASS., March 12, 1834.

MY DEAR SIR, — As the day approaches when Mr. Lewis should leave Boston, I seize a few moments in a friendly house in the first of towns, to thank you heartily for your kindness in lending me the valued manuscripts which I return. The translations excited me much, and who can estimate the value of a good thought? I trust I am to learn much more from you hereafter of your German studies, and much I hope of your own. You asked in your note concerning Carlyle. My recollections of him are most pleasant, and I feel great confidence in his character. He understands and recognizes his mission. He is perfectly simple and affectionate in his manner, and frank, as he can well afford to be, in his communications. He expressed some impatience of his total solitude, and talked of Paris as a residence. I told him I hoped not; for I should always remember him with respect, meditating in the mountains of Nithsdale. He was cheered, as he ought to be, by learning that his papers were read with interest by young men unknown to him in this continent; and when I specified a piece which had attracted warm commendation from the New Jerusalem people here, his wife said that is always the way; whatever he has writ that he thinks has fallen dead, he hears of two or three years afterward. — He has many, many tokens of Goethe's regard, miniatures, medals, and many letters. If you should go to Scotland one day, you would gratify him, yourself, and me, by your visit to Craigenputtock, in the parish of Dunscore, near Dumfries. He told me he had a book which he thought to publish, but was in the purpose of dividing into a series of articles for "Fraser's Magazine." I therefore subscribed for that book, which he calls the "Mud Magazine," but have seen nothing of his workmanship in the two last numbers. The mail is going, so I shall finish my letter another time.

Your obliged friend and servant,

R. WALDO EMERSON.

CONCORD, MASS., November 25, 1834.

MY DEAR SIR, — Miss Peabody has kindly sent me your manuscript piece on Goethe and Carlyle. I have read it with great pleasure and a feeling of gratitude, at the same time with a serious regret that it was not published. I have forgotten what reason you assigned for not printing it; I cannot think of any sufficient one. Is it too late now? Why not change its form a little and annex to it some account of Carlyle's later pieces, to wit: "Diderot," and "Sartor Resartus." The last is complete, and he has sent it to me in a stitched pamphlet. Whilst I see its vices (relatively to the reading public) of style, I cannot but esteem it a noble philosophical poem, reflecting the ideas, institutions, men of this very hour. And it seems to me that it has so much wit and other secondary graces as must strike a class who would not care for its primary merit, that of being a sincere exhortation to seekers of truth. If you still retain your interest in his genius (as I see not how you can avoid, having understood it and cooperated with it so truly), you will be glad to know that he values his American readers very highly; that he does not defend this offensive style of his, but calls it questionable tentative; that he is trying other modes, and is about publishing a historical piece called "The Diamond Necklace," as a part of a great work which he meditates on the subject of the French Revolution. He says it is part of his creed that history is poetry, could we tell it right. He adds, moreover, in a letter I have recently received from him, that it has been an odd dream that he might end in the western woods. Shall we not bid him come, and be Poet and Teacher of a most scattered flock wanting a shepherd? Or, as I sometimes think, would it not be a new and worse chagrin to become acquainted with the extreme deadness of our community to spiritual influences of the higher kind? Have you read Sampson Reed's "Growth of the Mind"? I rejoice to be contemporary with that man, and cannot wholly despair of the society in which he lives; there must be some oxygen yet, and La Fayette is only just dead.

Your friend, R. WALDO EMERSON.

It occurs to me that 't is unfit to send any white paper so far as to your house, so you shall have a sentence from Carlyle's letter.

[This may be found in Carlyle's first letter, dated 12th August, 1834.] Dr. Le Baron Russell, an intimate friend of Emerson for the greater part of his life, gives me some particulars with reference to the publication of "Sartor Resartus," which I will repeat in his own words: —

"It was just before the time of which I am speaking [that of Emerson's marriage] that the 'Sartor Resartus' appeared in 'Fraser.' Emerson lent the numbers, or the collected sheets of 'Fraser,' to Miss Jackson, and we all had the

reading of them. The excitement which the book caused among young persons interested in the literature of the day at that time you probably remember. I was quite carried away by it, and so anxious to own a copy, that I determined to publish an American edition. I consulted James Munroe & Co. on the subject. Munroe advised me to obtain a subscription to a sufficient number of copies to secure the cost of the publication. This, with the aid of some friends, particularly of my classmate, William Silsbee, I readily succeeded in doing. When this was accomplished, I wrote to Emerson, who up to this time had taken no part in the enterprise, asking him to write a preface. (This is the Preface which appears in the American edition, James Munroe & Co., 1836. It was omitted in the third American from the second London edition, by the same publishers, 1840.) Before the first edition appeared, and after the subscription had been secured, Munroe & Co. offered to assume the whole responsibility of the publication, and to this I assented.

[Footnote 1: Revised and corrected by the author.]

“This American edition of 1836 was the first appearance of the ‘Sartor’ in either country, as a distinct edition. Some copies of the sheets from ‘Fraser,’ it appears, were stitched together and sent to a few persons, but Carlyle could find no English publisher willing to take the responsibility of printing the book. This shows, I think, how much more interest was taken in Carlyle’s writings in this country than in England.”

On the 14th of May, 1834, Emerson wrote to Carlyle the first letter of that correspondence which has since been given to the world under the careful editorship of Mr. Charles Norton. This correspondence lasted from the date mentioned to the 2d of April, 1872, when Carlyle wrote his last letter to Emerson. The two writers reveal themselves as being in strong sympathy with each other, in spite of a radical difference of temperament and entirely opposite views of life. The hatred of unreality was uppermost with Carlyle; the love of what is real and genuine with Emerson. Those old moralists, the weeping and the laughing philosophers, find their counterparts in every thinking community. Carlyle did not weep, but he scolded; Emerson did not laugh, but in his gravest moments there was a smile waiting for the cloud to pass from his forehead. The Duet they chanted was a Miserere with a Te Deum for its Antiphon; a *De Profundis* answered by a *Sursum Corda*. “The ground of my existence is black as death,” says Carlyle. “Come and live with me a year,” says Emerson, “and if you do not like New England well enough to stay, one of these years; (when the ‘History’ has passed its ten editions, and been translated into as many languages) I will come and dwell with you.”

Section 2. In September, 1835, Emerson was married to Miss Lydia Jackson, of Plymouth, Massachusetts. The wedding took place in the fine old mansion known as the Winslow House, Dr. Le Baron Russell and his sister standing up with the bridegroom and his bride. After their marriage, Mr. and Mrs. Emerson went to reside in the house in which he passed the rest of his life, and in which Mrs. Emerson and their daughter still reside. This is the "plain, square, wooden house," with horse-chestnut trees in the front yard, and evergreens around it, which has been so often described and figured. It is without pretensions, but not without an air of quiet dignity. A full and well-illustrated account of it and its arrangements and surroundings is given in "Poets' Homes," by Arthur Gilman and others, published by D. Lothrop & Company in 1879.

On the 12th of September, 1835, Emerson delivered an "Historical Discourse, at Concord, on the Second Centennial Anniversary of the Incorporation of the Town." There is no "mysticism," no "transcendentalism" in this plain, straightforward Address. The facts are collected and related with the patience and sobriety which became the writer as one of the Dryasdusts of our very diligent, very useful, very matter-of-fact, and for the most part judiciously unimaginative Massachusetts Historical Society. It looks unlike anything else Emerson ever wrote, in being provided with abundant foot-notes and an appendix. One would almost as soon have expected to see Emerson equipped with a musket and a knapsack as to find a discourse of his clogged with annotations, and trailing a supplement after it. Oracles are brief and final in their utterances. Delphi and Cumae are not expected to explain what they say.

It is the habit of our New England towns to celebrate their own worthies and their own deeds on occasions like this, with more or less of rhetorical gratitude and self-felicitation. The discourses delivered on these occasions are commonly worth reading, for there was never a clearing made in the forest that did not let in the light on heroes and heroines. Concord is on the whole the most interesting of all the inland towns of New England. Emerson has told its story in as painstaking, faithful a way as if he had been by nature an annalist. But with this fidelity, we find also those bold generalizations and sharp picturesque touches which reveal the poetic philosopher.

"I have read with care," he says, "the town records themselves. They exhibit a pleasing picture of a community almost exclusively agricultural, where no man has much time for words, in his search after things; of a community of great simplicity of manners, and of a manifest love of justice. I find our annals marked with a uniform good sense. — The tone of the record rises with the dignity of the event. These soiled and musty books are luminous and electric within. The old

town clerks did not spell very correctly, but they contrive to make intelligible the will of a free and just community.” ... “The matters there debated (in town meetings) are such as to invite very small consideration. The ill-spelled pages of the town records contain the result. I shall be excused for confessing that I have set a value upon any symptom of meanness and private pique which I have met with in these antique books, as proof that justice was done; that if the results of our history are approved as wise and good, it was yet a free strife; if the good counsel prevailed, the sneaking counsel did not fail to be suggested; freedom and virtue, if they triumphed, triumphed in a fair field. And so be it an everlasting testimony for them, and so much ground of assurance of man’s capacity for self-government.”

There was nothing in this Address which the plainest of Concord’s citizens could not read understandingly and with pleasure. In fact Mr. Emerson himself, besides being a poet and a philosopher, was also a plain Concord citizen. His son tells me that he was a faithful attendant upon town meetings, and, though he never spoke, was an interested and careful listener to the debates on town matters. That respect for “mother-wit” and for all the wholesome human qualities which reveals itself all through his writings was bred from this kind of intercourse with men of sense who had no pretensions to learning, and in whom, for that very reason, the native qualities came out with less disguise in their expression. He was surrounded by men who ran to extremes in their idiosyncrasies; Alcott in speculations, which often led him into the fourth dimension of mental space; Hawthorne, who brooded himself into a dream — peopled solitude; Thoreau, the nullifier of civilization, who insisted on nibbling his asparagus at the wrong end, to say nothing of idolaters and echoes. He kept his balance among them all. It would be hard to find a more candid and sober record of the result of self-government in a small community than is contained in this simple discourse, patient in detail, large in treatment, more effective than any unsupported generalities about the natural rights of man, which amount to very little unless men earn the right of asserting them by attending fairly to their natural duties. So admirably is the working of a town government, as it goes on in a well-disposed community, displayed in the history of Concord’s two hundred years of village life, that one of its wisest citizens had portions of the address printed for distribution, as an illustration of the American principle of self-government.

After settling in Concord, Emerson delivered courses of Lectures in Boston during several successive winters; in 1835, ten Lectures on English Literature; in 1836, twelve Lectures on the Philosophy of History; in 1837, ten Lectures on Human Culture. Some of these lectures may have appeared in print under their

original titles; all of them probably contributed to the Essays and Discourses which we find in his published volumes.

On the 19th of April, 1836, a meeting was held to celebrate the completion of the monument raised in commemoration of the Concord Fight. For this occasion Emerson wrote the hymn made ever memorable by the lines: —

Here once the embattled farmers stood,
And fired the shot heard round the world.

The last line of this hymn quickens the heartbeats of every American, and the whole hymn is admirable in thought and expression. Until the autumn of 1838, Emerson preached twice on Sundays to the church at East Lexington, which desired him to become its pastor. Mr. Cooke says that when a lady of the society was asked why they did not settle a friend of Emerson's whom he had urged them to invite to their pulpit, she replied: "We are a very simple people, and can understand no one but Mr. Emerson." He said of himself: "My pulpit is the Lyceum platform." Knowing that he made his Sermons contribute to his Lectures, we need not mourn over their not being reported.

In March, 1837, Emerson delivered in Boston a Lecture on War, afterwards published in Miss Peabody's "Aesthetic Papers." He recognizes war as one of the temporary necessities of a developing civilization, to disappear with the advance of mankind: —

"At a certain stage of his progress the man fights, if he be of a sound body and mind. At a certain high stage he makes no offensive demonstration, but is alert to repel injury, and of an unconquerable heart. At a still higher stage he comes into the region of holiness; passion has passed away from him; his warlike nature is all converted into an active medicinal principle; he sacrifices himself, and accepts with alacrity wearisome tasks of denial and charity; but being attacked, he bears it, and turns the other cheek, as one engaged, throughout his being, no longer to the service of an individual, but to the common good of all men."

In 1834 Emerson's brother Edward died, as already mentioned, in the West India island where he had gone for his health. In his letter to Carlyle, of November 12th of the same year, Emerson says: "Your letter, which I received last week, made a bright light in a solitary and saddened place. I had quite recently received the news of the death of a brother in the island of Porto Rico, whose loss to me will be a lifelong sorrow." It was of him that Emerson wrote the lines "In Memoriam," in which he says, —

”There is no record left on earth
Save on tablets of the heart,
Of the rich, inherent worth,
Of the grace that on him shone
Of eloquent lips, of joyful wit;
He could not frame a word unfit,
An act unworthy to be done.”

Another bereavement was too soon to be recorded. On the 7th of October, 1835, he says in a letter to Carlyle: —

“I was very glad to hear of the brother you describe, for I have one too, and know what it is to have presence in two places. Charles Chauncy Emerson is a lawyer now settled in this town, and, as I believe, no better Lord Hamlet was ever. He is our Doctor on all questions of taste, manners, or action. And one of the pure pleasures I promise myself in the months to come is to make you two gentlemen know each other.”

Alas for human hopes and prospects! In less than a year from the date of that letter, on the 17th of September, 1836, he writes to Carlyle: —

“Your last letter, dated in April, found me a mourner, as did your first. I have lost out of this world my brother Charles, of whom I have spoken to you, — the friend and companion of many years, the inmate of my house, a man of a beautiful genius, born to speak well, and whose conversation for these last years has treated every grave question of humanity, and has been my daily bread. I have put so much dependence on his gifts, that we made but one man together; for I needed never to do what he could do by noble nature, much better than I. He was to have been married in this month, and at the time of his sickness and sudden death, I was adding apartments to my house for his permanent accommodation. I wish that you could have known him. At twenty-seven years the best life is only preparation. He built his foundation so large that it needed the full age of man to make evident the plan and proportions of his character. He postponed always a particular to a final and absolute success, so that his life was a silent appeal to the great and generous. But some time I shall see you and speak of him.”

Section 3. In the year 1836 there was published in Boston a little book of less than a hundred very small pages, entitled “Nature.” It bore no name on its title-page, but was at once attributed to its real author, Ralph Waldo Emerson.

The Emersonian adept will pardon me for burdening this beautiful Essay with a

commentary which is worse than superfluous for him. For it has proved for many, — I will not say a *pons asinorum*, — but a very narrow bridge, which it made their heads swim to attempt crossing, and yet they must cross it, or one domain of Emerson's intellect will not be reached.

It differed in some respects from anything he had hitherto written. It talked a strange sort of philosophy in the language of poetry. Beginning simply enough, it took more and more the character of a rhapsody, until, as if lifted off his feet by the deepened and stronger undercurrent of his thought, the writer dropped his personality and repeated the words which "a certain poet sang" to him.

This little book met with a very unemotional reception. Its style was peculiar, — almost as unlike that of his Essays as that of Carlyle's "Sartor Resartus" was unlike the style of his "Life of Schiller." It was vague, mystic, incomprehensible, to most of those who call themselves common-sense people. Some of its expressions lent themselves easily to travesty and ridicule. But the laugh could not be very loud or very long, since it took twelve years, as Mr. Higginson tells us, to sell five hundred copies. It was a good deal like Keats's

"doubtful tale from fairy-land
Hard for the non-elect to understand."

The same experience had been gone through by Wordsworth.

"Whatever is too original," says De Quincey, "will be hated at the first. It must slowly mould a public for itself; and the resistance of the early thoughtless judgments must be overcome by a counter-resistance to itself, in a better audience slowly mustering against the first. Forty and seven years it is since William Wordsworth first appeared as an author. Twenty of these years he was the scoff of the world, and his poetry a by-word of scorn. Since then, and more than once, senates have rung with acclamations to the echo of his name."

No writer is more deeply imbued with the spirit of Wordsworth than Emerson, as we cannot fail to see in turning the pages of "Nature," his first thoroughly characteristic Essay. There is the same thought in the Preface to "The Excursion" that we find in the Introduction to "Nature."

"The foregoing generations beheld God and nature face to face; we through their eyes. Why should not we also enjoy an original relation to the universe? Why should not we have a poetry and philosophy of insight and not of tradition, and a religion by revelation to us, and not the history of theirs?"

”Paradise and groves
Elysian, Fortunate Fields — like those of old
Sought in the Atlantic Main, why should they be
A history only of departed things,
Or a mere fiction of what never was?”

“Nature” is a reflective prose poem. It is divided into eight chapters, which might almost as well have been called cantos.

Never before had Mr. Emerson given free utterance to the passion with which the aspects of nature inspired him. He had recently for the first time been at once master of himself and in free communion with all the planetary influences above, beneath, around him. The air of the country intoxicated him. There are sentences in “Nature” which are as exalted as the language of one who is just coming to himself after having been etherized. Some of these expressions sounded to a considerable part of his early readers like the vagaries of delirium. Yet underlying these excited outbursts there was a general tone of serenity which reassured the anxious. The gust passed over, the ripples smoothed themselves, and the stars shone again in quiet reflection.

After a passionate outbreak, in which he sees all, is nothing, loses himself in nature, in Universal Being, becomes “part or particle of God,” he considers briefly, in the chapter entitled *Commodity*, the ministry of nature to the senses. A few picturesque glimpses in pleasing and poetical phrases, with a touch of archaism, and reminiscences of Hamlet and Jeremy Taylor, “the Shakspeare of divines,” as he has called him, are what we find in this chapter on *Commodity*, or natural conveniences.

But “a nobler want of man is served by Nature, namely, the love of *Beauty*” which is his next subject. There are some touches of description here, vivid, high-colored, not so much pictures as hints and impressions for pictures.

Many of the thoughts which run through all his prose and poetry may be found here. Analogy is seen everywhere in the works of Nature. “What is common to them all, — that perfectness and harmony, is beauty.”— “Nothing is quite beautiful alone: nothing but is beautiful in the whole.”— “No reason can be asked or given why the soul seeks beauty.” How easily these same ideas took on the robe of verse may be seen in the Poems, “Each and All,” and “The Rhodora.” A good deal of his philosophy comes out in these concluding sentences of the chapter: —

“Beauty in its largest and profoundest sense is one expression for the universe; God is the all-fair. Truth and goodness and beauty are but different faces of the same All. But beauty in Nature is not ultimate. It is the herald of

inward and eternal beauty, and is not alone a solid and satisfactory good. It must therefore stand as a part and not as yet the highest expression of the final cause of Nature.”.

In the “Rhodora” the flower is made to answer that
“Beauty is its own excuse for being.”

In this Essay the beauty of the flower is not enough, but it must excuse itself for being, mainly as the symbol of something higher and deeper than itself.

He passes next to a consideration of *Language*. Words are signs of natural facts, particular material facts are symbols of particular spiritual facts, and Nature is the symbol of spirit. Without going very profoundly into the subject, he gives some hints as to the mode in which languages are formed, — whence words are derived, how they become transformed and worn out. But they come at first fresh from Nature.

“A man conversing in earnest, if he watch his intellectual processes, will find that always a material image, more or less luminous, arises in his mind, contemporaneous with every thought, which furnishes the vestment of the thought. Hence good writing and brilliant discourse are perpetual allegories.”

From this he argues that country life is a great advantage to a powerful mind, inasmuch as it furnishes a greater number of these material images. They cannot be summoned at will, but they present themselves when great exigencies call for them.

“The poet, the orator, bred in the woods, whose senses have been nourished by their fair and appealing changes, year after year, without design and without heed, — shall not lose their lesson altogether, in the roar of cities or the broil of politics. Long hereafter, amidst agitations and terror in national councils, — in the hour of revolution, — these solemn images shall reappear in their morning lustre, as fit symbols and words of the thought which the passing events shall awaken. At the call of a noble sentiment, again the woods wave, the pines murmur, the river rolls and shines, and the cattle low upon the mountains, as he saw and heard them in his infancy. And with these forms the spells of persuasion, the keys of power, are put into his hands.”

It is doing no wrong to this very eloquent and beautiful passage to say that it reminds us of certain lines in one of the best known poems of Wordsworth: —

”These beauteous forms,
Through a long absence, have not been to me
As is a landscape to a blind man’s eye;
But oft, in lonely rooms, and mid the din
Of towns and cities, I have owed to them

In hours of weariness sensations sweet
Felt in the blood and felt along the heart.”

It is needless to quote the whole passage. The poetry of Wordsworth may have suggested the prose of Emerson, but the prose loses nothing by the comparison.

In *Discipline*, which is his next subject, he treats of the influence of Nature in educating the intellect, the moral sense, and the will. Man is enlarged and the universe lessened and brought within his grasp, because

“Time and space relations vanish as laws are known.”— “The moral law lies at the centre of Nature and radiates to the circumference.”— “All things with which we deal preach to us. What is a farm but a mute gospel?”— “From the child’s successive possession of his several senses up to the hour when he sayeth, ‘Thy will be done!’ he is learning the secret that he can reduce under his will, not only particular events, but great classes, nay, the whole series of events, and so conform all facts to his character.”

The unity in variety which meets us everywhere is again referred to. He alludes to the ministry of our friendships to our education. When a friend has done for our education in the way of filling our minds with sweet and solid wisdom “it is a sign to us that his office is closing, and he is commonly withdrawn from our sight in a short time.” This thought was probably suggested by the death of his brother Charles, which occurred a few months before “Nature” was published. He had already spoken in the first chapter of this little book as if from some recent experience of his own, doubtless the same bereavement. “To a man laboring under calamity, the heat of his own fire hath sadness in it. Then there is a kind of contempt of the landscape felt by him who has just lost by death a dear friend. The sky is less grand as it shuts down over less worth in the population.” This was the first effect of the loss; but after a time he recognizes a superintending power which orders events for us in wisdom which we could not see at first.

The chapter on *Idealism* must be read by all who believe themselves capable of abstract thought, if they would not fall under the judgment of Turgot, which Emerson quotes: “He that has never doubted the existence of matter may be assured he has no aptitude for metaphysical inquiries.” The most essential statement is this: —

“It is a sufficient account of that Appearance we call the World, that God will teach a human mind, and so makes it the receiver of a certain number of congruent sensations, which we call sun and moon, man and woman, house and trade. In my utter impotence to test the authenticity of the report of my senses, to

know whether the impressions they make on me correspond with outlying objects, what difference does it make, whether Orion is up there in Heaven, or some god paints the image in the firmament of the Soul?"

We need not follow the thought through the argument from illusions, like that when we look at the shore from a moving ship, and others which cheat the senses by false appearances.

The poet animates Nature with his own thoughts, perceives the affinities between Nature and the soul, with Beauty as his main end. The philosopher pursues Truth, but, "not less than the poet, postpones the apparent order and relation of things to the empire of thought." Religion and ethics agree with all lower culture in degrading Nature and suggesting its dependence on Spirit. "The devotee flouts Nature."— "Plotinus was ashamed of his body."— "Michael Angelo said of external beauty, 'it is the frail and weary weed, in which God dresses the soul, which He has called into time.'" Emerson would not undervalue Nature as looked at through the senses and "the unrenewed understanding." "I have no hostility to Nature," he says, "but a child's love of it. I expand and live in the warm day like corn and melons." — But, "seen in the light of thought, the world always is phenomenal; and virtue subordinates it to the mind. Idealism sees the world in God," — as one vast picture, which God paints on the instant eternity, for the contemplation of the soul.

The unimaginative reader is likely to find himself off soundings in the next chapter, which has for its title *Spirit*.

Idealism only denies the existence of matter; it does not satisfy the demands of the spirit. "It leaves God out of me." — Of these three questions, What is matter? Whence is it? Where to? The ideal theory answers the first only. The reply is that matter is a phenomenon, not a substance.

"But when we come to inquire Whence is matter? and Where to? many truths arise to us out of the recesses of consciousness. We learn that the highest is present to the soul of man, that the dread universal essence, which is not wisdom, or love, or beauty, or power, but all in one, and each entirely, is that for which all things exist, and that by which they are; that spirit creates; that behind nature, throughout nature, spirit is present; that spirit is one and not compound; that spirit does not act upon us from without, that is, in space and time, but spiritually, or through ourselves."— "As a plant upon the earth, so a man rests upon the bosom of God; he is nourished by unfailing fountains, and draws, at his need, inexhaustible power."

Man may have access to the entire mind of the Creator, himself become a "creator in the finite."

"As we degenerate, the contrast between us and our house is more evident.

We are as much strangers in nature as we are aliens from God. We do not understand the notes of birds. The fox and the deer run away from us; the bear and the tiger rend us.”

All this has an Old Testament sound as of a lost Paradise. In the next chapter he dreams of Paradise regained.

This next and last chapter is entitled *Prospects*. He begins with a bold claim for the province of intuition as against induction, undervaluing the “half sight of science” as against the “untaught sallies of the spirit,” the surmises and vaticinations of the mind, — the “imperfect theories, and sentences which contain glimpses of truth.” In a word, he would have us leave the laboratory and its crucibles for the sibyl’s cave and its tripod. We can all — or most of us, certainly — recognize something of truth, much of imagination, and more of danger in speculations of this sort. They belong to visionaries and to poets. Emerson feels distinctly enough that he is getting into the realm of poetry. He quotes five beautiful verses from George Herbert’s “Poem on Man.” Presently he is himself taken off his feet into the air of song, and finishes his Essay with “some traditions of man and nature which a certain poet sang to me.”— “A man is a god in ruins.”— “Man is the dwarf of himself. Once he was permeated and dissolved by spirit. He filled nature with his overflowing currents. Out from him sprang the sun and moon; from man the sun, from woman the moon.” — But he no longer fills the mere shell he had made for himself; “he is shrunk to a drop.” Still something of elemental power remains to him. “It is instinct.” Such teachings he got from his “poet.” It is a kind of New England Genesis in place of the Old Testament one. We read in the Sermon on the Mount: “Be ye therefore perfect as your Father in Heaven is perfect.” The discourse which comes to us from the Trimount oracle commands us, “Build, therefore, your own world. As fast as you conform your life to the pure idea in your mind, that will unfold its great proportions.” The seer of Patmos foretells a heavenly Jerusalem, of which he says, “There shall in no wise enter into it anything which defileth.” The sage of Concord foresees a new heaven on earth. “A correspondent revolution in things will attend the influx of the spirit. So fast will disagreeable appearances, swine, spiders, snakes, pests, mad-houses, prisons, enemies, vanish; they are temporary and shall be no more seen.”

*

It may be remembered that Calvin, in his Commentary on the New Testament, stopped when he came to the book of the “Revelation.” He found it full of difficulties which he did not care to encounter. Yet, considered only as a poem,

the vision of St. John is full of noble imagery and wonderful beauty. "Nature" is the Book of Revelation of our Saint Radulphus. It has its obscurities, its extravagances, but as a poem it is noble and inspiring. It was objected to on the score of its pantheistic character, as Wordsworth's "Lines composed near Tintern Abbey" had been long before. But here and there it found devout readers who were captivated by its spiritual elevation and great poetical beauty, among them one who wrote of it in the "Democratic Review" in terms of enthusiastic admiration.

Mr. Bowen, the Professor of Natural Theology and Moral Philosophy in Harvard University, treated this singular semi-philosophical, semi-poetical little book in a long article in the "Christian Examiner," headed "Transcendentalism," and published in the January number for 1837. The acute and learned Professor meant to deal fairly with his subject. But if one has ever seen a sagacious pointer making the acquaintance of a box-tortoise, he will have an idea of the relations between the reviewer and the reviewed as they appear in this article. The professor turns the book over and over, — inspects it from plastron to carapace, so to speak, and looks for openings everywhere, sometimes successfully, sometimes in vain. He finds good writing and sound philosophy, passages of great force and beauty of expression, marred by obscurity, under assumptions and faults of style. He was not, any more than the rest of us, acclimated to the Emersonian atmosphere, and after some not unjust or unkind comments with which many readers will heartily agree, confesses his bewilderment, saying: —

"On reviewing what we have already said of this singular work, the criticism seems to be couched in contradictory terms; we can only allege in excuse the fact that the book is a contradiction in itself."

Carlyle says in his letter of February 13, 1837: —

"Your little azure-colored 'Nature' gave me true satisfaction. I read it, and then lent it about to all my acquaintances that had a sense for such things; from whom a similar verdict always came back. You say it is the first chapter of something greater. I call it rather the Foundation and Ground-plan on which you may build whatsoever of great and true has been given you to build. It is the true Apocalypse, this when the 'Open Secret' becomes revealed to a man. I rejoice much in the glad serenity of soul with which you look out on this wondrous Dwelling-place of yours and mine, — with an ear for the *Ewigen Melodien*, which pipe in the winds round us, and utter themselves forth in all sounds and sights and things; *not* to be written down by gamut-machinery; but which all right writing is a kind of attempt to write down."

The first edition of "Nature" had prefixed to it the following words from Plotinus: "Nature is but an image or imitation of wisdom, the last thing of the

soul; Nature being a thing which doth only do, but not know." This is omitted in after editions, and in its place we read: —

"A subtle chain of countless rings
The next unto the farthest brings;
The eye reads omens where it goes,
And speaks all languages the rose;
And striving to be man, the worm
Mounts through all the spires of form."

The copy of "Nature" from which I take these lines, his own, of course, like so many others which he prefixed to his different Essays, was printed in the year 1849, ten years before the publication of Darwin's "Origin of Species," twenty years and more before the publication of "The Descent of Man." But the "Vestiges of Creation," published in 1844, had already popularized the resuscitated theories of Lamarck. It seems as if Emerson had a warning from the poetic instinct which, when it does not precede the movement of the scientific intellect, is the first to catch the hint of its discoveries. There is nothing more audacious in the poet's conception of the worm looking up towards humanity, than the naturalist's theory that the progenitor of the human race was an acephalous mollusk. "I will not be sworn," says Benedick, "but love may transform me to an oyster." For "love" read science.

Unity in variety, "*il piu nell uno*" symbolism of Nature and its teachings, generation of phenomena, — appearances, — from spirit, to which they correspond and which they obey; evolution of the best and elimination of the worst as the law of being; all this and much more may be found in the poetic utterances of this slender Essay. It fell like an aerolite, unasked for, unaccounted for, unexpected, almost unwelcome, — a stumbling-block to be got out of the well-trodden highway of New England scholastic intelligence. But here and there it found a reader to whom it was, to borrow, with slight changes, its own quotation, —

"The golden key
Which opes the palace of eternity,"

inasmuch as it carried upon its face the highest certificate of truth, because it animated them to create a new world for themselves through the purification of their own souls.

Next to "Nature" in the series of his collected publications comes "The

American Scholar. An Oration delivered before the Phi Beta Kappa Society at Cambridge, August 31, 1837.”

The Society known by these three letters, long a mystery to the uninitiated, but which, filled out and interpreted, signify that philosophy is the guide of life, is one of long standing, the annual meetings of which have called forth the best efforts of many distinguished scholars and thinkers. Rarely has any one of the annual addresses been listened to with such profound attention and interest. Mr. Lowell says of it, that its delivery “was an event without any former parallel in our literary annals, a scene to be always treasured in the memory for its picturesqueness and its inspiration. What crowded and breathless aisles, what windows clustering with eager heads, what enthusiasm of approval, what grim silence of foregone dissent!”

Mr. Cooke says truly of this oration, that nearly all his leading ideas found expression in it. This was to be expected in an address delivered before such an audience. Every real thinker’s world of thought has its centre in a few formulae, about which they revolve as the planets circle round the sun which cast them off. But those who lost themselves now and then in the pages of “Nature” will find their way clearly enough through those of “The American Scholar.” It is a plea for generous culture; for the development of all the faculties, many of which tend to become atrophied by the exclusive pursuit of single objects of thought. It begins with a note like a trumpet call.

“Thus far,” he says, “our holiday has been simply a friendly sign of the survival of the love of letters amongst a people too busy to give to letters any more. As such it is precious as the sign of an indestructible instinct. Perhaps the time is already come when it ought to be, and will be, something else; when the sluggish intellect of this continent will look from under its iron lids and fill the postponed expectations of the world with something better than the exertions of mechanical skill. Our day of dependence, our long apprenticeship to the learning of other lands, draws to a close. The millions that around us are rushing into life cannot always be fed on the sere remains of foreign harvests. Events, actions arise, that must be sung, that will sing themselves. Who can doubt that poetry will revive and lead in a new age, as the star in the constellation Harp, which now flames in our zenith, astronomers announce shall one day be the pole-star for a thousand years?”

Emerson finds his text in the old fable which tells that Man, as he was in the beginning, was divided into men, as the hand was divided into fingers, the better to answer the end of his being. The fable covers the doctrine that there is One Man; present to individuals only in a partial manner; and that we must take the whole of society to find the whole man. Unfortunately the unit has been too

minutely subdivided, and many faculties are practically lost for want of use. “The state of society is one in which the members have suffered amputation from the trunk, and strut about so many walking monsters, — a good finger, a neck, a stomach, an elbow, but never a man.... Man is thus metamorphosed into a thing, into many things.... The priest becomes a form; the attorney a statute book; the mechanic a machine; the sailor a rope of the ship.”

This complaint is by no means a new one. Scaliger says, as quoted by omnivorous old Burton: “*Nequaquam, nos homines sumus sed partes hominis.*” The old illustration of this used to be found in pin-making. It took twenty different workmen to make a pin, beginning with drawing the wire and ending with sticking in the paper. Each expert, skilled in one small performance only, was reduced to a minute fraction of a fraction of humanity. If the complaint was legitimate in Scaliger’s time, it was better founded half a century ago when Mr. Emerson found cause for it. It has still more serious significance to-day, when in every profession, in every branch of human knowledge, special acquirements, special skill have greatly tended to limit the range of men’s thoughts and working faculties.

“In this distribution of functions the scholar is the delegated intellect. In the right state he is *Man thinking*. In the degenerate state, when the victim of society, he tends to become a mere thinker, or still worse, the parrot of other men’s thinking. In this view of him, as *Man thinking*, the theory of his office is continued. Him Nature solicits with all her placid, all her monitory pictures; him the past instructs; him the future invites.”

Emerson proceeds to describe and illustrate the influences of nature upon the mind, returning to the strain of thought with which his previous Essay has made us familiar. He next considers the influence of the past, and especially of books as the best type of that influence. “Books are the best of things well used; abused among the worst.” It is hard to distil what is already a quintessence without loss of what is just as good as the product of our labor. A sentence or two may serve to give an impression of the epigrammatic wisdom of his counsel.

“Each age must write its own books, or, rather, each generation for the next succeeding. The books of an older period will not fit this.”

When a book has gained a certain hold on the mind, it is liable to become an object of idolatrous regard.

“Instantly the book becomes noxious: the guide is a tyrant. The sluggish and perverted mind of the multitude, slow to open to the incursions of reason, having once so opened, having received this book, stands upon it and makes an outcry if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by *Man thinking*; by men of talent, that is, who start wrong, who set out from

accepted dogmas, not from their own sight of principle. Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries when they wrote these books. — One must be an inventor to read well. As the proverb says, ‘He that would bring home the wealth of the Indies must carry out the wealth of the Indies.’ — When the mind is braced by labor and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world.”

It is not enough that the scholar should be a student of nature and of books. He must take a part in the affairs of the world about him.

“Action is with the scholar subordinate, but it is essential. Without it he is not yet man. Without it thought can never ripen into truth. — The true scholar grudges every opportunity of action past by, as a loss of power. It is the raw material out of which the intellect moulds her splendid products. A strange process, too, this by which experience is converted into thought as a mulberry leaf is converted into satin. The manufacture goes forward at all hours.”

Emerson does not use the words “unconscious cerebration,” but these last words describe the process in an unmistakable way. The beautiful paragraph in which he pictures the transformation, the transfiguration of experience, closes with a sentence so thoroughly characteristic, so Emersonially Emersonian, that I fear some readers who thought they were his disciples when they came to it went back and walked no more with him, at least through the pages of this discourse. The reader shall have the preceding sentence to prepare him for the one referred to.

“There is no fact, no event in our private history, which shall not, sooner or later, lose its adhesive, inert form, and astonish us by soaring from our body into the empyrean.

“Cradle and infancy, school and playground, the fear of boys, and dogs, and ferules, the love of little maids and berries, and many another fact that once filled the whole sky, are gone already; friend and relative, professions and party, town and country, nation and world must also soar and sing.”

Having spoken of the education of the scholar by nature, by books, by action, he speaks of the scholar’s duties. “They may all,” he says, “be comprised in self-trust.” We have to remember that the *self* he means is the highest self, that consciousness which he looks upon as open to the influx of the divine essence from which it came, and towards which all its upward tendencies lead, always aspiring, never resting; as he sings in “The Sphinx “: —

”The heavens that now draw him
With sweetness untold,
Once found, — for new heavens
He spurneth the old.”

“First one, then another, we drain all cisterns, and waxing greater by all these supplies, we crave a better and more abundant food. The man has never lived that can feed us ever. The human mind cannot be enshrined in a person who shall set a barrier on any one side of this unbounded, unboundable empire. It is one central fire, which, flaming now out of the lips of Etna, lightens the Capes of Sicily, and now out of the throat of Vesuvius, illuminates the towers and vineyards of Naples. It is one light which beams out of a thousand stars. It is one soul which animates all men.”

And so he comes to the special application of the principles he has laid down to the American scholar of to-day. He does not spare his censure; he is full of noble trust and manly courage. Very refreshing it is to remember in this day of specialists, when the walking fraction of humanity he speaks of would hardly include a whole finger, but rather confine itself to the single joint of the finger, such words as these: —

“The scholar is that man who must take up into himself all the ability of the time, all the contributions of the past, all the hopes of the future. He must be a university of knowledges.... We have listened too long to the courtly muses of Europe. The spirit of the American freeman is already suspected to be timid, imitative, tame. — The scholar is decent, indolent, complaisant. — The mind of this country, taught to aim at low objects, eats upon itself. There is no work for any but the decorous and the complaisant.”

The young men of promise are discouraged and disgusted.

“What is the remedy? They did not yet see, and thousands of young men as hopeful now crowding to the barriers for the career do not yet see, that if the single man plant himself indomitably on his instincts, and there abide, the huge world will come round to him.”

Each man must be a unit, — must yield that peculiar fruit which he was created to bear.

“We will walk on our own feet; we will work with our own hands; we will speak our own minds. — A nation of men will for the first time exist, because each believes himself inspired by the Divine Soul which also inspires all men.”

This grand Oration was our intellectual Declaration of Independence. Nothing like it had been heard in the halls of Harvard since Samuel Adams supported the affirmative of the question, “Whether it be lawful to resist the chief magistrate, if

the commonwealth cannot otherwise be preserved.” It was easy to find fault with an expression here and there. The dignity, not to say the formality of an Academic assembly was startled by the realism that looked for the infinite in “the meal in the firkin; the milk in the pan.” They could understand the deep thoughts suggested by “the meanest flower that blows,” but these domestic illustrations had a kind of nursery homeliness about them which the grave professors and sedate clergymen were unused to expect on so stately an occasion. But the young men went out from it as if a prophet had been proclaiming to them “Thus saith the Lord.” No listener ever forgot that Address, and among all the noble utterances of the speaker it may be questioned if one ever contained more truth in language more like that of immediate inspiration.

CHAPTER V. 1838-1843. AET. 35-40.

Section 1. Divinity School Address. — Correspondence. — Lectures on Human Life. — Letters to James Freeman Clarke. — Dartmouth College Address: Literary Ethics. — Waterville College Address: The Method of Nature. — Other Addresses: Man the Reformer. — Lecture on the Times. — The Conservative. — The Transcendentalist. — Boston “Transcendentalism.”— “The Dial.” — Brook Farm.

Section 2. First Series of Essays published. — Contents: History, Self-Reliance, Compensation, Spiritual Laws, Love, Friendship, Prudence, Heroism, The Oversoul, Circles, Intellect, Art. — Emerson’s Account of his Mode of Life in a Letter to Carlyle. — Death of Emerson’s Son. — Threnody.

Section 1. On Sunday evening, July 15, 1838, Emerson delivered an Address before the Senior Class in Divinity College, Cambridge, which caused a profound sensation in religious circles, and led to a controversy, in which Emerson had little more than the part of Patroclus when the Greeks and Trojans fought over his body. In its simplest and broadest statement this discourse was a plea for the individual consciousness as against all historical creeds, bibles, churches; for the soul as the supreme judge in spiritual matters.

He begins with a beautiful picture which must be transferred without the change of an expression: —

“In this refulgent Summer, it has been a luxury to draw the breath of life. The grass grows, the buds burst, the meadow is spotted with fire and gold in the tint of flowers. The air is full of birds, and sweet with the breath of the pine, the balm of Gilead, and the new hay. Night brings no gloom to the heart with its welcome shade. Through the transparent darkness the stars pour their almost spiritual rays. Man under them seems a young child, and his huge globe a toy. The cool night bathes the world as with a river, and prepares his eyes again for the crimson dawn.”

How softly the phrases of the gentle iconoclast steal upon the ear, and how they must have hushed the questioning audience into pleased attention! The “Song of Songs, which is Solomon’s,” could not have wooed the listener more sweetly. “Thy lips drop as the honeycomb: honey and milk are under thy tongue, and the smell of thy garments is like the smell of Lebanon.” And this was the prelude of a discourse which, when it came to be printed, fared at the hands of

many a theologian, who did not think himself a bigot, as the roll which Baruch wrote with ink from the words of Jeremiah fared at the hands of Jehoiakim, the King of Judah. He listened while Jehudi read the opening passages. But “when Jehudi had read three or four leaves he cut it with the penknife, and cast it into the fire that was on the hearth, until all the roll was consumed in the fire that was on the hearth.” Such was probably the fate of many a copy of this famous discourse.

It is reverential, but it is also revolutionary. The file-leaders of Unitarianism drew back in dismay, and the ill names which had often been applied to them were now heard from their own lips as befitting this new heresy; if so mild a reproach as that of heresy belonged to this alarming manifesto. And yet, so changed is the whole aspect of the theological world since the time when that discourse was delivered that it is read as calmly to-day as a common “Election Sermon,” if such are ever read at all. A few extracts, abstracts, and comments may give the reader who has not the Address before him some idea of its contents and its tendencies.

The material universe, which he has just pictured in its summer beauty, deserves our admiration. But when the mind opens and reveals the laws which govern the world of phenomena, it shrinks into a mere fable and illustration of this mind. What am I? What is? — are questions always asked, never fully answered. We would study and admire forever.

But above intellectual curiosity, there is the sentiment of virtue. Man is born for the good, for the perfect, low as he now lies in evil and weakness. “The sentiment of virtue is a reverence and delight in the presence of certain divine laws. — These laws refuse to be adequately stated. — They elude our persevering thought; yet we read them hourly in each other’s faces, in each other’s actions, in our own remorse. — The intuition of the moral sentiment is an insight of the perfection of the laws of the soul. These laws execute themselves. — As we are, so we associate. The good, by affinity, seek the good; the vile, by affinity, the vile. Thus, of their own volition, souls proceed into heaven, into hell.”

These facts, Emerson says, have always suggested to man that the world is the product not of manifold power, but of one will, of one mind, — that one mind is everywhere active.— “All things proceed out of the same spirit, and all things conspire with it.” While a man seeks good ends, nature helps him; when he seeks other ends, his being shrinks, “he becomes less and less, a mote, a point, until absolute badness is absolute death.”— “When he says ‘I ought;’ when love warms him; when he chooses, warned from on high, the good and great deed; then deep melodies wander through his soul from Supreme

Wisdom.”

“This sentiment lies at the foundation of society and successively creates all forms of worship. — This thought dwelled always deepest in the minds of men in the devout and contemplative East; not alone in Palestine, where it reached its purest expression, but in Egypt, in Persia, in India, in China. Europe has always owed to Oriental genius its divine impulses. What these holy bards said, all sane men found agreeable and true. And the unique impression of Jesus upon mankind, whose name is not so much written as ploughed into the history of this world, is proof of the subtle virtue of this infusion.”

But this truth cannot be received at second hand; it is an intuition. What another announces, I must find true in myself, or I must reject it. If the word of another is taken instead of this primary faith, the church, the state, art, letters, life, all suffer degradation,— “the doctrine of inspiration is lost; the base doctrine of the majority of voices usurps the place of the doctrine of the soul.”

The following extract will show the view that he takes of Christianity and its Founder, and sufficiently explain the antagonism called forth by the discourse:

“Jesus Christ belonged to the true race of prophets. He saw with open eye the mystery of the soul. Drawn by its severe harmony, ravished with its beauty, he lived in it, and had his being there. Alone in all history he estimated the greatness of man. One man was true to what is in you and me. He saw that God incarnates himself in man, and evermore goes forth anew to take possession of his World. He said, in this jubilee of sublime emotion, ‘I am Divine. Through me God acts; through me, speaks. Would you see God, see me; or see thee, when thou also thinkest as I now think.’ But what a distortion did his doctrine and memory suffer in the same, in the next, and the following ages! There is no doctrine of the Reason which will bear to be taught by the Understanding. The understanding caught this high chant from the poet’s lips, and said, in the next age, ‘This was Jehovah come down out of heaven. I will kill you if you say he was a man.’ The idioms of his language and the figures of his rhetoric have usurped the place of his truth; and churches are not built on his principles, but on his tropes. Christianity became a Mythos, as the poetic teaching of Greece and of Egypt, before. He spoke of Miracles; for he felt that man’s life was a miracle, and all that man doth, and he knew that this miracle shines as the character ascends. But the word Miracle, as pronounced by Christian churches, gives a false impression; it is Monster. It is not one with the blowing clover and the falling rain.”

