Men are helpful through the intellect and the affections. Other help, I find a false appearance. If you affect to give me bread and fire, I perceive that I pay for it the full price, and at last it leaves me as it found me, neither better nor worse: but all mental and moral force is a positive good. It goes out from you whether you will or not, and profits me whom you never thought of. I cannot even hear of personal vigor of any kind, great power of performance, without fresh resolution. We are emulous of all that man can do. Cecil’s saying of Sir Walter Raleigh, “I know that he can toil terribly,” is an electric touch. So are Clarendon’s portraits, — of Hampden; “who was of an industry and vigilance not to be tired out or wearied by the most laborious, and of parts not to be imposed on by the most subtle and sharp, and of a personal courage equal to his best parts” — of Falkland; “who was so severe an adorer of truth, that he could as easily have given himself leave to steal, as to dissemble.” We cannot read Plutarch, without a tingling of the blood; and I accept the saying of the Chinese Mencius: “As age is the instructor of a hundred ages. When the manners of Loo are heard of, the stupid become intelligent, and the wavering, determined.”

This is the moral of biography; yet it is hard for departed men to touch the quick like our own companions, whose names may not last as long. What is he whom I never think of? whilst in every solitude are those who succor our genius, and stimulate us in wonderful manners. There is a power in love to divine another’s destiny better than that other can, and by heroic encouragements, hold him to his task. What has friendship so signaled as its sublime attraction to

whatever virtue is in us? We will never more think cheaply of ourselves, or of life. We are piqued to some purpose, and the industry of the diggers on the railroad will not again shame us.

Under this head, too, falls that homage, very pure, as I think, which all ranks pay to the hero of the day, from Coriolanus and Gracchus, down to Pitt, Lafayette, Wellington, Webster, Lamartine. Hear the shouts in the street! The people cannot see him enough. They delight in a man. Here is a head and a trunk! What a front! What eyes! Atlantean shoulders, and the whole carriage heroic, with equal inward force to guide the great machine! This pleasure of full expression to that which, in their private experience, is usually cramped and obstructed, runs, also, much higher, and is the secret of the reader's joy in literary genius. Nothing is kept back. There is fire enough to fuse the mountain of ore. Shakspeare's principal merit may be conveyed, in saying that he, of all men, best understands the English language, and can say what he will. Yet these unchoked channels and floodgates of expression are only health or fortunate constitution. Shakspeare's name suggests other and purely intellectual benefits.

Senates and sovereigns have no compliment, with their medals, swords, and armorial coats, like the addressing to a human being thoughts out of a certain height, and presupposing his intelligence. This honor, which is possible in personal intercourse scarcely twice in a lifetime, genius perpetually pays; contented, if now and then, in a century, the proffer is accepted. The indicators of the values of matter are degraded to a sort of cooks and confectioners, on the appearance of the indicators of ideas. Genius is the naturalist or geographer of the supersensible regions, and draws on their map; and, by acquainting us with new fields of activity, cools our affection for the old. These are at once accepted as the reality, of which the world we have conversed with is the show.

We go to the gymnasium and the swimming-school to see the power and beauty of the body; there is the like pleasure, and a higher benefit, from witnessing intellectual feats of all kinds; as, feats of memory, of mathematical combination, great power of abstraction, the transmutings of the imagination, even versatility, and concentration, as these acts expose the invisible organs and members of the mind, which respond, member for member, to the parts of the body. For, we thus enter a new gymnasium, and learn to choose men by their truest marks, taught, with Plato, "to choose those who can, without aid from the eyes, or any other sense, proceed to truth and to being." Foremost among these activities, are the summersaults, spells, and resurrections, wrought by the imagination. When this wakes, a man seems to multiply ten times or a thousand times his force. It opens the delicious sense of indeterminate size, and inspires an audacious mental habit. We are as elastic as the gas of gunpowder, and a

sentence in a book, or a word dropped in conversation, sets free our fancy, and instantly our heads are bathed with galaxies, and our feet tread the floor of the Pit. And this benefit is real, because we are entitled to these enlargements, and, once having passed the bounds, shall never again be quite the miserable pedants we were.

The high functions of the intellect are so allied, that some imaginative power usually appears in all eminent minds, even in arithmeticians of the first class, but especially in meditative men of an intuitive habit of thought. This class serve us, so that they have the perception of identity and the perception of reaction. The eyes of Plato, Shakespeare, Swedenborg, Goethe, never shut on either of these laws. The perception of these laws is a kind of metre of the mind. Little minds are little, through failure to see them.

Even these feasts have their surfeit. Our delight in reason degenerates into idolatry of the herald. Especially when a mind of powerful method has instructed men, we find the examples of oppression. The dominion of Aristotle, the Ptolemaic astronomy, the credit of Luther, of Bacon, of Locke, — in religion the history of hierarchies, of saints, and the sects which have taken the name of each founder, are in point. Alas! every man is such a victim. The imbecility of men is always inviting the impudence of power. It is the delight of vulgar talent to dazzle and to bind the beholder. But true genius seeks to defend us from itself. True genius will not impoverish, but will liberate, and add new senses. If a wise man should appear in our village, he would create, in those who conversed with him, a new consciousness of wealth, by opening their eyes to unobserved advantages; he would establish a sense of immovable equality, calm us with assurances that we could not be cheated; as every one would discern the checks and guaranties of condition. The rich would see their mistakes and poverty, the poor their escapes and their resources.

But nature brings all this about in due time. Rotation is her remedy. The soul is impatient of masters, and eager for change. Housekeepers say of a domestic who has been valuable, "She has lived with me long enough." We are tendencies, or rather, symptoms, and none of us complete. We touch and go, and sip the foam of many lives. Rotation is the law of nature. When nature removes a great man, people explore the horizon for a successor; but none comes and none will. His class is extinguished with him. In some other and quite different field, the next man will appear; not Jefferson, nor Franklin, but now a great salesman; then a road-contractor; then a student of fishes; then a buffalo-hunting explorer, or a semi-savage western general. Thus we make a stand against our rougher masters; but against the best there is a finer remedy. The power which they communicate is not theirs. When we are exalted by ideas, we do not owe this to

Plato, but to the idea, to which, also, Plato was debtor.

I must not forget that we have a special debt to a single class. Life is a scale of degrees. Between rank and rank of our great men are wide intervals. Mankind have, in all ages, attached themselves to a few persons, who, either by the quality of that idea they embodied, or by the largeness of their reception, were entitled to the position of leaders and law-givers. These teach us the qualities of primary nature, — admit us to the constitution of things. We swim, day by day, on a river of delusions, and are effectually amused with houses and towns in the air, of which the men about us are dupes. But life is a sincerity. In lucid intervals we say, “Let there be an entrance opened for me into realities; I have worn the fool’s cap too long.” We will know the meaning of our economies and politics. Give us the cipher, and, if persons and things are scores of a celestial music, let us read off the strains. We have been cheated of our reason; yet there have been sane men, who enjoyed a rich and related existence. What they know, they know for us. With each new mind, a new secret of nature transpires; nor can the Bible be closed, until the last great man is born. These men correct the delirium of the animal spirits, make us considerate, and engage us to new aims and powers. The veneration of mankind selects these for the highest place. Witness the multitude of statues, pictures, and memorials which recall their genius in every city, village, house, and ship: —

”Ever their phantoms arise before us.
Our loftier brothers, but one in blood;
At bed and table they lord it o’er us,
With looks of beauty, and words of good.”

How to illustrate the distinctive benefit of ideas, the service rendered by those who introduce moral truths into the general mind? — I am plagued, in all my living, with a perpetual tariff of prices. If I work in my garden, and prune an apple-tree, I am well enough entertained, and could continue indefinitely in the like occupation. But it comes to mind that a day is gone, and I have got this precious nothing done. I go to Boston or New York, and run up and down on my affairs: they are sped, but so is the day. I am vexed by the recollection of this price I have paid for a trifling advantage. I remember the *peau d’ane*, on which whoso sat should have his desire, but a piece of the skin was gone for every wish. I go to a convention of philanthropists. Do what I can, I cannot keep my eyes off the clock. But if there should appear in the company some gentle soul who knows little of persons or parties, of Carolina or Cuba, but who announces a law that disposes these particulars, and so certifies me of the equity which

checkmates every false player, bankrupts every self-seeker, and apprises me of my independence on any conditions of country, or time, or human body, that man liberates me; I forget the clock.

I pass out of the sore relation to persons. I am healed of my hurts. I am made immortal by apprehending my possession of incorruptible goods. Here is great competition of rich and poor. We live in a market, where is only so much wheat, or wool, or land; and if I have so much more, every other must have so much less. I seem to have no good, without breach of good manners. Nobody is glad in the gladness of another, and our system is one of war, of an injurious superiority. Every child of the Saxon race is educated to wish to be first. It is our system; and a man comes to measure his greatness by the regrets, envies, and hatreds of his competitors. But in these new fields there is room: here are no self-esteems, no exclusions.

I admire great men of all classes, those who stand for facts, and for thoughts; I like rough and smooth "Scourges of God," and "Darlings of the human race." I like the first Caesar; and Charles V., of Spain; and Charles XII., of Sweden; Richard Plantagenet; and Bonaparte, in France. I applaud a sufficient man, an officer, equal to his office; captains, ministers, senators. I like a master standing firm on legs of iron, well-born, rich, handsome, eloquent, loaded with advantages, drawing all men by fascination into tributaries and supporters of his power. Sword and staff, or talents sword-like or staff-like, carry on the work of the world. But I find him greater, when he can abolish himself, and all heroes, by letting in this element of reason, irrespective of persons; this subtilizer, and irresistible upward force, into our thought, destroying individualism; the power so great, that the potentate is nothing. Then he is a monarch, who gives a constitution to his people; a pontiff, who preaches the equality of souls, and releases his servants from their barbarous homages; an emperor, who can spare his empire.

But I intended to specify, with a little minuteness, two or three points of service. Nature never spares the opium or nepenthe; but wherever she mars her creature with some deformity or defect, lays her poppies plentifully on the bruise, and the sufferer goes joyfully through life, ignorant of the ruin, and incapable of seeing it, though all the world point their finger at it every day. The worthless and offensive members of society, whose existence is a social pest, invariably think themselves the most illused people alive, and never get over their astonishment at the ingratitude and selfishness of their contemporaries. Our globe discovers its hidden virtues, not only in heroes and archangels, but in gossips and nurses. Is it not a rare contrivance that lodged the due inertia in every creature, the conserving, resisting energy, the anger at being waked or

changed? Altogether independent of the intellectual force in each, is the pride of opinion, the security that we are right. Not the feeblest grandame, not a mowing idiot, but uses what spark of perception and faculty is left, to chuckle and triumph in his or her opinion over the absurdities of all the rest. Difference from me is the measure of absurdity. Not one has a misgiving of being wrong. Was it not a bright thought that made things cohere with this bitumen, fastest of cements? But, in the midst of this chuckle of self-gratulation, some figure goes by, which Thersites too can love and admire. This is he that should marshal us the way we were going. There is no end to his aid. Without Plato, we should almost lose our faith in the possibility of a reasonable book. We seem to want but one, but we want one. We love to associate with heroic persons, since our receptivity is unlimited; and, with the great, our thoughts and manners easily become great. We are all wise in capacity, though so few in energy. There needs but one wise man in a company, and all are wise, so rapid is the contagion.

Great men are thus a collyrium to clear our eyes from egotism, and enable us to see other people and their works. But there are vices and follies incident to whole populations and ages. Men resemble their contemporaries, even more than their progenitors. It is observed in old couples, or in persons who have been housemates for a course of years, that they grow alike; and, if they should live long enough, we should not be able to know them apart. Nature abhors these complaisances, which threaten to melt the world into a lump, and hastens to break up such maudlin agglutinations. The like assimilation goes on between men of one town, of one sect, of one political party; and the ideas of the time are in the air, and infect all who breathe it. Viewed from any high point, the city of New York, yonder city of London, the western civilization, would seem a bundle of insanities. We keep each other in countenance, and exasperate by emulation the frenzy of the time. The shield against the stings of conscience, is the universal practice, or our contemporaries. Again; it is very easy to be as wise and good as your companions. We learn of our contemporaries, what they know, without effort, and almost through the pores of the skin. We catch it by sympathy, or, as a wife arrives at the intellectual and moral elevations of her husband. But we stop where they stop. Very hardly can we take another step. The great, or such as hold of nature, and transcend fashions, by their fidelity to universal ideas, are saviors from these federal errors, and defend us from our contemporaries. They are the exceptions which we want, where all grows alike. A foreign greatness is the antidote for cabalism.

Thus we feed on genius, and refresh ourselves from too much conversation with our mates, and exult in the depth of nature in that direction in which he leads us. What indemnification is one great man for populations of pigmies!

Every mother wishes one son a genius, though all the rest should be mediocre. But a new danger appears in the excess of influence of the great man. His attractions warp us from our place. We have become underlings and intellectual suicides. Ah! yonder in the horizon is our help: — other great men, new qualities, counterweights and checks on each other. We cloy of the honey of each peculiar greatness. Every hero becomes a bore at last. Perhaps Voltaire was not bad-hearted, yet he said of the good Jesus, even, “I pray you, let me never hear that man’s name again.” They cry up the virtues of George Washington,— “Damn George Washington!” is the poor Jacobin’s whole speech and confutation. But it is human nature’s indispensable defense. The centripetence augments the centrifugence. We balance one man with his opposite, and the health of the state depends on the see-saw.

There is, however, a speedy limit to the use of heroes. Every genius is defended from approach by quantities of availableness. They are very attractive, and seem at a distance our own: but we are hindered on all sides from approach. The more we are drawn, the more we are repelled. There is something not solid in the good that is done for us. The best discovery the discoverer makes for himself. It has something unreal for his companion, until he too has substantiated it. It seems as if the Deity dressed each soul which he sends into nature in certain virtues and powers not communicable to other men, and, sending it to perform one more turn through the circle of beings, wrote “Not transferable,” and “Good for this trip only,” on these garments of the soul. There is somewhat deceptive about the intercourse of minds. The boundaries are invisible, but they are never crossed. There is such good will to impart, and such good will to receive, that each threatens to become the other; but the law of individuality collects its secret strength: you are you, and I am I, and so we remain.

For Nature wishes every thing to remain itself; and, whilst every individual strives to grow and exclude, and to exclude and grow, to the extremities of the universe, and to impose the law of its being on every other creature, Nature steadily aims to protect each against every other. Each is self-defended. Nothing is more marked than the power by which individuals are guarded from individuals, in a world where every benefactor becomes so easily a malefactor, only by continuation of his activity into places where it is not due; where children seem so much at the mercy of their foolish parents, and where almost all men are too social and interfering. We rightly speak of the guardian angels of children. How superior in their security from infusions of evil persons, from vulgarity and second thought! They shed their own abundant beauty on the objects they behold. Therefore, they are not at the mercy of such poor educators as we adults. If we huff and chide them, they soon come not to mind it, and get a

self-reliance; and if we indulge them to folly, they learn the limitation elsewhere.

We need not fear excessive influence. A more generous trust is permitted. Serve the great. Stick at no humiliation. Grudge no office thou canst render. Be the limb of their body, the breath of their mouth. Compromise thy egotism. Who cares for that, so thou gain aught wider and nobler? Never mind the taunt of Boswellism: the devotion may easily be greater than the wretched pride which is guarding its own skirts. Be another: not thyself, but a Platonist; not a soul, but a Christian; not a naturalist, but a Cartesian; not a poet, but a Shakspearian. In vain, the wheels of tendency will not stop, nor will all the forces of inertia, fear, or love itself, hold thee there. On, and forever onward! The microscope observes a monad or wheel-insect among the infusories circulating in water. Presently, a dot appears on the animal, which enlarges to a slit, and it becomes two perfect animals. The ever-proceeding detachment appears not less in all thought, and in society. Children think they cannot live without their parents. But, long before they are aware of it, the black dot has appeared, and the detachment taken place. Any accident will now reveal to them their independence.

But great men: — the word is injurious. Is there caste? is there fate? What becomes of the promise to virtue? The thoughtful youth laments the superfoetation of nature. “Generous and handsome,” he says, “is your hero; but look at yonder poor Paddy, whose country is his wheelbarrow; look at his whole nation of Paddies.” Why are the masses, from the dawn of history down, food for knives and powder? The idea dignifies a few leaders, who have sentiment, opinion, love, self-devotion; and they make war and death sacred; — but what for the wretches whom they hire and kill? The cheapness of man is every day’s tragedy. It is as real a loss that others should be low, as that we should be low; for we must have society.

Is it a reply to these suggestions, to say, society is a Pestalozzian school; all are teachers and pupils in turn. We are equally served by receiving and by imparting. Men who know the same things, are not long the best company for each other. But bring to each an intelligent person of another experience, and it is as if you let off water from a lake, by cutting a lower basin. It seems a mechanical advantage, and great benefit it is to each speaker, as he can now paint out his thought to himself. We pass very fast, in our personal moods, from dignity to dependence. And if any appear never to assume the chair, but always to stand and serve, it is because we do not see the company in a sufficiently long period for the whole rotation of parts to come about. As to what we call the masses, and common men; — there are no common men. All men are at last of a size; and true art is only possible, on the conviction that every talent has its apotheosis somewhere. Fair play, and an open field, and freshest laurels to all

who have won them! But heaven reserves an equal scope for every creature. Each is uneasy until he has produced his private ray unto the concave sphere, and beheld his talent also in its last nobility and exaltation.

The heroes of the hour are relatively great: of a faster growth; or they are such, in whom, at the moment of success, a quality is ripe which is then in request. Other days will demand other qualities. Some rays escape the common observer, and want a finely adapted eye. Ask the great man if there be none greater. His companions are; and not the less great, but the more, that society cannot see them. Nature never sends a great man into the planet, without confiding the secret to another soul.

One gracious fact emerges from these studies, — that there is true ascension in our love. The reputations of the nineteenth century will one day be quoted to prove its barbarism. The genius of humanity is the real subject whose biography is written in our annals. We must infer much, and supply many chasms in the record. The history of the universe is symptomatic, and life is mnemonical. No man, in all the procession of famous men, is reason or illumination, or that essence we were looking for; but is an exhibition, in some quarter, of new possibilities. Could we one day complete the immense figure which these flagrant points compose! The study of many individuals leads us to an elemental region wherein the individual is lost, or wherein all touch by their summits. Thought and feeling, that break out there, cannot be impounded by any fence of personality. This is the key to the power of the greatest men, — their spirit diffuses itself. A new quality of mind travels by night and by day, in concentric circles from its origin, and publishes itself by unknown methods: the union of all minds appears intimate: what gets admission to one, cannot be kept out of any other: the smallest acquisition of truth or of energy, in any quarter, is so much good to the commonwealth of souls. If the disparities of talent and position vanish, when the individuals are seen in the duration which is necessary to complete the career of each; even more swiftly the seeming injustice disappears, when we ascend to the central identity of all the individuals, and know that they are made of the same substance which ordaineth and doeth.

The genius of humanity is the right point of view of history. The qualities abide; the men who exhibit them have now more, now less, and pass away; the qualities remain on another brow. No experience is more familiar. Once you saw phoenixes: they are gone; the world is not therefore disenchanted. The vessels on which you read sacred emblems turn out to be common pottery; but the sense of the pictures is sacred, and you may still read them transferred to the walls of the world. For a time, our teachers serve us personally, as metres or milestones of progress. Once they were angels of knowledge, and their figures touched the

sky. Then we drew near, saw their means, culture, and limits; and they yielded their places to other geniuses. Happy, if a few names remain so high, that we have not been able to read them nearer, and age and comparison have not robbed them of a ray. But, at last, we shall cease to look in men for completeness, and shall content ourselves with their social and delegated quality. All that respects the individual is temporary and prospective, like the individual himself, who is ascending out of his limits, into a catholic existence. We have never come at the true and best benefit of any genius, so long as we believe him an original force. In the moment when he ceases to help us as a cause, he begins to help us move as an effect. Then he appears as an exponent of a vaster mind and will. The opaque self becomes transparent with the light of the First Cause.

Yet, within the limits of human education and agency, we may say, great men exist that there may be greater men. The destiny of organized nature is amelioration, and who can tell its limits? It is for man to tame the chaos; on every side, whilst he lives, to scatter the seeds of science and of song, that climate, corn, animals, men, may be milder, and the germs of love and benefit may be multiplied.

PLATO; OR, THE PHILOSOPHER.

Among books, Plato only is entitled to Omar's fanatical compliment to the Koran, when he said, "Burn the libraries; for, their value is in this book." These sentences contain the culture of nations; these are the corner-stone of schools; these are the fountain-head of literatures. A discipline it is in logic, arithmetic, taste, symmetry, poetry, language, rhetoric, ontology, morals, or practical wisdom. There was never such range of speculation. Out of Plato come all things that are still written and debated among men of thought. Great havoc makes he among our originalities. We have reached the mountain from which all these drift bowlders were detached. The Bible of the learned for twenty-two hundred years, every brisk young man, who says in succession fine things to each reluctant generation, — Boethius, Rabelais, Erasmus, Bruno, Locke, Rousseau, Alfieri, Coleridge, — is some reader of Plato, translating into the vernacular, wittily, his good things. Even the men of grander proportion suffer some deduction from the misfortune (shall I say?) of coming after this exhausting generalizer. St. Augustine, Copernicus, Newton, Behmen, Swedenborg, Goethe, are likewise his debtors, and must say after him. For it is fair to credit the broadest generalizer with all the particulars deducible from his thesis.

Plato is philosophy, and philosophy, Plato, — at once the glory and the shame of mankind, since neither Saxon nor Roman have availed to add any idea to his categories. No wife, no children had he, and the thinkers of all civilized nations are his posterity, and are tinged with his mind. How many great men Nature is incessantly sending up out of night, to be his men, — Platonists! the Alexandrians, a constellation of genius; the Elizabethans, not less; Sir Thomas More, Henry More, John Hales, John Smith, Lord Bacon, Jeremy Taylor, Ralph Cudworth, Sydenham, Thomas Taylor; Marcilius Ficinus, and Picus Mirandola. Calvinism is in his *Phaedo*: Christianity is in it. Mahometanism draws all its philosophy, in its hand-book of morals, the *Akhlak-y-Jalaly*, from him. Mysticism finds in Plato all its texts. This citizen of a town in Greece is no villager nor patriot. An Englishman reads and says, "how English!" a German— "how Teutonic!" an Italian— "how Roman and how Greek!" As they say that Helen of Argos had that universal beauty that everybody felt related to her, so Plato seems, to a reader in New England, an American genius. His broad humanity transcends all sectional lines.

This range of Plato instructs us what to think of the vexed question concerning his reputed works, — what are genuine, what spurious. It is singular that wherever we find a man higher, by a whole head, than any of his

contemporaries, it is sure to come into doubt, what are his real works. Thus, Homer, Plato, Raffaele, Shakspeare. For these men magnetize their contemporaries, so that their companions can do for them what they can never do for themselves; and the great man does thus live in several bodies; and write, or paint, or act, by many hands; and after some time, it is not easy to say what is the authentic work of the master, and what is only of his school.

Plato, too, like every great man, consumed his own times. What is a great man, but one of great affinities, who takes up into himself all arts, sciences, all knowables, as his food? He can spare nothing; he can dispose of everything. What is not good for virtue is good for knowledge. Hence his contemporaries tax him with plagiarism. But the inventor only knows how to borrow; and society is glad to forget the innumerable laborers who ministered to this architect, and reserves all its gratitude for him. When we are praising Plato, it seems we are praising quotations from Solon, and Sophron, and Philolaus. Be it so. Every book is a quotation; and every house is a quotation out of all forests, and mines, and stone quarries; and every man is a quotation from all his ancestors. And this grasping inventor puts all nations under contribution.

Plato absorbed the learning of his times, — Philolaus, Timaeus, Heraclitus, Parmenides, and what else; then his master, Socrates; and finding himself still capable of a larger synthesis, — beyond all example then or since, — he traveled into Italy, to gain what Pythagoras had for him; then into Egypt, and perhaps still further east, to import the other element, which Europe wanted, into the European mind. This breadth entitles him to stand as the representative of philosophy. He says, in the Republic, “Such a genius as philosophers must of necessity have, is wont but seldom, in all its parts, to meet in one man; but its different parts generally spring up in different persons.” Every man, who would do anything well, must come to it from a higher ground. A philosopher must be more than a philosopher. Plato is clothed with the powers of a poet, stands upon the highest place of the poet, and (though I doubt he wanted the decisive gift of lyric expression) mainly is not a poet, because he chose to use the poetic gift to an ulterior purpose.

Great geniuses have the shortest biographies. Their cousins can tell you nothing about them. They lived in their writings, and so their house and street life was trivial and commonplace. If you would know their tastes and complexions, the most admiring of their readers most resembles them. Plato, especially, has no external biography. If he had lover, wife, or children, we hear nothing of them. He ground them all into paint. As a good chimney burns its smoke, so a philosopher converts the value of all his fortunes into his intellectual performances.

He was born 430 A. C., about the time of the death of Pericles; was of patrician connection in his times and city; and is said to have had an early inclination for war; but in his twentieth year, meeting with Socrates, was easily dissuaded from this pursuit, and remained for ten years his scholar, until the death of Socrates. He then went to Megara; accepted the invitations of Dion and of Dionysius, to the court of Sicily; and went thither three times, though very capriciously treated. He traveled into Italy; then into Egypt, where he stayed a long time; some say three, — some say thirteen years. It is said, he went farther, into Babylonia: this is uncertain. Returning to Athens, he gave lessons, in the Academy, to those whom his fame drew thither; and died, as we have received it, in the act of writing, at eighty-one years.

But the biography of Plato is interior. We are to account for the supreme elevation of this man, in the intellectual history of our race, — how it happens that, in proportion to the culture of men, they become his scholars; that, as our Jewish Bible has implanted itself in the table-talk and household life of every man and woman in the European and American nations, so the writings of Plato have pre-occupied every school of learning, every lover of thought, every church, every poet, — making it impossible to think, on certain levels, except through him. He stands between the truth and every man's mind, and has almost impressed language, and the primary forms of thought, with his name and seal. I am struck, in reading him, with the extreme modernness of his style and spirit. Here is the germ of that Europe we know so well, in its long history of arts and arms; here are all its traits, already discernible in the mind of Plato, — and in none before him. It has spread itself since into a hundred histories, but has added no new element. This perpetual modernness is the measure of merit, in every work of art; since the author of it was not misled by anything shortlived or local, but abode by real and abiding traits. How Plato came thus to be Europe, and philosophy, and almost literature, is the problem for us to solve.

This could not have happened, without a sound, sincere, and catholic man, able to honor, at the same time, the ideal, or laws of the mind, and fate, or the order of nature. The first period of a nation, as of an individual, is the period of unconscious strength. Children cry, scream and stamp with fury, unable to express their desires. As soon as they can speak and tell their want, and the reason of it, they become gentle. In adult life, whilst the perceptions are obtuse, men and women talk vehemently and superlatively, blunder and quarrel; their manners are full of desperation; their speech is full of oaths. As soon as, with culture, things have cleared up a little, and they see them no longer in lumps and masses, but accurately distributed, they desist from that weak vehemence, and explain their meaning in detail. If the tongue had not been framed for

articulation, man would still be a beast in the forest. The same weakness and want, on a higher plane, occurs daily in the education of ardent young men and women. "Ah! you don't understand me; I have never met with any one who comprehends me:" and they sigh and weep, write verses, and walk alone, — fault of power to express their precise meaning. In a month or two, through the favor of their good genius, they meet some one so related as to assist their volcanic estate; and, good communication being once established, they are thenceforward good citizens. It is ever thus. The progress is to accuracy, to skill, to truth, from blind force.

There is a moment, in the history of every nation, when, proceeding out of this brute youth, the perceptive powers reach their ripeness, and have not yet become microscopic: so that man, at that instant, extends across the entire scale; and, with his feet still planted on the immense forces of night, converses, by his eyes and brain, with solar and stellar creation. That is the moment of adult health, the culmination of power.

Such is the history of Europe, in all points; and such in philosophy. Its early records, almost perished, are of the immigrations from Asia, bringing with them the dreams of barbarians; a confusion of crude notions of morals, and of natural philosophy, gradually subsiding, through the partial insight of single teachers.

Before Pericles, came the Seven Wise Masters; and we have the beginnings of geometry, metaphysics, and ethics: then the partialists, — deducing the origin of things from flux or water, or from air, or from fire, or from mind. All mix with these causes mythologic pictures. At last, comes Plato, the distributor, who needs no barbaric paint, or tattoo, or whooping; for he can define. He leaves with Asia the vast and superlative; he is the arrival of accuracy and intelligence. "He shall be as a god to me, who can rightly divide and define."

This defining is philosophy. Philosophy is the account which the human mind gives to itself of the constitution of the world. Two cardinal facts lie forever at the base: the one, and the two. — 1. Unity, or Identity; and, 2, Variety. We unite all things, by perceiving the law which pervades them; by perceiving the superficial differences, and the profound resemblances. But every mental act, — this very perception of identity or oneness, recognizes the difference of things. Oneness and otherness. It is impossible to speak, or to think, without embracing both.

The mind is urged to ask for one cause of many effects; then for the cause of that; and again the cause, diving still into the profound; self-assured that it shall arrive at an absolute and sufficient one, — a one that shall be all. "In the midst of the sun is the light, in the midst of the light is truth, and in the midst of truth is the imperishable being, "say the Vedas. All philosophy, of east and west, has the

same centripetence. Urged by an opposite necessity, the mind returns from the one, to that which is not one, but other or many; from cause to effect; and affirms the necessary existence of variety, the self-existence of both, as each is involved in the other. These strictly-blended elements it is the problem of thought to separate, and to reconcile. Their existence is mutually contradictory and exclusive; and each so fast slides into the other, that we can never say what is one, and what it is not. The Proteus is as nimble in the highest as in the lowest grounds, when we contemplate the one, the true, the good, — as in the surfaces and extremities of matter. In all nations, there are minds which incline to dwell in the conception of the fundamental Unity. The raptures of prayer and ecstasy of devotion lose all being in one Being. This tendency finds its highest expression in the religious writings of the East, and chiefly, in the Indian Scriptures, in the Vedas, the Bhagavat Geeta, and the Vishnu Purana. Those writings contain little else than this idea, and they rise to pure and sublime strains in celebrating it.

The Same, the Same! friend and foe are of one stuff; the ploughman, the plough, and the furrow, are of one stuff; and the stuff is such, and so much, that the variations of forms are unimportant. “You are fit” (says the supreme Krishna to a sage) “to apprehend that you are not distinct from me. That which I am, thou art, and that also is this world, with its gods, and heroes, and mankind. Men contemplate distinctions, because they are stupefied with ignorance.” “The words I and mine constitute ignorance. What is the great end of all, you shall now learn from me. It is soul, — one in all bodies, pervading, uniform, perfect, preeminent over nature, exempt from birth, growth, and decay, omnipresent, made up of true knowledge, independent, unconnected with unrealities, with name, species, and the rest, in time past, present, and to come. The knowledge that this spirit, which is essentially one, is in one’s own, and in all other bodies, is the wisdom of one who knows the unity of things. As one diffusive air, passing through the perforations of a flute, is distinguished as the notes of a scale, so the nature of the Great Spirit is single, though its forms be manifold, arising from the consequences of acts. When the difference of the investing form, as that of god, or the rest, is destroyed, there is no distinction.” “The whole world is but a manifestation of Vishnu, who is identical with all things, and is to be regarded by the wise, as not differing from, but as the same as themselves. I neither am going nor coming; nor is my dwelling in any one place; nor art thou, thou; nor are others, others; nor am I, I.” As if he had said, “All is for the soul, and the soul is Vishnu; and animals and stars are transient painting; and light is whitewash; and durations are deceptive; and form is imprisonment; and heaven itself a decoy.” That which the soul seeks is resolution into being, above form,

out of Tartarus, and out of heaven, — liberation from nature.

If speculation tends thus to a terrific unity, in which all things are absorbed, action tends directly backwards to diversity. The first is the course of gravitation of mind; the second is the power of nature. Nature is the manifold. The unity absorbs, and melts or reduces. Nature opens and creates. These two principles reappear and interpenetrate all things, all thought; the one, the many. One is being; the other, intellect; one is necessity; the other, freedom; one, rest; the other, motion; one, power; the other, distribution; one, strength; the other, pleasure; one, consciousness; the other, definition; one, genius; the other, talent, one, earnestness; the other, knowledge; one, possession; the other, trade; one, caste; the other, culture; one king; the other, democracy; and, if we dare carry these generalizations a step higher, and name the last tendency of both, we might say, that the end of the one is escape from organization, — pure science; and the end of the other is the highest instrumentality, or use of means, or executive deity.

Each student adheres, by temperament and by habit, to the first or to the second of these gods of the mind. By religion, he tends to unity; by intellect, or by the senses, to the many. A too rapid unification, and an excessive appliance to parts and particulars, are the twin dangers of speculation.

To this partiality the history of nations corresponded. The country of unity, of immovable institutions, the seat of a philosophy delighting in abstractions, of men faithful in doctrine and in practice to the idea of a deaf, unimplorable, immense fate, is Asia; and it realizes this fate in the social institution of caste. On the other side, the genius of Europe is active and creative; it resists caste by culture; its philosophy was a discipline; it is a land of arts, inventions, trade, freedom. If the East loved infinity, the West delighted in boundaries.

European civility is the triumph of talent, the extension of system, the sharpened understanding, adaptive skill, delight in forms, delight in manifestation, in comprehensible results. Pericles, Athens, Greece, had been working in this element with the joy of genius not yet chilled by any foresight of the detriment of an excess. They saw before them no sinister political economy; no ominous Malthus; no Paris or London; no pitiless subdivision of classes, — the doom of the pinmakers, the doom of the weavers, of dressers, of stockingers, of carders, of spinners, of colliers; no Ireland; no Indian caste, superinduced by the efforts of Europe to throw it off. The understanding was in its health and prime. Art was in its splendid novelty. They cut the Pentelican marble as if it were snow, and their perfect works in architecture and sculpture seemed things of course, not more difficult than the completion of a new ship at the Medford yards, or new mills at Lowell. These things are in course, and may be taken for

granted. The Roman legion, Byzantine legislation, English trade, the saloons of Versailles, the cafes of Paris, the steam-mill, steamboat, steam-coach, may all be seen in perspective; the town-meeting, the ballot-box, the newspaper and cheap press.

Meantime, Plato, in Egypt, and in Eastern pilgrimages, imbibed the idea of one Deity, in which all things are absorbed. The unity of Asia, and the detail of Europe; the infinitude of the Asiatic soul, and the defining, result-loving, machine-making, surface-seeking, opera-going Europe, — Plato came to join, and by contact to enhance the energy of each. The excellence of Europe and Asia are in his brain. Metaphysics and natural philosophy expressed the genius of Europe; he substracts the religion of Asia, as the base.

In short, a balanced soul was born, perceptive of the two elements. It is as easy to be great as to be small. The reason why we do not at once believe in admirable souls, is because they are not in our experience. In actual life, they are so rare, as to be incredible; but, primarily, there is not only no presumption against them, but the strongest presumption in favor of their appearance. But whether voices were heard in the sky, or not; whether his mother or his father dreamed that the infant man-child was the son of Apollo; whether a swarm of bees settled on his lips, or not; a man who could see two sides of a thing was born. The wonderful synthesis so familiar in nature; the upper and the under side of the medal of Jove; the union of impossibilities, which reappears in every object; its real and its ideal power, — was now, also, transferred entire to the consciousness of a man.

The balanced soul came. If he loved abstract truth, he saved himself by propounding the most popular of all principles, the absolute good, which rules rulers, and judges the judge. If he made transcendental distinctions, he fortified himself by drawing all his illustrations from sources disdained by orators, and polite conversers; from mares and puppies; from pitchers and soup-ladles; from cooks and criers; the shops of potters, horse-doctors, butchers, and fishmongers. He cannot forgive in himself a partiality, but is resolved that the two poles of thought shall appear in his statement. His arguments and his sentences are self-poised and spherical. The two poles appear; yes, and become two hands, to grasp and appropriate their own.

Every great artist has been such by synthesis. Our strength is transitional, alternating; or, shall I say, a thread of two strands. The seashore, sea seen from shore, shore seen from sea; the taste of two metals in contact; and our enlarged powers at the approach and at the departure of a friend; the experience of poetic creativeness, which is not found in staying at home, nor yet in traveling, but in transitions from one to the other, which must therefore be adroitly managed to

present as much transitional surface as possible; this command of two elements must explain the power and charm of Plato. Art expresses the one, or the same by the different. Thought seeks to know unity in unity; poetry to show it by variety; that is, always by an object or symbol. Plato keeps the two vases, one of aether and one of pigment, at his side, and invariably uses both. Things added to things, as statistics, civil history, are inventories. Things used as language are inexhaustibly attractive. Plato turns incessantly the obverse and the reverse of the medal of Jove.

To take an example: — The physical philosophers have sketched each his theory of the world; the theory of atoms, of fire, of flux, of spirit; theories mechanical and chemical in their genius. Plato, a master of mathematics, studious of all natural laws and causes, feels these, as second causes, to be no theories of the world, but bare inventories and lists. To the study of nature he therefore prefixes the dogma,— “Let us declare the cause which led the Supreme Ordainer to produce and compose the universe. He was good; and he who is good has no kind of envy. Exempt from envy, he wished that all things should be as much as possible like himself. Whosoever, taught by wise men, shall admit this as the prime cause of the origin and foundation of the world, will be in the truth.” “All things are for the sake of the good, and it is the cause of everything beautiful.” This dogma animates and impersonates his philosophy. The synthesis which makes the character of his mind appears in all his talents. Where there is great compass of wit, we usually find excellencies that combine easily in the living man, but in description appear incompatible. The mind of Plato is not to be exhibited by a Chinese catalogue, but is to be apprehended by an original mind in the exercise of its original power. In him the freest abandonment is united with the precision of a geometer. His daring imagination gives him the more solid grasp of facts; as the birds of highest flight have the strongest alar bones. His patrician polish, his intrinsic elegance, edged by an irony so subtle that it stings and paralyzes, adorn the soundest health and strength of frame. According to the old sentence, “If Jove should descend to the earth, he would speak in the style of Plato.”

With this palatial air, there is, for the direct aim of several of his works, and running through the tenor of them all, a certain earnestness, which mounts, in the Republic, and in the Phaedo, to piety. He has been charged with feigning sickness at the time of the death of Socrates. But the anecdotes that have come down from the times attest his manly interference before the people in his master’s behalf, since even the savage cry of the assembly to Plato is preserved; and the indignation towards popular government, in many of his pieces, expresses a personal exasperation. He has a probity, a native reverence for

justice and honor, and a humanity which makes him tender for the superstitions of the people. Add to this, he believes that poetry, prophecy, and the high insight, arc from a wisdom of which man is not master; that the gods never philosophize; but, by a celestial mania, these miracles are accomplished. Horsed on these winged steeds, he sweeps the dim regions, visits worlds which flesh cannot enter; he saw the souls in pain; he hears the doom of the judge; he beholds the penal metempsychosis; the Fates, with the rock and shears; and hears the intoxicating hum of their spindle.

But his circumspection never forsook him. One would say, he had read the inscription on the gates of Busyrane,— “Be bold;” and on the second gate,— “Be bold, be bold and evermore be bold;” and then again he paused well at the third gate,— “Be not too bold.” His strength is like the momentum of a falling planet; and his discretion, the return of its due and perfect curve, — so excellent is his Greek love of boundary, and his skill in definition. In reading logarithms, one is not more secure, than in following Plato in his flights. Nothing can be colder than his head, when the lightnings of his imagination are playing in the sky. He has finished his thinking, before he brings it to the reader; and he abounds in the surprises of a literary master. He has that opulence which furnishes, at every turn, the precise weapon he needs. As the rich man wears no more garments, drives no more horses, sits in no more chambers, than the poor, — but has that one dress, or equipage, or instrument, which is fit for the hour and the need; so Plato, in his plenty, is never restricted, but has the fit word. There is, indeed, no weapon in all the armory of wit which he did not possess and use, — epic, analysis, mania, intuition, music, satire, and irony, down to the customary and polite. His illustrations are poetry and his jests illustrations. Socrates’ profession of obstetric art is good philosophy; and his finding that word “cookery,” and “adulatory art,” for rhetoric, in the *Gorgias*, does us a substantial service still. No orator can measure in effect with him who can give good nicknames.

What moderation, and understatement, and checking his thunder in mid volley! He has good-naturedly furnished the courtier and citizen with all that can be said against the schools. “For philosophy is an elegant thing, if any one modestly meddles with it; but, if he is conversant with it more than is becoming, it corrupts the man.” He could well afford to be generous, — he, who from the sunlike centrality and reach of his vision, had a faith without cloud. Such as his perception, was his speech: he plays with the doubt, and makes the most of it: he paints and quibbles; and by and by comes a sentence that moves the sea and land. The admirable earnest comes not only at intervals, in the perfect yes and no of the dialogue, but in bursts of light. “I, therefore, Callicles, am persuaded by

these accounts, and consider how I may exhibit my soul before the judge in a healthy condition. Wherefore, disregarding the honors that most men value, and looking to the truth, I shall endeavor in reality to live as virtuously as I can and, when I die, to die so. And I invite all other men, to the utmost of my power; and you, too, I in turn invite to this contest, which, I affirm, surpasses all contests here.”

He is a great average man one who, to the best thinking, adds a proportion and equality in his faculties, so that men see in him their own dreams and glimpses made available, and made to pass for what they are. A great common sense is his warrant and qualification to be the world’s interpreter. He has reason, as all the philosophic and poetic class have: but he has, also, what they have not, — this strong solving sense to reconcile his poetry with the appearances of the world, and build a bridge from the streets of cities to the Atlantis. He omits never this graduation, but slopes his thought, however picturesque the precipice on one side, to an access from the plain. He never writes in ecstasy, or catches us up into poetic rapture.

Plato apprehended the cardinal facts. He could prostrate himself on the earth, and cover his eyes, whilst he adored that which cannot be numbered, or gauged, or known, or named: that of which everything can be affirmed and denied: that “which is entity and nonentity.” He called it super-essential. He even stood ready, as in the Parmenides, to demonstrate that it was so, — that this Being exceeded the limits of intellect. No man ever more fully acknowledged the Ineffable. Having paid his homage, as for the human race, to the Illimitable, he then stood erect, and for the human race affirmed, “And yet things are knowable!” — that is, the Asia in his mind was first heartily honored, — the ocean of love and power, before form, before will, before knowledge, the Same, the Good, the One; and now, refreshed and empowered by this worship, the instinct of Europe, namely, culture, returns; and he cries, Yet things are knowable! They are knowable, because, being from one, things correspond. There is a scale: and the correspondence of heaven to earth, of matter to mind, of the part to the whole, is our guide. As there is a science of stars, called astronomy; a science of quantities called mathematics; a science of qualities, called chemistry; so there is a science of sciences, — I call it Dialectic, — which is the intellect discriminating the false and the true. It rests on the observation of identity and diversity; for, to judge, is to unite to an object the notion which belongs to it. The sciences, even the best, — mathematics, and astronomy, are like sportsmen, who seize whatever prey offers, even without being able to make any use of them. Dialectic must teach the use of them. “This is of that rank that no intellectual man will enter on any study for its own sake, but only with a view

to advance himself in that one sole science which embraces all.”

“The essence or peculiarity of man is to comprehend the whole; or that which in the diversity of sensations, can be comprised under a rational unity.” “The soul which has never perceived the truth, cannot pass into the human form.” I announce to men the intellect. I announce the good of being interpenetrated by the mind that made nature: this benefit, namely, that it can understand nature, which it made and maketh. Nature is good, but intellect is better: as the law-giver is before the law-receiver. I give you joy, O sons of men: that truth is altogether wholesome; that we have hope to search out what might be the very self of everything. The misery of man is to be balked of the sight of essence, and to be stuffed with conjecture: but the supreme good is reality; the supreme beauty is reality; and all virtue and all felicity depend on this science of the real: for courage is nothing else than knowledge: the fairest fortune that can befall man, is to be guided by his daemon to that which is truly his own. This also is the essence of justice, — to attend every one his own; nay, the notion of virtue is not to be arrived at, except through direct contemplation of the divine essence. Courage, then, for “the persuasion that we must search that which we do not know, will render us, beyond comparison, better, braver, and more industrious, than if we thought it impossible to discover what we do not know, and useless to search for it.” He secures a position not to be commanded, by his passion for reality; valuing philosophy only as it is the pleasure of conversing with real being.

Thus, full of the genius of Europe, he said, “Culture.” He saw the institutions of Sparta, and recognized more genially, one would say, than any since, the hope of education. He delighted in every accomplishment, in every graceful and useful and truthful performance; above all, in the splendors of genius and intellectual achievement. “The whole of life, O Socrates,” said Glauco, “is, with the wise the measure of hearing such discourses as these.” What a price he sets on the feats of talent, on the powers of Pericles, of Isocrates, of Parmenides! What price, above price on the talents themselves! He called the several faculties, gods, in his beautiful personation. What value he gives to the art of gymnastics in education; what to geometry; what to music, what to astronomy, whose appeasing and medicinal power he celebrates! In the Timseus, he indicates the highest employment of the eyes. “By us it is asserted, that God invented and bestowed sight on us for this purpose, — that, on surveying the circles of intelligence in the heavens, we might properly employ those of our own minds, which, though disturbed when compared with the others that are uniform, are still allied to their circulations; and that, having thus learned, and being naturally possessed of a correct reasoning faculty, we might, by imitating

the uniform revolutions of divinity, set right our own wanderings and blunders.” And in the Republic,— “By each of these disciplines, a certain organ of the soul is both purified and reanimated, which is blinded and buried by studies of another kind; an organ better worth saving than ten thousand eyes, since truth is perceived by this alone.”

He said, Culture; but he first admitted its basis, and gave immeasurably the first place to advantages of nature. His patrician tastes laid stress on the distinctions of birth. In the doctrine of the organic character and disposition is the origin of caste. “Such as were fit to govern, into their composition the informing Deity mingled gold: into the military, silver; iron and brass for husbandmen and artificers.” The East confirms itself, in all ages, in this faith. The Koran is explicit on this point of caste. “Men have their metal, as of gold and silver. Those of you who were the worthy ones in the state of ignorance, will be the worthy ones in the state of faith, as soon as you embrace it.” Plato was not less firm. “Of the five orders of things, only four can be taught in the generality of men.” In the Republic, he insists on the temperaments of the youth, as the first of the first.

A happier example of the stress laid on nature, is in the dialogue with the young Theages, who wishes to receive lessons from Socrates. Socrates declares that, if some have grown wise by associating with him, no thanks are due to him; but, simply, whilst they were with him, they grew wise, not because of him; he pretends not to know the way of it. “It is adverse to many, nor can those be benefited by associating with me, whom the Daemons oppose, so that it is not possible for me to live with these. With many, however, he does not prevent me from conversing, who yet are not at all benefited by associating with me. Such, O Theages, is the association with me; for, if it pleases the God, you will make great and rapid proficiency: you will not, if he does not please. Judge whether it is not safer to be instructed by some one of those who have power over the benefit which they impart to men, than by me, who benefit or not, just as it may happen.” As if he had said, “I have no system. I cannot be answerable for you. You will be what you must. If there is love between us, inconceivably delicious and profitable will our intercourse be; if not, your time is lost, and you will only annoy me. I shall seem to you stupid, and the reputation I have, false. Quite above us, beyond the will of you or me, is this secret affinity or repulsion laid. All my good is magnetic, and I educate, not by lessons, but by going about my business.”

He said, Culture; he said, Nature; and he failed not to add, “There is also the divine.” There is no thought in any mind, but it quickly tends to convert itself into a power, and organizes a huge instrumentality of means. Plato, lover of

limits, loved the illimitable, saw the enlargement and nobility which come from truth itself, and good itself, and attempted, as if on the part of the human intellect, once for all, to do it adequate homage, — homage fit for the immense soul to receive, and yet homage becoming the intellect to render. He said, then, “Our faculties run out into infinity, and return to us thence. We can define but a little way; but here is a fact which will not be skipped, and which to shut our eyes upon is suicide. All things are in a scale; and, begin where we will, ascend and ascend. All things are symbolical; and what we call results are beginnings.”

A key to the method and completeness of Plato is his twice bisected line. After he has illustrated the relation between the absolute good and true, and the forms of the intelligible world, he says:— “Let there be a line cut in two, unequal parts. Cut again each of these two parts, — one representing the visible, the other the intelligible world, — and these two new sections, representing the bright part and the dark part of these worlds, you will have, for one of the sections of the visible world, — images, that is, both shadows and reflections; for the other section, the objects of these images,—that is, plants, animals, and the works of art and nature. Then divide the intelligible world in like manner; the one section will be of opinions and hypotheses, and the other section, of truths.” To these four sections, the four operations of the soul correspond, — conjecture, faith, understanding, reason. As every pool reflects the image of the sun, so every thought and thing restores us an image and creature of the supreme Good. The universe is perforated by a million channels for his activity. All things mount and mount.

All his thought has this ascension; in Phaedrus, teaching that “beauty is the most lovely of all things, exciting hilarity, and shedding desire and confidence through the universe, wherever it enters; and it enters, in some degree, into all things; but that there is another, which is as much more beautiful than beauty, as beauty is than chaos; namely, wisdom, which our wonderful organ of sight cannot reach unto, but which, could it be seen, would ravish us with its perfect reality.” He has the same regard to it as the source of excellence in works of art. “When an artificer, in the fabrication of any work, looks to that which always subsists according to the same; and, employing a model of this kind, expresses its idea and power in his work; it must follow, that his production should be beautiful. But when he beholds that which is born and dies, it will be far from beautiful.”

Thus ever: the Banquet is a teaching in the same spirit, familiar now to all the poetry, and to all the sermons of the world, that the love of the sexes is initial; and symbolizes, at a distance, the passion of the soul for that immense lake of beauty it exists to seek. This faith in the Divinity is never out of mind, and

constitutes the limitation of all his dogmas. Body cannot teach wisdom; — God only. In the same mind, he constantly affirms that virtue cannot be taught; that it is not a science, but an inspiration; that the greatest goods are produced to us through mania, and are assigned to us by a divine gift.

This leads me to that central figure, which he has established in his Academy, as the organ through which every considered opinion shall be announced, and whose biography he has likewise so labored, that the historic facts are lost in the light of Plato's mind. Socrates and Plato are the double star, which the most powerful instruments will not entirely separate. Socrates, again, in his traits and genius, is the best example of that synthesis which constitutes Plato's extraordinary power. Socrates, a man of humble stem, but honest enough; of the commonest history; of a personal homeliness so remarkable, as to be a cause of wit in others, — the rather that his broad good nature and exquisite taste for a joke invited the sally, which was sure to be paid. The players personated him on the stage; the potters copied his ugly face on their stone jugs. He was a cool fellow, adding to his humor a perfect temper, and a knowledge of his man, be he who he might whom he talked with, which laid the companion open to certain defeat in any debate, — and in debate he immoderately delighted. The young men are prodigiously fond of him, and invite him to their feasts, whither he goes for conversation. He can drink, too; has the strongest head in Athens; and, after leaving the whole party under the table, goes away, as if nothing had happened, to begin new dialogues with somebody that is sober. In short, he was what our country-people call an old one.

He affected a good many citizen-like tastes, was monstrously fond of Athens, hated trees, never willingly went beyond the walls, knew the old characters, valued the bores and philistines, thought everything in Athens a little better than anything in any other place. He was plain as a Quaker in habit and speech, affected low phrases, and illustrations from cocks and quails, soup-pans and sycamore-spoons, grooms and farriers, and unnameable offices, — especially if he talked with any superfine person. He had a Franklin-like wisdom. Thus, he showed one who was afraid to go on foot to Olympia, that it was no more than his daily walk within doors, if continuously extended, would easily reach.

Plain old uncle as he was, with his great ears, — an immense talker, — the rumor ran, that, on one or two occasions, in the war with Boeotia, he had shown a determination which had covered the retreat of a troop; and there was some story that, under cover of folly, he had, in the city government, when one day he chanced to hold a seat there, evinced a courage in opposing singly the popular voice, which had well-nigh ruined him. He is very poor; but then he is hardy as a soldier, and can live on a few olives; usually, in the strictest sense, on bread and

water, except when entertained by his friends. His necessary expenses were exceedingly small, and no one could live as he did. He wore no undergarment; his upper garment was the same for summer and winter; and he went barefooted; and it is said that, to procure the pleasure, which he loves, of talking at his ease all day with the most elegant and cultivated young men, he will now and then return to his shop, and carve statues, good or bad, for sale. However that be, it is certain that he had grown to delight in nothing else than this conversation; and that, under his hypocritical pretense of knowing nothing, he attacks and brings down all the fine speakers, all the fine philosophers of Athens, whether natives, or strangers from Asia Minor and the islands. Nobody can refuse to talk with him, he is so honest, and really curious to know; a man who was willingly confuted, if he did not speak the truth, and who willingly confuted others, asserting what was false; and not less pleased when confuted than when confuting; for he thought not any evil happened to men, of such a magnitude as false opinion respecting the just and unjust. A pitiless disputant, who knows nothing, but the bounds of whose conquering intelligence no man had ever reached; whose temper was imperturbable; whose dreadful logic was always leisurely and sportive; so careless and ignorant as to disarm the weariest, and draw them, in the pleasantest manner, into horrible doubts and confusion. But he always knew the way out; knew it, yet would not tell it. No escape; he drives them to terrible choices by his dilemmas, and tosses the Hippiases and Gorgiases, with their grand reputations, as a boy tosses his balls. The tyrannous realist!-Meno has discoursed a thousand times, at length, on virtue, before many companies, and very well, as it appeared to him; but, at this moment, he cannot even tell what it is, — this cramp-fish of a Socrates has so bewitched him.

This hard-headed humorist, whose strange conceits, drollery, and *bon-homme*, diverted the young patricians, whilst the rumor of his sayings and quibbles gets abroad every day, turns out, in a sequel, to have a probity as invincible as his logic and to be either insane, or, at least, under cover of this play, enthusiastic in his religion. When accused before the judges of subverting the popular creed, he affirms the immortality of the soul, the future reward and punishment; and, refusing to recant, in a caprice of the popular government, was condemned to die, and sent to the prison. Socrates entered the prison, and took away all ignominy from the place, which could not be a prison, whilst he was there. Crito bribed the jailor; but Socrates would not go out by treachery. “Whatever inconvenience ensue, nothing is to be preferred before justice. These things I hear like pipes and drums, whose sound makes me deaf to everything you say.” The fame of this prison, the fame of the discourses there, and the drinking of the hemlock, are one of the most precious passages in the history of

the world.

The rare coincidence, in one ugly body, of the droll and the martyr, the keen street and market debater with the sweetest saint known to any history at that time, had forcibly struck the mind of Plato, so capacious of these contrasts; and the figure of Socrates, by a necessity, placed itself in the foreground of the scene, as the fittest dispenser of the intellectual treasures he had to communicate. It was a rare fortune, that this Aesop of the mob, and this robed scholar, should meet, to make each other immortal in their mutual faculty. The strange synthesis, in the character of Socrates, capped the synthesis in the mind of Plato. Moreover, by this means, he was able, in the direct way, and without envy, to avail himself of the wit and weight of Socrates, to which unquestionably his own debt was great; and these derived again their principal advantage from the perfect art of Plato.

It remains to say, that the defect of Plato in power is only that which results inevitably from his quality. He is intellectual in his aim; and, therefore, in expression, literary. Mounting into heaven, driving into the pit, expounding the laws of the state, the passion of love, the remorse of crime, the hope of the parting soul, — he is literary, and never otherwise. It is almost the sole deduction from the merit of Plato, that his writings have not, — what is, no doubt, incident to this regnancy of intellect in his work, — the vital authority which the screams of prophets and the sermons of unlettered Arabs and Jews possess. There is an interval; and to cohesion, contact is necessary.

I know not what can be said in reply to this criticism, but that we have come to a fact in the nature of things: an oak is not an orange. The qualities of sugar remain with sugar, and those of salt, with salt.

In the second place, he has not a system. The dearest defenders and disciples are at fault. He attempted a theory of the universe, and his theory is not complete or self-evident. One man thinks he means this, and another, that: he has said one thing in one place, and the reverse of it in another place. He is charged with having failed to make the transition from ideas to matter. Here is the world, sound as a nut, perfect, not the smallest piece of chaos left, never a stitch nor an end, not a mark of haste, or botching, or second thought; but the theory of the world is a thing of shreds and patches.

The longest wave is quickly lost in the sea. Plato would willingly have a Platonism, a known and accurate expression for the world, and it should be accurate. It shall be the world passed through the mind of Plato, — nothing less. Every atom shall have the Platonic tinge; every atom, every relation or quality you knew before, you shall know again and find here, but now ordered; not nature, but art. And you shall feel that Alexander indeed overran, with men and

horses, some countries of the planet; but countries, and things of which countries are made, elements, planet itself, laws of planet and of men, have passed through this man as bread into his body, and become no longer bread, but body: so all this mammoth morsel has become Plato. He has clapped copyright on the world. This is the ambition of individualism. But the mouthful proves too large. Boa constrictor has good will to eat it, but he is foiled. He falls abroad in the attempt; and biting, gets strangled: the bitten world holds the biter fast by his own teeth. There he perishes: unconquered nature lives on, and forgets him. So it fares with all: so must it fare with Plato. In view of eternal nature, Plato turns out to be philosophical exertions. He argues on this side, and on that. The acutest German, the lovingest disciple, could never tell what Platonism was; indeed, admirable texts can be quoted on both sides of every great question from him.

These things we are forced to say, if we must consider the effort of Plato, or of any philosopher, to dispose of Nature, — which will not be disposed of. No power of genius has ever yet had the smallest success in explaining existence. The perfect enigma remains. But there is an injustice in assuming this ambition for Plato. Let us not seem to treat with flippancy his venerable name. Men, in proportion to their intellect, have admitted his transcendent claims. The way to know him, is to compare him, not with nature, but with other men. How many ages have gone by, and he remains unapproached! A chief structure of human wit, like Karnac, or the mediaeval cathedrals, or the Etrurian remains, it requires all the breadth of human faculty to know it. I think it is truest seen, when seen with the most respect. His sense deepens, his merits multiply, with study. When we say, here is a fine collection of fables; or, when we praise the style; or the common sense; or arithmetic; we speak as boys, and much of our impatient criticism of the dialectic, I suspect, is no better. The criticism is like our impatience of miles when we are in a hurry; but it is still best that a mile should have seventeen hundred and sixty yards. The great-eyed Plato proportioned the lights and shades after the genius of our life.

PLATO: NEW READINGS

The publication, in Mr. Bohn's "Serial Library," of the excellent translations of Plato, which we esteem one of the chief benefits the cheap press has yielded, gives us an occasion to take hastily a few more notes of the elevation and bearings of this fixed star; or, to add a bulletin, like the journals, of Plato at the latest dates.

Modern science, by the extent of its generalization, has learned to indemnify the student of man for the defects of individuals, by tracing growth and ascent in races; and, by the simple expedient of lighting up the vast background, generates a feeling of complacency and hope. The human being has the saurian and the plant in his rear. His arts and sciences, the easy issue of his brain, look glorious when prospectively beheld from the distant brain of ox, crocodile, and fish. It seems as if nature, in regarding the geologic night behind her, when, in five or six millenniums, she had turned out five or six men, as Homer, Phidias, Menu, and Columbus, was nowise discontented with the result. These samples attested the virtue of the tree. These were a clear amelioration of trilobite and saurus, and a good basis for further proceeding. With this artist time and space are cheap, and she is insensible of what you say of tedious preparation. She waited tranquilly the flowing periods of paleontology, for the hour to be struck when man should arrive. Then periods must pass before the motion of the earth can be suspected; then before the map of the instincts and the cultivable powers can be drawn. But as of races, so the succession of individual men is fatal and beautiful, and Plato has the fortune, in the history of mankind, to mark an epoch.

Plato's fame does not stand on a syllogism, or on any masterpieces of the Socratic, or on any thesis, as, for example, the immortality of the soul. He is more than an expert, or a school-man, or a geometer, or the prophet of a peculiar message. He represents the privilege of the intellect, the power, namely, of carrying up every fact to successive platforms, and so disclosing, in every fact, a germ of expansion. These expansions are in the essence of thought. The naturalist would never help us to them by any discoveries of the extent of the universe, but is as poor, when cataloguing the resolved nebula of Orion, as when measuring the angles of an acre. But the Republic of Plato, by these expansions, may be said to require, and so to anticipate, the astronomy of Laplace. The expansions are organic. The mind does not create what it perceives, any more than the eye creates the rose. In ascribing to Plato the merit of announcing them, we only say, here was a more complete man, who could apply to nature the whole scale of the senses, the understanding, and the reason. These expansions,

or extensions, consist in continuing the spiritual sight where the horizon falls on our natural vision, and, by this second sight, discovering the long lines of law which shoot in every direction. Everywhere he stands on a path which has no end, but runs continuously round the universe. Therefore, every word becomes an exponent of nature. Whatever he looks upon discloses a second sense, and ulterior senses. His perception of the generation of contraries, of death out of life, and life out of death, — that law by which, in nature, decomposition is recomposition, and putrefaction and cholera are only signals of a new creation; his discernment of the little in the large, and the large in the small; studying the state in the citizen, and the citizen in the state; and leaving it doubtful whether he exhibited the Republic as an allegory on the education of the private soul; his beautiful definitions of ideas, of time, of form, of figure, of the line, sometimes hypothetically given, as his defining of virtue, courage, justice, temperance; his love of the apologue, and his apologues themselves; the cave of Trophonius; the ring of Gyges; the charioteer and two horses; the golden, silver, brass, and iron temperaments; Theuth and Thamus; and the visions of Hades and the Fates — fables which have imprinted themselves in the human memory like the signs of the zodiac; his soliform eye and his boniform soul; his doctrine of assimilation; his doctrine of reminiscence; his clear vision of the laws of return, or reaction, which secure instant justice throughout the universe, instanced everywhere, but specially in the doctrine, “what comes from God to us, returns from us to God,” and in Socrates’ belief that the laws below are sisters of the laws above.

More striking examples are his moral conclusions. Plato affirms the coincidence of science and virtue; for vice can never know itself and virtue; but virtue knows both itself and vice. The eye attested that justice was best, as long as it was profitable; Plato affirms that it is profitable throughout; that the profit is intrinsic, though the just conceal his justice from gods and men; that it is better to suffer injustice, than to do it; that the sinner ought to covet punishment; that the lie was more hurtful than homicide; and that ignorance, or the involuntary lie, was more calamitous than involuntary homicide; that the soul is unwillingly deprived of true opinions; and that no man sins willingly; that the order of proceeding of nature was from the mind to the body; and, though a sound body cannot restore an unsound mind, yet a good soul can, by its virtue, render the body the best possible. The intelligent have a right over the ignorant, namely, the right of instructing them. The right punishment of one out of tune, is to make him play in tune; the fine which the good, refusing to govern, ought to pay, is, to be governed by a worse man; that his guards shall not handle gold and silver, but shall be instructed that there is gold and silver in their souls, which will make men willing to give them everything which they need. This second sight explains

the stress laid on geometry. He saw that the globe of earth was not more lawful and precise than was the supersensible; that a celestial geometry was in place there, as a logic of lines and angles here below; that the world was throughout mathematical; the proportions are constant of oxygen, azote, and lime; there is just so much water, and slate, and magnesia; not less are the proportions constant of moral elements.

This eldest Goethe, hating varnish and falsehood, delighted in revealing the real at the base of the accidental; in discovering connection, continuity, and representation, everywhere; hating insulation; and appears like the god of wealth among the cabins of vagabonds, opening power and capability in everything he touches. Ethical science was new and vacant, when Plato could write thus:—“Of all whose arguments are left to the men of the present time, no one has ever yet condemned injustice, or praised justice, otherwise than as respects the repute, honors, and emoluments arising therefrom; while, as respects either of them in itself, and subsisting by its own power in the soul of the possessor, and concealed both from gods and men, no one has yet sufficiently investigated, either in poetry or prose writings, — how, namely, that the one is the greatest of all the evils that the soul has within it, and justice the greatest good.”

His definition of ideas, as what is simple, permanent, uniform, and self-existent, forever discriminating them from the notions of the understanding, marks an era in the world. He was born to behold the self-evolving power of spirit, endless generator of new ends; a power which is the key at once to the centrality and the evanescence of things. Plato is so centered, that he can well spare all his dogmas. Thus the fact of knowledge and ideas reveals to him the fact of eternity; and the doctrine of reminiscence he offers as the most probable particular explication. Call that fanciful, — it matters not; the connection between our knowledge and the abyss of being is still real, and the explication must be not less magnificent.

He has indicated every eminent point in speculation. He wrote on the scale of the mind itself, so that all things have symmetry in his tablet. He put in all the past, without weariness, and descended into detail with a courage like that he witnessed in nature. One would say, that his forerunners had mapped out each a farm, or a district, or an island, in intellectual geography, but that Plato first drew the sphere. He domesticates the soul in nature; man is the microcosm. All the circles of the visible heaven represent as many circles in the rational soul. There is no lawless particle, and there is nothing casual in the action of the human mind. The names of things, too, are fatal, following the nature of things. All the gods of the Pantheon are, by their names, significant of a profound sense. The gods are the ideas. Pan is speech, or manifestation; Saturn, the contemplative;

Jove, the regal soul; and Mars, passion. Venus is proportion; Calliope, the soul of the world; Aglaia, intellectual illustration.

These thoughts, in sparkles of light, had appeared often to pious and to poetic souls; but this well-bred, all-knowing Greek geometer comes with command, gathers them all up into rank and gradation, the Euclid of holiness, and marries the two parts of nature. Before all men, he saw the intellectual values of the moral sentiment. He describes his own ideal, when he paints in *Timaeus* a god leading things from disorder into order. He kindled a fire so truly in the center, that we see the sphere illuminated, and can distinguish poles, equator, and lines of latitude, every arc and node; a theory so averaged, so modulated, that you would say, the winds of ages had swept through this rhythmic structure, and not that it was the brief extempore blotting of one short-lived scribe. Hence it has happened that a very well-marked class of souls, namely those who delight in giving a spiritual, that is, an ethico-intellectual expression to every truth by exhibiting an ulterior end which is yet legitimate to it, are said to Platonize. Thus, Michel Angelo is a Platonist, in his sonnets. Shakspeare is a Platonist, when he writes, "Nature is made better by no mean, but nature makes that mean," or,

"He that can endure
To follow with allegiance a fallen lord,
Does conquer him that did his master conquer,
And earns a place in the story."

Hamlet is a pure Platonist, and 'tis the magnitude only of Shakspeare's proper genius that hinders him from being classed as the most eminent of this school. Swedenborg, throughout his prose poem of "Conjugal Love," is a Platonist.

His subtlety commended him to men of thought. The secret of his popular success is the moral aim, which endeared him to mankind. "Intellect," he said, "is king of heaven and of earth;" but, in Plato, intellect is always moral. His writings have also the sempiternal youth of poetry. For their arguments, most of them, might have been couched in sonnets; and poetry has never soared higher than in the *Timaeus* and the *Phaedrus*. As the poet, too, he is only contemplative. He did not, like Pythagoras, break himself with an institution. All his painting in the *Republic* must be esteemed mythical, with intent to bring out, sometimes in violent colors, his thought. You cannot institute, without peril of charlatan.

It was a high scheme, his absolute privilege for the best (which, to make emphatic, he expressed by community of women), as the premium which he would set on grandeur. There shall be exempts of two kinds: first, those who by

demerit have put themselves below protection, — outlaws; and secondly, those who by eminence of nature and desert are out of the reach of your rewards; let such be free of the city, and above the law. We confide them to themselves; let them do with us as they will. Let none presume to measure the irregularities of Michel Angelo and Socrates by village scales.

In his eighth book of the Republic, he throws a little mathematical dust in our eyes. I am sorry to see him, after such noble superiorities, permitting the lie to governors. Plato plays Providence a little with the baser sort, as people allow themselves with their dogs and cats.

SWEDENBORG; OR, THE MYSTIC.

Among eminent persons, those who are most dear to men are not the class which the economists call producers; they have nothing in their hands; they have not cultivated corn, nor made bread; they have not led out a colony, nor invented a loom. A higher class, in the estimation and love of this city-building, market-going race of mankind, are the poets, who, from the intellectual kingdom, feed the thought and imagination with ideas and pictures which raise men out of the world of corn and money, and console them for the shortcomings of the day, and the meannesses of labor and traffic. Then, also, the philosopher has his value, who flatters the intellect of this laborer, by engaging him with subtleties which instruct him in new faculties. Others may build cities; he is to understand them, and keep them in awe. But there is a class who lead us into another region, — the world of morals, or of will. What is singular about this region of thought, is, its claim. Wherever the sentiment of right comes in, it takes precedence of everything else. For other things, I make poetry of them; but the moral sentiment makes poetry of me.

I have sometimes thought that he would render the greatest service to modern criticism, who shall draw the line of relation that subsists between Shakespeare and Swedenborg. The human mind stands ever in perplexity, demanding intellect, demanding sanctity, impatient equally of each without the other. The reconciler has not yet appeared. If we tire of the saints, Shakespeare is our city of refuge. Yet the instincts presently teach, that the problem of essence must take precedence of all others, — the questions of Whence? What? and Whither? and the solution of these must be in a life, and not in a book. A drama or poem is a proximate or oblique reply; but Moses, Menu, Jesus, work directly on this problem. The atmosphere of moral sentiment is a region of grandeur which reduces all material magnificence to toys, yet opens to every wretch that has reason, the doors of the universe. Almost with a fierce haste it lays its empire on the man. In the language of the Koran, “God said, the heaven and the earth, and all that is between them, think ye that we created them in jest, and that ye shall not return to us?” It is the kingdom of the will, and by inspiring the will, which is the seat of personality, seems to convert the universe into a person: —

”The realms of being to no other bow,
Not only all are thine, but all are Thou.”

All men are commanded by the saint. The Koran makes a distinct class of

those who are by nature good, and whose goodness has an influence on others, and pronounces this class to be the aim of creation: the other classes are admitted to the feast of being, only as following in the train of this. And the Persian poet exclaims to a soul of this kind:

”Go boldly forth, and feast on being’s banquet;
Thou art the called, — the rest admitted with thee.”

The privilege of this caste is an access to the secrets and structure of nature, by some higher method than by experience. In common parlance, what one man is said to learn by experience, a man of extraordinary sagacity is said, without experience, to divine. The Arabians say, that Abul Khain, the mystic, and Abu Ali Seena, the Philosopher, conferred together; and, on parting, the philosopher said, “All that he sees, I know;” and the mystic said, “All that he knows, I see.” If one should ask the reason of this intuition, the solution would lead us into that property which Plato denoted as Reminiscence, and which is implied by the Bramins in the tenet of Transmigration. The soul having been often born, or, as the Hindoos say, “traveling the path of existence through thousands of births,” having beheld the things which are here, those which are in heaven, and those which are beneath, there is nothing of which she has not gained the knowledge: no wonder that she is able to recollect, in regard to any one thing, what formerly she knew. “For, all things in nature being linked and related, and the soul having heretofore known all, nothing hinders but that any man who has recalled to mind, or, according to the common phrase, has learned one thing only, should of himself recover all his ancient knowledge, and find out again all the rest, if he have but courage, and faint not in the midst of his researches. For inquiry and learning is reminiscence all.” How much more, if he that inquires be a holy and godlike soul! For, by being assimilated to the original soul, by whom, and after whom, all things subsist, the soul of man does then easily flow into all things, and all things flow into it: they mix: and he is present and sympathetic with their structure and law.

This path is difficult, secret, and beset with terror. The ancients called it ecstasy or absence, — a getting out of their bodies to think. All religious history contains traces of the trance of saints, — a beatitude, but without any sign of joy, earnest, solitary, even sad; “the flight,” Plotinus called it, “of the alone to the alone.” The trances of Socrates, Plotinus, Porphyry, Behmen, Bunyan, Fox, Pascal, Guion, Swedenborg, will readily come to mind. But what as readily comes to mind, is the accompaniment of disease. This beatitude comes in terror, and with shocks to the mind of the receiver. “It o’erinform the tenement of

clay,” and drives the man mad; or, gives a certain violent bias, which taints his judgment. In the chief examples of religious illumination, somewhat morbid, has mingled, in spite of the unquestionable increase of mental power. Must the highest good drag after it a quality which neutralizes and discredits it? —

”Indeed it takes

From our achievements, when performed at height,
The pith and marrow of our attribute.”

Shall we say, that the economical mother disburses so much earth and so much fire, by weight and metre, to make a man, and will not add a pennyweight, though a nation is perishing for a leader? Therefore, the men of God purchased their science by folly or pain. If you will have pure carbon, carbuncle, or diamond, to make the brain transparent, the trunk and organs shall be so much the grosser: instead of porcelain, they are potter’s earth, clay, or mud.

In modern times, no such remarkable example of this introverted mind has occurred, as in Emanuel Swedenborg, born in Stockholm, in 1688. This man, who appeared to his contemporaries a visionary, and elixir of moonbeams, no doubt led the most real life of any man then in the world: and now, when the royal and ducal Frederics, Cristierns, and Brunswicks, of that day, have slid into oblivion, he begins to spread himself into the minds of thousands. As happens in great men, he seemed, by the variety and amount of his powers, to be a composition of several persons, — like the giant fruits which are matured in gardens by the union of four or five single blossoms. His frame is on a larger scale, and possesses the advantage of size. As it is easier to see the reflection of the great sphere in large globes, though defaced by some crack or blemish, than in drops of water, so men of large calibre, though with some eccentricity or madness, like Pascal or Newton, help us more than balanced mediocre minds.

His youth and training could not fail to be extraordinary. Such a boy could not whistle or dance, but goes grubbing into mines and mountains, prying into chemistry and optics, physiology, mathematics, and astronomy, to find images fit for the measure of his versatile and capacious brain. He was a scholar from a child, and was educated at Upsala. At the age of twenty-eight, he was made Assessor of the Board of Mines, by Charles XII. In 1716, he left home for four years, and visited the universities of England, Holland, France, and Germany. He performed a notable feat of engineering in 1718, at the siege of Fredericshall, by hauling two galleys, five boats, and a sloop, some fourteen English miles overland, for the royal service. In 1721 he journeyed over Europe, to examine mines and smelting works. He published, in 1716, his *Daedalus Hyperboreus*,

and, from this time, for the next thirty years, was employed in the composition and publication of his scientific works. With the like force, he threw himself into theology. In 1743, when he was fifty-four years old, what is called his illumination began. All his metallurgy, and transportation of ships overland, was absorbed into this ecstasy. He ceased to publish any more scientific books, withdrew from his practical labors, and devoted himself to the writing and publication of his voluminous theological works, which were printed at his own expense, or at that of the Duke of Brunswick, or other prince, at Dresden, Liepsic, London, or Amsterdam. Later, he resigned his office of Assessor: the salary attached to this office continued to be paid to him during his life. His duties had brought him into intimate acquaintance with King Charles XII., by whom he was much consulted and honored. The like favor was continued to him by his successor. At the Diet of 1751, Count Hopken says, the most solid memorials on finance were from his pen. In Sweden, he appears to have attracted a marked regard. His rare science and practical skill, and the added fame of second sight and extraordinary religious knowledge and gifts, drew to him queens, nobles, clergy, shipmasters, and people about the ports through which he was wont to pass in his many voyages. The clergy interfered a little with the importation and publication of his religious works; but he seems to have kept the friendship of men in power. He was never married. He had great modesty and gentleness of bearing. His habits were simple; he lived on bread, milk, and vegetables; and he lived in a house situated in a large garden; he went several times to England, where he does not seem to have attracted any attention whatever from the learned or the eminent; and died at London, March 29, 1772, of apoplexy, in his eighty-fifth year. He is described, when in London, as a man of quiet, clerical habit, not averse to tea and coffee, and kind to children. He wore a sword when in full velvet dress, and, whenever he walked out, carried a gold-headed cane. There is a common portrait of him in antique coat and wig, but the face has a wandering or vacant air.

The genius which was to penetrate the science of the age with a far more subtle science; to pass the bounds of space and time; venture into the dim spirit-realm, and attempt to establish a new religion in the world, — began its lessons in quarries and forges, in the smelting-pot and crucible, in ship-yards and dissecting-rooms. No one man is perhaps able to judge of the merits of his works on so many subjects. One is glad to learn that his books on mines and metals are held in the highest esteem by those who understand these matters. It seems that he anticipated much science of the nineteenth century; anticipated, in astronomy, the discovery of the seventh planet, — but, unhappily, not also of the eighth; anticipated the views of modern astronomy in regard to the generation of earth

by the sun; in magnetism, some important experiments and conclusions of later students; in chemistry, the atomic theory; in anatomy, the discoveries of Schlichting, Monro, and Wilson; and first demonstrated the office of the lungs. His excellent English editor magnanimously lays no stress on his discoveries, since he was too great to care to be original; and we are to judge, by what he can spare, of what remains.

A colossal soul, he lies vast abroad on his times, uncomprehended by them, and requires a long local distance to be seen; suggest, as Aristotle, Bacon, Selden, Humboldt, that a certain vastness of learning, or *quasi* omnipresence of the human soul in nature, is possible. His superb speculations, as from a tower, over nature and arts, without ever losing sight of the texture and sequence of things, almost realizes his own picture, in the “Principia,” of the original integrity of man. Over and above the merit of his particular discoveries, is the capital merit of his self-equality. A drop of water has the properties of the sea, but cannot exhibit a storm. There is beauty of a concert, as well as of a flute; strength of a host, as well as of a hero; and, in Swedenborg, those who are best acquainted with modern books, will most admire the merit of mass. One of the missouriums and mastodons of literature, he is not to be measured by whole colleges of ordinary scholars. His stalwart presence would flutter the gowns of an university. Our books are false by being fragmentary; their sentences are *bon mots*, and not parts of natural discourse; childish expressions of surprise or pleasure in nature; or, worse, owing a brief notoriety to their petulance, or aversion from the order of nature, — being some curiosity or oddity, designedly not in harmony with nature, and purposely framed to excite a surprise, as jugglers do by concealing their means. But Swedenborg is systematic, and respective of the world in every sentence; all the means are orderly given; his faculties work with astronomic punctuality, and this admirable writing is pure from all pertness or egotism.

Swedenborg was born into an atmosphere of great ideas. 'Tis hard to say what was his own: yet his life was dignified by noblest pictures of the universe. The robust Aristotelian method, with its breadth and adequateness, shaming our sterile and linear logic by its genial radiation, conversant with series and degree, with effects and ends, skilful to discriminate power from form, essence from accident, and opening by its terminology and definition, high roads into nature, had trained a race of athletic philosophers. Harvey had shown the circulation of the blood; Gilbert had shown that the earth was a magnet; Descartes, taught by Gilbert's magnet, with its vortex, spiral, and polarity, had filled Europe with the leading thought of vortical motion, as the secret of nature. Newton, in the year in which Swedenborg was born, published the “Principia,” and established the

universal gravity. Malpighi, following the high doctrines of Hippocrates, Leucippus, and Lucretius, had given emphasis to the dogma that nature works in leasts,— “*tota in minimis existit natura.*” Unrivalled dissectors, Swammerdam, Leeuwenhoek, Winslow, Eustachius, Heister, Vesalius, Boerhaave, had left nothing for scalpel or microscope to reveal in human or comparative anatomy; Linnaeus, his contemporary, was affirming, in his beautiful science, that “Nature is always like herself;” and, lastly, the nobility of method, the largest application of principles, had been exhibited by Leibnitz and Christian Wolff, in cosmology; whilst Locke and Grotius had drawn the moral argument. What was left for a genius of the largest calibre, but to go over their ground, and verify and unite? It is easy to see, in these minds, the original of Swedenborg’s studies, and the suggestion of his problems. He had a capacity to entertain and vivify these volumes of thought. Yet the proximity of these geniuses, one or other of whom had introduced all his leading ideas, makes Swedenborg another example of the difficulty, even in a highly fertile genius, of proving originality, the first birth and annunciation of one of the laws of nature.

He named his favorite views, the doctrine of Forms, the doctrine of Series and Degrees, the doctrine of Influx, the doctrine of Correspondence. His statement of these doctrines deserves to be studied in his books. Not every man can read them, but they will reward him who can. His theologic works are valuable to illustrate these. His writings would be a sufficient library to a lonely and athletic student; and the “Economy of the Animal Kingdom” is one of those books which, by the sustained dignity of thinking, is an honor to the human race. He had studied spars and metals to some purpose. His varied and solid knowledge makes his style lustrous with points and shooting spicula of thought, and resembling one of those winter mornings when the air sparkles with crystals. The grandeur of the topics makes the grandeur of the style. He was apt for cosmology, because of that native perception of identity which made mere size of no account to him. In the atom of magnetic iron, he saw the quality which would generate the spiral motion of sun and planet.

The thoughts in which he lived were, the universality of each law in nature; the Platonic doctrine of the scale or degrees; the version or conversion of each into other, and so the correspondence of all the parts; the fine secret that little explains large, and large, little; the centrality of man in nature, and the connection that subsists throughout all things: he saw that the human body was strictly universal, or an instrument through which the soul feeds and is fed by the whole of matter: so that he held, in exact antagonism to the skeptics, that, “the wiser a man is, the more will he be a worshipper of the Deity.” In short, he was a believer in the Identity-philosophy, which he held not idly, as the dreamers of

Berlin or Boston, but which he experimented with and established through years of labor, with the heart and strength of the rudest Viking that his rough Sweden ever sent to battle.

This theory dates from the oldest philosophers, and derives perhaps its best illustration from the newest. It is this: that nature iterates her means perpetually on successive planes. In the old aphorism, nature is always self-similar. In the plant, the eye or germinative point opens to a leaf, then to another leaf, with a power of transforming the leaf into radicle, stamen, pistil, petal, bract, sepal, or seed. The whole art of the plant is still to repeat leaf on leaf without end, the more or less of heat, light, moisture, and food, determining the form it shall assume. In the animal, nature makes a vertebra, or a spine of vertebrae, and helps herself still by a new spine, with a limited power of modifying its form, — spine on spine, to the end of the world. A poetic anatomist, in our own day, teaches that a snake, being a horizontal line, and man, being an erect line, constitute a right angle; and, between the lines of this mystical quadrant, all animate beings find their place; and he assumes the hair-worm, the span-worm, or the snake, as the type of prediction of the spine. Manifestly, at the end of the spine, nature puts out smaller spines, as arms; at the end of the arms, new spines, as hands; at the other end, she repeats the process, as legs and feet. At the top of the column, she puts out another spine, which doubles or loops itself over, as a span-worm, into a ball, and forms the skull, with extremities again; the hands being now the upper jaw, the feet the lower jaw, the fingers and toes being represented this time by upper and lower teeth. This new spine is destined to high uses. It is a new man on the shoulders of the last. It can almost shed its trunk, and manage to live alone, according to the Platonic idea in the *Timaeus*. Within it, on a higher plane, all that was done in the trunk repeats itself. Nature recites her lesson once more in a higher mood. The mind is a finer body, and resumes its functions of feeding, digesting, absorbing, excluding, and generating, in a new and ethereal element. Here, in the brain, is all the process of alimentation repeated, in the acquiring, comparing, digesting, and assimilating of experience. Here again is the mystery of generation repeated. In the brain are male and female faculties; here is marriage, here is fruit. And there is no limit to this ascending scale, but series on series. Everything, at the end of one use, is taken up into the next, each series punctually repeating every organ and process of the last. We are adapted to infinity. We are hard to please, and love nothing which ends; and in nature is no end; but everything, at the end of one use, is lifted into a superior, and the ascent of these things climbs into daemonic and celestial natures. Creative force, like a musical composer, goes on unweariedly repeating a simple air or theme now high, now low, in solo, in chorus, ten thousand times reverberated, till it fills

earth and heaven with the chant.

Gravitation, as explained by Newton, is good, but grandeur, when we find chemistry only an extension of the law of masses into particles, and that the atomic theory shows the action of chemistry to be mechanical also. Metaphysics shows us a sort of gravitation, operative also in the mental phenomena; and the terrible tabulation of the French statisticians brings every piece of whim and humor to be reducible also to exact numerical ratios. If one man in twenty thousand, or in thirty thousand, eats shoes, or marries his grandmother, then, in every twenty thousand, or thirty thousand, is found one man who eats shoes, or marries his grandmother. What we call gravitation, and fancy ultimate, is one fork of a mightier stream, for which we have yet no name. Astronomy is excellent; but it must come up into life to have its full value, and not remain there in globes and spaces. The globule of blood gyrates around its own axis in the human veins, as the planet in the sky; and the circles of intellect relate to those of the heavens. Each law of nature has the like universality; eating, sleep or hybernation, rotation, generation, metamorphosis, vortical motion, which is seen in eggs as in planets. These grand rhymes or returns in nature, — the dear, best-known face startling us at every turn, under a mask so unexpected that we think it the face of a stranger, and, carrying up the semblance into divine forms, — delighted the prophetic eye of Swedenborg; and he must be reckoned a leader in that revolution, which, by giving to science an idea, has given to an aimless accumulation of experiments, guidance and form, and a beating heart.

I own, with some regret, that his printed works amount to about fifty stout octaves, his scientific works being about half of the whole number; and it appears that a mass of manuscript still unedited remains in the royal library at Stockholm. The scientific works have just now been translated into English, in an excellent edition.

Swedenborg printed these scientific books in the ten years from 1734 to 1744, and they remained from that time neglected; and now, after their century is complete, he has at last found a pupil in Mr. Wilkinson, in London, a philosophic critic, with a co-equal vigor of understanding and imagination comparable only to Lord Bacon's, who has produced his master's buried books to the day, and transferred them, with every advantage, from their forgotten Latin into English, to go round the world in our commercial and conquering tongue. This startling reappearance of Swedenborg, after a hundred years, in his pupil, is not the least remarkable fact in his history. Aided, it is said, by the munificence of Mr. Clissold, and also by his literary skill, this piece of poetic justice is done. The admirable preliminary discourses with which Mr. Wilkinson has enriched these volumes, throw all the contemporary philosophy of England

into shade, and leave me nothing to say on their proper grounds.

The “Animal Kingdom” is a book of wonderful merits. It was written with the highest end, — to put science and the soul, long estranged from each other, at one again. It was an anatomist’s account of the human body, in the highest style of poetry. Nothing can exceed the bold and brilliant treatment of a subject usually so dry and repulsive. He saw nature “wreathing through an everlasting spiral, with wheels that never dry, on axles that never creak,” and sometimes sought “to uncover those secret recesses where nature is sitting at the fires in the depths of her laboratory;” whilst the picture comes recommended by the hard fidelity with which it is based on practical anatomy. It is remarkable that this sublime genius decides, peremptorily for the analytic, against the synthetic method; and, in a book whose genius is a daring poetic synthesis, claims to confine himself to a rigid experience.

He knows, if he only, the flowing of nature and how wise was that old answer of Amasis to him who bade him drink up the sea,— “Yes, willingly, if you will stop the rivers that flow in.” Few knew as much about nature and her subtle manners, or expressed more subtly her goings. He thought as large a demand is made on our faith by nature, as by miracles. “He noted that in her proceeding from first principles through her several subordinations, there was no state through which she did not pass, as if her path lay through all things.” “For as often as she betakes herself upward from visible phenomena, or, in other words, withdraws herself inward, she instantly, as it were, disappears, while no one knows what has become of her, or whither she is gone; so that it is necessary to take science as a guide in pursuing her steps.”

The pursuing the inquiry under the light of an end or final cause, gives wonderful animation, a sort of personality to the whole writing. This book announces his favorite dogmas. The ancient doctrines of Hippocrates, that the brain is a gland; and of Leucippus, that the atom may be known by the mass; or, in Plato, the macrocosm by the microcosm; and, in the verses of Lucretius, —

Ossa videlicet e paucillis atque minutis
Ossibus sic et de paucillis atque minutis
Visceribus viscus gigni, sanguenque creari
Sanguinis inter se multis coeuntibus guttis;
Ex aurique putat micis consistere posse
Aurum, et de terris terram concrecere parvis;
Ignibus ex igneis, humorem humoribus esse.

Lib. I. 835.

”The principle of all things entrails made
Of smallest entrails; bone, of smallest bone,
Blood, of small sanguine drops reduced to one;
Gold, of small grains; earth, of small sands compacted
Small drops to water, sparks to fire contracted:”

and which Malpighi had summed in his maxim, that “nature exists entirely in leasts,” — is a favorite thought of Swedenborg. “It is a constant law of the organic body, that large, compound, or visible forms exist and subsist from smaller, simpler, and ultimately from invisible forms, which act similarly to the larger ones, but more perfectly and more universally, and the least forms so perfectly and universally, as to involve an idea representative of their entire universe.” The unities of each organ are so many little organs, homogeneous with their compound; the unities of the tongue are little tongues; those of the stomach, little stomachs; those of the heart are little hearts. This fruitful idea furnishes a key to every secret. What was too small for the eye to detect was read by the aggregates; what was too large, by the units. There is no end to his application of the thought. “Hunger is an aggregate of very many little hungers, or losses of blood by the little veins all over the body.” It is the key to his theology, also. “Man is a kind of very minute heaven, corresponding to the world of spirits and to heaven. Every particular idea of man, and every affection, yea, every smallest spark of his affection, is an image and effigy of him. A spirit may be known from only a single thought. God is the grand man.” The hardihood and thoroughness of his study of nature required a theory of forms, also. “Forms ascend in order from the lowest to the highest. The lowest form is angular, or the terrestrial and corporeal. The second and next higher form is the circular, which is also called the perpetual-angular, because the circumference of a circle is a perpetual angle. The form above this is the spiral, parent and measure of circular forms; its diameters are not rectilinear, but variously circular, and have a spherical surface for center; therefore it is called the perpetual-circular. The form above this is the vortical, or perpetual-spiral; next, the perpetual-vortical, or celestial; last, the perpetual-celestial, or spiritual.”

Was it strange that a genius so bold should take the last step, also, — conceive that he might attain the science of all sciences, to unlock the meaning of the world? In the first volume of the “Animal Kingdom,” he broaches the subject, in a remarkable note. —

“In our doctrine of Representations and Correspondences, we shall treat of both these symbolical and typical resemblances, and of the astonishing things which occur, I will not say, in the living body only, but throughout nature, and

which correspond so entirely to supreme and spiritual things, that one would swear that the physical world was purely symbolical of the spiritual world; inasmuch, that if we choose to express any natural truth in physical and definite vocal terms, and to convert these terms only into the corresponding and spiritual terms, we shall by this means elicit a spiritual truth, or theological dogma, in place of the physical truth or precept; although no mortal would have predicted that anything of the kind could possibly arise by bare literal transposition; inasmuch as the one precept, considered separately from the other, appears to have absolutely no relation to it. I intend, hereafter, to communicate a number of examples of such correspondences, together with a vocabulary containing the terms of spiritual things, as well as of the physical things for which they are to be substituted. This symbolism pervades the living body.”

The fact, thus explicitly stated, is implied in all poetry, in allegory, in fable, in the use of emblems, and in the structure of language. Plato knew of it, as is evident from his twice bisected line, in the sixth book of the Republic. Lord Bacon had found that truth and nature differed only as seal and print; and he instanced some physical proportions, with their translation into a moral and political sense. Behmen, and all mystics, imply this law in their dark riddle-writing. The poets, in as far as they are poets, use it; but it is known to them only, as the magnet was known for ages, as a toy. Swedenborg first put the fact into a detached and scientific statement, because it was habitually present to him, and never not seen. It was involved, as we explained already, in the doctrine of identity and iteration, because the mental series exactly tallies with the material series. It required an insight that could rank things in order and series; or, rather, it required such rightness of position, that the poles of the eye should coincide with the axis of the world. The earth has fed its mankind through five or six millenniums, and they had sciences, religions, philosophies; and yet had failed to see the correspondence of meaning between every part and every other part. And, down to this hour, literature has no book in which the symbolism of things is scientifically opened. One would say, that, as soon as men had the first hint that every sensible object, — animal, rock, river, air, — nay, space and time, subsists not for itself, nor finally to a material end, but as a picture-language, to tell another story of beings and duties, other science would be put by, and a science of such grand presage would absorb all faculties; that each man would ask of all objects, what they mean: Why does the horizon hold me fast, with my joy and grief, in this center? Why hear I the same sense from countless differing voices, and read one never quite expressed fact in endless picture-language? Yet, whether it be that these things will not be intellectually learned, or, that many centuries must elaborate and compose so rare and opulent a soul, — there is no

comet, rock-stratum, fossil, fish, quadruped, spider, or fungus, that, for itself, does not interest more scholars and classifiers than the meaning and upshot of the frame of things.

But Swedenborg was not content with the culinary use of the world. In his fifty-fourth year, these thoughts held him fast, and his profound mind admitted the perilous opinion, too frequent in religious history, that he was an abnormal person, to whom was granted the privilege of conversing with angels and spirits; and this ecstasy connected itself with just this office of explaining the moral import of the sensible world. To a right perception, at once broad and minute, of the order of nature, he added the comprehension of the moral laws in their widest social aspects; but whatever he saw, through some excessive determination to form, in his constitution, he saw not abstractly, but in pictures, heard it in dialogues, constructed it in events. When he attempted to announce the law most sanely, he was forced to couch it in parable.

Modern psychology offers no similar example of a deranged balance. The principal powers continued to maintain a healthy action; and, to a reader who can make due allowance in the report for the reporter's peculiarities, the results are still instructive, and a more striking testimony to the sublime laws he announced, than any that balanced dulness could afford. He attempts to give some account of the modus of the new state, affirming that "his presence in the spiritual world is attended with a certain separation, but only as to the intellectual part of his mind, not as to the will part;" and he affirms that "he sees, with the internal sight, the things that are in another life, more clearly than he sees the things which are here in the world."

Having adopted the belief that certain books of the Old and New Testaments were exact allegories, or written in the angelic and ecstatic mode, he employed his remaining years in extricating from the literal, the universal sense. He had borrowed from Plato the fine fable of "a most ancient people, men better than we, and dwelling nigher to the gods;" and Swedenborg added, that they used the earth symbolically; that these, when they saw terrestrial objects, did not think at all about them, but only about those which they signified. The correspondence between thoughts and things henceforward occupied him. "The very organic form resembles the end inscribed on it." A man is in general, and in particular, an organized justice or injustice, selfishness or gratitude. And the cause of this harmony he assigned in the Arcana: "The reason why all and single things, in the heavens and on earth, are representative, is because they exist from an influx of the Lord, through heaven." This design of exhibiting such correspondences, which, if adequately executed, would be the poem of the world, in which all history and science would play an essential part, was narrowed and defeated by

the exclusively theologic direction which his inquiries took. His perception of nature is not human and universal, but is mystical and Hebraic. He fastens each natural object to a theologic notion: — a horse signifies carnal understanding; a tree, perception; the moon, faith; a cat means this; an ostrich, that; an artichoke, this other; and poorly tethers every symbol to a several ecclesiastic sense. The slippery Proteus is not so easily caught. In nature, each individual symbol plays innumerable parts, as each particle of matter circulates in turn through every system. The central identity enables any one symbol to express successively all the qualities and shades of the real being. In the transmission of the heavenly waters, every hose fits every hydrant. Nature avenges herself speedily on the hard pedantry that would chain her waves. She is no literalist. Everything must be taken genially, and we must be at the top of our condition to understand anything rightly.

His theological bias thus fatally narrowed his interpretation of nature, and the dictionary of symbols is yet to be written. But the interpreter, whom mankind must still expect, will find no predecessor who has approached so near to the true problem.

Swedenborg styles himself, in the title-page of his books, “Servant of the Lord Jesus Christ;” and by force of intellect, and in effect, he is the last Father in the Church, and is not likely to have a successor. No wonder that his depth of ethical wisdom should give him influence as a teacher. To the withered traditional church yielding dry catechisms, he let in nature again, and the worshiper, escaping from the vestry of verbs and texts, is surprised to find himself a party to the whole of his religion. His religion thinks for him, and is of universal application. He turns it on every side; it fits every part of life, interprets and dignifies every circumstance. Instead of a religion which visited him diplomatically three or four times, — when he was born, when he married, when he fell sick, and when he died, and for the rest never interfered with him, — here was a teaching which accompanied him all day, accompanied him even into sleep and dreams; into his thinking, and showed him through what a long ancestry his thoughts descend; into society, and showed by what affinities he was girt to his equals and his counterparts; into natural objects, and showed their origin and meaning, what are friendly, and what are hurtful; and opened the future world, by indicating the continuity of the same laws. His disciples allege that their intellect is invigorated by the study of his books.

There is no such problem for criticism as his theological writings, their merits are so commanding; yet such grave deductions must be made. Their immense and sandy diffuseness is like the prairie, or the desert, and their incongruities are like the last deliration. He is superfluously explanatory, and his feelings of the

ignorance of men, strangely exaggerated. Men take truths of this nature very fast. Yet he abounds in assertions; he is a rich discoverer, and of things which most import us to know. His thought dwells in essential resemblances, like the resemblance of a house to the man who built it. He saw things in their law, in likeness of function, not of structure. There is an invariable method and order in his delivery of his truth, the habitual proceeding of the mind from inmost to outmost. What earnestness and weightiness, — his eye never roving, without one swell of vanity, or one look to self, in any common form of literary pride! a theoretic or speculative man, but whom no practical man in the universe could affect to scorn. Plato is a gownsman; his garment, though of purple, and almost skywoven, is an academic robe, and hinders action with its voluminous folds. But this mystic is awful to Caesar. Lycurgus himself would bow.

The moral insight of Swedenborg, the correction of popular errors, the announcement of ethical laws, take him out of comparison with any other modern writer, and entitle him to a place, vacant for some ages, among the lawgivers of mankind. That slow but commanding influence which he has acquired, like that of other religious geniuses, must be excessive also, and have its tides, before it subsides into a permanent amount. Of course, what is real and universal cannot be confined to the circle of those who sympathize strictly with his genius, but will pass forth into the common stock of wise and just thinking. The world has a sure chemistry, by which it attracts what is excellent in its children, and lets fall the infirmities and limitations of the grandest mind.

That metempsychosis which is familiar in the old mythology of the Greeks, collected in Ovid, and in the Indian Transmigration, and is there objective, or really takes place in bodies by alien will, — in Swedenborg's mind, has a more philosophic character. It is subjective, or depends entirely upon the thought of the person. All things in the universe arrange themselves to each person anew, according to his ruling love. Man is such as his affection and thought are. Man is man by virtue of willing, not by virtue of knowing and understanding. As he is, so he sees. The marriages of the world are broken up. Interiors associate all in the spiritual world. Whatever the angels looked upon was to them celestial. Each Satan appears to himself a man; to those as bad as he, a comely man; to the purified, a heap of carrion. Nothing can resist states; everything gravitates; like will to like; what we call poetic justice takes effect on the spot. We have come into a world which is a living poem. Every thing is as I am. Bird and beast is not bird and beast, but emanation and effluvia of the minds and wills of men there present. Every one makes his own house and state. The ghosts are tormented with the fear of death, and cannot remember that they have died. They who are in evil and falsehood are afraid of all others. Such as have deprived themselves

of charity, wander and flee; the societies which they approach discover their quality, and drive them away. The covetous seem to themselves to be abiding in cells where their money is deposited, and these to be infested with mice. They who place merit in good works seem to themselves to cut wood. "I asked such, if they were not wearied? They replied, that they have not yet done work enough to merit heaven."

He delivers golden sayings, which express with singular beauty the ethical laws; as when he uttered that famed sentence, that, "in heaven the angels are advancing continually to the springtime of their youth, so that the oldest angel appears the youngest:" "The more angels, the more room:" "The perfection of man is the love of use:" "Man, in his perfect form, is heaven:" "What is from Him, is Him:" "Ends always ascend as nature descends:" And the truly poetic account of the writing in the inmost heaven, which, as it consists of inflexions according to the form of heaven, can be read without instruction He almost justifies his claim to preternatural vision, by strange insights of the structure of the human body and mind. "It is never permitted to any one, in heaven, to stand behind another and look at the back of his head; for then the influx which is from the Lord is disturbed." The angels, from the sound of the voice, know a man's love; from the articulation of the sound, his wisdom; and from the sense of the words, his science.

In the "Conjugal Love," he has unfolded the science of marriage. Of this book, one would say, that, with the highest elements, it has failed of success. It came near to be the Hymn of Love, which Plato attempted in the "Banquet;" the love, which, Dante says, Casella sang among the angels in Paradise; and which, as rightly celebrated, in its genesis, fruition, and effect, might well entrance the souls, as it would lay open the genesis of all institutions, customs, and manners. The book had been grand, if the Hebraism had been omitted, and the law stated without Gothicism, as ethics, and with that scope for ascension of state which the nature of things requires. It is a fine Platonic development of the science of marriage; teaching that sex is universal, and not local; virility in the male qualifying every organ, act, and thought; and the feminine in woman. Therefore, in the real or spiritual world, the nuptial union is not momentary, but incessant and total; and chastity not a local, but a universal virtue; unchastity being discovered as much in the trading, or planting, or speaking, or philosophizing, as in generation; and that, though the virgins he saw in heaven were beautiful, the wives were incomparably more beautiful, and went on increasing in beauty evermore.

Yet Swedenborg, after his mode, pinned his theory to a temporary form. He exaggerates the circumstance of marriage; and, though he finds false marriages

on the earth, fancies a wiser choice in heaven. But of progressive souls, all loves and friendships are momentary. Do you love me? means, Do you see the same truth? If you do, we are happy with the same happiness; but presently one of us passes into the perception of new truth; — we are divorced, and no tension in nature can hold us to each other. I know how delicious is this cup of love, — I existing for you, you existing for me; but it is a child's clinging to his toy; an attempt to eternize the fireside and nuptial chamber; to keep the picture-alphabet through which our first lessons are prettily conveyed. The Eden of God is bare and grand: like the outdoor landscape, remembered from the evening fireside, it seems cold and desolate, whilst you cower over the coals; but, once abroad again, we pity those who can forego the magnificence of nature, for candle-light and cards. Perhaps the true subject of the "Conjugal Love" is conversation, whose laws are profoundly eliminated. It is false, if literally applied to marriage. For God is the bride or bridegroom of the soul. Heaven is not the pairing of two, but the communion of all souls. We meet, and dwell an instant under the temple of one thought, and part as though we parted not, to join another thought in other fellowships of joy. So far from there being anything divine in the low and proprietary sense of, Do you love me? it is only when you leave and lose me, by casting yourself on a sentiment which is higher than both of us, that I draw near, and find myself at your side; and I am repelled, if you fix your eye on me, and demand love. In fact, in the spiritual world, we change sexes every moment. You love the worth in me; then I am your husband: but it is not me, but the worth, that fixes the love; and that worth is a drop of the ocean of worth that is beyond me. Meantime, I adore the greater worth in another, and so become his wife. He aspires to a higher worth in another spirit, and is wife of receiver of that influence.

Whether a self-inquisitorial habit, that he grew into, from jealousy of the sins to which men of thought are liable, he has acquired, in disentangling and demonstrating that particular form of moral disease, an acumen which no conscience can resist. I refer to his feeling of the profanation of thinking to what is good "from scientifics." "To reason about faith, is to doubt and deny." He was painfully alive to the difference between knowing and doing, and this sensibility is incessantly expressed. Philosophers are, therefore, vipers, cockatrices, asps, hemorrhoids, presters, and flying serpents; literary men are conjurers and charlatans.

But this topic suggests a sad afterthought, that here we find the seat of his own pain. Possibly Swedenborg paid the penalty of introverted faculties. Success, or a fortunate genius, seems to depend on a happy adjustment of heart and brain; on a due proportion, hard to hit, of moral and mental power, which,

perhaps, obeys the law of those chemical ratios which make a proportion in volumes necessary to combination, as when gases will combine in certain fixed rates, but not at any rate. It is hard to carry a full cup: and this man, profusely endowed in heart and mind, early fell into dangerous discord with himself. In his Animal Kingdom, he surprises us, by declaring that he loved analysis, and not synthesis; and now, after his fiftieth year, he falls into jealousy of his intellect; and, though aware that truth is not solitary, nor is goodness solitary, but both must ever mix and marry, he makes war on his mind, takes the part of the conscience against it, and, on all occasions, traduces and blasphemes it. The violence is instantly avenged. Beauty is disgraced, love is unlovely, when truth, the half part of heaven, is denied, as much as when a bitterness in men of talent leads to satire, and destroys the judgment. He is wise, but wise in his own despite. There is an air of infinite grief, and the sound of wailing, all over and through this lurid universe. A vampyre sits in the seat of the prophet, and turns with gloomy appetite to the images of pain. Indeed, a bird does not more readily weave its nest, or a mole bore into the ground, than this seer of souls substructs a new hell and pit, each more abominable than the last, round every new crew of offenders. He was let down through a column that seemed of brass, but it was formed of angelic spirits, that he might descend safely amongst the unhappy, and witness the vastation of souls; and heard there, for a long continuance, their lamentations; he saw their tormentors, who increase and strain pangs to infinity; he saw the hell of the jugglers, the hell of the assassins, the hell of the lascivious; the hell of robbers, who kill and boil men; the infernal tun of the deceitful; the excrementitious hells; the hell of the revengeful, whose faces resembled a round, broad-cake, and their arms rotate like a wheel. Except Rabelais and Dean Swift, nobody ever had such science of filth and corruption.

These books should be used with caution. It is dangerous to sculpture these evanescent images of thought. True in transition, they become false if fixed. It requires, for his just apprehension, almost a genius equal to his own. But when his visions become the stereotyped language of multitudes of persons, of all degrees of age and capacity, they are perverted. The wise people of the Greek race were accustomed to lead the most intelligent and virtuous young men, as part of their education, through the Eleusinian mysteries, wherein, with much pomp and graduation, the highest truths known to ancient wisdom were taught. An ardent and contemplative young man, at eighteen or twenty years, might read once these books of Swedenborg, these mysteries of love and conscience, and then throw them aside forever. Genius is ever haunted by similar dreams, when the hells and the heavens are opened to it. But these pictures are to be held as mystical, that is, as a quite arbitrary and accidental picture of the truth — not as

the truth. Any other symbol would be as good: then this is safely seen.

Swedenborg's system of the world wants central spontaneity; it is dynamic, not vital, and lacks power to generate life. There is no individual in it. The universe is a gigantic crystal, all those atoms and laminae lie in uninterrupted order, and with unbroken unity, but cold and still. What seems an individual and a will, is none. There is an immense chain of intermediation, extending from center to extremes, which bereaves every agency of all freedom and character. The universe, in his poem, suffers under a magnetic sleep, and only reflects the mind of the magnetizer. Every thought comes into each mind by influence from a society of spirits that surround it, and into these from a higher society, and so on. All his types mean the same few things. All his figures speak one speech. All his interlocutors Swedenborgize. Be they who they may, to this complexion must they come at last. This Charon ferries them all over in his boat; kings, counselors, cavaliers, doctors, Sir Isaac Newton, Sir Hans Sloane, King George II., Mahomet, or whosoever, and all gather one grimness of hue and style. Only when Cicero comes by, our gentle seer sticks a little at saying he talked with Cicero, and, with a touch of human relenting, remarks, "one whom it was given me to believe was Cicero;" and when the *soi disant* Roman opens his mouth, Rome and eloquence have ebbed away, — it is plain theologic Swedenborg, like the rest. His heavens and hells are dull; fault of want of individualism. The thousand-fold relation of men is not there. The interest that attaches in nature to each man, because he is right by his wrong, and wrong by his right, because he defies all dogmatizing and classification, so many allowances, and contingencies, and futurities, are to be taken into account, strong by his vices, often paralyzed by his virtues, — sinks into entire sympathy with his society. This want reacts to the center of the system. Though the agency of "the Lord" is in every line referred to by name, it never becomes alive. There is no lustre in that eye which gazes from the center, and which should vivify the immense dependency of beings.

The vice of Swedenborg's mind is its theologic determination. Nothing with him has the liberality of universal wisdom, but we are always in a church. That Hebrew muse, which taught the lore of right and wrong to man, had the same excess of influence for him, it has had for the nations. The mode, as well as the essence, was sacred. Palestine is ever the more valuable as a chapter in universal history, and ever the less an available element in education. The genius of Swedenborg, largest of all modern souls in this department of thought, wasted itself in the endeavor to reanimate and conserve what had already arrived at its natural term, and, in the great secular Providence, was retiring from its prominence, before western modes of thought and expression. Swedenborg and

Behmen both failed by attaching themselves to the Christian symbol, instead of to the moral sentiment, which carries innumerable christianities, humanities, divinities, in its bosom.

The excess of influence shows itself in the incongruous importation of a foreign rhetoric. "What have I to do," asks the impatient reader, "with jasper and sardonyx, beryl and chalcedony; what with arks and passovers, ephahs and ephods; what with lepers and emerods; what with heave-offerings and unleavened bread; chariots of fire, dragons crowned and horned, behemoth and unicorn? Good for orientals, these are nothing to me. The more learning you bring to explain them, the more glaring the impertinence. The more coherent and elaborate the system, the less I like it. I say, with the Spartan, 'Why do you speak so much to the purpose, of that which is nothing to the purpose?' My learning is such as God gave me in my birth and habit, in the delight and study of my eyes, and not of another man's. Of all absurdities, this of some foreigner, purposing to take away my rhetoric, and substitute his own, and amuse me with pelican and stork, instead of thrush and robin; palm-trees and shittim-wood, instead of sassafras and hickory, — seems the most needless." Locke said, "God, when he makes the prophet, does not unmake the man." Swedenborg's history points the remark. The parish disputes, in the Swedish church, between the friends and foes of Luther and Melancthon, concerning "faith alone," and "works alone," intrude themselves into his speculations upon the economy of the universe, and of the celestial societies. The Lutheran bishop's son, for whom the heavens are opened, so that he sees with eyes, and in the richest symbolic forms, the awful truth of things, and utters again, in his books, as under a heavenly mandate, the indisputable secrets of moral nature, — with all these grandeurs resting upon him, remains the Lutheran bishop's son; his judgments are those of a Swedish polemic, and his vast enlargements purchased by adamantine limitations. He carries his controversial memory with him, in his visits to the souls. He is like Michel Angelo, who, in his frescoes, put the cardinal who had offended him to roast under a mountain of devils; or, like Dante, who avenged, in vindictive melodies, all his private wrongs; or, perhaps still more like Montaigne's parish priest, who, if a hailstorm passes over the village, thinks the day of doom has come, and the cannibals already have got the pip. Swedenborg confounds us not less with the pains of Melancthon, and Luther, and Wolfius, and his own books, which he advertises among the angels.

Under the same theologic cramp, many of his dogmas are bound. His cardinal position in morals is, that evils should be shunned as sins. But he does not know what evil is, or what good is, who thinks any ground remains to be occupied, after saying that evil is to be shunned as evil. I doubt not he was led by the desire

to insert the element of personality of Deity. But nothing is added. One man, you say, dreads crabs, — show him that this dread is evil: or, one dreads hell, — show him that dread is evil. He who loves goodness, harbors angels, reveres reverence, and lives with God. The less we have to do with our sins, the better. No man can afford to waste his moments in compunctions. “That is active duty,” say the Hindoos, “which is not for our bondage; that is knowledge, which is for our liberation; all other duty is good only unto weariness.”

Another dogma, growing out of this pernicious theologic limitation, is this Inferno. Swedenborg has devils. Evil, according to old philosophers, is good in the making. That pure malignity can exist, is the extreme proposition of unbelief. It is not to be entertained by a rational agent; it is atheism; it is the last profanation. Euripides rightly said, —

“Goodness and being in the gods are one; He who imputes ill to them makes them none.”

To what a painful perversion had Gothic theology arrived, that Swedenborg admitted no conversion for evil spirits! But the divine effort is never relaxed; the carrion in the sun will convert itself to grass and flowers; and man, though in brothels, or jails, or on gibbets, is on his way to all that is good and true. Burns, with the wild humor of his apostrophe to “poor old Nickie Ben,”

“O wad ye tak a thought, and mend!”

has the advantage of the vindictive theologian. Everything is superficial, and perishes, but love and truth only. The largest is always the truest sentiment, and we feel the more generous spirit of the Indian Vishnu,—“I am the same to all mankind. There is not one who is worthy of my love or hatred. They who serve me with adoration, — I am in them, and they in me. If one whose ways are altogether evil, serve me alone, he is as respectable as the just man; he is altogether well employed; he soon becometh of a virtuous spirit, and obtaineth eternal happiness.”

For the anomalous pretension of Revelations of the other world, — only his probity and genius can entitle it to any serious regard. His revelations destroy their credit by running into detail. If a man say, that the Holy Ghost hath informed him that the Last Judgment (or the last of the judgments) took place in 1757; or, that the Dutch, in the other world, live in a heaven by themselves, and the English in a heaven by themselves; I reply, that the Spirit which is holy, is reserved, taciturn, and deals in laws. The rumors of ghosts and hobgoblins gossip and tell fortunes. The teachings of the high Spirit are abstemious, and, in regard to particulars, negative. Socrates’ Genius did not advise him to act or to find, but if he proposed to do somewhat not advantageous, it dissuaded him. “What God is,” he said, “I know not; what he is not I know.” The Hindoos have

denominated the Supreme Being, the “Internal Check.” The illuminated Quakers explained their Light, not as somewhat which leads to any action, but it appears as an obstruction to anything unfit. But the right examples are private experiences, which are absolutely at one on this point. Strictly speaking, Swedenborg’s revelation is a confounding of planes, — a capital offence in so learned a categorist. This is to carry the law of surface into the plane of substance, to carry individualism and its fopperies into the realm of essences and generals, which is dislocation and chaos.

The secret of heaven is kept from age to age. No imprudent, no sociable angel ever dropt an early syllable to answer the longings of saints, the fears of mortals. We should have listened on our knees to any favorite, who, by stricter obedience, had brought his thoughts into parallelism with the celestial currents, and could hint to human ears the scenery and circumstance of the newly parted soul. But it is certain that it must tally with what is best in nature. It must not be inferior in tone to the already known works of the artist who sculptures the globes of the firmament, and writes the moral law. It must be fresher than rainbows, stabler than mountains, agreeing with flowers, with tides, and the rising and setting of autumnal stars. Melodious poets shall be hoarse as street ballads, when once the penetrating key-note of nature and spirit is sounded, — the earth-beat, sea-beat, heart-beat which makes the tune to which the sun rolls, and the globule of blood, and the sap of trees.

In this mood, we hear the rumor that the seer has arrived, and his tale is told. But there is no beauty, no heaven: for angels, goblins. The sad muse loves night and death, and the pit. His Inferno is mesmeric. His spiritual world bears the same relation to the generousities and joys of truth, of which human souls have already made us cognizant, as a man’s bad dreams bear to his ideal life. It is indeed very like, in its endless power of lurid pictures, to the phenomena of dreaming, which nightly turns many an honest gentleman, benevolent but dyspeptic, into a wretch, skulking like a dog about the outer yards and kennels of creation. When he mounts into the heavens, I do not hear its language. A man should not tell me that he has walked among the angels; his proof is, that his eloquence makes me one. Shall the archangels be less majestic and sweet than the figures that have actually walked the earth? These angels that Swedenborg paints give us no very high idea of their discipline and culture; they are all country parsons; their heaven is a *fete champetre*, and evangelical picnic, or French distribution of prizes to virtuous peasants. Strange, scholastic, didactic, passionless, bloodless man, who denotes classes of souls as a botanist disposes of a *carex*, and visits doleful hells as a stratum of chalk or hornblende! He has no sympathy. He goes up and down the world of men, a modern Rhadamanthus in

gold-headed cane and peruke, and with nonchalance, and the air of a referee, distributing souls. The warm, many-weathered, passionate-peopled world is to him a grammar of hieroglyphs, or an emblematic freemason's procession. How different is Jacob Behmen! he is tremulous with emotion, and listens awe-struck, with the gentlest humanity, to the Teacher whose lessons he conveys; and when he asserts that, "in some sort, love is greater than God," his heart beats so high that the thumping against his leathern coat is audible across the centuries. 'Tis a great difference. Behmen is healthily and beautifully wise, notwithstanding the mystical narrowness and incommunicableness. Swedenborg is disagreeably wise, and, with all his accumulated gifts, paralyzes and repels.

It is the best sign of a great nature, that it opens a foreground, and, like the breath of morning landscapes, invites us onward. Swedenborg is retrospective, nor can we divest him of his mattock and shroud. Some minds are forever restrained from descending into nature; others are forever prevented from ascending out of it. With a force of many men, he could never break the umbilical cord which held him to nature, and he did not rise to the platform of pure genius.

It is remarkable that this man, who, by his perception of symbols, saw the poetic construction of things, and the primary relation of mind to matter, remained entirely devoid of the whole apparatus of poetic expression, which that perception creates. He knew the grammar and rudiments of the Mother-Tongue, — how could he not read off one strain into music? Was he like Saadi, who, in his vision, designed to fill his lap with the celestial flowers, as presents for his friends; but the fragrance of the roses so intoxicated him, that the skirt dropped from his hands? or, is reporting a breach of the manners of that heavenly society? or, was it that he saw the vision intellectually, and hence that chiding of the intellectual that pervades his books? Be it as it may, his books have no melody, no emotion, no humor, no relief to the dead prosaic level. In his profuse and accurate imagery is no pleasure, for there is no beauty. We wander forlorn in a lack-lustre landscape. No bird ever sang in all these gardens of the dead. The entire want of poetry in so transcendent a mind betokens the disease, and, like a hoarse voice in a beautiful person, is a kind of warning. I think, sometimes, he will not be read longer. His great name will turn a sentence. His books have become a monument. His laurels so largely mixed with cypress, a charnel-breath so mingles with the temple incense, that boys and maids will shun the spot.

Yet, in this immolation of genius and fame at the shrine of conscience, is a merit sublime beyond praise. He lived to purpose: he gave a verdict. He elected goodness as the clue to which the soul must cling in all this labyrinth of nature. Many opinions conflict as to the true center. In the shipwreck, some cling to

running rigging, some to cask and barrel, some to spars, some to mast; the pilot chooses with science, — I plant myself here; all will sink before this; “he comes to land who sails with me.” Do not rely on heavenly favor, or on compassion to folly, or on prudence, on common sense, the old usage and main chance of men; nothing can keep you, — not fate, nor health, nor admirable intellect; none can keep you, but rectitude only, rectitude forever and ever! — and, with a tenacity that never swerved in all his studies, inventions, dreams, he adheres to this brave choice. I think of him as of some transmigratory votary of Indian legend, who says, “Though I be dog, or jackal, or pismire, in the last rudiments of nature, under what integument or ferocity, I cleave to right, as the sure ladder that leads up to man and to God.”

Swedenborg has rendered a double service to mankind, which is now only beginning to be known. By the science of experiment and use, he made his first steps; he observed and published the laws of nature; and, ascending by just degrees, from events to their summits and causes, he was fired with piety at the harmonies he felt, and abandoned himself to his joy and worship. This was his first service. If the glory was too bright for his eyes to bear, if he staggered under the trance of delight, the more excellent is the spectacle he saw, the realities of being which beam and blaze through him, and which no infirmities of the prophet are suffered to obscure; and he renders a second passive service to men, not less than the first, — perhaps, in the great circle of being, and in the retributions of spiritual nature, not less glorious or less beautiful to himself.

MONTAIGNE; OR, THE SKEPTIC.

Every fact is related on one side to sensation and, on the other, to morals. The game of thought is, on the appearance of one of these two sides, to find the other; given the upper, to find the under side. Nothing so thin, but has these two faces; and, when the observer has seen the obverse, he turns it over to see the reverse.

Life is a pitching of this penny, — heads or tails. We never tire of this game, because there is still a slight shudder of astonishment at the exhibition of the other face, at the contrast of the two faces. A man is flushed with success, and bethinks himself what this good luck signifies. He drives his bargain in the street; but it occurs that he also is bought and sold. He sees the beauty of a human face, and searches the cause of that beauty, which must be more beautiful. He builds his fortunes, maintains the laws, cherishes his children; but he asks himself, why? and whereto? This head and this tail are called, in the language of philosophy, Infinite and Finite; Relative and Absolute; Apparent and Real; and many fine names beside.

Each man is born with a predisposition to one or the other of these sides of nature; and it will easily happen that men will be found devoted to one or the other. One class has the perception of difference, and is conversant with facts and surfaces; cities and persons; and the bringing certain things to pass; — the men of talent and action. Another class have the perception of identity, and are men of faith and philosophy, men of genius.

Each of these riders drives too fast. Plotinus believes only in philosophers; Fenelon, in saints; Pindar and Byron, in poets. Read the haughty language in which Plato and the Platonists speak of all men who are not devoted to their own shining abstractions: other men are rats and mice. The literary class is usually proud and exclusive. The correspondence of Pope and Swift describes mankind around them as monsters; and that of Goethe and Schiller, in our own time, is scarcely more kind.

It is easy to see how this arrogance comes. The genius is a genius by the first look he casts on any object. Is his eye creative? Does he not rest in angles and colors, but beholds the design — he will presently undervalue the actual object. In powerful moments, his thought has dissolved the works of art and nature into their causes, so that the works appear heavy and faulty. He has a conception of beauty which the sculptor cannot embody. Picture, statue, temple, railroad, steam-engine, existed first in an artist's mind, without flaw, mistake, or friction, which impair the executed models. So did the church, the state, college, court,

social circle, and all the institutions. It is not strange that these men, remembering what they have seen and hoped of ideas, should affirm disdainfully the superiority of ideas. Having at some time seen that the happy soul will carry all the arts in power, they say, Why cumber ourselves with superfluous realizations? and, like dreaming beggars, they assume to speak and act as if these values were already substantiated.

On the other part, the men of toil and trade and luxury, — the animal world, including the animal in the philosopher and poet also, — and the practical world, including the painful drudgeries which are never excused to philosopher or poet any more than to the rest, — weigh heavily on the other side. The trade in our streets believes in no metaphysical causes, thinks nothing of the force which necessitated traders and a trading planet to exist; no, but sticks to cotton, sugar, wool, and salt. The ward meetings, on election days, are not softened by any misgivings of the value of these ballotings. Hot life is streaming in a single direction. To the men of this world, to the animal strength and spirits, to the men of practical power, whilst immersed in it, the man of ideas appears out of his reason. They alone have reason.

Things always bring their own philosophy with them, that is, prudence. No man acquires property without acquiring with it a little arithmetic, also. In England, the richest country that ever existed, property stands for more, compared with personal ability, than in any other. After dinner, a man believes less, denies more; verities have lost some charm. After dinner, arithmetic is the only science; ideas are disturbing, incendiary, follies of young men, repudiated by the solid portion of society; and a man comes to be valued by his athletic and animal qualities. Spence relates, that Mr. Pope was with Sir Godfrey Kneller one day, when his nephew, a Guinea trader, came in. “Nephew,” said Sir Godfrey, “you have the honor of seeing the two greatest men in the world.” “I don’t know how great men you may be,” said the Guinea man, “but I don’t like your looks. I have often bought a man much better than both of you, all muscles and bones, for ten guineas. Thus, the men of the senses revenge themselves on the professors, and repay scorn for scorn. The first had leaped to conclusions not yet ripe, and say more than is true; the others make themselves merry with the philosopher, and weigh man by the pound. — They believe that mustard bites the tongue, that pepper is hot, friction-matches are incendiary, revolvers to be avoided, and suspenders hold up pantaloons; that there is much sentiment in a chest of tea; and a man will be eloquent, if you give him good wine. Are you tender and scrupulous, — you must eat more mince-pie. They hold that Luther had milk in him when he said,

“Wer nicht liebt Wein, Weib, und Gesang Der bleibt ein Narr sein Leben

lang,”

and when he advised a young scholar perplexed with fore-ordination and free-will, to get well drunk. “The nerves,” says Cabanis, “they are the man.” My neighbor, a jolly farmer, in the tavern bar-room, thinks that the use of money is sure and speedy spending. “For his part,” he says, “he puts his down his neck, and gets the good of it.”

The inconvenience of this way of thinking is, that it runs into indifferentism, and then into disgust. Life is eating us up. We shall be fables presently. Keep cool: it will be all one a hundred years hence. Life’s well enough; but we shall be glad to get out of it, and they will all be glad to have us. Why should we fret and drudge? Our meat will taste to-morrow as it did yesterday, and we may at last have had enough of it. “Ah,” said my languid gentleman at Oxford, “there’s nothing new or true, — and no matter.”

With a little more bitterness, the cynic moans: our life is like an ass led to market by a bundle of hay being carried before him: he sees nothing but the bundle of hay. “There is so much trouble in coming into the world,” said Lord Bolingbroke, “and so much more, as well as meanness, in going out of it, that ’tis hardly worth while to be here at all.” I knew a philosopher of this kidney, who was accustomed briefly to sum up his experience of human nature in saying, “Mankind is a damned rascal:” and the natural corollary is pretty sure to follow,— “The world lives by humbug, and so will I.”

The abstractionist and the materialist thus mutually exasperating each other, and the scoffer expressing the worst of materialism, there arises a third party to occupy the middle ground between these two, the skeptic, namely. He finds both wrong by being in extremes. He labors to plant his feet, to be the beam of the balance. He will not go beyond his card. He sees the one-sidedness of these men of the street; he will not be a Gibeonite; he stands for the intellectual faculties, a cool head, and whatever serves to keep it cool; no unadvised industry, no unrewarded self-devotion, no loss of the brains in toil. Am I an ox, or a dray? — You are both in extremes, he says. You that will have all solid, and a world of pig-lead, deceive yourselves grossly. You believe yourselves rooted and grounded on adamant; and, yet, if we uncover the last facts of our knowledge, you are spinning like bubbles in a river, you know not whither or whence, and you are bottomed and capped and wrapped in delusions.

Neither will he be betrayed to a book, and wrapped in a gown. The studious class are their own victims; they are thin and pale, their feet are cold, their heads are hot, the night is without sleep, the day a fear of interruption, — pallor, squalor, hunger, and egotism. If you come near them, and see what conceits they entertain, — they are abstractionists, and spend their days and nights in

dreaming some dreams; in expecting the homage of society to some precious scheme built on a truth, but destitute of proportion in its presentment, of justness in its application, and of all energy of will in the schemer to embody and vitalize it.

But I see plainly, he says, that I cannot see. I know that human strength is not in extremes, but in avoiding extremes. I, at least, will shun the weakness of philosophizing beyond my depth. What is the use of pretending to powers we have not? What is the use of pretending to assurances we have not, respecting the other life? Why exaggerate the power of virtue? Why be an angel before your time? These strings, wound up too high, will snap. If there is a wish for immortality, and no evidence, why not say just that? If there are conflicting evidences, why not state them? If there is not ground for a candid thinker to make up his mind, yea or nay, — why not suspend the judgment? I weary of these dogmatizers. I tire of these hacks of routine, who deny the dogmas. I neither affirm nor deny. I stand here to try the case. I am here to consider, — to consider how it is. I will try to keep the balance true. Of what use to take the chair, and glibly rattle off theories of societies, religion, and nature, when I know that practical objections lie in the way, insurmountable by me and by my mates? Why so talkative in public, when each of my neighbors can pin me to my seat by arguments I cannot refute? Why pretend that life is so simple a game, when we know how subtle and elusive the Proteus is? Why think to shut up all things in your narrow coop, when we know there are not one or two only, but ten, twenty, a thousand things, and unlike? Why fancy that you have all the truth in your keeping? There is much to say on all sides.

Who shall forbid a wise skepticism, seeing that there is no practical question on which anything more than an approximate solution can be had? Is not marriage an open question when it is alleged, from the beginning of the world, that such as are in the institution wish to get out, and such as are out wish to get in? And the reply of Socrates, to him who asked whether he should choose a wife, still remains reasonable, “that, whether he should choose one or not, he would repent it.” Is not the state a question? All society is divided in opinion on the subject of the state. Nobody loves it; great numbers dislike it, and suffer conscientious scruples to allegiance: and the only defense set up, is, the fear of doing worse in disorganizing. Is it otherwise with the church? Or, to put any of the questions which touch mankind nearest, — shall the young man aim at a leading part in law, in politics, in trade? It will not be pretended that a success in either of these kinds is quite coincident with what is best and inmost in his mind. Shall he, then, cutting the stays that hold him fast to the social state, put out to sea with no guidance but his genius? There is much to say on both sides.

Remember the open question between the present order of “competition,” and the friends of “attractive and associated labor.” The generous minds embrace the proposition of labor shared by all; it is the only honesty; nothing else is safe. It is from the poor man’s hut alone, that strength and virtue come; and yet, on the other side, it is alleged that labor impairs the form, and breaks the spirit of man, and the laborers cry unanimously, “We have no thoughts.” Culture, how indispensable! I cannot forgive you the want of accomplishment; and yet, culture will instantly destroy that chiefest beauty of spontaneousness. Excellent is culture for a savage; but once let him read in the book, and he is no longer able not to think of Plutarch’s heroes. In short, since true fortitude of understanding consists “in not letting what we know be embarrassed by what we do not know,” we ought to secure those advantages which we can command, and not risk them by clutching after the airy and unattainable. Come, no chimeras! Let us go abroad; let us mix in affairs; let us learn, and get, and have, and climb. “Men are a sort of moving plants, and, like trees, receive a great part of their nourishment from the air. If they keep too much at home, they pine.” Let us have a robust, manly life; let us know what we know, for certain; what we have, let it be solid, and seasonable, and our own. A world in the hand is worth two in the bush. Let us have to do with real men and women, and not with skipping ghosts.

This, then, is the right ground of the skeptic, — this of consideration, of self-containing; not at all of unbelief; not at all of universal denying, nor of universal doubting, — doubting even that he doubts; least of all, of scoffing and profligate jeering at all that is stable and good. These are no more his moods than are those of religion and philosophy. He is the considerer, the prudent, taking in sail, counting stock, husbanding his means, believing that a man has too many enemies, than that he can afford to be his own; that we cannot give ourselves too many advantages, in this unequal conflict, with powers so vast and unwearable ranged on one side, and this little, conceited, vulnerable popinjay that a man is, bobbing up and down into every danger, on the other. It is a position taken up for better defense, as of more safety, and one that can be maintained; and it is one of more opportunity and range; as, when we build a house, the rule is, to set it not too high nor too low, under the wind, but out of the dirt.

The philosophy we want is one of fluxions and mobility. The Spartan and Stoic schemes are too stark and stiff for our occasion. A theory of Saint John, and of non-resistance, seems, on the other hand, too thin and aerial. We want some coat woven of elastic steel, stout as the first, and limber as the second. We want a ship in these billows we inhabit. An angular, dogmatic house would be rent to chips and splinters, in this storm of many elements. No, it must be tight, and fit to the form of man, to live at all; as a shell is the architecture of a house

founded on the sea. The soul of man must be the type of our scheme, just as the body of man is the type after which a dwelling-house is built. Adaptiveness is the peculiarity of human nature. We are golden averages, volitant stabilities, compensated or periodic errors, houses founded on the sea. The wise skeptic wishes to have a near view of the best game, and the chief players; what is best in the planet; art and nature, places and events, but mainly men. Everything that is excellent in mankind, — a form of grace, an arm of iron, lips of persuasion, a brain of resources, every one skilful to play and win, — he will see and judge.

The terms of admission to this spectacle are, that he have a certain solid and intelligible way of living of his own; some method of answering the inevitable needs of human life; proof that he has played with skill and success; that he has evinced the temper, stoutness, and the range of qualities which, among his contemporaries and countrymen, entitle him to fellowship and trust. For, the secrets of life are not shown except to sympathy and likeness. Men do not confide themselves to boys, or coxcombs, or pedants, but to their peers. Some wise limitation, as the modern phrase is; some condition between the extremes, and having itself a positive quality; some stark and sufficient man, who is not salt or sugar, but sufficiently related to the world to do justice to Paris or London, and, at the same time, a vigorous and original thinker, whom cities cannot overawe, but who uses them, — is the fit person to occupy this ground of speculation.

These qualities meet in the character of Montaigne. And yet, since the personal regard which I entertain for Montaigne may be unduly great, I will, under the shield of this prince of egotists, offer, as an apology for electing him as the representative of skepticism, a word or two to explain how my love began and grew for this admirable gossip.

A single odd volume of Cotton's translation of the Essays remained to me from my father's library, when a boy. It lay long neglected, until, after many years, when I was newly escaped from college, I read the book, and procured the remaining volumes. I remember the delight and wonder in which I lived with it. It seemed to me as if I had myself written the book, in some former life, so sincerely it spoke to my thought and experience. It happened, when in Paris, in 1833, that, in the cemetery of Pere le Chaise, I came to a tomb of Augustus Collignon, who died in 1830, aged sixty-eight years, and who, said the monument, "lived to do right, and had formed himself to virtue on the Essays of Montaigne." Some years later, I became acquainted with an accomplished English poet, John Sterling; and, in prosecuting my correspondence, I found that, from a love of Montaigne, he had made a pilgrimage to his chateau, still standing near Castellan, in Perigord, and, after two hundred and fifty years, had copied

from the walls of his library the inscriptions which Montaigne had written there. That Journal of Mr. Sterling's, published in the Westminster Review, Mr. Hazlitt has reprinted in the Prolegomenae to his edition of the Essays. I heard with pleasure that one of the newly-discovered autographs of William Shakspeare was in a copy of Florio's translation of Montaigne. It is the only book which we certainly know to have been in the poet's library. And, oddly enough, the duplicate copy of Florio, which the British Museum purchased, with a view of protecting the Shakspeare autograph (as I was informed in the Museum), turned out to have the autograph of Ben Jonson in the fly-leaf. Leigh Hunt relates of Lord Byron, that Montaigne was the only great writer of past times whom he read with avowed satisfaction. Other coincidences, not needful to be mentioned here, concurred to make this old Gascon still new and immortal for me.

In 1571, on the death of his father, Montaigne, then thirty-eight years old, retired from the practice of law, at Bordeaux, and settled himself on his estate. Though he had been a man of pleasure, and sometimes a courtier, his studious habits now grew on him, and he loved the compass, staidness, and independence of the country gentleman's life. He took up his economy in good earnest, and made his farms yield the most. Downright and plain-dealing, and abhorring to be deceived or to deceive, he was esteemed in the country for his sense and probity. In the civil wars of the League, which converted every house into a fort, Montaigne kept his gates open, and his house without defense. All parties freely came and went, his courage and honor being universally esteemed. The neighboring lords and gentry brought jewels and papers to him for safekeeping. Gibbon reckons, in these bigoted times, but two men of liberality in France, — Henry IV. and Montaigne.

Montaigne is the frankest and honestest of all writers. His French freedom runs into grossness; but he has anticipated all censures by the bounty of his own confessions. In his times, books were written to one sex only, and almost all were written in Latin; so that, in a humorist, a certain nakedness of statement was permitted, which our manners, of a literature addressed equally to both sexes, do not allow. But, though a biblical plainness, coupled with a most uncanonical levity, may shut his pages to many sensitive readers, yet the offence is superficial. He parades it: he makes the most of it; nobody can think or say worse of him than he does. He pretends to most of the vices; and, if there be any virtue in him, he says, it got in by stealth. There is no man, in his opinion, who has not deserved hanging five or six times; and he pretends no exception in his own behalf. "Five or six as ridiculous stories," too, he says, "can be told of me, as of any man living." But, with all this really superfluous frankness, the opinion of an invincible probity grows into every reader's mind.

“When I the most strictly and religiously confess myself, I find that the best virtue I have has in it some tincture of vice; and I am afraid that Plato, in his purest virtue (I, who am as sincere and perfect a lover of virtue of that stamp as any other whatever), if he had listened, and laid his ear close to himself, would have heard some jarring sound of human mixture; but faint and remote, and only to be perceived by himself.”

Here is an impatience and fastidiousness at color or pretense of any kind. He has been in courts so long as to have conceived a furious disgust at appearances; he will indulge himself with a little cursing and swearing; he will talk with sailors and gypsies, use flash and street ballads; he has stayed indoors till he is deadly sick; he will to the open air, though it rain bullets. He has seen too much of gentlemen of the long robe, until he wishes for cannibals; and is so nervous, by factitious life, that he thinks, the more barbarous man is, the better he is. He likes his saddle. You may read theology, and grammar, and metaphysics elsewhere. Whatever you get here, shall smack of the earth and of real life, sweet, or smart, or stinging. He makes no hesitation to entertain you with the records of his disease; and his journey to Italy is quite full of that matter. He took and kept this position of equilibrium. Over his name, he drew an emblematic pair of scales, and wrote, *Que sais-je?* under it. As I look at his effigy opposite the title-page, I seem to hear him say, “You may play old Poz, if you will; you may rail and exaggerate, — I stand here for truth, and will not, for all the states, and churches, and revenues, and personal reputations of Europe, overstate the dry fact, as I see it; I will rather mumble and prose about what I certainly know, — my house and barns; my father, my wife, and my tenants; my old lean bald pate; my knives and forks; what meats I eat, and what drinks I prefer; and a hundred straws just as ridiculous, — than I will write, with a fine crow-quill, a fine romance. I like gray days, and autumn and winter weather. I am gray and autumnal myself, and think an undress, and old shoes that do not pinch my feet, and old friends who do not constrain me, and plain topics where I do not need to strain myself and pump my brains, the most suitable. Our condition as men is risky and ticklish enough. One cannot be sure of himself and his fortune an hour, but he may be whisked off into some pitiable or ridiculous plight. Why should I vapor and play the philosopher, instead of ballasting, the best I can, this dancing balloon? So, at least, I live within compass, keep myself ready for action, and can shoot the gulf, at last, with decency. If there be anything farcical in such a life, the blame is not mine; let it lie at fate’s and nature’s door.”

The Essays, therefore, are an entertaining soliloquy on every random topic that comes into his head; treating everything without ceremony, yet with

masculine sense. There have been men with deeper insight; but, one would say, never a man with such abundance of thoughts; he is never dull, never insincere, and has the genius to make the reader care for all that he cares for.

The sincerity and marrow of the man reaches to his sentences. I know not anywhere the book that seems less written. It is the language of conversation transferred to a book. Cut these words, and they would bleed; they are vascular and alive. One has the same pleasure in it that we have in listening to the necessary speech of men about their work, when any unusual circumstance give momentary importance to the dialogue. For blacksmiths and teamsters do not trip in their speech; it is a shower of bullets. It is Cambridge men who correct themselves, and begin again at every half-sentence, and, moreover, will pun, and refine too much, and swerve from the matter to the expression. Montaigne talks with shrewdness, knows the world, and books, and himself, and uses the positive degree; never shrieks, or protests, or prays; no weakness, no convulsion, no superlative; does not wish to jump out of his skin, or play any antics, or annihilate space or time; but is stout and solid; tastes every moment of the day; likes pain, because it makes him feel himself, and realize things; as we pinch ourselves to know that we are awake. He keeps the plain; he rarely mounts or sinks; likes to feel solid ground, and the stones underneath. His writing has no enthusiasms, no aspiration; contented, self-respecting, and keeping the middle of the road. There is but one exception, — in his love for Socrates. In speaking of him, for once his cheek flushes, and his style rises to passion.

Montaigne died of a quinsy, at the age of sixty, in 1592. When he came to die, he caused the mass to be celebrated in his chamber. At the age of thirty-three, he had been married. “But,” he says, “might I have had my own will, I would not have married Wisdom herself, if she would have had me; but ’tis to much purpose to evade it, the common custom and use of life will have it so. Most of my actions are guided by example, not choice.” In the hour of death he gave the same weight to custom. *Que sais-je?* What do I know.

This book of Montaigne the world has endorsed, by translating it into all tongues, and printing seventy-five editions of it in Europe; and that, too, a circulation somewhat chosen, namely, among courtiers, soldiers, princes, men of the world, and men of wit and generosity.

Shall we say that Montaigne has spoken wisely, and given the right and permanent expression of the human mind, on the conduct of life?

We are natural believers. Truth, or the connection between cause and effect, alone interests us. We are persuaded that a thread runs through all things; all worlds are strung on it, as beads; and men, and events, and life, come to us, only because of that thread; they pass and repass, only that we may know the

direction and continuity of that line. A book or statement which goes to show that there is no line, but random and chaos, a calamity out of nothing, a prosperity and no account of it, a hero born from a fool, a fool from a hero, — dispirits us. Seen or unseen, we believe the tie exists. Talent makes counterfeit ties; genius finds the real ones. We hearken to the man of science, because we anticipate the sequence in natural phenomena which he uncovers. We love whatever affirms, connects, preserves; and dislike what scatters or pulls down. One man appears whose nature is to all men's eyes conserving and constructive; his presence supposes a well-ordered society, agriculture, trade, large institutions, and empire. If these did not exist, they would begin to exist through his endeavors. Therefore, he cheers and comforts men, who feel all this in him very readily. The nonconformist and the rebel say all manner of unanswerable things against the existing republic, but discover to our sense no plan of house or state of their own. Therefore, though the town, and state, and way of living, which our counselor contemplated, might be a very modest or musty prosperity, yet men rightly go for him, and reject the reformer, so long as he comes only with axe and crowbar.

But though we are natural conservers and causationists, and reject a sour, dumpish unbelief, the skeptical class, which Montaigne represents, have reason, and every man, at some time, belongs to it. Every superior mind will pass through this domain of equilibration, — I should rather say, will know how to avail himself of the checks and balances in nature, as a natural weapon against the exaggeration and formalism of bigots and blockheads.

Skepticism is the attitude assumed by the student in relation to the particulars which society adores, but which he sees to be reverent only in their tendency and spirit. The ground occupied by the skeptic is the vestibule of the temple. Society does not like to have any breath of question blown on the existing order. But the interrogation of custom at all points is an inevitable stage in the growth of every superior mind, and is the evidence of its perception of the flowing power which remains itself in all changes.

The superior mind will find itself equally at odds with the evils of society, and with the projects that are offered to relieve them. The wise skeptic is a bad citizen; no conservative; he sees the selfishness of property, and the drowsiness of institutions. But neither is he fit to work with any democratic party that ever was constituted; for parties wish every one committed, and he penetrates the popular patriotism. His politics are those of the "Soul's Errand" of Sir Walter Raleigh; or of Krishna, in the Bhagavat, "There is none who is worthy of my love or hatred;" while he sentences law, physic, divinity, commerce, and custom. He is a reformer: yet he is no better member of the philanthropic association. It

turns out that he is not the champion of the operative, the pauper, the prisoner, the slave. It stands in his mind, that our life in this world is not of quite so easy interpretation as churches and school-books say. He does not wish to take ground against these benevolences, to play the part of devil's attorney, and blazon every doubt and sneer that darkens the sun for him. But he says, There are doubts.

I mean to use the occasion, and celebrate the calendar-day of our Saint Michel de Montaigne, by counting and describing these doubts or negations. I wish to ferret them out of their holes, and sun them a little. We must do with them as the police do with old rogues, who are shown up to the public at the marshal's office. They will never be so formidable, when once they have been identified and registered. But I mean honestly by them — that justice shall be done to their terrors. I shall not take Sunday objections, made up on purpose to be put down. I shall take the worst I can find, whether I can dispose of them, or they of me.

I do not press the skepticism of the materialist. I know the quadruped opinion will not prevail. 'Tis of no importance what bats and oxen think. The first dangerous symptom I report is, the levity of intellect; as if it were fatal to earnestness to know much. Knowledge is the knowing that we cannot know. The dull pray; the geniuses are light mockers. How respectable is earnestness on every platform! but intellect kills it. Nay, San Carlo, my subtle and admirable friend, one of the most penetrating of men, finds that all direct ascension, even of lofty piety, leads to this ghastly insight, and sends back the votary orphaned. My astonishing San Carlo thought the lawgivers and saints infected. They found the ark empty; saw, and would not tell; and tried to choke off their approaching followers, by saying, "Action, action, my dear fellows, is for you!" Bad as was to me this detection by San Carlo, this frost in July, this blow from a brick, there was still a worse, namely, the cloy or satiety of the saints. In the mount of vision, ere they have yet risen from their knees, they say, "We discover that this our homage and beatitude is partial and deformed; we must fly for relief to the suspected and reviled Intellect, to the Understanding, the Mephistopheles, to the gymnastics of latent."

This is hobgoblin the first; and, though it has been the subject of much elegy, in our nineteenth century, from Byron, Goethe, and other poets of less fame, not to mention many distinguished private observers, — I confess it is not very affecting to my imagination; for it seems to concern the shattering of baby-houses and crockery-shops. What flutters the church of Rome, or of England, or of Geneva, or of Boston, may yet be very far from touching any principle of faith. I think that the intellect and moral sentiment are unanimous; and that,

though philosophy extirpates bugbears, yet it supplies the natural checks of vice, and polarity to the soul. I think that the wiser a man is, the more stupendous he finds the natural and moral economy, and lifts himself to a more absolute reliance.