He proceeds to point out what he considers the great defects of historical Christianity. It has exaggerated the personal, the positive, the ritual. It has

wronged mankind by monopolizing all virtues for the Christian name. It is only by his holy thoughts that Jesus serves us. "To aim to convert a man by miracles is a profanation of the soul." The preachers do a wrong to Jesus by removing him from our human sympathies; they should not degrade his life and dialogues by insulation and peculiarity.

Another defect of the traditional and limited way of using the mind of Christ is that the Moral Nature — the Law of Laws — is not explored as the fountain of the established teaching in society. "Men have come to speak of the revelation as somewhat long ago given and done, as if God were dead." — "The soul is not preached. The church seems to totter to its fall, almost all life extinct. — The stationariness of religion; the assumption that the age of inspiration is past; that the Bible is closed; the fear of degrading the character of Jesus by representing him as a man; indicate with sufficient clearness the falsehood of our theology. It is the office of a true teacher to show us that God is, not was; that he speaketh, not spake. The true Christianity — a faith like Christ's in the infinitude of Man — is lost."

When Emerson came to what his earlier ancestors would have called the "practical application," some of his young hearers must have been startled at the style of his address.

"Yourself a new — born bard of the Holy Ghost, cast behind you all conformity, and acquaint men at first hand with Deity. Look to it first and only, that fashion, custom, authority, pleasure, and money are nothing to you, — are not bandages over your eyes, that you cannot see, — but live with the privilege of the immeasurable mind."

Emerson recognizes two inestimable advantages as the gift of Christianity; first the Sabbath, — hardly a Christian institution, — and secondly the institution of preaching. He spoke not only eloquently, but with every evidence of deep sincerity and conviction. He had sacrificed an enviable position to that inner voice of duty which he now proclaimed as the sovereign law over all written or spoken words. But he was assailing the cherished beliefs of those before him, and of Christendom generally; not with hard or bitter words, not with sarcasm or levity, rather as one who felt himself charged with a message from the same divinity who had inspired the prophets and evangelists of old with whatever truth was in their messages. He might be wrong, but his words carried the evidence of his own serene, unshaken confidence that the spirit of all truth was with him. Some of his audience, at least, must have felt the contrast between his utterances and the formal discourses they had so long listened to, and said to themselves, "he speaks 'as one having authority, and not as the Scribes.'"

Such teaching, however, could not be suffered to go unchallenged. Its

doctrines were repudiated in the “Christian Examiner,” the leading organ of the Unitarian denomination. The Rev. Henry Ware, greatly esteemed and honored, whose colleague he had been, addressed a letter to him, in which he expressed the feeling that some of the statements of Emerson’s discourse would tend to overthrow the authority and influence of Christianity. To this note Emerson returned the following answer: —

“What you say about the discourse at Divinity College is just what I might expect from your truth and charity, combined with your known opinions. I am not a stick or a stone, as one said in the old time, and could not but feel pain in saying some things in that place and presence which I supposed would meet with dissent, I may say, of dear friends and benefactors of mine. Yet, as my conviction is perfect in the substantial truth of the doctrines of this discourse, and is not very new, you will see at once that it must appear very important that it be spoken; and I thought I could not pay the nobleness of my friends so mean a compliment as to suppress my opposition to their supposed views, out of fear of offence. I would rather say to them, these things look thus to me, to you otherwise. Let us say our uttermost word, and let the all-pervading truth, as it surely will, judge between us. Either of us would, I doubt not, be willingly apprised of his error. Meantime, I shall be admonished by this expression of your thought, to revise with greater care the ‘address,’ before it is printed (for the use of the class): and I heartily thank you for this expression of your tried toleration and love.”

Dr. Ware followed up his note with a sermon, preached on the 23d of September, in which he dwells especially on the necessity of adding the idea of personality to the abstractions of Emerson’s philosophy, and sent it to him with a letter, the kindness and true Christian spirit of which were only what were inseparable from all the thoughts and feelings of that most excellent and truly apostolic man.

To this letter Emerson sent the following reply: —

CONCORD, October 8, 1838.

“MY DEAR SIR, — I ought sooner to have acknowledged your kind letter of last week, and the sermon it accompanied. The letter was right manly and noble. The sermon, too, I have read with attention. If it assails any doctrine of mine, — perhaps I am not so quick to see it as writers generally, — certainly I did not feel any disposition to depart from my habitual contentment, that you should say your thought, whilst I say mine. I believe I must tell you what I think of my new position. It strikes me very oddly that good and wise men at Cambridge and Boston should think of raising me into an object of criticism. I have always been — from my very incapacity of methodical writing — a ‘chartered libertine,’ free

to worship and free to rail, — lucky when I could make myself understood, but never esteemed near enough to the institutions and mind of society to deserve the notice of the masters of literature and religion. I have appreciated fully the advantages of my position, for I well know there is no scholar less willing or less able than myself to be a polemic. I could not give an account of myself, if challenged. I could not possibly give you one of the ‘arguments’ you cruelly hint at, on which any doctrine of mine stands; for I do not know what arguments are in reference to any expression of a thought. I delight in telling what I think; but if you ask me how I dare say so, or why it is so, I am the most helpless of mortal men. I do not even see that either of these questions admits of an answer. So that in the present droll posture of my affairs, when I see myself suddenly raised to the importance of a heretic, I am very uneasy when I advert to the supposed duties of such a personage, who is to make good his thesis against all comers. I certainly shall do no such thing. I shall read what you and other good men write, as I have always done, glad when you speak my thoughts, and skipping the page that has nothing for me. I shall go on just as before, seeing whatever I can, and telling what I see; and, I suppose, with the same fortune that has hitherto attended me, — the joy of finding that my abler and better brothers, who work with the sympathy of society, loving and beloved, do now and then unexpectedly confirm my conceptions, and find my nonsense is only their own thought in motley, — and so I am your affectionate servant,” *etc.*

The controversy which followed is a thing of the past; Emerson took no part in it, and we need not return to the discussion. He knew his office and has defined it in the clearest manner in the letter just given,— “Seeing whatever I can, and telling what I see.” But among his listeners and readers was a man of very different mental constitution, not more independent or fearless, but louder and more combative, whose voice soon became heard and whose strength soon began to be felt in the long battle between the traditional and immanent inspiration, — Theodore Parker. If Emerson was the moving spirit, he was the right arm in the conflict, which in one form or another has been waged up to the present day.

In the winter of 1838-39 Emerson delivered his usual winter course of Lectures. He names them in a letter to Carlyle as follows: “Ten Lectures: I. The Doctrine of the Soul; II. Home; III. The School; IV. Love; V. Genius; VI. The Protest; VII. Tragedy; VIII. Comedy; IX. Duty; X. Demonology. I designed to add two more, but my lungs played me false with unseasonable inflammation, so I discoursed no more on Human Life.” Two or three of these titles only are prefixed to his published Lectures or Essays; Love, in the first volume of Essays; Demonology in “Lectures and Biographical Sketches;” and “The Comic” in

“Letters and Social Aims.”

*

I owe the privilege of making use of the two following letters to my kind and honored friend, James Freeman Clarke.

The first letter was accompanied by the Poem “The Humble-bee,” which was first published by Mr. Clarke in the “Western Messenger,” from the autograph copy, which begins “Fine humble-bee! fine humble-bee!” and has a number of other variations from the poem as printed in his collected works.

CONCORD, December 7, 1838.

MY DEAR SIR, — Here are the verses. They have pleased some of my friends, and so may please some of your readers, and you asked me in the spring if I hadn’t somewhat to contribute to your journal. I remember in your letter you mentioned the remark of some friend of yours that the verses, “Take, O take those lips away,” were not Shakspeare’s; I think they are. Beaumont, nor Fletcher, nor both together were ever, I think, visited by such a starry gleam as that stanza. I know it is in “Rollo,” but it is in “Measure for Measure” also; and I remember noticing that the Malones, and Stevens, and critical gentry were about evenly divided, these for Shakspeare, and those for Beaumont and Fletcher. But the internal evidence is all for one, none for the other. If he did not write it, they did not, and we shall have some fourth unknown singer. What care we *who* sung this or that. It is we at last who sing. Your friend and servant, R.W. EMERSON.

TO JAMES FREEMAN CLARKE.

CONCORD, February 27, 1839.

MY DEAR SIR, — I am very sorry to have made you wait so long for an answer to your flattering request for two such little poems. You are quite welcome to the lines “To the Rhodora;” but I think they need the superscription [“Lines on being asked ‘Whence is the Flower?’”]. Of the other verses [“Good-by proud world,” etc] I send you a corrected copy, but I wonder so much at your wishing to print them that I think you must read them once again with your critical spectacles before they go further. They were written sixteen years ago, when I kept school in Boston, and lived in a corner of Roxbury called Canterbury. They have a slight misanthropy, a shade deeper than belongs to me; and as it seems nowadays I am a philosopher and am grown to have opinions, I think they must have an apologetic date, though I well know that poetry that needs a date is no poetry, and so you will wiselier suppress them. I heartily wish

I had any verses which with a clear mind I could send you in lieu of these juvenilities. It is strange, seeing the delight we take in verses, that we can so seldom write them, and so are not ashamed to lay up old ones, say sixteen years, instead of improvising them as freely as the wind blows, whenever we and our brothers are attuned to music. I have heard of a citizen who made an annual joke. I believe I have in April or May an annual poetic *conatus* rather than *afflatus*, experimenting to the length of thirty lines or so, if I may judge from the dates of the rhythmical scraps I detect among my MSS. I look upon this incontinence as merely the redundancy of a susceptibility to poetry which makes all the bards my daily treasures, and I can well run the risk of being ridiculous once a year for the benefit of happy reading all the other days. In regard to the Providence Discourse, I have no copy of it; and as far as I remember its contents, I have since used whatever is striking in it; but I will get the MS., if Margaret Fuller has it, and you shall have it if it will pass muster. I shall certainly avail myself of the good order you gave me for twelve copies of the "Carlyle Miscellanies," so soon as they appear. He, T.C., writes in excellent spirits of his American friends and readers.... A new book, he writes, is growing in him, though not to begin until his spring lectures are over (which begin in May). Your sister Sarah was kind enough to carry me the other day to see some pencil sketches done by Stuart Newton when in the Insane Hospital. They seemed to me to betray the richest invention, so rich as almost to say, why draw any line since you can draw all? Genius has given you the freedom of the universe, why then come within any walls? And this seems to be the old moral which we draw from our fable, read it how or where you will, that we cannot make one good stroke until we can make every possible stroke; and when we can one, every one seems superfluous. I heartily thank you for the good wishes you send me to open the year, and I say them back again to you. Your field is a world, and all men are your spectators, and all men respect the true and great-hearted service you render. And yet it is not spectator nor spectacle that concerns either you or me. The whole world is sick of that very ail, of being seen, and of seemliness. It belongs to the brave now to trust themselves infinitely, and to sit and hearken alone. I am glad to see William Channing is one of your coadjutors. Mrs. Jameson's new book, I should think, would bring a caravan of travellers, aesthetic, artistic, and what not, up your mighty stream, or along the lakes to Mackinaw. As I read I almost vowed an exploration, but I doubt if I ever get beyond the Hudson.

Your affectionate servant, R.W. EMERSON.

On the 24th of July, 1838, a little more than a week after the delivery of the Address before the Divinity School, Mr. Emerson delivered an Oration before the Literary Societies of Dartmouth College. If any rumor of the former

discourse had reached Dartmouth, the audience must have been prepared for a much more startling performance than that to which they listened. The bold avowal which fluttered the doves of Cambridge would have sounded like the crash of doom to the cautious old tenants of the Hanover aviary. If there were any drops of false or questionable doctrine in the silver shower of eloquence under which they had been sitting, the plumage of orthodoxy glistened with unctuous repellents, and a shake or two on coming out of church left the sturdy old dogmatists as dry as ever.

Those who remember the Dartmouth College of that day cannot help smiling at the thought of the contrast in the way of thinking between the speaker and the larger part, or at least the older part, of his audience. President Lord was well known as the scriptural defender of the institution of slavery. Not long before a controversy had arisen, provoked by the setting up of the Episcopal form of worship by one of the Professors, the most estimable and scholarly Dr. Daniel Oliver. Perhaps, however, the extreme difference between the fundamental conceptions of Mr. Emerson and the endemic orthodoxy of that place and time was too great for any hostile feeling to be awakened by the sweet-voiced and peaceful-mannered speaker. There is a kind of harmony between boldly contrasted beliefs like that between complementary colors. It is when two shades of the same color are brought side by side that comparison makes them odious to each other. Mr. Emerson could go anywhere and find willing listeners among those farthest in their belief from the views he held. Such was his simplicity of speech and manner, such his transparent sincerity, that it was next to impossible to quarrel with the gentle image-breaker.

The subject of Mr. Emerson's Address is *Literary Ethics*. It is on the same lofty plane of sentiment and in the same exalted tone of eloquence as the Phi Beta Kappa Address. The word impassioned would seem misplaced, if applied to any of Mr. Emerson's orations. But these discourses were both written and delivered in the freshness of his complete manhood. They were produced at a time when his mind had learned its powers and the work to which it was called, in the struggle which freed him from the constraint of stereotyped confessions of faith and all peremptory external authority. It is not strange, therefore, to find some of his paragraphs glowing with heat and sparkling with imaginative illustration.

"Neither years nor books," he says, "have yet availed to extirpate a prejudice rooted in me, that a scholar is the favorite of Heaven and earth, the excellency of his country, the happiest of men." And yet, he confesses that the scholars of this country have not fulfilled the reasonable expectation of mankind. "Men here, as elsewhere, are indisposed to innovation and prefer any antiquity, any usage, any

livery productive of ease or profit, to the unproductive service of thought." For all this he offers those correctives which in various forms underlie all his teachings. "The resources of the scholar are proportioned to his confidence in the attributes of the Intellect." New lessons of spiritual independence, fresh examples and illustrations, are drawn from history and biography. There is a passage here so true to nature that it permits a half page of quotation and a line or two of comment: —

"An intimation of these broad rights is familiar in the sense of injury which men feel in the assumption of any man to limit their possible progress. We resent all criticism which denies us anything that lies in our line of advance. Say to the man of letters, that he cannot paint a Transfiguration, or build a steamboat, or be a grand-marshal, and he will not seem to himself depreciated. But deny to him any quality of literary or metaphysical power, and he is piqued. Concede to him genius, which is a sort of stoical *plenum* annulling the comparative, and he is content; but concede him talents never so rare, denying him genius, and he is aggrieved."

But it ought to be added that if the pleasure of denying the genius of their betters were denied to the mediocrities, their happiness would be forever blighted.

From the resources of the American Scholar Mr. Emerson passes to his tasks. Nature, as it seems to him, has never yet been truly studied. "Poetry has scarcely chanted its first song. The perpetual admonition of Nature to us is, 'The world is new, untried. Do not believe the past. I give you the universe a virgin to-day.'" And in the same way he would have the scholar look at history, at philosophy. The world belongs to the student, but he must put himself into harmony with the constitution of things. "He must embrace solitude as a bride." Not superstitiously, but after having found out, as a little experience will teach him, all that society can do for him with its foolish routine. I have spoken of the exalted strain into which Mr. Emerson sometimes rises in the midst of his general serenity. Here is an instance of it: —

"You will hear every day the maxims of a low prudence. You will hear that the first duty is to get land and money, place and name. 'What is this truth you seek? What is this beauty?' men will ask, with derision. If, nevertheless, God have called any of you to explore truth and beauty, be bold, be firm, be true. When you shall say, 'As others do, so will I: I renounce, I am sorry for it, my early visions: I must eat the good of the land, and let learning and romantic expectations go, until a more convenient season;' — then dies the man in you; then once more perish the buds of art, and poetry, and science, as they have died already in a thousand thousand men. — Bend to the persuasion which is flowing

to you from every object in nature, to be its tongue to the heart of man, and to show the besotted world how passing fair is wisdom. Why should you renounce your right to traverse the starlit deserts of truth, for the premature comforts of an acre, house, and barn? Truth also has its roof and house and board. Make yourself necessary to the world, and mankind will give you bread; and if not store of it, yet such as shall not take away your property in all men's possessions, in all men's affections, in art, in nature, and in hope."

The next Address Emerson delivered was "The Method of Nature," before the Society of the Adelpi, in Waterville College, Maine, August 11, 1841.

In writing to Carlyle on the 31st of July, he says: "As usual at this season of the year, I, incorrigible spouting Yankee, am writing an oration to deliver to the boys in one of our little country colleges nine days hence.... My whole philosophy — which is very real — teaches acquiescence and optimism. Only when I see how much work is to be done, what room for a poet — for any spiritualist — in this great, intelligent, sensual, and avaricious America, I lament my fumbling fingers and stammering tongue." It may be remembered that Mr. Matthew Arnold quoted the expression about America, which sounded more harshly as pronounced in a public lecture than as read in a private letter.

The Oration shows the same vein of thought as the letter. Its title is "The Method of Nature." He begins with congratulations on the enjoyments and promises of this literary Anniversary.

"The scholars are the priests of that thought which establishes the foundations of the castle."— "We hear too much of the results of machinery, commerce, and the useful arts. We are a puny and a fickle folk. Avarice, hesitation, and following are our diseases. The rapid wealth which hundreds in the community acquire in trade, or by the incessant expansion of our population and arts, enchants the eyes of all the rest; this luck of one is the hope of thousands, and the bribe acts like the neighborhood of a gold mine to impoverish the farm, the school, the church, the house, and the very body and feature of man."— "While the multitude of men degrade each other, and give currency to desponding doctrines, the scholar must be a bringer of hope, and must reinforce man against himself."

I think we may detect more of the manner of Carlyle in this Address than in any of those which preceded it.

"Why then goest thou as some Boswell or literary worshipper to this saint or to that? That is the only lese-majesty. Here art thou with whom so long the universe travailed in labor; darest thou think meanly of thyself whom the stalwart Fate brought forth to unite his ragged sides, to shoot the gulf, to reconcile the irreconcilable?"

That there is an “intimate divinity” which is the source of all true wisdom, that the duty of man is to listen to its voice and to follow it, that “the sanity of man needs the poise of this immanent force,” that the rule is “Do what you know, and perception is converted into character,” — all this is strongly enforced and richly illustrated in this Oration. Just how easily it was followed by the audience, just how far they were satisfied with its large principles wrought into a few broad precepts, it would be easier at this time to ask than to learn. We notice not so much the novelty of the ideas to be found in this discourse on “The Method of Nature,” as the pictorial beauty of their expression. The deep reverence which underlies all Emerson’s speculations is well shown in this paragraph: —

“We ought to celebrate this hour by expressions of manly joy. Not thanks nor prayer seem quite the highest or truest name for our communication with the infinite, — but glad and conspiring reception, — reception that becomes giving in its turn as the receiver is only the All-Giver in part and in infancy.”— “It is God in us which checks the language of petition by grander thought. In the bottom of the heart it is said: ‘I am, and by me, O child! this fair body and world of thine stands and grows. I am, all things are mine; and all mine are thine.’”

We must not quarrel with his peculiar expressions. He says, in this same paragraph, “I cannot, — nor can any man, — speak precisely of things so sublime; but it seems to me the wit of man, his strength, his grace, his tendency, his art, is the grace and the presence of God. It is beyond explanation.”

“We can point nowhere to anything final but tendency; but tendency appears on all hands; planet, system, constellation, total nature is growing like a field of maize in July; is becoming something else; is in rapid metamorphosis. The embryo does not more strive to be man, than yonder burr of light we call a nebula tends to be a ring, a comet, a globe, and parent of new stars.” “In short, the spirit and peculiarity of that impression nature makes on us is this, that it does not exist to any one, or to any number of particular ends, but to numberless and endless benefit; that there is in it no private will, no rebel leaf or limb, but the whole is oppressed by one superincumbent tendency, obeys that redundancy or excess of life which in conscious beings we call ecstasy.”

Here is another of those almost lyrical passages which seem too long for the music of rhythm and the resonance of rhyme.

“The great Pan of old, who was clothed in a leopard skin to signify the beautiful variety of things, and the firmament, his coat of stars, was but the representative of thee, O rich and various Man! thou palace of sight and sound, carrying in thy senses the morning and the night and the unfathomable galaxy; in thy brain the geometry of the City of God; in thy heart the bower of love and the

realms of right and wrong.”

His feeling about the soul, which has shown itself in many of the extracts already given, is summed up in the following sentence: —

“We cannot describe the natural history of the soul, but we know that it is divine. I cannot tell if these wonderful qualities which house to-day in this mental home shall ever reassemble in equal activity in a similar frame, or whether they have before had a natural history like that of this body you see before you; but this one thing I know, that these qualities did not now begin to exist, cannot be sick with my sickness, nor buried in any grave; but that they circulate through the Universe: before the world was, they were.”

It is hard to see the distinction between the omnipresent Deity recognized in our formal confessions of faith and the “pantheism” which is the object of dread to many of the faithful. But there are many expressions in this Address which must have sounded strangely and vaguely to his Christian audience. “Are there not moments in the history of heaven when the human race was not counted by individuals, but was only the Influenced; was God in distribution, God rushing into manifold benefit?” It might be feared that the practical philanthropists would feel that they lost by his counsels.

“The reform whose fame now fills the land with Temperance, Anti-Slavery, Non-Resistance, No Government, Equal Labor, fair and generous as each appears, are poor bitter things when prosecuted for themselves as an end.”— “I say to you plainly there is no end to which your practical faculty can aim so sacred or so large, that if pursued for itself, will not at last become carrion and an offence to the nostril. The imaginative faculty of the soul must be fed with objects immense and eternal. Your end should be one inapprehensible to the senses; then it will be a god, always approached, — never touched; always giving health.”

Nothing is plainer than that it was Emerson’s calling to supply impulses and not methods. He was not an organizer, but a power behind many organizers, inspiring them with lofty motive, giving breadth, to their views, always tending to become narrow through concentration on their special objects. The Oration we have been examining was delivered in the interval between the delivery of two Addresses, one called “Man the Reformer,” and another called “Lecture on the Times.” In the first he preaches the dignity and virtue of manual labor; that “a man should have a farm, or a mechanical craft for his culture.” — That he cannot give up labor without suffering some loss of power. “How can the man who has learned but one art procure all the conveniences of life honestly? Shall we say all we think? — Perhaps with his own hands. — Let us learn the meaning of economy. — Parched corn eaten to-day that I may have roast fowl to my

dinner on Sunday is a baseness; but parched corn and a house with one apartment, that I may be free of all perturbation, that I may be serene and docile to what the mind shall speak, and quit and road-ready for the lowest mission of knowledge or good will, is frugality for gods and heroes.”

This was what Emerson wrote in January, 1841. This “house with one apartment” was what Thoreau built with his own hands in 1845. In April of the former year, he went to live with Mr. Emerson, but had been on intimate terms with him previously to that time. Whether it was from him that Thoreau got the hint of the Walden cabin and the parched corn, or whether this idea was working in Thoreau’s mind and was suggested to Emerson by him, is of no great consequence. Emerson, to whom he owed so much, may well have adopted some of those fancies which Thoreau entertained, and afterwards worked out in practice. He was at the philanthropic centre of a good many movements which he watched others carrying out, as a calm and kindly spectator, without losing his common sense for a moment. It would never have occurred to him to leave all the conveniences and comforts of life to go and dwell in a shanty, so as to prove to himself that he could live like a savage, or like his friends “Teague and his jade,” as he called the man and brother and sister, more commonly known nowadays as Pat, or Patrick, and his old woman.

“The Americans have many virtues,” he says in this Address, “but they have not Faith and Hope.” Faith and Hope, Enthusiasm and Love, are the burden of this Address. But he would regulate these qualities by “a great prospective prudence,” which shall mediate between the spiritual and the actual world.

In the “Lecture on the Times” he shows very clearly the effect which a nearer contact with the class of men and women who called themselves Reformers had upon him.

“The Reforms have their higher origin in an ideal justice, but they do not retain the purity of an idea. They are quickly organized in some low, inadequate form, and present no more poetic image to the mind than the evil tradition which they reprobated. They mix the fire of the moral sentiment with personal and party heats, with measureless exaggerations, and the blindness that prefers some darling measure to justice and truth. Those who are urging with most ardor what are called the greatest benefit of mankind are narrow, self-pleasing, conceited men, and affect us as the insane do. They bite us, and we run mad also. I think the work of the reformer as innocent as other work that is done around him; but when I have seen it near! — I do not like it better. It is done in the same way; it is done profanely, not piously; by management, by tactics and clamor.”

All this, and much more like it, would hardly have been listened to by the ardent advocates of the various reforms, if anybody but Mr. Emerson had said it.

He undervalued no sincere action except to suggest a wiser and better one. He attacked no motive which had a good aim, except in view of some larger and loftier principle. The charm of his imagination and the music of his words took away all the sting from the thoughts that penetrated to the very marrow of the entranced listeners. Sometimes it was a splendid hyperbole that illuminated a statement which by the dim light of common speech would have offended or repelled those who sat before him. He knew the force of *felix audacia* as well as any rhetorician could have taught him. He addresses the reformer with one of those daring images which defy the critics.

“As the farmer casts into the ground the finest ears of his grain, the time will come when we too shall hold nothing back, but shall eagerly convert more than we possess into means and powers, when we shall be willing to sow the sun and the moon for seeds.”

He said hard things to the reformer, especially to the Abolitionist, in his “Lecture on the Times.” It would have taken a long while to get rid of slavery if some of Emerson’s teachings in this lecture had been accepted as the true gospel of liberty. But how much its last sentence covers with its soothing tribute!

“All the newspapers, all the tongues of today will of course defame what is noble; but you who hold not of to-day, not of the times, but of the Everlasting, are to stand for it; and the highest compliment man ever receives from Heaven is the sending to him its disguised and discredited angels.”

The Lecture called “The Transcendentalist” will naturally be looked at with peculiar interest, inasmuch as this term has been very commonly applied to Emerson, and to many who were considered his disciples. It has a proper philosophical meaning, and it has also a local and accidental application to the individuals of a group which came together very much as any literary club might collect about a teacher. All this comes out clearly enough in the Lecture. In the first place, Emerson explains that the “*new views*,” as they are called, are the oldest of thoughts cast in a new mould.

“What is popularly called Transcendentalism among us is Idealism: Idealism as it appears in 1842. As thinkers, mankind have ever divided into two sects, Materialists and Idealists; the first class founding on experience, the second on consciousness; the first class beginning to think from the data of the senses, the second class perceive that the senses are not final, and say, the senses give us representations of things, but what are the things themselves, they cannot tell. The materialist insists on facts, on history, on the force of circumstances and the animal wants of man; the idealist on the power of Thought and of Will, on inspiration, on miracle, on individual culture.”

“The materialist takes his departure from the external world, and esteems a

man as one product of that. The idealist takes his departure from his consciousness, and reckons the world an appearance. — His thought, that is the Universe.”

The association of scholars and thinkers to which the name of “Transcendentalists” was applied, and which made itself an organ in the periodical known as “The Dial,” has been written about by many who were in the movement, and others who looked on or got their knowledge of it at second hand. Emerson was closely associated with these “same Transcendentalists,” and a leading contributor to “The Dial,” which was their organ. The movement borrowed its inspiration more from him than from any other source, and the periodical owed more to him than to any other writer. So far as his own relation to the circle of illuminati and the dial which they shone upon was concerned, he himself is the best witness.

In his “Historic Notes of Life and Letters in New England,” he sketches in a rapid way the series of intellectual movements which led to the development of the “new views” above mentioned. “There are always two parties,” he says, “the party of the Past and the party of the Future; the Establishment and the Movement.”

About 1820, and in the twenty years which followed, an era of activity manifested itself in the churches, in politics, in philanthropy, in literature. In our own community the influence of Swedenborg and of the genius and character of Dr. Channing were among the more immediate early causes of the mental agitation. Emerson attributes a great importance to the scholarship, the rhetoric, the eloquence, of Edward Everett, who returned to Boston in 1820, after five years of study in Europe. Edward Everett is already to a great extent a tradition, somewhat as Rufus Choate is, a voice, a fading echo, as must be the memory of every great orator. These wondrous personalities have their truest and warmest life in a few old men’s memories. It is therefore with delight that one who remembers Everett in his robes of rhetorical splendor, who recalls his full-blown, high-colored, double-flowered periods, the rich, resonant, grave, far-reaching music of his speech, with just enough of nasal vibration to give the vocal sounding-board its proper value in the harmonies of utterance, — it is with delight that such a one reads the glowing words of Emerson whenever he refers to Edward Everett. It is enough if he himself caught inspiration from those eloquent lips; but many a listener has had his youthful enthusiasm fired by that great master of academic oratory.

Emerson follows out the train of influences which added themselves to the impulse given by Mr. Everett. German scholarship, the growth of science, the generalizations of Goethe, the idealism of Schelling, the influence of

Wordsworth, of Coleridge, of Carlyle, and in our immediate community, the writings of Channing, — he left it to others to say of Emerson, — all had their part in this intellectual, or if we may call it so, spiritual revival. He describes with that exquisite sense of the ridiculous which was a part of his mental ballast, the first attempt at organizing an association of cultivated, thoughtful people. They came together, the cultivated, thoughtful people, at Dr. John Collins Warren's, — Dr. Channing, the great Dr. Channing, among the rest, full of the great thoughts he wished to impart. The preliminaries went on smoothly enough with the usual small talk, —

“When a side-door opened, the whole company streamed in to an oyster supper, crowned by excellent wines [this must have been before Dr. Warren's temperance epoch], and so ended the first attempt to establish aesthetic society in Boston.

“Some time afterwards Dr. Channing opened his mind to Mr. and Mrs. Ripley, and with some care they invited a limited party of ladies and gentlemen. I had the honor to be present. — Margaret Fuller, George Ripley, Dr. Convers Francis, Theodore Parker, Dr. Hedge, Mr. Brownson, James Freeman Clarke, William H. Channing, and many others gradually drew together, and from time to time spent an afternoon at each other's houses in a serious conversation.”

With them was another, “a pure Idealist, — who read Plato as an equal, and inspired his companions only in proportion as they were intellectual.” He refers, of course to Mr. Alcott. Emerson goes on to say: —

“I think there prevailed at that time a general belief in Boston that there was some concert of *doctrinaires* to establish certain opinions, and inaugurate some movement in literature, philosophy, and religion, of which design the supposed conspirators were quite innocent; for there was no concert, and only here and there two or three men and women who read and wrote, each alone, with unusual vivacity. Perhaps they only agreed in having fallen upon Coleridge and Wordsworth and Goethe, then on Carlyle, with pleasure and sympathy. Otherwise their education and reading were not marked, but had the American superficialness, and their studies were solitary. I suppose all of them were surprised at this rumor of a school or sect, and certainly at the name of Transcendentalism, given, nobody knows by whom, or when it was applied.”

Emerson's picture of some of these friends of his is so peculiar as to suggest certain obvious and not too flattering comments.

“In like manner, if there is anything grand and daring in human thought or virtue; any reliance on the vast, the unknown; any presentiment, any extravagance of faith, the Spiritualist adopts it as most in nature. The Oriental mind has always tended to this largeness. Buddhism is an expression of it. The

Buddhist, who thanks no man, who says, 'Do not flatter your benefactors,' but who in his conviction that every good deed can by no possibility escape its reward, will not deceive the benefactor by pretending that he has done more than he should, is a Transcendentalist.

"These exacting children advertise us of our wants. There is no compliment, no smooth speech with them; they pay you only this one compliment, of insatiable expectation; they aspire, they severely exact, and if they only stand fast in this watch-tower, and persist in demanding unto the end, and without end, then are they terrible friends, whereof poet and priest cannot choose but stand in awe; and what if they eat clouds, and drink wind, they have not been without service to the race of man."

The person who adopts "any presentiment, any extravagance as most in nature," is not commonly called a Transcendentalist, but is known colloquially as a "crank." The person who does not thank, by word or look, the friend or stranger who has pulled him out of the fire or water, is fortunate if he gets off with no harder name than that of a churl.

Nothing was farther from Emerson himself than whimsical eccentricity or churlish austerity. But there was occasionally an air of bravado in some of his followers as if they had taken out a patent for some knowing machine which was to give them a monopoly of its products. They claimed more for each other than was reasonable, — so much occasionally that their pretensions became ridiculous. One was tempted to ask: "What forlorn hope have you led? What immortal book have you written? What great discovery have you made? What heroic task of any kind have you performed?" There was too much talk about earnestness and too little real work done. Aspiration too frequently got as far as the alpenstock and the brandy flask, but crossed no dangerous crevasse, and scaled no arduous summit. In short, there was a kind of "Transcendentalist" dilettanteism, which betrayed itself by a phraseology as distinctive as that of the Della Crusicans of an earlier time.

In reading the following description of the "intelligent and religious persons" who belonged to the "Transcendentalist" communion, the reader must remember that it is Emerson who draws the portrait, — a friend and not a scoffer: —

"They are not good citizens, not good members of society: unwillingly they bear their part of the public and private burdens; they do not willingly share in the public charities, in the public religious rites, in the enterprise of education, of missions, foreign and domestic, in the abolition of the slave-trade, or in the temperance society. They do not even like to vote."

After arraigning the representatives of Transcendental or spiritual beliefs in this way, he summons them to plead for themselves, and this is what they have

to say: —

“‘New, we confess, and by no means happy, is our condition: if you want the aid of our labor, we ourselves stand in greater want of the labor. We are miserable with inaction. We perish of rest and rust: but we do not like your work.’

‘Then,’ says the world, ‘show me your own.’

‘We have none.’

‘What will you do, then?’ cries the world.

‘We will wait.’

‘How long?’

‘Until the Universe beckons and calls us to work.’

‘But whilst you wait you grow old and useless.’

’Be it so: I can sit in a corner and *perish* (as you call it), but I will not move until I have the highest command.’”

And so the dissatisfied tenant of this unhappy creation goes on with his reasons for doing nothing.

It is easy to stay away from church and from town-meetings. It is easy to keep out of the way of the contribution box and to let the subscription paper go by us to the next door. The common duties of life and the good offices society asks of us may be left to take care of themselves while we contemplate the infinite. There is no safer fortress for indolence than “the Everlasting No.” The chimney-corner is the true arena for this class of philosophers, and the pipe and mug furnish their all-sufficient panoply. Emerson undoubtedly met with some of them among his disciples. His wise counsel did not always find listeners in a fitting condition to receive it. He was a sower who went forth to sow. Some of the good seed fell among the thorns of criticism. Some fell on the rocks of hardened conservatism. Some fell by the wayside and was picked up by the idlers who went to the lecture-room to get rid of themselves. But when it fell upon the right soil it bore a growth of thought which ripened into a harvest of large and noble lives.

Emerson shows up the weakness of his young enthusiasts with that delicate wit which warns its objects rather than wounds them. But he makes it all up with the dreamers before he can let them go.

“Society also has its duties in reference to this class, and must behold them with what charity it can. Possibly some benefit may yet accrue from them to the state. Besides our coarse implements, there must be some few finer instruments, — rain-gauges, thermometers, and telescopes; and in society, besides farmers,

sailors, and weavers, there must be a few persons of purer fire kept specially as gauges and meters of character; persons of a fine, detecting instinct, who note the smallest accumulations of wit and feeling in the by-stander. Perhaps too there might be room for the excitors and monitors; collectors of the heavenly spark, with power to convey the electricity to others. Or, as the storm-tossed vessel at sea speaks the frigate or "line-packet" to learn its longitude, so it may not be without its advantage that we should now and then encounter rare and gifted men, to compare the points of our spiritual compass, and verify our bearings from superior chronometers."

It must be confessed that it is not a very captivating picture which Emerson draws of some of his transcendental friends. Their faults were naturally still more obvious to those outside of their charmed circle, and some prejudice, very possibly, mingled with their critical judgments. On the other hand we have the evidence of a visitor who knew a good deal of the world as to the impression they produced upon him: —

"There has sprung up in Boston," says Dickens, in his "American Notes," "a sect of philosophers known as Transcendentalists. On inquiring what this appellation might be supposed to signify, I was given to understand that whatever was unintelligible would be certainly Transcendental. Not deriving much comfort from this elucidation, I pursued the inquiry still further, and found that the Transcendentalists are followers of my friend Mr. Carlyle, or, I should rather say, of a follower of his, Mr. Ralph Waldo Emerson. This gentleman has written a volume of Essays, in which, among much that is dreamy and fanciful (if he will pardon me for saying so), there is much more that is true and manly, honest and bold. Transcendentalism has its occasional vagaries (what school has not?), but it has good healthful qualities in spite of them; not least among the number a hearty disgust of Cant, and an aptitude to detect her in all the million varieties of her everlasting wardrobe. And therefore, if I were a Bostonian, I think I would be a Transcendentalist."

In December, 1841, Emerson delivered a Lecture entitled "The Conservative." It was a time of great excitement among the members of that circle of which he was the spiritual leader. Never did Emerson show the perfect sanity which characterized his practical judgment more beautifully than in this Lecture and in his whole course with reference to the intellectual agitation of the period. He is as fair to the conservative as to the reformer. He sees the fanaticism of the one as well as that of the other. "Conservatism tends to universal seeming and treachery; believes in a negative fate; believes that men's tempers govern them; that for me it avails not to trust in principles, they will fail me, I must bend a little; it distrusts Nature; it thinks there is a general law without a particular

application, — law for all that does not include any one. Reform in its antagonism inclines to asinine resistance, to kick with hoofs; it runs to egotism and bloated self-conceit; it runs to a bodiless pretension, to unnatural refining and elevation, which ends in hypocrisy and sensual reaction. And so, whilst we do not go beyond general statements, it may be safely affirmed of these two metaphysical antagonists that each is a good half, but an impossible whole.”

He has his beliefs, and, if you will, his prejudices, but he loves fair play, and though he sides with the party of the future, he will not be unjust to the present or the past.

We read in a letter from Emerson to Carlyle, dated March 12, 1835, that Dr. Charming “lay awake all night, he told my friend last week, because he had learned in the evening that some young men proposed to issue a journal, to be called ‘The Transcendentalist,’ as the organ of a spiritual philosophy.” Again on the 30th of April of the same year, in a letter in which he lays out a plan for a visit of Carlyle to this country, Emerson says: —

“It was suggested that if Mr. C. would undertake a journal of which we have talked much, but which we have never yet produced, he would do us great service, and we feel some confidence that it could be made to secure him a support. It is that project which I mentioned to you in a letter by Mr. Barnard, — a book to be called ‘The Transcendentalist;’ or, ‘The Spiritual Inquirer,’ or the like.... Those who are most interested in it designed to make gratuitous contribution to its pages, until its success could be assured.”

The idea of the grim Scotchman as editor of what we came in due time to know as “The Dial!” A concert of singing mice with a savage and hungry old grimalkin as leader of the orchestra! It was much safer to be content with Carlyle’s purring from his own side of the water, as thus: —

“‘The Boston Transcendentalist,’ whatever the fate or merit of it may prove to be, is surely an interesting symptom. There must be things not dreamt of over in that *Transoceanic* parish! I shall certainly wish well to this thing; and hail it as the sure forerunner of things better.”

There were two notable products of the intellectual ferment of the Transcendental period which deserve an incidental notice here, from the close connection which Emerson had with one of them and the interest which he took in the other, in which many of his friends were more deeply concerned. These were the periodical just spoken of as a possibility realized, and the industrial community known as Brook Farm. They were to a certain extent synchronous, — the Magazine beginning in July, 1840, and expiring in April, 1844; Brook Farm being organized in 1841, and breaking up in 1847.

“The Dial” was edited at first by Margaret Fuller, afterwards by Emerson,

who contributed more than forty articles in prose and verse, among them "The Conservative," "The Transcendentalist," "Chardon Street and Bible Convention," and some of his best and best known poems, "The Problem," "Woodnotes," "The Sphinx," "Fate." The other principal writers were Margaret Fuller, A. Bronson Alcott, George Ripley, James Freeman Clarke, Theodore Parker, William H. Channing, Henry Thoreau, Eliot Cabot, John S. Dwight, C.P. Cranch, William Ellery Channing, Mrs. Ellen Hooper, and her sister Mrs. Caroline Tappan. Unequal as the contributions are in merit, the periodical is of singular interest. It was conceived and carried on in a spirit of boundless hope and enthusiasm. Time and a narrowing subscription list proved too hard a trial, and its four volumes remain stranded, like some rare and curiously patterned shell which a storm of yesterday has left beyond the reach of the receding waves. Thoreau wrote for nearly every number. Margaret Fuller, less attractive in print than in conversation, did her part as a contributor as well as editor. Theodore Parker came down with his "trip-hammer" in its pages. Mrs. Ellen Hooper published a few poems in its columns which remain, always beautiful, in many memories. Others, whose literary lives have fulfilled their earlier promise, and who are still with us, helped forward the new enterprise with their frequent contributions. It is a pleasure to turn back to "The Dial," with all its crudities. It should be looked through by the side of the "Anthology." Both were April buds, opening before the frosts were over, but with the pledge of a better season.

We get various hints touching the new Magazine in the correspondence between Emerson and Carlyle. Emerson tells Carlyle, a few months before the first number appeared, that it will give him a better knowledge of our *young people* than any he has had. It is true that unfledged writers found a place to try their wings in it, and that makes it more interesting. This was the time above all others when out of the mouth of babes and sucklings was to come forth strength. The feeling that intuition was discovering a new heaven and a new earth was the inspiration of these "young people" to whom Emerson refers. He has to apologize for the first number. "It is not yet much," he says; "indeed, though no copy has come to me, I know it is far short of what it should be, for they have suffered puffs and dulness to creep in for the sake of the complement of pages, but it is better than anything we had. — The Address of the Editors to the Readers is all the prose that is mine, and whether they have printed a few verses for me I do not know." They did print "The Problem." There were also some fragments of criticism from the writings of his brother Charles, and the poem called "The Last Farewell," by his brother Edward, which is to be found in Emerson's "May-day and other Pieces."

On the 30th of August, after the periodical had been published a couple of

months, Emerson writes: —

“Our community begin to stand in some terror of Transcendentalism; and the *Dial*, poor little thing, whose first number contains scarce anything considerable or even visible, is just now honored by attacks from almost every newspaper and magazine; which at least betrays the irritability and the instincts of the good public.”

Carlyle finds the second number of “The Dial” better than the first, and tosses his charitable recognition, as if into an alms-basket, with his usual air of superiority. He distinguishes what is Emerson’s readily, — the rest he speaks of as the work of [Greek: oi polloi] for the most part. “But it is all good and very good as a *soul*; wants only a body, which want means a great deal.” And again, “‘The Dial,’ too, it is all spirit like, aeri-form, aurora-borealis like. Will no *Angel* body himself out of that; no stalwart Yankee *man*, with color in the cheeks of him and a coat on his back?”

Emerson, writing to Carlyle in March, 1842, speaks of the “dubious approbation on the part of you and other men,” notwithstanding which he found it with “a certain class of men and women, though few, an object of tenderness and religion.” So, when Margaret Fuller gave it up, at the end of the second volume, Emerson consented to become its editor. “I cannot bid you quit ‘The Dial,’” says Carlyle, “though it, too, alas, is Antinomian somewhat! *Perge*, *perge*, nevertheless.”

In the next letter he says: —

“I love your ‘Dial,’ and yet it is with a kind of shudder. You seem to me in danger of dividing yourselves from the Fact of this present Universe, in which alone, ugly as it is, can I find any anchorage, and soaring away after Ideas, Beliefs, Revelations and such like, — into perilous altitudes, as I think; beyond the curve of perpetual frost, for one thing. I know not how to utter what impression you give me; take the above as some stamping of the fore-hoof.”

A curious way of characterizing himself as a critic, — but he was not always as well-mannered as the Houyhnhnms.

To all Carlyle’s complaints of “The Dial’s” short-comings Emerson did not pretend to give any satisfactory answer, but his plea of guilty, with extenuating circumstances, is very honest and definite.

“For the *Dial* and its sins, I have no defence to set up. We write as we can, and we know very little about it. If the direction of these speculations is to be deplored, it is yet a fact for literary history that all the bright boys and girls in New England, quite ignorant of each other, take the world so, and come and make confession to fathers and mothers, — the boys, that they do not wish to go

into trade, the girls, that they do not like morning calls and evening parties. They are all religious, but hate the churches; they reject all the ways of living of other men, but have none to offer in their stead. Perhaps one of these days a great Yankee shall come, who will easily do the unknown deed.”

“All the bright boys and girls in New England,” and “‘The Dial’ dying of inanition!” In October, 1840, Emerson writes to Carlyle: —

“We are all a little wild here with numberless projects of social reform. Not a reading man but has a draft of a new community in his waistcoat pocket. I am gently mad myself, and am resolved to live cleanly. George Ripley is talking up a colony of agriculturists and scholars, with whom he threatens to take the field and the book. One man renounces the use of animal food; and another of coin; and another of domestic hired service; and another of the state; and on the whole we have a commendable share of reason and hope.”

Mr. Ripley’s project took shape in the West Roxbury Association, better known under the name of Brook Farm. Emerson was not involved in this undertaking. He looked upon it with curiosity and interest, as he would have looked at a chemical experiment, but he seems to have had only a moderate degree of faith in its practical working. “It was a noble and generous movement in the projectors to try an experiment of better living. One would say that impulse was the rule in the society, without centripetal balance; perhaps it would not be severe to say, intellectual sans-culottism, an impatience of the formal routinary character of our educational, religious, social, and economical life in Massachusetts.” The reader will find a full detailed account of the Brook Farm experiment in Mr. Frothingham’s “Life of George Ripley,” its founder, and the first President of the Association. Emerson had only tangential relations with the experiment, and tells its story in his “Historic Notes” very kindly and respectfully, but with that sense of the ridiculous in the aspect of some of its conditions which belongs to the sagacious common-sense side of his nature. The married women, he says, were against the community. “It was to them like the brassy and lacquered life in hotels. The common school was well enough, but to the common nursery they had grave objections. Eggs might be hatched in ovens, but the hen on her own account much preferred the old way. A hen without her chickens was but half a hen.” Is not the inaudible, inward laughter of Emerson more refreshing than the explosions of our noisiest humorists?

This is his benevolent summing up: —

“The founders of Brook Farm should have this praise, that they made what all people try to make, an agreeable place to live in. All comers, even the most fastidious, found it the pleasantest of residences. It is certain, that freedom from household routine, variety of character and talent, variety of work, variety of

means of thought and instruction, art, music, poetry, reading, masquerade, did not permit sluggishness or despondency; broke up routine. There is agreement in the testimony that it was, to most of the associates, education; to many, the most important period of their life, the birth of valued friendships, their first acquaintance with the riches of conversation, their training in behavior. The art of letter-writing, it is said, was immensely cultivated. Letters were always flying, not only from house to house, but from room to room. It was a perpetual picnic, a French Revolution in small, an Age of Reason in a patty-pan.”

The public edifice called the “Phalanstery” was destroyed by fire in 1846. The Association never recovered from this blow, and soon afterwards it was dissolved.

Section 2. Emerson’s first volume of his collected Essays was published in 1841.

In the reprint it contains the following Essays: History; Self-Reliance; Compensation; Spiritual Laws; Love; Friendship; Prudence; Heroism; The Over-Soul; Circles; Intellect; Art. “The Young American,” which is now included in the volume, was not delivered until 1844.

Once accustomed to Emerson’s larger formulae we can to a certain extent project from our own minds his treatment of special subjects. But we cannot anticipate the daring imagination, the subtle wit, the curious illustrations, the felicitous language, which make the Lecture or the Essay captivating as read, and almost entrancing as listened to by the teachable disciple. The reader must be prepared for occasional extravagances. Take the Essay on History, in the first series of Essays, for instance. “Let it suffice that in the light of these two facts, namely, that the mind is One, and that nature is its correlative, history is to be read and written.” When we come to the application, in the same Essay, almost on the same page, what can we make of such discourse as this? The sentences I quote do not follow immediately, one upon the other, but their sense is continuous.

“I hold an actual knowledge very cheap. Hear the rats in the wall, see the lizard on the fence, the fungus under foot, the lichen on the log. What do I know sympathetically, morally, of either of these worlds of life? — How many times we must say Rome and Paris, and Constantinople! What does Rome know of rat and lizard? What are Olympiads and Consulates to these neighboring systems of being? Nay, what food or experience or succor have they for the Esquimau seal-hunter, for the Kamchatcan in his canoe, for the fisherman, the stevedore, the porter?”

The connection of ideas is not obvious. One can hardly help being reminded

of a certain great man's Rochester speech as commonly reported by the storyteller. "Rome in her proudest days never had a waterfall a hundred and fifty feet high! Greece in her palmiest days never had a waterfall a hundred and fifty feet high! Men of Rochester, go on! No people ever lost their liberty who had a waterfall a hundred and fifty feet high!"

We cannot help smiling, perhaps laughing, at the odd mixture of Rome and rats, of Olympiads and Esquimaux. But the underlying idea of the interdependence of all that exists in nature is far from ridiculous. Emerson says, not absurdly or extravagantly, that "every history should be written in a wisdom which divined the range of our affinities and looked at facts as symbols."

We have become familiar with his doctrine of "Self-Reliance," which is the subject of the second lecture of the series. We know that he always and everywhere recognized that the divine voice which speaks authoritatively in the soul of man is the source of all our wisdom. It is a man's true self, so that it follows that absolute, supreme self-reliance is the law of his being. But see how he guards his proclamation of self-reliance as the guide of mankind.

"Truly it demands something god-like in him who has cast off the common motives of humanity and has ventured to trust himself for a task-master. High be his heart, faithful his will, clear his sight, that he may in good earnest be doctrine, society, law, to himself, that a simple purpose may be to him as strong as iron necessity is to others!"

"Compensation" might be preached in a synagogue, and the Rabbi would be praised for his performance. Emerson had been listening to a sermon from a preacher esteemed for his orthodoxy, in which it was assumed that judgment is not executed in this world, that the wicked are successful, and the good are miserable. This last proposition agrees with John Bunyan's view: —

"A Christian man is never long at ease,
When one fright's gone, another doth him seize."

Emerson shows up the "success" of the bad man and the failures and trials of the good man in their true spiritual characters, with a noble scorn of the preacher's low standard of happiness and misery, which would have made him throw his sermon into the fire.

The Essay on "Spiritual Laws" is full of pithy sayings: —

"As much virtue as there is, so much appears; as much goodness as there is, so much reverence it commands. All the devils respect virtue. — A man passes for that he is worth. — The ancestor of every action is a thought. — To think is to act. — Let a man believe in God, and not in names and places and persons.

Let the great soul incarnated in some woman's form, poor and sad and single, in some Dolly or Joan, go out to service and sweep chambers and scour floors, and its effulgent day-beams cannot be hid, but to sweep and scour will instantly appear supreme and beautiful actions, the top and radiance of human life, and all people will get mops and brooms; until, lo! suddenly the great soul has enshrined itself in some other form and done some other deed, and that is now the flower and head of all living nature."

This is not any the worse for being the flowering out of a poetical bud of George Herbert's. The Essay on "Love" is poetical, but the three poems, "Initial," "Daemonic," and "Celestial Love" are more nearly equal to his subject than his prose.

There is a passage in the Lecture on "Friendship" which suggests some personal relation of Emerson's about which we cannot help being inquisitive: —

"It has seemed to me lately more possible than I knew, to carry a friendship greatly, on one side, without due correspondence on the other. Why should I cumber myself with regrets that the receiver is not capacious? It never troubles the sun that some of his rays fall wide and vain into ungrateful space, and only a small part on the reflecting planet. Let your greatness educate the crude and cold companion.... Yet these things may hardly be said without a sort of treachery to the relation. The essence of friendship is entireness, a total magnanimity and trust. It must not surmise or provide for infirmity. It treats its object as a god that it may deify both."

Was he thinking of his relations with Carlyle? It is a curious subject of speculation what would have been the issue if Carlyle had come to Concord and taken up his abode under Emerson's most hospitable roof. "You shall not come nearer a man by getting into his house." How could they have got on together? Emerson was well-bred, and Carlyle was wanting in the social graces. "Come rest in this bosom" is a sweet air, heard in the distance, too apt to be followed, after a protracted season of close proximity, by that other strain, —

"No, fly me, fly me, far as pole from pole!
Rise Alps between us and whole oceans roll!"

But Emerson may have been thinking of some very different person, perhaps some "crude and cold companion" among his disciples, who was not equal to the demands of friendly intercourse.

He discourses wisely on "Prudence," a virtue which he does not claim for himself, and nobly on "Heroism," which was a shining part of his own moral and intellectual being.

The points which will be most likely to draw the reader's attention are the remarks on the literature of heroism; the claim for our own America, for Massachusetts and Connecticut River and Boston Bay, in spite of our love for the names of foreign and classic topography; and most of all one sentence which, coming from an optimist like Emerson, has a sound of sad sincerity painful to recognize.

“Who that sees the meanness of our politics but inly congratulates Washington that he is long already wrapped in his shroud, and forever safe; that he was laid sweet in his grave, the hope of humanity not yet subjugated in him. Who does not sometimes envy the good and brave who are no more to suffer from the tumults of the natural world, and await with curious complacency the speedy term of his own conversation with finite nature? And yet the love that will be annihilated sooner than treacherous has already made death impossible, and affirms itself no mortal, but a native of the deeps of absolute and inextinguishable being.”

In the following Essay, “The Over-Soul,” Emerson has attempted the impossible. He is as fully conscious of this fact as the reader of his rhapsody, — nay, he is more profoundly penetrated with it than any of his readers. In speaking of the exalted condition the soul is capable of reaching, he says, —

“Every man's words, who speaks from that life, must sound vain to those who do not dwell in the same thought on their own part. I dare not speak for it. My words do not carry its august sense; they fall short and cold. Only itself can inspire whom it will, and behold! their speech shall be lyrical and sweet, and universal as the rising of the wind. Yet I desire, even by profane words, if I may not use sacred, to indicate the heaven of this deity, and to report what hints I have collected of the transcendent simplicity and energy of the Highest Law.”

“The Over-Soul” might almost be called the *Over-flow* of a spiritual imagination. We cannot help thinking of the “pious, virtuous, God-intoxicated” Spinoza. When one talks of the infinite in terms borrowed from the finite, when one attempts to deal with the absolute in the language of the relative, his words are not symbols, like those applied to the objects of experience, but the shadows of symbols, varying with the position and intensity of the light of the individual intelligence. It is a curious amusement to trace many of these thoughts and expressions to Plato, or Plotinus, or Proclus, or Porphyry, to Spinoza or Schelling, but the same tune is a different thing according to the instrument on which it is played. There are songs without words, and there are states in which, in place of the trains of thought moving in endless procession with ever-varying figures along the highway of consciousness, the soul is possessed by a single all-absorbing idea, which, in the highest state of spiritual exaltation, becomes a

vision. Both Plotinus and Porphyry believed they were privileged to look upon Him whom “no man can see and live.”

But Emerson states his own position so frankly in his Essay entitled “Circles,” that the reader cannot take issue with him as against utterances which he will not defend. There can be no doubt that he would have confessed as much with reference to “The Over-Soul” as he has confessed with regard to “Circles,” the Essay which follows “The Over-Soul.”

“I am not careful to justify myself.... But lest I should mislead any when I have my own head and obey my whims, let me remind the reader that I am only an experimenter. Do not set the least value on what I do, or the least discredit on what I do not, as if I pretended to settle anything as true or false. I unsettle all things. No facts are to me sacred; none are profane; I simply experiment, an endless seeker, with no Past at my back.”

Perhaps, after reading these transcendental essays of Emerson, we might borrow Goethe’s language about Spinoza, as expressing the feeling with which we are left.

“I am reading Spinoza with Frau von Stein. I feel myself very near to him, though his soul is much deeper and purer than mine.

“I cannot say that I ever read Spinoza straight through, that at any time the complete architecture of his intellectual system has stood clear in view before me. But when I look into him I seem to understand him, — that is, he always appears to me consistent with himself, and I can always gather from him very salutary influences for my own way of feeling and acting.”

Emerson would not have pretended that he was always “consistent with himself,” but these “salutary influences,” restoring, enkindling, vivifying, are felt by many of his readers who would have to confess, like Dr. Walter Channing, that these thoughts, or thoughts like these, as he listened to them in a lecture, “made his head ache.”

The three essays which follow “The Over-Soul,” “Circles,” “Intellect,” “Art,” would furnish us a harvest of good sayings, some of which we should recognize as parts of our own (borrowed) axiomatic wisdom.

“Beware when the great God lets loose a thinker on this planet. Then all things are at risk.”

“God enters by a private door into every individual.”

”God offers to every mind its choice between truth and repose. Take which you please, — you can never have both.”

”Though we travel the world over to find the beautiful, we must

carry it with us, or we find it not.”

But we cannot reconstruct the Hanging Gardens with a few bricks from Babylon.

Emerson describes his mode of life in these years in a letter to Carlyle, dated May 10, 1838.

“I occupy, or improve, as we Yankees say, two acres only of God’s earth; on which is my house, my kitchen-garden, my orchard of thirty young trees, my empty barn. My house is now a very good one for comfort, and abounding in room. Besides my house, I have, I believe, \$22,000, whose income in ordinary years is six per cent. I have no other tithe or glebe except the income of my winter lectures, which was last winter \$800. Well, with this income, here at home, I am a rich man. I stay at home and go abroad at my own instance. I have food, warmth, leisure, books, friends. Go away from home, I am rich no longer. I never have a dollar to spend on a fancy. As no wise man, I suppose, ever was rich in the sense of freedom to spend, because of the inundation of claims, so neither am I, who am not wise. But at home, I am rich, — rich enough for ten brothers. My wife Lidian is an incarnation of Christianity, — I call her Asia, — and keeps my philosophy from Antinomianism; my mother, whitest, mildest, most conservative of ladies, whose only exception to her universal preference for old things is her son; my boy, a piece of love and sunshine, well worth my watching from morning to night; — these, and three domestic women, who cook, and sew and run for us, make all my household. Here I sit and read and write, with very little system, and, as far as regards composition, with the most fragmentary result: paragraphs incompressible, each sentence an infinitely repellent particle.”

A great sorrow visited Emerson and his household at this period of his life. On the 30th of October, 1841, he wrote to Carlyle: “My little boy is five years old to-day, and almost old enough to send you his love.”

Three months later, on the 28th of February, 1842, he writes once more: —

“My dear friend, you should have had this letter and these messages by the last steamer; but when it sailed, my son, a perfect little boy of five years and three months, had ended his earthly life. You can never sympathize with me; you can never know how much of me such a young child can take away. A few weeks ago I accounted myself a very rich man, and now the poorest of all. What would it avail to tell you anecdotes of a sweet and wonderful boy, such as we solace and sadden ourselves with at home every morning and evening? From a

perfect health and as happy a life and as happy influences as ever child enjoyed, he was hurried out of my arms in three short days by scarlatina. We have two babes yet, one girl of three years, and one girl of three months and a week, but a promise like that Boy's I shall never see. How often I have pleased myself that one day I should send to you this Morning Star of mine, and stay at home so gladly behind such a representative. I dare not fathom the Invisible and Untold to inquire what relations to my Departed ones I yet sustain."

This was the boy whose memory lives in the tenderest and most pathetic of Emerson's poems, the "Threnody," — a lament not unworthy of comparison with Lycidas for dignity, but full of the simple pathos of Cowper's well-remembered lines on the receipt of his mother's picture, in the place of Milton's sonorous academic phrases.

CHAPTER VI. 1843-1848. AET. 40-45.

“The Young American.” — Address on the Anniversary of the Emancipation of the Negroes in the British West Indies. — Publication of the Second Series of Essays. — Contents: The Poet. — Experience. — Character. — Manners. — Gifts. — Nature. — Politics. — Nominalist and Realist. — NewEngland Reformers. — Publication of Poems. — Second Visit to England.

[Footnote 1: These two addresses are to be found in the first and eleventh volumes, respectively, of the last collective edition of Emerson’s works, namely, “Nature, Addresses, and Lectures,” and “Miscellanies.”]

Emerson was American in aspect, temperament, way of thinking, and feeling; American, with an atmosphere of Oriental idealism; American, so far as he belonged to any limited part of the universe. He believed in American institutions, he trusted the future of the American race. In the address first mentioned in the contents, of this chapter, delivered February 7, 1844, he claims for this country all that the most ardent patriot could ask. Not a few of his fellow-countrymen will feel the significance of the following contrast.

“The English have many virtues, many advantages, and the proudest history in the world; but they need all and more than all the resources of the past to indemnify a heroic gentleman in that country for the mortifications prepared for him by the system of society, and which seem to impose the alternative to resist or to avoid it.... It is for Englishmen to consider, not for us; we only say, Let us live in America, too thankful for our want of feudal institutions.... If only the men are employed in conspiring with the designs of the Spirit who led us hither, and is leading us still, we shall quickly enough advance out of all hearing of others’ censures, out of all regrets of our own, into a new and more excellent social state than history has recorded.”

Thirty years have passed since the lecture from which these passages are taken was delivered. The “Young American” of that day is the more than middle-aged American of the present. The intellectual independence of our country is far more solidly established than when this lecture was written. But the social alliance between certain classes of Americans and English is more and more closely cemented from year to year, as the wealth of the new world burrows its way among the privileged classes of the old world. It is a poor ambition for the possessor of suddenly acquired wealth to have it appropriated as a feeder of the impaired fortunes of a deteriorated household, with a family record of which its representatives are unworthy. The plain and wholesome

language of Emerson is on the whole more needed now than it was when spoken. His words have often been extolled for their stimulating quality; following the same analogy, they are, as in this address, in a high degree tonic, bracing, strengthening to the American, who requires to be reminded of his privileges that he may know and find himself equal to his duties.

On the first day of August, 1844, Emerson delivered in Concord an address on the Anniversary of the Emancipation of the Negroes in the British West India Islands. This discourse would not have satisfied the Abolitionists. It was too general in its propositions, full of humane and generous sentiments, but not looking to their extreme and immediate method of action.

*

Emerson's second series of Essays was published in 1844. There are many sayings in the Essay called "The Poet," which are meant for the initiated, rather than for him who runs, to read: —

"All that we call sacred history attests that the birth of a poet is the principal event in chronology."

Does this sound wild and extravagant? What were the political ups and downs of the Hebrews, — what were the squabbles of the tribes with each other, or with their neighbors, compared to the birth of that poet to whom we owe the Psalms, — the sweet singer whose voice is still the dearest of all that ever sang to the heart of mankind?

The poet finds his materials everywhere, as Emerson tells him in this eloquent apostrophe: —

"Thou true land-bird! sea-bird! air-bird! Wherever snow falls, or water flows, or birds fly, wherever day and night meet in twilight, wherever the blue heaven is hung by clouds, or sown with stars, wherever are forms with transparent boundaries, wherever are outlets into celestial space, wherever is danger and awe and love, there is Beauty, plenteous as rain, shed for thee, and though thou should'st walk the world over, thou shalt not be able to find a condition inopportune or ignoble."

"Experience" is, as he says himself, but a fragment. It bears marks of having been written in a less tranquil state of mind than the other essays. His most important confession is this: —

"All writing comes by the grace of God, and all doing and having. I would gladly be moral and keep due metes and bounds, which I dearly love, and allow the most to the will of man; but I have set my heart on honesty in this chapter, and I can see nothing at last, in success or failure, than more or less of vital force

supplied from the Eternal.”

The Essay on “Character” requires no difficult study, but is well worth the trouble of reading. A few sentences from it show the prevailing tone and doctrine.

“Character is Nature in the highest form. It is of no use to ape it, or to contend with it. Somewhat is possible of resistance and of persistence and of creation to this power, which will foil all emulation.”

“There is a class of men, individuals of which appear at long intervals, so eminently endowed with insight and virtue, that they have been unanimously saluted as *divine*, and who seem to be an accumulation of that power we consider.

“The history of those gods and saints which the world has written, and then worshipped, are documents of character. The ages have exulted in the manners of a youth who owed nothing to fortune, and who was hanged at the Tyburn of his nation, who, by the pure quality of his nature, shed an epic splendor around the facts of his death which has transfigured every particular into an universal symbol for the eyes of mankind. This great defeat is hitherto our highest fact.”

In his Essay on “Manners,” Emerson gives us his ideas of a gentleman: —

“The gentleman is a man of truth, lord of his own actions and expressing that lordship in his behavior, not in any manner dependent and servile either on persons or opinions or possessions. Beyond this fact of truth and real force, the word denotes good-nature or benevolence: manhood first, and then gentleness. — Power first, or no leading class. — God knows that all sorts of gentlemen knock at the door: but whenever used in strictness, and with any emphasis, the name will be found to point at original energy. — The famous gentlemen of Europe have been of this strong type: Saladin, Sapor, the Cid, Julius Caesar, Scipio, Alexander, Pericles, and the lordliest personages. They sat very carelessly in their chairs, and were too excellent themselves to value any condition at a high rate. — I could better eat with one who did not respect the truth or the laws than with a sloven and unrepresentable person. — The person who screams, or uses the superlative degree, or converses with heat, puts whole drawing-rooms to flight. — I esteem it a chief felicity of this country that it excels in woman.”

So writes Emerson, and proceeds to speak of woman in language which seems almost to pant for rhythm and rhyme.

This essay is plain enough for the least “transcendental” reader. Franklin would have approved it, and was himself a happy illustration of many of the qualities which go to the Emersonian ideal of good manners, a typical American, equal to his position, always as much so in the palaces and salons of Paris as in

the Continental Congress, or the society of Philadelphia.

“Gifts” is a dainty little Essay with some nice distinctions and some hints which may help to give form to a generous impulse: —

“The only gift is a portion of thyself. Thou must bleed for me. Therefore the poet brings his poem; the shepherd, his lamb; the farmer, corn; the miner, a gem; the sailor, coral and shells; the painter, his picture; the girl, a handkerchief of her own sewing.”

“Flowers and fruits are always fit presents; flowers, because they are a proud assertion that a ray of beauty outvalues all the utilities of the world. — Fruits are acceptable gifts, because they are the flower of commodities, and admit of fantastic values being attached to them.”

“It is a great happiness to get off without injury and heart-burning from one who has had the ill-luck to be served by you. It is a very onerous business, this of being served, and the debtor naturally wishes to give you a slap.”

Emerson hates the superlative, but he does unquestionably love the tingling effect of a witty over-statement.

We have recognized most of the thoughts in the Essay entitled “Nature,” in the previous Essay by the same name, and others which we have passed in review. But there are poetical passages which will give new pleasure.

Here is a variation of the formula with which we are familiar: —

”Nature is the incarnation of a thought, and turns to a thought again, as ice becomes water and gas. The world is mind precipitated, and the volatile essence is forever escaping again into the state of free thought.”

And here is a quaint sentence with which we may take leave of this Essay: —

“They say that by electro-magnetism, your salad shall be grown from the seed, whilst your fowl is roasting for dinner: it is a symbol of our modern aims and endeavors, — of our condensation and acceleration of objects; but nothing is gained: nature cannot be cheated: man’s life is but seventy salads long, grow they swift or grow they slow.”

This is pretty and pleasant, but as to the literal value of the prediction, M. Jules Verne would be the best authority to consult. Poets are fond of that branch of science which, if the imaginative Frenchman gave it a name, he would probably call *Onditologie*.

It is not to be supposed that the most sanguine optimist could be satisfied with

the condition of the American political world at the present time, or when the Essay on "Politics" was written, some years before the great war which changed the aspects of the country in so many respects, still leaving the same party names, and many of the characters of the old parties unchanged. This is Emerson's view of them as they then were: —

"Of the two great parties, which, at this hour, almost share the nation between them, I should say that one has the best cause, and the other contains the best men. The philosopher, the poet, or the religious man, will, of course, wish to cast his vote with the democrat, for free trade, for wide suffrage, for the abolition of legal cruelties in the penal code, and for facilitating in every manner the access of the young and the poor to the sources of wealth and power. But he can rarely accept the persons whom the so-called popular party propose to him as representatives of these liberties. They have not at heart the ends which give to the name of democracy what hope and virtue are in it. The spirit of our American radicalism is destructive and aimless; it is not loving; it has no ulterior and divine ends; but is destructive only out of hatred and selfishness. On the other side, the conservative party, composed of the most moderate, able, and cultivated part of the population, is timid, and merely defensive of property. It indicates no right, it aspires to no real good, it brands no crime, it proposes no generous policy, it does not build nor write, nor cherish the arts, nor foster religion, nor establish schools, nor encourage science, nor emancipate the slave, nor befriend the poor, or the Indian, or the immigrant. From neither party, when in power, has the world any benefit to expect in science, art, or humanity, at all commensurate with the resources of the nation."

The metaphysician who looks for a closely reasoned argument on the famous old question which so divided the schoolmen of old will find a very moderate satisfaction in the Essay entitled "Nominalism and Realism." But there are many discursive remarks in it worth gathering and considering. We have the complaint of the Cambridge "Phi Beta Kappa Oration," reiterated, that there is no complete man, but only a collection of fragmentary men.

As a Platonist and a poet there could not be any doubt on which side were all his prejudices; but he takes his ground cautiously.

"In the famous dispute with the Nominalists, the Realists had a good deal of reason. General ideas are essences. They are our gods: they round and ennoble the most practical and sordid way of living.

"Though the uninspired man certainly finds persons a conveniency in household matters, the divine man does not respect them: he sees them as a rack of clouds, or a fleet of ripples which the wind drives over the surface of the water. But this is flat rebellion. Nature will not be Buddhist: she resents

generalizing, and insults the philosopher in every moment with a million of fresh particulars.”

New England Reformers. — Would any one venture to guess how Emerson would treat this subject? With his unsparing, though amiable radicalism, his excellent common sense, his delicate appreciation of the ridiculous, too deep for laughter, as Wordsworth’s thoughts were too deep for tears, in the midst of a band of enthusiasts and not very remote from a throng of fanatics, what are we to look for from our philosopher who unites many characteristics of Berkeley and of Franklin?

We must remember when this lecture was written, for it was delivered on a Sunday in the year 1844. The Brook Farm experiment was an index of the state of mind among one section of the Reformers of whom he was writing. To remodel society and the world into a “happy family” was the aim of these enthusiasts. Some attacked one part of the old system, some another; some would build a new temple, some would rebuild the old church, some would worship in the fields and woods, if at all; one was for a phalanstery, where all should live in common, and another was meditating the plan and place of the wigwam where he was to dwell apart in the proud independence of the woodchuck and the musquash. Emerson had the largest and kindest sympathy with their ideals and aims, but he was too clear-eyed not to see through the whims and extravagances of the unpractical experimenters who would construct a working world with the lay figures they had put together, instead of flesh and blood men and women and children with all their congenital and acquired perversities. He describes these Reformers in his own good-naturedly half-satirical way: —

“They defied each other like a congress of kings; each of whom had a realm to rule, and a way of his own that made concert unprofitable. What a fertility of projects for the salvation of the world! One apostle thought all men should go to farming; and another that no man should buy or sell; that the use of money was the cardinal evil; another that the mischief was in our diet, that we eat and drink damnation. These made unleavened bread, and were foes to the death to fermentation. It was in vain urged by the housewife that God made yeast as well as dough, and loves fermentation just as dearly as he does vegetation; that fermentation develops the saccharine element in the grain, and makes it more palatable and more digestible. No, they wish the pure wheat, and will die but it shall not ferment. Stop, dear nature, these innocent advances of thine; let us scotch these ever-rolling wheels! Others attacked the system of agriculture, the use of animal manures in farming; and the tyranny of man over brute nature; these abuses polluted his food. The ox must be taken from the plough, and the

horse from the cart, the hundred acres of the farm must be spaded, and the man must walk wherever boats and locomotives will not carry him. Even the insect world was to be defended, — that had been too long neglected, and a society for the protection of ground-worms, slugs, and mosquitoes was to be incorporated without delay. With these appeared the adepts of homoeopathy, of hydropathy, of mesmerism, of phrenology, and their wonderful theories of the Christian miracles!”

We have already seen the issue of the famous Brook Farm experiment, which was a practical outcome of the reforming agitation.

Emerson has had the name of being a leader in many movements in which he had very limited confidence, this among others to which the idealizing impulse derived from him lent its force, but for the organization of which he was in no sense responsible.

He says in the lecture we are considering: —

“These new associations are composed of men and women of superior talents and sentiments; yet it may easily be questioned whether such a community will draw, except in its beginnings, the able and the good; whether these who have energy will not prefer their choice of superiority and power in the world to the humble certainties of the association; whether such a retreat does not promise to become an asylum to those who have tried and failed rather than a field to the strong; and whether the members will not necessarily be fractions of men, because each finds that he cannot enter into it without some compromise.”

His sympathies were not allowed to mislead him; he knew human nature too well to believe in a Noah’s ark full of idealists.

All this time he was lecturing for his support, giving courses of lectures in Boston and other cities, and before the country lyceums in and out of New England.

His letters to Carlyle show how painstaking, how methodical, how punctual he was in the business which interested his distant friend. He was not fond of figures, and it must have cost him a great effort to play the part of an accountant.

He speaks also of receiving a good deal of company in the summer, and that some of this company exacted much time and attention, — more than he could spare, — is made evident by his gentle complaints, especially in his poems, which sometimes let out a truth he would hardly have uttered in prose.

In 1846 Emerson’s first volume of poems was published. Many of the poems had been long before the public — some of the best, as we have seen, having been printed in “The Dial.” It is only their being brought together for the first time which belongs especially to this period, and we can leave them for the present, to be looked over by and by in connection with a second volume of

poems published in 1867, under the title, “May-Day and other Pieces.”

In October, 1847, he left Concord on a second visit to England, which will be spoken of in the following chapter.

CHAPTER VII. 1848-1853. AET. 45-50.

The "Massachusetts Quarterly Review;" Visit to Europe. — England. — Scotland. — France.— "Representative Men" published. I. Uses of Great Men. II. Plato; or, the Philosopher; Plato; New Readings. III. Swedenborg; or, the Mystic. IV. Montaigne; or, the Skeptic. V. Shakespeare; or, the Poet. VI. Napoleon; or, the Man of the World. VII. Goethe; or, the Writer. — Contribution to the "Memoirs of Margaret Fuller Ossoli."

A new periodical publication was begun in Boston in 1847, under the name of the "Massachusetts Quarterly Review." Emerson wrote the "Editor's Address," but took no further active part in it, Theodore Parker being the real editor. The last line of this address is characteristic: "We rely on the truth for aid against ourselves."

On the 5th of October, 1847, Emerson sailed for Europe on his second visit, reaching Liverpool on the 22d of that month. Many of his admirers were desirous that he should visit England and deliver some courses of lectures. Mr. Alexander Ireland, who had paid him friendly attentions during his earlier visit, and whose impressions of him in the pulpit have been given on a previous page, urged his coming. Mr. Conway quotes passages from a letter of Emerson's which show that he had some hesitation in accepting the invitation, not unmingled with a wish to be heard by the English audiences favorably disposed towards him.

"I feel no call," he said, "to make a visit of literary propagandism in England. All my impulses to work of that kind would rather employ me at home." He does not like the idea of "coaxing" or advertising to get him an audience. He would like to read lectures before institutions or friendly persons who sympathize with his studies. He has had a good many decisive tokens of interest from British men and women, but he doubts whether he is much and favorably known in any one city, except perhaps in London. It proved, however, that there was a very widespread desire to hear him, and applications for lectures flowed in from all parts of the kingdom.

From Liverpool he proceeded immediately to Manchester, where Mr. Ireland received him at the Victoria station. After spending a few hours with him, he went to Chelsea to visit Carlyle, and at the end of a week returned to Manchester to begin the series of lecturing engagements which had been arranged for him. Mr. Ireland's account of Emerson's visits and the interviews between him and many distinguished persons is full of interest, but the interest largely relates to the persons visited by Emerson. He lectured at Edinburgh, where his liberal way of thinking and talking made a great sensation in orthodox circles. But he did not

fail to find enthusiastic listeners. A young student, Mr. George Cupples, wrote an article on these lectures from which, as quoted by Mr. Ireland, I borrow a single sentence, — one only, but what could a critic say more?

Speaking of his personal character, as revealed through his writings, he says: “In this respect, I take leave to think that Emerson is the most mark-worthy, the loftiest, and most heroic mere man that ever appeared.” Emerson has a lecture on the superlative, to which he himself was never addicted. But what would youth be without its extravagances, — its preterpluperfect in the shape of adjectives, its unmeasured and unstinted admiration?

I need not enumerate the celebrated literary personages and other notabilities whom Emerson met in England and Scotland. He thought “the two finest mannered literary men he met in England were Leigh Hunt and De Quincey.” His diary might tell us more of the impressions made upon him by the distinguished people he met, but it is impossible to believe that he ever passed such inhuman judgments on the least desirable of his new acquaintances as his friend Carlyle has left as a bitter legacy behind him. Carlyle’s merciless discourse about Coleridge and Charles Lamb, and Swinburne’s carnivorous lines, which take a barbarous vengeance on him for his offence, are on the level of political rhetoric rather than of scholarly criticism or characterization. Emerson never forgot that he was dealing with human beings. He could not have long endured the asperities of Carlyle, and that “loud shout of laughter,” which Mr. Ireland speaks of as one of his customary explosions, would have been discordant to Emerson’s ears, which were offended by such noisy manifestations.

During this visit Emerson made an excursion to Paris, which furnished him materials for a lecture on France delivered in Boston, in 1856, but never printed.

From the lectures delivered in England he selected a certain number for publication. These make up the volume entitled “Representative Men,” which was published in 1850. I will give very briefly an account of its contents. The title was a happy one, and has passed into literature and conversation as an accepted and convenient phrase. It would teach us a good deal merely to consider the names he has selected as typical, and the ground of their selection. We get his classification of men considered as leaders in thought and in action. He shows his own affinities and repulsions, and, as everywhere, writes his own biography, no matter about whom or what he is talking. There is hardly any book of his better worth study by those who wish to understand, not Plato, not Plutarch, not Napoleon, but Emerson himself. All his great men interest us for their own sake; but we know a good deal about most of them, and Emerson holds the mirror up to them at just such an angle that we see his own face as well

as that of his hero, unintentionally, unconsciously, no doubt, but by a necessity which he would be the first to recognize.

Emerson swears by no master. He admires, but always with a reservation. Plato comes nearest to being his idol, Shakespeare next. But he says of all great men: "The power which they communicate is not theirs. When we are exalted by ideas, we do not owe this to Plato, but to the idea, to which also Plato was debtor."

Emerson loves power as much as Carlyle does; he likes "rough and smooth," "scourges of God," and "darlings of the human race." He likes Julius Caesar, Charles the Fifth, of Spain, Charles the Twelfth, of Sweden, Richard Plantagenet, and Bonaparte.

"I applaud," he says, "a sufficient man, an officer equal to his office; captains, ministers, senators. I like a master standing firm on legs of iron, well born, rich, handsome, eloquent, loaded with advantages, drawing all men by fascination into tributaries and supporters of his power. Sword and staff, or talents sword-like or staff-like, carry on the work of the world. But I find him greater when he can abolish himself and all heroes by letting in this element of reason, irrespective of persons, this subtilizer and irresistible upward force, into our thoughts, destroying individualism; the power is so great that the potentate is nothing. —

"The genius of humanity is the right point of view of history. The qualities abide; the men who exhibit them have now more, now less, and pass away; the qualities remain on another brow. — All that respects the individual is temporary and prospective, like the individual himself, who is ascending out of his limits into a catholic existence."

No man can be an idol for one who looks in this way at all men. But Plato takes the first place in Emerson's gallery of six great personages whose portraits he has sketched. And of him he says: —

"Among secular books Plato only is entitled to Omar's fanatical compliment to the Koran, when he said, 'Burn the libraries; for their value is in this book.' Out of Plato come all things that are still written and debated among men of thought." —

"In proportion to the culture of men they become his scholars." — "How many great men Nature is incessantly sending up out of night to be *his men!* — His contemporaries tax him with plagiarism. — But the inventor only knows how to borrow. When we are praising Plato, it seems we are praising quotations from Solon and Sophron and Philolaus. Be it so. Every book is a quotation; and

every house is a quotation out of all forests and mines and stone quarries; and every man is a quotation from all his ancestors.”

The reader will, I hope, remember this last general statement when he learns from what wide fields of authorship Emerson filled his storehouses.

A few sentences from Emerson will show us the probable source of some of the deepest thought of Plato and his disciples.

The conception of the fundamental Unity, he says, finds its highest expression in the religious writings of the East, especially in the Indian Scriptures. ““The whole world is but a manifestation of Vishnu, who is identical with all things, and is to be regarded by the wise as not differing from but as the same as themselves. I neither am going nor coming; nor is my dwelling in any one place; nor art thou, thou; nor are others, others; nor am I, I.’ As if he had said, ‘All is for the soul, and the soul is Vishnu; and animals and stars are transient paintings; and light is whitewash; and durations are deceptive; and form is imprisonment; and heaven itself a decoy.’” All of which we see reproduced in Emerson’s poem “Brahma.”— “The country of unity, of immovable institutions, the seat of a philosophy delighting in abstractions, of men faithful in doctrine and in practice to the idea of a deaf, unimplorable, immense fate, is Asia; and it realizes this faith in the social institution of caste. On the other side, the genius of Europe is active and creative: it resists caste by culture; its philosophy was a discipline; it is a land of arts, inventions, trade, freedom.”— “Plato came to join, and by contact to enhance, the energy of each.”

But Emerson says, — and some will smile at hearing him say it of another, — “The acutest German, the lovingest disciple, could never tell what Platonism was; indeed, admirable texts can be quoted on both sides of every great question from him.”

The transcendent intellectual and moral superiorities of this “Euclid of holiness,” as Emerson calls him, with his “soliform eye and his boniform soul,” — the two quaint adjectives being from the mint of Cudworth, — are fully dilated upon in the addition to the original article called “Plato: New Readings.”

Few readers will be satisfied with the Essay entitled “Swedenborg; or, the Mystic.” The believers in his special communion as a revealer of divine truth will find him reduced to the level of other seers. The believers of the different creeds of Christianity will take offence at the statement that “Swedenborg and Behmen both failed by attaching themselves to the Christian symbol, instead of to the moral sentiment, which carries innumerable christianities, humanities, divinities in its bosom.” The men of science will smile at the exorbitant claims put forward in behalf of Swedenborg as a scientific discoverer. “Philosophers” will not be pleased to be reminded that Swedenborg called them “cockatrices,”

“asps,” or “flying serpents;” “literary men” will not agree that they are “conjurers and charlatans,” and will not listen with patience to the praises of a man who so called them. As for the poets, they can take their choice of Emerson’s poetical or prose estimate of the great Mystic, but they cannot very well accept both. In “The Test,” the Muse says: —

”I hung my verses in the wind,
Time and tide their faults may find;
All were winnowed through and through,
Five lines lasted good and true ...
Sunshine cannot bleach the snow,
Nor time unmake what poets know.
Have you eyes to find the five
Which five hundred did survive?”

In the verses which follow we learn that the five immortal poets referred to are Homer, Dante, Shakespeare, *Swedenborg*, and Goethe.

And now, in the Essay we have just been looking at, I find that “his books have no melody, no emotion, no humor, no relief to the dead prosaic level. We wander forlorn in a lack-lustre landscape. No bird ever sang in these gardens of the dead. The entire want of poetry in so transcendent a mind betokens the disease, and like a hoarse voice in a beautiful person, is a kind of warning.” Yet Emerson says of him that “He lived to purpose: he gave a verdict. He elected goodness as the clue to which the soul must cling in this labyrinth of nature.”

Emerson seems to have admired *Swedenborg* at a distance, but seen nearer, he liked Jacob Behmen a great deal better.

“Montaigne; or, the Skeptic,” is easier reading than the last-mentioned Essay. Emerson accounts for the personal regard which he has for Montaigne by the story of his first acquaintance with him. But no other reason was needed than that Montaigne was just what Emerson describes him as being.

“There have been men with deeper insight; but, one would say, never a man with such abundance of thought: he is never dull, never insincere, and has the genius to make the reader care for all that he cares for.

“The sincerity and marrow of the man reaches to his sentences. I know not anywhere the book that seems less written. It is the language of conversation transferred to a book. Cut these words and they would bleed; they are vascular and alive. —

“Montaigne talks with shrewdness, knows the world and books and himself, and uses the positive degree; never shrieks, or protests, or prays: no weakness,

no convulsion, no superlative: does not wish to jump out of his skin, or play any antics, or annihilate space or time, but is stout and solid; tastes every moment of the day; likes pain because it makes him feel himself and realize things; as we pinch ourselves to know that we are awake. He keeps the plain; he rarely mounts or sinks; likes to feel solid ground and the stones underneath. His writing has no enthusiasms, no aspiration; contented, self-respecting, and keeping the middle of the road. There is but one exception, — in his love for Socrates. In speaking of him, for once his cheek flushes and his style rises to passion.”

The writer who draws this portrait must have many of the same characteristics. Much as Emerson loved his dreams and his dreamers, he must have found a great relief in getting into “the middle of the road” with Montaigne, after wandering in difficult by-paths which too often led him round to the point from which he started.

As to his exposition of the true relations of skepticism to affirmative and negative belief, the philosophical reader must be referred to the Essay itself.

In writing of “Shakespeare; or, the Poet,” Emerson naturally gives expression to his leading ideas about the office of the poet and of poetry.

“Great men are more distinguished by range and extent than by originality.” A poet has “a heart in unison with his time and country.”— “There is nothing whimsical and fantastic in his production, but sweet and sad earnest, freighted with the weightiest convictions, and pointed with the most determined aim which any man or class knows of in his times.”

When Shakespeare was in his youth the drama was the popular means of amusement. It was “ballad, epic, newspaper, caucus, lecture, Punch, and library, at the same time. The best proof of its vitality is the crowd of writers which suddenly broke into this field.” Shakespeare found a great mass of old plays existing in manuscript and reproduced from time to time on the stage. He borrowed in all directions: “A great poet who appears in illiterate times absorbs into his sphere all the light which is anywhere radiating.” Homer, Chaucer, Saadi, felt that all wit was their wit. “Chaucer is a huge borrower.” Emerson gives a list of authors from whom he drew. This list is in many particulars erroneous, as I have learned from a letter of Professor Lounsbury’s which I have had the privilege of reading, but this is a detail which need not delay us.

The reason why Emerson has so much to say on this subject of borrowing, especially when treating of Plato and of Shakespeare, is obvious enough. He was arguing in his own cause, — not defending himself, as if there were some charge of plagiarism to be met, but making the proud claim of eminent domain in behalf of the masters who knew how to use their acquisitions.

“Shakespeare is the only biographer of Shakespeare; and even he can tell

nothing except to the Shakespeare in us.”— “Shakespeare is as much out of the category of eminent authors as he is out of the crowd. A good reader can in a sort nestle into Plato’s brain and think from thence; but not into Shakespeare’s. We are still out of doors.”

After all the homage which Emerson pays to the intellect of Shakespeare, he weighs him with the rest of mankind, and finds that he shares “the halfness and imperfection of humanity.”

“He converted the elements which waited on his command into entertainment. He was master of the revels to mankind.”

And so, after this solemn verdict on Shakespeare, after looking at the forlorn conclusions of our old and modern oracles, priest and prophet, Israelite, German, and Swede, he says: “It must be conceded that these are half views of half men. The world still wants its poet-priest, who shall not trifle with Shakespeare the player, nor shall grope in graves with Swedenborg the mourner; but who shall see, speak, and act with equal inspiration.”

It is not to be expected that Emerson should have much that is new to say about “Napoleon; or, the Man of the World.”

The stepping-stones of this Essay are easy to find: —

“The instinct of brave, active, able men, throughout the middle class everywhere, has pointed out Napoleon as the incarnate democrat. —

“Napoleon is thoroughly modern, and at the highest point of his fortunes, has the very spirit of the newspapers.” As Plato borrowed, as Shakespeare borrowed, as Mirabeau “plagiarized every good thought, every good word that was spoken in France,” so Napoleon is not merely “representative, but a monopolizer and usurper of other minds.”

He was “a man of stone and iron,” — equipped for his work by nature as Sallust describes Catiline as being. “He had a directness of action never before combined with such comprehension. Here was a man who in each moment and emergency knew what to do next. He saw only the object; the obstacle must give way.”

“When a natural king becomes a titular king everybody is pleased and satisfied.” —

“I call Napoleon the agent or attorney of the middle class of modern society. — He was the agitator, the destroyer of prescription, the internal improver, the liberal, the radical, the inventor of means, the opener of doors and markets, the subverter of monopoly and abuse.”

But he was without generous sentiments, “a boundless liar,” and finishing in high colors the outline of his moral deformities, Emerson gives us a climax in two sentences which render further condemnation superfluous: —

”In short, when you have penetrated through all the circles of power and splendor, you were not dealing with a gentleman, at last, but with an impostor and rogue; and he fully deserves the epithet of Jupiter Scapin, or a sort of Scamp Jupiter.