There is the power of moods, each setting at nought all but its own tissue of facts and beliefs. There is the power of complexions, obviously modifying the dispositions and sentiments. The beliefs and unbeliefs appear to be structural; and, as soon as each man attains the poise and vivacity which allow the whole machinery to play, he will not need extreme examples, but will rapidly alternate all opinions in his own life. Our life is March weather, savage and serene in one hour. We go forth austere, dedicated, believing in the iron links of Destiny, and will not turn on our heel to save our life; but a book, or a bust, or only the sound of a name, shoots a spark through the nerves, and we suddenly believe in will: my finger-ring shall be the seal of Solomon: fate is for imbeciles: all is possible to the resolved mind. Presently, a new experience gives a new turn to our thoughts: common sense resumes its tyranny: we say, "Well, the army, after all, is the gate to fame, manners, and poetry: and, look you, — on the whole, selfishness plants best, prunes best, makes the best commerce, and the best citizen." Are the opinions of a man on right and wrong, on fate and causation, at the mercy of a broken sleep or an indigestion? Is his belief in God and Duty no deeper than a stomach evidence? And what guaranty for the permanence of his opinions? I like not the French celerity, — a new church and state once a week. — This is the second negation; and I shall let it pass for what it will. As far as it asserts rotation of states of mind, I suppose it suggests its own remedy, namely, in the record of larger periods. What is the mean of many states; of all the states? Does the general voice of ages affirm any principle, or is no community of sentiment discoverable in distant times and places? And when it shows the power of self-interest, I accept that as a part of the divine law, and must reconcile it with aspiration the best I can.

The word Fate, or Destiny, expresses the sense of mankind, in all ages, — that the laws of the world do not always befriend, but often hurt and crush us. Fate, in the shape of Kinde or nature, grows over us like grass. We paint Time with a scythe; Love and Fortune, blind; and Destiny, deaf. We have too little power of resistance against this ferocity which champs us up. What front can we make against these unavoidable, victorious, maleficent forces? What can I do against the influence of Race, in my history? What can I do against hereditary and constitutional habits, against scrofula, lymph, impotence? against climate, against barbarism, in my country? I can reason down or deny everything, except this perpetual Belly; feed he must and will, and I cannot make him respectable.

But the main resistance which the affirmative impulse finds, and one including all others, is in the doctrine of the Illusionists. There is a painful rumor in circulation, that we have been practiced upon in all the principal performances of life, and free agency is the emptiest name. We have been sopped and drugged with the air, with food, with woman, with children, with sciences, with events which leave us exactly where they found us. The mathematics, 'tis complained, leave the mind where they find it: so do all sciences; and so do all events and actions. I find a man who has passed through all the sciences, the churl he was; and, through all the offices, learned, civil, and social, can detect the child. We are not the less necessitated to dedicate life to them. In fact, we may come to accept it as the fixed rule and theory of our state of education, that God is a substance, and his method is illusion. The eastern sages owned the goddess Yoganidra, the great illusory energy of Vishnu, by whom, as utter ignorance, the whole world is beguiled.

Or, shall I state it thus? — The astonishment of life, is, the absence of any appearance of reconciliation between the theory and practice of life. Reason, the prized reality, the Law, is apprehended, now and then, for a serene and profound moment, amidst the hubbub of cares and works which have no direct bearing on it; — is then lost, for months or years, and again found, for an interval, to be lost again. If we compute it in time, we may, in fifty years, have half a dozen reasonable hours. But what are these cares and works the better? A method in the world we do not see, but this parallelism of great and little, which never react on each other, nor discover the smallest tendency to converge. Experiences, fortunes, governings, readings, writings are nothing to the purpose; as when a man comes into the room, it does not appear whether he has been fed on yams or buffalo, — he has contrived to get so much bone and fibre as he wants, out of rice or out of snow. So vast is the disproportion between the sky of law and the pismire of performance under it, that, whether he is a man of worth or a sot, is not so great a matter as we say. Shall I add, as one juggle of this enchantment, the stunning non-intercourse law which makes cooperation impossible? The young spirit pants to enter society. But all the ways of culture and greatness lead to solitary imprisonment. He has been often balked. He did not expect a sympathy with his thought from the village, but he went with it to the chosen and intelligent, and found no entertainment for it, but mere misapprehension, distaste, and scoffing. Men are strangely mistimed and misapplied; and the excellence of each is an inflamed individualism which separates him more.

There are these, and more than these diseases of thought, which our ordinary teachers do not attempt to remove. Now shall we, because a good nature inclines us to virtue's side, say, There are no doubts, — and lie for the right? Is life to be

led in a brave or in a cowardly manner? and is not the satisfaction of the doubts essential to all manliness? Is the name of virtue to be a barrier to that which is virtue? Can you not believe that a man of earnest and burly habit may find small good in tea, essays, and catechism, and want a rougher instruction, want men, labor, trade, farming, war, hunger, plenty, love, hatred, doubt, and terror, to make things plain to him; and has he not a right to insist on being convinced in his own way? When he is convinced, he will be worth the pains.

Belief consists in accepting the affirmations of the soul; unbelief in denying them. Some minds are incapable of skepticism. The doubts they profess to entertain are rather a civility or accommodation to the common discourse of their company. They may well give themselves leave to speculate, for they are secure of a return. Once admitted to the heaven of thought, they see no relapse into night, but infinite invitation on the other side. Heaven is within heaven, and sky over sky, and they are encompassed with divinities. Others there are, to whom the heaven is brass, and it shuts down to the surface of the earth. It is a question of temperament, or of more or less immersion in nature. The last class must needs have a reflex or parasite faith; not a sight of realities, but an instinctive reliance on the seers and believers of realities. The manners and thoughts of believers astonish them, and convince them that these have seen something which is hid from themselves. But their sensual habit would fix the believer to his last position, whilst he as inevitably advances; and presently the unbeliever, for love of belief, burns the believer.

Great believers are always reckoned infidels, impracticable, fantastic, atheistic, and really men of no account. The spiritualist finds himself driven to express his faith by a series of skepticisms. Charitable souls come with their projects, and ask his cooperation. How can he hesitate? It is the rule of mere comity and courtesy to agree where you can, and to turn your sentence with something auspicious, and not freezing and sinister. But he is forced to say, "O, these things will be as they must be: what can you do? These particular griefs and crimes are the foliage and fruit of such trees as we see growing. It is vain to complain of the leaf or the berry: cut it off; it will bear another just as bad. You must begin your cure lower down." The generousities of the day prove an intractable element for him. The people's questions are not his; their methods are not his; and, against all the dictates of good nature, he is driven to say, he has no pleasure in them.

Even the doctrines dear to the hope of man, of the divine Providence, and of the immortality of the soul, his neighbors cannot put the statement so that he shall affirm it. But he denies out of more faith, and not less. He denies out of honesty. He had rather stand charged with the imbecility of skepticism, than with

untruth. I believe, he says, in the moral design of the universe; it exists hospitably for the weal of the souls; but your dogmas seem to me caricatures; why should I make believe them? Will any say, this is cold and infidel? The wise and magnanimous will not say so. They will exult in his far-sighted good-will, that can abandon to the adversary all the ground of tradition and common belief, without losing a jot of strength. It sees to the end of all transgression. George Fox saw “that there was an ocean of darkness and death; but withal, an infinite ocean of light and love which flowed over that of darkness.”

The final solution in which skepticism is lost is in the moral sentiment, which never forfeits its supremacy. All moods may be safely tried, and their weight allowed to all objections: the moral sentiment as easily outweighs them all, as any one. This is the drop which balances the sea. I play with the miscellany of facts, and take those superficial views which we call skepticism; but I know that they will presently appear to me in that order which makes skepticism impossible. A man of thought must feel the thought that is parent of the universe, that the masses of nature do undulate and flow.

This faith avails to the whole emergency of life and objects. The world is saturated with deity and with law. He is content with just and unjust, with sots and fools, with the triumph of folly and fraud. He can behold with serenity the yawning gulf between the ambition of man and his power of performance, between the demand and supply of power, which makes the tragedy of all souls.

Charles Fourier announced that “the attractions of man are proportioned to his destinies;” in other words, that every desire predicts its own satisfaction. Yet, all experience exhibits the reverse of this; the incompetency of power is the universal grief of young and ardent minds. They accuse the divine Providence of a certain parsimony. It has shown the heaven and earth to every child, and filled him with a desire for the whole; a desire raging, infinite; a hunger, as of space to be filled with planets; a cry of famine, as of devils for souls. Then for the satisfaction, — to each man is administered a single drop, a bead of dew of vital power per day, — a cup as large as space, and one drop of the water of life in it. Each man woke in the morning, with an appetite that could eat the solar system like a cake; a spirit for action and passion without bounds; he could lay his hand on the morning star; he could try conclusions with gravitation or chemistry; but, on the first motion to prove his strength — hands, feet, senses, gave way, and would not serve him. He was an emperor deserted by his states, and left to whistle by himself, or thrust into a mob of emperors, all whistling: and still the sirens sang, “The attractions are proportioned to the destinies.” In every house, in the heart of each maiden, and of each boy, in the soul of the soaring saint, this chasm is found, — between the largest promise of ideal power, and the shabby

experience.

The expansive nature of truth comes to our succor, elastic, not to be surrounded. Man helps himself by larger generalizations. The lesson of life is practically to generalize; to believe what the years and the centuries say against the hours; to resist the usurpation of particulars; to penetrate to their catholic sense. Things seem to say one thing, and say the reverse. The appearance is immoral; the result is moral. Things seem to tend downward, to justify despondency, to promote rogues, to defeat the just; and, by knaves, as by martyrs, the just cause is carried forward. Although knaves win in every political struggle, although society seems to be delivered over from the hands of one set of criminals into the hands of another set of criminals, as fast as the government is changed, and the march of civilization is a train of felonies, yet, general ends are somehow answered. We see, now, events forced on, which seem to retard or retrograde the civility of ages. But the world-spirit is a good swimmer, and storms and waves cannot drown him. He snaps his finger at laws; and so, throughout history, heaven seems to affect low and poor means. Through the years and the centuries, through evil agents, through toys and atoms, a great and beneficent tendency irresistibly streams.

Let a man learn to look for the permanent in the mutable and fleeting; let him learn to bear the disappearance of things he was wont to reverence, without losing his reverence; let him learn that he is here, not to work, but to be worked upon; and that, though abyss open under abyss, and opinion displace opinion, all are at last contained in the Eternal cause. —

“If my bark sink, ’tis to another sea.”

SHAKSPEARE; OR, THE POET.

Great men are more distinguished by range and extent than by originality. If we require the originality which consists in weaving, like a spider, their web from their own bowels; in finding clay, and making bricks and building the house, no great men are original. Nor does valuable originality consist in unlikeness to other men. The hero is in the press of knights, and the thick of events; and, seeing what men want, and sharing their desire, he adds the needful length of sight and of arm, to come at the desired point. The greatest genius is the most indebted man. A poet is no rattlebrain, saying what comes uppermost, and, because he says everything, saying, at last, something good; but a heart in unison with his time and country. There is nothing whimsical and fantastic in his production, but sweet and sad earnest, freighted with the weightiest convictions, and pointed with the most determined aim which any man or class knows of in his times.

The Genius of our life is jealous of individuals, and will not have any individual great, except through the general. There is no choice to genius. A great man does not wake up on some fine morning, and say, "I am full of life, I will go to sea, and find an Antarctic continent: to-day I will square the circle: I will ransack botany, and find a new food for man: I have a new architecture in my mind: I foresee a new mechanic power;" no, but he finds himself in the river of the thoughts and events, forced onward by the ideas and necessities of his contemporaries. He stands where all the eyes of men look one way, and their hands all point in the direction in which he should go. The church has reared him amidst rites and pomps, and he carries out the advice which her music gave him, and builds a cathedral needed by her chants and processions. He finds a war raging: it educates him by trumpet, in barracks, and he betters the instruction. He finds two counties groping to bring coal, or flour, or fish, from the place of production to the place of consumption, and he hits on a railroad. Every master has found his materials collected, and his power lay in his sympathy with his people, and in his love of the materials he wrought in. What an economy of power! and what a compensation for the shortness of life! All is done to his hand. The world has brought him thus far on his way. The human race has gone out before him, sunk the hills, filled the hollows, and bridged the rivers. Men, nations, poets, artisans, women, all have worked for him, and he enters into their labors. Choose any other thing, out of the line of tendency, out of the national feeling and history, and he would have all to do for himself: his powers would be expended in the first preparations. Great genial power, one would almost say,

consists in not being original at all; in being altogether receptive; in letting the world do all, and suffering the spirit of the hour to pass unobstructed through the mind.

Shakspeare's youth fell in a time when the English people were importunate for dramatic entertainments. The court took offence easily at political allusions, and attempted to suppress them. The Puritans, a growing and energetic party, and the religious among the Anglican church, would suppress them. But the people wanted them. Inn-yards, houses without roofs, and extemporaneous enclosures at country fairs, were the ready theatres of strolling players. The people had tasted this new joy; and, as we could not hope to suppress newspapers now, — no, not by the strongest party, — neither then could king, prelate, or puritan, alone or united, suppress an organ, which was ballad, epic, newspaper, caucus, lecture, punch, and library, at the same time. Probably king, prelate and puritan, all found their own account in it. It had become, by all causes, a national interest, — by no means conspicuous, so that some great scholar would have thought of treating it in an English history, — but not a whit less considerable, because it was cheap, and of no account, like a baker's-shop. The best proof of its vitality is the crowd of writers which suddenly broke into this field; Kyd, Marlow, Greene, Jonson, Chapman, Dekker, Webster, Heywood, Middleton, Peele, Ford, Massinger, Beaumont, and Fletcher.

The secure possession, by the stage, of the public mind, is of the first importance to the poet who works for it. He loses no time in idle experiments. Here is audience and expectation prepared. In the case of Shakespeare there is much more. At the time when he left Stratford, and went up to London, a great body of stage-plays, of all dates and writers, existed in manuscript, and were in turn produced on the boards. Here is the Tale of Troy, which the audience will bear hearing some part of every week; the Death of Julius Caesar, and other stories out of Plutarch, which they never tire of; a shelf full of English history, from the chronicles of Brut and Arthur, down to the royal Henries, which men hear eagerly; and a string of doleful tragedies, merry Italian tales, and Spanish voyages, which all the London 'prentices know. All the mass has been treated, with more or less skill, by every playwright, and the prompter has the soiled and tattered manuscripts. It is now no longer possible to say who wrote them first. They have been the property of the Theatre so long, and so many rising geniuses have enlarged or altered them, inserting a speech, or a whole scene, or adding a song, that no man can any longer claim copyright on this work of numbers. Happily, no man wishes to. They are not yet desired in that way. We have few readers, many spectators and hearers. They had best lie where they are.

Shakspeare, in common with his comrades, esteemed the mass of old plays,

waste stock, in which any experiment could be freely tried. Had the *prestige* which hedges about a modern tragedy existed, nothing could have been done. The rude warm blood of the living England circulated in the play, as in street-ballads, and gave body which he wanted to his airy and majestic fancy. The poet needs a ground in popular tradition on which he may work, and which, again, may restrain his art within the due temperance. It holds him to the people, supplies a foundation for his edifice; and, in furnishing so much work done to his hand, leaves him at leisure, and in full strength for the audacities of his imagination. In short, the poet owes to his legend what sculpture owed to the temple. Sculpture in Egypt, and in Greece, grew up in subordination to architecture. It was the ornament of the temple wall: at first, a rude relief carved on pediments, then the relief became bolder, and a head or arm was projected from the wall, the groups being still arrayed with reference to the building, which serves also as a frame to hold the figures; and when, at last, the greatest freedom of style and treatment was reached, the prevailing genius of architecture still enforced a certain calmness and continence in the statue. As soon as the statue was begun for itself, and with no reference to the temple or palace, the art began to decline: freak, extravagance, and exhibition, took the place of the old temperance. This balance-wheel, which the sculptor found in architecture, the perilous irritability of poetic talent found in the accumulated dramatic materials to which the people were already wonted, and which had a certain excellence which no single genius, however extraordinary, could hope to create.

In point of fact, it appears that Shakspeare did owe debts in all directions, and was able to use whatever he found; and the amount of indebtedness may be inferred from Malone's laborious computations in regard to the First, Second, and Third parts of Henry VI., in which, "out of 6043 lines, 1771 were written by some author preceding Shakspeare; 2373 by him, on the foundation laid by his predecessors; and 1899 were entirely his own." And the preceding investigation hardly leaves a single drama of his absolute invention. Malone's sentence is an important piece of external history. In Henry VIII., I think I see plainly the cropping out of the original rock on which his own finer stratum was laid. The first play was written by a superior, thoughtful man, with a vicious ear. I can mark his lines, and know well their cadence. See Wolsey's soliloquy, and the following scene with Cromwell, where, — instead of the metre of Shakspeare, whose secret is, that the thought constructs the tune, so that reading for the sense will best bring out the rhythm, — here the lines are constructed on a given tune, and the verse has even a trace of pulpit eloquence. But the play contains, through all its length, unmistakable traits of Shakspeare's hand, and some passages, as the account of the coronation, are like autographs. What is odd, the compliment

to Queen Elizabeth is in the bad rhythm.

Shakspeare knew that tradition supplies a better fable than any invention can. If he lost any credit of design, he augmented his resources; and, at that day our petulant demand for originality was not so much pressed. There was no literature for the million. The universal reading, the cheap press, were unknown. A great poet, who appears in illiterate times, absorbs into his sphere all the light which is anywhere radiating. Every intellectual jewel, every flower of sentiment, it is his fine office to bring to his people; and he comes to value his memory equally with his invention. He is therefore little solicitous whence his thoughts have been derived; whether through translation, whether through tradition, whether by travel in distant countries, whether by inspiration; from whatever source, they are equally welcome to his uncritical audience. Nay, he borrows very near home. Other men say wise things as well as he; only they say a good many foolish things, and do not know when they have spoken wisely. He knows the sparkle of the true stone, and puts it in high place, wherever he finds it. Such is the happy position of Homer, perhaps; of Chaucer, of Saadi. They felt that all wit was their wit. And they are librarians and historiographers, as well as poets. Each romancer was heir and dispenser of all the hundred tales of the world, —

”Presenting Thebes’ and Pelops’ line
And the tale of Troy divine.”

The influence of Chaucer is conspicuous in all our early literature; and, more recently, not only Pope and Dryden have been beholden to him, but, in the whole society of English writers, a large unacknowledged debt is easily traced. One is charmed with the opulence which feeds so many pensioners. But Chaucer is a huge borrower. Chaucer, it seems, drew continually, through Lydgate and Caxton, from Guido di Colonna, whose Latin romance of the Trojan war was in turn a compilation from Dares Phrygius, Ovid, and Statius. Then Petrarch, Boccaccio, and the Provencal poets, are his benefactors: the Romaunt of the Rose is only judicious translation from William of Lorris and John of Meun: Troilus and Creseide, from Lollius of Urbino: The Cock and the Fox, from the *Lais* of Marie: The House of Fame, from the French or Italian: and poor Gower he uses as if he were only a brick-kiln or stone-quarry out of which to build his house. He steals by this apology, — that what he takes has no worth where he finds it, and the greatest where he leaves it. It has come to be practically a sort of rule in literature, that a man, having once shown himself capable of original writing, is entitled thenceforth to steal from the writings of others at discretion. Thought is the property of him who can entertain it; and of him who can

adequately place it. A certain awkwardness marks the use of borrowed thoughts; but, as soon as we have learned what to do with them, they become our own.

Thus, all originality is relative. Every thinker is retrospective. The learned member of the legislature, at Westminster, or at Washington, speaks and votes for thousands. Show us the constituency, and the now invisible channels by which the senator is made aware of their wishes, the crowd of practical and knowing men, who, by correspondence or conversation, are feeding him with evidence, anecdotes, and estimates, and it will bereave his fine attitude and resistance of something of their impressiveness. As Sir Robert Peel and Mr. Webster vote, so Locke and Rousseau think for thousands; and so there were fountains all around Homer, Menu, Saadi, or Milton, from which they drew; friends, lovers, books, traditions, proverbs, — all perished, — which, if seen, would go to reduce the wonder. Did the bard speak with authority? Did he feel himself, overmatched by any companion? The appeal is to the consciousness of the writer. Is there at last in his breast a Delhi whereof to ask concerning any thought or thing, whether it be verily so, yea or nay? and to have answer, and to rely on that? All the debt which such a man could contract to other wit, would never disturb his consciousness of originality: for the ministrations of books, and of other minds, are a whiff of smoke to that most private reality with which he has conversed.

It is easy to see that what is best written or done by genius, in the world, was no man's work, but came by wide social labor, when a thousand wrought like one, sharing the same impulse. Our English Bible is a wonderful specimen of the strength and music of the English language. But it was not made by one man, or at one time; but centuries and churches brought it to perfection. There never was a time when there was not some translation existing. The Liturgy, admired for its energy and pathos, is an anthology of the piety of ages and nations, a translation of the prayers and forms of the Catholic church, — these collected, too, in long periods, from the prayers and meditations of every saint and sacred writer, all over the world. Grotius makes the like remark in respect to the Lord's Prayer, that the single clauses of which it is composed were already in use, in the time of Christ, in the rabbinical forms. He picked out the grains of gold. The nervous language of the Common Law, the impressive forms of our courts, and the precision and substantial truth of the legal distinctions, are the contribution of all the sharp-sighted, strong-minded men who have lived in the countries where these laws govern. The translation of Plutarch gets its excellence by being translation on translation. There never was a time when there was none. All the truly diomatic and national phrases are kept, and all others successively picked out and thrown away. Something like the same process had gone on, long before,

with the originals of these books. The world takes liberties with world-books. Vedas, Aesop's Fables, Pilpay, Arabian Nights, Cid, Iliad, Robin Hood, Scottish Minstrelsy, are not the work of single men. In the composition of such works, the time thinks, the market thinks, the mason, the carpenter, the merchant, the farmer, the fop, all think for us. Every book supplies its time with one good word; every municipal law, every trade, every folly of the day, and the generic catholic genius who is not afraid or ashamed to owe his originality to the originality of all, stands with the next age as the recorder and embodiment of his own.

We have to thank the researches of antiquaries, and the Shakspeare Society, for ascertaining the steps of the English drama, from the Mysteries celebrated in churches and by churchmen, and the final detachment from the church, and the completion of secular plays, from Ferrex and Porrex, and Gammer Gurton's Needle, down to the possession of the stage by the very pieces which Shakspeare altered, remodelled, and finally made his own. Elated with success, and piqued by the growing interest of the problem, they have left no book-stall unsearched, no chest in a garret unopened, no file of old yellow accounts to decompose in damp and worms, so keen was the hope to discover whether the boy Shakspeare poached or not, whether he held horses at the theater door, whether he kept school, and why he left in his will only his second-best bed to Ann Hathaway, his wife.

There is somewhat touching in the madness with which the passing age mischooses the object on which all candles shine, and all eyes are turned; the care with which it registers every trifle touching Queen Elizabeth, and King James, and the Essexes, Leicesters, Burleighs, and Buckingham; and let pass without a single valuable note the founder of another dynasty, which alone will cause the Tudor dynasty to be remembered, — the man who carries the Saxon race in him by the inspiration which feeds him, and on whose thoughts the foremost people of the world are now for some ages to be nourished, and minds to receive this and not another bias. A popular player, — nobody suspected he was the poet of the human race; and the secret was kept as faithfully from poets and intellectual men, as from courtiers and frivolous people. Bacon, who took the inventory of the human understanding for his times, never mentioned his name. Ben Jonson, though we have strained his few words of regard and panegyric, had no suspicion of the elastic fame whose first vibrations he was attempting. He no doubt thought the praise he has conceded to him generous, and esteemed himself, out of all question, the better poet of the two.

If it need wit to know wit, according to the proverb, Shakspeare's time should be capable of recognizing it. Sir Henry Wotton was born four years after

Shakspeare, and died twenty-three years after him; and I find among his correspondents and acquaintances, the following persons: Theodore Beza, Isaac Casaubon, Sir Philip Sidney, Earl of Essex, Lord Bacon, Sir Walter Raleigh, John Milton, Sir Henry Vane, Isaac Walton, Dr. Donne, Abraham Cowley, Bellarmine, Charles Cotton, John Pym, John Hales, Kepler, Vieta, Albericus Gentilis, Paul Sarpi, Ariminius; with all of whom exist some token of his having communicated, without enumerating many others, whom doubtless he saw, — Shakspeare, Spenser, Jonson, Beaumont, Massinger, two Herberts, Marlow, Chapman, and the rest. Since the constellation of great men who appeared in Greece in the time of Pericles, there was never any such society; — yet their genius failed them to find out the best head in the universe. Our poet's mask was impenetrable. You cannot see the mountain near. It took a century to make it suspected; and not until two centuries had passed, after his death, did any criticism which we think adequate begin to appear. It was not possible to write the history of Shakspeare till now; for he is the father of German literature: it was on the introduction of Shakspeare into German by Lessing, and the translation of his works by Wieland and Schlegel, that the rapid burst of German literature was most intimately connected. It was not until the nineteenth century, whose speculative genius is a sort of living Hamlet, that the tragedy of Hamlet should find such wondering readers. Now, literature, philosophy, and thought are Shakspearized. His mind is the horizon beyond which, at present, we do not see. Our ears are educated to music by his rhythm. Coleridge and Goethe are the only critics who have expressed our convictions with any adequate fidelity: but there is in all cultivated minds a silent appreciation of his superlative power and beauty, which, like Christianity, qualifies the period.

The Shakspeare Society have inquired in all directions, advertised the missing facts, offered money for any information that will lead to proof; and with what results? Beside some important illustration of the history of the English stage, to which I have adverted, they have gleaned a few facts touching the property, and dealings in regard to property, of the poet. It appears that, from year to year, he owned a larger share in the Blackfriars' Theater: its wardrobe and other appurtenances were his: that he bought an estate in his native village, with his earnings, as writer and shareholder; that he lived in the best house in Stratford; was intrusted by his neighbors with their commissions in London, as of borrowing money, and the like; that he was a veritable farmer. About the time when he was writing Macbeth, he sues Philip Rogers, in the borough-court of Stratford, for thirty-five shillings ten pence, for corn delivered to him at different times; and, in all respects, appears as a good husband, with no reputation for eccentricity or excess. He was a good-natured sort of man, an actor and

shareholder in the theater, not in any striking manner distinguished from other actors and managers. I admit the importance of this information. It was well worth the pains that have been taken to procure it.

But whatever scraps of information concerning his condition these researches may have rescued, they can shed no light upon that infinite invention which is the concealed magnet of his attraction for us. We are very clumsy writers of history. We tell the chronicle of parentage, birth, birthplace, schooling, schoolmates, earning of money, marriage, publication of books, celebrity, death; and when we have come to an end of this gossip, no ray of relation appears between it and the goddess-born; and it seems as if, had we dipped at random into the "Modern Plutarch," and read any other life there, it would have fitted the poems as well. It is the essence of poetry to spring, like the rainbow daughter of Wonder, from the invisible, to abolish the past, and refuse all history. Malone, Warburton, Dyce, and Collier, have wasted their oil. The famed theaters, Covent Garden, Drury Lane, the Park, and Tremont, have vainly assisted. Betterton, Garrick, Kemble, Kean, and Macready, dedicate their lives to this genius; him they crown, elucidate, obey, and express. The genius knows them not. The recitation begins; one golden word leaps out immortal from all this painted pedantry, and sweetly torments us with invitations to its own inaccessible homes. I remember, I went once to see the Hamlet of a famed performer, the pride of the English stage; and all I then heard, and all I now remember, of the tragedian, was that in which the tragedian had no part; simply, Hamlet's question to the ghost, —

"What may this mean,
That thou, dead corse, again in complete steel
Revisit'st thus the glimpses of the moon?"

That imagination which dilates the closet he writes into the world's dimension, crowds it with agents in rank and order, as quickly reduces the big reality to be the glimpses of the moon. These tricks of his magic spoil for us the illusions of the green-room. Can any biography shed light on the localities into which the *Midsummer Night's Dream* admits me? Did Shakspeare confide to any notary or parish recorder, sacristan, or surrogate, in Stratford, the genesis of that delicate creation? The forest of Arden, the nimble air of Scone Castle, the moonlight of Portia's villa, "the antres vast and deserts idle," of Othello's captivity, — where is the third cousin, or grand-nephew, the chancellor's file of accounts, or private letter, that has kept one word of those transcendent secrets. In fine, in this drama, as in all great works of art, — in the Cyclopean

architecture of Egypt and India; in the Phidian sculpture; the Gothic minsters; the Italian painting; the Ballads of Spain and Scotland, — the Genius draws up the ladder after him, when the creative age goes up to heaven, and gives way to a new, who see the works, and ask in vain for a history.

Shakspeare is the only biographer of Shakspeare; and even he can tell nothing, except to the Shakspeare in us; that is, to our most apprehensive and sympathetic hour. He cannot step from off his tripod, and give us anecdotes of his inspirations. Read the antique documents extricated, analyzed, and compared, by the assiduous Dyce and Collier; and now read one of those skyey sentences, — aerolites, — which seem to have fallen out of heaven, and which, not your experience, but the man within the breast, has accepted as words of fate; and tell me if they match; if the former account in any manner for the latter; or, which gives the most historical insight into the man.

Hence, though our external history is so meager, yet, with Shakspeare for biographer, instead of Aubrey and Rowe, we have really the information which is material, that which describes character and fortune; that which, if we were about to meet the man and deal with him, would most import us to know. We have his recorded convictions on those questions which knock for answer at every heart, — on life and death, on love, on wealth and poverty, on the prizes of life, and the ways whereby we may come at them; on the characters of men, and the influences, occult and open, which affect their fortunes: and on those mysterious and demoniacal powers which defy our science, and which yet interweave their malice and their gift in our brightest hours. Who ever read the volume of Sonnets, without finding that the poet had there revealed, under masks that are no masks to the intelligent, the lore of friendship and of love; the confusion of sentiments in the most susceptible, and, at the same time, the most intellectual of men? What trait of his private mind has he hidden in his dramas? One can discern, in his ample pictures of the gentleman and the king, what forms and humanities pleased him; his delight in troops of friends, in large hospitality, in cheerful giving. Let Timon, let Warwick, let Antonio the merchant, answer for his great heart. So far from Shakspeare being the least known, he is the one person, in all modern history, known to us. What point of morals, of manners, of economy, of philosophy, of religion, of taste, of the conduct of life, has he not settled? What mystery has he not signified his knowledge of? What office or function, or district of man's work, has he not remembered? What king has he not taught state, as Talma taught Napoleon? What maiden has not found him finer than her delicacy? What lover has he not outloved? What sage has he not outseen? What gentleman has he not instructed in the rudeness of his behavior?

Some able and appreciating critics think no criticism on Shakspeare valuable,

that does not rest purely on the dramatic merit; that he is falsely judged as poet and philosopher. I think as highly as these critics of his dramatic merit, but still think it secondary. He was a full man, who liked to talk; a brain exhaling thoughts and images, which, seeking vent, found the drama next at hand. Had he been less, we should have had to consider how well he filled his place, how good a dramatist he was, — and he is the best in the world. But it turns out; that what he has to say is of that weight, as to withdraw some attention from the vehicle; and he is like some saint whose history is to be rendered into all languages, into verse and prose, into songs and pictures, and cut up into proverbs; so that the occasions which gave the saint's meaning the form of a conversation, or of a prayer, or of a code of laws, is immaterial compared with the universality of its application. So it fares with the wise Shakspeare and his book of life. He wrote the airs for all our modern music: he wrote the text of modern life; the text of manners: he drew the man of England and Europe; the father of the man in America: he drew the man and described the day, and what is done in it: he read the hearts of men and women, their probity, and their second thought, and wiles; the wiles of innocence, and the transitions by which virtues and vices slide into their contraries: he could divide the mother's part from the father's part in the face of the child, or draw the fine demarcations of freedom and fate: he knew the laws of repression which make the police of nature: and all the sweets and all the terrors of human lot lay in his mind as truly but as softly as the landscape lies on the eye. And the importance of this wisdom of life sinks the form, as of Drama or Epic, out of notice. 'Tis like making a question concerning the paper on which a king's message is written.

Shakspeare is as much out of the category of eminent authors, as he is out of the crowd. He is inconceivably wise; the others, conceivably. A good reader can, in a sort, nestle into Plato's brain, and think from thence; but not into Shakspeare's. We are still out of doors. For executive faculty, for creation, Shakspeare is unique. No man can imagine it better. He was the farthest reach of subtlety compatible with an individual self, — the subtlest of authors, and only just within the possibility of authorship. With this wisdom of life, is the equal endowment of imaginative and of lyric power. He clothed the creatures of his legend with form and sentiments, as if they were people who had lived under his roof; and few real men have left such distinct characters as these fictions. And they spoke in language as sweet as it was fit. Yet his talents never seduced him into an ostentation, nor did he harp on one string. An omnipresent humanity coordinates all his faculties. Give a man of talents a story to tell, and his partiality will presently appear. He has certain observations, opinions, topics, which have some accidental prominence, and which he disposes all to exhibit. He crams this

part, and starves that other part, consulting not the fitness of the thing, but his fitness and strength. But Shakspeare has no peculiarity, no importunate topic; but all is duly given; no veins, no curiosities: no cow-painter, no bird-fancier, no mannerist is he: he has no discoverable egotism: the great he tells greatly; the small subordinately. He is wise without emphasis or assertion; he is strong, as nature is strong, who lifts the land into mountain slopes without effort, and by the same rule as she floats a bubble in the air, and likes as well to do the one as the other. This makes that equality of power in farce, tragedy, narrative, and love-songs; a merit so incessant, that each reader is incredulous of the perception of other readers.

This power of expression, or of transferring the inmost truth of things into music and verse, makes him the type of the poet, and has added a new problem to metaphysics. This is that which throws him into natural history, as a main production of the globe, and as announcing new eras and ameliorations. Things were mirrored in his poetry without loss or blur: he could paint the fine with precision, the great with compass; the tragic and comic indifferently, and without any distortion or favor. He carried his powerful execution into minute details, to a hair point; finishes an eyelash or a dimple as firmly as he draws a mountain; and yet these like nature's, will bear the scrutiny of the solar microscope.

In short, he is the chief example to prove that more or less of production, more or fewer pictures, is a thing indifferent. He had the power to make one picture. Daguerre learned how to let one flower etch its image on his plate of iodine; and then proceeds at leisure to etch a million. There are always objects; but there was never representation. Here is perfect representation, at last; and now let the world of figures sit for their portraits. No recipe can be given for the making of a Shakspeare; but the possibility of the translation of things into song is demonstrated.

His lyric power lies in the genius of the piece. The sonnets, though their excellence is lost in the splendor of the dramas, are as inimitable as they: and it is not a merit of lines, but a total merit of the piece; like the tone of voice of some incomparable person, so is this a speech of poetic beings, and any clause as unproducible now as a whole poem.

Though the speeches in the plays, and single lines, have a beauty which tempts the ear to pause on them for their euphuism, yet the sentence is so loaded with meaning, and so linked with its foregoers and followers, that the logician is satisfied. His means are as admirable as his ends; every subordinate invention, by which he helps himself to connect some irreconcilable opposites, is a poem too. He is not reduced to dismount and walk, because his horses are running off

with him in some distant direction: he always rides.

The finest poetry was first experience: but the thought has suffered a transformation since it was an experience. Cultivated men often attain a good degree of skill in writing verses; but it is easy to read, through their poems, their personal history; any one acquainted with parties can name every figure: this is Andrew, and that is Rachel. The sense thus remains prosaic. It is a caterpillar with wings, and not yet a butterfly. In the poet's mind, the fact has gone quite over into the new element of thought, and has lost all that is exuvial. This generosity abides with Shakspeare. We say, from the truth and closeness of his pictures, that he knows the lesson by heart. Yet there is not a trace of egotism.

One more royal trait properly belongs to the poet. I mean his cheerfulness, without which no man can be a poet, — for beauty is his aim. He loves virtue, not for its obligation, but for its grace: he delights in the world, in man, in woman, for the lovely light that sparkles from them. Beauty, the spirit of joy and hilarity, he sheds over the universe. Epicurus relates, that poetry hath such charms that a lover might forsake his mistress to partake of them. And the true bards have been noted for their firm and cheerful temper. Homer lies in sunshine; Chaucer is glad and erect; and Saadi says, "It was rumored abroad that I was penitent; but what had I to do with repentance?" Not less sovereign and cheerful, — much more sovereign and cheerful is the tone of Shakspeare. His name suggests joy and emancipation to the heart of men. If he should appear in any company of human souls, who would not march in his troop? He touches nothing that does not borrow health and longevity from his festive style.

And now, how stands the account of man with this bard and benefactor, when in solitude, shutting our ears to the reverberations of his fame, we seek to strike the balance? Solitude has austere lessons; it can teach us to spare both heroes and poets; and it weighs Shakspeare also, and finds him to share the halfness and imperfections of humanity.

Shakspeare, Homer, Dante, Chaucer, saw the splendor of meaning that plays over the visible world; knew that a tree had another use than for apples, and corn another than for meal, and the ball of the earth, than for tillage and roads: that these things bore a second and finer harvest to the mind, being emblems of its thoughts, and conveying in all their natural history a certain mute commentary on human life. Shakspeare employed them as colors to compose his picture. He rested in their beauty; and never took the step which seemed inevitable to such genius, namely, to explore the virtue which resides in these symbols, and imparts this power, — what is that which they themselves say? He converted the elements, which waited on his command, into entertainments. He was master of the revels to mankind. Is it not as if one should have, through majestic powers of

science, the comets given into his hand, or the planets and their moons, and should draw them from their orbits to glare with the municipal fireworks on a holiday night, and advertise in all towns, "very superior pyrotechny this evening!" Are the agents of nature, and the power to understand them, worth no more than a street serenade, or the breath of a cigar? One remembers again the trumpet-text in the Koran— "The heavens and the earth, and all that is between them, think ye we have created them in jest?" As long as the question is of talent and mental power, the world of men has not his equal to show. But when the question is to life, and its materials, and its auxiliaries, how does he profit me? What does it signify? It is but a Twelfth Night, or Midsummer-Night's Dream, or a Winter Evening's Tale: what signifies another picture more or less? The Egyptian verdict of the Shakspeare Societies comes to mind, that he was a jovial actor and manager. I cannot marry this fact to his verse. Other admirable men have led lives in some sort of keeping with their thought; but this man, in wide contrast. Had he been less, had he reached only the common measure of great authors, of Bacon, Milton, Tasso, Cervantes, we might leave the fact in the twilight of human fate: but, that this man of men, he who gave to the science of mind a new and larger subject than had ever existed, and planted the standard of humanity some furlongs forward into Chaos, — that he should not be wise for himself, — it must even go into the world's history, that the best poet led an obscure and profane life, using his genius for the public amusement.

Well, other men, priest and prophet, Israelite, German, and Swede, beheld the same objects: they also saw through them that which was contained. And to what purpose? The beauty straightway vanishes; they read commandments, all-excluding mountainous duty; an obligation, a sadness, as of piled mountains, fell on them, and life became ghastly, joyless, a pilgrim's progress, a probation, beleaguered round with doleful histories of Adam's fall and curse, behind us; with doomsdays and purgatorial and penal fires before us; and the heart of the seer and the heart of the listener sank in them. It must be conceded that these are half-views of half-men. The world still wants its poet-priest, a reconciler, who shall not trifle with Shakspeare the player, nor shall grope in graves with Swedenborg the mourner; but who shall see, speak, and act, with equal inspiration. For knowledge will brighten the sunshine; right is more beautiful than private affection; and love is compatible with universal wisdom.

NAPOLEON; OR, THE MAN OF THE WORLD.

Among the eminent persons of the nineteenth century, Bonaparte is far the best known, and the most powerful; and owes his predominance to the fidelity with which he expresses the tone of thought and belief, the aims of the masses of active and cultivated men. It is Swedenborg's theory, that every organ is made up of homogeneous particles; or, as it is sometimes expressed, every whole is made of similars; that is, the lungs are composed of infinitely small lungs; the liver, of infinitely small livers; the kidney, of little kidneys, *etc.* Following this analogy, if any man is found to carry with him the power and affections of vast numbers, if Napoleon is France, if Napoleon is Europe, it is because the people whom he sways are little Napoleons.

In our society, there is a standing antagonism between the conservative and the democratic classes; between those who have made their fortunes, and the young and the poor who have fortunes to make; between the interests of dead labor, — that is, the labor of hands long ago still in the grave, which labor is now entombed in money stocks, or in land and buildings owned by idle capitalists, — and the interests of living labor, which seeks to possess itself of land, and buildings, and money stocks. The first class is timid, selfish, illiberal, hating innovation, and continually losing numbers by death. The second class is selfish also, encroaching, bold, self-relying, always outnumbering the other, and recruiting its numbers every hour by births. It desires to keep open every avenue to the competition of all, and to multiply avenues; — the class of business men in America, in England, in France, and throughout Europe; the class of industry and skill. Napoleon is its representative. The instinct of active, brave, able men, throughout the middle class everywhere, has pointed out Napoleon as the incarnate Democrat. He had their virtues, and their vices; above all, he had their spirit or aim. That tendency is material, pointing at a sensual success, and employing the richest and most various means to that end; conversant with mechanical powers, highly intellectual, widely and accurately learned and skilful, but subordinating all intellectual and spiritual forces into means to a material success. To be the rich man is the end. "God has granted" says the Koran, "to every people a prophet in its own tongue." Paris, and London, and New York, the spirit of commerce, of money, and material power, were also to have their prophet; and Bonaparte was qualified and sent.

Every one of the million readers of anecdotes, or memoirs, or lives of Napoleon, delights in the page, because he studies in it his own history. Napoleon is thoroughly modern, and, at the highest point of his fortunes, has the

very spirit of the newspapers. He is no saint, — to use his own word, “no capuchin,” and he is no hero, in the high sense. The man in the street finds in him the qualities and powers of other men in the street. He finds him, like himself, by birth a citizen, who, by very intelligible merits, arrived at such a commanding position, that he could indulge all those tastes which the common man possesses, but is obliged to conceal and deny; good society, good books, fast traveling, dress, dinners, servants without number, personal weight, the execution of his ideas, the standing in the attitude of a benefactor to all persons about him, the refined enjoyments of pictures, statues, music, palaces, and conventional honors, — precisely what is agreeable to the heart of every man in the nineteenth century, — this powerful man possessed.

It is true that a man of Napoleon’s truth of adaptation to the mind of the masses around him becomes not merely representative, but actually a monopolizer and usurper of other minds. Thus Mirabeau plagiarized every good thought, every good word, that was spoken in France. Dumont relates that he sat in the gallery of the Convention, and heard Mirabeau make a speech. It struck Dumont that he could fit it with a peroration, which he wrote in pencil immediately, and showed to Lord Elgin, who sat by him. Lord Elgin approved it, and Dumont, in the evening, showed it to Mirabeau. Mirabeau read it, pronounced it admirable, and declared he would incorporate it into his harangue, to-morrow, to the Assembly. “It is impossible,” said Dumont, “as, unfortunately, I have shown it to Lord Elgin.” “If you have shown it to Lord Elgin, and to fifty persons beside, I shall still speak it to-morrow:” and he did speak it, with much effect, at the next day’s session. For Mirabeau, with his overpowering personality, felt that these things, which his presence inspired, were as much his own, as if he had said them, and that his adoption of them gave them their weight. Much more absolute and centralizing was the successor to Mirabeau’s popularity, and to much more than his predominance in France. Indeed, a man of Napoleon’s stamp almost ceases to have a private speech and opinion. He is so largely receptive, and is so placed, that he comes to be a bureau for all the intelligence, wit, and power, of the age and country. He gains the battle; he makes the code; he makes the system of weights and measures; he levels the Alps; he builds the road. All distinguished engineers, savants, statisticians, report to him; so likewise do all good heads in every kind; he adopts the best measures, sets his stamp on them, and not these alone, but on every happy and memorable expression. Every sentence spoken by Napoleon, and every line of his writing, deserves reading, as it is the sense of France.

Bonaparte was the idol of common men, because he had in transcendent degree the qualities and powers of common men. There is a certain satisfaction

in coming down to the lowest ground of politics, for we get rid of cant and hypocrisy. Bonaparte wrought, in common with that great class he represented, for power and wealth, — but Bonaparte, specially, without any scruple as to the means. All the sentiments which embarrass men's pursuit of these objects, he set aside. The sentiments were for women and children. Fontanes, in 1804, expressed Napoleon's own sense, when, in behalf of the Senate, he addressed him,— “Sire, the desire of perfection is the worst disease that ever afflicted the human mind.” The advocates of liberty, and of progress, are “ideologists;” — a word of contempt often in his mouth;— “Necker is an ideologist:” “Lafayette is an ideologist.”

An Italian proverb, too well known, declares that, “if you would succeed, you must not be too good.” It is an advantage, within certain limits, to have renounced the dominion of the sentiments of piety, gratitude, and generosity; since, what was an impassable bar to us, and still is to others, becomes a convenient weapon for our purposes; just as the river which was a formidable barrier, winter transforms into the smoothest of roads.

Napoleon renounced, once for all, sentiments and affections, and would help himself with his hands and his head. With him is no miracle, and no magic. He is a worker in brass, in iron, in wood, in earth, in roads, in buildings, in money, and in troops, and a very consistent and wise master-workman. He is never weak and literary, but acts with the solidity and the precision of natural agents. He has not lost his native sense and sympathy with things. Men give way before such a man as before natural events. To be sure, there are men enough who are immersed in things, as farmers, smiths, sailors, and mechanics generally; and we know how real and solid such men appear in the presence of scholars and grammarians; but these men ordinarily lack the power of arrangement, and are like hands without a head. But Bonaparte superadded to this mineral and animal force, insight and generalization, so that men saw in him combined the natural and the intellectual power, as if the sea and land had taken flesh and begun to cipher. Therefore the land and sea seem to presuppose him. He came unto his own, and they received him. This ciphering operative knows what he is working with, and what is the product. He knew the properties of gold and iron, of wheels and ships, of troops and diplomatists, and required that each should do after its kind.

The art of war was the game in which he exerted his arithmetic. It consisted, according to him, in having always more forces than the enemy, on the point where the enemy is attacked, or where he attacks: and his whole talent is strained by endless manoeuvre and evolution, to march always on the enemy at an angle, and destroy his forces in detail. It is obvious that a very small force, skilfully and rapidly manoeuvring, so as always to bring two men against one at the point of

engagement, will be an overmatch for a much larger body of men.

The times, his constitution, and his early circumstances, combined to develop this pattern democrat. He had the virtues of his class, and the conditions for their activity. That common sense, which no sooner respects any end, than it finds the means to effect it; the delight in the use of means; in the choice, simplification, and combining of means; the directness and thoroughness of his work; the prudence with which all was seen, and the energy with which all was done, make him the natural organ and head of what I may almost call, from its extent, the modern party.

Nature must have far the greatest share in every success, and so in his. Such a man was wanted, and such a man was born; a man of stone and iron, capable of sitting on horseback sixteen or seventeen hours, of going many days together without rest or food, except by snatches, and with the speed and spring of a tiger in action; a man not embarrassed by any scruples; compact, instant, selfish, prudent, and of a perception which did not suffer itself to be balked or misled by any pretences of others, or any superstition, or any heat or haste of his own. "My hand of iron," he said, "was not at the extremity of my arm; it was immediately connected with my head." He respected the power of nature and fortune, and ascribed to it his superiority, instead of valuing himself, like inferior men, on his opinionativeness and waging war with nature. His favorite rhetoric lay in allusion to his star: and he pleased himself, as well as the people, when he styled himself the "Child of Destiny." "They charge me," he said, "with the commission of great crimes: men of my stamp do not commit crimes. Nothing has been more simple than my elevation: 'tis in vain to ascribe it to intrigue or crime: it was owing to the peculiarity of the times, and to my reputation of having fought well against the enemies of my country. I have always marched with the opinion of great masses, and with events. Of what use, then, would crimes be to me?" Again he said, speaking of his son, "My son cannot replace me; I could not replace myself. I am the creature of circumstances." He had a directness of action never before combined with so much comprehension. He is a realist, terrific to all talkers, and confused truth-obscuring persons. He sees where the matter hinges, throws himself on the precise point of resistance, and slights all other considerations. He is strong in the right manner, namely, by insight. He never blundered into victory, but won his battles in his head, before he won them on the field. His principal means are in himself. He asks counsel of no other. In 1796, he writes to the Directory: "I have conducted the campaign without consulting any one. I should have done no good, if I had been under the necessity of conforming to the notions of another person. I have gained some advantages over superior forces, and when totally destitute of everything,

because, in the persuasion that your confidence was reposed in me, my actions were as prompt as my thoughts.”

History is full, down to this day, of the imbecility of kings and governors. They are a class of persons much to be pitied, for they know not what they should do. The weavers strike for bread; and the king and his ministers, not knowing what to do, meet them with bayonets. But Napoleon understood his business. Here was a man who, in each moment and emergency, knew what to do next. It is an immense comfort and refreshment to the spirits, not only of kings, but of citizens. Few men have any next; they live from hand to mouth, without plan, and are ever at the end of their line, and, after each action, wait for an impulse from abroad. Napoleon had been the first man of the world if his ends had been purely public. As he is, he inspires confidence and vigor by the extraordinary unity of his action. He is firm, sure, self-denying, self-postponing, sacrificing everything to his aim, — money, troops, generals, and his own safety also, to his aim; not misled, like common adventurers, by the splendor of his own means. “Incidents ought not to govern policy,” he said, “but policy, incidents.” “To be hurried away by every event, is to have no political system at all. His victories were only so many doors, and he never for a moment lost sight of his way onward, in the dazzle and uproar of the present circumstance. He knew what to do, and he flew to his mark. He would shorten a straight line to come at his object. Horrible anecdotes may, no doubt, be collected from his history, of the price at which he bought his successes; but he must not therefore be set down as cruel; but only as one who knew no impediment to his will; not bloodthirsty, not cruel, — but woe to what thing or person stood in his way! Not bloodthirsty, but not sparing of blood, — and pitiless. He saw only the object: the obstacle must give way. “Sire, General Clarke cannot combine with General Junot, for the dreadful fire of the Austrian battery.”— “Let him carry the battery.”— “Sire, every regiment that approaches the heavy artillery is sacrificed: Sire, what orders?”— “Forward, forward!” Seruzier, a colonel of artillery, gives, in his “Military Memoirs,” the following sketch of a scene after the battle of Austerlitz.— “At the moment in which the Russian army was making its retreat, painfully, but in good order, on the ice of the lake, the Emperor Napoleon came riding at full speed toward the artillery. ‘You are losing time,’ he cried; ‘fire upon those masses; they must be engulfed; fire upon the ice!’ The order remained unexecuted for ten minutes. In vain several officers and myself were placed on the slope of a hill to produce the effect; their balls and mine rolled upon the ice, without breaking it up. Seeing that, I tried a simple method of elevating light howitzers. The almost perpendicular fall of the heavy projectiles produced the desired effect. My method was immediately followed by the

adjoining batteries, and in less than no time we buried ‘some’ [Footnote: As I quote at second-hand, and cannot procure Seruzier, I dare not adopt the high figure I find.] thousands of Russians and Austrians under the waters of the lake.”

In the plenitude of his resources, every obstacle seemed to vanish. “There shall be no Alps,” he said; and he built his perfect roads, climbing by graded galleries their steepest precipices, until Italy was as open to Paris as any town in France. He laid his bones to, and wrought for his crown. Having decided what was to be done, he did that with might and main. He put out all his strength. He risked everything, and spared nothing, neither ammunition, nor money, nor troops, nor generals, nor himself.

We like to see everything do its office after its kind, whether it be a milch-cow or a rattlesnake; and, if fighting be the best mode of adjusting national differences (as large majorities of men seem to agree), certainly Bonaparte was right in making it thorough. “The grand principle of war,” he said, “was, that an army ought always to be ready, by day and by night, and at all hours, to make all the resistance it is capable of making.” He never economized his ammunition, but, on a hostile position, rained a torrent of iron, — shells, balls, grape-shot, — to annihilate all defense. On any point of resistance, he concentrated squadron on squadron in overwhelming numbers, until it was swept out of existence. To a regiment of horse-chasseurs at Lobenstein, two days before the battle of Jena, Napoleon said, “My lads, you must not fear death; when soldiers brave death, they drive him into the enemy’s ranks.” In the fury of assault, he no more spared himself. He went to the edge of his possibility. It is plain that in Italy he did what he could, and all that he could. He came, several times, within an inch of ruin; and his own person was all but lost. He was flung into the marsh at Arcola. The Austrians were between him and his troops, in the melee, and he was brought off with desperate efforts. At Lonato, and at other places, he was on the point of being taken prisoner. He fought sixty battles. He had never enough. Each victory was a new weapon. “My power would fall, were I not to support it by new achievements. Conquest has made me what I am, and conquest must maintain me.” He felt, with every wise man, that as much life is needed for conservation as for creation. We are always in peril, always in a bad plight, just on the edge of destruction, and only to be saved by invention and courage.

This vigor was guarded and tempered by the coldest prudence and punctuality. A thunderbolt in the attack, he was found invulnerable in his intrenchments. His very attack was never the inspiration of courage, but the result of calculation. His idea of the best defense consists in being still the attacking party. “My ambition,” he says, “was great, but was of a cold nature.” In one of his conversations with Las Casas, he remarked, “As to moral courage, I

have rarely met with the two-o'clock-in-the-morning kind; I mean unprepared courage, that which, is necessary on an unexpected occasion; and which, in spite of the most unforeseen events, leaves full freedom of judgment and decision;" and he did not hesitate to declare that he was himself eminently endowed with this "two-o'clock-in-the-morning courage, and that he had met with few persons equal to himself in this respect."

Everything depended on the nicety of his combinations, and the stars were not more punctual than his arithmetic. His personal attention descended to the smallest particulars. "At Montebello, I ordered Kellermann to attack with eight hundred horse, and with these he separated the six thousand Hungarian grenadiers, before the very eyes of the Austrian cavalry. This cavalry was half a league off, and required a quarter of an hour to arrive on the field of action; and I have observed, that it is always these quarters of an hour that decide the fate of a battle." "Before he fought a battle, Bonaparte thought little about what he should do in case of success, but a great deal about what he should do in case of a reverse of fortune. "The same prudence and good sense mark all his behavior. His instructions to his secretary at the Tuilleries are worth remembering. "During the night, enter my chamber as seldom as possible. Do not wake me when you have any good news to communicate; with that there is no hurry. But when you bring bad news, rouse me instantly, for then there is not a moment to be lost." It was a whimsical economy of the same kind which dictated his practice, when general in Italy, in regard to his burdensome correspondence. He directed Bourienne to leave all letters unopened for three weeks, and then observed with satisfaction how large a part of the correspondence had thus disposed of itself, and no longer required an answer. His achievement of business was immense, and enlarges the known powers of man. There have been many working kings, from Ulysses to William of Orange, but none who accomplished a tithe of this man's performance.

To these gifts of nature, Napoleon added the advantage of having been born to a private and humble fortune. In his latter days, he had the weakness of wishing to add to his crowns and badges the prescription of aristocracy; but he knew his debt to his austere education, and made no secret of his contempt for the born kings, and for "the hereditary asses," as he coarsely styled the Bourbons. He said that, "in their exile, they had learned nothing, and forgot nothing." Bonaparte had passed through all the degrees of military service, but also was citizen before he was emperor, and so had the key to citizenship. His remarks and estimates discover the information and justness of measurement of the middle class. Those who had to deal with him found that he was not to be imposed upon, but could cipher as well as another man. This appears in all parts

of his Memoirs, dictated at St. Helena. When the expenses of the empress, of his household, of his palaces, had accumulated great debts, Napoleon examined the bills of the creditors himself, detected overcharges and errors, and reduced the claims by considerable sums.

His grand weapon, namely, the millions whom he directed, he owed to the representative character which clothed him. He interests us as he stands for France and for Europe; and he exists as captain and king, only as far as the Revolution, or the interest of the industrious masses found an organ and a leader in him. In the social interests, he knew the meaning and value of labor, and threw himself naturally on that side. I like an incident mentioned by one of his biographers at St. Helena. "When walking with Mrs. Balcombe, some servants, carrying heavy boxes, passed by on the road, and Mrs. Balcombe desired them, in rather an angry tone, to keep back. Napoleon interfered, saying, 'Respect the burden, Madam.'" In the time of the empire, he directed attention to the improvement and embellishment of the market of the capital. "The market-place," he said, "is the Louvre of the common people." The principal works that have survived him are his magnificent roads. He filled the troops with his spirit, and a sort of freedom and companionship grew up between him and them, which the forms of his court never permitted between the officers and himself. They performed, under his eye, that which no others could do. The best document of his relation to his troops is the order of the day on the morning of the battle of Austerlitz, in which Napoleon promises the troops that he will keep his person out of reach of fire. This declaration, which is the reverse of that ordinarily made by generals and sovereigns on the eve of a battle, sufficiently explains the devotion of the army to their leader.

But though there is in particulars this identity between Napoleon and the mass of the people, his real strength lay in their conviction that he was their representative in his genius and aims, not only when he courted, but when he controlled, and even when he decimated them by his conscriptions. He knew, as well as any Jacobin in France, how to philosophize on liberty and equality; and, when allusion was made to the precious blood of centuries, which was spilled by the killing of the Duc d'Enghien, he suggested, "Neither is my blood ditch-water" The people felt that no longer the throne was occupied, and the land sucked of its nourishment, by a small class of legitimates, secluded from all community with the children of the soil, and holding the ideas and superstitions of a long-forgotten state of society. Instead of that vampire, a man of themselves held, in the Tuilleries, knowledge and ideas like their own, opening, of course, to them and their children, all places of power and trust. The day of sleepy, selfish policy, ever narrowing the means and opportunities of young men, was ended,

and a day of expansion and demand was come. A market for all the powers and productions of man was opened: brilliant prizes glittered in the eyes of youth and talent. The old, iron-bound, feudal France was changed into a young Ohio or New York; and those who smarted under the immediate rigors of the new monarch, pardoned them as the necessary severities of the military system which had driven out the oppressor. And even when the majority of the people had begun to ask, whether they had really gained anything under the exhausting levies of men and money of the new master, — the whole talent of the country, in every rank and kindred, took his part, and defended him as its natural patron. In 1814, when advised to rely on the higher classes, Napoleon said to those around him, “Gentlemen, in the situation in which I stand, my only nobility is the rabble of the Faubourgs.”

Napoleon met this natural expectation. The necessity of his position required a hospitality to every sort of talent, and its appointment to trusts; and his feelings went along with this policy. Like every superior person, he undoubtedly felt a desire for men and compeers, and a wish to measure his power with other masters, and an impatience of fools and underlings. In Italy, he sought for men, and found none. “Good God!” he said, “how rare men are! There are eighteen millions in Italy, and I have with difficulty found two, — Dandolo and Melzi.” In later years, with larger experience, his respect for mankind was not increased. In a moment of bitterness, he said to one of his oldest friends, “Men deserve the contempt with which they inspire me. I have only to put some gold lace on the coat of my virtuous republicans, and they immediately become just what I wish them.” This impatience at levity was, however, an oblique tribute of respect to those able persons who commanded his regard, not only when he found them friends and coadjutors, but also when they resisted his will. He could not confound Fox and Pitt, Carnot, Lafayette, and Bernadotte, with the danglers of his court; and, in spite of the detraction which his systematic egotism dictated toward the great captains who conquered with and for him, ample acknowledgements are made by him to Lannes Duroc, Kleber, Dessaix, Massena, Murat, Ney, and Augereau. If he felt himself their patron, and founder of their fortunes, as when he said, “I made my generals out of mud,” he could not hide his satisfaction in receiving from them a seconding and support commensurate with the grandeur of his enterprise. In the Russian campaign, he was so much impressed by the courage and resources of Marshal Ney, that he said, “I have two hundred millions in my coffers, and I would give them all for Ney.” The characters which he has drawn of several of his marshals are discriminating, and, though they did not content the insatiable vanity of French officers, are, no doubt, substantially just. And, in fact, every species of merit was

sought and advanced under his government. "I know," he said, "the depth and draught of water of every one of my generals." Natural power was sure to be well received at his court. Seventeen men, in his time, were raised from common soldiers to the rank of king, marshal, duke, or general; and the crosses of his Legion of Honor were given to personal valor, and not to family connection. "When soldiers have been baptized in the fire of a battle-field, they have all one rank in my eyes."

When a natural king becomes a titular king, everybody is pleased and satisfied. The Revolution entitled the strong populace of the Faubourg St. Antoine, and every horse-boy and powder-monkey in the army, to look on Napoleon as flesh of his flesh, and the creature of his party: but there is something in the success of grand talent which enlists an universal sympathy. For, in the prevalence of sense and spirit over stupidity and malversation, all reasonable men have an interest; and, as intellectual beings, we feel the air purified by the electric shock, when material force is overthrown by intellectual energies. As soon as we are removed out of the reach of local and accidental partialities, man feels that Napoleon fights for him; these are honest victories; this strong steam-engine does our work. Whatever appeals to the imagination, by transcending the ordinary limits of human ability, wonderfully encourages and liberates us. This capacious head, revolving and disposing sovereignly trains of affairs, and animating such multitudes of agents; this eye, which looked through Europe; this prompt invention; this inexhaustible resource; — what events! what romantic pictures! what strange situations! — when spying the Alps, by a sunset in the Sicilian sea; drawing up his army for battle, in sight of the Pyramids, and saying to his troops, "From the tops of those pyramids, forty centuries look down on you;" fording the Red Sea; wading in the gulf of the Isthmus of Suez. On the shore of Ptolemais, gigantic projects agitated him. "Had Acre fallen, I should have changed the face of the world." His army, on the night of the battle of Austerlitz, which was the anniversary of his inauguration as Emperor, presented him with a bouquet of forty standards taken in the fight. Perhaps it is a little puerile, the pleasure he took in making these contrasts glaring; as when he pleased himself with making kings wait in his antechambers, at Tilsit, at Paris, and at Erfurt.

We cannot, in the universal imbecility, indecision, and indolence of men, sufficiently congratulate ourselves on this strong and ready actor, who took occasion by the beard, and showed us how much may be accomplished by the mere force of such virtues as all men possess in less degrees; namely, by punctuality, by personal attention, by courage, and thoroughness. "The Austrians," he said, "do not know the value of time." I should cite him, in his

earlier years, as a model of prudence. His power does not consist in any wild or extravagant force; in any enthusiasm, like Mahomet's; or singular power of persuasion; but in the exercise of common sense on each emergency, instead of abiding by rules and customs. The lesson he teaches is that which vigor always teaches, — that there is always room for it. To what heaps of cowardly doubts is not that man's life an answer. When he appeared, it was the belief of all military men that there could be nothing new in war; as it is the belief of men to-day, that nothing new can be undertaken in politics, or in church, or in letters, or in trade, or in farming, or in our social manners and customs; and as it is, at all times, the belief of society that the world is used up. But Bonaparte knew better than society; and, moreover, knew that he knew better. I think all men know better than they do; know that the institutions we so volubly commend are go-carts and baubles; but they dare not trust their presentiments. Bonaparte relied on his own sense, and did not care a bean for other people's. The world treated his novelties just as it treats everybody's novelties, — made infinite objection: mustered all the impediments; but he snapped his finger at their objections. "What creates great difficulty," he remarks, "in the profession of the land commander, is the necessity of feeding so many men and animals. If he allows himself to be guided by the commissaries, he will never stir, and all his expeditions will fail." An example of his common sense is what he says of the passage of the Alps in winter, which all writers, one repeating after the other, had described as impracticable. "The winter," says Napoleon, "is not the most unfavorable season for the passage of lofty mountains. The snow is then firm, the weather settled, and there is nothing to fear from avalanches, the real and only danger to be apprehended in the Alps. On those high mountains, there are often very fine days in December, of a dry cold, with extreme calmness in the air." Read his account, too, of the way in which battles are gained. "In all battles, a moment occurs, when the bravest troops, after having made the greatest efforts, feel inclined to run. That terror proceeds from a want of confidence in their own courage; and it only requires a slight opportunity, a pretense, to restore confidence to them. The art is to give rise to the opportunity, and to invent the pretense. At Arcola, I won the battle with twenty-five horsemen. I seized that moment of lassitude, gave every man a trumpet, and gained the day with this handful. You see that two armies are two bodies which meet, and endeavor to frighten each other: a moment of panic occurs, and that moment must be turned to advantage. When a man has been present in many actions, he distinguishes that moment without difficulty; it is as easy as casting up an addition."

This deputy of the nineteenth century added to his gifts a capacity for speculation on general topics. He delighted in running through the range of

practical, of literary, and of abstract questions. His opinion is always original, and to the purpose. On the voyage to Egypt, he liked, after dinner, to fix on three or four persons to support a proposition, and as many to oppose it. He gave a subject, and the discussions turned on questions of religion, the different kinds of government, and the art of war. One day, he asked, whether the planets were inhabited? On another, what was the age of the world? Then he proposed to consider the probability of the destruction of the globe, either by water or by fire; at another time, the truth or fallacy of presentiments, and the interpretation of dreams. He was very fond of talking of religion. In 1806, he conversed with Fournier, bishop of Montpelier, on matters of theology. There were two points on which they could not agree, viz., that of hell, and that of salvation out of the pale of the church. The Emperor told Josephine, that he disputed like a devil on these two points, on which the bishop was inexorable. To the philosophers he readily yielded all that was proved against religion as the work of men and time; but he would not hear of materialism. One fine night, on deck, amid a clatter of materialism, Bonaparte pointed to the stars, and said, "You may talk as long as you please, gentlemen, but who made all that?" He delighted in the conversation of men of science, particularly of Monge and Berthollet; but the men of letters he slighted; "they were manufacturers of phrases." Of medicine, too, he was fond of talking, and with those of its practitioners whom he most esteemed, -with Corvisart at Paris, and with Antonomarchi at St. Helena. "Believe me," he said to the last, "we had better leave off all these remedies: life is a fortress which neither you nor I know anything about. Why throw obstacles in the way of its defense? Its own means are superior to all the apparatus of your laboratories. Corvisart candidly agreed with me, that all your filthy mixtures are good for nothing. Medicine is a collection of uncertain prescriptions, the results of which, taken collectively, are more fatal than useful to mankind. Water, air, and cleanliness, are the chief articles in my pharmacopeia."

His memoirs, dictated to Count Montholon and General Gourgaud, at St. Helena, have great value, after all the deduction that, it seems, is to be made from them, on account of his known disingenuousness. He has the goodnature of strength and conscious superiority. I admire his simple, clear narrative of his battles; — good as Caesar's; his goodnatured and sufficiently respectful account of Marshal Wurmser and his other antagonists, and his own equality as a writer to his varying subject. The most agreeable portion is the Campaign in Egypt.

He had hours of thought and wisdom. In intervals of leisure, either in the camp or the palace, Napoleon appears as a man of genius, directing on abstract questions the native appetite for truth, and the impatience of words, he was wont to show in war. He could enjoy every play of invention, a romance, a *bon mot*, as

well as a stratagem in a campaign. He delighted to fascinate Josephine and her ladies, in a dim-lighted apartment, by the terrors of a fiction, to which his voice and dramatic power lent every addition.

I call Napoleon the agent or attorney of the middle class of modern society; of the throng who fill the markets, shops, counting-houses, manufactories, ships, of the modern world, aiming to be rich. He was the agitator, the destroyer of prescription, the internal improver, the liberal, the radical, the inventor of means, the opener of doors and markets, the subverter of monopoly and abuse. Of course, the rich and aristocratic did not like him. England, the center of capital, and Rome and Austria, centers of tradition and genealogy, opposed him. The consternation of the dull and conservative classes, the terror of the foolish old men and old women of the Roman conclave, — who in their despair took hold of anything, and would cling to red-hot iron, — the vain attempts of statistes to amuse and deceive him, of the emperor of Austria to bribe him; and the instinct of the young, ardent, and active men, everywhere, which pointed him out as the giant of the middle class, make his history bright and commanding. He had the virtues of the masses of his constituents; he had also their vices. I am sorry that the brilliant picture has its reverse. But that is the fatal quality which we discover in our pursuit of wealth, that it is treacherous, and is bought by the breaking or weakening of the sentiments; and it is inevitable that we should find the same fact in the history of this champion, who proposed to himself simply a brilliant career, without any stipulation or scruple concerning the means.

Bonaparte was singularly destitute of generous sentiments. The highest-placed individual in the most cultivated age and population of the world, — he has not the merit of common truth and honesty. He is unjust to his generals; egotistic, and monopolizing; meanly stealing the credit of their great actions from Kellermann, from Bernadotte; intriguing to involve his faithful Junot in hopeless bankruptcy, in order to drive him to a distance from Paris, because the familiarity of his manners offends the new pride of his throne. He is a boundless liar. The official paper, his “*Moniteurs*,” and all his bulletins, are proverbs for saying what he wished to be believed; and worse, — he sat, in his premature old age, in his lonely island, coldly falsifying facts, and dates, and characters, and giving to history, a theatrical eclat. Like all Frenchmen, he has a passion for stage effect. Every action that breathes of generosity is poisoned by this calculation. His star, his love of glory, his doctrine of the immortality of the soul, are all French. “I must dazzle and astonish. If I were to give the liberty of the press, my power could not last three days.” To make a great noise is his favorite design. “A great reputation is a great noise; the more there is made, the farther off it is heard. Laws, institutions, monuments, nations, all fall; but the noise

continues, and resounds in after ages.” His doctrine of immortality is simply fame. His theory of influence is not flattering. “There are two levers for moving men, — interest and fear. Love is a silly infatuation, depend upon it. Friendship is but a name. I love nobody. I do not even love my brothers; perhaps Joseph, a little, from habit, and because he is my elder; and Duroc, I love him too; but why? — because his character pleases me; he is stern and resolute, and, I believe, the fellow never shed a tear. For my part, I know very well that I have no true friends. As long as I continue to be what I am, I may have as many pretended friends as I please. Leave sensibility to women; but men should be firm in heart and purpose, or they should have nothing to do with war and government.” He was thoroughly unscrupulous. He would steal, slander, assassinate, drown, and poison, as his interest dictated. He had no generosity; but mere vulgar hatred; he was intensely selfish; he was perfidious; he cheated at cards; he was a prodigious gossip; and opened letters; and delighted in his infamous police; and rubbed his hands with joy when he had intercepted some morsel of intelligence concerning the men and women about him, boasting that “he knew everything;” and interfered with the cutting the dresses of the women; and listened after the hurrahs and the compliments of the street, incognito. His manners were coarse. He treated women with low familiarity. He had the habit of pulling their ears and pinching their cheeks, when he was in good humor, and of pulling the ears and whiskers of men, and of striking and horse-play with them, to his last days. It does not appear that he listened at keyholes, or, at least, that he “was caught at it”. In short, when you have penetrated through all the circles of power and splendor, you were not dealing with a gentleman, at last; but with an impostor and a rogue; and he fully deserves the epithet of Jupiter Scapin, or a sort of Scamp Jupiter.

In describing the two parties into which modern society divides itself, — the democrat and the conservative, — I said, Bonaparte represents the democrat, or the party of men of business, against the stationary or conservative party. I omitted then to say, what is material to the statement, namely, that these two parties differ only as young and old. The democrat is a young conservative; the conservative is an old democrat. The aristocrat is the democrat ripe, and gone to seed, — because both parties stand on the one ground of the supreme value of property, which one endeavors to get, and the other to keep. Bonaparte may be said to represent the whole history of this party, its youth and its age; yes, and with poetic justice, its fate, in his own. The counter-revolution, the counter-party, still waits for its organ and representative, in a lover and a man of truly public and universal aims.

Here was an experiment, under the most favorable conditions, of the powers

of intellect without conscience. Never was such a leader so endowed, and so weaponed; never leader found such aids and followers. And what was the result of this vast talent and power, of these immense armies, burned cities, squandered treasures, immolated millions of men, of this demoralized Europe? It came to no result. All passed away, like the smoke of his artillery and left no trace. He left France smaller, poorer, feebler, than he found it; and the whole contest for freedom was to be begun again. The attempt was, in principle, suicidal. France served him with life, and limb, and estate, as long as it could identify its interest with him; but when men saw that after victory was another war; after the destruction of armies, new conscriptions; and they who had toiled so desperately were never nearer to the reward, — they could not spend what they had earned, nor repose on their down-beds, nor strut in their chateaux, — they deserted him. Men found that his absorbing egotism was deadly to all other men. It resembled the torpedo, which inflicts a succession of shocks on any one who takes hold of it, producing spasms which contract the muscles of the hand, so that the man cannot open his fingers; and the animal inflicts new and more violent shocks, until he paralyzes and kills his victim. So, this exorbitant egotist narrowed, impoverished, and absorbed the power and existence of those who served him; and the universal cry of France, and of Europe, in 1814, was, “enough of him;” “assez de Bonaparte.”

It was not Bonaparte’s fault. He did all that in him lay, to live and thrive without moral principle. It was the nature of things, the eternal law of man and of the world, which balked and ruined him; and the result, in a million experiments, will be the same. Every experiment, by multitudes or by individuals, that has a sensual and selfish aim, will fail. The pacific Fourier will be as inefficient as the pernicious Napoleon. As long as our civilization is essentially one of property, of fences, of exclusiveness, it will be mocked by delusions. Our riches will leave us sick; there will be bitterness in our laughter; and our wine will burn our mouth. Only that good profits, which we can taste with all doors open, and which serves all men.

GOETHE; OR, THE WRITER

I find a provision in the constitution of the world for the writer or secretary, who is to report the doings of the miraculous spirit of life that everywhere throbs and works. His office is a reception of the facts into the mind, and then a selection of the eminent and characteristic experiences.

Nature will be reported. All things are engaged in writing their history. The planet, the pebble, goes attended by its shadow. The rolling rock leaves its scratches on the mountain; the river, its channel in the soil; the animal, its bones in the stratum; the fern and leaf their modest epitaph in the coal. The falling drop makes its sculpture in the sand or the stone. Not a foot steps into the snow, or along the ground, but prints in characters more or less lasting, a map of its march. Every act of the man inscribes itself in the memories of his fellows, and in his own manners and face. The air is full of sounds; the sky, of tokens; the ground is all memoranda and signatures; and every object covered over with hints, which speak to the intelligent.

In nature, this self-registration is incessant, and the narrative is the print of the seal. It neither exceeds nor comes short of the fact. But nature strives upward; and, in man, the report is something more than print of the seal. It is a new and finer form of the original. The record is alive, as that which it recorded is alive. In man, the memory is a kind of looking-glass, which, having received the images of surrounding objects, is touched with life, and disposes them in a new order. The facts which transpired do not lie in it inert; but some subside, and others shine; so that soon we have a new picture, composed of the eminent experiences. The man cooperates. He loves to communicate; and that which is for him to say lies as a load on his heart until it is delivered. But, besides the universal joy of conversation, some men are born with exalted powers for this second creation. Men are born to write. The gardener saves every slip, and seed, and peach-stone; his vocation is to be a planter of plants. Not less does the writer attend his affairs. Whatever he beholds or experiences, comes to him as a model, and sits for its picture. He counts it all nonsense that they say, that some things are undescribable. He believes that all that can be thought can be written, first or last; and he would report the Holy Ghost, or attempt it. Nothing so broad, so subtle, or so dear, but comes therefore commended to his pen, — and he will write. In his eyes, a man is the faculty of reporting, and the universe is the possibility of being reported. In conversation, in calamity, he finds new materials; as our German poet said, “some god gave me the power to paint what I suffer.” He draws his rents from rage and pain. By acting rashly, he buys the

power of talking wisely. Vexations, and a tempest of passion, only fill his sails; as the good Luther writes, "When I am angry I can pray well, and preach well;" and if we knew the genesis of fine-strokes of eloquence, they might recall the complaisance of Sultan Amurath, who struck off some Persian heads, that his physician, Vesalius, might see the spasms in the muscles of the neck. His failures are the preparation of his victories. A new thought, or a crisis of passion, apprises him that all that he has yet learned and written is exoteric — is not the fact, but some rumor of the fact. What then? Does he throw away the pen? No; he begins again to describe in the new light which has shined on him, — if, by some means, he may yet save some true word. Nature conspires. Whatever can be thought can be spoken, and still rises for utterance, though to rude and stammering organs. If they cannot compass it, it waits and works, until, at last, it moulds them to its perfect will, and is articulated.

This striving after imitative expression, which one meets everywhere, is significant of the aim of nature, but is mere stenography. There are higher degrees, and nature has more splendid endowments for those whom she elects to a superior office; for the class of scholars or writers, who see connection where the multitude see fragments, and who are impelled to exhibit the facts in order, and so to supply the axis on which the frame of things turns. Nature has dearly at heart the formation of the speculative man, or scholar. It is an end never lost sight of, and is prepared in the original casting of things. He is no permissive or accidental appearance, but an organic agent, one of the estates of the realm, provided and prepared from of old and from everlasting, in the knitting and contexture of things. Presentiments, impulses, cheer him. There is a certain heat in the breast, which attends the perception of a primary truth, which is the shining of the spiritual sun down into the shaft of the mine. Every thought which dawns on the mind, in the moment of its emergency announces its own rank, — whether it is some whimsy, or whether it is a power.

If he have his incitements, there is, on the other side, invitation and need enough of his gift. Society has, at all times, the same want, namely, of one sane man with adequate powers of expression to held up each object of monomania in its right relation. The ambitious and mercenary bring their last new mumbo-jumbo, whether tariff, Texas, railroad, Romanism, mesmerism, or California; and, by detaching the object from its relations, easily succeed in making it seen in a glare; and a multitude go mad about it, and they are not to be reprov'd or cured by the opposite multitude, who are kept from this particular insanity by an equal frenzy on another crochet. But let one man have the comprehensive eye that can replace this isolated prodigy in its right neighborhood and bearings, — the illusion vanishes, and the returning reason of the community thanks the

reason of the monitor.

The scholar is the man of the ages, but he must also wish, with other men, to stand well with his contemporaries. But there is a certain ridicule, among superficial people, thrown on the scholars or clerisy, which is of no import, unless the scholars heed it. In this country, the emphasis of conversation, and of public opinion, commends the practical man; and the solid portion of the community is named with significant respect in every circle. Our people are of Bonaparte's opinion concerning ideologists. Ideas are subversive of social order and comfort, and at last make a fool of the possessor. It is believed, the ordering a cargo of goods from New York to Smyrna; or, the running up and down to procure a company of subscribers to set a-going five or ten thousand spindles; or, the negotiations of a caucus, and the practising on the prejudices and facility of country-people, to secure their votes in November, — is practical and commendable.

If I were to compare action of a much higher strain with a life of contemplation, I should not venture to pronounce with much confidence in favor of the former. Mankind have such a deep stake in inward illumination, that there is much to be said by the hermit or monk in defense of his life of thought and prayer. A certain partiality, a headiness, and loss of balance, is the tax which all action must pay. Act, if you like, — but you do it at your peril. Men's actions are too strong for them. Show me a man who has acted, and who has not been the victim and slave of his action. What they have done commits and enforces them to do the same again. The first act, which was to be an experiment, becomes a sacrament. The fiery reformer embodies his aspiration in some rite or covenant, and he and his friends cleave to the form and lose the aspiration. The Quaker has established Quakerism, the Shaker has established his monastery and his dance; and, although each prates of spirit, there is no spirit, but repetition, which is anti-spiritual. But where are his new things of today? In actions of enthusiasm, this drawback appears: but in those lower activities, which have no higher aim than to make us more comfortable and more cowardly, in actions of cunning, actions that steal and lie, actions that divorce the speculative from the practical faculty, and put a ban on reason and sentiment, there is nothing else but drawback and negation. The Hindoos write in their sacred books, "Children only, and not the learned, speak of the speculative and the practical faculties as two. They are but one, for both obtain the selfsame end, and the place which is gained by the followers of the one is gained by the followers of the other. That man seeth, who seeth that the speculative and the practical doctrines are one." For great action must draw on the spiritual nature. The measure of action is the sentiment from which it proceeds. The greatest action may easily be one of the most private

circumstances.

This disparagement will not come from the leaders, but from inferior persons. The robust gentlemen who stand at the head of the practical class, share the ideas of the time, and have too much sympathy with the speculative class. It is not from men excellent in any kind, that disparagement of any other is to be looked for. With such, Talleyrand's question is ever the main one; not, is he rich? is he committed? is he well-meaning? has he this or that faculty? is he of the movement? is he of the establishment? — but, Is he anybody? does he stand for something? He must be good of his kind. That is all that Talleyrand, all that State-street, all that the common sense of mankind asks. Be real and admirable, not as we know, but as you know. Able men do not care in what kind a man is able, so only that he is able. A master likes a master, and does not stipulate whether it be orator, artist, craftsman, or king.

Society has really no graver interest than the well-being of the literary class. And it is not to be denied that men are cordial in their recognition and welcome of intellectual accomplishments. Still the writer does not stand with us on any commanding ground. I think this to be his own fault. A pound passes for a pound. There have been times when he was a sacred person; he wrote Bibles; the first hymns; the codes; the epics; tragic songs; Sibylline verses; Chaldean oracles; Laconian sentences inscribed on temple walls. Every word was true, and woke the nations to new life. He wrote without levity, and without choice. Every word was carved, before his eyes, into the earth and sky; and the sun and stars were only letters of the same purport; and of no more necessity. But how can he be honored, when he does not honor himself; when he loses himself in the crowd; when he is no longer the lawgiver, but the sycophant, ducking to the giddy opinion of a reckless public; when he must sustain with shameless advocacy some bad government, or must bark, all the year round, in opposition; or write conventional criticism, or profligate novels; or, at any rate, write without thought, and without recurrence, by day and night, to the sources of inspiration?

Some reply to these questions may be furnished by looking over the list of men of literary genius in our age. Among these, no more instructive name occurs than that of Goethe, to represent the power and duties of the scholar or writer.

I described Bonaparte as a representative of the popular external life and aims of the nineteenth century. Its other half, its poet, is Goethe, a man quite domesticated in the century, breathing its air, enjoying its fruits, impossible at any earlier time, and taking away, by his colossal parts, the reproach of weakness, which, but for him, would lie on the intellectual works of the period. He appears at a time when a general culture has spread itself, and has smoothed

down all sharp individual traits; when, in the absence of heroic characters, a social comfort and cooperation have come in. There is no poet, but scores of poetic writers; no Columbus, but hundreds of post-captains, with transit-telescope, barometer, and concentrated soup and pemmican; no Demosthenes, no Chatham, but any number of clever parliamentary and forensic debaters; no prophet or saint, but colleges of divinity; no learned man, but learned societies, a cheap press, reading-rooms, and book-clubs, without number. There was never such a miscellany of facts. The world extends itself like American trade. We conceive Greek or Roman life, — life in the middle ages — to be a simple and comprehensive affair; but modern life to respect a multitude of things, which is distracting.

Goethe was the philosopher of this multiplicity; hundred-handed, Argus-eyed, able and happy to cope with this rolling miscellany of facts and sciences, and, by his own versatility, to dispose of them with ease; a manly mind, unembarrassed by the variety of coats of convention with which life had got encrusted, easily able by his subtlety to pierce these, and to draw his strength from nature, with which he lived in full communion. What is strange, too, he lived in a small town, in a petty state, in a defeated state, and in a time when Germany played no such leading part in the world's affairs as to swell the bosom of her sons with any metropolitan pride, such as might have cheered a French, or English, or, once, a Roman or Attic genius. Yet there is no trace of provincial limitation in his muse. He is not a debtor to his position, but was born with a free and controlling genius.

The *Helena*, or the second part of *Faust*, is a philosophy of literature set in poetry; the work of one who found himself the master of histories, mythologies, philosophies, sciences, and national literatures, in the encyclopaedical manner in which modern erudition, with its international intercourse of the whole earth's population, researches into Indian, Etruscan, and all Cyclopaean arts, geology, chemistry, astronomy; and every one of these kingdoms assuming a certain aerial and poetic character, by reason of the multitude. One looks at a king with reverence; but if one should chance to be at a congress of kings, the eye would take liberties with the peculiarities of each. These are not wild miraculous songs, but elaborate forms, to which the poet has confided the results of eighty years of observation. This reflective and critical wisdom makes the poem more truly the flower of this time. It dates itself. Still he is a poet, — poet of a prouder laurel than any contemporary, and under this plague of microscopes (for he seems to see out of every pore of his skin), strikes the harp with a hero's strength and grace.

The wonder of the book is its superior intelligence. In the menstruum of this

man's wit, the past and the present ages, and their religions, politics, and modes of thinking, are dissolved into archetypes and ideas. What new mythologies sail through his head! The Greeks said, that Alexander went as far as Chaos; Goethe went, only the other day, as far; and one step farther he hazarded, and brought himself safe back. There is a heart-cheering freedom in his speculation. The immense horizon which journeys with us lends its majesties to trifles, and to matters of convenience and necessity, as to solemn and festal performances. He was the soul of his century. If that was learned, and had become, by population, compact organization, and drill of parts, one great Exploring Expedition, accumulating a glut of facts and fruits too fast for any hitherto-existing savants to classify, this man's mind had ample chambers for the distribution of all. He had a power to unite the detached atoms again by their own law. He has clothed our modern existence with poetry. Amid littleness and detail, he detected the Genius of life, the old cunning Proteus, nestling close beside us, and showed that the dullness and prose we ascribe to the age was only another of his masks:—"His very flight is presence in disguise:" that he had put off a gay uniform for a fatigue dress, and was not a whit less vivacious or rich in Liverpool or the Hague, than once in Rome or Antioch. He sought him in public squares and main streets, in boulevards and hotels; and, in the solidest kingdom of routine and the senses, he showed the lurking daemonic power; that, in actions of routine, a thread of mythology and fable spins itself; and this, by tracing the pedigree of every usage and practice, every institution, utensil, and means, home to its origin in the structure of man. He had an extreme impatience of conjecture, and of rhetoric. "I have guesses enough of my own; if a man write a book, let him set down only what he knows." He writes in the plainest and lowest tone, omitting a great deal more than he writes, and putting ever a thing for a word. He has explained the distinction between the antique and the modern spirit and art. He has defined art, its scope and laws. He has said the best things about nature that ever were said. He treats nature as the old philosophers, as the seven wise masters did, — and, with whatever loss of French tabulation and dissection, poetry and humanity remain to us; and they have some doctorial skill. Eyes are better, on the whole, than telescopes or microscopes. He has contributed a key to many parts of nature, through the rare turn for unity and simplicity in his mind. Thus Goethe suggested the leading idea of modern botany, that a leaf, or the eye of a leaf, is the unit of botany, and that every part of the plant is only a transformed leaf to meet a new condition; and, by varying the conditions, a leaf may be converted into any other organ, and any other organ into a leaf. In like manner, in osteology, he assumed that one vertebra of the spine might be considered the unit of the skeleton; the head was only the uppermost vertebra

transformed. “The plant goes from knot to knot, closing, at last, with the flower and the seed. So the tape-worm, the caterpillar, goes from knot to knot, and closes with the head. Men and the higher animals are built up through the vertebrae, the powers being concentrated in the head.” In optics, again, he rejected the artificial theory of seven colors, and considered that every color was the mixture of light and darkness in new proportions. It is really of very little consequence what topic he writes upon. He sees at every pore, and has a certain gravitation toward truth. He will realize what you say. He hates to be trifled with, and to be made to say over again some old wife’s fable, that has had possession of men’s faith these thousand years. He may as well see if it is true as another. He sifts it. I am here, he would say, to be the measure and judge of these things. Why should I take them on trust? And, therefore, what he says of religion, of passion, of marriage, of manners, property, of paper money, of periods or beliefs, of omens, of luck, or whatever else, refuses to be forgotten.

Take the most remarkable example that could occur of this tendency to verify every term in popular use. The Devil had played an important part in mythology in all times. Goethe would have no word that does not cover a thing. The same measure will still serve: “I have never heard of any crime which I might not have committed.” So he flies at the throat of this imp. He shall be real; he shall be modern; he shall be European; he shall dress like a gentleman, and accept the manner, and walk in the streets, and be well initiated in the life of Vienna, and of Heidelberg, in 1820, — or he shall not exist. Accordingly, he stripped him of mythologic gear, of horns, cloven foot, harpoon tail, brimstone, and blue-fire, and, instead of looking in books and pictures, looked for him in his own mind, in every shade of coldness, selfishness, and unbelief that, in crowds, or in solitude, darkens over the human thought, — and found that the portrait gained reality and terror by everything he added, and by everything he took away. He found that the essence of this hobgoblin, which had hovered in shadow about the habitations of men, ever since they were men, was pure intellect, applied, — as always there is a tendency, — to the service of the senses: and he flung into literature, in his Mephistopheles, the first organic figure that has been added for some ages, and which will remain as long as the Prometheus. I have no design to enter into any analysis of his numerous works. They consist of translations, criticisms, dramas, lyric and every other description of poems, literary journals, and portraits of distinguished men. Yet I cannot omit to specify the Wilhelm Meister.

Wilhelm Meister is a novel in every sense, the first of its kind, called by its admirers the only delineation of modern society, — as if other novels, those of Scott, for example, dealt with costume and condition, this with the spirit of life.

It is a book over which some veil is still drawn. It is read by very intelligent persons with wonder and delight. It is preferred by some such to Hamlet, as a work of genius. I suppose no book of this century can compare with it in its delicious sweetness, so new, so provoking to the mind, gratifying it with so many and so solid thoughts, just insights into life, and manners, and characters; so many good hints for the conduct of life, so many unexpected glimpses into a higher sphere, and never a trace of rhetoric or dullness. A very provoking book to the curiosity of young men of genius, but a very unsatisfactory one. Lovers of light reading, those who look in it for the entertainment they find in a romance, are disappointed. On the other hand, those who begin it with the higher hope to read in it a worthy history of genius, and the just award of the laurels to its toils and denials, have also reason to complain. We had an English romance here, not long ago, professing to embody the hope of a new age, and to unfold the political hope of the party called "Young England," in which the only reward of virtue is a seat in parliament, and a peerage. Goethe's romance has a conclusion as lame and immoral. George Sand, in *Consuelo* and its continuation, has sketched a truer and more dignified picture. In the progress of the story, the characters of the hero and heroine expand at a rate that shivers the porcelain chess-table of aristocratic convention: they quit the society and habits of their rank; they lose their wealth; they become the servants of great ideas, and of the most generous social ends; until, at last, the hero, who is the center and fountain of an association for the rendering of the noblest benefits to the human race, no longer answers to his own titled name: it sounds foreign and remote in his ear.

"I am only man," he says; "I breathe and work for man," and this in poverty and extreme sacrifices. Goethe's hero, on the contrary, has so many weaknesses and impurities, and keeps such bad company, that the sober English public, when the book was translated, were disgusted. And yet it is so crammed with wisdom, with knowledge of the world, and with knowledge of laws; the persons so truly and subtly drawn, and with such few strokes, and not a word too much, the book remains ever so new and unexhausted, that we must even let it go its way, and be willing to get what good from it we can, assured that it has only begun its office, and has millions of readers yet to serve.

The argument is the passage of a democrat to the aristocracy, using both words in their best sense. And this passage is not made in any mean or creeping way, but through the hall door. Nature and character assist, and the rank is made real by sense and probity in the nobles. No generous youth can escape this charm of reality in the book, so that it is highly stimulating to intellect and courage. The ardent and holy Novalis characterized the book as "thoroughly modern and prosaic; the romantic is completely leveled in it; so is the poetry of nature; the

wonderful. The book treats only of the ordinary affairs of men: it is a poeticized civic and domestic story. The wonderful in it is expressly treated as fiction and enthusiastic dreaming:” — and yet, what is also characteristic, Novalis soon returned to this book, and it remained his favorite reading to the end of his life.

What distinguishes Goethe for French and English readers, is a property which he shares with his nation, — a habitual reference to interior truth. In England and in America there is a respect for talent; and, if it is exerted in support of any ascertained or intelligible interest or party, or in regular opposition to any, the public is satisfied. In France, there is even a greater delight in intellectual brilliancy, for its own sake. And, in all these countries, men of talent write from talent. It is enough if the understanding is occupied, the taste propitiated, — so many columns so many hours, filled in a lively and creditable way. The German intellect wants the French sprightliness, the fine practical understanding of the English, and the American adventure; but it has a certain probity, which never rests in a superficial performance, but asks steadily, To what end? A German public asks for a controlling sincerity. Here is activity of thought; but what is it for? What does the man mean? Whence, whence, all these thoughts?

Talent alone cannot make a writer. There must be a man behind the book; a personality which, by birth and quality, is pledged to the doctrines there set forth, and which exists to see and state things so, and not otherwise; holding things because they are things. If he cannot rightly express himself to-day, the same things subsist, and will open themselves to-morrow. There lies the burden on his mind — the burden of truth to be declared, — more or less understood; and it constitutes his business and calling in the world, to see those facts through, and to make them known. What signifies that he trips and stammers; that his voice is harsh or hissing; that this method or his tropes are inadequate? That message will find method and imagery, articulation and melody. Though he were dumb, it would speak. If not, — if there be no such God’s word in the man, — what care we how adroit, how fluent, how brilliant he is?

It makes a great difference to the force of any sentence, whether there be a man behind it, or no. In the learned journal, in the influential newspaper, I discern no form; only some irresponsible shadow; oftener some monied corporation, or some dangler, who hopes, in the mask and robes of his paragraph, to pass for somebody. But, through every clause and part of speech of a right book, I meet the eyes of the most determined of men: his force and terror inundate every word: the commas and dashes are alive; so that the writing is athletic and nimble, — can go far and live long.

In England and America, one may be an adept in the writing of a Greek or

Latin poet, without any poetic taste or fire. That a man has spent years on Plato and Proclus, does not afford a presumption that he holds heroic opinions, or undervalues the fashions of his town. But the German nation have the most ridiculous good faith on these subjects: the student, out of the lecture-room, still broods on the lessons; and the professor cannot divest himself of the fancy, that the truths of philosophy have some application to Berlin and Munich. This earnestness enables them to out-see men of much more talent. Hence, almost all the valuable distinctions which are current in higher conversation, have been derived to us from Germany. But, whilst men distinguished for wit and learning, in England and France, adopt their study and their side with a certain levity, and are not understood to be very deeply engaged, from grounds of character, to the topic or the part they espouse, — Goethe, the head and body of the German nation, does not speak from talent, but the truth shines through: he is very wise, though his talent often veils his wisdom. However excellent his sentence is, he has somewhat better in view. It awakens my curiosity. He has the formidable independence which converse with truth gives: hear you, or forbear, his fact abides; and your interest in the writer is not confined to his story, and he dismissed from memory, when he has performed his task creditably, as a baker when he has left his loaf; but his work is the least part of him. The old Eternal Genius who built the world has confided himself more to this man than to any other. I dare not say that Goethe ascended to the highest grounds from which genius has spoken. He has not worshipped the highest unity; he is incapable of a self-surrender to the moral sentiment. There are nobler strains in poetry than any he has sounded. There are writers poorer in talent, whose tone is purer, and more touches the heart. Goethe can never be dear to men. His is not even the devotion to pure truth; but to truth for the sake of culture. He has no aims less large than the conquest of universal nature, of universal truth, to be his portion; a man not to be bribed, nor deceived, nor overawed; of a stoical self-command and self-denial, and having one test for all men, — What can you teach me? All possessions are valued by him for that only; rank, privileges, health, time, being itself.

He is the type of culture, the amateur of all arts, and sciences, and events; artistic, but not artist; spiritual, but not spiritualist. There is nothing he had not right to know; there is no weapon in the army of universal genius he did not take into his hand, but with peremptory heed that he should not be for a moment prejudiced by his instruments. He lays a ray of light under every fact, and between himself and his dearest property. From him nothing was hid, nothing withholden. The lurking daemons sat to him, and the saint who saw the daemons; and the metaphysical elements took form. “Piety itself is no aim, but

only a means whereby, through purest inward peace, we may attain to highest culture." And his penetration of every secret of the fine arts will make Goethe still more statuesque. His affections help him, like women employed by Cicero to worm out the secret of conspirators. Enmities he has none. Enemy of him you may be, — if so you shall teach him aught which your good-will cannot, — were it only what experience will accrue from your ruin. Enemy and welcome, but enemy on high terms. He cannot hate anybody; his time is worth too much. Temperamental antagonisms may be suffered, but like feuds of emperors, who fight dignifiedly across kingdoms.

His autobiography, under the title of "Poetry and Truth Out of My Life," is the expression of the idea, — now familiar to the world through the German mind, but a novelty to England, Old and New, when that book appeared, — that a man exists for culture; not for what he can accomplish, but for what can be accomplished in him. The reaction of things on the man is the only noteworthy result. An intellectual man can see himself as a third person; therefore his faults and delusions interest him equally with his successes. Though he wishes to prosper in affairs, he wishes more to know the history and destiny of man; whilst the clouds of egotists drifting about him are only interested in a low success. This idea reigns in the *Dichtung und Wahrheit*, and directs the selection of the incidents; and nowise the external importance of events, the rank of the personages, or the bulk of incomes. Of course, the book affords slender materials for what would be reckoned with us a "Life of Goethe;" — few dates; no correspondence; no details of offices or employments; no light on his marriage; and, a period of ten years, that should be the most active in his life, after his settlement at Weimar, is sunk in silence. Meantime, certain love-affairs, that came to nothing, as people say, have the strangest importance: he crowds us with detail: — certain whimsical opinions, cosmogonies, and religions of his own invention, and, especially his relations to remarkable minds, and to critical epochs of thought: — these he magnifies. His "Daily and Yearly Journal," his "Italian Travels," his "Campaign in France" and the historical part of his "Theory of Colors," have the same interest. In the last, he rapidly notices Kepler, Roger Bacon, Galileo, Newton, Voltaire, etc.; and the charm of this portion of the book consists in the simplest statement of the relation betwixt these grandees of European scientific history and himself; the mere drawing of the lines from Goethe to Kepler, from Goethe to Bacon, from Goethe to Newton. The drawing of the line is for the time and person, a solution of the formidable problem, and gives pleasure when Iphigenia and Faust do not, without any cost of invention comparable to that of Iphigenia and Faust. This law giver of art is not an artist. Was it that he knew too much, that his sight was microscopic, and interfered

with the just perspective, the seeing of the whole? He is fragmentary; a writer of occasional poems, and of an encyclopaedia of sentences. When he sits down to write a drama or a tale, he collects and sorts his observations from a hundred sides, and combines them into the body as fitly as he can. A great deal refuses to incorporate: this he adds loosely, as letters, of the parties, leaves from their journals, or the like. A great deal still is left that will not find any place. This the bookbinder alone can give any cohesion to: and, hence, notwithstanding the looseness of many of his works, we have volumes of detached paragraphs, aphorisms, *xenien*, *etc.*

I suppose the worldly tone of his tales grew out of the calculations of self-culture. It was the infirmity of an admirable scholar, who loved the world out of gratitude; who knew where libraries, galleries, architecture, laboratories, savants, and leisure, were to be had, and who did not quite trust the compensations of poverty and nakedness. Socrates loved Athens; Montaigne, Paris; and Madame de Stael said, she was only vulnerable on that side (namely, of Paris). It has its favorable aspect. All the geniuses are usually so ill-assorted and sickly, that one is ever wishing them somewhere else. We seldom see anybody who is not uneasy or afraid to live. There is a slight blush of shame on the cheek of good men and aspiring men, and a spice of caricature. But this man was entirely at home and happy in his century and the world. None was so fit to live, or more heartily enjoyed the game. In this aim of culture, which is the genius of his works, is their power. The idea of absolute, eternal truth, without reference to my own enlargement by it, is higher. The surrender to the torrent, of poetic inspiration is higher; but compared with any motives on which books are written in England and America, this is very truth, and has the power to inspire which belongs to truth. Thus has he brought back to a book some of its ancient might and dignity.

Goethe, coming into an over-civilized time and country, when original talent was oppressed under the load of books, and mechanical auxiliaries, and the distracting variety of claims, taught men how to dispose of this mountainous miscellany, and make it subservient. I join Napoleon with him, as being both representatives of the impatience and reaction of nature against the morgue of conventions, — two stern realists, who, with their scholars, have severally set the axe at the root of the tree of cant and seeming, for this time, and for all time. This cheerful laborer, with no external popularity or provocation, drawing his motive and his plan from his own breast, tasked himself with stints for a giant, and, without relaxation or rest, except by alternating his pursuits, worked on for eighty years with the steadiness of his first zeal.

It is the last lesson of modern science, that the highest simplicity of structure

is produced, not by few elements, but by the highest complexity. Man is the most composite of all creatures: the wheel-insect, *volvox globator*, is at the other extreme. We shall learn to draw rents and revenues from the immense patrimony of the old and recent ages. Goethe teaches courage, and the equivalence of all times: that the disadvantages of any epoch exist only to the faint-hearted. Genius hovers with his sunshine and music close by the darkest and deafest eras. No mortgage, no attainder, will hold on men or hours. The world is young; the former great men call to us affectionately. We too must write Bibles, to unite again the heavens and the earthly world. The secret of genius is to suffer no fiction to exist for us; to realize all that we know; in the high refinement of modern life, in arts, in sciences, in books, in men, to exact good faith, reality, and a purpose; and first, last, midst, and without end, to honor every truth by use.

THE END

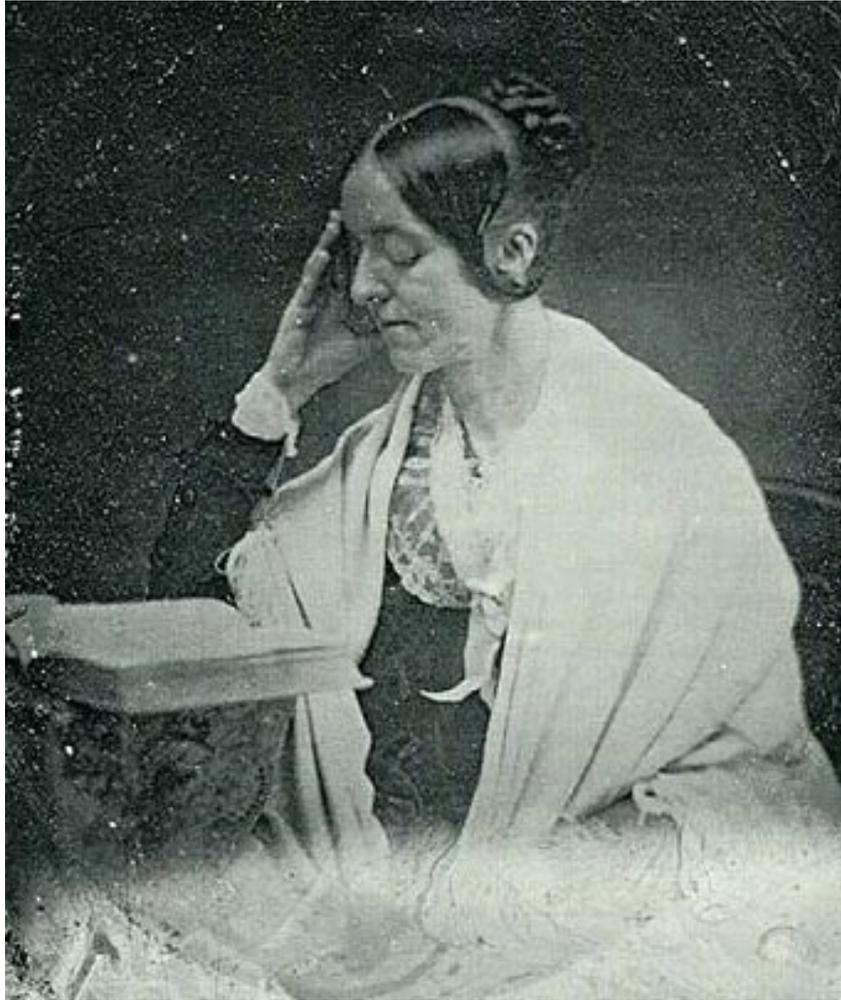

MEMOIRS OF MARGARET FULLER OSSOLI by R. F. Fuller

Edited by Ralph Waldo Emerson, W. H. Channing and James Freeman Clarke

On September 1, 1837, female members attended a meeting of the Transcendental Club for the first time and Emerson had invited Margaret Fuller for dinner at his home before the meeting to ensure she would be present for the evening get-together. Fuller would prove to be an important figure in Transcendentalism. However, her greatest achievements were working as an ardent campaigner for women's rights, as she became the first full-time American female book reviewer in journalism. Her landmark work *Woman in the Nineteenth Century* is considered the first major feminist book of the United States. Fuller was an advocate of women's education and the right to employment. She also encouraged many other reforms in society, including prison reform and the emancipation of slaves. Tragically, the author died, aged forty, in a shipwreck off Fire Island, New York, as she was travelling to the United States in 1850.

In February 1852 Emerson and James Freeman Clarke and William Henry Channing edited an edition of the works and letters of Margaret Fuller. Within a week of her death, her New York editor Horace Greeley suggested to Emerson that a biography should be prepared quickly "before the interest excited by her sad decease has passed away". Published with the title *The Memoirs of Margaret Fuller Ossoli*, Fuller's words were heavily censored or rewritten. The three editors were not concerned about accuracy, as they felt public interest in Fuller was temporary and that she would not survive as a historical figure. Nevertheless, the memoir was to become one of the bestsellers of the decade and went through thirteen editions before the end of the century.

The only surviving image of Margaret Fuller, 1846

Only a learned and a manly soul
I purposed her, that should with even powers
The rock, the spindle, and the shears control
Of Destiny, and spin her own free hours.

BEN JONSON.

Però che ogni diletto nostro e doglia
Sta in sì e nò saper, voler, potere;
Adunque quel sol può, che col dovere
Ne trae la ragion fuor di sua soglia.

Adunque tu, lettor di queste note,
S' a te vuoi esser buono, e agli altri caro,
Vogli sempre poter quel che tu debbi.

LEONARDO DA VINCI

I. YOUTH.

AUTOBIOGRAPHY.

*

”Aus Morgenduft gewebt und Sonnenklarheit
Der Dichtung Schleir aus der Hand der Wahrheit.”

GOETHE.

”The million stars which tremble
O’er the deep mind of dauntless infancy.”

TENNYSON.

”Wie leicht ward er dahin gefragen,
Was war dem Glücklichen zu schwer!
Wie tanzte vor des Lebens Wagen
Die luftige Begleitung her!
Die Liebe mit dem süßen Lohne,
Das Glück mit seinem gold’nen Kranz,
Der Ruhm mit seiner Sternenkrone,
Die Wahrheit in der Sonne Glanz.”

SCHILLER

What wert thou then? A child most infantine,
Yet wandering far beyond that innocent age,
In all but its sweet looks and mien divine;
Even then, methought, with the world's tyrant rage
A patient warfare thy young heart did wage,
When those soft eyes of scarcely conscious thought
Some tale, or thine own fancies, would engage
To overflow with tears, or converse fraught
With passion o'er their depths its fleeting light had wrought.'

SHELLE

”And I smiled, as one never smiles but once;
Then first discovering my own aim’s extent,
Which sought to comprehend the works of God.
And God himself, and all God’s intercourse
With the human mind.”

BROWNING.

I.

YOUTH.

*

‘Tieck, who has embodied so many Runic secrets, explained to me what I have often felt toward myself, when he tells of the poor changeling, who, turned from the door of her adopted home, sat down on a stone and so pitied herself that she wept. Yet me also, the wonderful bird, singing in the wild forest, has tempted on, and not in vain.’

Thus wrote Margaret in the noon of life, when looking back through youth to the “dewy dawn of memory.” She was the eldest child of Timothy Fuller and Margaret Crane, and was born in Cambridge-Port, Massachusetts, on the 23d of May, 1810.

Among her papers fortunately remains this unfinished sketch of youth, prepared by her own hand, in 1840, as the introductory chapter to an autobiographical romance.

PARENTS.

‘My father was a lawyer and a politician. He was a man largely endowed with that sagacious energy, which the state of New England society, for the last half century, has been so well fitted to develop. His father was a clergyman, settled as pastor in Princeton, Massachusetts, within the bounds of whose parish-farm was Wachuset. His means were small, and the great object of his ambition was to send his sons to college. As a boy, my father was taught to think only of

preparing himself for Harvard University, and when there of preparing himself for the profession of Law. As a Lawyer, again, the ends constantly presented were to work for distinction in the community, and for the means of supporting a family. To be an honored citizen, and to have a home on earth, were made the great aims of existence. To open the deeper fountains of the soul, to regard life here as the prophetic entrance to immortality, to develop his spirit to perfection, — motives like these had never been suggested to him, either by fellow-beings or by outward circumstances. The result was a character, in its social aspect, of quite the common sort. A good son and brother, a kind neighbor, an active man of business — in all these outward relations he was but one of a class, which surrounding conditions have made the majority among us. In the more delicate and individual relations, he never approached but two mortals, my mother and myself.

‘His love for my mother was the green spot on which he stood apart from the common-places of a mere bread-winning, bread-bestowing existence. She was one of those fair and flower-like natures, which sometimes spring up even beside the most dusty highways of life — a creature not to be shaped into a merely useful instrument, but bound by one law with the blue sky, the dew, and the frolic birds. Of all persons whom I have known, she had in her most of the angelic, — of that spontaneous love for every living thing, for man, and beast, and tree, which restores the golden age.’

DEATH IN THE HOUSE.

‘My earliest recollection is of a death, — the death of a sister, two years younger than myself. Probably there is a sense of childish endearments, such as belong to this tie, mingled with that of loss, of wonder, and mystery; but these last are prominent in memory. I remember coming home and meeting our nursery-maid, her face streaming with tears. That strange sight of tears made an indelible impression. I realize how little I was of stature, in that I looked up to this weeping face; — and it has often seemed since, that — full-grown for the life of this earth, I have looked up just so, at times of threatening, of doubt, and distress, and that just so has some being of the next higher order of existences looked down, aware of a law unknown to me, and tenderly commiserating the pain I muse endure in emerging from my ignorance.

‘She took me by the hand and led me into a still and dark chamber, — then drew aside the curtain and showed me my sister. I see yet that beauty of death! The highest achievements of sculpture are only the reminder of its severe sweetness. Then I remember the house all still and dark, — the people in their

black clothes and dreary faces, — the scent of the newly-made coffin, — my being set up in a chair and detained by a gentle hand to hear the clergyman, — the carriages slowly going, the procession slowly doling out their steps to the grave. But I have no remembrance of what I have since been told I did, — insisting, with loud cries, that they should not put the body in the ground. I suppose that my emotion was spent at the time, and so there was nothing to fix that moment in my memory.

‘I did not then, nor do I now, find any beauty in these ceremonies. What had they to do with the sweet playful child? Her life and death were alike beautiful, but all this sad parade was not. Thus my first experience of life was one of death. She who would have been the companion of my life was severed from me, and I was left alone. This has made a vast difference in my lot. Her character, if that fair face promised right, would have been soft, graceful and lively: it would have tempered mine to a gentler and more gradual course.

OVERWORK.

‘My father, — all whose feelings were now centred on me, — instructed me himself. The effect of this was so far good that, not passing through the hands of many ignorant and weak persons as so many do at preparatory schools, I was put at once under discipline of considerable severity, and, at the same time, had a more than ordinarily high standard presented to me. My father was a man of business, even in literature; he had been a high scholar at college, and was warmly attached to all he had learned there, both from the pleasure he had derived in the exercise of his faculties and the associated memories of success and good repute. He was, beside, well read in French literature, and in English, a Queen Anne’s man. He hoped to make me the heir of all he knew, and of as much more as the income of his profession enabled him to give me means of acquiring. At the very beginning, he made one great mistake, more common, it is to be hoped, in the last generation, than the warnings of physiologists will permit it to be with the next. He thought to gain time, by bringing forward the intellect as early as possible. Thus I had tasks given me, as many and various as the hours would allow, and on subjects beyond my age; with the additional disadvantage of reciting to him in the evening, after he returned from his office. As he was subject to many interruptions, I was often kept up till very late; and as he was a severe teacher, both from his habits of mind and his ambition for me, my feelings were kept on the stretch till the recitations were over. Thus frequently, I was sent to bed several hours too late, with nerves unnaturally stimulated. The consequence was a premature development of the brain, that made me a

“youthful prodigy” by day, and by night a victim of spectral illusions, nightmare, and somnambulism, which at the time prevented the harmonious development of my bodily powers and checked my growth, while, later, they induced continual headache, weakness and nervous affections, of all kinds. As these again re-acted on the brain, giving undue force to every thought and every feeling, there was finally produced a state of being both too active and too intense, which wasted my constitution, and will bring me, — even although I have learned to understand and regulate my now morbid temperament, — to a premature grave.

‘No one understood this subject of health then. No one knew why this child, already kept up so late, was still unwilling to retire. My aunts cried out upon the “spoiled child, the most unreasonable child that ever was, — if brother could but open his eyes to see it, — who was never willing to go to bed.” They did not know that, so soon as the light was taken away, she seemed to see colossal faces advancing slowly towards her, the eyes dilating, and each feature swelling loathsomely as they came, till at last, when they were about to close upon her, she started up with a shriek which drove them away, but only to return when she lay down again. They did not know that, when at last she went to sleep, it was to dream of horses trampling over her, and to awake once more in fright; or, as she had just read in her Virgil, of being among trees that dripped with blood, where she walked and walked and could not get out, while the blood became a pool and plashed over her feet, and rose higher and higher, till soon she dreamed it would reach her lips. No wonder the child arose and walked in her sleep, moaning all over the house, till once, when they heard her, and came and waked her, and she told what she had dreamed, her father sharply bid her “leave off thinking of such nonsense, or she would be crazy,” — never knowing that he was himself the cause of all these horrors of the night. Often she dreamed of following to the grave the body of her mother, as she had done that of her sister, and woke to find the pillow drenched in tears. These dreams softened her heart too much, and cast a deep shadow over her young days; for then, and later, the life of dreams, — probably because there was in it less to distract the mind from its own earnestness, — has often seemed to her more real, and been remembered with more interest, than that of waking hours.

‘Poor child! Far remote in time, in thought, from that period, I look back on these glooms and terrors, wherein I was enveloped, and perceive that I had no natural childhood.’

BOOKS.

‘Thus passed my first years. My mother was in delicate health, and much

absorbed in the care of her younger children. In the house was neither dog nor bird, nor any graceful animated form of existence. I saw no persons who took my fancy, and real life offered no attraction. Thus my already over-excited mind found no relief from without, and was driven for refuge from itself to the world of books. I was taught Latin and English grammar at the same time, and began to read Latin at six years old, after which, for some years, I read it daily. In this branch of study, first by my father, and afterwards by a tutor, I was trained to quite a high degree of precision. I was expected to understand the mechanism of the language thoroughly, and in translating to give the thoughts in as few well-arranged words as possible, and without breaks or hesitation, — for with these my father had absolutely no patience.

‘Indeed, he demanded accuracy and clearness in everything: you must not speak, unless you can make your meaning perfectly intelligible to the person addressed; must not express a thought, unless you can give a reason for it, if required; must not make a statement, unless sure of all particulars — such were his rules. “But,” “if,” “unless,” “I am mistaken,” and “it may be so,” were words and phrases excluded from the province where he held sway. Trained to great dexterity in artificial methods, accurate, ready, with entire command of his resources, he had no belief in minds that listen, wait, and receive. He had no conception of the subtle and indirect motions of imagination and feeling. His influence on me was great, and opposed to the natural unfolding of my character, which was fervent, of strong grasp, and disposed to infatuation, and self-forgetfulness. He made the common prose world so present to me, that my natural bias was controlled. I did not go mad, as many would do, at being continually roused from my dreams. I had too much strength to be crushed, — and since I must put on the fetters, could not submit to let them impede my motions. My own world sank deep within, away from the surface of my life; in what I did and said I learned to have reference to other minds. But my true life was only the dearer that it was secluded and veiled over by a thick curtain of available intellect, and that coarse, but wearable stuff woven by the ages, — Common Sense.

‘In accordance with this discipline in heroic common sense, was the influence of those great Romans, whose thoughts and lives were my daily food during those plastic years. The genius of Rome displayed itself in Character, and scarcely needed an occasional wave of the torch of thought to show its lineaments, so marble strong they gleamed in every light. Who, that has lived with those men, but admires the plain force of fact, of thought passed into action? They take up things with their naked hands. There is just the man, and the block he casts before you, — no divinity, no demon, no unfulfilled aim, but

just the man and Rome, and what he did for Rome. Everything turns your attention to what a man can become, not by yielding himself freely to impressions, not by letting nature play freely through him, but by a single thought, an earnest purpose, an indomitable will, by hardihood, self-command, and force of expression. Architecture was the art in which Rome excelled, and this corresponds with the feeling these men of Rome excite. They did not grow, — they built themselves up, or were built up by the fate of Rome, as a temple for Jupiter Stator. The ruined Roman sits among the ruins; he flies to no green garden; he does not look to heaven; if his intent is defeated, if he is less than he meant to be, he lives no more. The names which end in “*us*,” seem to speak with lyric cadence. That measured cadence, — that tramp and march, — which are not stilted, because they indicate real force, yet which seem so when compared with any other language, — make Latin a study in itself of mighty influence. The language alone, without the literature, would give one the *thought* of Rome. Man present in nature, commanding nature too sternly to be inspired by it, standing like the rock amid the sea, or moving like the fire over the land, either impassive, or irresistible; knowing not the soft mediums or fine flights of life, but by the force which he expresses, piercing to the centre.

‘We are never better understood than when we speak of a “Roman virtue,” a “Roman outline.” There is somewhat indefinite, somewhat yet unfulfilled in the thought of Greece, of Spain, of modern Italy; but ROME! it stands by itself, a clear Word. The power of will, the dignity of a fixed purpose is what it utters. Every Roman was an emperor. It is well that the infallible church should have been founded on this rock, that the presumptuous Peter should hold the keys, as the conquering Jove did before his thunderbolts, to be seen of all the world. The Apollo tends flocks with Admetus; Christ teaches by the lonely lake, or plucks wheat as he wanders through the fields some Sabbath morning. They never come to this stronghold; they could not have breathed freely where all became stone as soon as spoken, where divine youth found no horizon for its all-promising glance, but every thought put on, before it dared issue to the day in action, its *toga virilis*.

‘Suckled by this wolf, man gains a different complexion from that which is fed by the Greek honey. He takes a noble bronze in camps and battle-fields; the wrinkles of council well beseem his brow, and the eye cuts its way like the sword. The Eagle should never have been used as a symbol by any other nation: it belonged to Rome.

‘The history of Rome abides in mind, of course, more than the literature. It was degeneracy for a Roman to use the pen; his life was in the day. The “vaunting” of Rome, like that of the North American Indians, is her proper

literature. A man rises; he tells who he is, and what he has done; he speaks of his country and her brave men; he knows that a conquering god is there, whose agent is his own right hand; and he should end like the Indian, "I have no more to say."

'It never shocks us that the Roman is self-conscious. One wants no universal truths from him, no philosophy, no creation, but only his life, his Roman life felt in every pulse, realized in every gesture. The universal heaven takes in the Roman only to make us feel his individuality the more. The Will, the Resolve of Man! — it has been expressed, — fully expressed!

'I steadily loved this ideal in my childhood, and this is the cause, probably, why I have always felt that man must know how to stand firm on the ground, before he can fly. In vain for me are men more, if they are less, than Romans. Dante was far greater than any Roman, yet I feel he was right to take the Mantuan as his guide through hell, and to heaven.

'Horace was a great deal to me then, and is so still. Though his words do not abide in memory, his presence does: serene, courtly, of darting hazel eye, a self-sufficient grace, and an appreciation of the world of stern realities, sometimes pathetic, never tragic. He is the natural man of the world; he is what he ought to be, and his darts never fail of their aim. There is a perfume and raciness, too, which makes life a banquet, where the wit sparkles no less that the viands were bought with blood.

'Ovid gave me not Rome, nor himself, but a view into the enchanted gardens of the Greek mythology. This path I followed, have been following ever since; and now, life half over, it seems to me, as in my childhood, that every thought of which man is susceptible, is intimated there. In those young years, indeed, I did not see what I now see, but loved to creep from amid the Roman pikes to lie beneath this great vine, and see the smiling and serene shapes go by, woven from the finest fibres of all the elements. I knew not why, at that time, — but I loved to get away from the hum of the forum, and the mailed clang of Roman speech, to these shifting shows of nature, these Gods and Nymphs born of the sunbeam, the wave, the shadows on the hill.

'As with Rome I antedated the world of deeds, so I lived in those Greek forms the true faith of a refined and intense childhood. So great was the force of reality with which these forms impressed me, that I prayed earnestly for a sign, — that it would lighten in some particular region of the heavens, or that I might find a bunch of grapes in the path, when I went forth in the morning. But no sign was given, and I was left a waif stranded upon the shores of modern life!

'Of the Greek language, I knew only enough to feel that the sounds told the same story as the mythology; — that the law of life in that land was beauty, as in

Rome it was a stern composure. I wish I had learned as much of Greece as of Rome, — so freely does the mind play in her sunny waters, where there is no chill, and the restraint is from within out; for these Greeks, in an atmosphere of ample grace, could not be impetuous, or stern, but loved moderation as equable life always must, for it is the law of beauty.

‘With these books I passed my days. The great amount of study exacted of me soon ceased to be a burden, and reading became a habit and a passion. The force of feeling, which, under other circumstances, might have ripened thought, was turned to learn the thoughts of others. This was not a tame state, for the energies brought out by rapid acquisition gave glow enough. I thought with rapture of the all-accomplished man, him of the many talents, wide resources, clear sight, and omnipotent will. A Cæsar seemed great enough. I did not then know that such men impoverish the treasury to build the palace. I kept their statues as belonging to the hall of my ancestors, and loved to conquer obstacles, and fed my youth and strength for their sake.

*

‘Still, though this bias was so great that in earliest years I learned, in these ways, how the world takes hold of a powerful nature, I had yet other experiences. None of these were deeper than what I found in the happiest haunt of my childish years, — our little garden. Our house, though comfortable, was very ugly, and in a neighborhood which I detested, — every dwelling and its appurtenances having a *mesquin* and huddled look. I liked nothing about us except the tall graceful elms before the house, and the dear little garden behind. Our back door opened on a high flight of steps, by which I went down to a green plot, much injured in my ambitious eyes by the presence of the pump and tool-house. This opened into a little garden, full of choice flowers and fruit-trees, which was my mother’s delight, and was carefully kept. Here I felt at home. A gate opened thence into the fields, — a wooden gate made of boards, in a high, unpainted board wall, and embowered in the clematis creeper. This gate I used to open to see the sunset heaven; beyond this black frame I did not step, for I liked to look at the deep gold behind it. How exquisitely happy I was in its beauty, and how I loved the silvery wreaths of my protecting vine! I never would pluck one of its flowers at that time, I was so jealous of its beauty, but often since I carry off wreaths of it from the wild-wood, and it stands in nature to my mind as the emblem of domestic love.

‘Of late I have thankfully felt what I owe to that garden, where the best hours of my lonely childhood were spent. Within the house everything was socially

utilitarian; my books told of a proud world, but in another temper were the teachings of the little garden. There my thoughts could lie callow in the nest, and only be fed and kept warm, not called to fly or sing before the time. I loved to gaze on the roses, the violets, the lilies, the pinks; my mother's hand had planted them, and they bloomed for me. I culled the most beautiful. I looked at them on every side. I kissed them, I pressed them to my bosom with passionate emotions, such as I have never dared express to any human being. An ambition swelled my heart to be as beautiful, as perfect as they. I have not kept my vow. Yet, forgive, ye wild asters, which gleam so sadly amid the fading grass; forgive me, ye golden autumn flowers, which so strive to reflect the glories of the departing distant sun; and ye silvery flowers, whose moonlight eyes I knew so well, forgive! Living and blooming in your unchecked law, ye know nothing of the blights, the distortions, which beset the human being; and which at such hours it would seem that no glories of free agency could ever repay!

*

'There was, in the house, no apartment appropriated to the purpose of a library, but there was in my father's room a large closet filled with books, and to these I had free access when the task-work of the day was done. Its window overlooked wide fields, gentle slopes, a rich and smiling country, whose aspect pleased without much occupying the eye, while a range of blue hills, rising at about twelve miles distance, allured to reverie. "Distant mountains," says Tieck, "excite the fancy, for beyond them we place the scene of our Paradise." Thus, in the poems of fairy adventure, we climb the rocky barrier, pass fearless its dragon caves, and dark pine forests, and find the scene of enchantment in the vale behind. My hopes were never so definite, but my eye was constantly allured to that distant blue range, and I would sit, lost in fancies, till tears fell on my cheek. I loved this sadness; but only in later years, when the realities of life had taught me moderation, did the passionate emotions excited by seeing them again teach how glorious were the hopes that swelled my heart while gazing on them in those early days.

'Melancholy attends on the best joys of a merely ideal life, else I should call most happy the hours in the garden, the hours in the book closet. Here were the best French writers of the last century; for my father had been more than half a Jacobin, in the time when the French Republic cast its glare of promise over the world. Here, too, were the Queen Anne authors, his models, and the English novelists; but among them I found none that charmed me. Smollett, Fielding, and the like, deal too broadly with the coarse actualities of life. The best of their

men and women — so merely natural, with the nature found every day — do not meet our hopes. Sometimes the simple picture, warm with life and the light of the common sun, cannot fail to charm, — as in the wedded love of Fielding's Amelia, — but it is at a later day, when the mind is trained to comparison, that we learn to prize excellence like this as it deserves. Early youth is prince-like: it will bend only to "the king, my father." Various kinds of excellence please, and leave their impression, but the most commanding, alone, is duly acknowledged at that all-exacting age.

'Three great authors it was my fortune to meet at this important period, — all, though of unequal, yet congenial powers, — all of rich and wide, rather than aspiring genius, — all free to the extent of the horizon their eye took in, — all fresh with impulse, racy with experience; never to be lost sight of, or superseded, but always to be apprehended more and more.

'Ever memorable is the day on which I first took a volume of SHAKSPEARE in my hand to read. It was on a Sunday.

' — This day was punctiliously set apart in our house. We had family prayers, for which there was no time on other days. Our dinners were different, and our clothes. We went to church. My father put some limitations on my reading, but — bless him for the gentleness which has left me a pleasant feeling for the day! — he did not prescribe what was, but only what was *not*, to be done. And the liberty this left was a large one. "You must not read a novel, or a play;" but all other books, the worst, or the best, were open to me. The distinction was merely technical. The day was pleasing to me, as relieving me from the routine of tasks and recitations; it gave me freer play than usual, and there were fewer things occurred in its course, which reminded me of the divisions of time; still the church-going, where I heard nothing that had any connection with my inward life, and these rules, gave me associations with the day of empty formalities, and arbitrary restrictions; but though the forbidden book or walk always seemed more charming then, I was seldom tempted to disobey. —

'This Sunday — I was only eight years old — I took from the book-shelf a volume lettered SHAKSPEARE. It was not the first time I had looked at it, but before I had been deterred from attempting to read, by the broken appearance along the page, and preferred smooth narrative. But this time I held in my hand "Romeo and Juliet" long enough to get my eye fastened to the page. It was a cold winter afternoon. I took the book to the parlor fire, and had there been 'seated an hour or two, when my father looked up and asked what I was reading so intently. "Shakspeare," replied the child, merely raising her eye from the

page. "Shakspeare, — that won't do; that's no book for Sunday; go put it away and take another." I went as I was bid, but took no other. Returning to my seat, the unfinished story, the personages to whom I was but just introduced, thronged and burnt my brain. I could not bear it long; such a lure it was impossible to resist. I went and brought the book again. There were several guests present, and I had got half through the play before I again attracted attention. "What is that child about that she don't hear a word that's said to her?" quoth my aunt. "What are you reading?" said my father. "Shakspeare" was again the reply, in a clear, though somewhat impatient, tone. "How?" said my father angrily, — then restraining himself before his guests,— "Give me the book and go directly to bed."

'Into my little room no care of his anger followed me. Alone, in the dark, I thought only of the scene placed by the poet before my eye, where the free flow of life, sudden and graceful dialogue, and forms, whether grotesque or fair, seen in the broad lustre of his imagination, gave just what I wanted, and brought home the life I seemed born to live. My fancies swarmed like bees, as I contrived the rest of the story; — what all would do, what say, where go. My confinement tortured me. I could not go forth from this prison to ask after these friends; I could not make my pillow of the dreams about them which yet I could not forbear to frame. Thus was I absorbed when my father entered. He felt it right, before going to rest, to reason with me about my disobedience, shown in a way, as he considered, so insolent. I listened, but could not feel interested in what he said, nor turn my mind from what engaged it. He went away really grieved at my impenitence, and quite at a loss to understand conduct in me so unusual.

' — Often since I have seen the same misunderstanding between parent and child, — the parent thrusting the morale, the discipline, of life upon the child, when just engrossed by some game of real importance and great leadings to it. That is only a wooden horse to the father, — the child was careering to distant scenes of conquest and crusade, through a country of elsewhere unimagined beauty. None but poets remember their youth; but the father who does not retain poetical apprehension of the world, free and splendid as it stretches out before the child, who cannot read his natural history, and follow out its intimations with reverence, must be a tyrant in his home, and the purest intentions will not prevent his doing much to cramp him. Each new child is a new Thought, and has bearings and discernings, which the Thoughts older in date know not yet, but must learn. —

'My attention thus fixed on Shakspeare, I returned to him at every hour I could command. Here was a counterpoise to my Romans, still more forcible than

the little garden. My author could read the Roman nature too, — read it in the sternness of Coriolanus, and in the varied wealth of Cæsar. But he viewed these men of will as only one kind of men; he kept them in their place, and I found that he, who could understand the Roman, yet expressed in Hamlet a deeper thought.

‘In CERVANTES, I found far less productive talent,— ‘indeed, a far less powerful genius, — but the same wide wisdom, a discernment piercing the shows and symbols of existence, yet rejoicing in them all, both for their own life, and as signs of the unseen reality. Not that Cervantes philosophized, — his genius was too deeply philosophical for that; he took things as they came before him, and saw their actual relations and bearings. Thus the work he produced was of deep meaning, though he might never have expressed that meaning to himself. It was left implied in the whole. A Coleridge comes and calls Don Quixote the pure Reason, and Sancho the Understanding. Cervantes made no such distinctions in his own mind; but he had seen and suffered enough to bring out all his faculties, and to make him comprehend the higher as well as the lower part of our nature. Sancho is too amusing and sagacious to be contemptible; the Don too noble and clear-sighted towards absolute truth, to be ridiculous. And we are pleased to see manifested in this way, how the lower must follow and serve the higher, despite its jeering mistrust and the stubborn realities which break up the plans of this pure-minded champion.

’The effect produced on the mind is nowise that described by
Byron: —

“Cervantes smiled Spain’s chivalry away,” &c.

‘On the contrary, who is not conscious of a sincere reverence for the Don, prancing forth on his gaunt steed? Who would not rather be he than any of the persons who laugh at him? — Yet the one we would wish to be is thyself, Cervantes, unconquerable spirit! gaining flavor and color like wine from every change, while being carried round the world; in whose eye the serene sagacious laughter could not be dimmed by poverty, slavery, or unsuccessful authorship. Thou art to us still more the Man, though less the Genius, than Shakspeare; thou dost not evade our sight, but, holding the lamp to thine own magic shows, dost enjoy them with us.

‘My third friend was MOLIÉRE, one very much lower, both in range and depth, than the-others, but, as far as he goes, of the same character. Nothing secluded or partial is there about his genius, — a man of the world, and a man by himself, as he is. It was, indeed, only the poor social world of Paris that he saw,

but he viewed it from the firm foundations of his manhood, and every lightest laugh rings from a clear perception, and teaches life anew.

‘These men were all alike in this, — they loved the *natural history* of man. Not what he should be, but what he is, was the favorite subject of their thought. Whenever a noble leading opened to the eye new paths of light, they rejoiced; but it was never fancy, but always fact, that inspired them. They loved a thorough penetration of the murkiest dens, and most tangled paths of nature; they did not spin from the desires of their own special natures, but reconstructed the world from materials which they collected on every side. Thus their influence upon me was not to prompt me to follow out thought in myself so much as to detect it everywhere, for each of these men is not only a nature, but a happy interpreter of many natures. They taught me to distrust all invention which is not based on a wide experience. Perhaps, too, they taught me to overvalue an outward experience at the expense of inward growth; but all this I did not appreciate till later.

‘It will be seen that my youth was not unfriended, since those great minds came to me in kindness. A moment of action in one’s self, however, is worth an age of apprehension through others; not that our deeds are better, but that they produce a renewal of our being. I have had more productive moments and of deeper joy, but never hours of more tranquil pleasure than those in which these demi-gods visited me, — and with a smile so familiar, that I imagined the world to be full of such. They did me good, for by them a standard was early given of sight and thought, from which I could never go back, and beneath which I cannot suffer patiently my own life or that of any friend to fall. They did me harm, too, for the child fed with meat instead of milk becomes too soon mature. Expectations and desires were thus early raised, after which I must long toil before they can be realized. How poor the scene around, how tame one’s own existence, how meagre and faint every power, with these beings in my mind! Often I must cast them quite aside in order to grow in my small way, and not sink into despair. Certainly I do not wish that instead of these masters I had read baby books, written down to children, and with such ignorant dulness that they blunt the senses and corrupt the tastes of the still plastic human being. But I do wish that I had read no books at all till later, — that I had lived with toys, and played in the open air. Children should not cull the fruits of reflection and observation early, but expand in the sun, and let thoughts come to them. They should not through books antedate their actual experiences, but should take them gradually, as sympathy and interpretation are needed. With me, much of life was devoured in the bud.

FIRST FRIEND.

‘For a few months, this bookish and solitary life was invaded by interest in a living, breathing figure. At church, I used to look around with a feeling of coldness and disdain, which, though I now well understand its causes, seems to my wiser mind as odious as it was unnatural. The puny child sought everywhere for the Roman or Shakspeare figures, and she was met by the shrewd, honest eye, the homely decency, or the smartness of a New England village on Sunday. There was beauty, but I could not see it then; it was not of the kind I longed for. In the next pew sat a family who were my especial aversion. There were five daughters, the eldest not above four-and-twenty, — yet they had the old fairy, knowing look, hard, dry, dwarfed, strangers to the All-Fair, — were working-day residents in this beautiful planet. They looked as if their thoughts had never strayed beyond the jobs of the day, and they were glad of it. Their mother was one of those shrunken, faded patterns of woman who have never done anything to keep smooth the cheek and dignify the brow. The father had a Scotch look of shrewd narrowness, and entire self-complacency. I could not endure this family, whose existence contradicted all my visions; yet I could not forbear looking at them.

‘As my eye one day was ranging about with its accustomed coldness, and the proudly foolish sense of being in a shroud of thoughts that were not their thoughts, it was arrested by a face most fair, and well-known as it seemed at first glance, — for surely I had met her before and waited for her long. But soon I saw that she was a new apparition foreign to that scene, if not to me. Her dress, — the arrangement of her hair, which had the graceful pliancy of races highly cultivated for long, — the intelligent and full picture of her eye, whose reserve was in its self-possession, not in timidity, — all combined to make up a whole impression, which, though too young to understand, I was well prepared to feel.

‘How wearisome now appears that thorough-bred *millefleur* beauty, the distilled result of ages of European culture! Give me rather the wild heath on the lonely hill-side, than such a rose-tree from the daintily clipped garden. But, then, I had but tasted the cup, and knew not how little it could satisfy; more, more, was all my cry; continued through years, till I had been at the very fountain. Indeed, it was a ruby-red, a perfumed draught, and I need not abuse the wine because I prefer water, but merely say I have had enough of it. Then, the first sight, the first knowledge of such a person was intoxication.

‘She was an English lady, who, by a singular chance, was cast upon this region for a few months. Elegant and captivating, her every look and gesture was tuned to a different pitch from anything I had ever known. She was in various

ways “accomplished,” as it is called, though to what degree I cannot now judge. She painted in oils; — I had never before seen any one use the brush, and days would not have been too long for me to watch the pictures growing beneath her hand. She played the harp; and its tones are still to me the heralds of the promised land I saw before me then. She rose, she looked, she spoke; and the gentle swaying motion she made all through life has gladdened memory, as the stream does the woods and meadows.

‘As she was often at the house of one of our neighbors, and afterwards at our own, my thoughts were fixed on her with all the force of my nature. It was my first real interest in my kind, and it engrossed me wholly. I had seen her, — I should see her, — and my mind lay steeped in the visions that flowed from this source. My task-work I went through with, as I have done on similar occasions all my life, aided by pride that could not bear to fail, or be questioned. Could I cease from doing the work of the day, and hear the reason sneeringly given,— “Her head is so completely taken up with —— that she can do nothing”? Impossible.

‘Should the first love be blighted, they say, the mind loses its sense of eternity. All forms of existence seem fragile, the prison of time real, for a god is dead. Equally true is this of friendship. I thank Heaven that this first feeling was permitted its free flow. The years that lay between the woman and the girl only brought her beauty into perspective, and enabled me to see her as I did the mountains from my window, and made her presence to me a gate of Paradise. That which she was, that which she brought, that which she might have brought, were mine, and over a whole region of new life I ruled proprietor of the soil in my own right.

‘Her mind was sufficiently unoccupied to delight in my warm devotion. She could not know what it was to me, but the light cast by the flame through so delicate a vase cheered and charmed her. All who saw admired her in their way; but she would lightly turn her head from their hard or oppressive looks, and fix a glance of full-eyed sweetness on the child, who, from a distance, watched all her looks and motions. She did not say much to me — not much to any one; she spoke in her whole being rather than by chosen words. Indeed, her proper speech was dance or song, and what was less expressive did not greatly interest her. But she saw much, having in its perfection the woman’s delicate sense for sympathies and attractions. We walked in the fields, alone. Though others were present, her eyes were gliding over all the field and plain for the objects of beauty to which she was of kin. She was not cold to her seeming companions; a sweet courtesy satisfied them, but it hung about her like her mantle that she wore without thinking of it; her thoughts were free, for these civilized beings can

really live two lives at the same moment. With them she seemed to be, but her hand was given to the child at her side; others did not observe me, but to her I was the only human presence. Like a guardian spirit she led me through the fields and groves, and every tree, every bird greeted me, and said, what I felt, "She is the first angel of your life."

'One time I had been passing the afternoon with her. She had been playing to me on the harp, and I sat listening in happiness almost unbearable. Some guests were announced. She went into another room to receive them, and I took up her book. It was *Guy Mannering*, then lately published, and the first of Scott's novels I had ever seen. I opened where her mark lay, and read merely with the feeling of continuing our mutual existence by passing my eyes over the same page where hers had been. It was the description of the rocks on the sea-coast where the little Harry Bertram was lost. I had never seen such places, and my mind was vividly stirred to imagine them. The scene rose before me, very unlike reality, doubtless, but majestic and wild. I was the little Harry Bertram, and had lost her, — all I had to lose, — and sought her vainly in long dark caves that had no end, plashing through the water; while the crags beetled above, threatening to fall and crush the poor child. Absorbed in the painful vision, tears rolled down my cheeks. Just then she entered with light step, and full-beaming eye. When she saw me thus, a soft cloud stole over her face, and clothed every feature with a lovelier tenderness than I had seen there before. She did not question, but fixed on me inquiring looks of beautiful love. I laid my head against her shoulder and wept, — dimly feeling that I must lose her and all, — all who spoke to me of the same things, — that the cold wave must rush over me. She waited till my tears were spent, then rising, took from a little box a bunch of golden amaranths or everlasting flowers, and gave them to me. They were very fragrant. "They came," she said, "from Madeira." These flowers stayed with me seventeen years. "Madeira" seemed to me the fortunate isle, apart in the blue ocean from all of ill or dread. Whenever I saw a sail passing in the distance, — if it bore itself with fulness of beautiful certainty, — I felt that it was going to Madeira. Those thoughts are all gone now. No Madeira exists for me now, — no fortunate purple isle, — and all these hopes and fancies are lifted from the sea into the sky. Yet I thank the charms that fixed them here so long, — fixed them till perfumes like those of the golden flowers were drawn from the earth, teaching me to know my birth-place.

'I can tell little else of this time, — indeed, I remember little, except the state of feeling in which I lived. For I *lived*, and when this is the case, there is little to tell in the form of thought. We meet — at least those who are true to their instincts meet — a succession of persons through our lives, all of whom have

some peculiar errand to us. There is an outer circle, whose existence we perceive, but with whom we stand in no real relation. They tell us the news, they act on us in the offices of society, they show us kindness and aversion; but their influence does not penetrate; we are nothing to them, nor they to us, except as a part of the world's furniture. Another circle, within this, are dear and near to us. We know them and of what kind they are. They are to us not mere facts, but intelligible thoughts of the divine mind. We like to see how they are unfolded; we like to meet them and part from them: we like their action upon us and the pause that succeeds and enables us to appreciate its quality. Often we leave them on our path, and return no more, but we bear them in our memory, tales which have been told, and whose meaning has been felt.

'But yet a nearer group there are, beings born under the same star, and bound with us in a common destiny. These are not mere acquaintances, mere friends, but, when we meet, are sharers of our very existence. There is no separation; the same thought is given at the same moment to both, — indeed, it is born of the meeting, and would not otherwise have been called into existence at all. These not only know themselves more, but *are* more for having met, and regions of their being, which would else have laid sealed in cold obstruction, burst into leaf and bloom and song.

'The times of these meetings are fated, nor will either party be able ever to meet any other person in the same way. Both seem to rise at a glance into that part of the heavens where the word can be spoken, by which they are revealed to one another and to themselves. The step in being thus gained, can never be lost, nor can it be re-trod; for neither party will be again what the other wants. They are no longer fit to interchange mutual influence, for they do not really need it, and if they think they do, it is because they weakly pine after a past pleasure.

'To this inmost circle of relations but few are admitted, because some prejudice or lack of courage has prevented the many from listening to their instincts the first time they manifested themselves. If the voice is once disregarded it becomes fainter each time, till, at last, it is wholly silenced, and the man lives in this world, a stranger to its real life, deluded like the maniac who fancies he has attained his throne, while in reality he is on a bed of musty straw. Yet, if the voice finds a listener and servant the first time of speaking, it is encouraged to more and more clearness. Thus it was with me, — from no merit of mine, but because I had the good fortune to be free enough to yield to my impressions. Common ties had not bound me; there were no traditionary notions in my mind; I believed in nothing merely because others believed in it; I had taken no feelings on trust. Thus my mind was open to their sway.

'This woman came to me, a star from the east, a morning star, and I

worshipped her. She too was elevated by that worship, and her fairest self called out. To the mind she brought assurance that there was a region congenial with its tendencies and tastes, a region of elegant culture and intercourse, whose object, fulfilled or not, was to gratify the sense of beauty, not the mere utilities of life. In our relation she was lifted to the top of her being. She had known many celebrities, had roused to passionate desire many hearts, and became afterwards a wife; but I do not believe she ever more truly realized her best self than towards the lonely child whose heaven she was, whose eye she met, and whose possibilities she predicted. "He raised me," said a woman inspired by love, "upon the pedestal of his own high thoughts, and wings came at once, but I did not fly away. I stood there with downcast eyes worthy of his love, for he had made me so."

'Thus we do always for those who inspire us to expect from them the best. That which they are able to be, they become, because we demand it of them. "We expect the impossible — and find it."

'My English friend went across the sea. She passed into her former life, and into ties that engrossed her days. But she has never ceased to think of me. Her thoughts turn forcibly back to the child who was to her all she saw of the really New World. On the promised coasts she had found only cities, careful men and women, the aims and habits of ordinary life in her own land, without that elegant culture which she, probably, over-estimated, because it was her home. But in the mind of the child she found the fresh prairie, the untrodden forests for which she had longed. I saw in her the storied castles, the fair stately parks and the wind laden with tones from the past, which I desired to know. We wrote to one another for many years; — her shallow and delicate epistles did not disenchant me, nor did she fail to see something of the old poetry in my rude characters and stammering speech. But we must never meet again.

'When this friend was withdrawn I fell into a profound depression. I knew not how to exert myself, but lay bound hand and foot. Melancholy enfolded me in an atmosphere, as joy had done. This suffering, too, was out of the gradual and natural course. Those who are really children could not know such love, or feel such sorrow. "I am to blame," said my father, "in keeping her at home so long merely to please myself. She needs to be with other girls, needs play and variety. She does not seem to me really sick, but dull rather. She eats nothing, you say. I see she grows thin. She ought to change the scene."

'I was indeed *dull*. The books, the garden, had lost all charm. I had the excuse of headache, constantly, for not attending to my lessons. The light of life was set, and every leaf was withered. At such an early age there are no back or side scenes where the mind, weary and sorrowful, may retreat. Older, we realize the

width of the world more, and it is not easy to despair on any point. The effort at thought to which we are compelled relieves and affords a dreary retreat, like hiding in a brick-kiln till the shower be over. But then all joy seemed to have departed with my friend, and the emptiness of our house stood revealed. This I had not felt while I every day expected to see or had seen her, or annoyance and dulness were unnoticed or swallowed up in the one thought that clothed my days with beauty. But now she was gone, and I was roused from habits of reading or reverie to feel the fiery temper of the soul, and to learn that it must have vent, that it would not be pacified by shadows, neither meet without consuming what lay around it. I avoided the table as much as possible, took long walks and lay in bed, or on the floor of my room. I complained of my head, and it was not wrong to do so, for a sense of dulness and suffocation, if not pain, was there constantly.