“So this exorbitant egotist narrowed, impoverished, and absorbed the power and existence of those who served him; and the universal cry of France and of Europe in 1814 was, Enough of him; ‘*Assez de Bonaparte.*’”

It was to this feeling that the French poet Barbier, whose death we have but lately seen announced, gave expression in the terrible satire in which he pictured France as a fiery courser bestridden by her spurred rider, who drove her in a mad career over heaps of rocks and ruins.

But after all, Carlyle’s “*carrière ouverte aux talens*” is the expression for Napoleon’s great message to mankind.

“Goethe; or, the Writer,” is the last of the Representative Men who are the subjects of this book of Essays. Emerson says he had read the fifty-five volumes of Goethe, but no other German writers, at least in the original. It must have been in fulfilment of some pious vow that he did this. After all that Carlyle had written about Goethe, he could hardly help studying him. But this Essay looks to me as if he had found the reading of Goethe hard work. It flows rather languidly, toys with side issues as a stream loiters round a nook in its margin, and finds an excuse for play in every pebble. Still, he has praise enough for his author. “He has clothed our modern existence with poetry.”— “He has said the best things about nature that ever were said. — He flung into literature in his Mephistopheles the first organic figure that has been added for some ages, and which will remain as long as the Prometheus. — He is the type of culture, the amateur of all arts and sciences and events; artistic, but not artist; spiritual, but not spiritualist. — I join Napoleon with him, as being both representatives of the impatience and reaction of nature against the morgue of conventions, — two stern realists, who, with their scholars, have severally set the axe at the root of the tree of cant and seeming, for this time and for all time.”

This must serve as an *ex pede* guide to reconstruct the Essay which finishes the volume.

In 1852 there was published a Memoir of Margaret Fuller Ossoli, in which Emerson, James Freeman Clarke, and William Henry Channing each took a part. Emerson’s account of her conversation and extracts from her letters and diaries, with his running commentaries and his interpretation of her mind and character, are a most faithful and vivid portraiture of a woman who is likely to live longer by what is written of her than by anything she ever wrote herself.

CHAPTER VIII. 1858-1858. AET. 50-55.

Lectures in various Places. — Anti-Slavery Addresses. — Woman. A Lecture read before the Woman's Rights Convention. — Samuel Hoar. Speech at Concord. — Publication of "English Traits." — The "Atlantic Monthly." — The "Saturday Club."

After Emerson's return from Europe he delivered lectures to different audiences, — one on Poetry, afterwards published in "Letters and Social Aims," a course of lectures in Freeman Place Chapel, Boston, some of which have been published, one on the Anglo-Saxon Race, and many others. In January, 1855, he gave one of the lectures in a course of Anti-Slavery Addresses delivered in Tremont Temple, Boston. In the same year he delivered an address before the Anti-Slavery party of New York. His plan for the extirpation of slavery was to buy the slaves from the planters, not conceding their right to ownership, but because "it is the only practical course, and is innocent." It would cost two thousand millions, he says, according to the present estimate, but "was there ever any contribution that was so enthusiastically paid as this would be?"

His optimism flowers out in all its innocent luxuriance in the paragraph from which this is quoted. Of course with notions like these he could not be hand in hand with the Abolitionists. He was classed with the Free Soilers, but he seems to have formed a party by himself in his project for buying up the negroes. He looked at the matter somewhat otherwise in 1863, when the settlement was taking place in a different currency, — in steel and not in gold: —

"Pay ransom to the owner,
And fill the bag to the brim.
Who is the owner? The slave is owner,
And ever was. Pay him."

His sympathies were all and always with freedom. He spoke with indignation of the outrage on Sumner; he took part in the meeting at Concord expressive of sympathy with John Brown. But he was never in the front rank of the aggressive Anti-Slavery men. In his singular "Ode inscribed to W.H. Channing" there is a hint of a possible solution of the slavery problem which implies a doubt as to the permanence of the cause of all the trouble.

"The over-god
Who marries Right to Might,
Who peoples, unpeoples, —

He who exterminates
Races by stronger races,
Black by white faces, —
Knows to bring honey
Out of the lion.”

Some doubts of this kind helped Emerson to justify himself when he refused to leave his “honeyed thought” for the busy world where
“Things are of the snake.”

The time came when he could no longer sit quietly in his study, and, to borrow Mr. Cooke’s words, “As the agitation proceeded, and brave men took part in it, and it rose to a spirit of moral grandeur, he gave a heartier assent to the outward methods adopted.”

*

No woman could doubt the reverence of Emerson for womanhood. In a lecture read to the “Woman’s Rights Convention” in 1855, he takes bold, and what would then have been considered somewhat advanced, ground in the controversy then and since dividing the community. This is the way in which he expresses himself:

“I do not think it yet appears that women wish this equal share in public affairs. But it is they and not we that are to determine it. Let the laws be purged of every barbarous remainder, every barbarous impediment to women. Let the public donations for education be equally shared by them, let them enter a school as freely as a church, let them have and hold and give their property as men do theirs; — and in a few years it will easily appear whether they wish a voice in making the laws that are to govern them. If you do refuse them a vote, you will also refuse to tax them, — according to our Teutonic principle, No representation, no tax. — The new movement is only a tide shared by the spirits of man and woman; and you may proceed in the faith that whatever the woman’s heart is prompted to desire, the man’s mind is simultaneously prompted to accomplish.”

Emerson was fortunate enough to have had for many years as a neighbor, that true New England Roman, Samuel Hoar. He spoke of him in Concord before his fellow-citizens, shortly after his death, in 1856. He afterwards prepared a sketch of Mr. Hoar for “Putnam’s Magazine,” from which I take one prose sentence and the verse with which the sketch concluded: —

“He was a model of those formal but reverend manners which make what is

called a gentleman of the old school, so called under an impression that the style is passing away, but which, I suppose, is an optical illusion, as there are always a few more of the class remaining, and always a few young men to whom these manners are native.”

The single verse I quote is compendious enough and descriptive enough for an Elizabethan monumental inscription.

”With beams December planets dart
His cold eye truth and conduct scanned;
July was in his sunny heart,
October in his liberal hand.”

Emerson’s “English Traits,” forming one volume of his works, was published in 1856. It is a thoroughly fresh and original book. It is not a tourist’s guide, not a detailed description of sights which tired the traveller in staring at them, and tire the reader who attacks the wearying pages in which they are recorded. Shrewd observation there is indeed, but its strength is in broad generalization and epigrammatic characterizations. They are not to be received as in any sense final; they are not like the verifiable facts of science; they are more or less sagacious, more or less well founded opinions formed by a fair-minded, sharp-witted, kind-hearted, open-souled philosopher, whose presence made every one well-disposed towards him, and consequently left him well-disposed to all the world.

A glance at the table of contents will give an idea of the objects which Emerson proposed to himself in his tour, and which take up the principal portion of his record. Only one *place* is given as the heading of a chapter, — *Stonehenge*. The other eighteen chapters have general titles, *Land, Race, Ability, Manners*, and others of similar character.

He uses plain English in introducing us to the Pilgrim fathers of the British Aristocracy: —

“Twenty thousand thieves landed at Hastings. These founders of the House of Lords were greedy and ferocious dragoons, sons of greedy and ferocious pirates. They were all alike, they took everything they could carry; they burned, harried, violated, tortured, and killed, until everything English was brought to the verge of ruin. Such, however, is the illusion of antiquity and wealth, that decent and dignified men now existing boast their descent from these filthy thieves, who showed a far juster conviction of their own merits by assuming for their types

the swine, goat, jackal, leopard, wolf, and snake, which they severally resembled.”

The race preserves some of its better characteristics.

“They have a vigorous health and last well into middle and old age. The old men are as red as roses, and still handsome. A clear skin, a peach-bloom complexion, and good teeth are found all over the island.”

English “Manners” are characterized, according to Emerson, by pluck, vigor, independence. “Every one of these islanders is an island himself, safe, tranquil, incommunicable.” They are positive, methodical, cleanly, and formal, loving routine and conventional ways; loving truth and religion, to be sure, but inexorable on points of form.

“They keep their old customs, costumes, and pomps, their wig and mace, sceptre and crown. A severe decorum rules the court and the cottage. Pretension and vamping are once for all distasteful. They hate nonsense, sentimentalism, and high-flown expressions; they use a studied plainness.”

“In an aristocratical country like England, not the Trial by Jury, but the dinner is the capital institution.”

“They confide in each other, — English believes in English.”— “They require the same adherence, thorough conviction, and reality in public men.”

”As compared with the American, I think them cheerful and contented.

Young people in this country are much more prone to melancholy.”

Emerson’s observation is in accordance with that of Cotton Mather nearly two hundred years ago.

“*New England*, a country where splenetic Maladies are prevailing and pernicious, perhaps above any other, hath afforded numberless instances, of even pious people, who have contracted those *Melancholy Indispositions*, which have unhinged them from all service or comfort; yea, not a few persons have been hurried thereby to lay *Violent Hands* upon themselves at the last. These are among the *unsearchable Judgments* of God.”

If there is a little exaggeration about the following portrait of the Englishman, it has truth enough to excuse its high coloring, and the likeness will be smilingly recognized by every stout Briton.

“They drink brandy like water, cannot expend their quantities of waste strength on riding, hunting, swimming, and fencing, and run into absurd follies with the gravity of the Eumenides. They stoutly carry into every nook and corner of the earth their turbulent sense; leaving no lie uncontradicted; no pretension unexamined. They chew hasheesh; cut themselves with poisoned creases, swing

their hammock in the boughs of the Bohon Upas, taste every poison, buy every secret; at Naples, they put St. Januarius's blood in an alembic; they saw a hole into the head of the 'winking virgin' to know why she winks; measure with an English foot-rule every cell of the inquisition, every Turkish Caaba, every Holy of Holies; translate and send to Bentley the arcanum, bribed and bullied away from shuddering Bramins; and measure their own strength by the terror they cause."

This last audacious picture might be hung up as a prose pendant to Marvell's poetical description of Holland and the Dutch.

"A saving stupidity marks and protects their perception as the curtain of the eagle's eye. Our swifter Americans, when they first deal with English, pronounce them stupid; but, later, do them justice as people who wear well, or hide their strength. — High and low, they are of an unctuous texture. — Their daily feasts argue a savage vigor of body. — Half their strength they put not forth. The stability of England is the security of the modern world."

Perhaps nothing in any of his vigorous paragraphs is more striking than the suggestion that "if hereafter the war of races often predicted, and making itself a war of opinions also (a question of despotism and liberty coming from Eastern Europe), should menace the English civilization, these sea-kings may take once again to their floating castles and find a new home and a second millennium of power in their colonies."

In reading some of Emerson's pages it seems as if another Arcadia, or the new Atlantis, had emerged as the fortunate island of Great Britain, or that he had reached a heaven on earth where neither moth nor rust doth corrupt, and where thieves do not break through nor steal, — or if they do, never think of denying that they have done it. But this was a generation ago, when the noun "shoddy," and the verb "to scamp," had not grown such familiar terms to English ears as they are to-day. Emerson saw the country on its best side. Each traveller makes his own England. A Quaker sees chiefly broad brims, and the island looks to him like a field of mushrooms.

The transplanted Church of England is rich and prosperous and fashionable enough not to be disturbed by Emerson's flashes of light that have not come through its stained windows.

"The religion of England is part of good-breeding. When you see on the continent the well-dressed Englishman come into his ambassador's chapel, and put his face for silent prayer into his smooth-brushed hat, one cannot help feeling how much national pride prays with him, and the religion of a gentleman.

“The church at this moment is much to be pitied. She has nothing left but possession. If a bishop meets an intelligent gentleman, and reads fatal interrogation in his eyes, he has no resource but to take wine with him.”

Sydney Smith had a great reverence for a bishop, — so great that he told a young lady that he used to roll a crumb of bread in his hand, from nervousness, when he sat next one at a dinner-table, — and if next an archbishop, used to roll crumbs with both hands, — but Sydney Smith would have enjoyed the tingling felicity of this last stinging touch of wit, left as lightly and gracefully as a *banderillero* leaves his little gayly ribboned dart in the shoulders of the bull with whose unwieldy bulk he is playing.

Emerson handles the formalism and the half belief of the Established Church very freely, but he closes his chapter on Religion with soft-spoken words.

“Yet if religion be the doing of all good, and for its sake the suffering of all evil, *souffrir de tout le monde, et ne faire souffrir personne*, that divine secret has existed in England from the days of Alfred to those of Romilly, of Clarkson, and of Florence Nightingale, and in thousands who have no fame.”

“English Traits” closes with Emerson’s speech at Manchester, at the annual banquet of the “Free Trade Athenaeum.” This was merely an occasional after-dinner reply to a toast which called him up, but it had sentences in it which, if we can imagine Milton to have been called up in the same way, he might well have spoken and done himself credit in their utterance.

*

The total impression left by the book is that Emerson was fascinated by the charm of English society, filled with admiration of the people, tempted to contrast his New Englanders in many respects unfavorably with Old Englanders, mainly in their material and vital stamina; but with all this not blinded for a moment to the thoroughly insular limitations of the phlegmatic islander. He alternates between a turn of genuine admiration and a smile as at a people that has not outgrown its playthings. This is in truth the natural and genuine feeling of a self-governing citizen of a commonwealth where thrones and wigs and mitres seem like so many pieces of stage property. An American need not be a philosopher to hold these things cheap. He cannot help it. Madame Tussaud’s exhibition, the Lord-Mayor’s gilt coach, and a coronation, if one happens to be in season, are all sights to be seen by an American traveller, but the reverence which is born with the British subject went up with the smoke of the gun that fired the long echoing shot at the little bridge over the sleepy river which works its way along through the wide-awake town of Concord.

In November, 1857, a new magazine was established in Boston, bearing the name of "The Atlantic Monthly." Professor James Russell Lowell was editor-in-chief, and Messrs. Phillips and Sampson, who were the originators of the enterprise, were the publishers. Many of the old contributors to "The Dial" wrote for the new magazine, among them Emerson. He contributed twenty-eight articles in all, more than half of them verse, to different numbers, from the first to the thirty-seventh volume. Among them are several of his best known poems, such as "The Romany Girl," "Days," "Brahma," "Waldeinsamkeit," "The Titmouse," "Boston Hymn," "Saadi," and "Terminus."

At about the same time there grew up in Boston a literary association, which became at last well known as the "Saturday Club," the members dining together on the last Saturday of every month.

The Magazine and the Club have existed and flourished to the present day. They have often been erroneously thought to have some organic connection, and the "Atlantic Club" has been spoken of as if there was or had been such an institution, but it never existed.

Emerson was a member of the Saturday Club from the first; in reality before it existed as an empirical fact, and when it was only a Platonic idea. The Club seems to have shaped itself around him as a nucleus of crystallization, two or three friends of his having first formed the habit of meeting him at dinner at "Parker's," the "Will's Coffee-House" of Boston. This little group gathered others to itself and grew into a club as Rome grew into a city, almost without knowing how. During its first decade the Saturday Club brought together, as members or as visitors, many distinguished persons. At one end of the table sat Longfellow, florid, quiet, benignant, soft-voiced, a most agreeable rather than a brilliant talker, but a man upon whom it was always pleasant to look, — whose silence was better than many another man's conversation. At the other end of the table sat Agassiz, robust, sanguine, animated, full of talk, boy-like in his laughter. The stranger who should have asked who were the men ranged along the sides of the table would have heard in answer the names of Hawthorne, Motley, Dana, Lowell, Whipple, Peirce, the distinguished mathematician, Judge Hoar, eminent at the bar and in the cabinet, Dwight, the leading musical critic of Boston for a whole generation, Sumner, the academic champion of freedom, Andrew, "the great War Governor" of Massachusetts, Dr. Howe, the philanthropist, William Hunt, the painter, with others not unworthy of such company. And with these, generally near the Longfellow end of the table, sat Emerson, talking in low tones and carefully measured utterances to his neighbor, or listening, and recording on his mental phonograph any stray word worth remembering. Emerson was a very regular attendant at the meetings of the

Saturday Club, and continued to dine at its table, until within a year or two of his death.

Unfortunately the Club had no Boswell, and its golden hours passed unrecorded.

CHAPTER IX. 1858-1863: AET. 55-60.

Essay on Persian Poetry. — Speech at the Burns Centennial Festival — Letter from Emerson to a Lady. — Tributes to Theodore Parker and to Thoreau. — Address on the Emancipation Proclamation. — Publication of "The Conduct of Life." Contents: Fate; Power; Wealth; Culture; Behavior; Worship; Considerations by the Way; Beauty; Illusions.

The Essay on Persian Poetry, published in the "Atlantic Monthly" in 1858, should be studied by all readers who are curious in tracing the influence of Oriental poetry on Emerson's verse. In many of the shorter poems and fragments published since "May-Day," as well as in the "Quatrains" and others of the later poems in that volume, it is sometimes hard to tell what is from the Persian from what is original.

On the 25th of January, 1859, Emerson attended the Burns Festival, held at the Parker House in Boston, on the Centennial Anniversary of the poet's birth. He spoke after the dinner to the great audience with such beauty and eloquence that all who listened to him have remembered it as one of the most delightful addresses they ever heard. Among his hearers was Mr. Lowell, who says of it that "every word seemed to have just dropped down to him from the clouds." Judge Hoar, who was another of his hearers, says, that though he has heard many of the chief orators of his time, he never witnessed such an effect of speech upon men. I was myself present on that occasion, and underwent the same fascination that these gentlemen and the varied audience before the speaker experienced. His words had a passion in them not usual in the calm, pure flow most natural to his uttered thoughts; white-hot iron we are familiar with, but white-hot silver is what we do not often look upon, and his inspiring address glowed like silver fresh from the cupel.

I am allowed the privilege of printing the following letter addressed to a lady of high intellectual gifts, who was one of the earliest, most devoted, and most faithful of his intimate friends: —

CONCORD, May 13, 1859.

Please, dear C., not to embark for home until I have despatched these lines, which I will hasten to finish. Louis Napoleon will not bayonet you the while, — keep him at the door. So long I have promised to write! so long I have thanked your long suffering! I have let pass the unreturning opportunity your visit to Germany gave to acquaint you with Gisela von Arnim (Bettina's daughter), and Joachim the violinist, and Hermann Grimm the scholar, her friends. Neither has E., — wandering in Europe with hope of meeting you, — yet met. This

contumacy of mine I shall regret as long as I live. How palsy creeps over us, with gossamer first, and ropes afterwards! and the witch has the prisoner when once she has put her eye on him, as securely as after the bolts are drawn. — Yet I and all my little company watch every token from you, and coax Mrs. H. to read us letters. I learned with satisfaction that you did not like Germany. Where then did Goethe find his lovers? Do all the women have bad noses and bad mouths? And will you stop in England, and bring home the author of “Counterparts” with you? Or did — write the novels and send them to London, as I fancied when I read them? How strange that you and I alone to this day should have his secret! I think our people will never allow genius, without it is alloyed by talent. But — is paralyzed by his whims, that I have ceased to hope from him. I could wish your experience of your friends were more animating than mine, and that there were any horoscope you could not cast from the first day. The faults of youth are never shed, no, nor the merits, and creeping time convinces ever the more of our impotence, and of the irresistibility of our bias. Still this is only science, and must remain science. Our *praxis* is never altered for that. We must forever hold our companions responsible, or they are not companions but stall-fed.

I think, as we grow older, we decrease as individuals, and as if in an immense audience who hear stirring music, none essays to offer a new stave, but we only join emphatically in the chorus. We volunteer no opinion, we despair of guiding people, but are confirmed in our perception that Nature is all right, and that we have a good understanding with it. We must shine to a few brothers, as palms or pines or roses among common weeds, not from greater absolute value, but from a more convenient nature. But 'tis almost chemistry at last, though a meta-chemistry. I remember you were such an impatient blasphemer, however musically, against the adamantine identities, in your youth, that you should take your turn of resignation now, and be a preacher of peace. But there is a little raising of the eyebrow, now and then, in the most passive acceptance, — if of an intellectual turn. Here comes out around me at this moment the new June, — the leaves say June, though the calendar says May, — and we must needs hail our young relatives again, though with something of the gravity of adult sons and daughters receiving a late-born brother or sister. Nature herself seems a little ashamed of a law so monstrous, billions of summers, and now the old game again without a new bract or sepal. But you will think me incorrigible with my generalities, and you so near, and will be here again this summer; perhaps with A.W. and the other travellers. My children scan curiously your E.'s drawings, as they have seen them.

The happiest winds fill the sails of you and yours!

R.W. EMERSON.

In the year 1860, Theodore Parker died, and Emerson spoke of his life and labors at the meeting held at the Music Hall to do honor to his memory. Emerson delivered discourses on Sundays and week-days in the Music Hall to Mr. Parker's society after his death. In 1862, he lost his friend Thoreau, at whose funeral he delivered an address which was published in the "Atlantic Monthly" for August of the same year. Thoreau had many rare and admirable qualities, and Thoreau pictured by Emerson is a more living personage than White of Selborne would have been on the canvas of Sir Joshua Reynolds.

The Address on the Emancipation Proclamation was delivered in Boston in September, 1862. The feeling that inspired it may be judged by the following extract: —

"Happy are the young, who find the pestilence cleansed out of the earth, leaving open to them an honest career. Happy the old, who see Nature purified before they depart. Do not let the dying die; hold them back to this world, until you have charged their ear and heart with this message to other spiritual societies, announcing the melioration of our planet: —

"Incertainties now crown themselves assured,
And Peace proclaims olives of endless age."

The "Conduct of Life" was published in 1860. The chapter on "Fate" might leave the reader with a feeling that what he is to do, as well as what he is to be and to suffer, is so largely predetermined for him, that his will, though formally asserted, has but a questionable fraction in adjusting him to his conditions as a portion of the universe. But let him hold fast to this reassuring statement: —

"If we must accept Fate, we are not less compelled to affirm liberty, the significance of the individual, the grandeur of duty, the power of character. — We are sure, that, though we know not how, necessity does comport with liberty, the individual with the world, my polarity with the spirit of the times."

But the value of the Essay is not so much in any light it throws on the mystery of volition, as on the striking and brilliant way in which the limitations of the individual and the inexplicable rule of law are illustrated.

"Nature is no sentimentalist, — does not cosset or pamper us. We must see that the world is rough and surly, and will not mind drowning a man or a woman; but swallows your ship like a grain of dust. — The way of Providence is a little rude. The habit of snake and spider, the snap of the tiger and other leapers and bloody jumpers, the crackle of the bones of his prey in the coil of the

anaconda, — these are in the system, and our habits are like theirs. You have just dined, and however scrupulously the slaughterhouse is concealed in the graceful distance of miles, there is complicity, — expensive races, — race living at the expense of race. — Let us not deny it up and down. Providence has a wild, rough, incalculable road to its end, and it is of no use to try to whitewash its huge, mixed instrumentalities, or to dress up that terrific benefactor in a clean shirt and white neckcloth of a student in divinity.”

Emerson cautions his reader against the danger of the doctrines which he believed in so fully: —

”They who talk much of destiny, their birth-star, etc., are in a lower dangerous plane, and invite the evils they fear.”

But certainly no physiologist, no cattle-breeder, no Calvinistic predestinarian could put his view more vigorously than Emerson, who dearly loves a picturesque statement, has given it in these words, which have a dash of science, a flash of imagination, and a hint of the delicate wit that is one of his characteristics: —

“People are born with the moral or with the material bias; — uterine brothers with this diverging destination: and I suppose, with high magnifiers, Mr. Fraunhofer or Dr. Carpenter might come to distinguish in the embryo at the fourth day, this is a whig and that a free-soiler.”

Let us see what Emerson has to say of “Power:” —

“All successful men have agreed in one thing — they were *causationists*. They believed that things went not by luck, but by law; that there was not a weak or a cracked link in the chain that joins the first and the last of things.

“The key to the age may be this, or that, or the other, as the young orators describe; — the key to all ages is, — Imbecility; imbecility in the vast majority of men at all times, and, even in heroes, in all but certain eminent moments; victims of gravity, custom, and fear. This gives force to the strong, — that the multitude have no habit of self-reliance or original action. —

“We say that success is constitutional; depends on a *plus* condition of mind and body, on power of work, on courage; that is of main efficacy in carrying on the world, and though rarely found in the right state for an article of commerce, but oftener in the supernatural or excess, which makes it dangerous and destructive, yet it cannot be spared, and must be had in that form, and absorbents provided to take off its edge.”

The “two economies which are the best *succedanea*” for deficiency of temperament are concentration and drill. This he illustrates by example, and he

also lays down some good, plain, practical rules which “Poor Richard” would have cheerfully approved. He might have accepted also the Essay on “Wealth” as having a good sense so like his own that he could hardly tell the difference between them.

“Wealth begins in a tight roof that keeps the rain and wind out; in a good pump that yields you plenty of sweet water; in two suits of clothes, so as to change your dress when you are wet; in dry sticks to burn; in a good double-wick lamp, and three meals; in a horse or locomotive to cross the land; in a boat to cross the sea; in tools to work with; in books to read; and so, in giving, on all sides, by tools and auxiliaries, the greatest possible extension to our powers, as if it added feet, and hands, and eyes, and blood, length to the day, and knowledge and good will. Wealth begins with these articles of necessity. —

“To be rich is to have a ticket of admission to the masterworks and chief men of each race. —

“The pulpit and the press have many commonplaces denouncing the thirst for wealth; but if men should take these moralists at their word, and leave off aiming to be rich, the moralists would rush to rekindle at all hazards this love of power in the people, lest civilization should be undone.”

Who can give better counsels on “Culture” than Emerson? But we must borrow only a few sentences from his essay on that subject. All kinds of secrets come out as we read these Essays of Emerson’s. We know something of his friends and disciples who gathered round him and sat at his feet. It is not hard to believe that he was drawing one of those composite portraits Mr. Galton has given us specimens of when he wrote as follows: —

“The pest of society is egotism. This goitre of egotism is so frequent among notable persons that we must infer some strong necessity in nature which it subserves; such as we see in the sexual attraction. The preservation of the species was a point of such necessity that Nature has secured it at all hazards by immensely overloading the passion, at the risk of perpetual crime and disorder. So egotism has its root in the cardinal necessity by which each individual persists to be what he is.

“The antidotes against this organic egotism are, the range and variety of attraction, as gained by acquaintance with the world, with men of merit, with classes of society, with travel, with eminent persons, and with the high resources of philosophy, art, and religion: books, travel, society, solitude.”

“We can ill spare the commanding social benefits of cities; they must be used; yet cautiously and haughtily, — and will yield their best values to him who can best do without them. Keep the town for occasions, but the habits should be formed to retirement. Solitude, the safeguard of mediocrity, is to genius the stern

friend, the cold, obscure shelter, where moult the wings which will bear it farther than suns and stars.”

We must remember, too, that “the calamities are our friends. Try the rough water as well as the smooth. Rough water can teach lessons worth knowing. Don’t be so tender at making an enemy now and then. He who aims high, must dread an easy home and popular manners.”

Emerson cannot have had many enemies, if any, in his calm and noble career. He can have cherished no enmity, on personal grounds at least. But he refused his hand to one who had spoken ill of a friend whom he respected. It was “the hand of Douglas” again, — the same feeling that Charles Emerson expressed in the youthful essay mentioned in the introduction to this volume.

Here are a few good sayings about “Behavior.”

“There is always a best way of doing everything, if it be to boil an egg. Manners are the happy ways of doing things; each once a stroke of genius or of love, — now repeated and hardened into usage.”

Thus it is that Mr. Emerson speaks of “Manners” in his Essay under the above title.

”The basis of good manners is self-reliance. — Manners require time, as nothing is more vulgar than haste. —

”Men take each other’s measure, when they meet for the first time, — and every time they meet. —

“It is not what talents or genius a man has, but how he is to his talents, that constitutes friendship and character. The man that stands by himself, the universe stands by him also.”

In his Essay on “Worship,” Emerson ventures the following prediction: —

“The religion which is to guide and fulfil the present and coming ages, whatever else it be, must be intellectual. The scientific mind must have a faith which is science. — There will be a new church founded on moral science, at first cold and naked, a babe in a manger again, the algebra and mathematics of ethical law, the church of men to come, without shawms or psaltery or sackbut; but it will have heaven and earth for its beams and rafters; science for symbol and illustration; it will fast enough gather beauty, music, picture, poetry.”

It is a bold prophecy, but who can doubt that all improbable and unverifiable traditional knowledge of all kinds will make way for the established facts of science and history when these last reach it in their onward movement? It may be remarked that he now speaks of science more respectfully than of old. I

suppose this Essay was of later date than “Beauty,” or “Illusions.” But accidental circumstances made such confusion in the strata of Emerson’s published thought that one is often at a loss to know whether a sentence came from the older or the newer layer.

We come to “Considerations by the Way.” The common-sense side of Emerson’s mind has so much in common with the plain practical intelligence of Franklin that it is a pleasure to find the philosopher of the nineteenth century quoting the philosopher of the eighteenth.

“Franklin said, ‘Mankind are very superficial and dastardly: they begin upon a thing, but, meeting with a difficulty, they fly from it discouraged; but they have the means if they would employ them.’”

“Shall we judge a country by the majority, or by the minority? By the minority, surely.” Here we have the doctrine of the “saving remnant,” which we have since recognized in Mr. Matthew Arnold’s well-remembered lecture. Our republican philosopher is clearly enough outspoken on this matter of the *vox populi*. “Leave this hypocritical prating about the masses. Masses are rude, lame, unmade, pernicious in their demands, and need not to be flattered, but to be schooled. I wish not to concede anything to them, but to tame, drill, divide, and break them up, and draw individuals out of them.”

Père Bouhours asked a question about the Germans which found its answer in due time. After reading what Emerson says about “the masses,” one is tempted to ask whether a philosopher can ever have “a constituency” and be elected to Congress? Certainly the essay just quoted from would not make a very promising campaign document. Perhaps there was no great necessity for Emerson’s returning to the subject of “Beauty,” to which he had devoted a chapter of “Nature,” and of which he had so often discoursed incidentally. But he says so many things worth reading in the Essay thus entitled in the “Conduct of Life” that we need not trouble ourselves about repetitions. The Essay is satirical and poetical rather than philosophical. Satirical when he speaks of science with something of that old feeling betrayed by his brother Charles when he was writing in 1828; poetical in the flight of imagination with which he enlivens, entertains, stimulates, inspires, — or as some may prefer to say, — amuses his listeners and readers.

The reader must decide which of these effects is produced by the following passage: —

“The feat of the imagination is in showing the convertibility of everything into every other thing. Facts which had never before left their stark common sense suddenly figure as Eleusinian mysteries. My boots and chair and candlestick are fairies in disguise, meteors, and constellations. All the facts in

Nature are nouns of the intellect, and make the grammar of the eternal language. Every word has a double, treble, or centuple use and meaning. What! has my stove and pepper-pot a false bottom? I cry you mercy, good shoe-box! I did not know you were a jewel-case. Chaff and dust begin to sparkle, and are clothed about with immortality. And there is a joy in perceiving the representative or symbolic character of a fact, which no base fact or event can ever give. There are no days so memorable as those which vibrated to some stroke of the imagination.”

One is reminded of various things in reading this sentence. An ounce of alcohol, or a few whiffs from an opium-pipe, may easily make a day memorable by bringing on this imaginative delirium, which is apt, if often repeated, to run into visions of rodents and reptiles. A coarser satirist than Emerson indulged his fancy in “Meditations on a Broomstick,” which My Lady Berkeley heard seriously and to edification. Meditations on a “Shoe-box” are less promising, but no doubt something could be made of it. A poet must select, and if he stoops too low he cannot lift the object he would fain idealize.

The habitual readers of Emerson do not mind an occasional over-statement, extravagance, paradox, eccentricity; they find them amusing and not misleading. But the accountants, for whom two and two always make four, come upon one of these passages and shut the book up as wanting in sanity. Without a certain sensibility to the humorous, no one should venture upon Emerson. If he had seen the lecturer’s smile as he delivered one of his playful statements of a runaway truth, fact unhorsed by imagination, sometimes by wit, or humor, he would have found a meaning in his words which the featureless printed page could never show him.

The Essay on “Illusions” has little which we have not met with, or shall not find repeating itself in the Poems.

During this period Emerson contributed many articles in prose and verse to the “Atlantic Monthly,” and several to “The Dial,” a second periodical of that name published in Cincinnati. Some of these have been, or will be, elsewhere referred to.

CHAPTER X. 1863-1868. AET. 60-65.

“Boston Hymn.”— “Voluntaries.” — Other Poems.— “May-Day and other Pieces.”— “Remarks at the Funeral Services of Abraham Lincoln.” — Essay on Persian Poetry. — Address at a Meeting of the Free Religious Association.— “Progress of Culture.” Address before the Phi Beta Kappa Society of Harvard University. — Course of Lectures in Philadelphia. — The Degree of LL.D. conferred upon Emerson by Harvard University.— “Terminus.”

The “Boston Hymn” was read by Emerson in the Music Hall, on the first day of January, 1863. It is a rough piece of verse, but noble from beginning to end. One verse of it, beginning “Pay ransom to the owner,” has been already quoted; these are the three that precede it: —

”I cause from every creature
His proper good to flow:
As much as he is and doeth
So much shall he bestow.

”But laying hands on another
To coin his labor and sweat,
He goes in pawn to his victim
For eternal years in debt.

”To-day unbind the captive,
So only are ye unbound:
Lift up a people from the dust,
Trump of their rescue, sound!”

“Voluntaries,” published in the same year in the “Atlantic Monthly,” is more dithyrambic in its measure and of a more Pindaric elevation than the plain song of the “Boston Hymn.”

”But best befriended of the God
He who, in evil times,
Warned by an inward voice,
Heeds not the darkness and the dread,
Biding by his rule and choice,
Feeling only the fiery thread
Leading over heroic ground,
Walled with mortal terror round,

To the aim which him allures,
And the sweet heaven his deed secures.
Peril around, all else appalling,
Cannon in front and leaden rain
Him duly through the clarion calling
To the van called not in vain.”

It is in this poem that we find the lines which, a moment after they were written, seemed as if they had been carved on marble for a thousand years: —

”So nigh is grandeur to our dust,
So near is God to man,
When Duty whispers low, *Thou must*,
The youth replies, *I can.*”

“Saadi” was published in the “Atlantic Monthly” in 1864, “My Garden” in 1866, “Terminus” in 1867. In the same year these last poems with many others were collected in a small volume, entitled “May-Day, and Other Pieces.” The general headings of these poems are as follows: May-Day. — The Adirondacs. — Occasional and Miscellaneous Pieces. — Nature and Life. — Elements. — Quatrains. — Translations. — Some of these poems, which were written at long intervals, have been referred to in previous pages. “The Adirondacs” is a pleasant narrative, but not to be compared for its poetical character with “May-Day,” one passage from which, beginning,

“I saw the bud-crowned Spring go forth,”

is surpassingly imaginative and beautiful. In this volume will be found “Brahma,” “Days,” and others which are well known to all readers of poetry.

Emerson’s delineations of character are remarkable for high-relief and sharp-cut lines. In his Remarks at the Funeral Services for Abraham Lincoln, held in Concord, April 19, 1865, he drew the portrait of the homespun-robed chief of the Republic with equal breadth and delicacy: —

“Here was place for no holiday magistrate, no fair weather sailor; the new pilot was hurried to the helm in a tornado. In four years, — four years of battle-days, — his endurance, his fertility of resources, his magnanimity, were sorely tried and never found wanting. There, by his courage, his justice, his even temper, his fertile counsel, his humanity, he stood a heroic figure in the centre of a heroic epoch. He is the true history of the American people in his time. Step by step he walked before them; slow with their slowness, quickening his march by theirs, the true representative of this continent; an entirely public man; father of

his country; the pulse of twenty millions throbbing in his heart, the thought of their minds articulated by his tongue.”

In his “Remarks at the Organization of the Free Religious Association,” Emerson stated his leading thought about religion in a very succinct and sufficiently “transcendental” way: intelligibly for those who wish to understand him; mystically to those who do not accept or wish to accept the doctrine shadowed forth in his poem, “The Sphinx.”

— “As soon as every man is apprised of the Divine Presence within his own mind, — is apprised that the perfect law of duty corresponds with the laws of chemistry, of vegetation, of astronomy, as face to face in a glass; that the basis of duty, the order of society, the power of character, the wealth of culture, the perfection of taste, all draw their essence from this moral sentiment; then we have a religion that exalts, that commands all the social and all the private action.”

Nothing could be more wholesome in a meeting of creed-killers than the suggestive remark, —

— “What I expected to find here was, some practical suggestions by which we were to reanimate and reorganize for ourselves the true Church, the pure worship. Pure doctrine always bears fruit in pure benefits. It is only by good works, it is only on the basis of active duty, that worship finds expression. — The interests that grow out of a meeting like this, should bind us with new strength to the old eternal duties.”

In a later address before the same association, Emerson says:— “I object, of course, to the claim of miraculous dispensation, — certainly not to the *doctrine* of Christianity. — If you are childish and exhibit your saint as a worker of wonders, a thaumaturgist, I am repelled. That claim takes his teachings out of nature, and permits official and arbitrary senses to be grafted on the teachings.”

The “Progress of Culture” was delivered as a Phi Beta Kappa oration just thirty years after his first address before the same society. It is very instructive to compare the two orations written at the interval of a whole generation: one in 1837, at the age of thirty-four; the other in 1867, at the age of sixty-four. Both are hopeful, but the second is more sanguine than the first. He recounts what he considers the recent gains of the reforming movement: —

“Observe the marked ethical quality of the innovations urged or adopted. The new claim of woman to a political status is itself an honorable testimony to the civilization which has given her a civil status new in history. Now that by the increased humanity of law she controls her property, she inevitably takes the next step to her share in power.”

He enumerates many other gains, from the war or from the growth of

intelligence,— “All, one may say, in a high degree revolutionary, teaching nations the taking of governments into their own hands, and superseding kings.”

He repeats some of his fundamental formulae.

”The foundation of culture, as of character, is at last the moral sentiment.

”Great men are they who see that spiritual is stronger than any material force, that thoughts rule the world.

“Periodicity, reaction, are laws of mind as well as of matter.”

And most encouraging it is to read in 1884 what was written in 1867, — especially in the view of future possibilities. “Bad kings and governors help us, if only they are bad enough.” *Non tali auxilio*, we exclaim, with a shudder of remembrance, and are very glad to read these concluding words: “I read the promise of better times and of greater men.”

In the year 1866, Emerson reached the age which used to be spoken of as the “grand climacteric.” In that year Harvard University conferred upon him the degree of Doctor of Laws, the highest honor in its gift.

In that same year, having left home on one of his last lecturing trips, he met his son, Dr. Edward Waldo Emerson, at the Brevoort House, in New York. Then, and in that place, he read to his son the poem afterwards published in the “Atlantic Monthly,” and in his second volume, under the title “Terminus.” This was the first time that Dr. Emerson recognized the fact that his father felt himself growing old. The thought, which must have been long shaping itself in the father’s mind, had been so far from betraying itself that it was a shock to the son to hear it plainly avowed. The poem is one of his noblest; he could not fold his robes about him with more of serene dignity than in these solemn lines. The reader may remember that one passage from it has been quoted for a particular purpose, but here is the whole poem: —

TERMINUS.

It is time to be old,
To take in sail: —
The god of bounds,
Who sets to seas a shore,
Came to me in his fatal rounds,
And said: “No more!

No farther shoot
Thy broad ambitious branches, and thy root.
Fancy departs: no more invent;
Contract thy firmament
To compass of a tent.
There's not enough for this and that,
Make thy option which of two;
Economize the failing river,
Not the less revere the Giver,
Leave the many and hold the few,
Timely wise accept the terms,
Soften the fall with wary foot;
A little while
Still plan and smile,
And, — fault of novel germs, —
Mature the unfallen fruit.
Curse, if thou wilt, thy sires,
Bad husbands of their fires,
Who when they gave thee breath,
Failed to bequeath
The needful sinew stark as once,
The baresark marrow to thy bones,
But left a legacy of ebbing veins,
Inconstant heat and nerveless reins, —
Amid the Muses, left thee deaf and dumb,
Amid the gladiators, halt and numb.

”As the bird trims her to the gale
I trim myself to the storm of time,
I man the rudder, reef the sail,
Obey the voice at eve obeyed at prime:
'Lowly faithful, banish fear,
Right onward drive unharmed;
The port, well worth the cruise, is near,
And every wave is charmed.’”

CHAPTER XI. 1868-1873. AET. 65-70.

Lectures on the Natural History of the Intellect. — Publication of “*Society and Solitude.*” Contents: *Society and Solitude.* — *Civilization.* — *Art.* — *Eloquence.* — *Domestic Life.* — *Farming.* — *Works and Days.* — *Books.* — *Clubs.* — *Courage.* — *Success.* — *Old Age.* — *Other Literary Labors.* — *Visit to California.* — *Burning of his House, and the Story of its Rebuilding.* — *Third Visit to Europe.* — *His Reception at Concord on his Return.*

During three successive years, 1868, 1869, 1870, Emerson delivered a series of Lectures at Harvard University on the “Natural History of the Intellect.” These Lectures, as I am told by Dr. Emerson, cost him a great deal of labor, but I am not aware that they have been collected or reported. They will be referred to in the course of this chapter, in an extract from Prof. Thayer’s “Western Journey with Mr. Emerson.” He is there reported as saying that he cared very little for metaphysics. It is very certain that he makes hardly any use of the ordinary terms employed by metaphysicians. If he does not hold the words “subject and object” with their adjectives, in the same contempt that Mr. Ruskin shows for them, he very rarely employs either of these expressions. Once he ventures on the *not me*, but in the main he uses plain English handles for the few metaphysical tools he has occasion to employ.

“Society and Solitude” was published in 1870. The first Essay in the volume bears the same name as the volume itself.

In this first Essay Emerson is very fair to the antagonistic claims of solitary and social life. He recognizes the organic necessity of solitude. We are driven “as with whips into the desert.” But there is danger in this seclusion. “Now and then a man exquisitely made can live alone and must; but coop up most men and you undo them. — Here again, as so often, Nature delights to put us between extreme antagonisms, and our safety is in the skill with which we keep the diagonal line. — The conditions are met, if we keep our independence yet do not lose our sympathy.”

The Essay on “Civilization” is pleasing, putting familiar facts in a very agreeable way. The framed or stone-house in place of the cave or the camp, the building of roads, the change from war, hunting, and pasturage to agriculture, the division of labor, the skilful combinations of civil government, the diffusion of knowledge through the press, are well worn subjects which he treats agreeably, if not with special brilliancy: —

“Right position of woman in the State is another index. — Place the sexes in right relations of mutual respect, and a severe morality gives that essential charm to a woman which educates all that is delicate, poetic, and self-sacrificing;

breeds courtesy and learning, conversation and wit, in her rough mate, so that I have thought a sufficient measure of civilization is the influence of good women.”

My attention was drawn to one paragraph for a reason which my reader will readily understand, and I trust look upon good-naturedly: —

“The ship, in its latest complete equipment, is an abridgment and compend of a nation’s arts: the ship steered by compass and chart, longitude reckoned by lunar observation and by chronometer, driven by steam; and in wildest sea-mountains, at vast distances from home, —

”The pulses of her iron heart
Go beating through the storm.”

I cannot be wrong, it seems to me, in supposing those two lines to be an incorrect version of these two from a poem of my own called “The Steamboat:”

”The beating of her restless heart
Still sounding through the storm.”

It is never safe to quote poetry from memory, at least while the writer lives, for he is ready to “cavil on the ninth part of a hair” where his verses are concerned. But extreme accuracy was not one of Emerson’s special gifts, and vanity whispers to the misrepresented versifier that

’tis better to be quoted wrong Than to be quoted not at all.

This Essay of Emerson’s is irradiated by a single precept that is worthy to stand by the side of that which Juvenal says came from heaven. How could the man in whose thought such a meteoric expression suddenly announced itself fail to recognize it as divine? It is not strange that he repeats it on the page next the one where we first see it. Not having any golden letters to print it in, I will underscore it for italics, and doubly underscore it in the second extract for small capitals: —

“Now that is the wisdom of a man, in every instance of his labor, to *hitch his wagon to a star*, and see his chore done by the gods themselves.” —

“‘It was a great instruction,’ said a saint in Cromwell’s war, ‘that the best courages are but beams of the Almighty.’ **HITCH YOUR WAGON TO A STAR.** Let us not fag in paltry works which serve our pot and bag alone. Let us not lie and steal. No god will help. We shall find all their teams going the other way, — Charles’s Wain, Great Bear, Orion, Leo, Hercules: every god will leave us. Work rather for those interests which the divinities honor and promote, —

justice, love, freedom, knowledge, utility.” —

Charles’s Wain and the Great Bear, he should have been reminded, are the same constellation; the *Dipper* is what our people often call it, and the country folk all know “the pinters,” which guide their eyes to the North Star.

I find in the Essay on “Art” many of the thoughts with which we are familiar in Emerson’s poem, “The Problem.” It will be enough to cite these passages: —

“We feel in seeing a noble building which rhymes well, as we do in hearing a perfect song, that it is spiritually organic; that it had a necessity in nature for being; was one of the possible forms in the Divine mind, and is now only discovered and executed by the artist, not arbitrarily composed by him. And so every genuine work of art has as much reason for being as the earth and the sun.

— “The Iliad of Homer, the songs of David, the odes of Pindar, the tragedies of Aeschylus, the Doric temples, the Gothic cathedrals, the plays of Shakspeare, all and each were made not for sport, but in grave earnest, in tears and smiles of suffering and loving men. —

— “The Gothic cathedrals were built when the builder and the priest and the people were overpowered by their faith. Love and fear laid every stone. —

“Our arts are happy hits. We are like the musician on the lake, whose melody is sweeter than he knows.”

The discourse on “Eloquence” is more systematic, more professorial, than many of the others. A few brief extracts will give the key to its general purport:

— “Eloquence must be grounded on the plainest narrative. Afterwards, it may warm itself until it exhales symbols of every kind and color, speaks only through the most poetic forms; but, first and last, it must still be at bottom a biblical statement of fact. —

“He who will train himself to mastery in this science of persuasion must lay the emphasis of education, not on popular arts, but on character and insight. —

— “The highest platform of eloquence is the moral sentiment. —

— “Its great masters ... were grave men, who preferred their integrity to their talent, and esteemed that object for which they toiled, whether the prosperity of their country, or the laws, or a reformation, or liberty of speech, or of the press, or letters, or morals, as above the whole world and themselves also.”

“Domestic Life” begins with a picture of childhood so charming that it sweetens all the good counsel which follows like honey round the rim of the goblet which holds some tonic draught: —

“Welcome to the parents the puny struggler, strong in his weakness, his little arms more irresistible than the soldier’s, his lips touched with persuasion which

Chatham and Pericles in manhood had not. His unaffected lamentations when he lifts up his voice on high, or, more beautiful, the sobbing child, — the face all liquid grief, as he tries to swallow his vexation, — soften all hearts to pity, and to mirthful and clamorous compassion. The small despot asks so little that all reason and all nature are on his side. His ignorance is more charming than all knowledge, and his little sins more bewitching than any virtue. His flesh is angels' flesh, all alive. — All day, between his three or four sleeps, he coos like a pigeon-house, sputters and spurs and puts on his faces of importance; and when he fasts, the little Pharisee fails not to sound his trumpet before him.”

Emerson has favored his audiences and readers with what he knew about “Farming.” Dr. Emerson tells me that this discourse was read as an address before the “Middlesex Agricultural Society,” and printed in the “Transactions” of that association. He soon found out that the hoe and the spade were not the tools he was meant to work with, but he had some general ideas about farming which he expressed very happily: —

“The farmer’s office is precise and important, but you must not try to paint him in rose-color; you cannot make pretty compliments to fate and gravitation, whose minister he is. — This hard work will always be done by one kind of man; not by scheming speculators, nor by soldiers, nor professors, nor readers of Tennyson; but by men of endurance, deep-chested, long-winded, tough, slow and sure, and timely.”

Emerson’s chemistry and physiology are not profound, but they are correct enough to make a fine richly colored poetical picture in his imaginative presentation. He tells the commonest facts so as to make them almost a surprise: —

“By drainage we went down to a subsoil we did not know, and have found there is a Concord under old Concord, which we are now getting the best crops from; a Middlesex under Middlesex; and, in fine, that Massachusetts has a basement story more valuable and that promises to pay a better rent than all the superstructure.”

In “Works and Days” there is much good reading, but I will call attention to one or two points only, as having a slight special interest of their own. The first is the boldness of Emerson’s assertions and predictions in matters belonging to science and art. Thus, he speaks of “the transfusion of the blood, — which, in Paris, it was claimed, enables a man to change his blood as often as his linen!” And once more,

“We are to have the balloon yet, and the next war will be fought in the air.”

Possibly; but it is perhaps as safe to predict that it will be fought on wheels; the soldiers on bicycles, the officers on tricycles.

The other point I have marked is that we find in this Essay a prose version of the fine poem, printed in "May-Day" under the title "Days." I shall refer to this more particularly hereafter.

It is wronging the Essay on "Books" to make extracts from it. It is all an extract, taken from years of thought in the lonely study and the public libraries. If I commit the wrong I have spoken of, it is under protest against myself. Every word of this Essay deserves careful reading. But here are a few sentences I have selected for the reader's consideration: —

"There are books; and it is practicable to read them because they are so few.

—

"I visit occasionally the Cambridge Library, and I can seldom go there without renewing the conviction that the best of it all is already within the four walls of my study at home. —

"The three practical rules which I have to offer are, 1. Never read any book that is not a year old. 2. Never read any but famed books. 3. Never read any but what you like, or, in Shakspeare's phrase, —

"No profit goes where is no pleasure ta'en;
In brief, Sir, study what you most affect."

Emerson has a good deal to say about conversation in his Essay on "Clubs," but nothing very notable on the special subject of the Essay. Perhaps his diary would have something of interest with reference to the "Saturday Club," of which he was a member, which, in fact, formed itself around him as a nucleus, and which he attended very regularly. But he was not given to personalities, and among the men of genius and of talent whom he met there no one was quieter, but none saw and heard and remembered more. He was hardly what Dr. Johnson would have called a "clubable" man, yet he enjoyed the meetings in his still way, or he would never have come from Concord so regularly to attend them. He gives two good reasons for the existence of a club like that of which I have been speaking: —

"I need only hint the value of the club for bringing masters in their several arts to compare and expand their views, to come to an understanding on these points, and so that their united opinion shall have its just influence on public questions of education and politics."

"A principal purpose also is the hospitality of the club, as a means of receiving a worthy foreigner with mutual advantage."

I do not think "public questions of education and politics" were very

prominent at the social meetings of the "Saturday Club," but "worthy foreigners," and now and then one not so worthy, added variety to the meetings of the company, which included a wide range of talents and callings.

All that Emerson has to say about "Courage" is worth listening to, for he was a truly brave man in that sphere of action where there are more cowards than are found in the battle-field. He spoke his convictions fearlessly; he carried the spear of Ithuriel, but he wore no breastplate save that which protects him

"Whose armor is his honest thought,
And simple truth his utmost skill."

He mentions three qualities as attracting the wonder and reverence of mankind: 1. Disinterestedness; 2. Practical Power; 3. Courage. "I need not show how much it is esteemed, for the people give it the first rank. They forgive everything to it. And any man who puts his life in peril in a cause which is esteemed becomes the darling of all men." — There are good and inspiring lessons for young and old in this Essay or Lecture, which closes with the spirited ballad of "George Nidiver," written "by a lady to whom all the particulars of the fact are exactly known."

Men will read any essay or listen to any lecture which has for its subject, like the one now before me, "Success." Emerson complains of the same things in America which Carlyle groaned over in England: —

"We countenance each other in this life of show, puffing advertisement, and manufacture of public opinion; and excellence is lost sight of in the hunger for sudden performance and praise. —

"Now, though I am by no means sure that the reader will assent to all my propositions, yet I think we shall agree in my first rule for success, — that we shall drop the brag and the advertisement and take Michael Angelo's course, 'to confide in one's self and be something of worth and value.'"

Reading about "Success" is after all very much like reading in old books of alchemy. "How not to do it," is the lesson of all the books and treatises. Geber and Albertus Magnus, Roger Bacon and Raymond Lully, and the whole crew of "pauperes alchimistae," all give the most elaborate directions showing their student how to fail in transmuting Saturn into Luna and Sol and making a billionaire of himself. "Success" in its vulgar sense, — the gaining of money and position, — is not to be reached by following the rules of an instructor. Our "self-made men," who govern the country by their wealth and influence, have found their place by adapting themselves to the particular circumstances in which they were placed, and not by studying the broad maxims of "Poor

Richard,” or any other moralist or economist. — For such as these is meant the cheap cynical saying quoted by Emerson, “*Rien ne réussit mieux que le succès.*”

But this is not the aim and end of Emerson’s teaching: —

“I fear the popular notion of success stands in direct opposition in all points to the real and wholesome success. One adores public opinion, the other private opinion; one fame, the other desert; one feats, the other humility; one lucre, the other love; one monopoly, and the other hospitality of mind.”

And so, though there is no alchemy in this Lecture, it is profitable reading, assigning its true value to the sterling gold of character, the gaining of which is true success, as against the brazen idol of the market-place.

The Essay on “Old Age” has a special value from its containing two personal reminiscences: one of the venerable Josiah Quincy, a brief mention; the other the detailed record of a visit in the year 1825, Emerson being then twenty-two years old, to ex-President John Adams, soon after the election of his son to the Presidency. It is enough to allude to these, which every reader will naturally turn to first of all.

But many thoughts worth gathering are dropped along these pages. He recounts the benefits of age; the perilous capes and shoals it has weathered; the fact that a success more or less signifies little, so that the old man may go below his own mark with impunity; the feeling that he has found expression, — that his condition, in particular and in general, allows the utterance of his mind; the pleasure of completing his secular affairs, leaving all in the best posture for the future: —

“When life has been well spent, age is a loss of what it can well spare, muscular strength, organic instincts, gross bulk, and works that belong to these. But the central wisdom which was old in infancy is young in fourscore years, and dropping off obstructions, leaves in happy subjects the mind purified and wise. I have heard that whoever loves is in no condition old. I have heard that whenever the name of man is spoken, the doctrine of immortality is announced; it cleaves to his constitution. The mode of it baffles our wit, and no whisper comes to us from the other side. But the inference from the working of intellect, hiving knowledge, hiving skill, — at the end of life just ready to be born, — affirms the inspirations of affection and of the moral sentiment.”

Other literary labors of Emerson during this period were the Introduction to “Plutarch’s Morals” in 1870, and a Preface to William Ellery Channing’s Poem, “The Wanderer,” in 1871. He made a speech at Howard University, Washington, in 1872.

In the year 1871 Emerson made a visit to California with a very pleasant company, concerning which Mr. John M. Forbes, one of whose sons married Emerson's daughter Edith, writes to me as follows. Professor James B. Thayer, to whom he refers, has more recently written and published an account of this trip, from which some extracts will follow Mr. Forbes's letter: —

BOSTON, February 6, 1884.

MY DEAR DR., — What little I can give will be of a very rambling character.

One of the first memories of Emerson which comes up is my meeting him on the steamboat at returning from Detroit East. I persuaded him to stop over at Niagara, which he had never seen. We took a carriage and drove around the circuit. It was in early summer, perhaps in 1848 or 1849. When we came to Table Rock on the British side, our driver took us down on the outer part of the rock in the carriage. We passed on by rail, and the next day's papers brought us the telegraphic news that Table Rock had fallen over; perhaps we were among the last persons on it!

About 1871 I made up a party for California, including Mr. Emerson, his daughter Edith, and a number of gay young people. We drove with B ———, the famous Vermont coachman, up to the Geysers, and then made the journey to the Yosemite Valley by wagon and on horseback. I wish I could give you more than a mere outline picture of the sage at this time. With the thermometer at 100 degrees he would sometimes drive with the buffalo robes drawn up over his knees, apparently indifferent to the weather, gazing on the new and grand scenes of mountain and valley through which we journeyed. I especially remember once, when riding down the steep side of a mountain, his reins hanging loose, the bit entirely out of the horse's mouth, without his being aware that this was an unusual method of riding Pegasus, so fixed was his gaze into space, and so unconscious was he, at the moment, of his surroundings.

In San Francisco he visited with us the dens of the opium smokers, in damp cellars, with rows of shelves around, on which were deposited the stupefied Mongolians; perhaps the lowest haunts of humanity to be found in the world. The contrast between them and the serene eye and undisturbed brow of the sage was a sight for all beholders.

When we reached Salt Lake City on our way home he made a point of calling on Brigham Young, then at the summit of his power. The Prophet, or whatever he was called, was a burly, bull-necked man of hard sense, really leading a great industrial army. He did not seem to appreciate who his visitor was, at any rate gave no sign of so doing, and the chief interest of the scene was the wide contrast between these leaders of spiritual and of material forces.

I regret not having kept any notes of what was said on this and other occasions, but if by chance you could get hold of Professor J.B. Thayer, who was one of our party, he could no doubt give you some notes that would be valuable.

Perhaps the latest picture that remains in my mind of our friend is his wandering along the beaches and under the trees at Naushon, no doubt carrying home large stealings from my domain there, which lost none of their value from being transferred to his pages. Next to his private readings which he gave us there, the most notable recollection is that of his intense amusement at some comical songs which our young people used to sing, developing a sense of humor which a superficial observer would hardly have discovered, but which you and I know he possessed in a marked degree.

Yours always,

J.M. FORBES.

Professor James B. Thayer's little book, "A Western Journey with Mr. Emerson," is a very entertaining account of the same trip concerning which Mr. Forbes wrote the letter just given. Professor Thayer kindly read many of his notes to me before his account was published, and allows me to make such use of the book as I see fit. Such liberty must not be abused, and I will content myself with a few passages in which Emerson has a part. No extract will interest the reader more than the following: —

"'How *can* Mr. Emerson,' said one of the younger members of the party to me that day, 'be so agreeable, all the time, without getting tired!' It was the *naive* expression of what we all had felt. There was never a more agreeable travelling companion; he was always accessible, cheerful, sympathetic, considerate, tolerant; and there was always that same respectful interest in those with whom he talked, even the humblest, which raised them in their own estimation. One thing particularly impressed me, — the sense that he seemed to have of a certain great amplitude of time and leisure. It was the behavior of one who really *believed* in an immortal life, and had adjusted his conduct accordingly; so that, beautiful and grand as the natural objects were, among which our journey lay, they were matched by the sweet elevation of character, and the spiritual charm of our gracious friend. Years afterwards, on that memorable day of his funeral at Concord, I found that a sentence from his own Essay on Immortality haunted my mind, and kept repeating itself all the day long; it seemed to point to the sources of his power: 'Meantime the true disciples saw through the letter the doctrine of eternity, which dissolved the poor corpse,

and Nature also, and gave grandeur to the passing hour.’”

This extract will be appropriately followed by another alluding to the same subject.

“The next evening, Sunday, the twenty-third, Mr. Emerson read his address on ‘Immortality,’ at Dr. Stebbins’s church. It was the first time that he had spoken on the Western coast; never did he speak better. It was, in the main, the same noble Essay that has since been printed.

“At breakfast the next morning we had the newspaper, the ‘Alta California.’ It gave a meagre outline of the address, but praised it warmly, and closed with the following observations: ‘All left the church feeling that an elegant tribute had been paid to the creative genius of the Great First Cause, and that a masterly use of the English language had contributed to that end.’”

The story used to be told that after the Reverend Horace Holley had delivered a prayer on some public occasion, Major Ben. Russell, of ruddy face and ruffled shirt memory, Editor of “The Columbian Centinel,” spoke of it in his paper the next day as “the most eloquent prayer ever addressed to a Boston audience.”

The “Alta California’s” “elegant tribute” is not quite up to this rhetorical altitude.

“‘The minister,’ said he, ‘is in no danger of losing his position; he represents the moral sense and the humanities.’ He spoke of his own reasons for leaving the pulpit, and added that ‘some one had lately come to him whose conscience troubled him about retaining the name of Christian; he had replied that he himself had no difficulty about it. When he was called a Platonist, or a Christian, or a Republican, he welcomed it. It did not bind him to what he did not like. What is the use of going about and setting up a flag of negation?’”

“I made bold to ask him what he had in mind in naming his recent course of lectures at Cambridge, ‘The Natural History of the Intellect.’ This opened a very interesting conversation; but, alas! I could recall but little of it, — little more than the mere hintings of what he said. He cared very little for metaphysics. But he thought that as a man grows he observes certain facts about his own mind, — about memory, for example. These he had set down from time to time. As for making any methodical history, he did not undertake it.”

Emerson met Brigham Young at Salt Lake City, as has been mentioned, but neither seems to have made much impression upon the other. Emerson spoke of the Mormons. Some one had said, “They impress the common people, through their imagination, by Bible-names and imagery.” “Yes,” he said, “it is an after-clap of Puritanism. But one would think that after this Father Abraham could go no further.”

The charm of Boswell’s Life of Johnson is that it not merely records his

admirable conversation, but also gives us many of those lesser peculiarities which are as necessary to a true biography as lights and shades to a portrait on canvas. We are much obliged to Professor Thayer therefore for the two following pleasant recollections which he has been good-natured enough to preserve for us, and with which we will take leave of his agreeable little volume:

“At breakfast we had, among other things, pie. This article at breakfast was one of Mr. Emerson’s weaknesses. A pie stood before him now. He offered to help somebody from it, who declined; and then one or two others, who also declined; and then Mr. — ; he too declined. ‘But Mr. — !’ Mr. Emerson remonstrated, with humorous emphasis, thrusting the knife under a piece of the pie, and putting the entire weight of his character into his manner,— ‘but Mr. — , *what is pie for?*’”

A near friend of mine, a lady, was once in the cars with Emerson, and when they stopped for the refreshment of the passengers he was very desirous of procuring something at the station for her solace. Presently he advanced upon her with a cup of tea in one hand and a wedge of pie in the other, — such a wedge! She could hardly have been more dismayed if one of Caesar’s *cunei*, or wedges of soldiers, had made a charge against her.

Yet let me say here that pie, often foolishly abused, is a good creature, at the right time and in angles of thirty or forty degrees. In semicircles and quadrants it may sometimes prove too much for delicate stomachs. But here was Emerson, a hopelessly confirmed pie-eater, never, so far as I remember, complaining of dyspepsia; and there, on the other side, was Carlyle, feeding largely on wholesome oatmeal, groaning with indigestion all his days, and living with half his self-consciousness habitually centred beneath his diaphragm.

Like his friend Carlyle and like Tennyson, Emerson had a liking for a whiff of tobacco-smoke: —

“When alone,” he said, “he rarely cared to finish a whole cigar. But in company it was singular to see how different it was. To one who found it difficult to meet people, as he did, the effect of a cigar was agreeable; one who is smoking may be as silent as he likes, and yet be good company. And so Hawthorne used to say that he found it. On this journey Mr. Emerson generally smoked a single cigar after our mid-day dinner, or after tea, and occasionally after both. This was multiplying, several times over, anything that was usual with him at home.”

Professor Thayer adds in a note: —

“Like Milton, Mr. Emerson ‘was extraordinary temperate in his Diet,’ and he used even less tobacco. Milton’s quiet day seems to have closed regularly with a

pipe; he ‘supped,’ we are told, ‘upon ... some light thing; and after a pipe of tobacco and a glass of water went to bed.’”

As Emerson’s name has been connected with that of Milton in its nobler aspects, it can do no harm to contemplate him, like Milton, indulging in this semi-philosophical luxury.

One morning in July, 1872, Mr. and Mrs. Emerson woke to find their room filled with smoke and fire coming through the floor of a closet in the room over them. The alarm was given, and the neighbors gathered and did their best to put out the flames, but the upper part of the house was destroyed, and with it were burned many papers of value to Emerson, including his father’s sermons. Emerson got wet and chilled, and it seems too probable that the shock hastened that gradual loss of memory which came over his declining years.

His kind neighbors did all they could to save his property and relieve his temporary needs. A study was made ready for him in the old Court House, and the “Old Manse,” which had sheltered his grandfather, and others nearest to him, received him once more as its tenant.

On the 15th of October he spoke at a dinner given in New York in honor of James Anthony Froude, the historian, and in the course of this same month he set out on his third visit to Europe, accompanied by his daughter Ellen. We have little to record of this visit, which was suggested as a relief and recreation while his home was being refitted for him. He went to Egypt, but so far as I have learned the Sphinx had no message for him, and in the state of mind in which he found himself upon the mysterious and dream-compelling Nile it may be suspected that the landscape with its palms and pyramids was an unreal vision, — that, as to his Humble-bee,

“All was picture as he passed.”

But while he was voyaging his friends had not forgotten him. The sympathy with him in his misfortune was general and profound. It did not confine itself to expressions of feeling, but a spontaneous movement organized itself almost without effort. If any such had been needed, the attached friend whose name is appended to the Address to the Subscribers to the Fund for rebuilding Mr. Emerson’s house would have been as energetic in this new cause as he had been in the matter of procuring the reprint of “Sartor Resartus.” I have his kind permission to publish the whole correspondence relating to the friendly project so happily carried out.

To the Subscribers to the Fund for the Rebuilding of Mr. Emerson’s House, after the Fire of July 24, 1872:

The death of Mr. Emerson has removed any objection which may have before existed to the printing of the following correspondence. I have now caused this

to be done, that each subscriber may have the satisfaction of possessing a copy of the touching and affectionate letters in which he expressed his delight in this, to him, most unexpected demonstration of personal regard and attachment, in the offer to restore for him his ruined home.

No enterprise of the kind was ever more fortunate and successful in its purpose and in its results. The prompt and cordial response to the proposed subscription was most gratifying. No contribution was solicited from any one. The simple suggestion to a few friends of Mr. Emerson that an opportunity was now offered to be of service to him was all that was needed. From the first day on which it was made, the day after the fire, letters began to come in, with cheques for large and small amounts, so that in less than three weeks I was enabled to send to Judge Hoar the sum named in his letter as received by him on the 13th of August, and presented by him to Mr. Emerson the next morning, at the Old Manse, with fitting words.

Other subscriptions were afterwards received, increasing the amount on my book to eleven thousand six hundred and twenty dollars. A part of this was handed directly to the builder at Concord. The balance was sent to Mr. Emerson October 7, and acknowledged by him in his letter of October 8, 1872.

All the friends of Mr. Emerson who knew of the plan which was proposed to rebuild his house, seemed to feel that it was a privilege to be allowed to express in this way the love and veneration with which he was regarded, and the deep debt of gratitude which they owed to him, and there is no doubt that a much larger amount would have been readily and gladly offered, if it had been required, for the object in view.

Those who have had the happiness to join in this friendly "conspiracy" may well take pleasure in the thought that what they have done has had the effect to lighten the load of care and anxiety which the calamity of the fire brought with it to Mr. Emerson, and thus perhaps to prolong for some precious years the serene and noble life that was so dear to all of us.

My thanks are due to the friends who have made me the bearer of this message of good-will.

LE BARON RUSSELL.

BOSTON, May 8, 1882.

BOSTON, August 13, 1872.

DEAR MR. EMERSON:

It seems to have been the spontaneous desire of your friends, on hearing of the burning of your house, to be allowed the pleasure of rebuilding it.

A few of them have united for this object, and now request your acceptance of the amount which I have to-day deposited to your order at the Concord Bank, through the kindness of our friend, Judge Hoar. They trust that you will receive it as an expression of sincere regard and affection from friends, who will, one and all, esteem it a great privilege to be permitted to assist in the restoration of your home.

And if, in their eagerness to participate in so grateful a work, they may have exceeded the estimate of your architect as to what is required for that purpose, they beg that you will devote the remainder to such other objects as may be most convenient to you.

Very sincerely yours,

LE BARON RUSSELL.

CONCORD, August 14, 1872.

DR. LE B. RUSSELL:

Dear Sir, — I received your letters, with the check for ten thousand dollars inclosed, from Mr. Barrett last evening. This morning I deposited it to Mr. Emerson's credit in the Concord National Bank, and took a bank book for him, with his little balance entered at the top, and this following, and carried it to him with your letter. I told him, by way of prelude, that some of his friends had made him treasurer of an association who wished him to go to England and examine Warwick Castle and other noted houses that had been recently injured by fire, in order to get the best ideas possible for restoration, and then to apply them to a house which the association was formed to restore in this neighborhood.

When he understood the thing and had read your letter, he seemed very deeply moved. He said that he had been allowed so far in life to stand on his own feet, and that he hardly knew what to say, — that the kindness of his friends was very great. I said what I thought was best in reply, and told him that this was the spontaneous act of friends, who wished the privilege of expressing in this way their respect and affection, and was done only by those who thought it a privilege to do so. I mentioned Hillard as you desired, and also Mrs. Tappan, who, it seems, had written to him and offered any assistance he might need, to the extent of five thousand dollars, personally.

I think it is all right, but he said he must see the list of contributors, and would

then say what he had to say about it. He told me that Mr. F.C. Lowell, who was his classmate and old friend, Mr. Bangs, Mrs. Gurney, and a few other friends, had already sent him five thousand dollars, which he seemed to think was as much as he could bear. This makes the whole a very gratifying result, and perhaps explains the absence of some names on your book.

I am glad that Mr. Emerson, who is feeble and ill, can learn what a debt of obligation his friends feel to him, and thank you heartily for what you have done about it. Very truly yours,

E.R. HOAR.

CONCORD, August 16, 1872.

MY DEAR LE BARON:

I have wondered and melted over your letter and its accompaniments till it is high time that I should reply to it, if I can. My misfortunes, as I have lived along so far in this world, have been so few that I have never needed to ask direct aid of the host of good men and women who have cheered my life, though many a gift has come to me. And this late calamity, however rude and devastating, soon began to look more wonderful in its salvages than in its ruins, so that I can hardly feel any right to this munificent endowment with which you, and my other friends through you, have astonished me. But I cannot read your letter or think of its message without delight, that my companions and friends bear me so noble a good-will, nor without some new aspirations in the old heart toward a better deserving. Judge Hoar has, up to this time, withheld from me the names of my benefactors, but you may be sure that I shall not rest till I have learned them, every one, to repeat to myself at night and at morning.

Your affectionate friend and debtor,

R.W. EMERSON.

DR. LE BARON RUSSELL

CONCORD, October 8, 1872.

MY DEAR DOCTOR LE BARON:

I received last night your two notes, and the cheque, enclosed in one of them, for one thousand and twenty dollars.

Are my friends bent on killing me with kindness? No, you will say, but to make me live longer. I thought myself sufficiently loaded with benefits already, and you add more and more. It appears that you all will rebuild my house and rejuvenate me by sending me in my old days abroad on a young man's excursion.

I am a lover of men, but this recent wonderful experience of their tenderness surprises and occupies my thoughts day by day. Now that I have all or almost all the names of the men and women who have conspired in this kindness to me (some of whom I have never personally known), I please myself with the thought of meeting each and asking, Why have we not met before? Why have you not told me that we thought alike? Life is not so long, nor sympathy of thought so common, that we can spare the society of those with whom we best agree. Well, 'tis probably my own fault by sticking ever to my solitude. Perhaps it is not too late to learn of these friends a better lesson.

Thank them for me whenever you meet them, and say to them that I am not wood or stone, if I have not yet trusted myself so far as to go to each one of them directly.

My wife insists that I shall also send her acknowledgments to them and you.

Yours and theirs affectionately,

R.W. EMERSON.

DR. LE BARON KUSSELL.

The following are the names of the subscribers to the fund for rebuilding Mr. Emerson's house: —

Mrs. Anne S. Hooper.

Mr. John E. Williams.
Dr. Le Baron Russell.

In May, 1873, Emerson returned to Concord. His friends and fellow-citizens received him with every token of affection and reverence. A set of signals was arranged to announce his arrival. Carriages were in readiness for him and his family, a band greeted him with music, and passing under a triumphal arch, he was driven to his renewed old home amidst the welcomes and the blessings of his loving and admiring friends and neighbors.

CHAPTER XII. 1873-1878. AET. 70-75.

Publication of "Parnassus." — Emerson Nominated as Candidate for the Office of Lord Rector of Glasgow University. — Publication of "Letters and Social Aims." Contents: Poetry and Imagination. — Social Aims. — Eloquence. — Resources. — The Comic. — Quotation and Originality. — Progress of Culture. — Persian Poetry. — Inspiration. — Greatness. — Immortality. — Address at the Unveiling of the Statue of "The Minute-Man" at Concord. — Publication of Collected Poems.

In December, 1874, Emerson published "Parnassus," a Collection of Poems by British and American authors. Many readers may like to see his subdivisions and arrangement of the pieces he has brought together. They are as follows: "Nature."— "Human Life."— "Intellectual."— "Contemplation."— "Moral and Religious."— "Heroic."— "Personal."— "Pictures."— "Narrative Poems and Ballads."— "Songs."— "Dirges and Pathetic Poems."— "Comic and Humorous."— "Poetry of Terror."— "Oracles and Counsels."

I have borrowed so sparingly from the rich mine of Mr. George Willis Cooke's "Ralph Waldo Emerson, His Life, Writings, and Philosophy," that I am pleased to pay him the respectful tribute of taking a leaf from his excellent work.

"This collection," he says,

"was the result of his habit, pursued for many years, of copying into his commonplace book any poem which specially pleased him. Many of these favorites had been read to illustrate his lectures on the English poets. The book has no worthless selections, almost everything it contains bearing the stamp of genius and worth. Yet Emerson's personality is seen in its many intellectual and serious poems, and in the small number of its purely religious selections. With two or three exceptions he copies none of those devotional poems which have attracted devout souls. — His poetical sympathies are shown in the fact that one third of the selections are from the seventeenth century. Shakespeare is drawn on more largely than any other, no less than eighty-eight selections being made from him. The names of George Herbert, Herrick, Ben Jonson, and Milton frequently appear. Wordsworth appears forty-three times, and stands next to Shakespeare; while Burns, Byron, Scott, Tennyson, and Chaucer make up the list of favorites. Many little known pieces are included, and some whose merit is other than poetical. — This selection of poems is eminently that of a poet of keen intellectual tastes. I not popular in character, omitting many public favorites, and introducing very much which can never be acceptable to the

general reader. The Preface is full of interest for its comments on many of the poems and poets appearing in these selections.”

I will only add to Mr. Cooke’s criticism these two remarks: First, that I have found it impossible to know under which of his divisions to look for many of the poems I was in search of; and as, in the earlier copies at least, there was no paged index where each author’s pieces were collected together, one had to hunt up his fragments with no little loss of time and patience, under various heads, “imitating the careful search that Isis made for the mangled body of Osiris.” The other remark is that each one of Emerson’s American fellow-poets from whom he has quoted would gladly have spared almost any of the extracts from the poems of his brother-bards, if the editor would only have favored us with some specimens of his own poetry, with a single line of which he has not seen fit to indulge us.

In 1874 Emerson received the nomination by the independent party among the students of Glasgow University for the office of Lord Rector. He received five hundred votes against seven hundred for Disraeli, who was elected. He says in a letter to Dr. J. Hutchinson Sterling: —

“I count that vote as quite the fairest laurel that has ever fallen on me; and I cannot but feel deeply grateful to my young friends in the University, and to yourself, who have been my counsellor and my too partial advocate.”

Mr. Cabot informs us in his Prefatory Note to “Letters and Social Aims,” that the proof sheets of this volume, now forming the eighth of the collected works, showed even before the burning of his house and the illness which followed from the shock, that his loss of memory and of mental grasp was such as to make it unlikely that he would in any case have been able to accomplish what he had undertaken. Sentences, even whole pages, were repeated, and there was a want of order beyond what even he would have tolerated: —

“There is nothing here that he did not write, and he gave his full approval to whatever was done in the way of selection and arrangement; but I cannot say that he applied his mind very closely to the matter.”

This volume contains eleven Essays, the subjects of which, as just enumerated, are very various. The longest and most elaborate paper is that entitled “Poetry and Imagination.” I have room for little more than the enumeration of the different headings of this long Essay. By these it will be seen how wide a ground it covers. They are “Introductory;” “Poetry;” “Imagination;” “Veracity;” “Creation;” “Melody, Rhythm, Form;” “Bards and Trouveurs;” “Morals;” “Transcendancy.” Many thoughts with which we are familiar are reproduced, expanded, and illustrated in this Essay. Unity in multiplicity, the symbolism of nature, and others of his leading ideas appear in new phrases, not

unwelcome, for they look fresh in every restatement. It would be easy to select a score of pointed sayings, striking images, large generalizations. Some of these we find repeated in his verse. Thus: —

“Michael Angelo is largely filled with the Creator that made and makes men. How much of the original craft remains in him, and he a mortal man!”

And so in the well remembered lines of “The Problem”: —

“Himself from God he could not free.”

“He knows that he did not make his thought, — no, his thought made him, and made the sun and stars.”

”Art might obey but not surpass.
The passive Master lent his hand
To the vast soul that o’er him planned.”

Hope is at the bottom of every Essay of Emerson’s as it was at the bottom of Pandora’s box: —

“I never doubt the riches of nature, the gifts of the future, the immense wealth of the mind. O yes, poets we shall have, mythology, symbols, religion of our own.

— “Sooner or later that which is now life shall be poetry, and every fair and manly trait shall add a richer strain to the song.”

Under the title “Social Aims” he gives some wise counsel concerning manners and conversation. One of these precepts will serve as a specimen — if we have met with it before it is none the worse for wear: —

“Shun the negative side. Never worry people with; your contritions, nor with dismal views of politics or society. Never name sickness; even if you could trust yourself on that perilous topic, beware of unmuzzling a valetudinarian, who will give you enough of it.”

We have had one Essay on “Eloquence” already. One extract from this new discourse on the same subject must serve our turn: —

“These are ascending stairs, — a good voice, winning manners, plain speech, chastened, however, by the schools into correctness; but we must come to the main matter, of power of statement, — know your fact; hug your fact. For the essential thing is heat, and heat comes of sincerity. Speak what you know and believe; and are personally in it; and are answerable for every word. Eloquence is *the power to translate a truth into language perfectly intelligible to the person to whom you speak.*”

The italics are Emerson’s.

If our learned and excellent John Cotton used to sweeten his mouth before

going to bed with a bit of Calvin, we may as wisely sweeten and strengthen our sense of existence with a morsel or two from Emerson's Essay on "Resources":

—
"A Schopenhauer, with logic and learning and wit, teaching pessimism, — teaching that this is the worst of all possible worlds, and inferring that sleep is better than waking, and death than sleep, — all the talent in the world cannot save him from being odious. But if instead of these negatives you give me affirmatives; if you tell me that there is always life for the living; that what man has done man can do; that this world belongs to the energetic; that there is always a way to everything desirable; that every man is provided, in the new bias of his faculty, with a key to nature, and that man only rightly knows himself as far as he has experimented on things, — I am invigorated, put into genial and working temper; the horizon opens, and we are full of good-will and gratitude to the Cause of Causes."

The Essay or Lecture on "The Comic" may have formed a part of a series he had contemplated on the intellectual processes. Two or three sayings in it will show his view sufficiently: —

"The essence of all jokes, of all comedy, seems to be an honest or well-intended halfness; a non-performance of what is pretended to be performed, at the same time that one is giving loud pledges of performance.

"If the essence of the Comic be the contrast in the intellect between the idea and the false performance, there is good reason why we should be affected by the exposure. We have no deeper interest than our integrity, and that we should be made aware by joke and by stroke of any lie we entertain. Besides, a perception of the comic seems to be a balance-wheel in our metaphysical structure. It appears to be an essential element in a fine character. — A rogue alive to the ludicrous is still convertible. If that sense is lost, his fellow-men can do little for him."

These and other sayings of like purport are illustrated by well-preserved stories and anecdotes not for the most part of very recent date.

"Quotation and Originality" furnishes the key to Emerson's workshop. He believed in quotation, and borrowed from everybody and every book. Not in any stealthy or shame-faced way, but proudly, royally, as a king borrows from one of his attendants the coin that bears his own image and superscription.

"All minds quote. Old and new make the warp and woof of every moment. There is no thread that is not a twist of these two strands. — We quote not only books and proverbs, but arts, sciences, religion, customs, and laws; nay, we quote temples and houses, tables and chairs by imitation. —

"The borrowing is often honest enough and comes of magnanimity and

stoutness. A great man quotes bravely, and will not draw on his invention when his memory serves him with a word as good.

”Next to the originator of a good sentence is the first quoter of it.” —

— “The Progress of Culture,” his second Phi Beta Kappa oration, has already been mentioned.

— The lesson of self-reliance, which he is never tired of inculcating, is repeated and enforced in the Essay on “Greatness.”

“There are certain points of identity in which these masters agree. Self-respect is the early form in which greatness appears. — Stick to your own; don’t inculcate yourself in the local, social, or national crime, but follow the path your genius traces like the galaxy of heaven for you to walk in.

“Every mind has a new compass, a new direction of its own, differencing its genius and aim from every other mind. — We call this specialty the *bias* of each individual. And none of us will ever accomplish anything excellent or commanding except when he listens to this whisper which is heard by him alone.”

If to follow this native bias is the first rule, the second is concentration. — To the bias of the individual mind must be added the most catholic receptivity for the genius of others.

“Shall I tell you the secret of the true scholar? It is this: Every man I meet is my master in some point, and in that I learn of him.” —

“The man whom we have not seen, in whom no regard of self degraded the adorer of the laws, — who by governing himself governed others; sportive in manner, but inexorable in act; who sees longevity in his cause; whose aim is always distinct to him; who is suffered to be himself in society; who carries fate in his eye; — he it is whom we seek, encouraged in every good hour that here or hereafter he shall he found.”

What has Emerson to tell us of “Inspiration?”

“I believe that nothing great or lasting can be done except by inspiration, by leaning on the secret augury. —

“How many sources of inspiration can we count? As many as our affinities. But to a practical purpose we may reckon a few of these.”

I will enumerate them briefly as he gives them, but not attempting to reproduce his comments on each: —

1. Health. 2. The experience of writing letters. 3. The renewed sensibility which comes after seasons of decay or eclipse of the faculties. 4. The power of

the will. 5. Atmospheric causes, especially the influence of morning. 6. Solitary converse with nature. 7. Solitude of itself, like that of a country inn in summer, and of a city hotel in winter. 8. Conversation. 9. New poetry; by which, he says, he means chiefly old poetry that is new to the reader.

“Every book is good to read which sets the reader in a working mood.”

What can promise more than an Essay by Emerson on “Immortality”? It is to be feared that many readers will transfer this note of interrogation to the Essay itself. What is the definite belief of Emerson as expressed in this discourse, — what does it mean? We must tack together such sentences as we can find that will stand for an answer: —

“I think all sound minds rest on a certain preliminary conviction, namely, that if it be best that conscious personal life shall continue, it will continue; if not best, then it will not; and we, if we saw the whole, should of course see that it was better so.”

This is laying the table for a Barmecide feast of nonentity, with the possibility of a real banquet to be provided for us. But he continues: —

“Schiller said, ‘What is so universal as death must be benefit.’”

He tells us what Michael Angelo said, how Plutarch felt, how Montesquieu thought about the question, and then glances off from it to the terror of the child at the thought of life without end, to the story of the two skeptical statesmen whose unsatisfied inquiry through a long course of years he holds to be a better affirmative evidence than their failure to find a confirmation was negative. He argues from our delight in permanence, from the delicate contrivances and adjustments of created things, that the contriver cannot be forever hidden, and says at last plainly: —

“Everything is prospective, and man is to live hereafter. That the world is for his education is the only sane solution of the enigma.”

But turn over a few pages and we may read: —

“I confess that everything connected with our personality fails. Nature never spares the individual; we are always balked of a complete success; no prosperity is promised to our self-esteem. We have our indemnity only in the moral and intellectual reality to which we aspire. That is immortal, and we only through that. The soul stipulates for no private good. That which is private I see not to be good. ‘If truth live, I live; if justice live, I live,’ said one of the old saints, ‘and these by any man’s suffering are enlarged and enthroned.’”

Once more we get a dissolving view of Emerson’s creed, if such a word applies to a statement like the following: —

— “I mean that I am a better believer, and all serious souls are better believers in the immortality than we can give grounds for. The real evidence is

too subtle, or is higher than we can write down in propositions, and therefore Wordsworth's 'Ode' is the best modern essay on the subject."

Wordsworth's "Ode" is a noble and beautiful dream; is it anything more? The reader who would finish this Essay, which I suspect to belong to an early period of Emerson's development, must be prepared to plunge into mysticism and lose himself at last in an Oriental apologue. The eschatology which rests upon an English poem and an Indian fable belongs to the realm of reverie and of imagination rather than the domain of reason.

On the 19th of April, 1875, the hundredth anniversary of the "Fight at the Bridge," Emerson delivered a short Address at the unveiling of the statue of "The Minute-Man," erected at the place of the conflict, to commemorate the event. This is the last Address he ever wrote, though he delivered one or more after this date. From the manuscript which lies before me I extract a single passage: —

"In the year 1775 we had many enemies and many friends in England, but our one benefactor was King George the Third. The time had arrived for the political severance of America, that it might play its part in the history of this globe, and the inscrutable divine Providence gave an insane king to England. In the resistance of the Colonies, he alone was immovable on the question of force. England was so dear to us that the Colonies could only be absolutely disunited by violence from England, and only one man could compel the resort to violence. Parliament wavered, Lord North wavered, all the ministers wavered, but the king had the insanity of one idea; he was immovable, he insisted on the impossible, so the army was sent, America was instantly united, and the Nation born."

There is certainly no mark of mental failure in this paragraph, written at a period when he had long ceased almost entirely from his literary labors.

Emerson's collected "Poems" constitute the ninth volume of the recent collected edition of his works. They will be considered in a following chapter.

CHAPTER XIII. 1878-1882. AET. 75-79.

*Last Literary Labors. — Addresses and Essays.— “Lectures and Biographical Sketches.”—
“Miscellanies.”*

The decline of Emerson's working faculties went on gently and gradually, but he was not condemned to entire inactivity. His faithful daughter, Ellen, followed him with assiduous, quiet, ever watchful care, aiding his failing memory, bringing order into the chaos of his manuscript, an echo before the voice whose words it was to shape for him when his mind faltered and needed a momentary impulse.

With her helpful presence and support he ventured from time to time to read a paper before a select audience. Thus, March 30, 1878, he delivered a Lecture in the Old South Church,— “Fortune of the Republic.” On the 5th of May, 1879, he read a Lecture in the Chapel of Divinity College, Harvard University,— “The Preacher.” In 1881 he read a paper on Carlyle before the Massachusetts Historical Society. — He also published a paper in the “North American Review,” in 1878,— “The Sovereignty of Ethics,” and one on “Superlatives,” in “The Century” for February, 1882.

But in these years he was writing little or nothing. All these papers were taken from among his manuscripts of different dates. The same thing is true of the volumes published since his death; they were only compilations from his stores of unpublished matter, and their arrangement was the work of Mr. Emerson's friend and literary executor, Mr. Cabot. These volumes cannot be considered as belonging to any single period of his literary life.

Mr. Cabot prefixes to the tenth volume of Emerson's collected works, which bears the title, “Lectures and Biographical Sketches,” the following: —

“NOTE.

“Of the pieces included in this volume the following, namely, those from ‘The Dial,’ ‘Character,’ ‘Plutarch,’ and the biographical sketches of Dr. Ripley, of Mr. Hoar, and of Henry Thoreau, were printed by Mr. Emerson before I took any part in the arrangement of his papers. The rest, except the sketch of Miss Mary Emerson, I got ready for his use in readings to his friends, or to a limited public. He had given up the regular practice of lecturing, but would sometimes, upon special request, read a paper that had been prepared for him from his manuscripts, in the manner described in the Preface to ‘Letters and Social Aims,’ — some former lecture serving as a nucleus for the new. Some of these papers

he afterwards allowed to be printed; others, namely, 'Aristocracy,' 'Education,' 'The Man of Letters,' 'The Scholar,' 'Historic Notes of Life and Letters in New England,' 'Mary Moody Emerson,' are now published for the first time."

Some of these papers I have already had occasion to refer to. From several of the others I will make one or two extracts, — a difficult task, so closely are the thoughts packed together.

From "Demonology": —

"I say to the table-rappers

'I will believe

Thou wilt not utter what thou dost not know,'

And so far will I trust thee, gentle Kate!"

"Meantime far be from me the impatience which cannot brook the supernatural, the vast; far be from me the lust of explaining away all which appeals to the imagination, and the great presentiments which haunt us. Willingly I too say Hail! to the unknown, awful powers which transcend the ken of the understanding."

I will not quote anything from the Essay called "Aristocracy." But let him who wishes to know what the word means to an American whose life has come from New England soil, whose ancestors have breathed New England air for many generations, read it, and he will find a new interpretation of a very old and often greatly wronged appellation.

"Perpetual Forces" is one of those prose poems, — of his earlier epoch, I have no doubt, — in which he plays with the facts of science with singular grace and freedom.

What man could speak more fitly, with more authority of "Character," than Emerson? When he says, "If all things are taken away, I have still all things in my relation to the Eternal," we feel that such an utterance is as natural to his pure spirit as breathing to the frame in which it was imprisoned.

We have had a glimpse of Emerson as a school-master, but behind and far above the teaching drill-master's desk is the chair from which he speaks to us of "Education." Compare the short and easy method of the wise man of old, — "He that spareth his rod hateth his son," with this other, "Be the companion of his thought, the friend of his friendship, the lover of his virtue, — but no kinsman of his sin."

"The Superlative" will prove light and pleasant reading after these graver essays. [Greek: *Maedhen agan*] — *ne quid nimis*, — nothing in excess, was his precept as to adjectives.