‘But when it was proposed that I should go to school, that was a remedy I could not listen to with patience for a moment. The peculiarity of my education had separated me entirely from the girls around, except that when they were playing at active games, I would sometimes go out and join them. I liked violent bodily exercise, which always relieved my nerves. But I had no success in associating with them beyond the mere play. Not only I was not their schoolmate, but my book-life and lonely habits had given a cold aloofness to my whole expression, and veiled my manner with a hauteur which turned all hearts away. Yet, as this reserve was superficial, and rather ignorance than arrogance, it produced no deep dislike. Besides, the girls supposed me really superior to themselves, and did not hate me for feeling it, but neither did they like me, nor wish to have me with them. Indeed, I had gradually given up all such wishes myself; for they seemed to me rude, tiresome, and childish, as I did to them dull and strange. This experience had been earlier, before I was admitted to any real friendship; but now that I had been lifted into the life of mature years, and into just that atmosphere of European life to which I had before been tending, the thought of sending me to school filled me with disgust.

‘Yet what could I tell my father of such feelings? I resisted all I could, but in vain. He had no faith in medical aid generally, and justly saw that this was no occasion for its use. He thought I needed change of scene, and to be roused to activity by other children. “I have kept you at home,” he said, “because I took such pleasure in teaching you myself, and besides I knew that you would learn faster with one who is so desirous to aid you. But you will learn fast enough wherever you are, and you ought to be more with others of your own age. I shall soon hear that you are better, I trust.”’

SCHOOL-LIFE.

The school to which Margaret was sent was that of the Misses Prescott, in Groton, Massachusetts. And her experience there has been described with touching truthfulness by herself, in the story of "Mariana." [A]

'At first her schoolmates were captivated with her ways; her love of wild dances and sudden song, her freaks of passion and of wit. She was always new, always surprising, and, for a time, charming.

'But after a while, they tired of her. She could never be depended on to join in their plans, yet she expected them, to follow out hers with their whole strength. She was very loving, even infatuated in her own affections, and exacted from those who had professed any love for her the devotion she was willing to bestow.

'Yet there was a vein of haughty caprice in her character, and a love of solitude, which made her at times wish to retire apart, and at these times she would expect to be entirely understood, and let alone, yet to be welcomed back when she returned. She did not thwart others in their humors, but she never doubted of great indulgence from them.

'Some singular habits she had, which, when new, charmed, but, after acquaintance, displeased her companions. She had by nature the same habit and power of excitement that is described in the spinning dervishes of the East. Like them she would spin until all around her were giddy, while her own brain, instead of being disturbed, was excited to great action. Pausing, she would declaim, verses of others, or her own, or act many parts, with strange catchwords and burdens, that seemed to act with mystical power on her own fancy, sometimes stimulating her to convulse the hearers with laughter, sometimes to melt them to tears. When her power began to languish, she would spin again till fired to recommence her singular drama, into which she wove figures from the scenes of her earlier childhood, her companions, and the dignitaries she sometimes saw, with fantasies unknown to life, unknown to heaven or earth.

'This excitement, as may be supposed, was not good for her. It usually came on in the evening, and often spoiled her sleep. She would wake in the night, and cheat her restlessness by inventions that teased, while they sometimes diverted her companions.

'She was also a sleep-walker; and this one trait of her case did somewhat alarm her guardians, who, otherwise, showed the profound ignorance as to this peculiar being, usual in the overseeing of the young. They consulted a physician, who said she would outgrow it, and prescribed a milk diet.

'Meantime, the fever of this ardent and too early stimulated nature was constantly increased by the restraints and narrow routine of the boarding school. She was always devising means to break in upon it. She had a taste — which

would have seemed ludicrous to her mates, if they had not felt some awe of her, from the touch of genius and power that never left her — for costume and fancy dresses. There was always some sash twisted about her, some drapery, something odd in the arrangement of her hair and dress; so that the methodical preceptress dared not let her go out without a careful scrutiny and remodelling, whose soberizing effects generally disappeared the moment she was in the free air.

‘At last a vent was assured for her in private theatricals. Play followed play, and in these and the rehearsals, she found entertainment congenial with her. The principal parts, as a matter of course, fell to her lot; most of the good suggestions and arrangements came from her: and, for a time, she ruled mostly, and shone triumphant.

‘During these performances, the girls had heightened their bloom with artificial red; this was delightful to them, it was something so out of the way. But Mariana, after the plays were over, kept her carmine saucer on the dressing-table, and put on her blushes, regularly as the morning. When stared and jeered at, she at first said she did it because she thought it made her look pretty; but, after a while, she became petulant about it, — would make no reply to any joke, but merely kept up the habit.

‘This irritated the girls, as all eccentricity does the world in general, more than vice or malignity. They talked it over among themselves till they were wrought up to a desire of punishing, once for all, this sometimes amusing, but so often provoking non-conformist. And having obtained leave of the mistress, they laid, with great glee, a plan, one evening, which was to be carried into execution next day at dinner.

‘Among Mariana’s irregularities was a great aversion to the meal-time ceremonial, — so long, so tiresome, she found it, to be seated at a certain moment, and to wait while each one was served, at so large a table, where there was scarcely any conversation; and from day to day it became more heavy to sit there, or go there at all; often as possible she excused herself on the ever-convenient plea of headache, and was hardly ever ready when the dinner-bell rang.

‘To-day the summons found her on the balcony, but gazing on the beautiful prospect. I have heard her say afterwards, that she had scarcely in her life been so happy, — and she was one with whom happiness was a still rapture. It was one of the most blessed summer days; the shadows of great white clouds empurpled the distant hills for a few moments, only to leave them more golden; the tall grass of the wide fields waved in the softest breeze. Pure blue were the heavens, and the same hue of pure contentment was in the heart of Mariana.

‘Suddenly on her bright mood jarred the dinner-bell. At first rose her usual thought, I will not, cannot go; and then the *must*, which daily life can always enforce, even upon the butterflies and birds, came, and she walked reluctantly to her room. She merely changed her dress, and never thought of adding the artificial rose to her cheek.

‘When she took her seat in the dining-hall, and was asked if she would be helped, raising her eyes, she saw the person who asked her was deeply rouged, with a bright glaring spot, perfectly round, on either cheek. She looked at the next, — same apparition! She then slowly passed her eyes down the whole line, and saw the same, with a suppressed smile distorting every countenance. Catching the design at once, she deliberately looked along her own side of the table, at every schoolmate in turn; every one had joined in the trick. The teachers strove to be grave, but she saw they enjoyed the joke. The servants could not suppress a titter.

‘When Warren Hastings stood at the bar of Westminster Hall, — when the Methodist preacher walked through a line of men, each of whom greeted him with a brickbat or rotten egg, — they had some preparation for the crisis, though it might be very difficult to meet it with an impassible brow. Our little girl was quite unprepared to find herself in the midst of a world which despised her, and triumphed in her disgrace.

‘She had ruled like a queen, in the midst of her companions; she had shed her animation through their lives, and loaded them with prodigal favors, nor once suspected that a popular favorite might not be loved. Now she felt that she had been but a dangerous plaything in the hands of those whose hearts she never had doubted.

‘Yet the occasion found her equal to it, for Mariana had the kind of spirit which, in a better cause, had made the Roman matron truly say of her death-wound, “It is not painful, Poetus.” She did not blench, — she did not change countenance. She swallowed her dinner with apparent composure. She made remarks to those near her, as if she had no eyes.

‘The wrath of the foe, of course, rose higher, and the moment they were freed from the restraints of the dining room, they all ran off, gayly calling, and sarcastically laughing, with backward glances, at Mariana, left alone.

‘Alone she went to her room, locked the door, and threw herself on the floor in strong convulsions. These had sometimes threatened her life, in earlier childhood, but of later years she had outgrown them. School-hours came, and she was not there. A little girl, sent to her door, could get no answer. The teachers became alarmed, and broke it open. Bitter was their penitence, and that of her companions, at the state in which they found her. For some hours terrible

anxiety was felt, but at last nature, exhausted, relieved herself by a deep slumber.

‘From this Mariana arose an altered being. She made no reply to the expressions of sorrow from her companions, none to the grave and kind, but undiscerning, comments of her teacher. She did not name the source of her anguish, and its poisoned dart sank deeply in. This was the thought which stung her so:— “What, not one, not a single one, in the hour of trial, to take my part? not one who refused to take part against me?” Past words of love, and caresses, little heeded at the time, rose to her memory, and gave fuel to her distempered heart. Beyond the sense of burning resentment at universal perfidy, she could not get. And Mariana, born for love, now hated all the world.

‘The change, however, which these feelings made in her conduct and appearance, bore no such construction to the careless observer. Her gay freaks were quite gone, her wildness, her invention. Her dress was uniform, her manner much subdued. Her chief interest seemed to be now in her studies, and in music. Her companions she never sought; but they, partly from uneasy, remorseful feelings, partly that they really liked her much better now that she did not puzzle and oppress them, sought her continually. And here the black shadow comes upon her life, the only stain upon the history of Mariana.

‘They talked to her, as girls having few topics naturally do, of one another. Then the demon rose within her, and spontaneously, without design, generally without words of positive falsehood, she became a genius of discord amongst them. She fanned those flames of envy and jealousy which a wise, true word from a third person will often quench forever; and by a glance, or seemingly light reply, she planted the seeds of dissension, till there was scarcely a peaceful affection, or sincere intimacy, in the circle where she lived, and could not but rule, for she was one whose nature was to that of the others as fire to clay.

‘It was at this time that I came to the school, and first saw Mariana. Me she charmed at once, for I was a sentimental child, who, in my early ill health, had been indulged in reading novels, till I had no eyes for the common. It was not, however, easy to approach her. Did I offer to run and fetch her handkerchief, she was obliged to go to her room, and would rather do it herself. She did not like to have people turn over for her the leaves of the music-book as she played. Did I approach my stool to her feet, she moved away as if to give me room. The bunch of wild flowers, which I timidly laid beside her plate, was left untouched. After some weeks, my desire to attract her notice really preyed upon me; and one day, meeting her alone in the entry, I fell upon my knees, and, kissing her hand, cried “O, Mariana, do let me love you, and try to love me a little!” But my idol snatched away her hand, and laughing wildly, ran into her room. After that day, her manner to me was not only cold, but repulsive, and I felt myself scorned.

‘Perhaps four months had passed thus, when, one afternoon, it became obvious that something more than common was brewing. Dismay and mystery were written in many faces of the older girls; much whispering was going on in corners.

‘In the evening, after prayers, the principal bade us stay; and, in a grave, sad voice, summoned forth Mariana to answer charges to be made against her.

‘Mariana stood up and leaned against the chimney-piece. Then eight of the older girls came forward, and preferred against her charges, — alas! too well founded, of calumny and falsehood.

‘At first, she defended herself with self-possession and eloquence. But when she found she could no more resist the truth, she suddenly threw herself down, dashing her head with all her force against the iron hearth, on which a fire was burning, and was taken up senseless.

‘The affright of those present was great. Now that they had perhaps killed her, they reflected it would have been as well if they had taken warning from the former occasion, and approached very carefully a nature so capable of any extreme. After a while she revived, with a faint groan, amid the sobs of her companions. I was on my knees by the bed, and held her cold hand. One of those most aggrieved took it from me, to beg her pardon, and say, it was impossible not to love her. She made no reply.

‘Neither that night, nor for several days, could a word be obtained from her, nor would she touch food; but, when it was presented to her, or any one drew near from any cause, she merely turned away her head, and gave no sign. The teacher saw that some terrible nervous affection had fallen upon her — that she grew more and more feverish. She knew not what to do.

‘Meanwhile, a new revolution had taken place in the mind of the passionate but nobly-tempered child. All these months nothing but the sense of injury had rankled in her heart. She had gone on in one mood, doing what the demon prompted, without scruple, and without fear.

‘But at the moment of detection, the tide ebbed, and the bottom of her soul lay revealed to her eye. How black, how stained, and sad! Strange, strange, that she had not seen before the baseness and cruelty of falsehood, the loveliness of truth! Now, amid the wreck, uprose the moral nature, which never before had attained the ascendant. “But,” she thought, “too late sin is revealed to me in all its deformity, and sin-defiled, I will not, cannot live. The main-spring of life is broken.”

‘The lady who took charge of this sad child had never well understood her before, but had always looked on her with great tenderness. And now love seemed, — when all around were in the greatest distress, fearing to call in

medical aid, fearing to do without it, — to teach her where the only balm was to be found that could heal the wounded spirit.

‘One night she came in, bringing a calming draught. Mariana was sitting as usual, her hair loose, her dress the same robe they had put on her at first, her eyes fixed vacantly upon the whited wall. To the proffers and entreaties of her nurse, she made no reply.

‘The lady burst into tears, but Mariana did not seem even to observe it.

‘The lady then said, “O, my child, do not despair; do not think that one great fault can mar a whole life! Let me trust you; let me tell you the griefs of my sad life. I will tell you, Mariana, what I never expected to impart to any one.”

‘And so she told her tale. It was one of pain, of shame, borne not for herself, but for one near and dear as herself. Mariana knew the dignity and reserve of this lady’s nature. She had often admired to see how the cheek, lovely, but no longer young, mantled with the deepest blush of youth, and the blue eyes were cast down at any little emotion. She had understood the proud sensibility of her character. She fixed her eyes on those now raised to hers, bright with fast-falling tears. She heard the story to the end, and then, without saying a word, stretched out her hand for the cup.

‘She returned to life, but it was as one who had passed through the valley of death. The heart of stone was quite broken in her, — the fiery will fallen from flame to coal. When her strength was a little restored, she had all her companions summoned, and said to them,— “I deserved to die, but a generous trust has called me back to life. I will be worthy of it, nor ever betray the trust, or resent injury more. Can you forgive the past?”

‘And they not only forgave, but, with love and earnest tears, clasped in their arms the returning sister. They vied with one another in offices of humble love to the humbled one; and let it be recorded, as an instance of the pure honor of which young hearts are capable, that these facts, known to some forty persons, never, so far as I know, transpired beyond those walls.

‘It was not long after this that Mariana was summoned home. She went thither a wonderfully instructed being, though in ways those who had sent her forth to learn little dreamed of.

‘Never was forgotten the vow of the returning prodigal. Mariana could not *resent*, could not *play false*. The terrible crisis, which she so early passed through, probably prevented the world from hearing much of her. A wild fire was tamed in that hour of penitence at the boarding-school, such as has oftentimes wrapped court and camp in a destructive glow.’

[Footnote A: Summer on the Lakes, p. 81.]

SELF-CULTURE.

Letters written to the beloved teacher, who so wisely befriended Margaret in her trial-hour, will best show how this high-spirited girl sought to enlarge and harmonize her powers.

‘*Cambridge, July 11, 1825.* — Having excused myself from accompanying my honored father to church, which I always do in the afternoon, when possible, I devote to you the hours which Ariosto and Helvetius ask of my eyes, — as, lying on my writing-desk, they put me in mind that they must return this week to their owner.

‘You keep me to my promise of giving you some sketch of my pursuits. I rise a little before five, walk an hour, and then practise on the piano, till seven, when we breakfast. Next I read French, — Sismondi’s *Literature of the South of Europe*, — till eight, then two or three lectures in Brown’s *Philosophy*. About half-past nine I go to Mr. Perkins’s school and study Greek till twelve, when, the school being dismissed, I recite, go home, and practise again till dinner, at two. Sometimes, if the conversation is very agreeable, I lounge for half an hour over the dessert, though rarely so lavish of time. Then, when I can, I read two hours in Italian, but I am often interrupted. At six, I walk, or take a drive. Before going to bed, I play or sing, for half an hour or so, to make all sleepy, and, about eleven, retire to write a little while in my journal, exercises on what I have read, or a series of characteristics which I am filling up according to advice. Thus, you see, I am learning Greek, and making acquaintance with metaphysics, and French and Italian literature.

“How,” you will say, “can I believe that my indolent, fanciful, pleasure-loving pupil, perseveres in such a course?” I feel the power of industry growing every day, and, besides the all-powerful motive of ambition, and a new stimulus lately given through a friend, I have learned to believe that nothing, no! not perfection, is unattainable. I am determined on distinction, which formerly I thought to win at an easy rate; but now I see that long years of labor must be given to secure even the “*succès de société*,” — which, however, shall never content me. I see multitudes of examples of persons of genius, utterly deficient in grace and the power of pleasurable excitement. I wish to combine both. I know the obstacles in my way. I am wanting in that intuitive tact and polish, which nature has bestowed upon some, but which I must acquire. And, on the other hand, my powers of intellect, though sufficient, I suppose, are not well disciplined. Yet all such hindrances may be overcome by an ardent spirit. If I fail, my consolation shall be found in active employment.’

*

‘*Cambridge, March 5, 1826.* — Duke Nicholas is to succeed the Emperor Alexander, thus relieving Europe from the sad apprehension of evil to be inflicted by the brutal Constantine, and yet depriving the Holy Alliance of its very soul. We may now hope more strongly for the liberties of unchained Europe; we look in anxious suspense for the issue of the struggle of Greece, the result of which seems to depend on the new autocrat. I have lately been reading Anastasius, the Greek Gil Bias, which has excited and delighted me; but I do not think you like works of this cast. You did not like my sombre and powerful Ormond, — though this is superior to Ormond in every respect; it translates you to another scene, hurls you into the midst of the burning passions of the East, whose vicissitudes are, however, interspersed by deep pauses of shadowy reflective scenes, which open upon you like the green watered little vales occasionally to be met with in the burning desert. There is enough of history to fix profoundly the attention, and prevent you from revolting from scenes profligate and terrific, and such characters as are never to be met with in our paler climes. How delighted am I to read a book which can absorb me to tears and shuddering, — not by individual traits of beauty, but by the spirit of adventure, — happiness which one seldom enjoys after childhood in this blest age, so philosophic, free, and enlightened to a miracle, but far removed from the ardent dreams and soft credulity of the world’s youth. Sometimes I think I would give all our gains for those times when young and old gathered in the feudal hall, listening with soul-absorbing transport to the romance of the minstrel, unrestrained and regardless of criticism, and when they worshipped nature, not as high-dressed and pampered, but as just risen from the bath.’

‘*Cambridge, May 14, 1826.* — I am studying Madame de Stael, Epictetus, Milton, Racine, and Castilian ballads, with great delight. There’s an assemblage for you. Now tell me, had you rather be the brilliant De Stael or the useful Edgeworth? — though De Stael is useful too, but it is on the grand scale, on liberalizing, regenerating principles, and has not the immediate practical success that Edgeworth has. I met with a parallel the other day between Byron and Rousseau, and had a mind to send it to you, it was so excellent.’

*

‘*Cambridge, Jan. 10, 1827.* — As to my studies, I am engrossed in reading the elder Italian poets, beginning with Berni, from whom I shall proceed to Pulci and Politian. I read very critically. Miss Francis[A] and I think of reading Locke,

as introductory to a course of English metaphysics, and then De Stael on Locke's system. Allow me to introduce this lady to you as a most interesting woman, in my opinion. She is a natural person, — a most rare thing in this age of cant and pretension. Her conversation is charming, — she brings all her powers to bear upon it; her style is varied, and she has a very pleasant and spirited way of thinking. I should judge, too, that she possesses peculiar purity of mind. I am going to spend this evening with her, and wish you were to be with us.'

*

'*Cambridge, Jan. 3, 1828.* — I am reading Sir William Temple's works, with great pleasure. Such enlarged views are rarely to be found combined with such acuteness and discrimination. His style, though diffuse, is never verbose or overloaded, but beautifully expressive; 'tis English, too, though he was an accomplished linguist, and wrote much and well in. French, Spanish, and Latin. The latter he used, as he says of the Bishop of Munster, (with whom he corresponded in that tongue,) "more like a man of the court and of business than a scholar." He affected not Augustan niceties, but his expressions are free and appropriate. I have also read a most entertaining book, which I advise you to read, (if you have not done so already,) Russell's *Tour in Germany*. There you will find more intelligent and detailed accounts than I have seen anywhere of the state of the German universities, Viennese court, secret associations, *Plica Polonica*, and other very interesting matters. There is a minute account of the representative government given to his subjects by the Duke of Weimar. I have passed a luxurious afternoon, having been in bed from dinner till tea, reading Rammohun Roy's book, and framing dialogues aloud on every argument beneath the sun. Really, I have not had my mind so exercised for months; and I have felt a gladiatorial disposition lately, and don't enjoy mere light conversation. The love of knowledge is prodigiously kindled within my soul of late; I study much and reflect more, and feel an aching wish for some person with whom I might talk fully and openly.

'Did you ever read the letters and reflections of Prince de Ligne, the most agreeable man of his day? I have just had it, and if it is new to you, I recommend it as an agreeable book to read at night just before you go to bed. There is much curious matter concerning Catharine II.'s famous expedition into Taurida, which puts down some of the romantic stories prevalent on that score, but relates more surprising realities. Also it gives much interesting information about that noble philosopher, Joseph II., and about the Turkish tactics and national character.'

*

‘Cambridge, Jan. 1830. — You need not fear to revive painful recollections. I often think of those sad experiences. True, they agitate me deeply. But it was best so. They have had a most powerful effect on my character. I tremble at whatever looks like dissimulation. The remembrance of that evening subdues every proud, passionate impulse. My beloved supporter in those sorrowful hours, your image shines as fair to my mind’s eye as it did in 1825, when I left you with my heart overflowing with gratitude for your singular and judicious tenderness. Can I ever forget that to your treatment in that crisis of youth I owe the true life, — the love of Truth and Honor?’

[Footnote A: Lydia Maria Child.]

LIFE IN CAMBRIDGE.

BY JAMES FREEMAN CLARKE.

*

“Extraordinary, generous seeking.”

GOETHE.

”Through, brothers, through, — this be
Our watchword in danger or sorrow,
Common clay to its mother dust,
All nobleness heavenward!”

THEODORE KOERNER.

”Thou friend whose presence on my youthful heart
Fell, like bright Spring upon some herbless plain;
How beautiful and calm and free thou wert
In thy young wisdom, when the mortal chain
Of custom thou didst burst and rend in twain,
And walk as free as light the clouds among!”

SHELLY.

“There are not a few instances of that conflict, known also to the fathers, of the

spirit with the flesh, the inner with the outer man, of the freedom of the will with the necessity of nature, the pleasure of the individual with the conventions of society, of the emergency of the case with the despotism of the rule. It is this, which, while it makes the interest of life, makes the difficulty of living. It is a struggle, indeed, between unequal powers, — between the man, who is a conscious moral person, and nature, or events, or bodies of men, which either want personality or unity; and hence the man, after fearful and desolating war, sometimes rises on the ruins of all the necessities of nature and all the prescriptions of society. But what these want in personality they possess in number, in recurrency, in invulnerability. The spirit of man, an agent indeed of curious power and boundless resource, but trembling with sensibilities, tender and irritable, goes out against the inexorable conditions of destiny, the lifeless forces of nature, or the ferocious cruelty of the multitude, and long before the hands are weary or the invention exhausted, the heart may be broken in the warfare.”

N.A. REVIEW, Jan., 1817, article “*Dichtung und Wahrheit.*”

II. CAMBRIDGE

*

The difficulty which we all feel in describing our past intercourse and friendship with Margaret Fuller, is, that the intercourse was so intimate, and the friendship so personal, that it is like making a confession to the public of our most interior selves. For this noble person, by her keen insight and her generous interest, entered into the depth of every soul with which she stood in any real relation. To print one of her letters, is like giving an extract from our own private journal. To relate what she was to us, is to tell how she discerned elements of worth and beauty where others could only have seen what was common-place and poor; it is to say what high hopes, what generous assurance, what a pure ambition, she entertained on our behalf, — a hope and confidence which may well be felt as a rebuke to our low attainments and poor accomplishments.

Nevertheless, it seems due to this great soul that those of us who have been blessed and benefited by her friendship should be willing to say what she has done for us, — undeterred by the thought that to reveal her is to expose ourselves.

My acquaintance with Sarah Margaret Fuller began in 1829. We both lived in Cambridge, and from that time until she went to Groton to reside, in 1833, I saw her, or heard from her, almost every day. There was a family connection, and we called each other cousin.[A] During this period, her intellect was intensely active. With what eagerness did she seek for knowledge! What fire, what exuberance, what reach, grasp, overflow of thought, shone in her conversation! She needed a friend to whom to speak of her studies, to whom to express the ideas which were dawning and taking shape in her mind. She accepted me for this friend, and to me it was a gift of the gods, an influence like no other.

For the first few months of our acquaintance, our intercourse was simply that of two young persons seeking entertainment in each other's society. Perhaps a note written at this time will illustrate the easy and graceful movement of her mind in this superficial kind of intercourse.

'March 16th, 1830. Half-past six, morning. — I have encountered that most common-place of glories, sunrise, (to say naught of being praised and wondered at by every member of the family in succession,) that I might have leisure to answer your note even as you requested. I thank you a thousand times for "The Rivals." [B] Alas!! I must leave my heart in the book, and spend the livelong morning in reading to a sick lady from some amusing story-book. I tell you of

this act of (in my professedly unamiable self) most unwonted charity, for three several reasons. Firstly, and foremostly, because I think that you, being a socialist by vocation, a sentimentalist by nature, and a Channingite from force of circumstances and fashion, will peculiarly admire this little self-sacrifice exploit. Secondly, because 'tis neither conformable to the spirit of the nineteenth century, nor the march of mind, that those churlish reserves should be kept up between *the right and left hands*, which belonged to ages of barbarism and prejudice, and could only have been inculcated for their use. Thirdly, and lastly, the true ladylike reason, — because I would fain have my correspondent enter into and sympathize with my feelings of the moment.

'As to the relationship; 'tis, I find, on inquiry, by no means to be compared with that between myself and —— ; of course, the intimacy cannot be so great. But no matter; it will enable me to answer your notes, and you will interest my imagination much more than if I knew you better. But I am exceeding legitimate note-writing limits. With a hope that this epistle may be legible to your undiscerning eyes, I conclude,

'Your cousin only thirty-seven degrees removed,

'M.'

The next note which I shall give was written not many days after, and is in quite a different vein. It is memorable to me as laying the foundation of a friendship which brought light to my mind, which enlarged my heart, and gave elevation and energy to my aims and purposes. For nearly twenty years, Margaret remained true to the pledges of this note. In a few years we were separated, but our friendship remained firm. Living in different parts of the country, occupied with different thoughts and duties, making other friends, — sometimes not seeing nor hearing from each other for months, — we never met without my feeling that she was ready to be interested in all my thoughts, to love those whom I loved, to watch my progress, to rebuke my faults and follies, to encourage within me every generous and pure aspiration, to demand of me, always, the best that I could be or do, and to be satisfied with no mediocrity, no conformity to any low standard.

And what she thus was to me, she was to many others. Inexhaustible in power of insight, and with a good-will "broad as ether," she could enter into the needs, and sympathize with the various excellences, of the greatest variety of characters. One thing only she demanded of all her friends, — that they should have some "extraordinary generous seeking,"[C] that they should not be satisfied with the common routine of life, — that they should aspire to something higher,

better, holier, than they had now attained. Where this element of aspiration existed, she demanded no originality of intellect, no greatness of soul. If these were found, well; but she could love, tenderly and truly, where they were not. But for a worldly character, however gifted, she felt and expressed something very like contempt. At this period, she had no patience with self-satisfied mediocrity. She afterwards learned patience and unlearned contempt; but at the time of which I write, she seemed, and was to the multitude, a haughty and supercilious person, — while to those whom she loved, she was all the more gentle, tender and true.

Margaret possessed, in a greater degree than any person I ever knew, the power of so magnetizing others, when she wished, by the power of her mind, that they would lay open to her all the secrets of their nature. She had an infinite curiosity to know individuals, — not the vulgar curiosity which seeks to find out the circumstances of their outward lives, but that which longs to understand the inward springs of thought and action in their souls. This desire and power both rested on a profound conviction of her mind in the individuality of every human being. A human being, according to her faith, was not the result of the presence and stamp of outward circumstances, but an original *monad*, with a certain special faculty, capable of a certain fixed development, and having a profound personal unity, which the ages of eternity might develop, but could not exhaust. I know not if she would have stated her faith in these terms, but some such conviction appeared in her constant endeavor to see and understand the germinal principle, the special characteristic, of every person whom she deemed worthy of knowing at all. Therefore, while some persons study human nature in its universal laws, and become great philosophers, moralists and teachers of the race, — while others study mankind in action, and, seeing the motives and feelings by which masses are swayed, become eminent politicians, sagacious leaders, and eminent in all political affairs, — a few, like Margaret, study character, and acquire the power of exerting profoundest influence on individual souls.

I had expressed to her my desire to know something of the history of her mind, — to understand her aims, her hopes, her views of life. In a note written in reply, she answered me thus: —

‘I cannot bring myself to write you what you wished. You would be disappointed, at any rate, after all the solemn note of preparation; the consciousness of this would chill me now. Besides, I cannot be willing to leave with you such absolute *vagaries* in a tangible, examinable shape. I think of your after-smiles, of your colder moods. But I will tell you, when a fitting opportunity presents, all that can interest you, and perhaps more. And excuse my caution. I

do not profess, I may not dare, to be generous in these matters.'

To this I replied to the effect that, "in my coldest mood I could not criticize words written in a confiding spirit;" and that, at all events, she must not expect of me a confidence which she dared not return. This was the substance of a note to which Margaret thus replied: —

'I thank you for your note. Ten minutes before I received it, I scarcely thought that anything again would make my stifled heart throb so warm a pulse of pleasure. Excuse my cold doubts, my selfish arrogance, — you will, when I tell you that this experiment has before had such uniform results; those who professed to seek my friendship, and whom, indeed, I have often truly loved, have always learned to content themselves with that inequality in the connection which I have never striven to veil. Indeed, I have thought myself more valued and better beloved, because the sympathy, the interest, were all on my side. True! such regard could never flatter my pride, nor gratify my affections, since it was paid not to myself, but to the need they had of me; still, it was dear and pleasing, as it has given me an opportunity of knowing and serving many lovely characters; and I cannot see that there is anything else for me to do on earth. And I should rejoice to cultivate generosity, since (see that *since*) affections gentler and more sympathetic are denied me.

'I would have been a true friend to you; ever ready to solace your pains and partake your joy as far as possible. Yet I cannot but rejoice that I have met a person who could discriminate and reject a proffer of this sort. Two years ago I should have ventured to proffer you friendship, indeed, on seeing such an instance of pride in you; but I have gone through a sad process of feeling since, and those emotions, so necessarily repressed, have lost their simplicity, their ardent beauty. *Then*, there was nothing I might not have disclosed to a person capable of comprehending, had I ever seen such an one! Now there are many voices of the soul which I imperiously silence. This results not from any particular circumstance or event, but from a gradual ascertaining of realities.

'I cannot promise you any limitless confidence, but I *can* promise that no timid caution, no haughty dread shall prevent my telling you the truth of my thoughts on any subject we may have in common. Will this satisfy you? Oh let it! suffer me to know you.'

In a postscript she adds, 'No other cousin or friend of any style is to see this note.' So for twenty years it has lain unseen, but for twenty years did we remain true to the pledges of that period. And now that noble heart sleeps beneath the tossing Atlantic, and I feel no reluctance in showing to the world this expression of pure youthful ardor. It may, perhaps, lead some wise worldlings, who doubt the possibility of such a relation, to reconsider the grounds of their scepticism;

or, if not that, it may encourage some youthful souls, as earnest and eager as ours, to trust themselves to their hearts' impulse, and enjoy some such blessing as came to us.

Let me give extracts from other notes and letters, written by Margaret, about the same period.

'Saturday evening, May 1st, 1830. — The holy moon and merry-toned wind of this night woo to a vigil at the open window; a half-satisfied interest urges me to live, love and perish! in the noble, wronged heart of Basil;[D] my Journal, which lies before me, tempts to follow out and interpret the as yet only half-understood musings of the past week. Letter-writing, compared with any of these things, takes the ungracious semblance of a duty. I have, nathless, after a two hours' reverie, to which this resolve and its preliminaries have formed excellent warp, determined to sacrifice this hallowed time to you.

'It did not in the least surprise me that you found it impossible at the time to avail yourself of the confidential privileges I had invested you with. On the contrary, I only wonder that we should ever, after such gage given and received, (not by a look or tone, but by letter,) hold any frank communication. Preparations are good in life, prologues ruinous. I felt this even before I sent my note, but could not persuade myself to consign an impulse so embodied, to oblivion, from any consideration of expediency.'

*

'May 4th, 1830. — I have greatly wished to see among us such a person of genius as the nineteenth century can afford — i.e., one who has tasted in the morning of existence the extremes of good and ill, both imaginative and real. I had imagined a person endowed by nature with that acute sense of Beauty, (i.e., Harmony or Truth,) and that vast capacity of desire, which give soul to love and ambition. I had wished this person might grow up to manhood alone (but not alone in crowds); I would have placed him in a situation so retired, so obscure, that he would quietly, but without bitter sense of isolation, stand apart from all surrounding him. I would have had him go on steadily, feeding his mind with congenial love, hopefully confident that if he only nourished his existence into perfect life, Fate would, at fitting season, furnish an atmosphere and orbit meet for his breathing and exercise. I wished he might adore, not fever for, the bright phantoms of his mind's creation, and believe them but the shadows of external

things to be met with hereafter. After this steady intellectual growth had brought his powers to manhood, so far as the ideal can do it, I wished this being might be launched into the world of realities, his heart glowing with the ardor of an immortal toward perfection, his eyes searching everywhere to behold it; I wished he might collect into one burning point those withering, palsying convictions, which, in the ordinary routine of things, so gradually pervade the soul; that he might suffer, in brief space, agonies of disappointment commensurate with his unpreparedness and confidence. And I thought, thus thrown back on the representing pictorial resources I supposed him originally to possess, with such material, and the need he must feel of using it, such a man would suddenly dilate into a form of Pride, Power, and Glory, — a centre, round which asking, aimless hearts might rally, — a man fitted to act as interpreter to the one tale of many-languaged eyes!

‘What words are these! Perhaps you will feel as if I sought but for the longest and strongest. Yet to my ear they do but faintly describe the imagined powers of such a being.’

Margaret’s home at this time was in the mansion-house formerly belonging to Judge Dana, — a large, old-fashioned building, since taken down, standing about a quarter of a mile from the Cambridge Colleges, on the main road to Boston. The house stood back from the road, on rising ground, which overlooked an extensive landscape. It was always a pleasure to Margaret to look at the outlines of the distant hills beyond the river, and to have before her this extent of horizon and sky. In the last year of her residence in Cambridge, her father moved to the old Brattle place, — a still more ancient edifice, with large, old-fashioned garden, and stately rows of Linden trees. Here Margaret enjoyed the garden walks, which took the place of the extensive view.

During these five years her life was not diversified by events, but was marked by an inward history. Study, conversation, society, friendship, and reflection on the aim and law of life, made up her biography. Accordingly, these topics will constitute the substance of this chapter, though sometimes, in order to give completeness to a subject, we may anticipate a little, and insert passages from the letters and journals of her Groton life.

[Footnote A: I had once before seen Margaret, when we were both children about five years of age. She made an impression on my mind which was never effaced, and I distinctly recollect the joyful child, with light flowing locks and bright face, who led me by the hand down the back-steps of her house into the garden. This was when her father lived in Cambridgeport, in a house on Cherry street, in front of which still stand some handsome trees, planted by him in the

year of Margaret's birth.]

[Footnote B: "The Rivals" was a novel I had lent her, — if I remember right, by the author of "The Collegians;" a writer who in those days interested us not a little.]

[Footnote C: These words of Goethe, which I have placed among the mottoes at the beginning of this chapter, were written by Margaret on the first page of a richly gilt and bound blank book, which she gave to me, in 1832, for a private journal. The words of Körner are also translated by herself, and were given to me about the same time.]

[Footnote D: The hero of a novel she was reading.]

I.

FRIENDSHIP.

"Friendly love perfecteth mankind."

BACON.

"To have found favor in thy sight
Will still remain
A river of thought, that full of light
Divides the plain."

MILNES.

"Cui potest vita esse vitalis, (ut ait Ennius,) quæ non in amici mutatâ benevolentîâ requiescat?" — CICERO.

*

It was while living at Cambridge that Margaret commenced several of those friendships which lasted through her life, and which were the channels for so large a part of her spiritual activity. In giving some account of her in these relations, there is only the alternative of a prudent reserve which omits whatever is liable to be misunderstood, or a frank utterance which confides in the good sense and right feeling of the reader. By the last course, we run the risk of allowing our friend to be misunderstood; but by the first we make it certain that the most important part of her character shall not be understood at all. I have, therefore, thought it best to follow, as far as I can, her own ideas on this subject,

which I find in two of her letters to myself. The first is dated, Groton, Jan. 8th, 1839. I was at that time editing a theological and literary magazine, in the West, and this letter was occasioned by my asking her to allow me to publish therein certain poems, and articles of hers, which she had given me to read.

‘And I wish now, as far as I can, to give my reasons for what you consider absurd squeamishness in me. You may not acquiesce in my view, but I think you will respect it *as mine* and be willing to act upon it so far as I am concerned.

‘Genius seems to me excusable in taking the public for a confidant. Genius is universal, and can appeal to the common heart of man. But even here I would not have it too direct. I prefer to see the thought or feeling made universal. How different the confidence of Goethe, for instance, from that of Byron!

‘But for us lesser people, who write verses merely as vents for the overflowings of a personal experience, which in every life of any value craves occasionally the accompaniment of the lyre, it seems to me that all the value of this utterance is destroyed by a hasty or indiscriminate publicity. The moment I lay open my heart, and tell the fresh feeling to any one who chooses to hear, I feel profaned.

‘When it has passed into experience, when the flower has gone to seed, I don’t care who knows it, or whither they wander. I am no longer it, — I stand on it. I do not know whether this is peculiar to me, or not, but I am sure the moment I cease to have any reserve or delicacy about a feeling, it is on the wane.

‘About putting beautiful verses in your Magazine, I have no feeling except what I should have about furnishing a room. I should not put a dressing-case into a parlor, or a book-case into a dressing-room, because, however good things in their place, they were not in place there. And this, not in consideration of the public, but of my own sense of fitness and harmony.’

The next extract is from a letter written to me in 1842, after a journey which we had taken to the White Mountains, in the company of my sister, and Mr. and Mrs. Farrar. During this journey Margaret had conversed with me concerning some passages of her private history and experience, and in this letter she asks me to be prudent in speaking of it, giving her reasons as follows: —

‘*Cambridge, July 31, 1842.* — ... I said I was happy in having no secret. It is my nature, and has been the tendency of my life, to wish that all my thoughts and deeds might lie, as the “open secrets” of Nature, free to all who are able to understand them. I have no reserves, except intellectual reserves; for to speak of things to those who cannot receive them is stupidity, rather than frankness. But in this case, I alone am not concerned. Therefore, dear James, give heed to the subject. You have received a key to what was before unknown of your friend; you have made use of it, now let it be buried with the past, over whose passages

profound and sad, yet touched with heaven-born beauty, “let silence stand sentinel.””

I shall endeavor to keep true to the spirit of these sentences in speaking of Margaret’s friendships. Yet not to speak of them in her biography would be omitting the most striking feature of her character. It would be worse than the play of Hamlet with Hamlet omitted. Henry the Fourth without Sully, Gustavus Adolphus without Oxenstiern, Napoleon without his marshals, Socrates without his scholars, would be more complete than Margaret without her friends. So that, in touching on these private relations, we must be everywhere “bold,” yet not “too bold.” The extracts will be taken indiscriminately from letters written to many friends.

The insight which Margaret displayed in finding her friends, the magnetism by which she drew them toward herself, the catholic range of her intimacies, the influence which she exercised to develop the latent germ of every character, the constancy with which she clung to each when she had once given and received confidence, the delicate justice which kept every intimacy separate, and the process of transfiguration which took place when she met any one on this mountain of Friendship, giving a dazzling lustre to the details of common life, — all these should be at least touched upon and illustrated, to give any adequate view of her in these relations.

Such a prejudice against her had been created by her faults of manner, that the persons she might most wish to know often retired from her and avoided her. But she was “sagacious of her quarry,” and never suffered herself to be repelled by this. She saw when any one belonged to her, and never rested till she came into possession of her property. I recollect a lady who thus fled from her for several years, yet, at last, became most nearly attached to her. This “wise sweet” friend, as Margaret characterized her in two words, a flower hidden in the solitude of deep woods, Margaret saw and appreciated from the first.

See how, in the following passage, she describes to one of her friends her perception of character, and her power of attracting it, when only fifteen years old.

‘*Jamaica Plains, July, 1840.* — Do you remember my telling you, at Cohasset, of a Mr. ——— staying with us, when I was fifteen, and all that passed? Well, I have not seen him since, till, yesterday, he came here. I was pleased to find, that, even at so early an age, I did not overrate those I valued. He was the same as in memory; the powerful eye dignifying an otherwise ugly face; the calm wisdom, and refined observation, the imposing *manière d’être*, which anywhere would give him an influence among men, without his taking any trouble, or making any sacrifice, and the great waves of feeling that seemed to

rise as an attractive influence, and overspread his being. He said, nothing since his childhood had been so marked as his visit to our house; that it had dwelt in his thoughts unchanged amid all changes. I could have wished he had never returned to change the picture. He looked at me continually, and said, again and again, he should have known me anywhere; but O how changed I must be since that epoch of pride and fulness! He had with him his son, a wild boy of five years old, all brilliant with health and energy, and with the same powerful eye. He said, — You know I am not one to confound acuteness and rapidity of intellect with real genius; but he is for those an extraordinary child. He would astonish you, but I look deep enough into the prodigy to see the work of an extremely nervous temperament, and I shall make him as dull as I can. “Margaret,” (pronouncing the name in the same deliberate searching way he used to do,) “I love him so well, I will try to teach him moderation. If I can help it, he shall not feed on bitter ashes, nor try these paths of avarice and ambition.” It made me feel very strangely to hear him talk so to my old self. What a gulf between! There is scarce a fibre left of the haughty, passionate, ambitious child he remembered and loved. I felt affection for him still; for his character was formed then, and had not altered, except by ripening and expanding! But thus, in other worlds, we shall remember our present selves.’

Margaret’s constancy to any genuine relation, once established, was surprising. If her friends’ *aim* changed, so as to take them out of her sphere, she was saddened by it, and did not let them go without a struggle. But wherever they continued “true to the original standard,” (as she loved to phrase it) her affectionate interest would follow them unimpaired through all the changes of life. The principle of this constancy she thus expresses in a letter to one of her brothers: —

‘Great and even *fatal* errors (so far as this life is concerned) could not destroy my friendship for one in whom I am sure of the kernel of nobleness.’

She never formed a friendship until she had seen and known this germ of good; and afterwards judged conduct by this. To this germ of good, to this highest law of each individual, she held them true. But never did she act like those who so often judge of their friend from some report of his conduct, as if they had never known him, and allow the inference from a single act to alter the opinion formed by an induction from years of intercourse. From all such weakness Margaret stood wholly free.

I have referred to the wide range of Margaret’s friendships. Even at this period this variety was very apparent. She was the centre of a group very different from each other, and whose only affinity consisted in their all being polarized by the strong attraction of her mind, — all drawn toward herself. Some

of her friends were young, gay and beautiful; some old, sick or studious. Some were children of the world, others pale scholars. Some were witty, others slightly dull. But all, in order to be Margaret's friends, must be capable of seeking something, — capable of some aspiration for the better. And how did she glorify life to all! all that was tame and common vanishing away in the picturesque light thrown over the most familiar things by her rapid fancy, her brilliant wit, her sharp insight, her creative imagination, by the inexhaustible resources of her knowledge, and the copious rhetoric which found words and images always apt and always ready. Even then she displayed almost the same marvellous gift of conversation which afterwards dazzled all who knew her, — with more perhaps of freedom, since she floated on the flood of our warm sympathies. Those who know Margaret only by her published writings know her least; her notes and letters contain more of her mind; but it was only in conversation that she was perfectly free and at home.

Margaret's constancy in friendship caused her to demand it in others, and thus she was sometimes exacting. But the pure Truth of her character caused her to express all such feelings with that freedom and simplicity that they became only as slight clouds on a serene sky, giving it a tenderer beauty, and casting picturesque shades over the landscape below. From her letters to different friends I select a few examples of these feelings.

'The world turns round and round, and you too must needs be negligent and capricious. You have not answered my note; you have not given me what I asked. You do not come here. Do not you act so, — it is the drop too much. The world seems not only turning but tottering, when my kind friend plays such a part.'

*

'You need not have delayed your answer so long; why not at once answer the question I asked? Faith is not natural to me; for the love I feel to others is not in the idleness of poverty, nor can I persist in believing the best; merely to save myself pain, or keep a leaning place for the weary heart. But I should believe you, because I have seen that your feelings are strong and constant; they have never disappointed me, when closely scanned.'

*

'*July 6, 1832.* — I believe I behaved very badly the other evening. I did not think so yesterday. I had been too surprised and vexed to recover very easily, but

to-day my sophistries have all taken wing, and I feel that nothing good could have made me act with such childish petulance and bluntness towards one who spoke from friendly emotions. Be at peace; I will astonish you by my repose, mildness, and self-possession. No, that is silly; but I believe it cannot be right to be on such terms with any one, that, on the least vexation, I indulge my feelings at his or her expense. We will talk less, but we shall be very good friends still, I hope. Shall not we?’

In the last extract, we have an example of that genuine humility, which, being a love of truth, underlaid her whole character, notwithstanding its seeming pride. She could not have been great as she was, without it.[A]

‘*December 19th, 1829.* — I shall always be glad to have you come to me when saddened. The melancholic does not misbecome you. The lights of your character are *wintry*. They are generally inspiriting, life-giving, but, if perpetual, would glare too much on the tired sense; one likes sometimes a cloudy day, with its damp and warmer breath, — its gentle, down-looking shades. Sadness in some is intolerably ungraceful and oppressive; it affects one like a cold rainy day in June or September, when all pleasure departs with the sun; everything seems out of place and irrelative to the time; the clouds are fog, the atmosphere leaden, — but ’tis not so with you.’

Of her own truthfulness to her friends, which led her frankly to speak to them of their faults or dangers, her correspondence gives constant examples.

The first is from a letter of later date than properly belongs to this chapter, but is so wholly in her spirit of candor that I insert it here. It is from a letter written in 1843.

‘I have been happy in the sight of your pure design, of the sweetness and serenity of your mind. In the inner sanctuary we met. But I shall say a few blunt words, such as were frequent in the days of intimacy, and, if they are needless, you will let them fall to the ground. Youth is past, with its passionate joys and griefs, its restlessness, its vague desires. You have chosen your path, you have rounded out your lot, your duties are before you. *Now* beware the mediocrity that threatens middle age, its limitation of thought and interest, its dulness of fancy, its too external life, and mental thinness. Remember the limitations that threaten every professional man, only to be guarded against by great earnestness and watchfulness. So take care of yourself, and let not the intellect more than the spirit be quenched.

*

‘It is such a relief to me to be able to speak to you upon a subject which I

thought would never lie open between us. Now there will be no place which does not lie open to the light. I can always say what I feel. And the way in which you took it, so like yourself, so manly and noble, gives me the assurance that I shall have the happiness of seeing in you that symmetry, that conformity in the details of life with the highest aims, of which I have sometimes despaired. How much higher, dear friend, is “the mind, the music breathing from the” *life*, than anything we can say! Character is higher than intellect; this I have long felt to be true; may we both live as if we knew it.

‘I hope and believe we may be yet very much to each other. Imperfect as I am, I feel myself not unworthy to be a true friend. Neither of us is unworthy. In few natures does such love for the good and beautiful survive the ruin of all youthful hopes, the wreck of all illusions.’

*

‘I supposed our intimacy would terminate when I left Cambridge. Its continuing to subsist is a matter of surprise to me. And I expected, ere this, you would have found some Hersilia, or such-like, to console you for losing your Natalia. See, my friend, I am three and twenty. I believe in love and friendship, but I cannot but notice that circumstances have appalling power, and that those links which are not riveted by situation, by *interest*, (I mean, not mere worldly interest, but the instinct of self-preservation,) may be lightly broken by a chance touch. I speak not in misanthropy, I believe

“Die Zeit ist schlecht, doch giebt's noch grosse Herzen.”

‘Surely I maybe pardoned for aiming at the same results with the chivalrous “gift of the Gods.” I cannot endure to be one of those shallow beings who can never get beyond the primer of experience, — who are ever saying, —

”Ich habe geglaubt, *nun glaube ich erst recht*,
Und geht es auch wunderbarlich, geht es auch schlecht,
Ich bleibe in gläubigen Orden.”

Yet, when you write, write freely, and if I don't like what you say, let me say so. I have ever been frank, as if I expected to be intimate with you good three-score years and ten. I am sure we shall always esteem each other. I have that much faith.’

*

‘Jan. 1832. — All that relates to — must be interesting to me, though I never voluntarily think of him now. The apparent caprice of his conduct has shaken my faith, but not destroyed my hope. That hope, if I, who have so mistaken others, may dare to think I know myself, was never selfish. It is painful to lose a friend whose knowledge and converse mingled so intimately with the growth of my mind, — an early friend to whom I was all truth and frankness, seeking nothing but equal truth and frankness in return. But this evil may be borne; the hard, the lasting evil was to learn to distrust my own heart, and lose all faith in my power of knowing others. In this letter I see again that peculiar pride, that contempt of the forms and shows of goodness, that fixed resolve to be anything but “like unto the Pharisees,” which were to my eye such happy omens. Yet how strangely distorted are all his views! The daily influence of his intercourse with me was like the breath he drew; it has become a part of him. Can he escape from himself? Would he be unlike all other mortals? His feelings are as false as those of Alcibiades. He influenced me, and helped form me to what I am. Others shall succeed him. Shall I be ashamed to owe anything to friendship? But why do I talk? — a child might confute him by defining the term *human being*. He will gradually work his way into light; if too late for our friendship, not, I trust, too late for his own peace and honorable well-being. I never insisted on being the instrument of good to him. I practised no little arts, no! not to effect the good of the friend I loved. I have prayed to Heaven, (surely we are sincere when doing that,) to guide him in the best path for him, however far from me that path might lead. The lesson I have learned may make me a more useful friend, a more efficient aid to others than I could be to him; yet I hope I shall not be denied the consolation of knowing surely, one day, that all which appeared evil in the companion of happy years was but error.’

*

‘I think, since you have seen so much of my character, that you must be sensible that any reserves with those whom I call my friends, do not arise from duplicity, but an instinctive feeling that I could not be understood. I can truly say that I wish no one to overrate me; undeserved regard could give me no pleasure; nor will I consent to practise charlatanism, either in friendship or anything else.’

*

‘You ought not to think I show a want of generous confidence, if I sometimes try the ground on which I tread, to see if perchance it may return the echoes of

hollowness.’

*

‘Do not cease to respect me as formerly. It seems to me that I have reached the “parting of the ways” in my life, and all the knowledge which I have toiled to gain only serves to show me the disadvantages of each. None of those who think themselves my friends can aid me; each, careless, takes the path to which present convenience impels; and all would smile or stare, could they know the aching and measureless wishes, the sad apprehensiveness, which make me pause and strain my almost hopeless gaze to the distance. What wonder if my present conduct should be mottled by selfishness and incertitude? Perhaps you, who *can* make your views certain, cannot comprehend me; though you showed me last night a penetration which did not flow from sympathy. But this I may say — though the glad light of hope and ambitious confidence, which has vitalized my mind, should be extinguished forever, I will not in life act a mean, ungenerous, or useless part. Therefore, let not a slight thing lessen your respect for me. If you feel as much pain as I do, when obliged to diminish my respect for any person, you will be glad of this assurance. I hope you will not think this note in the style of a French novel.’

[Footnote A: According to Dryden’s beautiful statement —

’For as high turrets, in their airy sweep
Require foundations, in proportion deep
And lofty cedars as far upward shoot
As to the nether heavens they drive the root;
So low did her secure foundation lie,
She was not humble, but humility.’]

POWER OF CIRCUMSTANCES.

‘Do you remember a conversation we had in the garden, one starlight evening, last summer, about the incalculable power which outward circumstances have over the character? You would not sympathize with the regrets I expressed, that mine had not been formed amid scenes and persons of nobleness and beauty, eager passions and dignified events, instead of those secret trials and petty conflicts which make my transition state so hateful to my memory and my tastes. You then professed the faith which I resigned with such anguish, — the faith which a Schiller could never attain, — a faith in the power of the human will.

Yet now, in every letter, you talk to me of the power of circumstances. You tell me how changed you are. Every one of your letters is different from the one preceding, and all so altered from your former self. For are you not leaving all our old ground, and do you not apologize to me for all your letters? Why do you apologize? I think I know you very, very well; considering that we are both human, and have the gift of concealing our thoughts with words. Nay, further — I do not believe you will be able to become anything which I cannot understand. I know I can sympathize with all who feel and think, from a Dryfesdale up to a Max Piccolomini. You say, you have become a machine. If so, I shall expect to find you a grand, high-pressure, wave-compelling one — requiring plenty of fuel. You must be a steam-engine, and move some majestic fabric at the rate of thirty miles an hour along the broad waters of the nineteenth century. None of your pendulum machines for me! I should, to be sure, turn away my head if I should hear you tick, and mark the quarters of hours; but the buzz and whiz of a good large life-endangerer would be music to mine ears. Oh, no! sure there is no danger of your requiring to be set down quite on a level, kept in a still place, and wound up every eight days. Oh no, no! you are not one of that numerous company, who

— “live and die,
Eat, drink, wake, sleep between,
Walk, talk like clock-work too,
So pass in order due,
Over the scene,
To where the past — *is* past,
The future — nothing yet,” &c. &c.

But we must all be machines: you shall be a steam-engine; — shall be a mill, with extensive water-privileges, — and I will be a spinning jenny. No! upon second thoughts, I will not be a machine. I will be an instrument, not to be confided to vulgar hands, — for instance, a chisel to polish marble, or a whetstone to sharpen steel!’

In an unfinished tale, Margaret has given the following studies of character. She is describing two of the friends of the hero of her story. Unquestionably the traits here given were taken from life, though it might not be easy to recognize the portrait of any individual in either sketch. Yet we insert it here to show her own idea of this relation, and her fine feeling of the action and reaction of these subtle intimacies.

‘Now, however, I found companions, in thought, at least One, who had great

effect on my mind, I may call Lytton. He was as premature as myself; at thirteen a man in the range of his thoughts, analyzing motives, and explaining principles, when he ought to have been playing cricket, or hunting in the woods. The young Arab, or Indian, may dispense with mere play, and enter betimes into the histories and practices of manhood, for all these are, in their modes of life, closely connected with simple nature, and educate the body no less than the mind; but the same good cannot be said of lounging lazily under a tree, while mentally accompanying Gil Blas through his course of intrigue and adventure, and visiting with him the impure atmosphere of courtiers, picaroons, and actresses. This was Lytton's favorite reading; his mind, by nature subtle rather than daring, would in any case have found its food in the now hidden workings of character and passion, the by-play of life, the unexpected and seemingly incongruous relations to be found there. He loved the natural history of man, not religiously, but for entertainment. What he sought, he found, but paid the heaviest price. All his later days were poisoned by his subtlety, which made it impossible for him to look at any action with a single and satisfied eye. He tore the buds open to see if there were no worm sheathed in the blushful heart, and was so afraid of overlooking some mean possibility, that he lost sight of virtue. Grubbing like a mole beneath the surface of earth, rather than reading its living language above, he had not faith enough to believe in the flower, neither faith enough to mine for the gem, and remains at penance in the limbo of halfnesses, I trust not forever. Then all his characteristics wore brilliant hues. He was very witty, and I owe to him the great obligation of being the first and only person who has excited me to frequent and boundless gayety. The sparks of his wit were frequent, slight surprises; his was a slender dart, and rebounded easily to the hand. I like the scintillating, arrowy wit far better than broad, genial humor. The light metallic touch pleases me. When wit appears as fun and jollity, she wears a little of the Silenus air; — the Mercurial is what I like.

'In later days, — for my intimacy with him lasted many years, — he became the feeder of my intellect. He delighted to ransack the history of a nation, of an art or a science, and bring to me all the particulars. Telling them fixed them in his own memory, which was the most tenacious and ready I have ever known; he enjoyed my clear perception as to their relative value, and I classified them in my own way. As he was omnivorous, and of great mental activity, while my mind was intense, though rapid in its movements, and could only give itself to a few things of its own accord, I traversed on the wings of his effort large demesnes that would otherwise have remained quite unknown to me. They were not, indeed, seen to the same profit as my own province, whose tillage I knew, and whose fruits were the answer to my desire; but the fact of seeing them at all

gave a largeness to my view, and a candor to my judgment. I could not be ignorant how much there was I did not know, nor leave out of sight the many sides to every question, while, by the law of affinity, I chose my own.

‘Lytton was not loved by any one. He was not positively hated, or disliked; for there was nothing which the general mind could take firm hold of enough for such feelings. Cold, intangible, he was to play across the life of others. A momentary resentment was sometimes felt at a presence which would not mingle with theirs; his scrutiny, though not hostile, was recognized as unfeeling and impertinent, and his mirth unsettled all objects from their foundations. But he was soon forgiven and forgotten. Hearts went not forth to war against or to seek one who was a mere experimentalist and observer in existence. For myself, I did not love, perhaps, but was attached to him, and the attachment grew steadily, for it was founded, not on what I wanted of him, but on his truth to himself. His existence was a real one; he was not without a pathetic feeling of his wants, but was never tempted to supply them by imitating the properties of any other character. He accepted the law of his being, and never violated it. This is next best to the nobleness which transcends it. I did not disapprove, even when I disliked, his acts.

‘Amadin, my other companion, was as slow and deep of feeling, as Lytton was brilliant, versatile, and cold. His temperament was generally grave, even to apparent dulness; his eye gave little light, but a slow fire burned in its depths. His was a character not to be revealed to himself, or others, except by the important occasions of life. Though every day, no doubt, deepened and enriched him, it brought little that he could show or recall. But when his soul, capable of religion, capable of love, was moved, all his senses were united in the word or action that followed, and the impression made on you was entire. I have scarcely known any capable of such true manliness as he. His poetry, written, or unwritten, was the experience of life. It lies in few lines, as yet, but not one of them will ever need to be effaced.

‘Early that serious eye inspired in me a trust that has never been deceived. There was no magnetism in him, no lights and shades that could stir the imagination; no bright ideal suggested by him stood between the friend and his self. As the years matured that self, I loved him more, and knew him as he knew himself, always in the present moment; he could never occupy my mind in absence.’

Another of her early friends, Rev. F.H. Hedge, has sketched his acquaintance with her in the following paper, communicated by him for these memoirs. Somewhat older than Margaret, and having enjoyed an education at a German university, his conversation was full of interest and excitement to her. He opened

to her a whole world of thoughts and speculations which gave movement to her mind in a congenial direction.

*

“My acquaintance with Margaret commenced in the year 1823, at Cambridge, my native place and hers. I was then a member of Harvard College, in which my father held one of the offices of instruction, and I used frequently to meet her in the social circles of which the families connected with the college formed the nucleus. Her father, at this time, represented the county of Middlesex in the Congress of the United States.

“Margaret was then about thirteen, — a child in years, but so precocious in her mental and physical developments, that she passed for eighteen or twenty. Agreeably to this estimate, she had her place in society, as a lady full-grown.

“When I recall her personal appearance, as it was then and for ten or twelve years subsequent to this, I have the idea of a blooming girl of a florid complexion and vigorous health, with a tendency to robustness, of which she was painfully conscious, and which, with little regard to hygienic principles, she endeavored to suppress or conceal, thereby preparing for herself much future suffering. With no pretensions to beauty then, or at any time, her face was one that attracted, that awakened a lively interest, that made one desirous of a nearer acquaintance. It was a face that fascinated, without satisfying. Never seen in repose, never allowing a steady perusal of its features, it baffled every attempt to judge the character by physiognomical induction. You saw the evidence of a mighty force, but what direction that force would assume, — whether it would determine itself to social triumphs, or to triumphs of art, — it was impossible to divine. Her moral tendencies, her sentiments, her true and prevailing character, did not appear in the lines of her face. She seemed equal to anything, but might not choose to put forth her strength. You felt that a great possibility lay behind that brow, but you felt, also, that the talent that was in her might miscarry through indifference or caprice.

“I said she had no pretensions to beauty. Yet she was not plain. She escaped the reproach of positive plainness, by her blond and abundant hair, by her excellent teeth, by her sparkling, dancing, busy eyes, which, though usually half closed from near-sightedness, shot piercing glances at those with whom she conversed, and, most of all, by the very peculiar and graceful carriage of her head and neck, which all who knew her will remember as the most characteristic trait in her personal appearance.

“In conversation she had already, at that early age, begun to distinguish

herself, and made much the same impression in society that she did in after years, with the exception, that, as she advanced in life, she learned to control that tendency to sarcasm, — that disposition to ‘quiz,’ — which was then somewhat excessive. It frightened shy young people from her presence, and made her, for a while, notoriously unpopular with the ladies of her circle.

“This propensity seems to have been aggravated by unpleasant encounters in her school-girl experience. She was a pupil of Dr. Park, of Boston, whose seminary for young ladies was then at the height of a well-earned reputation, and whose faithful and successful endeavors in this department have done much to raise the standard of female education among us. Here the inexperienced country girl was exposed to petty persecutions from the dashing misses of the city, who pleased themselves with giggling criticisms not inaudible, nor meant to be inaudible to their subject, on whatsoever in dress and manner fell short of the city mark. Then it was first revealed to her young heart, and laid up for future reflection, how large a place in woman’s world is given to fashion and frivolity. Her mind reacted on these attacks with indiscriminate sarcasms. She made herself formidable by her wit, and, of course, unpopular. A root of bitterness sprung up in her which years of moral culture were needed to eradicate.

“Partly to evade the temporary unpopularity into which she had fallen, and partly to pursue her studies secure from those social avocations which were found unavoidable in the vicinity of Cambridge and Boston, in 1824 or 5 she was sent to Groton, where she remained two years in quiet seclusion.

“On her return to Cambridge, in 1826, I renewed my acquaintance, and an intimacy was then formed, which continued until her death. The next seven years, which were spent in Cambridge, were years of steady growth, with little variety of incident, and little that was noteworthy of outward experience, but with great intensity of the inner life. It was with her, as with most young women, and with most young men, too, between the ages of sixteen and twenty-five, a period of preponderating sentimentality, a period of romance and of dreams, of yearning and of passion. She pursued at this time, I think, no systematic study, but she read with the heart, and was learning more from social experience than from books.

“I remember noting at this time a trait which continued to be a prominent one through life, — I mean, a passionate love for the beautiful, which comprehended all the kingdoms of nature and art. I have never known one who seemed to derive such satisfaction from the contemplation of lovely forms.

“Her intercourse with girls of her own age and standing was frank and excellent. Personal attractions, and the homage which they received, awakened in her no jealousy. She envied not their success, though vividly aware of the

worth of beauty, and inclined to exaggerate her own deficiencies in that kind. On the contrary, she loved to draw these fair girls to herself, and to make them her guests, and was never so happy as when surrounded, in company, with such a bevy. This attraction was mutual, as, according to Goethe, every attraction is. Where she felt an interest, she awakened an interest. Without flattery or art, by the truth and nobleness of her nature, she won the confidence, and made herself the friend and intimate, of a large number of young ladies, — the belles of their day, — with most of whom she remained in correspondence during the greater part of her life.

“In our evening re-unions she was always conspicuous by the brilliancy of her wit, which needed but little provocation to break forth in exuberant sallies, that drew around her a knot of listeners, and made her the central attraction of the hour. Rarely did she enter a company in which she was not a prominent object.

“I have spoken of her conversational talent. It continued to develop itself in these years, and was certainly her most decided gift. One could form no adequate idea of her ability without hearing her converse. She did many things well, but nothing so well as she talked. It is the opinion of all her friends, that her writings do her very imperfect justice. For some reason or other, she could never deliver herself in print as she did with her lips. She required the stimulus of attentive ears, and answering eyes, to bring out all her power. She must have her auditory about her.

“Her conversation, as it was then, I have seldom heard equalled. It was not so much attractive as commanding. Though remarkably fluent and select, it was neither fluency, nor choice diction, nor wit, nor sentiment, that gave it its peculiar power, but accuracy of statement, keen discrimination, and a certain weight of judgment, which contrasted strongly and charmingly with the youth and sex of the speaker. I do not remember that the vulgar charge of talking ‘like a book’ was ever fastened upon her, although, by her precision, she might seem to have incurred it. The fact was, her speech, though finished and true as the most deliberate rhetoric of the pen, had always an air of spontaneity which made it seem the grace of the moment, — the result of some organic provision that made finished sentences as natural to her as blundering and hesitation are to most of us. With a little more imagination, she would have made an excellent improvisatrice.

“Here let me say a word respecting the character of Margaret’s mind. It was what in woman is generally called a masculine mind; that is, its action was determined by ideas rather than by sentiments. And yet, with this masculine trait, she combined a woman’s appreciation of the beautiful in sentiment and the

beautiful in action. Her intellect was rather solid than graceful, yet no one was more alive to grace. She was no artist, — she would never have written an epic, or romance, or drama, — yet no one knew better the qualities which go to the making of these; and though catholic as to kind, no one was more rigorously exacting as to quality. Nothing short of the best in each kind would content her.

“She wanted imagination, and she wanted productiveness. She wrote with difficulty. Without external pressure, perhaps, she would never have written at all. She was dogmatic, and not creative. Her strength was in characterization and in criticism. Her *critique* on Goethe, in the second volume of the *Dial*, is, in my estimation, one of the best things she has written. And, as far as it goes, it is one of the best criticisms extant of Goethe.

“What I especially admired in her was her intellectual sincerity. Her judgments took no bribe from her sex or her sphere, nor from custom nor tradition, nor caprice. She valued truth supremely, both for herself and others. The question with her was not what should be believed, or what ought to be true, but what *is* true. Her yes and no were never conventional; and she often amazed people by a cool and unexpected dissent from the common-places of popular acceptance.”

*

Margaret, we have said, saw in each of her friends the secret interior capability, which might become hereafter developed into some special beauty or power. By means of this penetrating, this prophetic insight, she gave each to himself, acted on each to draw out his best nature, gave him an ideal out of which he could draw strength and liberty hour by hour. Thus her influence was ever ennobling, and each felt that in her society he was truer, wiser, better, and yet more free and happy, than elsewhere. The “dry light” which Lord Bacon loved, she never knew; her light was life, was love, was warm with sympathy and a boundless energy of affection and hope. Though her love flattered and charmed her friends, it did not spoil them, for they knew her perfect truth. They knew that she loved them, not for what she imagined, but for what she saw, though she saw it only in the germ. But as the Greeks beheld a Persephone and Athene in the passing stranger, and ennobled humanity into ideal beauty, Margaret saw all her friends thus idealized. She was a balloon of sufficient power to take us all up with her into the serene depth of heaven, where she loved to float, far above the low details of earthly life. Earth lay beneath us as a lovely picture, — its sounds came up mellowed into music.

Margaret was, to persons younger than herself, a Makaria and Natalia. She

was wisdom and intellectual beauty, filling life with a charm and glory “known to neither sea nor land.” To those of her own age she was sibyl and seer, — a prophetess, revealing the future, pointing the path, opening their eyes to the great aims only worthy of pursuit in life. To those older than herself she was like the Euphorion in Goethe’s drama, child of Faust and Helen, — a wonderful union of exuberance and judgment, born of romantic fulness and classic limitation. They saw with surprise her clear good-sense balancing her now of sentiment and ardent courage. They saw her comprehension of both sides of every question, and gave her their confidence, as to one of equal age, because of so ripe a judgment.

But it was curious to see with what care and conscience she kept her friendships distinct. Her fine practical understanding, teaching her always the value of limits, enabled her to hold apart all her intimacies, nor did one ever encroach on the province of the other. Like a moral Paganini, she played always on a single string, drawing from each its peculiar music, — bringing wild beauty from the slender wire, no less than from the deep-sounding harp string. Some of her friends had little to give her when compared with others; but I never noticed that she sacrificed in any respect the smaller faculty to the greater. She fully realized that the Divine Being makes each part of this creation divine, and that He dwells in the blade of grass as really if not as fully as in the majestic oak which has braved the storm for a hundred years. She felt in full the thought of a poem which she once copied for me from Barry Cornwall, which begins thus: —

”She was not fair, nor full of grace,
Nor crowned with thought, nor aught beside
No wealth had she of mind or face,
To win our love, or gain our pride, —
No lover’s thought her heart could touch, —
No poet’s dream was round her thrown;
And yet we miss her — ah, so much!
Now — she has flown.”

I will close this section of Cambridge Friendship with the two following passages, the second of which was written to some one unknown to me:

‘Your letter was of cordial sweetness to me, as is ever the thought of our friendship, — that sober-suited friendship, of which the web was so deliberately and well woven, and which wears so well.

‘I want words to express the singularity of all my past relations; yet let me try.

‘From a very early age I have felt that I was not born to the common womanly lot. I knew I should never find a being who could keep the key of my character; that there would be none on whom I could always lean, from whom I could always learn; that I should be a pilgrim and sojourner on earth, and that the birds and foxes would be surer of a place to lay the head than I. You understand me, of course; such beings can only find their homes in hearts. All material luxuries, all the arrangements of society, are mere conveniences to them.

‘This thought, all whose bearings I did not, indeed, understand, affected me sometimes with sadness, sometimes with pride. I mourned that I never should have a thorough experience of life, never know the full riches of my being; I was proud that I was to test myself in the sternest way, that I was always to return to myself, to be my own priest, pupil, parent, child, husband, and wife. All this I did not understand as I do now; but this destiny of the thinker, and (shall I dare to say it?) of the poetic priestess, sibylline, dwelling in the cave, or amid the Lybian sands, lay yet enfolded in my mind. Accordingly, I did not look on any of the persons, brought into relation with me, with common womanly eyes.

‘Yet, as my character is, after all, still more feminine than masculine, it would sometimes happen that I put more emotion into a state than I myself knew. I really was capable of attachment, though it never seemed so till the hour of separation. And if a connexion was torn up by the roots, the soil of my existence showed an unsightly wound, which long refused to clothe itself in verdure.

‘With regard to yourself, I was to you all that I wished to be. I knew that I reigned in your thoughts in my own way. And I also lived with you more truly and freely than with any other person. We were truly friends, but it was not friends as men are friends to one another, or as brother and sister. There was, also, that pleasure, which may, perhaps, be termed conjugal, of finding oneself in an alien nature. Is there any tinge of love in this? Possibly! At least, in comparing it with my relation to — , I find *that* was strictly fraternal. I valued him for himself. I did not care for an influence over him, and was perfectly willing to have one or fifty rivals in his heart.

‘I think I may say, I never loved. I but see my possible life reflected on the clouds. As in a glass darkly, I have seen what I might feel as child, wife, mother, but I have never really approached the close relations of life. A sister I have truly been to many, — a brother to more, — a fostering nurse to, oh how many! The bridal hour of many a spirit, when first it was wed, I have shared, but said adieu before the wine was poured out at the banquet. And there is one I always love in

my poetic hour, as the lily looks up to the star from amid the waters; and another whom I visit as the bee visits the flower, when I crave sympathy. Yet those who live would scarcely consider that I am among the living, — and I am isolated, as you say.

‘My dear — , all is well; all has helped me to decipher the great poem of the universe. I can hardly describe to you the happiness which floods my solitary hours. My actual life is yet much clogged and impeded, but I have at last got me an oratory; where I can retire and pray. With your letter, vanished a last regret. You did not act or think unworthily. It is enough. As to the cessation of our confidential intercourse, circumstances must have accomplished that long ago; my only grief was that you should do it with your own free will, and for reasons that I thought unworthy. I long to honor you, to be honored by you. Now we will have free and noble thoughts of one another, and all that is best of our friendship shall remain.’

II.

CONVERSATION. — SOCIAL INTERCOURSE.

“Be thou what thou singly art, and personate only thyself. Swim smoothly in the stream of thy nature, and live but one man.”

SIR THOMAS BROWNE.

”Ah, how mournful look in letters
Black on white, the words to me,
Which from lips of thine cast fetters
Bound the heart, or set It free.”

GOETHE, *translated by J.S. Dwight.*

”Zu erfinden, zu beschliessen,
Bleibe, Künstler, oft allein;
Deines Wirkens zu geniessen
Eile freudig zum Verein,
Hier im Ganzen schau erfahre
Deines eignen Lebenslauf,
Und die Thaten mancher Jahre
Gehn dir in dem Nachbar auf.”

GOETHE, *Artist's Song*.

*

When I first knew Margaret, she was much in society, but in a circle of her own, — of friends whom she had drawn around her, and whom she entertained and delighted by her exuberant talent. Of those belonging to this circle, let me recall a few characters.

The young girls whom Margaret had attracted were very different from herself, and from each other. From Boston, Charlestown, Roxbury, Brookline, they came to her, and the little circle of companions would meet now in one house, and now in another, of these pleasant towns. There was A — , a dark-haired, black-eyed beauty, with clear olive complexion, through which the rich blood flowed. She was bright, beauteous, and cold as a gem, — with clear perceptions of character within a narrow limit, — enjoying society, and always surrounded with admirers, of whose feelings she seemed quite unconscious. While they were just ready to die of unrequited love, she stood untouched as Artemis, scarcely aware of the deadly arrows which had flown from her silver bow. I remember that Margaret said, that Tennyson's little poem of the skipping-rope must have been written for her, — where the lover expressing his admiration of the fairy-like motion and the light grace of the lady, is told —

”Get off, or else my skipping-rope
Will hit you in the eye.”

Then there was B — , the reverse of all this, — tender, susceptible, with soft blue eyes, and mouth of trembling sensibility. How sweet were her songs, in which a single strain of pure feeling ever reminded me of those angel symphonies, —

”In all whose music, the pathetic minor
Our ears will cross— “

and when she sang or spoke, her eyes had often the expression of one looking *in* at her thought, not *out* at her companion.

Then there was C — , all animated and radiant with joyful interest in life, — seeing with ready eye the beauty of Nature and of Thought, — entering with quick sympathy into all human interest, taking readily everything which belonged to her, and dropping with sure instinct whatever suited her not.

Unknown to her was struggle, conflict, crisis; she grew up harmonious as the flower, drawing nutriment from earth and air, — from “common things which round us lie,” and equally from the highest thoughts and inspirations.

Shall I also speak of D —— , whose beauty had a half-voluptuous character, from those ripe red lips, those ringlets overflowing the well-rounded shoulders, and the hazy softness of those large eyes? Or of E —— , her companion, beautiful too, but in a calmer, purer style, — with eye from which looked forth self-possession, truth and fortitude? Others, well worth notice, I must not notice now.

But among the young men who surrounded Margaret, a like variety prevailed. One was to her interesting, on account of his quick, active intellect, and his contempt for shows and pretences; for his inexhaustible wit, his exquisite taste, his infinitely varied stores of information, and the poetic view which he took of life, painting it with Rembrandt depths of shadow and bursts of light. Another she gladly went to for his compact, thoroughly considered views of God and the world, — for his culture, so much more deep and rich than any other we could find here, — for his conversation, opening in systematic form new fields of thought. Yet men of strong native talent, and rich character, she also liked well to know, however deficient in culture, knowledge, or power of utterance. Each was to her a study, and she never rested till she had found the bottom of every mind, — till she had satisfied herself of its capacity and currents, — measuring it with her sure line, as

— “All human wits
Are measured, but a few.”

It was by her singular gift of speech that she cast her spells and worked her wonders in this little circle. Full of thoughts and full of words; capable of poetic improvisation, had there not been a slight overweight of a tendency to the tangible and real; capable of clear, complete, philosophic statement, but for the strong tendency to life which melted down evermore in its lava-current the solid blocks of thought; she was yet, by these excesses, better fitted for the arena of conversation. Here she found none adequate for the equal encounter; when she laid her lance in rest, every champion must go down before it. How fluent her wit, which, for hour after hour, would furnish best entertainment, as she described scenes where she had lately been, or persons she had lately seen! Yet she readily changed from gay to grave, and loved better the serious talk which opened the depths of life. Describing a conversation in relation to Christianity, with a friend of strong mind, who told her he had found, in this religion, a home

for his best and deepest thoughts, she says— ‘ Ah! what a pleasure ‘to meet with such a daring, yet realizing, mind as his!’ But her catholic taste found satisfaction in intercourse with persons quite different from herself in opinions and tendencies, as the following letter, written in her twentieth year, will indicate:

*

‘I was very happy, although greatly restrained by the apprehension of going a little too far with these persons of singular refinement and settled opinions.

‘However, I believe I did pretty well, though I did make one or two little mistakes, when most interested; but I was not so foolish as to try to retrieve them. One occasion more particularly, when Mr. G —— , after going more fully into his poetical opinions than I could have expected, stated his sentiments: first, that Wordsworth had, in truth, guided, or, rather, completely vivified the poetry of this age; secondly, that ‘t was his influence which had, in reality, given all his better individuality to Byron. He recurred again and again to this opinion, *con amore*, and seemed to wish much for an answer; but I would not venture, though ‘twas hard for me to forbear, I knew so well what I thought. Mr. G — — ‘s Wordsworthianism, however, is excellent; his beautiful simplicity of taste, and love of truth, have preserved him from any touch of that vague and imbecile enthusiasm, which has enervated almost all the exclusive and determined admirers of the great poet whom I have known in these parts. His reverence, his feeling, are thoroughly intelligent. Everything in his mind is well defined; and his horror of the vague, and false, nay, even (suppose another horror here, for grammar’s sake) of the startling and paradoxical, have their beauty. I think I could know Mr. G —— long, and see him perpetually, without any touch of satiety; such variety is made by the very absence of pretension, and the love of truth. I found much amusement in leading him to sketch the scenes and persons which Lockhart portrays in such glowing colors, and which he, too, has seen with the *eye of taste*, but how different!’

*

Our friend was well aware that her *forte* was in conversation. Here she felt at home. Here she felt her power, and the excitement which the presence of living persons brought, gave all her faculties full activity ‘After all,’ she says, in a letter,

‘this writing is mighty dead. Oh, for my dear old Greeks, who talked

everything — not to shine as in the Parisian saloons, but to learn, to teach, to vent the heart, to clear the mind!’

Again, in 1832: —

‘Conversation is my natural element. I need to be called out, and never think alone, without imagining some companion. Whether this be nature or the force of circumstances, I know not; it is my habit, and bespeaks a second-rate mind.’

I am disposed to think, much as she excelled in general conversation, that her greatest mental efforts were made in intercourse with individuals. All her friends will unite in the testimony, that whatever they may have known of wit and eloquence in others, they have never seen one who, like her, by the conversation of an hour or two, could not merely entertain and inform, but make an epoch in one’s life. We all dated back to this or that conversation with Margaret, in which we took a complete survey of great subjects, came to some clear view of a difficult question, saw our way open before us to a higher plane of life, and were led to some definite resolution or purpose which has had a bearing on all our subsequent career. For Margaret’s conversation turned, at such times, to life, — its destiny, its duty, its prospect. With comprehensive glance she would survey the past, and sum up, in a few brief words, its results; she would then turn to the future, and, by a natural order, sweep through its chances and alternatives, — passing ever into a more earnest tone, into a more serious view, — and then bring all to bear on the present, till its duties grew plain, and its opportunities attractive. Happy he who can lift conversation, without loss of its cheer, to the highest uses! Happy he who has such a gift as this, an original faculty thus accomplished by culture, by which he can make our common life rich, significant and fair, — can give to the hour a beauty and brilliancy which shall make it eminent long after, amid dreary years of level routine!

I recall many such conversations. I remember one summer’s day, in which we rode together, on horseback, from Cambridge to Newton, — a day all of a piece, in which my eloquent companion helped me to understand my past life, and her own, — a day which left me in that calm repose which comes to us, when we clearly apprehend what we ought to do, and are ready to attempt it. I recall other mornings when, not having seen her for a week or two, I would walk with her for hours, beneath the lindens or in the garden, while we related to each other what we had read in our German studies. And I always left her astonished at the progress of her mind, at the amount of new thoughts she had garnered, and filled with a new sense of the worth of knowledge, and the value of life.

There were other conversations, in which, impelled by the strong instinct of utterance, she would state, in words of tragical pathos, her own needs and longings, — her demands on life, — the struggles of mind, and of heart, — her

conflicts with self, with nature, with the limitations of circumstances, with insoluble problems, with an unattainable desire. She seemed to feel relief from the expression of these thoughts, though she gained no light from her companion. Many such conversations I remember, while she lived in Cambridge, and one such in Groton; but afterwards, when I met her, I found her mind risen above these struggles, and in a self-possessed state which needed no such outlet for its ferment.

It is impossible to give any account of *these* conversations; but I add a few scraps, to indicate, however slightly, something of her ordinary manner.

‘Rev. Mr. —— preached a sermon on TIME. But what business had he to talk about time? We should like well to hear the opinions of a great man, who had made good use of time; but not of a little man, who had not used it to any purpose. I wished to get up and tell him to speak of something which he knew and felt.’

* ‘The best criticism on those sermons which proclaim so loudly the dignity of human nature was from our friend E.S. She said, coming out from Dr. Channing’s church, that she felt fatigued by the demands the sermon made on her, and would go home and read what Jesus said,— “*Ye are of more value than many sparrows.*” That she could bear; it did not seem exaggerated praise.’

*

‘The Swedenborgians say, “that is *Correspondence*,” and the phrenologists, “that it is *Approbativeness*,” and so think they know all about it. It would not be so, if we could be like the birds, — make one method, and then desert it, and make a new one, — as they build their nests.’

*

‘As regards crime, we cannot understand what we have not *already* felt; — thus, all crimes have formed part of our minds. We do but recognize one part of ourselves in the worst actions of others. When you take the subject in this light, do you not incline to consider the capacity for action as something widely differing from the experience of a feeling?’

*

‘How beautiful the life of Benvenuto Cellini! How his occupations perpetually

impelled to thought, — to gushings of thought naturally excited!’

*

‘Father lectured me for looking satirical when the man of Words spake, and so attentive to the man of Truth, — that is, of God.’

Margaret used often to talk about the books which she and I were reading.

GODWIN. ‘I think you will be more and more satisfied with Godwin. He has fully lived the double existence of man, and he casts the reflexes on his magic mirror from a height where no object in life’s panorama can cause one throb of delirious hope or grasping ambition. At any rate, if you study him, you may know all he has to tell. He is quite free from vanity, and conceals not miserly any of his treasures from the knowledge of posterity.’

M’LLE. D’ESPINASSE. ‘I am swallowing by gasps that *cauldrony* beverage of selfish passion and morbid taste, the letters of M’lle D’Espinasse. It is good for me. How odious is the abandonment of passion, such as this, unshaded by pride or delicacy, unhallowed by religion, — a selfish craving only; every source of enjoyment stifled to cherish this burning thirst. Yet the picture, so minute in its touches, is true as death. I should not like Delphine now.’

Events in life, apparently trivial, often seemed to her full of mystic significance, and it was her pleasure to turn such to poetry. On one occasion, the sight of a passion-flower, given by one lady to another, and then lost, appeared to her so significant of the character, relation, and destiny of the two, that it drew from her lines of which two or three seem worth preserving, as indicating her feeling of social relations.

‘Dear friend, my heart grew pensive when I saw
The flower, for thee so sweetly set apart,
By one whose passionless though tender heart
Is worthy to bestow, as angels are,
By an unheeding hand conveyed away,
To close, in unsoothed night, the promise of its day.

*

‘The mystic flower read in thy soul-filled eye
To its life’s question the desired reply,
But came no nearer. On thy gentle breast
It hoped to find the haven of its rest;

But in cold night, hurried afar from thee,
It closed its once half-smiling destiny.

'Yet thus, methinks, it utters as it dies, —
"By the pure truth of those calm, gentle eyes
Which saw my life should find its aim in thine,
I see a clime where no strait laws confine.
In that blest land where *twos* ne'er know a *three*,
Save as the accord of their fine sympathy,
O, best-loved, I will wait for thee!"'

III. STUDIES.

”Nur durch das Morgenthor des Schönen
Drangst du in der Erkenntniss Land;
An höhen Glanz sich zu gewöhnen
Uebt sich, am Reize der Verstand.
Was bei dem Saitenklang der Musen
Mit süßem Beben dich, durchdrang,
Erzog die Kraft in deinem Busen,
Die sich dereinst zum Weltgeist schwang.”

SCHILLER.

”To work, with heart resigned and spirit strong;
Subdue, with patient toil, life’s bitter wrong,
Through Nature’s dullest, as her brightest ways,
We will march onward, singing to thy praise.”

E.S., in the Dial.

“The peculiar nature of the scholar’s occupation consists in this, — that science, and especially that side of it from which he conceives of the whole, shall continually burst forth before him in new and fairer forms. Let this fresh spiritual youth never grow old within him; let no form become fixed and rigid; let each sunrise bring him new joy and love in his vocation, and larger views of its significance.”

FICHTE.

*

Of Margaret’s studies while at Cambridge, I knew personally only of the German. She already, when I first became acquainted with her, had become familiar with the masterpieces of French, Italian and Spanish literature. But all this amount of reading had not made her “deep-learned in books and shallow in herself;” for she brought to the study of most writers “a spirit and genius equal or superior.” — so far, at least, as the analytic understanding was concerned. Every writer whom she studied, as every person whom she knew, she placed in his own class, knew his relation to other writers, to the world, to life, to nature, to herself. Much as they might delight her, they never swept her away. She

breasted the current of their genius, as a stately swan moves up a stream, enjoying the rushing water the more because she resists it. In a passionate love-struggle she wrestled thus with the genius of De Staël, of Rousseau, of Alfieri, of Petrarch.

The first and most striking element in the genius of Margaret was the clear, sharp understanding, which keenly distinguished between things different, and kept every thought, opinion, person, character, in its own place, not to be confounded with any other. The god Terminus presided over her intellect. She knew her thoughts as we know each other's faces; and opinions, with most of us so vague, shadowy, and shifting, were in her mind substantial and distinct realities. Some persons see distinctions, others resemblances; but she saw both. No sophist could pass on her a counterfeit piece of intellectual money; but also she recognized the one pure metallic basis in coins of different epochs, and when mixed with a very ruinous alloy. This gave a comprehensive quality to her mind most imposing and convincing, as it enabled her to show the one Truth, or the one Law, manifesting itself in such various phenomena. Add to this her profound faith in truth, which made her a Realist of that order that thoughts to her were things. The world of her thoughts rose around her mind as a panorama, — the sun-in the sky, the flowers distinct in the foreground, the pale mountain sharply, though faintly, cutting the sky with its outline in the distance, — and all in pure light and shade, all in perfect perspective.

Margaret began to study German early in 1832. Both she and I were attracted towards this literature, at the same time, by the wild bugle-call of Thomas Carlyle, in his romantic articles on Richter, Schiller, and Goethe, which appeared in the old Foreign Review, the Edinburgh Review, and afterwards in the Foreign Quarterly.

I believe that in about three months from the time that Margaret commenced German, she was reading with ease the masterpieces of its literature. Within the year, she had read Goethe's Faust, Tasso, Iphigenia, Hermann and Dorothea, Elective Affinities, and Memoirs; Tieck's William Lovel, Prince Zerbino, and other works; Körner, Novalis, and something of Richter; all of Schiller's principal dramas, and his lyric poetry. Almost every evening I saw her, and heard an account of her studies. Her mind opened under this influence, as the apple-blossom at the end of a warm week in May. The thought and the beauty of this rich literature equally filled her mind and fascinated her imagination.

*

But if she studied books thus earnestly, still more frequently did she turn to the

study of men. Authors and their personages were not ideal beings merely, but full of human blood and life. So living men and women were idealized again, and transfigured by her rapid fancy, — every trait intensified, developed, ennobled. Lessing says that “The true portrait painter will paint his subject, flattering him as art ought to flatter, — painting the face not as it actually is, but as creation designed, omitting the imperfections arising from the resistance of the material worked in.” Margaret’s portrait-painting intellect treated persons in this way. She saw them as God designed them, — omitting the loss from wear and tear, from false position, from friction of untoward circumstances. If we may be permitted to take a somewhat transcendental distinction, she saw them not as they *actually* were, but as they *really* were. This accounts for her high estimate of her friends, — too high, too flattering, indeed, but justified to her mind by her knowledge of their interior capabilities.

*

The following extract illustrates her power, even at the age of nineteen, of comprehending the relations of two things lying far apart from each other, and of rising to a point of view which could overlook both: —

‘I have had, — while staying a day or two in Boston, — some of Shirley’s, Ford’s, and Hey wood’s plays from the Athenæum. There are some noble strains of proud rage, and intellectual, but most poetical, all-absorbing, passion. One of the finest fictions I recollect in those specimens of the Italian novelists, — which you, I think, read when I did, — noble, where it illustrated the Italian national spirit, is ruined by the English novelist, who has transplanted it to an uncongenial soil; yet he has given it beauties which an Italian eye could not see, by investing the actors with deep, continuing, truly English affections.’

*

The following criticism on some of the dialogues of Plato, (dated June 3d, 1833,) in a letter returning the book, illustrates her downright way of asking world-revered authors to accept the test of plain common sense. As a finished or deliberate opinion, it ought not to be read; for it was not intended as such, but as a first impression hastily sketched. But read it as an illustration of the method in which her mind worked, and you will see that she meets the great Plato modestly, but boldly, on human ground, asking him for satisfactory proof of all that he says, and treating him as a human being, speaking to human beings.

‘June 3, 1833. — I part with Plato with regret. I could have wished to

“enchant myself,” as Socrates would say, with him some days longer. Eutyphron is excellent. Tis the best specimen I have ever seen of that mode of convincing. There is one passage in which Socrates, as if it were *aside*, — since the remark is quite away from the consciousness of Eutyphron, — declares, “qu’il aimerait incomparablement mieux des principes fixes et inébranlables à l’habilité de Dédale avec les tresors de Tantale.” I delight to hear such things from those whose lives have given the right to say them. For ’tis not always true what Lessing says, and I, myself, once thought, —

”F. — Von was fur Tugenden spricht er denn?

MINNA. — Er spricht von keiner; denn ihn fehlt keine.”

For the mouth sometimes talketh virtue from the overflowing of the heart, as well as love, anger, &c.

“Crito” I have read only once, but like it. I have not got it in my heart though, so clearly as the others. The “Apology” I deem only remarkable for the noble tone of sentiment, and beautiful calmness. I was much affected by Phaedo, but think the argument weak in many respects. The nature of abstract ideas is clearly set forth; but there is no justice in reasoning, from their existence, that our souls have lived previous to our present state, since it was as easy for the Deity to create at once the idea of beauty within us, as the sense which brings to the soul intelligence that it exists in some outward shape. He does not clearly show his opinion of what the soul is; whether eternal *as* the Deity, created *by* the Deity, or how. In his answer to Simmias, he takes advantage of the general meaning of the words harmony, discord, &c. The soul might be a result, without being a harmony. But I think too many things to write, and some I have not had time to examine. Meanwhile I can think over parts, and say to myself, “beautiful,” “noble,” and use this as one of my enchantments.’

*

‘I send two of your German books. It pains me to part with Ottilia. I wish we could learn books, as we do pieces of music, and repeat them, in the author’s order, when taking a solitary walk. But, now, if I set out with an Ottilia, this wicked fairy association conjures up such crowds of less lovely companions, that I often cease to feel the influence of the elect one. I don’t like Goethe so well as Schiller now. I mean, I am not so happy in reading him. That perfect wisdom and *merciless* nature seems cold, after those seducing pictures of forms more

beautiful than truth. Nathless, I should like to read the second part of Goethe's Memoirs, if you do not use it now.'

*

1832. — I am thinking how I omitted to talk a volume to you about the "Elective Affinities." Now I shall never say half of it, for which I, on my own account, am sorry. But two or three things I would ask: —

'What do you think of Charlotte's proposition, that the accomplished pedagogue must be tiresome in society?

'Of Ottilia's, that the afflicted, and ill-educated, are oftentimes singled out by fate to instruct others, and her beautiful reasons why?

'And what have you thought of the discussion touching graves and monuments?

'I am now going to dream of your sermon, and of Ottilia's china-asters. Both shall be driven from my head to-morrow, for I go to town, allured by despatches from thence, promising much entertainment. Woe unto them if they disappoint me!

'Consider it, I pray you, as the "nearest duty" to answer my questions, and not act as you did about the sphinx-song.'

*

'I have not anybody to speak to, that does not talk common-place, and I wish to talk about such an uncommon person, — about Novalis! a wondrous youth, and who has only written one volume. That is pleasant! I feel as though I could pursue my natural mode with him, get acquainted, then make my mind easy in the belief that I know all that is to be known. And he died at twenty-nine, and, as with Körner, your feelings may be single; you will never be called upon to share his experience, and compare his future feelings with his present. And his life was so full and so still.

Then it is a relief, after feeling the immense superiority of Goethe. It seems to me as if the mind of Goethe had embraced the universe. I have felt this lately, in reading his lyric poems. I am enchanted while I read. He comprehends every feeling I have ever had so perfectly, expresses it so beautifully: but when I shut the book, it seems as if I had lost my personal identity; all my feelings linked with such an immense variety that belong to beings I had thought so different. What can I bring? There is no answer in my mind, except "It is so," or "It will be so," or "No doubt such and such feel so." Yet, while my judgment becomes

daily more tolerant towards others, the same attracting and repelling work is going on in my feelings. But I persevere in reading the great sage, some part of every day, hoping the time will come, when I shall not feel so overwhelmed, and leave off this habit of wishing to grasp the whole, and be contented to learn a little every day, as becomes a pupil.

‘But now the one-sidedness, imperfection, and glow, of a mind like that of Novalis, seem refreshingly human to me. I have wished fifty times to write some letters giving an account, first, of his very pretty life, and then of his one volume, as I re-read it, chapter by chapter. If you will pretend to be very much interested, perhaps I will get a better pen, and write them to you.’

NEED OF COMMUNION.

‘Aug. 7, 1832. — I feel quite lost; it is so long since I have talked myself. To see so many acquaintances, to talk so many words, and never tell my mind completely on any subject — to say so many things which do not seem called out, makes me feel strangely vague and movable.

‘’Tis true, the time is probably near when I must live alone, to all intents and purposes, — separate entirely my acting from my thinking world, take care of my ideas without aid, — except from the illustrious dead, — answer my own questions, correct my own feelings, and do all that hard work for myself. How tiresome ’tis to find out all one’s self-delusion! I thought myself so very independent, because I could conceal some feelings at will, and did not need the same excitement as other young characters did. And I am not independent, nor never shall be, while I can get anybody to minister to me. But I shall go where there is never a spirit to come, if I call ever so loudly.

‘Perhaps I shall talk to you about Körner, but need not write. He charms me, and has become a fixed star in the heaven of my thought; but I understand all that he excites perfectly. I felt very *new* about Novalis,— “the good Novalis,” as you call him after Mr. Carlyle. He is, indeed, *good*, most enlightened, yet most pure; every link of his experience framed — no, *beaten* — from the tried gold.

‘I have read, thoroughly, only two of his pieces, “Die Lehrlinge zu Sais,” and “Heinrich von Ofterdingen.” From the former I have only brought away piecemeal impressions, but the plan and treatment of the latter, I believe, I understand. It describes the development of poetry in a mind; and with this several other developments are connected. I think I shall tell you all I know about it, some quiet time after your return, but if not, will certainly keep a

Novalis-journal for you some favorable season, when I live regularly for a fortnight.'

*

'June, 1833. — I return Lessing. I could hardly get through Miss Sampson. E. Galeotti is good in the same way as Minna. Well-conceived and sustained characters, interesting situations, but never that profound knowledge of human nature, those minute beauties, and delicate vivifying traits, which lead on so in the writings of some authors, who may be nameless. I think him easily followed; strong, but not deep.'

*

'May, 1833. — *Groton*. — I think you are wrong in applying your artistical ideas to occasional poetry. An epic, a drama, must have a fixed form in the mind of the poet from the first; and copious draughts of ambrosia quaffed in the heaven of thought, soft fanning gales and bright light from the outward world, give muscle and bloom, — that is, give life, — to this skeleton. But all occasional poems must be moods, and can a mood have a form fixed and perfect, more than a wave of the sea?'

*

'Three or four afternoons I have passed very happily at my beloved haunt in the wood, reading Goethe's "Second Residence in Rome." Your pencil-marks show that you have been before me. I shut the book each time with an earnest desire to live as he did, — always to have some engrossing object of pursuit. I sympathize deeply with a mind in that state. While mine is being used up by ounces, I wish pailfuls might be poured into it. I am dejected and uneasy when I see no results from my daily existence, but I am suffocated and lost when I have not the bright feeling of progression.'

*

'I think I am less happy, in many respects, than you, but particularly in this. You can speak freely to me of all your circumstances and feelings, can you not? It is not possible for me to be so profoundly frank with any earthly friend. Thus my heart has no proper home; it only can prefer some of its visiting-places to others; and with deep regret I realize that I have, at length, entered on the concentrating

stage of life. It was not time. I had been too sadly cramped. I had not learned enough, and must always remain imperfect. Enough! I am glad I have been able to say so much.'

*

'I have read nothing, — to signify, — except Goethe's "Campagne in Frankreich." Have you looked through it, and do you remember his intercourse with the Wertherian Plessing? That tale pained me exceedingly. We cry, "help, help," and there is no help — in man at least. How often I have thought, if I could see Goethe, and tell him my state of mind, he would support and guide me! He would be able to understand; he would show me how to rule circumstances, instead of being ruled by them; and, above all, he would not have been so sure that all would be for the best, without our making an effort to act out the oracles; he would have wished to see me what Nature intended. But his conduct to Plessing and Ohlenschlager shows that to him, also, an appeal would have been vain.'

'Do you really believe there is anything "all-comprehending" but religion? Are not these distinctions imaginary? Must not the philosophy of every mind, or set of minds, be a system suited to guide them, and give a home where they can bring materials among which to accept, reject, and shape at pleasure? Novalis calls those, who harbor these ideas, "unbelievers;" but hard names make no difference. He says with disdain, "To *such*, philosophy is only a system which will spare them the trouble of reflecting." Now this is just my case. I *do* want a system which shall suffice to my character, and in whose applications I shall have faith. I do not wish to *reflect* always, if reflecting must be always about one's identity, whether "*ich*" am the true "*ich*" &c. I wish to arrive at that point where I can trust myself, and leave off saying, "It seems to me," and boldly feel, It is so TO ME. My character has got its natural regulator, my heart beats, my lips speak truth, I can walk alone, or offer my arm to a friend, or if I lean on another, it is not the debility of sickness, but only wayside weariness. This is the philosophy I want; this much would satisfy *me*.

'Then Novalis says, "Philosophy is the art of discovering the place of truth in every encountered event and circumstance, to attune all relations to truth."

'Philosophy is peculiarly home-sickness; an over-mastering desire to be at home.

'I think so; but what is there *all-comprehending*;

eternally-conscious, about that?’

*

‘Sept., 1832.— “Not see the use of metaphysics?” A moderate portion, taken at stated intervals, I hold to be of much use as discipline of the faculties. I only object to them as having an absorbing and anti-productive tendency. But ’tis not always so; may not be so with you. Wait till you are two years older, before you decide that ’tis your vocation. Time enough at six-and-twenty to form yourself into a metaphysical philosopher. The brain does not easily get too dry for *that*. Happy you, in these ideas which give you a tendency to optimism. May you become a proselyte to that consoling faith. I shall never be able to follow you, but shall look after you with longing eyes.’

*

‘Groton. — Spring has come, and I shall see you soon. If I could pour into your mind all the ideas which have passed through mine, you would be well entertained, I think, for three or four days. But no hour will receive aught beyond its own appropriate wealth.

‘I am at present engaged in surveying the level on which the public mind is poised. I no longer lie in wait for the tragedy and comedy of life; the rules of its *prose* engage my attention. I talk incessantly with common-place people, full of curiosity to ascertain the process by which materials, apparently so jarring and incapable of classification, get united into that strange whole, the American public. I have read all Jefferson’s letters, the North American, the daily papers, &c., without end. H. seems to be weaving his Kantisms into the American system in a tolerably happy manner.’

*

‘George Thompson has a voice of uncommon compass and beauty; never sharp in its highest, or rough and husky in its lowest, tones. A perfect enunciation, every syllable round and energetic; though his manner was the one I love best, very rapid, and full of eager climaxes. Earnestness in every part, — sometimes impassioned earnestness, — a sort of “Dear friends, believe, *pray* believe, I love you, and you MUST believe as I do” expression, even in the argumentative parts. I felt, as I have so often done before, if I were a man, the gift I would choose should be that of eloquence. That power of forcing the vital currents of

thousands of human hearts into ONE current, by the constraining power of that most delicate instrument, the voice, is so intense, — yes, I would prefer it to a more extensive fame, a more permanent influence.’

‘Did I describe to you my feelings on hearing Mr. Everett’s eulogy on Lafayette? No; I did not. That was exquisite. The old, hackneyed story; not a new anecdote, not a single reflection of any value; but the manner, the *manner*^ the delicate inflections of voice, the elegant and appropriate gesture, the sense of beauty produced by the whole, which thrilled us all to tears, flowing from a deeper and purer source than that which answers to pathos. This was fine; but I prefer the Thompson manner. Then there is Mr. Webster’s, unlike either; simple grandeur, nobler, more impressive, less captivating. I have heard few fine speakers; I wish I could hear a thousand.

Are you vexed by my keeping the six volumes of your Goethe? I read him very little either; I have so little time, — many things to do at home, — my three children, and three pupils besides, whom I instruct.

‘By the way, I have always thought all that was said about the anti-religious tendency of a classical education to be old wives’ tales. But their puzzles about Virgil’s notions of heaven and virtue, and his gracefully-described gods and goddesses, have led me to alter my opinions; and I suspect, from reminiscences of my own mental history, that if all governors do not think the same ‘t is from want of that intimate knowledge of their pupils’ minds which I naturally possess. I really find it difficult to keep their *morale* steady, and am inclined to think many of my own sceptical sufferings are traceable to this source. I well remember what reflections arose in my childish mind from a comparison of the Hebrew history, where every moral obliquity is shown out with such naïveté, and the Greek history, full of sparkling deeds and brilliant sayings, and their gods and goddesses, the types of beauty and power, with the dazzling veil of flowery language and poetical imagery cast over their vices and failings.’

*

‘My own favorite project, since I began seriously to entertain any of that sort, is six historical tragedies; of which I have the plans of three quite perfect. However, the attempts I have made on them have served to show me the vast difference between conception and execution. Yet I am, though abashed, not altogether discouraged. My next favorite plan is a series of tales illustrative of Hebrew history. The proper junctures have occurred to me during my late studies on the historical books of the Old Testament. This task, however,

requires a thorough and imbuing knowledge of the Hebrew manners and spirit, with a chastened energy of imagination, which I am as yet far from possessing. But if I should be permitted peace and time to follow out my ideas, I have hopes. Perhaps it is a weakness to confide to you embryo designs, which never may glow into life, or mock me by their failure.'

*

'I have long had a suspicion that no mind can systematize its knowledge, and carry on the concentrating processes, without some fixed opinion on the subject of metaphysics. But that indisposition, or even dread of the study, which you may remember, has kept me from meddling with it, till lately, in meditating on the life of Goethe, I thought I must get some idea of the history of philosophical opinion in Germany, that I might be able to judge of the influence it exercised upon his mind. I think I can comprehend him every other way, and probably interpret him satisfactorily to others, — if I can get the proper materials. When I was in Cambridge, I got Fichte and Jacobi; I was much interrupted, but some time and earnest thought I devoted. Fichte I could not understand at all; though the treatise which I read was one intended to be popular, and which he says must compel (*bezwingen*) to conviction. Jacobi I could understand in details, but not in system. It seemed to me that his mind must have been moulded by some other mind, with which I ought to be acquainted, in order to know him well, — perhaps Spinoza's. Since I came home, I have been consulting Buhle's and Tennemann's histories of philosophy, and dipping into Brown, Stewart, and that class of books.'

*

'After I had cast the burden of my cares upon you, I rested, and read Petrarch for a day or two. But that could not last. I had begun to "take an account of stock," as Coleridge calls it, and was forced to proceed. He says few persons ever did this faithfully, without being dissatisfied with the result, and lowering their estimate of their supposed riches. With me it has ended in the most humiliating sense of poverty; and only just enough pride is left to keep your poor friend off the parish. As it is, I have already asked items of several besides yourself; but, though they have all given what they had, it has by no means answered my purpose; and I have laid their gifts aside, with my other hoards, which gleamed so fairy bright, and are now, in the hour of trial, turned into mere slate-stones. I am not sure that even if I do find the philosopher's stone, I shall be able to

transmute them into the gold they looked so like formerly. It will be long before I can give a distinct, and at the same time concise, account of my present state. I believe it is a great era. I am thinking now, — really thinking, I believe; certainly it seems as if I had never done so before. If it does not kill me, something will come of it. Never was my mind so active; and the subjects are God, the universe, immortality. But shall I be fit for anything till I have absolutely re-educated myself? Am I, can I make myself, fit to write an account of half a century of the existence of one of the master-spirits of this world? It seems as if I had been very arrogant to dare to think it; yet will I not shrink back from what I have undertaken, — even by failure I shall learn much.'

*

'I am shocked to perceive you think I am *writing* the life of Goethe. No, indeed! I shall need a great deal of preparation before I shall have it clear in my head, I have taken a great many notes; but I shall not begin to write it, till it all lies mapped out before me. I have no materials for ten years of his life, from the time he went to Weimar, up to the Italian journey. Besides, I wish to see the books that have been written about him in Germany, by friend or foe. I wish to look at the matter from all sides. New lights are constantly dawning on me; and I think it possible I shall come out from the Carlyle view, and perhaps from yours, and distaste you, which will trouble me.

'How am I to get the information I want, unless I go to Europe? To whom shall I write to choose my materials? I have thought of Mr. Carlyle, but still more of Goethe's friend, Von Muller. I dare say he would be pleased at the idea of a life of G. written in this hemisphere, and be very willing to help me. If you have anything to tell me, you will, and not mince matters. Of course, my impressions of Goethe's works cannot be influenced by information I get about his *life*; but, as to this latter, I suspect I must have been hasty in my inferences. I apply to you without scruple. There are subjects on which men and women usually talk a great deal, but apart from one another. You, however, are well aware that I am very destitute of what is commonly *called* modesty. With regard to this, how fine the remark of our present subject: "Courage and modesty are virtues which every sort of society reveres, because they are virtues which cannot be counterfeited; also, they are known by the *same hue*." When that blush does not come naturally to my face, I do not drop a veil to make people think it is there. All this may be very unlovely, but it is *I*.'

CHANNING ON SLAVERY.

‘This is a noble work. So refreshing its calm, benign atmosphere, after the pestilence-bringing gales of the day. It comes like a breath borne over some solemn sea which separates us from an island of righteousness. How valuable is it to have among us a man who, standing apart from the conflicts of the herd, watches the principles that are at work, with a truly paternal love for what is human, and may be permanent; ready at the proper point to give his casting-vote to the cause of Right! The author has amplified on the grounds of his faith, to a degree that might seem superfluous, if the question had not become so utterly bemazed and bedarkened of late. After all, it is probable that, in addressing the public at large, it is *not* best to express a thought in as few words as possible; there is much classic authority for diffuseness.’

RICHTER.

Groton.— ‘Ritcher says, the childish heart vies in the height of its surges with the manly, only is not furnished with *lead* for sounding them.

‘How thoroughly am I converted to the love of Jean Paul, and wonder at the indolence or shallowness which could resist so long, and call his profuse riches want of system! What a mistake! System, plan, there is, but on so broad a basis that I did not at first comprehend it. In every page I am forced to pencil. I will make me a book, or, as he would say, bind me a bouquet from his pages, and wear it on my heart of hearts, and be ever refreshing my wearied inward sense with its exquisite fragrance. I must have improved, to love him as I do.’

IV. CHARACTER. — AIMS AND IDEAS OF LIFE.

”O friend, how flat and tasteless such a life!
Impulse gives birth to impulse, deed to deed,
Still toilsomely ascending step by step,
Into an unknown realm of dark blue clouds.
What crowns the ascent? Speak, or I go no further.
I need a goal, an aim. I cannot toil,
Because the steps are here in their ascent
Tell me THE END, or I sit still and weep.”

“NATURLICHE TOCHTER,”

Translated by Margaret.

“And so he went onward, ever onward, for twenty-seven years — then, indeed, he had gone far enough.”

GOETHE’S words concerning Schiller

*

I would say something of Margaret’s inward condition, of her aims and views in life, while in Cambridge, before closing this chapter of her story. Her powers, whether of mind, heart, or will, have been sufficiently indicated in what has preceded. In the sketch of her friendships and of her studies, we have seen the affluence of her intellect, and the deep tenderness of her woman’s nature. We have seen the energy which she displayed in study and labor.

But to what *aim* were these powers directed? Had she any clear view of the demands and opportunities of life, any definite plan, any high, pure purpose? This is, after all, the test question, which detects the low-born and low-minded wearer of the robe of gold, —

“Touch them inwardly, they smell of copper.”

Margaret’s life *had an aim*, and she was, therefore, essentially a moral person, and not merely an overflowing genius, in whom “impulse gives birth to impulse, deed to deed.” This aim was distinctly apprehended and steadily pursued by her from first to last. It was a high, noble one, wholly religious, almost Christian. It gave dignity to her whole career, and made it heroic.

This aim, from first to last, was SELF-CULTURE. If she ever was ambitious of knowledge and talent, as a means of excelling others, and gaining fame,

position, admiration, — this vanity had passed before I knew her, and was replaced by the profound desire for a full development of her whole nature, by means of a full experience of life.

In her description of her own youth, she says, ‘VERY EARLY I KNEW THAT THE ONLY OBJECT IN LIFE WAS TO GROW.’ This is the passage: —

‘I was now in the hands of teachers, who had not, since they came on the earth, put to themselves one intelligent question as to their business here. Good dispositions and employment for the heart gave a tone to all they said, which was pleasing, and not perverting. They, no doubt, injured those who accepted the husks they proffered for bread, and believed that exercise of memory was study, and to know what others knew, was the object of study. But to me this was all penetrable. I had known great living minds. — I had seen how they took their food and did their exercise, and what their objects were. *Very early I knew that the only object in life was to grow.* I was often false to this knowledge, in idolatries of particular objects, or impatient longings for happiness, but I have never lost sight of it, have always been controlled by it, and this first gift of thought has never been superseded by a later love.’

In this she spoke truth. The good and the evil which flow from this great idea of self-development she fully realized. This aim of life, originally self-chosen, was made much more clear to her mind by the study of Goethe, the great master of this school, in whose unequalled eloquence this doctrine acquires an almost irresistible beauty and charm.

“Wholly religious, and almost Christian,” I said, was this aim. It was religious, because it recognized something divine, infinite, imperishable in the human soul, — something divine in outward nature and providence, by which the soul is led along its appointed way. It was almost Christian in its superiority to all low, worldly, vulgar thoughts and cares; in its recognition of a high standard of duty, and a great destiny for man. In its strength, Margaret was enabled to do and bear, with patient fortitude, what would have crushed a soul not thus supported. Yet it is not the highest aim, for in all its forms, whether as personal improvement, the salvation of the soul, or ascetic religion, it has at its core a profound selfishness. Margaret’s soul was too generous for any low form of selfishness. Too noble to become an Epicurean, too large-minded to become a modern ascetic, the defective nature of her rule of life, showed itself in her case, only in a certain supercilious tone toward “the vulgar herd,” in the absence (at this period) of a tender humanity, and in an idolatrous hero-worship of genius and power. Afterward, too, she may have suffered from her desire for a universal

human experience, and an unwillingness to see that we must often be content to enter the Kingdom, of Heaven halt and maimed, — that a perfect development here must often be wholly renounced.

But how much better to pursue with devotion, like that of Margaret, an imperfect aim, than to worship with lip-service, as most persons do, even though it be in a loftier temple, and before a holier shrine! With Margaret, the doctrine of self-culture was a devotion to which she sacrificed all earthly hopes and joys, — everything but manifest duty. And so her course was “onward, ever onward,” like that of Schiller, to her last hour of life.

Burned in her cheek with ever deepening fire
The spirit's YOUTH, which never passes by; —
The COURAGE which, though worlds in hate conspire,
Conquers, at last, their dull hostility; —
The lofty FAITH, which, ever mounting higher,
Now presses on, now waiteth patiently, —
With which the good tends ever to his goal,
With which day finds, at last, the earnest soul.

But this high idea which governed our friend's life, brought her into sharp conflicts, which constituted the pathos and tragedy of her existence, — first with her circumstances, which seemed so inadequate to the needs of her nature, — afterwards with duties to relatives and friends, — and, finally, with the law of the Great Spirit, whose will she found it so hard to acquiesce in.

The circumstances in which Margaret lived appeared to her life a prison. She had no room for utterance, no sphere adequate; her powers were unemployed. With what eloquence she described this want of a field! Often have I listened with wonder and admiration, satisfied that she exaggerated the evil, and yet unable to combat her rapid statements. Could she have seen in how few years a way would open before her, by which she could emerge into an ample field, — how soon she would find troops of friends, fit society, literary occupation, and the opportunity of studying the great works of art in their own home, — she would have been spared many a sharp pang.

Margaret, like every really earnest and deep nature, felt the necessity of a religious faith as the foundation of character. The first notice which I find of her views on this point is contained in the following letter to one of her youthful friends, when only nineteen: —

‘I have hesitated much whether to tell you what you ask about my religion. You are mistaken! I have not formed an opinion. I have determined not to form settled opinions at present. Loving or feeble natures need a positive religion, a visible refuge, a protection, as much in the passionate season of youth as in those stages nearer to the grave. But mine is not such. My pride is superior to any feelings I have yet experienced: my affection is strong admiration, not the necessity of giving or receiving assistance or sympathy. When disappointed, I do not ask or wish consolation, — I wish to know and feel my pain, to investigate its nature and its source; I will not have my thoughts diverted, or my feelings soothed; ’tis therefore that my young life is so singularly barren of illusions. I know, I feel the time must come when this proud and impatient heart shall be stilled, and turn from the ardors of Search and Action, to lean on something above. But — shall I say it? — the thought of that calmer era is to me a thought of deepest sadness; so remote from my present being is that future existence, which still the mind may conceive. I believe in Eternal Progression. I believe in a God, a Beauty and Perfection to which I am to strive all my life for assimilation. From these two articles of belief, I draw the rules by which I strive to regulate my life. But, though I reverence all religions as necessary to the happiness of man, I am yet ignorant of the religion of Revelation. Tangible promises! well defined hopes! are things of which I do not *now* feel the need. At present, my soul is intent on this life, and I think of religion as its rule; and, in my opinion, this is the natural and proper course from youth to age. What I have written is not hastily concocted, it has a meaning. I have given you, in this little space, the substance of many thoughts, the clues to many cherished opinions. ’Tis a subject on which I rarely speak. I never said so much but once before. I have here given you all I know, or think, on the most important of subjects — could you but read understandingly!’

*

I find, in her journals for 1833, the following passages, expressing the religious purity of her aspirations at that time: —

‘Blessed Father, nip every foolish wish in blossom. Lead me *any way* to truth and goodness; but if it might be, I would not pass from idol to idol. Let no mean sculpture deform a mind disorderly, perhaps ill-furnished, but spacious and life-warm. Remember thy child, such as thou madest her, and let her understand her little troubles, when possible, oh, beautiful Deity!’

*

‘*Sunday morning.* — Mr. — preached on the nature of our duties, social and personal. The sweet dew of truth penetrated my heart like balm. He pointed out the various means of improvement, whereby the humblest of us may be beneficent at last. How just, how nobly true, — how modestly, yet firmly uttered, — his opinions of man, — of time, — of God!

‘My heart swelled with prayer. I began to feel hope that time and toil might strengthen me to despise the “vulgar parts of felicity,” and live as becomes an immortal creature. I am sure, quite sure, that I am getting into the right road. Oh, lead me, my Father! root out false pride and selfishness from my heart; inspire me with virtuous energy, and enable me to improve every talent for the eternal good of myself and others.’

A friend of Margaret, some years older than herself, gives me the following narrative: —

“I was,” says she, in substance, “suffering keenly from a severe trial, and had secluded myself from all my friends, when Margaret, a girl of twenty, forced her way to me. She sat with me, and gave me her sympathy, and, with most affectionate interest, sought to draw me away from my gloom. As far as she was able, she gave me comfort. But as my thoughts were then much led to religious subjects, she sought to learn my religious experience, and listened to it with great interest. I told her how I had sat in darkness for two long years, waiting for the light, and in full faith that it would come; how I had kept my soul patient and quiet, — had surrendered self-will to God’s will, — had watched and waited till at last His great mercy came in an infinite peace to my soul. Margaret was never weary of asking me concerning this state, and said, ‘I would gladly give all my talents and knowledge for such an experience as this.’

“Several years after,” continues this friend, “I was travelling with her, and we sat, one lovely night, looking at the river, as it rolled beneath the yellow moonlight. We spoke again of God’s light in the soul, and I said— ‘Margaret! has that light dawned on *your* soul?’ She answered, ‘I think it has. But, oh! it is so glorious that I fear it will not be permanent, and so precious that I dare not speak of it, lest it should be gone.’

“That was the whole of our conversation, and I did not speak to her again concerning it.”

*

Before this time, however, during her residence at Cambridge, she seemed to reach the period of her existence in which she descended lowest into the depths of gloom. She felt keenly, at this time, the want of a home for her heart. Full of a

profound tendency toward life, capable of an ardent love, her affections were thrown back on her heart, to become stagnant, and for a while to grow bitter there; Then it was that she felt how empty and worthless were all the attainments and triumphs of the mere intellect; then it was that “she went about to cause her heart to despair of all the labor she had taken under the sun.” Had she not emerged from this valley of the shadow of death, and come on to a higher plane of conviction and hope, her life would have been a most painful tragedy. But, when we know how she passed on and up, ever higher and higher, to the mountain-top, leaving one by one these dark ravines and mist-shrouded valleys, and ascending to where a perpetual sunshine lay, above the region of clouds, and was able to overlook with eagle glance the widest panorama, — we can read, with sympathy indeed, but without pain, the following extracts from a journal:

‘It was Thanksgiving day, (Nov., 1831,) and I was obliged to go to church, or exceedingly displease my father. I almost always suffered much in church from a feeling of disunion with the hearers and dissent from the preacher; but to-day, more than ever before, the services jarred upon me from their grateful and joyful tone. I was wearied out with mental conflicts, and in a mood of most childish, childlike sadness. I felt within myself great power, and generosity, and tenderness; but it seemed to me as if they were all unrecognized, and as if it was impossible that they should be used in life. I was only one-and-twenty; the past was worthless, the future hopeless; yet I could not remember ever voluntarily to have done a wrong thing, and my aspiration seemed very high. I looked round the church, and envied all the little children; for I supposed they had parents who protected them, so that they could never know this strange anguish, this dread uncertainty. I knew not, then, that none could have any father but God. I knew not, that I was not the only lonely one, that I was not the selected Oedipus, the special victim of an iron law. I was in haste for all to be over, that I might get into the free air.

‘I walked away over the fields as fast as I could walk. This was my custom at that time, when I could no longer bear the weight of my feelings, and fix my attention on any pursuit; for I do believe I never voluntarily gave way to these thoughts one moment. The force I exerted I think, even now, greater than I ever knew in any other character. But when I could bear myself no longer, I walked many hours, till the anguish was wearied out, and I returned in a state of prayer. To-day all seemed to have reached its height. It seemed as if I could never return to a world in which I had no place, — to the mockery of humanities. I could not

act a part, nor seem to live any longer. It was a sad and fallow day of the late autumn. Slow processions of sad clouds were passing over a cold blue sky; the hues of earth were dull, and gray, and brown, with sickly struggles of late green here and there; sometimes a moaning gust of wind drove late, reluctant leaves across the path; — there was no life else. In the sweetness of my present peace, such days seem to me made to tell man the worst of his lot; but still that November wind can bring a chill of memory.

‘I paused beside a little stream, which I had envied in the merry fulness of its spring life. It was shrunken, voiceless, choked with withered leaves. I marvelled that it did not quite lose itself in the earth. There was no stay for me, and I went on and on, till I came to where the trees were thick about a little pool, dark and silent. I sat down there. I did not think; all was dark, and cold, and still. Suddenly the sun shone out with that transparent sweetness, like the last smile of a dying lover, which it will use when it has been unkind all a cold autumn day. And, even then, passed into my thought a beam from its true sun, from its native sphere, which has never since departed from me. I remembered how, a little child. I had stopped myself one day on the stairs, and asked, how came I here? How is it that I seem to be this Margaret Fuller? What does it mean? What shall I do about it? I remembered all the times and ways in which the same thought had returned. I saw how long it must be before the soul can learn to act under these limitations of time and space, and human nature; but I saw, also, that it **MUST** do it, — that it must make all this false true, — and sow new and immortal plants in the garden of God, before it could return again. I saw there was no self; that selfishness was all folly, and the result of circumstance; that it was only because I thought self real that I suffered; that I had only to live in the idea of the **ALL**, and all was mine. This truth came to me, and I received it unhesitatingly; so that I was for that hour taken up into God. In that true ray most of the relations of earth seemed mere films, phenomena.

‘My earthly pain at not being recognized never went deep after this hour. I had passed the extreme of passionate sorrow; and all check, all failure, all ignorance, have seemed temporary ever since. When I consider that this will be nine years ago next November, I am astonished that I have not gone on faster since; that I am not yet sufficiently purified to be taken back to God. Still, I did but touch then on the only haven of Insight. You know what I would say. I was dwelling in the ineffable, the unutterable. But the sun of earth set, and it grew dark around; the moment came for me to go. I had never been accustomed to walk alone at night, for my father was very strict on that subject, but now I had not one fear.

When I came back, the moon was riding clear above the houses. I went into the churchyard, and there offered a prayer as holy, if not as deeply true, as any I know now; a prayer, which perhaps took form as the guardian angel of my life. If that word in the Bible, *Selah*, means what gray-headed old men think it does, when they read aloud, it should be written here, — *Selah*!

‘Since that day, I have never more been completely engaged in self; but the statue has been emerging, though slowly, from the block. Others may not see the promise even of its pure symmetry, but I do, and am learning to be patient. I shall be all human yet; and then the hour will come to leave humanity, and live always in the pure ray.

‘This first day I was taken up; but the second time the Holy Ghost descended like a dove. I went out again for a day, but this time it was spring. I walked in the fields of Groton. But I will not describe that day; its music still sounds too sweetly near. Suffice it to say, I gave it all into our Father’s hands, and was no stern-weaving Fate more, but one elected to obey, and love, and at last know. Since then I have suffered, as I must suffer again, till all the complex be made simple, but I have never been in discord with the grand harmony.’

GROTON AND PROVIDENCE.

LETTERS AND JOURNALS.

*

”What hath not man sought out and found,
But his dear God? Who yet his glorious love
Embosoms in us, mellowing the ground
With showers, and frosts, with love and awe.”

HERBERT.

“No one need pride himself upon Genius, for it is the free-gift of God; but of honest Industry and true devotion to his destiny any man may well be proud; indeed, this thorough, integrity of purpose is itself the Divine Idea in its most common form, and no really honest mind is without communion with God”

FICHTE.

”God did anoint thee with his odorous oil,
To wrestle, not to reign; and he assigns

All thy tears over, like pure crystallines,
For younger fellow-workers of the soil
To wear for amulets. So others shall
Take patience, labor, to their hearts and hands,
From thy hands, and thy heart, and thy brave cheer,
And God's grace fructify through thee to all."

ELIZABETH B. BARRETT.

"While I was restless, nothing satisfied,
Distrustful, most perplexed — yet felt somehow
A mighty power was brooding, taking shape
Within me; and this lasted till one night
When, as I sat revolving it and more,
A still voice from without said,— 'Seest thou not,
Desponding child, whence came defeat and loss?
Even from thy strength.'"

BROWNING.

III.

GROTON AND PROVIDENCE.

*

'Heaven's discipline has been invariable to me. The seemingly most pure and noble hopes have been blighted; the seemingly most promising connections broken. The lesson has been endlessly repeated: "Be humble, patient, self-sustaining; hope only for occasional aids; love others, but not engrossingly, for by being much alone your appointed task can best be done!" What a weary work is before me, ere that lesson shall be fully learned! Who shall wonder at the stiff-necked, and rebellious folly of young Israel, bowing down to a brute image, though the prophet was bringing messages from the holy mountain, while one's own youth is so obstinately idolatrous! Yet will I try to keep the heart with diligence, nor ever fear that the sun is gone out because I shiver in the cold and dark!'

Such was the tone of resignation in which Margaret wrote from Groton, Massachusetts, whither, much to her regret, her father removed in the spring of 1833. Extracts from letters and journals will show how stern was her schooling

there, and yet how constant was her faith, that

”God keeps a niche
In heaven to hold our idols! And albeit
He breaks them to our faces, and denies
That our close kisses should impair their white,
I know we shall behold them raised, complete,
The dust shook from their beauty, — glorified,
New Memnons singing in the great God-light.”

SAD WELCOME HOME.

‘*Groton, April 25, 1833.* — I came hither, summoned by the intelligence, that our poor — had met with a terrible accident. I found the dear child, — who had left me so full of joy and eagerness, that I thought with a sigh, not of envy, how happy he, at least, would be here, — burning with fever. He had expected me impatiently, and was very faint lest it should not be “Margaret” who had driven up. I confess I greeted our new home with a flood of bitter tears. He behaves with great patience, sweetness, and care for the comfort of others. This has been a severe trial for mother, fatigued, too, as she was, and full of care; but her conduct is angelic. I try to find consolation in all kinds of arguments, and to distract my thoughts till the precise amount of injury is surely known. I am not idle a moment. When not-with — , in whose room I sit, sewing, and waiting upon him, or reading aloud a great part of the day, I solace my soul with Goethe, and follow his guidance into realms of the “Wahren, Guten, and Schönen.”’

OCCUPATIONS.

‘*May, 1833.* — As to German, I have done less than I hoped, so much had the time been necessarily broken up. I have with me the works of Goethe which I have not yet read, and am now engaged upon “Kunst and Alterthum,” and “Campagne in Frankreich.” I still prefer Goethe to any one, and, as I proceed, find more and more to learn, and am made to feel that my general notion of his mind is most imperfect, and needs testing and sifting.

‘I brought your beloved Jean Paul with me, too. I cannot yet judge well, but think we shall not be intimate. His infinitely variegated, and certainly most exquisitely colored, web fatigues attention. I prefer, too, wit to humor, and daring imagination to the richest fancy. Besides, his philosophy and religion seem to be of the sighing sort, and, having some tendency that way myself, I

want opposing force in a favorite author. Perhaps I have spoken unadvisedly; if so, I shall recant on further knowledge.'

And thus recant she did, when familiar acquaintance with the genial and sagacious humorist had won for him her reverent love.

RICHTER.

'Poet of Nature! Gentlest of the wise,
Most airy of the fanciful, most keen
Of satirists! — thy thoughts, like butterflies,
Still near the sweetest scented flowers have been
With Titian's colors thou canst sunset paint,
With Raphael's dignity, celestial love;
With Hogarth's pencil, each deceit and feint
Of meanness and hypocrisy reprove;

Canst to devotion's highest flight sublime
Exalt the mind, by tenderest pathos' art,
Dissolve, in purifying tears, the heart,
Or bid it, shuddering, recoil at crime;
The fond illusions of the youth and maid,
At which so many world-formed sages sneer,
When by thy altar-lighted torch displayed,
Our natural religion must appear.
All things in thee tend to one polar star,
Magnetic all thy influences are!'

'Some murmur at the "want of system" in Richter's writings.

'A labyrinth! a flowery wilderness!
Some in thy "slip-boxes" and "honey-moons"
Complain of — *want of order*, I confess,
But not of *system* in its highest sense.
Who asks a guiding clue through this wide mind,
In love of Nature such will surely find.
In tropic climes, live like the tropic bird,
Whene'er a spice-fraught grove may tempt thy stay;
Nor be by cares of colder climes disturbed —
No frost the summer's bloom shall drive away;

Nature's wide temple and the azure dome
Have plan enough, for the free spirit's home!

'Your Schiller has already given me great pleasure. I have been reading the "Revolt in the Netherlands" with intense interest, and have reflected much upon it. The volumes are numbered in my little book-case, and as the eye runs over them, I thank the friendly heart that put all this genius and passion within my power.

'I am glad, too, that you thought of lending me "Bigelow's Elements." I have studied the Architecture attentively, till I feel quite mistress of it all. But I want more engravings, Vitruvius, Magna Græcia, the Ionian Antiquities, &c. Meanwhile, I have got out all our tours in Italy. Forsyth, a book I always loved much, I have re-read with increased pleasure, by this new light. Goethe, too, studied architecture while in Italy; so his books are full of interesting information; and Madame De Stael, though not deep, is tasteful.'

*

'American History! Seriously, my mind is regenerating as to my country, for I am beginning to appreciate the United States and its great men. The violent antipathies, — the result of an exaggerated love for, shall I call it by so big a name as the "poetry of being?" — and the natural distrust arising from being forced to hear the conversation of half-bred men, all whose petty feelings were roused to awkward life by the paltry game of local politics, — are yielding to reason and calmer knowledge. Had I but been educated in the knowledge of such men as Jefferson, Franklin, Rush! I have learned now to know them partially. And I rejoice, if only because my father and I can have so much in common on this topic. All my other pursuits have led me away from him; here he has much information and ripe judgment. But, better still, I hope to feel no more that sometimes despairing, sometimes insolently contemptuous, feeling of incongeniality with my time and place. Who knows but some proper and attainable object of pursuit may present itself to the cleared eye? At any rate, wisdom is good, if it brings neither bliss nor glory.'

*

March, 1834. — Four pupils are a serious and fatiguing charge for one of my somewhat ardent and impatient disposition. Five days in the week I have given daily lessons in three languages, in Geography and History, besides many other

exercises on alternate days. This has consumed often eight, always five hours of my day. There has been, also, a great deal of needle-work to do, which is now nearly finished, so that I shall not be obliged to pass my time about it when everything looks beautiful, as I did last summer. We have had very poor servants, and, for some time past, only one. My mother has been often ill. My grandmother, who passed the winter with us, has been ill. Thus, you may imagine, as I am the only grown-up daughter, that my time has been considerably taxed.

‘But as, sad or merry, I must always be learning, I laid down a course of study at the beginning of winter, comprising certain subjects, about which I had always felt deficient. These were the History and Geography of modern Europe, beginning the former in the fourteenth century; the Elements of Architecture; the works of Alfieri, with his opinions on them; the historical and critical works of Goethe and Schiller, and the outlines of history of our own country.

‘I chose this time as one when I should have nothing to distract or dissipate my mind. I have nearly completed this course, in the style I proposed, — not minute or thorough. I confess, — though I have had only three evenings in the week, and chance hours in the day, for it. I am very glad I have undertaken it, and feel the good effects already. Occasionally, I try my hand at composition, but have not completed anything to my own satisfaction. I have sketched a number of plans, but if ever accomplished, it must be in a season of more joyful energy, when my mind has been renovated, and refreshed by change of scene or circumstance. My translation of Tasso cannot be published at present, if ‘it ever is.’

*

‘My object is to examine thoroughly, as far as my time and abilities will permit, the evidences of the Christian Religion. I have endeavored to get rid of this task as much and as long as possible; to be content with superficial notions, and, if I may so express it, to adopt religion as a matter of taste. But I meet with infidels very often; two or three of my particular friends are deists; and their arguments, with distressing sceptical notions of my own, are haunting me forever. I must satisfy myself; and having once begun, I shall go on as far as I can.

‘My mind often swells with thoughts on these subjects, which I long to pour out on some person of superior calmness and strength, and fortunate in more accurate knowledge. I should feel such a quieting reaction. But, generally, it seems best that I should go through these conflicts alone. The process will be slower, more irksome, more distressing, but the results will be my own, and I

shall feel greater confidence in them.’

MISS MARTINEAU.

In the summer of 1835, Margaret found a fresh stimulus to self-culture in the society of Miss Martineau, whom she met while on a visit at Cambridge, in the house of her friend, Mrs. Farrar. How animating this intercourse then was to her, appears from her journals.

Miss Martineau received me so kindly as to banish all embarrassment at once. We had some talk about “Carlyleism,” and I was not quite satisfied with the ground she took, but there was no opportunity for full discussion. I wished to give myself wholly up to receive an impression of her. What shrewdness in detecting various shades of character! Yet, what she said of Hannah More and Miss Edgeworth, grated upon my feelings.’

Again, later: —

‘I cannot conceive how we chanced upon the subject of our conversation, but never shall I forget what she said. It has bound me to her. In that hour, most unexpectedly to me, we passed the barrier that separates acquaintance from friendship, and I saw how greatly her heart is to be valued.’

And again: —

‘We sat together close to the pulpit. I was deeply moved by Mr.—’s manner of praying for “our friends,” and I put up this prayer for my companion, which I recorded, as it rose in my heart: “Author of good, Source of all beauty and holiness, thanks to Thee for the purifying, elevating communion that I have enjoyed with this beloved and revered being. Grant, that the thoughts she has awakened, and the bright image of her existence, may live in my memory, inciting my earth-bound spirit to higher words and deeds. May her path be guarded and blessed. May her noble mind be kept firmly poised in its native truth, unsullied by prejudice or error, and strong to resist whatever outwardly or inwardly shall war against its high vocation. May each day bring to this generous seeker new riches of true philosophy and of Divine Love. And, amidst all trials, give her to know and feel that Thou, the All-sufficing, art with her, leading her on through eternity to likeness of Thyself.”

*

‘I sigh for an intellectual guide. Nothing but the sense of what God has done for me, in bringing me nearer to himself, saves me from despair. With what envy I looked at Flaxman’s picture of Hesiod sitting at the feet of the Muse! How blest

would it be to be thus instructed in one's vocation! Anything would I do and suffer, to be sure that, when leaving earth, I should not be haunted with recollections of "aims unreached, occasions lost." I have hoped some friend would do, — what none has ever yet done, — comprehend me wholly, mentally, and morally, and enable me better to comprehend myself. I have had some hope that Miss Martineau might be this friend, but cannot yet tell. She has what I want, — vigorous reasoning powers, invention, clear views of her objects, — and she has been trained to the best means of execution. Add to this, that there are no strong intellectual sympathies between us, such as would blind her to my defects.'

*

'A delightful letter from Miss Martineau. I mused long upon the noble courage with which she stepped forward into life, and the accurate judgment with which she has become acquainted with its practical details, without letting her fine imagination become tamed. I shall be cheered and sustained, amidst all fretting and uncongenial circumstances, by remembrance of her earnest love of truth and ardent faith.'

ILLNESS

‘A terrible feeling in my head, but kept about my usual avocations. Read Ugo Foscolo’s *Sepolcri*, and Pindemonti’s answer, but could not relish either, so distressing was the weight on the top of the brain; sewed awhile, and then went out to get warm, but could not, though I walked to the very end of Hazel-grove, and the sun was hot upon me. Sat down, and, though seemingly able to think with only the lower part of my head, meditated literary plans, with full hope that, if I could command leisure, I might do something good. It seemed as if I should never reach home, as I was obliged to sit down incessantly.

‘For nine long days and nights, without intermission, all was agony, — fever and dreadful pain in my head. Mother tended me like an angel all that time, scarcely ever leaving me, night or day. My father, too, habitually so sparing in tokens of affection, was led by his anxiety to express what he felt towards me in stronger terms than he had ever used in the whole course of my life. He thought I might not recover, and one morning, coming into my room, after a few moments’ conversation, he said: “My dear, I have been thinking of you in the night, and I cannot remember that you have any *faults*. You have defects, of course, as all mortals have, but I do not know that you have a single fault.” These words, — so strange from him, who had scarce ever in my presence praised me, and who, as I knew, abstained from praise as hurtful to his children, — affected me to tears at the time, although I could not foresee how dear and consolatory this extravagant expression of regard would very soon become. The family were deeply moved by the fervency of his prayer of thanksgiving, on the Sunday morning when I was somewhat recovered; and to mother he said, “I have no room for a painful thought now that our daughter is restored.”

‘For myself, I thought I should die; but I was calm, and looked to God without fear. When I remembered how much struggle awaited me if I remained, and how improbable it was that any of my cherished plans would bear fruit, I felt willing to go. But Providence did not so will it. A much darker dispensation for our family was in store.’

DEATH OF HER FATHER.

‘On the evening of the 30th of September, 1835, my father was seized with cholera, and on the 2d of October, was a corpse. For the first two days, my grief, under this calamity, was such as I dare not speak of. But since my father’s head is laid in the dust, I feel an awful calm, and am becoming familiar with the

thoughts of being an orphan. I have prayed to God that duty may now be the first object, and self set aside. May I have light and strength to do what is right, in the highest sense, for my mother, brothers, and sister.

‘It has been a gloomy week, indeed. The children have all been ill, and dearest mother is overpowered with sorrow, fatigue, and anxiety. I suppose she must be ill too, when the children recover. I shall endeavor to keep my mind steady, by remembering that there is a God, and that grief is but for a season. Grant, oh Father, that neither the joys nor sorrows of this past year shall have visited my heart in vain! Make me wise and strong for the performance of immediate duties, and ripen me, by what means Thou seest best, for those which lie beyond.

‘My father’s image follows me constantly. Whenever I am in my room, he seems to open the door, and to look on me with a complacent, tender smile. What would I not give to have it in my power, to make that heart once more beat with joy! The saddest feeling is the remembrance of little things, in which I have fallen short of love and duty. I never sympathized in his liking for this farm, and secretly wondered how a mind which had, for thirty years, been so widely engaged in the affairs of men, could care so much for trees and crops. But now, amidst the beautiful autumn days, I walk over the grounds, and look with painful emotions at every little improvement. He had selected a spot to place a seat where I might go to read alone, and had asked me to visit it. I contented myself with “When you please, father;” but we never went! What would I not now give, if I had fixed a time, and shown more interest! A day or two since, I went there. The tops of the distant blue hills were veiled in delicate autumn haze; soft silence brooded over the landscape; on one side, a brook gave to the gently sloping meadow spring-like verdure; on the other, a grove, — which he had named for me, — lay softly glowing in the gorgeous hues of October. It was very sad. May this sorrow give me a higher sense of duty in the relationships which remain.

‘Dearest mother is worn to a shadow. Sometimes, when I look on her pale face, and think of all her grief, and the cares and anxieties which now beset her, I am appalled by the thought that she may not continue with us long. Nothing sustains me now but the thought that God, who saw fit to restore me to life when I was so very willing to leave it, — more so, perhaps than I shall ever be again, — must have some good work for me to do.’

*

‘Nov. 3, 1835. — I thought I should be able to write ere now, how our affairs

were settled, but that time has not come yet. My father left no will, and, in consequence, our path is hedged in by many petty difficulties. He has left less property than we had anticipated, for he was not fortunate in his investments in real estate. There will, however, be enough to maintain my mother, and educate the children decently. I have often had reason to regret being of the softer sex, and never more than now. If I were an eldest son, I could be guardian to my brothers and sister, administer the estate, and really become the head of my family. As it is, I am very ignorant of the management and value of property, and of practical details. I always hated the din of such affairs, and hoped to find a life-long refuge from them in the serene world of literature and the arts. But I am now full of desire to learn them, that I may be able to advise and act, where it is necessary. The same mind which has made other attainments, can, in time, compass these, however uncongenial to its nature and habits.'

*

'I shall be obliged to give up selfishness in the end. May God enable me to see the way clear, and not to let down the intellectual, in raising the moral tone of my mind. Difficulties and duties became distinct the very night after my father's death, and a solemn prayer was offered then, that I might combine what is due to others with what is due to myself. The spirit of that prayer I shall constantly endeavor to maintain. What ought to be done for a few months to come is plain, and, as I proceed, the view will open.'

TRIAL.

The death of her father brought in its train a disappointment as keen as Margaret could well have been called on to bear. For two years and more she had been buoyed up to intense effort by the promise of a visit to Europe, for the end of completing her culture. And as the means of equitably remunerating her parents for the cost of such a tour, she had faithfully devoted herself to the teaching of the younger members of the family. Her honored friends, Professor and Mrs. Farrar, who were about visiting the Old World, had invited her to be their companion; and, as Miss Martineau was to return to England in the ship with them, the prospect before her was as brilliant with generous hopes as her aspiring imagination could conceive. But now, in her journal of January 1, 1836, she writes: —

'The New-year opens upon me under circumstances inexpressibly sad. I must make the last great sacrifice, and, apparently, for evil to me and mine. Life, as I

look forward, presents a scene of struggle and privation only. Yet “I bate not a jot of heart,” though much “of hope.” My difficulties are not to be compared with those over which many strong souls have triumphed. Shall I then despair? If I do, I am not a strong soul.’

Margaret’s family treated her, in this exigency, with the grateful consideration due to her love, and urgently besought her to take the necessary means, and fulfil her father’s plan. But she could not make up her mind to forsake them, preferring rather to abandon her long-cherished literary designs. Her struggles and her triumph thus appear in her letters: —

‘*January 30, 1836.* — I was a great deal with Miss Martineau, while in Cambridge, and love her more than ever. She is to stay till August, and go to England with Mr. and Mrs. Farrar. If I should accompany them I shall be with her while in London, and see the best literary society. If I should go, you will be with mother the while, will not you?[A] Oh, dear E ———, you know not how I fear and tremble to come to a decision. My temporal all seems hanging upon it, and the prospect is most alluring. A few thousand dollars would make all so easy, so safe. As it is, I cannot tell what is coming to us, for the estate will not be settled when I go. I pray to God ceaselessly that I may decide wisely.’

*

‘*April 17th, 1836.* — If I am not to go with you I shall be obliged to tear my heart, by a violent effort, from its present objects and natural desires. But I shall feel the necessity, and will do it if the life-blood follows through the rent. Probably, I shall not even think it best to correspond with you at all while you are in Europe. Meanwhile, let us be friends indeed. The generous and unfailing love which you have shown me during these three years, when I could be so little to you, your indulgence for my errors and fluctuations, your steady faith in my intentions, have done more to shield and sustain me than any other earthly influence. If I must now learn to dispense with feeling them constantly near me, at least their remembrance can never, never be less dear. I suppose I ought, instead of grieving that we are soon to be separated, now to feel grateful for an intimacy of extraordinary permanence, and certainly of unstained truth and perfect freedom on both sides.

’As to my feelings, I take no pleasure in speaking of them; but I know not that I could give you a truer impression of them, than by these lines which I translate from the German of Uhland. They are entitled “JUSTIFICATION.”

”Our youthful fancies, idly fired,
The fairest visions would embrace;
These, with impetuous tears desired,
Float upward into starry space;
Heaven, upon the suppliant wild,
Smiles down a gracious *No!* — In vain
The strife! Yet be consoled, poor child,
For the wish passes with the pain.

But when from such idolatry
The heart has turned, and wiser grown,
In earnestness and purity
Would make a nobler plan its own, —
Yet, after all its zeal and care,
Must of its chosen aim despair, —
Some bitter tears may be forgiven
By *Man*, at least, — *we trust, by Heaven.*”

[Footnote A: Her eldest brother.]

BIRTHDAY.

‘*May 23d, 1836.* — I have just been reading Goethe’s *Lebensregel*. It is easy to say “Do not trouble yourself with useless regrets for the past; enjoy the present, and leave the future to God.” But it is *not* easy for characters, which are by nature neither *calm* nor *careless*, to act upon these rules. I am rather of the opinion of Novalis, that “*Wer sich der hochsten Lieb ergeben Genest von ihnen Wunden nie.*”

‘But I will endeavor to profit by the instructions of the great philosopher who teaches, I think, what Christ did, to use without overvaluing the world.

‘Circumstances have decided that I must not go to Europe, and shut upon me the door, as I think, forever, to the scenes I could have loved. Let me now try to forget myself, and act for others’ sakes. What I can do with my pen, I know not. At present, I feel no confidence or hope. The expectations so many have been led to cherish by my conversational powers, I am disposed to deem ill-founded. I do not think I can produce a valuable work. I do not feel in my bosom that confidence necessary to sustain me in such undertakings, — the confidence of genius. But I am now but just recovered from bodily illness, and still heart-broken by sorrow and disappointment. I may be renewed again, and feel

differently. If I do not soon, I will make up my mind to teach. I can thus get money, which I will use for the benefit of my dear, gentle, suffering mother, — my brothers and sister. This will be the greatest consolation to me, at all events.'

DEATH IN LIFE.

'The moon tempted me out, and I set forth for a house at no great distance. The beloved south-west was blowing; the heavens were flooded with light, which could not diminish the tremulously pure radiance of the evening star; the air was full of spring sounds, and sweet spring odors came up from the earth. I felt that happy sort of feeling, as if the soul's pinions were budding. My mind was full of poetic thoughts, and nature's song of promise was chanting in my heart.

'But what a change when I entered that human dwelling! I will try to give you an impression of what you, I fancy, have never come in contact with. The little room — they have but one — contains a bed, a table, and some old chairs. A single stick of wood burns in the fire-place. It is not needed now, but those who sit near it have long ceased to know what spring is. They are all frost. Everything is old and faded, but at the same time as clean and carefully mended as possible. For all they know of pleasure is to get strength to sweep those few boards, and mend those old spreads and curtains. That sort of self-respect they have, and it is all of pride their many years of poor-tith has left them.

'And there they sit, — mother and daughter! In the mother, ninety years have quenched every thought and every feeling, except an imbecile interest about her daughter, and the sort of self-respect I just spoke of. Husband, sons, strength, health, house and lands, all are gone. And yet these losses have not had power to bow that palsied head to the grave. Morning by morning she rises without a hope, night by night she lies down vacant or apathetic; and the utmost use she can make of the day is to totter three or four times across the floor by the assistance of her staff. Yet, though we wonder that she is still permitted to cumber the ground, joyless and weary, "the tomb of her dead self," we look at this dry leaf, and think how green it once was, and how the birds sung to it in its summer day.

'But can we think of spring, or summer, or anything joyous or really life-like, when we look at the daughter? — that bloodless effigy of humanity, whose care is to eke out this miserable existence by means of the occasional doles of those who know how faithful and good a child she has been to that decrepit creature; who thinks herself happy if she can be well enough, by hours of patient toil, to perform those menial services which they both require; whose talk is of the price of pounds of sugar, and ounces of tea, and yards of flannel; whose only

intellectual resource is hearing five or six verses of the Bible read every day,— “my poor head,” she says, “cannot bear any more;” and whose only hope is the death to which she has been so slowly and wearily advancing, through many years like this.

‘The saddest part is, that she does *not wish* for death. She clings to this sordid existence. Her soul is now so habitually enwrapt in the meanest cares, that if she were to be lifted two or three steps upward, she would not know what to do with life; how, then, shall she soar to the celestial heights? Yet she ought; for she has ever been good, and her narrow and crushing duties have been performed with a self-sacrificing constancy, which I, for one, could never hope to equal.

‘While I listened to her, — and I often think it good for me to listen to her patiently, — the expressions you used in your letter, about “drudgery,” occurred to me. I remember the time when I, too, deified the “soul’s impulses.” It is a noble worship; but, if we do not aid it by a just though limited interpretation of what “Ought” means, it will degenerate into idolatry. For a time it was so with me, and I am not yet good enough to love the *Ought*.

‘Then I came again into the open air, and saw those resplendent orbs moving so silently, and thought that they were perhaps tenanted, not only by beings in whom I can see the germ of a possible angel, but by myriads like this poor creature, in whom that germ is, so far as we can see, blighted entirely, I could not help saying, “O my Father! Thou, whom we are told art all Power, and also all Love, how canst Thou suffer such even transient specks on the transparence of Thy creation? These grub-like lives, undignified even by passion, — these life-long quenchings of the spark divine. — why dost Thou suffer them? Is not Thy paternal benevolence impatient till such films be dissipated?”

‘Such questionings once had power to move my spirit deeply; now, they but shade my mind for an instant. I have faith in a glorious explanation, that shall make manifest perfect justice and perfect wisdom.’

LITERATURE.

Cut off from access to the scholars, libraries, lectures, galleries of art, museums of science, antiquities, and historic scenes of Europe, Margaret bent her powers to use such opportunities of culture as she could command in her solitary country-home. Journals and letters thus bear witness to her zeal: —

‘I am having one of my “intense” times, devouring book after book. I never stop a minute, except to talk with mother, having laid all little duties on the shelf for a few days. Among other things, I have twice read through the life of Sir J. Mackintosh; and it has suggested so much to me, that I am very sorry I did not

talk it over with you. It is quite gratifying, after my late chagrin, to find Sir James, with all his metaphysical turn, and ardent desire to penetrate it, puzzling so over the German philosophy, and particularly what I was myself troubled about, at Cambridge, — Jacobi's letters to Fichte.

'Few things have ever been written more discriminating or more beautiful than his strictures upon the Hindoo character, his portrait of Fox, and his second letter to Robert Hall, after his recovery from derangement. Do you remember what he says of the want of brilliancy in Priestley's moral sentiments? Those remarks, though slight, seem to me to show the quality of his mind more decidedly than anything in the book. That so much learning, benevolence, and almost unparalleled fairness of mind, should be in a great measure lost to the world, for want of earnestness of purpose, might impel us to attach to the latter attribute as much importance as does the wise uncle in Wilhelm Meister.'

*

'As to what you say of Shelley, it is true that the unhappy influences of early education prevented his ever attaining clear views of God, life, and the soul. At thirty, he was still a seeker, — an experimentalist. But then his should not be compared with such a mind as — — 's, which, having no such exuberant fancy to tame, nor various faculties to develop, naturally comes to maturity sooner. Had Shelley lived twenty years longer, I have no doubt he would have become a fervent Christian, and thus have attained that mental harmony which was necessary to him. It is true, too, as you say, that we always feel a melancholy imperfection in what he writes. But I love to think of those other spheres in which so pure and rich a being shall be perfected; and I cannot allow his faults of opinion and sentiment to mar my enjoyment of the vast capabilities, and exquisite perception of beauty, displayed everywhere in his poems.'

*

'*March 17, 1836.* — I think Herschel will be very valuable to me, from the slight glance I have taken of it, and I thank Mr. F.; but do not let him expect anything of me because I have ventured on a book so profound as the *Novum Organum*. I have been examining myself with severity, intellectually as well as morally, and am shocked to find how vague and superficial is all my knowledge. I am no longer surprised that I should have appeared harsh and arrogant in my strictures to one who, having a better-disciplined mind, is more sensible of the difficulties in the way of really knowing and doing anything, and who, having

more Wisdom, has more Reverence too. All that passed at your house will prove very useful to me; and I trust that I am approximating somewhat to that genuine humility which is so indispensable to true regeneration. But do not speak of this to — , for I am not yet sure of the state of my mind.’

*

‘1836. — I have, for the time, laid aside *De Stael* and *Bacon*, for *Martineau* and *Southey*. I find, with delight, that the former has written on the very subjects I wished most to talk out with her, and probably I shall receive more from her in this way than by personal intercourse, — for I think more of her character when with her, and am stimulated through my affections. As to *Southey*, I am steeped to the lips in enjoyment. I am glad I did not know this poet earlier; for I am now just ready to receive his truly exalting influences in some degree. I think, in reading, I shall place him next to *Wordsworth*. I have finished *Herschel*, and really believe I am a little wiser. I have read, too, *Heyne’s* letters twice, *Sartor Resartus* once, some of *Goethe’s* late diaries, *Coleridge’s* *Literary Remains*, and drank a great deal from *Wordsworth*. By the way, do you know his “Happy Warrior”? I find my insight of this sublime poet perpetually deepening.’

*

‘Mr. — says the *Wanderjahre* is “wise.” It must be presumed so; and yet one is not satisfied. I was perfectly so with my manner of interpreting the *Lehrjahre*; but this sequel keeps jerking my clue, and threatens to break it. I do not know our *Goethe* yet. I have changed my opinion about his religious views many times. Sometimes I am tempted to think that it is only his wonderful knowledge of human nature which has excited in me such reverence for his philosophy, and that no worthy fabric has been elevated on this broad foundation. Yet often, when suspecting that I have found a huge gap, the next turning it appears that it was but an air-hole, and there is a brick all ready to stop it. On the whole, though my enthusiasm for the *Goetherian* philosophy is checked, my admiration for the genius of *Goethe* is in nowise lessened, and I stand in a sceptical attitude, ready to try his philosophy, and, if needs must, play the *Eclectic*.’

‘Did I write that a kind-hearted neighbor, fearing I might be *dull*, sent to offer me the use of a *book-caseful* of *Souvenirs*, *Gems*, and such-like glittering ware?

I took a two or three year old “*Token*,” and chanced on a story, called the “*Gentle Boy*,” which I remembered to have heard was written by somebody in

Salem. It is marked by so much grace and delicacy of feeling, that I am very desirous to know the author, whom I take to be a lady.'

'With regard to what you say about the American Monthly, my answer is, I would gladly sell some part of my mind for lucre, to get the command of time; but I will not sell my soul: that is, I am perfectly willing to take the trouble of writing for money to pay the seamstress; but I am *not* willing to have what I write mutilated, or what I ought to say dictated to suit the public taste. You speak of my writing about Tieck. It is my earnest wish to interpret the German authors of whom I am most fond to such Americans as are ready to receive. Perhaps some might sneer at the notion of my becoming a teacher; but where I love so much, surely I might inspire others to love a little; and I think this kind of culture would be precisely the counterpoise required by the utilitarian tendencies of our day and place. My very imperfections may be of value. While enthusiasm is yet fresh, while I am still a novice, it may be more easy to communicate with those quite uninitiated, than when I shall have attained to a higher and calmer state of knowledge. I hope a periodical may arise, by and by, which may think me worthy to furnish a series of articles on German literature, giving room enough and perfect freedom to say what I please. In this case, I should wish to devote at least eight numbers to Tieck, and should use the Garden of Poesy, and my other translations.

'I have sometimes thought of translating his Little Red Riding Hood, for children. If it could be adorned with illustrations, like those in the "Story without an End," it would make a beautiful little book; but I do not know that this could be done in Boston. There is much meaning that children could not take in; but, as they would never discover this till able to receive the whole, the book corresponds exactly with my notions of what a child's book should be.

'I should like to begin the proposed series with a review of Heyne's letters on German Literature, which afford excellent opportunity for some preparatory hints. My plans are so undecided for several coming months, that I cannot yet tell whether I shall have the time and tranquillity needed to write out the whole course, though much tempted by the promise of perfect liberty. I could engage, however, to furnish at least two articles on Novalis and Körner. I trust you will be interested in my favorite Körner. Great is my love for both of them. But I wish to write something which shall not only *be* free from exaggeration, but which shall *seem* so, to those unacquainted with their works.

'I have so much reading to go through with this month, that I have but few hours for correspondents. I have already

discussed five volumes in German, two in French, three in English, and not without thought and examination.

‘Tell — that I read “Titan” by myself, in the afternoons and evenings of about three weeks. She need not be afraid to undertake it. Difficulties of detail may, perhaps, not be entirely conquered without a master or a good commentary, but she could enjoy all that is most valuable alone. I should be very unwilling to read it with a person of narrow or unrefined mind; for it is a noble work, and fit to raise a reader into that high serene of thought where pedants cannot enter.’

FAREWELL TO GROTON.

‘The place is beautiful, in its way, but its scenery is too tamely smiling and sleeping. My associations with it are most painful. There darkened round us the effects of my father’s ill-judged exchange, — ill-judged, so far at least as regarded himself, mother, and me, — all violently rent from the habits of our former life, and cast upon toils for which we were unprepared: there my mother’s health was impaired, and mine destroyed; there my father died; there were undergone the miserable perplexities of a family that has lost its head; there I passed through the conflicts needed to give up all which my heart had for years desired, and to tread a path for which I had no skill, and no-call, except that it must be trodden by some one, and I alone was ready. Wachuset and the Peterboro’ hills are blended in my memory with hours of anguish as great as I am capable of suffering. I used to look at them towering to the sky, and feel that I, too, from birth, had longed to rise, and, though for the moment crushed, was not subdued.

‘But if those beautiful hills, and wide, rich fields, saw this sad lore well learned, they also saw some precious lessons given in faith, fortitude, self-command, and unselfish love. There too, in solitude, the mind acquired more power of concentration, and discerned the beauty of strict method; there too, more than all, the heart was awakened to sympathize with the ignorant, to pity the vulgar, to hope for the seemingly worthless, and to commune with the Divine Spirit of Creation, which cannot err, which never sleeps, which will not permit evil to be permanent, nor its aim of beauty in the smallest particular eventually to fail.’

WINTER IN BOSTON.

In the autumn of 1836 Margaret went to Boston, with the two-fold design of

teaching Latin and French in Mr. Alcott's school, which was then highly prosperous, and of forming classes of young ladies in French, German, and Italian.

Her view of Mr. Alcott's plan of education was thus hinted in a journal, one day, after she had been talking with him, and trying to place herself in his mental position: —

Mr. A. 'O for the safe and natural way of Intuition! I cannot grope like a mole in the gloomy passages of experience. To the attentive spirit, the revelation contained in books is only so far valuable as it comments upon, and corresponds with, the universal revelation. Yet to me, a being social and sympathetic by natural impulse, though recluse and contemplative by training and philosophy, the character and life of Jesus have spoken more forcibly than any fact recorded in human history. This story of incarnate Love has given me the key to all mysteries, and showed me what path should be taken in returning to the Fountain of Spirit. Seeing that other redeemers have imperfectly fulfilled their tasks, I have sought a new way. They all, it seemed to me, had tried to influence the human being at too late a day, and had laid their plans too wide. They began with men; I will begin with babes. They began with the world; I will begin with the family. So I preach the Gospel of the Nineteenth Century.'

M. 'But, preacher, you make *three* mistakes.

'You do not understand the nature of Genius or creative power.

'You do not understand the reaction of matter on spirit.

'You are too impatient of the complex; and, not enjoying variety in unity, you become lost in abstractions, and cannot illustrate your principles.'

On the other hand, Mr. Alcott's impressions of Margaret were thus noted in his diaries: —

"She is clearly a person given to the boldest speculation, and of liberal and varied acquirements. Not wanting in imaginative power, she has the rarest good sense and discretion. She adopts the Spiritual Philosophy, and has the subtlest perception of its bearings. She takes large and generous views of all subjects, and her disposition is singularly catholic. The blending of sentiment and of wisdom in her is most remarkable; and her taste is as fine as her prudence. I think her the most brilliant talker of the day. She has a quick and comprehensive wit, a firm command of her thoughts, and a speech to win the ear of the most cultivated."

In her own classes Margaret was very successful, and thus in a letter sums up the results: —

'I am still quite unwell, and all my pursuits and propensities have a tendency to make my head worse. It is but a bad head, — as bad as if I were a great man! I

am not entitled to so bad a head by anything I have done; but I flatter myself it is very interesting to suffer so much, and a fair excuse for not writing pretty letters, and saying to my friends the good things I think about them.

‘I was so desirous of doing all I could, that I took a great deal more upon myself than I was able to bear. Yet now that the twenty-five weeks of incessant toil are over, I rejoice in it all, and would not have done an iota less. I have fulfilled all my engagements faithfully; have acquired more power of attention, self-command, and fortitude; have acted in life as I thought I would in my lonely meditations; and have gained some knowledge of means. Above all, — blessed be the Father of our spirits! — my aims are the same as they were in the happiest flight of youthful fancy. I have learned too, at last, to rejoice in all past pain, and to see that my spirit has been judiciously tempered for its work. In future I may sorrow, but can I ever despair?

‘The beginning of the winter was forlorn. I was always ill; and often thought I might not live, though the work was but just begun. The usual disappointments, too, were about me. Those from whom aid was expected failed, and others who aided did not understand my aims. Enthusiasm for the things loved best fled when I seemed to be buying and selling them. I could not get the proper point of view, and could not keep a healthful state of mind. Mysteriously a gulf seemed to have opened between me and most intimate friends, and for the first time for many years I was entirely, absolutely, alone. Finally, my own character and designs lost all romantic interest, and I felt vulgarized, profaned, forsaken, — though obliged to smile brightly and talk wisely all the while. But these clouds at length passed away.

‘And now let me try to tell you what has been done. To one class I taught the German language, and thought it good success, when, at the end of three months, they could read twenty pages of German at a lesson, and very well. This class, of course, was not interesting, except in the way of observation and analysis of language.

‘With more advanced pupils I read, in twenty-four weeks, Schiller’s Don Carlos, Artists, and Song of the Bell, besides giving a sort of general lecture on Schiller; Goethe’s Hermann and Dorothea, Goetz von Berlichingen, Iphigenia, first part of Faust, — three weeks of thorough study this, as valuable to me as to them, — and Clavigo, — thus comprehending samples of all his efforts in poetry, and bringing forward some of his prominent opinions; Lessing’s Nathan, Minna, Emilia Galeotti; parts of Tieck’s Phantasus, and nearly the whole first volume of Richter’s Titan.

‘With the Italian class, I read parts of Tasso, Petrarch — whom they came to almost adore, — Ariosto, Alfieri, and the whole hundred cantos of the Divina

Commedia, with the aid of the fine Athenæum copy, Flaxman's designs, and all the best commentaries. This last piece of work was and will be truly valuable to myself.

'I had, besides, three private pupils, Mrs. ——, who became very attractive to me, ——, and little ——, who had not the use of his eyes. I taught him Latin orally, and read the History of England and Shakspeare's historical plays in connection. This lesson was given every day for ten weeks, and was very interesting, though very fatiguing. The labor in Mr. Alcott's school was also quite exhausting. I, however, loved the children, and had many valuable thoughts suggested, and Mr. A.'s society was much to me.

'As you may imagine, the Life of Goethe is not yet written; but I have studied and thought about it much. It grows in my mind with everything that does grow there. My friends in Europe have sent me the needed books on the subject, and I am now beginning to work in good earnest. It is very possible that the task may be taken from me by somebody in England, or that in doing it I may find myself incompetent; but I go on in hope, secure, at all events, that it will be the means of the highest culture.'

In addition to other labors, Margaret translated, one evening every week, German authors into English, for the gratification of Dr. Channing; their chief reading being in De Wette and Herder.

'It was not very pleasant,' she writes, 'for Dr. C. takes in subjects more deliberately than is conceivable to us feminine people, with our habits of ducking, diving, or flying for truth. Doubtless, however, he makes better use of what he gets, and if his sympathies were livelier he would not view certain truths in so steady a light. But there is much more talking than reading; and I like talking with him. I do not feel that constraint which some persons complain of, but am perfectly free, though less called out than by other intellects of inferior power. I get too much food for thought from him, and am not bound to any tiresome formality of respect on account of his age and rank in the world of intellect. He seems desirous to meet even one young and obscure as myself on equal terms, and trusts to the elevation of his thoughts to keep him in his place.'

She found higher satisfaction still in his preaching: —

'A discourse from Dr. C. on the spirituality of man's nature. This was delightful! I came away in the most happy, hopeful, and heroic mood. The tone of the discourse was so dignified, his manner was so benignant and solemnly earnest, in his voice there was such a concentration of all his force, physical and moral, to give utterance to divine truth, that I felt purged as by fire. If some speakers feed intellect more, Dr. C. feeds the whole spirit. O for a more calm, more pervading faith in the divinity of my own nature! I am so far from being

thoroughly tempered and seasoned, and am sometimes so presumptuous, at others so depressed. Why cannot I lay more to heart the text, "God is never in a hurry: let man be patient and confident"?

PROVIDENCE.

In the spring of 1837, Margaret received a very favorable offer to become a principal teacher in the Greene Street School, at Providence, R.I.

'The proposal is, that I shall teach the elder girls my favorite branches, for four hours a day, — choosing my own hours, and arranging the course, — for a thousand dollars a year, if, upon trial, I am well enough pleased to stay. This would be independence, and would enable me to do many slight services for my family. But, on the other hand, I am not sure that I shall like the situation, and am sanguine that, by perseverance, the plan of classes in Boston might be carried into full effect. Moreover, Mr. Ripley, — who is about publishing a series of works on Foreign Literature, — has invited me to prepare the "Life of Goethe," on very advantageous terms. This I should much prefer. Yet when the thousand petty difficulties which surround us are considered, it seems unwise to relinquish immediate independence.'

She accepted, therefore, the offer which promised certain means of aiding her family, and reluctantly gave up the precarious, though congenial, literary project.

SCHOOL EXPERIENCES.

'The new institution of which I am to be "Lady Superior" was dedicated last Saturday. People talk to me of the good I am to do; but the last fortnight has been so occupied in the task of arranging many scholars of various ages and unequal training, that I cannot yet realize this new era.

'The gulf is vast, wider than I could have conceived possible, between me and my pupils; but the sight of such deplorable ignorance, such absolute burial of the best powers, as I find in some instances, makes me comprehend, better than before, how such a man as Mr. Alcott could devote his life to renovate elementary education. I have pleasant feelings when I see that a new world has already been opened to them.

'Nothing of the vulgar feeling towards teachers, too often to be observed in schools, exists towards me. The pupils seem to reverence my tastes and opinions in all things; they are docile, decorous, and try hard to please; they are in awe of

my displeasure, but delighted whenever permitted to associate with me on familiar terms. As I treat them like ladies, they are anxious to prove that they deserve to be so treated.

‘There is room here for a great move in the cause of education, and if I could resolve on devoting five or six years to this school, a good work might, doubtless, be done. Plans are becoming complete in my mind, ways and means continually offer, and, so far as I have tried them, they succeed. I am left almost as much at liberty as if no other person was concerned. Some sixty scholars are more or less under my care, and many of them begin to walk in the new paths pointed out. General activity of mind, accuracy in processes, constant looking for principles, and search after the good and the beautiful, are the habits I strive to develop.

‘I will write a short record of the last day at school. For a week past I have given the classes in philosophy, rhetoric, history, poetry, and moral science, short lectures on the true objects of study, with advice as to their future course; and to-day, after recitation, I expressed my gratification that the minds of so many had been opened to the love of good and beauty.

‘Then came the time for last words. First, I called into the recitation room the boys who had been under my care. They are nearly all interesting, and have showed a chivalric feeling in their treatment of me. People talk of women not being able to govern boys; but I have always found it a very easy task. He must be a coarse boy, indeed, who, when addressed in a resolute, yet gentle manner, by a lady, will not try to merit her esteem. These boys have always rivalled one another in respectful behavior. I spoke a few appropriate words to each, mentioning his peculiar errors and good deeds, mingling some advice with more love, which will, I hope, make it remembered. We took a sweet farewell. With the younger girls I had a similar interview.’

‘Then I summoned the elder girls, who have been my especial charge. I reminded them of the ignorance in which some of them were found, and showed them how all my efforts had necessarily been directed to stimulating their minds, — leaving undone much which, under other circumstances, would have been deemed indispensable. I thanked them for the favorable opinion of my government which they had so generally expressed, but specified three instances in which I had been unjust. I thanked them, also, for the moral beauty of their conduct, bore witness that an appeal to conscience had never failed, and told them of my happiness in having the faith thus confirmed, that young persons can be best guided by addressing their highest nature. I declared my consciousness

of having combined, not only in speech but in heart, tolerance and delicate regard for the convictions of their parents, with fidelity to my own, frankly uttered. I assured them of my true friendship, proved by my never having cajoled or caressed them into good. Every word of praise had been earned; all my influence over them was rooted in reality; I had never softened nor palliated their faults; I had appealed, not to their weakness, but to their strength; I had offered to them, always, the loftiest motives, and had made every other end subordinate to that of spiritual growth. With a heartfelt blessing, I dismissed them; but none stirred, and we all sat for some moments, weeping. Then I went round the circle and bade each, separately, farewell.'

PERSONS.

Margaret's Providence journals are made extremely piquant and entertaining, by her life-like portraiture of people and events; and every page attests the scrupulous justice with which she sought to penetrate through surfaces to reality, and, forgetting personal prejudices, to apply universally the test of truth. A few sketches of public characters may suffice to show with what sagacious, all-observing eyes, she looked about her.

'At the whig caucus, I heard TRISTAM BURGESS,— "The old bald Eagle!" His baldness increases the fine effect of his appearance, for it seems as if the locks had retreated, that the contour of his very strongly marked head might be revealed to every eye. His *personnel*, as well as I could see, was fitted to command respect rather than admiration. He is a venerable, not a beautiful old man.

'He is a rhetorician, — if I could judge from this sample; style in woven and somewhat ornate, matter frequently wrought up to a climax, manner rather declamatory, though strictly that of a gentleman and a scholar. One art in his oratory was, no doubt, very effective, before he lost force and distinctness of voice. I allude to his way, — after having reasoned a while, till he has reached the desired conclusion, — of leaning forward, with hands reposing but figure very earnest, and communicating, confidentially as it were, the result to the audience. The impression produced in former days, when those low, emphatic passages could be distinctly heard, must have been very strong. Yet there is too much apparent trickery in this, to bear frequent repetition. His manner is well adapted for argument, and for the expression either of satire or of chivalric sentiment.'

‘Mr. JOHN NEAL addressed my girls on the destiny and vocation of Woman in this country. He gave, truly, a *manly* view, though not the view of common men, and it was pleasing to watch his countenance, where energy is animated by genius. He then spoke to the boys, in the most noble and liberal spirit, on the exercise of political rights. If there is one among them who has the germ of a truly independent man, too generous to become a party tool, and with soul enough to think, as well as feel, for himself, those words were not spoken in vain. He was warmed up into giving a sketch of his boyhood. It was an eloquent narrative, and is ineffaceably impressed on my memory, with every look and gesture of the speaker. What gave chief charm to this history was its fearless ingenuousness. It was delightful to note the impression produced by his magnetic genius and independent character.

‘In the evening we had a long conversation upon Woman, Whigism, modern English Poets, Shakspeare, — and, in particular, Richard the Third, — about which we had actually a fight. Mr. Neal does not argue quite fairly, for he uses reason while it lasts, and then helps himself out with wit, sentiment and assertion. I should quarrel with his definitions upon almost every subject, but his fervid eloquence, brilliancy, endless resource, and ready tact, give him great advantage. There was a sort of exaggeration and coxcombry in his talk; but his lion-heart, and keen sense of the ludicrous, alike in himself as in others, redeem them. I should not like to have my motives scrutinized as he would scrutinize them, for I prefer rather to disclose them myself than to be found out; but I was dissatisfied in parting from this remarkable man before having seen him more thoroughly.

*

‘Mr. WHIPPLE addressed the meeting at length. His presence is not imposing, though his face is intellectual. It is difficult to look at him, for you cannot be taken prisoner by his eye, while, *en revanche*, he can look at you as long as he pleases; and, as usual, with one who can get the better of his auditors, he does not call out the best in them. His gestures are remarkably fine, free, graceful, and expressive. He has no natural advantages of voice, — for it is without compass, depth, sweetness, — and has none of the winning tones which reach the inmost soul, and none of the tones of passionate energy, which raise you out of your own world into the speaker’s. But his modulation is smooth, measured, dignified, though occasionally injured by too elaborate a swell, and his enunciation is admirable.

‘His theme was one which has been so thoroughly discussed that novelty was

not to be looked for; but his method and arrangement were excellent, though parts were too much expanded, and the whole might well have been condensed. There were many felicitous popular hits. The humorous touches were skilful, and the illustrations on a broad scale good, though in single images he failed. Altogether, there was a pervading air of ease and mastery, which showed him fit to be a leader of the flock. Though not a man of the Webster class, he is among the first of the second class of men who apply their powers to practical purposes, — and that is saying much.’

*

‘I went to hear JOSEPH JOHN GURNEY, one of the most distinguished and influential, it is said, of the English Quakers. He is a thick-set, beetle-browed man, with a well-to-do-in-the-world air of pious stolidity. I was grievously disappointed; for Quakerism has at times looked lovely to me, and I had expected at least a spiritual exposition of its doctrines from the brother of Mrs. Fry. But his manner was as wooden as his matter, and had no merit but that of distinct elocution. His sermon was a tissue of texts, illy selected, and worse patched together, in proof of the assertion that a belief in the Trinity is the one thing needful, and that reason, unless manacled by a creed, is the one thing dangerous. His figures were paltry, his thoughts narrowed down, and his very sincerity made corrupt by spiritual pride. One could not but pity his notions of the Holy Ghost, and his bat-like fear of light. His Man-God seemed to be the keeper of a mad-house, rather than the informing Spirit of all spirits. After finishing his discourse, Mr. G. sang a prayer, in a tone of mingled shout and whine, and then requested his audience to sit a while in devout meditation. For one, I passed the interval in praying for him, that the thick film of self-complacency might be removed from the eyes of his spirit, so that he might no more degrade religion.’

*

‘Mr. HAGUE is of the Baptist persuasion, and is very popular with his own sect. He is small, and carries his head erect; he has a high and intellectual, though not majestic, forehead; his brows are lowering and, when knit in indignant denunciation, give a thunderous look to the countenance, and beneath them flash, sparkle, and flame, — for all that may be said of light in rapid motion is true of them, — his dark eyes. Hazel and blue eyes with their purity, steadfastness, subtle penetration and radiant hope, may persuade and win, but

black is the color to command. His mouth has an equivocal expression, but as an orator perhaps he gains power by the air of mystery this gives.

‘He has a very active intellect, sagacity and elevated sentiment; and, feeling strongly that God is love, can never preach without earnestness. His power comes first from his glowing vitality of temperament. While speaking, his every muscle is in action, and all his action is towards one object. There is perfect *abandon*. He is permeated, overborne, by his thought. This lends a charm above grace, though incessant nervousness and heat injure his manner. He is never violent, though often vehement; pleading tones in his voice redeem him from coarseness, even when most eager; and he throws himself into the hearts of his hearers, not in weak need of sympathy, but in the confidence of generous emotion. His second attraction is his individuality. He speaks direct from the conviction of his spirit, without temporizing, or artificial method. His is the “unpremeditated art,” and therefore successful. He is full of intellectual life; his mind has not been fettered by dogmas, and the worship of beauty finds a place there. I am much interested in this truly animated being.’

*

‘Mr. R.H. DANA has been giving us readings in the English dramatists, beginning with Shakspeare. The introductory was beautiful. After assigning to literature its high place in the education of the human soul, he announced his own view in giving these readings: that he should never pander to a popular love of excitement, but quietly, without regard to brilliancy or effect, would tell what had struck him in these poets; that he had no belief in artificial processes of acquisition or communication, and having never learned anything except through love, he had no hope of teaching any but loving spirits, &c. All this was arrayed in a garb of most delicate grace; but a man of such genuine refinement undervalues the cannon-blasts and rockets which are needed to rouse the attention of the vulgar. His naïve gestures, the rapt expression of his face, his introverted eye, and the almost childlike simplicity of his pathos, carry one back into a purer atmosphere, to live over again youth’s fresh emotions. I greatly enjoyed his readings in Hamlet, and have reviewed in connection what Goethe and Coleridge have said. Both have successfully seized on the main points in the character of Hamlet, and Mr. D. took nearly the same range. His views of Ophelia, however, are unspeakably more just than are those of Serlo in Wilhelm Meister. I regret that the whole course is not to be on Shakspeare, for I should like to read with him all the plays.

‘I never have met with a person of finer perceptions. He leaves out nothing;

though he over-refines on some passages. He has the most exquisite taste, and freshens the souls of his hearers with ever new beauty. He is greatly indebted to the delicacy of his physical organization for the delicacy of his mental appreciation. But when he has told you what *he* likes, the pleasure of intercourse is over: for he is a man of prejudice more than of reason, and though he can make a lively *exposé* of his thoughts and feelings, he does not justify them. In a word, Mr. Dana has the charms and the defects of one whose object in life has been to preserve his individuality unprofaned.'

ART.

While residing at Providence, and during her visits to Boston, in her vacations, Margaret's mind was opening more and more to the charms of art.

'The Ton-Kunst, the Ton-Welt, give me now more stimulus than the written Word; for music seems to contain everything in nature, unfolded into perfect harmony. In it the *all* and *each* are manifested in most rapid transition; the spiral and undulatory movement of beautiful creation is felt throughout, and, as we listen, thought is most clearly, because most mystically, perceived.'

'I have been to hear Neukomm's Oratorio of David. It is to music what Barry Cornwall's verses and Talfourd's Ion are to poetry. It is completely modern, and befits an age of consciousness. Nothing can be better arranged as a drama; the parts are in excellent gradation, the choruses are grand and effective, the composition, as a whole, brilliantly imposing. Yet it was dictated by taste and science only. Where are the enrapturing visions from the celestial world which shone down upon Haydn and Mozart; where the revelations from the depths of man's nature, which impart such passion to the symphonies of Beethoven; where, even, the fascinating fairy land, gay with delight, of Rossini? O, Genius! none but thee shall make our hearts and heads throb, our cheeks crimson, our eyes overflow, or fill our whole being with the serene joy of faith.'

'I went to see Vandenhoff twice, in Brutus and Virginius. Another fine specimen of the conscious school; no inspiration, yet much taste. Spite of the thread-paper Tituses, the chambermaid Virginias, the washerwoman Tullias, and the people, made up of half a dozen chimney-sweeps, in carters' frocks and red nightcaps, this man had power to recall a thought of the old stately Roman, with his unity of will and deed. He was an admirable *father*, that fairest, noblest part, — with a happy mixture of dignity and tenderness, blending the delicate sympathy of the

companion with the calm, wisdom of the teacher, and showing beneath the zone of duty a heart that has not forgot to throb with youthful love. This character, — which did actual fathers know how to be, they would fulfil the order of nature, and image Deity to their children, — Vandenhoff represented sufficiently, at least, to call up the beautiful ideal.’

FANNY KEMBLE.

‘When in Boston, I saw the Kembles twice, — in “Much ado about Nothing,” and “The Stranger.” The first night I felt much disappointed in Miss K. In the gay parts a coquettish, courtly manner marred the wild mirth and wanton wit of Beatrice. Yet, in everything else, I liked her conception of the part; and where she urges Benedict to fight with Claudio, and where she reads Benedict’s sonnet, she was admirable. But I received no more pleasure from Miss K.’s acting out the part than I have done in reading it, and this disappointed me. Neither did I laugh, but thought all the while of Miss K., — how very graceful she was, and whether this and that way of rendering the part was just. I do not believe she has comic power within herself, though tasteful enough to comprehend any part. So I went home, vexed because my “heart was not full,” and my “brain not on fire” with enthusiasm. I drank my milk, and went to sleep, as on other dreary occasions, and dreamed not of Miss Kemble.

‘Next night, however, I went expectant, and all my soul was satisfied. I saw her at a favorable distance, and she looked beautiful. And as the scene rose in interest, her attitudes, her gestures, had the expression which an Angelo could give to sculpture. After she tells her story, — and I was almost suffocated by the effort she made to divulge her sin and fall, — she sunk to the earth, her head bowed upon her knee, her white drapery falling in large, graceful folds about this broken piece of beautiful humanity, *crushed* in the very manner so well described by Scott when speaking of a far different person, “not as one who intentionally stoops, kneels, or prostrates himself to excite compassion, but like a man borne down on all sides by the pressure of some invisible force, which crushes him to the earth without power of resistance.” A movement of abhorrence from me, as her insipid confidante turned away, attested the triumph of the poet-actress. Had not all been over in a moment, I believe I could not have refrained from rushing forward to raise the fair frail being, who seemed so prematurely humbled in her parent dust. I burst into tears; and, with the stifled, hopeless feeling of a real sorrow, continued to weep till the very end; nor could I recover till I left the house.

‘That is genius, which could give such life to this play; for, if I may judge

from other parts, it is defaced by inflated sentiments, and verified by few natural touches. I wish I had it to read, for I should like to recall her every tone and look.'

*

'I have been studying Flaxman and Retzsch. How pure, how immortal, the language of Form! Fools cannot fancy they fathom its meaning; witless *dillettanti* cannot degrade it by hackneyed usage; none but genius can create or reproduce it. Unlike the colorist, he who expresses his thought in form is secure as man can be against the ravages of time.'

*

'I went to the Athenæum in an agonizing conflict of mind, when some high influence was needed to rouse me from the state of sickly sensitiveness, which, much as I despise, I cannot wholly conquer. How soothing it was to feel the blessed power of the Ideal world, to be surrounded, once more with the records of lives poured out in embodying thought in beauty! I seemed to breathe my native atmosphere, and smoothed my ruffled pinions.'

*

'No wonder God made a world to express his thought. Who, that has a soul for beauty, does not feel the need of creating, and that the power of creation alone can satisfy the spirit? When I thus reflect, the Artist seems the only fortunate man. Had I but as much creative genius as I have apprehensiveness!'

*

'How transcendently lovely was the face of one young angel by Raphael! It was the perfection of physical, moral, and mental life. Variegated wings, of pinkish-purple touched with green, like the breasts of doves, and in perfect harmony with the complexion, spring from the shoulders upwards, and against them leans the divine head. The eye seems fixed on the centre of being, and the lips are gently parted, as if uttering strains of celestial melody.'

*

'The head of Aspasia was instinct with the voluptuousness of intellect. From the

eyes, the cheek, the divine lip, one might give honey. Both the Loves were exquisite: one, that zephyr sentiment which visits all the roses of life; the other, the Amore Greco, may be fitly described in these words of Landor: "There is a gloom in deep love, as in deep water; there is a silence in it which suspends the foot, and the folded arms and the dejected head are the images it reflects. No voice shakes its surface; the Muses themselves approach it with a tardy and a timid step, with a low and tremulous and melancholy song."

*

'The Sibyl I understood. What grace in that beautiful oval! what apprehensiveness in the eye! Such is female Genius; it alone understands the God. The Muses only sang the praises of Apollo; the Sibyls interpreted his will. Nay, she to whom it was offered, refused the divine union, and preferred remaining a satellite to being absorbed into the sun. You read in the eye of this one, and the observation is confirmed by the low forehead, that the secret of her inspiration lay in the passionate enthusiasm of her nature, rather than in the ideal perfection of any faculty.

*

'A Christ, by Raphael, that I saw the other night, brought Christianity more home to my heart, made me more long to be like Jesus, than ever did sermon. It is from one of the Vatican frescoes. The Deity, — a stern, strong, wise man, of about forty-five, in a square velvet cap, truly the Jewish God, inflexibly just, yet jealous and wrathful, — is at the top of the picture, looking with a gaze of almost frowning scrutiny down into his world. A step below is the Son. Stately angelic shapes kneel near him in dignified adoration, — brothers, but not peers. A cloud of more ecstatic seraphs floats behind the Father. At the feet of the Son is the Holy Ghost, the Heavenly Dove. In the description, by a connoisseur, of this picture, read to me while I was looking at it, it is spoken of as in Raphael's first manner, cold, hard, trammelled. But to me how did that face proclaim the Infinite Love! His head is bent back, as if seeking to behold the Father. His attitude expresses the need of adoring something higher, in order to keep him at his highest. What sweetness, what purity, in the eyes! I can never express it; but I felt, when looking at it, the beauty of reverence, of self-sacrifice, to a degree that stripped the Apollo of his beams.'

MAGNANIMITY.

Immediately after reading Miss Martineau's book on America, Margaret felt bound in honor to write her a letter, the magnanimity of which is brought out in full relief, by contrast with the expressions already given of her affectionate regard. Extracts from this letter, recorded in her journals, come here rightfully in place: —

'On its first appearance, the book was greeted by a volley of coarse and outrageous abuse, and the nine days' wonder was followed by a nine days' hue-and-cry. It was garbled, misrepresented, scandalously ill-treated. This was all of no consequence. The opinion of the majority you will find expressed in a late number of the North American Review. I should think the article, though ungenerous, not more so than great part of the critiques upon your book.

'The minority may be divided into two classes: The one, consisting of those who knew you but slightly, either personally, or in your writings. These have now read your book; and, seeing in it your high ideal standard, genuine independence, noble tone of sentiment, vigor of mind and powers of picturesque description, they value your book very much, and rate you higher for it.

'The other comprises those who were previously aware of these high qualities, — and who, seeing in a book to which they had looked for a lasting monument to your fame, a degree of presumptuousness, irreverence, inaccuracy, hasty generalization, and ultraism on many points, which they did not expect, lament the haste in which you have written, and the injustice which you have consequently done to so important a task, and to your own powers of being and doing. To this class I belong.

'I got the book as soon as it came out, — long before I received the copy endeared by your handwriting, — and devoted myself to reading it. I gave myself up to my natural impressions, without seeking to ascertain those of others. Frequently I felt pleasure and admiration, but more frequently disappointment, sometimes positive distaste.

'There are many topics treated of in this book of which I am not a judge; but I do pretend, even where I cannot criticize in detail, to have an opinion as to the general tone of thought. When Herschel writes his Introduction to Natural Philosophy, I cannot test all he says, but I cannot err about his fairness, his manliness, and wide range of knowledge. When Jouffroy writes his lectures, I am not conversant with all his topics of thought, but I can appreciate his lucid style and admirable method. When Webster speaks on the currency, I do not understand the subject, but I do understand his mode of treating it, and can see what a blaze of light streams from his torch. When Harriet Martineau writes about America, I often cannot test that rashness and inaccuracy of which I hear

so much, but I can feel that they exist. A want of soundness, of habits of patient investigation, of completeness, of arrangement, are felt throughout the book; and, for all its fine descriptions of scenery, breadth of reasoning, and generous daring, I cannot be happy in it, because it is not worthy of my friend, and I think a few months given to ripen it, to balance, compare, and mellow, would have made it so.

‘Certainly you show no spirit of harshness towards this country in general. I think your tone most kindly. But many passages are deformed by intemperance of epithet. Would your heart, could you but investigate the matter, approve such overstatement, such a crude, intemperate tirade as you have been guilty of about Mr. Alcott, — a true and noble man, a philanthropist, whom a true and noble woman, also a philanthropist, should have delighted to honor; whose disinterested and resolute efforts, for the redemption of poor humanity, all independent and faithful minds should sustain, since the “broadcloth” vulgar will be sure to assail them; a philosopher, worthy of the palmy times of ancient Greece; a man whom Carlyle and Berkely, whom you so uphold, would delight to honor; a man whom the worldlings of Boston hold in as much horror as the worldlings of ancient Athens did Socrates. They smile to hear their verdict confirmed from the other side of the Atlantic, by their censor, Harriet Martineau.

‘I do not like that your book should be an abolition book. You might have borne your testimony as decidedly as you pleased; but why leaven the whole book with it? This subject haunts us on almost every page. It is a great subject, but your book had other purposes to fulfil.

‘I have thought it right to say all this to you, since I felt it. I have shrunk from the effort, for I fear that I must lose you. Not that I think all authors are like Gil Bias’ archbishop. No; if your heart turns from me, I shall still love you, still think you noble. I know it must be so trying to fail of sympathy, at such a time, where we expect it. And, besides, I felt from the book that the sympathy between us is less general than I had supposed, it was so strong on several points. It is strong enough for me to love you ever, and I could no more have been happy in your friendship, if I had not spoken out now.’

SPIRITUAL LIFE.

‘You question me as to the nature of the benefits conferred upon me by Mr. E.’s preaching. I answer, that his influence has been more beneficial to me than that of any American, and that from him I first learned what is meant by an inward

life. Many other springs have since fed the stream of living waters, but he first opened the fountain. That the “mind is its own place,” was a dead phrase to me, till he cast light upon my mind. Several of his sermons stand apart in memory, like landmarks of my spiritual history. It would take a volume to tell what this one influence did for me. But perhaps I shall some time see that it was best for me to be forced to help myself.’

*

‘Some remarks which I made last night trouble me, and I cannot fix my attention upon other things till I have qualified them. I suffered myself to speak in too unmeasured terms, and my expressions were fitted to bring into discredit the religious instruction which has been given me, or which I have sought.

‘I do not think “all men are born for the purpose of unfolding beautiful ideas;” for the vocation of many is evidently the culture of affections by deeds of kindness. But I do think that the vocations of men and women differ, and that those who are forced to act out of their sphere are shorn of inward and outward brightness.

‘For myself, I wish to say, that, if I am in a mood of darkness and despondency, I nevertheless consider such a mood unworthy of a Christian, or indeed of any one who believes in the immortality of the soul. No one, who had steady faith in this and in the goodness of God, could be otherwise than cheerful. I reverence the serenity of a truly religious mind so much, that I think, if I live, I may some time attain to it.

‘Although I do not believe in a Special Providence regulating outward events, and could not reconcile such a belief with what I have seen of life, I do not the less believe in the paternal government of a Deity. That He should visit the souls of those who seek Him seems to me the nobler way to conceive of his influence. And if there were not some error in my way of seeking, I do not believe I should suffer from languor or deadness on spiritual subjects, at the time when I have most need to feel myself at home there. To find this error is my earnest wish; and perhaps I am now travelling to that end, though by a thorny road. It is a mortification to find so much yet to do; for at one time the scheme of things seemed so clear, that, with Cromwell, I might say, “I was once in grace.” With my mind I prize high objects as much as then: it is my heart which is cold. And sometimes I fear that the necessity of urging them on those under my care dulls my sense of their beauty. It is so hard to prevent one’s feelings from evaporating in words.’

*

“The faint sickness of a wounded heart.” How frequently do these words of Beckford recur to my mind! His prayer, imperfect as it is, says more to me than many a purer aspiration. It breathes such an experience of impassioned anguish. He had everything, — health, personal advantages, almost boundless wealth, genius, exquisite taste, culture; he could, in some way, express his whole being. Yet well-nigh he sank beneath the sickness of the wounded heart; and solitude, “country of the unhappy,” was all he craved at last.

‘Goethe, too, says he has known, in all his active, wise, and honored life, no four weeks of happiness. This teaches me on the other side; for, like Goethe, I have never given way to my feelings, but have lived active, thoughtful, seeking to be wise. Yet I have long days and weeks of heartache; and at those times, though I am busy every moment, and cultivate every pleasant feeling, and look always upwards to the pure ideal region, yet this ache is like a bodily wound, whose pain haunts even when it is not attended to, and disturbs the dreams of the patient who has fallen asleep from exhaustion.

‘There is a German in Boston, who has a wound in his breast, received in battle long ago. It never troubles him, except when he sings, and then, if he gives out his voice with much expression, it opens, and cannot, for a long time, be stanchd again. So with me: when I rise into one of those rapturous moods of thought, such as I had a day or two since, my wound opens again, and all I can do is to be patient, and let it take its own time to skin over. I see it will never do more. Some time ago I thought the barb was fairly out; but no, the fragments rankle there still, and will, while there is any earth attached to my spirit. Is it not because, in my pride, I held the mantle close, and let the weapon, which some friendly physician might have extracted, splinter in the wound?’

*

‘*Sunday, July, 1838.* — I partook, for the first time, of the Lord’s Supper. I had often wished to do so, but had not been able to find a clergyman, — from whom I could be willing to receive it, — willing to admit me on my own terms. Mr. H ——— did so; and I shall ever respect and value him, if only for the liberality he displayed on this occasion. It was the Sunday after the death of his wife, a lady whom I truly honored, and should, probably, had we known one another longer, have also loved. She was the soul of truth and honor; her mind was strong, her reverence for the noble and beautiful fervent, her energy in promoting the best interests of those who came under her influence unusual. She was as full of wit

and playfulness as of goodness. Her union with her husband was really one of mind and heart, of mutual respect and tenderness; likeness in unlikeness made it strong. I wished particularly to share in this rite on an occasion so suited to bring out its due significance.'

FAREWELL TO SUMMER.

'The Sun, the Moon, the Waters, and the Air,
The hopeful, holy, terrible, and fair,
All that is ever speaking, never spoken,
Spells that are ever breaking, never broken,
Have played upon my soul; and every string
Confessed the touch, which once could make it ring
Celestial notes. And still, though changed the tone,
Though damp and jarring fall the lyre hath known
It would, if fitly played, its deep notes wove
Into one tissue of belief and love,
Yield melodies for angel audience meet,
And pæans fit Creative Power to greet.
O injured lyre! thy golden frame is marred,
No garlands deck thee, no libations poured
Tell to the earth the triumphs of thy song;
No princely halls echo thy strains along.
But still the strings are there; and, if they break,
Even in death rare melody will make,
Might'st thou once more be tuned, and power be given
To tell in numbers all thou canst of heaven!'

VISITS TO CONCORD.

BY R.W. EMERSON.

EXTRACT FROM A LETTER FROM MADAME ARCONATI TO R.W.
EMERSON.

Je n'ai point rencontré, dans ma vie, de femme plus noble; ayant autant de sympathie pour ses semblables, et dont l'esprit fut plus vivifiant. Je me suis tout de suite sentie attirée par elle. Quand je fis sa connoissance, j'ignorais que ce fut une femme remarquable.

IV.

VISITS TO CONCORD.

*

I became acquainted with Margaret in 1835. Perhaps it was a year earlier that Henry Hedge, who had long been her friend, told me of her genius and studies, and loaned me her manuscript translation of Goethe's Tasso. I was afterwards still more interested in her, by the warm praises of Harriet Martineau, who had become acquainted with her at Cambridge, and who, finding Margaret's fancy for seeing me, took a generous interest in bringing us together. I remember, during a week in the winter of 1835-6, in which Miss Martineau was my guest, she returned again and again to the topic of Margaret's excelling genius and conversation, and enjoined it on me to seek her acquaintance: which I willingly promised. I am not sure that it was not in Miss Martineau's company, a little earlier, that I first saw her. And I find a memorandum, in her own journal, of a visit, made by my brother Charles and myself, to Miss Martineau, at Mrs. Farrar's. It was not, however, till the next July, after a little diplomatizing in billets by the ladies, that her first visit to our house was arranged, and she came to spend a fortnight with my wife. I still remember the first half-hour of Margaret's conversation. She was then twenty-six years old. She had a face and frame that would indicate fulness and tenacity of life. She was rather under the middle height; her complexion was fair, with strong fair hair. She was then, as always, carefully and becomingly dressed, and of ladylike self-possession. For the rest, her appearance had nothing prepossessing. Her extreme plainness, — a trick of incessantly opening and shutting her eyelids, — the nasal tone of her voice, — all repelled; and I said to myself, we shall never get far. It is to be said, that Margaret made a disagreeable first impression on most persons, including those who became afterwards her best friends, to such an extreme that they did not wish to be in the same room with her. This was partly the effect of her manners, which expressed an overweening sense of power, and slight esteem of others, and partly the prejudice of her fame. She had a dangerous reputation for satire, in addition to her great scholarship. The men thought she carried too many guns, and the women did not like one who despised them. I believe I fancied her too much interested in personal history; and her talk was a comedy in which dramatic justice was done to everybody's foibles. I remember that she made me laugh more than I liked; for I was, at that time, an eager scholar of ethics, and had tasted the sweets of solitude and stoicism, and I found something

profane in the hours of amusing gossip into which she drew me, and, when I returned to my library, had much to think of the crackling of thorns under a pot. Margaret, who had stuffed me out as a philosopher, in her own fancy, was too intent on establishing a good footing between us, to omit any art of winning. She studied my tastes, piqued and amused me, challenged frankness by frankness, and did not conceal the good opinion of me she brought with her, nor her wish to please. She was curious to know my opinions and experiences. Of course, it was impossible long to hold out against such urgent assault. She had an incredible variety of anecdotes, and the readiest wit to give an absurd turn to whatever passed; and the eyes, which were so plain at first, soon swam with fun and drolleries, and the very tides of joy and superabundant life.

This rumor was much spread abroad, that she was sneering, scoffing, critical, disdainful of humble people, and of all but the intellectual. I had heard it whenever she was named. It was a superficial judgment. Her satire was only the pastime and necessity of her talent, the play of superabundant animal spirits. And it will be seen, in the sequel, that her mind presently disclosed many moods and powers, in successive platforms or terraces, each above each, that quite effaced this first impression, in the opulence of the following pictures.

Let us hear what she has herself to say on the subject of tea-table-talk, in a letter to a young lady, to whom she was already much attached: —

I am repelled by your account of your party. It is beneath you to amuse yourself with active satire, with what is vulgarly called quizzing. When such a person as —— chooses to throw himself in your way, I sympathize with your keen perception of his ridiculous points. But to laugh a whole evening at vulgar nondescripts, — is that an employment for one who was born passionately to love, to admire, to sustain truth? This would be much more excusable in a chameleon like me. Yet, whatever may be the vulgar view of my character, I can truly say, I know not the hour in which I ever looked for the ridiculous. It has always been forced upon me, and is the accident of my existence. I would not want the sense of it when it comes, for that would show an obtuseness of mental organization; but, on peril of my soul, I would not move an eyelash to look for it.'

When she came to Concord, she was already rich in friends, rich in experiences, rich in culture. She was well read in French, Italian, and German literature. She had learned Latin and a little Greek. But her English reading was incomplete; and, while she knew Molière, and Rousseau, and any quantity of French letters, memoirs, and novels, and was a dear student of Dante and Petrarca, and knew German books more cordially than any other person, she was little read in Shakspeare; and I believe I had the pleasure of making her

acquainted with Chaucer, with Ben Jonson, with Herbert, Chapman, Ford, Beaumont and Fletcher, with Bacon, and Sir Thomas Browne. I was seven years her senior, and had the habit of idle reading in old English books, and, though not much versed, yet quite enough to give me the right to lead her. She fancied that her sympathy and taste had led her to an exclusive culture of southern European books.

She had large experiences. She had been a precocious scholar at Dr. Park's school; good in mathematics and in languages. Her father, whom she had recently lost had been proud of her, and petted her. She had drawn at Cambridge, numbers of lively young men about her. She had had a circle of young women who were devoted to her, and who described her as "a wonder of intellect, who had yet no religion." She had drawn to her every superior young man or young woman she had met, and whole romances of life and love had been confided, counselled, thought, and lived through, in her cognizance and sympathy.

These histories are rapid, so that she had already beheld many times the youth, meridian, and old age of passion. She had, besides, selected, from so many, a few eminent companions, and already felt that she was not likely to see anything more beautiful than her beauties, anything more powerful and generous than her youths. She had found out her own secret by early comparison, and knew what power to draw confidence, what necessity to lead in every circle, belonged of right to her. Her powers were maturing, and nobler sentiments were subliming the first heats and rude experiments. She had outward calmness and dignity. She had come to the ambition to be filled with all nobleness.

Of the friends who surrounded her, at that period, it is neither easy to speak, nor not to speak. A life of Margaret is impossible without them, she mixed herself so inextricably with her company; and when this little book was first projected, it was proposed to entitle it "Margaret and her Friends," the subject persisting to offer itself in the plural number. But, on trial, that form proved impossible, and it only remained that the narrative, like a Greek tragedy, should suppose the chorus always on the stage, sympathizing and sympathized with by the queen of the scene.

Yet I remember these persons as a fair, commanding troop, every one of them adorned by some splendor of beauty, of grace, of talent, or of character, and comprising in their band persons who have since disclosed sterling worth and elevated aims in the conduct of life.

Three beautiful women, — either of whom would have been the fairest ornament of Papanti's Assemblies, but for the presence of the other, — were her friends. One of these early became, and long remained, nearly the central figure in Margaret's brilliant circle, attracting to herself, by her grace and her singular

natural eloquence, every feeling of affection, hope, and pride.

Two others I recall, whose rich and cultivated voices in song were, — one a little earlier, the other a little later, — the joy of every house into which they came; and, indeed, Margaret's taste for music was amply gratified in the taste and science which several persons among her intimate friends possessed. She was successively intimate with two sisters, whose taste for music had been opened, by a fine and severe culture, to the knowledge and to the expression of all the wealth of the German masters.

I remember another, whom every muse inspired, skilful alike with the pencil and the pen, and by whom both were almost contemned for their inadequateness, in the height and scope of her aims.

'With her,' said Margaret, 'I can talk of anything. She is like me. She is able to look facts in the face. We enjoy the clearest, widest, most direct communication. She may be no happier than — , but she will know her own mind too clearly to make any great mistake in conduct, and will learn a deep meaning from her days.'

'It is not in the way of tenderness that I love — . I prize her always; and this is all the love some natures ever know. And I also feel that I may always expect she will be with me. I delight to picture to myself certain persons translated, illuminated. There are a few in whom I see occasionally the future being piercing, promising, — whom I can strip of all that masks their temporary relations, and elevate to their natural position. Sometimes I have not known these persons intimately, — oftener I have; for it is only in the deepest hours that this light is likely to break out. But some of those I have best befriended I cannot thus portray, and very few men I can. It does not depend at all on the beauty of their forms, at present; it is in the eye and the smile, that the hope shines through. I can see exactly how — will look: not like this angel in the paper; she will not bring flowers, but a living coal, to the lips of the singer; her eyes will not burn as now with smothered fires, they will be ever deeper, and glow more intensely; her cheek will be smooth, but marble pale; her gestures nobly free, but few.'

Another was a lady who was devoted to landscape-painting, and who enjoyed the distinction of being the only pupil of Allston, and who, in her alliance with Margaret, gave as much honor as she received, by the security of her spirit, and by the heroism of her devotion to her friend. Her friends called her "the perpetual peace-offering," and Margaret says of her,— 'She is here, and her neighborhood casts the mildness and purity too of the moonbeam on the else parti-colored scene.'

There was another lady, more late and reluctantly entering Margaret's circle,

with a mind as high, and more mathematically exact, drawn by taste to Greek, as Margaret to Italian genius, tempted to do homage to Margaret's flowing expressive energy, but still more inclined and secured to her side by the good sense and the heroism which Margaret disclosed, perhaps not a little by the sufferings which she addressed herself to alleviate, as long as Margaret lived. Margaret had a courage in her address which it was not easy to resist. She called all her friends by their Christian names. In their early intercourse I suppose this lady's billets were more punctiliously worded than Margaret liked; so she subscribed herself, in reply, 'Your affectionate "Miss Fuller."' When the difficulties were at length surmounted, and the conditions ascertained on which two admirable persons could live together, the best understanding grew up, and subsisted during her life. In her journal is a note: —

'Passed the morning in Sleepy Hollow, with ——— . What fine, just distinctions she made! Worlds grew clearer as we talked. I grieve to see her fine frame subject to such rude discipline. But she truly said, "I am not a failed experiment; for, in the bad hours, I do not forget what I thought in the better."'

None interested her more at that time, and for many years after, than a youth with whom she had been acquainted in Cambridge before he left the University, and the unfolding of whose powers she had watched with the warmest sympathy. He was an amateur, and, but for the exactions not to be resisted of an *American*, that is to say, of a commercial, career, — his acceptance of which she never ceased to regard as an apostasy, — himself a high artist. He was her companion, and, though much younger, her guide in the study of art. With him she examined, leaf by leaf, the designs of Raphael, of Michel Angelo, of Da Vinci, of Guercino, the architecture of the Greeks, the books of Palladio, the Ruins, and Prisons of Piranesi; and long kept up a profuse correspondence on books and studies in which they had a mutual interest. And yet, as happened so often, these literary sympathies, though sincere, were only veils and occasions to beguile the time, so profound was her interest in the character and fortunes of her friend.

There was another youth, whom she found later, of invalid habit, which had infected in some degree the tone of his mind, but of a delicate and pervasive insight, and the highest appreciation for genius in letters, arts, and life. Margaret describes 'his complexion as clear in its pallor, and his eye steady.' His turn of mind, and his habits of life, had almost a monastic turn, — a jealousy of the common tendencies of literary men either to display or to philosophy. Margaret was struck with the singular fineness of his perceptions, and the pious tendency of his thoughts, and enjoyed with him his proud reception, not as from above, but almost on equal ground, of Homer and Æschylus, of Dante and Petrarch, of Montaigne, of Calderon, of Goethe. Margaret wished, also, to defend his privacy

from the dangerous solicitations to premature authorship: —

‘His mind should be approached close by one who needs its fragrance. All with him leads rather to glimpses and insights, than to broad, comprehensive views. Till he needs the public, the public does not need him. The lonely lamp, the niche, the dark cathedral grove, befit him best. Let him shroud himself in the symbols of his native ritual, till he can issue forth on the wings of song.’

She was at this time, too, much drawn also to a man of poetic sensibility, and of much reading, — which he took the greatest pains to conceal, — studious of the art of poetry, but still more a poet in his conversation than in his poems, — who attracted Margaret by the flowing humor with which he filled the present hour, and the prodigality with which he forgot all the past.

‘Unequal and uncertain,’ she says, ‘but in his good moods, of the best for a companion, absolutely abandoned to the revelations of the moment, without distrust or check of any kind, unlimited and delicate, abundant in thought, and free of motion, he enriches life, and fills the hour.’

‘I wish I could retain — — ‘s talk last night. It was wonderful; it was about all the past experiences frozen down in the soul, and the impossibility of being penetrated by anything. “Had I met you,” said he, “when I was young! — but now nothing can penetrate.” Absurd as was what he said, on one side, it was the finest poetic-inspiration on the other, painting the cruel process of life, except where genius continually burns over the stubble fields.

“Life,” he said, “is continually eating us up.” He said, “Mr. E. is quite wrong about books. He wants them all good; now I want many bad. Literature is not merely a collection of gems, but a great system of interpretation.” He railed at me as artificial. “It don’t strike me when you are alone with me,” he says; “but it does when others are present. You don’t follow out the fancy of the moment; you converse; you have treasured thoughts to tell; you are disciplined, — artificial.” I pleaded guilty, and observed that I supposed that it must be so with one of any continuity of thought, or earnestness of character. “As to that,” says he, “I shall not like you the better for your excellence. I don’t know what is the matter. I feel strongly attracted towards you; but there is a drawback in my mind, — I don’t know exactly what. You will always be wanting to grow forward; now I like to grow backward, too. You are too ideal. Ideal people anticipate their lives; and they make themselves and everybody around them restless, by always being beforehand with themselves.”

‘I listened attentively; for what he said was excellent. Following up the humor of the moment, he arrests admirable thoughts on the wing. But I cannot but see, that what they say of my or other obscure lives is true of every prophetic, of every tragic character. And then I like to have them make me look on that side,

and reverence the lovely forms of nature, and the shifting moods, and the clinging instincts. But I must not let them disturb me. There is an only guide, the voice in the heart, that asks, "Was thy wish sincere? If so, thou canst not stray from nature, nor be so perverted but she will make thee true again." I must take my own path, and learn from them all, without being paralyzed for the day. We need great energy, faith, and self-reliance to endure to-day. My age may not be the best, my position may be bad, my character ill-formed; but Thou, oh Spirit! hast no regard to aught but the seeking heart; and, if I try to walk upright, wilt guide me. What despair must he feel, who, after a whole life passed in trying to build up himself, resolves that it would have been far better if he had kept still as the clod of the valley, or yielded easily as the leaf to every breeze! A path has been appointed me. I have walked in it as steadily as I could. I am what I am; that which I am not, teach me in the others. I will bear the pain of imperfection, but not of doubt. E. must not shake me in my worldliness, nor — in the fine motion that has given me what I have of life, nor this child of genius make me lay aside the armor, without which I had lain bleeding on the field long since; but, if they can keep closer to nature, and learn to interpret her as souls, also, let me learn from them what I have not.'

And, in connection with this conversation, she has copied the following lines which this gentleman addressed to her: —

"TO MARGARET.

I mark beneath thy life the virtue shine
That deep within the star's eye opes its day;
I clutch the gorgeous thoughts thou throw'st away
From the profound unfathomable mine,
And with them this mean common hour do twine,
As glassy waters on the dry beach play.
And I were rich as night, them to combine
With, my poor store, and warm me with thy ray.
From the fixed answer of those dateless eyes
I meet bold hints of spirit's mystery
As to what's past, and hungry prophecies
Of deeds to-day, and things which are to be;
Of lofty life that with the eagle flies,
And humble love that clasps humanity."

I have thus vaguely designated, among the numerous group of her friends,

only those who were much in her company, in the early years of my acquaintance with her.

She wore this circle of friends, when I first knew her, as a necklace of diamonds about her neck. They were so much to each other, that Margaret seemed to represent them all, and, to know her, was to acquire a place with them. The confidences given her were their best, and she held them to them. She was an active, inspiring companion and correspondent, and all the art, the thought, and the nobleness in New England, seemed, at that moment, related to her, and she to it. She was everywhere a welcome guest. The houses of her friends in town and country were open to her, and every hospitable attention eagerly offered. Her arrival was a holiday, and so was her abode. She stayed a few days, often a week, more seldom a month, and all tasks that could be suspended were put aside to catch the favorable hour, in walking, riding, or boating, to talk with this joyful guest, who brought wit, anecdotes, love-stories, tragedies, oracles with her, and, with her broad web of relations to so many fine friends, seemed like the queen of some parliament of love, who carried the key to all confidences, and to whom every question had been finally referred.

Persons were her game, specially, if marked by fortune, or character, or success; — to such was she sent. She addressed them with a hardihood, — almost a haughty assurance, — queen-like. Indeed, they fell in her way, where the access might have seemed difficult, by wonderful casualties; and the inveterate recluse, the coyest maid, the waywardest poet, made no resistance, but yielded at discretion, as if they had been waiting for her, all doors to this imperious dame. She disarmed the suspicion of recluse scholars by the absence of bookishness. The ease with which she entered into conversation made them forget all they had heard of her; and she was infinitely less interested in literature than in life. They saw she valued earnest persons, and Dante, Petrarch, and Goethe, because they thought as she did, and gratified her with high portraits, which she was everywhere seeking. She drew her companions to surprising confessions. She was the wedding-guest, to whom the long-pent story must be told; and they were not less struck, on reflection, at the suddenness of the friendship which had established, in one day, new and permanent covenants. She extorted the secret of life, which cannot be told without setting heart and mind in a glow; and thus had the best of those she saw. Whatever romance, whatever virtue, whatever impressive experience, — this came to her; and she lived in a superior circle; for they suppressed all their common-place in her presence.

She was perfectly true to this confidence. She never confounded relations, but kept a hundred fine threads in her hand, without crossing or entangling any. An entire intimacy, which seemed to make both sharers of the whole horizon of each

others' and of all truth, did not yet make her false to any other friend; gave no title to the history that an equal trust of another friend had put in her keeping. In this reticence was no prudery and no effort. For, so rich her mind, that she never was tempted to treachery, by the desire of entertaining. The day was never long enough to exhaust her opulent memory; and I, who knew her intimately for ten years, — from July, 1836, till August, 1846, when she sailed for Europe, — never saw her without surprise at her new powers.

Of the conversations above alluded to, the substance was whatever was suggested by her passionate wish for equal companions, to the end of making life altogether noble. With the firmest tact she led the discourse into the midst of their daily living and working, recognizing the good-will and sincerity which each man has in his aims, and treating so playfully and intellectually all the points, that one seemed to see his life *en beau*, and was flattered by beholding what he had found so tedious in its workday weeds, shining in glorious costume. Each of his friends passed before him in the new light; hope seemed to spring under his feet, and life was worth living. The auditor jumped for joy, and thirsted for unlimited draughts. What! is this the dame, who, I heard, was sneering and critical? this the blue-stocking, of whom I stood in terror and dislike? this wondrous woman, full of counsel, full of tenderness, before whom every mean thing is ashamed, and hides itself; this new Corinne, more variously gifted, wise, sportive, eloquent, who seems to have learned all languages, Heaven knows when or how, — I should think she was born to them, — magnificent, prophetic, reading my life at her will, and puzzling me with riddles like this, 'Yours is an example of a destiny springing from character:' and, again, 'I see your destiny hovering before you, but it always escapes from you.'

The test of this eloquence was its range. It told on children, and on old people; on men of the world, and on sainted maids. She could hold them all by her honeyed tongue. A lady of the best eminence, whom Margaret occasionally visited, in one of our cities of spindles, speaking one day of her neighbors, said, "I stand in a certain awe of the moneyed men, the manufacturers, and so on, knowing that they will have small interest in Plato, or in Biot; but I saw them approach Margaret, with perfect security, for she could give them bread that they could eat." Some persons are thrown off their balance when in society; others are thrown on to balance; the excitement of company, and the observation of other characters, correct their biases. Margaret always appeared to unexpected advantage in conversation with a large circle. She had more sanity than any other; whilst, in private, her vision was often through colored lenses.

Her talents were so various, and her conversation so rich and entertaining, that one might talk with her many times, by the parlor fire, before he discovered

the strength which served as foundation to so much accomplishment and eloquence. But, concealed under flowers and music, was the broadest good sense, very well able to dispose of all this pile of native and foreign ornaments, and quite able to work without them. She could always rally on this, in every circumstance, and in every company, and find herself on a firm footing of equality with any party whatever, and make herself useful, and, if need be, formidable.

The old Anaximenes, seeking, I suppose, for a source sufficiently diffusive, said, that Mind must be *in the air*, which, when all men breathed, they were filled with one intelligence. And when men have larger measures of reason, as Æsop, Cervantes, Franklin, Scott, they gain in universality, or are no longer confined to a few associates, but are good company for all persons, — philosophers, women, men of fashion, tradesmen, and servants. Indeed, an older philosopher than Anaximenes, namely, language itself, had taught to distinguish superior or purer sense as *common sense*.

Margaret had, with certain limitations, or, must we say, *strictures*, these larger lungs, inhaling this universal element, and could speak to Jew and Greek, free and bond, to each in his own tongue. The Concord stage-coachman distinguished her by his respect, and the chambermaid was pretty sure to confide to her, on the second day, her homely romance.

I regret that it is not in my power to give any true report of Margaret's conversation. She soon became an established friend and frequent inmate of our house, and continued, thenceforward, for years, to come, once in three or four months, to spend a week or a fortnight with us. She adopted all the people and all the interests she found here. Your people shall be my people, and yonder darling boy I shall cherish as my own. Her ready sympathies endeared her to my wife and my mother, each of whom highly esteemed her good sense and sincerity. She suited each, and all. Yet, she was not a person to be suspected of complaisance, and her attachments, one might say, were chemical.

She had so many tasks of her own, that she was a very easy guest to entertain, as she could be left to herself, day after day, without apology. According to our usual habit, we seldom met in the forenoon. After dinner, we read something together, or walked, or rode. In the evening, she came to the library, and many and many a conversation was there held, whose details, if they could be preserved, would justify all encomiums. They interested me in every manner; — talent, memory, wit, stern introspection, poetic play, religion, the finest personal feeling, the aspects of the future, each followed each in full activity, and left me, I remember, enriched and sometimes astonished by the gifts of my guest. Her topics were numerous, but the cardinal points of poetry, love, and religion, were

never far off. She was a student of art, and, though untravelled, knew, much better than most persons who had been abroad, the conventional reputation of each of the masters. She was familiar with all the field of elegant criticism in literature. Among the problems of the day, these two attracted her chiefly, Mythology and Demonology; then, also, French Socialism, especially as it concerned woman; the whole prolific family of reforms, and, of course, the genius and career of each remarkable person.

She had other friends, in this town, beside those in my house. A lady, already alluded to, lived in the village, who had known her longer than I, and whose prejudices Margaret had resolutely fought down, until she converted her into the firmest and most efficient of friends. In 1842, Nathaniel Hawthorne, already then known to the world by his *Twice-Told Tales*, came to live in Concord, in the "Old Manse," with his wife, who was herself an artist. With these welcomed persons Margaret formed a strict and happy acquaintance. She liked their old house, and the taste which had filled it with new articles of beautiful form, yet harmonized with the antique furniture left by the former proprietors. She liked, too, the pleasing walks, and rides, and boatings, which that neighborhood commanded.

In 1842, William Ellery Channing, whose wife was her sister, built a house in Concord, and this circumstance made a new tie and another home for Margaret.

ARCANA.

It was soon evident that there was somewhat a little pagan about her; that she had some faith more or less distinct in a fate, and in a guardian genius; that her fancy, or her pride, had played with her religion. She had a taste for gems, ciphers, talismans, omens, coincidences, and birthdays. She had a special love for the planet Jupiter, and a belief that the month of September was inauspicious to her. She never forgot that her name, Margarita, signified a pearl. 'When I first met with the name Leila,' she said, 'I knew, from the very look and sound, it was mine; I knew that it meant night, — night, which brings out stars, as sorrow brings out truths.' Sortilege she valued. She tried *sortes biblicæ*, and her hits were memorable. I think each new book which interested her, she was disposed to put to this test, and know if it had somewhat personal to say to her. As happens to such persons, these guesses were justified by the event. She chose carbuncle for her own stone, and when a dear friend was to give her a gem, this was the one selected. She valued what she had somewhere read, that carbuncles are male and female. The female casts out light, the male has his within himself. 'Mine,' she said, 'is the male.' And she was wont to put on her carbuncle, a

bracelet, or some selected gem, to write letters to certain friends. One of her friends she coupled with the onyx, another in a decided way with the amethyst. She learned that the ancients esteemed this gem a talisman to dispel intoxication, to give good thoughts and understanding 'The Greek meaning is *antidote against drunkenness*.' She characterized her friends by these stones, and wrote to the last mentioned, the following lines: —

'TO ——— .

'Slow wandering on a tangled way,
To their lost child pure spirits say: —
The diamond marshal thee by day,
By night, the carbuncle defend,
Heart's blood of a bosom friend.
On thy brow, the amethyst,
Violet of purest earth,
When by fullest sunlight kissed,
Best reveals its regal birth;
And when that haloed moment flies,
Shall keep thee steadfast, chaste, and wise.'

Coincidences, good and bad, *contretemps*, seals, ciphers, mottoes, omens, anniversaries, names, dreams, are all of a certain importance to her. Her letters are often dated on some marked anniversary of her own, or of her correspondent's calendar. She signalized saints' days, "All-Souls," and "All-Saints," by poems, which had for her a mystical value. She remarked a preëstablished harmony of the names of her personal friends, as well as of her historical favorites; that of Emanuel, for Swedenborg; and Rosencrantz, for the head of the Rosicrucians. 'If Christian Rosencrantz,' she said, 'is not a made name, the genius of the age interfered in the baptismal rite, as in the cases of the archangels of art, Michael and Raphael, and in giving the name of Emanuel to the captain of the New Jerusalem. *Sub rosa crux*, I think, is the true derivation, and not the chemical one, generation, corruption, &c.' In this spirit, she soon surrounded herself with a little mythology of her own. She had a series of anniversaries, which she kept. Her seal-ring of the flying Mercury had its legend. She chose the *Sistrum* for her emblem, and had it carefully drawn with a view to its being engraved on a gem. And I know not how many verses and legends came recommended to her by this symbolism. Her dreams, of course, partook of this symmetry. The same dream returns to her periodically, annually, and

punctual to its night. One dream she marks in her journal as repeated for the fourth time: —

‘In C., I at last distinctly recognized the figure of the early vision, whom I found after I had left A., who led me, on the bridge, towards the city, glittering in sunset, but, midway, the bridge went under water. I have often seen in her face that it was she, but refused to believe it.’

She valued, of course, the significance of flowers, and chose emblems for her friends from her garden.

‘TO — , WITH HEARTSEASE.

’Content, in purple lustre clad,
Kingly serene, and golden glad,
No demi-hues of sad contrition,
No pallors of enforced submission; —
Give me such content as this,
And keep awhile the rosy bliss.’

DÆMONOLOGY.

This catching at straws of coincidence, where all is geometrical, seems the necessity of certain natures. It, is true, that, in every good work, the particulars are right, and, that every spot of light on the ground, under the trees, is a perfect image of the sun. Yet, for astronomical purposes, an observatory is better than an orchard; and in a universe which is nothing but generations, or an unbroken suite of cause and effect, to infer Providence, because a man happens to find a shilling on the pavement just when he wants one to spend, is puerile, and much as if each of us should date his letters and notes of hand from his own birthday, instead of from Christ’s or the king’s reign, or the current Congress. These, to be sure, are also, at first, petty and private beginnings, but, by the world of men, clothed with a social and cosmical character.

It will be seen, however, that this propensity Margaret held with certain tenets of fate, which always swayed her, and which Goethe, who had found room and fine names for all this in his system, had encouraged; and, I may add, which her own experiences, early and late, seemed strangely to justify.

Some extracts, from her letters to different persons, will show how this matter lay in her mind.

‘*December 17, 1829.* — The following instance of beautiful credulity, in Rousseau, has taken my mind greatly. This remote seeking for the decrees of

fate, this feeling of a destiny, casting its shadows from the very morning of thought, is the most beautiful species of idealism in our day. 'Tis finely manifested in Wallenstein, where the two common men sum up their superficial observations on the life and doings of Wallenstein, and show that, not until this agitating crisis, have they caught any idea of the deep thoughts which shaped that hero, who has, without their feeling it, moulded *their* existence.

“Tasso,” says Rousseau, “has predicted my misfortunes. Have you remarked that Tasso has this peculiarity, that you cannot take from his work a single strophe, nor from any strophe a single line, nor from any line a single word, without disarranging the whole poem? Very well! take away the strophe I speak of, the stanza has no connection with those that precede or follow it; it is absolutely useless. *Tasso probably wrote it involuntarily, and without comprehending it himself.*”

‘As to the impossibility of taking from Tasso without disarranging the poem, &c., I dare say 'tis not one whit more justly said of his, than, of any other narrative poem. *Mais, n'importe*, 'tis sufficient if Rousseau believed this. I found the stanza in question; admire its meaning beauty.

‘I hope you have Italian enough to appreciate the singular perfection in expression. If not, look to Fairfax's Jerusalem Delivered, Canto 12, Stanza 77; but Rousseau says these lines have no connection with what goes before, or after; *they are preceded*, stanza 76, by these three lines, which he does not think fit to mention.’

*

”Misero mostro d'infelice amore;
Misero mostro a cui sol pena è degna
Dell' immensa impietà, la vita indegna.”

”Vivrò fra i miei tormenti e fra le cure,
Mie giuste furie, forsennato errante.
Paventerò l'ombre solinghe e scure,
Che l'primo error mi recheranno avante
E del sol che scoprì le mie sventure,
A schivo ed in orrore avrò il sembiante.
Temerò me medesimo; e da me stesso
Sempre fuggendo, avrò me sempre appresso.”

LA GERUSALEMME: LIBERATA, C. XII. 76, 77.

TO R.W.E.

‘Dec.12, 1843. — When Goethe received a letter from Zelter, with a handsome superscription, he said. “Lay that aside; it is Zelter’s true handwriting. Every man has a dæmon, who is busy to confuse and limit his life. No way is the action of this power more clearly shown, than in the handwriting. On this occasion, the evil influences have been evaded; the mood, the hand, the pen and paper have conspired to let our friend write truly himself.”

‘You may perceive, I quote from memory, as the sentences are anything but Goethean; but I think often of this little passage. With me, for weeks and months, the dæmon works his will. Nothing succeeds with me. I fall ill, or am otherwise interrupted. At these times, whether of frost, or sultry weather, I would gladly neither plant nor reap, — wait for the better times, which sometimes come, when I forget that sickness is ever possible; when all interruptions are upborne like straws on the full stream of my life, and the words that accompany it are as much in harmony as sedges murmuring near the bank. Not all, yet not unlike. But it often happens, that something presents itself, and must be done, in the bad time; nothing presents itself in the good: so I, like the others, seem worse and poorer than I am.’

In another letter to an earlier friend, she expatiates a little.

‘As to the Dæmoniacal, I know not that I can say to you anything more precise than you find from Goethe. There are no precise terms for such thoughts. The word *instinctive* indicates their existence. I intimated it in the little piece on the Drachenfels. It may be best understood, perhaps, by a symbol. As the sun shines from the serene heavens, dispelling noxious exhalations, and calling forth exquisite thoughts on the surface of earth in the shape of shrub or flower, so gnome-like works the fire within the hidden caverns and secret veins of earth, fashioning existences which have a longer share in time, perhaps, because they are not immortal in thought. Love, beauty, wisdom, goodness are intelligent, but this power moves only to seize its prey. It is not necessarily either malignant or the reverse, but it has no scope beyond demonstrating its existence. When conscious, self-asserting, it becomes (as power working for its own sake, unwilling to acknowledge love for its superior, must) the devil. That is the legend of Lucifer, the star that would not own its centre. Yet, while it is unconscious, it is not devilish, only dæmoniac. In nature, we trace it in all volcanic workings, in a boding position of lights, in whispers of the wind, which has no pedigree; in deceitful invitations of the water, in the sullen rock, which never shall find a voice, and in the shapes of all those beings who go about seeking what they may devour. We speak of a mystery, a dread; we shudder, but

we approach still nearer, and a part of our nature listens, sometimes answers to this influence, which, if not indestructible, is at least indissolubly linked with the existence of matter.

‘In genius, and in character, it works, as you say, instinctively; it refuses to be analyzed by the understanding, and is most of all inaccessible to the person who possesses it. We can only say, I have it, he has it. You have seen it often in the eyes of those Italian faces you like. It is most obvious in the eye. As we look on such eyes, we think on the tiger, the serpent, beings who lurk, glide, fascinate, mysteriously control. For it is occult by its nature, and if it could meet you on the highway, and be familiarly known as an acquaintance, could not exist. The angels of light do not love, yet they do not insist on exterminating it.

‘It has given rise to the fables of wizard, enchantress, and the like; these beings are scarcely good, yet not necessarily bad. Power tempts them. They draw their skills from the dead, because their being is coeval with that of matter, and matter is the mother of death.’

In later days, she allowed herself sometimes to dwell sadly on the resistances which she called her fate, and remarked, that ‘all life that has been or could be natural to me, is invariably denied.’

She wrote long afterwards: —

‘My days at Milan were not unmarked. I have known some happy hours, but they all lead to sorrow, and not only the cups of wine, but of milk, seem drugged with poison, for me. It does not seem to be my fault, this destiny. I do not court these things, — they come. I am a poor magnet, with power to be wounded by the bodies I attract.’

TEMPERAMENT.

I said that Margaret had a broad good sense, which brought her near to all people. I am to say that she had also a strong temperament, which is that counter force which makes individuality, by driving all the powers in the direction of the ruling thought or feeling, and, when it is allowed full sway, isolating them. These two tendencies were always invading each other, and now one and now the other carried the day. This alternation perplexes the biographer, as it did the observer. We contradict on the second page what we affirm on the first: and I remember how often I was compelled to correct my impressions of her character when living; for after I had settled it once for all that she wanted this or that perception, at our next interview she would say with emphasis the very word.

I think, in her case, there was something abnormal in those obscure habits and necessities which we denote by the word Temperament. In the first days of our

acquaintance, I felt her to be a foreigner, — that, with her, one would always be sensible of some barrier, as if in making up a friendship with a cultivated Spaniard or Turk. She had a strong constitution, and of course its reactions were strong; and this is the reason why in all her life she has so much to say of her *fate*. She was in jubilant spirits in the morning, and ended the day with nervous headache, whose spasms, my wife told me, produced total prostration. She had great energy of speech and action, and seemed formed for high emergencies.

Her life concentrated itself on certain happy days, happy hours, happy moments. The rest was a void. She had read that a man of letters must lose many days, to work well in one. Much more must a Sappho or a sibyl. The capacity of pleasure was balanced by the capacity of pain. ‘If I had wist!— ‘ she writes, ‘I am a worse self-tormentor than Rousseau, and all my riches are fuel to the fire. My beautiful lore, like the tropic clime, hatches scorpions to sting me. There is a verse, which Annie of Lochroyan sings about her ring, that torments my memory, ’tis so true of myself.’

When I found she lived at a rate so much faster than mine, and which was violent compared with mine, I foreboded rash and painful crises, and had a feeling as if a voice cried, *Stand from under!* — as if, a little further on, this destiny was threatened with jars and reverses, which no friendship could avert or console. This feeling partly wore off, on better acquaintance, but remained latent; and I had always an impression that her energy was too much a force of blood, and therefore never felt the security for her peace which belongs to more purely intellectual natures. She seemed more vulnerable. For the same reason, she remained inscrutable to me; her strength was not my strength, — her powers were a surprise. She passed into new states of great advance, but I understood these no better. It were long to tell her peculiarities. Her childhood was full of presentiments. She was then a somnambulist. She was subject to attacks of delirium, and, later, perceived that she had spectral illusions. When she was twelve, she had a determination of blood to the head. ‘My parents,’ she said,

‘were much mortified to see the fineness of my complexion destroyed. My own vanity was for a time severely wounded; but I recovered, and made up my mind to be bright and ugly.’

She was all her lifetime the victim of disease and pain. She read and wrote in bed, and believed that she could understand anything better when she was ill. Pain acted like a girdle, to give tension to her powers. A lady, who was with her one day during a terrible attack of nervous headache, which made Margaret totally helpless, assured me that Margaret was yet in the finest vein of humor, and kept those who were assisting her in a strange, painful excitement, between laughing and crying, by perpetual brilliant sallies. There were other peculiarities

of habit and power. When she turned her head on one side, she alleged she had second sight, like St. Francis. These traits or predispositions made her a willing listener to all the uncertain science of mesmerism and its goblin brood, which have been rife in recent years.

She had a feeling that she ought to have been a man, and said of herself, 'A man's ambition with a woman's heart, is an evil lot.' In some verses which she wrote 'To the Moon,' occur these lines: —

'But if I steadfast gaze upon thy face,
A human secret, like my own, I trace;
For, through the woman's smile looks the male eye.'

And she found something of true portraiture in a disagreeable novel of Balzac's, "*Le Livre Mystique*," in which an equivocal figure exerts alternately a masculine and a feminine influence on the characters of the plot.

Of all this nocturnal element in her nature she was very conscious, and was disposed, of course, to give it as fine names as it would carry, and to draw advantage from it. 'Attica,' she said to a friend, 'is your province, Thessaly is mine: Attica produced the marble wonders, of the great geniuses; but Thessaly is the land of magic.'

'I have a great share of Typhon to the Osiris, wild rush and leap, blind force for the sake of force.'

*

'Dante, thou didst not describe, in all thy apartments of Inferno, this tremendous repression of an existence half unfolded; this swoon as the soul was ready to be born.'

*

'Every year I live, I dislike routine more and more, though I see that society rests on that, and other falsehoods. The more I screw myself down to hours, the more I become expert at giving out thought and life in regulated rations, — the more I weary of this world, and long to move upon the wing, without props and sedan chairs.'

TO R.W.E.

'Dec. 26, 1839. — If you could look into my mind just now, you would send far

from you those who love and hate. I am on the Drachenfels, and cannot get off; it is one of my naughtiest moods. Last Sunday, I wrote a long letter, describing it in prose and verse, and I had twenty minds to send it you as a literary curiosity; then I thought, this might destroy relations, and I might not be able to be calm and chip marble with you any more, if I talked to you in magnetism and music; so I sealed and sent it in the due direction.

‘I remember you say, that forlorn seasons often turn out the most profitable. Perhaps I shall find it so. I have been reading Plato all the week, because I could not write. I hoped to be tuned up thereby. I perceive, with gladness, a keener insight in myself, day by day; yet, after all, could not make a good statement this morning on the subject of beauty.’

She had, indeed, a rude strength, which, if it could have been supported by an equal health, would have given her the efficiency of the strongest men. As it was, she had great power of work. The account of her reading in Groton is at a rate like Gibbon’s, and, later, that of her writing, considered with the fact that writing was not grateful to her, is incredible. She often proposed to her friends, in the progress of intimacy, to write every day. ‘I think less than a daily offering of thought and feeling would not content me, so much seems to pass unspoken.’ In Italy, she tells Madame Arconati, that she has ‘more than a hundred correspondents;’ and it was her habit there to devote one day of every week to those distant friends. The facility with which she assumed stints of literary labor, which veteran feeders of the press would shrink from, — assumed and performed, — when her friends were to be served, I have often observed with wonder, and with fear, when I considered the near extremes of ill-health, and the manner in which her life heaped itself in high and happy moments, which were avenged by lassitude and pain.

‘As each task comes,’ she said, ‘I borrow a readiness from its aspect, as I always do brightness from the face of a friend. Yet, as soon as the hour is past, I sink.’

I think most of her friends will remember to have felt, at one time or another, some uneasiness, as if this athletic soul craved a larger atmosphere than it found; as if she were ill-timed and mismated, and felt in herself a tide of life, which compared with the slow circulation of others as a torrent with a rill. She found no full expression of it but in music. Beethoven’s Symphony was the only right thing the city of the Puritans had for her. Those to whom music has a representative value, affording them a stricter copy of their inward life than any other of the expressive arts, will, perhaps, enter into the spirit which dictated the following letter to her patron saint, on her return, one evening, from the Boston Academy of Music.

TO BEETHOVEN.

‘*Saturday Evening. 25th Nov., 1843.*

‘My only friend,

‘How shall I thank thee for once more breaking the chains of my sorrowful slumber? My heart beats. I live again, for I feel that I am worthy audience for thee, and that my being would be reason enough for thine.

‘Master, my eyes are always clear. I see that the universe is rich, if I am poor. I see the insignificance of my sorrows. In my will, I am not a captive; in my intellect, not a slave. Is it then my fault that the palsy of my affections benumbs my whole life?

‘I know that the curse is but for the time. I know what the eternal justice promises. But on this one sphere, it is sad. Thou didst say, thou hadst no friend but thy art. But that one is enough. I have no art, in which to vent the swell of a soul as deep as thine, Beethoven, and of a kindred frame. Thou wilt not think me presumptuous in this saying, as another might. I have always known that thou wouldst welcome and know me, as would no other who ever lived upon the earth since its first creation.

‘Thou wouldst forgive me, master, that I have not been true to my eventual destiny, and therefore have suffered on every side “the pangs of despised love.” Thou didst the same; but thou didst borrow from those errors the inspiration of thy genius. Why is it not thus with me? Is it because, as a woman, I am bound by a physical-law, which prevents the soul from manifesting itself? Sometimes the moon seems mockingly to say so, — to say that I, too, shall not shine, unless I can find a sun. O, cold and barren moon, tell a different tale!

‘But thou, oh blessed master! dost answer all my questions, and make it my privilege to be. Like a humble wife to the sage, or poet, it is my triumph that I can understand and cherish thee: like a mistress, I arm thee for the fight: like a young daughter, I tenderly bind thy wounds. Thou art to me beyond compare, for thou art all I want. No heavenly sweetness of saint or martyr, no many-leaved Raphael, no golden Plato, is anything to me, compared with thee. The infinite Shakspeare, the stern Angelo, Dante, — bittersweet like thee, — are no longer seen in thy presence. And, beside these names, there are none that could vibrate in thy crystal sphere. Thou hast all of them, and that ample surge of life besides, that great winged being which they only dreamed of. There is none greater than Shakspeare; he, too, is a god; but his creations are successive; thy *fiat* comprehends them all.

‘Last summer, I met thy mood in nature, on those wide impassioned plains flower and crag-bestrown. There, the tide of emotion had rolled over, and left the

vision of its smiles and sobs, as I saw to-night from thee.

‘If thou wouldst take me wholly to thyself — ! I am lost in this world, where I sometimes meet angels, but of a different star from mine. Even so does thy spirit plead with all spirits. But thou dost triumph and bring them all in.

‘Master, I have this summer envied the oriole which had even a swinging nest in the high bough. I have envied the least flower that came to seed, though that seed were strown to the wind. But I envy none when I am with thee.’

SELF-ESTEEM.

Margaret at first astonished and repelled us by a complacency that seemed the most assured since the days of Scaliger. She spoke, in the quietest manner, of the girls she had formed, the young men who owed everything to her, the fine companions she had long ago exhausted. In the coolest way, she said to her friends, ‘I now know all the people worth knowing in America, and I find no intellect comparable to my own.’ In vain, on one occasion, I professed my reverence for a youth of genius, and my curiosity in his future,— ‘O no, she was intimate with his mind,’ and I ‘spoiled him, by overrating him.’ Meantime, we knew that she neither had seen, nor would see, his subtle superiorities.

I have heard, that from the beginning of her life, she idealized herself as a sovereign. She told — she early saw herself to be intellectually superior to those around her, and that for years she dwelt upon the idea, until she believed that she was not her parents’ child, but an European princess confided to their care. She remembered, that, when a little girl, she was walking one day under the apple trees with such an air and step, that her father pointed her out to her sister, saying, *Incedit regina*. And her letters sometimes convey these exultations, as the following, which was written to a lady, and which contained Margaret’s translation of Goethe’s “Prometheus.”

To ——— .

1838. — Which of us has not felt the questionings expressed in this bold fragment? Does it not seem, were we gods, or could steal their fire, we would make men not only happier, but free, — glorious? Yes, my life is strange; thine is strange. We are, we shall be, in this life, mutilated beings, but there is in my bosom a faith, that I shall see the reason; a glory, that I can endure to be so imperfect; and a feeling, ever elastic, that fate and time shall have the shame and the blame, if I am mutilated. I will do all I can, — and, if one cannot succeed, there is a beauty in martyrdom.

Your letters are excellent. I did not mean to check your writing, only I thought that you might wish a confidence that I must anticipate with a protest.

But I take my natural position always: and the more I see, the more I feel that it is regal. Without throne, sceptre, or guards, still a queen.

It is certain that Margaret occasionally let slip, with all the innocence imaginable, some phrase betraying the presence of a rather mountainous ME, in a way to surprise those who knew her good sense. She could say, as if she were stating a scientific fact, in enumerating the merits of somebody, 'He appreciates *me*.' There was something of hereditary organization in this, and something of unfavorable circumstance in the fact, that she had in early life no companion, and few afterwards, in her finer studies; but there was also an ebullient sense of power, which she felt to be in her, which as yet had found no right channels. I remember she once said to me, what I heard as a mere statement of fact, and nowise as unbecoming, that 'no man gave such invitation to her mind as to tempt her to a full expression; that she felt a power to enrich her thought with such wealth and variety of embellishment as would, no doubt, be tedious to such as she conversed with.'

Her impatience she expressed as she could. 'I feel within myself,' she said, 'an immense force, but I cannot bring it out. It may sound like a joke, but I do feel something corresponding to that tale of the Destinies falling in love with Hermes.'

In her journal, in the summer of 1844, she writes: —

'Mrs. Ware talked with me about education, — wilful education, — in which she is trying to get interested. I talk with a Goethean moderation on this subject, which rather surprises her and ———, who are nearer the entrance of the studio. I am really old on this subject. In near eight years' experience, I have learned as much as others would in eighty, from my great talent at explanation, tact in the use of means, and immediate and invariable power over the minds of my pupils. My wish has been, to purify my own conscience, when near them; give clear views of the aims of this life; show them where the magazines of knowledge lie; and leave the rest to themselves and the Spirit, who must teach and help them to self-impulse. I told Mrs. W. it was much if we did not injure them; if they were passing the time in a way that was *not bad*, so that good influences have a chance. Perhaps people in general must expect greater outward results, or they would feel no interest.'

Again:

'With the intellect I always have, always shall, overcome; but that is not the half of the work. The life, the life! O, my God! shall the life never be sweet?'

I have inquired diligently of those who saw her often, and in different companies, concerning her habitual tone, and something like this is the report: — In conversation, Margaret seldom, except as a special grace, admitted others

upon an equal ground with herself. She was exceedingly tender, when she pleased to be, and most cherishing in her influence; but to elicit this tenderness, it was necessary to submit first to her personally. When a person was overwhelmed by her, and answered not a word, except, "Margaret, be merciful to me, a sinner," then her love and tenderness would come like a seraph's, and often an acknowledgment that she had been too harsh, and even a craving for pardon, with a humility, — which, perhaps, she had caught from the other. But her instinct was not humility, — that was always an afterthought.

This arrogant tone of her conversation, if it came to be the subject of comment, of course, she defended, and with such broad good nature, and on grounds of simple truth, as were not easy to set aside. She quoted from Manzoni's *Carmagnola*, the lines: —

"Tolga il ciel che alcuno
Piu altamente di me pensi ch'io stesso."

"God forbid that any one should conceive more highly of me than I myself." Meantime, the tone of her journals is humble, tearful, religious, and rises easily into prayer.

I am obliged to an ingenious correspondent for the substance of the following account of this idiosyncrasy: —

Margaret was one of the few persons who looked upon life as an art, and every person not merely as an artist, but as a work of art. She looked upon herself as a living statue, which should always stand on a polished pedestal, with right accessories, and under the most fitting lights. She would have been glad to have everybody so live and act. She was annoyed when they did not, and when they did not regard her from the point of view which alone did justice to her. No one could be more lenient in her judgments of those whom she saw to be living in this light. Their faults were to be held as "the disproportions of the ungrown giant." But the faults of persons who were unjustified by this ideal, were odious. Unhappily, her constitutional self-esteem sometimes blinded the eyes that should have seen that an idea lay at the bottom of some lives which she did not quite so readily comprehend as beauty; that truth had other manifestations than those which engaged her natural sympathies; that sometimes the soul illuminated only the smallest arc — of a circle so large that it was lost in the clouds of another world.

This apology reminds me of a little speech once made to her, at his own house, by Dr. Channing, who held her in the highest regard: "Miss Fuller, when I consider that you are and have all that Miss —— has so long wished for, and

that you scorn her, and that she still admires you, — I think her place in heaven will be very high.”

But qualities of this kind can only be truly described by the impression they make on the bystander; and it is certain that her friends excused in her, because she had a right to it, a tone which they would have reckoned intolerable in any other. Many years since, one of her earliest and fastest friends quoted Spenser’s sonnet as accurately descriptive of Margaret: —

”Rudely thou wrongest my dear heart’s desire,
In finding fault with her too portly pride;
The thing which I do most in her admire
Is of the world unworthy most envied.
For, in those lofty looks is close implied
Scorn of base things, disdain of foul dishonor,
Threatening rash eyes which gaze on her so wide
That loosely they ne dare to look upon her:
Such pride is praise, such portliness is honor,
That boldened innocence bears in her eyes;
And her fair countenance, like a goodly banner,
Spreads in defiance of all enemies.
Was never in this world aught worthy tried,
Without a spark of some self-pleasing pride.”

BOOKS.

She had been early remarked for her sense and sprightliness, and for her skill in school exercises. Now she had added wide reading, and of the books most grateful to her. She had read the Italian poets by herself, and from sympathy. I said, that, by the leading part she naturally took, she had identified herself with all the elegant culture in this country. Almost every person who had any distinction for wit, or art, or scholarship, was known to her; and she was familiar with the leading books and topics. There is a kind of undulation in the popularity of the great writers, even of the first rank. We have seen a recent importance given to Behmen and Swedenborg; and Shakspeare has unquestionably gained with the present generation. It is distinctive, too, of the taste of the period, — the new vogue given to the genius of Dante. An edition of Cary’s translation, reprinted in Boston, many years ago, was rapidly sold; and, for the last twenty years, all studious youths and maidens have been reading the *Inferno*. Margaret had very early found her way to Dante, and from a certain native preference

which she felt or fancied for the Italian genius. The following letter, though of a later date, relates to these studies: —

TO R.W.E.

‘December, 1842. — When you were here, you seemed to think I might perhaps have done something on the *Vita Nuova*; and the next day I opened the book, and considered how I could do it. But you shall not expect that, either, for your present occasion. When I first mentioned it to you, it was only as a piece of Sunday work, which I thought of doing for you alone; and because it has never seemed to me you entered enough into the genius of the Italian to apprehend the mind, which has seemed so great to me, and a star unlike, if not higher than all the others in our sky. Else, I should have given you the original, rather than any version of mine. I intended to translate the poems, with which it is interspersed, into plain prose. Milnes and Longfellow have tried each their power at doing it in verse, and have done better, probably, than I could, yet not well. But this would not satisfy me for the public. Besides, the translating Dante is a piece of literary presumption, and challenges a criticism to which I am not sure that I am, as the Germans say, *gewachsen*. Italian, as well as German, I learned by myself, unassisted, except as to the pronunciation. I have never been brought into connection with minds trained to any severity in these kinds of elegant culture. I have used all the means within my reach, but my not going abroad is an insuperable defect in the technical part of my education. I was easily capable of attaining excellence, perhaps mastery, in the use of some implements. Now I know, at least, *what I do not know*, and I get along by never voluntarily going beyond my depth, and, when called on to do it, stating my incompetency. At moments when I feel tempted to regret that I could not follow out the plan I had marked for myself, and develop powers which are not usual here, I reflect, that if I had attained high finish and an easy range in these respects, I should not have been thrown back on my own resources, or known them as I do. But Lord Brougham should not translate Greek orations, nor a maid-of-all-work attempt such a piece of delicate handling as to translate the *Vita Nuova*.’

Here is a letter, without date, to another correspondent:

‘To-day, on reading over some of the sonnets of Michel Angelo, I felt them more than usual. I know not why I have not read them thus before, except that the beauty was pointed out to me at first by another, instead of my coming unexpectedly upon it of myself. All the great writers, all the persons who have been dear to me, I have found and chosen; they have not been proposed to me. My intimacy with them came upon me as natural eras, unexpected and thrice

dear. Thus I have appreciated, but not been able to feel, Michel Angelo as a poet.

‘It is a singular fact in my mental history, that, while I understand the principles and construction of language much better than formerly, I cannot read so well *les langues méridionales*. I suppose it is that I am less *méridionale* myself. I understand the genius of the north better than I did.’

Dante, Petrarca, Tasso, were her friends among the old poets, — for to Ariosto she assigned a far lower place, — Alfieri and Manzoni, among the new. But what was of still more import to her education, she had read German books, and, for the three years before I knew her, almost exclusively, — Lessing, Schiller, Richter, Tieck, Novalis, and, above all, GOETHE. It was very obvious, at the first intercourse with her, though her rich and busy mind never reproduced undigested reading, that the last writer, — food or poison, — the most powerful of all mental reagents, — the pivotal mind in modern literature, — for all before him are ancients, and all who have read him are moderns, — that this mind had been her teacher, and, of course, the place was filled, nor was there room for any other. She had that symptom which appears in all the students of Goethe, — an ill-dissembled contempt of all criticism on him which they hear from others, as if it were totally irrelevant; and they are themselves always preparing to say the right word, — a *prestige* which is allowed, of course, until they do speak: when they have delivered their volley, they pass, like their foregoers, to the rear.

The effect on Margaret was complete. She was perfectly timed to it. She found her moods met, her topics treated, the liberty of thought she loved, the same climate of mind. Of course, this book superseded all others, for the time, and tinged deeply all her thoughts. The religion, the science, the Catholicism, the worship of art, the mysticism and dæmonology, and withal the clear recognition of moral distinctions as final and eternal, all charmed her; and Faust, and Tasso, and Mignon, and Makaria, and Iphigenia, became irresistible names. It was one of those agreeable historical coincidences, perhaps invariable, though not yet registered, the simultaneous appearance of a teacher and of pupils, between whom exists a strict affinity. Nowhere did Goethe find a braver, more intelligent, or more sympathetic reader. About the time I knew her, she was meditating a biography of Goethe, and did set herself to the task in 1837. She spent much time on it, and has left heaps of manuscripts, which are notes, transcripts, and studies in that direction. But she wanted leisure and health to finish it, amid the multitude of projected works with which her brain teemed. She used great discretion on this point, and made no promises. In 1839, she published her translation of Eckermann, a book which makes the basis of the translation of Eckermann since published in London, by Mr. Oxenford. In the *Dial*, in July, 1841, she wrote an article on Goethe, which is, on many accounts, her best

paper.

CRITICISM.

Margaret was in the habit of sending to her correspondents, in lieu of letters, sheets of criticism on her recent readings. From such quite private folios, never intended for the press, and, indeed, containing here and there names and allusions, which it is now necessary to veil or suppress, I select the following notices, chiefly of French books. Most of these were addressed to me, but the three first to an earlier friend.

‘Reading Schiller’s introduction to the Wars of the League, I have been led back to my old friend, the Duke of Sully, and his charming king. He was a man, that Henri! How gay and graceful seems his unflinching frankness! He wore life as lightly as the feather in his cap. I have become much interested, too, in the two Guises, who had seemed to me mere intriguers, and not of so splendid abilities, when I was less able to appreciate the difficulties they daily and hourly combated. I want to read some more books about them. Do you know whether I could get Matthieu, or de Thou, or the Memoirs of the House of Nevers?’

‘I do not think this is a respectable way of passing my summer, but I cannot help it.

‘I never read any life of Molière. Are the facts very interesting? You see clearly in his writing what he was: a man not high, not poetic; but firm, wide, genuine, whose clear-sightedness only made him more noble. I love him well that he could see without showing these myriad mean faults of the social man, and yet make no nearer approach to misanthropy than his *Alceste*. These witty Frenchmen. Rabelais, Montaigne, Molière, are great as were their marshals and *preux chevaliers*; when the Frenchman tries to be poetical, he becomes theatrical, but he can be romantic, and also dignified, maugre shrugs and snuff-boxes.’

*

‘*Thursday Evening*. — Although I have been much engaged these two days. I have read *Spiridion* twice. I could have wished to go through it the second time more at leisure, but as I am going away, I thought I would send it back, lest it should be wanted before my return.

‘The development of the religious sentiment being the same as in *Hélène*, I at first missed the lyric effusion of that work, which seems to me more and more beautiful, as I think of it more. This, however, was a mere prejudice, of course,

as the thought here is poured into a quite different mould, and I was not troubled by it on a second reading.

‘Again, when I came to look at the work by itself, I thought the attempt too bold. A piece of character-painting does not seem to be the place for a statement of these wide and high subjects. For here the philosophy is not merely implied in the poetry and religion, but assumes to show a face of its own. And, as none should meddle with these matters who are not in earnest, so, such will prefer to find the thought of a teacher or fellow-disciple expressed as directly and as bare of ornament as possible.

‘I was interested in De Wette’s Theodor, and that learned and (*on dit*) profound man seemed to me so to fail, that I did not finish the book, nor try whether I could believe the novice should ever arrive at manly stature.

‘I am not so clear as to the scope and bearing of this book, as of that. I suppose if I were to read Lamennais, or L’Erminier, I should know what they all want or intend. And if you meet with *Les paroles d’un Croyant*, I will beg you to get it for me, for I am more curious than ever. I had supposed the view taken by these persons in France, to be the same with that of Novalis and the German Catholics, in which I have been deeply interested. But from this book, it would seem to approach the faith of some of my friends here, which has been styled Psychotheism. And the gap in the theoretical fabric is the same as with them. I read with unutterable interest the despair of Alexis in his Eclectic course, his return to the teachings of external nature, his new birth, and consequent appreciation of poetry and music. But the question of Free Will, — how to reconcile its workings with necessity and compensation, — how to reconcile the life of the heart with that of the intellect, — how to listen to the whispering breeze of Spirit, while breasting, as a man should, the surges of the world, — these enigmas Sand and her friends seem to have solved no better than M.F. and her friends.

‘The practical optimism is much the same as ours, except that there is more hope for the masses — soon.

‘This work is written with great vigor, scarce any faltering on the wing. The horrors are disgusting, as are those of every writer except Dante. Even genius should content itself in dipping the pencil in cloud and mist. The apparitions of Spiridion are managed with great beauty. As in *Hélène*, as in Novalis, I recognized, with delight, the eye that gazed, the ear that listened, till the spectres came, as they do to the Highlander on his rocky couch, to the German peasant on his mountain. How different from the vulgar eye which looks, but never sees! Here the beautiful apparition advances from the solar ray, or returns to the fountain of light and truth, as it should, when eagle eyes are gazing.

‘I am astonished at her insight into the life of thought. She must know it through some man. Women, under any circumstances, can scarce do more than dip the foot in this broad and deep river; they have not strength to contend with the current. Brave, if they do not delicately shrink from the cold water. No Sibyls have existed like those of Michel Angelo; those of Raphael are the true brides of a God, but not themselves divine. It is easy for women to be heroic in action, but when it comes to interrogating God, the universe, the soul, and, above all, trying to live above their own hearts, they dart down to their nests like so many larks, and, if they cannot find them, fret like the French Corinne. Goethe’s Makaria was born of the stars. Mr. Flint’s Platonic old lady a *lusus naturæ*, and the Dudevant has loved a philosopher.

‘I suppose the view of the present state of Catholicism no way exaggerated. Alexis is no more persecuted than Abelard was, and is so, for the same reasons. From the examinations of the Italian convents in Leopold’s time, it seems that the grossest materialism not only reigns, but is taught and professed in them. And Catholicism loads and infects as all dead forms do, however beautiful and noble during their lives.’

GEORGE SAND, AGAIN.

‘1839. — When I first knew George Sand, I thought I found tried the experiment I wanted. I did not value Bettine so much; she had not pride enough for me; only now when I am sure of myself, would I pour out my soul at the feet of another. In the assured soul it is kingly prodigality; in one which cannot forbear, it is mere babyhood. I love *abandon* only when natures are capable of the extreme reverse. I knew Bettine would end in nothing, when I read her book. I knew she could not outlive her love.

‘But in *Les Sept Cordes de la Lyre*, which I read first, I saw the knowledge of the passions, and of social institutions, with the celestial choice which rose above them. I loved H elene, who could so well hear the terrene voices, yet keep her eye fixed on the stars. That would be my wish, also, to know all, then choose; I ever revered her, for I was not sure that I could have resisted the call of the Now, could have left the spirit, and gone to God. And, at a more ambitious age, I could not have refused the philosopher. But I hoped from her steadfastness, and I thought I heard the last tones of a purified life: — Gretchen, in the golden cloud, raised above all past delusions, worthy to redeem and upbear the wise man, who stumbled into the pit of error while searching for truth.

‘Still, in *André*, and in *Jacques*, I traced the same high morality of one who had tried the liberty of circumstance only to learn to appreciate the liberty of law, to know that license is the foe of freedom. And, though the sophistry of passion in these books disgusted me, flowers of purest hue seemed to grow upon the dank and dirty ground. I thought she had cast aside the slough of her past life, and began a new existence beneath the sun of a true Ideal.

‘But here (in the *Lettres d’un Voyageur*) what do I see? An unfortunate bewailing her loneliness, bewailing her mistakes, writing for money! She has genius, and a manly grasp of mind, but not a manly heart! Will there never be a being to combine a man’s mind and woman’s heart, and who yet finds life too rich to weep over? Never?

‘When I read in *Leone Lioni* the account of the jeweller’s daughter’s life with her mother, passed in dress and in learning to be looked at when dressed, *avec un front impassible*, it reminded me exceedingly of ——, and her mother. What a heroine she would be for Sand! She has the same fearless softness with Juliet, and a sportive *naïveté*, a mixture of bird and kitten, unknown to the dupe of Lioni.

‘If I were a man, and wished a wife, as many do, merely as an ornament, or silken toy, I would take —— as soon as any I know. Her fantastic, impassioned, and mutable nature would yield an inexhaustible amusement. She is capable of the most romantic actions; — wild as the falcon, and voluptuous as the tuberose, — yet she has not in her the elements of romance, like a deeper and less susceptible nature. My cold and reasoning E., with her one love lying, perhaps, never to be unfolded, beneath such sheaths of pride and reserve, would make a far better heroine.

‘Both these characters are natural, while S. and T. are *naturally factitious*, because so imitative, and her mother differs from Juliet and her mother, by the impulse a single strong character gave them. Even at this distance of time, there is a slight but perceptible taste of iron in the water.

‘George Sand disappoints me, as almost all beings have, especially since I have been brought close to her person by the *Lettres d’un Voyageur*. Her remarks on Lavater seem really shallow, and hasty, *à la mode du genre féminin*. No self-ruling Aspasia she, but a frail woman mourning over a lot. Any peculiarity in her destiny seems accidental. She is forced to this and that, to earn her bread forsooth!

‘Yet her style, — with what a deeply smouldering fire it burns! — not vehement, but intense, like Jean Jacques.’

ALFRED DE VIGNY.

‘Sept., 1839.

“La harpe tremble encore, et la flûte soupire.”

‘Sometimes we doubt this, and think the music has finally ceased, so sultry still lies the air around us, or only disturbed by the fife and drum of talent, calling to the parade-ground of social life. The ear grows dull.

”Faith asks her daily bread,
And Fancy is no longer fed.”

‘So materialistic is the course of common life, that we *ask daily* new Messiahs from literature and art, to turn us from the Pharisaic observance of law, to the baptism of spirit. But stars arise upon our murky sky, and the flute *soupire* from the quarter where we least expect it.

‘*La jeune France!* I had not believed in this youthful pretender. I thought she had no pure blood in her veins, no aristocratic features in her face, no natural grace in her gait. I thought her an illegitimate child of the generous, but extravagant youth of Germany. I thought she had been left at the foundling hospital, as not worth a parent’s care, and that now, grown up, she was trying to prove at once her parentage and her charms by certificates which might be headed, Innocent Adultery, Celestial Crime, &c.

‘The slight acquaintance I had with Hugo, and company, did not dispel these impressions. And I thought Chateaubriand (far too French for my taste also,) belonged to *l’ancien régime*, and that Béranger and Courier stood apart. Nodier, Paul de Kock, Sue, Jules Janin, I did not know, except through the absurd reports of English reviewers; Le Maistre and Lamennais, as little.

‘But I have now got a peep at this galaxy. I begin to divine the meaning of St. Simonianism, Cousinism, and the movement which the same causes have produced in belles-lettres. I perceive that *la jeune France* is the legitimate, though far younger sister of Germany; taught by her, but not born of her, but of a common mother. I see, at least begin to see, what she has learned from England, and what the bloody rain of the revolution has done to fertilize her soil, naturally too light.

‘Blessed be the early days when I sat at the feet of Rousseau, prophet sad and stately as any of Jewry! Every onward movement of the age, every downward step into the solemn depths of my own soul, recalls thy oracles, O Jean Jacques! But as these things only glimmer upon me at present, clouds of rose and amber, in the perspective of a long, dim woodland glade, which I must traverse if I would get a fair look at them from the hill-top, — as I cannot, to say sooth, get

the works of these always working geniuses, but by slow degrees, in a country that has no heed of them till her railroads and canals are finished, — I need not jot down my petty impressions of the movement writers. I wish to speak of one among them, aided, honored by them, but not of them. He is to *la jeune France* rather the herald of a tourney, or the master of ceremonies at a patriotic festival, than a warrior for her battles, or an advocate to win her cause.

‘The works of M. de Vigny having come in my way, I have read quite through this thick volume.

‘I read, a year since, in the London and Westminster, an admirable sketch of Armand Carrel. The writer speaks particularly of the use of which Carrel’s experience of practical life had been to him as an author; how it had tempered and sharpened the blade of his intellect to the Damascene perfection. It has been of like use to de Vigny, though not in equal degree.

‘De Vigny *passed*, — but for manly steadfastness, he would probably say *wasted*, — his best years in the army. He is now about forty; and we have in this book the flower of these best years. It is a night-blooming Cereus, for his days were passed in the duties of his profession. These duties, so tiresome and unprofitable in time of peace, were the ground in which the seed sprang up, which produced these many-leaved and calm night-flowers.

‘The first portion of this volume, *Servitude et Grandeurs Militaires*, contains an account of the way in which he received his false tendency. Cherished on the “wounded knees” of his aged father, he listened to tales of the great Frederic, whom the veteran had known personally. After an excellent sketch of the king, he says: “I expatiate here, almost in spite of myself, because this was the first great man whose portrait was thus drawn for me at home, — a portrait after nature, — and because my admiration of him was the first symptom of my useless love of arms, — the first cause of one of the most complete delusions of my life.” This admiration for the great king remained so lively in his mind, that even Bonaparte in his gestures seemed to him, in later days, a plagiarist.

‘At the military school, “the drum stifled the voices of our masters, and the mysterious voices of books seemed to us cold and pedantic. Tropes and logarithms seemed to us only steps to mount to the star of the Legion of Honor, — the fairest star of heaven to us children.”

“No meditation could keep long in chains heads made constantly giddy by the noise of cannon and bells for the *Te Deum*. When one of our former comrades returned to pay us a visit in uniform, and his arm in a scarf, we blushed at our books, and threw them at the heads of our teachers. Our teachers were always reading us bulletins from the *grande armée*, and our cries of *Vive*

l'Empereur interrupted Tacitus and Plato. Our preceptors resembled heralds of arms, our study halls barracks, and our examinations reviews.”

‘Thus was he led into the army; and, he says, “It was only very late, that I perceived that my services were one long mistake, and that I had imported into a life altogether active, a nature altogether contemplative.”

‘He entered the army at the time of Napoleon’s fall, and, like others, wasted life in waiting for war. For these young persons could not believe that peace and calm were possible to France; could not believe that she could lead any life but one of conquest.

‘As De Vigny was gradually undeceived, he says: “Loaded with an ennui which I did not dream of in a life I had so ardently desired, it became a necessity to me to detach myself by night from the vain and tiresome tumult of military days. From these nights, in which I enlarged in silence the knowledge I had acquired from our public and tumultuous studies, proceeded my poems and books. From these days, there remain to me these recollections, whose chief traits I here assemble around one idea. For, not reckoning for the glory of arms, either on the present or future, I sought it in the souvenirs of my comrades. My own little adventures will not serve, except as frame to those pictures of the military life, and of the manners of our armies, all whose traits are by no means known.”

‘And thus springs up, in the most natural manner, this little book on the army.

‘It has the truth, the delicacy, and the healthiness of a production native to the soil; the merit of love-letters, journals, lyric poems, &c., written without any formal intention of turning life into a book, but because the writer could not help it. What, more than anything else, engaged the attention of De Vigny, was the false position of two beings towards a factitious society: the soldier, now that standing armies are the mode, and the poet, now that Olympic games or pastimes are not the mode. He has treated the first best, because with profounder *connaissance du fait*. For De Vigny is not a poet; he has only an eye to perceive the existence of these birds of heaven. But in few ways, except their own broken harp-tone’s thrill, have their peculiar sorrows and difficulties been so well illustrated. The character of the soldier, with its virtues and faults, is portrayed with such delicacy, that to condense would ruin. The peculiar reserve, the habit of duty, the beauty of a character which cannot look forward, and need not look back, are given with distinguished finesse.

‘Of the three stories which adorn this part of the book, *Le Cachet Rouge* is the loveliest, *La Canne au Jonc* the noblest. Never was anything more sweetly naïve than parts of *Le Cachet Rouge*. *La pauvre petite femme*, she was just such a

person as my —— . And then the farewell injunctions, — *du pauvre petite maré*, — the nobleness and the coarseness of the poor captain. It is as original as beautiful, *c'est dire beaucoup*. In *La Canne au Jonc*, Collingwood, who embodies the high feeling of duty, is taken too raw out of a book, — his letters to his daughters. But the effect on the character of *le Capitaine Renaud*, and the unfolding of his interior life, are done with the spiritual beauty of Manzoni.

'*Cinq-Mars* is a romance in the style of Walter Scott. It is well brought out, figures in good relief, lights well distributed, sentiment high, but nowhere exaggerated, knowledge exact, and the good and bad of human nature painted with that impartiality which becomes a man, and a man of the world. All right, no failure anywhere; also, no wonderful success, no genius, no magic. It is one of those works which I should consider only excusable as the amusement of leisure hours; and, though few could write it, chiefly valuable to the writer.

'Here he has arranged, as in a bouquet, what he knew, — and a great deal it is, — of the time of Louis XIII., as he has of the Regency in "La Marechale d'Ancre," — a much finer work, indeed one of the best-arranged and finished modern dramas. The Leonora Galigai is better than anything I have seen in Victor Hugo, and as good as Schiller. Stello is a bolder attempt. It is the history of three poets, — Gilbert, André Chenier, Chatterton. He has also written a drama called Chatterton, inferior to the story here. The "marvellous boy" seems to have captivated his imagination marvellously. In thought, these productions are worthless; for taste, beauty of sentiment, and power of description, remarkable. His advocacy of the poets' cause is about as effective and well-planned as Don Quixote's tourney with the wind-mill. How would you provide for the poet *bon homme* De Vigny? — from a joint-stock company Poet's Fund, or how?

'His translation of Othello, which I glanced at, is good for a Frenchman.

'Among his poems, *La Frégate*, *La Sérieuse*, *Madame de Soubise*, and *Dolorida*, please me especially. The last has an elegiac sweetness and finish, which are rare. It also makes a perfect gem of a cabinet picture. Some have a fine strain of natural melody, and give you at once the key-note of the situation, as this: —

""J'aime le son du cor le soir, au fond des bois,
Soit qu'il chante," &c.

And

”Qu’il est doux, qu’il est doux d’écouter les histoires
Des histoires du temps passe
Quand les branches des arbres sont noires,
Quand la neige est essaiée, et charge un sol glacé,
Quand seul dans un ciel pâle un peuplier s’élance,
Quand sous le manteau blanc qui vient de le cacher
L’immobile corbeau sur l’arbre se balance
Comme la girouette au bout du long clocher.”

’These poems generally are only interesting as the leisure hours of an interesting man.

‘De Vigny writes in an excellent style; soft, fresh, deliberately graceful. Such a style is like fine manners; you think of the words select, appropriate, rather than distinguished, or beautiful. De Vigny is a perfect gentleman; and his refinement is rather that of the gentleman than that of the poets whom he is so full of. In character, he looks naturally at those things which interest the man of honor and the man of taste. But for literature, he would have known nothing about the poets. He should be the elegant and instructive companion of social, not the priest or the minstrel of solitary hours.

‘Neither has he logic or grasp with his reasoning powers, though of this, also, he is ambitious. Observation is his forte. To see, and to tell with grace, often with dignity and pathos, what he sees, is his proper vocation. Yet, where he fails, he has too much tact and modesty to be despised; and we cannot enough admire the absence of faults in a man whose ambition soared so much beyond his powers, and in an age and a country so full of false taste. He is never seduced into sentimentality, paradox, violent contrast, and, above all, never makes the mistake of confounding the horrible with the sublime. Above all, he never falls into the error, common to merely elegant minds, of painting leading minds “*en gigantesque*.” His Richelieu and his Bonaparte are treated with great calmness, and with dignified ease, almost as beautiful as majestic superiority.

‘In this volume is contained all that is on record of the inner life of a man of forty years. How many suns, how many rains and dews, to produce a few buds and flowers, some sweet, but not rich fruit! We cannot help demanding of the man of talent that he should be like “the orange tree, that busy plant.” But, as Landor says, “He who has any thoughts of any worth can, and probably will, afford to let the greater part lie fallow.”

‘I have not made a note upon De Vigny’s notions of abnegation, which he repeats as often as Dr. Channing the same watch-word of self-sacrifice. It is that my views are not yet matured, and I can have no judgment on the point.’

BÉRANGER.

‘Sept., 1839. — I have lately been reading some of Béranger’s *chansons*. The hour was not propitious. I was in a mood the very reverse of Roger Bontemps, and beset with circumstances the most unsuited to make me sympathize with the prayer —

”Pardonnez la gaieté
De ma philosophie;”

yet I am not quite insensible to their wit, high sentiment, and spontaneous grace. A wit that sparkles all over the ocean of life, a sentiment that never puts the best foot forward, but prefers the tone of delicate humor, to the mouthings of tragedy; a grace so aerial, that it nowhere requires the aid of a thought, for in the light refrains of these productions, the meaning is felt as much as in the most pointed lines. Thus, in “Les Mirmidons,” the refrain —

”Mirmidons, race féconde,
Mirmidons
Enfin nous commandons,
Jupiter livre le monde,
Aux mirmidons, aux mirmidons, (bis.)”

‘The swarming of the insects about the dead lion is expressed as forcibly as in the most sarcastic passage of the chanson. In “La Faridondaine” every sound is a witticism, and levels to the ground a bevy of what Byron calls “garrison people.” “Halte là! ou la système des interpretations” is equally witty, though there the form seems to be as much in the saying, as in the comic melody of sound.

‘In “Adieux à la Campagne,” “Souvenirs du Peuple,” “La Déesse de la Liberté,” “La Convoi de David,” a melancholy pathos breathes, which touches the heart the more that it is so unpretending. “Ce n’est plus Lisette,” “Mon Habit,” “L’Indépendant,” “Vous vieillirez, O ma belle Maitresse,” a gentle graceful sadness wins us. In “Le Dieu des Bonnes Gens,” “Les Etoiles qui filent,” “Les Conseils de Lise,” “Treize à Table,” a noble dignity is admired, while such as “La Fortune” and “La Métempsycose” are inimitable in their

childlike playfulness. "Ma Vocation" I have had and admired for many years. He is of the pure ore, a darling fairy changling of great mother Nature; the poet of the people, and, therefore, of all in the upper classes sufficiently intelligent and refined to appreciate the wit and sentiment of the people. But his wit is so truly French in its lightness and sparkling, feathering vivacity, that one like me, accustomed to the bitterness of English tonics, suicidal November melancholy, and Byronic wrath of satire, cannot appreciate him at once. But when used to the gentler stimuli, we like them best, and we also would live awhile in the atmosphere of music and mirth, content if we have "bread for to-day, and hope for to-morrow."

'There are fine lines in his "Cinq Mai;" the sentiment is as grand as Manzoni's, though not sustained by the same majestic sweep of diction, as, —

"Ce rocher repousse l'espérance,
L'Aigle n'est plus dans le secret des dieux,
Il fatiguait la victoire à le suivre,
Elle était lasse: il ne l'attendit pas."

'And from "La Gérontocratie, ou les infiniment petits:"

"Combien d'imperceptibles êtres,
De petits jésuites bilieux!
De milliers d'autres petits prêtres,
Lui portent de petits bons dieux."

'But wit, poet, man of honor, tailor's grandson and fairy's favorite, he must speak for himself, and the best that can be felt or thought of him cannot be said in the way of criticism. I will copy and keep a few of his songs. I should like to keep the whole collection by me, and take it up when my faith in human nature required the gentlest of fortifying draughts.

'How fine his answer to those who asked about the "de" before his name! —

"Je suis vilain,
Vilain, vilain," &c.
J'honore une race commune,
Car, sensible, quoique malin,

Je n'ai flatté que l'infortune."

'In a note to "Couplets on M. Laisney, *imprimeur à Peronne*," he says: "It was in his printing-house that I was put to prentice; not having been able to learn orthography, he imparted to me the taste for poetry, gave me lessons in versification, and corrected my first essays."

'Of Bonaparte, —

”Un conquérant, dans sa fortune altière,
Se fit un jeu des sceptres et des lois,
Et de ses pieds on peut voir la poussière
Empreinte encore sur le bandeau des rois.”

'I admire, also, "Le Violon brisé," for its grace and sweetness. How fine Béranger on Waterloo! —

“Its name shall never sadden verse of mine.”

TO R.W.E.

'*Niagara, 1st June, 1843.* — I send you a token, made by the hands of some Seneca Indian lady. If you use it for a watch-pocket, hang it, when you travel, at the head of your bed, and you may dream of Niagara. If you use it for a purse, you can put in it alms for poets and artists, and the subscription-money you receive for Mr. Carlyle's book. His book, as it happened, you gave me as a birthday gift, and you may take this as one to you; for, on yours, was W.'s birthday, J.'s wedding-day, and the day of — — 's death, and we set out on this journey. Perhaps there is something about it on the purse. The "number five which nature loves," is repeated on it.

'Carlyle's book I have, in some sense, read. It is witty, full of pictures, as usual. I would have gone through with it, if only for the sketch of Samson, and two or three bits of fun which happen to please me. No doubt it may be of use to rouse the unthinking to a sense of those great dangers and sorrows. But how open is he to his own assault. He rails himself out of breath at the short-sighted, and yet sees scarce a step before him. There is no valuable doctrine in his book, except the Goethean, *Do to-day the nearest duty*. Many are ready for that, could they but find the way. This he does not show. His proposed measures say nothing. Educate the people. That cannot be done by books, or voluntary effort, under these paralyzing circumstances. Emigration! According to his own

estimate of the increase of population, relief that way can have very slight effect. He ends as he began; as he did in Chartism. Everything is very bad. You are fools and hypocrites, or you would make it better. I cannot but sympathize with him about hero-worship; for I, too, have had my fits of rage at the stupid irreverence of little minds, which also is made a parade of by the pedantic and the worldly. Yet it is a good sign. Democracy is the way to the new aristocracy, as irreligion to religion. By and by, if there are great men, they will not be brilliant exceptions, redeemers, but favorable samples of their kind.

‘Mr. C.’s tone is no better than before. He is not loving, nor large; but he seems more healthy and gay.

‘We have had bad weather here, bitterly cold. The place is what I expected: it is too great and beautiful to agitate or surprise: it satisfies: it does not excite thought, but fully occupies. All is calm; even the rapids do not hurry, as we see them in smaller streams. The sound, the sight, fill the senses and the mind.

‘At Buffalo, some ladies called on us, who extremely regretted they could not witness our emotions, on first seeing Niagara. “Many,” they said, “burst into tears; but with those of most sensibility, the hands become cold as ice, and they would not mind if buckets of cold water were thrown over them!”’

NATURE.

Margaret’s love of beauty made her, of course, a votary of nature, but rather for pleasurable excitement than with a deep poetic feeling. Her imperfect vision and her bad health were serious impediments to intimacy with woods and rivers. She had never paid, — and it is a little remarkable, — any attention to natural sciences. She neither botanized, nor geologized, nor dissected. Still she delighted in short country rambles, in the varieties of landscape, in pastoral country, in mountain outlines, and, above all, in the sea-shore. At Nantasket Beach, and at Newport, she spent a month or two of many successive summers. She paid homage to rocks, woods, flowers, rivers, and the moon. She spent a good deal of time out of doors, sitting, perhaps, with a book in some sheltered recess commanding a landscape. She watched, by day and by night, the skies and the earth, and believed she knew all their expressions. She wrote in her journal, or in her correspondence, a series of “moonlights,” in which she seriously attempts to describe the light and scenery of successive nights of the summer moon. Of course, her raptures must appear sickly and superficial to an observer, who, with equal feeling, had better powers of observation.

Nothing is more rare than a talent to describe landscape, and, especially, skyscape, or cloudscape, although a vast number of letters, from correspondents

between the ages of twenty and thirty, are filled with experiments in this kind. Margaret, in her turn, made many vain attempts, and, to a lover of nature, who knows that every day has new and inimitable lights and shades, one of these descriptions is as vapid as the raptures of a citizen arrived at his first meadow. Of course, he is charmed, but, of course, he cannot tell what he sees, or what pleases him. Yet Margaret often speaks with a certain tenderness and beauty of the impressions made upon her.

TO ——— .

'Fishkill, 25 Nov., 1844. — You would have been happy as I have been in the company of the mountains. They are companions both bold and calm. They exhilarate and they satisfy. To live, too, on the bank of the great river so long, has been the realization of a dream. Though I have been reading and thinking, yet this has been my life.'

'After they were all in bed,' she writes from the "Manse," in Concord,

'I went out, and walked till near twelve. The moonlight filled my heart. These embowering elms stood in solemn black, the praying monastics of this holy night; full of grace, in every sense; their life so full, so hushed; not a leaf stirred.'

*

'You say that nature does not keep her promise; but, surely, she satisfies us now and then for the time. The drama is always in progress, but here and there she speaks out a sentence, full in its cadence, complete in its structure; it occupies, for the time, the sense and the thought. We have no care for promises. Will you say it is the superficialness of my life, that I have known hours with men and nature, that bore their proper fruit, — all present ate and were filled, and there were taken up of the fragments twelve baskets full? Is it because of the superficial mind, or the believing heart, that I can say this?'

*

'Only through emotion do we know thee, Nature! We lean upon thy breast, and feel its pulses vibrate to our own. That is knowledge, for that is love. Thought will never reach it.'

ART.

There are persons to whom a gallery is everywhere a home. In this country, the

antique is known only by plaster casts, and by drawings. The BOSTON ATHENÆUM, — on whose sunny roof and beautiful chambers may the benediction of centuries of students rest with mine! — added to its library, in 1823, a small, but excellent museum of the antique sculpture, in plaster; — the selection being dictated, it is said, by no less an adviser than Canova. The Apollo, the Laocoon, the Venuses, Diana, the head of the Phidian Jove, Bacchus, Antinous, the Torso Hercules, the Discobolus, the Gladiator Borghese, the Apollino, — all these, and more, the sumptuous gift of Augustus Thorndike. It is much that one man should have power to confer on so many, who never saw him, a benefit so pure and enduring.

To these were soon added a heroic line of antique busts, and, at last, by Horatio Greenough, the Night and Day of Michel Angelo. Here was old Greece and old Italy brought bodily to New England, and a verification given to all our dreams and readings. It was easy to collect, from the drawing-rooms of the city, a respectable picture-gallery for a summer exhibition. This was also done, and a new pleasure was invented for the studious, and a new home for the solitary. The Brimmer donation, in 1838, added a costly series of engravings, chiefly of the French and Italian museums, and the drawings of Guercino, Salvator Rosa, and other masters. The separate chamber in which these collections were at first contained, made a favorite place of meeting for Margaret and a few of her friends, who were lovers of these works.

First led perhaps by Goethe, afterwards by the love she herself conceived for them, she read everything that related to Michel Angelo and Raphael. She read, pen in hand, Quatremère de Quincy's lives of those two painters, and I have her transcripts and commentary before me. She read *Condivi*, Vasari, Benvenuto Cellini, Duppa, Fuseli, and Von Waagen, — great and small. Every design of Michel, the four volumes of Raphael's designs, were in the rich portfolios of her most intimate friend. 'I have been very happy,' she writes, 'with four hundred and seventy designs of Raphael in my possession for a week.'

*

These fine entertainments were shared with many admirers, and, as I now remember them, certain months about the years 1839, 1840, seem colored with the genius of these Italians. Our walls were hung with prints of the Sistine frescoes; we were all petty collectors; and prints of Correggio and Guercino took the place, for the time, of epics and philosophy.

In the summer of 1839, Boston was still more rightfully adorned with the Allston Gallery; and the sculptures of our compatriots Greenough, and

Crawford, and Powers, were brought hither. The following lines were addressed by Margaret to the Orpheus: —

‘CRAWFORD’S ORPHEUS.

’Each Orpheus must to the abyss descend,
For only thus the poet can be wise, —
Must make the sad Persephone his friend,
And buried love to second life arise;
Again his love must lose, through too much love,
Must lose his life by living life too true;
For what he sought below has passed above,
Already done is all that he would do;
Must tune all being with his single lyre;
Must melt all rocks free from their primal pain,
Must search all nature with his one soul’s fire;
Must bind anew all forms in heavenly chain:
If he already sees what he must do,
Well may he shade his eyes from the far-shining view.’

Margaret’s love of art, like that of most cultivated persons in this country, was not at all technical, but truly a sympathy with the artist, in the protest which his work pronounced on the deformity of our daily manners; her co-perception with him of the eloquence of form; her aspiration with him to a fairer life. As soon as her conversation ran into the mysteries of manipulation and artistic effect, it was less trustworthy. I remember that in the first times when I chanced to see pictures with her, I listened reverently to her opinions, and endeavored to see what she saw. But, on several occasions, finding myself unable to reach it, I came to suspect my guide, and to believe, at last, that her taste in works of art, though honest, was not on universal, but on idiosyncratic, grounds. As it has proved one of the most difficult problems of the practical astronomer to obtain an achromatic telescope, so an achromatic eye, one of the most needed, is also one of the rarest instruments of criticism.

She was very susceptible to pleasurable stimulus, took delight in details of form, color, and sound. Her fancy and imagination were easily stimulated to genial activity, and she erroneously thanked the artist for the pleasing emotions and thoughts that rose in her mind. So that, though capable of it, she did not always bring that highest tribunal to a work of art, namely, the calm presence of greatness, which only greatness in the object can satisfy. Yet the opinion was

often well worth hearing on its own account, though it might be wide of the mark as criticism. Sometimes, too, she certainly brought to beautiful objects a fresh and appreciating love; and her written notes, especially on sculpture, I found always original and interesting. Here are some notes on the Athenæum Gallery of Sculpture, in August, 1840, which she sent me in manuscript: —

‘Here are many objects worth study. There is Thorwaldsen’s Byron. This is the truly beautiful, the ideal Byron. This head is quite free from the got-up, caricatured air of disdain, which disfigures most likenesses of him, as it did himself in real life; yet sultry, stern, all-craving, all-commanding. Even the heavy style of the hair, too closely curled for grace, is favorable to the expression of concentrated life. While looking at this head, you learn to account for the grand failure in the scheme of his existence. The line of the cheek and chin are here, as usual, of unrivalled beauty.

‘The bust of Napoleon is here also, and will naturally be named, in connection with that of Byron, since the one in letters, the other in arms, represented more fully than any other the tendency of their time; more than any other gave it a chance for reaction. There was another point of resemblance in the external being of the two, perfectly corresponding with that of the internal, a sense of which peculiarity drew on Byron some ridicule. I mean that it was the intention of nature, that neither should ever grow fat, but remain a Cassius in the commonwealth. And both these heads are taken while they were at an early age, and so thin as to be still beautiful. This head of Napoleon is of a stern beauty. A head must be of a style either very stern or very chaste, to make a deep impression on the beholder; there must be a great force of will and withholding of resources, giving a sense of depth below depth, which we call sternness; or else there must be that purity, flowing as from an inexhaustible fountain through every lineament, which drives far off or converts all baser natures. Napoleon’s head is of the first description; it is stern, and not only so, but ruthless. Yet this ruthlessness excites no aversion; the artist has caught its true character, and given us here the Attila, the instrument of fate to serve a purpose not his own. While looking on it, came full to mind the well-known lines, —

”Speak gently of his crimes:

Who knows, Scourge of God, but in His eyes, those crimes
Were virtues?”

His brows are tense and damp with the dews of thought. In that head you see the great future, careless of the black and white stones; and even when you turn to the voluptuous beauty of the mouth, the impression remains so strong, that

Russia's snows, and mountains of the slain, seem the tragedy that must naturally follow the appearance of such an actor. You turn from him, feeling that he is a product not of the day, but of the ages, and that the ages must judge him.

'Near him is a head of Ennius, very intellectual; self-centred and self-fed; but wrung and gnawed by unceasing thoughts.

'Yet, even near the Ennius and Napoleon, our American men look worthy to be perpetuated in marble or bronze, if it were only for their air of calm, unpretending sagacity. If the young American were to walk up an avenue lined with such effigies, he might not feel called to such greatness as the strong Roman wrinkles tell of, but he must feel that he could not live an idle life, and should nerve himself to lift an Atlas weight without repining or shrinking.

'The busts of Everett and Allston, though admirable as every-day likenesses, deserved a genius of a different order from Clevenger. Clevenger gives the man as he is at the moment, but does not show the possibilities of his existence. Even thus seen, the head of Mr. Everett brings back all the age of Pericles, so refined and classic is its beauty. The two busts of Mr. Webster, by Clevenger and Powers, are the difference between prose, — healthy and energetic prose, indeed, but still prose, — and poetry. Clevenger's is such as we see Mr. Webster on any public occasion, when his genius is not called forth. No child could fail to recognize it in a moment. Powers' is not so good as a likeness, but has the higher merit of being an ideal of the orator and statesman at a great moment. It is quite an American Jupiter in its eagle calmness of conscious power.

'A marble copy of the beautiful Diana, not so spirited as the Athenæum cast. S. C. — thought the difference was one of size. This work may be seen at a glance; yet does not tire one after survey. It has the freshness of the woods, and of morning dew. I admire those long lithe limbs, and that column of a throat. The Diana is a woman's ideal of beauty; its elegance, its spirit, its graceful, peremptory air, are what we like in our own sex: the Venus is for men. The sleeping Cleopatra cannot be looked at enough; always her sleep seems sweeter and more graceful, always more wonderful the drapery. A little Psyche, by a pupil of Bartolini, pleases us much thus far. The forlorn sweetness with which she sits there, crouched down like a bruised butterfly, and the languid tenacity of her mood, are very touching. The Mercury and Ganymede with the Eagle, by Thorwaldsen, are still as fine as on first acquaintance. Thorwaldsen seems the grandest and simplest of modern sculptors. There is a breadth in his thought, a freedom in his design, we do not see elsewhere.

'A spaniel, by Gott, shows great talent, and knowledge of the animal. The head is admirable; it is so full of playfulness and of doggish knowingness.'

I am tempted, by my recollection of the pleasure it gave her, to insert here a

little poem, addressed to Margaret by one of her friends, on the beautiful imaginative picture in the gallery of 1840, called "The Dream."

"A youth, with gentle brow and tender cheek,
Dreams in a place so silent, that no bird,
No rustle of the leaves his slumbers break;
Only soft tinkling from the stream is heard,
As in bright little waves it comes to greet
The beauteous One, and play upon his feet.

"On a low bank, beneath the thick shade thrown,
Soft gleams over his brown hair are flitting,
His golden plumes, bending, all lovely shone;
It seemed an angel's home where he was sitting,
Erect, beside, a silver lily grew,
And over all the shadow its sweet beauty threw.

"Dreams he of life? O, then a noble maid
Toward him floats, with eyes of starry light,
In richest robes all radiantly arrayed,
To be his ladye and his dear delight.
Ah no! the distance shows a winding stream;
No lovely ladye moves, no starry eyes do gleam.

"Cold is the air, and cold the mountains blue;
The banks are brown, and men are lying there,
Meagre and old; O, what have they to do
With joyous visions of a youth so fair?
He must not ever sleep as they are sleeping,
Onward through life he must be ever sweeping.

"Let the pale glimmering distance pass away;
Why in the twilight art thou slumbering there?
Wake, and come forth into triumphant day;
Thy life and deeds must all be great and fair.
Canst thou not from the lily learn true glory,
Pure, lofty, lowly? — such should be thy story.

"But no! thou lovest the deep-eyéd Past,

And thy heart clings to sweet remembrances;
In dim cathedral aisles thou'lt linger last,
And fill thy mind with flitting fantasies.
But know, dear One, the world is rich to-day,
And the unceasing God gives glory forth alway."

I have said she was never weary of studying Michel Angelo and Raphael; and here are some manuscript "notes," which she sent me one day, containing a clear expression of her feeling toward each of these masters, after she had become tolerably familiar with their designs, as far as prints could carry her: —

'On seeing such works as these of Michel Angelo, we feel the need of a genius scarcely inferior to his own, which should invent some word, or some music, adequate to express our feelings, and relieve us from the Titanic oppression.

"Greatness," "majesty," "strength," — to these words we had before thought we attached their proper meaning. But now we repent that they ever passed our lips. Created anew by the genius of this man, we would create language anew, and give him a word of response worthy his sublime profession of faith. Could we not at least have reserved "godlike" for him? For never till now did we appreciate the primeval vigor of creation, the instant swiftness with which thought can pass to deed; never till now appreciate the passage, "Let there be light, and there was light," which, be grateful, Michel! was clothed in human word before thee.

'One feels so repelled and humbled, on turning from Raphael to his contemporary, that I could have hated him as a Gentile Choragus might hate the prophet Samuel. Raphael took us to his very bosom, as if we had been fit for disciples, —

”Parting with smiles the hair upon the brow,
And telling me none ever was preferred”

’This man waves his serpent wand over me, and beauty’s self
seems no better than a golden calf!

’I could not bear M. De Quincy for intimating that the archangel Michel could be jealous; yet I can easily see that he might have given cause, by undervaluing his divine contemporary. Raphael was so sensuous, so lovely and loving. All undulates to meet the eye, glides or floats upon the soul’s horizon, as soft as is consistent with perfectly distinct and filled-out forms. The graceful Lionardo might see his pictures in moss; the beautiful Raphael on the cloud, or wave, or foliage; but thou, Michel, didst look straight upwards to the heaven, and grasp and bring thine down from the very sun of invention.

’How Raphael revels in the image! His life is all reproduced; nothing was abstract or conscious. Pantheism, Polytheism, Greek god of Beauty, Apollo Musagetes, — what need of life beyond the divine work? “I paint,” said he, “from an idea that comes into my mind.”

’But thou, Michel, didst not only feel but see the divine Ideal. Thine is the conscious monotheism of Jewry. Like thy own Moses, even on the mount of celestial converse, thou didst ask thy God to show now his face, and didst write his words, not in the alphabet of flowers, but on stone tables.

’It is, indeed, the two geniuses of Greece and Jewry, which are reproduced in these two men. Thaumaturgus nature saw fit to wait but a very few years before using these moulds again, in smaller space. Would you read the Bible aright? look at Michel; the Greek Mythology? look at Raphael. Would you know how the sublime coexists with the beautiful, or the beautiful with the sublime? would you see power and truth regnant on the one side, with beauty and love harmonious and ministrant, but subordinate; or would you look at the other aspect of Deity? — study here. Would you open all the founts of marvel, admiration, and tenderness? — study both.

’One is not higher than the other; yet I am conscious of a slight rebuke from Michel, for having so poured out my soul at the feet of his brother angel. He seems to remind of Mr. E.’s view, and ask, “Why did you not question whether there was not aught else? why not reserve some inaccessible stronghold for me? why did you unlock the floodgates of the mind to such tides of emotion?” But there is no reality or permanence in this; it is only a reminder that the feminine part of human nature must not be dominant.

‘The prophets of Michel Angelo excite all my admiration at the man capable of giving to such a physique an expression which commands it. The soul is worthily lodged in these powerful frames; and she has the ease and dignity of one accustomed to command, and to command servants able to obey her hests. Who else could have so animated such forms, that they are imposing, but never heavy? The strong man is made so majestic by his office, that you scarcely feel how strong he is. The wide folds of the drapery, the breadth of light and shade, are great as anything in

“the large utterance of the early gods.”

‘How they read, — these prophets and sibyls! Never did the always-baffled, always reëspiring hope of the finite to compass the infinite find such expression, except in the *sehnsucht* of music. They are buried in the volume. They cannot believe that it has not somewhere been revealed, the word of enigma, the link between the human and divine, matter and spirit. Evidently, they hope to find it on the very next page. I have always thought, that clearly enough did nature and the soul’s own consciousness respond to the craving for immortality. I have thought it great weakness to need the voucher of a miracle, or of any of those direct interpositions of a divine power, which, in common parlance, are alone styled revelation. When the revelations of nature seemed to me so clear, I had thought it was the weakness of the heart, or the dogmatism of the understanding, which had such need of *a book*. But in these figures of Michel, the highest power seizes upon a scroll, hoping that some other mind may have dived to the depths of eternity for the desired pearl, and enable him, without delay, consciously to embrace the Everlasting Now.

‘How fine the attendant intelligences! So youthful and fresh, yet so strong. Some merely docile and reverent, others eager for utterance before the thought be known, — so firm is the trust in its value, so great the desire for sympathy. Others so brilliant in the attention of the inquiring eye, so intelligent in every feature, that they seem to divine the whole, before they hear it.