Two sentences from “The Sovereignty of Ethics” will go far towards reconciling elderly readers who have not forgotten the Westminster Assembly’s Catechism with this sweet-souled dealer in spiritual dynamite: —

“Luther would cut his hand off sooner than write theses against the pope if he suspected that he was bringing on with all his might the pale negations of Boston Unitarianism. —

”If I miss the inspiration of the saints of Calvinism, or of Platonism, or of Buddhism, our times are not up to theirs, or, more truly, have not yet their own legitimate force.”

So, too, this from “The Preacher”: —

“All civil mankind have agreed in leaving one day for contemplation against six for practice. I hope that day will keep its honor and its use. — The Sabbath changes its forms from age to age, but the substantial benefit endures.”

The special interest of the Address called “The Man of Letters” is, that it was delivered during the war. He was no advocate for peace where great principles were at the bottom of the conflict: —

“War, seeking for the roots of strength, comes upon the moral aspects at once. — War ennobles the age. — Battle, with the sword, has cut many a Gordian knot in twain which all the wit of East and West, of Northern and Border statesmen could not untie.”

“The Scholar” was delivered before two Societies at the University of Virginia so late as the year 1876. If I must select any of its wise words, I will choose the questions which he has himself italicized to show his sense of their importance: —

”For all men, all women, Time, your country, your condition, the invisible world are the interrogators: *Who are you? What do you? Can you obtain what you wish? Is there method in your consciousness? Can you see tendency in your life? Can you help any soul?*

“Can he answer these questions? Can he dispose of them? Happy if you can answer them mutely in the order and disposition of your life! Happy for more than yourself, a benefactor of men, if you can answer them in works of wisdom, art, or poetry; bestowing on the general mind of men organic creations, to be the guidance and delight of all who know them.”

The Essay on “Plutarch” has a peculiar value from the fact that Emerson owes more to him than to any other author except Plato, who is one of the only two

writers quoted oftener than Plutarch. *Mutato nomine*, the portrait which Emerson draws of the Greek moralist might stand for his own: —

“Whatever is eminent in fact or in fiction, in opinion, in character, in institutions, in science — natural, moral, or metaphysical, or in memorable sayings drew his attention and came to his pen with more or less fulness of record.

”A poet in verse or prose must have a sensuous eye, but an intellectual co-perception. Plutarch’s memory is full and his horizon wide. Nothing touches man but he feels to be his.

“Plutarch had a religion which Montaigne wanted, and which defends him from wantonness; and though Plutarch is as plain spoken, his moral sentiment is always pure. —

“I do not know where to find a book — to borrow a phrase of Ben Jonson’s— ‘so rammed with life,’ and this in chapters chiefly ethical, which are so prone to be heavy and sentimental. — His vivacity and abundance never leave him to loiter or pound on an incident. —

“In his immense quotation and allusion we quickly cease to discriminate between what he quotes and what he invents.— ’Tis all Plutarch, by right of eminent domain, and all property vests in this emperor.

“It is in consequence of this poetic trait in his mind, that I confess that, in reading him, I embrace the particulars, and carry a faint memory of the argument or general design of the chapter; but he is not less welcome, and he leaves the reader with a relish and a necessity for completing his studies.

“He is a pronounced idealist, who does not hesitate to say, like another Berkeley, ‘Matter is itself privation.’ —

“Of philosophy he is more interested in the results than in the method. He has a just instinct of the presence of a master, and prefers to sit as a scholar with Plato than as a disputant.

“His natural history is that of a lover and poet, and not of a physicist.

“But though curious in the questions of the schools on the nature and genesis of things, his extreme interest in every trait of character, and his broad humanity, lead him constantly to Morals, to the study of the Beautiful and Good. Hence his love of heroes, his rule of life, and his clear convictions of the high destiny of the soul. La Harpe said that ‘Plutarch is the genius the most naturally moral that ever existed.’

”Plutarch thought ‘truth to be the greatest good that man can

receive, and the goodliest blessing that God can give.’

”All his judgments are noble. He thought with Epicurus that it is more delightful to do than to receive a kindness.

“Plutarch was well-born, well-conditioned — eminently social, he was a king in his own house, surrounded himself with select friends, and knew the high value of good conversation. —

“He had that universal sympathy with genius which makes all its victories his own; though he never used verse, he had many qualities of the poet in the power of his imagination, the speed of his mental associations, and his sharp, objective eyes. But what specially marks him, he is a chief example of the illumination of the intellect by the force of morals.”

How much, of all this would have been recognized as just and true if it had been set down in an obituary notice of Emerson!

I have already made use of several of the other papers contained in this volume, and will merely enumerate all that follow the “Plutarch.” Some of the titles will be sure to attract the reader. They are “Historic Notes of Life and Letters in New England;” “The Chardon Street Convention;” “Ezra Ripley, D.D.,” “Mary Moody Emerson;” “Samuel Hoar;” “Thoreau;” “Carlyle.” —

Mr. Cabot prefaces the eleventh and last volume of Emerson’s writings with the following “Note”: —

“The first five pieces in this volume, and the ‘Editorial Address’ from the ‘Massachusetts Quarterly Review,’ were published by Mr. Emerson long ago. The speeches at the John Brown, the Walter Scott, and the Free Religious Association meetings were published at the time, no doubt with his consent, but without any active co-operation on his part. The ‘Fortune of the Republic’ appeared separately in 1879; the rest have never been published. In none was any change from the original form made by me, except in the ‘Fortune of the Republic,’ which was made up of several lectures for the occasion upon which it was read.”

The volume of “Miscellanies” contains no less than twenty-three pieces of very various lengths and relating to many different subjects. The five referred to as having been previously published are, “The Lord’s Supper,” the “Historical Discourse in Concord,” the “Address at the Dedication of the Soldiers’ Monument in Concord,” the “Address on Emancipation in the British West Indies,” and the Lecture or Essay on “War,” — all of which have been already spoken of.

Next in order comes a Lecture on the “Fugitive Slave Law.” Emerson says, “I

do not often speak on public questions. — My own habitual view is to the well-being of scholars.” But he leaves his studies to attack the institution of slavery, from which he says he himself has never suffered any inconvenience, and the “Law,” which the abolitionists would always call the “Fugitive Slave *Bill*.” Emerson had a great admiration for Mr. Webster, but he did not spare him as he recalled his speech of the seventh of March, just four years before the delivery of this Lecture. He warns against false leadership: —

“To make good the cause of Freedom, you must draw off from all foolish trust in others. — He only who is able to stand alone is qualified for society. And that I understand to be the end for which a soul exists in this world, — to be himself the counter-balance of all falsehood and all wrong. — The Anglo-Saxon race is proud and strong and selfish. — England maintains trade, not liberty.”

Cowper had said long before this: —

“doing good, Disinterested good, is not our trade.”

And America found that England had not learned that trade when, fifteen years after this discourse was delivered, the conflict between the free and slave states threatened the ruin of the great Republic, and England forgot her Anti-slavery in the prospect of the downfall of “a great empire which threatens to overshadow the whole earth.”

It must be remembered that Emerson had never been identified with the abolitionists. But an individual act of wrong sometimes gives a sharp point to a blunt dagger which has been kept in its sheath too long: —

“The events of the last few years and months and days have taught us the lessons of centuries. I do not see how a barbarous community and a civilized community can constitute one State. I think we must get rid of slavery or we must get rid of freedom.”

These were his words on the 26th of May, 1856, in his speech on “The Assault upon Mr. Sumner.” A few months later, in his “Speech on the Affairs of Kansas,” delivered almost five years before the first gun was fired at Fort Sumter, he spoke the following fatally prophetic and commanding words: —

“The hour is coming when the strongest will not be strong enough. A harder task will the new revolution of the nineteenth century be than was the revolution of the eighteenth century. I think the American Revolution bought its glory cheap. If the problem was new, it was simple. If there were few people, they were united, and the enemy three thousand miles off. But now, vast property, gigantic interests, family connections, webs of party, cover the land with a network that immensely multiplies the dangers of war.

“Fellow-citizens, in these times full of the fate of the Republic, I think the towns should hold town meetings, and resolve themselves into Committees of

Safety, go into permanent sessions, adjourning from week to week, from month to month. I wish we could send the sergeant-at-arms to stop every American who is about to leave the country. Send home every one who is abroad, lest they should find no country to return to. Come home and stay at home while there is a country to save. When it is lost it will be time enough then for any who are luckless enough to remain alive to gather up their clothes and depart to some land where freedom exists.”

Two short speeches follow, one delivered at a meeting for the relief of the family of John Brown, on the 18th of November, 1859, the other after his execution: —

“Our blind statesmen,” he says, “go up and down, with committees of vigilance and safety, hunting for the origin of this new heresy. They will need a very vigilant committee indeed to find its birthplace, and a very strong force to root it out. For the arch-Abolitionist, older than Brown, and older than the Shenandoah Mountains, is Love, whose other name is Justice, which was before Alfred, before Lycurgus, before Slavery, and will be after it.”

From his “Discourse on Theodore Parker” I take the following vigorous sentence: —

“His commanding merit as a reformer is this, that he insisted beyond all men in pulpits, — I cannot think of one rival, — that the essence of Christianity is its practical morals; it is there for use, or it is nothing; and if you combine it with sharp trading, or with ordinary city ambitions to gloze over municipal corruptions, or private intemperance, or successful fraud, or immoral politics, or unjust wars, or the cheating of Indians, or the robbery of frontier nations, or leaving your principles at home to follow on the high seas or in Europe a supple complaisance to tyrants, — it is hypocrisy, and the truth is not in you; and no love of religious music, or of dreams of Swedenborg, or praise of John Wesley, or of Jeremy Taylor, can save you from the Satan which you are.”

The Lecture on “American Civilization,” made up from two Addresses, one of which was delivered at Washington on the 31st of January, 1862, is, as might be expected, full of anti-slavery. That on the “Emancipation Proclamation,” delivered in Boston in September, 1862, is as full of “silent joy” at the advent of “a day which most of us dared not hope to see, — an event worth the dreadful war, worth its costs and uncertainties.”

From the “Remarks” at the funeral services for Abraham Lincoln, held in Concord on the 19th of April, 1865, I extract this admirably drawn character of the man: —

“He is the true history of the American people in his time. Step by step he walked before them; slow with their slowness, quickening his march by theirs,

the true representative of this continent; an entirely public man; father of his country, the pulse of twenty millions throbbing in his heart, the thought of their minds articulated by his tongue.”

The following are the titles of the remaining contents of this volume: “Harvard Commemoration Speech;” “Editor’s Address: Massachusetts Quarterly Review;” “Woman;” “Address to Kossuth;” “Robert Burns;” “Walter Scott;” “Remarks at the Organization of the Free Religious Association;” “Speech at the Annual Meeting of the Free Religious Association;” “The Fortune of the Republic.” In treating of the “Woman Question,” Emerson speaks temperately, delicately, with perfect fairness, but leaves it in the hands of the women themselves to determine whether they shall have an equal part in public affairs. “The new movement,” he says, “is only a tide shared by the spirits of man and woman; and you may proceed in the faith that whatever the woman’s heart is prompted to desire, the man’s mind is simultaneously prompted to accomplish.”

It is hard to turn a leaf in any book of Emerson’s writing without finding some pithy remark or some striking image or witty comment which illuminates the page where we find it and tempts us to seize upon it for an extract. But I must content myself with these few sentences from “The Fortune of the Republic,” the last address he ever delivered, in which his belief in America and her institutions, and his trust in the Providence which overrules all nations and all worlds, have found fitting utterance: —

“Let the passion for America cast out the passion for Europe. Here let there be what the earth waits for, — exalted manhood. What this country longs for is personalities, grand persons, to counteract its materialities. For it is the rule of the universe that corn shall serve man, and not man corn.

“They who find America insipid, — they for whom London and Paris have spoiled their own homes, can be spared to return to those cities. I not only see a career at home for more genius than we have, but for more than there is in the world.

“Our helm is given up to a better guidance than our own; the course of events is quite too strong for any helmsman, and our little wherry is taken in tow by the ship of the great Admiral which knows the way, and has the force to draw men and states and planets to their good.”

With this expression of love and respect for his country and trust in his country’s God, we may take leave of Emerson’s prose writings.

CHAPTER XIV. EMERSON'S POEMS.

The following "Prefatory Note" by Mr. Cabot introduces the ninth volume of the series of Emerson's collected works: —

"This volume contains nearly all the pieces included in the POEMS and MAY-DAY of former editions. In 1876 Mr. Emerson published a selection from his poems, adding six new ones, and omitting many. Of those omitted, several are now restored, in accordance with the expressed wishes of many readers and lovers of them. Also some pieces never before published are here given in an Appendix, on various grounds. Some of them appear to have had Emerson's approval, but to have been withheld because they were unfinished. These it seemed best not to suppress, now that they can never receive their completion. Others, mostly of an early date, remained unpublished doubtless because of their personal and private nature. Some of these seem to have an autobiographic interest sufficient to justify their publication. Others again, often mere fragments, have been admitted as characteristic, or as expressing in poetic form thoughts found in the Essays.

"In coming to a decision in these cases, it seemed on the whole preferable to take the risk of including too much rather than the opposite, and to leave the task of further winnowing to the hands of time.

"As was stated in the Preface to the first volume of this edition of Mr. Emerson's writings, the readings adopted by him in the "Selected Poems" have not always been followed here, but in some cases preference has been given to corrections made by him when he was in fuller strength than at the time of the last revision.

"A change in the arrangement of the stanzas of "May-Day," in the part representative of the march of Spring, received his sanction as bringing them more nearly in accordance with the events in Nature."

Emerson's verse has been a fertile source of discussion. Some have called him a poet and nothing but a poet, and some have made so much of the palpable defects of his verse that they have forgotten to recognize its true claims. His prose is often highly poetical, but his verse is something more than the most imaginative and rhetorical passages of his prose. An illustration presently to be given will make this point clear.

Poetry is to prose what the so-called full dress of the ball-room is to the plainer garments of the household and the street. Full dress, as we call it, is so full of beauty that it cannot hold it all, and the redundancy of nature overflows the narrowed margin of satin or velvet.

It reconciles us to its approach to nudity by the richness of its drapery and ornaments. A pearl or diamond necklace or a blushing bouquet excuses the liberal allowance of undisguised nature. We expect from the fine lady in her brocades and laces a generosity of display which we should reprimand with the virtuous severity of Tartuffe if ventured upon by the waiting-maid in her calicoes. So the poet reveals himself under the protection of his imaginative and melodious phrases, — the flowers and jewels of his vocabulary.

Here is a prose sentence from Emerson's "Works and Days:" —

"The days are ever divine as to the first Aryans. They come and go like muffled and veiled figures, sent from a distant friendly party; but they say nothing, and if we do not use the gifts they bring, they carry them as silently away."

Now see this thought in full dress, and then ask what is the difference between prose and poetry: —

"DAYS.

"Daughters of Time, the hypocritic Days,
Muffled and dumb like barefoot dervishes,
And marching single in an endless file,
Bring diadems and fagots in their hands.
To each they offer gifts after his will,
Bread, kingdom, stars, and sky that holds them all.
I, in my pleachéd garden watched the pomp,
Forgot my morning wishes, hastily
Took a few herbs and apples, and the Day
Turned and departed silent. I too late
Under her solemn fillet saw the scorn."

— Cinderella at the fireside, and Cinderella at the prince's ball! The full dress version of the thought is glittering with new images like bracelets and brooches and ear-rings, and fringed with fresh adjectives like edges of embroidery. That one word *pleachéd*, an heir-loom from Queen Elizabeth's day, gives to the noble sonnet an antique dignity and charm like the effect of an ancestral jewel. But mark that now the poet reveals himself as he could not in the prosaic form of the first extract. It is his own neglect of his great opportunity of which he now speaks, and not merely the indolent indifference of others. It is himself who is the object of scorn. Self-revelation of beauty embellished by ornaments is the privilege of full dress; self-revelation in the florid costume of

verse is the divine right of the poet. Passion that must express itself longs always for the freedom of rhythmic utterance. And in spite of the exaggeration and extravagance which shield themselves under the claim of poetic license, I venture to affirm that "*In vino veritas*" is not truer than *In carmine veritas*. As a further illustration of what has just been said of the self-revelations to be looked for in verse, and in Emerson's verse more especially, let the reader observe how freely he talks about his bodily presence and infirmities in his poetry, — subjects he never referred to in prose, except incidentally, in private letters.

Emerson is so essentially a poet that whole pages of his are like so many litanies of alternating chants and recitations. His thoughts slip on and off their light rhythmic robes just as the mood takes him, as was shown in the passage I have quoted in prose and in verse. Many of the metrical preludes to his lectures are a versified and condensed abstract of the leading doctrine of the discourse. They are a curious instance of survival; the lecturer, once a preacher, still wants his text; and finds his scriptural motto in his own rhythmic inspiration.

Shall we rank Emerson among the great poets or not?

"The great poets are judged by the frame of mind they induce; and to them, of all men, the severest criticism is due."

These are Emerson's words in the Preface to "Parnassus."

His own poems will stand this test as well as any in the language. They lift the reader into a higher region of thought and feeling. This seems to me a better test to apply to them than the one which Mr. Arnold cited from Milton. The passage containing this must be taken, not alone, but with the context. Milton had been speaking of "Logic" and of "Rhetoric," and spoke of poetry "as being less subtle and fine, but more simple, sensuous, and passionate." This relative statement, it must not be forgotten, is conditioned by what went before. If the terms are used absolutely, and not comparatively, as Milton used them, they must be very elastic if they would stretch widely enough to include all the poems which the world recognizes as masterpieces, nay, to include some of the best of Milton's own.

In spite of what he said about himself in his letter to Carlyle, Emerson was not only a poet, but a very remarkable one. Whether a great poet or not will depend on the scale we use and the meaning we affix to the term. The heat at eighty degrees of Fahrenheit is one thing and the heat at eighty degrees of Réaumur is a very different matter. The rank of poets is a point of very unstable equilibrium. From the days of Homer to our own, critics have been disputing about the place to be assigned to this or that member of the poetic hierarchy. It is

not the most popular poet who is necessarily the greatest; Wordsworth never had half the popularity of Scott or Moore. It is not the multitude of remembered passages which settles the rank of a metrical composition as poetry. Gray's "Elegy," it is true, is full of lines we all remember, and is a great poem, if that term can be applied to any piece of verse of that length. But what shall we say to the "Ars Poetica" of Horace? It is crowded with lines worn smooth as old sesterces by constant quotation. And yet we should rather call it a versified criticism than a poem in the full sense of that word. And what shall we do with Pope's "Essay on Man," which has furnished more familiar lines than "Paradise Lost" and "Paradise Regained" both together? For all that, we know there is a school of writers who will not allow that Pope deserves the name of poet.

It takes a generation or two to find out what are the passages in a great writer which are to become commonplaces in literature and conversation. It is to be remembered that Emerson is one of those authors whose popularity must diffuse itself from above downwards. And after all, few will dare assert that "The Vanity of Human Wishes" is greater as a poem than Shelley's "Ode to the West Wind," or Keats's "Ode to a Nightingale," because no line in either of these poems is half so often quoted as

"To point a moral or adorn a tale."

We cannot do better than begin our consideration of Emerson's poetry with Emerson's own self-estimate. He says in a fit of humility, writing to Carlyle: —

"I do not belong to the poets, but only to a low department of literature, the reporters, suburban men."

But Miss Peabody writes to Mr. Ireland: —

"He once said to me, 'I am not a great poet — but whatever is of me
is a poet.'"

These opposite feelings were the offspring of different moods and different periods.

Here is a fragment, written at the age of twenty-eight, in which his self-distrust and his consciousness of the "vision," if not "the faculty, divine," are revealed with the brave nudity of the rhythmic confessional: —

"A dull uncertain brain,
But gifted yet to know
That God has cherubim who go
Singing an immortal strain,
Immortal here below.

I know the mighty bards,
I listen while they sing,
And now I know
The secret store
Which these explore
When they with torch of genius pierce
The tenfold clouds that cover
The riches of the universe
From God's adoring lover.
And if to me it is not given
To fetch one ingot thence
Of that unfading gold of Heaven
His merchants may dispense,
Yet well I know the royal mine
And know the sparkle of its ore,
Know Heaven's truth from lies that shine, —
Explored, they teach us to explore.”

These lines are from “The Poet,” a series of fragments given in the “Appendix,” which, with his first volume, “Poems,” his second, “May-Day, and other Pieces,” form the complete ninth volume of the new series. These fragments contain some of the loftiest and noblest passages to be found in his poetical works, and if the reader should doubt which of Emerson's self-estimates in his two different moods spoken of above had most truth in it, he could question no longer after reading “The Poet.”

Emerson has the most exalted ideas of the true poetic function, as this passage from “Merlin” sufficiently shows: —

”Thy trivial harp will never please
Or fill my craving ear;
Its chords should ring as blows the breeze,
Free, peremptory, clear.
No jingling serenader's art
Nor tinkling of piano-strings
Can make the wild blood start
In its mystic springs;
The kingly bard
Must smite the chords rudely and hard,
As with hammer or with mace;

That they may render back
Artful thunder, which conveys
Secrets of the solar track,
Sparks of the supersolar blaze.

*

Great is the art,
Great be the manners of the bard.
He shall not his brain encumber
With the coil of rhythm and number;
But leaving rule and pale forethought
He shall aye climb
For his rhyme.
'Pass in, pass in,' the angels say,
'In to the upper doors,
Nor count compartments of the floors,
But mount to paradise
By the stairway of surprise.'"

And here is another passage from "The Poet," mentioned in the quotation before the last, in which the bard is spoken of as performing greater miracles than those ascribed to Orpheus: —

"A Brother of the world, his song
Sounded like a tempest strong
Which tore from oaks their branches broad,
And stars from the ecliptic road.
Time wore he as his clothing-weeds,
He sowed the sun and moon for seeds.
As melts the iceberg in the seas,
As clouds give rain to the eastern breeze,
As snow-banks thaw in April's beam,
The solid kingdoms like a dream
Resist in vain his motive strain,
They totter now and float amain.
For the Muse gave special charge
His learning should be deep and large,
And his training should not scant

The deepest lore of wealth or want:
His flesh should feel, his eyes should read
Every maxim of dreadful Need;
In its fulness he should taste
Life's honeycomb, but not too fast;
Full fed, but not intoxicated;
He should be loved; he should be hated;
A blooming child to children dear,
His heart should palpitate with fear."

We look naturally to see what poets were Emerson's chief favorites. In his poems "The Test" and "The Solution," we find that the five whom he recognizes as defying the powers of destruction are Homer, Dante, Shakespeare, Swedenborg, Goethe.

Here are a few of his poetical characterizations from "The Harp:" —

"And this at least I dare affirm,
Since genius too has bound and term,
There is no bard in all the choir,
Not Homer's self, the poet-sire,
Wise Milton's odes of pensive pleasure,
Or Shakespeare whom no mind can measure,
Nor Collins' verse of tender pain,
Nor Byron's clarion of disdain,
Scott, the delight of generous boys,
Or Wordsworth, Pan's recording voice, —
Not one of all can put in verse,
Or to this presence could rehearse
The sights and voices ravishing
The boy knew on the hills in spring." —

In the notice of "Parnassus" some of his preferences have been already mentioned.

Comparisons between men of genius for the sake of aggrandizing the one at the expense of the other are the staple of the meaner kinds of criticism. No lover of art will clash a Venetian goblet against a Roman amphora to see which is strongest; no lover of nature undervalues a violet because it is not a rose. But comparisons used in the way of description are not odious.

The difference between Emerson's poetry and that of the contemporaries with

whom he would naturally be compared is that of algebra and arithmetic. He deals largely in general symbols, abstractions, and infinite series. He is always seeing the universal in the particular. The great multitude of mankind care more for two and two, something definite, a fixed quantity, than for $a + b$'s and x^2 's, — symbols used for undetermined amounts and indefinite possibilities. Emerson is a citizen of the universe who has taken up his residence for a few days and nights in this travelling caravansary between the two inns that hang out the signs of Venus and Mars. This little planet could not provincialize such a man. The multiplication-table is for the every day use of every day earth-people, but the symbols he deals with are too vast, sometimes, we must own, too vague, for the unilluminated terrestrial and arithmetical intelligence. One cannot help feeling that he might have dropped in upon us from some remote centre of spiritual life, where, instead of addition and subtraction, children were taught quaternions, and where the fourth dimension of space was as familiarly known to everybody as a foot-measure or a yard-stick is to us. Not that he himself dealt in the higher or the lower mathematics, but he saw the hidden spiritual meaning of things as Professor Cayley or Professor Sylvester see the meaning of their mysterious formulae. Without using the Rosetta-stone of Swedenborg, Emerson finds in every phenomenon of nature a hieroglyphic. Others measure and describe the monuments, — he reads the sacred inscriptions. How alive he makes Monadnoc! Dinocrates undertook to “hew Mount Athos to the shape of man” in the likeness of Alexander the Great. Without the help of tools or workmen, Emerson makes “Cheshire’s haughty hill” stand before us an impersonation of kingly humanity, and talk with us as a god from Olympus might have talked.

This is the fascination of Emerson’s poetry; it moves in a world of universal symbolism. The sense of the infinite fills it with its majestic presence. It shows, also, that he has a keen delight in the every-day aspects of nature. But he looks always with the eye of a poet, never with that of the man of science. The law of association of ideas is wholly different in the two. The scientific man connects objects in sequences and series, and in so doing is guided by their collective resemblances. His aim is to classify and index all that he sees and contemplates so as to show the relations which unite, and learn the laws that govern, the subjects of his study. The poet links the most remote objects together by the slender filament of wit, the flowery chain of fancy, or the living, pulsating cord of imagination, always guided by his instinct for the beautiful. The man of science clings to his object, as the marsupial embryo to its teat, until he has filled himself as full as he can hold; the poet takes a sip of his dew-drop, throws his head up like a chick, rolls his eyes around in contemplation of the heavens above

him and the universe in general, and never thinks of asking a Linnaean question as to the flower that furnished him his dew-drop. The poetical and scientific natures rarely coexist; Haller and Goethe are examples which show that such a union may occur, but as a rule the poet is contented with the colors of the rainbow and leaves the study of Fraunhofer's lines to the man of science.

Though far from being a man of science, Emerson was a realist in the best sense of that word. But his realities reached to the highest heavens: like Milton,

—

"He passed the flaming bounds of place and time;
The living throne, the sapphire blaze
Where angels tremble while they gaze,
HE SAW" —

Everywhere his poetry abounds in celestial imagery. If Galileo had been a poet as well as an astronomer, he would hardly have sowed his verse thicker with stars than we find them in the poems of Emerson.

Not less did Emerson clothe the common aspects of life with the colors of his imagination. He was ready to see beauty everywhere: —

"Thou can'st not wave thy staff in air,
Or dip thy paddle in the lake,
But it carves the bow of beauty there,
And the ripples in rhyme the oar forsake."

He called upon the poet to

"Tell men what they knew before;
Paint the prospect from their door."

And his practice was like his counsel. He saw our plain New England life with as honest New England eyes as ever looked at a huckleberry-bush or into a milking-pail.

This noble quality of his had its dangerous side. In one of his exalted moods he would have us

"Give to barrows, trays and pans
Grace and glimmer of romance."

But in his Lecture on "Poetry and Imagination," he says: —

“What we once admired as poetry has long since come to be a sound of tin pans; and many of our later books we have outgrown. Perhaps Homer and Milton will be tin pans yet.”

The “grace and glimmer of romance” which was to invest the tin pan are forgotten, and he uses it as a belittling object for comparison. He himself was not often betrayed into the mistake of confounding the prosaic with the poetical, but his followers, so far as the “realists” have taken their hint from him, have done it most thoroughly. Mr. Whitman enumerates all the objects he happens to be looking at as if they were equally suggestive to the poetical mind, furnishing his reader a large assortment on which he may exercise the fullest freedom of selection. It is only giving him the same liberty that Lord Timothy Dexter allowed his readers in the matter of punctuation, by leaving all stops out of his sentences, and printing at the end of his book a page of commas, semicolons, colons, periods, notes of interrogation and exclamation, with which the reader was expected to “pepper” the pages as he might see fit.

French realism does not stop at the tin pan, but must deal with the slop-pail and the wash-tub as if it were literally true that

”In the mud and scum of things
There alway, alway something sings.”

Happy were it for the world if M. Zola and his tribe would stop even there; but when they cross the borders of science into its infected districts, leaving behind them the reserve and delicacy which the genuine scientific observer never forgets to carry with him, they disgust even those to whom the worst scenes they describe are too wretchedly familiar. The true realist is such a man as Parent du Chatelet; exploring all that most tries the senses and the sentiments, and reporting all truthfully, but soberly, chastely, without needless circumstance, or picturesque embellishment, for a useful end, and not for a mere sensational effect.

What a range of subjects from “The Problem” and “Uriel” and “Forerunners” to “The Humble-Bee” and “The Titmouse!” Nor let the reader who thinks the poet must go far to find a fitting theme fail to read the singularly impressive home-poem, “Hamatreya,” beginning with the names of the successive owners of a piece of land in Concord, — probably the same he owned after the last of them: —

“Bulkeley, Hunt, Willard, Hosmer, Meriam, Flint,”
and ending with the austere and solemn “Earth-Song.”

Full of poetical feeling, and with a strong desire for poetical expression,

Emerson experienced a difficulty in the mechanical part of metrical composition. His muse picked her way as his speech did in conversation and in lecturing. He made desperate work now and then with rhyme and rhythm, showing that though a born poet he was not a born singer. Think of making “feeble” rhyme with “people,” “abroad” with “Lord,” and contemplate the following couplet which one cannot make rhyme without actual verbicide: —

”Where feeds the moose, and walks the surly bear,
And up the tall mast runs the woodpeck”-are!

And how could prose go on all-fours more unmetrically than this?

”In Adirondac lakes
At morn or noon the guide rows bare-headed.”

It was surely not difficult to say —

“At morn or noon bare-headed rows the guide.” And yet while we note these blemishes, many of us will confess that we like his uncombed verse better, oftentimes, than if it were trimmed more neatly and disposed more nicely. When he is at his best, his lines flow with careless ease, as a mountain stream tumbles, sometimes rough and sometimes smooth, but all the more interesting for the rocks it runs against and the grating of the pebbles it rolls over.

There is one trick of verse which Emerson occasionally, not very often, indulges in. This is the crowding of a redundant syllable into a line. It is a liberty which is not to be abused by the poet. Shakespeare, the supreme artist, and Milton, the “mighty-mouth’d inventor of harmonies,” knew how to use it effectively. Shelley employed it freely. Bryant indulged in it occasionally, and wrote an article in an early number of the “North American Review” in defence of its use. Willis was fond of it. As a relief to monotony it may be now and then allowed, — may even have an agreeable effect in breaking the monotony of too formal verse. But it may easily become a deformity and a cause of aversion. A humpback may add picturesqueness to a procession, but if there are too many humpbacks in line we turn away from the sight of them. Can any ear reconcile itself to the last of these three lines of Emerson’s?

”Oh, what is Heaven but the fellowship
Of minds that each can stand against the world
By its own meek and incorruptible will?”

These lines that lift their backs up in the middle — span-worm lines, we may call them — are not to be commended for common use because some great poets have now and then admitted them. They have invaded some of our recent poetry as the canker-worms gather on our elms in June. Emerson has one or two of them here and there, but they never swarm on his leaves so as to frighten us away from their neighborhood.

As for the violently artificial rhythms and rhymes which have reappeared of late in English and American literature, Emerson would as soon have tried to ride three horses at once in a circus as to shut himself up in triolets, or attempt any cat's-cradle tricks of rhyming sleight of hand.

If we allow that Emerson is not a born singer, that he is a careless versifier and rhymer, we must still recognize that there is something in his verse which belongs, indissolubly, sacredly, to his thought. Who would decant the wine of his poetry from its quaint and antique-looking *lagena*? — Read his poem to the Aeolian harp (“The Harp”) and his model betrays itself: —

”These syllables that Nature spoke,
And the thoughts that in him woke
Can adequately utter none
Save to his ear the wind-harp lone.
Therein I hear the Parcae reel
The threads of man at their humming wheel,
The threads of life and power and pain,
So sweet and mournful falls the strain.
And best can teach its Delphian chord
How Nature to the soul is moored,
If once again that silent string,
As erst it wont, would thrill and ring.”

There is no need of quoting any of the poems which have become familiar to most true lovers of poetry. Emerson saw fit to imitate the Egyptians by placing “The Sphinx” at the entrance of his temple of song. This poem was not fitted to attract worshippers. It is not easy of comprehension, not pleasing in movement. As at first written it had one verse in it which sounded so much like a nursery rhyme that Emerson was prevailed upon to omit it in the later versions. There are noble passages in it, but they are for the adept and not for the beginner. A commonplace young person taking up the volume and puzzling his or her way along will come by and by to the verse: —

”Have I a lover
Who is noble and free? —
I would he were nobler
Than to love me.”

The commonplace young person will be apt to say or think *c'est magnifique, mais ce n'est pas — l'amour*.

The third poem in the volume, “The Problem,” should have stood first in order. This ranks among the finest of Emerson’s poems. All his earlier verse has a certain freshness which belongs to the first outburst of song in a poetic nature. “Each and All,” “The Humble-Bee,” “The Snow-Storm,” should be read before “Uriel,” “The World-Soul,” or “Mithridates.” “Monadnoc” will be a good test of the reader’s taste for Emerson’s poetry, and after this “Woodnotes.”

In studying his poems we must not overlook the delicacy of many of their descriptive portions. If in the flights of his imagination he is like the strong-winged bird of passage, in his exquisite choice of descriptive epithets he reminds me of the *tenui-rostrals*. His subtle selective instinct penetrates the vocabulary for the one word he wants, as the long, slender bill of those birds dives deep into the flower for its drop of honey. Here is a passage showing admirably the two different conditions: wings closed and the selective instinct picking out its descriptive expressions; then suddenly wings flashing open and the imagination in the firmament, where it is always at home. Follow the pitiful inventory of insignificances of the forlorn being he describes with a pathetic humor more likely to bring a sigh than a smile, and then mark the grand hyperbole of the last two lines. The passage is from the poem called “Destiny”: —

”Alas! that one is born in blight,
Victim of perpetual slight:
When thou lookest on his face,
Thy heart saith ‘Brother, go thy ways!
None shall ask thee what thou doest,
Or care a rush for what thou knowest.
Or listen when thou repliest,
Or remember where thou liest,
Or how thy supper is sodden;’
And another is born
To make the sun forgotten.”

Of all Emerson’s poems the “Concord Hymn” is the most nearly complete

and faultless, — but it is not distinctively Emersonian. It is such a poem as Collins might have written, — it has the very movement and melody of the “Ode on the Death of Mr. Thomson,” and of the “Dirge in Cymbeline,” with the same sweetness and tenderness of feeling. Its one conspicuous line,

“And fired the shot heard round the world,”

must not take to itself all the praise deserved by this perfect little poem, a model for all of its kind. Compact, expressive, serene, solemn, musical, in four brief stanzas it tells the story of the past, records the commemorative act of the passing day, and invokes the higher Power that governs the future to protect the Memorial-stone sacred to Freedom and her martyrs.

These poems of Emerson’s find the readers that must listen to them and delight in them, as the “Ancient Mariner” fastened upon the man who must hear him. If any doubter wishes to test his fitness for reading them, and if the poems already mentioned are not enough to settle the question, let him read the paragraph of “May-Day,” beginning, —

“I saw the bud-crowned Spring go forth,”

“Sea-shore,” the fine fragments in the “Appendix” to his published works, called, collectively, “The Poet,” blocks bearing the mark of poetic genius, but left lying round for want of the structural instinct, and last of all, that which is, in many respects, first of all, the “Threnody,” a lament over the death of his first-born son. This poem has the dignity of “Lycidas” without its refrigerating classicism, and with all the tenderness of Cowper’s lines on the receipt of his mother’s picture. It may well compare with others of the finest memorial poems in the language, — with Shelley’s “Adonais,” and Matthew Arnold’s “Thyrsis,” leaving out of view Tennyson’s “In Memoriam” as of wider scope and larger pattern.

Many critics will concede that there is much truth in Mr. Arnold’s remark on the want of “evolution” in Emerson’s poems. One is struck with the fact that a great number of fragments lie about his poetical workshop: poems begun and never finished; scraps of poems, chips of poems, paving the floor with intentions never carried out. One cannot help remembering Coleridge with his incomplete “Christabel,” and his “Abyssinian Maid,” and her dulcimer which she never got a tune out of. We all know there was good reason why Coleridge should have been infirm of purpose. But when we look at that great unfinished picture over which Allston labored with the hopeless ineffectiveness of Sisyphus; when we go through a whole gallery of pictures by an American artist in which the backgrounds are slighted as if our midsummer heats had taken away half the artist’s life and vigor; when we walk round whole rooms full of sketches, impressions, effects, symphonies, invisibilities, and other apologies for honest

work, it would not be strange if it should suggest a painful course of reflections as to the possibility that there may be something in our climatic or other conditions which tends to scholastic and artistic anaemia and insufficiency, — the opposite of what we find showing itself in the full-blooded verse of poets like Browning and on the flaming canvas of painters like Henri Regnault. Life seemed lustier in Old England than in New England to Emerson, to Hawthorne, and to that admirable observer, Mr. John Burroughs. Perhaps we require another century or two of acclimation.

Emerson never grappled with any considerable metrical difficulties. He wrote by preference in what I have ventured to call the normal respiratory measure, — octosyllabic verse, in which one common expiration is enough and not too much for the articulation of each line. The “fatal facility” for which this verse is noted belongs to it as recited and also as written, and it implies the need of only a minimum of skill and labor. I doubt if Emerson would have written a verse of poetry if he had been obliged to use the Spenserian stanza. In the simple measures he habitually employed he found least hindrance to his thought.

Every true poet has an atmosphere as much as every great painter. The golden sunshine of Claude and the pearly mist of Corot belonged to their way of looking at nature as much as the color of their eyes and hair belonged to their personalities. So with the poets; for Wordsworth the air is always serene and clear, for Byron the sky is uncertain between storm and sunshine. Emerson sees all nature in the same pearly mist that wraps the willows and the streams of Corot. Without its own characteristic atmosphere, illuminated by

“The light that never was on sea or land,”

we may have good verse but no true poem. In his poetry there is not merely this atmosphere, but there is always a mirage in the horizon.

Emerson’s poetry is eminently subjective, — if Mr. Ruskin, who hates the word, will pardon me for using it in connection with a reference to two of his own chapters in his “Modern Painters.” These are the chapter on “The Pathetic Fallacy,” and the one which follows it “On Classical Landscape.” In these he treats of the transfer of a writer’s mental or emotional conditions to the external nature which he contemplates. He asks his readers to follow him in a long examination of what he calls by the singular name mentioned, “the pathetic fallacy,” because, he says, “he will find it eminently characteristic of the modern mind; and in the landscape, whether of literature or art, he will also find the modern painter endeavoring to express something which he, as a living creature, imagines in the lifeless object, while the classical and mediaeval painters were content with expressing the unimaginary and actual qualities of the object itself.”

Illustrations of Mr. Ruskin’s “pathetic fallacy” may be found almost

anywhere in Emerson's poems. Here is one which offers itself without search:

—

"Daily the bending skies solicit man,
The seasons chariot him from this exile,
The rainbow hours bedeck his glowing wheels,
The storm-winds urge the heavy weeks along,
Suns haste to set, that so remoter lights
Beckon the wanderer to his vaster home."

The expression employed by Ruskin gives the idea that he is dealing with a defect. If he had called the state of mind to which he refers the *sympathetic illusion*, his readers might have looked upon it more justly.

It would be a pleasant and not a difficult task to trace the resemblances between Emerson's poetry and that of other poets. Two or three such resemblances have been incidentally referred to, a few others may be mentioned.

In his contemplative study of Nature he reminds us of Wordsworth, at least in certain brief passages, but he has not the staying power of that long-breathed, not to say long-winded, lover of landscapes. Both are on the most intimate terms with Nature, but Emerson contemplates himself as belonging to her, while Wordsworth feels as if she belonged to him.

"Good-by, proud world,"

recalls Spenser and Raleigh. "The Humble-Bee" is strongly marked by the manner and thought of Marvell. Marvell's

"Annihilating all that's made
To a green thought in a green shade,"

may well have suggested Emerson's

"The green silence dost displace
With thy mellow, breezy bass."

"The Snow-Storm" naturally enough brings to mind the descriptions of Thomson and of Cowper, and fragment as it is, it will not suffer by comparison with either.

"Woodnotes," one of his best poems, has passages that might have been found in Milton's "Comus;" this, for instance: —

”All constellations of the sky
Shed their virtue through his eye.
Him Nature giveth for defence
His formidable innocence.”

Of course his Persian and Indian models betray themselves in many of his poems, some of which, called translations, sound as if they were original.

So we follow him from page to page and find him passing through many moods, but with one pervading spirit: —

”Melting matter into dreams,
Panoramas which I saw,
And whatever glows or seems
Into substance, into Law.”

We think in reading his “Poems” of these words of Sainte-Beuve: —

“The greatest poet is not he who has done the best; it is he who suggests the most; he, not all of whose meaning is at first obvious, and who leaves you much to desire, to explain, to study; much to complete in your turn.”

Just what he shows himself in his prose, Emerson shows himself in his verse. Only when he gets into rhythm and rhyme he lets us see more of his personality, he ventures upon more audacious imagery, his flight is higher and swifter, his brief crystalline sentences have dissolved and pour in continuous streams. Where they came from, or whither they flow to empty themselves, we cannot always say, — it is enough to enjoy them as they flow by us.

Incompleteness — want of beginning, middle, and end, — is their too common fault. His pages are too much like those artists’ studios all hung round with sketches and “bits” of scenery. “The Snow-Storm” and “Sea-Shore” are “bits” out of a landscape that was never painted, admirable, so far as they go, but forcing us to ask, “Where is the painting for which these scraps are studies?” or “Out of what great picture have these pieces been cut?”

We do not want his fragments to be made wholes, — if we did, what hand could be found equal to the task? We do not want his rhythms and rhymes smoothed and made more melodious. They are as honest as Chaucer’s, and we like them as they are, not modernized or manipulated by any versifying drill-sergeant, — if we wanted them reshaped whom could we trust to meddle with them?

His poetry is elemental; it has the rock beneath it in the eternal laws on which it rests; the roll of deep waters in its grander harmonies; its air is full of Aeolian

strains that waken and die away as the breeze wanders over them; and through it shines the white starlight, and from time to time flashes a meteor that startles us with its sudden brilliancy.

After all our criticisms, our selections, our analyses, our comparisons, we have to recognize that there is a charm in Emerson's poems which cannot be defined any more than the fragrance of a rose or a hyacinth, — any more than the tone of a voice which we should know from all others if all mankind were to pass before us, and each of its articulating representatives should call us by name.

All our crucibles and alembics leave unaccounted for the great mystery of *style*. "The style is of [a part of] the man himself," said Buffon, and this saying has passed into the stronger phrase, "The style is the man."

The "personal equation" which differentiates two observers is not confined to the tower of the astronomer. Every human being is individualized by a new arrangement of elements. His mind is a safe with a lock to which only certain letters are the key. His ideas follow in an order of their own. His words group themselves together in special sequences, in peculiar rhythms, in unlooked-for combinations, the total effect of which is to stamp all that he says or writes with his individuality. We may not be able to assign the reason of the fascination the poet we have been considering exercises over us. But this we can say, that he lives in the highest atmosphere of thought; that he is always in the presence of the infinite, and ennobles the accidents of human existence so that they partake of the absolute and eternal while he is looking at them; that he unites a royal dignity of manner with the simplicity of primitive nature; that his words and phrases arrange themselves, as if by an elective affinity of their own, with a *curiosa felicitas* which captivates and enthrals the reader who comes fully under its influence, and that through all he sings as in all he says for us we recognize the same serene, high, pure intelligence and moral nature, infinitely precious to us, not only in themselves, but as a promise of what the transplanted life, the air and soil and breeding of this western world may yet educe from their potential virtues, shaping themselves, at length, in a literature as much its own as the Rocky Mountains and the Mississippi.

CHAPTER XV.

Recollections of Emerson's Last Years. — Mr. Conway's Visits. — Extracts from Mr. Whitman's Journal. — Dr. Le Baron Russell's Visit. — Dr. Edward Emerson's Account. — Illness and Death. — Funeral Services.