‘Zachariah is much the finer of the two prophets.

‘Of the sibyls, the *Cumæa* would be disgusting, from her overpowering strength in the feminine form, if genius had not made her tremendous. Especially the bosom gives me a feeling of faintness and aversion I cannot express. The female breast looks made for the temple of sweet and chaste thoughts, while this is so formed as to remind you of the lioness in her lair, and suggest a word which I will not write.

‘The *Delphica* is even beautiful, in Michel’s fair, calm, noble style, like the mother and child asleep in the *Persica*, and *Night* in the casts I have just seen.

‘The *Libica* is also more beautiful than grand. Her adjuncts are admirable. The elder figure, in the lowest pannel, — with what eyes of deep experience, and still unquenched enthusiasm, he sits meditating on the past! The figures at top are fiery with genius, especially the melancholy one, worthy to lift any weight, if he did but know how to set about it. As it is, all his strength may be wasted, yet he no whit the less noble.

‘But the *Persica* is my favorite above all. She is the true sibyl. All the grandeur of that wasted frame comes from within. The life of thought has wasted the fresh juices of the body, and hardened the sere leaf of her cheek to parchment; every lineament is sharp, every tint tarnished; her face is seamed with wrinkles, — usually as repulsive on a woman’s face as attractive on a man. We usually feel, on looking at a woman, as if Nature had given them their best dower, and Experience could prove little better than a step-dame. But here, her high ambition and devotion to the life of thought gives her the masculine privilege of beauty in advancing years. Read on, hermitess of the world! what thou seekest is not there, yet thou dost not seek in vain.

‘The adjuncts to this figure are worthy of it. On the right, below, those two divine sleepers, redeeming human nature, and infolding expectation in a robe of pearly sheen. Here is the sweetness of strength, — honey to the valiant; on the other side, its awfulness, — meat to the strong man. His sleep is more powerful than the waking of myriads of other men. What will he do when he has recruited his strength in this night’s slumber? What wilt thou sing of it, wild-haired child of the lyre?

‘I admire the heavy fall of the sleeper’s luxuriant hair, which reminds one of the final shutting down of night upon a sullen twilight.

‘The other figures, too, are full of augury, sad but life-like, in its poetry. On the shield, how perfectly is the expression of being struck home to the heart given! I wish I could have that shield, in some shape. Only a single blow was needed; the hand was sure, the breast shrinking, but unresisting. Die, child of my affection, child of my old age! Let the blood follow to the hilt, for it is the sword of the Lord!

‘In looking again, this shield is on the *Libica*, and that of the *Persica* represents conquest, not sacrifice.

‘Over all these figures broods the spirit of prophecy. You see their sternest deed is under the theocratic form. There is pride in action, but no selfishness in these figures.

‘When I first came to Michel, I clung to the beautiful Raphael, and feared his Druidical axe. But now, after the sibyls of Michel, it is unsafe to look at those of Raphael; for they seem weak, which is not so, only seems so, beside the sterner

ideal.

‘The beauty of composition here is great, and you feel that Michel’s works are looked at fragment-wise in comparison. Here the eye glides along so naturally, does so easily justice to each part.’

LETTERS.

I fear the remark already made on that susceptibility to details in art and nature which precluded the exercise of Margaret’s sound catholic judgment, must be extended to more than her connoisseurship. She *had* a sound judgment, on which, in conversation, she could fall back, and anticipate and speak the best sense of the largest company. But, left to herself, and in her correspondence, she was much the victim of Lord Bacon’s *idols of the cave*, or self-deceived by her own phantasms. I have looked over volumes of her letters to me and others. They are full of probity, talent, wit, friendship, charity, and high aspiration. They are tainted with a mysticism, which to me appears so much an affair of constitution, that it claims no more respect than the charity or patriotism of a man who has dined well, and feels better for it. One sometimes talks with a genial *bon vivant*, who looks as if the omelet and turtle have got into his eyes. In our noble Margaret, her personal feeling colors all her judgment of persons, of books, of pictures, and even of the laws of the world. This is easily felt in ordinary women, and a large deduction is civilly made on the spot by whosoever replies to their remark. But when the speaker has such brilliant talent and literature as Margaret, she gives so many fine names to these merely sensuous and subjective phantasms, that the hearer is long imposed upon, and thinks so precise and glittering nomenclature cannot be of mere *muscae volitantes*, phoenixes of the fancy, but must be of some real ornithology, hitherto unknown to him. This mere feeling exaggerates a host of trifles into a dazzling mythology. But when one goes to sift it, and find if there be a real meaning, it eludes search. Whole sheets of warm, florid writing are here, in which the eye is caught by “sapphire,” “heliotrope,” “dragon,” “aloes,” “Magna Dea,” “limboes,” “stars,” and “purgatory,” but can connect all this, or any part of it, with no universal experience.

In short, Margaret often loses herself in sentimentalism. That dangerous vertigo nature in her case adopted, and was to make respectable. As it sometimes happens that a grandiose style, like that of the Alexandrian Platonists, or like Macpherson’s Ossian, is more stimulating to the imagination of nations, than the true Plato, or than the simple poet, so here was a head so creative of new colors, of wonderful gleams, — so iridescent, that it piqued curiosity, and stimulated

thought, and communicated mental activity to all who approached her; though her perceptions were not to be compared to her fancy, and she made numerous mistakes. Her integrity was perfect, and she was led and followed by love, and was really bent on truth, but too indulgent to the meteors of her fancy.

FRIENDSHIP.

”Friends she must have, but in no one could find
A tally fitted to so large a mind.”

It is certain that Margaret, though unattractive in person, and assuming in manners, so that the girls complained that “she put upon them,” or, with her burly masculine existence, quite reduced them to satellites, yet inspired an enthusiastic attachment. I hear from one witness, as early as 1829, that “all the girls raved about Margaret Fuller,” and the same powerful magnetism wrought, as she went on, from year to year, on all ingenuous natures. The loveliest and the highest endowed women were eager to lay their beauty, their grace, the hospitalities of sumptuous homes, and their costly gifts, at her feet. When I expressed, one day, many years afterwards, to a lady who knew her well, some surprise at the homage paid her by men in Italy, — offers of marriage having there been made her by distinguished parties, — she replied: “There is nothing extraordinary in it. Had she been a man, any one of those fine girls of sixteen, who surrounded her here, would have married her: they were all in love with her, she understood them so well.” She had seen many persons, and had entire confidence in her own discrimination of characters. She saw and foresaw all in the first interview. She had certainly made her own selections with great precision, and had not been disappointed. When pressed for a reason, she replied, in one instance,

‘I have no good reason to give for what I think of —— . It is a dæmoniacal intimation. Everybody at —— praised her, but their account of what she said gave me the same unfavorable feeling. This is the first instance in which I have not had faith, if you liked a person. Perhaps I am wrong now; perhaps, if I saw her, a look would give me a needed clue to her character, and I should change my feeling. Yet I have never been mistaken in these intimations, as far as I recollect. I hope I am now.’

I am to add, that she gave herself to her friendships with an entireness not possible to any but a woman, with a depth possible to few women. Her friendships, as a girl with girls, as a woman with women, were not unmingled with passion, and had passages of romantic sacrifice and of ecstatic fusion,

which I have heard with the ear, but could not trust my profane pen to report. There were, also, the ebbs and recoils from the other party, — the mortal unequal to converse with an immortal, — ingratitude, which was more truly incapacity, the collapse of overstrained affections and powers. At all events, it is clear that Margaret, later, grew more strict, and values herself with her friends on having the tie now “redeemed from all search after Eros.” So much, however, of intellectual aim and activity mixed with her alliances, as to breathe a certain dignity and myrrh through them all. She and her friends are fellow-students with noblest moral aims. She is there for help and for counsel. ‘Be to the best thou knowest ever true!’ is her language to one. And that was the effect of her presence. Whoever conversed with her felt challenged by the strongest personal influence to a bold and generous life. To one she wrote, —

‘Could a word from me avail you, I would say, that I have firm faith that nature cannot be false to her child, who has shown such an unalterable faith in her piety towards her.’

*

‘These tones of my dear — — ‘s lyre are of the noblest. Will they sound purely through her experiences? Will the variations be faithful to the theme? Not always do those who most devoutly long for the Infinite, know best how to modulate their finite into a fair passage of the eternal Harmony.

‘How many years was it the cry of my spirit, —

”Give, give, ye mighty Gods!

Why do ye thus hold back?” —

and, I suppose, all noble young persons think for the time that they would have been more generous than the Olympians. But when we have learned the high lesson *to deserve*, — that boon of manhood, — we see they esteemed us too much, to give what we had not earned.’

The following passages from her journal and her letters are sufficiently descriptive, each in its way, of her strong affections.

‘At Mr. G.’s we looked over prints, the whole evening, in peace. Nothing fixed my attention so much as a large engraving of Madame Recamier in her boudoir. I have so often thought over the intimacy between her and Madame De Stael.

‘It is so true that a woman may be in love with a woman, and a man with a man. I like to be sure of it, for it is the same love which angels feel, where —

“Sie fragen nicht nach Mann und Weib.”

‘It is regulated by the same law as that of love between persons of different sexes; only it is purely intellectual and spiritual. Its law is the desire of the spirit to realize a whole, which makes it seek in another being what it finds not in itself. Thus the beautiful seek the strong, and the strong the beautiful; the mute seeks the eloquent, &c.; the butterfly settles always on the dark flower. Why did Socrates love Alcibiades? Why did Körner love Schneider? How natural is the love of Wallenstein for Max; that of De Stael for De Recamier; mine for —— . I loved —— , for a time, with as much passion as I was then strong enough to feel. Her face was always gleaming before me; her voice was always echoing in my ear; all poetic thoughts clustered round the dear image. This love was a key which unlocked for me many a treasure which I still possess; it was the carbuncle which cast light into many of the darkest caverns of human nature. She loved me, too, though not so much, because her nature was “less high, less grave, less large, less deep.” But she loved more tenderly, less passionately. She loved me, for I well remember her suffering when she first could feel my faults, and knew one part of the exquisite veil rent away; how she wished to stay apart, and weep the whole day.

*

‘I do not love her now with passion, but I still feel towards her as I can to no other woman. I thought of all this as I looked at Madame Recamier.’

*

TO R.W.E.

‘7th Feb., 1843. — I saw the letter of your new friend, and liked it much; only, at this distance, one could not be sure whether it was the nucleus or the train of a comet, that lightened afar. The daemons are not busy enough at the births of most men. They do not give them individuality deep enough for truth to take root in. Such shallow natures cannot resist a strong head; its influence goes right through them. It is not stopped and fermented long enough. But I do not understand this hint of hesitation, because you have many friends already. We need not economize, we need not hoard these immortal treasures. Love and thought are not diminished by diffusion. In the widow’s cruse is oil enough to furnish light for all the world.’

*

TO R.W.E.

‘15th March, 1842. — It is to be hoped, my best one, that the experiences of life will yet correct your vocabulary, and that you will not always answer the burst of frank affection by the use of such a word as “flattery.”

‘Thou knowest, O all-seeing Truth! whether that hour is base or unworthy thee, in which the heart turns tenderly towards some beloved object, whether stirred by an apprehension of its needs, or of its present beauty, or of its great promise; when it would lay before it all the flowers of hope and love, would soothe its weariness as gently as might the sweet south, and *flatter* it by as fond an outbreak of pride and devotion as is seen on the sunset clouds. Thou knowest whether these promptings, whether these longings, be not truer than intellectual scrutiny of the details of character; than cold distrust of the exaggerations even of heart. What we hope, what we think of those we love, is true, true as the fondest dream of love and friendship that ever shone upon the childish heart.

‘The faithful shall yet meet a full-eyed love, ready as profound, that never needs turn the key on its retirement, or arrest the stammering of an overweening trust.’

*

TO ———

‘I wish I could write you often, to bring before you the varied world-scene you cannot so well go out to unfold for yourself. But it was never permitted me, even where I wished it most. But the forest leaves fall unseen, and make a soil on which shall be reared the growths and fabrics of a nobler era. This thought rounds off each day. Your letter was a little golden key to a whole volume of thoughts and feelings. I cannot make the one bright drop, like champagne in ice, but must pour a full gush, if I speak at all, and not think whether the water is clear either.’

With this great heart, and these attractions, it was easy to add daily to the number of her friends. With her practical talent, her counsel and energy, she was pretty sure to find clients and sufferers enough, who wished to be guided and supported. ‘Others,’ she said, ‘lean on this arm, which I have found so frail. Perhaps it is strong enough to have drawn a sword, but no better suited to be used as a *bolt*, than that of Lady Catharine Douglas, of loyal memory.’ She could

not make a journey, or go to an evening party, without meeting a new person, who wished presently to impart his history to her. Very early, she had written to ——, ‘My museum is so well furnished, that I grow lazy about collecting new specimens of human nature.’ She had soon enough examples of the historic development of rude intellect under the first rays of culture. But, in a thousand individuals, the process is much the same; and, like a professor too long pent in his college, she rejoiced in encountering persons of untutored grace and strength, and felt no wish to prolong the intercourse when culture began to have its effect. I find in her journal a characteristic note, on receiving a letter on books and speculations, from one whom she had valued for his heroic qualities in a life of adventure: —

‘These letters of —— are beautiful, and moved me deeply. It looks like the birth of a soul. But I loved *thee*, fair, rich *earth*, — and all that is gone forever. This that comes now, we know in much farther stages. Yet there is silver sweet in the tone, generous nobility in the impulses.’

*

‘Poor Tasso in the play offered his love and service too officiously to all. They all rejected it, and declared him mad, because he made statements too emphatic of his feelings. If I wanted only ideal figures to think about, there are those in literature I like better than any of your living ones. But I want far more. I want habitual intercourse, cheer, inspiration, tenderness. I want these for myself; I want to impart them. I have done as Timon did, for these last eight years. My early intercourses were more equal, because more natural. Since I took on me the vows of renunciation, I have acted like a prodigal. Like Timon, I have loved to give, perhaps not from beneficence, but from restless love. Now, like Fortunatus, I find my mistresses will not thank me for fires made of cinnamon; rather they run from too rich an odor. What shall I do? not curse, like him, (oh base!) nor dig my grave in the marge of the salt tide. Give an answer to my questions, dæmon! Give a rock for my feet, a bird of peaceful and sufficient song within my breast! I return to thee, my Father, from the husks that have been offered me. But I return as one who meant not to leave Thee.’

Of course, she made large demands on her companions, and would soon come to sound their knowledge, and guess pretty nearly the range of their thoughts. There yet remained to command her constancy, what she valued more, the quality and affection proper to each. But she could rarely find natures sufficiently deep and magnetic. With her sleepless curiosity, her magnanimity, and her diamond-ring, like Annie of Lochroyan’s, to exchange for gold or for

pewter, she might be pardoned for her impatient questionings. To me, she was uniformly generous; but neither did I escape. Our moods were very different; and I remember, that, at the very time when I, slow and cold, had come fully to admire her genius, and was congratulating myself on the solid good understanding that subsisted between us, I was surprised with hearing it taxed by her with superficiality and halfness. She stigmatized our friendship as commercial. It seemed, her magnanimity was not met, but I prized her only for the thoughts and pictures she brought me; — so many thoughts, so many facts yesterday, — so many to-day; — when there was an end of things to tell, the game was up: that, I did not know, as a friend should know, to prize a silence as much as a discourse, — and hence a forlorn feeling was inevitable; a poor counting of thoughts, and a taking the census of virtues, was the unjust reception so much love found. On one occasion, her grief broke into words like these: ‘The religious nature remained unknown to you, because it could not proclaim itself, but claimed to be divined. The deepest soul that approached you was, in your eyes, nothing but a magic lantern, always bringing out pretty shows of life.’

But as I did not understand the discontent then, — of course, I cannot now. It was a war of temperaments, and could not be reconciled by words; but, after each party had explained to the uttermost, it was necessary to fall back on those grounds of agreement which remained and leave the differences henceforward in respectful silence. The recital may still serve to show to sympathetic persons the true lines and enlargements of her genius. It is certain that this incongruity never interrupted for a moment the intercourse, such as it was, that existed between us.

I ought to add here, that certain mental changes brought new questions into conversation. In the summer of 1840, she passed into certain religious states, which did not impress me as quite healthy, or likely to be permanent; and I said, “I do not understand your tone; it seems exaggerated. You are one who can afford to speak and to hear the truth. Let us hold hard to the common-sense, and let us speak in the positive degree.”

And I find, in later letters from her, sometimes playful, sometimes grave allusions to this explanation.

‘Is ——— there? Does water meet water? — no need of wine, sugar, spice, or even a *soupçon* of lemon to remind of a tropical climate? I fear me not. Yet, dear positives, believe me superlatively yours, MARGARET.’

The following letter seems to refer, under an Eastern guise, and with something of Eastern exaggeration of compliment too, to some such native sterilities in her correspondent: —

TO R.W.E.

'23d Feb., 1840. — I am like some poor traveller of the desert, who saw, at early morning, a distant palm, and toiled all day to reach it. All day he toiled. The unfeeling sun shot pains into his temples; the burning air, filled with sand, checked his breath; he had no water, and no fountain sprung along his path. But his eye was bright with courage, for he said, "When I reach the lonely palm, I will lie beneath its shade. I will refresh myself with its fruit. Allah has reared it to such a height, that it may encourage the wandering, and bless and sustain the faint and weary." But when he reached it, alas! it had grown too high to shade the weary man at its foot. On it he saw no clustering dates, and its one draught of wine was far beyond his reach. He saw at once that it was so. A child, a bird, a monkey, might have climbed to reach it. A rude hand might have felled the whole tree; but the full-grown man, the weary man, the gentle-hearted, religious man, was no nearer to its nourishment for being close to the root; yet he had not force to drag himself further, and leave at once the aim of so many fond hopes, so many beautiful thoughts. So he lay down amid the inhospitable sands. The night dews pierced his exhausted frame; the hyena laughed, the lion roared, in the distance; the stars smiled upon him satirically from their passionless peace; and he knew they were like the sun, as unfeeling, only more distant. He could not sleep for famine. With the dawn he arose. The palm stood as tall, as inaccessible, as ever; its leaves did not so much as rustle an answer to his farewell sigh. On and on he went, and came, at last, to a living spring. The spring was encircled by tender verdure, wild fruits ripened near, and the clear waters sparkled up to tempt his lip. The pilgrim rested, and refreshed himself, and looked back with less pain to the unsympathizing palm, which yet towered in the distance.

'But the wanderer had a mission to perform, which must have forced him to leave at last both palm and fountain. So on and on he went, saying to the palm, "Thou art for another;" and to the gentle waters, "I will return."

'Not far distant was he when the sirocco came, and choked with sand the fountain, and uprooted the fruit-trees. When years have passed, the waters will have forced themselves up again to light, and a new oasis will await a new wanderer. Thou, Sohrab, wilt, ere that time, have left thy bones at Mecca. Yet the remembrance of the fountain cheers thee as a blessing; that of the palm haunts thee as a pang.

'So talks the soft spring gale of the Shah Nameh. Genuine Sanscrit I cannot write. My Persian and Arabic you love not. Why do I write thus to one who must ever regard the deepest tones of my nature as those of childish fancy or worldly

discontent?’

PROBLEMS OF LIFE.

Already, too, at this time, each of the main problems of human life had been closely scanned and interrogated by her, and some of them had been much earlier settled. A worshipper of beauty, why could not she also have been beautiful? — of the most radiant sociality, why should not she have been so placed, and so decorated, as to have led the fairest and highest? In her journal is a bitter sentence, whose meaning I cannot mistake: ‘Of a disposition that requires the most refined, the most exalted tenderness, without charms to inspire it: — poor Mignon! fear not the transition through death; no penal fires can have in store worse torments than thou art familiar with already.’

In the month of May, she writes: —

‘When all things are blossoming, it seems so strange not to blossom too; that the quick thought within cannot remould its tenement. Man is the slowest aloe, and I am such a shabby plant, of such coarse tissue. I hate not to be beautiful, when all around is so.’

Again, after recording a visit to a family, whose taste and culture, united to the most liberal use of wealth, made the most agreeable of homes, she writes:

‘Looking out on the wide view, I felt the blessings of my comparative freedom. I stand in no false relations. Who else is so happy? Here are these fair, unknowing children envying the depth of my mental life. They feel withdrawn by sweet duties from reality. Spirit! I accept; teach me to prize and use whatsoever is given me.’

‘At present,’ she writes elsewhere, ‘it skills not. I am able to take the superior view of life, and my place in it. But I know the deep yearnings of the heart and the bafflings of time will be felt again, and then I shall long for some dear hand to hold. But I shall never forget that my curse is nothing, compared with that of those who have entered into those relations, but not made them real; who only *seem* husbands, wives, and friends.’

‘I remain fixed to be, without churlishness or coldness, as much alone as possible. It is best for me. I am not fitted to be loved, and it pains me to have close dealings with those who do not love, to whom my feelings are “strange.” Kindness and esteem are very well. I am willing to receive and bestow them; but these alone are not worth feelings such as mine. And I wish I may make no more mistakes, but keep chaste for mine own people.’

There is perhaps here, as in a passage of the same journal quoted already, an allusion to a verse in the ballad of the Lass of Lochroyan: —

”O yours was gude, and gude enough,
But aye the best was mine;
For yours was o’ the gude red gold,
But mine o’ the diamond fine.”

‘There is no hour of absolute beauty in all my past, though some have been made musical by heavenly hope, many dignified by intelligence. Long urged by the Furies, I rest again in the temple of Apollo. Celestial verities dawn constellated as thoughts in the Heaven of my mind.

‘But, driven from home to home, as a renouncer, I get the picture and the poetry of each. Keys of gold, silver, iron, and lead, are in my casket. No one loves me; but I love many a good deal, and see, more or less, into their eventual beauty. Meanwhile, I have no fetter on me, no engagement, and, as I look on others, — almost every other, — can I fail to feel this a great privilege? I have nowise tied my hands or feet; yet the varied calls on my sympathy have been such, that I hope not to be made partial, cold, or ignorant, by this isolation. I have no child; but now, as I look on these lovely children of a human birth, what low and neutralizing cares they bring with them to the mother! The children of the muse come quicker, and have not on them the taint of earthly corruption.’

Practical questions in plenty the days and months brought her to settle, — questions requiring all her wisdom, and sometimes more than all. None recurs with more frequency, at one period, in her journals, than the debate with herself, whether she shall make literature a profession. Shall it be woman, or shall it be artist?

WOMAN, OR ARTIST?

Margaret resolved, again and again, to devote herself no more to these disappointing forms of men and women, but to the children of the muse. ‘The *dramatis personæ*’ she said, ‘of my poems shall henceforth be chosen from the children of immortal Muse. I fix my affections no more on these frail forms.’ But it was vain; she rushed back again to persons, with a woman’s devotion.

Her pen was a non-conductor. She always took it up with some disdain, thinking it a kind of impiety to attempt to report a life so warm and cordial, and wrote on the fly-leaf of her journal, —

“*Scrivo sol per sfogar’ l’interno.*”

‘Since you went away,’ she said, ‘I have thought of many things I might have told you, but I could not bear to be eloquent and poetical. It is a mockery thus to play the artist with life, and dip the brush in one’s own heart’s blood. One would

fain be no more artist, or philosopher, or lover, or critic, but a soul ever rushing forth in tides of genial life.'

*

'26 Dec., 1842. — I have been reading the lives of Lord Herbert of Cherbury, and of Sir Kenelm Digby. These splendid, chivalrous, and thoughtful Englishmen are meat which my soul loveth, even as much as my Italians. What I demand of men, — that they could act out all their thoughts, — these have. They are lives; — and of such I do not care if they had as many faults as there are days in the year, — there is the energy to redeem them. Do you not admire Lord Herbert's two poems on life, and the conjectures concerning celestial life? I keep reading them.'

*

'When I look at my papers, I feel as if I had never had a thought that was worthy the attention of any but myself; and 'tis only when, on talking with people, I find I tell them what they did not know, that my confidence at all returns.'

*

'My verses, — I am ashamed when I think there is scarce a line of poetry in them, — all rhetorical and impassioned, as Goethe said of De Stael. However, such as they are, they have been overflowing drops from the somewhat bitter cup of my existence.'

*

'How can I ever write with this impatience of detail? I shall never be an artist; I have no patient love of execution; I am delighted with my sketch, but if I try to finish it, I am chilled. Never was there a great sculptor who did not love to chip the marble.'

*

'I have talent and knowledge enough to furnish a dwelling for friendship, but not enough to deck with golden gifts a Delphi for the world.'

*

‘Then a woman of tact and brilliancy, like me, has an undue advantage in conversation with men. They are astonished at our instincts. They do not see where we got our knowledge; and, while they tramp on in their clumsy way, we wheel, and fly, and dart hither and thither, and seize with ready eye all the weak points, like Saladin in the desert. It is quite another thing when we come to write, and, without suggestion from another mind, to declare the positive amount of thought that is in us. Because we seemed to know all, they think we can tell all; and, finding we can tell so little, lose faith in their first opinion of us, *which, nathless, was true.*’

And again:

‘These gentlemen are surprised that I write no better, because I talk so well. But I have served a long apprenticeship to the one, none to the other. I shall write better, but never, I think, so well as I talk; for then I feel inspired. The means are pleasant; my voice excites me, my pen never. I shall not be discouraged, nor take for final what they say, but sift from it the truth, and use it. I feel the strength to dispense with all illusions. I will stand steady, and rejoice in the severest probations.’

*

‘What a vulgarity there seems in this writing for the multitude! We know not yet, have not made ourselves known to a single soul, and shall we address those still more unknown? Shall we multiply our connections, and thus make them still more superficial?’

‘I would go into the crowd, and meet men for the day, to help them for the day, but for that intercourse which most becomes us. Pericles, Anaxagoras, Aspasia, Cleone, is circle wide enough for me. I should think all the resources of my nature, and all the tribute it could enforce from external nature, none too much to furnish the banquet for this circle.

‘But where to find fit, though few, representatives for all we value in humanity? Where obtain those golden keys to the secret treasure-chambers of the soul? No samples are perfect. We must look abroad into the wide circle, to seek a little here, and a little there, to make up our company. And is not the “prent book” a good beacon-light to tell where we wait the bark? — a reputation, the means of entering the Olympic game, where Pindar may perchance be encountered?’

‘So it seems the mind must reveal its secret; must reproduce. And I have no castle, and no natural circle, in which I might live, like the wise Makaria, observing my kindred the stars, and gradually enriching my archives. Makaria

here must go abroad, or the stars would hide their light, and the archive remain a blank.

‘For all the tides of life that flow within me, I am dumb and ineffectual, when it comes to casting my thought into a form. No old one suits me. If I could invent one, it seems to me the pleasure of creation would make it possible for me to write. What shall I do, dear friend? I want force to be either a genius or a character. One should be either private or public. I love best to be a woman; but womanhood is at present too straitly-bounded to give me scope. At hours, I live truly as a woman; at others, I should stifle; as, on the other hand, I should palsy, when I would play the artist.’

HEROISM.

These practical problems Margaret had to entertain and to solve the best way she could. She says truly, ‘there was none to take up her burden whilst she slept.’ But she was formed for action, and addressed herself quite simply to her part. She was a woman, an orphan, without beauty, without money; and these negatives will suggest what difficulties were to be surmounted where the tasks dictated by her talents required the good-will of “good society,” in the town where she was to teach and write. But she was even-tempered and erect, and, if her journals are sometimes mournful, her mind was made up, her countenance beamed courage and cheerfulness around her. Of personal influence, speaking strictly, — an efflux, that is, purely of mind and character, excluding all effects of power, wealth, fashion, beauty, or literary fame, — she had an extraordinary degree; I think more than any person I have known. An interview with her was a joyful event. Worthy men and women, who had conversed with her, could not forget her, but worked bravely on in the remembrance that this heroic approver had recognized their aims. She spoke so earnestly, that the depth of the sentiment prevailed, and not the accidental expression, which might chance to be common. Thus I learned, the other day, that, in a copy of Mrs. Jameson’s *Italian Painters*, against a passage describing Correggio as a true servant of God in his art, above sordid ambition, devoted to truth, “one of those superior beings of whom there are so few;” Margaret wrote on the margin, ‘And yet all might be such.’ The book lay long on the table of the owner, in Florence, and chanced to be read there by a young artist of much talent. “These words,” said he, months afterwards, “struck out a new strength in me. They revived resolutions long fallen away, and made me set my face like a flint.”

But Margaret’s courage was thoroughly sweet in its temper. She accused herself in her youth of unamiable traits, but, in all the later years of her life, it is

difficult to recall a moment of malevolence. The friends whom her strength of mind drew to her, her good heart held fast; and few persons were ever the objects of more persevering kindness. Many hundreds of her letters remain, and they are alive with proofs of generous friendship given and received.

Among her early friends, Mrs. Farrar, of Cambridge, appears to have discovered, at a critical moment in her career, the extraordinary promise of the young girl, and some false social position into which her pride and petulance, and the mistakes of others, had combined to bring her, and she set herself, with equal kindness and address, to make a second home for Margaret in her own house, and to put her on the best footing in the agreeable society of Cambridge. She busied herself, also, as she could, in removing all superficial blemishes from the gem. In a well-chosen travelling party, made up by Mrs. Farrar, and which turned out to be the beginning of much happiness by the friendships then formed, Margaret visited, in the summer of 1835, Newport, New York, and Trenton Falls; and, in the autumn, made the acquaintance, at Mrs. F.'s house, of Miss Martineau, whose friendship, at that moment, was an important stimulus to her mind.

Mrs. Farrar performed for her, thenceforward, all the offices of an almost maternal friendship. She admired her genius, and wished that all should admire it. She counselled and encouraged her, brought to her side the else unobtainable aid of a matron and a lady, sheltered her in sickness, forwarded her plans with tenderness and constancy, to the last. I read all this in the tone of uniform gratitude and love with which this lady is mentioned in Margaret's letters. Friendships like this praise both parties; and the security with which people of a noble disposition approached Margaret, indicated the quality of her own infinite tenderness. A very intelligent woman applied to her what Stilling said of Goethe: "Her heart, which few knew, was as great as her mind, which all knew;" and added, that, "in character, Margaret was, of all she had beheld, the largest woman, and not a woman who wished, to be a man." Another lady added, "She never disappointed you. To any one whose confidence she had once drawn out, she was thereafter faithful. She could talk of persons, and never gossip; for she had a fine instinct that kept her from any reality, and from any effect of treachery." I was still more struck with the remark that followed. "Her life, since she went abroad, is wholly unknown to me; but I have an unshaken trust that what Margaret did she can defend."

She was a right brave and heroic woman. She shrunk from no duty, because of feeble nerves. Although, after her father died, the disappointment of not going to Europe with Miss Martineau and Mrs. Farrar was extreme, and her mother and sister wished her to take her portion of the estate and go; and, on her refusal,

entreated the interference of friends to overcome her objections; Margaret would not hear of it, and devoted herself to the education of her brothers and sisters, and then to the making a home for the family. She was exact and punctual in money matters, and maintained herself, and made her full contribution to the support of her family, by the reward of her labors as a teacher, and in her conversation classes. I have a letter from her at Jamaica Plain, dated November, 1840, which begins,

‘This day I write you from my own hired house, and am full of the dignity of citizenship. Really, it is almost happiness. I retain, indeed, some cares and responsibilities; but these will sit light as feathers, for I can take my own time for them. Can it be that this peace will be mine for five whole months? At any rate, five days have already been enjoyed.’

Here is another, written in the same year: —

‘I do not wish to talk to you of my ill-health, except that I like you should know when it makes me do anything badly, since I wish you to excuse and esteem me. But let me say, once for all, in reply to your letter, that you are mistaken if you think I ever wantonly sacrifice my health. I have learned that we cannot injure ourselves without injuring others; and besides, that we have no right; for ourselves are all we know of heaven. I do not try to domineer over myself. But, unless I were sure of dying, I cannot dispense with making some exertion, both for the present and the future. There is no mortal, who, if I laid down my burden, would take care of it while I slept. Do not think me weakly disinterested, or, indeed, disinterested at all.’

Every one of her friends knew assuredly that her sympathy and aid would not fail them when required. She went, from the most joyful of all bridals, to attend a near relative during a formidable surgical operation. She was here to help others. As one of her friends writes, ‘She helped whoever knew her.’ She adopted the interests of humble persons, within her circle, with heart-cheering warmth, and her ardor in the cause of suffering and degraded women, at SingSing, was as irresistible as her love of books. She had, many years afterwards, scope for the exercise of all her love and devotion, in Italy, but she came to it as if it had been her habit and her natural sphere. The friends who knew her in that country, relate, with much surprise, that she, who had all her lifetime drawn people by her wit, should recommend herself so highly, in Italy, by her tenderness and large affection. Yet the tenderness was only a face of the wit; as before, the wit was raised above all other wit by the affection behind it. And, truly, there was an ocean of tears always, in her atmosphere, ready to fall.

There was, at New York, a poor adventurer, half patriot, half author, a miserable man, always in such depths of distress, with such squadrons of

enemies, that no charity could relieve, and no intervention save him. He believed Europe banded for his destruction, and America corrupted to connive at it. Margaret listened to these woes with such patience and mercy, that she drew five hundred dollars, which had been invested for her in a safe place, and put them in those hapless hands, where, of course, the money was only the prey of new rapacity, to be bewailed by new reproaches. When one of her friends had occasion to allude to this, long afterwards, she replied: —

‘In answer to what you say of ——, I wish, indeed, the little effort I made for him had been wiselier applied. Yet these are not the things one regrets. It will not do to calculate too closely with the affectionate human impulse. We must consent to make many mistakes, or we should move too slow to help our brothers much. I am sure you do not regret what you spent on Miani, and other worthless people. As things looked then, it would have been wrong not to have risked the loss.’

TRUTH.

But Margaret crowned all her talents and virtues with a love of truth, and the power to speak it. In great and in small matters, she was a woman of her word, and gave those who conversed with her the unspeakable comfort that flows from plain dealing. Her nature was frank and transparent, and she had a right to say, as she says in her journal: —

‘I have the satisfaction of knowing, that, in my counsels, I have given myself no air of being better than I am.’

And again: —

‘In the chamber of death, I prayed in very early years, “Give me truth; cheat me by no illusion.” O, the granting of this prayer is sometimes terrible to me! I walk over the burning ploughshares, and they sear my feet. Yet nothing but truth will do; no love will serve that is not eternal, and as large as the universe; no philanthropy in executing whose behests I myself become unhealthy; no creative genius which bursts asunder my life, to leave it a poor black chrysalid behind. And yet this last is too true of me.’

She describes a visit made in May, 1844, at the house of some valued friends in West Roxbury, and adds: ‘We had a long and deep conversation, happy in its candor. Truth, truth, thou art the great preservative! Let free air into the mind, and the pestilence cannot lurk in any corner.’

And she uses the following language in an earnest letter to another friend: —

‘My own entire sincerity, in every passage of life, gives me a right to expect that I shall be met by no unmeaning phrases or attentions.’

*

‘Reading to-day a few lines of —— , I thought with refreshment of such lives as T.’s, and V.’s, and W.’s, so private and so true, where each line written is really the record of a thought or a feeling. I hate poems which are a melancholy monument of culture for the sake of being cultivated, not of growing.’

Even in trifles, one might find with her the advantage and the electricity of a little honesty. I have had from an eye-witness a note of a little scene that passed in Boston, at the Academy of Music. A party had gone early, and taken an excellent place to hear one of Beethoven’s symphonies. Just behind them were soon seated a young lady and two gentlemen, who made an incessant buzzing, in spite of bitter looks cast on them by the whole neighborhood, and destroyed all the musical comfort. After all was over, Margaret leaned across one seat, and catching the eye of this girl, who was pretty and well-dressed, said, in her blindest, gentlest voice, “May I speak with you one moment?” “Certainly,” said the young lady, with a fluttered, pleased look, bending forward. “I only wish to say,” said Margaret, “that I trust, that, in the whole course of your life, you will not suffer so great a degree of annoyance as you have inflicted on a large party of lovers of music this evening.” This was said with the sweetest air, as if to a little child, and it was as good as a play to see the change of countenance which the young lady exhibited, who had no replication to make to so Christian a blessing.

On graver occasions, the same habit was only more stimulated; and I cannot remember certain passages which called it into play, without new regrets at the costly loss which our community sustains in the loss of this brave and eloquent soul.

People do not speak the truth, not for the want of not knowing and preferring it, but because they have not the organ to speak it adequately. It requires a clear sight, and, still more, a high spirit, to deal with falsehood in the decisive way. I have known several honest persons who valued truth as much as Peter and John, but, when they tried to speak it, *they* grew red and black in the face instead of Ananias, until, after a few attempts, they decided that aggressive truth was not their vocation, and confined themselves thenceforward to silent honesty, except on rare occasions, when either an extreme outrage, or a happier inspiration, loosened their tongue. But a soul is now and then incarnated, whom indulgent nature has not afflicted with any cramp or frost, but who can speak the right word at the right moment, qualify the selfish and hypocritical act with its real name, and, without any loss of serenity, hold up the offence to the purest daylight. Such a truth-speaker is worth more than the best police, and more than

the laws or governors; for these do not always know their own side, but will back the crime for want of this very truth-speaker to expose them. That is the theory of the newspaper, — to supersede official by intellectual influence. But, though the apostles establish the journal, it usually happens that, by some strange oversight, Ananias slips into the editor's chair. If, then, we could be provided with a fair proportion of truth-speakers, we could very materially and usefully contract the legislative and the executive functions. Still, the main sphere for this nobleness is private society, where so many mischiefs go unwhipped, being out of the cognizance of law, and supposed to be nobody's business. And society is, at all times, suffering for want of judges and headsman, who will mark and lop these malefactors.

Margaret suffered no vice to insult her presence, but called the offender to instant account, when the law of right or of beauty was violated. She needed not, of course, to go out of her way to find the offender, and she never did, but she had the courage and the skill to cut heads off which were not worn with honor in her presence. Others might abet a crime by silence, if they pleased; she chose to clear herself of all complicity, by calling the act by its name.

It was curious to see the mysterious provocation which the mere presence of insight exerts in its neighborhood. Like moths about a lamp, her victims voluntarily came to judgment: conscious persons, encumbered with egotism; vain persons, bent on concealing some mean vice; arrogant reformers, with some halting of their own; the compromisers, who wished to reconcile right and wrong; — all came and held out their palms to the wise woman, to read their fortunes, and they were truly told. Many anecdotes have come to my ear, which show how useful the glare of her lamp proved in private circles, and what dramatic situations it created. But these cannot be told. The valor for dragging the accused spirits among his acquaintance to the stake is not in the heart of the present writer. The reader must be content to learn that she knew how, without loss of temper, to speak with unmistakable plainness to any party, when she felt that the truth or the right was injured. For the same reason, I omit one or two letters, most honorable both to her mind and heart, in which she felt constrained to give the frankest utterance to her displeasure. Yet I incline to quote the testimony of one witness, which is so full and so pointed, that I must give it as I find it.

“I have known her, by the severity of her truth, mow down a crop of evil, like the angel of retribution itself, and could not sufficiently admire her courage. A conversation she had with Mr. ———, just before he went to Europe, was one of these things; and there was not a particle of ill-will in it, but it was truth which she could not help seeing and uttering, nor he refuse to accept.

“My friends told me of a similar verdict, pronounced upon Mr. ———, at Paris, which they said was perfectly tremendous. They themselves sat breathless; Mr. ——— was struck dumb; his eyes fixed on her with wonder and amazement, yet gazing too with an attention which seemed like fascination. When she had done, he still looked to see if she was to say more, and when he found she had really finished, he arose, took his hat, said faintly, ‘I thank you.’ and left the room. He afterwards said to Mr. ———, ‘I never shall speak ill of her. She has done me good.’ And this was the greater triumph, for this man had no theories of impersonality, and was the most egotistical and irritable of self-lovers, and was so unvarnished, that one had to hope in charity that his organ for apprehending truth was deficient.”

ECSTASY.

I have alluded to the fact, that, in the summer of 1840, Margaret underwent some change in the tone and the direction of her thoughts, to which she attributed a high importance. I remember, at an earlier period, when in earnest conversation with her, she seemed to have that height and daring, that I saw she was ready to do whatever she thought; and I observed that, with her literary riches, her invention and wit, her boundless fun and drollery, her light satire, and the most entertaining conversation in America, consisted a certain pathos of sentiment, and a march of character, threatening to arrive presently at the shores and plunge into the sea of Buddhism and mystical trances. The literature of asceticism and rapturous piety was familiar to her. The conversation of certain mystics, who had appeared in Boston about this time, had interested her, but in no commanding degree. But in this year, 1840, in which events occurred which combined great happiness and pain for her affections, she remained for some time in a sort of ecstatic solitude. She made many attempts to describe her frame of mind to me, but did not inspire me with confidence that she had now come to any experiences that were profound or permanent. She was vexed at the want of sympathy on my part, and I again felt that this craving for sympathy did not prove the inspiration. There was a certain restlessness and fever, which I did not like should deceive a soul which was capable of greatness. But jets of magnanimity were always natural to her; and her aspiring mind, eager for a higher and still a higher ground, made her gradually familiar with the range of the mystics, and, though never herself laid in the chamber called Peace, never quite authentically and originally speaking from the absolute or prophetic mount, yet she borrowed from her frequent visits to its precincts an occasional enthusiasm, which gave a religious dignity to her thought.

‘I have plagues about me, but they don’t touch me now. I thank nightly the benignant Spirit, for the unaccustomed serenity in which it enfolds me.

‘ — is very wretched; and once I could not have helped taking on me all his griefs, and through him the griefs of his class; but now I drink only the wormwood of the minute, and that has always equal parts, — a drop of sweet to a drop of bitter. But I shall never be callous, never unable to understand *homesickness*. Am not I, too, one of the band who know not where to lay their heads? Am I wise enough to hear such things? Perhaps not; but happy enough, surely. For that Power which daily makes me understand the value of the little wheat amid the field of tares, and shows me how the kingdom of heaven is sown in the earth like a grain of mustard-seed, is good to me, and bids me call unhappiness happy.’

*

TO —

‘*March*, 1842. — My inward life has been more rich and deep, and of more calm and musical flow than ever before. It seems to me that Heaven, whose course has ever been to cross-bias me, as Herbert said, is no niggard in its compensations. I have indeed been forced to take up old burdens, from which I thought I had learned what they could teach; the pen has been snatched from my hand just as I most longed to use it; I have been forced to dissipate, when I most wished to concentrate; to feel the hourly presence of others’ mental wants, when, it seemed, I was just on the point of satisfying my own. But a new page is turned, and an era begun, from which I am not yet sufficiently remote to describe it as I would. I have lived a life, if only in the music I have heard, and one development seemed to follow another therein, as if bound together by destiny, and all things were done for me. All minds, all scenes, have ministered to me. Nature has seemed an ever-open secret; the Divine, a sheltering love; truth, an always-springing fountain; and my soul more alone, and less lonely, more hopeful, patient, and, above all, more gentle and humble in its living. New minds have come to reveal themselves to me, though I do not wish it, for I feel myself inadequate to the ties already formed. I have not strength or time to meet the thoughts of those I love already. But these new have come with gifts too fair to be refused, and which have cheered my passive mind.’

*

‘June, 1844. — Last night, in the boat, I could not help thinking, each has something, none has enough. I fear to want them all; and, through ages, if not forever, promises and beckons the life of reception, of renunciation. Passing every seven days from one region to the other, the maiden grows weary of *packing the trunk*, yet blesses Thee, O rich God!’

Her letters at this period betray a pathetic alternation of feeling, between her aspiring for a rest in the absolute Centre, and her necessity of a perfect sympathy with her friends. She writes to one of them: —

‘What I want, the word I crave, I do not expect to hear from the lips of man. I do not wish to be, I do not wish to have, a *mediator*; yet I cannot help wishing, when I am with you, that some tones of the longed-for music could be vibrating in the air around us. But I will not be impatient again; for, though I am but as I am, I like not to feel the eyes I have loved averted.’

CONVERSATION.

I have separated and distributed as I could some of the parts which blended in the rich composite energy which Margaret exerted during the ten years over which my occasional interviews with her were scattered. It remains to say, that all these powers and accomplishments found their best and only adequate channel in her conversation; — a conversation which those who have heard it, unanimously, as far as I know, pronounced to be, in elegance, in range, in flexibility, and adroit transition, in depth, in cordiality, and in moral aim, altogether admirable; surprising and cheerful as a poem, and communicating its own civility and elevation like a charm to all hearers. She was here, among our anxious citizens, and frivolous fashionists, as if sent to refine and polish her countrymen, and announce a better day. She poured a stream of amber over the endless store of private anecdotes, of bosom histories, which her wonderful persuasion drew forth, and transfigured them into fine fables. Whilst she embellished the moment, her conversation had the merit of being solid and true. She put her whole character into it, and had the power to inspire. The companion was made a thinker, and went away quite other than he came. The circle of friends who sat with her were not allowed to remain spectators or players, but she converted them into heroes, if she could. The muse woke the muses, and the day grew bright and eventful. Of course, there must be, in a person of such sincerity, much variety of aspect, according to the character of her company. Only, in Margaret’s case, there is almost an agreement in the testimony to an invariable power over the minds of all. I conversed lately with a gentleman who has vivid remembrances of his interviews with her in Boston, many years ago,

who described her in these terms:— “No one ever came so near. Her mood applied itself to the mood of her companion, point to point, in the most limber, sinuous, vital way, and drew out the most extraordinary narratives; yet she had a light sort of laugh, when all was said, as if she thought she could live over that revelation. And this sufficient sympathy she had for all persons indifferently, — for lovers, for artists, and beautiful maids, and ambitious young statesmen, and for old aunts, and coach-travellers. Ah! she applied herself to the mood of her companion, as the sponge applies itself to water.” The description tallies well enough with my observation. I remember she found, one day, at my house, her old friend Mr. ———, sitting with me. She looked at him attentively, and hardly seemed to know him. In the afternoon, he invited her to go with him to Cambridge. The next day she said to me, ‘You fancy that you know ——. It is too absurd; you have never seen him. When I found him here, sitting like a statue, I was alarmed, and thought him ill. You sit with courteous, *unconfiding* smile, and suppose him to be a mere man of talent. He is so with you. But the moment I was alone with him, he was another creature; his manner, so glassy and elaborate before, was full of soul, and the tones of his voice entirely different.’ And I have no doubt that she saw expressions, heard tones, and received thoughts from her companions, which no one else ever saw or heard from the same parties, and that her praise of her friends, which seemed exaggerated, was her exact impression. We were all obliged to recall Margaret’s testimony, when we found we were sad blockheads to other people.

I find among her letters many proofs of this power of disposing equally the hardest and the most sensitive people to open their hearts, on very short acquaintance. Any casual *rencontré*, in a walk, in a steamboat, at a concert, became the prelude to unwonted confidences.

*

1843.— ‘I believe I told you about one new man, a Philistine, at Brook Farm. He reproved me, as such people are wont, for my little faith. At the end of the first meeting in the hall, he seemed to me perfectly hampered in his old ways and technics, and I thought he would not open his mind to the views of others for years, if ever. After I wrote, we had a second meeting, by request, on personal relations; at the end of which, he came to me, and expressed delight, and a feeling of new light and life, in terms whose modesty might have done honor to the wisest.’

*

‘This afternoon we met Mr. —— in his wood; and he sat down and told us the story of his life, his courtship, and painted the portraits of his father and mother with most amusing naïveté. He says:— “How do you think I offered myself? I never had told Miss —— that I loved her; never told her she was handsome; and I went to her, and said, ‘Miss ——, I’ve come to offer myself; but first I’ll give you my character. I’m very poor; you’ll have to work: I’m very cross and irascible; you’ll have everything to bear: and I’ve liked many other pretty girls. Now what do you say?’ and she said, ‘I’ll have you:’ and she’s been everything to me.”

“My mother was a Calvinist, very strict, but she was always reading ‘Abelard and Eloisa,’ and crying over it. At sixteen I said to her: ‘Mother, you’ve brought me up well; you’ve kept me strict. Why don’t I feel that regeneration they talk of? why an’t I one of the elect?’ And she talked to me about the potter using his clay as he pleased; and I said: ‘Mother, God is not a potter: He’s a perfect being; and he can’t treat the vessels he makes, anyhow, but with perfect justice, or he’s no God. So I’m no Calvinist.’”

*

Here is a very different picture: —

‘ —— has infinite grace and shading in her character: a springing and tender fancy, a Madonna depth of meditative softness, and a purity which has been unstained, and keeps her dignified even in the most unfavorable circumstances. She was born for the love and ornament of life. I can scarcely forbear weeping sometimes, when I look on her, and think what happiness and beauty she might have conferred. She is as yet all unconscious of herself, and she rather dreads being with me, because I make her too conscious. She was on the point, at ——, of telling me all she knew of herself; but I saw she dreaded, while she wished, that I should give a local habitation and a name to what lay undefined, floating before her, the phantom of her destiny; or rather lead her to give it, for she always approaches a tragical clearness when talking with me.’

*

‘ —— has been to see us. But it serves not to know such a person, who perpetually defaces the high by such strange mingling with the low. It certainly is not pleasant to hear of God and Miss Biddeford in a breath. To me, this hasty attempt at skimming from the deeps of theosophy is as unpleasant as the rude vanity of reformers. Dear Beauty! where, where, amid these morasses and pine

barrens, shall we make thee a temple? where find a Greek to guard it, — clear-eyed, deep-thoughted, and delicate enough to appreciate the relations and gradations which nature always observes?’

An acute and illuminated woman, who, in this age of indifferentism, holds on with both hands to the creed of the Pilgrims, writes of Margaret, whom she saw but once:— “She looked very sensible, but as if contending with ill health and duties. She lay, all the day and evening, on the sofa, and catechized me, who told my literal traditions, like any old bobbin-woman.”

I add the testimony of a man of letters, and most competent observer, who had, for a long time, opportunities of daily intercourse with her: —

“When I knew Margaret, I was so young, and perhaps too much disposed to meet people on my own ground, that I may not be able to do justice to her. Her nature was so large and receptive, so sympathetic with youth and genius, so aspiring, and withal so womanly in her understanding, that she made her companion think more of himself, and of a common life, than of herself. She was a companion as few others, if indeed any one, have been. Her heart was underneath her intellectualness, her mind was reverent, her spirit devout; a thinker without dryness; a scholar without pedantry. She could appreciate the finest thoughts, and knew the rich soil and large fields of beauty that made the little vase of otto. With her unusual wisdom and religious spirit, she seemed like the priestess of the youth, opening to him the fields of nature; but she was more than a priestess, a companion also. As I recall her image, I think she may have been too intellectual, and too conscious of intellectual relation, so that she was not sufficiently self-centred on her own personality; and hence something of a duality: but I may not be correct in this impression.”

V. CONVERSATIONS IN BOSTON

BY R.W. EMERSON.

“Do not scold me; they are guests of my eyes. Do not frown, — they want no bread; they are guests of my words.”

TARTAR ECLOGUES

CONVERSATIONS IN BOSTON.

*

In the year 1839, Margaret removed from Groton, and, with her mother and family, took a house at Jamaica Plain, five miles from Boston. In November of the next year the family removed to Cambridge, and rented a house there, near their old home. In 1841, Margaret took rooms for the winter in town, retaining still the house in Cambridge. And from the day of leaving Groton, until the autumn of 1844, when she removed to New York, she resided in Boston, or its immediate vicinity. Boston was her social centre. There were the libraries, galleries, and concerts which she loved; there were her pupils and her friends; and there were her tasks, and the openings of a new career.

I have vaguely designated some of the friends with whom she was on terms of intimacy at the time when I was first acquainted with her. But the range of her talents required an equal compass in her society; and she gradually added a multitude of names to the list. She knew already all the active minds at Cambridge; and has left a record of one good interview she had with Allston. She now became intimate with Doctor Channing, and interested him to that point in some of her studies, that, at his request, she undertook to render some selections of German philosophy into English for him. But I believe this attempt was soon abandoned. She found a valuable friend in the late Miss Mary Rotch, of New Bedford, a woman of great strength of mind, connected with the Quakers not less by temperament than by birth, and possessing the best lights of that once spiritual sect. At Newport, Margaret had made the acquaintance of an elegant scholar, in Mr. Calvert, of Maryland. In Providence, she had won, as by conquest, such a homage of attachment, from young and old, that her arrival there, one day, on her return from a visit to Bristol, was a kind of ovation. In Boston, she knew people of every class, — merchants, politicians, scholars,

artists, women, the migratory genius, and the rooted capitalist, — and, amongst all, many excellent people, who were every day passing, by new opportunities, conversations, and kind offices, into the sacred circle of friends. The late Miss Susan Burley had many points of attraction for her, not only in her elegant studies, but also in the deep interest which that lady took in securing the highest culture for women. She was very well read, and, avoiding abstractions, knew how to help herself with examples and facts. A friendship that proved of great importance to the next years was that established with Mr. George Ripley; an accurate scholar, a man of character, and of eminent powers of conversation, and already then deeply engaged in plans of an expansive practical bearing, of which the first fruit was the little community which nourished for a few years at Brook Farm. Margaret presently became connected with him in literary labors, and, as long as she remained in this vicinity, kept up her habits of intimacy with the colonists of Brook Farm. At West-Roxbury, too, she knew and prized the heroic heart, the learning and wit of Theodore Parker, whose literary aid was, subsequently, of the first importance to her. She had an acquaintance, for many years, — subject, no doubt, to alternations of sun and shade, — with Mr. Alcott. There was much antagonism in their habitual views, but each learned to respect the genius of the other. She had more sympathy with Mr. Alcott's English friend, Charles Lane, an ingenious mystic, and bold experimenter in practical reforms, whose dexterity and temper in debate she frankly admired, whilst his asceticism engaged her reverence. Neither could some marked difference of temperament remove her from the beneficent influences of Miss Elizabeth Peabody, who, by her constitutional hospitality to excellence, whether mental or moral, has made her modest abode for so many years the inevitable resort of studious feet, and a private theatre for the exposition of every question of letters, of philosophy, of ethics, and of art.

The events in Margaret's life, up to the year 1840, were few, and not of that dramatic interest which readers love. Of the few events of her bright and blameless years, how many are private, and must remain so. In reciting the story of an affectionate and passionate woman, the voice lowers itself to a whisper, and becomes inaudible. A woman in our society finds her safety and happiness in exclusions and privacies. She congratulates herself when she is not called to the market, to the courts, to the polls, to the stage, or to the orchestra. Only the most extraordinary genius can make the career of an artist secure and agreeable to her. Prescriptions almost invincible the female lecturer or professor of any science must encounter; and, except on points where the charities which are left to women as their legitimate province interpose against the ferocity of laws, with us a female politician is unknown. Perhaps this fact, which so dangerously

narrows the career of a woman, accuses the tardiness of our civility, and many signs show that a revolution is already on foot.

Margaret had no love of notoriety, or taste for eccentricity, to goad her, and no weak fear of either. Willingly she was confined to the usual circles and methods of female talent. She had no false shame. Any task that called out her powers was good and desirable. She wished to live by her strength. She could converse, and teach, and write. She took private classes of pupils at her own house. She organized, with great success, a school for young ladies at Providence, and gave four hours a day to it, during two years. She translated Eckermann's Conversations with Goethe, and published in 1839. In 1841, she translated the Letters of Gunderode and Bettine, and published them as far as the sale warranted the work. In 1843, she made a tour to Lake Superior and to Michigan, and published an agreeable narrative of it, called "Summer on the Lakes."

Apparently a more pretending, but really also a private and friendly service, she edited the "Dial," a quarterly journal, for two years from its first publication in 1840. She was eagerly solicited to undertake the charge of this work, which, when it began, concentrated a good deal of hope and affection. It had its origin in a club of speculative students, who found the air in America getting a little close and stagnant; and the agitation had perhaps the fault of being too secondary or bookish in its origin, or caught not from primary instincts, but from English, and still more from German books. The journal was commenced with much hope, and liberal promises of many coöperators. But the workmen of sufficient culture for a poetical and philosophical magazine were too few; and, as the pages were filled by unpaid contributors, each of whom had, according to the usage and necessity of this country, some paying employment, the journal did not get his best work, but his second best. Its scattered writers had not digested their theories into a distinct dogma, still less into a practical measure which the public could grasp; and the magazine was so eclectic and miscellaneous, that each of its readers and writers valued only a small portion of it. For these reasons it never had a large circulation, and it was discontinued after four years. But the Dial betrayed, through all its juvenility, timidity, and conventional rubbish, some sparks of the true love and hope, and of the piety to spiritual law, which had moved its friends and founders, and it was received by its early subscribers with almost a religious welcome. Many years after it was brought to a close, Margaret was surprised in England by very warm testimony to its merits; and, in 1848, the writer of these pages found it holding the same affectionate place in many a private bookshelf in England and Scotland, which it had secured at home. Good or bad, it cost a good deal of precious labor from

those who served it, and from Margaret most of all. As editor, she received a compensation for the first years, which was intended to be two hundred dollars *per annum*, but which, I fear, never reached even that amount.

But it made no difference to her exertion. She put so much heart into it that she bravely undertook to open, in the *Dial*, the subjects which most attracted her; and she treated, in turn, Goethe, and Beethoven, the Rhine and the Romaic Ballads, the Poems of John Sterling, and several pieces of sentiment, with a spirit which spared no labor; and, when the hard conditions of journalism held her to an inevitable day, she submitted to jeopardizing a long-cherished subject, by treating it in the crude and forced article for the month. I remember, after she had been compelled by ill health to relinquish the journal into my hands, my grateful wonder at the facility with which she assumed the preparation of laborious articles, that might have daunted the most practised scribe.

But in book or journal she found a very imperfect expression of herself, and it was the more vexatious, because she was accustomed to the clearest and fullest. When, therefore, she had to choose an employment that should pay money, she consulted her own genius, as well as the wishes of a multitude of friends, in opening a class for conversation. In the autumn of 1839, she addressed the following letter, intended for circulation, to Mrs. George Ripley, in which her general design was stated: —

‘My dear friend: — The advantages of a weekly meeting, for conversation, might be great enough to repay the trouble of attendance, if they consisted only in supplying a point of union to well-educated and thinking women, in a city which, with great pretensions to mental refinement, boasts, at present, nothing of the kind, and where I have heard many, of mature age, wish for some such means of stimulus and cheer, and those younger, for a place where they could state their doubts and difficulties, with a hope of gaining aid from the experience or aspirations of others. And, if my office were only to suggest topics, which would lead to conversation of a better order than is usual at social meetings, and to turn back the current when digressing into personalities or common-places, so that what is valuable in the experience of each might be brought to bear upon all, I should think the object not unworthy of the effort.

‘But my ambition goes much further. It is to pass in review the departments of thought and knowledge, and endeavor to place them in due relation to one another in our minds. To systematize thought, and give a precision and clearness in which our sex are so deficient, chiefly, I think, because they have so few inducements to test and classify what they receive. To ascertain what pursuits are best suited to us, in our time and state of society, and how we may make best use of our means for building up the life of thought upon the life of action.

‘Could a circle be assembled in earnest, desirous to answer the questions, — What were we born to do? and how shall we do it? — which so few ever propose to themselves till their best years are gone by, I should think the undertaking a noble one, and, if my resources should prove sufficient to make me its moving spring, I should be willing to give to it a large portion of those coming years, which will, as I hope, be my best. I look upon it with no blind enthusiasm, nor unlimited faith, but with a confidence that I have attained a distinct perception of means, which, if there are persons competent to direct them, can supply a great want, and promote really high objects. So far as I have tried them yet, they have met with success so much beyond my hopes, that my faith will not easily be shaken, nor my earnestness chilled. Should I, however, be disappointed in Boston, I could hardly hope that such a plan could be brought to bear on general society, in any other city of the United States. But I do not fear, if a good beginning can be made. I am confident that twenty persons cannot be brought together from better motives than vanity or pedantry, to talk upon such subjects as we propose, without finding in themselves great deficiencies, which they will be very desirous to supply.

‘Should the enterprise fail, it will be either from incompetence in me, or that sort of vanity in them which wears the garb of modesty. On the first of these points, I need not speak. I cannot be supposed to have felt so much the wants of others, without feeling my own still more deeply. And, from the depth of this feeling, and the earnestness it gave, such power as I have yet exerted has come. Of course, those who are inclined to meet me, feel a confidence in me, and should they be disappointed, I shall regret it not solely or most on my own account. I have not given my gauge without measuring my capacity to sustain defeat. For the other, I know it is very hard to lay aside the shelter of vague generalities, the art of coterie criticism, and the “delicate disdains” of *good society*, and fearlessly meet the light, even though it flow from the sun of truth. Yet, as, without such generous courage, nothing of value can be learned or done, I hope to see many capable of it; willing that others should think their sayings crude, shallow, or tasteless, if, by such unpleasant means, they may attain real health and vigor, which need no aid from rouge or candle-light, to brave the light of the world.

‘Since I saw you, I have been told of persons who are desirous to join the class, “if only they need not talk.” I am so sure that the success of the whole depends on conversation being general, that I do not wish any one to come, who does not intend, if possible, to take an active part. No one will be forced, but those who do not talk will not derive the same advantages with those who openly state their impressions, and can consent to have it known that they learn by

blundering, as is the destiny of man here below. And general silence, or side talks, would paralyze me. I should feel coarse and misplaced, were I to harangue over-much. In former instances, I have been able to make it easy and even pleasant, to twenty-five out of thirty, to bear their part, to question, to define, to state, and examine opinions. If I could not do as much now, I should consider myself as unsuccessful, and should withdraw. But I shall expect communication to be effected by degrees, and to do a great deal myself at the first meetings. My method has been to open a subject, — for instance, Poetry, as expressed in —

External Nature;

The life of man;

Literature;

The fine arts;

or, The history of a nation to be studied in —

Its religious and civil institutions;

Its literature and arts;

The characters of its great men;

and, after as good a general statement as I know how to make, select a branch of the subject, and lead others to give their thoughts upon it. When they have not been successful in verbal utterance of their thoughts, I have asked them to attempt it in writing. At the next meeting, I would read these “skarts of pen and ink” aloud, and canvass their adequacy, without mentioning the names of the writers. I found this less necessary, as I proceeded, and my companions attained greater command both of thought and language; but for a time it was useful, and may be now. Great advantage in point of discipline may be derived from even this limited use of the pen.

‘I do not wish, at present, to pledge myself to any course of subjects. Generally, I may say, they will be such as literature and the arts present in endless profusion. Should a class be brought together, I should wish, first, to ascertain our common ground, and, in the course of a few meetings, should see whether it be practicable to follow out the design in my mind, which, as yet, would look too grand on paper.

‘Let us see whether there will be any organ, before noting down the music to which it may give breath.’

Accordingly, a class of ladies assembled at Miss Peabody’s rooms, in West Street, on the 6th November, 1839. Twenty-five were present, and the circle comprised some of the most agreeable and intelligent women to be found in Boston and its neighborhood. The following brief report of this first day’s

meeting remains: —

‘Miss Fuller enlarged, in her introductory conversation, on the topics which she touched in her letter to Mrs. Ripley.

‘Women are now taught, at school, all that men are; they run over, superficially, even *more* studies, without being really taught anything. When they come to the business of life, they find themselves inferior, and all their studies have not given them that practical good sense, and mother wisdom, and wit, which grew up with our grandmothers at the spinning-wheel. But, with this difference; men are called on, from a very early period, to reproduce all that they learn. Their college exercises, their political duties, their professional studies, the first actions of life in any direction, call on them to put to use what they have learned. But women learn without any attempt to reproduce. Their only reproduction is for purposes of display.

‘It is to supply this defect,’ Miss Fuller said, ‘that these conversations have been planned. She was not here to teach; but she had had some experience in the management of such a conversation as was now proposed; she meant to give her view on each subject, and provoke the thoughts of others.

‘It would be best to take subjects on which we know words, and have vague impressions, and compel ourselves to define those words. We should have, probably, mortifications to suffer; but we should be encouraged by the rapid gain that comes from making a simple and earnest effort for expression.’

Miss Fuller had proposed the Grecian Mythology as the subject of the first conversations, and now gave her reasons for the choice.

‘It is quite separated from all exciting local subjects. It is serious, without being solemn, and without excluding any mode of intellectual action; it is playful, as well as deep. It is sufficiently wide, for it is a complete expression of the cultivation of a nation. It is objective and tangible. It is, also, generally known, and associated with all our ideas of the arts.

‘It originated in the eye of the Greek. He lived out of doors: his climate was genial, his senses were adapted to it. He was vivacious and intellectual, and personified all he beheld. He *saw* the oreads, naiads, nereids. Their forms, as poets and painters give them, are the very lines of nature humanized, as the child’s eye sees faces in the embers or in the clouds.

‘Other forms of the mythology, as Jupiter, Juno, Apollo, are great instincts, or ideas, or facts of the internal constitution, separated and personified.’

After exhibiting their enviable mental health, and rebutting the cavils of some of the speakers, — who could not bear, in Christian times, by Christian ladies, that heathen Greeks should be envied, — Miss Fuller declared,

‘that she had no desire to go back, and believed we have the elements of a

deeper civilization; yet, the Christian was in its infancy; the Greek in its maturity; nor could she look on the expression of a great nation's intellect, as insignificant. These fables of the Gods were the result of the universal sentiments of religion, aspiration, intellectual action, of a people, whose political and æsthetic life had become immortal; and we must leave off despising, if we would begin to learn.'

The reporter closes her account by saying:— "Miss Fuller's thoughts were much illustrated, and all was said with the most captivating address and grace, and with beautiful modesty. The position in which she placed herself with respect to the rest, was entirely ladylike, and companionable. She told what she intended, the earnest purpose with which she came, and, with great tact, indicated the indiscretions that might spoil the meeting."

Here is Margaret's own account of the first days.

TO R.W.E.

'25th Nov., 1839. — My class is prosperous. I was so fortunate as to rouse, at once, the tone of simple earnestness, which can scarcely, when once awakened, cease to vibrate. All seem in a glow, and quite as receptive as I wish. They question and examine, yet follow leadings; and thoughts, not opinions, have ruled the hour every time. There are about twenty-five members, and every one, I believe, full of interest. The first time, ten took part in the conversation; the last, still more. Mrs. ——— came out in a way that surprised me. She seems to have shaken off a wonderful number of films. She showed pure vision, sweet sincerity, and much talent. Mrs. ——— ——— keeps us in good order, and takes care that Christianity and morality are not forgotten. The first day's topic was, the genealogy of heaven and earth; then the Will, (Jupiter); the Understanding, (Mercury): the second day's, the celestial inspiration of genius, perception, and transmission of divine law, (Apollo); the terrene inspiration, the impassioned abandonment of genius, (Bacchus). Of the thunderbolt, the caduceus, the ray, and the grape, having disposed as well as might be, we came to the wave, and the sea-shell it moulds to Beauty, and Love her parent and her child.

'I assure you, there is more Greek than Bostonian spoken at the meetings; and we may have pure honey of Hymettus to give you yet.'

To another friend she wrote: —

'The circle I meet interests me. So even devoutly thoughtful seems their spirit, that, from the very first, I took my proper place, and never had the feeling I dreaded, of display, of a paid Corinne. I feel as I would, truly a teacher and a guide. All are intelligent; five or six have talent. But I am never driven home for

ammunition; never put to any expense; never truly called out. What I have is always enough; though I feel how superficially I am treating my subject.'

Here is an extract from the letter of a lady, who joined the class, for the first time, at the eighth meeting, to her friend in New Haven: —

“Christmas made a holiday for Miss Fuller’s class, but it met on Saturday, at noon. As I sat there, my heart overflowed with joy at the sight of the bright circle, and I longed to have you by my side, for I know not where to look for so much character, culture, and so much love of truth and beauty, in any other circle of women and girls. The names and faces would not mean so much to you as to me, who have seen more of the lives, of which they are the sign. Margaret, beautifully dressed, (don’t despise that, for it made a fine picture,) presided with more dignity and grace than I had thought possible. The subject was Beauty. Each had written her definition, and Margaret began with reading her own. This called forth questions, comments, and illustrations, on all sides. The style and manner, of course, in this age, are different, but the question, the high point from which it was considered, and the earnestness and simplicity of the discussion, as well as the gifts and graces of the speakers, gave it the charm of a Platonic dialogue. There was no pretension or pedantry in a word that was said. The tone of remark and question was simple as that of children in a school class; and, I believe, every one was gratified.”

The conversations thus opened proceeded with spirit and success. Under the mythological forms, room was found for opening all the great questions, on which Margaret and her friends wished to converse. Prometheus was made the type of Pure Reason; Jupiter, of Will; Juno, the passive side of the same, or Obstinacy; Minerva, Intellectual Power, Practical Reason; Mercury, Executive Power, Understanding; Apollo was Genius, the Sun; Bacchus was Geniality, the Earth’s answer. “Apollo and Bacchus were contrasted,” says the reporter. “Margaret unfolded her idea of Bacchus. His whole life was triumph. Born from fire; a divine frenzy; the answer of the earth to the sun, — of the warmth of joy to the light of genius. He is beautiful, also; not severe in youthful beauty, like Apollo; but exuberant, — liable to excess. She spoke of the fables of his destroying Pentheus, &c., and suggested the interpretations. This Bacchus was found in Scripture. The Indian Bacchus is glowing; he is the genial apprehensive power; the glow of existence; mere joy.”

Venus was Grecian womanhood, instinctive; Diana, chastity; Mars, Grecian manhood, instinctive. Venus made the name for a conversation on Beauty, which was extended through four meetings, as it brought in irresistibly the related topics of poetry, genius, and taste. Neptune was Circumstance; Pluto, the Abyss, the Undeveloped; Pan, the glow and sportiveness and music of Nature; Ceres,

the productive power of Nature; Proserpine, the Phenomenon.

Under the head of Venus, in the fifth conversation, the story of Cupid and Psyche was told with fitting beauty, by Margaret; and many fine conjectural interpretations suggested from all parts of the room. The ninth conversation turned on the distinctive qualities of poetry, discriminating it from the other fine arts. Rhythm and Imagery, it was agreed, were distinctive. An episode to dancing, which the conversation took, led Miss Fuller to give the thought that lies at the bottom of different dances. Of her lively description the following record is preserved: —

‘Gavottes, shawl dances, and all of that kind, are intended merely to exhibit the figure in as many attitudes as possible. They have no character, and say nothing, except, Look! how graceful I am!

‘The minuet is conjugal; but the wedlock is chivalric. Even so would Amadis wind slow, stately, calm, through the mazes of life, with Oriana, when he had made obeisances enough to win her for a partner.

‘English, German, Swiss, French, and Spanish dances all express the same things, though in very different ways. Love and its life are still the theme.

‘In the English country dance, the pair who have chosen one another, submit decorously to the restraints of courtship and frequent separations, cross hands, four go round, down outside, in the most earnest, lively, complacent fashion. If they join hands to go down the middle, and exhibit their union to all spectators, they part almost as soon as meet, and disdain not to give hands right and left to the most indifferent persons, like marriage in its daily routine.

‘In the Swiss, the man pursues, stamping with energy, marking the time by exulting flings, or snapping of the fingers, in delighted confidence of succeeding at last; but the maiden coyly, demurely, foots it round, yet never gets out of the way, intending to be won.

‘The German asks his *madchen* if she will, with him, for an hour forget the cares and common-places of life in a tumult of rapturous sympathy, and she smiles with Saxon modesty her *Ja*. He sustains her in his arms; the music begins. At first, in willing mazes they calmly imitate the planetary orbs, but the melodies flow quicker, their accordant hearts beat higher, and they whirl at last into giddy raptures, and dizzy evolutions, which steal from life its free-will and self-collection, till nothing is left but mere sensation.

‘The French couple are somewhat engaged with one another, but almost equally so with the world around them. They think it well to vary existence with plenty of coquetry and display. First, the graceful reverence to one another, then to their neighbors. Exhibit your grace in the *chassé*, — made apparently solely

for the purpose of *déchasséing*; — then civil intimacy between the ladies, in *la chaine*, then a decorous promenade of partners, then right and left with all the world, and balance, &c. The quadrille also offers opportunity for talk. Looks and sympathetic motions are not enough for our Parisian friends, unless eked out by words.

‘The impassioned bolero and fandango are the dances for me. They are not merely loving, but living; they express the sweet Southern ecstasy at the mere gift of existence. These persons are together, they live, they are beautiful; how can they say this in sufficiently plain terms? — I love, I live, I am beautiful! — I put on my festal dress to do honor to my happiness; I shake my castanets, that my hands, too, may be busy; *I felice, — felicissima!*’

This first series of conversations extended to thirteen, the class meeting once a week at noon, and remaining together for two hours. The class were happy, and the interest increased. A new series of thirteen more weeks followed, and the general subject of the new course was “the Fine Arts.” A few fragmentary notes only of these hours have been shown me, but all those who bore any part in them testify to their entire success. A very competent witness has given me some interesting particulars: —

“Margaret used to come to the conversations very well dressed, and, altogether, looked sumptuously. She began them with an exordium, in which she gave her leading views; and those exordiums were excellent, from the elevation of the tone, the ease and flow of discourse, and from the tact with which they were kept aloof from any excess, and from the gracefulness with which they were brought down, at last, to a possible level for others to follow. She made a pause, and invited the others to come in. Of course, it was not easy for every one to venture her remark, after an eloquent discourse, and in the presence of twenty superior women, who were all inspired. But whatever was said, Margaret knew how to seize the good meaning of it with hospitality, and to make the speaker feel glad, and not sorry, that she had spoken. She showed herself thereby fit to preside at such meetings, and imparted to the susceptible a wonderful reliance on her genius.”

In her writing she was prone to spin her sentences without a sure guidance, and beyond the sympathy of her reader. But in discourse, she was quick, conscious of power, in perfect tune with her company, and would pause and turn the stream with grace and adroitness, and with so much spirit, that her face beamed, and the young people came away delighted, among other things, with “her beautiful looks.” When she was intellectually excited, or in high animal spirits, as often happened, all deformity of features was dissolved in the power of the expression. So I interpret this repeated story of sumptuousness of dress,

that this appearance, like her reported beauty, was simply an effect of a general impression of magnificence made by her genius, and mistakenly attributed to some external elegance; for I have been told by her most intimate friend, who knew every particular of her conduct at that time, that there was nothing of special expense or splendor in her toilette.

The effect of the winter's work was happiest. Margaret was made intimately known to many excellent persons.[A] In this company of matrons and maids, many tender spirits had been set in ferment. A new day had dawned for them; new thoughts had opened; the secret of life was shown, or, at least, that life had a secret. They could not forget what they had heard, and what they had been surprised into saying. A true refinement had begun to work in many who had been slaves to trifles. They went home thoughtful and happy, since the steady elevation of Margaret's aim had infused a certain unexpected greatness of tone into the conversation. It was, I believe, only an expression of the feeling of the class, the remark made, perhaps at the next year's course, by a lady of eminent powers, previously by no means partial to Margaret, and who expressed her frank admiration on leaving the house:— "I never heard, read of, or imagined a conversation at all equal to this we have now heard."

The strongest wishes were expressed, on all sides, that the conversations should be renewed at the beginning of the following winter. Margaret willingly consented; but, as I have already intimated, in the summer and autumn of 1840, she had retreated to some interior shrine, and believed that she came into life and society with some advantage from this devotion.

Of this feeling the new discussion bore evident traces. Most of the last year's class returned, and new members gave in their names. The first meeting was holden on the twenty-second of November, 1840. By all accounts it was the best of all her days. I have again the notes, taken at the time, of the excellent lady at whose house it was held, to furnish the following sketch of the first and the following meetings. I preface these notes by an extract from a letter of Margaret.

TO W.H.C.

'Sunday, Nov. 8th, 1840. — On Wednesday I opened with my class. It was a noble meeting. I told them the great changes in my mind, and that I could not be sure they would be satisfied with me now, as they were when I was in deliberate possession of myself. I tried to convey the truth, and though I did not arrive at any full expression of it, they all, with glistening eyes, seemed melted into one love. Our relation is now perfectly true, and I do not think they will ever interrupt me. — sat beside me, all glowing; and the moment I had finished,

she began to speak. She told me afterwards, she was all kindled, and none there could be strangers to her more. I was really delighted by the enthusiasm of Mrs. — . I did not expect it. All her best self seemed called up, and she feels that these meetings will be her highest pleasure. — , too, was most beautiful. I went home with Mrs. F., and had a long attack of nervous headache. She attended anxiously on me, and asked if it would be so all winter. I said, if it were I did not care; and truly I feel just now such a separation from pain and illness, — such a consciousness of true life, while suffering most, — that pain has no effect but to steal some of my time.’

[Footnote A: A friend has furnished me with the names of so many of the ladies as she recollects to have met, at one or another time, at these classes. Some of them were perhaps only occasional members. The list recalls how much talent, beauty, and worth were at that time constellated here: —

Mrs. George Bancroft, Mrs. Barlow, Miss Burley, Mrs. L.M. Child, Miss Mary Channing, Miss Sarah Clarke, Mrs. E.P. Clark, Miss Dorr, Mrs. Edwards, Mrs. R.W. Emerson, Mrs. Farrar, Miss S.J. Gardiner, Mrs. R.W. Hooper, Mrs. S. Hooper, Miss Haliburton, Miss Howes, Miss E. Hoar, Miss Marianne Jackson, Mrs. T. Lee, Miss Littlehale, Mrs. E.G. Loring, Mrs. Mack, Mrs. Horace Mann, Mrs. Newcomb, Mrs. Theodore Parker, Miss E.P. Peabody, Miss S. Peabody, Mrs. S. Putnam, Mrs. Phillips, Mrs. Josiah Quincy, Miss B. Randall, Mrs. Samuel Ripley, Mrs. George Ripley, Mrs. George Russell, Miss Ida Russell, Mrs. Frank Shaw, Miss Anna B. Shaw, Miss Caroline Sturgis, Miss Tuckerman, Miss Maria White, Mrs. S.G. Ward, Miss Mary Ward, Mrs. W. Whiting.]

CONVERSATIONS ON THE FINE ARTS.

“Miss Fuller’s fifth conversation was pretty much a monologue of her own. The company collected proved much larger than any of us had anticipated: a chosen company, — several persons from homes out of town, at considerable inconvenience; and, in one or two instances, fresh from extreme experiences of joy and grief, — which Margaret felt a very grateful tribute to her. She knew no one came for experiment, but all in earnest love and trust, and was moved by it quite to the heart, which threw an indescribable charm of softness over her brilliancy. It is sometimes said, that women never are so lovely and enchanting in the company of their own sex, merely, but it requires the other to draw them out. Certain it is that Margaret never appears, when I see her, either so brilliant and deep in thought, or so desirous to please, or so modest, or so heart-touching,

as in this very party. Well, she began to say how gratifying it was to her to see so many come, because all knew why they came, — that it was to learn from each other and ourselves the highest ends of life, where there could be no excitements and gratifications of personal ambition, &c. She spoke of herself, and said she felt she had undergone changes in her own mind since the last winter, as doubtless we all felt we had done; that she was conscious of looking at all things less objectively, — more from the law with which she identified herself. This, she stated, was the natural progress of our individual being, when we did not hinder its development, to advance from objects to law, from the circumference of being, where we found ourselves at our birth, to the centre.

“This advance was enacted poesy. We could not, in our individual lives, amid the disturbing influences of other wills, which had as much right to their own action as we to ours, enact poetry entirely; the discordant, the inferior, the prose, would intrude, but we should always keep in mind that poetry of life was not something aside, — a path that might or might not be trod, — it was the only path of the true soul; and prose you may call the deviation. We might not always be poetic in life, but we might and should be poetic in our thought and intention. The fine arts were one compensation for the necessary prose of life. The man who could not write his thought of beauty in his life, — the materials of whose life would not work up into poetry, — wrote it in stone, drew it on canvas, breathed it in music, or built it in lofty rhyme. In this statement, however, she guarded her meaning, and said that to seek beauty was to miss it often. We should only seek to live as harmoniously with the great laws as our social and other duties permitted, and solace ourselves with poetry and the fine arts.”

I find a further record by the same friendly scribe, which seems a second and enlarged account of the introductory conversation, or else a sketch of the course of thought which ran through several meetings, and which very naturally repeated occasionally the same thoughts. I give it as I find it: —

“She then recurred to the last year’s conversations; and, first, the Grecian mythologies, which she looked at as symbolical of a deeper intellectual and æsthetic life than we were wont to esteem it, when looking at it from a narrow religious point of view. We had merely skimmed along the deeper study. She spoke of the conversations on the different part played by Inspiration and Will in the works of man, and stated the different views of inspiration, — how some had felt it was merely perception; others apprehended it as influx upon the soul from the soul-side of its being. Then she spoke of the conversation upon poesy as the ground of all the fine arts, and also of the true art of life; it being not merely truth, not merely good, but the beauty which integrates both. On this poesy, she dwelt long, aiming to show how life, — perfect life, — could be the only perfect

manifestation of it. Then she spoke of the individual as surrounded, however, by *prose*, — so we may here call the manifestation of the temporary, in opposition to the eternal, always trenching on it, and circumscribing and darkening. She spoke of the acceptance of this limitation, but it should be called by the right name, and always measured; and we should inwardly cling to the truth that poesy was the natural life of the soul; and never yield inwardly to the common notion that poesy was a luxury, out of the common track; but maintain in word and life that prose carried the soul out of its track; and then, perhaps, it would not injure us to walk in these by-paths, when forced thither. She admitted that prose was the necessary human condition, and quickened our life indirectly by necessitating a conscious demand on the source of life. In reply to a remark I made, she very strongly stated the difference between a poetic and a *dilettante* life, and sympathized with the sensible people who were tired of hearing all the young ladies of Boston sighing like furnace after being beautiful. Beauty was something very different from prettiness, and a microscopic vision missed the grand whole. The fine arts were our compensation for not being able to live out our poesy, amid the conflicting and disturbing forces of this moral world in which we are. In sculpture, the heights to which our being comes are represented; and its nature is such as to allow us to leave out all that vulgarizes, — all that bridges over to the actual from the ideal. She dwelt long upon sculpture, which seems her favorite art. That was grand, when a man first thought to engrave his idea of man upon a stone, the most unyielding and material of materials, — the backbone of this phenomenal earth, — and, when he did not succeed, that he persevered; and so, at last, by repeated efforts, the Apollo came to be.

“But, no; music she thought the greatest of arts, — expressing what was most interior, — what was too fine to be put into any material grosser than air; conveying from soul to soul the most secret motions of feeling and thought. This was the only fine art which might be thought to be nourishing now. The others had had their day. This was advancing upon a higher intellectual ground.

“Of painting she spoke, but not so well. She seemed to think painting worked more by illusion than sculpture. It involved more prose, from its representing more objects. She said nothing adequate about *color*.

“She dwelt upon the histrionic art as the most complete, its organ being the most flexible and powerful.

“She then spoke of life, as the art, of which these all were beautiful symbols; and said, in recurring to her opinions expressed last winter, of Dante and Wordsworth, that she had taken another view, deeper, and more in accordance with some others which were then expressed. She acknowledged that

Wordsworth had done more to make all men poetical, than perhaps any other; that he was the poet of reflection; that where he failed to poetize his subject, his simple faith intimated to the reader a poetry that he did not find in the book. She admitted that Dante's Narrative was instinct with the poetry concentrated often in single words. She uttered her old heresies about Milton, however, unmodified.

"I do not remember the transition to modern poetry and Milnes; but she read (very badly indeed) the Legendary Tale.

"We then had three conversations upon Sculpture, one of which was taken up very much in historical accounts of the sculpture of the ancients, in which color was added to form, and which seemed to prove that they were not, after all, sufficiently intellectual to be operated on by form exclusively. The question, of course, arose whether there was a modern sculpture, and why not. This led us to speak of the Greek sculpture as growing naturally out of their life and religion, and how alien it was to our life and to our religion. The Swiss lion, carved by Thorwaldsen out of the side of a mountain rock, was described as a natural growth. Those who had seen it described it; and Mrs. — spoke of it. She was also led to the story of her acquaintance with Thorwaldsen, and drew tears from many eyes with her natural eloquence.

"Mrs. C. asked, if sculpture could express as well as painting the idea of immortality.

"Margaret thought the Greek art expressed immortality as much as Christian art, but did not throw it into the future, by preëminence. They expressed it in the present, by casting out of the mortal body every expression of infirmity and decay. The idealization of the human form makes a God. The fact that man can conceive and express this perfection of being, is as good a witness to immortality, as the look of aspiration in the countenance of a Magdalen.

"It is quite beyond the power of my memory to recall all the bright utterances of Margaret, in these conversations on Sculpture. It was a favorite subject with her. Then came two or three conversations on Painting, in which it seemed to be conceded that color expressed passion, whilst sculpture more severely expressed thought: yet painting did not exclude the expression of thought, or sculpture that of feeling, — witness Niobe, — but it must be an universal feeling, like the maternal sentiment."

*

"*March 22, 1841.* — The question of the day was, What is life?

"Let us define, each in turn, our idea of living. Margaret did not believe we had, any of us, a distinct idea of life.

“A.S. thought so great a question ought to be given for a written definition. ‘No,’ said Margaret, ‘that is of no use. When we go away to think of anything, we never do think. We all talk of life. We all have some thought now. Let us tell it. C ——, what is life?’

“C —— replied,— ‘It is to laugh, or cry, according to our organization.’

“‘Good,’ said Margaret, ‘but not grave enough. Come, what is life? I know what I think; I want you to find out what you think.’

“Miss P. replied,— ‘Life is division from one’s principle of life in order to a conscious reorganization. We are cut up by time and circumstance, in order to feel our reproduction of the eternal law.’

“Mrs. E.,— ‘We live by the will of God, and the object of life is to submit,’ and went on into Calvinism.

“Then came up all the antagonisms of Fate and Freedom.

“Mrs. H. said,— ‘God created us in order to have a perfect sympathy from us as free beings.’

“Mrs. A.B. said she thought the object of life was to attain absolute freedom. At this Margaret immediately and visibly kindled.

“C.S. said,— ‘God creates from the fulness of life, and cannot but create; he created us to overflow, without being exhausted, because what he created, necessitated new creation. It is not to make us happy, but creation is his happiness and ours.’

“Margaret was then pressed to say what she considered life to be.

“Her answer was so full, clear, and concise, at once, that it cannot but be marred by being drawn through the scattering medium of my memory. But here are some fragments of her satisfying statement.

“She began with God as Spirit, Life, so full as to create and love eternally, yet capable of pause. Love and creativeness are dynamic forces, out of which we, individually, as creatures, go forth bearing his image, that is, having within our being the same dynamic forces, by which we also add constantly to the total sum of existence, and shaking off ignorance, and its effects, and by becoming more ourselves, i.e., more divine; — destroying sin in its principle, we attain to absolute freedom, we return to God, conscious like himself, and, as his friends, giving, as well as receiving, felicity forevermore. In short, we become gods, and able to give the life which we now feel ourselves able only to receive.

“On Saturday morning, Mrs. L.E. and Mrs. E.H. were present, and begged Margaret to repeat the statement concerning life, with which she closed the last conversation. Margaret said she had forgotten every word she said. She must have been inspired by a good genius, to have so satisfied everybody. — but the good genius had left her. She would try, however, to say what she thought, and

trusted it would resemble what she had said already. She then went into the matter, and, true enough, she did not use a single word she used before.”

The fame of these conversations spread wide through all families and social circles of the ladies attending, and the golden report they gave, led to a proposal, that Margaret should undertake an evening class, of four or five lessons, to which gentlemen should also be admitted. This was put in effect, in the course of the winter, and I had myself the pleasure of assisting at one — the second — of these soirées. The subject was Mythology, and several gentlemen took part in it. Margaret spoke well, — she could not otherwise, — but I remember that she seemed encumbered, or interrupted, by the headiness or incapacity of the men, whom she had not had the advantage of training, and who fancied, no doubt, that, on such a question, they, too, must assert and dogmatize.

But, how well or ill they fared, may still be known; since the same true hand which reported for the Ladies’ Class, drew up, at the time, the following note of the Evenings of Mythology. My distance from town, and engagements, prevented me from attending again. I was told that on the preceding and following evenings the success was more decisive.

“Margaret’s plan, in these conversations, was a very noble one, and, had it been seconded, as she expected, they would have been splendid. She thought, that, by admitting gentlemen, who had access, by their classical education, to the whole historical part of the mythology, her own comparative deficiency, as she felt it, in this part of learning, would be made up; and that taking her stand on the works of art, which were the final development in Greece of these multifarious fables, the whole subject might be swept from zenith to nadir. But all that depended on others entirely failed. Mr. W. contributed some isolated facts, — told the etymology of names, and cited a few fables not so commonly known as most; but, even in the point of erudition, which Margaret did not profess, on the subject, she proved the best informed of the party, while no one brought an idea, except herself.

“Her general idea was, that, upon the Earth-worship and Sabæanism of earlier ages, the Grecian genius acted to humanize and idealize, but, still, with some regard to the original principle. What was a seed, or a root, merely, in the Egyptian mind, became a flower in Greece, — Isis, and Osiris, for instance, are reproduced in Ceres and Proserpine, with some loss of generality, but with great gain of beauty; Hermes, in Mercury, with only more grace of form, though with great loss of grandeur; but the loss of grandeur was also an advance in philosophy, in this instance, the brain in the hand being the natural consequence of the application of Idea to practice, — the Hermes of the Egyptians.

“I do not feel that the class, by their apprehension of Margaret, do any justice

to the scope and depth of her views. They come, — myself among the number, — I confess, — to be entertained; but she has a higher purpose. She, amid all her infirmities, studies and thinks with the seriousness of one upon oath, and there has not been a single conversation this winter, in either class, that had not in it the spirit which giveth life. Just in proportion to the importance of the subject, does she tax her mind, and say what is most important; while, of necessity, nothing is reported from the conversations but her brilliant sallies, her occasional paradoxes of form, and, sometimes, her impatient reacting upon dulness and frivolity. In particular points, I know, some excel her; in particular departments I sympathize more with some other persons; but, take her as a whole, she has the most to bestow on others by conversation of any person I have ever known. I cannot conceive of any species of vanity living in her presence. She distances all who talk with her.

“Mr. E. only served to display her powers. With his sturdy reiteration of his uncompromising idealism, his absolute denial of the fact of human nature, he gave her opportunity and excitement to unfold and illustrate her realism and acceptance of conditions. What is so noble is, that her realism is transparent with idea, — her human nature is the germ of a divine life. She proceeds in her search after the unity of things, the divine harmony, not by exclusion, as Mr. E. does, but by comprehension, — and so, no poorest, saddest spirit, but she will lead to hope and faith. I have thought, sometimes, that her acceptance of evil was *too great*, — that her theory of the good to be educed proved too much. But in a conversation I had with her yesterday, I understood her better than I had done. ‘It might never be sin to us, at the moment,’ she said, ‘it must be an excess, on which conscience puts the restraint.’”

The classes thus formed were renewed in November of each year, until Margaret’s removal to New York, in 1844. But the notes of my principal reporter fail me at this point. Afterwards, I have only a few sketches from a younger hand. In November, 1841, the class numbered from twenty-five to thirty members: the general subject is stated as “Ethics.” And the influences on Woman seem to have been discussed under the topics of the Family, the School, the Church, Society, and Literature. In November, 1842, Margaret writes that the meetings have been unusually spirited, and congratulates herself on the part taken in them by Miss Burley, as ‘a presence so positive as to be of great value to me.’ The general subject I do not find. But particular topics were such as these:— “Is the ideal first or last; divination or experience?” “Persons who never awake to life in this world.” “Mistakes;” “Faith;” “Creeds;” “Woman;” “Dæmonology;” “Influence;” “Catholicism” (Roman); “The Ideal.”

In the winter of 1843-4, the general subject was “Education.” Culture,

Ignorance, Vanity, Prudence, Patience, and Health, appear to have been the titles of conversations, in which wide digressions, and much autobiographic illustration, with episodes on War, Bonaparte, Goethe, and Spinoza, were mingled. But the brief narrative may wind up with a note from Margaret on the last day.

'28th April, 1844. — It was the last day with my class. How noble has been my experience of such relations now for six years, and with so many and so various minds! Life is worth living, is it not?

'We had a most animated meeting. On bidding me good-bye, they all, and always, show so much good-will and love, that I feel I must really have become a friend to them. I was then loaded with beautiful gifts, accompanied with those little delicate poetic traits, of which I should delight to tell you, if we were near. Last came a beautiful bouquet, passion-flower, heliotrope, and soberer blooms. Then I went to take my repose on C — — 's sofa, and we had a most serene afternoon together.'

VOLUME II.

*

Only a learned and a manly soul
I purposed her, that should with even powers
The rock, the spindle, and the shears control
Of Destiny, and spin her own free hours.

BEN JONSON

Però che ogni diletto nostro e doglia
Sta in sì e nò saper, voler, potere;
Adunque quel sol può, che col dovere
Ne trae la ragion fuor di sua soglia.

Adunque tu, lettor di queste note,
S'a tè vuoi esser buono, e agli altri caro,
Vogli sempre poter quel che tu debbi.

BY W.H. CHANNING.

*

”Quando
Lo raggio della grazia, onde s'accende
Verace amore, e che poi cresce amando,
Moltiplicato in tè tanto risplende,
Che ti conduce su per quella scala,
U' senza risalir nessun discende,
Qual ti negasse 'l vin della sua fiàla
Por la tua sete, in libertà non fôra,
Se non com' acqua oh' al mar non si cala.”

DANTE.

”Weite Welt und breites Leben,
Langer Jahre redlich Streben,
Stets geforscht und stets gegründet,
Nie geschlossen, oft geründet,
Aeltestes bewahrt mit Treue,
Freundlich aufgefasstes Neue,
Heitern Sinn und reine Zwecke:
Nun! man kommt wohl eine Strecke.”

GOETHE.

”My purpose holds
To sail beyond the sunset, and the baths
Of all the western stars, until I die.
It may be that the gulfs will wash us down;
It may be we shall touch the Happy Isles.”

TENNYSON.

“Remember how august the heart is. It contains the temple not only of Love but of Conscience; and a whisper is heard from the extremity of one to the extremity

of the other.”

LANDOR

”If all the gentlest-hearted friends I knew
Concentred in one heart their gentleness,
That still grew gentler till its pulse was less
For life than pity, — I should yet be slow
To bring my own heart nakedly below
The palm of such a friend, that he should press
My false, ideal joy and fickle woe
Out to full light and knowledge.”

JAMAICA PLAIN

*

I.

FIRST IMPRESSIONS.

It was while Margaret was residing at Jamaica Plain, in the summer of 1839, that we first really met as friends, though for several years previous we had been upon terms of kindest mutual regard. And, as the best way of showing how her wonderful character opened upon me, the growth of our acquaintance shall be briefly traced.

The earliest recollection of Margaret is as a schoolmate of my sisters, in Boston. At that period she was considered a prodigy of talent and accomplishment; but a sad feeling prevailed, that she had been overtaken by her father, who wished to train her like a boy, and that she was paying the penalty for undue application, in nearsightedness, awkward manners, extravagant tendencies of thought, and a pedantic style of talk, that made her a butt for the ridicule of frivolous companions. Some seasons later, I call to mind seeing, at the "Commencements" and "Exhibitions" of Harvard University, a girl, plain in appearance, but of dashing air, who was invariably the centre of a listening group, and kept their merry interest alive by sparkles of wit and incessant small-talk. The bystanders called her familiarly, "Margaret," "Margaret Fuller;" for, though young, she was already noted for conversational gifts, and had the rare skill of attracting to her society, not spirited collegians only, but men mature in culture and of established reputation. It was impossible not to admire her fluency and fun; yet, though curiosity was piqued as to this entertaining personage, I never sought an introduction, but, on the contrary, rather shunned encounter with one so armed from head to foot in saucy sprightliness.

About 1830, however, we often met in the social circles of Cambridge, and I began to observe her more nearly. At first, her vivacity, decisive tone, downrightness, and contempt of conventional standards, continued to repel. She appeared too *intense* in expression, action, emphasis, to be pleasing, and wanting in that *retenue* which we associate with delicate dignity. Occasionally, also, words flashed from her of such scathing satire, that prudence counselled the keeping at safe distance from a body so surcharged with electricity. Then, again, there was an imperial — shall it be said imperious? — air, exacting deference to

her judgments and loyalty to her behests, that prompted pride to retaliatory measures. She paid slight heed, moreover, to the trim palings of etiquette, but swept through the garden-beds and into the doorway of one's confidence so cavalierly, that a reserved person felt inclined to lock himself up in his sanctum. Finally, to the coolly-scanning eye, her friendships wore a look of such romantic exaggeration, that she seemed to walk enveloped in a shining fog of sentimentalism. In brief, it must candidly be confessed, that I then suspected her of affecting the part of a Yankee Corinna.

But soon I was charmed, unaware, with the sagacity of her sallies, the profound thoughts carelessly dropped by her on transient topics, the breadth and richness of culture manifested in her allusions or quotations, her easy comprehension of new views, her just discrimination, and, above all, her *truthfulness*. "Truth at all cost," was plainly her ruling maxim. This it was that made her criticism so trenchant, her contempt of pretence so quick and stern, her speech so naked in frankness, her gaze so searching, her whole attitude so alert. Her estimates of men, books, manners, events, art, duty, destiny, were moulded after a grand ideal; and she was a severe judge from the very loftiness of her standard. Her stately deportment, border though it might on arrogance, but expressed high-heartedness. Her independence, even if haughty and rash, was the natural action of a self-centred will, that waited only fit occasion to prove itself heroic. Her earnestness to read the hidden history of others was the gauge of her own emotion. The enthusiasm that made her speech so affluent, when measured by the average scale, was the unconscious overflow of a poetic temperament. And the ardor of her friends' affection proved the faithfulness of her love. Thus gradually the mist melted away, till I caught a glimpse of her real self. We were one evening talking of American literature, — she contrasting its boyish crudity, half boastful, half timid, with the tempered, manly equipoise of thorough-bred European writers, and I asserting that in its mingled practicality and aspiration might be read bright auguries; when, betrayed by sympathy, she laid bare her secret hope of what Woman might be and do, as an author, in our Republic. The sketch was an outline only, and dashed off with a few swift strokes, but therein appeared her own portrait, and we were strangers no more.

It was through the medium of others, however, that at this time I best learned to appreciate Margaret's nobleness of nature and principle. My most intimate friend in the Theological School, James Freeman Clarke, was her constant companion in exploring the rich gardens of German literature; and from his descriptions I formed a vivid image of her industry, comprehensiveness, buoyancy, patience, and came to honor her intelligent interest in high problems of science, her aspirations after spiritual greatness, her fine æsthetic taste, her

religiousness. By power to quicken other minds, she showed how living was her own. Yet more near were we brought by common attraction toward a youthful visitor in our circle, the untouched freshness of whose beauty was but the transparent garb of a serene, confiding, and harmonious soul, and whose polished grace, at once modest and naïve, sportive and sweet, fulfilled the charm of innate goodness of heart. Susceptible in temperament, anticipating with ardent fancy the lot of a lovely and refined woman, and morbidly exaggerating her own slight personal defects, Margaret seemed to long, as it were, to transfuse with her force this nymph-like form, and to fill her to glowing with her own lyric fire. No drop of envy tainted the sisterly love, with which she sought by genial sympathy thus to live in another's experience, to be her guardian-angel, to shield her from contact with the unworthy, to rouse each generous impulse, to invigorate thought by truth incarnate in beauty, and with unfelt ministry to weave bright threads in her web of fate. Thus more and more Margaret became an object of respectful interest, in whose honor, magnanimity and strength I learned implicitly to trust.

Separation, however, hindered our growing acquaintance, as we both left Cambridge, and, with the exception of a few chance meetings in Boston and a ramble or two in the glens and on the beaches of Rhode Island, held no further intercourse till the summer of 1839, when, as has been already said, the friendship, long before rooted, grew up and leafed and bloomed.

II.

A CLUE.

*

I have no hope of conveying to readers my sense of the beauty of our relation, as it lies in the past with brightness falling on it from Margaret's risen spirit. It would be like printing a chapter of autobiography, to describe what is so grateful in memory, its influence upon one's self. And much of her inner life, as confidentially disclosed, could not be represented without betraying a sacred trust. All that can be done is to open the outer courts, and give a clue for loving hearts to follow. To such these few sentences may serve as a guide.

'When I feel, as I do this morning, the poem of existence, I am repaid for all trial. The bitterness of wounded affection, the disgust at unworthy care, the aching sense of how far deeds are transcended by our lowest aspirations, pass away as I lean on the bosom of Nature, and inhale new life from her breath. Could but love, like knowledge, be its own reward!'

‘Oftentimes I have found in those of my own sex more gentleness, grace, and purity, than in myself; but seldom the heroism which I feel within my own breast. I blame not those who think the heart cannot bleed because it is so strong; but little they dream of what lies concealed beneath the determined courage. Yet mine has been the Spartan sternness, smiling while it hides the wound. I long rather for the Christian spirit, which even on the cross prays, “Father, forgive them,” and rises above fortitude to heavenly satisfaction.’

*

‘Remember that only through aspirations, which sometimes make me what is called unreasonable, have I been enabled to vanquish unpropitious circumstances, and save my soul alive.’

*

‘All the good I have ever done has been by calling on every nature for its highest. I will admit that sometimes I have been wanting in gentleness, but never in tenderness, nor in noble faith.’

*

‘The heart which hopes and dares is also accessible to terror, and this falls upon it like a thunderbolt. It can never defend itself at the moment, it is so surprised. There is no defence but to strive for an equable temper of courageous submission, of obedient energy, that shall make assault less easy to the foe.

‘*This* is the dart within the heart, as well as I can tell it: — At moments, the music of the universe, which daily I am upheld by hearing, seems to stop. I fall like a bird when the sun is eclipsed, not looking for such darkness. The sense of my individual law — that lamp of life — flickers. I am repelled in what is most natural to me. I feel as, when a suffering child, I would go and lie with my face to the ground, to sob away my little life.’

*

‘In early years, when, though so frank as to the thoughts of the mind, I put no heart confidence in any human being, my refuge was in my journal. I have burned those records of my youth, with its bitter tears, and struggles, and aspirations. Those aspirations were high, and have gained only broader foundations and wider reach. But the leaves had done their work. For years to

write there, instead of speaking, had enabled me to soothe myself; and the Spirit was often my friend, when I sought no other. Once again I am willing to take up the cross of loneliness. Resolves are idle, but the anguish of my soul has been, deep. It will not be easy to profane life by rhetoric.'

*

'I woke thinking of the monks of La Trappe; — how could they bear their silence? When the game of life was lost for me, in youthful anguish I knew well the desire for that vow; but if I had taken it, my heart would have burned out my physical existence long ago.'

*

'Save me from plunging into the depths to learn the worst, or from being led astray by the winged joys of childish feeling. I pray for truth in proportion as there is strength to receive.'

*

'My law is incapable of a charter. I pass all bounds, and cannot do otherwise. Those whom it seems to me I am to meet again in the Ages, I meet, soul to soul, now. I have no knowledge of any circumstances except the degree of affinity.'

*

'I feel that my impatient nature needs the dark days. I would learn the art of limitation, without compromise, and act out my faith with a delicate fidelity. When loneliness becomes too oppressive, I feel Him drawing me nearer, to be soothed by the smile of an All-Intelligent Love. He will not permit the freedom essential to growth to be checked. If I can give myself up to Him, I shall not be too proud, too impetuous, neither too timid, and fearful of a wound or cloud.'

III.

TRANSCENDENTALISM.

*

The summer of 1839 saw the full dawn of the Transcendental movement in New

England. The rise of this enthusiasm was as mysterious as that of any form of revival; and only they who were of the faith could comprehend how bright was this morning-time of a new hope. Transcendentalism was an assertion of the inalienable integrity of man, of the immanence of Divinity in instinct. In part, it was a reaction against Puritan Orthodoxy; in part, an effect of renewed study of the ancients, of Oriental Pantheists, of Plato and the Alexandrians, of Plutarch's *Morals*, Seneca and Epictetus; in part, the natural product of the culture of the place and time. On the somewhat stunted stock of Unitarianism, — whose characteristic dogma was trust in individual reason as correlative to Supreme Wisdom, — had been grafted German Idealism, as taught by masters of most various schools, — by Kant and Jacobi, Fichte and Novalis, Schelling and Hegel, Schleiermacher and De Wette, by Madame de Stael, Cousin, Coleridge, and Carlyle; and the result was a vague yet exalting conception of the godlike nature of the human spirit. Transcendentalism, as viewed by its disciples, was a pilgrimage from the idolatrous world of creeds and rituals to the temple of the Living God in the soul. It was a putting to silence of tradition and formulas, that the Sacred Oracle might be heard through intuitions of the single-eyed and pure-hearted. Amidst materialists, zealots, and sceptics, the Transcendentalist believed in perpetual inspiration, the miraculous power of will, and a birthright to universal good. He sought to hold communion face to face with the unnameable Spirit of his spirit, and gave himself up to the embrace of nature's beautiful joy, as a babe seeks the breast of a mother. To him the curse seemed past; and love was without fear. "All mine is thine" sounded forth to him in ceaseless benediction, from flowers and stars, through the poetry, art, heroism of all ages, in the aspirations of his own genius, and the budding promise of the time. His work was to be faithful, as all saints, sages, and lovers of man had been, to Truth, as the very Word of God. His maxims were,— "Trust, dare and be; infinite good is ready for your asking; seek and find. All that your fellows can claim or need is that you should become, in fact, your highest self; fulfil, then, your ideal." Hence, among the strong, withdrawal to private study and contemplation, that they might be "alone with the Alone;" solemn yet glad devotedness to the Divine leadings in the inmost will; calm concentration of thought to wait for and receive wisdom; dignified independence, stern yet sweet, of fashion and public opinion; honest originality of speech and conduct, exempt alike from apology or dictation, from servility or scorn. Hence, too, among the weak, whimsies, affectation, rude disregard of proprieties, slothful neglect of common duties, surrender to the claims of natural appetite, self-indulgence, self-absorption, and self-idolatry.

By their very posture of mind, as seekers of the new, the Transcendentalists

were critics and “come-outers” from the old. Neither the church, the state, the college, society, nor even reform associations, had a hold upon their hearts. The past might be well enough for those who, without make-belief, could yet put faith in common dogmas and usages; but for them the matin-bells of a new day were chiming, and the herald-trump of freedom was heard upon the mountains. Hence, leaving ecclesiastical organizations, political parties, and familiar circles, which to them were brown with drought, they sought in covert nooks of friendship for running waters, and fruit from the tree of life. The journal, the letter, became of greater worth than the printed page; for they felt that systematic results were not yet to be looked for, and that in sallies of conjecture, glimpses and flights of ecstasy, the “Newness” lifted her veil to her votaries. Thus, by mere attraction of affinity, grew together the brotherhood of the “Like-minded,” as they were pleasantly nicknamed by outsiders, and by themselves, on the ground that no two were of the same opinion. The only password of membership to this association, which had no compact, records, or officers, was a hopeful and liberal spirit; and its chance conventions were determined merely by the desire of the caller for a “talk,” or by the arrival of some guest from a distance with a budget of presumptive novelties. Its “symposium” was a pic-nic, whereto each brought of his gains, as he felt prompted, a bunch of wild grapes from the woods, or bread-corn from his threshing-floor. The tone of the assemblies was cordial welcome for every one’s peculiarity; and scholars, farmers, mechanics, merchants, married women, and maidens, met there on a level of courteous respect. The only guest not tolerated was intolerance; though strict justice might add, that these “Illuminati” were as unconscious of their special cant as smokers are of the perfume of their weed, and that a professed declaration of universal independence turned out in practice to be rather oligarchic.

Of the class of persons most frequently found at these meetings Margaret has left the following sketch: —

“I am not mad, most noble Festus,” was Paul’s rejoinder, as he turned upon his vulgar censor with the grace of a courtier, the dignity of a prophet, and the mildness of a saint. But many there are, who, adhering to the faith of the soul with that unusual earnestness which the world calls “mad,” can answer their critics only by the eloquence of their characters and lives. Now, the other day, while visiting a person whose highest merit, so far as I know, is to save his pennies, I was astounded by hearing him allude to some of most approved worth among us, thus: “You know *we* consider *those men* insane.”

‘What this meant, I could not at first well guess, so completely was my scale

of character turned topsy-turvy. But revolving the subject afterward, I perceived that WE was the multiple of Festus, and THOSE MEN of Paul. All the circumstances seemed the same as in that Syrian hall; for the persons in question were they who cared more for doing good than for fortune and success, — more for the one risen from the dead than for fleshly life, — more for the Being in whom we live and move than for King Agrippa.

‘Among this band of candidates for the mad-house, I found the young poet who valued insight of nature’s beauty, and the power of chanting to his fellow-men a heavenly music, above the prospect of fortune, political power, or a standing in fashionable society. At the division of the goods of this earth, he was wandering like Schiller’s poet. But the difference between American and German regulations would seem to be, that in Germany the poet, when not “with Jove,” is left at peace on earth; while here he is, by a self-constituted police, declared “mad.”

‘Another of this band was the young girl who, early taking a solemn view of the duties of life, found it difficult to serve an apprenticeship to its follies. She could not turn her sweetness into “manner,” nor cultivate love of approbation at the expense of virginity of heart. In so called society she found no outlet for her truest, fairest self, and so preferred to live with external nature, a few friends, her pencil, instrument, and books. She, they say, is “mad.”

‘And he, the enthusiast for reform, who gives away fortune, standing in the world, peace, and only not life, because bigotry is now afraid to exact the pound of flesh as well as the ducats, — he, whose heart beats high with hopes for the welfare of his race, is “mad.”

‘And he, the philosopher, who does not tie down his speculation to the banner of the day, but lets the wings of his thought upbear him where they will, as if they were stronger and surer than the balloon let off for the amusement of the populace, — he must be “mad.” Off with him to the moon! that paradise of noble fools, who had visions of possibilities too grand and lovely for this sober earth.

‘And ye, friends, and lovers, who see, through all the films of human nature, in those you love, a divine energy, worthy of creatures who have their being in very God, ye, too, are “mad” to think they can walk in the dust, and yet shake it from their feet when they come upon the green. These are no winged Mercuries, no silver-sandalled Madonnas. Listen to “the world’s” truth and soberness, and we will show you that your heart would be as well placed in a hospital, as in these air-born palaces.

‘And thou, priest, seek thy God among the people, and not in the shrine. The light need not penetrate thine own soul. Thou canst catch the true inspiration

from the eyes of thy auditors. Not the Soul of the World, not the ever-flowing voice of nature, but the articulate accents of practical utility, should find thy ear ever ready. Keep always among men, and consider what they like; for in the silence of thine own breast will be heard the voices that make men "mad." Why shouldst thou judge of the consciousness of others by thine own? May not thine own soul have been made morbid, by retiring too much within? If Jesus of Nazareth had not fasted and prayed so much alone, the devil could never have tempted him; if he had observed the public mind more patiently and carefully, he would have waited till the time was ripe, and the minds of men prepared for what he had to say. He would thus have escaped the ignominious death, which so prematurely cut short his "usefulness." Jewry would thus, gently, soberly, and without disturbance, have been led to a better course.

"Children of this generation!" — ye Festuses and Agrippas! — ye are wiser, we grant, than "the children of light;" yet we advise you to commend to a higher tribunal those whom much learning, or much love, has made "mad." For if they stay here, almost will they persuade even you!

Amidst these meetings of the Transcendentalists it was, that, after years of separation, I again found Margaret. Of this body she was member by grace of nature. Her romantic freshness of heart, her craving for the truth, her self-trust, had prepared her from childhood to be a pioneer in prairie-land; and her discipline in German schools had given definite form and tendency to her idealism. Her critical yet aspiring intellect filled her with longing for germs of positive affirmation in place of the chaff of thrice-sifted negation; while her æsthetic instinct responded in accord to the praise of Beauty as the beloved heir of Good and Truth, whose right it is to reign. On the other hand, strong common-sense saved her from becoming visionary, while she was too well-read as a scholar to be caught by conceits, and had been too sternly tried by sorrow to fall into fanciful effeminacy. It was a pleasing surprise to see how this friend of earlier days was acknowledged as a peer of the realm, in this new world of thought. Men, — her superiors in years, fame and social position, — treated her more with the frankness due from equal to equal, than the half-condescending deference with which scholars are wont to adapt themselves to women. They did not talk down to her standard, nor translate their dialect into popular phrase, but trusted to her power of interpretation. It was evident that they prized her verdict, respected her criticism, feared her rebuke, and looked to her as an umpire. Very observable was it, also, how, in side-talks with her, they became confidential, seemed to glow and brighten into their best mood, and poured out in full measure what they but scantily hinted in the circle at large.

IV.

GENIUS.

*

It was quite a study to watch the phases through which Margaret passed, in one of these assemblies. There was something in the air and step with which she chose her place in the company, betokening an instinctive sense, that, in intellect, she was of blood royal and needed to ask no favors. And then she slowly gathered her attention to take in the significance of the scene. Nearsighted and habitually using an eye-glass, she rapidly scanned the forms and faces, pausing intently where the expression of particular heads or groups suggested thought, and ending her survey with some apt home-thrust to her next neighbors, as if to establish full *rapport*, and so to become a medium for the circulating life. Only when thus in magnetic relations with all present, by a clear impress of their state and place, did she seem prepared to rise to a higher stage of communion. Then she listened, with ear finely vibrating to every tone, with all capacities responsive in sympathy, with a swift and ductile power of appreciation, that made her feel to the quick the varying moods of different speakers, and yet the while with coolest self-possession. Now and then a slight smile, flickering over her countenance, as lightning plays on the surface of a cloud, marked the inward process whereby she was harmonizing in equilibrium opposing thoughts. And, as occasion offered, a felicitous quotation, pungent apothegm, or symbolic epithet, dropped unawares in undertone, showed how swiftly scattered rays were brought in her mind to a focus.

When her turn came, by a graceful transition she resumed the subject where preceding speakers had left it, and, briefly summing up their results, proceeded to unfold her own view. Her opening was deliberate, like the progress of some massive force gaining its momentum; but as she felt her way, and moving in a congenial element, the sweep of her speech became grand. The style of her eloquence was sententious, free from prettiness, direct, vigorous, charged with vitality. Articulateness, just emphasis and varied accent, brought out most delicate shades and brilliant points of meaning, while a rhythmical collocation of words gave a finished form to every thought. She was affluent in historic illustration and literary allusion, as well as in novel hints. She knew how to concentrate into racy phrases the essential truth gathered from wide research, and distilled with patient toil; and by skilful treatment she could make green again the wastes of common-place. Her statements, however rapid, showed

breadth of comprehension, ready memory, impartial judgment, nice analysis of differences, power of penetrating through surfaces to realities, fixed regard to central laws and habitual communion with the Life of life. Critics, indeed, might have been tempted to sneer at a certain oracular grandiloquence, that bore away her soberness in moments of elation; though even the most captious must presently have smiled at the humor of her descriptive touches, her dexterous exposure of folly and pretension, the swift stroke of her bright wit, her shrewd discernment, promptitude, and presence of mind. The reverential, too, might have been pained at the sternness wherewith popular men, measures, and established customs, were tried and found guilty, at her tribunal; but even while blaming her aspirations as rash, revolutionary and impractical, no honest conservative could fail to recognize the sincerity of her aim. And every deep observer of character would have found the explanation of what seemed vehement or too high-strung, in the longing of a spirited woman to break every trammel that checked her growth or fettered her movement.

In conversations like these, one saw that the richness of Margaret's genius resulted from a rare combination of opposite qualities. To her might have been well applied the words first used as describing George Sand: "Thou large-brained Woman, and large-hearted Man." She blended in closest union and swift interplay feminine receptiveness with masculine energy. She was at once impressible and creative, impulsive and deliberate, pliant in sympathy yet firmly self-centred, confidingly responsive while commanding in originality. By the vivid intensity of her conceptions, she brought out in those around their own consciousness, and, by the glowing vigor of her intellect, roused into action their torpid powers. On the other hand, she reproduced a truth, whose germ had just been imbibed from others, moulded after her own image and quickened by her own life, with marvellous rapidity. And the presence of congenial minds so stimulated the prolific power of her imagination, that she was herself astonished at the fresh beauty of her new-born thoughts. 'There is a mortifying sense,' she writes,

'of having played the Mirabeau after a talk with a circle of intelligent persons. They come with a store of acquired knowledge and reflection, on the subject in debate, about which I may know little, and have reflected less; yet, by mere apprehensiveness and prompt intuition, I may appear their superior. Spontaneously I appropriate all their material, and turn it to my own ends, as if it was my inheritance from a long train of ancestors. Rays of truth flash out at the moment, and they are startled by the light thrown over their familiar domain. Still they are gainers, for I give them new impulse, and they go on their way rejoicing in the bright glimpses they have caught. I should despise myself, if I

purposely appeared thus brilliant, but I am inspired as by a power higher than my own.'

All friends will bear witness to the strict fidelity of this sketch. There were seasons when she seemed borne irresistibly on to the verge of prophecy, and fully embodied one's notion of a sibyl.

Admirable as Margaret appeared in public, I was yet more affected by this peculiar mingling of impressibility and power to influence, when brought within her private sphere. I know not how otherwise to describe her subtle charm, than by saying that she was at once a clairvoyante and a magnetizer. She read another's bosom-secret, and she imparted of her own force. She interpreted the cipher in the talisman of one's destiny, that he had tried in vain to spell alone; by sympathy she brought out the invisible characters traced by experience on his heart; and in the mirror of her conscience he might see the image of his very self, as dwarfed in actual appearance, or developed after the divine ideal. Her sincerity was terrible. In her frank exposure no foible was spared, though by her very reproof she roused dormant courage and self-confidence. And so unerring seemed her insight, that her companion felt as if standing bare before a disembodied spirit, and communicated without reserve thoughts and emotions, which, even to himself, he had scarcely named.

This penetration it was that caused Margaret to be so dreaded, in general society, by superficial observers. They, who came nigh enough to test the quality of her spirit, could not but perceive how impersonal was her justice; but, contrasted with the dead flat of conventional tolerance, her candor certainly looked rugged and sharp. The frivolous were annoyed at her contempt of their childishness, the ostentatious piqued at her insensibility to their show, and the decent scared lest they should be stripped of their shams; partisans were vexed by her spurning their leaders; and professional sneerers, — civil in public to those whom in private they slandered, — could not pardon the severe truth whereby she drew the sting from their spite. Indeed, how could so undisguised a censor but shock the prejudices of the moderate, and wound the sensibilities of the diffident; how but enrage the worshippers of new demi-gods in literature, art and fashion, whose pet shrines she demolished; how but cut to the quick, alike by silence or by speech, the self-love of the vain, whose claims she ignored? So gratuitous, indeed, appeared her hypercriticism, that I could not refrain from remonstrance, and to one of my appeals she thus replied:

'If a horror for the mania of little great men, so prevalent in this country, — if aversion to the sentimental exaggerations to which so many minds are prone, — if finding that most men praise, as well as blame, too readily, and that overpraise desecrates the lips and makes the breath unworthy to blow the coal of devotion,

— if rejection of the — s and — s, from a sense that the priestess must reserve her pæans for Apollo, — if untiring effort to form my mind to justice and revere only the superlatively good, that my praise might be praise; if this be to offend, then have I offended.’

V.

THE DIAL.

*

Several talks among the Transcendentalists, during the autumn of 1839, turned upon the propriety of establishing an organ for the expression of freer views than the conservative journals were ready to welcome. The result was the publication of the “Dial,” the first number of which appeared early in the summer of 1840, under the editorship of Margaret, aided by R.W. Emerson and George Ripley. How moderate were her own hopes, in regard to this enterprise, is clearly enough shown by passages from her correspondence.

*‘Jamaica Plain, 22d March, 1840. * I have a great deal written, but, as I read it over, scarce a word seems pertinent to the place or time. When I meet people, it is easy to adapt myself to them; but when I write, it is into another world, — not a better one, perhaps, but one with very dissimilar habits of thought to this wherein I am domesticated. How much those of us, who have been formed by the European mind, have to unlearn, and lay aside, if we would act here! I would fain do something worthily that belonged to the country where I was born, but most times I fear it may not be.*

‘What others can do, — whether all that has been said is the mere restlessness of discontent, or there are thoughts really struggling for utterance, — will be tested now. A perfectly free organ is to be offered for the expression of individual thought and character. There are no party measures to be carried, no particular standard to be set up. A fair, calm tone, a recognition of universal principles, will, I hope, pervade the essays in every form. I trust there will be a spirit neither of dogmatism nor of compromise, and that this journal will aim, not at leading public opinion, but at stimulating each man to judge for himself, and to think more deeply and more nobly, by letting him see how some minds are kept alive by a wise self-trust. We must not be sanguine as to the amount of talent which will be brought to bear on this publication. All concerned are rather indifferent,

and there is no great promise for the present. We cannot show high culture, and I doubt about vigorous thought. But we shall manifest free action as far as it goes, and a high aim. It were much if a periodical could be kept open, not to accomplish any outward object, but merely to afford an avenue for what of liberal and calm thought might be originated among us, by the wants of individual minds.'

*

'April 19, 1840. — Things go on pretty well, but doubtless people will be disappointed, for they seem to be looking for the Gospel of Transcendentalism. It may prove as Jouffroy says it was with the successive French ministries: "The public wants something positive, and, seeing that such and such persons are excellent at fault-finding, it raises them to be rulers, when, lo! they have no noble and full Yea, to match their shrill and bold Nay, and so are pulled down again." Mr. Emerson knows best what he wants; but he has already said it in various ways. Yet, this experiment is well worth trying; hearts beat so high, they must be full of something, and here is a way to breathe it out quite freely. It is for dear New England that I want this review. For myself, if I had wished to write a few pages now and then, there were ways and means enough of disposing of them. But in truth I have not much to say; for since I have had leisure to look at myself, I find that, so far from being an original genius, I have not yet learned to think to any depth, and that the utmost I have done in life has been to form my character to a certain consistency, cultivate my tastes, and learn to tell the truth with a little better grace than I did at first. For this the world will not care much, so I shall hazard a few critical remarks only, or an unpretending chalk sketch now and then, till I have learned to do something. There will be beautiful poesies; about prose we know not yet so well. We shall be the means of publishing the little Charles Emerson left as a mark of his noble course, and, though it lies in fragments, all who read will be gainers.'

*

'1840. — Since the Revolution, there has been little, in the circumstances of this country, to call out the higher sentiments. The effect of continued prosperity is the same on nations as on individuals, — it leaves the nobler faculties undeveloped. The need of bringing out the physical resources of a vast extent of country, the commercial and political fever incident to our institutions, tend to fix the eyes of men on what is local and temporary, on the external advantages of

their condition. The superficial diffusion of knowledge, unless attended by a correspondent deepening of its sources, is likely to vulgarize rather than to raise the thought of a nation, depriving them of another sort of education through sentiments of reverence, and leading the multitude to believe themselves capable of judging what they but dimly discern. They see a wide surface, and forget the difference between seeing and knowing. In this hasty way of thinking and living they traverse so much ground that they forget that not the sleeping railroad passenger, but the botanist, the geologist, the poet, really see the country, and that, to the former, “a miss is as good as a mile.” In a word, the tendency of circumstances has been to make our people superficial, irreverent, and more anxious to get a living than to live mentally and morally. This tendency is no way balanced by the slight literary culture common here, which is mostly English, and consists in a careless reading of publications of the day, having the same utilitarian tendency with our own proceedings. The infrequency of acquaintance with any of the great fathers of English lore marks this state of things.

‘New England is now old enough, — some there have leisure enough, — to look at all this; and the consequence is a violent reaction, in a small minority, against a mode of culture that rears such fruits. They see that political freedom does not necessarily produce liberality of mind, nor freedom in church institutions — vital religion; and, seeing that these changes cannot be wrought from without inwards, they are trying to quicken the soul, that they may work from within outwards. Disgusted with the vulgarity of a commercial aristocracy, they become radicals; disgusted with the materialistic working of “rational” religion, they become mystics. They quarrel with all that is, because it is not spiritual enough. They would, perhaps, be patient if they thought this the mere sensuality of childhood in our nation, which it might outgrow; but they think that they see the evil widening, deepening, — not only debasing the life, but corrupting the thought, of our people, and they feel that if they know not well what should be done, yet that the duty of every good man is to utter a protest against what is done amiss.

‘Is this protest indiscriminating? are these opinions crude? do these proceedings threaten to sap the bulwarks on which men at present depend? I confess it all, yet I see in these men promise of a better wisdom than in their opponents. Their hope for man is grounded on his destiny as an immortal soul, and not as a mere comfort-loving inhabitant of earth, or as a subscriber to the social contract. It was not meant that the soul should cultivate the earth, but that the earth should educate and maintain the soul. Man is not made for society, but society is made for man. No institution can be good which does not tend to

improve the individual. In these principles I have confidence so profound, that I am not afraid to trust those who hold them, despite their partial views, imperfectly developed characters, and frequent want of practical sagacity. I believe, if they have opportunity to state and discuss their opinions, they will gradually sift them, ascertain their grounds and aims with clearness, and do the work this country needs. I hope for them as for “the leaven that is hidden in the bushel of meal, till all be leavened.” The leaven is not good by itself, neither is the meal; let them combine, and we shall yet have bread.

‘Utopia it is impossible to build up. At least, my hopes for our race on this one planet are more limited than those of most of my friends. I accept the limitations of human nature, and believe a wise acknowledgment of them one of the best conditions of progress. Yet every noble scheme, every poetic manifestation, prophesies to man his eventual destiny. And were not man ever more sanguine than facts at the moment justify, he would remain torpid, or be sunk in sensuality. It is on this ground that I sympathize with what is called the “Transcendental party,” and that I feel their aim to be the true one. They acknowledge in the nature of man an arbiter for his deeds, — a standard transcending sense and time, — and are, in my view, the true utilitarians. They are but at the beginning of their course, and will, I hope, learn how to make use of the past, as well as to aspire for the future, and to be true in the present moment.

‘My position as a woman, and the many private duties which have filled my life, have prevented my thinking deeply on several of the great subjects which these friends have at heart. I suppose, if ever I become capable of judging, I shall differ from most of them on important points. But I am not afraid to trust any who ‘are true, and in intent noble, with their own course, nor to aid in enabling them to express their thoughts, whether I coincide with them or not.

‘On the subject of Christianity, my mind is clear. If Divine, it will stand the test of any comparison. I believe the reason it has so imperfectly answered to the aspirations of its Founder is, that men have received it on external grounds. I believe that a religion, thus received, may give the life an external decorum, but will never open the fountains of holiness in the soul.

‘One often thinks of Hamlet as the true representative of idealism in its excess. Yet if, in his short life, man be liable to some excess, should we not rather prefer to have the will palsied like Hamlet, by a deep-searching tendency and desire for poetic perfection, than to have it enlightened by worldly sagacity, as in the case of Julius Cæsar, or made intense by pride alone, as in that of Coriolanus?

‘After all, I believe it is absurd to attempt to speak on these subjects within

the limits of a letter. I will try to say what I mean in print some day. Yet one word as to "the material," in man. Is it not the object of all philosophy, as well as of religion and poetry, to prevent its prevalence? Must not those who see most truly be ever making statements of the truth to combat this sluggishness, or worldliness? What else are sages, poets, preachers, born to do? Men go an undulating course, — sometimes on the hill, sometimes in the valley. But he only is in the right who in the valley forgets not the hill-prospect, and knows in darkness that the sun will rise again. That is the real life which is subordinated to, not merged in, the ideal; he is only wise who can bring the lowest act of his life into sympathy with its highest thought. And this I take to be the one only aim of our pilgrimage here. I agree with those who think that no true philosophy will try to ignore or annihilate the material part of man, but will rather seek to put it in its place, as servant and minister to the soul.'

VI.

THE WOMAN.

*

In 1839 I had met Margaret upon the plane of intellect. In the summer of 1840, on my return from the West, she was to be revealed in a new aspect.

It was a radiant and refreshing morning, when I entered the parlor of her pleasant house, standing upon a slope beyond Jamaica Plain to the south. She was absent at the moment, and there was opportunity to look from the windows on a cheerful prospect, over orchards and meadows, to the wooded hills and the western sky. Presently Margaret appeared, bearing in her hand a vase of flowers, which she had been gathering in the garden. After exchange of greetings, her first words were of the flowers, each of which was symbolic to her of emotion, and associated with the memory of some friend. I remember her references only to the Daphne Odora, the Provence Rose, the sweet-scented Verbena, and the Heliotrope; the latter being her chosen emblem, true bride of the sun that it is.

From flowers she passed to engravings hanging round the room. 'Here,' said she, 'are Dante and Beatrice.

"Approach, and know that I am Beatrice.

The power of ancient love was strong within me."

'She is beautiful enough, is not she, for that higher moment? But Dante! Yet

who could paint a Dante, — and Dante in heaven? They give but his shadow, as he walked in the forest-maze of earth. Then here is the Madonna del Pesce; not divine, like the Foligno, not deeply maternal, like the Seggiola, not the beätified “Mother of God” of the Dresden gallery, but graceful, and “not too bright and good for human nature’s daily food.” And here is Raphael himself, the young seer of beauty, with eyes softly contemplative, yet lit with central fires,’ &c.

There were gems, too, and medallions and seals, to be examined, each enigmatical, and each blended by remembrances with some fair hour of her past life.

Talk on art led the way to Greece and the Greeks, whose mythology Margaret was studying afresh. She had been culling the blooms of that poetic land, and could not but offer me leaves from her garland. She spoke of the statue of Minerva-Polias, cut roughly from an olive-tree, yet cherished as the heaven-descended image of the most sacred shrine, to which was due the Panathenaic festival.

‘The less ideal perfection in the figure, the greater the reverence of the adorer. Was not this because spiritual imagination makes light of results, and needs only a germ whence to unfold Olympic splendors?’

She spoke of the wooden column, left standing from the ruins of the first temple to Juno, amidst the marble walls of the magnificent fane erected in its place: —

’This is a most beautiful type, is not it, of the manner in which life’s earliest experiences become glorified by our perfecting destiny?’

‘In the temple of Love and the Graces, one Grace bore a rose, a second a branch of myrtle, a third dice; — who can read that riddle?’

“Better is it,” said Appollonius, “on entering a small shrine to find there a statue of gold and ivory, than in a large temple to behold only a coarse figure of terra cotta.” How often, after leaving with disgust the so-called great affairs of men, do we find traces of angels’ visits in quiet scenes of home.

‘The Hours and the Graces appear as ornaments on all thrones and shrines, except those of Vulcan and Pluto. Alas for us, when we become so sunk in utilitarian toil as to be blind to the beauty with which even common cares are daily wreathed!’

And so on and on, with myth and allusion.

Next, Margaret spoke of the friends whose generosity had provided the decorations on her walls, and the illustrated books for her table, — friends who

were fellow-students in art, history, or science, — friends whose very life she shared. Her heart seemed full to overflow with sympathy for their joys and sorrows, their special trials and struggles, their peculiar tendencies of character and respective relations. The existence of each was to her a sacred process, whose developments she watched with awe, and whose leadings she reverently sought to aid. She had scores of pretty anecdotes to tell, sweet bowers of sentiment to open, significant lessons of experience to interpret, and scraps of journals or letters to read aloud, as the speediest means of introducing me to her chosen circle. There was a fascinating spell in her piquant descriptions, and a genial glow of sympathy animated to characteristic movement the figures, who in varying pantomime replaced one another on the theatre of her fancy. Frost-bound New England melted into a dreamland of romance beneath the spice-breeze of her Eastern narrative. Sticklers for propriety might have found fault at the freedom with which she confided her friends' histories to one who was a comparative stranger to them; but I could not but note how conscientiousness reined in her sensibilities and curbed their career, as they reached the due bounds of privacy. She did but realize one's conception of the transparent truthfulness that will pervade advanced societies of the future, where the very atmosphere shall be honorable faith.

Nearer and nearer Margaret was approaching a secret throned in her heart that day; and the preceding transitions were but a prelude of her orchestra before the entrance of the festal group. Unconsciously she made these preparations for paying worthy honors to a high sentiment. She had lately heard of the betrothal of two of her best-loved friends; and she wished to communicate the graceful story in a way that should do justice to the facts and to her own feelings. It was by a spontaneous impulse of her genius, and with no voluntary foreshaping, that she had grouped the previous tales; but no drama could have been more artistically constructed than the steps whereby she led me onward to the denouement; and the look, tone, words, with which she told it, were fluent with melody as the song of an improvisatrice.

Scarcely had she finished, when, offering some light refreshment, — as it was now past noon, — she proposed a walk in the open air. She led the way to Bussey's wood, her favorite retreat during the past year, where she had thought and read, or talked with intimate friends. We climbed the rocky path, resting a moment or two at every pretty point, till, reaching a moss-cushioned ledge near the summit, she seated herself. For a time she was silent, entranced in delighted communion with the exquisite hue of the sky, seen through interlacing boughs and trembling leaves, and the play of shine and shadow over the wide landscape. But soon, arousing from her reverie, she took up the thread of the morning's

talk. My part was to listen; for I was absorbed in contemplating this, to me, quite novel form of character. It has been seen how my early distaste for Margaret's society was gradually changed to admiration. Like all her friends, I had passed through an avenue of sphinxes before reaching the temple. But now it appeared that thus far I had never been admitted to the adytum.

As, leaning on one arm, she poured out her stream of thought, turning now and then her eyes full upon me, to see whether I caught her meaning, there was leisure to study her thoroughly. Her temperament was predominantly what the physiologists would call nervous-sanguine; and the gray eye, rich brown hair and light complexion, with the muscular and well-developed frame, bespoke delicacy balanced by vigor. Here was a sensitive yet powerful being, fit at once for rapture or sustained effort, intensely active, prompt for adventure, firm for trial. She certainly had not beauty; yet the high arched dome of the head, the changeful expressiveness of every feature, and her whole air of mingled dignity and impulse, gave her a commanding charm. Especially characteristic were two physical traits. The first was a contraction of the eyelids almost to a point, — a trick caught from nearsightedness, — and then a sudden dilation, till the iris seemed to emit flashes; — an effect, no doubt, dependent on her highly-magnetized condition. The second was a singular pliancy of the vertebræ and muscles of the neck, enabling her by a mere movement to denote each varying emotion; in moments of tenderness, or pensive feeling, its curves were swan-like in grace, but when she was scornful or indignant it contracted, and made swift turns like that of a bird of prey. Finally, in the animation, yet *abandon* of Margaret's attitude and look, were rarely blended the fiery force of northern, and the soft languor of southern races.

Meantime, as I was thus, through her physiognomy, tracing the outlines of her spiritual form, she was narrating chapters from the book of experience. How superficially, heretofore, had I known her! We had met chiefly as scholars. But now I saw before me one whose whole life had been a poem, — of boundless aspiration and hope almost wild in its daring, — of indomitable effort amidst poignant disappointment, — of widest range, yet persistent unity. Yes! here was a poet in deed, a true worshipper of Apollo, who had steadfastly striven to brighten and make glad existence, to harmonize all jarring and discordant strings, to fuse most hard conditions and cast them in a symmetric mould, to piece fragmentary fortunes into a mosaic symbol of heavenly order. Here was one, fond as a child of joy, eager as a native of the tropics for swift transition from luxurious rest to passionate excitement, prodigal to pour her mingled force of will, thought, sentiment, into the life of the moment, all radiant with imagination, longing for communion with artists of every age in their inspired

hours, fitted by genius and culture to mingle as an equal in the most refined circles of Europe, and yet her youth and early womanhood had passed away amid the very decent, yet drudging, descendants of the prim Puritans. Trained among those who could have discerned her peculiar power, and early fed with the fruits of beauty for which her spirit pined, she would have developed into one of the finest lyrists, romancers and critics, that the modern literary world has seen. This she knew; and this tantalization of her fate she keenly felt.

But the tragedy of Margaret's history was deeper yet. Behind the poet was the woman, — the fond and relying, the heroic and disinterested woman. The very glow of her poetic enthusiasm was but an outflush of trustful affection; the very restlessness of her intellect was the confession that her heart had found no home. A "book-worm," "a dilettante," "a pedant," I had heard her sneeringly called; but now it was evident that her seeming insensibility was virgin pride, and her absorption in study the natural vent of emotions, which had met no object worthy of life-long attachment. At once, many of her peculiarities became intelligible. Fitfulness, unlooked-for changes of mood, misconceptions of words and actions, substitution of fancy for fact, — which had annoyed me during the previous season, as inconsistent in a person of such capacious judgment and sustained self-government, — were now referred to the morbid influence of affections pent up to prey upon themselves. And, what was still more interesting, the clue was given to a singular credulousness, by which, in spite of her unusual penetration, Margaret might be led away blindfold. As this revelation of her ardent nature burst upon me, and as, rapidly recalling the past, I saw how faithful she had kept to her high purposes, — how patient, gentle, and thoughtful for others, how active in self-improvement and usefulness, how wisely dignified she had been, — I could not but bow to her in reverence.

We walked back to the house amid a rosy sunset, and it was with no surprise that I heard her complain of an agonizing nervous headache, which compelled her at once to retire, and call for assistance. As for myself, while going homeward, I reflected with astonishment on the unflagging spiritual energy with which, for hour after hour, she had swept over lands and seas of thought, and, as my own excitement cooled, I became conscious of exhaustion, as if a week's life had been concentrated in a day.

The interview, thus hastily sketched, may serve as a fair type of our usual intercourse. Always I found her open-eyed to beauty, fresh for wonder, with wings poised for flight, and fanning the coming breeze of inspiration. Always she seemed to see before her,

"A shape all light, which with one hand did fling

Dew on the earth, as if she were the dawn,
And the invisible rain did ever sing
A silver music on the mossy lawn.”

Yet more and more distinctly did I catch a plaintive tone of sorrow in her thought and speech, like the wail of an Æolian harp heard at intervals from some upper window. She had never met one who could love her as she could love; and in the orange-grove of her affections the white, perfumed blossoms and golden fruit wasted away unclaimed. Through the mask of slight personal defects and ungraceful manners, of superficial hauteur and egotism, and occasional extravagance of sentiment, no equal had recognized the rare beauty of her spirit. She was yet alone.

Among her papers remains this pathetic petition: —

‘I am weary of thinking. I suffer great fatigue from living. Oh God, take me! take me wholly! Thou knowest that I love none but Thee. All this beautiful poesy of my being lies in Thee. Deeply I feel it. I ask nothing. Each desire, each passionate feeling, is on the surface only; inmosty Thou keepest me strong and pure. Yet always to be thus going out into moments, into nature, and love, and thought! Father, I am weary! Reassume me for a while, I pray Thee. Oh let me rest awhile in Thee, Thou only Love! In the depth of my prayer I suffer much. Take me only awhile. No fellow-being will receive me. I cannot pause; they will not detain me by their love. Take me awhile, and again I will go forth on a renewed service. It is not that I repine, my Father, but I sink from want of rest, and none will shelter me. Thou knowest it all. Bathe me in the living waters of Thy Love.’

VII. THE FRIEND.

*

Yet, conscious as she was of an unfulfilled destiny, and of an undeveloped being, Margaret was no pining sentimentalist. The gums oozing from wounded boughs she burned as incense in her oratory; but in outward relations she was munificent with sympathy.

‘Let me be, Theodora, a bearer of heavenly gifts to my fellows,’

is written in her journals, and her life fulfilled the aspiration. The more one observed her, the more surprising appeared the variety, earnestness, and constancy of her friendships. Far and wide reached her wires of communication, and incessant was the interchange of messages of good-will. She was never so

preoccupied and absorbed as to deny a claimant for her affectionate interest; she never turned her visitors back upon themselves, mortified and vexed at being misunderstood. With delicate justice she appreciated the special form, force, tendency of utterly dissimilar characters and her heart responded to every appeal alike of humblest suffering or loftiest endeavor. In the plain, yet eloquent phrase of the backwoodsman, "the string of her door-latch was always out," and every wayfarer was free to share the shelter of her roof, or a seat beside her hearth-stone. Or, rather, it might be said, in symbol of her wealth of spirit, her palace, with its galleries of art, its libraries and festal-halls, welcomed all guests who could enjoy and use them.

She was, indeed, The Friend. This was her vocation. She bore at her girdle a golden key to unlock all caskets of confidence. Into whatever home she entered she brought a benediction of truth, justice, tolerance, and honor; and to every one who sought her to confess, or seek counsel, she spoke the needed word of stern yet benignant wisdom. To how many was the forming of her acquaintance an era of renovation, of awakening from sloth, indulgence or despair, to heroic mastery of fate, of inward serenity and strength, of new-birth to real self-hood, of catholic sympathies, of energy consecrated to the Supreme Good. Thus writes to her one who stands among the foremost in his own department: "What I am I owe, in large measure, to the stimulus you imparted. You roused my heart with high hopes; you raised my aims from paltry and vain pursuits to those which tasked and fed the soul; you inspired me with a great ambition, and made me see the worth and meaning of life; you awakened in me confidence in my own powers, showed me my special and distinct ability, and quickened my individual consciousness by intelligent sympathy with tendencies and feelings which I but half understood; you gave me to myself. This is a most benign influence to exercise, and for it, above all other benefits, gratitude is due. Therefore have you an inexhaustible bank of gratitude to draw from. Bless God that he has allotted to you such a ministry."

The following extracts from her letters will show how profusely Margaret poured out her treasures upon her friends; but they reveal, too, the painful processes of alchemy whereby she transmuted her lead into gold.

'Your idea of friendship apparently does not include intellectual intimacy, as mine does, but consists of mutual esteem and spiritual encouragement. This is the thought represented, on antique gems and bas-reliefs, of the meeting between God and Goddess, I find; for they rather offer one another the full flower of being, than grow together. As in the figures before me, Jupiter, king of Gods and men, meets Juno, the sister and queen, not as a chivalric suppliant, but as a stately claimant; and she, crowned, pure, majestic, holds the veil aside to reveal

herself to her august spouse.'

*

'How variously friendship is represented in literature! Sometimes the two friends kindle beacons from afar to apprize one another that they are constant, vigilant, and each content in his several home. Sometimes, two pilgrims, they go different routes in service of the same saint, and remember one another as they give alms, learn wisdom, or pray in shrines along the road. Sometimes, two knights, they bid farewell with mailed hand of truth and honor all unstained, as they ride forth on their chosen path to test the spirit of high emprise, and free the world from wrong, — to meet again for unexpected succor in the hour of peril, or in joyful surprise to share a frugal banquet on the plat of greensward opening from forest glades. Sometimes, proprietors of two neighboring estates, they have interviews in the evening to communicate their experiments and plans, or to study together the stars from an observatory; if either is engaged he simply declares it; they share enjoyments cordially; they exchange praise or blame frankly; in citizen-like good-fellowship they impart their gains.

'All these views of friendship are noble and beautiful, yet they are not enough for our manifold nature. Friends should be our incentives to Right, yet not only our guiding, but our prophetic stars. To love by sight is much, to love by faith is more; together they make up the entire love, without which heart, mind, and soul cannot be alike satisfied. Friends should love not merely for the absolute worth of each to the other, but on account of a mutual fitness of character. They are not merely one another's priests or gods, but ministering angels, exercising in their part the same function as the Great Soul does in the whole, — of seeing the perfect through the imperfect, nay, creating it there. Why am I to love my friend the less for any obstruction in his life? Is not that the very time for me to love most tenderly, when I must see his life in despite of seeming? When he shows it to me I can only admire; I do not give myself, I am taken captive.

'But how shall I express my meaning? Perhaps I can do so from the tales of chivalry, where I find what corresponds far more thoroughly with my nature, than in these stoical statements. The friend of Amadis expects to hear prodigies of valor of the absent Preux, but if he be mutilated in one of his first battles, shall he be mistrusted by the brother of his soul, more than if he had been tested in a hundred? If Britomart finds Artegall bound in the enchanter's spell, can she doubt therefore him whom she has seen in the magic glass? A Britomart does battle in his cause, and frees him from the evil power, while a dame of less nobleness might sit and watch the enchanted sleep, weeping night and day, or

spur on her white palfrey to find some one more helpful than herself. These friends in chivalry are always faithful through the dark hours to the bright. The Douglas motto, "tender and true," seems to me most worthy of the strongest breast. To borrow again from Spencer, I am entirely satisfied with the fate of the three brothers. I could not die while there was yet life in my brother's breast. I would return from the shades and nerve him with twofold life for the fight. I could do it, for our hearts beat with one blood. Do you not see the truth and happiness of this waiting tenderness? The verse —

"Have I a lover
Who is noble and free,
I would he were nobler
Than to love me," —

does not come home to my heart, though *this* does: —

"I could not love thee, sweet, so much,
Loved I not honor more."

* 'October 10th, 1840. — I felt singular pleasure in seeing you quote Hood's lines on "Melancholy." I thought nobody knew and loved his serious poems except myself, and two or three others, to whom I imparted them.[A] Do you like, also, the ode to Autumn, and —

"Sigh on, sad heart, for love's eclipse"?

It was a beautiful time when I first read these poems. I was staying in Hallowell, Maine, and could find no books that I liked, except Hood's poems. You know how the town is built, like a terraced garden on the river's bank; I used to go every afternoon to the granite quarry which crowns these terraces, and read till the sunset came casting its last glory on the opposite bank. They were such afternoons as those in September and October, clear, soft, and radiant. Nature held nothing back. 'Tis many years since, and I have never again seen the Kennebec, but remember it as a stream of noble character. It was the first river I ever sailed up, realizing all which that emblem discloses of life. Greater still would the charm have been to sail downward along an unknown stream, seeking not a home, but a ship upon the ocean.'

*

‘*Newbury, Oct. 18, 1840.* — It rained, and the day was pale and sorrowful, the thick-fallen leaves even shrouded the river. We went out in the boat, and sat under the bridge. The pallid silence, the constant fall of the rain and leaves, were most soothing, life had been for many weeks so crowded with thought and feeling, pain and pleasure, rapture and care. Nature seemed gently to fold us in her matron’s mantle. On such days the fall of the leaf does not bring sadness, only meditation. Earth seemed to loose the record of past summer hours from her permanent life, as lightly, and spontaneously, as the great genius casts behind him a literature, — the *Odyssey* he has outgrown. In the evening the rain ceased, the west wind came, and we went out in the boat again for some hours; indeed, we staid till the last clouds passed from the moon. Then we climbed the hill to see the full light in solemn sweetness over fields, and trees, and river.

‘I never enjoyed anything more in its way than the three days alone with —— in her boat, upon the little river. Not without reason was it that Goethe limits the days of intercourse to *three*, in the *Wanderjahre*. If you have lived so long in uninterrupted communion with any noble being, and with nature, a remembrance of man’s limitations seems to call on Polycrates to cast forth his ring. She seemed the very genius of the scene, so calm, so lofty, and so secluded. I never saw any place that seemed to me so much like home. The beauty, though so great, is so unobtrusive.

‘As we glided along the river, I could frame my community far more naturally and rationally than —— . A few friends should settle upon the banks of a stream like this, planting their homesteads. Some should be farmers, some woodmen, others bakers, millers, &c. By land, they should carry to one another the commodities; on the river they should meet for society. At sunset many, of course, would be out in their boats, but they would love the hour too much ever to disturb one another. I saw the spot where we should discuss the high mysteries that Milton speaks of. Also, I saw the spot where I would invite select friends to live through the noon of night, in silent communion. When we wished to have merely playful chat, or talk on politics or social reform, we would gather in the mill, and arrange those affairs while grinding the corn. What a happy place for children to grow up in! Would it not suit little —— to go to school to the cardinal flowers in her boat, beneath the great oak-tree? I think she would learn more than in a phalanx of juvenile florists. But, truly, why has such a thing never been? One of these valleys so immediately suggests an image of the fair company that might fill it, and live so easily, so naturally, so wisely. Can we not people the banks of some such affectionate little stream? I distrust ambitious plans, such as Phalansterian organizations!

‘ —— is quite bent on trying his experiment. I hope he may succeed; but as

they were talking the other evening, I thought of the river, and all the pretty symbols the tide-mill presents, and felt if I could at all adjust the economics to the more simple procedure, I would far rather be the miller, hoping to attract by natural affinity some congenial baker, “und so weiter.” However, one thing seems sure, that many persons will soon, somehow, somewhere, throw off a part, at least, of these terrible weights of the social contract, and see if they cannot lie more at ease in the lap of Nature. I do not feel the same interest in these plans, as if I had a firmer hold on life, but I listen with much pleasure to the good suggestions.’

*

‘*Oct. 19th, 1840.* — was here. Generally I go out of the room when he comes, for his great excitability makes me nervous, and his fondness for detail is wearisome. But to-night I was too much fatigued to do anything else, and did not like to leave mother; so I lay on the sofa while she talked with him.

‘My mind often wandered, yet ever and anon, as I listened again to him, I was struck with admiration at the compensations of Nature. Here is a man, isolated from his kind beyond any I know, of an ambitious temper and without an object of tender affections and without a love or a friend. I don’t suppose any mortal, unless it be his aged mother, cares more for him than we do, — scarce any value him so much. The disease, which has left him, in the eyes of men, a scathed and blighted tree, has driven him back to Nature, and she has not refused him sympathy. I was surprised by the refinement of his observations on the animals, his pets. He has carried his intercourse with them to a degree of perfection we rarely attain with our human friends. There is no misunderstanding between him and his dogs and birds; and how rich has been the acquaintance in suggestion! Then the flowers! I liked to hear him, for he recorded all their pretty ways, — not like a botanist, but a lover. His interview with the Magnolia of Lake Pontchartrain was most romantic. And what he said of the Yuca seems to me so pretty, that I will write it down, though somewhat more concisely than he told it:

—
“I had kept these plants of the Yuca Filamentosa six or seven years, though they had never bloomed. I knew nothing of them, and had no notion of what feelings they would excite. Last June I found in bud the one which had the most favorable exposure. A week or two after, another, which was more in the shade, put out flower-buds, and I thought I should be able to watch them, one after the other; but, no! the one which was most favored waited for the other, and both flowered together at the full of the moon. This struck me as very singular, but as

soon as I saw the flower by moonlight I understood it. This flower is made for the moon, as the Heliotrope is for the sun, and refuses other influences or to display her beauty in any other light.

“The first night I saw it in flower, I was conscious of a peculiar delight, I may even say rapture. Many white flowers are far more beautiful by day; the lily, for instance, with its firm, thick leaf, needs the broadest light to manifest its purity. But these transparent leaves of greenish white, which look dull in the day, are melted by the moon to glistening silver. And not only does the plant not appear in its destined hue by day, but the flower, though, as bell-shaped, it cannot quite close again after having once expanded, yet presses its petals together as closely as it can, hangs down its little blossoms, and its tall stalk seems at noon to have reared itself only to betray a shabby insignificance. Thus, too, with the leaves, which have burst asunder suddenly like the fan-palm to make way for the stalk, — their edges in the day time look ragged and unfinished, as if nature had left them in a hurry for some more pleasing task. On the day after the evening when I had thought it so beautiful, I could not conceive how I had made such a mistake.

“But the second evening I went out into the garden again. In clearest moonlight stood my flower, more beautiful than ever. The stalk pierced the air like a spear, all the little bells had erected themselves around it in most graceful array, with petals more transparent than silver, and of softer light than the diamond. Their edges were clearly, but not sharply defined. They seemed to have been made by the moon’s rays. The leaves, which had looked ragged by day, now seemed fringed by most delicate gossamer, and the plant might claim with pride its distinctive epithet of *Filamentosa*. I looked at it till my feelings became so strong that I longed to share it. The thought which filled my mind was that here we saw the type of pure feminine beauty in the moon’s own flower. I have since had further opportunity of watching the Yuca, and verified these observations, that she will not flower till the full moon, and chooses to hide her beauty from the eye of day.”

’Might not this be made into a true poem, if written out
merely as history of the plant, and no observer introduced?
How finely it harmonizes with all legends of Isis, Diana, &c.!
It is what I tried to say in the sonnet, —

Woman’s heaven,
Where palest lights a silvery sheen diffuse.

'In tracing these correspondences, one really does take hold of a Truth, of a Divine Thought.'

*

'*October 25th, 1840.* — This week I have not read any book, nor once walked in the woods and fields. I meant to give its days to setting outward things in order, and its evenings to writing. But, I know not how it is, I can never simplify my life; always so many ties, so many claims! However, soon the winter winds will chant matins and vespers, which may make my house a cell, and in a snowy veil enfold me for my prayer. If I cannot dedicate myself this time, I will not expect it again. Surely it should be! These Carnival masks have crowded on me long enough, and Lent must be at hand.

' — and — have been writing me letters, to answer which required all the time and thought I could give for a day or two. — — 's were of joyful recognition, and so beautiful I would give much to show them to you. — — 's have singularly affected me. They are noble, wise, of most unfriendly friendliness. I don't know why it is, I always seem to myself to have gone so much further with a friend than I really have. Just as at Newport I thought — met me, when he did not, and sang a joyful song which found no echo, so here — asks me questions which I thought had been answered in the first days of our acquaintance, and coldly enumerates all the charming qualities which make it impossible for him to part with me! He scolds me, though in the sweetest and solemnest way. I will not quote his words, though their beauty tempts me, for they do not apply, they do not touch ME.

'Why is it that the religion of my nature is so much hidden from my peers? why do they question me, who never question them? why persist to regard as a meteor an orb of assured hope? Can no soul know me wholly? shall I never know the deep delight of gratitude to any but the All-Knowing? I shall wait for — very peaceably, in reverent love as ever; but I cannot see why he should not have the pleasure of knowing now a friend, who has been "so tender and true."' "

*

' — was here, and spent twenty-four hours in telling me a tale of deepest tragedy. Its sad changes should be written out in Godwin's best manner: such are the themes he loved, as did also Rousseau. Through all the dark shadows shone a

pure white ray, one high, spiritual character, a man, too, and of advanced age. I begin to respect men more, — I mean actual men. What men may be, I know; but the men of to-day have seemed to me of such coarse fibre, or else such poor wan shadows!

‘ ——— had scarcely gone, when ——— came and wished to spend a few hours with me. I was totally exhausted, but I lay down, and she sat beside me, and poured out all her noble feelings and bright fancies. There was little light in the room, and she gleamed like a cloud

— “of pearl and opal,”

and reminded me more than ever of

— “the light-haired Lombardess Singing a song of her own native land,”
to the dying Correggio, beside the fountain.

‘I am astonished to see how much Bettine’s book is to all these people. This shows how little courage they have had to live out themselves. She really brings them a revelation. The men wish they had been loved by Bettine; the girls wish to write down the thoughts that come, and see if just such a book does not grow up. ———, however, was one of the few who do not over-estimate her; she truly thought Bettine only publishes what many burn. Would not genius be common as light, if men trusted their higher selves?’

*

‘I heard in town that ——— is a father, and has gone to see his child. This news made me more grave even than such news usually does; I suppose because I have known the growth of his character so intimately. I called to mind a letter he had written me of what we had expected of our fathers. The ideal father, the profoundly wise, provident, divinely tender and benign, he is indeed the God of the human heart. How solemn this moment of being called to prepare the way, to *make way* for another generation! What fulfilment does it claim in the character of a man, that he should be worthy to be a father! — what purity of motive, what dignity, what knowledge! When I recollect how deep the anguish, how deeper still the want, with which I walked alone in hours of childish passion, and called for a Father, often saying the word a hundred times, till stifled by sobs, how great seems the duty that name imposes! Were but the harmony preserved throughout! Could the child keep learning his earthly, as he does his heavenly Father, from all best experience of life, till at last it were the climax: “I am the Father. Have ye seen me? — ye have seen the Father.” But how many sons have we to make one father? Surely, to spirits, not only purified but perfected, this must appear the climax of earthly being, — a wise and worthy parentage. Here I

always sympathize with Mr. Alcott. He views the relation truly.'

*

'*Dec. 3, 1840.* — bids me regard her "as a sick child;" and the words recall some of the sweetest hours of existence. My brother Edward was born on my birth-day, and they said he should be my child. But he sickened and died just as the bud of his existence showed its first bright hues. He was some weeks wasting away, and I took care of him always half the night. He was a beautiful child, and became very dear to me then. Still in lonely woods the upturned violets show me the pleading softness of his large blue eyes, in those hours when I would have given worlds to prevent his suffering, and could not. I used to carry him about in my arms for hours; it soothed him, and I loved to feel his gentle weight of helpless purity upon my heart, while night listened around. At last, when death came, and the soul took wing like an overtaken bird from his sweet form, I felt what I feel now. Might I free — , as that angel freed him!

'In daily life I could never hope to be an unfailing fountain of energy and bounteous love. My health is frail; my earthly life is shrunk to a scanty rill; I am little better than an aspiration, which the ages will reward, by empowering me to incessant acts of vigorous beauty. But now it is well with me to be with those who do not suffer overmuch to have me suffer. It is best for me to serve where I can better bear to fall short. I could visit — more nobly than in daily life, through the soul of our souls. When she named me her Priestess, that name made me perfectly happy. Long has been my consecration; may I not meet those I hold dear at the altar? How would I pile up the votive offerings, and crowd the fires with incense? Life might be full and fair; for, in my own way, I could live for my friends.'

*

'*Dec. 8th, 1840.* — My book of amusement has been the Evenings of St. Petersburg. I do not find the praises bestowed on it at all exaggerated. Yet De Maistre is too logical for me. I only catch a thought here and there along the page. There is a grandeur even in the subtlety of his mind. He walks with a step so still, that, but for his dignity, it would be stealthy, yet with brow erect and wide, eye grave and deep. He is a man such as I have never known before.'

'I went to see Mrs. Wood in the *Somnambula*. Nothing could spoil this opera,

which expresses an ecstasy, a trance of feeling, better than anything I ever heard. I have loved every melody in it for years, and it was happiness to listen to the exquisite modulations as they flowed out of one another, endless ripples on a river deep, wide and strewn with blossoms. I never have known any one more to be loved than Bellini. No wonder the Italians make pilgrimages to his grave. In him thought and feeling flow always in one tide; he never divides himself. He is as melancholy as he is sweet; yet his melancholy is not impassioned, but purely tender.'

*

'Dec. 15, 1840. — I have not time to write out as I should this sweet story of Melissa, but here is the outline: —

'More than four years ago she received an injury, which caused her great pain in the spine, and went to the next country town to get medical advice. She stopped at the house of a poor blacksmith, an acquaintance only, and has never since been able to be moved. Her mother and sister come by turns to take care of her. She cannot help herself in any way, but is as completely dependent as an infant. The blacksmith and his wife gave her the best room in their house, have ever since ministered to her as to a child of their own, and, when people pity them for having to bear such a burthen, they say, "It is none, but a blessing."

'Melissa suffers all the time, and great pain. She cannot amuse or employ herself in any way, and all these years has been as dependent on others for new thoughts, as for daily cares. Yet her mind has deepened, and her character refined, under those stern teachers, Pain and Gratitude, till she has become the patron saint of the village, and the muse of the village school-mistress. She has a peculiar aversion to egotism, and could not bear to have her mother enlarge upon her sufferings.

"Perhaps it will pain the lady to hear that," said the mild, religious sufferer, who had borne all without a complaint.

"Whom the Lord loveth he chasteneth." The poor are the generous: the injured, the patient and loving.

All that — said of this girl was in perfect harmony with what De Maistre says of the saint of St. Petersburg, who, almost devoured by cancer, when, asked, "Quelle est la premiere grace que vous demanderez a Dieu, ma chere enfant, lorsque vous serez devant lui?" she replied, "Je lui demanderai pour mes

bienfaiteurs la grace de Paimer autant que je l'aime.”

‘When they were lamenting for her, “Je ne suis pas, dit elle, aussi malheureuse que vous le croyez; Dieu me fait la grace de ne peuser, qu’a lui.”’

‘Next of Edith. Tall, gaunt, hard-favored was this candidate for the American calendar; but Bonilacia might be her name. From her earliest years she had valued all she knew, only as she was to teach it again. Her highest ambition was to be the school-mistress; her recreation to dress the little ragged things, and take care of them out of school hours. She had some taste for nursing the grown-up, but this was quite subordinate to her care of the buds of the forest. Pure, perfectly beneficent, lived Edith, and never thought of any thing or person, but for its own sake. When she had attained midway the hill of life, she happened to be boarding in the house with a young farmer, who was lost in admiration of her lore. How he wished he, too, could read! “What, can’t you read? O, let me teach you!”— “You never can; I was too thick-skulled to learn even at school. I am sure I never could now.” But Edith was not to be daunted by any fancies of incapacity, and set to work with utmost zeal to teach this great grown man the primer. She succeeded, and won his heart thereby. He wished to requite the raising him from the night of ignorance, as Howard and Nicholas Poussin did the kind ones who raised them from the night of the tomb, by the gift of his hand. Edith consented, on condition that she might still keep school. So he had his sister come to “keep things straight.” Edith and he go out in the morning, — he to his field, she to her school, and meet again at eventide, to talk, and plan and, I hope, to read also.

‘The first use Edith made of her accession of property through her wedded estate, was to give away all she thought superfluous to a poor family she had long pitied, and to invite a poor sick woman to her “spare chamber.” Notwithstanding a course like this, her husband has grown rich, and proves that the pattern of the widow’s cruse was not lost in Jewry.

‘Edith has become the Natalia of the village, as is Melissa its “Schöne Seele.”’

*

‘Dec., 22, 1840.— “Community” seems dwindling to a point, and I fancy the best use of the plan, as projected thus far, will prove the good talks it has caused here, upon principles. I feel and find great want of wisdom in myself and the others. We are not ripe to reconstruct society yet. O Christopher Columbus! how

art thou to be admired, when we see how other men go to work with their lesser enterprises! — knows deepest what he wants, but not well how to get it. — has a better perception of means, and less insight as to principles; but this movement has done him a world of good. All should say, however, that they consider this plan as a mere experiment, and are willing to fail. I tell them that they are not ready till they can say that. — says he can bear to be treated unjustly by all concerned, — which is much. He is too sanguine, as it appears to me, but his aim is worthy, and, with his courage and clear intellect, his experiment will not, at least to him, be a failure.’

*

‘*Feb. 19, 1841.* — Have I never yet seen so much as *one* of my spiritual family? The other night they sat round me, so many who have thought they loved, or who begin to love me. I felt myself kindling the same fire in all their souls. I looked on each, and no eye repelled me. Yet there was no warmth for me on all those altars. Their natures seemed deep, yet there was ‘not one from which I could draw the living fountain. I could only cheat the hour with them, prize, admire, and pity. It was sad; yet who would have seen sadness in me?’

‘Once I was almost all intellect; now I am almost all feeling. Nature vindicates her rights, and I feel all Italy glowing beneath the Saxon crust. This cannot last long; I shall burn to ashes if all this smoulders here much longer. I must die if I do not burst forth in genius or heroism.

‘I meant to have translated the best passages of “Die Gunderode,” — which I prefer to Bettine’s correspondence with Goethe. The two girls are equal natures, and both in earnest. Goethe made a puppet-show, for his private entertainment, of Bettine’s life, and we wonder she did not feel he was not worthy of her homage. Gunderode is to me dear and admirable, Bettine only interesting. Gunderode is of religious grace, Bettine the fulness of instinctive impulse; Gunderode is the ideal, Bettine nature; Gunderode throws herself into the river because the world is all too narrow, Bettine lives and follows out every freakish fancy, till the enchanting child degenerates into an eccentric and undignified old woman. There is a medium somewhere. Philip Sidney found it; others had it found for them by fate.’

*

‘*March 29. 1841.* — Others have looked at society with far deeper consideration

than I. I have felt so unrelated to this sphere, that it has not been hard for me to be true. Also, I do not believe in Society. I feel that every man must struggle with these enormous ills, in some way, in every age; in that of Moses, or Plato, or Angelo, as in our own. So it has not moved me much to see my time so corrupt, but it would if I were in a false position.

‘ — went out to his farm yesterday, full of cheer, as one who doeth a deed with sincere good will. He has shown a steadfastness and earnestness of purpose most grateful to behold. I do not know what their scheme will ripen to; at present it does not deeply engage my hopes. It is thus far only a little better way than others. I doubt if they will get free from all they deprecate in society.’

*

‘*Paradise Farm, Newport, July, 1841.* — Here are no deep forests, no stern mountains, nor narrow, sacred valleys; but the little white farm-house looks down from its gentle slope on the boundless sea, and beneath the moon, beyond the glistening corn-fields, is heard the endless surge. All around the house is most gentle and friendly, with many common flowers, that seem to have planted themselves, and the domestic honey-suckle carefully trained over the little window. Around are all the common farm-house sounds, — the poultry making a pleasant recitative between the carols of singing birds; even geese and turkeys are not inharmonious when modulated by the diapasons of the beach. The orchard of very old apple-trees, whose twisted forms tell of the glorious winds that have here held revelry, protects a little homely garden, such as gives to me an indescribable refreshment, where the undivided vegetable plots and flourishing young fruit-trees, mingling carelessly, seem as if man had dropt the seeds just where he wanted the plants, and they had sprung up at once. The family, too, look, at first glance, well-suited to the place, — homely, kindly, unoppressed, of honest pride and mutual love, not unworthy to look out upon the far-shining sea.

‘Many, many sweet little things would I tell you, only they are so very little. I feel just now as if I could live and die here. I am out in the open air all the time, except about two hours in the early morning. And now the moon is fairly gone late in the evening. While she was here, we staid out, too. Everything seems sweet here, so homely, so kindly; the old people chatting so contentedly, the young men and girls laughing together in the fields, — not vulgarly, but in the true kinsfolk way, — little children singing in the house and beneath the berry-bushes. The never-ceasing break of the surf is a continual symphony, calming

the spirits which this delicious air might else exalt too much. Everything on the beach becomes a picture; the casting the seine, the ploughing the deep for seaweed. This, when they do it with horses, is prettiest of all; but when you see the oxen in the surf, you lose all faith in the story of Europa, as the gay waves tumble in on their lazy sides. The bull would be a fine object on the shore, but not, not in the water. Nothing short of a dolphin will do! Late to-night, from the highest Paradise rocks, seeing —— wandering, and the horsemen careering on the beach, so spectrally passing into nature, amid the pale, brooding twilight, I almost thought myself in the land of souls!

‘But in the morning it is life, all cordial and common. This half-fisherman, half-farmer life seems very favorable to manliness. I like to talk with the fishermen; they are not boorish, not limited, but keen-eyed, and of a certain rude gentleness. Two or three days ago I saw the sweetest picture. There is a very tall rock, one of the natural pulpits, at one end of the beach. As I approached, I beheld a young fisherman with his little girl; he had nestled her into a hollow of the rock, and was standing before her, with his arms round her, and looking up in her face. Never was anything so pretty. I stood and stared, country fashion; and presently he scrambled up to the very top with her in his arms. She screamed a little as they went, but when they were fairly up on the crest of the rock, she chuckled, and stretched her tiny hand over his neck, to go still further. Yet, when she found he did not wish it, she leaned against his shoulder, and he sat, feeling himself in the child like that exquisite Madonna, and looking out over the great sea. Surely, the “kindred points of heaven and home” were known in his breast, whatever guise they might assume.

‘The sea is not always lovely and bounteous, though generally, since we have been here, she has beamed her bluest. The night of the full moon we staid out on the far rocks. The afternoon was fair: the sun set nobly, wrapped in a violet mantle, which he left to the moon, in parting. She not only rose red, lowering, and of impatient attitude, but kept hiding her head all the evening with an angry, struggling movement. —— said, “This is not Dian;” and I replied, “No; now we see the Hecate.” But the damp, cold wind came sobbing, and the waves began wailing, too, till I was seized with a feeling of terror, such as I never had before, even in the darkest, and most treacherous, rustling wood. The moon seemed sternly to give me up to the dæmons of the rock, and the waves to mourn a tragic chorus, till I felt their cold grasp. I suffered so much, that I feared we should never get home without some fatal catastrophe. Never was I more relieved than when, as we came up the hill, the moon suddenly shone forth. It was ten o’clock, and here every human sound is hushed, and lamp put out at that hour. How tenderly the grapes and tall corn-ears glistened and nodded! and the trees

stretched out their friendly arms, and the scent of every humblest herb was like a word of love. The waves, also, at that moment put on a silvery gleam, and looked most soft and regretful. That was a real voice from nature.'

*

'*February, 1842.* — I am deeply sad at the loss of little Waldo, from whom I hoped more than from almost any living being. I cannot yet reconcile myself to the thought that the sun shines upon the grave of the beautiful blue-eyed boy, and I shall see him no more.

'Five years he was an angel to us, and I know not that any person was ever more the theme of thought to me. As I walk the streets they swarm with apparently worthless lives, and the question will rise, why he, why just he, who "bore within himself the golden future," must be torn away? His father will meet him again; but to me he seems lost, and yet that is weakness. I *must* meet that which he represented, since I so truly loved it. He was the only child I ever saw, that I sometimes wished I could have called mine.

'I loved him more than any child I ever knew, as he was of nature more fair and noble. You would be surprised to know how dear he was to my imagination. I saw him but little, and it was well; for it is unwise to bind the heart where there is no claim. But it is all gone, and is another of the lessons brought by each year, that we are to expect suggestions only, and not fulfilments, from each form of beauty, and to regard them merely as Angels of The Beauty.'

*

'*June, 1842.* — Why must children be with perfect people, any more than people wait to be perfect to be friends? The secret is, — is it not? — for parents to feel and be willing their children should know that they are but little older than themselves: only a class above, and able to give them some help in learning their lesson. Then parent and child keep growing together, in the same house. Let them blunder as we blundered. God is patient for us; why should not we be for them? Aspiration teaches always, and God leads, by inches. A perfect being would hurt a child no less than an imperfect.'

*

'It always makes my annoyances seem light, to be riding about to visit these fine houses. Not that I am intolerant towards the rich, but I cannot help feeling at

such times how much characters require the discipline of difficult circumstances. To say nothing of the need the soul has of a peace and courage that cannot be disturbed, even as to the intellect, how can one be sure of not sitting down in the midst of indulgence to pamper tastes alone, and how easy to cheat one's self with the fancy that a little easy reading or writing is quite work. I am safer; I do not sleep on roses. I smile to myself, when with these friends, at their care of me. I let them do as they will, for I know it will not last long enough to spoil me.'

*

'I take great pleasure in talking with Aunt Mary.[B] Her strong and simple nature checks not, falters not. Her experience is entirely unlike mine, as, indeed, is that of most others whom I know. No rapture, no subtle process, no slow fermentation in the unknown depths, but a rill struck out from the rock, clear and cool in all its course, the still, small voice. She says the guide of her life has shown itself rather as a restraining, than an impelling principle. I like her life, too, as far as I see it; it is dignified and true.'

*

'*Cambridge, July, 1842.* — A letter at Providence would have been like manna in the wilderness. I came into the very midst of the fuss,[C] and, tedious as it was at the time, I am glad to have seen it. I shall in future be able to believe real, what I have read with a dim disbelief of such times and tendencies. There is, indeed, little good, little cheer, in what I have seen: a city full of grown-up people as wild, as mischief-seeking, as full of prejudice, careless slander, and exaggeration, as a herd of boys in the play-ground of the worst boarding-school. Women whom I have seen, as the domestic cat, gentle, graceful, cajoling, suddenly showing the disposition, if not the force, of the tigress. I thought I appreciated the monstrous growths of rumor before, but I never did. The Latin poet, though used to a court, has faintly described what I saw and heard often, in going the length of a street. It is astonishing what force, purity and wisdom it requires for a human being to keep clear of falsehoods. These absurdities, of course, are linked with good qualities, with energy of feeling, and with a love of morality, though narrowed and vulgarized by the absence of the intelligence which should enlighten. I had the good discipline of trying to make allowance for those making none, to be charitable to their want of charity, and cool without being cold. But I don't know when I have felt such an aversion to my environment, and prayed so earnestly day by day,— "O, Eternal! purge from my

inmost heart this hot haste about ephemeral trifles,” and “keep back thy servant from presumptuous sins; let them not have dominion over me.”

‘What a change from the almost vestal quiet of “Aunt Mary’s” life, to all this open-windowed, open-eyed screaming of “poltroon,” “nefarious plan,” “entire depravity,” &c. &c.’

*

‘*July, 1842. Boston.* — I have been entertaining the girls here with my old experiences at Groton. They have been very fresh in my mind this week. Had I but been as wise in such matters then as now, how easy and fair I might have made the whole! Too late, too late to live, but not too late to think! And as that maxim of the wise Oriental teaches, “the Acts of this life shall be the Fate of the next.”’

* ‘I would have my friends tender of me, not because I am frail, but because I am capable of strength; — patient, because they see in me a principle that must, at last, harmonize all the exuberance of my character. I did not well understand what you felt, but I am willing to admit that what you said of my “over-great impetuosity” is just. You will, perhaps, feel it more and more. It may at times hide my better self. When it does, speak, I entreat, as harshly as you feel. Let me be always sure I know the worst I believe you will be thus just, thus true, for we are both servants of Truth.’

*

‘*August, 1842. Cambridge.* — Few have eyes for the pretty little features of a scene. In this, men are not so good as boys. Artists are always thus young; poets are; but the pilgrim does not lay aside his belt of steel, nor the merchant his pack, to worship the flowers on the fountain’s brink. I feel, like Herbert, the weight of “business to be done,” but the bird-like particle would skim and sing at these sweet places. It seems strange to leave them; and that we do so, while so fitted to live deeply in them, shows that beauty is the end but not the means.

‘I have just been reading the new poems of Tennyson. Much has he thought, much suffered, since the first ecstasy of so fine an organization clothed all the world with rosy light. He has not suffered himself to become a mere intellectual voluptuary, nor the songster of fancy and passion, but has earnestly revolved the problems of life, and his conclusions are calmly noble. In these later verses is a still, deep sweetness; how different from the intoxicating, sensuous melody of

his earlier cadence! I have loved him much this time, and taken him to heart as a brother. One of his themes has long been my favorite, — the last expedition of Ulysses, — and his, like mine, is the Ulysses of the Odyssey, with his deep romance of wisdom, and not the worldling of the Iliad. How finely marked his slight description of himself and of Telemachus. In Dora, Locksley Hall, the Two Voices, Morte D'Arthur, I find my own life, much of it, written truly out.'

*

Concord, August 25. 1842. — Beneath this roof of peace, beneficence, and intellectual activity, I find just the alternation of repose and satisfying pleasure that I need. *

'Do not find fault with the hermits and scholars. The true text is: —

"Mine own Telemachus
He does his work — I mine."

'All do the work, whether they will or no; but he is "mine own Telemachus" who does it in the spirit of religion, never believing that the last results can be arrested in any one measure or set of measures, listening always to the voice of the Spirit, — and who does this more than —— ?

'After the first excitement of intimacy with him, — when I was made so happy by his high tendency, absolute purity, the freedom and infinite graces of an intellect cultivated much beyond any I had known, — came with me the questioning season. I was greatly disappointed in my relation to him. I was, indeed, always called on to be worthy, — this benefit was sure in our friendship. But I found no intelligence of my best self; far less was it revealed to me in new modes; for not only did he seem to want the living faith which enables one to discharge this holiest office of a friend, but he absolutely distrusted me in every region of my life with which he was unacquainted. The same trait I detected in his relations with others. He had faith in the Universal, but not in the Individual Man: he met men, not as a brother, but as a critic. Philosophy appeared to chill instead of exalting the poet.

'But now I am better acquainted with him. His "accept" is true; the "I shall learn," with which he answers every accusation, is no less true. No one can feel his limitations, in fact, more than he, though he always speaks confidently from

his present knowledge as all he has yet, and never qualifies or explains. He feels himself "shut up in a crystal cell," from which only "a great love or a great task could release me," and hardly expects either from what remains in this life. But I already see so well how these limitations have fitted him for his peculiar work, that I can no longer quarrel with them; while from his eyes looks out the angel that must sooner or later break every chain. Leave him in his cell affirming absolute truth; protesting against humanity, if so he appears to do; the calm observer of the courses of things. Surely, "he keeps true to his thought, which is the great matter." He has already paid his debt to his time; how much more he will give we cannot know; but already I feel how invaluable is a cool mind, like his, amid the warring elements around us. As I look at him more by his own law, I understand him better; and as I understand him better, differences melt away. My inmost heart blesses the fate that gave me birth in the same clime and time, and that has drawn me into such a close bond with him as, it is my hopeful faith, will never be broken, but from sphere to sphere ever more hallowed. *

'What did you mean by saying I had imbibed much of his way of thought? I do indeed feel his life stealing gradually into mine; and I sometimes think that my work would have been more simple, and my unfolding to a temporal activity more rapid and easy, if we had never met. But when I look forward to eternal growth, I am always aware that I am far larger and deeper for him. His influence has been to me that of lofty assurance and sweet serenity. He says, I come to him as the European to the Hindoo, or the gay Trouvère to the Puritan in his steeple hat. Of course this implies that our meeting is partial. I present to him the many forms of nature and solicit with music; he melts them all into spirit and reproves performance with prayer. When I am with God alone, I adore in silence. With nature I am filled and grow only. With most men I bring words of now past life, and do actions suggested by the wants of their natures rather than my own. But he stops me from doing anything, and makes me think.'

*

October, 1842 To me, individually, Dr. Channing's kindness was great; his trust and esteem were steady, though limited, and I owe him a large debt of gratitude.

'His private character was gentle, simple, and perfectly harmonious, though somewhat rigid and restricted in its operations. It was easy to love, and a happiness to know him, though never, I think, a source of the highest social pleasure to be with him. His department was ethics; and as a literary companion,

he did not throw himself heartily into the works of creative genius, but looked, wherever he read, for a moral. In criticism he was deficient in “individuality,” if by that the phrenologists mean the power of seizing on the peculiar meanings of special forms. I have heard it said, that, under changed conditions, he might have been a poet. He had, indeed, the poetic sense of a creative spirit working everywhere. Man and nature were living to him; and though he did not yield to sentiment in particulars he did in universals. But his mind was not recreative, or even representative.

‘He was deeply interesting to me as having so true a respect for woman. This feeling in him was not chivalrous; it was not the sentiment of an artist; it was not the affectionateness of the common son of Adam, who knows that only her presence can mitigate his loneliness; but it was a religious reverence. To him she was a soul with an immortal destiny. Nor was there at the bottom of his heart one grain of masculine assumption. He did not wish that Man should protect her, but that God should protect her and teach her the meaning of her lot.

‘In his public relations he is to be regarded not only as a check upon the evil tendencies of his era, but yet more as a prophet of a better age already dawning as he leaves us. In his later days he filled yet another office of taking the middle ground between parties. Here he was a fairer figure than ever before. His morning prayer was, “Give me more light; keep my soul open to the light;” and it was answered. He steered his middle course with sails spotless and untried. He was preserved in a wonderful degree from the prejudices of his own past, the passions of the present, and the exaggerations of those who look forward to the future. In the writings where, after long and patient survey, he sums up the evidence on both sides, and stands umpire, with the judicial authority of a pure intent, a steadfast patience, and a long experience, the mild wisdom of age is beautifully tempered by the ingenuous sweetness of youth. These pieces resemble charges to a jury; they have always been heard with affectionate deference, if not with assent, and have, exerted a purifying influence.’

*

‘*November, 1842.* — When souls meet direct and all secret thoughts are laid open, we shall need no forbearance, no prevention, no care-taking of any kind. Love will be pure light, and each action simple, — too simple to be noble. But there will not be always so much to pardon in ourselves and others. Yesterday we had at my class a conversation on Faith. Deeply true things were said and felt. But to-day the virtue has gone out of me; I have accepted all, and yet there

will come these hours of weariness, — weariness of human nature in myself and others. “Could ye not watch one hour?” Not one faithfully through! To speak with open heart and “tongue affectionate and true,” — to enjoy real repose and the consciousness of a thorough mutual understanding in the presence of friends when we do meet, is what is needed. That being granted, I do believe I should not wish any surrender of time or thought from a human being. But I have always a sense that I cannot meet or be met *in haste*; as ——— said he could not look at the works of art in a chance half-hour, so cannot I thus rudely and hastily turn over the leaves of any mind. In peace, in stillness that permits the soul to flow, beneath the open sky, I would see those I love.’

[Footnote A: This was some years before their reprint in this country, it should be noticed.]

[Footnote C: The Dorr rebellion.]

VIII. SOCIALISM.

*

In the preceding extracts will have been noticed frequent reference to the Association Movement, which, during the winter of 1840-41, was beginning to appear simultaneously at several points in New England. In Boston and its vicinity several friends, for whose characters Margaret felt the highest honor, and with many of whose views, theoretic and practical, she accorded, were earnestly considering the possibility of making such industrial, social, and educational arrangements, as would simplify economies, combine leisure for study with healthful and honest toil, avert unjust collisions of caste, equalize refinements, awaken generous affections, diffuse courtesy, and sweeten and sanctify life as a whole. Chief among these was the Rev. George Ripley, who, convinced by his experience in a faithful ministry, that the need was urgent for a thorough application of the professed principles of Fraternity to actual relations, was about staking his all of fortune, reputation, position, and influence, in an attempt to organize a joint-stock community at Brook Farm. How Margaret was inclined to regard this movement has been already indicated. While at heart sympathizing with the heroism that prompted it, in judgment she considered it premature. But true to her noble self, though regretting the seemingly gratuitous sacrifice of her friends, she gave them without stint the cheer of her encouragement and the light of her counsel. She visited them often; entering

genially into their trials and pleasures, and missing no chance to drop good seed in every furrow upturned by the ploughshare or softened by the rain. In the secluded yet intensely animated circle of these co-workers I frequently met her during several succeeding years, and rejoice to bear testimony to the justice, magnanimity, wisdom, patience, and many-sided good-will, that governed her every thought and deed. The feelings with which she watched the progress of this experiment are thus exhibited in her journals: —

‘My hopes might lead to Association, too, — an association, if not of efforts, yet of destinies. In such an one I live with several already, feeling that each one, by acting out his own, casts light upon a mutual destiny, and illustrates the thought of a mastermind. It is a constellation, not a phalanx, to which I would belong.’

*

‘Why bind oneself to a central or any doctrine? How much nobler stands a man entirely unpledged, unbound! Association may be the great experiment of the age, still it is only an experiment. It is not worth while to lay such stress on it; let us try it, induce others to try it, — that is enough.’

*

‘It is amusing to see how the solitary characters tend to outwardness, — to association, — while the social and sympathetic ones emphasize the value of solitude, — of concentration, — so that we hear from each the word which, from his structure, we least expect.’

*

‘On Friday I came to Brook Farm. The first day or two here is desolate. You seem to belong to nobody — to have a right to speak to nobody; but very soon you learn to take care of yourself, and then the freedom of the place is delightful.

‘It is fine to see how thoroughly Mr. and Mrs. R. act out, in their own persons, what they intend.

‘All Saturday I was off in the woods. In the evening we had a general conversation, opened by me, upon Education, in its largest sense, and on what we can do for ourselves and others. I took my usual ground: The aim is perfection; patience the road. The present object is to give ourselves and others a tolerable chance. Let us not be too ambitious in our hopes as to immediate

results. Our lives should be considered as a tendency, an approximation only. Parents and teachers expect to do too much. They are not legislators, but only interpreters to the next generation. Soon, very soon, does the parent become merely the elder brother of his child; — a little wiser, it is to be hoped. — differed from me as to some things I said about the gradations of experience, — that “to be brought prematurely near perfect beings would chill and discourage.” He thought it would cheer and console. He spoke well, — with a youthful nobleness. — said “that the most perfect person would be the most impersonal” — philosophical bull that, I trow— “and, consequently, would impede us least from God.” Mr. R. spoke admirably on the nature of loyalty. The people showed a good deal of the *sans-culotte* tendency in their manners, — throwing themselves on the floor, yawning, and going out when they had heard enough. Yet, as the majority differ from me, to begin with, — that being the reason this subject was chosen, — they showed, on the whole, more respect and interest than I had expected. As I am accustomed to deference, however, and need it for the boldness and animation which my part requires, I did not speak with as much force as usual. Still, I should like to have to face all this; it would have the same good effects that the Athenian assemblies had on the minds obliged to encounter them.

‘Sunday. A glorious day; — the woods full of perfume. I was out all the morning. In the afternoon, Mrs. R. and I had a talk. I said my position would be too uncertain here, as I could not work. — said:— “They would all like to work for a person of genius. They would not like to have this service claimed from them, but would like to render it of their own accord.” “Yes,” I told her; “but where would be my repose, when they were always to be judging whether I was worth it or not. It would be the same position the clergyman is in, or the wandering beggar with his harp. Each day you must prove yourself anew. You are not in immediate relations with material things.”

‘We talked of the principles of the community. I said I had not a right to come, because all the confidence in it I had was as an *experiment* worth trying, and that it was a part of the great wave of inspired thought. — declared they none of them had confidence beyond this; but they seem to me to have. Then I said, “that though I entirely agreed about the dignity of labor, and had always wished for the present change, yet I did not agree with the principle of paying for services by time;[A] neither did I believe in the hope of excluding evil, for that was a growth of nature, and one condition of the development of good.” We had valuable discussion on these points.

‘All Monday morning in the woods again. Afternoon, out with the drawing party; I felt the evils of want of conventional refinement, in the impudence with

which one of the girls treated me. She has since thought of it with regret, I notice; and, by every day's observation of me, will see that she ought not to have done it.'

*

'In the evening, a husking in the barn. Men, women, and children, all engaged. It was a most picturesque scene, only not quite light enough to bring it out fully. I staid and helped about half an hour, then took a long walk beneath the stars.'

*

'Wednesday. I have been too much absorbed to-day by others, and it has made me almost sick. Mrs. —— came to see me, and we had an excellent talk, which occupied nearly all the morning. Then Mrs. —— wanted to see me, but after a few minutes I found I could not bear it, and lay down to rest. Then —— came. Poor man; — his feelings and work are wearing on him. He looks really ill now. Then —— and I went to walk in the woods. I was deeply interested in all she told me. If I were to write down all she and four other married women have confided to me, these three days past, it would make a cento, on one subject, in five parts. Certainly there should be some great design in my life; its attractions are so invariable.'

*

'In the evening, a conversation on Impulse. The reason for choosing this subject is the great tendency here to advocate spontaneousness, at the expense of reflection. It was a much better conversation than the one before. None yawned, for none came, this time, from mere curiosity. There were about thirty-five present, which is a large enough circle. Many engaged in the talk. I defended nature, as I always do; — the spirit ascending through, not superseding, nature. But in the scale of Sense, Intellect, Spirit, I advocated to-night the claims of Intellect, because those present were rather disposed to postpone them. On the nature of Beauty we had good talk. —— spoke well. She seemed in a much more reverent humor than the other night, and enjoyed the large plans of the universe which were unrolled. ——, seated on the floor, with the light falling from behind on his long gold locks, made, with sweet, serene aspect, and composed tones, a good exposé of his way of viewing things.'

*

‘Saturday. Well, good-by, Brook Farm. I know more about this place than I did when I came; but the only way to be qualified for a judge of such an experiment would be to become an active, though unimpassioned, associate in trying it. Some good things are proven, and as for individuals, they are gainers. Has not — vied, in her deeds of love, with “my Cid,” and the holy Ottilia? That girl who was so rude to me stood waiting, with a timid air, to bid me good-by. Truly, the soft answer turneth away wrath.

‘I have found myself here in the amusing position of a conservative. Even so is it with Mr. R. There are too many young people in proportion to the others. I heard myself saying, with a grave air, “Play out the play, gentles.” Thus, from generation to generation, rises and falls the wave.’

Again, a year afterward, she writes: —

‘Here I have passed a very pleasant week. The tone of the society is much sweeter than when I was here a year ago. There is a pervading spirit of mutual tolerance and gentleness, with great sincerity. There is no longer a passion for grotesque freaks of liberty, but a disposition, rather, to study and enjoy the liberty of law. The great development of mind and character observable in several instances, persuades me that this state of things affords a fine studio for the soul-sculptor. To a casual observer it may seem as if there was not enough of character here to interest, because there are no figures sufficiently distinguished to be worth painting for the crowd; but there is enough of individuality in free play to yield instruction; and one might have, from a few months’ residence here, enough of the human drama to feed thought for a long time.’

Thus much for Margaret’s impressions of Brook Farm and its inmates. What influence she in turn exerted on those she met there, may be seen from the following affectionate tribute, offered by one of the young girls alluded to in the journal: —

“Would that I might aid even slightly, in doing justice to the noble-hearted woman whose departure we must all mourn. But I feel myself wholly powerless to do so; and after I explain what my relation to her was, you will understand how this can be, without holding me indolent or unsympathetic.

“When I first met Miss Fuller, I had already cut from my moorings, and was sailing on the broad sea of experience, conscious that I possessed unusual powers of endurance, and that I should meet with sufficient to test their strength. She made no offer of guidance, and once or twice, in the succeeding year, alluded to the fact that she ‘had never helped me.’ This was in a particular sense, of course, for she helped all who knew her. She was interested in my rough history, but could not be intimate, in any just sense, with a soul so unbalanced, so inharmonious as mine then was. For my part, I revered her. She was to me

the embodiment of wisdom and tenderness. I heard her converse, and, in the rich and varied intonations of her voice, I recognized a being to whom every shade of sentiment was familiar. She knew, if not by experience then by no questionable intuition, how to interpret the inner life of every man and woman; and, by interpreting, she could soothe and strengthen. To her, psychology was an open book. When she came to Brook Farm, it was my delight to wait on one so worthy of all service, — to arrange her late breakfast in some remnants of ancient China, and to save her, if it might be, some little fatigue or annoyance, during each day. After a while she seemed to lose sight of my more prominent and disagreeable peculiarities, and treated me with affectionate regard.”

Being a confirmed Socialist, I often had occasion to discuss with Margaret the problems involved in the “Combined Order” of life; and though unmoved by her scepticism, I could not but admire the sagacity, foresight, comprehensiveness, and catholic sympathy with which she surveyed this complicated subject. Her objections, to be sure, were of the usual kind, and turned mainly upon two points, — the difficulty of so allying labor and capital as to secure the hoped-for coöperation, and the danger of merging the individual in the mass to such degree as to paralyze energy, heroism, and genius; but these objections were urged in a way that brought out her originality and generous hopes. There was nothing abject, timid, or conventional in her doubts. The end sought she prized; but the means she questioned. Though pleased in listening to sanguine visions of the future, she was slow to credit that an organization by “Groups and Series” would yield due incentive for personal development, while ensuring equilibrium through exact and universal justice. She felt, too, that Society was not a machine to be put together and set in motion, but a living body, whose breath must be Divine inspiration, and whose healthful growth is only hindered by forcing. Finally, while longing as earnestly as any Socialist for “Liberty and Law made one in living union,” and assured in faith that an era was coming of “Attractive Industry” and “Harmony,” she was still for herself inclined to seek sovereign independence in comparative isolation. Indeed, at this period, Margaret was in spirit and in thought preëminently a Transcendentalist.

[Footnote A: This was a transitional arrangement only.]

IX. CREDO.

*

In regard to Transcendentalism again, there was reason to rejoice in having found a friend, so firm to keep her own ground, while so liberal to comprehend

another's stand-point, as was Margaret. She knew, not only theoretically, but practically, how endless are the diversities of human character and of Divine discipline, and she revered fellow-spirits too sincerely ever to wish to warp them to her will, or to repress their normal development. She was stern but in one claim, that each should be faithful to apparent leadings of the Truth; and could avow widest differences of conviction without feeling that love was thereby chilled, or the hand withheld from cordial aid. Especially did she render service by enabling one, — through her blended insight, candor, and clearness of understanding, — to see in bright reflection his own mental state.

It would be doing injustice to a person like Margaret, always more enthusiastic than philosophical, to attribute to her anything like a system of theology; for, hopeful, reverent, aspiring, and free from scepticism, she felt too profoundly the vastness of the universe and of destiny ever to presume that with her span rule she could measure the Infinite. Yet the tendency of her thoughts can readily be traced in the following passages from note-books and letters: —

‘When others say to me, and not without apparent ground, that “the Outward Church is a folly which keeps men from enjoying the communion of the Church Invisible, and that in the desire to be helped by, and to help others, men lose sight of the only sufficient help, which they might find by faithful solitary intentness of spirit,” I answer it is true, and the present deadness and emptiness summon us to turn our thoughts in that direction. Being now without any positive form of religion, any unattractive symbols, or mysterious rites, we are in the less danger of stopping at surfaces, of accepting a mediator instead of the Father, a sacrament instead of the Holy Ghost. And when I see how little there is to impede and bewilder us, I cannot but accept, — should it be for many years, — the forlornness, the want of fit expression, the darkness as to what is to be expressed, even that characterize our time.

‘But I do not, therefore, as some of our friends do, believe that it will always be so, and that the church is tottering to its grave, never to rise again. The church was the growth of human nature, and it is so still. It is but one result of the impulse which makes two friends clasp one another's hands, look into one another's eyes at sight of beauty, or the utterance of a feeling of piety. So soon as the Spirit has mourned and sought, and waited long enough to open new depths, and has found something to express, there will again be a Cultus, a Church. The very people, who say that none is needed, make one at once. They talk with, they write to one another. They listen to music, they sustain themselves with the poets; they like that one voice should tell the thoughts of several minds, one gesture proclaim that the same life is at the same moment in many breasts.

‘I am myself most happy in my lonely Sundays, and do not feel the need of any social worship, as I have not for several years, which I have passed in the same way. Sunday is to me priceless as a day of peace and solitary reflection. To all who will, it may be true, that, as Herbert says: —

”Sundays the pillars are
On which Heaven’s palace arched lies;
The other days fill up the space
And hollow room with vanities;”

and yet in no wise “vanities,” when filtered by the Sunday crucible. After much troubling of the waters of my life, a radiant thought of the meaning and beauty of earthly existence will descend like a healing angel. The stillness permits me to hear a pure tone from the One in All. But often I am not alone. The many now, whose hearts, panting for truth and love, have been made known to me, whose lives flow in the same direction as mine, and are enlightened by the same star, are with me. I am in church, the church invisible, undefiled by inadequate expression. Our communion is perfect; it is that of a common aspiration; and where two or three are gathered together in one region, whether in the flesh or the spirit, He will grant their request. Other communion would be a happiness, — to break together the bread of mutual thought, to drink the wine of loving life, — but it is not necessary.

‘Yet I cannot but feel that the crowd of men whose pursuits are not intellectual, who are not brought by their daily walk into converse with sages and poets, who win their bread from an earth whose mysteries are not open to them, whose worldly intercourse is more likely to stifle than to encourage the sparks of love and faith in their breasts, need on that day quickening more than repose. The church is now rather a lecture-room than a place of worship; it should be a school for mutual instruction. I must rejoice when any one, who lays spiritual things to heart, feels the call rather to mingle with men, than to retire and seek by himself.

‘You speak of men going up to worship by “households,” &c. Were the actual family the intellectual family, this might be; but as social life now is, how can it? Do we not constantly see the child, born in the flesh to one father, choose in the spirit another? No doubt this is wrong, since the sign does not stand for the thing signified, but it is one feature of the time. How will it end? Can families worship together till it does end?

*

‘I have let myself be cheated out of my Sunday, by going to hear Mr. ———. As he began by reading the first chapter of Isaiah, and the fourth of John’s Epistle, I made mental comments with pure delight. “Bring no more vain oblations.” “Every one that loveth is born of God, and knoweth God.” “We know that we dwell in Him, and He in us, because he hath given us of the Spirit.” Then pealed the organ, full of solemn assurance. But straightway uprose the preacher to deny mysteries, to deny the second birth, to deny influx, and to renounce the sovereign gift of insight, for the sake of what he deemed a “*rational*” exercise of will. As he spoke I could not choose but deny him all through, and could scarce refrain from rising to expound, in the light of my own faith, the words of those wiser Jews which had been read. Was it not a sin to exchange friendly greeting as we parted, and yet tell him no word of what was in my mind?

‘Still I saw why he looked at things as he did. The old religionists did talk about “grace, conversion,” and the like, technically, without striving to enter into the idea, till they quite lost sight of it. Undervaluing the intellect, they became slaves of a sect, instead of organs of the Spirit. This Unitarianism has had its place. There was a time for asserting “the dignity of human nature,” and for explaining total depravity into temporary inadequacy, — a time to say that the truths of *essence*, if simplified at all in statement from their infinite variety of existence, should be spoken of as One, rather than Three, though that number, if they would only let it reproduce itself simply, is of highest significance. Yet the time seems now to have come for reinterpreting the old dogmas. For one I would now preach the Holy Ghost as zealously as they have been preaching Man, and faith instead of the understanding, and mysticism instead &c. But why go on? It certainly is by no means useless to preach. In my experience of the divine gifts of solitude, I had forgotten what might be done in this other way. That crowd of upturned faces, with their look of unintelligent complacency! Give tears and groans, rather, if there be a mixture of physical excitement and bigotry. Mr. ——— is heard because, though he has not entered into the secret of piety, he wishes to be heard, and with a good purpose, — can make a forcible statement, and kindle himself with his own thoughts. How many persons must there be who cannot worship alone, since they are content with so little! Can none wake the spark that will melt them, till they take beautiful forms? Were one to come now, who could purge us with fire, how would these masses glow and be clarified!

‘Mr. ——— made a good suggestion:— “Such things could not be said in the open air.” Let men preach for the open air, and speak now thunder and lightning, now dew and rustling leaves. Yet must the preacher have the thought of his day before he can be its voice. None have it yet; but some of our friends, perhaps, are nearer than the religious world at large, because neither ready to dogmatize, as if

they had got it, nor content to stop short with mere impressions and presumptuous hopes. I feel that a great truth is coming. Sometimes it seems as if we should have it among us in a day. Many steps of the Temple have been ascended, steps of purest alabaster, and of shining jasper, also of rough-brick, and slippery moss-grown stone. We shall reach what we long for, since we trust and do not fear, for our God knows not fear, only reverence, and his plan is All in All.'

*

'Who can expect to utter an absolutely pure and clear tone on these high subjects? Our earthly atmosphere is too gross to permit it. Yet, a severe statement has rather an undue charm for me, as I have a nature of great emotion, which loves free abandonment. I am ready to welcome a descending Moses, come to turn all men from idolatries. For my priests have been very generally of the Pagan greatness, revering nature and seeking excellence, but in the path of progress, not of renunciation. The lyric inspirations of the poet come very differently on the ear from the "still, small voice." They are, in fact, all one revelation; but one must be at the centre to interpret it. To that centre I have again and again been drawn, but my large natural life has been, as yet, but partially transfused with spiritual consciousness. I shun a premature narrowness, and bide my time. But I am drawn to look at natures who take a different way, because they seem to complete my being for me. They, too, tolerate me in my many phases for the same reason, probably. It pleased me to see, in one of the figures by which the Gnostics illustrated the progress of man, that Severity corresponded to Magnificence.'

*

'In my quiet retreat, I read Xenophon, and became more acquainted with his Socrates. I had before known only the Socrates of Plato, one much more to my mind. Socrates conformed to the Greek Church, and it is evident with a sincere reverence, because it was the growth of the *national* mind. He thought best to stand on its platform, and to illustrate, though with keen truth, by received forms. This was his right way, as his influence was naturally private, for individuals who could in some degree respond to the teachings of his dæmon; he knew the multitude would not understand him. But it was the other way that Jesus took, preaching in the fields, and plucking ears of corn on the Sabbath.'

*

‘Is it my defect of spiritual experience, that while that weight of sagacity, which is the iron to the dart of genius, is needful to satisfy me, the undertone of another and a deeper knowledge does not please, does not command me? Even in Handel’s Messiah, I am half incredulous, half impatient, when the sadness of the second part comes to check, before it interprets, the promise of the first; and the strain, “Was ever sorrow like to his sorrow,” is not for me, as I have been, as I am. Yet Handel was worthy to speak of Christ. The great chorus, “Since by man came death, by man came also the resurrection of the dead; for as in Adam all die, even so in Christ shall all be made alive,” if understood in the large sense of every man his own Saviour, and Jesus only representative of the way all must walk to accomplish our destiny, is indeed a worthy gospel.’

*

‘Ever since —— told me how his feelings had changed towards Jesus, I have wished much to write some sort of a Credo, out of my present state, but have had no time till last night. I have not satisfied myself in the least, and have written very hastily, yet, though not full enough to be true, this statement is nowhere false to me.

* ‘Whatever has been permitted by the law of being, must be for good, and only in time not good. We trust, and are led forward by experience. Light gives experience of outward life, faith of inward life, and then we discern, however faintly, the necessary harmony of the two. The moment we have broken through an obstruction, not accidentally, but by the aid of faith, we begin to interpret the Universe, and to apprehend why evil is permitted. Evil is obstruction; Good is accomplishment.

‘It would seem that the Divine Being designs through man to express distinctly what the other forms of nature only intimate, and that wherever man remains imbedded in nature, whether from sensuality, or because he is not yet awakened to consciousness, the purpose of the whole remains unfulfilled. Hence our displeasure when Man is not in a sense above Nature. Yet, when he is not so closely bound with all other manifestations, as duly to express their Spirit, we are also displeased. He must be at once the highest form of Nature, and conscious of the meaning she has been striving successively to unfold through those below him. Centuries pass; whole races of men are expended in the effort

to produce one that shall realize this Ideal, and publish Spirit in the human form. Here and there is a degree of success. Life enough is lived through a man, to justify the great difficulties attendant on the existence of mankind. And then throughout all realms of thought vibrates the affirmation, "This is my beloved Son, in whom I am well pleased."

'I do not mean to lay an undue stress upon the position and office of man merely because I am of his race, and understand best the scope of his destiny. The history of the earth, the motions of the heavenly bodies, suggest already modes of being higher than ours, and which fulfil more deeply the office of interpretation. But I do suppose man's life to be the rivet in one series of the great chain, and that all higher existences are analogous to his. Music suggests their mode of being, and, when carried up on its strong wings, we foresee how the next step in the soul's ascension shall interpret man to the universe, as he now interprets those forms beneath himself.

'The law of Spirit is identical, whether displaying itself as genius, or as piety, but its modes of expression are distinct dialects. All souls desire to become the fathers of souls, as citizens, legislators, poets, artists, sages, saints; and, so far as they are true to the law of their incorruptible essence, they are all Anointed, all Emanuel, all Messiah; but they are all brutes and devils so far as subjected to the law of corruptible existence.

'As wherever there is a tendency a form is gradually evolved, as its Type, — so is it the law of each class and order of human thoughts to produce a form which shall be the visible representation of its aim and strivings, and stand before it as its King. This effort to produce a kingly type it was, that clothed itself with power as Brahma or Osiris, that gave laws as Confucius or Moses, that embodied music and eloquence in the Apollo. This it was that incarnated itself, at one time as Plato, at another as Michel Angelo, at another as Luther, &c. Ever seeking, it has produced Ideal after Ideal of the beauty, into which mankind is capable of being developed; and one of the highest, in some respects the very highest, of these kingly types, was the life of Jesus of Nazareth.

'Few believe more in his history than myself, and it is very dear to me. I believe, in my own way, in the long preparation of ages for his coming, and the truth of prophecy that announced him. I see a necessity, in the character of Jesus, why Abraham should have been the founder of his nation, Moses its lawgiver, and David its king and poet. I believe in the genesis of the patriarchs, as given in the Old Testament. I believe in the prophets, — that they foreknew not only what their nation longed for, but what the development of universal Man

requires, — a Redeemer, an Atoner, a Lamb of God, taking away the sins of the world. I believe that Jesus came when the time was ripe, and that he was peculiarly a messenger and Son of God. I have nothing to say in denial of the story of his birth; whatever the actual circumstances were, he was born of a Virgin, and the tale expresses a truth of the soul. I have no objection to the miracles, except where they do not happen to please one's feelings. Why should not a spirit, so consecrate and intent, develop new laws, and make matter plastic? I can imagine him walking the waves, without any violation of my usual habits of thought. He could not remain in the tomb, they say; certainly not, — death is impossible to such a being. He remained upon earth; most true, and all who have met him since on the way, have felt their hearts burn within them. He ascended to heaven; surely, how could it be otherwise?

'Would I could express with some depth what I feel as to religion in my very soul; it would be a clear note of calm assurance. But for the present this must suffice with regard to Christ. I am grateful here, as everywhere, when Spirit bears fruit in fulness; it attests the justice of aspiration, it kindles faith, it rebukes sloth, it enlightens resolve. But so does a beautiful infant. Christ's life is only one modification of the universal harmony. I will not loathe sects, persuasions, systems, though I cannot abide in them one moment, for I see that by most men they are still needed. To them their banners, their tents; let them be Fire-worshippers, Platonists, Christians; let them live in the shadow of past revelations. But, oh, Father of our souls, the One, let me seek Thee! I would seek Thee in these forms, and in proportion as they reveal Thee, they teach me to go beyond themselves. I would learn from them all, looking only to Thee! But let me set no limits from the past, to my own soul, or to any soul.

'Ages may not produce one worthy to loose the shoes of the Prophet of Nazareth; yet there will surely be another manifestation of that Word which was in the beginning. And all future manifestations will come, like Christianity, "not to destroy the law and the prophets, but to fulfil." The very greatness of this manifestation demands a greater. As an Abraham called for a Moses, and a Moses for a David, so does Christ for another Ideal. We want a life more complete and various than that of Christ. We have had a Messiah to teach and reconcile; let us now have a Man to live out all the symbolical forms of human life, with the calm beauty of a Greek God, with the deep consciousness of a Moses, with the holy love and purity of Jesus.'

X. SELF-SOVEREIGNTY.

*

To one studying the signs of the times, it was quite instructive to watch the moods of a mind so sensitive as Margaret's; for her delicate meter indicated in advance each coming change in the air-currents of thought. But I was chiefly interested in the processes whereby she was gaining harmony and unity. The more one studied her, the more plainly he saw that her peculiar power was the result of fresh, fervent, exhaustless, and indomitable affections. The emotive force in her, indeed, was immense in volume, and most various in tendency; and it was wonderful to observe the outward equability of one inwardly so impassioned.

This was, in fact, the first problem to be solved in gaining real knowledge of her commanding character: "How did a person, by constitution so impetuous, become so habitually serene?" In temperament Margaret seemed a Bacchante, [A] prompt for wild excitement, and fearless to tread by night the mountain forest, with song and dance of delirious mirth; yet constantly she wore the laurel in token of purification, and, with water from fresh fountains, cleansed the statue of Minerva. Stagnancy and torpor were intolerable to her free and elastic impulses; a brilliant fancy threw over each place and incident Arcadian splendor; and eager desire, with energetic purposes, filled her with the consciousness of large latent life: and yet the lower instincts were duly subordinated to the higher, and dignified self-control ordered her deportment. Somehow, according to the doctrine of the wise Jacob Boehme, the fierce, hungry fire had met in embrace the meek, cool water, and was bringing to birth the pleasant light-flame of love. The transformation, though not perfected, was fairly begun.

Partly I could see how this change had been wrought. Ill health, pain, disappointment, care, had tamed her spirits. A wide range through the romantic literature of ancient and modern times had exalted while expending her passions. In the world of imagination, she had discharged the stormful energy which would have been destructive in actual life. And in thought she had bound herself to the mast while sailing past the Sirens. Through sympathy, also, from childhood, with the tragi-comedy of many lives around her, she had gained experience of the laws and limitations of providential order. Gradually, too, she had risen to higher planes of hope, whence opened wider prospects of destiny and duty. More than all, by that attraction of opposites which a strong will is most apt to feel, she had sought, as chosen companions, persons of scrupulous

reserve, of modest coolness, and severe elevation of view. Finally, she had been taught, by a discipline specially fitted to her dispositions, to trust the leadings of the Divine Spirit. The result was, that at this period Margaret had become a Mystic. Her prisoned emotions found the freedom they pined for in contemplation of nature's exquisite harmonies, — in poetic regards of the glory that enspheres human existence, when seen as a whole from beyond the clouds, — and above all in exultant consciousness of life ever influent from the All-Living.

A few passages from, her papers will best illustrate this proneness to rapture.

'My tendency is, I presume, rather to a great natural than to a deep religious life. But though others may be more conscientious and delicate, few have so steady a faith in Divine Love. I may be arrogant and impetuous, but I am never harsh and morbid. May there not be a mediation, rather than a conflict, between piety and genius? Greek and Jew, Italian and Saxon, are surely but leaves on one stem, at last.'

*

'I am in danger of giving myself up to experiences till they so steep me in ideal passion that the desired goal is forgotten in the rich present. Yet I think I am learning how to use life more wisely.'

*

'Forgive me, beautiful ones, who earlier learned the harmony of your beings, — with whom eye, voice, and hand are already true to the soul! Forgive me still some "lispings and stammerings of the passionate age." Teach me, — me, also, — to utter my paean in its full sweetness. These long lines are radii from one centre; aid me to fill the circumference. Then each moment, each act, shall be true. The pupil has found the carbuncle,[B] but knows not yet how to use it day by day. But "though his companions wondered at the pupil, the master loved him." He loves me, my friends. Do ye trust me. Wash the tears and black stains from the records of my life by the benignity of a true glance; make each discord harmony, by striking again the key-note; forget the imperfect interviews, burn the imperfect letters, till at last the full song bursts forth, the key-stone is given from heaven to the arch, the past is all pardoned and atoned for, and we live forever in the Now.'

*

‘Henceforth I hope I shall not write letters thus full of childish feeling; for in feeling I am indeed a child, and the least of children. Soon I must return into the Intellect, for *there* in sight, at least, I am a man, and could write the words very calmly and in steadfast flow. But, lately, the intellect has been so subordinated to the soul, that I am not free to enter the Basilikon, and plead and hear till I am called. But let me not stay too long in this Sicilian valley, gathering my flowers, for “night cometh.”’

*

‘The other evening, while hearing the Creation, in the music of “There shoots the healing plant,” I felt what I would ever feel for suffering souls. Somewhere in nature is the Moly, the Nepenthe, desired from the earliest ages of mankind. No wonder the music dwelt so exultingly on the passage: —

“In native worth and honor clad.”

Yes; even so would I ever see man. I will wait, and never despair, through all the dull years.’

*

‘I am “too fiery.” Even so. Ceres put her foster child in the fire because she loved him. If they thought so before, will they not far more now? Yet I wish to be seen as I am, and would lose all rather than soften away anything. Let my friends be patient and gentle, and teach me to be so. I never promised any one patience or gentleness, for those beautiful traits are not natural to me; but I would learn them. Can I not?’

*

‘Of all the books, and men, and women, that have touched me these weeks past, what has most entered my soul is the music I have heard, — the masterly expression from that violin; the triumph of the orchestra, after the exploits on the piano; Braham, in his best efforts, when he kept true to the dignity of art; the Messiah, which has been given on two successive Sundays, and the last time in a way that deeply expressed its divine life; but above all, Beethoven’s seventh symphony. What majesty! what depth! what tearful sweetness! what victory! This was truly a fire upon an altar. There are a succession of soaring passages, near the end of the third movement, which touch me most deeply. Though soaring, they hold on with a stress which almost breaks the chains of matter to

the hearer. O, how refreshing, after polemics and philosophy, to soar thus on strong wings! Yes, Father, I will wander in dark ways with the crowd, since thou seest best for me to be tied down. But only in thy free ether do I know myself. When I read Beethoven's life, I said, "I will never repine." When I heard this symphony, I said, "I will triumph."

*

'To-day I have finished the life of Raphael, by Quatremere de Quincy, which has so long engaged me. It scarce goes deeper than a *catalogue raisonnée*, but is very complete in its way. I could make all that splendid era alive to me, and inhale the full flower of the Sanzio. Easily one soars to worship these angels of Genius. To venerate the Saints you must well nigh be one.

'I went out upon the lonely rock which commands so delicious a panoramic view. A very mild breeze had sprung up after the extreme heat. A sunset of the melting kind was succeeded by a perfectly clear moon-rise. Here I sat, and thought of Raphael. I was drawn high up in the heaven of beauty, and the mists were dried from the white plumes of contemplation.'#/

'Only by emotion do we know thee, Nature. To lean upon thy heart, and feel its pulses vibrate to our own; — that is knowledge, for that is love, the love of infinite beauty, of infinite love. Thought will never make us be born again.

'My fault is that I think I feel *too much*. O that my friends would teach me that "simple art of not too much!" How can I expect them to bear the ceaseless eloquence of my nature?'

*

'Often it has seemed that I have come near enough to the limits to see what they are. But suddenly arises afar the Fata Morgana, and tells of new Sicilies, of their flowery valleys and fields of golden grain. Then, as I would draw near, my little bark is shattered on the rock, and I am left on the cold wave. Yet with my island in sight I do not sink.'

*

'I look not fairly to myself, at the present moment. If noble growths are always slow, others may ripen far worthier fruit than is permitted to my tropical heats and tornadoes. Let me clasp the cross on my breast, as I have done a thousand times before.'

'Let me but gather from the earth one full-grown fragrant flower;
Within my bosom let it bloom through, its one blooming hour;
Within my bosom let it die, and to its latest breath
My own shall answer, "Having lived, I shrink not now from death."
It is this niggard halfness that turns my heart to stone;
'T is the cup seen, not tasted, that makes the infant moan.
For once let me press firm my lips upon the moment's brow,
For once let me distinctly feel I am all happy now,
And bliss shall seal a blessing upon that moment's brow.'

'I was in a state of celestial happiness, which lasted a great while. For months I was all radiant with faith, and love, and life. I began to be myself. Night and day were equally beautiful, and the lowest and highest equally holy. Before, it had seemed as if the Divine only gleamed upon me; but then it poured into and through me a tide of light. I have passed down from the rosy mountain, now; but I do not forget its pure air, nor how the storms looked as they rolled beneath my feet. I have received my assurance, and if the shadows should lie upon me for a century, they could never make me forgetful of the true hour. Patiently I bide my time.'

The last passage describes a peculiar illumination, to which Margaret often referred as the period when her earthly being culminated, and when, in the noon-tide of loving enthusiasm, she felt wholly at one with God, with Man, and the Universe. It was ever after, to her, an earnest that she was of the Elect. In a letter to one of her confidential female friends, she thus fondly looks back to this experience on the mount of transfiguration: —

'You know how, when the leadings of my life found their interpretation, I longed to share my joy with those I prized most; for I felt that if they could but understand the past we should meet entirely. They received me, some more, some less, according to the degree of intimacy between our natures. But now I have done with the past, and again move forward. The path looks more difficult, but I am better able to bear its trials. We shall have much communion, even if not in the deepest places. I feel no need of isolation, but only of temperance in thought and speech, that the essence may not evaporate in words, but grow plenteous within. The Life will give me to my own. I am not yet so worthy to love as some others are, because my manifold nature is not yet harmonized enough to be faithful, and I begin, to see how much it was the want of a pure music in me that has made the good doubt me. Yet have I been true to the best light I had, and if I am so now much will be given.

'During my last weeks of solitude I was very happy, and all that had troubled

me became clearer. The angel was not weary of waiting for Gunhilde, till she had unravelled her mesh of thought, and seeds of mercy, of purification, were planted in the breast. Whatever the past has been, I feel that I have always been reading on and on, and that the Soul of all souls has been patient in love to mine. New assurances were given me, that if I would be faithful and humble, there was no experience that would not tell its heavenly errand. If shadows have fallen, already they give way to a fairer if more tempered light; and for the present I am so happy that the spirit kneels.

‘Life, is richly worth living, with its continual revelations of mighty woe, yet infinite hope: and I take it to my breast. Amid these scenes of beauty, all that is little, foreign, unworthy, vanishes like a dream. So shall it be some time amidst the Everlasting Beauty, when true joy shall begin and never cease.’

Filled thus as Margaret was with ecstasy, she was yet more than willing, — even glad, — to bear her share in the universal sorrow. Well she knew that pain must be proportioned to the fineness and fervor of her organization; that the very keenness of her sensibility exposed her to constant disappointment or disgust; that no friend, however faithful, could meet the demands of desires so eager, of sympathies so absorbing. Contrasted with her radiant visions, how dreary looked actual existence; how galling was the friction of petty hindrances; how heavy the yoke of drudging care! Even success seemed failure, when measured by her conscious aim; and experience had brought out to consciousness excesses and defects, which humbled pride while shaming self-confidence. But suffering as she did with all the intensity of so passionate a nature, Margaret still welcomed the searching discipline. ‘It is only when Persephone returns from lower earth that she weds Dyonyos, and passes from central sadness into glowing joy,’ she writes. And again: ‘I have no belief in beautiful lives; we are born to be mutilated; and the blood must flow till in every vein its place is supplied by the Divine ichor.’ And she reiterates: ‘The method of Providence with me is evidently that of “cross-biassing,” as Herbert hath it. In a word, to her own conscience and to intimate friends she avowed, without reserve, that there was in her ‘much rude matter that needed to be spiritualized.’ Comment would but weaken the pathos of the following passages, in which so plainly appears a once wilful temper striving, with childlike faith, to obey: —

‘I have been a chosen one; the lesson of renunciation was early, fully taught, and the heart of stone quite broken through. The Great Spirit wished to leave me no refuge but itself. Convictions have been given, enough to guide me many years if I am steadfast. How deeply, how gratefully I feel this blessing, as the fabric of others’ hopes are shivering round me. Peace will not always flow thus softly in my life; but, O, our Father! how many hours has He consecrated to

Himself. How often has the Spirit chosen the time, when no ray came from without, to descend upon the orphan life!’

*

‘A humbler, tenderer spirit! Yes, I long for it. But how to gain it? I see no way but prayerfully to bend myself to meet the hour. Let friends be patient with me, and pardon some faint-heartedness. The buds will shiver in the cold air when the sheaths drop. It will not be so long. The word “Patience” has been spoken; it shall be my talisman. A nobler courage will be given, with gentleness and humility. My conviction is clear that all my troubles are needed, and that one who has had so much light thrown upon the path, has no excuse for faltering steps.’

*

‘Could we command enthusiasm; had we an interest with the gods which would light up those sacred fires at will, we should be even seraphic in our influences. But life, if not a complete waste of wearisome hours, must be checkered with them; and I find that just those very times, when I feel all glowing and radiant in the happiness of receiving and giving out again the divine fluid, are preludes to hours of languor, weariness, and paltry doubt, born of —

”The secret soul’s mistrust
To find her fair ethereal wings
Weighed down by vile, degraded dust.”

‘To this, all who have chosen or been chosen to a life of thought must submit. Yet I rejoice in my heritage. Should I venture to complain? Perhaps, if I were to reckon up the hours of bodily pain, those passed in society with which I could not coalesce, those of ineffectual endeavor to penetrate the secrets of nature and of art, or, worse still, to reproduce the beautiful in some way for myself, I should find they far outnumbered those of delightful sensation, of full and soothing thought, of gratified tastes and affections, and of proud hope. Yet these last, if few, how lovely, how rich in presage! None, who have known them, can in their worst estate fail to hope that they may be again upborne to higher, purer blue.’

*

‘As I was steeped in the divine tenth book of the Republic, came — — ‘s letter,

in which he so insultingly retracts his engagements. I finished the book obstinately, but could get little good of it; then went to ask comfort of the descending sun in the woods and fields. What a comment it was on the disparity between my pursuits and my situation to receive such a letter while reading that book! However, I will not let life's mean perplexities blur from my eye the page of Plato; nor, if natural tears must be dropt, murmur at a lot, which, with all its bitterness, has given time and opportunity to cherish an even passionate love for Truth and Beauty.'

*

'Black Friday it has been, and my heart is well nigh wearied out. Shall I never be able to act and live with persons of views high as my own? or, at least, with some steadiness of feeling for me to calculate upon? Ah, me! what woes within and without; what assaults of folly; what mean distresses; and, oh, what wounds from cherished hands! Were ye the persons who should stab thus? Had I, too, the Roman right to fold my robe about me decently, and breathe the last sigh! The last! Horrible, indeed, should sobs, deep as these, be drawn to all eternity. But no; life could not hold out for more than one lease of sorrow. This anguish, however, will be wearied out, as I know by experience, alas! of how many such hours.'

*

'I am reminded to-day of the autumn hours at Jamaica Plain, where, after arranging everything for others that they wanted of me, I found myself, at last, alone in my still home, where everything, for once, reflected my feelings. It was so still, the air seemed full of spirits. How happy I was! with what sweet and solemn happiness! All things had tended to a crisis in me, and I was in a higher state, mentally and spiritually, than I ever was before or shall be again, till death shall introduce me to a new sphere. I purposed to spend the winter in study and self-collection, and to write constantly. I thought I should thus be induced to embody in beautiful forms all that lay in my mind, and that life would ripen into genius. But a very little while these fair hopes bloomed; and, since I was checked then, I do never expect to blossom forth on earth, and all postponements come naturally. At that time it seemed as if angels left me. Yet, now, I think they still are near. Renunciation appears to be entire, and I quite content; yet, probably, 't is no such thing, and that work is to be done over and over again.'

*

‘Do you believe our prayers avail for one another? and that happiness is good for the soul? Pray, then, for me, that I may have a little peace, — some green and flowery spot, ‘mid which my thoughts may rest; yet not upon fallacy, but only upon something genuine. I am deeply homesick, yet where is that home? If not on earth, why should we look to heaven? I would fain truly live wherever I must abide, and bear with full energy on my lot, whatever it is. He, who alone knoweth, will affirm that. I have tried to work whole-hearted from an earnest faith. Yet my hand is often languid, and my heart is slow. I would be gone; but whither? I know not; if I cannot make this spot of ground yield the corn and roses, famine must be my lot forever and ever, surely.’

*

‘I remember how at a similar time of perplexity, when there were none to counsel, hardly one to sympathize, and when the conflicting wishes of so many whom I loved pressed the aching heart on every side, after months of groping and fruitless thought, the merest trifle precipitated the whole mass; all became clear as crystal, and I saw of what use the tedious preparation had been, by the deep content I felt in the result.’

*

‘Beethoven! Tasso! It is well to think of you! What sufferings from baseness, from coldness! How rare and momentary were the flashes of joy, of confidence and tenderness, in these noblest lives! Yet could not their genius be repressed. The Eternal Justice lives. O, Father, teach the spirit the meaning of sorrow, and light up the generous fires of love and hope and faith, without which I cannot live!’

*

‘What signifies it that Thou dost always give me to drink more deeply of the inner fountains? And why do I seek a reason for these repulsions and strange arrangements of my mortal lot, when I always gain from them a deeper love for all men, and a deeper trust in Thee? Wonderful are thy ways! But lead me the darkest and the coldest as Thou wilt.’

*

‘Please, good Genius of my life, to make me very patient, resolute, gentle, while no less ardent; and after having tried me well, please present, at the end of some thousand years or so, a sphere of congenial and consecutive labors; of heart-felt, heart-filling wishes carried out into life on the instant; of aims obviously, inevitably proportioned to my highest nature. Sometime, in God’s good time, let me live as swift and earnest as a flash of the eye. Meanwhile, let me gather force slowly, and drift along lazily, like yonder cloud, and be content to end in a few tears at last.’

*

‘To-night I lay on the sofa, and saw how the flame shot up from beneath, through the mass of coal that had been piled above. It shot up in wild beautiful jets, and then unexpectedly sank again, and all was black, unsightly and forlorn. And thus, I thought, is it with my life at present. Yet if the fire beneath persists and conquers, that black dead mass will become all radiant, life-giving, fit for the altar or the domestic hearth. Yes, and it shall be so.’

*

‘My tendency at present is to the deepest privacy. Where can I hide till I am given to myself? Yet I love the others more and more. When they are with me I must give them the best from my scrip. I see their infirmities, and would fain heal them, forgetful of my own! But am I left one moment alone, then, a poor wandering pilgrim, but no saint, I would seek the shrine, and would therein die to the world. Then if from the poor relics some miracles might be wrought, that should be for my fellows. Yet some of the saints were able to work in their generation, for they had renounced all!’

*

‘Forget, if you can, all of petulant or overstrained that may have displeased you in me, and commend me in your prayers to my best self. When, in the solitude of the spirit, comes upon you some air from the distance, a breath of aspiration, of faith, of pure tenderness, then believe that the Power which has guided me so faithfully, emboldens my thoughts to frame a prayer for you.’

*

‘Beneath all pain inflicted by Nature, be not only serene, but more; let it avail

thee in prayer. Put up, at the moment of greatest suffering, a prayer; not for thy own escape, but for the enfranchisement of some being dear to thee, and the Sovereign Spirit will accept thy ransom.'

*

'Strive, strive, my soul, to be innocent; yes! beneficent. Does any man wound thee? not only forgive, but Work into thy thought intelligence of the kind of pain, that thou mayest never inflict it on another spirit. Then its work is done; it will never search thy whole nature again. O, love much, and be forgiven!'

*

'No! we cannot leave society while one clod remains unpervaded by divine life. We cannot live and grow in consecrated earth, alone. Let us rather learn to stand up like the Holy Father, and with extended arms bless the whole world.'

*

'It will be happiness indeed, if, on passing this first stage, we are permitted, in some degree, to alleviate the ills of those we love, — to lead them on a little way; to aid them when they call. Often it seems to me, it would be sweet to feel that I had certainly conferred one benefit. All my poor little schemes for others are apparently blighted, and now, as ever, I am referred to the Secular year for the interpretation of my moments.'

In one of Margaret's manuscripts is found this beautiful symbol:— 'There is a species of Cactus, from whose outer bark, if torn by an ignorant person, there exudes a poisonous liquid; but the natives, who know the plant, strike to the core, and there find a sweet, refreshing juice, that renews their strength.' Surely the preceding extracts prove that she was learning how to draw life-giving virtue from the very heart of evil. No superficial experience of sorrow embittered her with angry despair; but through profound acceptance, she sought to imbibe, from every ill, peace, purity and gentleness.

*

The two fiery trials through which she had been made to pass, and through which she was yet to pass again and again, — obstruction to the development of her genius, and loneliness of heart, — were the very furnace needed to burn the dross from her gold, till it could fitly image the Heavenly Refiner. By inherited

traits, and indiscreet treatment, self-love had early become so excessive that only severest discipline could transmute it to disinterestedness. Pity for her own misfortunes had, indeed, taught her to curb her youthful scorn for mediocrity, and filled her with considerateness and delicate sensibility. Constant experience, too, of the wonderful modes whereby her fate was shaped by overruling mercy, had chastened her love of personal sway, and her passion for a commanding career; and Margaret could humble herself, — did often humble herself, — with an all-resigning contrition, that was most touching to witness in one naturally so haughty. Of this the following letter to a valued friend gives illustration: —

‘I ought, I know, to have laid aside my own cares and griefs, been on the alert for intelligence that would gratify you, and written letters such as would have been of use and given pleasure to my wise, tender, ever faithful friend. But no; I first intruded on your happiness with my sorrowful epistles, and then, because you did not seem to understand my position, with sullen petulance I resolved to write no more. Nay, worse; I tried to harden my heart against you, and felt, “If you cannot be all, you shall be nothing.”’

‘It was a bad omen that I lost the locket you gave me, which I had constantly worn. Had that been daily before my eyes, to remind me of all your worth, — of the generosity with which you, a ripe and wise character, received me to the privileges of equal friendship; of the sincerity with which you reproved and the love with which you pardoned my faults; of how much you taught me, and bore with from me, — it would have softened the flint of my heart, and I should have relaxed from my isolation.

‘How shall I apologize for feelings which I now recognize as having been so cold, so bitter and unjust? I can only say I have suffered greatly, till the tone of my spirits seems destroyed. Since I have been at leisure to realize how very ill I have been, under what constant pain and many annoyances I have kept myself upright, and how, if I have not done my work, I have learned my lesson to the end, I should be inclined to excuse myself for every fault, except this neglect and ingratitude against friends. Yet, if you can forgive, I will try to forgive myself, and I do think I shall never so deeply sin again.’

Yet, though thus frank to own to herself and to her peers her errors, Margaret cherished a trust in her powers, a confidence in her destiny, and an ideal of her being, place and influence, so lofty as to be extravagant. In the morning-hour and mountain-air of aspiration, her shadow moved before her, of gigantic size, upon the snow-white vapor.

In accordance with her earnest charge, ‘Be true as Truth to me,’ I could not but expose this propensity to self-delusion; and her answer is her best explanation and defence: —

‘I protest against your applying to me, even in your most transient thought, such an epithet as “determined exaggeration.” Exaggeration, if you will; but not determined. No; I would have all open to the light, and would let my boughs be pruned, when they grow rank and unfruitful, even if I felt the knife to the quick of my being. Very fain would I have a rational modesty, without self-distrust; and may the knowledge of my failures leaven my soul, and check its intemperance. If you saw me wholly, you would not, I think, feel as you do; for you would recognize the force, that regulates my life and tempers the ardor with an eventual calmness. You would see, too, that the more I take my flight in poetical enthusiasm, the stronger materials I bring back for my nest. Certainly I am nowise yet an angel; but neither am I an utterly weak woman, and far less a cold intellect. God is rarely afar off. Exquisite nature is all around. Life affords vicissitudes enough to try the energies of the human will. I can pray, I can act, I can learn, I can constantly immerse myself in the Divine Beauty. But I also need to love my fellow-men, and to meet the responsive glance of my spiritual kindred.’

Again, she says: —

‘I like to hear you express your sense of my defects. The word “arrogance” does not, indeed, appear to me to be just; probably because I do not understand what you mean. But in due time I doubtless shall; for so repeatedly have you used it, that it must stand for something real in my large and rich, yet irregular and unclarified nature. But though I like to hear you, as I say, and think somehow your reproof does me good, by myself, I return to my native bias, and feel as if there was plenty of room in the universe for my faults, and as if I could not spend time in thinking of them, when so many things interest me more. I have no defiance or coldness, however, as to these spiritual facts which I do not know; but I must follow my own law, and bide my time, even if, like Oedipus, I should return a criminal, blind and outcast, to ask aid from the gods. Such possibilities, I confess, give me great awe; for I have more sense than most, of the tragic depths that may open suddenly in the life. Yet, believing in God, anguish cannot be despair, nor guilt perdition. I feel sure that I have never wilfully chosen, and that my life has been docile to such truth as was shown it. In an environment like mine, what may have seemed too lofty or ambitious in my character was absolutely needed to keep the heart from breaking and enthusiasm from extinction.’

Such Egoism as this, though lacking the angel grace of unconsciousness, has a stoical grandeur that commands respect. Indeed, in all that Margaret spoke, wrote, or did, no cynic could detect the taint of meanness. Her elation came not from opium fumes of vanity, inhaled in close chambers of conceit, but from the

stimulus of sunshine, fresh breezes, and swift movement upon the winged steed of poesy. Her existence was bright with romantic interest to herself. There was an amplitude and elevation in her aim, which were worthy, as she felt, of human honor and of heavenly aid; and she was buoyed up by a courageous good-will, amidst all evils, that she knew would have been recognized as heroic in the chivalric times, when "every morning brought a noble chance." Neither was her self-regard of an engrossing temper. On the contrary, the sense of personal dignity taught her the worth of the lowliest human being, and her intense desire for harmonious conditions quickened a boundless compassion for the squalid, downcast, and drudging multitude. She aspired to live in majestic fulness of benignant and joyful activity, leaving a track of light with every footstep; and, like the radiant Iduna, bearing to man the golden apples of immortality, she would have made each meeting with her fellows rich with some boon that should never fade, but brighten in bloom forever.

This characteristic self-esteem determined the quality of Margaret's influence, which was singularly penetrating, and most beneficent where most deeply and continuously felt. Chance acquaintance with her, like a breath from the tropics, might have prematurely burst the buds of feeling in sensitive hearts, leaving after blight and barrenness. Natures, small in compass and of fragile substance, might have been distorted and shattered by attempts to mould themselves on her grand model. And in her seeming unchartered impulses, — whose latent law was honorable integrity, — eccentric spirits might have found encouragement for capricious license. Her morbid subjectivity, too, might, by contagion, have affected others with undue self-consciousness. And, finally, even intimate friends might have been tempted, by her flattering love, to exaggerate their own importance, until they recognized that her regard for them was but one niche in a Pantheon at whose every shrine she offered incense. But these ill effects were superficial accidents. The peculiarity of her power was to make all who were in concert with her feel the miracle of existence. She lived herself with such concentrated force in the moments, that she was always effulgent with thought and affection, — with conscience, courage, resource, decision, a penetrating and forecasting wisdom. Hence, to associates, her presence seemed to touch even common scenes and drudging cares with splendor, as when, through the scud of a rain-storm, sunbeams break from serene blue openings, crowning familiar things with sudden glory. By manifold sympathies, yet central unity, she seemed in herself to be a goodly company, and her words and deeds imparted the virtue of a collective life. So tender was her affection, that, like a guardian genius, she made her friends' souls her own, and identified herself with their fortunes; and yet, so pure and high withal was her

justice, that, in her recognition of their past success and present claims, there came a summons for fresh endeavor after the perfect. The very thought of her roused manliness to emulate the vigorous freedom, with which one was assured, that wherever placed she was that instant acting; and the mere mention of her name was an inspiration of magnanimity, and faithfulness, and truth.

“Sincere has been their striving; great their love,”

‘is a sufficient apology for any life,’ wrote Margaret; and how preëminently were these words descriptive of herself. Hers was indeed

”The equal temper of heroic hearts,
Made weak by time and fate, but strong in will,
To strive, to seek, to find, and not to yield.”

This indomitable aspiration found utterance in the following verses, on

‘SUB ROSA CRUX.

’In times of old, as we are told,
When men more childlike at the feet
Of Jesus sat than now,
A chivalry was known, more bold
Than ours, and yet of stricter vow,
And worship more complete.

’Knights of the Rosy Cross! they bore
Its weight within the breast, but wore
Without the sign, in glistening ruby bright.
The gall and vinegar they drank alone,
But to the world at large would only own
The wine of faith, sparkling with rosy light.

’They knew the secret of the sacred oil,
Which, poured upon the prophet’s head,
Could keep him wise and pure for aye,
Apart from all that might distract or soil;
With this their lamps they fed,
Which burn in their sepulchral shrines,
Unfading night and day.

’The pass-word now is lost

To that initiation full and free;
Daily we pay the cost
Of our slow schooling for divine degree.
We know no means to feed an undying lamp,
Our lights go out in every wind and damp.

'We wear the cross of Ebony and Gold,
Upon a dark back-ground a form of light,
A heavenly hope within a bosom cold,
A starry promise in a frequent night;
And oft the dying lamp must trim again,
For we are conscious, thoughtful, striving men.

'Yet be we faithful to this present trust,
Clasp to a heart resigned this faithful Must;
Though deepest dark our efforts should enfold,
Unwearied mine to find the vein of gold;
Forget not oft to waft the prayer on high; —
The rosy dawn again shall fill the sky.

'And by that lovely light all truth revealed, —
The cherished forms, which sad distrust concealed,
Transfigured, yet the same, will round us stand,
The kindred angels of a faithful band;
Ruby and ebon cross then cast aside,
No lamp more needed, for the night has died.

”Be to the best thou knowest ever true,”
Is all the creed.
Then be thy talisman of rosy hue,
Or fenced with thorns, that wearing, thou must bleed,
Or, gentle pledge of love's prophetic view,
The faithful steps it will securely lead.

'Happy are all who reach that distant shore,
And bathe in heavenly day;
Happiest are those who high the banner bore,
To marshal others on the way,
Or waited for them, fainting and way-worn,

By burthens overborne.’

[Footnote A: This sentence was written before I was aware that Margaret, as will be seen hereafter, had used the same symbol to describe Madame Sand. The first impulse, of course, when I discovered this coincidence, was to strike out the above passage; yet, on second thought, I have retained it, as indicating an actual resemblance between these two grand women. In Margaret, however, the benediction of their noble-hearted sister, Elizabeth Barrett, had already been fulfilled; for she to “woman’s claim” had ever joined

“the angel-grace Of a pure genius sanctified from blame.”]

[Footnote B: Novalis.]

NEW YORK.

JOURNALS, LETTERS, &c.

*

”How much, preventing God, how much. I owe
To the defences thou hast round me set!
Example, Custom, Fear, Occasion slow, —
These scorned bondsmen were my parapet.
I dare not peep over this parapet,
To gauge with glance the roaring gulf below,
The depths of sin to which I had descended,
Had not these me against myself defended.”

”Di tè, finor, chiesto non hai severa
Ragione a tè; di sua virtù non cade
Sospetto in cor conscio a se stesso.”

ALFIERI.

”He that lacks time to mourn, lacks time to mend;
Eternity mourns that. ’Tis an ill cure
For life’s worst ills, to have no time to feel them.
Where sorrow’s held intrusive, and turned out,
There wisdom, will not enter, nor true power,
Nor aught that dignifies humanity.”

TAYLOR.

”That time of year thou may’st in me behold,
When yellow leaves, or none, or few do hang
Upon those boughs which shake against the cold,
Bare ruined choirs, where late the sweet birds sang.
In me thou seest the twilight of such day,
As after sunset fadeth in the west;
Which by and by black night doth take away, —
Death’s second self, that seals up all in rest.
In me thou seest the glowing of such fire,
That on the ashes of his youth doth lie;
As the death-bed whereon it must expire,
Consumed with that which it was nourished by.”

SHAKSPEARE. [Sonnet lxxiii.]

”Aber zufrieden mit stillerem Ruhme,
Brechen die Frauen des Augenblick’s Blume,
Nähren sie sorgsam mit liebendem Fleiss,
Freier in ihrem gebundenen Wirken,
Reicher als er in des Wissens Bezirken
Und in der Dichtung unendlichem Kreis.”

SCHILLER.

”Not like to like, but like in difference;
Yet in the long years liker must they grow, —
The man be more of woman, she of man;
He gain in sweetness and in moral height,
Nor lose the wrestling thews that throw the world;
She mental breadth, nor fail in childward care;
More as the double-natured poet each;
Till at the last she set herself to man,
Like perfect music unto noble words.”

TENNYSON.

VII. NEW YORK

*

LEAVING HOME.

Incessant exertion in teaching and writing, added to pecuniary anxieties and domestic cares, had so exhausted Margaret's energy, in 1844, that she felt a craving for fresh interests, and resolved to seek an entire change of scene amid freer fields of action.

'The tax on my mind is such,' she writes,

'and I am so unwell, that I can scarcely keep up the spring of my spirits, and sometimes fear that I cannot go through with the engagements of the winter. But I have never stopped yet in fulfilling what I have undertaken, and hope I shall not be compelled to now. How farcical seems the preparation needed to gain a few moments' life; yet just so the plant works all the year round for a few days' flower.'

But in brighter mood she says, again: —

'I congratulate myself that I persisted, against every persuasion, in doing all I could last winter; for now I am and shall be free from debt, and I look on the position of debtor with a dread worthy of some respectable Dutch burgomaster. My little plans for others, too, have succeeded; our small household is well arranged, and all goes smoothly as a wheel turns round. Mother, moreover, has learned not to be over-anxious when I suffer, so that I am not obliged to suppress my feelings when it is best to yield to them. Thus, having more calmness, I feel often that a sweet serenity is breathed through every trifling duty. I am truly grateful for being enabled to fulfil obligations which to some might seem humble, but which to me are sacred.'

And in mid-summer comes this pleasant picture: —

'Every day, I rose and attended to the many little calls which are always on me, and which have been more of late. Then, about eleven, I would sit down to write, at my window, close to which is the apple-tree, lately full of blossoms, and now of yellow birds. Opposite me was Del Sarto's Madonna; behind me Silenus, holding in his arms the infant Pan. I felt very content with my pen, my daily bouquet, and my yellow birds. About five I would go out and walk till dark; then would arrive my proofs, like crabbed old guardians, coming to tea every night. So passed each day. The 23d of May, my birth-day, about one o'clock, I wrote the last line of my little book;[A] then I went to Mount Auburn,

and walked gently among the graves.'

As the brothers had now left college, and had entered or were entering upon professional and commercial life, while the sister was married, and the mother felt calls to visit in turn her scattered children, it was determined to break up the "Home." 'As a family,' Margaret writes,

'we are henceforth to be parted. But though for months I had been preparing for this separation, the last moments were very sad. Such tears are childish tears, I know, and belie a deeper wisdom. It is foolish in me to be so anxious about my family. As I went along, it seemed as if all I did was for God's sake; but if it had been, could I now thus fear? My relations to them are altogether fair, so far as they go. As to their being no more to me than others of my kind, there is surely a mystic thrill betwixt children of one mother, which can never cease to be felt till the soul is quite born anew. The earthly family is the scaffold whereby we build the spiritual one. The glimpses we here obtain of what such relations should be are to me an earnest that the family is of Divine Order, and not a mere school of preparation. And in the state of perfect being which we call Heaven, I am assured that family ties will attain to that glorified beauty of harmonious adaptation, which stellar groups in the pure blue typify.'

Margaret's admirable fidelity, as daughter and sister, — amidst her incessant literary pursuits, and her far-reaching friendships, — can be justly appreciated by those only who were in her confidence; but from the following slight sketches generous hearts can readily infer what was the quality of her home-affections.

'Mother writes from Canton that my dear old grandmother is dead. I regret that you never saw her. She was a picture of primitive piety, as she sat holding the "Saint's Rest" in her hand, with her bowed, trembling figure, and her emphatic nods, and her sweet blue eyes. They were bright to the last, though she was ninety. It is a great loss to mother, who felt a large place warmed in her heart by the fond and grateful love of this aged parent.'

'We cannot be sufficiently grateful for our mother, — so so fair a blossom of the white amaranth; truly to us a mother in this, that we can venerate her piety. Our relations to her have known no jar. Nothing vulgar has sullied them; and in this respect life has been truly domesticated. Indeed, when I compare my lot with others, it seems to have had a more than usual likeness to home; for relations have been as noble as sincerity could make them, and there has been a frequent breath of refined affection, with its sweet courtesies. Mother thanks God in her prayers for "all the acts of mutual love which have been permitted;" and looking back, I see that these have really been many. I do not recognize this, as the days pass, for to my desires life would be such a flower-chain of symbols, that what is done seems very scanty, and the thread shows too much.

‘She has just brought me a little bouquet. Her flowers have suffered greatly by my neglect, when I would be engrossed by other things in her absences. But, not to be disgusted or deterred, whenever she can glean one pretty enough, she brings it to me. Here is the bouquet, — a very delicate rose, with its half-blown bud, heliotrope, geranium, lady-pea, heart’s-ease; all sweet-scented flowers! Moved by their beauty, I wrote a short note, to which this is the reply. Just like herself! [B]

“I should not love my flowers if they did not put forth all the strength they have, in gratitude for your preserving care, last winter, and your wasted feelings over the unavoidable effects of the frost, that came so unexpectedly to nip their budding beauties. I appreciate all you have done, knowing at what cost any plant must be nourished by one who sows in fields more precious than those opened, in early life, to my culture. One must have grown up with flowers, and found joy and sweetness in them, amidst disagreeable occupations, to take delight in their whole existence as I do. They have long had power to bring me into harmony with the Creator, and to soothe almost any irritation. Therefore I understand your love for these beautiful things, and it gives me real pleasure to procure them for you.

“You have done everything that the most affectionate and loving daughter could, under all circumstances. My faith in your generous desire to increase my happiness is founded on the knowledge I have gained of your disposition, through your whole life. I should ask your sympathy and aid, whenever it could be available, knowing that you would give it first to me. Waste no thought on neglected duties. I know of none. Let us pursue our appointed paths, aiding each other in rough places; and if I live to need the being led by the hand, I always feel that you will perform this office wisely and tenderly. We shall ever have perfect peace between us. Yours, in all love.”

Margaret adds: —

‘It has been, and still is, hard for me to give up the thought of serenity, and freedom from toil and care, for mother, in the evening of a day which has been all one work of disinterested love. But I am now confident that she will learn from every trial its lesson; and if I cannot be her protector, I can be at least her counsellor and soother.’

From the less private parts of Margaret’s correspondence with the younger members of the family, some passages may be selected, as attesting her quick and penetrating sympathy, her strict truth, and influential wisdom. They may be fitly prefaced by these few but emphatic words from a letter of one of her brothers: —

“I was much impressed, during my childhood, at Groton, with an incident that

first disclosed to me the tenderness of Margaret's character. I had always viewed her as a being of different nature from myself, to whose altitudes of intellectual life I had no thought of ascending. She had been absent during the winter, and on her return asked me for some account of my experiences. Supposing that she could not enter into such insignificant details, I was not frank or warm in my confidence, though I gave no reason for my reserve; and the matter had passed from my mind, when our mother told me that Margaret had shed tears, because I seemed to heed so little her sisterly sympathy. 'Tears from one so learned,' thought I, 'for the sake of one so inferior!' Afterwards, my heart opened to her, as to no earthly friend.

"The characteristic trait of Margaret, to which all her talents and acquirements were subordinate, was sympathy, — universal sympathy. She had that large intelligence and magnanimity which enabled her to comprehend the struggles and triumphs of every form of character. Loving all about her, whether rich or poor, rude or cultivated, as equally formed after a Divine Original, with an equal birth-right of immortal growth, she regarded rather their aspirations than their accomplishments. And this was the source of her marvellous influence. Those who had never thought of their own destiny, nor put faith in their own faculties, found in her society not so much a display of her gifts, as surprising discoveries of their own. She revealed to them the truth, that all can be noble by fidelity to the highest self. She appreciated, with delicate tenderness, each one's peculiar trials, and, while never attempting to make the unhappy feel that their miseries were unreal, she pointed out the compensations of their lot, and taught them how to live above misfortune. She had consolation and advice for every one in trouble, and wrote long letters to many friends, at the expense not only of precious time, but of physical pain.

"When now, with the experience of a man, I look back upon her wise guardianship over our childhood, her indefatigable labors for our education, her constant supervision in our family affairs, her minute instructions as to the management of multifarious details, her painful conscientiousness in every duty; and then reflect on her native inaptitude and even disgust for practical affairs, on her sacrifice, — in the very flower of her genius, — of her favorite pursuits, on her incessant drudgery and waste of health, on her patient bearing of burdens, and courageous conflict with difficult circumstances, her character stands before me as heroic."

It was to this brother that Margaret wrote as follows: —

'It is a great pleasure to me to give you this book; both that I have a brother whom I think worthy to value it, and that I can give him something worthy to be valued more and more through all his life. Whatever height we may attain in

knowledge, whatever facility in the expression of thoughts, will only enable us to do more justice to what is drawn from so deep a source of faith and intellect, and arrayed, oftentimes, in the fairest hues of nature. Yet it may not be well for a young mind to dwell too near one tuned to so high a pitch as this writer, lest, by trying to come into concord with him, the natural tones be overstrained, and the strings weakened by untimely pressure. Do not attempt, therefore, to read this book through, but keep it with you, and when the spirit is fresh and earnest turn to it. It is full of the tide-marks of great thoughts, but these can be understood by one only who has gained, by experience, some knowledge of these tides. The ancient sages knew how to greet a brother who had consecrated his life to thought, and was never disturbed from his purpose by a lower aim. But it is only to those perfected in purity that Pythagoras can show a golden thigh.

‘One word as to your late readings. They came in a timely way to admonish you, amidst mere disciplines, as to the future uses of such disciplines. But systems of philosophy are mere pictures to him, who has not yet learned how to systematize. From an inward opening of your nature these knowledges must begin to be evolved, ere you can apprehend aught beyond their beauty, as revealed in the mind of another. Study in a reverent and patient spirit, blessing the day that leads you the least step onward. Do not ride hobbies. Do not hasten to conclusions. Be not coldly sceptical towards any thinker, neither credulous of his views. A man, whose mind is full of error, may give us the genial sense of truth, as a tropical sun, while it rears crocodiles, yet ripens the wine of the palm-tree.

‘To turn again to my Ancients: while they believed in self-reliance with a force little known in our day, they dreaded no pains of initiation, but fitted themselves for intelligent recognition of the truths on which our being is based, by slow gradations of travel, study, speech, silence, bravery, and patience. That so it may be with you, dear ——, hopes your sister and friend.’

A few extracts from family letters written at different times, and under various conditions, may be added.

‘I read with great interest the papers you left with me. The picture and the emotions suggested are genuine. The youthful figure, no doubt, stands portress at the gate of Infinite Beauty; yet I would say to one I loved as I do you, do not waste these emotions, nor the occasions which excite them. There is danger of prodigality, — of lavishing the best treasures of the breast on objects that cannot be the permanent ones. It is true, that whatever thought is awakened in the mind becomes truly ours; but it is a great happiness to owe these influences to a cause so proportioned to our strength as to grow with it. I say this merely because I fear that the virginity of heart which I believe essential to feeling a real love, in

all its force and purity, may be endangered by too careless excursions into the realms of fancy.'

*

'It is told us, we should pray, "lead us not into temptation;" and I agree. Yet I think it cannot be, that, with a good disposition, and the means you have had to form your mind and discern a higher standard, your conduct or happiness can be so dependent on circumstances, as you seem to think. I never advised your taking a course which would blunt your finer powers and I do not believe that winning the means of pecuniary independence need do so. I have not found that it does, in my own case, placed at much greater disadvantage than you are. I have never considered, either, that there was any misfortune in your lot. Health, good abilities, and a well-placed youth, form a union of advantages possessed by few, and which leaves you little excuse for fault or failure. And so to your better genius and the instruction of the One Wise, I commend you.'

*

'It gave me great pleasure to get your last letter, for these little impromptu effusions are the genuine letters. I rejoice that man and nature seem harmonious to you, and that the heart beats in unison with the voices of Spring. May all that is manly, sincere, and pure, in your wishes, be realized! Obligated to live myself without the sanctuary of the central relations, yet feeling I must still not despair, nor fail to profit by the precious gifts of life, while "leaning upon our Father's hand," I still rejoice, if any one can, in the true temper, and with well-founded hopes, secure a greater completeness of earthly existence. This fortune is as likely to be yours, as any one's I know. It seems to me dangerous, however, to meddle with the future. I never lay my hand on it to grasp it with impunity.'

*

'Of late I have often thought of you with strong yearnings of affection and desire to see you. It would seem to me, also, that I had not devoted myself to you enough, if I were not conscious that by any more attention to the absent than I have paid, I should have missed the needed instructions from the present. And I feel that any bond of true value will endure necessary neglect.'

*

‘There is almost too much of bitter mixed in the cup of life. You say religion is a mere sentiment with you, and that if you are disappointed in your first, your very first hopes and plans, you do not know whether you shall be able to act well. I do not myself see how a reflecting soul can endure the passage through life, except by confidence in a Power that must at last order all things right, and the resolution that it shall not be our own fault if we are not happy, — that we will resolutely deserve to be happy. There are many bright glimpses in life, many still hours; much worthy toil, some deep and noble joys; but, then, there are so many, and such long, intervals, when we are kept from all we want, and must perish but for such thoughts.’

*

‘You need not fear, dear ———, my doing anything to chill you. I am only too glad of the pure happiness you so sweetly describe. I well understand what you say of its invigorating you for every enterprise. I was always sure it would be so with me, — that resigned, I could do well, but happy I could do excellently. Happiness must, with the well-born, expand the generous affections towards all men, and invigorate one to deserve what the gods have given.’

Margaret’s charities and courtesies were not limited to her kindred. She fell, at once, into agreeable relations with her domestics, became their confidant, teacher, and helper, studied their characters, consulted their convenience, warned them of their dangers or weaknesses, and rejoiced to gratify their worthy tastes; and, in return, no lady could receive, from servants, more punctual or hearty attendance. She knew how to command and how to persuade, and her sympathy was perfect. They felt the power of her mind, her hardy directness, prompt judgment, decision and fertility of resource, and liked to aid one who knew so well her own wants. ‘Around my path,’ she writes,

‘how much humble love continually flows. These every-day and lowly friends never forget my wishes, never censure my whims, make no demands on me, and load me with gifts and uncomplaining service. Though sometimes forgetful of their claims, I try to make it up when we do meet, and I trust give little pain as I pass along this world.’

Even in extreme cases of debasement she found more to admire than to contemn, and won the confidence of the fallen by manifesting her real respect. “There was in my family,” writes a friend, “a very handsome young girl, who had been vicious in her habits, and so enamored of one of her lovers, that when he deserted her, she attempted to drown herself. She was rescued, and some good people were eager to reform her life. While she was engaged in housework

for us, Margaret saw her, and one day asked —— if she could not help her. —— replied: ‘No! for should I begin to talk with her, I should show my consciousness of her history so much as to be painful.’ Margaret was very indignant at this weakness. Said she,

‘This girl is taken away, you know, from all her objects of interest, and must feel her life vacant and dreary. Her mind should be employed; she should be made to feel her powers.’

It was plain that if Margaret had been near her, she would have devoted herself at once to her education and reestablishment.”

About the time of breaking up their home, Margaret thus expressed, to one of her brothers, her hopes and plans.

‘You wish, dear —— , that I was not obliged to toil and spin, but could live, for a while, like the lilies. I wish so, too, for life has fatigued me, my strength is little, and the present state of my mind demands repose and refreshment, that it may ripen some fruit worthy of the long and deep experiences through which I have passed. I do not regret that I have shared the labors and cares of the suffering million, and have acquired a feeling sense of the conditions under which the Divine has appointed the development of the human. Yet, if our family affairs could now be so arranged, that I might be tolerably tranquil for the next six or eight years, I should go out of life better satisfied with the page I have turned in it, than I shall if I must still toil on. A noble career is yet before me, if I can be unimpeded by cares. I have given almost all my young energies to personal relations; but, at present, I feel inclined to impel the general stream of thought. Let my nearest friends also wish that I should now take share in more public life.’

[Footnote A: Summer on the Lakes.]

[Footnote B: The editor must offer as excuse for printing, without permission asked, this note, found carefully preserved among Margaret’s papers, that he knew no other way of so truly indicating the relation between mother and daughter. This lily is eloquent of the valley where it grew. W.H.C.]

THE HIGHLANDS.

Seeking thus, at once, expansion and rest in new employments, Margaret determined, in the autumn of 1844, to accept a liberal offer of Messrs. Greeley and McElrath, to become a constant contributor to the New York Tribune. But before entering upon her new duties, she found relaxation, for a few weeks, amid the grand scenery of the Hudson. In October, she writes from Fishkill Landing:

‘Can I find words to tell you how I enjoy being here, encircled by the majestic beauty of these mountains? I felt regret, indeed, in bidding farewell to Boston, so many marks of affection were shown me at the last, and so many friendships, true if imperfect, were left behind. But now I am glad to feel enfranchized in the society of Nature. I have a well-ordered, quiet house to dwell in, with nobody’s humors to consult but my own. From my windows I see over the tops of variegated trees the river, with its purple heights beyond, and a few moments’ walk brings me to the lovely shore, where sails are gliding continually by, and the huge steamers sweep past with echoing tread, and a train of waves, whose rush relieves the monotone of the ripples. In the country behind us are mountain-paths, and lonely glens, with gurgling streams, and many-voiced water-falls. And over all are spread the gorgeous hues of autumn.’

And again: —

“‘From the brain of the purple mountain” flows forth cheer to my somewhat weary mind. I feel refreshed amid these bolder shapes of nature. Mere gentle and winning landscapes are not enough. How I wish my birth had been cast among the sources of the streams, where the voice of hidden torrents is heard by night, and the eagle soars, and the thunder resounds in prolonged peals, and wide blue shadows fall like brooding wings across the valleys! Amid such scenes, I expand and feel at home. All the fine days I spend among the mountain passes, along the mountain brooks, or beside the stately river. I enjoy just the tranquil happiness I need in communion with this fair grandeur.’

And, again: —

‘The boldness, sweetness, and variety here, are just what I like. I could pass the autumn in watching the exquisite changes of light and shade on the heights across the river. How idle to pretend that one could live and write as well amid fallow flat fields! This majesty, this calm splendor, could not but exhilarate the mind, and make it nobly free and plastic.’

These few weeks among the Highlands, — spent mostly in the open air, under October’s golden sunshine, the slumberous softness of the Indian summer, or the brilliant, breezy skies of November, — were an important era for Margaret. She had —

”lost the dream of Doing
And the other dream of Done;
The first spring in the pursuing,
The first pride in the Begun,
First recoil from incompleteness in the face of what is won.”

But she was striving, also, to use her own words, 'to be patient to the very depths of the heart, to expect no hasty realizations, not to make her own plan her law of life, but to learn the law and plan of God.' She adds, however: —

'What heaven it must be to have the happy sense of accomplishing something, and to feel the glow of action without exhausted weariness! Surely the race would have worn itself out by corrosion, if men in all ages had suffered, as we now do, from the consciousness of an unattained Ideal.'

Extracts from journals will best reveal her state of mind.

'I have a dim consciousness of what the terrible experiences must be by which the free poetic element is harmonized with the spirit of religion. In their essence and their end these are one, but rarely in actual existence. I would keep what was pure and noble in my old native freedom, with that consciousness of falling below the best convictions which now binds me to the basest of mankind, and find some new truth that shall reconcile and unite them. Once it seemed to me, that my heart was so capable of goodness, my mind of clearness, that all should acknowledge and claim me as a friend. But now I see that these impulses were prophetic of a yet distant period. The "intensity" of passion, which so often unfits me for life, or, rather, for *life here*, is to be moderated, not into dulness or languor, but a gentler, steadier energy.'

'The stateliest, strongest vessel must sometimes be brought into port to rent. If she will not submit to be fastened to the dock, stripped of her rigging, and scrutinized by unwashed artificers, she may spring a leak when riding most proudly on the subject wave. Norway fir nor English oak can resist forever the insidious assaults of the seemingly conquered ocean. The man who clears the barnacles from the keel is more essential than he who hoists the pennant on the lofty mast.'

*

'A week of more suffering than I have had for a long time, — from Sunday to Sunday, — headache night and day! And not only there has been no respite, but it has been fixed in one spot — between the eyebrows! — what does that promise? — till it grew real torture. Then it has been depressing to be able to do so little, when there was so much I had at heart to do. It seems that the black and white guardians, depicted on the Etrurian monuments, and in many a legend, are always fighting for my life. Whenever I have any cherished purpose, either outward obstacles swarm around, which the hand that would be drawing beautiful lines must be always busy in brushing away, or comes this great vulture, and fastens his iron talons on the brain.

‘But at such times the soul rises up, like some fair child in whom sleep has been mistaken for death, a living flower in the dark tomb. He casts aside his shrouds and bands, rosy and fresh from the long trance, undismayed, not seeing how to get out, yet sure there is a way.

‘I think the black jailer laughs now, hoping that while I want to show that Woman can have the free, full action of intellect, he will prove in my own self that she has not physical force to bear it. Indeed, I am too poor an example, and do wish I was bodily strong and fair. Yet, I will not be turned from the deeper convictions.’

‘Driven from home to home, as a Renouncer, I gain the poetry of each. Keys of gold, silver, iron, lead, are in my casket. Though no one loves me as I would be loved, I yet love many well enough to see into their eventual beauty. Meanwhile, I have no fetters, and when one perceives how others are bound in false relations, this surely should be regarded as a privilege. And so varied have been my sympathies, that this isolation will not, I trust, make me cold, ignorant, nor partial. My history presents much superficial, temporary tragedy. The Woman in me kneels and weeps in tender rapture; the Man in me rushes forth, but only to be baffled. Yet the time will come, when, from the union of this tragic king and queen, shall be born a radiant sovereign self.’

*

‘I have quite a desire to try my powers in a narrative poem; but my head teems with plans, of which there will be time for very few only to take form. Milton, it is said, made for himself a list of a hundred subjects for dramas, and the recorder of the fact seems to think this many. I think it very few, so filled is life with innumerable themes.’

*

‘*Sunday Evening.* — I have employed some hours of the day, with great satisfaction, in copying the Poet’s Dreams from the Pentameron of Landor. I do not often have time for such slow, pleasing labor. I have thus imprinted the words in my mind, so that they will often recur in their original beauty.

‘I have added three sonnets of Petrarca, all written after the death of Laura. They are among his noblest, all pertinent to the subject, and giving three aspects of that one mood. The last lines of the last sonnet are a fit motto for Boccaccio’s dream.

‘In copying both together, I find the prose of the Englishman worthy of the

verse of the Italian. It is a happiness to see such marble beauty in the halls of a contemporary.

'How fine it is to see the terms "onesto," "gentile," used in their original sense and force.

'Soft, solemn day!
Where earth and heaven together seem to meet,
I have been blest to greet
From human thought a kindred sway;
In thought these stood
So near the simple Good,
That what we nobleness and honor call,
They viewed as honesty, the common dower of all.'

Margaret was reading, in these weeks, the Four Books of Confucius, the Desatir, some of Taylor's translations from the Greek, a work on Scandinavian Mythology, Moehler's Symbolism, Fourier's Nouveau Monde Industriel, and Landor's Pentameron, — but she says, in her journal,

'No book is good enough to read in the open air, among these mountains; even the best seem partial, civic, limiting, instead of being, as man's voice should be, a tone higher than nature's.'

And again: —

'This morning came — — 's letter, announcing Sterling's death: —

"Weep for Dedalus all that is fairest."

'The news was very sad: Sterling did so earnestly wish to do a man's work, and had done so small a portion of his own. This made me feel how fast my years are flitting by, and nothing done. Yet these few beautiful days of leisure I cannot resolve to give at all to work. I want absolute rest, to let the mind lie fallow, to keep my whole nature open to the influx of truth.'

At this very time, however, she was longing to write with full freedom and power. 'Formerly,' she says,

'the pen did not seem to me an instrument capable of expressing the spirit of a life like mine. An enchanter's mirror, on which, with a word, could be made to rise all apparitions of the universe, grouped in new relations; a magic ring, that could transport the wearer, himself invisible, into each region of grandeur or beauty; a divining-rod, to tell where lie the secret fountains of refreshment; a wand, to invoke elemental spirits; — only such as these seemed fit to embody

one's thought with sufficient swiftness and force. In earlier years I aspired to wield the sceptre or the lyre; for I loved with wise design and irresistible command to mould many to one purpose, and it seemed all that man could desire to breathe in music and speak in words, the harmonies of the universe. But the golden lyre was not given to my hand, and I am but the prophecy of a poet. Let me use, then, the slow pen. I will make no formal vow to the long-scorned Muse; I assume no garland; I dare not even dedicate myself as a novice; I can promise neither patience nor energy: — but I will court excellence, so far as an humble heart and open eye can merit it, and, if I may gradually grow to some degree of worthiness in this mode of expression, I shall be grateful.'

WOMAN.

It was on "Woman in the Nineteenth Century" that Margaret was now testing her power as a writer. 'I have finished the pamphlet,' she writes, 'though the last day it kept spinning out beneath my hand. After taking a long walk, early one most exhilarating morning, I sat down to work, and did not give it the last stroke till near nine in the evening. Then I felt a delightful glow, as if I had put a good deal of my true life in it, and as if, should I go away now, the measure of my footprint would be left on the earth.'

A few extracts from her manuscripts upon this subject may be of interest, as indicating the spirit and aim with which she wrote: —

'To those of us who hate emphasis and exaggeration, who believe that whatever is good of its kind is good, who shrink from love of excitement and love of sway, who, while ready for duties of many kinds, dislike pledges and bonds to any, — this talk about "Woman's Sphere," "Woman's Mission," and all such phrases as mark the present consciousness of an impending transition from old conventions to greater freedom, are most repulsive. And it demands some valor to lift one's head amidst the shower of public squibs, private sneers, anger, scorn, derision, called out by the demand that women should be put on a par with their brethren, legally and politically; that they should hold property not by permission but by right, and that they should take an active part in all great movements. But though, with Mignon, we are prompted to characterize heaven as the place where

"Sie fragen nicht nach Mann nie Weib,"

yet it is plain that we must face this agitation; and beyond the dull clouds overhead hangs in the horizon Venus, as morning-star, no less fair, though of more melting beauty, than the glorious Jupiter, who shares with her the watch.

*

‘The full, free expression of feeling must be rare, for this book of Bettina Brentano’s to produce such an effect. Men who have lived in the society of women all their days, seem never before to have dreamed of their nature; they are filled with wonderment and delight at these revelations, and because they see the woman, fancy her a genius. But in truth her inspiration is nowise extraordinary; and I have letters from various friends, lying unnoticed in my portfolio, which are quite as beautiful. For one, I think that these veins of gold should pass in secret through the earth, inaccessible to all who will not take the trouble to mine for them. I do not like Bettina for publishing her heart, and am ready to repeat to her Serlo’s reproof to Aurelia.’

*

‘How terrible must be the tragedy of a woman who awakes to find that she has given herself wholly to a person for whom she is not eternally fitted! I cannot look on marriage as on the other experiments of life: it is the one grand type that should be kept forever sacred. There are two kinds of love experienced by high and rich souls. The first seeks, according to Plato’s myth, another half, as being not entire in itself, but needing a kindred nature to unlock its secret chambers of emotion, and to act with quickening influence on all its powers, by full harmony of senses, affections, intellect, will; the second is purely ideal, beholding in its object divine perfection, and delighting in it only in degree as it symbolizes the essential good. But why is not this love steadily directed to the Central Spirit, since in no form, however suggestive in beauty, can God be fully revealed? Love’s delusion is owing to one of man’s most godlike qualities, — the earnestness with which he would concentrate his whole being, and thus experience the Now of the I Am. Yet the noblest are not long deluded; they love really the Infinite Beauty, though they may still keep before them a human form, as the Isis, who promises hereafter a seat at the golden tables. How high is Michel Angelo’s love, for instance, compared with Petrarch’s! Petrarch longs, languishes; and it is only after the death of Laura that his muse puts on celestial plumage. But Michel always soars; his love is a stairway to the heavens.

*

‘Might not we women do something in regard to this Texas Annexation project? I have never felt that I had any call to take part in public affairs before; but this is

a great moral question, and we have an obvious right to express our convictions. I should like to convene meetings of the women everywhere, and take our stand.

*

‘Had Christendom but been true to its standard, while accommodating its modes of operation to the calls of successive times, woman would now have not only equal *power* with man, — for of that omnipotent nature will never permit her to be defrauded, — but a *chartered* power, too fully recognized to be abused. Indeed, all that is wanting is, that man should prove his own freedom by making her free. Let him abandon conventional restriction, as a vestige of that Oriental barbarity which confined woman to a seraglio. Let him trust her entirely, and give her every privilege already acquired for himself, — elective franchise, tenure of property, liberty to speak in public assemblies, &c.

‘Nature has pointed out her ordinary sphere by the circumstances of her physical existence. She cannot wander far. If here and there the gods send their missives through women, as through men, let them speak without remonstrance. In no age have men been able wholly to hinder them. A Deborah must always be a spiritual mother in Israel; a Corinna may be excluded from the Olympic games, yet all men will hear her song, and a Pindar sit at her feet. It is man’s fault that there ever were Aspasia and Ninons. These exquisite forms were intended for the shrines of virtue.

‘Neither need men fear to lose their domestic deities. Woman is born for love, and it is impossible to turn her from seeking it. Men should deserve her love as an inheritance, rather than seize and guard it like a prey. Were they noble, they would strive rather not to be loved too much, and to turn her from idolatry to the true, the only Love. Then, children of one Father, they could not err, nor misconceive one another.

‘Society is now so complex, that it is no longer possible to educate woman merely as woman; the tasks which come to her hand are so various, and so large a proportion of women are thrown entirely upon their own resources. I admit that this is not their state of perfect development; but it seems as if heaven, having so long issued its edict in poetry and religion, without securing intelligent obedience, now commanded the world in prose, to take a high and rational view. The lesson reads to me thus: —

‘Sex, like rank, wealth, beauty, or talent, is but an accident of birth. As you would not educate a soul to be an aristocrat, so do not to be a woman. A general regard to her usual sphere is dictated in the economy of nature. You need never enforce these provisions rigorously. Achilles had long plied the distaff as a

princess, yet, at first sight of a sword, he seized it. So with woman, one hour of love would teach her more of her proper relations, than all your formulas and conventions. Express your views, men, of what you *seek* in woman: thus best do you give them laws. Learn, women, what you should *demand* of men: thus only can they become themselves. Turn both from the contemplation of what is merely phenomenal in your existence, to your permanent life as souls. Man, do not prescribe how the Divine shall display itself in woman. Woman, do not expect to see all of God in man. Fellow-pilgrims and helpmeets are ye, Apollo and Diana, twins of one heavenly birth, both beneficent, and both armed. Man, fear not to yield to woman's hand both the quiver and the lyre; for if her urn be filled with light, she will use both to the glory of God. There is but one doctrine for ye both, and that is the doctrine of the SOUL.

Thus, in communion with the serene loveliness of mother-earth, and inspired with memories of Isis and Ceres, of Minerva and Freia, and all the commanding forms beneath which earlier ages symbolized their sense of the Divine Spirit in woman, Margaret cherished visions of the future, and responded with full heart to the poet's prophecy: —

"Then comes the statelier Eden back to men;
Then reign the world's great bridals, chaste and calm;
Then springs the crowning race of human-kind."

It was but after the usual order of our discordant life, — where Purgatory lies so nigh to Paradise, — that she should thence be summoned to pass a Sunday with the prisoners at Sing-Sing. This was the period when, in fulfilment of the sagacious and humane counsels of Judge Edmonds, a system of kind discipline, combined with education, was in practice at that penitentiary, and when the female department was under the matronly charge of Mrs. E.W. Farnum, aided by Mrs. Johnson, Miss Bruce, and other ladies, who all united sisterly sympathy with energetic firmness. Margaret thus describes her impressions: —

'We arrived on Saturday evening, in such resplendent moonlight, that we might have mistaken the prison for a palace, had we not known but too well what those massive walls contained.

'Sunday morning we attended service in the chapel of the male convicts. They listened with earnest attention, and many were moved to tears. I never felt such sympathy with an audience as when, at the words "Men and brethren," that sea of faces, marked with the scars of every ill, were upturned, and the shell of brutality burst apart at the touch of love. I knew that at least heavenly truth would not be kept out by self-complacence and dependence on good

appearances.

‘After twelve at noon, all are confined in their cells, that the keepers may have rest from their weekly fatigue. But I was allowed to have some of the women out to talk with, and the interview was very pleasant. They showed the natural aptitude of the sex for refinement. These women were among the so-called worst, and all from the lowest haunts of vice. Yet nothing could have been more decorous than their conduct, while it was also frank; and they showed a sensibility and sense of propriety, which would not have disgraced any society. All passed, indeed, much as in one of my Boston classes. I told them I was writing about Woman; and, as my path had been a favored one, I wanted to gain information from those who had been tempted and afflicted. They seemed to reply in the same spirit in which I asked. Several, however, expressed a wish to see me alone, as they could then say *all*, which they could not bear to before one another. I shall go there again, and take time for this. It is very gratifying to see the influence these few months of gentle and intelligent treatment have had upon these women; indeed, it is wonderful.’

So much were her sympathies awakened by this visit, that she rejoiced in the opportunity, soon after offered, of passing Christmas with these outcasts, and gladly consented to address the women in their chapel. “There was,” says one present, “a most touching tenderness, blended with dignity, in her air and tone, as, seated in the desk, she looked round upon her fallen sisters, and begun: ‘To me the pleasant office has been given, of ‘wishing you a happy Christmas.’ A simultaneous movement of obeisance rippled over the audience, with a murmured ‘Thank you;’ and a smile was spread upon those sad countenances, like sunrise sparkling on a pool.” A few words from this discourse, — which was extemporaneous, but of which she afterward made an imperfect record, — will show the temper in which she spoke: —

‘I have passed other Christmas days happily, but never felt as now, how fitting it is that this festival should come among the snows and chills of winter; for, to many of you, I trust, it is the birth-day of a higher life, when the sun of good-will is beginning to return, and the evergreen of hope gives promise of the eternal year. *’

‘Some months ago, we were told of the riot, the license, and defying spirit which made this place so wretched, and the conduct of some now here was such that the world said:— “Women once lost are far worse than abandoned men, and cannot be restored.” But, no! It is not so! I know my sex better. It is because women have so much feeling, and such a rooted respect for purity, that they

seem so shameless and insolent, when they feel that they have erred and that others think ill of them. They know that even the worst of men would like to see women pure as angels, and when they meet man's look of scorn, the desperate passion that rises is a perverted pride, which might have been their guardian angel. Might have been! Rather let me say, which may be; for the great improvement so rapidly wrought here gives us all warm hopes. *

'Be not in haste to leave these walls. Yesterday, one of you, who was praised, replied, that "if she did well she hoped that efforts would be made to have her pardoned." I can feel the monotony and dreariness of your confinement, but I entreat you to believe that for many of you it would be the greatest misfortune to be taken from here too soon. You know, better than I can, the temptations that await you in the world; and you must now perceive how dark is the gulf of sin and sorrow, towards which they would hurry you. Here, you have friends indeed; friends to your better selves; able and ready to help you. Born of unfortunate marriages, inheriting dangerous inclinations, neglected in childhood, with bad habits and bad associates, as certainly must be the case with some of you, how terrible will be the struggle when you leave this shelter! O, be sure that you are fitted to triumph over evil, before you again expose yourselves to it! And, instead of wasting your time and strength in vain wishes, use this opportunity to prepare yourselves for a better course of life, when you are set free. *

'When I was here before, I was grieved by hearing several of you say, "I will tell you what you wish to know, if I can be alone with you; but not before the other prisoners; for, if they know my past faults, they will taunt me with them." O, never do that! To taunt the fallen is the part of a fiend. And you! you were meant by Heaven to become angels of sympathy and love. It says in the Scripture: "Their angels do always behold in heaven the face of my Father." So was it with you in your childhood; so is it now. Your angels stand forever there to intercede for you; and to you they call to be gentle and good. Nothing can so grieve and discourage those heavenly friends as when you mock the suffering. It was one of the highest praises of Jesus, "The bruised reed he will not break." Remember that, and never insult, where you cannot aid, a companion. *

'Let me warn you earnestly against acting insincerely, and appearing to wish to do right for the sake of approbation I know you must prize the good opinion of your friendly protectors; but do not buy it at the cost of truth. Try to be, not to seem. Only so far as you earnestly wish to do right for the sake of right, can you

gain a principle that will sustain you hereafter; and that is what we wish, not fair appearances now. A career can never be happy that begins with falsehood. Be inwardly, outwardly true; then you will never be weakened or hardened by the consciousness of playing a part; and if, hereafter, the unfeeling or thoughtless give you pain, or take the dreadful risk of pushing back a soul emerging from darkness, you will feel the strong support of a good conscience. *

‘And never be discouraged; never despond; never say, “It is too late.” Fear not, even if you relapse again and again. Many of you have much to contend with. Some may be so faulty, by temperament or habit, that they can never on this earth lead a wholly fair and harmonious life, however much they strive. Yet do what you can. If in one act, — for one day, — you can do right, let that live like a point of light in your memory; for if you have done well once you can again. If you fall, do not lie grovelling; but rise upon your feet once more, and struggle bravely on. And if aroused conscience makes you suffer keenly, have patience to bear it. God will not let you suffer more than you need to fit you for his grace. At the very moment of your utmost pain, persist to seek his aid, and it will be given abundantly. Cultivate this spirit of prayer. I do not mean agitation and excitement, but a deep desire for truth, purity, and goodness, and you will daily learn how near He is to every one of ‘us.’

These fragments, from a hasty report transcribed when the impressions of the hour had grown faint, give but a shadow of the broad good sense, hearty fellow-feeling, and pathetic hopefulness, which made so effective her truly womanly appeal.

This intercourse with the most unfortunate of her sex, and a desire to learn more of the causes of their degradation, and of the means of restoring them, led Margaret, immediately on reaching New York, to visit the various benevolent institutions, and especially the prisons on Blackwell’s Island. And it was while walking among the beds of the lazar-house, — mis-called “hospital,” — which then, to the disgrace of the city, was the cess-pool of its social filth, that an incident occurred, as touching as it was surprising to herself. A woman was pointed out who bore a very bad character, as hardened, sulky, and impenetrable. She was in bad health and rapidly failing. Margaret requested to be left alone with her; and to her question, ‘Are you ‘willing to die?’ the woman answered, “Yes;” adding, with her usual bitterness, “not on religious grounds, though.” ‘That is well, — to understand yourself,’ was Margaret’s rejoinder. She then began to talk with her about her health, and her few comforts, until the conversation deepened in interest. At length, as Margaret rose to go, she said: ‘Is there not anything I can do ‘for you?’ The woman replied: “I should be glad if

you will pray with me.”

The condition of these wretched beings was brought the more home to her heart, as the buildings were directly in sight from Mr. Greeley’s house, at Turtle Bay, where Margaret, on her arrival, went to reside. ‘Seven hundred females,’ she writes,

‘are now confined in the Penitentiary opposite this point. We can pass over in a boat in a few minutes. I mean to visit, talk, and read with them. I have always felt great interest in those women who are trampled in the mud to gratify the brute appetites of men, and wished that I might be brought naturally into contact with them. Now I am.’

THE TRIBUNE AND HORACE GREELEY.

It was early in December of 1844 that Margaret took up her abode with Mr. and Mrs. Greeley, in a spacious old wooden mansion, somewhat ruinous, but delightfully situated on the East River, which she thus describes: —

‘This place is, to me, entirely charming; it is so completely in the country, and all around is so bold and free. It is two miles or more from the thickly settled parts of New York, but omnibuses and cars give me constant access to the city, and, while I can readily see what and whom I will, I can command time and retirement. Stopping on the Haarlem road, you enter a lane nearly a quarter of a mile long, and going by a small brook and pond that locks in the place, and ascending a slightly rising ground, get sight of the house, which, old-fashioned and of mellow tint, fronts on a flower-garden filled with shrubs, large vines, and trim box borders. On both sides of the house are beautiful trees, standing fair, full-grown, and clear. Passing through a wide hall, you come out upon a piazza, stretching the whole length of the house, where one can walk in all weathers; and thence by a step or two, on a lawn, with picturesque masses of rocks, shrubs and trees, overlooking the East River. Gravel paths lead, by several turns, down the steep bank to the water’s edge, where round the rocky point a small bay curves, in which boats are lying. And, owing to the currents, and the set of the tide, the sails glide sidelong, seeming to greet the house as they sweep by. The beauty here, seen by moonlight, is truly transporting. I enjoy it greatly, and the *genius loci* receives me as to a home.’

Here Margaret remained for a year and more, writing regularly for the Tribune. And how high an estimate this prolonged and near acquaintance led her to form for its Editor, will appear from a few passages in her letters: —

‘Mr. Greeley is a man of genuine excellence, honorable, benevolent, and of an uncorrupted disposition. He is sagacious, and, in his way, of even great

abilities. In modes of life and manner he is a man of the people, and of the American people.' And again: — Mr. Greeley is in many ways very interesting for me to know. He teaches me things, which my own influence on those, who have hitherto approached me, has prevented me from learning. In our business and friendly relations, we are on terms of solid good-will and mutual respect. With the exception of my own mother, I think him the most disinterestedly generous person I have ever known.'

And later she writes: —

'You have heard that the Tribune Office was burned to the ground. For a day I thought it must make a difference, but it has served only to increase my admiration for Mr. Greeley's smiling courage. He has really a strong character.'

On the other side, Mr. Greeley thus records his recollections of his friend: —

"My first acquaintance with Margaret Fuller was made through the pages of 'The Dial.' The lofty range and rare ability of that work, and its un-American richness of culture and ripeness of thought, naturally filled the 'fit audience, though few,' with a high estimate of those who were known as its conductors and principal writers. Yet I do not now remember that any article, which strongly impressed me, was recognized as from the pen of its female editor, prior to the appearance of 'The Great Lawsuit,' afterwards matured into the volume more distinctively, yet not quite accurately, entitled 'Woman in the Nineteenth Century.' I think this can hardly have failed to make a deep impression on the mind of every thoughtful reader, as the production of an original, vigorous, and earnest mind. 'Summer on the Lakes,' which appeared some time after that essay, though before its expansion into a book, struck me as less ambitious in its aim, but more graceful and delicate in its execution; and as one of the clearest and most graphic delineations, ever given, of the Great Lakes, of the Prairies, and of the receding barbarism, and the rapidly advancing, but rude, repulsive semi-civilization, which were contending with most unequal forces for the possession of those rich lands. I still consider 'Summer on the Lakes' unequalled, especially in its pictures of the Prairies and of the sunnier aspects of Pioneer life.

"Yet, it was the suggestion of Mrs. Greeley, — who had spent some weeks of successive seasons in or near Boston, and who had there made the personal acquaintance of Miss Fuller, and formed a very high estimate and warm attachment for her, — that induced me, in the autumn of 1844, to offer her terms, which were accepted, for her assistance in the literary department of the Tribune. A home in my family was included in the stipulation. I was myself barely acquainted with her, when she thus came to reside with us, and I did not fully appreciate her nobler qualities for some months afterward. Though we were

members of the same household, we scarcely met save at breakfast; and my time and thoughts were absorbed in duties and cares, which left me little leisure or inclination for the amenities of social intercourse. Fortune seemed to delight in placing us two in relations of friendly antagonism, — or rather, to develop all possible contrasts in our ideas and social habits. She was naturally inclined to luxury and a good appearance before the world. My pride, if I had any, delighted in bare walls and rugged fare. She was addicted to strong tea and coffee, both which I rejected and contemned, even in the most homoeopathic dilutions: while, my general health being sound, and hers sadly impaired, I could not fail to find in her dietetic habits the causes of her almost habitual illness; and once, while we were still barely acquainted, when she came to the breakfast-table with a very severe headache, I was tempted to attribute it to her strong potations of the Chinese leaf the night before. She told me quite frankly that she ‘declined being lectured on the food or beverage she saw fit to take;’ which was but reasonable in one who had arrived at her maturity of intellect and fixedness of habits. So the subject was thenceforth tacitly avoided between us; but, though words were suppressed, looks and involuntary gestures could not so well be; and an utter divergency of views on this and kindred themes created a perceptible distance between us.

“Her earlier contributions to the Tribune were not her best, and I did not at first prize her aid so highly as I afterwards learned to do. She wrote always freshly, vigorously, but not always clearly; for her full and intimate acquaintance with continental literature, especially German, seemed to have marred her felicity and readiness of expression in her mother tongue. While I never met another woman who conversed more freely or lucidly, the attempt to commit her thoughts to paper seemed to induce a singular embarrassment and hesitation. She could write only when in the vein; and this needed often to be waited for through several days, while the occasion sometimes required an immediate utterance. The new book must be reviewed before other journals had thoroughly dissected and discussed it, else the ablest critique would command no general attention, and perhaps be, by the greater number, unread. That the writer should wait the flow of inspiration, or at least the recurrence of elasticity of spirits and relative health of body, will not seem unreasonable to the general reader; but to the inveterate hack-horse of the daily press, accustomed to write at any time, on any subject, and with a rapidity limited only by the physical ability to form the requisite pen-strokes, the notion of waiting for a brighter day, or a happier frame of mind, appears fantastic and absurd. He would as soon think of waiting for a change in the moon. Hence, while I realized that her contributions evinced rare intellectual wealth and force, I did not value them as I should have done had they

been written more fluently and promptly. They often seemed to make their appearance 'a day after the fair.'

"One other point of tacit antagonism between us may as well be noted. Margaret was always a most earnest, devoted champion of the Emancipation of Women, from their past and present condition of inferiority, to an independence on Men. She demanded for them the fullest recognition of Social and Political Equality with the rougher sex; the freest access to all stations, professions, employments, which are open to any. To this demand I heartily acceded. It seemed to me, however, that her clear perceptions of abstract right were often overborne, in practice, by the influence of education and habit; that while she demanded absolute equality for Woman, she exacted a deference and courtesy from men to women, *as women*, which was entirely inconsistent with that requirement. In my view, the equalizing theory can be enforced only by ignoring the habitual discrimination of men and women, as forming separate *classes*, and regarding all alike as simply *persons*, — as human beings. So long as a lady shall deem herself in need of some gentleman's arm to conduct her properly out of a dining or ball-room, — so long as she shall consider it dangerous or unbecoming to walk half a mile alone by night, — I cannot see how the 'Woman's Rights' theory is ever to be anything more than a logically defensible abstraction. In this view Margaret did not at all concur, and the diversity was the incitement to much perfectly good-natured, but nevertheless sharpish sparring between us. Whenever she said or did anything implying the usual demand of Woman on the courtesy and protection of Manhood, I was apt, before complying, to look her in the face and exclaim with marked emphasis, — quoting from her 'Woman in the Nineteenth Century,' — 'LET THEM BE SEACAPTAINS IF THEY WILL!' Of course, this was given and received as raillery, but it did not tend to ripen our intimacy or quicken my esteem into admiration. Though no unkind word ever passed between us, nor any approach to one, yet we two dwelt for months under the same roof, as scarcely more than acquaintances, meeting once a day at a common board, and having certain business relations with each other. Personally, I regarded her rather as my wife's cherished friend than as my own, possessing many lofty qualities and some prominent weaknesses, and a good deal spoiled by the unmeasured flattery of her little circle of inordinate admirers. For myself, burning no incense on any human shrine, I half-consciously resolved to 'keep my eye beam clear,' and escape the fascination which she seemed to exert over the eminent and cultivated persons, mainly women, who came to our out-of-the-way dwelling to visit her, and who seemed generally to regard her with a strangely Oriental adoration.

"But as time wore on, and I became inevitably better and better acquainted

with her, I found myself drawn, almost irresistibly, into the general current. I found that her faults and weaknesses were all superficial and obvious to the most casual, if undazzled, observer. They rather dwindled than expanded upon a fuller knowledge; or rather, took on new and brighter aspects in the light of her radiant and lofty soul. I learned to know her as a most fearless and unselfish champion of Truth and Human Good at all hazards, ready to be their standard-bearer through danger and obloquy, and, if need be, their martyr. I think few have more keenly appreciated the material goods of life, — Rank, Riches, Power, Luxury, Enjoyment; but I know none who would have more cheerfully surrendered them all, if the well-being of our Race could thereby have been promoted. I have never met another in whom the inspiring hope of Immortality was so strengthened into profoundest conviction. She did not *believe* in our future and unending existence, — she *knew* it, and lived ever in the broad glare of its morning twilight. With a limited income and liberal wants, she was yet generous beyond the bounds of reason. Had the gold of California been all her own, she would have disbursed nine tenths of it in eager and well-directed efforts to stay, or at least diminish, the flood of human misery. And it is but fair to state, that the liberality she evinced was fully paralleled by the liberality she experienced at the hands of others. Had she needed thousands, and made her wants known, she had friends who would have cheerfully supplied her. I think few persons, in their pecuniary dealings, have experienced and evinced more of the better qualities of human nature than Margaret Fuller. She seemed to inspire those who approached her with that generosity which was a part of her nature.

“Of her writings I do not purpose to speak critically. I think most of her contributions to the Tribune, while she remained with us, were characterized by a directness, terseness, and practicality, which are wanting in some of her earlier productions. Good judges have confirmed my own opinion, that, while her essays in the Dial are more elaborate and ambitious, her reviews in the Tribune are far better adapted to win the favor and sway the judgment of the great majority of readers. But, one characteristic of her writings I feel bound to commend, — their absolute truthfulness. She never asked how this would sound, nor whether that would do, nor what would be the effect of saying anything; but simply, ‘Is it the truth? Is it such as the public should know?’ And if her judgment answered, ‘Yes,’ she uttered it; no matter what turmoil it might excite, nor what odium it might draw down on her own head. Perfect conscientiousness was an unflinching characteristic of her literary efforts. Even the severest of her critiques, — that on Longfellow’s Poems, — for which an impulse in personal pique has been alleged, I happen with certainty to know had no such origin. When I first handed her the book to review, she excused herself, assigning the

wide divergence of her views of Poetry from those of the author and his school, as her reason. She thus induced me to attempt the task of reviewing it myself. But day after day sped by, and I could find no hour that was not absolutely required for the performance of some duty that *would not* be put off, nor turned over to another. At length I carried the book back to her in utter despair of ever finding an hour in which even to look through it; and, at my renewed and earnest request, she reluctantly undertook its discussion. The statement of these facts is but an act of justice to her memory.

“Profoundly religious, — though her creed was, at once, very broad and very short, with a genuine love for inferiors in social position, whom she was habitually studying, by her counsel and teachings, to elevate and improve, — she won the confidence and affection of those who attracted her, by unbounded sympathy and trust. She probably knew the cherished secrets of more hearts than any one else, because she freely imparted her own. With a full share both of intellectual and of family pride, she preëminently recognized and responded to the essential brotherhood of all human kind, and needed but to know that a fellow-being required her counsel or assistance, to render her, riot merely willing, but eager to impart it. Loving ease, luxury, and the world’s good opinion, she stood ready to renounce them all, at the call of pity or of duty. I think no one, not radically averse to the whole system of domestic servitude, would have treated servants, of whatever class, with such uniform and thoughtful consideration, — a regard which wholly merged their factitious condition in their antecedent and permanent humanity. I think few servants ever lived weeks with her, who were not dignified and lastingly benefited by her influence and her counsels. They might be at first repelled, by what seemed her too stately manner and exacting disposition, but they soon learned to esteem and love her.

“I have known few women, and scarcely another maiden, who had the heart and the courage to speak with such frank compassion, in mixed circles, of the most degraded and outcast portion of the sex. The contemplation of their treatment, especially by the guilty authors of their ruin, moved her to a calm and mournful indignation, which she did not attempt to suppress nor control. Others were willing to pity and deplore; Margaret was more inclined to vindicate and to redeem. She did not hesitate to avow that on meeting some of these abused, unhappy sisters, she had been surprised to find them scarcely fallen morally below the ordinary standard of Womanhood, — realizing and loathing their debasement; anxious to escape it; and only repelled by the sad consciousness that for them sympathy and society remained only so long as they should persist in the ways of pollution. Those who have read her ‘Woman,’ may remember

some daring comparisons therein suggested between these Pariahs of society and large classes of their respectable sisters; and that was no fitful expression, — no sudden outbreak, — but impelled by her most deliberate convictions. I think, if she had been born to large fortune, a house of refuge for all female outcasts desiring to return to the ways of Virtue, would have been one of her most cherished and first realized conceptions.