Mr. Conway gives the following account of two visits to Emerson after the decline of his faculties had begun to make itself obvious: —

“In 1875, when I stayed at his house in Concord for a little time, it was sad enough to find him sitting as a listener before those who used to sit at his feet in silence. But when alone with him he conversed in the old way, and his faults of memory seemed at times to disappear. There was something striking in the kind of forgetfulness by which he suffered. He remembered the realities and uses of things when he could not recall their names. He would describe what he wanted or thought of; when he could not recall ‘chair’ he could speak of that which supports the human frame, and ‘the implement that cultivates the soil’ must do for plough. —

“In 1880, when I was last in Concord, the trouble had made heavy strides. The intensity of his silent attention to every word that was said was painful, suggesting a concentration of his powers to break through the invisible walls closing around them. Yet his face was serene; he was even cheerful, and joined in our laughter at some letters his eldest daughter had preserved, from young girls, trying to coax autograph letters, and in one case asking for what price he would write a valedictory address she had to deliver at college. He was still able to joke about his ‘naughty memory;’ and no complaint came from him when he once rallied himself on living too long. Emerson appeared to me strangely beautiful at this time, and the sweetness of his voice, when he spoke of the love and providence at his side, is quite indescribable.” —

One of the later glimpses we have of Emerson is that preserved in the journal of Mr. Whitman, who visited Concord in the autumn of 1881. Mr. Ireland gives a long extract from this journal, from which I take the following: —

“On entering he had spoken very briefly, easily and politely to several of the company, then settled himself in his chair, a trifle pushed back, and, though a listener and apparently an alert one, remained silent through the whole talk and discussion. And so, there Emerson sat, and I looking at him. A good color in his face, eyes clear, with the well-known expression of sweetness, and the old clear-peering aspect quite the same.”

Mr. Whitman met him again the next day, Sunday, September 18th, and records: —

“As just said, a healthy color in the cheeks, and good light in the eyes, cheery expression, and just the amount of talking that best suited, namely, a word or short phrase only where needed, and almost always with a smile.”

Dr. Le Baron Russell writes to me of Emerson at a still later period: —

“One incident I will mention which occurred at my last visit to Emerson, only a few months before his death. I went by Mrs. Emerson’s request to pass a Sunday at their house at Concord towards the end of June. His memory had been failing for some time, and his mind as you know was clouded, but the old charm of his voice and manner had never left him. On the morning after my arrival Mrs. Emerson took us into the garden to see the beautiful roses in which she took great delight. One red rose of most brilliant color she called our attention to especially; its ‘hue’ was so truly ‘angry and brave’ that I involuntarily repeated Herbert’s line, —

‘Bids the rash gazer wipe his eye,’ —

from the verses which Emerson had first repeated to me so long ago. Emerson looked at the rose admiringly, and then as if by a sudden impulse lifted his hat gently, and said with a low bow, ‘I take off my hat to it.’”

Once a poet, always a poet. It was the same reverence for the beautiful that he had shown in the same way in his younger days on entering the wood, as Governor Rice has told us the story, given in an earlier chapter.

I do not remember Emerson’s last time of attendance at the “Saturday Club,” but I recollect that he came after the trouble in finding words had become well marked. “My memory hides itself,” he said. The last time I saw him, living, was at Longfellow’s funeral. I was sitting opposite to him when he rose, and going to the side of the coffin, looked intently upon the face of the dead poet. A few minutes later he rose again and looked once more on the familiar features, not apparently remembering that he had just done so. Mr. Conway reports that he said to a friend near him, “That gentleman was a sweet, beautiful soul, but I have entirely forgotten his name.”

Dr. Edward Emerson has very kindly furnished me, in reply to my request, with information regarding his father’s last years which will interest every one who has followed his life through its morning and midday to the hour of evening shadows.

“May-Day,” which was published in 1867, was made up of the poems written since his first volume appeared. After this he wrote no poems, but with some difficulty fitted the refrain to the poem “Boston,” which had remained unfinished since the old Anti-slavery days. “Greatness,” and the “Phi Beta Kappa Oration” of 1867, were among his last pieces of work. His College Lectures, “The Natural History of the Intellect,” were merely notes recorded years before, and now

gathered and welded together. In 1876 he revised his poems, and made the selections from them for the "Little Classic" edition of his works, then called "Selected Poems." In that year he gave his "Address to the Students of the University of Virginia." This was a paper written long before, and its revision, with the aid of his daughter Ellen, was accomplished with much difficulty.

The year 1867 was about the limit of his working life. During the last five years he hardly answered a letter. Before this time it had become increasingly hard for him to do so, and he always postponed and thought he should feel more able the next day, until his daughter Ellen was compelled to assume the correspondence. He did, however, write some letters in 1876, as, for instance, the answer to the invitation of the Virginia students.

Emerson left off going regularly to the "Saturday Club" probably in 1875. He used to depend on meeting Mr. Cabot there, but after Mr. Cabot began to come regularly to work on "Letters and Social Aims," Emerson, who relied on his friendly assistance, ceased attending the meetings. The trouble he had in finding the word he wanted was a reason for his staying away from all gatherings where he was called upon to take a part in conversation, though he the more willingly went to lectures and readings and to church. His hearing was very slightly impaired, and his sight remained pretty good, though he sometimes said letters doubled, and that "M's" and "N's" troubled him to read. He recognized the members of his own family and his *old* friends; but, as I infer from this statement, he found a difficulty in remembering the faces of new acquaintances, as is common with old persons.

He continued the habit of reading, — read through all his printed works with much interest and surprise, went through all his manuscripts, and endeavored, unsuccessfully, to index them. In these Dr. Emerson found written "Examined 1877 or 1878," but he found no later date.

In the last year or two he read anything which he picked up on his table, but he read the same things over, and whispered the words like a child. He liked to look over the "Advertiser," and was interested in the "Nation." He enjoyed pictures in books and showed them with delight to guests.

All this with slight changes and omissions is from the letter of Dr. Emerson in answer to my questions. The twilight of a long, bright day of life may be saddening, but when the shadow falls so gently and gradually, with so little that is painful and so much that is soothing and comforting, we do not shrink from following the imprisoned spirit to the very verge of its earthly existence.

But darker hours were in the order of nature very near at hand. From these he was saved by his not untimely release from the imprisonment of the worn-out bodily frame.

In April, 1882, Emerson took a severe cold, and became so hoarse that he could hardly speak. When his son, Dr. Edward Emerson, called to see him, he found him on the sofa, feverish, with more difficulty of expression than usual, dull, but not uncomfortable. As he lay on his couch he pointed out various objects, among others a portrait of Carlyle "the good man, — my friend." His son told him that he had seen Carlyle, which seemed to please him much. On the following day the unequivocal signs of pneumonia showed themselves, and he failed rapidly. He still recognized those around him, among the rest Judge Hoar, to whom he held out his arms for a last embrace. A sharp pain coming on, ether was administered with relief. And in a little time, surrounded by those who loved him and whom he loved, he passed quietly away. He lived very nearly to the completion of his seventy-ninth year, having been born May 25, 1803, and his death occurring on the 27th of April, 1882.

Mr. Ireland has given a full account of the funeral, from which are, for the most part, taken the following extracts: —

"The last rites over the remains of Ralph Waldo Emerson took place at Concord on the 30th of April. A special train from Boston carried a large number of people. Many persons were on the street, attracted by the services, but were unable to gain admission to the church where the public ceremonies were held. Almost every building in town bore over its entrance-door a large black and white rosette with other sombre draperies. The public buildings were heavily draped, and even the homes of the very poor bore outward marks of grief at the loss of their friend and fellow-townsmen.

"The services at the house, which were strictly private, occurred at 2.30, and were conducted by Rev. W.H. Furness of Philadelphia, a kindred spirit and an almost lifelong friend. They were simple in character, and only Dr. Furness took part in them. The body lay in the front northeast room, in which were gathered the family and close friends of the deceased. The only flowers were contained in three vases on the mantel, and were lilies of the valley, red and white roses, and arbutus. The adjoining room and hall were filled with friends and neighbors.

"At the church many hundreds of persons were awaiting the arrival of the procession, and all the space, except the reserved pews, was packed. In front of the pulpit were simple decorations, boughs of pine covered the desk, and in their centre was a harp of yellow jonquils, the gift of Miss Louisa M. Alcott. Among the floral tributes was one from the teachers and scholars in the Emerson school. By the sides of the pulpit were white and scarlet geraniums and pine boughs, and high upon the wall a laurel wreath.

"Before 3.30 the pall-bearers brought in the plain black walnut coffin, which was placed before the pulpit. The lid was turned back, and upon it was put a

cluster of richly colored pansies and a small bouquet of roses. While the coffin was being carried in, 'Pleyel's Hymn' was rendered on the organ by request of the family of the deceased. Dr. James Freeman Clarke then entered the pulpit. Judge E. Rockwood Hoar remained by the coffin below, and when the congregation became quiet, made a brief and pathetic address, his voice many times trembling with emotion."

I subjoin this most impressive "Address" entire, from the manuscript with which Judge Hoar has kindly favored me: —

"The beauty of Israel is fallen in its high place! Mr. Emerson has died; and we, his friends and neighbors, with this sorrowing company, have turned aside the procession from his home to his grave, — to this temple of his fathers, that we may here unite in our parting tribute of memory and love.

"There is nothing to mourn for him. That brave and manly life was rounded out to the full length of days. That dying pillow was softened by the sweetest domestic affection; and as he lay down to the sleep which the Lord giveth his beloved, his face was as the face of an angel, and his smile seemed to give a glimpse of the opening heavens.

"Wherever the English language is spoken throughout the world his fame is established and secure. Throughout this great land and from beyond the sea will come innumerable voices of sorrow for this great public loss. But we, his neighbors and townsmen, feel that he was *ours*. He was descended from the founders of the town. He chose our village as the place where his lifelong work was to be done. It was to our fields and orchards that his presence gave such value; it was our streets in which the children looked up to him with love, and the elders with reverence. He was our ornament and pride.

"He is gone — is dust, —

He the more fortunate! Yea, he hath finished!
For him there is no longer any future.
His life is bright — bright without spot it was
And cannot cease to be. No ominous hour
Knocks at his door with tidings of mishap.
Far off is he, above desire and fear;
No more submitted to the change and chance
Of the uncertain planets. —

"The bloom is vanished from my life,
For, oh! he stood beside me like my youth;
Transformed for me the real to a dream,

Clothing the palpable and the familiar
With golden exhalations of the dawn.
Whatever fortunes wait my future toils,
The *beautiful* is vanished and returns not.'

“That lofty brow, the home of all wise thoughts and high aspirations, — those lips of eloquent music, — that great soul, which trusted in God and never let go its hope of immortality, — that large heart, to which everything that belonged to man was welcome, — that hospitable nature, loving and tender and generous, having no repulsion or scorn for anything but meanness and baseness, — oh, friend, brother, father, lover, teacher, inspirer, guide! is there no more that we can do now than to give thee this our hail and farewell!”

Judge Hoar’s remarks were followed by the congregation singing the hymns, “Thy will be done,” “I will not fear the fate provided by Thy love.” The Rev. Dr. Furness then read selections from the Scriptures.

The Rev. James Freeman Clarke then delivered an “Address,” from which I extract two eloquent and inspiring passages, regretting to omit any that fell from lips so used to noble utterances and warmed by their subject, — for there is hardly a living person more competent to speak or write of Emerson than this high-minded and brave-souled man, who did not wait until he was famous to be his admirer and champion.

“The saying of the Liturgy is true and wise, that ‘in the midst of life we are in death.’ But it is still more true that in the midst of death we are in life. Do we ever believe so much in immortality as when we look on such a dear and noble face, now so still, which a few hours ago was radiant with thought and love? ‘He is not here: he is risen.’ That power which we knew, — that soaring intelligence, that soul of fire, that ever-advancing spirit, — *that* cannot have been suddenly annihilated with the decay of these earthly organs. It has left its darkened dust behind. It has outsoared the shadow of our night. God does not trifle with his creatures by bringing to nothing the ripe fruit of the ages by the lesion of a cerebral cell, or some bodily tissue. Life does not die, but matter dies off from it. The highest energy we know, the soul of man, the unit in which meet intelligence, imagination, memory, hope, love, purpose, insight, — this agent of immense resource and boundless power, — this has not been subdued by its instrument. When we think of such an one as he, we can only think of life, never of death.

“Such was his own faith, as expressed in his paper on ‘Immortality.’ But he himself was the best argument for immortality. Like the greatest thinkers, he did not rely on logical proof, but on the higher evidence of universal instincts, — the

vast streams of belief which flow through human thought like currents in the ocean; those shoreless rivers which forever roll along their paths in the Atlantic and Pacific, not restrained by banks, but guided by the revolutions of the globe and the attractions of the sun.”

*

“Let us then ponder his words: —

’Wilt thou not ope thy heart to know
What rainbows teach and sunsets show?
Voice of earth to earth returned,
Prayers of saints that inly burned,
Saying, *What is excellent*
As God lives, is permanent;
Hearts are dust, hearts’ loves remain;
Hearts’ love will meet thee again.

House and tenant go to ground
Lost in God, in Godhead found.”

After the above address a feeling prayer was offered by Rev. Howard M. Brown, of Brookline, and the benediction closed the exercises in the church. Immediately before the benediction, Mr. Alcott recited the following sonnet, which he had written for the occasion: —

”His harp is silent: shall successors rise,
Touching with venturous hand the trembling string,
Kindle glad raptures, visions of surprise,
And wake to ecstasy each slumbering thing?
Shall life and thought flash new in wondering eyes,
As when the seer transcendent, sweet, and wise,
World-wide his native melodies did sing,
Flushed with fair hopes and ancient memories?
Ah, no! That matchless lyre shall silent lie:
None hath the vanished minstrel’s wondrous skill
To touch that instrument with art and will.
With him, winged poesy doth droop and die;
While our dull age, left voiceless, must lament

The bard high heaven had for its service sent.”

“Over an hour was occupied by the passing files of neighbors, friends, and visitors looking for the last time upon the face of the dead poet. The body was robed completely in white, and the face bore a natural and peaceful expression. From the church the procession took its way to the cemetery. The grave was made beneath a tall pine-tree upon the hill-top of Sleepy Hollow, where lie the bodies of his friends Thoreau and Hawthorne, the upturned sod being concealed by strewings of pine boughs. A border of hemlock spray surrounded the grave and completely lined its sides. The services here were very brief, and the casket was soon lowered to its final resting-place.

“The Rev. Dr. Haskins, a cousin of the family, an Episcopal clergyman, read the Episcopal Burial Service, and closed with the Lord’s Prayer, ending at the words, ‘and deliver us from evil.’ In this all the people joined. Dr. Haskins then pronounced the benediction. After it was over the grandchildren passed the open grave and threw flowers into it.”

So vanished from human eyes the bodily presence of Ralph Waldo Emerson, and his finished record belongs henceforth to memory.

CHAPTER XVI. EMERSON. — A RETROSPECT.

Personality and Habits of Life. — His Commission and Errand. — As a Lecturer. — His Use of Authorities. — Resemblance to Other Writers. — As influenced by Others. — His Place as a Thinker. — Idealism and Intuition. — Mysticism. — His Attitude respecting Science. — As an American. — His Fondness for Solitary Study. — His Patience and Amiability. — Feeling with which he was regarded. — Emerson and Burns. — His Religious Belief. — His Relations with Clergymen. — Future of his Reputation. — His Life judged by the Ideal Standard.

Emerson's earthly existence was in the estimate of his own philosophy so slight an occurrence in his career of being that his relations to the accidents of time and space seem quite secondary matters to one who has been long living in the companionship of his thought. Still, he had to be born, to take in his share of the atmosphere in which we are all immersed, to have dealings with the world of phenomena, and at length to let them all "soar and sing" as he left his earthly half-way house. It is natural and pardonable that we should like to know the details of the daily life which the men whom we admire have shared with common mortals, ourselves among the rest. But Emerson has said truly "Great geniuses have the shortest biographies. Their cousins can tell you nothing about them. They lived in their writings, and so their home and street life was trivial and commonplace."

The reader has had many extracts from Emerson's writings laid before him. It was no easy task to choose them, for his paragraphs are so condensed, so much in the nature of abstracts, that it is like distilling absolute alcohol to attempt separating the spirit of what he says from his undiluted thought. His books are all so full of his life to their last syllable that we might letter every volume *Emersoniana*, by Ralph Waldo Emerson.

From the numerous extracts I have given from Emerson's writings it may be hoped that the reader will have formed an idea for himself of the man and of the life which have been the subjects of these pages. But he may probably expect something like a portrait of the poet and moralist from the hand of his biographer, if the author of this Memoir may borrow the name which will belong to a future and better equipped laborer in the same field. He may not unreasonably look for some general estimate of the life work of the scholar and thinker of whom he has been reading. He will not be disposed to find fault with the writer of the Memoir if he mentions many things which would seem very trivial but for the interest they borrow from the individual to whom they relate.

Emerson's personal appearance was that of a scholar, the descendant of scholars. He was tall and slender, with the complexion which is bred in the

alcove and not in the open air. He used to tell his son Edward that he measured six feet in his shoes, but his son thinks he could hardly have straightened himself to that height in his later years. He was very light for a man of his stature. He got on the scales at Cheyenne, on his trip to California, comparing his weight with that of a lady of the party. A little while afterwards he asked of his fellow-traveller, Professor Thayer, "How much did I weigh? A hundred and forty?" "A hundred and forty and a half," was the answer. "Yes, yes, a hundred and forty and a half! That *half* I prize; it is an index of better things!"

Emerson's head was not such as Schopenhauer insists upon for a philosopher. He wore a hat measuring six and seven eighths on the *cephalometer* used by hatters, which is equivalent to twenty-one inches and a quarter of circumference. The average size is from seven to seven and an eighth, so that his head was quite small in that dimension. It was long and narrow, but lofty, almost symmetrical, and of more nearly equal breadth in its anterior and posterior regions than many or most heads.

His shoulders sloped so much as to be commented upon for this peculiarity by Mr. Gilfillan, and like "Ammon's great son," he carried one shoulder a little higher than the other. His face was thin, his nose somewhat accipitrine, casting a broad shadow; his mouth rather wide, well formed and well closed, carrying a question and an assertion in its finely finished curves; the lower lip a little prominent, the chin shapely and firm, as becomes the corner-stone of the countenance. His expression was calm, sedate, kindly, with that look of refinement, centring about the lips, which is rarely found in the male New Englander, unless the family features have been for two or three cultivated generations the battlefield and the playground of varied thoughts and complex emotions as well as the sensuous and nutritive port of entry. His whole look was irradiated by an ever active inquiring intelligence. His manner was noble and gracious. Few of our fellow-countrymen have had larger opportunities of seeing distinguished personages than our present minister at the Court of St. James. In a recent letter to myself, which I trust Mr. Lowell will pardon my quoting, he says of Emerson: —

"There was a majesty about him beyond all other men I have known, and he habitually dwelt in that ampler and diviner air to which most of us, if ever, only rise in spurts."

From members of his own immediate family I have derived some particulars relating to his personality and habits which are deserving of record.

His hair was brown, quite fine, and, till he was fifty, very thick. His eyes were of the "strongest and brightest blue." The member of the family who tells me this says: —

“My sister and I have looked for many years to see whether any one else had such absolutely blue eyes, and have never found them except in sea-captains. I have seen three sea-captains who had them.”

He was not insensible to music, but his gift in that direction was very limited, if we may judge from this family story. When he was in College, and the singing-master was gathering his pupils, Emerson presented himself, intending to learn to sing. The master received him, and when his turn came, said to him, “Chord!” “What?” said Emerson. “Chord! Chord! I tell you,” repeated the master. “I don’t know what you mean,” said Emerson. “Why, sing! Sing a note.” “So I made some kind of a noise, and the singing-master said, ‘That will do, sir. You need not come again.’”

Emerson’s mode of living was very simple: coffee in the morning, tea in the evening, animal food by choice only once a day, wine only when with others using it, but always *pie* at breakfast. “It stood before him and was the first thing eaten.” Ten o’clock was his bed-time, six his hour of rising until the last ten years of his life, when he rose at seven. Work or company sometimes led him to sit up late, and this he could do night after night. He never was hungry, — could go any time from breakfast to tea without food and not know it, but was always ready for food when it was set before him.

He always walked from about four in the afternoon till tea-time, and often longer when the day was fine, or he felt that he should work the better.

It is plain from his writings that Emerson was possessed all his life long with the idea of his constitutional infirmity and insufficiency. He hated invalidism, and had little patience with complaints about ill-health, but in his poems, and once or twice in his letters to Carlyle, he expresses himself with freedom about his own bodily inheritance. In 1827, being then but twenty-four years old, he writes: —

”I bear in youth the sad infirmities
That use to undo the limb and sense of age.”

Four years later: —

”Has God on thee conferred
A bodily presence mean as Paul’s,
Yet made thee bearer of a word
Which sleepy nations as with trumpet calls?”

and again, in the same year: —

”Leave me, Fear, thy throbs are base,
Trembling for the body’s sake.” —

Almost forty years from the first of these dates we find him bewailing in “Terminus” his inherited weakness of organization.

And in writing to Carlyle, he says: —

“You are of the Anakirn and know nothing of the debility and postponement of the blonde constitution.”

Again, “I am the victim of miscellany — miscellany of designs, vast debility and procrastination.”

He thought too much of his bodily insufficiencies, which, it will be observed, he refers to only in his private correspondence, and in that semi-nudity of self-revelation which is the privilege of poetry. His presence was fine and impressive, and his muscular strength was enough to make him a rapid and enduring walker.

Emerson’s voice had a great charm in conversation, as in the lecture-room. It was never loud, never shrill, but singularly penetrating. He was apt to hesitate in the course of a sentence, so as to be sure of the exact word he wanted; picking his way through his vocabulary, to get at the best expression of his thought, as a well-dressed woman crosses the muddy pavement to reach the opposite sidewalk. It was this natural slight and not unpleasant semicolon pausing of the memory which grew upon him in his years of decline, until it rendered conversation laborious and painful to him.

He never laughed loudly. When he laughed it was under protest, as it were, with closed doors, his mouth shut, so that the explosion had to seek another respiratory channel, and found its way out quietly, while his eyebrows and nostrils and all his features betrayed the “ground swell,” as Professor Thayer happily called it, of the half-suppressed convulsion. He was averse to loud laughter in others, and objected to Margaret Fuller that she made him laugh too much.

Emerson was not rich in some of those natural gifts which are considered the birthright of the New Englander. He had not the mechanical turn of the whittling Yankee. I once questioned him about his manual dexterity, and he told me he could split a shingle four ways with one nail, — which, as the intention is not to split it at all in fastening it to the roof of a house or elsewhere, I took to be a confession of inaptitude for mechanical works. He does not seem to have been very accomplished in the handling of agricultural implements either, for it is told in the family that his little son, Waldo, seeing him at work with a spade, cried out, “Take care, papa, — you will dig your leg.”

He used to regret that he had no ear for music. I have said enough about his verse, which often jars on a sensitive ear, showing a want of the nicest perception of harmonies and discords in the arrangement of the words.

There are stories which show that Emerson had a retentive memory in the earlier part of his life. It is hard to say from his books whether he had or not, for he jotted down such a multitude of things in his diary that this was a kind of mechanical memory which supplied him with endless materials of thought and subjects for his pen.

Lover and admirer of Plato as Emerson was, the doors of the academy, over which was the inscription [Greek: *maedeis hageometraetos eseito*] — Let no one unacquainted with geometry enter here, — would have been closed to him. All the exact sciences found him an unwilling learner. He says of himself that he cannot multiply seven by twelve with impunity.

In an unpublished manuscript kindly submitted to me by Mr. Frothingham, Emerson is reported as saying, "God has given me the seeing eye, but not the working hand." His gift was insight: he saw the germ through its envelop; the particular in the light of the universal; the fact in connection with the principle; the phenomenon as related to the law; all this not by the slow and sure process of science, but by the sudden and searching flashes of imaginative double vision. He had neither the patience nor the method of the inductive reasoner; he passed from one thought to another not by logical steps but by airy flights, which left no footprints. This mode of intellectual action when found united with natural sagacity becomes poetry, philosophy, wisdom, or prophecy in its various forms of manifestation. Without that gift of natural sagacity (*odoratio quaedam venatica*), — a good scent for truth and beauty, — it appears as extravagance, whimsicality, eccentricity, or insanity, according to its degree of aberration. Emerson was eminently sane for an idealist. He carried the same sagacity into the ideal world that Franklin showed in the affairs of common life.

He was constitutionally fastidious, and had to school himself to become able to put up with the terrible inflictions of uncongenial fellowships. We must go to his poems to get at his weaknesses. The clown of the first edition of "Monadnoc" "with heart of cat and eyes of bug," disappears in the after-thought of the later version of the poem, but the eye that recognized him and the nature that recoiled from him were there still. What must he not have endured from the persecutions of small-minded worshippers who fastened upon him for the interminable period between the incoming and the outgoing railroad train! He was a model of patience and good temper. We might have feared that he lacked the sensibility to make such intrusions and offences an annoyance. But when Mr. Frothingham gratifies the public with those most interesting personal

recollections which I have had the privilege of looking over, it will be seen that his equanimity, admirable as it was, was not incapable of being disturbed, and that on rare occasions he could give way to the feeling which showed itself of old in the doom pronounced on the barren fig-tree.

Of Emerson's affections his home-life, and those tender poems in memory of his brothers and his son, give all the evidence that could be asked or wished for. His friends were all who knew him, for none could be his enemy; and his simple graciousness of manner, with the sincerity apparent in every look and tone, hardly admitted indifference on the part of any who met him were it but for a single hour. Even the little children knew and loved him, and babes in arms returned his angelic smile. Of the friends who were longest and most intimately associated with him, it is needless to say much in this place. Of those who are living, it is hardly time to speak; of those who are dead, much has already been written. Margaret Fuller, — I must call my early schoolmate as I best remember her, — leaves her life pictured in the mosaic of five artists, — Emerson himself among the number; Thoreau is faithfully commemorated in the loving memoir by Mr. Sanborn; Theodore Parker lives in the story of his life told by the eloquent Mr. Weiss; Hawthorne awaits his portrait from the master-hand of Mr. Lowell.

How nearly any friend, other than his brothers Edward and Charles, came to him, I cannot say, indeed I can hardly guess. That "majesty" Mr. Lowell speaks of always seemed to hedge him round like the divinity that doth hedge a king. What man was he who would lay his hand familiarly upon his shoulder and call him Waldo? No disciple of Father Mathew would be likely to do such a thing. There may have been such irreverent persons, but if any one had so ventured at the "Saturday Club," it would have produced a sensation like Brummel's "George, ring the bell," to the Prince Regent. His ideas of friendship, as of love, seem almost too exalted for our earthly conditions, and suggest the thought as do many others of his characteristics, that the spirit which animated his mortal frame had missed its way on the shining path to some brighter and better sphere of being.

Not so did Emerson appear among the plain working farmers of the village in which he lived. He was a good, unpretending fellow-citizen who put on no airs, who attended town-meetings, took his part in useful measures, was no great hand at farming, but was esteemed and respected, and felt to be a principal source of attraction to Concord, for strangers came flocking to the place as if it held the tomb of Washington.

What was the errand on which he visited our earth, — the message with which he came commissioned from the Infinite source of all life?

Every human soul leaves its port with sealed orders. These may be opened earlier or later on its voyage, but until they are opened no one can tell what is to be his course or to what harbor he is bound.

Emerson inherited the traditions of the Boston pulpit, such as they were, damaged, in the view of the prevailing sects of the country, perhaps by too long contact with the “Sons of Liberty,” and their revolutionary notions. But the most “liberal” Boston pulpit still held to many doctrines, forms, and phrases open to the challenge of any independent thinker.

In the year 1832 this young priest, then a settled minister, “began,” as was said of another,— “to be about thirty years of age.” He had opened his sealed orders and had read therein:

Thou shalt not profess that which thou dost not believe.

Thou shalt not heed the voice of man when it agrees not with the voice of God in thine own soul.

Thou shalt study and obey the laws of the Universe and they will be thy fellow-servants.

Thou shalt speak the truth as thou seest it, without fear, in the spirit of kindness to all thy fellow-creatures, dealing with the manifold interests of life and the typical characters of history.

Nature shall be to thee as a symbol. The life of the soul, in conscious union with the Infinite, shall be for thee the only real existence.

This pleasing show of an external world through which thou art passing is given thee to interpret by the light which is in thee. Its least appearance is not unworthy of thy study. Let thy soul be open and thine eyes will reveal to thee beauty everywhere.

Go forth with thy message among thy fellow-creatures; teach them they must trust themselves as guided by that inner light which dwells with the pure in heart, to whom it was promised of old that they shall see God.

Teach them that each generation begins the world afresh, in perfect freedom; that the present is not the prisoner of the past, but that today holds captive all yesterdays, to compare, to judge, to accept, to reject their teachings, as these are shown by its own morning’s sun.

To thy fellow-countrymen thou shalt preach the gospel of the New World, that here, here in our America, is the home of man; that here is the promise of a new and more excellent social state than history has recorded.

Thy life shall be as thy teachings, brave, pure, truthful, beneficent, hopeful, cheerful, hospitable to all honest belief, all sincere thinkers, and active according

to thy gifts and opportunities.

*

He was true to the orders he had received. Through doubts, troubles, privations, opposition, he would not

“bate a jot Of heart or hope, but still bear up and steer Right onward.”

All through the writings of Emerson the spirit of these orders manifests itself. His range of subjects is very wide, ascending to the highest sphere of spiritual contemplation, bordering on that “intense inane” where thought loses itself in breathless ecstasy, and stooping to the homeliest maxims of prudence and the every-day lessons of good manners, And all his work was done, not so much

“As ever in his great Taskmaster’s eye,”

as in the ever-present sense of divine companionship.

He was called to sacrifice his living, his position, his intimacies, to a doubt, and he gave them all up without a murmur. He might have been an idol, and he broke his own pedestal to attack the idolatry which he saw all about him. He gave up a comparatively easy life for a toilsome and trying one; he accepted a precarious employment, which hardly kept him above poverty, rather than wear the golden padlock on his lips which has held fast the conscience of so many pulpit Chrysostoms. Instead of a volume or two of sermons, bridled with a text and harnessed with a confession of faith, he bequeathed us a long series of Discourses and Essays in which we know we have his honest thoughts, free from that professional bias which tends to make the pulpit teaching of the fairest-minded preacher follow a diagonal of two forces, — the promptings of his personal and his ecclesiastical opinions.

Without a church or a pulpit, he soon had a congregation. It was largely made up of young persons of both sexes, young by nature, if not in years, who, tired of routine and formulae, and full of vague aspirations, found in his utterances the oracles they sought. To them, in the words of his friend and neighbor Mr. Alcott, he

“Sang his full song of hope and lofty cheer.”

Nor was it only for a few seasons that he drew his audiences of devout listeners around him. Another poet, his Concord neighbor, Mr. Sanborn, who listened to him many years after the first flush of novelty was over, felt the same enchantment, and recognized the same inspiring life in his words, which had thrilled the souls of those earlier listeners.

”His was the task and his the lordly gift

Our eyes, our hearts, bent earthward, to uplift.”

This was his power, — to inspire others, to make life purer, loftier, calmer, brighter. Optimism is what the young want, and he could no more help taking the hopeful view of the universe and its future than Claude could help flooding his landscapes with sunshine.

“Nature,” published in 1836, “the first clear manifestation of his genius,” as Mr. Norton calls it, revealed him as an idealist and a poet, with a tendency to mysticism. If he had been independent in circumstances, he would doubtless have developed more freely in these directions. But he had his living to get and a family to support, and he must look about him for some paying occupation. The lecture-room naturally presented itself to a scholar accustomed to speaking from the pulpit. This medium of communicating thought was not as yet very popular, and the rewards it offered were but moderate. Emerson was of a very hopeful nature, however, and believed in its possibilities.

— “I am always haunted with brave dreams of what might be accomplished in the lecture-room, — so free and so unpretending a platform, — a Delos not yet made fast. I imagine an eloquence of infinite variety, rich as conversation can be, with anecdote, joke, tragedy, epics and pindarics, argument and confession.” So writes Emerson to Carlyle in 1841.

It would be as unfair to overlook the special form in which Emerson gave most of his thoughts to the world, as it would be to leave out of view the calling of Shakespeare in judging his literary character. Emerson was an essayist and a lecturer, as Shakespeare was a dramatist and a play-actor.

The exigencies of the theatre account for much that is, as it were, accidental in the writings of Shakespeare. The demands of the lecture-room account for many peculiarities which are characteristic of Emerson as an author. The play must be in five acts, each of a given length. The lecture must fill an hour and not overrun it. Both play and lecture must be vivid, varied, picturesque, stimulating, or the audience would tire before the allotted time was over.

Both writers had this in common: they were poets and moralists. They reproduced the conditions of life in the light of penetrative observation and ideal contemplation; they illustrated its duties in their breach and in their observance, by precepts and well-chosen portraits of character. The particular form in which they wrote makes little difference when we come upon the utterance of a noble truth or an elevated sentiment.

It was not a simple matter of choice with the dramatist or the lecturer in what direction they should turn their special gifts. The actor had learned his business on the stage; the lecturer had gone through his apprenticeship in the pulpit. Each

had his bread to earn, and he must work, and work hard, in the way open before him. For twenty years the playwright wrote dramas, and retired before middle age with a good estate to his native town. For forty years Emerson lectured and published lectures, and established himself at length in competence in the village where his ancestors had lived and died before him. He never became rich, as Shakespeare did. He was never in easy circumstances until he was nearly seventy years old. Lecturing was hard work, but he was under the “base necessity,” as he called it, of constant labor, writing in summer, speaking everywhere east and west in the trying and dangerous winter season.

He spoke in great cities to such cultivated audiences as no other man could gather about him, and in remote villages where he addressed plain people whose classics were the Bible and the “Farmer’s Almanac.” Wherever he appeared in the lecture-room, he fascinated his listeners by his voice and manner; the music of his speech pleased those who found his thought too subtle for their dull wits to follow.

When the Lecture had served its purpose, it came before the public in the shape of an Essay. But the Essay never lost the character it borrowed from the conditions under which it was delivered; it was a lay sermon, — *concio ad populum*. We must always remember what we are dealing with. “Expect nothing more of my power of construction, — no ship-building, no clipper, smack, nor skiff even, only boards and logs tied together.”— “Here I sit and read and write, with very little system, and, as far as regards composition, with the most fragmentary result: paragraphs incompressible, each sentence an infinitely repellent particle.” We have then a moralist and a poet appearing as a Lecturer and an Essayist, and now and then writing in verse. He liked the freedom of the platform. “I preach in the Lecture-room,” he says, “and there it tells, for there is no prescription. You may laugh, weep, reason, sing, sneer, or pray, according to your genius.” In England, he says, “I find this lecturing a key which opens all doors.” But he did not tend to overvalue the calling which from “base necessity” he followed so diligently. “Incorrigible spouting Yankee,” he calls himself; and again, “I peddle out all the wit I can gather from Time or from Nature, and am pained at heart to see how thankfully that little is received.” Lecture-peddling was a hard business and a poorly paid one in the earlier part of the time when Emerson was carrying his precious wares about the country and offering them in competition with the cheapest itinerants, with shilling concerts and negro-minstrel entertainments. But one could get a kind of living out of it if he had invitations enough. I remember Emerson’s coming to my house to know if I could fill his place at a certain Lyceum so that he might accept a very advantageous invitation in another direction. I told him that I was unfortunately

engaged for the evening mentioned. He smiled serenely, saying that then he supposed he must give up the new stove for that season.

No man would accuse Emerson of parsimony of ideas. He crams his pages with the very marrow of his thought. But in weighing out a lecture he was as punctilious as Portia about the pound of flesh. His utterance was deliberate and spaced with not infrequent slight delays. Exactly at the end of the hour the lecture stopped. Suddenly, abruptly, but quietly, without peroration of any sort, always with “a gentle shock of mild surprise” to the unprepared listener. He had weighed out the full measure to his audience with perfect fairness.

[Greek: oste thalanta gunhae cheruhaetis halaethaes
Aetestathmhon hechon echousa kahi heirion hamphis hanhelkei
Ishazous ina paishin haeikhea misthon haraetai,]

or, in Bryant’s version,

”as the scales

Are held by some just woman, who maintains
By spinning wool her household, — carefully
She poises both the wool and weights, to make
The balance even, that she may provide
A pittance for her babes.” —

As to the charm of his lectures all are agreed. It is needless to handle this subject, for Mr. Lowell has written upon it. Of their effect on his younger listeners he says, “To some of us that long past experience remains the most marvellous and fruitful we have ever had. Emerson awakened us, saved us from the body of this death. It is the sound of the trumpet that the young soul longs for, careless of what breath may fill it. Sidney heard it in the ballad of ‘Chevy Chase,’ and we in Emerson. Nor did it blow retreat, but called us with assurance of victory.”

There was, besides these stirring notes, a sweet seriousness in Emerson’s voice that was infinitely soothing. So might “Peace, be still,” have sounded from the lips that silenced the storm. I remember that in the dreadful war-time, on one of the days of anguish and terror, I fell in with Governor Andrew, on his way to a lecture of Emerson’s, where he was going, he said, to relieve the strain upon his mind. An hour passed in listening to that flow of thought, calm and clear as the diamond drops that distil from a mountain rock, was a true nepenthe for a careworn soul.

An author whose writings are like mosaics must have borrowed from many quarries. Emerson had read more or less thoroughly through a very wide range of authors. I shall presently show how extensive was his reading. No doubt he had studied certain authors diligently, a few, it would seem, thoroughly. But let no one be frightened away from his pages by the terrible names of Plotinus and Proclus and Porphyry, of Behmen or Spinoza, or of those modern German philosophers with whom it is not pretended that he had any intimate acquaintance. Mr. George Ripley, a man of erudition, a keen critic, a lover and admirer of Emerson, speaks very plainly of his limitations as a scholar.

“As he confesses in the Essay on ‘Books,’ his learning is second hand; but everything sticks which his mind can appropriate. He defends the use of translations, and I doubt whether he has ever read ten pages of his great authorities, Plato, Plutarch, Montaigne, or Goethe, in the original. He is certainly no friend of profound study any more than of philosophical speculation. Give him a few brilliant and suggestive glimpses, and he is content.”

One correction I must make to this statement. Emerson says he has “contrived to read” almost every volume of Goethe, and that he has fifty-five of them, but that he has read nothing else in German, and has not looked into him for a long time. This was in 1840, in a letter to Carlyle. It was up-hill work, it may be suspected, but he could not well be ignorant of his friend’s great idol, and his references to Goethe are very frequent.

Emerson’s quotations are like the miraculous draught of fishes. I hardly know his rivals except Burton and Cotton Mather. But no one would accuse him of pedantry. Burton quotes to amuse himself and his reader; Mather quotes to show his learning, of which he had a vast conceit; Emerson quotes to illustrate some original thought of his own, or because another writer’s way of thinking falls in with his own, — never with a trivial purpose. Reading as he did, he must have unconsciously appropriated a great number of thoughts from others. But he was profuse in his references to those from whom he borrowed, — more profuse than many of his readers would believe without taking the pains to count his authorities. This I thought it worth while to have done, once for all, and I will briefly present the results of the examination. The named references, chiefly to authors, as given in the table before me, are three thousand three hundred and ninety-three, relating to eight hundred and sixty-eight different individuals. Of these, four hundred and eleven are mentioned more than once; one hundred and fifty-five, five times or more; sixty-nine, ten times or more; thirty-eight, fifteen times or more; and twenty-seven, twenty times or more. These twenty-seven names alone, the list of which is here given, furnish no less than one thousand and sixty-five references.

The name of Jesus occurs fifty-four times.

It is interesting to observe that Montaigne, Franklin, and Emerson all show the same fondness for Plutarch.

Montaigne says, "I never settled myself to the reading of any book of solid learning but Plutarch and Seneca."

Franklin says, speaking of the books in his father's library, "There was among them Plutarch's Lives, which I read abundantly, and I still think that time spent to great advantage."

Emerson says, "I must think we are more deeply indebted to him than to all the ancient writers."

Studies of life and character were the delight of all these four moralists. As a judge of character, Dr. Hedge, who knew Emerson well, has spoken to me of his extraordinary gift, and no reader of "English Traits" can have failed to mark the formidable penetration of the intellect which looked through those calm cerulean eyes.

Noscitur a sociis is as applicable to the books a man most affects as well as to the companions he chooses. It is with the kings of thought that Emerson most associates. As to borrowing from his royal acquaintances his ideas are very simple and expressed without reserve.

"All minds quote. Old and new make the warp and woof of every moment. There is no thread that is not a twist of these two strands. By necessity, by proclivity, and by delight, we all quote."

What Emerson says of Plutarch applies very nearly to himself.

"In his immense quotation and allusion we quickly cease to discriminate between what he quotes and what he invents. We sail on his memory into the ports of every nation, enter into every private property, and do not stop to discriminate owners, but give him the praise of all."

Mr. Ruskin and Lord Tennyson have thought it worth their while to defend themselves from the charge of plagiarism. Emerson would never have taken the trouble to do such a thing. His mind was overflowing with thought as a river in the season of flood, and was full of floating fragments from an endless variety of sources. He drew ashore whatever he wanted that would serve his purpose. He makes no secret of his mode of writing. "I dot evermore in my endless journal, a line on every knowable in nature; but the arrangement loiters long, and I get a brick-kiln instead of a house." His journal is "full of disjointed dreams and audacities." Writing by the aid of this, it is natural enough that he should speak of his "lapidary style" and say "I build my house of boulders."

"It is to be remembered," says Mr. Ruskin, "that all men who have sense and feeling are continually helped: they are taught by every person they meet, and enriched by everything that falls in their way. The greatest is he who has been oftenest aided; and if the attainments of all human minds could be traced to their real sources, it would be found that the world had been laid most under contribution by the men of most original powers, and that every day of their existence deepened their debt to their race, while it enlarged their gifts to it."

The reader may like to see a few coincidences between Emerson's words and thoughts and those of others.

Some sayings seem to be a kind of family property. "Scorn trifles" comes from Aunt Mary Moody Emerson, and reappears in her nephew, Ralph Waldo. — "What right have you, Sir, to your virtue? Is virtue piecemeal? This is a jewel

among the rags of a beggar.” So writes Ralph Waldo Emerson in his Lecture “New England Reformers.”— “Hiding the badges of royalty beneath the gown of the mendicant, and ever on the watch lest their rank be betrayed by the sparkle of a gem from under their rags.” Thus wrote Charles Chauncy Emerson in the “Harvard Register” nearly twenty years before.

”The hero is not fed on sweets,
Daily his own heart he eats.”

The image comes from Pythagoras *via* Plutarch.

Now and then, but not with any questionable frequency, we find a sentence which recalls Carlyle.

“The national temper, in the civil history, is not flashy or whiffling. The slow, deep English mass smoulders with fire, which at last sets all its borders in flame. The wrath of London is not French wrath, but has a long memory, and in hottest heat a register and rule.”

Compare this passage from “English Traits” with the following one from Carlyle’s “French Revolution”: —

“So long this Gallic fire, through its successive changes of color and character, will blaze over the face of Europe, and afflict and scorch all men: — till it provoke all men, till it kindle another kind of fire, the Teutonic kind, namely; and be swallowed up, so to speak, in a day! For there is a fire comparable to the burning of dry jungle and grass; most sudden, high-blazing; and another fire which we liken to the burning of coal, or even of anthracite coal, but which no known thing will put out.”

”O what are heroes, prophets, men
But pipes through which the breath of man doth blow
A momentary music.”

The reader will find a similar image in one of Burns’s letters, again in one of Coleridge’s poetical fragments, and long before any of them, in a letter of Leibnitz.

“He builded better than he knew”

is the most frequently quoted line of Emerson. The thought is constantly recurring in our literature. It helps out the minister’s sermon; and a Fourth of July Oration which does not borrow it is like the “Address without a Phoenix”

among the Drury Lane mock poems. Can we find any trace of this idea elsewhere?

In a little poem of Coleridge's, "William Tell," are these two lines:

"On wind and wave the boy would toss
Was great, nor knew how great he was."

The thought is fully worked out in the celebrated Essay of Carlyle called "Characteristics." It reappears in Emerson's poem "Fate."

"Unknown to Cromwell as to me
Was Cromwell's measure and degree;
Unknown to him as to his horse,
If he than his groom is better or worse."

It is unnecessary to illustrate this point any further in this connection. In dealing with his poetry other resemblances will suggest themselves. All the best poetry the world has known is full of such resemblances. If we find Emerson's wonderful picture, "Initial Love" prefigured in the "Symposium" of Plato, we have only to look in the "Phaedrus" and we shall find an earlier sketch of Shakespeare's famous group, —

"The lunatic, the lover, and the poet."

Sometimes these resemblances are nothing more than accidental coincidences; sometimes the similar passages are unconsciously borrowed from another; sometimes they are paraphrases, variations, embellished copies, *éditions de luxe* of sayings that all the world knows are old, but which it seems to the writer worth his while to say over again. The more improved versions of the world's great thoughts we have, the better, and we look to the great minds for them. The larger the river the more streams flow into it. The wide flood of Emerson's discourse has a hundred rivers and thousands of streamlets for its tributaries.

It was not from books only that he gathered food for thought and for his lectures and essays. He was always on the lookout in conversation for things to be remembered. He picked up facts one would not have expected him to care for. He once corrected me in giving Flora Temple's time at Kalamazoo. I made a mistake of a quarter of a second, and he set me right. He was not always so exact in his memory, as I have already shown in several instances. Another example is where he speaks of Quintus Curtius, the historian, when he is thinking of Mettus Curtius, the self-sacrificing equestrian. Little inaccuracies of this kind did not

concern him much; he was a wholesale dealer in illustrations, and could not trouble himself about a trifling defect in this or that particular article.

Emerson was a man who influenced others more than others influenced him. Outside of his family connections, the personalities which can be most easily traced in his own are those of Carlyle, Mr. Alcott, and Thoreau. Carlyle's harsh virility could not be without its effect on his valid, but sensitive nature. Alcott's psychological and physiological speculations interested him as an idealist. Thoreau lent him a new set of organs of sense of wonderful delicacy. Emerson looked at nature as a poet, and his natural history, if left to himself, would have been as vague as that of Polonius. But Thoreau had a pair of eyes which, like those of the Indian deity, could see the smallest emmet on the blackest stone in the darkest night, — or come nearer to seeing it than those of most mortals. Emerson's long intimacy with him taught him to give an outline to many natural objects which would have been poetic nebulae to him but for this companionship. A nicer analysis would detect many alien elements mixed with his individuality, but the family traits predominated over all the external influences, and the personality stood out distinct from the common family qualities. Mr. Whipple has well said: "Some traits of his mind and character may be traced back to his ancestors, but what doctrine of heredity can give us the genesis of his genius? Indeed the safest course to pursue is to quote his own words, and despairingly confess that it is the nature of genius 'to spring, like the rainbow daughter of Wonder, from the invisible, to abolish the past and refuse all history.'"

*

Emerson's place as a thinker is somewhat difficult to fix. He cannot properly be called a psychologist. He made notes and even delivered lectures on the natural history of the intellect; but they seem to have been made up, according to his own statement, of hints and fragments rather than of the results of systematic study. He was a man of intuition, of insight, a seer, a poet, with a tendency to mysticism. This tendency renders him sometimes obscure, and once in a while almost, if not quite, unintelligible. We can, for this reason, understand why the great lawyer turned him over to his daughters, and Dr. Walter Channing complained that his lecture made his head ache. But it is not always a writer's fault that he is not understood. Many persons have poor heads for abstractions; and as for mystics, if they understand themselves it is quite as much as can be expected. But that which is mysticism to a dull listener may be the highest and most inspiring imaginative clairvoyance to a brighter one. It is to be hoped that

no reader will take offence at the following anecdote, which may be found under the title “Diogenes,” in the work of his namesake, Diogenes Laertius. I translate from the Latin version.

“Plato was talking about ideas, and spoke of *mensality* and *cyathity* [*tableity*, and *gobletity*]. ‘I can see a table and a goblet,’ said the cynic, ‘but I can see no such things as tableity and gobletity.’ ‘Quite so,’ answered Plato, ‘because you have the eyes to see a goblet and a table with, but you have not the brains to understand tableity and gobletity.’”

This anecdote may be profitably borne in mind in following Emerson into the spheres of intuition and mystical contemplation.

Emerson was an idealist in the Platonic sense of the word, a spiritualist as opposed to a materialist. He believes, he says, “as the wise Spenser teaches,” that the soul makes its own body. This, of course, involves the doctrine of preexistence; a doctrine older than Spenser, older than Plato or Pythagoras, having its cradle in India, fighting its way down through Greek philosophers and Christian fathers and German professors, to our own time, when it has found Pierre Leroux, Edward Beecher, and Brigham Young among its numerous advocates. Each has his fancies on the subject. The geography of an undiscovered country and the soundings of an ocean that has never been sailed over may belong to romance and poetry, but they do not belong to the realm of knowledge.

That the organ of the mind brings with it inherited aptitudes is a simple matter of observation. That it inherits truths is a different proposition. The eye does not bring landscapes into the world on its retina, — why should the brain bring thoughts? Poetry settles such questions very simply by saying it is so.

The poet in Emerson never accurately differentiated itself from the philosopher. He speaks of Wordsworth’s Ode on the Intimations of Immortality as the high-water mark of the poetry of this century. It sometimes seems as if he had accepted the lofty rhapsodies of this noble Ode as working truths.

”Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory do we come
From God, who is our home.”

In accordance with this statement of a divine inheritance from a preexisting state, the poet addresses the infant: —

”Mighty prophet! Seer blest!

On whom those truths do rest
Which we are toiling all our lives to find.” —

These are beautiful fancies, but the philosopher will naturally ask the poet what are the truths which the child has lost between its cradle and the age of eight years, at which Wordsworth finds the little girl of whom he speaks in the lines, —

”A simple child —
That lightly draws its breath
And feels its life in every limb, —
What should it know of death?”

What should it, sure enough, or of any other of those great truths which Time with its lessons, and the hardening of the pulpy brain can alone render appreciable to the consciousness? Undoubtedly every brain has its own set of moulds ready to shape all material of thought into its own individual set of patterns. If the mind comes into consciousness with a good set of moulds derived by “traduction,” as Dryden called it, from a good ancestry, it may be all very well to give the counsel to the youth to plant himself on his instincts. But the individual to whom this counsel is given probably has dangerous as well as wholesome instincts. He has also a great deal besides the instincts to be considered. His instincts are mixed up with innumerable acquired prejudices, erroneous conclusions, deceptive experiences, partial truths, one-sided tendencies. The clearest insight will often find it hard to decide what is the real instinct, and whether the instinct itself is, in theological language, from God or the devil. That which was a safe guide for Emerson might not work well with Lacenaire or Jesse Pomeroy. The cloud of glory which the babe brings with it into the world is a good set of instincts, which dispose it to accept moral and intellectual truths, — not the truths themselves. And too many children come into life trailing after them clouds which are anything but clouds of glory.

It may well be imagined that when Emerson proclaimed the new doctrine, — new to his young disciples, — of planting themselves on their instincts, consulting their own spiritual light for guidance, — trusting to intuition, — without reference to any other authority, he opened the door to extravagances in any unbalanced minds, if such there were, which listened to his teachings. Too much was expected out of the mouths of babes and sucklings. The children shut up by Psammetichus got as far as one word in their evolution of an original language, but *bekkos* was a very small contribution towards a complete

vocabulary. "The Dial" was well charged with intuitions, but there was too much vagueness, incoherence, aspiration without energy, effort without inspiration, to satisfy those who were looking for a new revelation.

The gospel of intuition proved to be practically nothing more or less than this: a new manifesto of intellectual and spiritual independence. It was no great discovery that we see many things as truths which we cannot prove. But it was a great impulse to thought, a great advance in the attitude of our thinking community, when the profoundly devout religious free-thinker took the ground of the undevout and irreligious free-thinker, and calmly asserted and peaceably established the right and the duty of the individual to weigh the universe, its laws and its legends, in his own balance, without fear of authority, or names, or institutions.

All this brought its dangers with it, like other movements of emancipation. For the *Fay ce que voudras* of the revellers of Medmenham Abbey, was substituted the new motto, *Pense ce que voudras*. There was an intoxication in this newly proclaimed evangel which took hold of some susceptible natures and betrayed itself in prose and rhyme, occasionally of the Bedlam sort. Emerson's disciples were never accused of falling into the more perilous snares of antinomianism, but he himself distinctly recognizes the danger of it, and the counterbalancing effect of household life, with its curtain lectures and other benign influences. Extravagances of opinion cure themselves. Time wore off the effects of the harmless debauch, and restored the giddy revellers to the regimen of sober thought, as reformed spiritual inebriates.

Such were some of the incidental effects of the Emersonian declaration of independence. It was followed by a revolutionary war of opinion not yet ended or at present like to be. A local outbreak, if you will, but so was throwing the tea overboard. A provincial affair, if the Bohemian press likes that term better, but so was the skirmish where the gun was fired the echo of which is heard in every battle for freedom all over the world.

*

Too much has been made of Emerson's mysticism. He was an intellectual rather than an emotional mystic, and withal a cautious one. He never let go the string of his balloon. He never threw over all his ballast of common sense so as to rise above an atmosphere in which a rational being could breathe. I found in his library William Law's edition of Jacob Behmen. There were all those wonderful diagrams over which the reader may have grown dizzy, — just such as one finds on the walls of lunatic asylums, — evidences to all sane minds of cerebral

strabismus in the contrivers of them. Emerson liked to lose himself for a little while in the vagaries of this class of minds, the dangerous proximity of which to insanity he knew and has spoken of. He played with the incommunicable, the inconceivable, the absolute, the antinomies, as he would have played with a bundle of jack-straws. "Brahma," the poem which so mystified the readers of the "Atlantic Monthly," was one of his spiritual divertissements. To the average Western mind it is the nearest approach to a Torricellian vacuum of intelligibility that language can pump out of itself. If "Rejected Addresses" had not been written half a century before Emerson's poem, one would think these lines were certainly meant to ridicule and parody it.

"The song of Braham is an Irish howl;
Thinking is but an idle waste of thought,
And nought is everything and everything is nought."

Braham, Hazlitt might have said, is so obviously the anagram of Brahma that dulness itself could not mistake the object intended.

Of course no one can hold Emerson responsible for the "Yoga" doctrine of Brahmanism, which he has amused himself with putting in verse. The oriental side of Emerson's nature delighted itself in these narcotic dreams, born in the land of the poppy and of hashish. They lend a peculiar charm to his poems, but it is not worth while to try to construct a philosophy out of them. The knowledge, if knowledge it be, of the mystic is not transmissible. It is not cumulative; it begins and ends with the solitary dreamer, and the next who follows him has to build his own cloud-castle as if it were the first aerial edifice that a human soul had ever constructed.

Some passages of "Nature," "The Over-Soul," "The Sphinx," "Uriel," illustrate sufficiently this mood of spiritual exaltation. Emerson's calm temperament never allowed it to reach the condition he sometimes refers to, — that of ecstasy. The passage in "Nature" where he says "I become a transparent eyeball" is about as near it as he ever came. This was almost too much for some of his admirers and worshippers. One of his most ardent and faithful followers, whose gifts as an artist are well known, mounted the eyeball on legs, and with its cornea in front for a countenance and its optic nerve projecting behind as a queue, the spiritual cyclops was shown setting forth on his travels.

Emerson's reflections in the "transcendental" mood do beyond question sometimes irresistibly suggest the close neighborhood of the sublime to the ridiculous. But very near that precipitous border line there is a charmed region where, if the statelier growths of philosophy die out and disappear, the flowers

of poetry next the very edge of the chasm have a peculiar and mysterious beauty. "Uriel" is a poem which finds itself perilously near to the gulf of unsounded obscurity, and has, I doubt not, provoked the mirth of profane readers; but read in a lucid moment, it is just obscure enough and just significant enough to give the voltaic thrill which comes from the sudden contacts of the highest imaginative conceptions.

Human personality presented itself to Emerson as a passing phase of universal being. Born of the Infinite, to the Infinite it was to return. Sometimes he treats his own personality as interchangeable with objects in nature, — he would put it off like a garment and clothe himself in the landscape. Here is a curious extract from "The Adirondacs," in which the reader need not stop to notice the parallelism with Byron's —

"The sky is changed, — and such a change! O night
And storm and darkness, ye are wondrous strong." —

Now Emerson: —

"And presently the sky is changed; O world!
What pictures and what harmonies are thine!
The clouds are rich and dark, the air serene,
So like the soul of me, what if't were me?"

We find this idea of confused personal identity also in a brief poem printed among the "Translations" in the Appendix to Emerson's Poems. These are the last two lines of "The Flute, from Hilali": —

"Saying, Sweetheart! the old mystery remains,
If I am I; thou, thou, or thou art I?"

The same transfer of personality is hinted in the line of Shelley's "Ode to the West Wind":

"Be thou, Spirit fierce,
My spirit! Be thou me, impetuous one!"

Once more, how fearfully near the abyss of the ridiculous! A few drops of alcohol bring about a confusion of mind not unlike this poetical metempsychosis.

The laird of Balnamoon had been at a dinner where they gave him cherry-

brandy instead of port wine. In driving home over a wild tract of land called Munrimmon Moor his hat and wig blew off, and his servant got out of the gig and brought them to him. The hat he recognized, but not the wig. "It's no my wig, Hairy [Harry], lad; it's no my wig," and he would not touch it. At last Harry lost his patience: "Ye'd better tak' it, sir, for there's nae waile [choice] o' wigs on Munrimmon Moor." And in our earlier days we used to read of the bewildered market-woman, whose *Ego* was so obscured when she awoke from her slumbers that she had to leave the question of her personal identity to the instinct of her four-footed companion: —

"If it be I, he'll wag his little tail;
And if it be not I, he'll loudly bark and wail."

I have not lost my reverence for Emerson in showing one of his fancies for a moment in the distorting mirror of the ridiculous. He would doubtless have smiled with me at the reflection, for he had a keen sense of humor. But I take the opportunity to disclaim a jesting remark about "a foreshell of the Infinite" which Mr. Conway has attributed to me, who am innocent of all connection with it.

The mystic appeals to those only who have an ear for the celestial concords, as the musician only appeals to those who have the special endowment which enables them to understand his compositions. It is not for organizations untuned to earthly music to criticise the great composers, or for those who are deaf to spiritual harmonies to criticise the higher natures which lose themselves in the strains of divine contemplation. The bewildered reader must not forget that passage of arms, previously mentioned, between Plato and Diogenes.

*

Emerson looked rather askance at Science in his early days. I remember that his brother Charles had something to say in the "Harvard Register" (1828) about its disenchantments. I suspect the prejudice may have come partly from Wordsworth. Compare this verse of his with the lines of Emerson's which follow it.

"Physician art thou, one all eyes;
Philosopher, a fingering slave,
One that would peep and botanize
Upon his mother's grave?"

Emerson's lines are to be found near the end of the Appendix in the new edition of his works.

"Philosophers are lined with eyes within,
And, being so, the sage unmakes the man.
In love he cannot therefore cease his trade;
Scarce the first blush has overspread his cheek,
He feels it, introverts his learned eye
To catch the unconscious heart in the very act.
His mother died, — the only friend he had, —
Some tears escaped, but his philosophy
Couched like a cat, sat watching close behind
And throttled all his passion. Is't not like
That devil-spider that devours her mate
Scarce freed from her embraces?"

The same feeling comes out in the Poem "Blight," where he says the "young scholars who invade our hills"

"Love not the flower they pluck, and know it not,
And all their botany is Latin names;"

and in "The Walk," where the "learned men" with their glasses are contrasted with the sons of Nature, — the poets are no doubt meant, — much to the disadvantage of the microscopic observers. Emerson's mind was very far from being of the scientific pattern. Science is quantitative, — loves the foot-rule and the balance, — methodical, exhaustive, indifferent to the beautiful as such. The poet is curious, asks all manner of questions, and never thinks of waiting for the answer, still less of torturing Nature to get at it. Emerson wonders, for instance,

—
"Why Nature loves the number five,"

but leaves his note of interrogation without troubling himself any farther. He must have picked up some wood-craft and a little botany from Thoreau, and a few chemical notions from his brother-in-law, Dr. Jackson, whose name is associated with the discovery of artificial anaesthesia. It seems probable that the genial companionship of Agassiz, who united with his scientific genius, learning, and renown, most delightful social qualities, gave him a kinder feeling to men of science and their pursuits than he had entertained before that great master came among us. At any rate he avails himself of the facts drawn from

their specialties without scruple when they will serve his turn. But he loves the poet always better than the scientific student of nature. In his Preface to the Poems of Mr. W.E. Channing, he says: —

“Here is a naturalist who sees the flower and the bud with a poet’s curiosity and awe, and does not count the stamens in the aster, nor the feathers in the wood-thrush, but rests in the surprise and affection they awake.” —

This was Emerson’s own instinctive attitude to all the phenomena of nature.

Emerson’s style is epigrammatic, incisive, authoritative, sometimes quaint, never obscure, except when he is handling nebulous subjects. His paragraphs are full of brittle sentences that break apart and are independent units, like the fragments of a coral colony. His imagery is frequently daring, leaping from the concrete to the abstract, from the special to the general and universal, and *vice versa*, with a bound that is like a flight. Here are a few specimens of his pleasing *audacities*: —

“There is plenty of wild azote and carbon unappropriated, but it is naught till we have made it up into loaves and soup.” —

“He arrives at the sea-shore and a sumptuous ship has floored and carpeted for him the stormy Atlantic.” —

“If we weave a yard of tape in all humility and as well as we can, long hereafter we shall see it was no cotton tape at all but some galaxy which we braided, and that the threads were Time and Nature.” —

“Tapping the tempest for a little side wind.” —

“The locomotive and the steamboat, like enormous shuttles, shoot every day across the thousand various threads of national descent and employment and bind them fast in one web.” —

He is fond of certain archaisms and unusual phrases. He likes the expression “mother-wit,” which he finds in Spenser, Marlowe, Shakespeare, and other old writers. He often uses the word “husband” in its earlier sense of economist. His use of the word “haughty” is so fitting, and it sounds so nobly from his lips, that we could wish its employment were forbidden henceforth to voices which vulgarize it. But his special, constitutional, word is “fine,” meaning something like dainty, as Shakespeare uses it,— “my dainty Ariel,”— “fine Ariel.” It belongs to his habit of mind and body as “faint” and “swoon” belong to Keats. This word is one of the ear-marks by which Emerson’s imitators are easily recognized. “Melioration” is another favorite word of Emerson’s. A clairvoyant could spell out some of his most characteristic traits by the aid of his use of these three words; his inborn fastidiousness, subdued and kept out of sight by his large charity and his good breeding, showed itself in his liking for the word “haughty;” his exquisite delicacy by his fondness for the word “fine,” with a

certain shade of meaning; his optimism in the frequent recurrence of the word “melioration.”

We must not find fault with his semi-detached sentences until we quarrel with Solomon and criticise the Sermon on the Mount. The “point and surprise” which he speaks of as characterizing the style of Plutarch belong eminently to his own. His fertility of illustrative imagery is very great. His images are noble, or, if borrowed from humble objects, ennobled by his handling. He throws his royal robe over a milking-stool and it becomes a throne. But chiefly he chooses objects of comparison grand in themselves. He deals with the elements at first hand. Such delicacy of treatment, with such breadth and force of effect, is hard to match anywhere, and we know him by his style at sight. It is as when the slight fingers of a girl touch the keys of some mighty and many-voiced organ, and send its thunders rolling along the aisles and startling the stained windows of a great cathedral. We have seen him as an unpretending lecturer. We follow him round as he “peddles out all the wit he can gather from Time or from Nature,” and we find that “he has changed his market cart into a chariot of the sun,” and is carrying about the morning light as merchandise.

*

Emerson was as loyal an American, as thorough a New Englander, as home-loving a citizen, as ever lived. He arraigned his countrymen sharply for their faults. Mr. Arnold made one string of his epithets familiar to all of us,— “This great, intelligent, sensual, and avaricious America.” This was from a private letter to Carlyle. In his Essay, “Works and Days,” he is quite as outspoken: “This mendicant America, this curious, peering, itinerant, imitative America.” “I see plainly,” he says, “that our society is as bigoted to the respectabilities of religion and education as yours.” “The war,” he says, “gave back integrity to this erring and immoral nation.” All his life long he recognized the faults and errors of the new civilization. All his life long he labored diligently and lovingly to correct them. To the dark prophecies of Carlyle, which came wailing to him across the ocean, he answered with ever hopeful and cheerful anticipations. “Here,” he said, in words I have already borrowed, “is the home of man — here is the promise of a new and more excellent social state than history has recorded.”

Such a man as Emerson belongs to no one town or province or continent; he is the common property of mankind; and yet we love to think of him as breathing the same air and treading the same soil that we and our fathers and our children have breathed and trodden. So it pleases us to think how fondly he remembered his birthplace; and by the side of Franklin’s bequest to his native

city we treasure that golden verse of Emerson's: —

”A blessing through the ages thus
Shield all thy roofs and towers,
GOD WITH THE FATHERS, SO WITH US,
Thou darling town of ours!”

Emerson sympathized with all generous public movements, but he was not fond of working in associations, though he liked well enough to attend their meetings as a listener and looker-on. His study was his workshop, and he preferred to labor in solitude. When he became famous he paid the penalty of celebrity in frequent interruptions by those “devastators of the day” who sought him in his quiet retreat. His courtesy and kindness to his visitors were uniform and remarkable. Poets who come to recite their verses and reformers who come to explain their projects are among the most formidable of earthly visitations. Emerson accepted his martyrdom with meek submission; it was a martyrdom in detail, but collectively its petty tortures might have satisfied a reasonable inquisitor as the punishment of a moderate heresy. Except in that one phrase above quoted he never complained of his social oppressors, so far as I remember, in his writings. His perfect amiability was one of his most striking characteristics, and in a nature fastidious as was his in its whole organization, it implied a self-command worthy of admiration.

*

The natural purity and elevation of Emerson's character show themselves in all that he writes. His life corresponded to the ideal we form of him from his writings. This it was which made him invulnerable amidst all the fierce conflicts his gentle words excited. His white shield was so spotless that the least scrupulous combatants did not like to leave their defacing marks upon it. One would think he was protected by some superstition like that which Voltaire refers to as existing about Boileau, —

“Ne disons pas mal de Nicolas, — cela porte malheur.”

(Don't let us abuse Nicolas, — it brings ill luck.) The cooped-up dogmatists whose very citadel of belief he was attacking, and who had their hot water and boiling pitch and flaming brimstone ready for the assailants of their outer defences, withheld their missiles from him, and even sometimes, in a movement of involuntary human sympathy, sprinkled him with rose-water. His position in our Puritan New England was in some respects like that of Burns in Presbyterian

Scotland. The *dour* Scotch ministers and elders could not cage their minstrel, and they could not clip his wings; and so they let this morning lark rise above their theological mists, and sing to them at heaven's gate, until he had softened all their hearts and might nestle in their bosoms and find his perch on "the big ha' bible," if he would, — and as he did. So did the music of Emerson's words and life steal into the hearts of our stern New England theologians, and soften them to a temper which would have seemed treasonable weakness to their stiff-kneed forefathers. When a man lives a life commended by all the Christian virtues, enlightened persons are not so apt to cavil at his particular beliefs or unbeliefs as in former generations. We do, however, wish to know what are the convictions of any such persons in matters of highest interest about which there is so much honest difference of opinion in this age of deep and anxious and devout religious scepticism.

It was a very wise and a very prudent course which was taken by Simonides, when he was asked by his imperial master to give him his ideas about the Deity. He begged for a day to consider the question, but when the time came for his answer he wanted two days more, and at the end of these, four days. In short, the more he thought about it, the more he found himself perplexed.

The name most frequently applied to Emerson's form of belief is Pantheism. How many persons who shudder at the sound of this word can tell the difference between that doctrine and their own professed belief in the omnipresence of the Deity?

Theodore Parker explained Emerson's position, as he understood it, in an article in the "Massachusetts Quarterly Review." I borrow this quotation from Mr. Cooke: —

"He has an absolute confidence in God. He has been foolishly accused of Pantheism, which sinks God in nature, but no man is further from it. He never sinks God in man; he does not stop with the law, in matter or morals, but goes to the Law-giver; yet probably it would not be so easy for him to give his definition of God, as it would be for most graduates at Andover or Cambridge."

We read in his Essay, "Self-Reliance": "This is the ultimate fact which we so quickly reach on this, as on every topic, the resolution of all into the ever-blessed ONE. Self-existence is the attribute of the Supreme Cause, and it constitutes the measure of good by the degree in which it enters into all lower forms."

The "ever-blessed ONE" of Emerson corresponds to the Father in the doctrine of the Trinity. The "Over-Soul" of Emerson is that aspect of Deity which is known to theology as the Holy Spirit. Jesus was for him a divine manifestation, but only as other great human souls have been in all ages and are to-day. He was willing to be called a Christian just as he was willing to be called a Platonist.

Explanations are apt not to explain much in dealing with subjects like this. "Canst thou by searching find out God? Canst thou find out the Almighty unto perfection?" But on certain great points nothing could be clearer than the teaching of Emerson. He believed in the doctrine of spiritual influx as sincerely as any Calvinist or Swedenborgian. His views as to fate, or the determining conditions of the character, brought him near enough to the doctrine of predestination to make him afraid of its consequences, and led him to enter a caveat against any denial of the self-governing power of the will.

His creed was a brief one, but he carried it everywhere with him. In all he did, in all he said, and so far as all outward signs could show, in all his thoughts, the indwelling Spirit was his light and guide; through all nature he looked up to nature's God; and if he did not worship the "man Christ Jesus" as the churches of Christendom have done, he followed his footsteps so nearly that our good Methodist, Father Taylor, spoke of him as more like Christ than any man he had known.

Emerson was in friendly relations with many clergymen of the church from which he had parted. Since he left the pulpit, the lesson, not of tolerance, for that word is an insult as applied by one set of well-behaved people to another, not of charity, for that implies an impertinent assumption, but of good feeling on the part of divergent sects and their ministers has been taught and learned as never before. Their official Confessions of Faith make far less difference in their human sentiments and relations than they did even half a century ago. These ancient creeds are handed along down, to be kept in their phials with their stoppers fast, as attar of rose is kept in its little bottles; they are not to be opened and exposed to the atmosphere so long as their perfume, — the odor of sanctity, — is diffused from the carefully treasured receptacles, — perhaps even longer than that.

Out of the endless opinions as to the significance and final outcome of Emerson's religious teachings I will select two as typical.

Dr. William Hague, long the honored minister of a Baptist church in Boston, where I had the pleasure of friendly acquaintance with him, has written a thoughtful, amiable paper on Emerson, which he read before the New York Genealogical and Biographical Society. This Essay closes with the following sentence: —

"Thus, to-day, while musing, as at the beginning, over the works of Ralph Waldo Emerson, we recognize now as ever his imperial genius as one of the greatest of writers; at the same time, his life work, as a whole, tested by its

supreme ideal, its method and its fruitage, shows also a great waste of power, verifying the saying of Jesus touching the harvest of human life: 'HE THAT GATHERETH NOT WITH ME SCATTERETH ABROAD.'

"But when Dean Stanley returned from America, it was to report," says Mr. Conway ("Macmillan," June, 1879), that religion had there passed through an evolution from Edwards to Emerson, and that 'the genial atmosphere which Emerson has done so much to promote is shared by all the churches equally.'

What is this "genial atmosphere" but the very spirit of Christianity? The good Baptist minister's Essay is full of it. He comes asking what has become of Emerson's "wasted power" and lamenting his lack of "fruitage," and lo! he himself has so ripened and mellowed in that same Emersonian air that the tree to which he belongs would hardly know him. The close-communication clergyman handles the arch-heretic as tenderly as if he were the nursing mother of a new infant Messiah. A few generations ago this preacher of a new gospel would have been burned; a little later he would have been tried and imprisoned; less than fifty years ago he was called infidel and atheist; names which are fast becoming relinquished to the intellectual half-breeds who sometimes find their way into pulpits and the so-called religious periodicals.

It is not within our best-fenced churches and creeds that the self-governing American is like to find the religious freedom which the Concord prophet asserted with the strength of Luther and the sweetness of Melancthon, and which the sovereign in his shirt-sleeves will surely claim. Milton was only the precursor of Emerson when he wrote: —

"Neither is God appointed and confined, where and out of what place these his chosen shall be first heard to speak; for he sees not as man sees, chooses not as man chooses, lest we should devote ourselves again to set places and assemblies, and outward callings of men, planting our faith one while in the old convocation house, and another while in the Chapel at Westminster, when all the faith and religion that shall be there canonized is not sufficient without plain conviction, and the charity of patient instruction, to supple the least bruise of conscience, to edify the meanest Christian who desires to walk in the spirit and not in the letter of human trust, for all the number of voices that can be there made; no, though Harry the Seventh himself there, with all his liege toms about him, should lend their voices from the dead, to swell their number."

The best evidence of the effect produced by Emerson's writings and life is to be found in the attention he has received from biographers and critics. The ground upon which I have ventured was already occupied by three considerable Memoirs. Mr. George Willis Cooke's elaborate work is remarkable for its careful and thorough analysis of Emerson's teachings. Mr. Moncure Daniel

Conway's "Emerson at Home and Abroad" is a lively picture of its subject by one long and well acquainted with him. Mr. Alexander Ireland's "Biographical Sketch" brings together, from a great variety of sources, as well as from his own recollections, the facts of Emerson's history and the comments of those whose opinions were best worth reproducing. I must refer to this volume for a bibliography of the various works and Essays of which Emerson furnished the subject.

From the days when Mr. Whipple attracted the attention of our intelligent, but unawakened reading community, by his discriminating and appreciative criticisms of Emerson's Lectures, and Mr. Lowell drew the portrait of the New England "Plotinus-Montaigne" in his brilliant "Fable for Critics," to the recent essays of Mr. Matthew Arnold, Mr. John Morley, Mr. Henry Norman, and Mr. Edmund Clarence Stedman, Emerson's writings have furnished one of the most enduring *pièces de résistance* at the critical tables of the old and the new world.

He early won the admiration of distinguished European thinkers and writers: Carlyle accepted his friendship and his disinterested services; Miss Martineau fully recognized his genius and sounded his praises; Miss Bremer fixed her sharp eyes on him and pronounced him "a noble man." Professor Tyndall found the inspiration of his life in Emerson's fresh thought; and Mr. Arnold, who clipped his medals reverently but unsparingly, confessed them to be of pure gold, even while he questioned whether they would pass current with posterity. He found discerning critics in France, Germany, and Holland. Better than all is the testimony of those who knew him best. They who repeat the saying that "a prophet is not without honor save in his own country," will find an exception to its truth in the case of Emerson. Read the impressive words spoken at his funeral by his fellow-townsmen, Judge Hoar; read the glowing tributes of three of Concord's poets, — Mr. Alcott, Mr. Channing, and Mr. Sanborn, — and it will appear plainly enough that he, whose fame had gone out into all the earth, was most of all believed in, honored, beloved, lamented, in the little village circle that centred about his own fireside.

It is a not uninteresting question whether Emerson has bequeathed to the language any essay or poem which will resist the flow of time like "the adamant of Shakespeare," and remain a classic like the Essays of Addison or Gray's Elegy. It is a far more important question whether his thought entered into the spirit of his day and generation, so that it modified the higher intellectual, moral, and religious life of his time, and, as a necessary consequence, those of succeeding ages. *Corpora non agunt nisi soluta*, and ideas must be dissolved and taken up as well as material substances before they can act. "That which thou sowest is not quickened except it die," or rather lose the form with which it was

sown. Eight stanzas of four lines each have made the author of "The Burial of Sir John Moore" an immortal, and endowed the language with a classic, perfect as the most finished cameo. But what is the gift of a mourning ring to the bequest of a perpetual annuity? How many lives have melted into the history of their time, as the gold was lost in Corinthian brass, leaving no separate monumental trace of their influence, but adding weight and color and worth to the age of which they formed a part and the generations that came after them! We can dare to predict of Emerson, in the words of his old friend and disciple, Mr. Cranch: —

"The wise will know thee and the good will love,
The age to come will feel thy impress given
In all that lifts the race a step above
Itself, and stamps it with the seal of heaven."

It seems to us, to-day, that Emerson's best literary work in prose and verse must live as long as the language lasts; but whether it live or fade from memory, the influence of his great and noble life and the spoken and written words which were its exponents, blends, indestructible, with the enduring elements of civilization.

*

It is not irreverent, but eminently fitting, to compare any singularly pure and virtuous life with that of the great exemplar in whose footsteps Christendom professes to follow. The time was when the divine authority of his gospel rested chiefly upon the miracles he is reported to have wrought. As the faith in these exceptions to the general laws of the universe diminished, the teachings of the Master, of whom it was said that he spoke as never man spoke, were more largely relied upon as evidence of his divine mission. Now, when a comparison of these teachings with those of other religious leaders is thought by many to have somewhat lessened the force of this argument, the life of the sinless and self-devoted servant of God and friend of man is appealed to as the last and convincing proof that he was an immediate manifestation of the Divinity.

Judged by his life Emerson comes very near our best ideal of humanity. He was born too late for the trial of the cross or the stake, or even the jail. But the penalty of having an opinion of his own and expressing it was a serious one, and he accepted it as cheerfully as any of Queen Mary's martyrs accepted his fiery baptism. His faith was too large and too deep for the formulae he found built into

the pulpit, and he was too honest to cover up his doubts under the flowing vestments of a sacred calling. His writings, whether in prose or verse, are worthy of admiration, but his manhood was the underlying quality which gave them their true value. It was in virtue of this that his rare genius acted on so many minds as a trumpet call to awaken them to the meaning and the privileges of this earthly existence with all its infinite promise. No matter of what he wrote or spoke, his words, his tones, his looks, carried the evidence of a sincerity which pervaded them all and was to his eloquence and poetry like the water of crystallization; without which they would effloresce into mere rhetoric. He shaped an ideal for the commonest life, he proposed an object to the humblest seeker after truth. Look for beauty in the world around you, he said, and you shall see it everywhere. Look within, with pure eyes and simple trust, and you shall find the Deity mirrored in your own soul. Trust yourself because you trust the voice of God in your inmost consciousness.

There are living organisms so transparent that we can see their hearts beating and their blood flowing through their glassy tissues. So transparent was the life of Emerson; so clearly did the true nature of the man show through it. What he taught others to be, he was himself. His deep and sweet humanity won him love and reverence everywhere among those whose natures were capable of responding to the highest manifestations of character. Here and there a narrow-eyed sectary may have avoided or spoken ill of him; but if He who knew what was in man had wandered from door to door in New England as of old in Palestine, we can well believe that one of the thresholds which "those blessed feet" would have crossed, to hallow and receive its welcome, would have been that of the lovely and quiet home of Emerson.

BIOGRAPHICAL SKETCH by Edward W. Emerson

The Emersons first appeared in the north of England, but Thomas, who landed in Massachusetts in 1638, came from Hertfordshire. He built soon after a house, sometimes called the Saint's Rest, which still stands in Ipswich on the slope of Heart-break Hill, close by Labour-in-vain Creek. Ralph Waldo Emerson was the sixth in descent from him. He was born in Boston, in Summer Street, May 25, 1803. He was the third son of William Emerson, the minister of the First Church in Boston, whose father, William Emerson, had been the patriotic minister of Concord at the outbreak of the Revolution, and died a chaplain in the army. Ruth Haskins, the mother of Ralph Waldo Emerson, was left a widow in 1811, with a family of five little boys. The taste of these boys was scholarly, and four of them went through the Latin School to Harvard College, and graduated there. Their mother was a person of great sweetness, dignity, and piety, bringing up her sons wisely and well in very straitened circumstances, and loved by them. Her husband's stepfather, Rev. Dr. Ripley of Concord, helped her, and constantly invited the boys to the Old Manse, so that the woods and fields along the Concord River were first a playground and then the background of the dreams of their awakening imaginations.

Born in the city, Emerson's young mind first found delight in poems and classic prose, to which his instincts led him as naturally as another boy's would to go fishing, but his vacations in the country supplemented these by giving him great and increasing love of nature. In his early poems classic imagery is woven into pictures of New England woodlands. Even as a little boy he had the habit of attempting flights of verse, stimulated by Milton, Pope, or Scott, and he and his mates took pleasure in declaiming to each other in barns and attics. He was so full of thoughts and fancies that he sought the pen instinctively, to jot them down.

At college Emerson did not shine as a scholar, though he won prizes for essays and declamations, being especially unfitted for mathematical studies, and enjoying the classics rather in a literary than grammatical way. And yet it is doubtful whether any man in his class used his time to better purpose with reference to his after life, for young Emerson's instinct led him to wide reading of works, outside the curriculum, that spoke directly to him. He had already formed the habit of writing in a journal, not the facts but the thoughts and inspirations of the day; often, also, good stories or poetical quotations, and

scraps of his own verse.

On graduation from Harvard in the class of 1821, following the traditions of his family, Emerson resolved to study to be a minister, and meantime helped his older brother William in the support of the family by teaching in a school for young ladies in Boston, that the former had successfully established. The principal was twenty-one and the assistant nineteen years of age. For school-teaching on the usual lines Emerson was not fitted, and his youth and shyness prevented him from imparting his best gifts to his scholars. Years later, when, in his age, his old scholars assembled to greet him, he regretted that no hint had been brought into the school of what at that very time "I was writing every night in my chamber, my first thoughts on morals and the beautiful laws of compensation, and of individual genius, which to observe and illustrate have given sweetness to many years of my life." Yet many scholars remembered his presence and teaching with pleasure and gratitude, not only in Boston, but in Chelmsford and Roxbury, for while his younger brothers were in college it was necessary that he should help. In these years, as through all his youth, he was loved, spurred on in his intellectual life, and keenly criticised by his aunt, Mary Moody Emerson, an eager and wide reader, inspired by religious zeal, high-minded, but eccentric.

The health of the young teacher suffered from too ascetic a life, and unmistakable danger-signals began to appear, fortunately heeded in time, but disappointment and delay resulted, borne, however, with sense and courage. His course at the Divinity School in Cambridge was much broken; nevertheless, in October, 1826, he was "approbated to preach" by the Middlesex Association of Ministers. A winter at the North at this time threatened to prove fatal, so he was sent South by his helpful kinsman, Rev. Samuel Ripley, and passed the winter in Florida with benefit, working northward in the spring, preaching in the cities, and resumed his studies at Cambridge.

In 1829, Emerson was called by the Second or Old North Church in Boston to become the associate pastor with Rev. Henry Ware, and soon after, because of his senior's delicate health, was called on to assume the full duty. Theological dogmas, such as the Unitarian Church of Channing's day accepted, did not appeal to Emerson, nor did the supernatural in religion in its ordinary acceptation interest him. The omnipresence of spirit, the dignity of man, the daily miracle of the universe, were what he taught, and while the older members of the congregation may have been disquieted that he did not dwell on revealed religion, his words reached the young people, stirred thought, and awakened aspiration. At this time he lived with his mother and his young wife (Ellen Tucker) in Chardon Street. For three years he ministered to his people in Boston.

Then having felt the shock of being obliged to conform to church usage, as stated prayer when the spirit did not move, and especially the administration of the Communion, he honestly laid his troubles before his people, and proposed to them some modification of this rite. While they considered his proposition, Emerson went into the White Mountains to weigh his conflicting duties to his church and conscience. He came down, bravely to meet the refusal of the church to change the rite, and in a sermon preached in September, 1832, explained his objections to it, and, because he could not honestly administer it, resigned.

He parted from his people in all kindness, but the wrench was felt. His wife had recently died, he was ill himself, his life seemed to others broken up. But meantime voices from far away had reached him. He sailed for Europe, landed in Italy, saw cities, and art, and men, but would not stay long. Of the dead, Michael Angelo appealed chiefly to him there; Landor among the living. He soon passed northward, making little stay in Paris, but sought out Carlyle, then hardly recognized, and living in the lonely hills of the Scottish Border. There began a friendship which had great influence on the lives of both men, and lasted through life. He also visited Wordsworth. But the new life before him called him home.

He landed at Boston within the year in good health and hope, and joined his mother and youngest brother Charles in Newton. Frequent invitations to preach still came, and were accepted, and he even was sounded as to succeeding Dr. Dewey in the church at New Bedford; but, as he stipulated for freedom from ceremonial, this came to nothing.

In the autumn of 1834 he moved to Concord, living with his kinsman, Dr. Ripley, at the Manse, but soon bought house and land on the Boston Road, on the edge of the village towards Walden woods. Thither, in the autumn, he brought his wife. Miss Lidian Jackson, of Plymouth, and this was their home during the rest of their lives.

The new life to which he had been called opened pleasantly and increased in happiness and opportunity, except for the sadness of bereavements, for, in the first few years, his brilliant brothers Edward and Charles died, and soon afterward Waldo, his firstborn son, and later his mother. Emerson had left traditional religion, the city, the Old World, behind, and now went to Nature as his teacher, his inspiration. His first book, "Nature," which he was meditating while in Europe, was finished here, and published in 1836. His practice during all his life in Concord was to go alone to the woods almost daily, sometimes to wait there for hours, and, when thus attuned, to receive the message to which he was to give voice. Though it might be colored by him in transmission, he held that the light was universal.

“Ever the words of the Gods resound,
But the porches of man’s ear
Seldom in this low life’s round
Are unsealed that he may hear.”

But he resorted, also, to the books of those who had handed down the oracles truly, and was quick to find the message destined for him. Men, too, he studied eagerly, the humblest and the highest, regretting always that the brand of the scholar on him often silenced the men of shop and office where he came. He was everywhere a learner, expecting light from the youngest and least educated visitor. The thoughts combined with the flower of his reading were gradually grouped into lectures, and his main occupation through life was reading these to who would hear, at first in courses in Boston, but later all over the country, for the Lyceum sprang up in New England in these years in every town, and spread westward to the new settlements even beyond the Mississippi. His winters were spent in these rough, but to him interesting journeys, for he loved to watch the growth of the Republic in which he had faith, and his summers were spent in study and writing. These lectures were later severely pruned and revised, and the best of them gathered into seven volumes of essays under different names between 1841 and 1876. The courses in Boston, which at first were given in the Masonic Temple, were always well attended by earnest and thoughtful people. The young, whether in years or in spirit, were always and to the end his audience of the spoken or written word. The freedom of the Lyceum platform pleased Emerson. He found that people would hear on Wednesday with approval and unsuspectingly doctrines from which on Sunday they felt officially obliged to dissent.

Mr. Lowell, in his essays, has spoken of these early lectures and what they were worth to him and others suffering from the generous discontent of youth with things as they were. Emerson used to say, “My strength and my doom is to be solitary;” but to a retired scholar a wholesome offset to this was the travelling and lecturing in cities and in raw frontier towns, bringing him into touch with the people, and this he knew and valued.

In 1837 Emerson gave the Phi Beta Kappa oration in Cambridge, The American Scholar, which increased his growing reputation, but the following year his Address to the Senior Class at the Divinity School brought out, even from the friendly Unitarians, severe strictures and warnings against its dangerous doctrines. Of this heresy Emerson said: “I deny personality to God because it is too little, not too much.” He really strove to elevate the idea of God. Yet those who were pained or shocked by his teachings respected Emerson. His lectures

were still in demand; he was often asked to speak by literary societies at orthodox colleges. He preached regularly at East Lexington until 1838, but thereafter withdrew from the ministerial office. At this time the progressive and spiritually minded young people used to meet for discussion and help in Boston, among them George Ripley, Cyrus Bartol, James Freeman Clarke, Alcott, Dr. Hedge, Margaret Fuller, and Elizabeth Peabody. Perhaps from this gathering of friends, which Emerson attended, came what is called the Transcendental Movement, two results of which were the Brook Farm Community and the Dial magazine, in which last Emerson took great interest, and was for the time an editor. Many of these friends were frequent visitors in Concord. Alcott moved thither after the breaking up of his school. Hawthorne also came to dwell there. Henry Thoreau, a Concord youth, greatly interested Emerson; indeed, became for a year or two a valued inmate of his home, and helped and instructed him in the labors of the garden and little farm, which gradually grew to ten acres, the chief interest of which for the owner was his trees, which he loved and tended. Emerson helped introduce his countrymen to the teachings of Carlyle, and edited his works here, where they found more readers than at home.

In 1847 Emerson was invited to read lectures in England, and remained abroad a year, visiting France also in her troublous times. English Traits was a result. Just before this journey he had collected and published his poems. A later volume, called May Day, followed in 1867. He had written verses from childhood, and to the purified expression of poetry he, through life, eagerly aspired. He said, "I like my poems best because it is not I who write them." In 1866 the degree of Doctor of Laws was conferred on him by Harvard University, and he was chosen an Overseer. In 1867 he again gave the Phi Beta Kappa oration, and in 1870 and 1871 gave courses in Philosophy in the University Lectures at Cambridge.

Emerson was not merely a man of letters. He recognized and did the private and public duties of the hour. He exercised a wide hospitality to souls as well as bodies. Eager youths came to him for rules, and went away with light. Reformers, wise and unwise, came to him, and were kindly received. They were often disappointed that they could not harness him to their partial and transient scheme. He said, My reforms include theirs: I must go my way; help people by my strength, not by my weakness. But if a storm threatened, he felt bound to appear and show his colors. Against the crying evils of his time he worked bravely in his own way. He wrote to President Van Buren against the wrong done to the Cherokees, dared speak against the idolized Webster, when he deserted the cause of Freedom, constantly spoke of the iniquity of slavery, aided with speech and money the Free State cause in Kansas, was at Phillips's side at

the antislavery meeting in 1861 broken up by the Boston mob, urged emancipation during the war.

He enjoyed his Concord home and neighbors, served on the school committee for years, did much for the Lyceum, and spoke on the town's great occasions. He went to all town-meetings, oftener to listen and admire than to speak, and always took pleasure and pride in the people. In return he was respected and loved by them.

Emerson's house was destroyed by fire in 1872, and the incident exposure and fatigue did him harm. His many friends insisted on rebuilding his house and sending him abroad to get well. He went up the Nile, and revisited England, finding old and new friends, and, on his return, was welcomed and escorted home by the people of Concord. After this time he was unable to write. His old age was quiet and happy among his family and friends. He died in April, 1882.

EDWARD W. EMERSON.