“Her love of children was one of her most prominent characteristics. The pleasure she enjoyed in their society was fully counterpoised by that she imparted. To them she was never lofty, nor reserved, nor mystical; for no one had ever a more perfect faculty for entering into their sports, their feelings, their enjoyments. She could narrate almost any story in language level to their capacities, and in a manner calculated to bring out their hearty and often boisterously expressed delight. She possessed marvellous powers of observation and imitation or mimicry; and, had she been attracted to the stage, would have been the first actress America has produced, whether in tragedy or comedy. Her faculty of mimicking was not needed to commend her to the hearts of children, but it had its effect in increasing the fascinations of her genial nature and heartfelt joy in their society. To amuse and instruct them was an achievement for which she would readily forego any personal object; and her intuitive perception of the toys, games, stories, rhymes, &c., best adapted to arrest and enchain their attention, was unsurpassed. Between her and my only child, then living, who was eight months old when she came to us, and something over two years when she sailed for Europe, tendrils of affection gradually intertwined themselves, which I trust Death has not severed, but rather multiplied and strengthened. She became his teacher, playmate, and monitor; and he requited her with a prodigality of love and admiration.

“I shall not soon forget their meeting in my office, after some weeks’ separation, just before she left us forever. His mother had brought him in from the country and left him asleep on my sofa, while she was absent making purchases, and he had rolled off and hurt himself in the fall, waking with the shock in a phrensy of anger, just before Margaret, hearing of his arrival, rushed into the office to find him. I was vainly attempting to soothe him as she entered; but he was running from one end to the other of the office, crying passionately, and refusing to be pacified. She hastened to him, in perfect confidence that her endearments would calm the current of his feelings, — that the sound of her well-remembered voice would banish all thought of his pain, — and that another moment would see him restored to gentleness; but, half-wakened, he did not heed her, and probably did not even realize who it was that caught him repeatedly in her arms and tenderly insisted that he should restrain himself. At

last she desisted in despair; and, with the bitter tears streaming down her face, observed:— ‘Pickie, many friends have treated me unkindly, but no one had ever the power to cut me to the heart, as you have!’ Being thus let alone, he soon came to himself, and their mutual delight in the meeting was rather heightened by the momentary estrangement.

“They had one more meeting; their last on earth! ‘Aunty Margaret’ was to embark for Europe on a certain day, and ‘Pickie’ was brought into the city to bid her farewell. They met this time also at my office, and together we thence repaired to the ferry-boat, on which she was returning to her residence in Brooklyn to complete her preparations for the voyage. There they took a tender and affecting leave of each other. But soon his mother called at the office, on her way to the departing ship, and we were easily persuaded to accompany her thither, and say farewell once more, to the manifest satisfaction of both Margaret and the youngest of her devoted friends. Thus they parted, never to meet again in time. She sent him messages and presents repeatedly from Europe; and he, when somewhat older, dictated a letter in return, which was joyfully received and acknowledged. When the mother of our great-souled friend spent some days with us nearly two years afterward, ‘Pickie’ talked to her often and lovingly of ‘Aunty Margaret,’ proposing that they two should ‘take a boat and go over and see her,’ — for, to his infantile conception, the low coast of Long Island, visible just across the East River, was that Europe to which she had sailed, and where she was unaccountably detained so long. Alas! a far longer and more adventurous journey was required to reunite those loving souls! The 12th of July, 1849, saw him stricken down, from health to death, by the relentless cholera; and my letter, announcing that calamity, drew from her a burst of passionate sorrow, such as hardly any bereavement but the loss of a very near relative could have impelled. Another year had just ended, when a calamity, equally sudden, bereft a wide circle of her likewise, with her husband and infant son. Little did I fear, when I bade her a confident Good-by, on the deck of her outward-bound ship, that the sea would close over her earthly remains, ere we should meet again; far less that the light of my eyes and the cynosure of my hopes, who then bade her a tenderer and sadder farewell, would precede her on the dim pathway to that ‘Father’s house,’ whence is no returning! Ah, well! God is above all, and gracious alike in what he conceals and what he discloses; — benignant and bounteous, as well when he reclaims as when he bestows. In a few years, at farthest, our loved and lost ones will welcome us to their home.”

Favorably as Mr. Greeley speaks of Margaret’s articles in the Tribune, it is yet true that she never brought her full power to bear upon them; partly because she was too much exhausted by previous over-work, partly because it hindered

her free action to aim at popular effect. Her own estimate of them is thus expressed: —

‘I go on very moderately, for my strength is not great, and I am connected with one who is anxious that I should not overtask it. Body and mind, I have long required rest and mere amusement, and now obey Nature as much as I can. If she pleases to restore me to an energetic state, she will by-and-by; if not, I can only hope this world will not turn me out of doors too abruptly. I value my present position very much, as enabling me to speak effectually some right words to a large circle; and, while I can do so, am content.’

Again she says, —

‘I am pleased with your sympathy about the Tribune, for I do not find much among my old friends. They think I ought to produce something excellent, while I am satisfied to aid in the great work of popular education. I never regarded literature merely as a collection of exquisite products, but rather as a means of mutual interpretation. Feeling that many are reached and in some degree helped, the thoughts of every day seem worth noting, though in a form that does not inspire me.’

The most valuable of her contributions, according to her own judgment, were the Criticisms on Contemporary Authors in Europe and America. A few of these were revised in the spring of 1846, and, in connection with some of her best articles selected from the Dial, Western Messenger, American Monthly, &c., appeared in two volumes of Wiley and Putnam’s Library of American Books, under the title of PAPERS ON ART AND LITERATURE.

SOCIETY.

Heralded by her reputation, as a scholar, writer, and talker, and brought continually before the public by her articles in the Tribune, Margaret found a circle of acquaintance opening before her, as wide, various, and rich, as time and inclination permitted her to know. Persons sought her in her country retreat, attracted alike by idle curiosity, desire for aid, and respectful sympathy. She visited freely in several interesting families in New York and Brooklyn: occasionally accepted invitations to evening parties, and often met, at the somewhat celebrated *soirées* of Miss Lynch, the assembled authors, artists, critics, wits, and *dilettanti* of New York. As was inevitable, also, for one of such powerful magnetic influence, liberal soul and broad judgment, she once again became, as elsewhere she had been, a confidant and counsellor of the tempted and troubled; and her geniality, lively conversation, and ever fresh love, gave her a home in many hearts. But the subdued tone of her spirits at this period led her

to prefer seclusion.

Of her own social habits she writes: —

‘It is not well to keep entirely apart from the stream of common life; so, though I never go out when busy, nor keep late hours, I find it pleasanter and better to enter somewhat into society. I thus meet with many entertaining acquaintance, and some friends. I can never, indeed, expect, in America, or in this world, to form relations with nobler persons than I have already known; nor can I put my heart into these new ties as into the old ones, though probably it would still respond to commanding excellence. But my present circle satisfies my wants. As to what is called “good society,” I am wholly indifferent. I know several women, whom I like very much, and yet more men. I hear good music, which answers my social desires better than any other intercourse can; and I love four or five interesting children, in whom I always find more genuine sympathy than in their elders.’

Of the impression produced by Margaret on those who were but slightly acquainted with her, some notion may be formed from the following sketch: —

“In general society, she commanded respect rather than admiration. All persons were curious to see her, and in full rooms her fine head and spiritual expression at once marked her out from the crowd; but the most were repelled by what seemed conceit, pedantry, and a harsh spirit of criticism, while, on her part, she appeared to regard those around her as frivolous, superficial, and conventional. Indeed, I must frankly confess, that we did not meet in pleasant relations, except now and then, when the lifting of a veil, as it were, revealed for a moment the true life of each. Yet I was fond of looking at her from a distance, and defending her when silly people were inclined to cavil at her want of feminine graces. Then I would say, ‘I would like to be an artist now, that I might paint, not the care-worn countenance and the uneasy air of one seemingly out of harmony with the scene about her, but the soul that sometimes looks out from under those large lids. Michel Angelo would have made her a Sibyl.’ I remember I was surprised to find her height no greater; for her writings had always given me an impression of magnitude. Thus I studied though I avoided her, admitting, the while, proudly and joyously, that she was a woman to reverence. A trifling incident, however, gave me the key to much in her character, of which, before, I had not dreamed. It was one evening, after a Valentine party, where Frances Osgood, Margaret Fuller, and other literary ladies, had attracted some attention, that, as we were in the dressing-room preparing to go home, I heard Margaret sigh deeply. Surprised and moved, I said, ‘Why?’— ‘Alone, as usual,’ was her pathetic answer, followed by a few sweet, womanly remarks, touching as they were beautiful. Often, after, I found myself recalling her look and tone, with

tears in my eyes; for before I had regarded her as a being cold, and abstracted, if not scornful.”

Cold, abstracted, and scornful! About this very time it was that Margaret wrote in her journal: —

‘Father, let me not injure my fellows during this period of repression. I feel that when we meet my tones are not so sweet as I would have them. O, let me not wound! I, who know so well how wounds can burn and ache, should not inflict them. Let my touch be light and gentle. Let me keep myself uninvaded, but let me not fail to be kind and tender, when need is. Yet I would not assume an overstrained poetic magnanimity. Help me to do just right, and no more. O, make truth profound and simple in me!’

Again: —

‘The heart bleeds, — faith almost gives way, to see man’s seventy years of chrysalis. Is it not too long? Enthusiasm must struggle fiercely to burn clear amid these fogs. In what little, low, dark cells of care and prejudice, without one soaring thought or melodious fancy, do poor mortals — well-intentioned enough, and with religious aspiration too — forever creep. And yet the sun sets to-day as gloriously bright as ever it did on the temples of Athens, and the evening star rises as heavenly pure as it rose on the eye of Dante. O, Father! help me to free my fellows from the conventional bonds whereby their sight is holden. By purity and freedom let me teach them justice.’

And yet again: —

‘There comes a consciousness that I have no real hold on life, — no real, permanent connection with any soul. I seem a wandering Intelligence, driven from spot to spot, that I may learn all secrets, and fulfil a circle of knowledge. This thought envelopes me as a cold atmosphere. I ‘do not see how I shall go through this destiny. I can, if it is mine; but I do not feel that I can.’

Casual observers mistook Margaret’s lofty idealism for personal pride; but thus speaks one who really knew her:— “You come like one of the great powers of nature, harmonizing with all beauty of the soul or of the earth. You cannot be discordant with anything that is true and deep. I thank God for the noble privilege of being recognized by so large, tender, and radiant a soul as thine.”

EUROPE.

LETTERS

"I go to prove my soul.
I see my way, as birds their trackless way.
In some time, God's good time, I shall arrive
He guides me and the bird. In his good time!"

BROWNING.

"One, who, if He be called upon to face
Some awful moment, to which Heaven has joined
Great issues, good or bad for human kind,
Is happy as a lover, and attired
With sudden brightness, like a man inspired;
And, through the heat of conflict, keeps the law
In calmness made, and sees what he foresaw."

WORDSWORTH.

"Italia! Italia! O tu cui feo la sorte
Dono infelice di bellezza, ond' hai
Funesta dote d' infiniti guai,
Che in fronte scritti per gran doglia porte.
Deh, fossi tu men bella, ò almen più forte!"

FILICAJA.

"Oh, not to guess it at the first.
But I did guess it, — that is, I divined,
Felt by an instinct how it was; — why else
Should I pronounce you free from all that heap
Of sins, which had been irredeemable?
I felt they were not yours."

BROWNING.

"Nests there are many of this very year,
Many the nests are, which the winds shall shake,
The rains run through and other birds beat down

Yours, O Aspasia! rests against the temple
Of heavenly love, and, thence inviolate,
It shall not fall this winter, nor the next.”

LANDOR.

”Lift up your heart upon the knees of God,
Losing yourself, your smallness and your darkness
In His great light, who fills and moves the world,
Who hath alone the quiet of perfect motion.”

STERLING.

VIII. EUROPE

*

[It has been judged best to let Margaret herself tell the story of her travels. In the spring of 1846, her valued friends, Marcus Spring and lady, of New York, had decided to make a tour in Europe, with their son, and they invited Miss Fuller to accompany them. An arrangement was soon made on such terms as she could accept, and the party sailed from Boston in the "Cambria," on the first of August. The following narrative is made up of letters addressed by her to various correspondents. Some extracts, describing distinguished persons whom she saw, have been borrowed from her letters to the New York Tribune.]

TO MRS. MARGARET FULLER.

Liverpool, Aug. 16, 1846.

My dear Mother: —

The last two days at sea passed well enough, as a number of agreeable persons were introduced to me, and there were several whom I knew before. I enjoyed nothing on the sea; the excessively bracing air so affected me that I could not bear to look at it. The sight of land delighted me. The tall crags, with their breakers and circling sea-birds; then the green fields, how glad! We had a very fine day to come ashore, and made the shortest passage ever known. The stewardess said, "Any one who complained this time tempted the Almighty." I did not complain, but I could hardly have borne another day. I had no appetite; but am now making up for all deficiencies, and feel already a renovation beginning from the voyage; and, still more, from freedom and entire change of scene.

We came here Wednesday, at noon; next day we went to Manchester; the following day to Chester; returning here Saturday evening.

On Sunday we went to hear James Martineau; were introduced to him, and other leading persons. The next day and evening I passed in the society of very pleasant people, who have made every exertion to give me the means of seeing and learning; but they have used up all my strength.

LONDON.

TO C.S.

As soon as I reached England, I found how right we were in supposing there was elsewhere a greater range of interesting character among the men, than with us. I do not find, indeed, any so valuable as three or four among the most marked we have known; but many that are strongly individual, and have a fund of hidden life.

In Westmoreland, I knew, and have since been seeing in London, a man, such as would interest you a good deal; Mr. Atkinson. He is sometimes called the "prince of the English mesmerisers;" and he has the fine instinctive nature you may suppose from that. He is a man of about thirty; in the fulness of his powers; tall, and finely formed, with a head for Leonardo to paint; mild and composed, but powerful and sagacious; he does not think, but perceives and acts. He is intimate with artists, having studied architecture himself as a profession; but has some fortune on which he lives. Sometimes stationary and acting in the affairs of other men; sometimes wandering about the world and learning; he seems bound by no tie, yet looks as if he had relatives in every place.

I saw, also, a man, — an artist, — severe and antique in his spirit; he seemed burdened by the sorrows of aspiration; yet very calm, as secure in the justice of fate. What he does is bad, but full of a great desire. His name is David Scott. I saw another, — a pupil of De la Roche, — very handsome, and full of a voluptuous enjoyment of nature: him I liked a little in a different way.

By far the most beautiful person I have seen is Joseph Mazzini. If you ever see Saunders' "People's Journal," you can read articles by him that will give you some notion of his mind, especially one on his friends, headed "Italian Martyrs." He is one in whom holiness has purified, but somewhat dwarfed the man.

*

Our visit to Mr. Wordsworth was fortunate. He is seventy-six; but his is a florid, fair old age. He walked with us to all his haunts about the house. Its situation is beautiful, and the "Rydalian Laurels" are magnificent. Still, I saw abodes among the hills that I should have preferred for Wordsworth; more wild and still more romantic. The fresh and lovely Rydal Mount seems merely the retirement of a gentleman, rather than the haunt of a poet. He showed his benignity of disposition in several little things, especially in his attentions to a young boy we had with us. This boy had left the circus, exhibiting its feats of horsemanship, in Ambleside, "for that day only," at his own desire to see Wordsworth; and I feared he would be dissatisfied, as I know I should have been at his age, if, when called to see a poet, I had found no Apollo flaming with youthful glory, laurel-crowned, and lyre in hand; but, instead, a reverend old man clothed in black, and

walking with cautious step along the level garden-path. However, he was not disappointed; and Wordsworth, in his turn, seemed to feel and prize a congenial nature in this child.

Taking us into the house, he showed us the picture of his sister, repeating with much expression some lines of hers, and those so famous of his about her, beginning "Five years," &c.; also, his own picture, by Inman, of whom he spoke with esteem. I had asked to see a picture in that room, which has been described in one of the finest of his later poems. A hundred times had I wished to see this picture, yet when seen was not disappointed by it. The light was unfavorable, but it had a light of its own, —

"whose mild gleam Of beauty never ceases to enrich The common light."

Mr. Wordsworth is fond of the hollyhock; a partiality scarcely deserved by the flower, but which marks the simplicity of his tastes. He had made a long avenue of them, of all colors, from the crimson brown to rose, straw-color, and white, and pleased himself with having made proselytes to a liking for them, among his neighbors.

I never have seen such magnificent fuchsias as at Ambleside, and there was one to be seen in every cottage-yard. They are no longer here under the shelter of the green-house, as with us, and as they used to be in England. The plant, from its grace and finished elegance, being a great favorite of mine, I should like to see it as frequently and of as luxuriant growth at home, and asked their mode of culture, which I here mark down for the benefit of all who may be interested. Make a bed of bog-earth and sand; put down slips of the fuchsia, and give them a great deal of water; this is all they need. People leave them out here in winter, but perhaps they would not bear the cold of our Januaries.

Mr. Wordsworth spoke with more liberality than we expected of the recent measures about the Corn-laws, saying that "the principle was certainly right, though whether existing interests had been as carefully attended to as was right, he was not prepared to say," &c. His neighbors were pleased to hear of his speaking thus mildly, and hailed it as a sign that he was opening his mind to more light on these subjects. They lament that his habits of seclusion keep him ignorant of the real wants of England and the world. Living in this region, which is cultivated by small proprietors, where there is little poverty, vice, or misery, he hears not the voice which cries so loudly from other parts of England, and will not be stilled by sweet, poetic suasion, or philosophy, for it is the cry of men in the jaws of destruction.

It was pleasant to find the reverence inspired by this great and pure mind warmest near home. Our landlady, in heaping praises upon him, added, constantly, "and Mrs. Wordsworth, too." "Do the people here," said I, "value

Mr. Wordsworth most because he is a celebrated writer?" "Truly, madam," said she, "I think it is because he is so kind a neighbor."

"True to the kindred points of Heaven and Home."

EDINBURGH. — DE QUINCEY.

At Edinburgh we were in the wrong season, and many persons we most wished to see were absent. We had, however, the good fortune to find Dr. Andrew Combe, who received us with great kindness. I was impressed with great and affectionate respect, by the benign and even temper of his mind, his extensive and accurate knowledge, accompanied by a large and intelligent liberality. Of our country he spoke very wisely and hopefully.

*

I had the satisfaction, not easily attainable now, of seeing De Quincey for some hours, and in the mood of conversation. As one belonging to the Wordsworth and Coleridge constellation (he, too, is now seventy years of age), the thoughts and knowledge of Mr. De Quincey lie in the past, and oftentimes he spoke of matters now become trite to one of a later culture. But to all that fell from his lips, his eloquence, subtle and forcible as the wind, full and gently falling as the evening dew, lent a peculiar charm. He is an admirable narrator; not rapid, but gliding along like a rivulet through a green meadow, giving and taking a thousand little beauties not absolutely required to give his story due relief, but each, in itself, a separate boon.

I admired, too, his urbanity; so opposite to the rapid, slang, Vivian-Greyish style, current in the literary conversation of the day. "Sixty years since," men had time to do things better and more gracefully.

CHALMERS.

With Dr. Chalmers we passed a couple of hours. He is old now, but still full of vigor and fire. We had an opportunity of hearing a fine burst of indignant eloquence from him. "I shall blush to my very bones," said he, "if the *Charrch*" (sound these two *rrs* with as much burr as possible, and you will get an idea of his mode of pronouncing that unwearable word,) "if the *Charrch* yield to the storm." He alluded to the outcry now raised by the Abolitionists against the Free Church, whose motto is, "Send back the money;" i.e., the money taken from the American slaveholders. Dr. C. felt, that if they did not yield from conviction,

they must not to assault. His manner in speaking of this gave me a hint of the nature of his eloquence. He seldom preaches now.

*

A Scottish gentleman told me the following story: — Burns, still only in the dawn of his celebrity, was invited to dine with one of the neighboring so-called gentry, unhappily quite void of true gentle blood. On arriving, he found his plate set in the servants' room. After dinner, he was invited into a room where guests were assembled, and, a chair being placed for him at the lower end of the board, a glass of wine was offered, and he was requested to sing one of his songs for the entertainment, of the company. He drank off the wine, and thundered forth in reply his grand song "For a' that and a' that," and having finished his prophecy and prayer, nature's nobleman left his churlish entertainers to hide their heads in the home they had disgraced.

A NIGHT ON BEN LOMOND.

At Inversnaid, we took a boat to go down Loch Lomond, to the little inn of Rowardennan, from which the ascent is made of Ben Lomond. We found a day of ten thousand, for our purpose; but, unhappily, a large party had come with the sun, and engaged all the horses, so that if we went, it must be on foot. This was something of an enterprise for me, as the ascent is four miles, and toward the summit quite fatiguing. However, in the pride of newly-gained health and strength, I was ready, and set forth with Mr. S. alone. We took no guide, and the people of the house did not advise us to take one, as they ought.

On reaching the peak, the sight was one of beauty and grandeur such as imagination never painted. You see around you no plain ground, but on every side constellations, or groups of hills, exquisitely dressed in the soft purple of the heather, amid which gleam the lakes, like eyes that tell the secrets of the earth, and drink in those of the heavens. Peak beyond peak caught from the shifting light all the colors of the prism, and, on the furthest, angel companies seemed hovering in glorious white robes.

About four o'clock we began our descent. Near the summit, the traces of the path are not distinct, and I said to Mr. S., after a while, that we had lost it. He said he thought that was of no consequence; we could find our way down. I said I thought it was, as the ground was full of springs that were bridged over in the pathway. He accordingly went to look for it, and I stood still, because I was so tired I did not like to waste any labor.

Soon he called to me that he had found it, and I followed in the direction where he seemed to be. But I mistook, overshot it, and saw him no more. In about ten minutes I became alarmed, and called him many times. It seems, he on his side shouted also, but the brow of some hill was between us, and we neither saw nor heard one another. I then thought I would make the best of my way down, and I should find him when I arrived. But, in doing so, I found the justice of my apprehension about the springs, so soon as I got to the foot of the hills; for I would sink up to my knees in bog, and must go up the hills again, seeking better crossing places. Thus I lost much time. Nevertheless, in the twilight, I saw, at last, the lake, and the inn of Rowardennan on its shore.

Between me and it, lay, direct, a high heathery hill, which I afterwards found is called "The Tongue," because hemmed in on three sides by a water-course. It looked as if, could I only get to the bottom of that, I should be on comparatively level ground. I then attempted to descend in the water-course, but, finding that impracticable, climbed on the hill again, and let myself down by the heather, for it was very steep, and full of deep holes. With great fatigue, I got to the bottom, but when I was about to cross the water-course there, I felt afraid, it looked so deep in the dim twilight. I got down as far as I could by the root of a tree, and threw down a stone. It sounded very hollow, and I was afraid to jump. The shepherds told me afterwards, if I had, I should probably have killed myself, it was so deep, and the bed of the torrent full of sharp stones.

I then tried to ascend the hill again, for there was no other way to get off it; but soon sank down utterly exhausted. When able to get up again, and look about me, it was completely dark. I saw, far below me, a light, that looked about as big as a pin's head, that I knew to be from the inn at Rowardennan, but heard no sound except the rush of the waterfall, and the sighing of the night wind.

For the first few minutes after I perceived I had come to my night's lodging, such as it was, the circumstance looked appalling. I was very lightly clad, my feet and dress were very wet, I had only a little shawl to throw round me, and the cold autumn wind had already come, and the night mist was to fall on me, all fevered and exhausted as I was. I thought I should not live through the night, or, if I did, I must be an invalid henceforward. I could not even keep myself warm by walking, for, now it was dark, it would be too dangerous to stir. My only chance, however, lay in motion, and my only help in myself; and so convinced was I of this, that I did keep in motion the whole of that long night, imprisoned as I was on such a little perch of that great mountain.

For about two hours, I saw the stars, and very cheery and companionable they looked; but then the mist fell, and I saw nothing more, except such apparitions as visited Ossian, on the hill-side, when he went out by night, and struck the bosky

shield, and called to him the spirits of the heroes, and the white-armed maids, with their blue eyes of grief. To me, too, came those visionary shapes. Floating slowly and gracefully, their white robes would unfurl from the great body of mist in which they had been engaged, and come upon me with a kiss pervasively cold as that of death. Then the moon rose. I could not see her, but her silver light filled the mist. Now I knew it was two o'clock, and that, having weathered out so much of the night, I might the rest; and the hours hardly seemed long to me more.

It may give an idea of the extent of the mountain, that, though I called, every now and then, with all my force, in case by chance some aid might be near, and though no less than twenty men, with their dogs, were looking for me, I never heard a sound, except the rush of the waterfall and the sighing of the night wind, and once or twice the startling of the grouse in the heather. It was sublime indeed, — a never-to-be-forgotten presentation of stern, serene realities. At last came the signs of day, — the gradual clearing and breaking up; some faint sounds from I know not what; the little flies, too, arose from their bed amid the purple heather, and bit me. Truly they were very welcome to do so. But what was my disappointment to find the mist so thick, that I could see neither lake nor inn, nor anything to guide me. I had to go by guess, and, as it happened, my Yankee method served me well. I ascended the hill, crossed the torrent, in the waterfall, first drinking some of the water, which was as good at that time as ambrosia. I crossed in that place, because the waterfall made steps, as it were, to the next hill. To be sure, they were covered with water, but I was already entirely wet with the mist, so that it did not matter. I kept on scrambling, as it happened, in the right direction, till, about seven, some of the shepherds found me. The moment they came, all my feverish strength departed, and they carried me home, where my arrival relieved my friends of distress far greater than I had undergone; for I had my grand solitude, my Ossianic visions, and the pleasure of sustaining myself; while they had only doubt, amounting to anguish, and a fruitless search through the night.

Entirely contrary to my forebodings, I only suffered for this a few days, and was able to take a parting look at my prison, as I went down the lake, with feelings of complacency. It was a majestic-looking hill, that Tongue, with the deep ravines on either side, and the richest robe of heather I have anywhere seen.

Mr. S. gave all the men who were looking for me a dinner in the barn, and he and Mrs. S. ministered to them; and they talked of Burns, — really the national writer, and known by them, apparently, as none other is, — and of hair-breadth 'scapes by flood and fell. Afterwards they were all brought up to see me, and it was gratifying to note the good breeding and good feeling with which they

deported themselves. Indeed, this adventure created quite an intimate feeling between us and the people there. I had been much pleased before, in attending one of their dances, at the genuine independence and politeness of their conduct. They were willing to dance their Highland flings and strathspeys, for our amusement, and did it as naturally and as freely as they would have offered the stranger the best chair.

JOANNA BAILLIE. — HOWITTS. — SMITH.

I have mentioned with satisfaction seeing some persons who illustrated the past dynasty in the progress of thought here: Wordsworth, Dr. Chalmers, De Quincey, Andrew Combe. With a still higher pleasure, because to one of my own sex, whom I have honored almost above any, I went to pay my court to Joanna Baillie. I found on her brow, not, indeed, a coronal of gold; but a serenity and strength undimmed and unbroken by the weight of more than fourscore years, or by the scanty appreciation which her thoughts have received. We found her in her little calm retreat, at Hampstead, surrounded by marks of love and reverence from distinguished and excellent friends. Near her was the sister, older than herself, yet still sprightly and full of active kindness, whose character and their mutual relations she has, in one of her last poems, indicated with such a happy mixture of sagacity, humor, and tender pathos, and with so absolute a truth of outline.

*

Mary and William Howitt are the main support of the People's Journal. I saw them several times at their cheerful and elegant home. In Mary Howitt, I found the same engaging traits of character we are led to expect from her books for children. At their house, I became acquainted with Dr. Southwood Smith, the well-known philanthropist. He is at present engaged in the construction of good tenements, calculated to improve the condition of the working people.

TO R.W.E.

Paris, Nov. 16, 1846. — I meant to write on my arrival in London, six weeks ago; but as it was not what is technically called "the season," I thought I had best send all my letters of introduction at once, that I might glean what few good people I could. But more than I expected were in town. These introduced others, and in three days I was engaged in such a crowd of acquaintance, that I had

hardly time to dress, and none to sleep, during all the weeks I was in London.

I enjoyed the time extremely. I find myself much in my element in European society. It does not, indeed, come up to my ideal, but so many of the encumbrances are cleared away that used to weary me in America, that I can enjoy a freer play of faculty, and feel, if not like a bird in the air, at least as easy as a fish in water.

In Edinburgh, I met Dr. Brown. He is still quite a young man, but with a high ambition, and, I should think, commensurate powers. But all is yet in the bud with him. He has a friend, David Scott, a painter, full of imagination, and very earnest in his views of art. I had some pleasant hours with them, and the last night which they and I passed with De Quincey, a real grand *conversazione*, quite in the Landor style, which lasted, in full harmony, some hours.

CARLYLE.

Of the people I saw in London, you will wish me to speak first of the Carlyles. Mr. C. came to see me at once, and appointed an evening to be passed at their house. That first time, I was delighted with him. He was in a very sweet humor, — full of wit and pathos, without being overbearing or oppressive. I was quite carried away with the rich flow of his discourse; and the hearty, noble earnestness of his personal being brought back the charm which once was upon his writing, before I wearied of it. I admired his Scotch, his way of singing his great full sentences, so that each one was like the stanza of a narrative ballad. He let me talk, now and then, enough to free my lungs and change my position, so that I did not get tired. That evening, he talked of the present state of things in England, giving light, witty sketches of the men of the day, fanatics and others, and some sweet, homely stories he told of things he had known of the Scotch peasantry. Of you he spoke with hearty kindness; and he told, with beautiful feeling, a story of some poor farmer, or artisan, in the country, who on Sunday lays aside the cark and care of that dirty English world, and sits reading the Essays, and looking upon the sea.

I left him that night, intending to go out very often to their house. I assure you there never was anything so witty as Carlyle's description of —— ————. It was enough to kill one with laughing. I, on my side, contributed a story to his fund of anecdote on this subject, and it was fully appreciated. Carlyle is worth a thousand of you for that; — he is not ashamed to laugh, when he is amused, but goes on in a cordial human fashion.

The second time, Mr. C. had a dinner-party, at which was a witty, French, flippant sort of man, author of a History of Philosophy, and now writing a Life

of Goethe, a task for which he must be as unfit as irreligion and sparkling shallowness can make him. But he told stories admirably, and was allowed sometimes to interrupt Carlyle a little, of which one was glad, for, that night, he was in his more acrid mood; and, though much more brilliant than on the former evening, grew wearisome to me, who disclaimed and rejected almost everything he said.

For a couple of hours, he was talking about poetry, and the whole harangue was one eloquent proclamation of the defects in his own mind. Tennyson wrote in verse because the schoolmasters had taught him that it was great to do so, and had thus, unfortunately, been turned from the true path for a man. Burns had, in like manner, been turned from his vocation. Shakspeare had not had the good sense to see that it would have been better to write straight on in prose; — and such nonsense, which, though amusing enough at first, he ran to death after a while. The most amusing part is always when he comes back to some refrain, as in the French Revolution of the *sea-green*. In this instance, it was Petrarch and *Laura*, the last word pronounced with his ineffable sarcasm of drawl. Although he said this over fifty times, I could not ever help laughing when *Laura* would come, — Carlyle running his chin out, when he spoke it, and his eyes glancing till they looked like the eyes and beak of a bird of prey. Poor *Laura*! Lucky for her that her poet had already got her safely canonized beyond the reach of this Teufelsdröckh vulture.

The worst of hearing Carlyle is that you cannot interrupt him. I understand the habit and power of haranguing have increased very much upon him, so that you are a perfect prisoner when he has once got hold of you. To interrupt him is a physical impossibility. If you get a chance to remonstrate for a moment, he raises his voice and bears you down. True, he does you no injustice, and, with his admirable penetration, sees the disclaimer in your mind, so that you are not morally delinquent; but it is not pleasant to be unable to utter it. The latter part of the evening, however, he paid us for this, by a series of sketches, in his finest style of railing and raillery, of modern French literature, not one of them, perhaps, perfectly just, but all drawn with the finest, boldest strokes, and, from his point of view, masterly. All were depreciating, except that of Béranger. Of him he spoke with perfect justice, because with hearty sympathy.

I had, afterward, some talk with Mrs. C., whom hitherto I had only *seen*, for who can speak while her husband is there? I like her very much; — she is full of grace, sweetness, and talent. Her eyes are sad and charming. *

After this, they went to stay at Lord Ashburton's, and I only saw them once

more, when they came to pass an evening with us. Unluckily, Mazzini was with us, whose society, when he was there alone, I enjoyed more than any. He is a beautiful and pure music; also, he is a dear friend of Mrs. C.; but his being there gave the conversation a turn to “progress” and ideal subjects, and C. was fluent in invectives on all our “rose-water imbecilities.” We all felt distant from him, and Mazzini, after some vain efforts to remonstrate, became very sad. Mrs. C. said to me, “These are but opinions to Carlyle; but to Mazzini, who has given his all, and helped bring his friends to the scaffold, in pursuit of such subjects, it is a matter of life and death.”

All Carlyle’s talk, that evening, was a defence of mere force, — success the test of right; — if people would not behave well, put collars round their necks; — find a hero, and let them be his slaves, &c. It was very Titanic, and anti-celestial. I wish the last evening had been more melodious. However, I bid Carlyle farewell with feelings of the warmest friendship and admiration. We cannot feel otherwise to a great and noble nature, whether it harmonize with our own or not. I never appreciated the work he has done for his age till I saw England. I could not. You must stand in the shadow of that mountain of shams, to know how hard it is to cast light across it.

Honor to Carlyle! *Hoch!* Although in the wine with which we drink this health, I, for one, must mingle the despised “rose-water.”

And now, having to your eye shown the defects of my own mind, in the sketch of another, I will pass on more lowly, — more willing to be imperfect, — since Fate permits such noble creatures, after all, to be only this or that. It is much if one is not only a crow or magpie; — Carlyle is only a lion. Some time we may, all in full, be intelligent and humanly fair.

CARLYLE, AGAIN.

Paris, Dec, 1846. — Accustomed to the infinite wit and exuberant richness of his writings, his talk is still an amazement and a splendor scarcely to be faced with steady eyes. He does not converse; — only harangues. It is the usual misfortune of such marked men, — happily not one invariable or inevitable, — that they cannot allow other minds room to breathe, and show themselves in their atmosphere, and thus miss the refreshment and instruction which the greatest never cease to need from the experience of the humblest. Carlyle allows no one a chance, but bears down all opposition, not only by his wit and onset of words, resistless in their sharpness as so many bayonets, but by actual physical superiority, — raising his voice, and rushing on his opponent with a torrent of sound. This is not in the least from unwillingness to allow freedom to others. On

the contrary, no man would more enjoy a manly resistance to his thought. But it is the habit of a mind accustomed to follow out its own impulse, as the hawk its prey, and which knows not how to stop in the chase. Carlyle, indeed, is arrogant and overbearing; but in his arrogance there is no littleness, — no self-love. It is the heroic arrogance of some old Scandinavian conqueror; — it is his nature, and the untamable energy that has given him power to crush the dragons. You do not love him, perhaps, nor revere; and perhaps, also, he would only laugh at you if you did; but you like him heartily, and like to see him the powerful smith, the Siegfried, melting all the old iron in his furnace till it glows to a sunset red, and burns you, if you senselessly go too near. He seems, to me, quite isolated, — lonely as the desert, — yet never was a man more fitted to prize a man, could he find one to match his mood. He finds them, but only in the past. He sings, rather than talks. He pours upon you a kind of satirical, heroical, critical poem, with regular cadences, and generally, near the beginning, hits upon some singular epithet, which serves as a *refrain* when his song is full, or with which, as with a knitting needle, he catches up the stitches, if he has chanced, now and then, to let fall a row. For the higher kinds of poetry he has no sense, and his talk on that subject is delightfully and gorgeously absurd. He sometimes stops a minute to laugh at it himself, then begins anew with fresh vigor; for all the spirits he is driving before him seem to him as Fata Morgana, ugly masks, in fact, if he can but make them turn about; but he laughs that they seem to others such dainty Ariels. His talk, like his books, is full of pictures; his critical strokes masterly. Allow for his point of view, and his survey is admirable. He is a large subject. I cannot speak more or wiselier of him now, nor needs it; — his works are true, to blame and praise him, — the Siegfried of England, — great and powerful, if not quite invulnerable, and of a might rather to destroy evil, than legislate for good.

Of Dr. Wilkinson I saw a good deal, and found him a substantial person, — a sane, strong, and well-exercised mind, — but in the last degree unpoetical in its structure. He is very simple, natural, and good; excellent to see, though one cannot go far with him; and he would be worth more in writing, if he could get time to write, than in personal intercourse. He may yet find time; — he is scarcely more than thirty. Dr. W. wished to introduce me to Mr. Clissold, but I had not time; shall find it, if in London again. Tennyson was not in town.

Browning has just married Miss Barrett, and gone to Italy. I may meet them there. Bailey is helping his father with a newspaper! His wife and child (Philip Festus by name) came to see me. I am to make them a visit on my return. Marston I saw several times, and found him full of talent. That is all I want to say at present; — he is a delicate nature, that can only be known in its own way and time. I went to see his “Patrician’s Daughter.” It is an admirable play for the

stage. At the house of W.J. Fox, I saw first himself, an eloquent man, of great practical ability, then Cooper, (of the "Purgatory of Suicides,") and others.

My poor selection of miscellanies has been courteously greeted in the London journals. Openings were made for me to write, had I but leisure; it is for that I look to a second stay in London, since several topics came before me on which I wished to write and publish *there*.

*

I became acquainted with a gentleman who is intimate with all the English artists, especially Stanfield and Turner, but was only able to go to his house once, at this time. Pictures I found but little time for, yet enough to feel what they are now to be to me. I was only at the Dulwich and National Galleries and Hampton Court. Also, have seen the Vandykes, at Warwick; but all the precious private collections I was obliged to leave untouched, except one of Turner's, to which I gave a day. For the British Museum, I had only one day, which I spent in the Greek and Egyptian Rooms, unable even to look at the vast collections of drawings, &c. But if I live there a few months, I shall go often. O, were life but longer, and my strength greater! Ever I am bewildered by the riches of existence, had I but more time to open the oysters, and get out the pearls. Yet some are mine, if only for a necklace or rosary.

PARIS.

TO HER MOTHER.

Paris, Dec. 26, 1846. — In Paris I have been obliged to give a great deal of time to French, in order to gain the power of speaking, without which I might as usefully be in a well as here. That has prevented my doing nearly as much as I would. Could I remain six months in this great focus of civilized life, the time would be all too short for my desires and needs.

My Essay on American Literature has been translated into French, and published in "La Revue Indépendante," one of the leading journals of Paris; only, with that delight at manufacturing names for which the French are proverbial, they put, instead of *Margaret, Elizabeth*. Write to ———, that aunt Elizabeth has appeared unexpectedly before the French public! She will not enjoy her honors long, as a future number, which is to contain a notice of "Woman in the Nineteenth Century," will rectify the mistake.

I have been asked, also, to remain in correspondence with La Revue

Indépendante, after my return to the United States, which will be very pleasant and advantageous to me.

I have some French acquaintance, and begin to take pleasure in them, now that we can hold intercourse more easily. Among others, a Madame Pauline Roland I find an interesting woman. She is an intimate friend of Béranger and of Pierre Leroux.

We occupy a charming suite of apartments, Hotel Rougement, Boulevard Poissonière. It is a new hotel, and has not the arched gateways and gloomy court-yard of the old mansions. My room, though small, is very pretty, with the thick, flowered carpet and marble slabs; the French clock, with Cupid, of course, over the fireplace, in which burns a bright little wood fire; the canopy bedstead, and inevitable large mirror; the curtains, too, are thick and rich, the closet, &c., excellent, the attendance good. But for all this, one pays dear. We do not find that one can live *pleasantly* at Paris for little money; and we prefer to economize by a briefer stay, if at all.

TO E.H.

Paris, Jan. 18, 1847, and Naples, March 17, 1847. — You wished to hear of George Sand, or, as they say in Paris, “Madame Sand.” I find that all we had heard of her was true in the outline; I had supposed it might be exaggerated. She had every reason to leave her husband, — a stupid, brutal man, who insulted and neglected her. He afterwards gave up their child to her for a sum of money. But the love for which she left him lasted not well, and she has had a series of lovers, and I am told has one now, with whom she lives on the footing of combined means, independent friendship! But she takes rank in society like a man, for the weight of her thoughts, and has just given her daughter in marriage. Her son is a grown-up young man, an artist. Many women visit her, and esteem it an honor. Even an American here, and with the feelings of our country on such subjects, Mrs. — , thinks of her with high esteem. She has broken with La Mennais, of whom she was once a disciple.

I observed to Dr. François, who is an intimate of hers, and loves and admires her, that it did not seem a good sign that she breaks with her friends. He said it was not so with her early friends; that she has chosen to buy a chateau in the region where she passed her childhood, and that the people there love and have always loved her dearly. She is now at the chateau, and, I begin to fear, will not come to town before I go. Since I came, I have read two charming stories recently written by her. Another longer one she has just sold to *La Presse* for fifteen thousand francs. She does not receive nearly as much for her writings as

Balzac, Dumas, or Sue. She has a much greater influence than they, but a less circulation.

She stays at the chateau, because the poor people there were suffering so much, and she could help them. She has subscribed *twenty thousand francs* for their relief, in the scarcity of the winter. It is a great deal to earn by one's pen: a novel of several volumes sold for only fifteen thousand francs, as I mentioned before.

*

At last, however, she came; and I went to see her at her house, Place d'Orleans. I found it a handsome modern residence. She had not answered my letter, written about a week before, and I felt a little anxious lest she should not receive me; for she is too much the mark of impertinent curiosity, as well as too busy, to be easily accessible to strangers. I am by no means timid, but I have suffered, for the first time in France, some of the torments of *mauvaise honte*, enough to see what they must be to many.

It is the custom to go and call on those to whom you bring letters, and push yourself upon their notice; thus you must go quite ignorant whether they are disposed to be cordial. My name is always murdered by the foreign servants who announce me. I speak very bad French; only lately have I had sufficient command of it to infuse some of my natural spirit in my discourse. This has been a great trial to me, who am eloquent and free in my own tongue, to be forced to feel my thoughts struggling in vain for utterance.

The servant who admitted me was in the picturesque costume of a peasant, and, as Madame Sand afterward told me, her god-daughter, whom she had brought from her province. She announced me as "*Madame Salere*," and returned into the ante-room to tell me. "*Madame says she does not know you*" I began to think I was doomed to a rebuff, among the crowd who deserve it. However, to make assurance sure, I said, "Ask if she has not received a letter from me." As I spoke, Madame S. opened the door, and stood looking at me an instant. Our eyes met. I never shall forget her look at that moment. The doorway made a frame for her figure; she is large, but well-formed. She was dressed in a robe of dark violet silk, with a black mantle on her shoulders, her beautiful hair dressed with the greatest taste, her whole appearance and attitude, in its simple and lady-like dignity, presenting an almost ludicrous contrast to the vulgar caricature idea of George Sand. Her face is a very little like the portraits, but much finer; the upper part of the forehead and eyes are beautiful, the lower, strong and masculine, expressive of a hardy temperament and strong passions, but not in the least coarse; the complexion olive, and the air of the whole head

Spanish, (as, indeed, she was born at Madrid, and is only on one side of French blood.) All these details I saw at a glance; but what fixed my attention was the expression of *goodness*, nobleness, and power, that pervaded the whole, — the truly human heart and nature that shone in the eyes. As our eyes met, she said, “*C’est vous*” and held out her hand. I took it, and went into her little study; we sat down a moment, then I said, “*Il me fait de bien de vous voir*” and I am sure I said it with my whole heart, for it made me very happy to see such a woman, so large and so developed a character, and everything that *is good* in it so *really good*. I loved, shall always love her.

She looked away, and said, “*Ah! vous m’avez écrit une lettre charmante*” This was all the preliminary of our talk, which then went on as if we had always known one another. She told me, before I went away, that she was going that very day to write to me; that when the servant announced me she did not recognize the name, but after a minute it struck her that it might be *La dame Americaine*, as the foreigners very commonly call me, for they find my name hard to remember. She was very much pressed for time, as she was then preparing copy for the printer, and, having just returned, there were many applications to see her, but she wanted me to stay then, saying, “It is better to throw things aside, and seize the present moment.” I staid a good part of the day, and was very glad afterwards, for I did not see her again uninterrupted. Another day I was there, and saw her in her circle. Her daughter and another lady were present, and a number of gentlemen. Her position there was of an intellectual woman and good friend, — the same as my own in the circle of my acquaintance as distinguished from my intimates. Her daughter is just about to be married. It is said, there is no congeniality between her and her mother; but for her son she seems to have much love, and he loves and admires her extremely. I understand he has a good and free character, without conspicuous talent.

Her way of talking is just like her writing, — lively, picturesque, with an undertone of deep feeling, and the same skill in striking the nail on the head every now and then with a blow.

We did not talk at all of personal or private matters. I saw, as one sees in her writings, the want of an independent, interior life, but I did not feel it as a fault, there is so much in her of her kind. I heartily enjoyed the sense of so rich, so prolific, so ardent a genius. I liked the woman in her, too, very much; I never liked a woman better.

For the rest I do not care to write about it much, for I cannot, in the room and time I have to spend, express my thoughts as I would; but as near as I can express the sum total, it is this. S ——— and others who admire her, are anxious to

make a fancy picture of her, and represent her as a Helena (in the Seven Chords of the Lyre); all whose mistakes are the fault of the present state of society. But to me the truth seems to be this. She has that purity in her soul, for she knows well how to love and prize its beauty; but she herself is quite another sort of person. She needs no defence, but only to be understood, for she has bravely acted out her nature, and always with good intentions. She might have loved one man permanently, if she could have found one contemporary with her who could interest and command her throughout her range; but there was hardly a possibility of that, for such a person. Thus she has naturally changed the objects of her affection, and several times. Also, there may have been something of the Bacchante in her life, and of the love of night and storm, and the free raptures amid which roamed on the mountain-tops the followers of Cybele, the great goddess, the great mother. But she was never coarse, never gross, and I am sure her generous heart has not failed to draw some rich drops from every kind of wine-press. When she has done with an intimacy, she likes to break it off suddenly, and this has happened often, both with men and women. Many calumnies upon her are traceable to this cause.

I forgot to mention, that, while talking, she *does* smoke all the time her little cigarette. This is now a common practice among ladies abroad, but I believe originated with her.

For the rest, she holds her place in the literary and social world of France like a man, and seems full of energy and courage in it. I suppose she has suffered much, but she has also enjoyed and done much, and her expression is one of calmness and happiness. I was sorry to see her *exploitant* her talent so carelessly. She does too much, and this cannot last forever; but "Teverino" and the "Mare au Diable," which she has lately published, are as original, as masterly in truth, and as free in invention, as anything she has done.

Afterwards I saw Chopin, not with her, although he lives with her, and has for the last twelve years. I went to see him in his room with one of his friends. He is always ill, and as frail as a snow-drop, but an exquisite genius. He played to me, and I liked his talking scarcely less. Madame S. loved Liszt before him; she has thus been intimate with the two opposite sides of the musical world. Mickiewicz says, "Chopin talks with spirit, and gives us the Ariel view of the universe. Liszt is the eloquent *tribune* to the world of men, a little vulgar and showy certainly, but I like the tribune best." It is said here, that Madame S. has long had only a friendship for Chopin, who, perhaps, on his side prefers to be a lover, and a jealous lover; but she does not leave him, because he needs her care so much, when sick and suffering. About all this, I do not know; you cannot know much about anything in France, except what you see with your two eyes. Lying is

ingrained in "*la grande nation*" as they so plainly show no less in literature than life.

RACHEL.

In France the theatre is living; you see something really good, and good throughout. Not one touch of that stage-strut and vulgar bombast of tone, which the English actor fancies indispensable to scenic illusion, is tolerated here. For the first time in my life, I saw something represented in a style uniformly good, and should have found sufficient proof, if I had needed any, that all men will prefer what is good to what is bad, if only a fair opportunity for choice be allowed. When I came here, my first thought was to go and see Mademoiselle Rachel. I was sure that in her I should find a true genius. I went to see her seven or eight times, always in parts that required great force of soul, and purity of taste, even to conceive them, and only once had reason to find fault with her. On one single occasion, I saw her violate the harmony of the character, to produce effect at a particular moment; but, almost invariably, I found her a true artist, worthy Greece, and worthy at many moments to have her conceptions immortalized in marble.

Her range even in high tragedy is limited. She can only express the darker passions, and grief in its most desolate aspects. Nature has not gifted her with those softer and more flowery attributes, that lend to pathos its utmost tenderness. She does not melt to tears, or calm or elevate the heart by the presence of that tragic beauty that needs all the assaults of fate to make it show its immortal sweetness. Her noblest aspect is when sometimes she expresses truth in some severe shape, and rises, simple and austere, above the mixed elements around her. On the dark side, she is very great in hatred and revenge. I admired her more in Phèdre than in any other part in which I saw her; the guilty love inspired by the hatred of a goddess was expressed, in all its symptoms, with a force and terrible naturalness, that almost suffocated the beholder. After she had taken the poison, the exhaustion and paralysis of the system, — the sad, cold, calm submission to Fate, — were still more grand.

I had heard so much about the power of her eye in one fixed look, and the expression she could concentrate in a single word, that the utmost results could only satisfy my expectations. It is, indeed, something magnificent to see the dark cloud give out such sparks, each one fit to deal a separate death; but it was not that I admired most in her. It was the grandeur, truth, and depth of her conception of each part, and the sustained purity with which she represented it.

The French language from her lips is a divine dialect; it is stripped of its

national and personal peculiarities, and becomes what any language must, moulded by such a genius, the pure music of the heart and soul. I never could remember her tone in speaking any word; it was too perfect; you had received the thought quite direct. Yet, had I never heard her speak a word, my mind would be filled by her attitudes. Nothing more graceful can be conceived, nor could the genius of sculpture surpass her management of the antique drapery.

She has no beauty, except in the intellectual severity of her outline, and she bears marks of race, that will grow stronger every year, and make her ugly at last. Still it will be a *grandiose*, gypsy, or rather Sibylline ugliness, well adapted to the expression of some tragic parts. Only it seems as if she could not live long; she expends force enough upon a part to furnish out a dozen common lives.

TO R.W.E.

Paris, Jan. 18, 1847. — I can hardly tell you what a fever consumes me, from sense of the brevity of my time and opportunity. Here I cannot sleep at night, because I have been able to do so little in the day. Constantly I try to calm my mind into content with small achievements, but it is difficult. You will say, it is not so mightily worth knowing, after all, this picture and natural history of Europe. Very true; but I am so constituted that it pains me to come away, having touched only the glass over the picture.

I am assiduous daily at the Academy lectures, picture galleries, Chamber of Deputies, — last week, at the court and court ball. So far as my previous preparation enabled me, I get something from all these brilliant shows, — thoughts, images, fresh impulse. But I need, to initiate me into various little secrets of the place and time, — necessary for me to look at things to my satisfaction, — some friend, such as I do not find here. My steps have not been fortunate in Paris, as they were in England. No doubt, the person exists here, whose aid I want; indeed, I feel that it is so; but we do not meet, and the time draws near for me to depart.

French people I find slippery, as they do not know exactly what to make of me, the rather as I have not the command of their language. I see *them*, their brilliancy, grace, and variety, the thousand slight refinements of their speech and manner, but cannot meet them in their way. My French teacher says, I speak and act like an Italian, and I hope, in Italy, I shall find myself more at home.

I had, the other day, the luck to be introduced to Béranger, who is the only person beside George Sand I cared very particularly to see here. I went to call on La Mennais, to whom I had a letter. I found him in a little study; his secretary

was writing in a large room through which I passed. With him was a somewhat citizen-looking, but vivacious elderly man, whom I was, at first, sorry to see, having wished for half an hour's undisturbed visit to the Apostle of Democracy. But those feelings were quickly displaced by joy, when he named to me the great national lyrist of France, the great Béranger. I had not expected to see him at all, for he is not to be seen in any show place; he lives in the hearts of the people, and needs no homage from their eyes. I was very happy, in that little study, in the presence of these two men, whose influence has been so real and so great. Béranger has been much to me, — his wit, his pathos, and exquisite lyric grace. I have not received influence from La Mennais, but I see well what he has been, and is, to Europe.

TO LA MENNAIS.

Monsieur: —

As my visit to you was cut short before I was quite satisfied, it was my intention to seek you again immediately; although I felt some scruples at occupying your valuable time, when I express myself so imperfectly in your language. But I have been almost constantly ill since, and now am not sure of finding time to pay you my respects before leaving Paris for Italy. In case this should be impossible, I take the liberty to write, and to present you two little volumes of mine. It is only as a tribute of respect. I regret that they do not contain some pieces of mine which might be more interesting to you, as illustrative of the state of affairs in our country. Some such will find their place in subsequent numbers. These, I hope, you will, if you do not read them, accept kindly as a salutation from our hemisphere. Many there delight to know you as a great apostle of the ideas which are to be our life, if Heaven intends us a great and permanent life. I count myself happy in having seen you, and in finding with you Béranger, the genuine poet, the genuine man of France. I have felt all the enchantment of the lyre of Béranger; have paid my warmest homage to the truth and wisdom adorned with such charms, such wit and pathos. It was a great pleasure to see himself. If your leisure permits, Monsieur, I will ask a few lines in reply. I should like to keep some words from your hand, in case I should not look upon you more here below; and am always, with gratitude for the light you have shed on so many darkened spirits,

Yours, most respectfully,

MARGARET FULLER.

*

Paris, Jan., 1847. — I missed hearing M. Guizot, (I am sorry for it,) in his speech on the Montpensier marriage. I saw the little Duchess, the innocent or ignorant topic of all this disturbance, when presented at court. She went round the circle on the arm of the queen. Though only fourteen, she looks twenty, but has something fresh, engaging, and girlish about her.

I attended not only at the presentation, but at the ball given at the Tuileries directly after. These are fine shows, as the suite of apartments is very handsome, brilliantly lighted, — the French ladies surpassing all others in the art of dress; indeed, it gave me much pleasure to see them. Certainly there are many ugly ones; but they are so well dressed, and have such an air of graceful vivacity, that the general effect was of a flower-garden. As often happens, several American women were among the most distinguished for positive beauty; one from Philadelphia, who is by many persons considered the prettiest ornament of the dress circle at the Italian opera, was especially marked by the attention of the king. However, these ladies, even if here a long time, do not attain the air and manner of French women. The magnetic fluid that envelops them is less brilliant and exhilarating in its attractions.

Among the crowd wandered Leverrier, in the costume of Academician, looking as if he had lost, not found, his planet. French *savants* are more generally men of the world, and even men of fashion, than those of other climates; but, in his case, he seemed not to find it easy to exchange the music of the spheres for the music of fiddles.

Speaking of Leverrier leads to another of my disappointments. I went to the Sorbonne to hear him lecture, not dreaming that the old pedantic and theological character of those halls was strictly kept up in these days of light. An old guardian of the inner temple seeing me approach, had his speech all ready, and, manning the entrance, said, with a disdainful air, before we had time to utter a word, “Monsieur may enter if he pleases, but madame must remain here” (*i.e.*, in the court-yard). After some exclamations of surprise, I found an alternative in the Hotel de Clugny, where I passed an hour very delightfully, while waiting for my companion.

I was more fortunate in hearing Arago, and he justified all my expectations. Clear, rapid, full, and equal, his discourse is worthy its celebrity, and I felt repaid for the four hours one is obliged to spend in going, in waiting, and in hearing, for the lecture begins at half past one, and you must be there before twelve to get a seat, so constant and animated is his popularity.

I was present on one good occasion, at the Academy, — the day that M.

Rémusat was received there, in the place of Royer Collard. I looked down, from one of the tribunes, upon the flower of the celebrities of France; that is to say, of the celebrities which are authentic, *comme il faut*. Among them were many marked faces, many fine heads; but, in reading the works of poets, we always fancy them about the age of Apollo himself, and I found with pain some of my favorites quite old, and very unlike the company on Parnassus, as represented by Raphael. Some, however, were venerable, even noble to behold.

The poorer classes have suffered from hunger this winter. All signs of this are kept out of sight in Paris. A pamphlet called "The Voice of Famine," stating facts, though in a tone of vulgar and exaggerated declamation, was suppressed as soon as published. While Louis Philippe lives, the gases may not burst up to flame, but the need of radical measures of reform is strongly felt in France; and the time will come, before long, when such will be imperatively demanded.

FOURIER.

The doctrines of Fourier are making progress, and wherever they spread, the necessity of some practical application of the precepts of Christ, in lieu of the mummeries of a worn-out ritual, cannot fail to be felt. The more I see of the terrible ills which infest the body politic of Europe, the more indignation I feel at the selfishness or stupidity of those in my own country who oppose an examination of these subjects, — such as is animated by the hope of prevention. Educated in an age of gross materialism, Fourier is tainted by its faults; in attempts to reorganize society, he commits the error of making soul the result of health of body, instead of body the clothing of soul; but his heart was that of a genuine lover of his kind, of a philanthropist in the sense of Jesus; his views are large and noble; his life was one of devout study on these subjects, and I should pity the person who, after the briefest sojourn in Manchester and Lyons, the most superficial acquaintance with the population of London and Paris, could seek to hinder a study of his thoughts, or be wanting in reverence for his purposes.

ROUSSEAU.

To the actually so-called Chamber of Deputies, I was indebted for a sight of the manuscripts of Rousseau treasured in their library. I saw them and touched them, — those manuscripts just as he has celebrated them, written on the fine white paper, tied with ribbon. Yellow and faded age has made them, yet at their touch I seemed to feel the fire of youth, immortally glowing, more and more expansive,

with which his soul has pervaded this century. He was the precursor of all we most prize. True, his blood was mixed with madness, and the course of his actual life made some *detours* through villanous places; but his spirit was intimate with the fundamental truths of human nature, and fraught with prophecy. There is none who has given birth to more life for this age; his gifts are yet untold; they are too present with us; but he who thinks really must often think with Rousseau, and learn him ever more and more. Such is the method of genius, — to ripen fruit for the crowd by those rays of whose heat they complain.

TO R.W.E.

Naples, March 15, 1847. — Mickiewicz, the Polish poet, first introduced the Essays to acquaintance in Paris. I did not meet him anywhere, and, as I heard a great deal of him which charmed me, I sent him your poems, and asked him to come and see me. He came, and I found in him the man I had long wished to see, with the intellect and passions in due proportion for a full and healthy human being, with a soul constantly inspiring. Unhappily, it was a very short time before I came away. How much time had I wasted on others which I might have given to this real and important relation.

After hearing music from Chopin and Neukomm, I quitted Paris on the 25th February, and came, *via* Chalons, Lyons, Avignon, (where I waded through melting snow to Laura's tomb,) Arles, to Marseilles; thence, by steamer, to Genoa, Leghorn, and Pisa. Seen through a cutting wind, the marble palaces, the gardens, the magnificent water-view of Genoa, failed to charm. Only at Naples have I found *my* Italy. Between Leghorn and Naples, our boat was run into by another, and we only just escaped being drowned.

ROME.

Rome, May, 1847. — Of the fragments of the great time, I have now seen nearly all that are treasured up here. I have as yet nothing of consequence to say of them. Others have often given good hints as to how they *look*. As to what they *are*, it can only be known by approximating to the state of soul out of which they grew. They are many and precious; yet is there not so much of high excellence as I looked for. They will not float the heart on a boundless sea of feeling, like the starry night on our Western Prairies. Yet I love much to see the galleries of marbles, even where there are not many separately admirable, amid the cypresses and ilexes of Roman villas; and a picture that is good at all, looks best in one of these old palaces. I have heard owls hoot in the Colosseum by

moonlight, and they spoke more to the purpose than I ever heard any other voice on that subject. I have seen all the pomps of Holy Week in St. Peter's, and found them less imposing than an habitual acquaintance with the church itself, with processions of monks and nuns stealing in, now and then, or the swell of vespers from some side chapel. The ceremonies of the church have been numerous and splendid, during our stay, and they borrow unusual interest from the love and expectation inspired by the present pontiff. He is a man of noble and good aspect, who has set his heart on doing something solid for the benefit of man. A week or two ago, the Cardinal Secretary published a circular, inviting the departments to measures which would give the people a sort of representative council. Nothing could seem more limited than this improvement, but it was a great measure for Rome. At night, the Corso was illuminated, and many thousands passed through it in a torch-bearing procession, on their way to the Quirinal, to thank the Pope, upbearing a banner on which the edict was printed.

TO W.H.C.

Rome, May 7, 1847. — I write not to you about these countries, of the famous people I see, of magnificent shows and places. All these things are only to me an illuminated margin on the text of my inward life. Earlier, they would have been more. Art is not important to me now. I like only what little I find that is transcendently good, and even with that feel very familiar and calm. I take interest in the state of the people, their manners, the state of the race in them. I see the future dawning; it is in important aspects Fourier's future. But I like no Fourierites; they are terribly wearisome here in Europe; the tide of things does not wash through them as violently as with us, and they have time to run in the tread-mill of system. Still, they serve this great future which I shall not live to see. I must be born again.

TO R.W.E.

Florence, June 20, 1847. — I have just come hither from Rome. Every minute, day and night, there is something to be seen or done at Rome, which we cannot bear to lose. We lived on the Corso, and all night long, after the weather became fine, there was conversation or music before my window. I never seemed really to sleep while there, and now, at Florence, where there is less to excite, and I live in a more quiet quarter, I feel as if I needed to sleep all the time, and cannot rest as I ought, there is so much to do.

I now speak French fluently, though not correctly, yet well enough to make

my thoughts avail in the cultivated society here, where it is much spoken. But to know the common people, and to feel truly in Italy, I ought to speak and understand the spoken Italian well, and I am now cultivating this sedulously. If I remain, I shall have, for many reasons, advantages for observation and enjoyment, such as are seldom permitted to a foreigner.

I forgot to mention one little thing rather interesting. At the *Miserere* of the Sistine chapel, I sat beside Goethe's favorite daughter-in-law, Ottilia, to whom I was introduced by Mrs. Jameson.

TO R.F.F.

Florence, July 1, 1847. — I do not wish to go through Germany in a hurried way, and am equally unsatisfied to fly through Italy; and shall, therefore, leaving my companions in Switzerland, take a servant to accompany me, and return hither, and hence to Rome for the autumn, perhaps the winter. I should always suffer the pain of Tantalus thinking of Rome, if I could not see it more thoroughly than I have as yet even begun to; for it was all *outside* the two months, just finding out where objects were. I had only just begun to know them, when I was obliged to leave. The prospect of returning presents many charms, but it leaves me alone in the midst of a strange land.

I find myself happily situated here, in many respects. The Marchioness Arconati Visconti, to whom I brought a letter from a friend of hers in France, has been good to me as a sister, and introduced me to many interesting acquaintance. The sculptors, Powers and Greenough, I have seen much and well. Other acquaintance I possess, less known to fame, but not less attractive.

Florence is not like Rome. At first, I could not bear the change; yet, for the study of the fine arts, it is a still richer place. Worlds of thought have risen in my mind; some time you will have light from all.

*

Milan, Aug. 9, 1847. — Passing from Florence, I came to Bologna. A woman should love Bologna, for there has the intellect of woman been cherished. In their Certosa, they proudly show the monument to Matilda Tambreni, late Greek professor there. In their anatomical hall, is the bust of a woman, professor of anatomy. In art, they have had Properzia di Rossi, Elisabetta Sirani, Lavinia Fontana, and delight to give their works a conspicuous place. In other cities, the men alone have their Casino dei Nobili, where they give balls and conversazioni. Here, women have one, and are the soul of society. In Milan, also, I see, in the

Ambrosian Library, the bust of a female mathematician.

TO HER MOTHER.

Lago di Garda, Aug. 1, 1847. — Do not let what I have written disturb you as to my health. I have rested now, and am as well as usual. This advantage I derive from being alone, that, if I feel the need of it, I can stop.

I left Venice four days ago; have seen well Vicenza, Verona, Mantua, and am reposing, for two nights and a day, in this tranquil room which overlooks the beautiful Lake of Garda. The air is sweet and pure, and I hear no noise except the waves breaking on the shore.

I think of you a great deal, especially when there are flowers. Florence was all flowers. I have many magnolias and jasmines. I always wish you could see them. The other day, on the island of San Lazaro, at the Armenian Convent, where Lord Byron used to go, I thought of you, seeing the garden full of immense oleanders in full bloom. One sees them everywhere at Venice.

TO HER TRAVELLING COMPANIONS AFTER PARTING.

Milan, Aug. 9, 1847. — I remained at Venice near a week after your departure, to get strong and tranquil again. Saw all the pictures, if not enough, yet pretty well. My journey here was very profitable. Vicenza, Verona, Mantua, I saw really well, and much there is to see. Certainly I had learned more than ever in any previous ten days of my existence, and have formed an idea of what is needed for the study of art in these regions. But, at Brescia, I was taken ill with fever. I cannot tell you how much I was alarmed when it seemed to me it was affecting my head. I had no medicine; nothing could I do except abstain entirely from food, and drink cold water. The second day, I had a bed made in a carriage, and came on here. I am now pretty well, only very weak.

TO R.W.E.

Milan, Aug. 10, 1847. — Since writing you from Florence, I have passed the mountains; two full, rich days at Bologna; one at Ravenna; more than a fortnight at Venice, intoxicated with the place, and with Venetian art, only to be really felt and known in its birth-place. I have passed some hours at Vicenza, seeing mainly the Palladian structures; a day at Verona, — a week had been better; seen Mantua, with great delight; several days in Lago di Garda, — truly happy days there; then, to Brescia, where I saw the Titians, the exquisite Raphael, the Scavi,

and the Brescian Hills. I could charm you by pictures, had I time.

To-day, for the first time, I have seen Manzoni. Manzoni has spiritual efficacy in his looks; his eyes glow still with delicate tenderness, as when he first saw Lucia, or felt them fill at the image of Father Cristoforo. His manners are very engaging, frank, expansive; every word betokens the habitual elevation of his thoughts; and (what you care for so much) he says distinct, good things; but you must not expect me to note them down. He lives in the house of his fathers, in the simplest manner. He has taken the liberty to marry a new wife for his own pleasure and companionship, and the people around him do not like it, because she does not, to their fancy, make a good pendant to him. But I liked her very well, and saw why he married her. They asked me to return often, if I pleased, and I mean to go once or twice, for Manzoni seems to like to talk with me.

*

Rome, Oct., 1847. — Leaving Milan, I went on the Lago Maggiore, and afterward into Switzerland. Of this tour I shall not speak here; it was a little romance by itself.

Returning from Switzerland, I passed a fortnight on the Lake of Como, and afterward visited Lugano. There is no exaggeration in the enthusiastic feeling with which artists and poets have viewed these Italian lakes. The “*Titan*” of Richter, the “*Wanderjahre*” of Goethe, the Elena of Taylor, the pictures of Turner, had not prepared me for the visions of beauty that daily entranced the eyes and heart in those regions. To our country, Nature has been most bounteous, but we have nothing in the same class that can compare with these lakes, as seen under the Italian heaven. As to those persons who have pretended to discover that the effects of light and atmosphere were no finer than they found in our own lake scenery, I can only say that they must be exceedingly obtuse in organization, — a defect not uncommon among Americans.

Nature seems to have labored to express her full heart in as many ways as possible, when she made these lakes, moulded and planted their shores. Lago Maggiore is grandiose, resplendent in its beauty; the view of the Alps gives a sort of lyric exaltation to the scene. Lago di Garda is so soft and fair on one side, — the ruins of ancient palaces rise softly with the beauties of that shore; but at the other end, amid the Tyrol, it is so sublime, so calm, so concentrated in its meaning! Como cannot be better described in generals than in the words of Taylor: —

“Softly sublime, profusely fair”

Lugano is more savage, more free in its beauty. I was on it in a high gale;

there was little danger, just enough to exhilarate; its waters wild, and clouds blowing across its peaks. I like the boatmen on these lakes; they have strong and prompt character; of simple features, they are more honest and manly than Italian men are found in the thoroughfares; their talk is not so witty as that of the Venetian gondoliers, but picturesque, and what the French call *incisive*. Very touching were some of their histories, as they told them to me, while pausing sometimes on the lake. Grossi gives a true picture of such a man in his family relations; the story may be found in "Marco Visconti."

On this lake, I met Lady Franklin, wife of the celebrated navigator. She has been in the United States, and showed equal penetration and candor in remarks on what she had seen there. She gave me interesting particulars as to the state of things in Van Diemen's Land, where she passed seven years, when her husband was in authority there.

TO C.S.

Lake of Como, Aug. 22, 1847. — Rome was much poisoned to me. But, after a time, its genius triumphed, and I became absorbed in its proper life. Again I suffered from parting, and have since resolved to return, and pass at least a part of the winter there. People may write and prate as they please of Rome, they cannot convey thus a portion of its spirit. The whole heart must be yielded up to it. It is something really transcendent, both spirit and body. Those last glorious nights, in which I wandered about amid the old walls and columns, or sat by the fountains in the Piazza del Popolo, or by the river, were worth an age of pain, — only one hates pain in Italy.

Tuscany I did not like as well. It is a great place to study the history of character and art. Indeed, there I did really begin to study, as well as gaze and feel. But I did not like it. Florence is more in its spirit like Boston, than like an Italian city. I knew a good many Italians, but they were busy and intellectual, not like those I had known before. But Florence is full of really good, great pictures. There first I saw some of the great masters. Andrea del Sarto, in particular, one sees only there, and he is worth much. His wife, whom he always paints, and for whom he was so infatuated, has some bad qualities, and in what is good a certain wild nature or *diablerie*.

Bologna is truly an Italian city, one in which I should like to live; full of hidden things, and its wonders of art are very grand. The Caracci and their friends had vast force; not much depth, but enough force to occupy one a good while, — and Domenichino, when good at all, is very great.

Venice was a dream of enchantment; *there* was no disappointment. Art and

life are one. There is one glow of joy, one deep shade of passionate melancholy; Giorgione, as a man, I care more for now than any of the artists, though he had no ideas.

In the first week, floating about in a gondola, I seemed to find myself again.

I was not always alone in Venice, but have come through the fertile plains of Lombardy, seen the lakes Garda and Maggiore, and a part of Switzerland, alone, except for occasional episodes of companionship, sometimes romantic enough.

In Milan I stayed a while, and knew some radicals, young, and interested in ideas. Here, on the lake, I have fallen into contact with some of the higher society, — duchesses, marquises, and the like. My friend here is Madame Arconati, Marchioness Visconti. I have formed connection with a fair and brilliant Polish lady, born Princess Radzivill. It is rather pleasant to come a little on the traces of these famous histories; also, both these ladies take pleasure in telling me of spheres so unlike mine, and do it well.

The life here on the lake is precisely what we once imagined as being so pleasant. These people have charming villas and gardens on the lake, adorned with fine works of art. They go to see one another in boats. You can be all the time in a boat, if you like; if you want more excitement, or wild flowers, you climb the mountains. I have been here for some time, and shall stay a week longer. I have found soft repose here. Now, I am to return to Rome, seeing many things by the way.

TO R.F.F.

Florence, Sept. 25, 1847. — I hope not to want a further remittance for a long time. I shall not, if I can settle myself at Rome so as to avoid spoliation. That is very difficult in this country. I have suffered from it already. The haste, the fatigue, the frequent illness in travelling, have tormented me. At Rome I shall settle myself for five months, and make arrangements to the best of my judgment, and with counsel of experienced friends, and have some hope of economy while there; but am not sure, as much more vigilance than I can promise is needed against the treachery of servants and the cunning of landlords.

You are disappointed by my letter from Rome. But I did not feel equal then to speaking of the things of Rome, and shall not, till better acquaintance has steadied my mind. It is a matter of conscience with me not to make use of crude impressions, and what they call here “coffee-house intelligence,” as travellers generally do. I prefer skimming over the surface of things, till I feel solidly ready to write.

Milan I left with great regret, and hope to return. I knew there a circle of the

aspiring youth, such as I have not in any other city. I formed many friendships, and learned a great deal. One of the young men, Guerrieri by name, (and of the famous Gonzaga family,) I really love. He has a noble soul, the quietest sensibility, and a brilliant and ardent, though not a great, mind. He is eight-and-twenty. After studying medicine for the culture, he has taken law as his profession. His mind and that of Hicks, an artist of our country now here, a little younger, are two that would interest you greatly. Guerrieri speaks no English; I speak French now as fluently as English, but incorrectly. To make use of it, I ought to have learned it earlier.

Arriving here, Mr. Mozier, an American, who from a prosperous merchant has turned sculptor, come hither to live, and promises much excellence in his profession, urged me so much to his house, that I came. At first, I was ill from fatigue, and staid several days in bed; but his wife took tender care of me, and the quiet of their house and regular simple diet have restored me. As soon as I have seen a few things here, I shall go to Rome. On my way, I stopped at Parma, — saw the works of Correggio and Parmegiano. I have now seen what Italy contains most important of the great past; I begin to hope for her also a great future, — the signs have improved so much since I came. I am most fortunate to be here at this time.

Interrupted, as always. How happy I should be if my abode at Rome would allow some chance for tranquil and continuous effort. But I dare not hope much, from the difficulty of making any domestic arrangements that can be relied on. The fruit of the moment is so precious, that I must not complain. I learn much; but to do anything with what I learn is, under such circumstances, impossible. Besides, I am in great need of repose; I am almost inert from fatigue of body and spirit.

TO E.H.

Florence, Sept., 1847. — I cannot even begin to speak of the magnificent scenes of nature, nor the works of art, that have raised and filled my mind since I wrote from Naples. Now I begin to be in Italy! but I wish to drink deep of this cup before I speak my enamored words. Enough to say, Italy receives me as a long-lost child, and I feel myself at home here, and if I ever tell anything about it, you will hear something real and domestic. Among strangers I wish most to speak to you of my friend the Marchioness A. Visconti, a Milanese. She is a specimen of the really high-bred lady, such as I have not known. Without any physical beauty, the grace and harmony of her manners produce all the impression of beauty. She has also a mind strong, clear, precise, and much cultivated. She has

a modest nobleness that you would dearly love. She is intimate with many of the first men. She seems to love me much, and to wish I should have whatever is hers. I take great pleasure in her friendship.

TO R.W.E.

Rome, Oct. 28, 1847. — I am happily settled for the winter, quite by myself, in a neat, tranquil apartment in the Corso, where I see all the motions of Rome, — in a house of loving Italians, who treat me well, and do not interrupt me, except for service. I live alone, eat alone, walk alone, and enjoy unspeakably the stillness, after all the rush and excitement of the past year.

I shall make no acquaintance from whom I do not hope a good deal, as my time will be like pure gold to me this winter; and, just for happiness, Rome itself is sufficient.

To-day is the last of the October feasts of the Trasteverini. I have been, this afternoon, to see them dancing. This morning I was out, with half Rome, to see the Civic Guard manoeuvring in that great field near the tomb of Cecilia Metella, which is full of ruins. The effect was noble, as the band played the Bolognese march, and six thousand Romans passed in battle array amid these fragments of the great time.

TO R.F.F.

Rome, Oct. 29, 1847. — I am trying to economize, — anxious to keep the Roman expenses for six months within the limits of four hundred dollars. Rome is not as cheap a place as Florence, but then I would not give a pin to live in Florence.

We have just had glorious times with the October feasts, when all the Roman people were out. I am now truly happy here, quiet and familiar; no longer a staring, sight-seeing stranger, riding about finely dressed in a coach to see muses and sibyls. I see these forms now in the natural manner, and am contented.

Keep free from false ties; they are the curse of life. I find myself so happy here, alone and free.

TO M.S.

Rome, Oct. 1847. — I arrived in Rome again nearly a fortnight ago, and all mean things were forgotten in the joy that rushed over me like a flood. Now I saw the true Rome. I came with no false expectations, and I came to live in tranquil

companionship, not in the restless impertinence of sight-seeing, so much more painful here than anywhere else.

I had made a good visit to Vicenza; a truly Italian town, with much to see and study. But all other places faded away, now that I again saw St. Peter's, and heard the music of the fountains.

The Italian autumn is not as beautiful as I expected, neither in the vintage of Tuscany nor here. The country is really serene and brown; but the weather is fine, and these October feasts are charming. Two days I have been at the Villa Borghese. There are races, balloons, and, above all, the private gardens open, and good music on the little lake.

TO ——— .

Rome, morning of the 17th Nov., 1847. — It seems great folly to send the enclosed letter. I have written it in my nightly fever. All day I dissipate my thoughts on outward beauty. I have many thoughts, happiest moments, but as yet I do not have even this part in a congenial way. I go about in a coach with several people; but English and Americans are not at home here. Since I have experienced the different atmosphere of the European mind, and been allied with it, nay, mingled in the bonds of love, I suffer more than ever from that which is peculiarly American or English. I should like to cease from hearing the language for a time. Perhaps I should return to it; but at present I am in a state of unnatural divorce from what I was most allied to.

There is a Polish countess here, who likes me much. She has been very handsome, still is, in the style of the full-blown rose. She is a widow, very rich, one of the emancipated women, naturally vivacious, and with talent. This woman *envies me*; she says, "How happy you are; so free, so serene, so attractive, so self-possessed!" I say not a word, but I do not look on myself as particularly enviable. A little money would have made me much more so; a little money would have enabled me to come here long ago, and find those that belong to me, or at least try my experiments; then my health would never have sunk, nor the best years of my life been wasted in useless friction. Had I money now, — could I only remain, take a faithful servant, and live alone, and still see those I love when it is best, that would suit me. It seems to me, very soon I shall be calmed, and begin to enjoy.

TO HER MOTHER.

Rome, Dec. 16, 1847. — My life at Rome is thus far all I hoped. I have not been

so well since I was a child, nor so happy ever, as during the last six weeks. I wrote you about my home; it continues good, perfectly clean, food wholesome, service exact. For all this I pay, but not immoderately. I think the sum total of my expenses here, for six months, will not exceed four hundred and fifty dollars.

My *marchesa*, of whom I rent my rooms, is the greatest liar I ever knew, and the most interested, heartless creature. But she thinks it for her interest to please me, as she sees I have a good many persons who value me; and I have been able, without offending her, to make it understood that I do not wish her society. Thus I remain undisturbed.

Every Monday evening, I receive my acquaintance. I give no refreshment, but only light the saloon, and decorate it with fresh flowers, of which I have plenty still. How I wish *you* could see them!

Among the frequent guests are known to you Mr. and Mrs. Cranch, Mr. and Mrs. Story. Mr. S. has finally given up law, for the artist's life. His plans are not matured, but he passes the winter at Rome.

On other evenings, I do not receive company, unless by appointment. I spend them chiefly in writing or study. I have now around me the books I need to know Italy and Rome. I study with delight, now that I can verify everything. The days are invariably fine, and each day I am out from eleven till five, exploring some new object of interest, often at a great distance.

TO R.W.E.

Rome, Dec. 20, 1847. — Nothing less than two or three years, free from care and forced labor, would heal all my hurts, and renew my life-blood at its source. Since Destiny will not grant me that, I hope she will not leave me long in the world, for I am tired of keeping myself up in the water without corks, and without strength to swim. I should like to go to sleep, and be born again into a state where my young life should not be prematurely taxed.

Italy has been glorious to me, and there have been hours in which I received the full benefit of the vision. In Rome, I have known some blessed, quiet days, when I could yield myself to be soothed and instructed by the great thoughts and memories of the place. But those days are swiftly passing. Soon I must begin to exert myself, for there is this incubus of the future, and none to help me, if I am not prudent to face it. So ridiculous, too, this mortal coil, — such small things!

I find how true was the lure that always drew me towards Europe. It was no false instinct that said I might here find an atmosphere to develop me in ways I need. Had I only come ten years earlier! Now my life must be a failure, so much strength has been wasted on abstractions, which only came because I grew not in

the right soil. However, it is a less failure than with most others, and not worth thinking twice about. Heaven has room enough, and good chances in store, and I can live a great deal in the years that remain.

TO R.W.E.

Rome, Dec. 20, 1847. — I don't know whether you take an interest in the present state of things in Italy, but you would if you were here. It is a fine time to see the people. As to the Pope, it is as difficult here as elsewhere to put new wine into old bottles, and there is something false as well as ludicrous in the spectacle of the people first driving their princes to do a little justice, and then *evviva-ing* them at such a rate. This does not apply to the Pope; he is a real great heart, a generous man. The love for him is genuine, and I like to be within its influence. It was his heart that gave the impulse, and this people has shown, to the shame of English and other prejudice, how unspoiled they were at the core, how open, nay, how wondrous swift to answer a generous appeal!

They are also gaining some education by the present freedom of the press and of discussion. I should like to write a letter for England, giving my view of the present position of things here.

*

Rome, October 18, 1847. — In the spring, when I came to Rome, the people were in the intoxication of joy at the first serious measures of reform taken by the Pope. I saw with pleasure their childlike joy and trust. Still doubts were always present whether this joy was not premature. From the people themselves the help must come, and not from the princes. Rome, to resume her glory, must cease to be an ecclesiastical capital. Whilst I sympathized with the warm love of the people, the adulation of leading writers, who were willing to take all from the prince of the Church as a gift and a bounty, instead of steadily implying that it was the right of the people, was very repulsive to me. Passing into Tuscany, I found the liberty of the press just established. The Grand Duke, a well-intentioned, though dull, man, had dared to declare himself an Italian prince. I arrived in Florence too late for the great fête of the 12th September, in honor of the grant of the National Guard, but the day was made memorable by the most generous feeling on all sides. Some days before were passed by reconciling all strifes, composing all differences between cities, districts, and individuals. On that day they all embraced in sign of this; exchanged banners as a token that they would fight for one another.

AMERICANS IN ITALY.

The Americans took their share in this occasion, and Greenough, — one of the few Americans who, living in Italy, takes the pains to know whether it is alive or dead, who penetrates beyond the cheats of tradesmen, and the cunning of a mob corrupted by centuries of slavery, to know the real mind, the vital blood of Italy, — took a leading part. I am sorry to say that a large portion of my countrymen here take the same slothful and prejudiced view as the English, and, after many years' sojourn, betray entire ignorance of Italian literature and Italian life beyond what is attainable in a month's passage through the thoroughfares. However, they did show, this time, a becoming spirit, and erected the American Eagle where its cry ought to be heard from afar. Crawford, here in Rome, has had the just feeling to join the Guard, and it is a real sacrifice for an artist to spend time on the exercises; but it well becomes the sculptor of Orpheus. In reference to what I have said of many Americans in Italy, I will only add that they talk about the corrupt and degenerate state of Italy as they do about that of our slaves at home. They come ready trained to that mode of reasoning which affirms, that, because men are degraded by bad institutions, they are not fit for better. I will only add some words upon the happy augury I draw from the wise docility of the people. With what readiness they listened to wise counsel and the hopes of the Pope that they would give no advantage to his enemies at a time when they were so fevered by the knowledge that conspiracy was at work in their midst! That was a time of trial. On all these occasions of popular excitement their conduct is like music, in such order, and with such union of the melody of feeling with discretion where to stop; but what is wonderful is that they acted in the same manner on that difficult occasion. The influence of the Pope here is without bounds; he can always calm the crowd at once. But in Tuscany, where they have no such one idol, they listened in the same way on a very trying occasion. The first announcement of the regulation for the Tuscan National Guard terribly disappointed the people. They felt that the Grand Duke, after suffering them to demonstrate such trust and joy on this feast of the 12th, did not really trust, on his side; that he meant to limit them all he could; they felt baffled, cheated; hence young men in anger tore down at once the symbols of satisfaction and respect; but the leading men went among the people, begged them to be calm, and wait till a deputation had seen the Grand Duke. The people listened at once to men who, they were sure, had at heart their best good — waited; the Grand Duke became convinced, and all ended without disturbance. If the people continue to act thus, their hopes cannot be baffled.

The American in Europe would fain encourage the hearts of these long-

oppressed nations, now daring to hope for a new era, by reciting triumphant testimony from the experience of his own country. But we must stammer and blush when we speak of many things. I take pride here, that I may really say the liberty of the press works well, and that checks and balances naturally evolve from it, which suffice to its government. I may say, that the minds of our people are alert, and that talent has a free chance to rise. It is much. But dare I say, that political ambition is not as darkly sullied as in other countries? Dare I say, that men of most influence in political life are those who represent most virtue, or even intellectual power? Can I say, our social laws are generally better, or show a nobler insight into the wants of man and woman? I do indeed say what I believe, that voluntary association for improvement in these particulars will be the grand means for my nation to grow, and give a nobler harmony to the coming age. Then there is this cancer of slavery, and this wicked war that has grown out of it. How dare I speak of these things here? I listen to the same arguments against the emancipation of Italy, that are used against the emancipation of our blacks; the same arguments in favor of the spoliation of Poland, as for the conquest of Mexico.

How it pleases me here to think of the Abolitionists! I could never endure to be with them at home; they were so tedious, often so narrow, always so rabid and exaggerated in their tone. But, after all, they had a high motive, something eternal in their desire and life; and, if it was not the only thing worth thinking of, it was really something worth living and dying for, to free a great nation from such a blot, such a plague. God strengthen them, and make them wise to achieve their purpose!

I please myself, too, with remembering some ardent souls among the American youth, who, I trust, will yet expand and help to give soul to the huge, overfed, too-hastily-grown-up body. May they be constant! "Were man but constant, he were perfect." It is to the youth that Hope addresses itself. But I dare not expect too much of them. I am not very old; yet of those who, in life's morning, I saw touched by the light of a high hope, many have seceded. Some have become voluptuaries; some mere family men, who think it is quite life enough to win bread for half a dozen people, and treat them decently; others are lost through indolence and vacillation. Yet some remain constant.

"I have witnessed many a shipwreck, yet still beat noble hearts."

*

Rome, January, 1848. — As one becomes domesticated here, ancient and modern Rome, at first so jumbled together, begin to separate. You see where

objects and limits anciently were. When this happens, one feels first truly at ease in Rome. Then the old kings, the consuls, the tribunes, the emperors, the warriors of eagle sight and remorseless beak, return for us, and the toga-clad procession finds room to sweep across the scene; the seven hills tower, the innumerable temples glitter, and the Via Sacra swarms with triumphal life once more.

*

Rome, Jan. 12, 1848. — In Rome, here, the new Council is inaugurated, and the elections have given tolerable satisfaction. Twenty-four carriages had been lent by the princes and nobles, at the request of the city, to convey the councillors. Each deputy was followed by his target and banner. In the evening, there was a ball given at the Argentine. Lord Minto was there, Prince Corsini, now senator, the Torlonias, in uniform of the Civic Guard, Princess Torlonia, in a sash of their colors given her by the Civic Guard, which she waved in answer to their greetings. But the beautiful show of the evening was the *Trasteverini* dancing the *Saltarello* in their most beautiful costume. I saw them thus to much greater advantage than ever before. Several were nobly handsome, and danced admirably. The *saltarello* enchants me; in this is really the Italian wine, the Italian sun.

The Pope, in receiving the councillors, made a speech, intimating that he meant only to improve, not to *reform* and should keep things safe locked with the keys of St. Peter.

I was happy the first two months of my stay here, seeing all the great things at my leisure. But now, after a month of continuous rain, Rome is no more Rome. The atmosphere is far worse than that of Paris. It is impossible to walk in the thick mud. The ruins, and other great objects, always solemn, appear terribly gloomy, steeped in black rain and cloud; and my apartment, in a street of high houses, is dark all day. The bad weather may continue all this month and all next. If I could use the time for work, I should not care; but this climate makes me so ill, I can do but little.

TO C.S.

Rome, Jan. 12, 1848. — My time in Lombardy and Switzerland was a series of beautiful pictures, dramatic episodes, not without some original life in myself. When I wrote to you from Como, I had a peaceful season. I floated on the lake with my graceful Polish countess, hearing her stories of heroic sorrow; or I

walked in the delicious gardens of the villas, with many another summer friend. Red banners floated, children sang and shouted, the lakes of Venus and Diana glittered in the sun. The pretty girls of Bellaggio, with their coral necklaces, brought flowers to the "American countess," and "hoped she would be as happy as she deserved." Whether this cautious wish is fulfilled, I know not, but certainly I left all the glitter of life behind at Como.

My days at Milan were not unmarked. I have known some happy hours, but they all lead to sorrow; and not only the cups of wine, but of milk, seem drugged with poison for me. It does not *seem* to be my fault, this Destiny; I do not court these things, — they come. I am a poor magnet, with power to be wounded by the bodies I attract.

Leaving Milan, I had a brilliant day in Parma. I had not known Correggio before; he deserves all his fame. I stood in the parlor of the Abbess, the person for whom all was done, and Paradise seemed opened by the nymph, upon her car of light, and the divine children peeping through the vines. Sweet soul of love! I should weary of you, too; but it was glorious that day.

I had another good day, too, crossing the Apennines. The young crescent moon rose in orange twilight, just as I reached the highest peak. I was alone on foot; I heard no sound; I prayed.

At Florence, I was very ill. For three weeks, my life hung upon a thread. The effect of the Italian climate on my health is not favorable. I feel as if I had received a great injury. I am tired and woe-worn; often, in the bed, I wish I could weep my life away. However, they brought me gruel, I took it, and after a while rose up again. In the time of the vintage, I went alone to Sienna. This is a real untouched Italian place. This excursion, and the grapes, restored me at that time.

When I arrived in Rome, I was at first intoxicated to be here. The weather was beautiful, and many circumstances combined to place me in a kind of passive, childlike well-being. That is all over now, and, with this year, I enter upon a sphere of my destiny so difficult, that I, at present, see no way out, except through the gate of death. It is useless to write of it; you are at a distance and cannot help me; — whether accident or angel will, I have no intimation. I have no reason to hope I shall not reap what I have sown, and do not. Yet how I shall endure it I cannot guess; it is all a dark, sad enigma. The beautiful forms of art charm no more, and a love, in which there is all fondness, but no help, flatters in vain. I am all alone; nobody around me sees any of this. My numerous friendly acquaintances are troubled if they see me ill, and who so affectionate and kind as Mr. and Mrs. S.?

TO MADAME ARCONATI.

Rome, Jan. 14, 1848. — What black and foolish calumnies are these on Mazzini! It is as much for his interest as his honor to let things take their course, at present. To expect anything else, is to suppose him base. And on what act of his life dares any one found such an insinuation? I do not wonder that you were annoyed at his manner of addressing the Pope; but to me it seems that he speaks as he should, — near God and beyond the tomb; not from power to power, but from soul to soul, without regard to temporal dignities. It must be admitted that the etiquette, Most Holy Father, &c., jars with this.

TO R.W.E.

Rome, March 14, 1848. — Mickiewicz is with me here, and will remain some time; it was he I wanted to see, more than any other person, in going back to Paris, and I have him much better here. France itself I should like to see, but remain undecided, on account of my health, which has suffered so much, this winter, that I must make it the first object in moving for the summer. One physician thinks it will of itself revive, when once the rains have passed, which have now lasted from 16th December to this day. At present, I am not able to leave the fire, or exert myself at all.

*

In all the descriptions of the Roman Carnival, the fact has been omitted of daily rain. I felt, indeed, ashamed to perceive it, when no one else seemed to, whilst the open windows caused me convulsive cough and headache. The carriages, with their cargoes of happy women dressed in their ball dresses and costumes, drove up and down, even in the pouring rain. The two handsome *contadine*, who serve me, took off their woollen gowns, and sat five hours at a time, in the street, in white cambric dresses, and straw hats turned up with roses. I never saw anything like the merry good-humor of these people. I should always be ashamed to complain of anything here. But I had always looked forward to the Roman Carnival as a time when I could play too; and it even surpassed my expectations, with its exuberant gayety and innocent frolic, but I was unable to take much part. The others threw flowers all day, and went to masked balls all night; but I went out only once, in a carriage, and was more exhausted with the storm of flowers and sweet looks than I could be by a storm of hail. I went to the German Artists' ball, where were some pretty costumes, and beautiful music; and to the Italian masked ball, where interest lies in intrigue.

I have scarcely gone to the galleries, damp and cold as tombs; or to the

mouldy old splendor of churches, where, by the way, they are just wailing over the theft of St. Andrew's head, for the sake of the jewels. It is quite a new era for this population to plunder the churches; but they are suffering terribly, and Pio's municipality does, as yet, nothing.

TO W.H.C.

Rome, March 29, 1848. — I have been engrossed, stunned almost, by the public events that have succeeded one another with such rapidity and grandeur. It is a time such as I always dreamed of, and for long secretly hoped to see. I rejoice to be in Europe at this time, and shall return possessed of a great history. Perhaps I shall be called to act. At present, I know not where to go, what to do. War is everywhere. I cannot leave Rome, and the men of Rome are marching out every day into Lombardy. The citadel of Milan is in the hands of my friends, Guerriere, &c., but there may be need to spill much blood yet in Italy. France and Germany are riot in such a state that I can go there now. A glorious flame burns higher and higher in the heart of the nations.

*

The rain was constant through the Roman winter, falling in torrents from 16th December to 19th March. Now the Italian heavens wear again their deep blue, the sun is glorious, the melancholy lustres are stealing again over the Campagna, and hundreds of larks sing unwearied above its ruins. Nature seems in sympathy with the great events that are transpiring. How much has happened since I wrote! — the resistance of Sicily, and the revolution of Naples; now the fall of Louis Philippe; and Metternich is crushed in Austria. I saw the Austrian arms dragged through the streets here, and burned in the Piazza del Popolo. The Italians embraced one another, and cried, *miracolo, Providenza!* the Tribune Ciccronachio fed the flame with fagots; Adam Mickiewicz, the great poet of Poland, long exiled from his country, looked on; while Polish women brought little pieces that had been scattered in the street, and threw into the flames. When the double-headed eagle was pulled down from the lofty portal of the Palazzo di Venezia, the people placed there, in its stead, one of white and gold, inscribed with the name, ALTA ITALIA; and instantly the news followed, that Milan, Venice, Modena, and Parma, were driving out their tyrants. These news were received in Rome with indescribable rapture. Men danced, and women wept with joy along the street. The youths rushed to enrol themselves in regiments to go to the frontier. In the Colosseum, their names were received.

*

Rome, April 1, 1848.—Yesterday, on returning from Ostia, I find the official news, that the Viceroy Ranieri has capitulated at Verona; that Italy is free, independent, and one. I trust this will prove no April foolery. It seems too good, too speedy a realization of hope.

*

Rome, April 30, 1848. — It is a time such as I always dreamed of; and that fire burns in the hearts of men around me which can keep me warm. Have I something to do here? or am I only to cheer on the warriors, and after write the history of their deeds? The first is all I have done yet, but many have blessed me for my sympathy, and blest me by the action it impelled.

My private fortunes are dark and tangled; my strength to govern them (perhaps that I am enervated by this climate) much diminished. I have thrown myself on God, and perhaps he will make my temporal state very tragical. I am more of a child than ever, and hate suffering more than ever, but suppose I shall live with it, if it must come.

I did not get your letter, about having the rosary blessed for ———, before I left Rome, and now, I suppose, she would not wish it, as none can now attach any value to the blessing of Pius IX. Those who loved him can no longer defend him. It has become obvious, that those first acts of his in the papacy were merely the result of a kindly, good-natured temperament; that he had not thought to understand their bearing, nor force to abide by it. He seems quite destitute of moral courage. He is not resolute either on the wrong or right side. First, he abandoned the liberal party; then, yielding to the will of the people, and uniting, in appearance, with a liberal ministry, he let the cardinals betray it, and defeat the hopes of Italy. He cried peace, peace! but had not a word of blame for the sanguinary acts of the King of Naples, a word of sympathy for the victims of Lombardy. Seizing the moment of dejection in the nation, he put in this retrograde ministry; sanctioned their acts, daily more impudent: let them neutralize the constitution he himself had given; and when the people slew his minister, and assaulted him in his own palace, he yielded anew; he dared not die, or even run the slight risk, — for only by accident could he have perished. His person as a Pope is still respected, though his character as a man is despised. All the people compare him with Pius VII. saying to the French, “Slay me if you will; I *cannot* yield,” and feel the difference.

I was on Monte Cavallo yesterday. The common people were staring at the

broken windows and burnt door of the palace where they have so often gone to receive a blessing, the children playing, "*Sedia Papale. Morte ai Cardinali, e morte al Papa!*"

The men of straw are going down in Italy everywhere; the real men rising into power. Montanelli, Guerazzi, Mazzini, are real men; their influence is of character. Had we only been born a little later! Mazzini has returned from his seventeen years' exile, "to see what he foresaw." He has a mind far in advance of his times, and yet Mazzini sees not all.

*

Rome, May 7, 1848. — Good and loving hearts will be unprepared, and for a time must suffer much from the final dereliction of Pius IX. to the cause of freedom. After the revolution opened in Lombardy, the troops of the line were sent thither; the volunteers rushed to accompany them, the priests preached the war as a crusade, the Pope blessed the banners. The report that the Austrians had taken and hung as a brigand one of the Roman Civic Guard, — a well-known artist engaged in the war of Lombardy, — roused the people; and they went to the Pope, to demand that he should declare war against the Austrians. The Pope summoned a consistory, and then declared in his speech that he had only intended local reforms; that he regretted the misuse that had been made of his name; and wound up by lamenting the war as offensive to the spirit of religion. A momentary stupefaction, followed by a passion of indignation, in which the words *traitor* and *imbecile* were heard, received this astounding speech. The Pope was besieged with deputations, and, after two days' struggle, was obliged to place the power in the hands of persons most opposed to him, and nominally acquiesce in their proceedings.

TO R.W.E. (*in London*).

Rome, May 19, 1848. — I should like to return with you, but I have much to do and learn in Europe yet. I am deeply interested in this public drama, and wish to see it *played out*. Methinks I have *my part* therein, either as actor or historian.

I cannot marvel at your readiness to close the book of European society. The shifting scenes entertain poorly. The flux of thought and feeling leaves some fertilizing soil; but for me, few indeed are the persons I should wish to see again; nor do I care to push the inquiry further. The simplest and most retired life would now please me, only I would not like to be confined to it, in case I grew weary, and now and then craved variety, for exhilaration. I want some scenes of natural beauty, and, imperfect as love is, I want human beings to love, as I suffocate without. For intellectual stimulus, books would mainly supply it, when

wanted.

Why did you not try to be in Paris at the opening of the Assembly?
There were elements worth scanning.

TO R.F.F.

Rome, May 20, 1848. — My health is much revived by the spring here, as gloriously beautiful as the winter was dreary. We know nothing of spring in our country. Here the soft and brilliant weather is unbroken, except now and then by a copious shower, which keeps everything fresh. The trees, the flowers, the bird-songs are in perfection. I have enjoyed greatly my walks in the villas, where the grounds are of three or four miles in extent, and like free nature in the wood-glades and still paths; while they have an added charm in the music of their many fountains, and the soft gleam, here and there, of sarcophagus or pillar.

I have been a few days at Albano, and explored its beautiful environs alone, to much greater advantage than I could last year, in the carriage with my friends.

I went, also, to Frascati and Ostia, with an English family, who had a good carriage, and were kindly, intelligent people, who could not disturb the Roman landscape.

Now I am going into the country, where I can live very cheaply, even keeping a servant of my own, without which guard I should not venture alone into the unknown and wilder regions.

I have been so disconcerted by my Roman winter, that I dare not plan decisively again. The enervating breath of Rome paralyzes my body, but I know and love her. The expression, "City of the Soul," designates her, and her alone.

TO MADAME ARCONATI.

Rome, May 27, 1848. — This is my last day at Rome. I have been passing several days at Subiaco and Tivoli, and return again to the country to-morrow. These scenes of natural beauty have filled my heart, and increased, if possible, my desire that the people who have this rich inheritance may no longer be deprived of its benefits by bad institutions.

The people of Subiaco are poor, though very industrious, and cultivating every inch of ground, with even English care and neatness; — so ignorant and uncultivated, while so finely and strongly made by Nature. May God grant now, to this people, what they need!

An illumination took place last night, in honor of the "Illustrious Gioberti."

He is received here with great triumph, his carriage followed with shouts of “*Viva Gioberti, morte ai Jesuiti!*” which must be pain to the many Jesuits, who, it is said, still linger here in disguise. His triumphs are shared by Mamiani and Orioli, self-trumpeted celebrities, self-constituted rulers of the Roman states, — men of straw, to my mind, whom the fire already kindled will burn into a handful of ashes.

I sit in my obscure corner, and watch the progress of events. It is the position that pleases me best, and, I believe, the most favorable one. Everything confirms me in my radicalism; and, without any desire to hasten matters, indeed with surprise to see them rush so like a torrent, I seem to see them all tending to realize my own hopes.

My health and spirits now much restored, I am beginning to set down some of my impressions. I am going into the mountains, hoping there to find pure, strengthening air, and tranquillity for so many days as to allow me to do something.

TO R.F. F — .

Rieti, July 1, 1848. — Italy is as beautiful as even I hoped, and I should wish to stay here several years, if I had a moderate fixed income. One wants but little money here, and can have with it many of the noblest enjoyments. I should have been very glad if fate would allow me a few years of congenial life, at the end of not a few of struggle and suffering. But I do not hope it; my fate will be the same to the close, — beautiful gifts shown, and then withdrawn, or offered on conditions that make acceptance impossible.

TO MADAME ARCONATI.

Corpus Domini, June 22, 1848. — I write such a great number of letters, having not less than a hundred correspondents, that it seems, every day, as if I had just written to each. There is no one, surely, this side of the salt sea, with whom I wish more to keep up the interchange of thought than with you.

I believe, if you could know my heart as God knows it, and see the causes that regulate my conduct, you would always love me. But already, in absence, I have lost, for the present, some of those who were dear to me, by failure of letters, or false report. After sorrowing much about a falsehood told me of a dearest friend, I found his letter at Torlonia’s, which had been there ten months, and, duly received, would have made all right. There is something fatal in my destiny about correspondence.

But I will say no more of this; only the loss of that letter to you, at such an unfortunate time, — just when I most wished to seem the loving and grateful friend I was, — made me fear it might be my destiny to lose you too. But if any cross event shall do me this ill turn on earth, we shall meet again in that clear state of intelligence which men call heaven.

I see by the journals that you have not lost Montanelli. That noble mind is still spared to Italy. The Pope's heart is incapable of treason; but he has fallen short of the office fate assigned him.

I am no bigoted Republican, yet I think that form of government will eventually pervade the civilized world. Italy may not be ripe for it yet, but I doubt if she finds peace earlier; and this hasty annexation of Lombardy to the crown of Sardinia seems, to me, as well as I can judge, an act unworthy and unwise. Base, indeed, the monarch, if it was needed, and weak no less than base; for he was already too far engaged in the Italian cause to retire with honor or wisdom.

I am here, in a lonely mountain home, writing the narrative of my European experience. To this I devote great part of the day. Three or four hours I pass in the open air, on donkey or on foot. When I have exhausted this spot, perhaps I shall try another. Apply as I may, it will take three months, at least, to finish my book. It grows upon me.

TO R.W.E.

Rieti, July 11, 1848. — Once I had resolution to face my difficulties myself, and try to give only what was pleasant to others; but now that my courage has fairly given way, and the fatigue of life is beyond my strength, I do not prize myself, or expect others to prize me.

Some years ago, I thought you very unjust, because you did not lend full faith to my spiritual experiences; but I see you were quite right. I thought I had tasted of the true elixir, and that the want of daily bread, or the pangs of imprisonment, would never make me a complaining beggar. A widow, I expected still to have the cruse full for others. Those were glorious hours, and angels certainly visited me; but there must have been too much earth, — too much taint of weakness and folly, so that baptism did not suffice. I know now those same things, but at present they are words, not living spells.

I hear, at this moment, the clock of the Church del Purgatorio telling noon in this mountain solitude. Snow yet lingers on these mountain-tops, after forty days of hottest sunshine, last night broken by a few clouds, prefatory to a thunder storm this morning. It has been so hot here, that even the peasant in the field

says, "*Non porro più resistere,*" and slumbers in the shade, rather than the sun. I love to see their patriarchal ways of guarding the sheep and tilling the fields. They are a simple race. Remote from the corruptions of foreign travel, they do not ask for money, but smile upon and bless me as I pass, — for the Italians love me; they say I am so "*simpatica.*" I never see any English or Americans, and now think wholly in Italian: only the surgeon who bled me, the other day, was proud to speak a little French, which he had learned at Tunis! The ignorance of this people is amusing. I am to them a divine visitant, — an instructive Ceres, — telling them wonderful tales of foreign customs, and even legends of the lives of their own saints. They are people whom I could love and live with. Bread and grapes among them would suffice me.

TO HER MOTHER.

Rome, Nov. 16, 1848. — * Of other circumstances which complicate my position I cannot write. Were you here, I would confide in you fully, and have more than once, in the silence of the night, recited to you those most strange and romantic chapters in the story of my sad life. At one time when I thought I might die, I empowered a person, who has given me, as far as possible to him, the aid and sympathy of a brother, to communicate them to you, on his return to the United States. But now I think we shall meet again, and I am sure you will always love your daughter, and will know gladly that in all events she has tried to aid and striven never to injure her fellows. In earlier days, I dreamed of doing and being much, but now am content with the Magdalen to rest my plea hereon, "*She has loved much.*"

You, loved mother, keep me informed, as you have, of important facts, *especially* the *worst*. The thought of you, the knowledge of your angelic nature, is always one of my greatest supports. Happy those who have such a mother! Myriad instances of selfishness and corruption of heart cannot destroy the confidence in human nature.

I am again in Rome, situated for the first time entirely to my mind. I have but one room, but large; and everything about the bed so gracefully and adroitly disposed that it makes a beautiful parlor, and of course I pay much less. I have the sun all day, and an excellent chimney. It is very high and has pure air, and the most beautiful view all around imaginable. Add, that I am with the dearest, delightful old couple one can imagine, quick, prompt, and kind, sensible and contented. Having no children, they like to regard me and the Prussian sculptor, my neighbor, as such; yet are too delicate and too busy ever to intrude. In the

attic, dwells a priest, who insists on making my fire when Antonia is away. To be sure, he pays himself for his trouble, by asking a great many questions. The stories below are occupied by a frightful Russian princess with moustaches, and a footman who ties her bonnet for her; and a fat English lady, with a fine carriage, who gives all her money to the church, and has made for the house a terrace of flowers that would delight you. Antonia has her flowers in a humble balcony, her birds, and an immense black cat; always addressed by both husband and wife as "Amoretto," (little love!)

The house looks out on the Piazza Barberini, and I see both that palace and the Pope's. The scene to-day has been one of terrible interest. The poor, weak Pope has fallen more and more under the dominion of the cardinals, till at last all truth was hidden from his eyes. He had suffered the minister, Rossi, to go on, tightening the reins, and, because the people preserved a sullen silence, he thought they would bear it. Yesterday, the Chamber of Deputies, illegally prorogued, was opened anew. Rossi, after two or three most unpopular measures, had the imprudence to call the troops of the line to defend him, instead of the National Guard. On the 14th, the Pope had invested him with the privileges of a Roman citizen: (he had renounced his country when an exile, and returned to it as ambassador of Louis Philippe.) This position he enjoyed but one day. Yesterday, as he descended from his carriage, to enter the Chamber, the crowd howled and hissed; then pushed him, and, as he turned his head in consequence, a sure hand stabbed him in the back. He said no word, but died almost instantly in the arms of a cardinal. The act was undoubtedly the result of the combination of many, from the dexterity with which it was accomplished, and the silence which ensued. Those who had not abetted beforehand seemed entirely to approve when done. The troops of the line, on whom he had relied, remained at their posts, and looked coolly on. In the evening, they walked the streets with the people, singing, "Happy the hand which rids the world of a tyrant!" Had Rossi lived to enter the Chamber, he would have seen the most terrible and imposing mark of denunciation known in the history of nations, — the whole house, without a single exception, seated on the benches of opposition. The news of his death was received by the deputies with the same cold silence as by the people. For me, I never thought to have heard of a violent death with satisfaction, but this act affected me as one of terrible justice.

To-day, all the troops and the people united and went to the Quirinal to demand a change of measures. They found the Swiss Guard drawn out, and the Pope dared not show himself. They attempted to force the door of his palace, to enter his presence, and the guard fired. I saw a man borne by wounded. The drum beat to call out the National Guard. The carriage of Prince Barberini has

returned with its frightened inmates and liveried retinue, and they have suddenly barred up the court-yard gate. Antonia, seeing it, observes, "Thank Heaven, we are poor, we have nothing to fear!" This is the echo of a sentiment which will soon be universal in Europe.

Never feel any apprehensions for my safety from such causes. There are those who will protect me, if necessary, and, besides, I am on the conquering side. These events have, to me, the deepest interest. These days are what I always longed for, — were I only free from private care! But, when the best and noblest want bread to give to the cause of liberty, I can just not demand *that* of them; their blood they would give me.

You cannot conceive the enchantment of this place. So much I suffered here last January and February, I thought myself a little weaned; but, returning, my heart swelled even to tears with the cry of the poet: —

"O, Rome, *my country, city of the soul!*"

Those have not lived who have not seen Rome. Warned, however, by the last winter, I dared not rent my lodgings for the year. I hope I am acclimated. I have been through what is called the grape-cure, much more charming, certainly, than the water-cure. At present I am very well; but, alas! because I have gone to bed early, and done very little. I do not know if I can maintain any labor. As to my life, I think that it is not the will of Heaven it should terminate very soon. I have had another strange escape. I had taken passage in the diligence to come to Rome; two rivers were to be passed, — the Turano and the Tiber, — but passed by good bridges, and a road excellent when not broken unexpectedly by torrents from the mountains. The diligence sets out between three and four in the morning, long before light. The director sent me word that the Marchioness Crispoldi had taken for herself and family a coach extraordinary, which would start two hours later, and that I could have a place in that, if I liked; so I accepted. The weather had been beautiful, but, on the eve of the day fixed for my departure, the wind rose, and the rain fell in torrents. I observed that the river which passed my window was much swollen, and rushed with great violence. In the night, I heard its voice still stronger, and felt glad I had not to set out in the dark. I rose with twilight, and was expecting my carriage, and wondering at its delay, when I heard, that the great diligence, several miles below, had been seized by a torrent; the horses were up to their necks in water, before any one dreamed of the danger. The postilion called on all the saints, and threw himself into the water. The door of the diligence could not be opened, and the passengers forced themselves, one after another, into the cold water, — dark too. Had I been there I had fared ill; a pair of strong men were ill after it, though all escaped with life.

For several days, there was no going to Rome; but, at last, we set forth in two great diligences, with all the horses of the route. For many miles, the mountains and ravines were covered with snow; I seemed to have returned to my own country and climate. Few miles passed, before the conductor injured his leg under the wheel, and I had the pain of seeing him suffer all the way, while “Blood of Jesus,” “Souls of Purgatory,” was the mildest beginning of an answer to the jeers of the postilions upon his paleness. We stopped at a miserable osteria, in whose cellar we found a magnificent remain of Cyclopean architecture, — as indeed in Italy one is paid at every step, for discomfort or danger, by some precious subject of thought. We proceeded very slowly, and reached just at night a solitary little inn, which marks the site of the ancient home of the Sabine virgins, snatched away to become the mothers of Rome. We were there saluted with the news that the Tiber, also, had overflowed its banks, and it was very doubtful if we could pass. But what else to do? There were no accommodations in the house for thirty people, or even for three, and to sleep in the carriages, in that wet air of the marshes, was a more certain danger than to attempt the passage. So we set forth; the moon, almost at the full, smiling sadly on the ancient grandeurs, then half draped in mist, then drawing over her face a thin white veil. As we approached the Tiber, the towers and domes of Rome could be seen, like a cloud lying low on the horizon. The road and the meadows, alike under water, lay between us and it, one sheet of silver. The horses entered; they behaved nobly; we proceeded, every moment uncertain if the water would not become deep; but the scene was beautiful, and I enjoyed it highly. I have never yet felt afraid when really in the presence of danger, though sometimes in its apprehension.

At last we entered the gate; the diligence stopping to be examined, I walked to the gate of Villa Ludovisi, and saw its rich shrubberies of myrtle, and its statues so pale and eloquent in the moonlight.

Is it not cruel that I cannot earn six hundred dollars a year, living here? I could live on that well, now I know Italy. Where I have been, this summer, a great basket of grapes sells for one cent! — delicious salad, enough for three or four persons, one cent, — a pair of chickens, fifteen cents. Foreigners cannot live so, but I could, now that I speak the language fluently, and know the price of everything. Everybody loves, and wants to serve me, and I cannot earn this pitiful sum to learn and do what I want.

Of course, I wish to see America again; but in my own time, when I am ready, and not to weep over hopes destroyed and projects unfulfilled.

My dear friend, Madame Arconati, has shown me generous love; — a *contadina*, whom I have known this summer, hardly less. Every Sunday, she

came in her holiday dress, — beautiful corset of red silk richly embroidered, rich petticoat, nice shoes and stockings, and handsome coral necklace, on one arm an immense basket of grapes, in the other a pair of live chickens, to be eaten by me for her sake, (*per amore mio*,”) and wanted no present, no reward; it was, as she said, “for the honor and pleasure of her acquaintance.” The old father of the family never met me but he took off his hat and said, “Madame, it is to me a *consolation* to see you.” Are there not sweet flowers of affection in life, glorious moments, great thoughts? — why must they be so dearly paid for?

Many Americans have shown me great and thoughtful kindness, and none more so than W. S ——— and his wife. They are now in Florence, but may return. I do not know whether I shall stay here or not; shall be guided much by the state of my health.

All is quieted now in Rome. Late at night the Pope had to yield, but not till the door of his palace was half burnt, and his confessor killed. This man, Parma, provoked his fate by firing on the people from a window. It seems the Pope never gave order to fire; his guard acted from a sudden impulse of their own. The new ministry chosen are little inclined to accept. It is almost impossible for any one to act, unless the Pope is stripped of his temporal power, and the hour for that is not yet quite ripe; though they talk more and more of proclaiming the Republic, and even of calling my friend Mazzini.

If I came home at this moment, I should feel as if forced to leave my own house, my own people, and the hour which I had always longed for. If I do come in this way, all I can promise is to plague other people as little as possible. My own plans and desires will be postponed to another world.

Do not feel anxious about me. Some higher power leads me through strange, dark, thorny paths, broken at times by glades opening down into prospects of sunny beauty, into which I am not permitted to enter. If God disposes for us, it is not for nothing. This I can say, my heart is in some respects better, it is kinder and more humble. Also, my mental acquisitions have certainly been great, however inadequate to my desires.

TO M.S.

Rome, Nov. 23, 1848. — Mazzini has stood alone in Italy, on a sunny height, far above the stature of other men. He has fought a great fight against folly, compromise, and treason; steadfast in his convictions, and of almost miraculous energy to sustain them, is he. He has foes; and at this moment, while he heads the insurrection in the Valtellina, the Roman people murmur his name, and long to call him here.

How often rings in my ear the consolatory word of Körner, after many struggles, many undeceptions, "Though the million suffer shipwreck, yet noble hearts survive!"

I grieve to say, the good-natured Pio has shown himself utterly derelict, alike without resolution to abide by the good or the ill. He is now abandoned and despised by both parties. The people do not trust his word, for they know he shrinks from the danger, and shuts the door to pray quietly in his closet, whilst he knows the cardinals are misusing his name to violate his pledges. The cardinals, chased from Rome, talk of electing an anti-Pope; because, when there was danger, he has always yielded to the people, and they say he has overstepped his prerogative, and broken his papal oath. No one abuses him, for it is felt that in a more private station he would have acted a kindly part; but he has failed of so high a vocation, and balked so noble a hope, that no one respects him either. Who would have believed, a year ago, that the people would assail his palace? I was on Monte Cavallo yesterday, and saw the broken windows, the burnt doors, the walls marked by shot, just beneath the loggia, on which we have seen him giving the benediction. But this would never have happened, if his guard had not fired first on the people. It is true it was without his order, but, under a different man, the Swiss would never have dared to incur such a responsibility.

Our old acquaintance, Sterbini, has risen to the ministry. He has a certain influence, from his consistency and independence, but has little talent.

Of me you wish to know; but there is little I can tell you at this distance. I have had happy hours, learned much, suffered much, and outward things have not gone fortunately with me. I have had glorious hopes, but they are overclouded now, and the future looks darker than ever, indeed, quite impossible to my steps. I have no hope, unless that God will show me some way I do not know of now; but I do not wish to trouble you with more of this.

TO W.S.

Rome, Dec. 9, 1848. — As to Florence itself, I do not like it, with the exception of the galleries and churches, and Michel Angelo's marbles. I do not like it, for the reason you *do*, because it seems like home. It seems a kind of Boston to me, — the same good and the same ill; I have had enough of both. But I have so many dear friends in Boston, that I must always wish to go there sometimes; and there are so many precious objects of study in Florence, that a stay of several months could not fail to be full of interest. Still, the spring must be the time to be in Florence; there are so many charming spots to visit in the environs, much

nearer than those you go to in Rome, within scope of an afternoon's drive. I saw them only when parched with sun and covered with dust. In the spring they must be very beautiful.

*

December, 1848. — I felt much what you wrote, “*if it were well with my heart.*” How seldom it is that a mortal is permitted to enjoy a paradisaical scene, unhaunted by some painful vision from the past or the future! With me, too, dark clouds of care and sorrow have sometimes blotted out the sunshine. I have not lost from my side an only sister, but have been severed from some visions still so dear, they looked almost like hopes. The future seems too difficult for me. I have been as happy as I could, and I feel that this summer, as last, had I been with my country folks, the picture of Italy would not have been so lively to me. Now I have been quite off the beaten track of travel, have seen, thought, spoken, dreamed only what is Italian. I have learned much, received many strong and clear impressions. While among the mountains, I was for a good while quite alone, except for occasional chat with the contadine, who wanted to know if Pius IX. was not *un gran carbonaro!* — a reputation which he surely ought to have forfeited by this time. About me they were disturbed: “*E sempre sola soletta,*” they said, “*eh perche?*”

Later, I made one of those accidental acquaintances, such as I have spoken of to you in my life of Lombardy, which may be called romantic: two brothers, elderly men, the last of a very noble family, formerly lords of many castles, still of more than one; both unmarried, men of great polish and culture. None of the consequences ensued that would in romances: they did not any way adopt me, nor give me a casket of diamonds, nor any of their pictures, among which were originals by several of the greatest masters, nor their rich cabinets, nor miniatures on agate, nor carving in wood and ivory. They only showed me their things, and their family archives of more than a hundred volumes, (containing most interesting documents about Poland, where four of their ancestors were nuncios,) manuscript letters from Tasso, and the like. With comments on these, and legendary lore enough to furnish Cooper or Walter Scott with a thousand romances, they enriched me; unhappily, I shall never have the strength or talent to make due use of it. I was sorry to leave them, for now I have recrossed the frontier into the Roman States. I will not tell you where, — I know not that I shall ever tell where, — these months have been passed. The great Goethe hid thus in Italy; “Then,” said he, “I did indeed feel alone, — when no former friend could form an *idea* where I was.” Why should not — and I enjoy this fantastic

luxury of *incognito* also, when we can so much more easily?

I will not name the place, but I will describe it. The rooms are spacious and airy; the loggia of the sleeping room is rude, but it overhangs a lovely little river, with its hedge of willows. Opposite is a large and rich vineyard; on one side a ruined tower, on the other an old casino, with its avenues of cypress, give human interest to the scene. A cleft amid the mountains full of light leads on the eye to a soft blue peak, very distant. At night the young moon trembles in the river, and its soft murmur soothes me to sleep; it needs, for I have had lately a bad attack upon the nerves, and been obliged to stop writing for the present. I think I shall stay here some time, though I suppose there are such sweet places all over Italy, if one only looks for one's self. Poor, beautiful Italy! how she has been injured of late! It is dreadful to see the incapacity and meanness of those to whom she had confided the care of her redemption.

I have thus far passed this past month of fine weather most delightfully in revisiting my haunts of the autumn before. Then, too, I was uncommonly well and strong; it was the golden period of my Roman life. The experience what long confinement may be expected after, from the winter rains, has decided me *never* to make my hay when the sun shines: *i.e.*, to give no fine day to books and pens.

The places of interest I am nearest now are villas Albani and Ludovisi, and Santa Agnese, St. Lorenzo, and the vineyards near Porta Maggiore. I have passed one day in a visit to Torre dei Schiavi and the neighborhood, and another on Monte Mario, both Rome and the Campagna-day golden in the mellowest lustre of the Italian sun. * But to you I may tell, that I always go with Ossoli, the most congenial companion I ever had for jaunts of this kind. We go out in the morning, carrying the roast chestnuts from Rome; the bread and wine are found in some lonely little osteria; and so we dine; and reach Rome again, just in time to see it, from a little distance, gilded by the sunset.

This moon having been so clear, and the air so warm, we have visited, on successive evenings, all the places we fancied: Monte Cavallo, now so lonely and abandoned, — no lights there but moon and stars, — Trinità de' Monti, Santa Maria Maggiore, and the Forum. So now, if the rain must come, or I be driven from Rome, I have all the images fair and fresh in my mind.

About public events, why remain ignorant? Take a daily paper in the house. The Italian press has recovered from the effervescence of childish spirits; — you can now approximate to the truth from its reports. There are many good papers now in Italy. Whatever represents the Montanelli ministry is best for you. That

gives the lead now. I see good articles copied from the “Alba.”

TO MADAME ARCONATI.

Rome, Feb. 5, 1849. — I am so delighted to get your letter, that I must answer on the instant. I try with all my force to march straight onwards, — to answer the claims of the day; to act out my feeling as seems right at the time, and not heed the consequences; — but in my affections I am tender and weak; where I have really loved, a barrier, a break, causes me great suffering. I read in your letter that I am still dear to you as you to me. I always felt, that if we had passed more time together, — if the intimacy, for which there was ground in the inner nature, had become consolidated, — no after differences of opinion or conduct could have destroyed, though they might interrupt its pleasure. But it was of few days’ standing, — our interviews much interrupted. I felt as if I knew you much better than you could me, because I had occasion to see you amid your various and habitual relations. I was afraid you might change, or become indifferent; now I hope not.

True, I have written, shall write, about the affairs of Italy, what you will much dislike, if ever you see it. I have done, may do, many things that would be very unpleasing to you; yet there *is* a congeniality, I dare to say, pure, and strong, and good, at the bottom of the heart, far, far deeper than these differences, that would always, on a real meeting, keep us friends. For me, I could never have but one feeling towards you.

Now, for the first time, I enjoy a full communion with the spirit of Rome. Last winter, I had here many friends; now all are dispersed, and sometimes I long to exchange thoughts with a friendly circle; but generally I am better content to live thus: — the impression made by all the records of genius around is more unbroken; I begin to be very familiar with them. The sun shines always, when last winter it never shone. I feel strong; I can go everywhere on foot. I pass whole days abroad; sometimes I take a book, but seldom read it: — why should I, when every stone talks?

In spring, I shall go often out of town. I have read “*La Rome Souterraine*” of Didier, and it makes me wish to see Ardea and Nettuno. Ostia is the only one of those desolate sites that I know yet. I study sometimes Niebuhr, and other books about Rome, but not to any great profit.

In the circle of my friends, two have fallen. One a person of great wisdom, strength, and calmness. She was ever to me a most tender friend, and one whose sympathy I highly valued. Like you by nature and education conservative, she was through thought liberal. With no exuberance or passionate impulsiveness

herself, she knew how to allow for these in others. The other was a woman of my years, of the most precious gifts in heart and genius. She had also beauty and fortune. She died at last of weariness and intellectual inanition. She never, to any of us, her friends, hinted her sufferings. But they were obvious in her poems, which, with great dignity, expressed a resolute but most mournful resignation.

TO R.F.F.

Rome, Feb. 23, 1849. — It is something if one can get free foot-hold on the earth, so as not to be jostled out of hearing the music, if there should be any spirits in the air to make such.

For my part, I have led rather too lonely a life of late. Before, it seemed as if too many voices of men startled away the inspirations; but having now lived eight months much alone, I doubt that good has come of it, and think to return, and go with others for a little. I have realized in these last days the thought of Goethe,— “He who would in loneliness live, ah! he is soon alone. Each one loves, each one lives, and leaves him to his pain.” I went away and hid, all summer. Not content with that, I said, on returning to Rome, I must be busy and receive people little. They have taken me at my word, and hardly one comes to see me. Now, if I want play and prattle, I shall have to run after them. It is fair enough that we all, in turn, should be made to feel our need of one another.

Never was such a winter as this. Ten weeks now of unbroken sunshine and the mildest breezes. Of course, its price is to be paid. The spring, usually divine here, with luxuriant foliage and multitudinous roses, will be all scorched and dusty. There is fear, too, of want of food for the poor Roman state.

I pass my days in writing, walking, occasional visits to the galleries. I read little, except the newspapers; these take up an hour or two of the day. I own, my thoughts are quite fixed on the daily bulletin of men and things. I expect to write the history, but because it is so much in my heart. If you were here, I rather think you would be impassive, like the two most esteemed Americans I see. They do not believe in the sentimental nations. Hungarians, Poles, Italians, are too demonstrative for them, too fiery, too impressible. They like better the loyal, slow-moving Germans: even the Russian, with his dog's nose and gentlemanly servility, pleases them better than *my* people. There is an antagonism of race.

TO E.S.

Rome, June 6, 1849. — The help I needed was external, practical. I knew myself all the difficulties and pains of my position; they were beyond present relief;

from sympathy I could struggle with them, but had not life enough left, afterwards, to be a companion of any worth. To be with persons generous and refined, who would not pain; who would sometimes lend a helping hand across the ditches of this strange insidious marsh, was all I could have now, and this you gave.

On Sunday, from our loggia, I witnessed a terrible, a real battle. It began at four in the morning: it lasted to the last gleam of light. The musket-fire was almost unintermitted; the roll of the cannon, especially from St. Angelo, most majestic. As all passed at Porta San Pancrazio and Villa Pamfili, I saw the smoke of every discharge, the flash of the bayonets; with a glass could see the men. Both French and Italians fought with the most obstinate valor. The French could not use their heavy cannon, being always driven away by the legions Garibaldi and ———, when trying to find positions for them. The loss on our side is about three hundred killed and wounded; theirs must be much greater. In one casino have been found seventy dead bodies of theirs. I find the wounded men at the hospital in a transport of indignation. The French soldiers fought so furiously, that they think them false as their general, and cannot endure the remembrance of their visits, during the armistice, and talk of brotherhood. You will have heard how all went: — how Lesseps, after appearing here fifteen days as *plenipotentiary*, signed a treaty not dishonorable to Rome; then Oudinot refused to ratify it, saying, *the plenipotentiary had surpassed his powers*: Lesseps runs back to Paris, and Oudinot attacks: — an affair alike infamous for the French from beginning to end. The cannonade on one side has continued day and night, (being full moon,) till this morning; they seeking to advance or take other positions, the Romans firing on them. The French throw rockets into the town: one burst in the court-yard of the hospital, just as I arrived there yesterday, agitating the poor sufferers very much; they said they did not want to die like mice in a trap.

TO M.S.

Rome, March 9, 1849. — Last night, Mazzini came to see me. You will have heard how he was called to Italy, and received at Leghorn like a prince, as he is; unhappily, in fact, the only one, the only great Italian. It is expected, that, if the republic lasts, he will be President. He has been made a Roman citizen, and elected to the Assembly; the labels bearing, in giant letters, "*Giuseppe Mazzini, cittadino Romano*," are yet up all over Rome. He entered by night, on foot, to avoid demonstrations, no doubt, and enjoy the quiet of his own thoughts, at so great a moment. The people went under his windows the next night, and called

him out to speak; but I did not know about it. Last night, I heard a ring; then somebody speak my name; the voice struck upon me at once. He looks more divine than ever, after all his new, strange sufferings. He asked after all of you. He stayed two hours, and we talked, though rapidly, of everything. He hopes to come often, but the crisis is tremendous, and all will come on him; since, if any one can save Italy from her foes, inward and outward, it will be he. But he is very doubtful whether this be possible; the foes are too many, too strong, too subtle. Yet Heaven helps sometimes. I only grieve I cannot aid him; freely would I give my life to aid him, only bargaining for a quick death. I don't like slow torture. I fear that it is in reserve for him, to survive defeat. True, he can never be utterly defeated; but to see Italy bleeding, prostrate once more, will be very dreadful for him.

He has sent me tickets, twice, to hear him speak in the Assembly. It was a fine, commanding voice. But, when he finished, he looked very exhausted and melancholy. He looks as if the great battle he had fought had been too much for his strength, and that he was only sustained by the fire of the soul.

All this I write to you, because you said, when I was suffering at leaving Mazzini,— “You will meet him in heaven.” This I believe will be, despite all my faults.

[In April, 1849, Margaret was appointed, by the “Roman Commission for the succor of the wounded,” to the charge of the hospital of the *Fate-Bene Fratetti*; the Princess Belgioioso having charge of the one already opened. The following is a copy of the original letter from the Princess, which is written in English, announcing the appointment.]

Comitato di Soccorso Pei Feriti, } April 30, 1849. }

Dear Miss Fuller: —

You are named Regolatrice of the Hospital of the *Fate-Rene Fratelli*. Go there at twelve, if the alarm bell has not rung before. When you arrive there, you will receive all the women coming for the wounded, and give them your directions, so that you are sure to have a certain number of them night and day.

May God help us.

CHRISTINE TRIVULZE,

of Belgioioso.

Miss Fuller, Piazza Barberini, No. 60.

TO R.W.E.

Rome, June 10, 1849. — I received your letter amid the round of cannonade and

musketry. It was a terrible battle fought here from the first till the last light of day. I could see all its progress from my balcony. The Italians fought like lions. It is a truly heroic spirit that animates them. They make a stand here for honor and their rights, with little ground for hope that they can resist, now they are betrayed by France.

Since the 30th April, I go almost daily to the hospitals, and, though I have suffered, — for I had no idea before, how terrible gunshot-wounds and wound-fever are, — yet I have taken pleasure, and great pleasure, in being with the men; there is scarcely one who is not moved by a noble spirit. Many, especially among the Lombards, are the flower of the Italian youth. When they begin to get better, I carry them books and flowers; they read, and we talk.

The palace of the Pope, on the Quirinal, is now used for convalescents. In those beautiful gardens, I walk with them, — one with his sling, another with his crutch. The gardener plays off all his water-works for the defenders of the country, and gathers flowers for me, their friend.

A day or two since, we sat in the Pope's little pavilion, where he used to give private audience. The sun was going gloriously down over Monte Mario, where gleamed the white tents of the French light-horse among the trees. The cannonade was heard at intervals. Two bright-eyed boys sat at our feet, and gathered up eagerly every word said by the heroes of the day. It was a beautiful hour, stolen from the midst of ruin and sorrow; and tales were told as full of grace and pathos as in the gardens of Boccaccio, only in a very different spirit, — with noble hope for man, with reverence for woman.

The young ladies of the family, very young girls, were filled with enthusiasm for the suffering, wounded patriots, and they wished to go to the hospital to give their services. Excepting the three superintendents, none but married ladies were permitted to serve there, but their services were accepted. Their governess then wished to go too, and, as she could speak several languages, she was admitted to the rooms of the wounded soldiers, to interpret for them, as the nurses knew nothing but Italian, and many of these poor men were suffering, because they could not make their wishes known. Some are French, some German, and many Poles. Indeed, I am afraid it is too true that there were comparatively but few Romans among them. This young lady passed several nights there.

Should I never return, — and sometimes I despair of doing so, it seems so far off, so difficult, I am caught in such a net of ties here, — if ever you know of my life here, I think you will only wonder at the constancy with which I have sustained myself; the degree of profit to which, amid great difficulties, I have put the time, at least in the way of observation. Meanwhile, love me all you can; let me feel, that, amid the fearful agitations of the world, there are pure hands, with

healthful, even pulse, stretched out toward me, if I claim their grasp.

I feel profoundly for Mazzini; at moments I am tempted to say, "Cursed with every granted prayer," — so cunning is the dæmon. He is become the inspiring soul of his people. He saw Rome, to which all his hopes through life tended, for the first time as a Roman citizen, and to become in a few days its ruler. He has animated, he sustains her to a glorious effort, which, if it fails, this time, will not in the age. His country will be free. Yet to me it would be so dreadful to cause all this bloodshed, to dig the graves of such martyrs.

Then Rome is being destroyed; her glorious oaks; her villas, haunts of sacred beauty, that seemed the possession of the world forever, — the villa of Raphael, the villa of Albani, home of Winkelmann, and the best expression of the ideal of modern Rome, and so many other sanctuaries of beauty, — all must perish, lest a foe should level his musket from their shelter. *I could not, could not!*

I know not, dear friend, whether I ever shall get home across that great ocean, but here in Rome I shall no longer wish to live. O, Rome, *my country!* could I imagine that the triumph of what I held dear was to heap such desolation on thy head!

Speaking of the republic, you say, do not I wish Italy had a great man? Mazzini is a great man. In mind, a great poetic statesman; in heart, a lover; in action, decisive and full of resource as Cæsar. Dearly I love Mazzini. He came in, just as I had finished the first letter to you. His soft, radiant look makes melancholy music in my soul; it consecrates my present life, that, like the Magdalen, I may, at the important hour, shed all the consecrated ointment on his head. There is one, Mazzini, who understands thee well; who knew thee no less when an object of popular fear, than now of idolatry; and who, if the pen be not held too feebly, will help posterity to know thee too.

TO W.H.C.

Rome, July 8, 1849. — I do not yet find myself tranquil and recruited from the painful excitements of these last days. But, amid the ruined hopes of Rome, the shameful oppressions she is beginning to suffer, amid these noble, bleeding martyrs, my brothers, I cannot fix my thoughts on anything else.

I write that you may assure mother of my safety, which in the last days began to be seriously imperilled. Say, that as soon as I can find means of conveyance, without an expense too enormous, I shall go again into the mountains. There I shall find pure, bracing air, and I hope stillness, for a time. Say, she need feel no anxiety, if she do not hear from me for some time. I may feel indisposed to write, as I do now; my heart is too full.

Private hopes of mine are fallen with the hopes of Italy. I have played for a new stake, and lost it. Life looks too difficult. But for the present I shall try to wave all thought of self and renew my strength.

After the attempt at revolution in France failed, could I have influenced Mazzini, I should have prayed him to capitulate, and yet I feel that no honorable terms can be made with such a foe, and that the only way is *never* to yield; but the sound of the musketry, the sense that men were perishing in a hopeless contest, had become too terrible for my nerves. I did not see Mazzini, the last two weeks of the republic. When the French entered, he walked about the streets, to see how the people bore themselves, and then went to the house of a friend. In the upper chamber of a poor house, with his life-long friends, — the Modenas, — I found him. Modena, who abandoned not only what other men hold dear, — home, fortune, peace, — but also endured, without the power of using the prime of his great artist-talent, a ten years' exile in a foreign land; his wife every way worthy of him, — such a woman as I am not.

Mazzini had suffered millions more than I could; he had borne his fearful responsibility; he had let his dearest friends perish; he had passed all these nights without sleep; in two short months, he had grown old; all the vital juices seemed exhausted; his eyes were all blood-shot; his skin orange; flesh he had none; his hair was mixed with white: his hand was painful to the touch; but he had never flinched, never quailed; had protested in the last hour against surrender; sweet and calm, but full of a more fiery purpose than ever; in him I revered the hero, and owned myself not of that mould.

You say truly, I shall come home humbler. God grant it may be entirely humble! In future, while more than ever deeply penetrated with principles, and the need of the martyr spirit to sustain them, I will ever own that there are few worthy, and that I am one of the least.

A silken glove might be as good a gauntlet as one of steel, but I, infirm of mood, turn sick even now as I think of the past.

*

July, 1849. — I cannot tell you what I endured in leaving Rome; abandoning the wounded soldiers; knowing that there is no provision made for them, when they rise from the beds where they have been thrown by a noble courage, where they have suffered with a noble patience. Some of the poorer men, who rise bereft even of the right arm, — one having lost both the right arm and the right leg, — I could have provided for with a small sum. Could I have sold my hair, or blood from my arm, I would have done it. Had any of the rich Americans remained in

Rome, they would have given it to me; they helped nobly at first, in the service of the hospitals, when there was far less need; but they had all gone. What would I have given that I could have spoken to one of the Lawrences, or the Phillippes; they could and would have saved the misery. These poor men are left helpless in the power of a mean and vindictive foe. You felt so oppressed in the slave-states; imagine what I felt at seeing all the noblest youth, all the genius of this dear land, again enslaved.

TO W.H.C.

Rieti, Aug. 28, 1849. — You say, you are glad I have had this great opportunity for carrying out my principles. Would it were so! I found myself inferior in courage and fortitude to the occasion. I knew not how to bear the havoc and anguish incident to the struggle for these principles. I rejoiced that it lay not with me to cut down the trees, to destroy the Elysian gardens, for the defence of Rome; I do not know that I could have done it. And the sight of these far nobler growths, the beautiful young men, mown down in their stately prime, became too much for me. I forget the great ideas, to sympathize with the poor mothers, who had nursed their precious forms, only to see them all lopped and gashed. You say, I sustained them; often have they sustained my courage: one, kissing the pieces of bone that were so painfully extracted from his arm, hanging them round his neck to be worn as the true relics of to-day; mementoes that he also had done and borne something for his country and the hopes of humanity. One fair young man, who is made a cripple for life, clasped my hand as he saw me crying over the spasms I could not relieve, and faintly cried, “Viva l’Italia.” “Think only, *cara bona donna*” said a poor wounded soldier, “that I can always wear my uniform on *festas*, just as it is now, with the holes where the balls went through, for a memory.” “God is good; God knows,” they often said to me, when I had not a word to cheer them.

THE WIFE AND MOTHER.[A]

Beneath the ruins of the Roman Republic, how many private fortunes were buried! and among these victims was Margaret. In that catastrophe, were swallowed up hopes sacredly cherished by her through weary months, at the risk of all she most prized.

Soon after the entrance of the French, she wrote thus, to the resident Envoy of the United States:

My dear Mr. Cass, — I beg you to come and see me, and give me your counsel, and, if need be, your aid, to get away from Rome. From what I hear this morning, I fear we may be once more shut up here; and I shall die, to be again separated from what I hold most dear. There are, as yet, no horses on the way we want to go, or we should post immediately.

You may feel, like me, sad, in these last moments, to leave this injured Rome. So many noble hearts I abandon here, whose woes I have known! I feel, if I could not aid, I might soothe. But for my child, I would not go, till some men, now sick, know whether they shall live or die.

*

Her child! Where was he? In RIETI, — at the foot of the Umbrian Apennines, — a day's journey to the north-east of Rome. Thither Margaret escaped with her husband, and thence she wrote the following letter:

Dearest Mother, — I received your letter a few hours before leaving Rome. Like all of yours, it refreshed me, and gave me as much satisfaction as anything could, at that sad time. Its spirit is of eternity, and befits an epoch when wickedness and perfidy so impudently triumph, and the best blood of the generous and honorable is poured out like water, seemingly in vain.

I cannot tell you what I suffered to abandon the wounded to the care of their mean foes; to see the young men, that were faithful to their vows, hunted from their homes, — hunted like wild beasts; denied a refuge in every civilized land. Many of those I loved are sunk to the bottom of the sea, by Austrian cannon, or will be shot. Others are in penury, grief, and exile. May God give due recompense for all that has been endured!

My mind still agitated, and my spirits worn out, I have not felt like writing to any one. Yet the magnificent summer does not smile quite in vain for me. Much exercise in the open air, living much on milk and fruit, have recruited my health, and I am regaining the habit of sleep, which a month of nightly cannonade in Rome had destroyed.

*

Receiving, a few days since, a packet of letters from America, I opened them with more feeling of hope and good cheer, than for a long time past. The first words that met my eye were these, in the hand of Mr. Greeley:— “Ah, Margaret,

the world grows dark with us! You grieve, for Rome is fallen; — I mourn, for Pickie is dead.”

I have shed rivers of tears over the inexpressibly affecting letter thus begun. One would think I might have become familiar enough with images of death and destruction; yet somehow the image of Pickie’s little dancing figure, lying, stiff and stark, between his parents, has made me weep more than all else. There was little hope he could do justice to himself, or lead a happy life in so perplexed a world; but never was a character of richer capacity, — never a more charming child. To me he was most dear, and would always have been so. Had he become stained with earthly faults, I could never have forgotten what he was when fresh from the soul’s home, and what he was to me when my soul pined for sympathy, pure and unalloyed.

The three children I have seen who were fairest in my eyes, and gave most promise of the future, were Waldo, Pickie, Hermann Clarke; — all nipped in the bud. Endless thoughts has this given me, and a resolve to seek the realization of all hopes and plans elsewhere, which resolve will weigh with me as much as it can weigh before the silver cord is finally loosed. Till then, Earth, our mother, always finds strange, unexpected ways to draw us back to her bosom, — to make us seek anew a nutriment which has never failed to cause us frequent sickness.

*

This brings me to the main object of my present letter, — a piece of intelligence about myself, which I had hoped I might be able to communicate in such a way as to give you *pleasure*. That I cannot, — after suffering much in silence with that hope, — is like the rest of my earthly destiny.

The first moment, it may cause you a pang to know that your eldest child might long ago have been addressed by another name than yours, and has a little son a year old.

But, beloved mother, do not feel this long. I do assure you, that it was only great love for you that kept me silent. I have abstained a hundred times, when your sympathy, your counsel, would have been most precious, from a wish not to harass you with anxiety. Even now I would abstain, but it has become necessary, on account of the child, for us to live publicly and permanently together; and we have no hope, in the present state of Italian affairs, that we can do it at any better advantage, for several years, than now.

My husband is a Roman, of a noble but now impoverished house. His mother died when he was an infant, his father is dead since we met, leaving some property, but encumbered with debts, and in the present state of Rome hardly

available, except by living there. He has three older brothers, all provided for in the Papal service, — one as Secretary of the Privy Chamber, the other two as members of the Guard Noble. A similar career would have been opened to him, but he embraced liberal principles, and, with the fall of the Republic, has lost all, as well as the favor of his family, who all sided with the Pope. Meanwhile, having been an officer in the Republican service, it was best for him to leave Rome. He has taken what little money he had, and we plan to live in Florence for the winter. If he or I can get the means, we shall come together to the United States, in the summer; — earlier we could not, on account of the child.

He is not in any respect such a person as people in general would expect to find with me. He had no instructor except an old priest, who entirely neglected his education; and of all that is contained in books he is absolutely ignorant, and he has no enthusiasm of character. On the other hand, he has excellent practical sense; has been a judicious observer of all that passed before his eyes; has a nice sense of duty, which, in its unfailing, minute activity, may put most enthusiasts to shame; a very sweet temper, and great native refinement. His love for me has been unswerving and most tender. I have never suffered a pain that he could relieve. His devotion, when I am ill, is to be compared only with yours. His delicacy in trifles, his sweet domestic graces, remind me of E ——. In him I have found a home, and one that interferes with no tie. Amid many ills and cares, we have had much joy together, in the sympathy with natural beauty, — with our child, — with all that is innocent and sweet.

I do not know whether he will always love me so well, for I am the elder, and the difference will become, in a few years, more perceptible than now. But life is so uncertain, and it is so necessary to take good things with their limitations, that I have not thought it worth while to calculate too curiously.

However my other friends may feel, I am sure that *you* will love him very much, and that he will love you no less. Could we all live together, on a moderate income, you would find peace with us. Heaven grant, that, on returning, I may gain means to effect this object. He, of course, can do nothing, while we are in the United States, but perhaps I can; and now that my health is better, I shall be able to exert myself, if sure that my child is watched by those who love him, and who are good and pure.

*

What shall I say of my child? All might seem hyperbole, even to my dearest mother. In him I find satisfaction, for the first time, to the deep wants of my heart. Yet, thinking of those other sweet ones fled, I must look upon him as a

treasure only lent. He is a fair child, with blue eyes and light hair; very affectionate, graceful, and sportive. He was baptized, in the Roman Catholic Church, by the name of Angelo Eugene Philip, for his father, grandfather, and my brother. He inherits the title of marquis.

Write the name of my child in your Bible, ANGELO OSSOLI, *born September 5, 1848*. God grant he may live to see you, and may prove worthy of your love!

More I do not feel strength to say. You can hardly guess how all attempt to express something about the great struggles and experiences of my European life enfeebles me. When I get home, — if ever I do, — it will be told without this fatigue and excitement. I trust there will be a little repose, before entering anew on this wearisome conflict.

I had addressed you twice, — once under the impression that I should not survive the birth of my child; again during the siege of Rome, the father and I being both in danger. I took Mrs. Story, and, when she left Rome, Mr. Cass, into my confidence. Both were kind as sister and brother. Amid much pain and struggle, sweet, is the memory of the generous love I received from William and Emelyn Story, and their uncle. They helped me gently through a most difficult period. Mr. Cass, also, who did not know me at all, has done everything possible for me.

*

A letter to her sister fills out these portraits of her husband and child.

*

About Ossoli[B] I do not like to say much, as he is an exceedingly delicate person. He is not precisely reserved, but it is not natural to him to talk about the objects of strong affection. I am sure he would not try to describe me to his sister, but would rather she would take her own impression of me; and, as much as possible, I wish to do the same by him. I presume that, to many of my friends, he will be nothing, and they will not understand that I should have life in common with him. But I do not think he will care; — he has not the slightest tinge of self-love. He has, throughout our intercourse, been used to my having many such ties. He has no wish to be anything to persons with whom he does not feel spontaneously bound, and when I am occupied, is happy in himself. But some of my friends and my family, who will see him in the details of practical life, cannot fail to prize the purity and simple strength of his character; and,

should he continue to love me as he has done, his companionship will be an inestimable blessing to me. I say *if*, because all human affections are frail, and I have experienced too great revulsions in my own, not to know it. Yet I feel great confidence in the permanence of his love. It has been unblemished so far, under many trials; especially as I have been more desponding and unreasonable, in many ways, than I ever was before, and more so, I hope, than I ever shall be again. But at all such times, he never had a thought except to sustain and cheer me. He is capable of the sacred love, — the love passing that of woman. He showed it to his father, to Rome, to me. Now he loves his child in the same way. I think he will be an excellent father, though he could not speculate about it, nor, indeed, about anything.

Our meeting was singular, — fateful, I may say. Very soon he offered me his hand through life, but I never dreamed I should take it. I loved him, and felt very unhappy to leave him; but the connection seemed so every way unfit, I did not hesitate a moment. He, however, thought I should return to him, as I did. I acted upon a strong impulse, and could not analyze at all what passed in my mind. I neither rejoice nor grieve; — for bad or for good, I acted out my character. Had I never connected myself with any one, my path was clear; now it is all hid; but, in that case, my development must have been partial. As to marriage, I think the intercourse of heart and mind may be fully enjoyed without entering into this partnership of daily life. Still, I do not find it burdensome. The friction that I have seen mar so much the domestic happiness of others does not occur with us, or, at least, has not occurred. Then, there is the pleasure of always being at hand to help one another.

Still, the great novelty, the immense gain, to me, is my relation with my child. I thought the mother's heart lived in me before, but it did not; — I knew nothing about it. Yet, before his birth, I dreaded it. I thought I should not survive: but if I did, and my child did, was I not cruel to bring another into this terrible world? I could not, at that time, get any other view. When he was born, that deep melancholy changed at once into rapture: but it did not last long. Then came the prudential motherhood. I grew a coward, a care-taker, not only for the morrow, but, impiously faithless, for twenty or thirty years ahead. It seemed very wicked to have brought the little tender thing into the midst of cares and perplexities we had not feared in the least for ourselves. I imagined everything; — he was to be in danger of every enormity the Croats were then committing upon the infants of Lombardy; — the house would be burned over his head; but, if he escaped, how were we to get money to buy his bibs and primers? Then his father was to be killed in the fighting, and I to die of my cough, &c. &c.

During the siege of Rome, I could not see my little boy. What I endured at

that time, in various ways, not many would survive. In the burning sun, I went, every day, to wait, in the crowd, for letters about him. Often they did not come. I saw blood that had streamed on the wall where Ossoli was. I have a piece of a bomb that burst close to him. I sought solace in tending the suffering men; but when I beheld the beautiful fair young men bleeding to death, or mutilated for life, I felt the woe of all the mothers who had nursed each to that full flower, to see them thus cut down. I felt the *consolation*, too, — for those youths died worthily. I was a Mater Dolorosa, and I remembered that she who helped Angelino into the world came from the sign of the Mater Dolorosa. I thought, even if he lives, if he comes into the world at this great troubled time, terrible with perplexed duties, it may be to die thus at twenty years, one of a glorious hecatomb, indeed, but still a sacrifice! It seemed then I was willing he should die.

*

Angelino's birth-place is thus sketched:

My baby saw mountains when he first looked forward into the world. RIETI, — not only an old classic town of Italy, but one founded by what are now called the Aborigines, — is a hive of very ancient dwellings with red brown roofs, a citadel and several towers. It is in a plain, twelve miles in diameter one way, not much less the other, and entirely encircled with mountains of the noblest form. Casinos and hermitages gleam here and there on their lower slopes. This plain is almost the richest in Italy, and full of vineyards. Rieti is near the foot of the hills on one side, and the rapid Velino makes almost the circuit of its walls, on its way to Terni. I had my apartment shut out from the family, on the bank of this river, and saw the mountains, as I lay on my restless couch. There was a piazza, too, or, as they call it here, a loggia, which hung over the river, where I walked most of the night, for I could not sleep at all in those months. In the wild autumn storms, the stream became a roaring torrent, constantly lit up by lightning flashes, and the sound of its rush was very sublime. I see it yet, as it swept away on its dark green current the heaps of burning straw which the children let down from the bridge. Opposite my window was a vineyard, whose white and purple clusters were my food for three months. It was pretty to watch the vintage, — the asses and wagons loaded with this wealth of amber and rubies, — the naked boys, singing in the trees on which the vines are trained, as they cut the grapes, — the nut-brown maids and matrons, in their red corsets and white head-clothes, receiving them below, while the babies and little children were frolicking in the grass.

In Rieti, the ancient Umbrians were married thus. In presence of friends, the man and maid received together the gifts of fire and water; the bridegroom then conducted to his house the bride. At the door, he gave her the keys, and, entering, threw behind him nuts, as a sign that he renounced all the frivolities of boyhood.

I intend to write all that relates to the birth of Angelino, in a little book, which I shall, I hope, show you sometime. I have begun it, and then stopped; — it seemed to me he would die. If he lives, I shall finish it, before the details are at all faded in my mind. Rieti is a place where I should have liked to have him born, and where I should like to have him now, — but that the people are so wicked. They are the most ferocious and mercenary population of Italy. I did not know this, when I went there, and merely expected to be solitary and quiet among poor people. But they looked on the “Marchioness” as an ignorant *Inglese*, and they fancy all *Inglesi* have wealth untold. Me they were bent on plundering in every way. They made me suffer terribly in the first days.

[Footnote A: The first part of this chapter is edited by R.W.E.; the remainder by W.H.C.]

[Footnote B: Giovanni Angelo Ossoli.]

THE PRIVATE MARRIAGE.

The high-minded friend, spoken of with such grateful affection by Margaret, in her letter to her mother, thus gracefully narrates the romance of her marriage; and the narrative is a noble proof of the heroic disinterestedness with which, amidst her own engrossing trials, Margaret devoted herself to others. Mrs. Story writes as follows: —

“During the month of November, 1847, we arrived in Rome, purposing to spend the winter there. At that time, Margaret was living in the house of the Marchesa — , in the Corso, *Ultimo Piano*. Her rooms were pleasant and cheerful, with a certain air of elegance and refinement, but they had not a sunny exposure, that all-essential requisite for health, during the damp Roman winter. Margaret suffered from ill health this winter, and she afterwards attributed it mainly to the fact, that she had not the sun. As soon as she heard of our arrival, she stretched forth a friendly, cordial hand, and greeted us most warmly. She gave us great assistance in our search for convenient lodgings, and we were soon happily established near her. Our intercourse was henceforth most frequent and intimate, and knew no cloud nor coldness. Daily we were much with her, and daily we felt more sensible of the worth and value of our friend. To me she seemed so unlike what I had thought her to be in America, that I continually

said, 'How have I misjudged you, — you are not at all such a person as I took you to be.' To this she replied, 'I am not the same person, but in many respects another; — my life has new channels now, and how thankful I am that I have been able to come out into larger interests, — but, partly, you did not know me at home in the true light.' It was true, that I had not known her much personally, when in Boston; but through her friends, who were mine also, I had learned to think of her as a person on intellectual stilts, with a large share of arrogance, and little sweetness of temper. How unlike to this was she now! — so delicate, so simple, confiding, and affectionate; with a true womanly heart and soul, sensitive and generous, and, what was to me a still greater surprise, possessed of so broad a charity, that she could cover with its mantle the faults and defects of all about her.

"We soon became acquainted with the young Marquis Ossoli, and met him frequently at Margaret's rooms. He appeared to be of a reserved and gentle nature, with quiet, gentleman-like manners, and there was something melancholy in the expression of his face, which made one desire to know more of him. In figure, he was tall, and of slender frame, with dark hair and eyes; we judged that he was about thirty years of age, possibly younger. Margaret spoke of him most frankly, and soon told us the history of her first acquaintance with him, which, as nearly as I can recall, was as follows: —

"She went to hear vespers, the evening of 'Holy Thursday,' soon after her first coming to Rome, in the spring of 1847, at St. Peter's. She proposed to her companions that some place in the church should be designated, where, after the services, they should meet, — she being inclined, as was her custom always in St. Peter's, to wander alone among the different chapels. When, at length, she saw that the crowd was dispersing, she returned to the place assigned, but could not find her party. In some perplexity, she walked about, with her glass carefully examining each group. Presently, a young man of gentlemanly address came up to her, and begged, if she were seeking any one, that he might be permitted to assist her; and together they continued the search through all parts of the church. At last, it became evident, beyond a doubt, that her party could no longer be there, and, as it was then quite late, the crowd all gone, they went out into the piazza to find a carriage, in which she might go home. In the piazza, in front of St. Peter's, generally may be found many carriages; but, owing to the delay they had made, there were then none, and Margaret was compelled to walk, with her stranger friend, the long distance between the Vatican and the Corso. At this time, she had little command of the language for conversational purposes, and their words were few, though enough to create in each a desire for further knowledge and acquaintance. At her door, they parted, and Margaret, finding her

friends already at home, related the adventure.”

This chance meeting at vesper service in St. Peter’s prepared the way for many interviews; and it was before Margaret’s departure for Venice, Milan, and Como, that Ossoli first offered her his hand, and was refused. Mrs. Story continues: —

“After her return to Rome, they met again, and he became her constant visitor; and as, in those days, Margaret watched with intense interest the tide of political events, his mind was also turned in the direction of liberty and better government. Whether Ossoli, unassisted, would have been able to emancipate himself from the influence of his family and early education, both eminently conservative and narrow, may be a question; but that he did throw off the shackles, and espouse the cause of Roman liberty with warm zeal, is most certain. Margaret had known Mazzini in London, had partaken of his schemes for the future of his country, and was taking every pains to inform herself in regard to the action of all parties, with a view to write a history of the period. Ossoli brought her every intelligence that might be of interest to her, and busied himself in learning the views of both parties, that she might be able to judge the matter impartially.

“Here I may say, that, in the estimation of most of those who were in Italy at this time, the loss of Margaret’s history and notes is a great and irreparable one. No one could have possessed so many avenues of direct information from both sides. While she was the friend and correspondent of Mazzini, and knew the springs of action of his party; through her husband’s family and connections, she knew the other view; so that, whatever might be the value of her deductions, her facts could not have been other than of highest worth. Together, Margaret and Ossoli went to the meetings of either side; and to her he carried all the flying reports of the day, such as he had heard in the café, or through his friends.

“In a short time, we went to Naples, and Margaret, in the course of a few months, to Aquila and Rieti. Meanwhile, we heard from her often by letter, and wrote to urge her to join us in our villa at Sorrento. During this summer, she wrote constantly upon her history of the Italian movement, for which she had collected materials through the past winter. We did not again meet, until the following spring, March, 1849, when we went from Florence back to Rome. Once more we were with her, then, in most familiar every-day intercourse, and as at this time a change of government had taken place, — the Pope having gone to Molo di Gaeta. — we watched with her the great movements of the day. Ossoli was now actively interested on the liberal side; he was holding the office of captain in the *Guardia Civica*, and enthusiastically looking forward to the success of the new measures.

“During the spring of 1849, Mazzini came to Rome. He went at once to see Margaret, and at her rooms met Ossoli. After this interview with Mazzini, it was quite evident that they had lost something of the faith and hopeful certainty with which they had regarded the issue, for Mazzini had discovered the want of singleness of purpose in the leaders of the Provisional Government. Still zealously Margaret and Ossoli aided in everything the progress of events; and when it was certain that the French had landed forces at Civita Vecchia, and would attack Rome, Ossoli took station with his men on the walls of the Vatican gardens, where he remained faithfully to the end of the attack. Margaret had, at the same time, the entire charge of one of the hospitals, and was the assistant of the Princess Belgioioso, in charge of ‘*dei Pellegrini*,’ where, during the first day, they received seventy wounded men, French and Romans.

“Night and day, Margaret was occupied, and, with the princess, so ordered and disposed the hospitals, that their conduct was truly admirable. All the work was skilfully divided, so that there was no confusion or hurry and, from the chaotic condition in which these places had been left by the priests, — who previously had charge of them, — they brought them to a state of perfect regularity and discipline. Of money they had very little, and they were obliged to give their time and thoughts, in its place. From the Americans in Rome, they raised a subscription for the aid of the wounded of either party; but, besides this, they had scarcely any means to use. I have walked through the wards with Margaret, and seen how comforting was her presence to the poor suffering men. ‘How long will the Signora stay?’ ‘When will the Signora come again?’ they eagerly asked. For each one’s peculiar tastes she had a care: to one she carried books; to another she told the news of the day; and listened to another’s oft-repeated tale of wrongs, as the best sympathy she could give. They raised themselves up on their elbows, to get the last glimpse of her as she was going away. There were some of the sturdy fellows of Garibaldi’s Legion there, and to them she listened, as they spoke with delight of their chief, of his courage and skill; for he seemed to have won the hearts of his men in a remarkable manner.

“One incident I may as well narrate in this connection. It happened, that, some time before the coming of the French, while Margaret was travelling quite by herself, on her return from a visit to her child, who was out at nurse in the country, she rested for an hour or two at a little wayside *osteria*. While there, she was startled by the *padrone*, who, with great alarm, rushed into the room, and said, ‘We are quite lost! here is the Legion Garibaldi! These men always pillage, and, if we do not give all up to them without pay, they will kill us.’ Margaret looked out upon the road, and saw that it was quite true, that the legion was coming thither with all speed. For a moment, she said, she felt uncomfortably;

for such was the exaggerated account of the conduct of the men, that she thought it quite possible that they would take her horses, and so leave her without the means of proceeding on her journey. On they came, and she determined to offer them a lunch at her own expense; having faith that gentleness and courtesy was the best protection from injury. Accordingly, as soon as they arrived, and rushed boisterously into the *osteria*, she rose, and said to the *padrone*, 'Give these good men wine and bread on my account; for, after their ride, they must need refreshment.' Immediately, the noise and confusion subsided; with respectful bows to her, they seated themselves and partook of the lunch, giving her an account of their journey. When she was ready to go, and her *vettura* was at the door, they waited upon her, took down the steps, and assisted her with much gentleness and respectfulness of manner, and she drove off, wondering how men with such natures could have the reputation they had. And, so far as we could gather, except in this instance, their conduct was of a most disorderly kind.

"Again, on another occasion, she showed how great was her power over rude men. This was when two *contadini* at Rieti, being in a violent quarrel, had rushed upon each other with knives. Margaret was called by the women bystanders, as the Signora who could most influence them to peace. She went directly up to the men, whose rage was truly awful to behold, and, stepping between them, commanded them to separate. They parted, but with such a look of deadly revenge, that Margaret felt her work was but half accomplished. She therefore sought them out separately, and talked with each, urging forgiveness; it was long, however, before she could see any change of purpose, and only by repeated conversations was it, that she brought about her desire, and saw them meet as friends. After this, her reputation as peace-maker was great, and the women in the neighborhood came to her with long tales of trouble, urging her intervention. I have never known anything more extraordinary than this influence of hers over the passion and violence of the Italian character. Repeated instances come to my mind, when a look from her has had more power to quiet excitement, than any arguments and reasonings that could be brought to bear upon the subject. Something quite superior and apart from them, the people thought her, and yet knew her as the gentle and considerate judge of their vices.

"I may also mention here, that Margaret's charities, according to her means, were larger than those of any other whom I ever knew. At one time, in Rome, while she lived upon the simplest, slenderest fare, spending only some ten or twelve cents a day for her dinner, she lent, unsolicited, her last fifty dollars to an artist, who was then in need. That it would ever be returned to her, she did not know; but the doubt did not restrain the hand from giving. In this instance, it was soon repaid her; but her charities were not always towards the most deserving.

Repeated instances of the false pretences, under which demands for charity are made, were known to her after she had given to unworthy objects; but no experience of this sort ever checked her kindly impulse to give, and being once deceived taught her no lesson of distrust. She ever listened with ready ear to all who came to her in any form of distress. Indeed, to use the language of another friend, 'the prevalent impression at Rome, among all who knew her, was, that she was a mild saint and a ministering angel.'

"I have, in order to bring in these instances of her influence on those about her, deviated from my track. We return to the life she led in Rome during the attack of the French, and her charge of the hospitals, where she spent daily some seven or eight hours, and, often, the entire night. Her feeble frame was a good deal shaken by so uncommon a demand upon her strength, while, at the same time, the anxiety of her mind was intense. I well remember how exhausted and weary she was; how pale and agitated she returned to us after her day's and night's watching; how eagerly she asked for news of Ossoli, and how seldom we had any to give her, for he was unable to send her a word for two or three days at a time. Letters from the country there were few or none, as the communication between Rieti and Rome was cut off.

"After one such day, she called me to her bedside, and said that I must consent, for her sake, to keep the SECRET she was about to confide. Then she told me of her marriage; where her child was, and where he was born; and gave me certain papers and parchment documents which I was to keep; and, in the event of her and her husband's death, I was to take the boy to her mother in America, and confide him to her care, and that of her friend, Mrs. ——— .

"The papers thus given me, I had perfect liberty to read; but after she had told me her story, I desired no confirmation of this fact, beyond what her words had given. One or two of the papers she opened, and we together read them. One was written on parchment, in Latin, and was a certificate, given by the priest who married them, saying that Angelo Eugene Ossoli was the legal heir of whatever title and fortune should come to his father. To this was affixed his seal, with those of the other witnesses, and the Ossoli crest was drawn in full upon the paper. There was also a book, in which Margaret had written the history of her acquaintance and marriage with Ossoli, and of the birth of her child. In giving that to me, she said, 'If I do not survive to tell this myself to my family, this book will be to them invaluable. Therefore keep it for them. If I live, it will be of no use, for my word will be all that they will ask.' I took the papers, and locked them up. Never feeling any desire to look into them, I never did; and as she gave them to me, I returned them to her, when I left Rome for Switzerland.

"After this, she often spoke to me of the necessity there had been, and still

existed, for her keeping her marriage a secret. At the time, I argued in favor of her making it public, but subsequent events have shown me the wisdom of her decision. The *explanation* she gave me of the secret marriage was this:

“They were married in December, soon after, — as I think, though I am not positive, — the death of the old Marquis Ossoli. The estate he had left was undivided, and the two brothers, attached to the Papal household, were to be the executors. This patrimony was not large, but, when fairly divided, would bring to each a little property, — an income sufficient, with economy, for life in Rome. Everyone knows, that law is subject to ecclesiastical influence in Rome, and that marriage with a Protestant would be destructive to all prospects of favorable administration. And beside being of another religious faith, there was, in this case, the additional crime of having married a liberal, — one who had publicly interested herself in radical views. Taking the two facts together, there was good reason to suppose, that, if the marriage were known, Ossoli must be a beggar, and a banished man, under the then existing government; while, by waiting a little, there was a chance, — a fair one, too, — of an honorable post under the new government, whose formation every one was anticipating. Leaving Rome, too, at that time, was deserting the field wherein they might hope to work much good, and where they felt that they were needed. Ossoli’s brothers had long before begun to look jealously upon him. Knowing his acquaintance with Margaret, they feared the influence she might exert over his mind in favor of liberal sentiments, and had not hesitated to threaten him with the Papal displeasure. Ossoli’s education had been such, that it certainly argues an uncommon elevation of character, that he remained so firm and single in his political views, and was so indifferent to the pecuniary advantages which his former position offered, since, during many years, the Ossoli family had been high in favor and in office, in Rome, and the same vista opened for his own future, had he chosen to follow their lead. The Pope left for Molo di Gaeta, and then came a suspension of all legal procedure, so that the estate was never divided, before we left Italy, and I do not know that it has ever been.

“Ossoli had the feeling, that, while his own sister and family could not be informed of his marriage, no others should know of it; and from day to day they hoped on for the favorable change which should enable them to declare it. Their child was born; and, for his sake, in order to defend him, as Margaret said, from the stings of poverty, they were patient waiters for the restored law of the land. Margaret felt that she would, at any cost to herself, gladly secure for her child a condition above want; and, although it was a severe trial, — as her letters to us attest, — she resolved to wait, and hope, and keep her secret. At the time when she took me into her confidence, she was so full of anxiety and dread of some

shock, from which she might not recover, that it was absolutely necessary to make it known to some friend. She was living with us at the time, and she gave it to me. Most sacredly, but timidly, did I keep her secret; for, all the while, I was tormented with a desire to be of active service to her, and I was incapacitated from any action by the position in which I was placed.

“Ossoli’s post was one of considerable danger, he being in one of the most exposed places; and, as Margaret saw his wounded and dying comrades, she felt that another shot might take him from her, or bring him to her care in the hospital. Eagerly she watched the carts, as they came up with their suffering loads, dreading that her worst fears might be confirmed. No argument of ours could persuade Ossoli to leave his post to take food or rest. Sometimes we went to him, and carried a concealed basket of provisions, but he shared it with so many of his fellows, that his own portion must have been almost nothing. Haggard, worn, and pale, he walked over the Vatican grounds with us, pointing out, now here, now there, where some poor fellow’s blood sprinkled the wall; Margaret was with us, and for a few moments they could have an anxious talk about their child.

“To get to the child, or to send to him, was quite impossible, and for days they were in complete ignorance about him. At length, a letter came; and in it the nurse declared that unless they should immediately send her, in advance-payment, a certain sum of money, she would altogether abandon Angelo. It seemed, at first, impossible to forward the money, the road was so insecure, and the bearer of any parcel was so likely to be seized by one party or the other, and to be treated as a spy. But finally, after much consideration, the sum was sent to the address of a physician, who had been charged with the care of the child. I think it did reach its destination, and for a while answered the purpose of keeping the wretched woman faithful to her charge.”

AQUILA AND RIETI.

Extracts from Margaret’s and Ossoli’s letters will guide us more into the heart of this home-tragedy, so sanctified with holy hope, sweet love, and patient heroism. They shall be introduced by a passage from a journal written many years before.

“My Child! O, Father, give me a bud on my tree of life, so scathed by the lightning and bound by the frost! Surely a being born wholly of my being, would not let me lie so still and cold in lonely sadness. This is a new sorrow; for always, before, I have wanted a superior or equal, but now it seems that only the feeling of a parent for a child could exhaust the richness of one’s soul. All powerful Nature, how dost thou lead me into thy heart and rebuke every

factitious feeling, every thought of pride, which has severed me from the Universe! How did I aspire to be a pure flame, ever pointing upward on the altar! But these thoughts of consecration, though true to the time, are false to the whole. There needs no consecration to the wise heart for all is pervaded by One Spirit, and the Soul of all existence is the Holy of Holies. I thought ages would pass, before I had this parent feeling, and then, that the desire would rise from my fulness of being. But now it springs up in my poverty and sadness. I am well aware that I ought not to be so happy. I do not deserve to be well beloved in any way, far less as the mother by her child. I am too rough and blurred an image of the Creator, to become a bestower of life. Yet, if I refuse to be anything else than my highest self, the true beauty will finally glow out in fulness.”

At what cost, were bought the blessings so long pined for! Early in the summer of 1848, Margaret left Rome for Aquila, a small, old town, once a baronial residence, perched among the mountains of Abruzzi. She thus sketches her retreat: —

“I am in the midst of a theatre of glorious, snow-crowned mountains, whose pedestals are garlanded with the olive and mulberry, and along whose sides run bridle-paths, fringed with almond groves and vineyards. The valleys are yellow with saffron flowers; the grain fields enamelled with the brilliant blue cornflower and red poppy. They are of intoxicating beauty, and like nothing in America. The old genius of Europe has so mellowed even the marbles here, that one cannot have the feeling of holy virgin loneliness, as in the New World. The spirits of the dead crowd me in most solitary places. Here and there, gleam churches or shrines. The little town, much ruined, lies on the slope of a hill, with the houses of the barons gone to decay, and unused churches, over whose arched portals are faded frescoes, with the open belfry, and stone wheel-windows, always so beautiful. Sweet little paths lead away through the fields to convents, — one of Passionists, another of Capuchins; and the draped figures of the monks, pacing up and down the hills, look very peaceful. In the churches still open, are pictures, not by great masters, but of quiet, domestic style, which please me much, especially one of the Virgin offering her breast to the child Jesus. There is often sweet music in these churches; they are dressed with fresh flowers, and the incense is not oppressive, so freely sweeps through them the mountain breeze.”

Here Margaret remained but a month, while Ossoli was kept fast by his guard duties in Rome. “*Addio, tutto caro,*” she writes; “I shall receive you with the greatest joy, when you can come. If it were only possible to be nearer to you! for, except the good air and the security, this place does not please me.” And again:— “How much I long to be near you! You write nothing of yourself, and

this makes me anxious and sad. Dear and good! I pray for thee often, now that it is all I can do for thee. We must hope that Destiny will at last grow weary of persecuting. Ever thy affectionate." Meantime Ossoli writes:— "Why do you not send me tidings of yourself, every post-day? since the post leaves Aquila three times a week. I send you journals or letters every time the post leaves Rome. You should do the same. Take courage, and thus you will make me happier also; and you can think how sad I must feel in not being near you, dearest, to care for all your wants."

By the middle of July, Margaret could bear her loneliness no longer, and, passing the mountains, advanced to Rieti, within the frontier of the Papal States. Here Ossoli could sometimes visit her on a Sunday, by travelling in the night from Rome. "Do not fail to come," writes Margaret. "I shall have your coffee warm. You will arrive early, and I can see the diligence pass the bridge from my window." But now threatened a new trial, terrible under the circumstances, yet met with the loving heroism that characterized all her conduct. The civic guard was ordered to prepare for marching to Bologna. Under date of August 17th, Ossoli writes:— "*Mia Cara!* How deplorable is my state! I have suffered a most severe struggle. If your condition were other than it is, I could resolve more easily; but, in the present moment, I cannot leave you! Ah, how cruel is Destiny! I understand well how much you would sacrifice yourself for me, and am deeply grateful; but I cannot yet decide." Margaret is alone, without a single friend, and not only among strangers, but surrounded by people so avaricious, cunning, and unscrupulous, that she has to be constantly on the watch to avoid being fleeced; she is very poor, and has no confidant, even in Rome, to consult with; she is ill, and fears death in the near crisis; yet thus, with true Roman greatness, she counsels her husband:— "It seems, indeed, a marvel how all things go contrary to us! That, just at this moment, you should be called upon to go away. But do what is for your honor. If honor requires it, go. I will try to sustain myself. I leave it to your judgment when to come, — if, indeed, you can ever come again! At least, we have had some hours of peace together, if now it is all over. Adieu, love; I embrace thee always, and pray for thy welfare. Most affectionately, adieu."

*

From this trial, however, she was spared. Pio Nono hesitated to send the civic guard to the north of Italy. Then Margaret writes:— "On our own account, love, I shall be most grateful, if you are not obliged to go. But how unworthy, in the Pope! He seems now a man without a heart. And that traitor, Charles Albert! He

will bear the curse of all future ages. Can you learn particulars from Milan? I feel sad for our poor friends there; how much they must suffer! * I shall be much more tranquil to have you at my side, for it would be sad to die alone, without the touch of one dear hand. Still, I repeat what I said in my last; if duty prevents you from coming, I will endeavor to take care of myself.” Again, two days later, she says:— “I feel, love, a profound sympathy with you, but am not able to give perfectly wise counsel. It seems to me, indeed, the worst possible moment to take up arms, except in the cause of duty, of honor; for, with the Pope so cold, and his ministers so undecided, nothing can be well or successfully done. If it is possible for you to wait for two or three weeks, the public state will be determined, — as will also mine, — and you can judge more calmly. Otherwise, it seems to me that I ought to say nothing. Only, if you go, come here first. I must see you once more. Adieu, dear. Our misfortunes are many and unlooked for. Not often does destiny demand a greater price for some happy moments. Yet never do I repent of our affection; and for thee, if not for me, I hope that life has still some good in store. Once again, adieu! May God give thee counsel and help, since they are not in the power of thy affectionate Margherita.”

On the 5th of September, Ossoli was “at her side,” and together, with glad and grateful hearts, they welcomed their boy; though the father was compelled to return the next day to Rome. Even then, however, a new chapter of sorrows was opening. By indiscreet treatment, Margaret was thrown into violent fever, and became unable to nurse her child. Her waiting maid, also, proved so treacherous, that she was forced to dismiss her, and wished “never to set eyes on her more;” and the family, with whom she was living, displayed most detestable meanness. Thus helpless, ill, and solitary, she could not even now enjoy the mother’s privilege. Yet she writes cheerfully:— “My present nurse is a very good one, and I feel relieved. We must have courage but it is a great care, alone and ignorant, to guard an infant in its first days of life. He is very pretty for his age; and, without knowing what name I intended giving him, the people in the house call him *Angiolino*, because he is so lovely.” Again:— “He is so dear! It seems to me, among all disasters and difficulties, that if he lives and is well, he will become a treasure for us two, that will compensate us for everything.” And yet again:— “This —— is faithless, like the rest. Spite of all his promises, he will not bring the matter to inoculate Nino, though, all about us, persons are dying with small-pox. I cannot sleep by night, and I weep by day, I am so disgusted; but you are too far off to help me. The baby is more beautiful every hour. He is worth all the trouble he causes me, — poor child that I am, — alone here, and abused by everybody.”

Yet new struggles; new sorrows! Ossoli writes: —

“Our affairs must be managed with the utmost caution imaginable, since my thought would be to keep the baby out of Rome for the sake of greater secrecy, if only we can find a good nurse who will take care of him like a mother.” To which Margaret replies:— “He is always so charming, how can I ever, ever leave him! I wake in the night, — I look at him. I think: Ah, it is impossible! He is so beautiful and good, I could die for him!” Once more:— “In seeking rooms, do not pledge me to remain in Rome, for it seems to me, often, I cannot stay long without seeing the boy. He is so dear, and life seems so uncertain. It is necessary that I should be in Rome a month, at least, to write, and also to be near you. But I must be free to return here, if I feel too anxious and suffering for him. O, love! how difficult is life! But thou art good! If it were only possible to make thee happy!” And, finally, “Signora speaks very highly of ———, the nurse of Angelo, and says that her aunt is an excellent woman, and that the brothers are all good. Her conduct pleases me well. This consoles me a little, in the prospect of leaving my child, if that is necessary.”

So, early in November, Ossoli came for her, and they returned together. In December, however, Margaret passed a week more with her darling, making two fatiguing and perilous journeys, as snows had fallen on the mountains, and the streams were much swollen by the rains. And then, from the combined motives of being near her husband, watching and taking part in the impending struggle of liberalism, earning support by her pen, preparing her book, and avoiding suspicion, she remained for three months in Rome. “How many nights I have passed,” she writes, “entirely in contriving possible means, by which, through resolution and effort on my part, that one sacrifice could be avoided. But it was impossible. I could not take the nurse from her family; I could not remove Angelo, without immense difficulty and risk. It is singular, how everything has worked to give me more and more sorrow. Could I but have remained in peace, cherishing the messenger dove, I should have asked no more, but should have felt overpaid for all the pains and bafflings of my sad and broken life.” In March, she flies back to Rieti, and finds “our treasure in the best of health, and plump, though small. When first I took him in my arms, he made no sound, but leaned his head against my bosom, and kept it there, as if he would say, How could you leave me? They told me, that all the day of my departure he would not be comforted, always looking toward the door. He has been a strangely precocious infant, I think, through sympathy with me, for I worked very hard before his birth, with the hope that all my spirit might be incarnated in him. In that regard, it may have been good for him to be with these more instinctively joyous natures. I see that he is more serene, is less sensitive, than when with me, and

sleeps better. The most solid happiness I have known has been when he has gone to sleep in my arms. What cruel sacrifices have I made to guard my secret for the present, and to have the mode of disclosure at my own option! It will, indeed, be just like all the rest, if these sacrifices are made in vain.”

*

At Rieti, Margaret rested till the middle of April, when, returning once more to Rome, she was, as we have seen, shut up within the beleaguered city.

The siege ended, the anxious mother was free to seek her child once more, in his nest among the mountains. Her fears had been but too prophetic. “Though the physician sent me reassuring letters,” she writes, “I yet often seemed to hear Angelino calling to me amid the roar of the cannon, and always his tone was of crying. And when I came, I found mine own fast waning to the tomb! His nurse, lovely and innocent as she appeared, had betrayed him, for lack of a few *scudi*! He was worn to a skeleton; his sweet, childish grace all gone! Everything I had endured seemed light to what I felt when I saw him too weak to smile, or lift his wasted little hand. Now, by incessant care, we have brought him back, — who knows if that be a deed of love? — into this hard world once more. But I could not let him go, unless I went with him; and I do hope that the cruel law of my life will, at least, not oblige us to be separated. When I saw his first returning smile, — that poor, wan, feeble smile! — and more than four weeks we watched him night and day, before we saw it, — new resolution dawned in my heart. I resolved to live, day by day, hour by hour, for his dear sake. So, if he is only treasure lent, — if he too must go, as sweet Waldo, Pickie, Hermann, did, — as all *my* children do! — I shall at least have these days and hours with him.”

How intolerable was this last blow to one stretched so long on the rack, is plain from Margaret’s letters. “I shall never again,” she writes, “be perfectly, be religiously generous, so terribly do I need for myself the love I have given to other sufferers. When you read this, I hope your heart will be happy; for I still like to know that others are happy, — it consoles me.” Again her agony wrung from her these bitter words, — the bitterest she ever uttered, — words of transient madness, yet most characteristic:— “Oh God! help me, is all my cry. Yet I have little faith in the Paternal love I need, so ruthless or so negligent seems the government of this earth. I feel calm, yet sternly, towards Fate. This last plot against me has been so cruelly, cunningly wrought, that I shall never acquiesce. I submit, because useless resistance is degrading, but I demand an explanation. I see that it is probable I shall never receive one, while I live here, and suppose I can bear the rest of the suspense, since I have comprehended all its

difficulties in the first moments. Meanwhile, I live day by day, though not on manna." But now comes a sweeter, gentler strain:—"I have been the object of great love from the noble and the humble; I have felt it towards both. Yet I am *tired out*, — tired of thinking and hoping, — tired of seeing men err and bleed. I take interest in some plans, — Socialism for instance, — but the interest is shallow as the plans. These are needed, are even good; but man will still blunder and weep, as he has done for so many thousand years. Coward and footsore, gladly would I creep into some green recess, where I might see a few not unfriendly faces, and where not more wretches should come than I could relieve. Yes! I am weary, and faith soars and sings no more. Nothing good of me is left except at the bottom of the heart, a melting tenderness:— 'She loves much.'"

CALM AFTER STORM.

Morning rainbows usher in tempests, and certainly youth's romantic visions had prefigured a stormy day of life for Margaret. But there was yet to be a serene and glowing hour before the sun went down. Angelo grew strong and lively once more; rest and peace restored her elasticity of spirit, and extracts from various letters will show in what tranquil blessedness, the autumn and winter glided by. After a few weeks' residence at Rieti, the happy three journeyed on, by way of Perugia, to Florence, where they arrived at the end of September. Thence, Margaret writes: —

It was so pleasant at Perugia! The pure mountain air is such perfect elixir, the walks are so beautiful on every side, and there is so much to excite generous and consoling feelings! I think the works of the Umbrian school are never well seen except in their home; — they suffer by comparison with works more rich in coloring, more genial, more full of common life. The depth and tenderness of their expression is lost on an observer stimulated to a point out of their range. Now, I can prize them. We went every morning to some church rich in pictures, returning at noon for breakfast. After breakfast, we went into the country, or to sit and read under the trees near San Pietro. Thus I read Nicolo di' Lapi, a book unenlivened by a spark of genius, but interesting, to me, as illustrative of Florence.

Our little boy gained strength rapidly there; — every day he was able to go out with us more. He is now full of life and gayety. We hope he will live, and grow into a stout man yet.

Our journey here was delightful; — it is the first time I have seen Tuscany when the purple grape hangs garlanded from tree to tree. We were in the early days of the vintage: the fields were animated by men and women, some of the

latter with such pretty little bare feet, and shy, soft eyes, under the round straw hat. They were beginning to cut the vines, but had not done enough to spoil any of the beauty.

Here, too, I feel better pleased than ever before. Florence seems so cheerful and busy, after ruined Rome, I feel as if I could forget the disasters of the day, for a while, in looking on the treasures she inherits.

*

To-day we have been out in the country, and found a little chapel, full of *contadine*, their lovers waiting outside the door. They looked charming in their black veils, — the straw hat hanging on the arm, — with shy, glancing eyes, and cheeks pinched rosy by the cold; for it is cold here as in New England. On foot, we have explored a great part of the environs; and till now I had no conception of their beauty. When here before, I took only the regular drives, as prescribed for all lady and gentlemen travellers. This evening we returned by a path that led to the banks of the Arno. The Duomo, with the snowy mountains, were glorious in the rosy tint and haze, just before sunset. What a difference it makes to come home to a child! — how it fills up all the gaps of life, just in the way that is most consoling, most refreshing! Formerly, I used to feel sad at that hour; the day had not been nobly spent, I had not done my duty to myself and others, and I felt so lonely! Now I never feel lonely; for, even if my little boy dies, our souls will remain eternally united. And I feel *infinite* hope for him, — hope that he will serve God and man more loyally than I have done; and, seeing how full he is of life, — how much he can afford to throw away, — I feel the inexhaustibleness of nature, and console myself for my own incapacities.

*

Florence, Oct. 14, 1849. — Weary in spirit, with the deep disappointments of the last year, I wish to dwell little on these things for the moment, but seek some consolation in the affections. My little boy is quite well now, and I often am happy in seeing how joyous and full of activity he seems. Ossoli, too, feels happier here. The future is full of difficulties for us, but, having settled our plans for the present, we shall set it aside while we may. “Sufficient for the day is the evil thereof;” and if the good be not always sufficient, in our case it is; so let us say grace to our dinner of herbs.

*

Florence, Nov. 7. — Dearest Mother, — Of all your endless acts and words of love, never was any so dear to me as your last letter; — so generous, so sweet, so holy! What on earth is so precious as a mother's love; and who has a mother like mine!

I was thinking of you and my father, all that first day of October, wishing to write, only there was much to disturb me that day, as the police were threatening to send us away. It is only since I have had my own child that I have known how much I always failed to do what I might have done for the happiness of you both; only since I have seen so much of men and their trials, that I have learned to prize my father as he deserved; only since I have had a heart daily and hourly testifying to me its love, that I have understood, too late, what it was for you to be deprived of it. It seems to me as if I had never sympathized with you as I ought, or tried to embellish and sustain your life, as far as is possible, after such an irreparable wound.

It will be sad for me to leave Italy, uncertain of return. Yet when I think of you, beloved mother; of brothers and sisters, and many friends, I wish to come. Ossoli is perfectly willing. He leaves in Rome a sister, whom he dearly loves. His aunt is dying now. He will go among strangers; but to him, as to all the young Italians, America seems the land of liberty. He hopes, too, that a new revolution will favor return, after a number of years, and that then he may find really a home in Italy. All this is dark; — we can judge only for the present moment. The decision will rest with me, and I shall wait till the last moment, as I always do, that I may have all the reasons before me.

I thought, to-day, ah, if she could only be with us now! But who knows how long this interval of peace will last? I have learned to prize such, as the halcyon prelude to the storm. It is now about a fortnight, since the police gave us leave to stay, and we feel safe in our little apartment. We have no servant except the nurse, with occasional aid from the porter's wife, and now live comfortably so, tormented by no one, helping ourselves. In the evenings, we have a little fire now; — the baby sits on his stool between us. He makes me think how I sat on mine, in the chaise, between you and father. He is exceedingly fond of flowers; — he has been enchanted, this evening, by this splendid Gardenia, and these many crimson flowers that were given me at Villa Correggi, where a friend took us in his carriage. It was a luxury, this ride, as we have entirely renounced the use of a carriage for ourselves. How enchanted you would have been with that villa! It seems now as if, with the certainty of a very limited income, we could be so happy! But I suppose, if we had it, one of us would die, or the baby. Do not you die, my beloved mother; — let us together have some halcyon moments, again, with God, with nature, with sweet childhood, with the remembrance of

pure trust and good intent; away from perfidy and care, and the blight of noble designs.

Ossoli wishes you were here, almost as much as I. When there is anything really lovely and tranquil, he often says, "Would not '*La Madre*' like that?" He wept when he heard your letter. I never saw him weep at any other time, except when his father died, and when the French entered Rome. He has, I think, even a more holy feeling about a mother, from having lost his own, when very small. It has been a life-long want with him. He often shows me a little scar on his face, made by a jealous dog, when his mother was caressing him as an infant. He prizes that blemish much.

*

Florence, December 1, 1849. — I do not know what to write about the baby, he changes so much, — has so many characters. He is like me in that, for his father's character is simple and uniform, though not monotonous, any more than are the flowers of spring flowers of the valley. Angelino is now in the most perfect rosy health, — a very gay, impetuous, ardent, but sweet-tempered child. He seems to me to have nothing in common with his first babyhood, with its ecstatic smiles, its exquisite sensitiveness, and a distinction in the gesture and attitudes that struck everybody. His temperament is apparently changed by taking the milk of these robust women. He is now come to quite a knowing age, — fifteen months.

In the morning, as soon as dressed, he signs to come into our room; then draws our curtain with his little dimpled hand, kisses me rather violently, pats my face, laughs, crows, shows his teeth, blows like the bellows, stretches himself, and says "*bravo.*" Then, having shown off all his accomplishments, he expects, as a reward, to be tied in his chair, and have his playthings. These engage him busily, but still he calls to us to sing and drum, to enliven the scene. Sometimes he summons me to kiss his hand, and laughs very much at this. Enchanting is that baby-laugh, all dimples and glitter, — so strangely arch and innocent! Then I wash and dress him. That is his great time. He makes it last as long as he can, insisting to dress and wash me the while, kicking, throwing the water about, and full of all manner of tricks, such as, I think, girls never dream of. Then comes his walk; — we have beautiful walks here for him, protected by fine trees, always warm in mid-winter. The bands are playing in the distance, and children of all ages are moving about, and sitting with their nurses. His walk and sleep give me about three hours in the middle of the day.

I feel so refreshed by his young life, and Ossoli diffuses such a power and sweetness over every day, that I cannot endure to think yet of our future. Too much have we suffered already, trying to command it. I do not feel force to make any effort yet. I suppose that very soon now I must do something, and hope I shall feel able when the time comes. My constitution seems making an effort to rally, by dint of much sleep. I had slept so little, for a year and a half, and, after the birth of the child, I had such anxiety and anguish when separated from him, that I was consumed as by nightly fever. The last two months at Rome would have destroyed almost any woman. Then, when I went to him, he was so ill, and I was constantly up with him at night, carrying him about. Now, for two months, we have been tranquil. We have resolved to enjoy being together as much as we can, in this brief interval, — perhaps all we shall ever know of peace. It is very sad we have no money, we could be so quietly happy a while. I rejoice in all Ossoli did; but the results, in this our earthly state, are disastrous, especially as my strength is now so impaired. This much I hope, in life or death, to be no more separated from Angelino.

Last winter, I made the most vehement efforts at least to redeem the time, hoping thus good for the future. But, of at least two volumes written at that time, no line seems of any worth. I had suffered much constraint, — much that was uncongenial, harassing, even torturing, before; but this kind of pain found me unprepared; — the position of a mother separated from her only child is too frightfully unnatural.

*

The Christmas holidays interest me now, through my child, as they never did for myself. I like to go out to watch the young generation who will be his contemporaries. On Monday, we went to the *Caseine*. After we had taken the drive, we sat down on a stone seat in the sunny walk, to see the people pass; — the Grand Duke and his children; the elegant Austrian officers, who will be driven out of Italy when Angelino is a man; Princess Demidoff; Harry Lorrequer; an absurd brood of fops; many lovely children; many little frisking dogs, with their bells, &c. The sun shone brightly on the Arno; a barque moved gently by; all seemed good to the baby. He laid himself back in my arms, smiling, singing to himself, and dancing his feet. I hope he will retain some trace in his mind of the perpetual exhilarating picture of Italy. It cannot but be important in its influence while yet a child, to walk in these stately gardens, full of sculpture, and hear the untiring music of the fountains.

Christmas-eve we went to the Annunziata, for midnight mass. Though the

service is not splendid here as in Rome, we yet enjoyed it; — sitting in one of the side chapels, at the foot of a monument, watching the rich crowds steal gently by, every eye gleaming, every gesture softened by the influence of the pealing choir, and the hundred silver lamps swinging their full light, in honor of the abused Emanuel.

But far finest was it to pass through the Duomo. No one was there. Only the altars were lit up, and the priests, who were singing, could not be seen by the faint light. The vast solemnity of the interior is thus really felt. The hour was worthy of Brunelleschi. I hope he walked there so. The Duomo is more divine than St. Peter's, and worthy of genius pure and unbroken. St. Peter's is, like Rome, a mixture of sublimest heaven with corruptest earth. I adore the Duomo, though no place can now be to me like St. Peter's, where has been passed the splendidest part of my life. My feeling was always perfectly regal, on entering the piazza of St. Peter's. No spot on earth is worthier the sunlight; — on none does it fall so fondly.

*

You ask me, how I employ myself here. I have been much engaged in writing out my impressions, which will be of worth so far as correct. I am anxious only to do historical justice to facts and persons; but there will not, so far as I am aware, be much thought, for I believe I have scarce expressed what lies deepest in my mind. I take no pains, but let the good genius guide my pen. I did long to lead a simple, natural life, *at home*, learning of my child, and writing only when imperatively urged by the need of utterance; but when we were forced to give up the hope of subsisting on a narrow independence, without tie to the public, we gave up the peculiar beauty of our lives, and I strive no more. I only hope to make good terms with the publishers.

Then, I have been occupied somewhat in reading Louis Blanc's *Ten Years*, Lamartine's *Girondists*, and other books of that class, which throw light on recent transactions.

I go into society, too, somewhat, and see several delightful persons, in an intimate way. The Americans meet twice a week, at the house of Messrs. Mozier and Chapman, and I am often present, on account of the friendly interest of those resident here. With our friends, the Greenoughs, I have twice gone to the opera. Then I see the Brownings often, and love and admire them both, more and more, as I know them better. Mr. Browning enriches every hour I pass with him, and is a most cordial, true, and noble man. One of my most highly prized Italian friends, also, Marchioness Arconati Visconti, of Milan, is passing the winter

here, and I see her almost every day.

*

My love for Ossoli is most pure and tender, nor has any one, except my mother or little children, loved me so genuinely as he does. To some, I have been obliged to make myself known; others have loved me with a mixture of fancy and enthusiasm, excited by my talent at embellishing life. But Ossoli loves me from simple affinity; — he loves to be with me, and to serve and soothe me. Life will probably be a severe struggle, but I hope I shall be able to live through all that is before us, and not neglect my child or his father. He has suffered enough since we met; — it has ploughed furrows in his life. He has done all he could, and cannot blame himself. Our outward destiny looks dark, but we must brave it as we can. I trust we shall always feel mutual tenderness, and Ossoli has a simple, childlike piety, that will make it easier for him.

MARGARET AND HER PEERS.

Pure and peaceful as was the joy of Margaret's Florence winter, it was ensured and perfected by the fidelity of friends, who hedged around with honor the garden of her home. She had been called to pass through a most trying ordeal, and the verdict of her peers was heightened esteem and love. With what dignified gratitude she accepted this well-earned proof of confidence, will appear from the following extracts.

TO MRS. E.S.

Thus far, my friends have received news that must have been an unpleasant surprise to them, in a way that, *à moi*, does them great honor. None have shown littleness or displeasure, at being denied my confidence while they were giving their own. Many have expressed the warmest sympathy, and only one has shown a disposition to transgress the limit I myself had marked, and to ask questions. With her, I think, this was because she was annoyed by what people said, and wished to be able to answer them. I replied to her, that I had communicated already all I intended, and should not go into detail; — that when unkind things were said about me, she should let them pass. Will you, dear E ———, do the same? I am sure your affection for me will prompt you to add, that you feel confident whatever I have done has been in a good spirit, and not contrary to *my* ideas of right. For the rest, you will not admit for me, — as I do not for myself,

— the rights of the social inquisition of the United States to know all the details of my affairs. If my mother is content; if Ossoli and I are content; if our child, when grown up, shall be content; that is enough. You and I know enough of the United States to be sure that many persons there will blame whatever is peculiar. The lower-minded persons, everywhere, are sure to think that whatever is mysterious must be bad. But I think there will remain for me a sufficient number of friends to keep my heart warm, and to help me earn my bread; — that is all that is of any consequence. Ossoli seems to me more lovely and good every day; our darling child is well now, and every day more gay and playful. For his sake I shall have courage; and hope some good angel will show us the way out of our external difficulties.

TO W.W.S.

It was like you to receive with such kindness the news of my marriage. A less generous person would have been displeased, that, when we had been drawn so together, — when we had talked so freely, and you had shown towards me such sweet friendship, — I had not told you. Often did I long to do so, but I had, for reasons that seemed important, made a law to myself to keep this secret as rigidly as possible, up to a certain moment. That moment came. Its decisions were not such as I had hoped; but it left me, at least, without that painful burden, which I trust never to bear again. Nature keeps so many secrets, that I had supposed the moral writers exaggerated the dangers and plagues of keeping them; but they cannot exaggerate. All that can be said about mine is, that I at least acted out, with, to me, tragic thoroughness, “The wonder, a woman keeps a secret.” As to my not telling *you*, I can merely say, that I was keeping the information from my family and dearest friends at home; and, had you remained near me a very little later, you would have been the very first person to whom I should have spoken, as you would have been the first, on this side of the water, to whom I should have written, had I known where to address you. Yet I hardly hoped for your sympathy, dear W ——— . I am very glad if I have it. May brotherly love ever be returned unto you in like measure. Ossoli desires his love and respect to be testified to you both.

TO THE MARCHIONESS VISCONTI ARCONATI.

Reading a book called “The Last Days of the Republic in Rome,” I see that my letter, giving my impressions of that period, may well have seemed to you strangely partial. If we can meet as once we did, and compare notes in the same

spirit of candor, while making mutual allowance for our different points of view, your testimony and opinions would be invaluable to me. But will you have patience with my democracy, — my revolutionary spirit? Believe that in thought I am more radical than ever. The heart of Margaret you know, — it is always the same. Mazzini is immortally dear to me — a thousand times dearer for all the trial I saw made of him in Rome; — dearer for all he suffered. Many of his brave friends perished there. We who, less worthy, survive, would fain make up for the loss, by our increased devotion to him, the purest, the most disinterested of patriots, the most affectionate of brothers. You will not love me less that I am true to him.

Then, again, how will it affect you to know that I have united my destiny with that of an obscure young man, — younger than myself; a person of no intellectual culture, and in whom, in short, you will see no reason for my choosing; yet more, that this union is of long standing; that we have with us our child, of a year old, and that it is only lately I acquainted my family with the fact?

If you decide to meet with me as before, and wish to say something about the matter to your friends, it will be true to declare that there have been pecuniary reasons for this concealment. But *to you*, in confidence, I add, this is only half the truth; and I cannot explain, or satisfy my dear friend further. I should wish to meet her independent of all relations, but, as we live in the midst of “society,” she would have to inquire for me now as Margaret Ossoli. That being done, I should like to say nothing more on the subject.

However you may feel about all this, dear Madame Arconati, you will always be the same in my eyes. I earnestly wish you may not feel estranged; but, if you do, I would prefer that you should act upon it. Let us meet as friends, or not at all. In all events, I remain ever yours,

MARGARET.

TO THE MARCHIONESS VISCONTI ARCONATI.

My loved friend, — I read your letter with greatest content. I did not know but that there might seem something offensively strange in the circumstances I mentioned to you. Goethe says, “There is nothing men pardon so little as singular conduct, for which no reason is given;” and, remembering this, I have been a little surprised at the even increased warmth of interest with which the little American society of Florence has received me, with the unexpected accessories of husband and child, — asking no questions, and seemingly

satisfied to find me thus accompanied. With you, indeed, I thought it would be so, because you are above the world; only, as you have always walked in the beaten path, though with noble port, and feet undefiled, I thought you might not like your friends to be running about in these blind alleys. It glads my heart, indeed, that you do not care for this, and that we may meet in love.

You speak of our children. Ah! dear friend, I do, indeed, feel we shall have deep sympathy there. I do not believe mine will be a brilliant child, and, indeed, I see nothing peculiar about him. Yet he is to me a source of ineffable joys, — far purer, deeper, than anything I ever felt before, — like what Nature had sometimes given, but more intimate, more sweet. He loves me very much; his little heart clings to mine. I trust, if he lives, to sow there no seeds which are not good, to be always growing better for his sake. Ossoli, too, will be a good father. He has very little of what is called intellectual development, but unspoiled instincts, affections pure and constant, and a quiet sense of duty, which, to me, — who have seen much of the great faults in characters of enthusiasm and genius, — seems of highest value.

When you write by post, please direct “Marchesa Ossoli,” as all the letters come to that address. I did not explain myself on that point. The fact is, it looks to me silly for a radical like me to be carrying a title; and yet, while Ossoli is in his native land, it seems disjoining myself from him, not to bear it. It is a sort of thing that does not naturally belong to me, and, unsustained by fortune, is but a *souvenir* even for Ossoli. Yet it has appeared to me, that for him to drop an inherited title would be, in some sort, to acquiesce in his brothers’ disclaiming him, and to abandon a right he may passively wish to maintain for his child. How does it seem to you? I am not very clear about it. If Ossoli should drop the title, it would be a suitable moment to do so on becoming an inhabitant of Republican America.

TO MRS. C.T.

What you say of the meddling curiosity of people repels me, it is so different here. When I made my appearance with a husband and a child of a year old, nobody did the least act to annoy me. All were most cordial; none asked or implied questions. Yet there were not a few who might justly have complained, that, when they were confiding to me all their affairs, and doing much to serve me, I had observed absolute silence to them. Others might, for more than one reason, be displeased at the choice I made. All have acted in the kindest and most refined manner. An Italian lady, with whom I was intimate, — who might be qualified in the Court Journal, as one of the highest rank, sustained by the

most scrupulous decorum, — when I wrote, “Dear friend, I am married; I have a child. There are particulars, as to my reasons for keeping this secret, I do not wish to tell. This is rather an odd affair; will it make any difference in our relations?” — answered, “What difference can it make, except that I shall love you more, now that we can sympathize as mothers?” Her first visit here was to me: she adopted at once Ossoli and the child to her love.

—— wrote me that —— was a little hurt, at first, that I did not tell him, even in the trying days of Rome, but left him to hear it, as he unluckily did, at the *table d’hôte* in Venice; but his second and prevailing thought was regret that he had not known it, so as to soothe and aid me, — to visit Ossoli at his post, — to go to the child in the country. Wholly in that spirit was the fine letter he wrote me, one of my treasures. The little American society have been most cordial and attentive; one lady, who has been most intimate with me, dropped a tear over the difficulties before me, but she said, “Since you have seen fit to take the step, all your friends have to do, now, is to make it as easy for you as they can.”

TO MRS. E.S.

I am glad to have people favorably impressed, because I feel lazy and weak, unequal to the trouble of friction, or the pain of conquest. Still, I feel a good deal of contempt for those so easily disconcerted or reassured. I was not a child; I had lived in the midst of that New England society, in a way that entitled me to esteem, and a favorable interpretation, where there was doubt about my motives or actions. I pity those who are inclined to think ill, when they might as well have inclined the other way. However, let them go; there are many in the world who stand the test, enough to keep us from shivering to death. I am, on the whole, fortunate in friends whom I can truly esteem, and in whom I know the kernel and substance of their being too well to be misled by seemings.

TO MRS. C.T.

I had a letter from my mother, last summer, speaking of the fact, that she had never been present at the marriage of one of her children. A pang of remorse came as I read it, and I thought, if Angelino dies,[A] I will not give her the pain of knowing that I have kept this secret from her; — she shall hear of this connection, as if it were something new. When I found he would live, I wrote to her and others. It half killed me to write those few letters, and yet, I know, many are wondering that I did not write more, and more particularly. My mother received my communication in the highest spirit. She said, she was sure a first

object with me had been, now and always, to save her pain. She blessed us. She rejoiced that she should not die feeling there was no one left to love me with the devotion she thought I needed. She expressed no regret at our poverty, but offered her feeble means. Her letter was a noble crown to her life of disinterested, purifying love.

[Footnote A: This was when Margaret found Nino so ill at Rieti.]

FLORENCE.

The following notes respecting Margaret's residence in Florence were furnished to the editors by Mr. W.H. Hurlbut.

I passed about six weeks in the city of Florence, during the months of March and April, 1850. During the whole of that time Madame Ossoli was residing in a house at the corner of the Via della Misericordia and the Piazza Santa Maria Novella. This house is one of those large, well built modern houses that show strangely in the streets of the stately Tuscan city. But if her rooms were less characteristically Italian, they were the more comfortable, and, though small, had a quiet, home-like air. Her windows opened upon a fine view of the beautiful Piazza; for such was their position, that while the card-board façade of the church of Sta. Maria Novella could only be seen at an angle, the exquisite Campanile rose fair and full against the sky. She enjoyed this most graceful tower very much, and, I think, preferred it even to Giotto's noble work. Its quiet religious grace was grateful to her spirit, which seemed to be yearning for peace from the cares that had so vexed and heated the world about her for a year past.

I saw her frequently at these rooms, where, surrounded by her books and papers, she used to devote her mornings to her literary labors. Once or twice I called in the morning, and found her quite immersed in manuscripts and journals. Her evenings were passed usually in the society of her friends, at her own rooms, or at theirs. With the pleasant circle of Americans, then living in Florence, she was on the best terms, and though she seemed always to bring with her her own most intimate society, and never to be quite free from the company of busy thoughts, and the cares to which her life had introduced her, she was always cheerful, and her remarkable powers of conversation subserved on all occasions the kindest, purposes of good-will in social intercourse.

The friends with whom she seemed to be on the terms of most sympathy, were an Italian lady, the Marchesa Arconati Visconti,[A] — the exquisite sweetness of whose voice interpreted, even to those who knew her only as a transient acquaintance, the harmony of her nature, — and some English residents in Florence, among whom I need only name Mr. and Mrs. Browning, to satisfy

the most anxious friends of Madame Ossoli that the last months of her Italian life were cheered by all the light that communion with gifted and noble natures could afford.

The Marchesa Arconati used to persuade Madame Ossoli to occasional excursions with her into the environs of Florence, and she passed some days of the beautiful spring weather at the villa of that lady.

Her delight in nature seemed to be a source of great comfort and strength to her. I shall not easily forget the account she gave me, on the evening of one delicious Sunday in April, of a walk which she had taken with her husband in the afternoon of that day, to the hill of San Miniato. The amethystine beauty of the Apennines, — the cypress trees that sentinel the way up to the ancient and deserted church, — the church itself, standing high and lonely on its hill, begirt with the vine-clad, crumbling walls of Michel Angelo, — the repose of the dome-crowned city in the vale below, — seemed to have wrought their impression with peculiar force upon her mind that afternoon. On their way home, they had entered the conventual church that stands half way up the hill, just as the vesper service was beginning, and she spoke of the simple spirit of devotion that filled the place, and of the gentle wonder with which, to use her own words, the “peasant women turned their glances, the soft dark glances of the Tuscan peasant’s eyes,” upon the strangers, with a singular enthusiasm. She was in the habit of taking such walks with her husband, and she never returned from one of them, I believe, without some new impression of beauty and of lasting truth. While her judgment, intense in its sincerity, tested, like an *aqua regia*, the value of all facts that came within her notice, her sympathies seemed, by an instinctive and unerring action, to transmute all her experiences instantly into permanent treasures.

The economy of the house in which she lived afforded me occasions for observing the decisive power, both of control and of consolation, which she could exert over others. Her maid, — an impetuous girl of Rieti, a town which rivals Tivoli as a hot-bed of homicide, — was constantly involved in disputes with a young Jewess, who occupied the floor above Madame Ossoli. On one occasion, this Jewess offered the maid a deliberate and unprovoked insult. The girl of Rieti, snatching up a knife, ran up stairs to revenge herself after her national fashion. The porter’s little daughter followed her and, running into Madame Ossoli’s rooms, besought her interference. Madame Ossoli reached the apartment of the Jewess, just in time to interpose between that beetle-browed lady and her infuriated assailant. Those who know the insane license of spirit which distinguishes the Roman mountaineers, will understand that this was a position of no slight hazard. The Jewess aggravated the danger of the offence by

the obstinate maliciousness of her aspect and words. Such, however, was Madame Ossoli's entire self-possession and forbearance, that she was able to hold her ground, and to remonstrate with this difficult pair of antagonists so effectually, as to bring the maid to penitent tears, and the Jewess to a confession of her injustice, and a promise of future good behavior.

The porter of the house, who lived in a dark cavernous hole on the first floor, was slowly dying of a consumption, the sufferings of which were imbibed by the chill dampness of his abode. His hollow voice and hacking cough, however, could not veil the grateful accent with which he uttered any allusion to Madame Ossoli. He was so close a prisoner to his narrow, windowless chamber, that when I inquired for Madame Ossoli he was often obliged to call his little daughter, before he could tell me whether Madame was at home, or not; and he always tempered the official uniformity of the question with some word of tenderness. Indeed, he rarely pronounced her name; sufficiently indicating to the child whom it was that I was seeking, by the affectionate epithet he used, "*Lita! e la cara Signora in casa?*"

The composure and force of Madame Ossoli's character would, indeed, have given her a strong influence for good over any person with whom she was brought into contact; but this influence must have been even extraordinary over the impulsive and ill-disciplined children of passion and of sorrow, among whom she was thrown in Italy.

Her husband related to me once, with a most reverent enthusiasm, some stories of the good she had done in Rieti, during her residence there. The Spanish troops were quartered in that town, and the dissipated habits of the officers, as well as the excesses of the soldiery, kept the place in a constant irritation. Though overwhelmed with cares and anxieties, Madame Ossoli found time and collectedness of mind enough to interest herself in the distresses of the townspeople, and to pour the soothing oil of a wise sympathy upon their wounded and indignant feelings. On one occasion, as the Marchese told me, she undoubtedly saved the lives of a family in Rieti, by inducing them to pass over in silence an insult offered to one of them by an intoxicated Spanish soldier, — and, on another, she interfered between two brothers, maddened by passion, and threatening to stain the family hearth with the guilt of fratricide.[B]

Such incidents, and the calm tenor of Madame Ossoli's confident hopes. — the assured faith and unshaken bravery, with which she met and turned aside the complicated troubles, rising sometimes into absolute perils, of their last year in Italy, — seemed to have inspired her husband with a feeling of respect for her, amounting to reverence. This feeling, modifying the manifest tenderness with which he hung upon her every word and look, and sought to anticipate her

simplest wishes, was luminously visible in the air and manner of his affectionate devotion to her.

The frank and simple recognition of his wife's singular nobleness, which he always displayed, was the best evidence that his own nature was of a fine and noble strain. And those who knew him best, are, I believe, unanimous in testifying that his character did in no respect belie the evidence borne by his manly and truthful countenance, to its warmth and its sincerity. He seemed quite absorbed in his wife and child. I cannot remember ever to have found Madame Ossoli alone, on those evenings when she remained at home. Her husband was always with her. The picture of their room rises clearly on my memory. A small square room, sparingly, yet sufficiently furnished, with polished floor and frescoed ceiling, — and, drawn up closely before the cheerful fire, an oval table, on which stood a monkish lamp of brass, with depending chains that support quaint classic cups for the olive oil. There, seated beside his wife, I was sure to find the Marchese, reading from some patriotic book, and dressed in the dark brown, red-corded coat of the Guardia Civica, which it was his melancholy pleasure to wear at home. So long as the conversation could be carried on in Italian, he used to remain, though he rarely joined in it to any considerable degree; but if a number of English and American visitors came in, he used to take his leave and go to the Café d'Italia, being very unwilling, as Madame Ossoli told me, to impose any seeming restraint, by his presence, upon her friends, with whom he was unable to converse. For the same reason, he rarely remained with her at the houses of her English or American friends, though he always accompanied her thither, and returned to escort her home.

I conversed with him so little that I can hardly venture to make any remarks on the impression which I received from his conversation, with regard to the character of his mind. Notwithstanding his general reserve and curtness of speech, on two or three occasions he showed himself to possess quite a quick and vivid fancy, and even a certain share of humor. I have heard him tell stories remarkably well. One tale, especially, which related to a dream he had in early life, about a treasure concealed in his father's house, which was thrice repeated, and made so strong an impression on his mind as to induce him to batter a certain panel in the library almost to pieces, in vain, but which received something like a confirmation from the fact, that a Roman attorney, who rented that and other rooms from the family, after his father's death, grew suddenly and unaccountably rich, — I remember as being told with great felicity and vivacity of expression.

His recollections of the trouble and the dangers through which he had passed with his wife seemed to be overpoweringly painful. On one occasion, he began

to tell me a story of their stay in the mountains: He had gone out to walk, and had unconsciously crossed the Neapolitan frontier. Suddenly meeting with a party of the Neapolitan *gendarmerie*, he was called to account for his trespass, and being unable to produce any papers testifying to his loyalty, or the legality of his existence, he was carried off, despite his protestations, and lodged for the night in a miserable guard-house, whence he was taken, next morning, to the head-quarters of the officer commanding in the neighborhood. Here, matters might have gone badly with him, but for the accident that he had upon his person a business letter directed to himself as the Marchese Ossoli. A certain abbé, the regimental chaplain, having once spent some time in Rome, recognized the name as that of an officer in the Pope's Guardia Nobile,[C] whereupon, the Neapolitan officers not only ordered him to be released, but sent him back, with many apologies, in a carriage, and under an armed escort, to the Roman territory. When he reached this part of his story, and came to his meeting with Madame Ossoli, the remembrance of her terrible distress during the period of his detention so overcame him, that he was quite unable to go on.

Towards their child he manifested an overflowing tenderness, and most affectionate care.

Notwithstanding the intense contempt and hatred which Signore Ossoli, in common with all the Italian liberals, cherished towards the ecclesiastical body, he seemed to be a very devout Catholic. He used to attend regularly the vesper service, in some of the older and quieter churches of Florence; and, though I presume Madame Ossoli never accepted in any degree the Roman Catholic forms of faith, she frequently accompanied him on these occasions. And I know that she enjoyed the devotional influences of the church ritual, as performed in the cathedral, and at Santa Croce, especially during the Easter-week.

Though condemned by her somewhat uncertain position at Florence,[D] as well as by the state of things in Tuscany at that time, to a comparative inaction, Madame Ossoli never seemed to lose in the least the warmth of her interest in the affairs of Italy, nor did she bate one jot of heart or hope for the future of that country. She was much depressed, however, I think, by the apparent apathy and prostration of the Liberals in Tuscany; and the presence of the Austrian troops in Florence was as painful and annoying to her, as it could have been to any Florentine patriot. When it was understood that Prince Lichtenstein had requested the Grand Duke to order a general illumination in honor of the anniversary of the battle of Novara, Madame Ossoli, I recollect, was more moved, than I remember on any other occasion to have seen her. And she used to speak very regretfully of the change which had come over the spirit of Florence, since her former residence there. Then all was gayety and hope. Bodies of

artisans, gathering recruits as they passed along, used to form themselves into choral bands, as they returned from their work at the close of the day, and filled the air with the chants of liberty. Now, all was a sombre and desolate silence.

Her own various cares so occupied Madame Ossoli that she seemed to be very much withdrawn from the world of art. During the whole time of my stay in Florence, I do not think she once visited either of the Grand Ducal Galleries, and the only studio in which she seemed to feel any very strong interest, was that of Mademoiselle Favand, a lady whose independence of character, self-reliance, and courageous genius, could hardly have failed to attract her congenial sympathies.

But among all my remembrances of Madame Ossoli, there are none more beautiful or more enduring than those which recall to me another person, a young stranger, alone and in feeble health, who found, in her society, her sympathy, and her counsels, a constant atmosphere of comfort and of peace. Every morning, wild-flowers, freshly gathered, were laid upon her table by the grateful hands of this young man; every evening, beside her seat in her little room, his mild, pure face was to be seen, bright with a quiet happiness, that must have bound his heart by no weak ties to her with whose fate his own was so closely to be linked.

And the recollection of such benign and holy influences breathed upon the human hearts of those who came within her sphere, will not, I trust, be valueless to those friends, in whose love her memory is enshrined with more immortal honors than the world can give or take away.

[Footnote A: Just before I left Florence, Madame Ossoli showed me a small marble figure of a child, playing among flowers or vine leaves, which, she said, was a portrait of the child of Madame Arconati, presented to her by that lady. I mention this circumstance, because I have understood that a figure answering this description was recovered from the wreck of the Elizabeth.]

[Footnote B: The circumstances of this story, perhaps, deserve to be recorded. The brothers were two young men, the sons and the chief supports of Madame Ossoli's landlord at Rieti. They were both married, — the younger one to a beautiful girl, who had brought him no dowry, and who, in the opinion of her husband's family, had not shown a proper disposition to bear her share of the domestic burdens and duties. The bickerings and disputes which resulted from this state of affairs, on one unlucky day, took the form of an open and violent quarrel. The younger son, who was absent from home when the conflict began, returned to find it at its height, and was received by his wife with passionate tears, and by his relations with sharp recriminations. His brother, especially, took it upon himself to upbraid him, in the name of all his family, for bringing into

their home-circle such a firebrand of discord. Charges and counter charges followed in rapid succession, and hasty words soon led to blows. From blows the appeal to the knife was swiftly made, and when Madame Ossoli, attracted by the unusual clamor, entered upon the scene of action, she found that blood had been already drawn, and that the younger brother was only restrained from following up the first assault by the united force of all the females, who hung about him, while the older brother, grasping a heavy billet of wood, and pale with rage, stood awaiting his antagonist. Passing through the group of weeping and terrified women, Madame Ossoli made her way up to the younger brother and, laying her hand upon his shoulder, asked him to put down his weapon and listen to her. It was in vain that he attempted to ignore her presence. Before the spell of her calm, firm, well-known voice, his fury melted away. She spoke to him again, and besought him to show himself a man, and to master his foolish and wicked rage. With a sudden impulse, he flung his knife upon the ground, turned to Madame Ossoli, clasped and kissed her hand, and then running towards his brother, the two met in a fraternal embrace, which brought the threatened tragedy to a joyful termination.]

[Footnote C: It will be understood, that this officer was the Marchese's older brother, who still adheres to the Papal cause.]

[Footnote D: She believed herself to be, and I suppose really was, under the surveillance of the police during her residence in Florence.]

HOMeward.

BY W.H. CHANNING

*

Last, having thus revealed all I could love
And having received all love bestowed on it,
I would die: so preserving through my course
God full on me, as I was full on men:
And He would grant my prayer— "I have gone through
All loveliness of life; make more for me,
If not for men, — or take me to Thyself,
Eternal, Infinite Love!"

BROWNING.

Till another open for me
In God's Eden-land unknown,
With an angel at the doorway,
White with gazing at His Throne;
And a saint's voice in the palm-trees, singing,— "ALL IS LOST, and won."

ELIZABETH BARRETT.

La ne venimmo: e lo scaglión primaio
Bianco marmo éra si pulito e terso,
Ch'io mi specchiava in esso, qual io paio.
Era 'l secondo tinto, piú che pérso,
D'una petrina ruvida ed arsiccia,
Crepata per lo lungo e per traverso.
Lo terzo, che di sopra s'ammassiccia,
Pôrfido mi pareva si fiammegiante,
Come sangue che fuor di vena spiccia.
Sopra questa teneva ambo le piante
L' angel di Dio, sedendo in su la soglia,
Che mi sembiava pietra di diamante.
Per li tre gradi su di buona voglia
Mi trasse 'l daca mio, dicendo, chiodi
Umilmente che 'l serráme scioglia.

DANTE.

Che luce è questa, e qual nuova beltate?
Dicean tra lor; perch' abito si adorno
Dal mondo errante a quest 'alto soggiorno
Non sail mai in tutta questa etàe.
Ella contenta aver cangiato albergo,
Si paragona pur coi più perfetti.

PETRARCA.

IX. HOMEWARD

SPRING-TIME.

Spring, bright prophet of God's eternal youth, herald forever eloquent of heaven's undying joy, has once more wrought its miracle of resurrection on the vineyards and olive-groves of Tuscany, and touched with gently-wakening fingers the myrtle and the orange in the gardens of Florence. The Apennines have put aside their snowy winding-sheet, and their untroubled faces salute with rosy gleams of promise the new day, while flowers smile upward to the serene sky amid the grass and grain fields, and fruit is swelling beneath the blossoms along the plains of Arno. "The Italian spring," writes Margaret, "is as good as Paradise. Days come of glorious sunshine and gently-flowing airs, that expand the heart and uplift the whole nature. The birds are twittering their first notes of love; the ground is enamelled with anemones, cowslips, and crocuses; every old wall and ruin puts on its festoon and garland; and the heavens stoop daily nearer, till the earth is folded in an embrace of light, and her every pulse beats music."

"This world is indeed a sad place, despite its sunshine, birds, and crocuses. But I never felt as happy as now, when I always find the glad eyes of my little boy to welcome me. I feel the tie between him and me so real and deep-rooted, that even death shall not part us. So sweet is this unimpassioned love, it knows no dark reactions, it does not idealize, and cannot be daunted by the faults of its object. Nothing but a child can take the worst bitterness out of life, and break the spell of loneliness. I shall not be alone in other worlds, whenever Eternity may call me."

And now her face is turned homeward. "I am homesick," she had written years before, "but where is that HOME?"

OMENS.

"My heart is very tired, — my strength is low, —
My hands are full of blossoms plucked before,
Held dead within them till myself shall die."

ELIZABETH BARRETT.

Many motives drew Margaret to her native land: heart-weariness at the reaction in Europe; desire of publishing to best advantage the book whereby she hoped at

once to do justice to great principles and brave men, and to earn bread for her dear ones and herself; and, above all, yearning to be again among her family and earliest associates. "I go back," she writes, "prepared for difficulties; but it will be a consolation to be with my mother, brothers, sister, and old friends, and I find it imperatively necessary to be in the United States, for a while at least, to make such arrangements with the printers as may free me from immediate care. I did think, at one time, of coming alone with Angelino, and then writing for Ossoli to come later, or returning to Italy; knowing that it will be painful for him to go, and that there he must have many lonely hours. But he is separated from his old employments and natural companions, while no career is open for him at present. Then, I would not take his child away for several months; for his heart is fixed upon him as fervently as mine. And, again, it would not only be very strange and sad to be so long without his love and care, but I should be continually solicitous about his welfare. Ossoli, indeed, cannot but feel solitary at first, and I am much more anxious about his happiness than my own. Still, he will have our boy, and the love of my family, especially of my mother, to cheer him, and quiet communings with nature give him pleasure so simple and profound, that I hope he will make a new life for himself, in our unknown country, till changes favor our return to his own. I trust, that we shall find the means to come together, and to remain together."

Considerations of economy determined them, spite of many misgivings, to take passage in a merchantman from Leghorn. "I am suffering," she writes, "as never before, from the horrors of indecision. Happy the fowls of the air, who do not have to think so much about their arrangements! The barque *Elizabeth* will take us, and is said to be an uncommonly good vessel, nearly new, and well kept. We may be two months at sea, but to go by way of France would more than double the expense. Yet, now that I am on the point of deciding to come in her, people daily dissuade me, saying that I have no conception of what a voyage of sixty or seventy days will be in point of fatigue and suffering; that the insecurity, compared with packet-ships or steamers, is great; that the cabin, being on deck, will be terribly exposed, in case of a gale, &c., &c. I am well aware of the proneness of volunteer counsellors to frighten and excite one, and have generally disregarded them. But this time I feel a trembling solicitude on account of my child, and am doubtful, harassed, almost ill." And again, under date of April 21, she says: "I had intended, if I went by way of France, to take the packet-ship '*Argo*,' from Havre; and I had requested Mrs. ——— to procure and forward to me some of my effects left at Paris, in charge of Miss F ———, when, taking up *Galignani*, my eye fell on these words: 'Died, 4th of April, Miss F ———; 'and,

turning the page, I read, 'The wreck of the *Argo*,' — a somewhat singular combination! There were notices, also, of the loss of the fine English steamer *Adelaide*, and of the American packet *John Skiddy*. Safety is not to be secured, then, by the wisest foresight. I shall embark more composedly in our merchant-ship, praying fervently, indeed, that it may not be my lot to lose my boy at sea, either by unsolaced illness, or amid the howling waves; or, if so, that Ossoli, Angelo, and I may go together, and that the anguish may be brief."

Their state-rooms were taken, their trunks packed, their preparations finished, they were just leaving Florence, when letters came, which, had they reached her a week earlier, would probably have induced them to remain in Italy. But Margaret had already by letter appointed a rendezvous for the scattered members of her family in July; and she would not break her engagements with the commander of the barque. It was destined that they were to sail, — to sail in the *Elizabeth*, to sail then. And, even in the hour of parting, clouds, whose tops were golden in the sunshine, whose base was gloomy on the waters, beckoned them onward. "Beware of the sea," had been a singular prophecy, given to Ossoli when a boy, by a fortune-teller, and this was the first ship he had ever set his foot on. More than ordinary apprehensions of risk, too, hovered before Margaret. "I am absurdly fearful," she writes, "and various omens have combined to give me a dark feeling. I am become indeed a miserable coward, for the sake of Angelino. I fear heat and cold, fear the voyage, fear biting poverty. I hope I shall not be forced to be as brave for him, as I have been for myself, and that, if I succeed to rear him, he will be neither a weak nor a bad man. But I love him too much! In case of mishap, however, I shall perish with my husband and my child, and we may be transferred to some happier state." And again: "I feel perfectly willing to stay my threescore years and ten, if it be thought I need so much tuition from this planet; but it seems to me that my future upon earth will soon close. It may be terribly trying, but it will not be so very long, now. God will transplant the root, if he wills to rear it into fruit-bearing." And, finally: "I have a vague expectation of some crisis, — I know not what. But it has long seemed, that, in the year 1850, I should stand on a plateau in the ascent of life, where I should be allowed to pause for a while, and take more clear and commanding views than ever before. Yet my life proceeds as regularly as the fates of a Greek tragedy, and I can but accept the pages as they turn."

*

These were her parting words: —

“*Florence, May 14, 1850.* — I will believe, I shall be welcome with my treasures, — my husband and child. For me, I long so much to see you! Should anything hinder our meeting upon earth, think of your daughter, as one who always wished, at least, to do her duty, and who always cherished you, according as her mind opened to discover excellence.

“Give dear love, too, to my brothers; and first to my eldest, faithful friend! Eugene; a sister’s love to Ellen; love to my kind and good aunts, and to my dear cousin. E., — God bless them!

“I hope we shall be able to pass some time together yet, in this world. But, if God decrees otherwise, — here and **HEREAFTER**, — my dearest mother,

“Your loving child, **MARGARET.**”

THE VOYAGE.[A]

The seventeenth of May, the day of sailing, came, and the *Elizabeth* lay waiting for her company. Yet, even then, dark presentiments so overshadowed Margaret, that she passed one anxious hour more in hesitation, before she could resolve to go on board. But Captain Hasty was so fine a model of the New England seaman, strong-minded, prompt, calm, decided, courteous; Mrs. Hasty was so refined, gentle, and hospitable; both had already formed so warm an attachment for the little family, in their few interviews at Florence and Leghorn; Celeste Paolini, a young Italian girl, who had engaged to render kindly services to Angelino, was so lady-like and pleasing; their only other fellow-passenger, Mr. Horace Sumner, of Boston, was so obliging and agreeable a friend; and the good ship herself looked so trim, substantial, and cheery, that it seemed weak and wrong to turn back. They embarked; and, for the first few days, all went prosperously, till fear was forgotten. Soft breezes sweep them tranquilly over the smooth bosom of the Mediterranean; Angelino sits among his heaps of toys, or listens to the seraphine, or leans his head with fondling hands upon the white goat, who is now to be his foster-parent, or in the captain’s arms moves to and fro, gazing curiously at spars and rigging, or watches with delight the swelling canvass; while, under the constant stars, above the unresting sea, Margaret and Ossoli pace the deck of their small ocean-home, and think of storms left behind, — perhaps of coming tempests.

But now Captain Hasty fell ill with fever, could hardly drag himself from his state-room to give necessary orders, and lay upon the bed or sofa, in fast-increased distress, though glad to bid Nino good-day, to kiss his cheek, and pat his hand. Still, the strong man grew weaker, till he could no longer draw from beneath the pillow his daily friend, the Bible, though his mind was yet clear to

follow his wife's voice, as she read aloud the morning and evening chapter. But alas for the brave, stout seaman! alas for the young wife, on almost her first voyage! alas for crew! alas for company! alas for the friends of Margaret! The fever proved to be confluent small-pox, in the most malignant form. The good commander had received his release from earthly duty. The *Elizabeth* must lose her guardian. With calm con-[Transcriber's note: A word appears to be missing here.] authorities refused permission for any one to land, and directed that the burial should be made at sea. As the news spread through the port, the ships dropped their flags half-mast, and at sunset, towed by the boat of a neighboring frigate, the crew of the *Elizabeth* bore the body of their late chief, wrapped in the flag of his nation, to its rest in deep water. Golden twilight flooded the western sky, and shadows of high-piled clouds lay purple on the broad Atlantic. In that calm, summer sunset funeral, what eye foresaw the morning of horror, of which it was the sad forerunner?

At Gibraltar, they were detained a week by adverse winds, but, on the 9th of June, set sail again. The second day after, Angelino sickened with the dreadful malady, and soon became so ill, that his life was despaired of. His eyes were closed, his head and face swollen out of shape, his body covered with eruption. Though inexperienced in the disease, the parents wisely treated their boy with cooling drinks, and wet applications to the skin; under their incessant care, the fever abated, and, to their unspeakable joy, he rapidly recovered. Sobered and saddened, they could again hope, and enjoy the beauty of the calm sky and sea. Once more Nino laughs, as he splashes in his morning bath, and playfully prolongs the meal, which the careful father has prepared with his own hand, or, if he has been angered, rests his head upon his mother's breast, while his palm is pressed against her cheek, as, bending down, she sings to him; once more, he sits among his toys, or fondles and plays with the white-haired goat, or walks up and down in the arms of the steward, who has a boy of just his age, at home, now waiting to embrace him; or among the sailors, with whom he is a universal favorite, prattles in baby dialect as he tries to imitate their cry, to work the pumps, and pull the ropes. Ossoli and Sumner, meanwhile, exchange alternate lessons in Italian and English. And Margaret, among her papers, gives the last touches to her book on Italy, or with words of hope and love comforts like a mother the heart-broken widow. Slowly, yet peacefully, pass the long summer days, the mellow moonlit nights; slowly, and with even flight, the good *Elizabeth*, under gentle airs from the tropics, bears them safely onward. Four thousand miles of ocean lie behind; they are nearly home.

THE WRECK.

”There are blind ways provided, the foredone
Heart-weary player in this pageant world
Drops out by, letting the main masque defile
By the conspicuous portal: — I am through,
Just through.”

BROWNING.

On Thursday, July 18th, at noon, the Elizabeth was off the Jersey coast, somewhere between Cape May and Barnegat; and, as the weather was thick, with a fresh breeze blowing from the east of south, the officer in command, desirous to secure a good offing, stood east-north-east. His purpose was, when daylight showed the highlands of Neversink, to take a pilot, and run before the wind past Sandy Hook. So confident, indeed, was he of safety, that he promised his passengers to land them early in the morning at New York. With this hope, their trunks were packed, the preparations made to greet their friends, the last good-night was spoken, and with grateful hearts Margaret and Ossoli put Nino to rest, for the last time, as they thought, on ship-board, — for the last time, as it was to be, on earth!

By nine o’clock, the breeze rose to a gale, which every hour increased in violence, till at midnight it became a hurricane. Yet, as the Elizabeth was new and strong, and as the commander, trusting to an occasional cast of the lead, assured them that they were not nearing the Jersey coast, — which alone he dreaded, — the passengers remained in their state-rooms, and caught such uneasy sleep as the howling storm and tossing ship permitted. Utterly unconscious, they were, even then, amidst perils, whence only by promptest energy was it possible to escape. Though under close-reefed sails, their vessel was making way far more swiftly than any one on board had dreamed of; and for hours, with the combined force of currents and the tempest, had been driving headlong towards the sand-bars of Long Island. About four o’clock, on Friday morning, July 19th, she struck, — first draggingly, then hard and harder, — on Fire Island beach.

The main and mizzen masts were at once cut away; but the heavy marble in her hold had broken through her bottom, and she bilged. Her bow held fast, her stern swung round, she careened inland, her broadside was bared to the shock of the billows, and the waves made a clear breach over her with every swell. The doom of the poor Elizabeth was sealed now, and no human power could save her. She lay at the mercy of the maddened ocean.

At the first jar, the passengers, knowing but too well its fatal import, sprang

from their berths. Then came the cry of "Cut away," followed by the crash of falling timbers, and the thunder of the seas, as they broke across the deck. In a moment more, the cabin skylight was dashed in pieces by the breakers, and the spray, pouring down like a cataract, put out the lights, while the cabin door was wrenched from its fastenings, and the waves swept in and out. One scream, one only, was heard from Margaret's state-room; and Sumner and Mrs. Hasty, meeting in the cabin, clasped hands, with these few but touching words: "We must die." "Let us die calmly, then." "I hope so, Mrs. Hasty." It was in the gray dusk, and amid the awful tumult, that the companions in misfortune met. The side of the cabin to the leeward had already settled under water; and furniture, trunks, and fragments of the skylight were floating to and fro; while the inclined position of the floor made it difficult to stand; and every sea, as it broke over the bulwarks, splashed in through the open roof. The windward cabin-walls, however, still yielded partial shelter, and against it, seated side by side, half leaning backwards, with feet braced upon the long table, they awaited what next should come. At first, Nino, alarmed at the uproar, the darkness, and the rushing water, while shivering with the wet, cried passionately; but soon his mother, wrapping him in such garments as were at hand and folding him to her bosom, sang him to sleep. Celeste too was in an agony of terror, till Ossoli, with soothing words and a long and fervent prayer, restored her to self-control and trust. Then calmly they rested, side by side, exchanging kindly partings and sending messages to friends, if any should survive to be their bearer. Meanwhile, the boats having been swamped or carried away, and the carpenter's tools washed overboard, the crew had retreated to the top-gallant forecabin; but, as the passengers saw and heard nothing of them, they supposed that the officers and crew had deserted the ship, and that they were left alone. Thus passed three hours.

At length, about seven, as there were signs that the cabin would soon break up, and any death seemed preferable to that of being crushed among the ruins, Mrs. Hasty made her way to the door, and, looking out at intervals between the seas as they swept across the vessel amidships, saw some one standing by the foremast. His face was toward the shore. She screamed and beckoned, but her voice was lost amid the roar of the wind and breakers, and her gestures were unnoticed. Soon, however, Davis, the mate, through the door of the forecabin caught sight of her, and, at once comprehending the danger, summoned the men to go to the rescue. At first none dared to risk with him the perilous attempt; but, cool and resolute, he set forth by himself, and now holding to the bulwarks, now stooping as the waves combed over, he succeeded in reaching the cabin. Two sailors, emboldened by his example, followed. Preparations were instantly made

to conduct the passengers to the fore-castle, which, as being more strongly built and lying further up the sands, was the least exposed part of the ship. Mrs. Hasty volunteered to go the first. With one hand clasped by Davis, while with the other each grasped the rail, they started, a sailor moving close behind. But hardly had they taken three steps, when a sea broke loose her hold, and swept her into the hatch-way. "Let me go," she cried, "your life is important to all on board." But cheerily, and with a smile,[B] he answered, "Not quite yet;" and, seizing in his teeth her long hair, as it floated past him, he caught with both hands at some near support, and, aided by the seaman, set her once again upon her feet. A few moments more of struggle brought them safely through. In turn, each of the passengers was helped thus laboriously across the deck, though, as the broken rail and cordage had at one place fallen in the way, the passage was dangerous and difficult in the extreme. Angelino was borne in a canvas bag, slung round the neck of a sailor. Within the fore-castle, which was comparatively dry and sheltered, they now seated themselves, and, wrapped in the loose overcoats of the seamen, regained some warmth. Three times more, however, the mate made his way to the cabin; once, to save her late husband's watch, for Mrs. Hasty; again for some doubloons, money-drafts, and rings in Margaret's desk; and, finally, to procure a bottle of wine and a drum of figs for their refreshment. It was after his last return, that Margaret said to Mrs. Hasty, "There still remains what, if I live, will be of more value to me than anything," referring, probably, to her manuscript on Italy; but it seemed too selfish to ask their brave preserver to run the risk again.

There was opportunity now to learn their situation, and to discuss the chances of escape. At the distance of only a few hundred yards, appeared the shore, — a lonely waste of sand-hills, so far as could be seen through the spray and driving rain. But men had been early observed, gazing at the wreck, and, later, a wagon had been drawn upon the beach. There was no sign of a life-boat, however, or of any attempt at rescue; and, about nine o'clock, it was determined that some one should try to land by swimming, and, if possible, get help. Though it seemed almost sure death to trust one's self to the surf, a sailor, with a life-preserver, jumped overboard, and, notwithstanding a current drifting him to leeward, was seen to reach the shore. A second, with the aid of a spar, followed in safety; and Sumner, encouraged by their success, sprang over also; but, either struck by some piece of the wreck, or unable to combat with the waves, he sank. Another hour or more passed by; but though persons were busy gathering into carts whatever spoil was stranded, no life-boat yet appeared; and, after much deliberation, the plan was proposed, — and, as it was then understood, agreed to, — that the passengers should attempt to land, each seated upon a plank, and

grasping handles of rope, while a sailor swam behind. Here, too, Mrs. Hasty was the first to venture, under the guard of Davis. Once and again, during their passage, the plank was rolled wholly over, and once and again was righted, with its bearer, by the dauntless steersman; and when, at length, tossed by the surf upon the sands, the half-drowned woman still holding, as in a death-struggle, to the ropes, was about to be swept back by the undertow, he caught her in his arms, and, with the assistance of a bystander, placed her high upon the beach. Thus twice in one day had he perilled his own life to save that of the widow of his captain, and even over that dismal tragedy his devotedness casts one gleam of light.

Now came Margaret's turn. But she steadily refused to be separated from Ossoli and Angelo. On a raft with them, she would have boldly encountered the surf, but alone she would not go. Probably, she had appeared to assent to the plan for escaping upon planks, with the view of inducing Mrs. Hasty to trust herself to the care of the best man on board; very possibly, also, she had never learned the result of their attempt, as, seated within the fore-castle, she could not see the beach. She knew, too, that if a life-boat could be sent, Davis was one who would neglect no effort to expedite its coming. While she was yet declining all persuasions, word was given from the deck, that the life-boat had finally appeared. For a moment, the news lighted up again the flickering fire of hope. They might yet be saved, — be saved together! Alas! to the experienced eyes of the sailors it too soon became evident that there was no attempt to launch or man her. The last chance of aid from shore, then, was gone utterly. They must rely on their own strength, or perish. And if ever they were to escape, the time had come; for, at noon, the storm had somewhat lulled; but already the tide had turned, and it was plain that the wreck could not hold together through another flood. In this emergency, the commanding officer, who until now had remained at his post, once more appealed to Margaret to try to escape, — urging that the ship would inevitably break up soon; that it was mere suicide to remain longer; that he did not feel free to sacrifice the lives of the crew, or to throw away his own; finally, that he would himself take Angelo, and that sailors should go with Celeste, Ossoli, and herself. But, as before, Margaret decisively declared that she would not be parted from her husband or her child. The order was then given to “save themselves,” and all but four of the crew jumped over, several of whom, together with the commander, reached shore alive, though severely bruised and wounded by the drifting fragments. There is a sad consolation in believing that, if Margaret judged it to be impossible that the *three* should escape, she in all probability was right. It required a most rare, combination of courage, promptness and persistency, to do what Davis had done for Mrs. Hasty. We may

not conjecture the crowd of thoughts which influenced the lovers, the parents, in this awful crisis; but doubtless one wish was ever uppermost, — that, God willing, the last hour might come for ALL, if it must come for *one*.

It was now past three o'clock, and as, with the rising tide, the gale swelled once more to its former violence, the remnants of the barque fast yielded to the resistless waves. The cabin went by the board, the after-parts broke up, and the stem settled out of sight. Soon, too, the forecastle was filled with water, and the helpless little band were driven to the deck, where they clustered round the foremast. Presently, even this frail support was loosened from the hull, and rose and fell with every billow. It was plain to all that the final moment drew swiftly nigh. Of the four seamen who still stood by the passengers, three were as efficient as any among the crew of the Elizabeth. These were the steward, carpenter, and cook. The fourth was an old sailor, who, broken down by hardships and sickness, was going home to die. These men were once again persuading Margaret, Ossoli and Celeste to try the planks, which they held ready in the lee of the ship, and the steward, by whom Nino was so much beloved, had just taken the little fellow in his arms, with the pledge that he would save him or die, when a sea struck the forecastle, and the foremast fell, carrying with it the deck, and all upon it. The steward and Angelino were washed upon the beach, both dead, though warm, some twenty minutes after. The cook and carpenter were thrown far upon the foremast, and saved themselves by swimming. Celeste and Ossoli caught for a moment by the rigging, but the next wave swallowed them up. Margaret sank at once. When last seen, she had been seated at the foot of the foremast, still clad in her white night-dress, with her hair fallen loose upon her shoulders. It was over, — that twelve hours' communion, face to face, with Death! It was over! and the prayer was granted, "that Ossoli, Angelo, and I, may go together, and that the anguish may be brief!"

*

A passage from the journal of a friend of Margaret, whom the news of the wreck drew at once to the scene, shall close this mournful story: —

“The hull of the Elizabeth, with the foremast still bound to it by cordage, lies so near the shore, that it seems as if a dozen oar-strokes would carry a boat alongside. And as one looks at it glittering in the sunshine, and rocking gently in the swell, it is hard to feel reconciled to our loss. Seven resolute men might have saved every soul on board. I know how different was the prospect on that awful morning, when the most violent gale that had visited our coast for years, drove

the billows up to the very foot of the sand-hills, and when the sea in foaming torrents swept across the beach into the bay behind. Yet I cannot but reluctantly declare my judgment, that this terrible tragedy is to be attributed, so far as human agency is looked at, to our wretched system, or *no-system*, of life-boats. The life-boat at Fire Island light-house, three miles distant only, was not brought to the beach till between twelve and one o'clock, more than eight hours after the Elizabeth was stranded, and more than six hours after the wreck could easily have been seen. When the life-boat did finally come, the beachmen could not be persuaded to launch or man her. And even the mortar, by which a rope could and should have been thrown on board, was not once fired. A single lesson like this might certainly suffice to teach the government, insurance companies, and humane societies, the urgent need, that to every life-boat should be attached ORGANIZED CREWS, stimulated to do their work faithfully, by ample pay for actual service, generous salvage-fees for cargoes and persons, and a pension to surviving friends where life is lost. *

“No trace has yet been found of Margaret’s manuscript on Italy, though the denials of the wreckers as to having seen it, are not in the least to be depended on. For, greedy after richer spoil, they might well have overlooked a mass of written paper; and, even had they kept it, they would be slow to give up what would so clearly prove their participation in the heartless robbery, that is now exciting such universal horror and indignation. Possibly it was washed away before reaching the shore, as several of the trunks, it is said, were open and empty, when thrown upon the beach. But it is sad to think, that very possibly the brutal hands of pirates may have tossed to the winds, or scattered on the sands, pages so rich with experience and life. The only papers of value saved, were the love-letters of Margaret and Ossoli.[C]

“It is a touching coincidence, that the only one of Margaret’s treasures which reached the shore, was the lifeless form of Angelino. When the body, stripped of every rag by the waves, was rescued from the surf, a sailor took it reverently in his arms, and, wrapping it in his neckcloth, bore it to the nearest house. There, when washed, and dressed in a child’s frock, found in Margaret’s trunk, it was laid upon a bed; and as the rescued seamen gathered round their late playfellow and pet, there were few dry eyes in the circle. Several of them mourned for Nino, as if he had been their own; and even the callous wreckers were softened, for the moment, by a sight so full of pathetic beauty. The next day, borne upon their shoulders in a chest, which one of the sailors gave for a coffin, it was buried in a hollow among the sand heaps. As I stood beside the lonely little mound, it seemed that never was seen a more affecting type of orphanage. Around, wiry

and stiff, were scanty spires of beach-grass; near by, dwarf-cedars, blown flat by wintry winds, stood like grim guardians; only at the grave-head a stunted wild-rose, wilted and scraggy, was struggling for existence. Thoughts came of the desolate childhood of many a little one in this hard world; and there was joy in the assurance, that Angelo was neither motherless nor fatherless, and that Margaret and her husband were not childless in that New World, which so suddenly they had entered together.

“To-morrow, Margaret’s mother, sister, and brothers will remove Nino’s body to New England.”

*

Was this, then, thy welcome home? A howling hurricane, the pitiless sea, wreck on a sand-bar, an idle life-boat, beach-pirates, and not one friend! In those twelve hours of agony, did the last scene appear but as the fitting close for a life of storms, where no safe haven was ever in reach; where thy richest treasures were so often stranded; where even the dearest and nearest seemed always too far off, or just too late, to help.

Ah, no! not so. The clouds were gloomy on the waters, truly; but their tops were golden in the sun. It was in the Father’s House that welcome awaited thee.

”Glory to God! to God! he saith,
Knowledge by suffering entereth,
And Life is perfected by Death.”

FIRST VISIT TO ENGLAND.

I have been twice in England. In 1833, on my return from a short tour in Sicily, Italy, and France, I crossed from Boulogne, and landed in London at the Tower stairs. It was a dark Sunday morning; there were few people in the streets; and I remember the pleasure of that first walk on English ground, with my companion, an American artist, from the Tower up through Cheapside and the Strand, to a house in Russell Square, whither we had been recommended to good chambers. For the first time for many months we were forced to check the saucy habit of travellers' criticism, as we could no longer speak aloud in the streets without being understood. The shop-signs spoke our language; our country names were on the door-plates; and the public and private buildings wore a more native and wonted front.

Like most young men at that time, I was much indebted to the men of Edinburgh, and of the Edinburgh Review, — to Jeffrey, Mackintosh, Hallam, and to Scott, Playfair, and De Quincey; and my narrow and desultory reading had inspired the wish to see the faces of three or four writers, — Coleridge, Wordsworth, Landor, De Quincey, and the latest and strongest contributor to the critical journals, Carlyle; and I suppose if I had sifted the reasons that led me to Europe, when I was ill and was advised to travel, it was mainly the attraction of these persons. If Goethe had been still living, I might have wandered into Germany also. Besides those I have named (for Scott was dead), there was not in Britain the man living whom I cared to behold, unless it were the Duke of Wellington, whom I afterwards saw at Westminster Abbey, at the funeral of Wilberforce. The young scholar fancies it happiness enough to live with people who can give an inside to the world; without reflecting that they are prisoners, too, of their own thought, and cannot apply themselves to yours. The conditions of literary success are almost destructive of the best social power, as they do not leave that frolic liberty which only can encounter a companion on the best terms. It is probable you left some obscure comrade at a tavern, or in the farms, with right mother-wit, and equality to life, when you crossed sea and land to play bo-peep with celebrated scribes. I have, however, found writers superior to their books, and I cling to my first belief, that a strong head will dispose fast enough of these impediments, and give one the satisfaction of reality, the sense of having been met, and a larger horizon.

On looking over the diary of my journey in 1833, I find nothing to publish in my memoranda of visits to places. But I have copied the few notes I made of visits to persons, as they respect parties quite too good and too transparent to the

whole world to make it needful to affect any prudery of suppression about a few hints of those bright personalities.

At Florence, chief among artists, I found Horatio Greenough, the American sculptor. His face was so handsome, and his person so well formed, that he might be pardoned, if, as was alleged, the face of his Medora, and the figure of a colossal Achilles in clay, were idealizations of his own. Greenough was a superior man, ardent and eloquent, and all his opinions had elevation and magnanimity. He believed that the Greeks had wrought in schools or fraternities, — the genius of the master imparting his design to his friends, and inflaming them with it, and when his strength was spent, a new hand, with equal heat, continued the work; and so by relays, until it was finished in every part with equal fire. This was necessary in so refractory a material as stone; and he thought art would never prosper until we left our shy jealous ways, and worked in society as they. All his thoughts breathed the same generosity. He was an accurate and a deep man. He was a votary of the Greeks, and impatient of Gothic art. His paper on Architecture, published in 1843, announced in advance the leading thoughts of Mr. Ruskin on the *morality* in architecture, notwithstanding the antagonism in their views of the history of art. I have a private letter from him, — later, but respecting the same period, — in which he roughly sketches his own theory. “Here is my theory of structure: A scientific arrangement of spaces and forms to functions and to site; an emphasis of features proportioned to their *gradated* importance in function; color and ornament to be decided and arranged and varied by strictly organic laws, having a distinct reason for each decision; the entire and immediate banishment of all makeshift and make-believe.”

Greenough brought me, through a common friend, an invitation from Mr. Landor, who lived at San Domenico di Fiesole. On the 15th May I dined with Mr. Landor. I found him noble and courteous, living in a cloud of pictures at his Villa Gherardesca, a fine house commanding a beautiful landscape. I had inferred from his books, or magnified from some anecdotes, an impression of Achillean wrath, — an untamable petulance. I do not know whether the imputation were just or not, but certainly on this May day his courtesy veiled that haughty mind, and he was the most patient and gentle of hosts. He praised the beautiful cyclamen which grows all about Florence; he admired Washington; talked of Wordsworth, Byron, Massinger, Beaumont and Fletcher. To be sure, he is decided in his opinions, likes to surprise, and is well content to impress, if possible, his English whim upon the immutable past. No great man ever had a great son, if Philip and Alexander be not an exception; and Philip he calls the greater man. In art, he loves the Greeks, and in sculpture, them only. He prefers

the Venus to everything else, and, after that, the head of Alexander, in the gallery here. He prefers John of Bologna to Michel Angelo; in painting, Raffaele; and shares the growing taste for Perugino and the early masters. The Greek histories he thought the only good; and after them, Voltaire's. I could not make him praise Mackintosh, nor my more recent friends; Montaigne very cordially, — and Charron also, which seemed indiscriminating. He thought Degerando indebted to "Lucas on Happiness" and "Lucas on Holiness"! He pestered me with Southey; but who is Southey?

He invited me to breakfast on Friday. On Friday I did not fail to go, and this time with Greenough. He entertained us at once with reciting half a dozen hexameter lines of Julius Cæsar's! — from Donatus, he said. He glorified Lord Chesterfield more than was necessary, and undervalued Burke, and undervalued Socrates; designated as three of the greatest of men, Washington, Phocion, and Timoleon; much as our pomologists, in their lists, select the three or the six best pears "for a small orchard"; and did not even omit to remark the similar termination of their names. "A great man," he said, "should make great sacrifices, and kill his hundred oxen, without knowing whether they would be consumed by gods and heroes, or whether the flies would eat them." I had visited Professor Amici, who had shown me his microscopes, magnifying (it was said) two thousand diameters; and I spoke of the uses to which they were applied. Landor despised entomology, yet, in the same breath, said, "the sublime was in a grain of dust." I suppose I teased him about recent writers, but he professed never to have heard of Herschel, *not even by name*. One room was full of pictures, which he likes to show, especially one piece, standing before which, he said "he would give fifty guineas to the man that would swear it was a Pomenichino." I was more curious to see his library, but Mr. H ———, one of the guests, told me that Mr. Landor gives away his books, and has never more than a dozen at a time in his house.

Mr. Landor carries to its height the love of freak which the English delight to indulge, as if to signalize their commanding freedom. He has a wonderful brain, despotic, violent, and inexhaustible, meant for a soldier, by what chance converted to letters, in which there is not a style nor a tint not known to him, yet with an English appetite for action and heroes. The thing done avails, and not what is said about it. An original sentence, a step forward, is worth more than all the censures. Landor is strangely undervalued in England; usually ignored; and sometimes savagely attacked in the Reviews. The criticism may be right or wrong, and is quickly forgotten; but year after year the scholar must still go back to Landor for a multitude of elegant sentences, — for wisdom, wit, and indignation that are unforgettable.

From London, on the 5th August, I went to Highgate, and wrote a note to Mr. Coleridge, requesting leave to pay my respects to him. It was near noon. Mr. Coleridge sent a verbal message, that he was in bed, but if I would call after one o'clock, he would see me. I returned at one, and he appeared, a short, thick old man, with bright blue eyes and fine clear complexion, leaning on his cane. He took snuff freely, which presently soiled his cravat and neat black suit. He asked whether I knew Allston, and spoke warmly of his merits and doings when he knew him in Rome; what a master of the Titianesque he was, etc., etc. He spoke of Dr. Channing. It was an unspeakable misfortune that he should have turned out a Unitarian after all. On this, he burst into a declamation on the folly and ignorance of Unitarianism, — its high unreasonableness; and taking up Bishop Waterland's book, which lay on the table, he read with vehemence two or three pages written by himself in the fly-leaves, — passages, too, which, I believe, are printed in the "Aids to Reflection." When he stopped to take breath, I interposed, that, "whilst I highly valued all his explanations, I was bound to tell him that I was born and bred a Unitarian." "Yes," he said, "I supposed so"; and continued as before. "It was a wonder, that after so many ages of unquestioning acquiescence in the doctrine of St. Paul, — the doctrine of the Trinity, which was also, according to Philo Judæus, the doctrine of the Jews before Christ, — this handful of Priestleians should take on themselves to deny it, etc., etc. He was very sorry that Dr. Channing, — a man to whom he looked up, — no, to say that he looked *up* to him would be to speak falsely; but a man whom he looked *at* with so much interest, — should embrace such views. When he saw Dr. Channing, he had hinted to him that he was afraid he loved Christianity for what was lovely and excellent, — he loved the good in it, and not the true; and I tell you, sir, that I have known ten persons who loved the good, for one person who loved the true; but it is a far greater virtue to love the true for itself alone, than to love the good for itself alone. He (Coleridge) knew all about Unitarianism perfectly well, because he had once been a Unitarian, and knew what quackery it was. He had been called "the rising star of Unitarianism." He went on defining, or rather refining: 'The Trinitarian doctrine was realism; the idea of God was not essential, but super-essential'; talked of *trinism* and *tetrakism*, and much more, of which I only caught this: 'that the will was that by which a person is a person; because, if one should push me in the street, and so I should force the man next me into the kennel, I should at once exclaim, "I did not do it, sir," meaning it was not my will.' And this also: 'that if you should insist on your faith here in England, and I on mine, mine would be the hotter side of the fagot.'

I took advantage of a pause to say, that he had many readers of all religious opinions in America, and I proceeded to inquire if the "extract" from the

Independent's pamphlet, in the third volume of the Friend, were a veritable quotation. He replied that it was really taken from a pamphlet in his possession, entitled "A Protest of one of the Independents," or something to that effect. I told him how excellent I thought it, and how much I wished to see the entire work. "Yes," he said, "the man was a chaos of truths, but lacked the knowledge that God was a god of order. Yet the passage would no doubt strike you more in the quotation than in the original, for I have filtered it."

When I rose to go, he said, "I do not know whether you care about poetry, but I will repeat some verses I lately made on my baptismal anniversary"; and he recited with strong emphasis, standing, ten or twelve lines, beginning, —

Born unto God in Christ —

He inquired where I had been travelling; and on learning that I had been in Malta and Sicily, he compared one island with the other, 'repeating what he had said to the Bishop of London when he returned from that country, that Sicily was an excellent school of political economy; for, in any town there, it only needed to ask what the government enacted, and reverse *that* to know what ought to be done; it was the most felicitously opposite legislation to anything good and wise. There were only three things which the government had brought into that garden of delights, namely, itch, pox, and famine; whereas, in Malta, the force of law and mind was seen, in making that barren rock of semi-Saracen inhabitants the seat of population and plenty.' Going out, he showed me in the next apartment a picture of Allston's, and told me 'that Montague, a picture-dealer, once came to see him, and, glancing towards this, said, "Well, you have got a picture!" thinking it the work of an old master; afterwards, Montague, still talking with his back to the canvas, put up his hand and touched it, and exclaimed, "By Heaven! this picture is not ten years old": — so delicate and skilful was that man's touch.'

I was in his company for about an hour, but find it impossible to recall the largest part of his discourse, which was often like so many printed paragraphs in his book, — perhaps the same, — so readily did he fall into certain commonplaces. As I might have foreseen, the visit was rather a spectacle than a conversation, of no use beyond the satisfaction of my curiosity. He was old and preoccupied, and could not bend to a new companion and think with him.

From Edinburgh I went to the Highlands. On my return, I came from Glasgow to Dumfries, and being intent on delivering a letter which I had brought from Rome, inquired for Cragenputtock. It was a farm in Nithsdale, in the parish of Dunscore, sixteen miles distant. No public coach passed near it, so I took a private carriage from the inn. I found the house amid desolate heathery hills,

where the lonely scholar nourished his mighty heart. Carlyle was a man from his youth, an author who did not need to hide from his readers, and as absolute a man of the world, unknown and exiled on that hill-farm, as if holding on his own terms what is best in London. He was tall and gaunt, with a cliff-like brow, self-possessed, and holding his extraordinary powers of conversation in easy command; clinging to his northern accent with evident relish; full of lively anecdote, and with a streaming humor, which floated everything he looked upon. His talk playfully exalting the familiar objects, put the companion at once into an acquaintance with his Lars and Lemurs, and it was very pleasant to learn what was predestined to be a pretty mythology. Few were the objects and lonely the man, "not a person to speak to within sixteen miles except the minister of Dunscore"; so that books inevitably made his topics.

He had names of his own for all the matters familiar to his discourse. "Blackwood's" was the "sand magazine"; "Fraser's" nearer approach to possibility of life was the "mud magazine"; a piece of road near by that marked some failed enterprise was the "grave of the last sixpence." When too much praise of any genius annoyed him, he professed hugely to admire the talent shown by his pig. He had spent much time and contrivance in confining the poor beast to one enclosure in his pen, but pig, by great strokes of judgment, had found out how to let a board down, and had foiled him. For all that, he still thought man the most plastic little fellow in the planet, and he liked Nero's death, "*Qualis artifex pereo!*" better than most history. He worships a man that will manifest any truth to him. At one time he had inquired and read a good deal about America. Landor's principle was mere rebellion, and *that* he feared was the American principle. The best thing he knew of that country was, that in it a man can have meat for his labor. He had read in Stewart's book, that when he inquired in a New York hotel for the Boots, he had been shown across the street and had found Mungo in his own house dining on roast turkey.

We talked of books. Plato he does not read, and he disparaged Socrates; and, when pressed, persisted in making Mirabeau a hero. Gibbon he called the splendid bridge from the old world to the new. His own reading had been multifarious. Tristram Shandy was one of his first books after Robinson Crusoe, and Robertson's America an early favorite. Rousseau's Confessions had discovered to him that he was not a dunce; and it was now ten years since he had learned German, by the advice of a man who told him he would find in that language what he wanted.

He took despairing or satirical views of literature at this moment; recounted the incredible sums paid in one year by the great booksellers for puffing. Hence it comes that no newspaper is trusted now, no books are bought, and the

booksellers are on the eve of bankruptcy.

He still returned to English pauperism, the crowded country, the selfish abdication by public men of all that public persons should perform. 'Government should direct poor men what to do. Poor Irish folk come wandering over these moors. My dame makes it a rule to give to every son of Adam bread to eat, and supplies his wants to the next house. But here are thousands of acres which might give them all meat, and nobody to bid these poor Irish go to the moor and till it. They burned the stacks, and so found a way to force the rich people to attend to them.'

We went out to walk over long hills, and looked at Criffel, then without his cap, and down into Wordsworth's country. There we sat down, and talked of the immortality of the soul. It was not Carlyle's fault that we talked on that topic, for he had the natural disinclination of every nimble spirit to bruise itself against walls, and did not like to place himself where no step can be taken. But he was honest and true, and cognizant of the subtle links that bind ages together, and saw how every event affects all the future. 'Christ died on the tree: that built Dunscore kirk yonder: that brought you and me together. Time has only a relative existence.'

He was already turning his eyes towards London with a scholar's appreciation. London is the heart of the world, he said, wonderful only from the mass of human beings. He liked the huge machine. Each keeps its own round. The baker's boy brings muffins to the window at a fixed hour every day, and that is all the Londoner knows or wishes to know on the subject. But it turned out good men. He named certain individuals, especially one man of letters, his friend, the best mind he knew, whom London had well served.

On the 23th August, I went to Rydal Mount, to pay my respects to Mr. Wordsworth. His daughters called in their father, a plain, elderly, white-haired man, not prepossessing, and disfigured by green goggles. He sat down, and talked with great simplicity. He had just returned from a journey. His health was good, but he had broken a tooth by a fall, when walking with two lawyers, and had said, that he was glad it did not happen forty years ago; whereupon they had praised his philosophy.

He had much to say of America, the more that it gave occasion for his favorite topic, — that society is being enlightened by a superficial tuition, out of all proportion to its being restrained by moral culture. Schools do no good. Tuition is not education. He thinks more of the education of circumstances than of tuition. 'T is not a question whether there are offences of which the law takes cognizance, but whether there are offences of which the law does not take cognizance. Sin is what he fears, and how society is to escape without gravest

mischiefs from this source — ? He has even said, what seemed a paradox, that they needed a civil war in America, to teach the necessity of knitting the social ties stronger. 'There may be,' he said, 'in America some vulgarity in manner, but that 's not important. That comes of the pioneer state of things. But I fear they are too much given to the making of money; and secondly, to politics; that they make political distinction the end, and not the means. And I fear they lack a class of men of leisure, — in short, of gentlemen, — to give a tone of honor to the community. I am told that things are boasted of in the second class of society there, which, in England, — God knows, are done in England every day, — but would never be spoken of. In America I wish to know not how many churches or schools, but what newspapers? My friend, Colonel Hamilton, at the foot of the hill, who was a year in America, assures me that the newspapers are atrocious, and accuse members of Congress of stealing spoons!' He was against taking off the tax on newspapers in England, which the reformers represent as a tax upon knowledge, for this reason, that they would be inundated with base prints. He said, he talked on political aspects, for he wished to impress on me and all good Americans to cultivate the moral, the conservative, etc., etc., and never to call into action the physical strength of the people, as had just now been done in England in the Reform Bill, — a thing prophesied by Delolme. He alluded once or twice to his conversation with Dr. Channing, who had recently visited him (laying his hand on a particular chair in which the Doctor had sat).

The conversation turned on books. Lucretius he esteems a far higher poet than Virgil: not in his system, which is nothing, but in his power of illustration. Faith is necessary to explain anything, and to reconcile the foreknowledge of God with human evil. Of Cousin (whose lectures we had all been reading in Boston) he knew only the name.

I inquired if he had read Carlyle's critical articles and translations. He said he thought him sometimes insane. He proceeded to abuse Goethe's Wilhelm Meister heartily. It was full of all manner of fornication. It was like the crossing of flies in the air. He had never gone further than the first part; so disgusted was he that he threw the book across the room. I deprecated this wrath, and said what I could for the better parts of the book; and he courteously promised to look at it again. Carlyle, he said, wrote most obscurely. He was clever and deep, but he defied the sympathies of everybody. Even Mr. Coleridge wrote more clearly, though he had always wished Coleridge would write more to be understood. He led me out into his garden, and showed me the gravel-walk in which thousands of his lines were composed. His eyes are much inflamed. This is no loss, except for reading, because he never writes prose, and of poetry he carries even hundreds of lines in his head before writing them. He had just returned from a

visit to Staffa, and within three days had made three sonnets on Fingal's Cave, and was composing a fourth, when he was called in to see me. He said, "If you are interested in my verses, perhaps you will like to hear these lines." I gladly assented; and he recollected himself for a few moments, and then stood forth and repeated, one after the other, the three entire sonnets with great animation. I fancied the second and third more beautiful than his poems are wont to be. The third is addressed to the flowers, which, he said, especially the ox-eye daisy, are very abundant on the top of the rock. The second alludes to the name of the cave, which is "Cave of Music"; the first to the circumstance of its being visited by the promiscuous company of the steamboat.

This recitation was so unlooked for and surprising, — he, the old Wordsworth, standing apart, and reciting to me in a garden-walk, like a school-boy declaiming, — that I at first was near to laugh; but recollecting myself, that I had come thus far to see a poet, and he was chanting poems to me, I saw that he was right and I was wrong, and gladly gave myself up to hear. I told him how much the few printed extracts had quickened the desire to possess his unpublished poems. He replied, he never was in haste to publish; partly, because he corrected a good deal, and every alteration is ungraciously received after printing; but what he had written would be printed, whether he lived or died. I said, "Tintern Abbey" appeared to be the favorite poem with the public, but more contemplative readers preferred the first books of the "Excursion," and the Sonnets. He said, "Yes, they are better." He preferred such of his poems as touched the affections, to any others; for whatever is didactic — what theories of society, and so on — might perish quickly; but whatever combined a truth with an affection was [Greek: *chtêma es aei*], good to-day and good forever. He cited the sonnet "On the feelings of a high-minded Spaniard," which he preferred to any other (I so understood him), and the "Two Voices"; and quoted, with evident pleasure, the verses addressed "To the Skylark." In this connection, he said of the Newtonian theory, that it might yet be superseded and forgotten; and Dalton's atomic theory.

When I prepared to depart, he said he wished to show me what a common person in England could do, and he led me into the enclosure of his clerk, a young man, to whom he had given this slip of ground, which was laid out, or its natural capabilities shown, with much taste. He then said he would show me a better way towards the inn; and he walked a good part of a mile, talking, and ever and anon stopping short to impress the word or the verse, and finally parted from me with great kindness, and returned across the fields.

Wordsworth honored himself by his simple adherence to truth, and was very willing not to shine; but he surprised by the hard limits of his thought. To judge

from a single conversation, he made the impression of a narrow and very English mind; of one who paid for his rare elevation by general tameness and conformity. Off his own beat, his opinions were of no value. It is not very rare to find persons loving sympathy and ease, who expiate their departure from the common in one direction, by their conformity in every other.

VOYAGE TO ENGLAND.

The occasion of my second visit to England was an invitation from some Mechanics' Institutes in Lancashire and Yorkshire, which separately are organized much in the same way as our New England Lyceums, but, in 1847, had been linked into a "Union," which embraced twenty or thirty towns and cities, and presently extended into the middle counties, and northward into Scotland. I was invited, on liberal terms, to read a series of lectures in them all. The request was urged with every kind suggestion, and every assurance of aid and comfort, by friendliest parties in Manchester, who, in the sequel, amply redeemed their word. The remuneration was equivalent to the fees at that time paid in this country for the like services. At all events, it was sufficient to cover any travelling expenses, and the proposal offered an excellent opportunity of seeing the interior of England and Scotland, by means of a home, and a committee of intelligent friends, awaiting me in every town.

I did not go very willingly. I am not a good traveller, nor have I found that long journeys yield a fair share of reasonable hours. But the invitation was repeated and pressed at a moment of more leisure, and when I was a little spent by some unusual studies. I wanted a change and a tonic, and England was proposed to me. Besides, there were, at least, the dread attraction and salutary influences of the sea. So I took my berth in the packet-ship *Washington Irving*, and sailed from Boston on Tuesday, 5th October, 1847.

On Friday, at noon, we had only made one hundred and thirty-four miles. A nimble Indian would have swum as far; but the captain affirmed that the ship would show us in time all her paces, and we crept along through the floating drift of boards, logs, and chips, which the rivers of Maine and New Brunswick pour into the sea after a freshet.

At last, on Sunday night, after doing one day's work in four, the storm came, the winds blew, and we flew before a northwester, which strained every rope and sail. The good ship darts through the water all day, all night, like a fish, quivering with speed, gliding through liquid leagues, sliding from horizon to horizon. She has passed Cape Sable; she has reached the Banks; the land-birds are left; gulls, haglets, ducks, petrels, swim, dive, and hover around; no fishermen; she has passed the Banks; left five sail behind her, far on the edge of the west at sundown, which were far east of us at morn, — though they say at sea a stern chase is a long race, — and still we fly for our lives. The shortest sea-line from Boston to Liverpool is 2,850 miles. This a steamer keeps, and saves 150 miles. A sailing ship can never go in a shorter line than 3,000, and usually it

is much longer. Our good master keeps his kites up to the last moment, studding-sails alow and aloft, and, by incessant straight steering, never loses a rod of way. Watchfulness is the law of the ship, — watch on watch, for advantage and for life. Since the ship was built, it seems, the master never slept but in his day-clothes whilst on board. “There are many advantages,” says Saadi, “in sea-voyaging, but security is not one of them.” Yet in hurrying over these abysses, whatever dangers we are running into, we are certainly running out of the risks of hundreds of miles every day, which have their own chances of squall, collision, sea-stroke, piracy, cold, and thunder. Hour for hour, the risk on a steamboat is greater; but the speed is safety, or twelve days of danger, instead of twenty-four.

Our ship was registered 750 tons, and weighed perhaps, with all her freight, 1,500 tons. The mainmast, from the deck to the top-button, measured 115 feet; the length of the deck, from stem to stern, 155. It is impossible not to personify a ship; everybody does in everything they say: — she behaves well; she minds her rudder; she swims like a duck; she runs her nose into the water; she looks into a port. Then that wonderful *esprit du corps*, by which we adopt into our self-love everything we touch, makes us all champions of her sailing-qualities.

The conscious ship hears all the praise. In one week she has made 1,467 miles, and now, at night, seems to hear the steamer behind her, which left Boston to-day at two, has mended her speed, and is flying before the gray south-wind eleven and a half knots the hour. The sea-fire shines in her wake, and far around wherever a wave breaks. I read the hour, 9h. 45', on my watch by this light. Near the equator, you can read small print by it; and the mate describes the phosphoric insects, when taken up in a pail, as shaped like a Carolina potato.

I find the sea-life an acquired taste, like that for tomatoes and olives. The confinement, cold, motion, noise, and odor are not to be dispensed with. The floor of your room is sloped at an angle of twenty or thirty degrees, and I waked every morning with the belief that some one was tipping up my berth. Nobody likes to be treated ignominiously, upset, shoved against the side of the house, rolled over, suffocated with bilge, mephitic, and stewing oil. We get used to these annoyances at last, but the dread of the sea remains longer. The sea is masculine, the type of active strength. Look, what eggshells are drifting all over it, each one, like ours, filled with men in ecstasies of terror, alternating with cockney conceit, as the sea is rough or smooth. Is this sad-colored circle an eternal cemetery? In our graveyards we scoop a pit, but this aggressive water opens mile-wide pits and chasms, and makes a mouthful of a fleet. To the geologist, the sea is the only firmament; the land is in perpetual flux and change, now blown up like a tumor, now sunk in a chasm, and the registered

observations of a few hundred years find it in a perpetual tilt, rising and falling. The sea keeps its old level; and 't is no wonder that the history of our race is so recent, if the roar of the ocean is silencing our traditions. A rising of the sea, such as has been observed, say an inch in a century, from east to west on the land, will bury all the towns, monuments, bones, and knowledge of mankind, steadily and insensibly. If it is capable of these great and secular mischiefs, it is quite as ready at private and local damage; and of this no landsman seems so fearful as the seaman. Such discomfort and such danger as the narratives of the captain and mate disclose are bad enough as the costly fee we pay for entrance to Europe; but the wonder is always new that any sane man can be a sailor. And here, on the second day of our voyage, stepped out a little boy in his shirt-sleeves, who had hid himself, whilst the ship was in port, in the bread-closet, having no money, and wishing to go to England. The sailors have dressed him in Guernsey frock, with a knife in his belt, and he is climbing nimbly about after them, "likes the work first-rate, and, if the captain will take him, means now to come back again in the ship." The mate avers that this is the history of all sailors; nine out of ten are runaway boys; and adds, that all of them are sick of the sea, but stay in it out of pride. Jack has a life of risks, incessant abuse, and the worst pay. It is a little better with the mate, and not very much better with the captain. A hundred dollars a month is reckoned high pay. If sailors were contented, if they had not resolved again and again not to go to sea any more, I should respect them.

Of course, the inconveniences and terrors of the sea are not of any account to those whose minds are preoccupied. The water-laws, arctic frost, the mountain, the mine, only shatter cockneyism; every noble activity makes room for itself. A great mind is a good sailor, as a great heart is. And the sea is not slow in disclosing inestimable secrets to a good naturalist.

'Tis a good rule in every journey to provide some piece of liberal study to rescue the hours which bad weather, bad company, and taverns steal from the best economist. Classics which at home are drowsily read have a strange charm in a country inn, or in the transom of a merchant brig. I remember that some of the happiest and most valuable hours I have owed to books, passed, many years ago, on shipboard. The worst impediment I have found at sea is the want of light in the cabin.

We found on board the usual cabin library; Basil Hall, Dumas, Dickens, Bulwer, Balzac, and Sand were our sea-gods. Among the passengers, there was some variety of talent and profession; we exchanged our experiences, and all learned something. The busiest talk with leisure and convenience at sea, and sometimes a memorable fact turns up, which you have long had a vacant niche

for, and seize with the joy of a collector. But, under the best conditions, a voyage is one of the severest tests to try a man. A college examination is nothing to it. Sea-days are long, — these lack-lustre, joyless days which whistled over us; but they were few, — only fifteen, as the captain counted, sixteen according to me. Reckoned from the time when we left soundings, our speed was such that the captain drew the line of his course in red ink on his chart, for the encouragement or envy of future navigators.

It has been said that the King of England would consult his dignity by giving audience to foreign ambassadors in the cabin of a man-of-war. And I think the white path of an Atlantic ship the right avenue to the palace front of this seafaring people, who for hundreds of years claimed the strict sovereignty of the sea, and exacted toll and the striking sail from the ships of all other peoples. When their privilege was disputed by the Dutch and other junior marines, on the plea that you could never anchor on the same wave, or hold property in what was always flowing, the English did not stick to claim the channel, or bottom of all the main. “As if,” said they, “we contended for the drops of the sea, and not for its situation, or the bed of those waters. The sea is bounded by his Majesty’s empire.”

As we neared the land, its genius was felt. This was inevitably the British side. In every man’s thought arises now a new system, English sentiments, English loves and fears, English history and social modes. Yesterday, every passenger had measured the speed of the ship by watching the bubbles over the ship’s bulwarks. To-day, instead of bubbles, we measure by Kinsale, Cork, Waterford, and Ardmore. There lay the green shore of Ireland, like some coast of plenty. We could see towns, towers, churches, harvests; but the curse of eight hundred years we could not discern.

LAND.

Alfieri thought Italy and England the only countries worth living in: the former, because there Nature vindicates her rights, and triumphs over the evils inflicted by the governments; the latter, because art conquers nature, and transforms a rude, ungenial land into a paradise of comfort and plenty. England is a garden. Under an ash-colored sky, the fields have been combed and rolled till they appear to have been finished with a pencil instead of a plough. The solidity of the structures that compose the towns speaks the industry of ages. Nothing is left as it was made. Rivers, hills, valleys, the sea itself, feel the hand of a master. The long habitation of a powerful and ingenious race has turned every rood of land to its best use, has found all the capabilities, the arable soil, the quarriable rock, the highways, the byways, the fords, the navigable waters; and the new arts of intercourse meet you everywhere; so that England is a huge phalanstery, where all that man wants is provided within the precinct. Cushioned and comforted in every manner, the traveller rides as on a cannon-ball, high and low, over rivers and towns, through mountains, in tunnels of three or four miles, at near twice the speed of our trains; and reads quietly the *Times* newspaper, which, by its immense correspondence and reporting, seems to have machinized the rest of the world for his occasion.

The problem of the traveller landing at Liverpool is, Why England is England. What are the elements of that power which the English hold over other nations? If there be one test of national genius universally accepted, it is success; and if there be one successful country in the universe for the last millennium, that country is England.

A wise traveller will naturally choose to visit the best of actual nations; and an American has more reasons than another to draw him to Britain. In all that is done or begun by the Americans towards right thinking or practice, we are met by a civilization already settled and overpowering. The culture of the day, the thoughts and aims of men, are English thoughts and aims. A nation considerable for a thousand years since Egbert, it has, in the last centuries, obtained the ascendant, and stamped the knowledge, activity, and power of mankind with its impress. Those who resist it do not feel it or obey it less. The Russian in his snows is aiming to be English. The Turk and Chinese also are making awkward efforts to be English. The practical common-sense of modern society, the utilitarian direction which labor, laws, opinion, religion, take, is the natural genius of the British mind. The influence of France is a constituent of modern civility, but not enough opposed to the English for the most wholesome effect.

The American is only the continuation of the English genius into new conditions, more or less propitious.

See what books fill our libraries. Every book we read, every biography, play, romance, in whatever form, is still English history and manners. So that a sensible Englishman once said to me, "As long as you do not grant us copyright, we shall have the teaching of you."

But we have the same difficulty in making a social or moral estimate of England, as the sheriff finds in drawing a jury to try some cause which has agitated the whole community, and on which everybody finds himself an interested party. Officers, jurors, judges, have all taken sides. England has inoculated all nations with her civilization, intelligence, and tastes; and, to resist the tyranny and prepossession of the British element, a serious man must aid himself, by comparing with it the civilizations of the farthest east and west, the old Greek, the Oriental, and, much more, the ideal standard, if only by means of the very impatience which English forms are sure to awaken in independent minds.

Besides, if we will visit London, the present time is the best time, as some signs portend that it has reached its highest point. It is observed that the English interest us a little less within a few years; and hence the impression that the British power has culminated, is in solstice, or already declining.

As soon as you enter England, which, with Wales, is no larger than the State of Georgia,¹ this little land stretches by an illusion to the dimensions of an empire. The innumerable details, the crowded succession of towns, cities, cathedrals, castles, and great and decorated estates, the number and power of the trades and guilds, the military strength and splendor, the multitudes of rich and of remarkable people, the servants and equipages, — all these catching the eye, and never allowing it to pause, hide all boundaries, by the impression of magnificence and endless wealth.

I reply to all the urgencies that refer me to this and that object indispensably to be seen, — Yes, to see England well needs a hundred years; for, what they told me was the merit of Sir John Soane's Museum, in London, — that it was well packed and well saved, — is the merit of England; — it is stuffed full, in all corners and crevices, with towns, towers, churches, villas, palaces, hospitals, and charity-houses. In the history of art, it is a long way from a cromlech to York minster; yet all the intermediate steps may still be traced in this all-preserving island.

The territory has a singular perfection. The climate is warmer by many degrees than it is entitled to by latitude. Neither hot nor cold, there is no hour in the whole year when one cannot work. Here is no winter, but such days as we

have in Massachusetts in November, a temperature which makes no exhausting demand on human strength, but allows the attainment of the largest stature. Charles the Second said, "It invited men abroad more days in the year and more hours in the day than another country." Then England has all the materials of a working country except wood. The constant rain — a rain with every tide, in some parts of the island — keeps its multitude of rivers full, and brings agricultural production up to the highest point. It has plenty of water, of stone, of potter's clay, of coal, of salt, and of iron. The land naturally abounds with game, immense heaths and downs are paved with quails, grouse, and woodcock, and the shores are animated by water-birds. The rivers and the surrounding sea spawn with fish; there are salmon for the rich, and sprats and herrings for the poor. In the northern lochs, the herring are in innumerable shoals; at one season, the country people say, the lakes contain one part water and two parts fish.

The only drawback on this industrial conveniency is the darkness of its sky. The night and day are too nearly of a color. It strains the eyes to read and to write. Add the coal-smoke. In the manufacturing towns, the fine soot or blacks darken the day, give white sheep the color of black sheep, discolor the human saliva, contaminate the air, poison many plants, and corrode the monuments and buildings.

The London fog aggravates the distempers of the sky, and sometimes justifies the epigram on the climate by an English wit, "in a fine day, looking up a chimney; in a foul day, looking down one." A gentleman in Liverpool told me that he found he could do without a fire in his parlor about one day in the year. It is however pretended, that the enormous consumption of coal in the island is also felt in modifying the general climate.

Factitious climate, factitious position. England resembles a ship in its shape, and, if it were one, its best admiral could not have worked it, or anchored it in a more judicious or effective position. Sir John Herschel said, "London was the centre of the terrene globs." The shopkeeping nation, to use a shop word, has a *good stand*. The old Venetians pleased themselves with the flattery, that Venice was in 45°, midway between the poles and the line; as if that were an imperial centrality. Long of old, the Greeks fancied Delphi the navel of the earth, in their favorite mode of fabling the earth to be an animal. The Jews believed Jerusalem to be the centre. I have seen a kratometric chart designed to show that the city of Philadelphia was in the same thermic belt, and, by inference, in the same belt of empire, as the cities of Athens, Rome, and London. It was drawn by a patriotic Philadelphian, and was examined with pleasure, under his showing, by the inhabitants of Chestnut Street. But, when carried to Charleston, to New Orleans, and to Boston, it somehow failed to convince the ingenious scholars of all those

capitals.

But England is anchored at the side of Europe, and right in the heart of the modern world. The sea, which, according to Virgil's famous line, divided the poor Britons utterly from the world, proved to be the ring of marriage with all nations. It is not down in the books, — it is written only in the geologic strata, — that fortunate day when a wave of the German Ocean burst the old isthmus which joined Kent and Cornwall to France, and gave to this fragment of Europe its impregnable sea-wall, cutting off an island of eight hundred miles in length, with an irregular breadth reaching to three hundred miles; a territory large enough for independence enriched with every seed of national power, so near, that it can see the harvests of the continent; and so far, that who would cross the strait must be an expert mariner, ready for tempests. As America, Europe, and Asia lie, these Britons have precisely the best commercial position in the whole planet, and are sure of a market for all the goods they can manufacture. And to make these advantages avail, the river Thames must dig its spacious outlet to the sea from the heart of the kingdom, giving road and landing to innumerable ships, and all the conveniency to trade, that a people so skilful and sufficient in economizing water-front by docks, warehouses, and lighters required. When James the First declared his purpose of punishing London by removing his Court, the Lord Mayor replied, "that, in removing his royal presence from his lieges, they hoped he would leave them the Thames."

In the variety of surface, Britain is a miniature of Europe, having plain, forest, marsh, river, sea-shore; mines in Cornwall; caves in Matlock and Derbyshire; delicious landscape in Dovedale, delicious sea-view at Tor Bay, Highlands in Scotland, Snowdon in Wales; and, in Westmoreland and Cumberland, a pocket Switzerland, in which the lakes and mountains are on a sufficient scale to fill the eye and touch the imagination. It is a nation conveniently small. Fontenelle thought, that nature had sometimes a little affectation; and there is such an artificial completeness in this nation of artificers, as if there were a design from the beginning to elaborate a bigger Birmingham. Nature held counsel with herself, and said, 'My Romans are gone. To build my new empire, I will choose a rude race, all masculine, with brutish strength. I will not grudge a competition of the roughest males. Let buffalo gore buffalo, and the pasture to the strongest! For I have work that requires the best will and sinew. Sharp and temperate northern breezes shall blow, to keep that will alive and alert. The sea shall disjoin the people from others, and knit them to a fierce nationality. It shall give them markets on every side. Long time I will keep them on their feet, by poverty, border-wars, sea-faring, sea-risks, and the stimulus of gain. An island, — but not so large, the people not so many as to glut the great markets and

depress one another, but proportioned to the size of Europe and the continents.’

With its fruits, and wares, and money, must its civil influence radiate. It is a singular coincidence to this geographic centrality, the spiritual centrality, which Emanuel Swedenborg ascribes to the people. “For the English nation, the best of them are in the centre of all Christians, because they have interior intellectual light. This appears conspicuously in the spiritual world. This light they derive from the liberty of speaking and writing, and thereby of thinking.”

RACE.

An ingenious anatomist has written a book² to prove that races are imperishable, but nations are pliant political constructions, easily changed or destroyed. But this writer did not found his assumed races on any necessary law, disclosing their ideal or metaphysical necessity; nor did he, on the other hand, count with precision the existing races, and settle the true bounds; a point of nicety, and the popular test of the theory. The individuals at the extremes of divergence in one race of men are as unlike as the wolf to the lapdog. Yet each variety shades down imperceptibly into the next, and you cannot draw the line where a race begins or ends. Hence every writer makes a different count. Blumenbach reckons five races; Humboldt, three; and Mr. Pickering, who lately, in our Exploring Expedition, thinks he saw all the kinds of men that can be on the planet, makes eleven.

The British Empire is reckoned to contain (in 1848) 222,000,000 souls, — perhaps a fifth of the population of the globe; and to comprise a territory of 5,000,000 square miles. So far have British people predominated. Perhaps forty of these millions are of British stock. Add the United States of America, which reckon (in the same year), exclusive of slaves, 20,000,000 of people, on a territory of 3,000,000 square miles, and in which the foreign element, however considerable, is rapidly assimilated, and you have a population of English descent and language, of 60,000,000, and governing a population of 245,000,000 souls.

The British census proper reckons twenty-seven and a half millions in the home countries. What makes this census important is the quality of the units that compose it. They are free forcible men, in a country where life is safe, and has reached the greatest value. They give the bias to the current age; and that, not by chance or by mass, but by their character, and by the number of individuals among them of personal ability. It has been denied that the English have genius. Be it as it may, men of vast intellect have been born on their soil, and they have made or applied the principal inventions. They have sound bodies, and supreme endurance in war and in labor. The spawning force of the race has sufficed to the colonization of great parts of the world; yet it remains to be seen whether they can make good the exodus of millions from Great Britain, amounting, in 1852, to more than a thousand a day. They have assimilating force, since they are imitated by their foreign subjects; and they are still aggressive and propagandist, enlarging the dominion of their arts and liberty. Their laws are hospitable, and slavery does not exist under them. What oppression exists is incidental and

temporary; their success is not sudden or fortunate, but they have maintained constancy and self-equality for many ages.

Is this power due to their race, or to some other cause? Men hear gladly of the power of blood or race. Everybody likes to know that his advantages cannot be attributed to air, soil, sea, or to local wealth, as mines and quarries, nor to laws and traditions, nor to fortune, but to superior brain, as it makes the praise more personal to him.

We anticipate in the doctrine of race something like that law of physiology, that, whatever bone, muscle, or essential organ is found in one healthy individual, the same part or organ may be found in or near the same place in its congener; and we look to find in the son every mental and moral property that existed in the ancestor. In race, it is not the broad shoulders, or liveness, or stature that give advantage, but a symmetry that reaches as far as to the wit. Then the miracle and renown begin. Then first we care to examine the pedigree, and copy needfully the training, — what food they ate, what nursing, school, and exercises they had, which resulted in this mother-wit, delicacy of thought, and robust wisdom. How came such men as King Alfred, and Roger Bacon, William of Wykeham, Walter Raleigh, Philip Sidney, Isaac Newton, William Shakspeare, George Chapman, Francis Bacon, George Herbert, Henry Vane, to exist here? What made these delicate natures? was it the air? was it the sea? was it the parentage? For it is certain that these men are samples of their contemporaries. The hearing ear is always found close to the speaking tongue; and no genius can long or often utter anything which is not invited and gladly entertained by men around him.

It is race, is it not? that puts the hundred millions of India under the dominion of a remote island in the north of Europe. Race avails much, if that be true, which is alleged, that all Celts are Catholics, and all Saxons are Protestants; that Celts love unity of power, and Saxons the representative principle. Race is a controlling influence in the Jew, who, for two millenniums, under every climate, has preserved the same character and employments. Race in the negro is of appalling importance. The French in Canada, cut off from all intercourse with the parent people, have held their national traits. I chanced to read Tacitus “on the Manners of the Germans,” not long since, in Missouri, and the heart of Illinois, and I found abundant points of resemblance between the Germans of the Hercynian forest, and our *Hoosiers*, *Suckers*, and *Badgers* of the American woods.

But whilst race works immortally to keep its own, it is resisted by other forces. Civilization is a re-agent, and eats away the old traits. The Arabs of to-day are the Arabs of Pharaoh; but the Briton of to-day is a very different person

from Cassibelaunus or Ossian. Each religious sect has its physiognomy. The Methodists have acquired a face; the Quakers, a face; the nuns, a face. An Englishman will pick out a dissenter by his manners. Trades and professions carve their own lines on face and form. Certain circumstances of English life are not less effective: as, personal liberty; plenty of food; good ale and mutton; open market, or good wages for every kind of labor; high bribes to talent and skill; the island life, or the million opportunities and outlets for expanding and misplaced talent; readiness of combination among themselves for politics or for business; strikes; and sense of superiority founded on habit of victory in labor and in war; and the appetite for superiority grows by feeding.

It is easy to add to the counteracting forces to race. Credence is a main element. 'T is said, that the views of nature held by any people determine all their institutions. Whatever influences add to mental or moral faculty, take men out of nationality, as out of other conditions, and make the national life a culpable compromise.

These limitations of the formidable doctrine of race suggest others which threaten to undermine it, as not sufficiently based. The fixity or inconvertibleness of races as we see them, is a weak argument for the eternity of these frail boundaries, since all our historical period is a point to the duration in which nature has wrought. Any the least and solitariest fact in our natural history, such as the melioration of fruits and of animal stocks, has the worth of a *power* in the opportunity of geologic periods. Moreover, though we flatter the self-love of men and nations by the legend of pure races, all our experience is of the gradation and resolution of races, and strange resemblances meet us everywhere. It need not puzzle us that Malay and Papuan, Celt and Itonian, Saxon and Tartar, should mix, when we see the rudiments of tiger and baboon in our human form, and know that the barriers of races are not so firm, but that some spray sprinkles us from the antediluvian seas.

The low organizations are simplest; a mere mouth, a jelly, or a straight worm. As the scale mounts, the organizations become complex. We are piqued with pure descent, but nature loves inoculation. A child blends in his face the faces of both parents, and some feature from every ancestor whose face hangs on the wall. The best nations are those most widely related; and navigation, as effecting a world-wide mixture, is the most potent advancer of nations.

The English composite character betrays a mixed origin. Everything English is a fusion of distant and antagonistic elements. The language is mixed; the names of men are of different nations, — three languages, three or four nations; — the currents of thought are counter: contemplation and practical skill; active intellect and dead conservatism; world-wide enterprise, and devoted use and

wont; aggressive freedom and hospitable law, with bitter class legislation; a people scattered by their wars and affairs over the face of the whole earth, and homesick to a man; a country of extremes, — dukes and chartists, Bishops of Durham and naked heathen colliers; — nothing can be praised in it without damning exceptions, and nothing denounced without salvos of cordial praise.

Neither do this people appear to be of one stem; but collectively a better race than any from which they are derived. Nor is it easy to trace it home to its original seats. Who can call by right names what races are in Britain? Who can trace them historically? Who can discriminate them anatomically, or metaphysically?

In the impossibility of arriving at satisfaction on the historical question of race, and — come of whatever disputable ancestry — the indisputable Englishman before me, himself very well marked, and nowhere else to be found, — I fancied I could leave quite aside the choice of a tribe as his lineal progenitors. Defoe said in his wrath, “the Englishman was the mud of all races.” I incline to the belief that, as water, lime, and sand make mortar, so certain temperaments marry well, and, by well-managed contrarieties, develop as drastic a character as the English. On the whole, it is not so much a history of one or of certain tribes of Saxons, Jutes, or Frisians, coming from one place, and genetically identical, as it is an anthology of temperaments out of them all. Certain temperaments suit the sky and soil of England, say eight or ten or twenty varieties, as, out of a hundred pear-trees, eight or ten suit the soil of an orchard, and thrive, whilst all the unadapted temperaments die out.

The English derive their pedigree from such a range of nationalities, that there needs sea-room and land-room to unfold the varieties of talent and character. Perhaps the ocean serves as a galvanic battery to distribute acids at one pole, and alkalies at the other. So England tends to accumulate her Liberals in America, and her conservatives at London. The Scandinavians in her race still hear in every age the murmurs of their mother, the ocean; the Briton in the blood hugs the homestead still.

Again, as if to intensate the influences that are not of race, what we think of when we talk of English traits really narrows itself to a small district. It excludes Ireland, and Scotland, and Wales, and reduces itself at last to London, that is, to those who come and go thither. The portraits that hang on the walls in the Academy Exhibition at London, the figures in Punch’s drawings of the public men, or of the club-houses, the prints in the shop-windows, are distinctive English, and not American, no, nor Scotch, nor Irish: but ‘t is a very restricted nationality. As you go north into the manufacturing and agricultural districts, and to the population that never travels, as you go into Yorkshire, as you enter

Scotland, the world's Englishman is no longer found. In Scotland, there is a rapid loss of all grandeur of mien and manners; a provincial eagerness and acuteness appear; the poverty of the country makes itself remarked, and a coarseness of manners; and, among the intellectual, is the insanity of dialectics. In Ireland, are the same climate and soil as in England, but less food, no right relation to the land, political dependence, small tenantry, and an inferior or misplaced race.

These queries concerning ancestry and blood may be well allowed, for there is no prosperity that seems more to depend on the kind of man than British prosperity. Only a hardy and wise people could have made this small territory great. We say, in a regatta or yacht-race, that if the boats are anywhere nearly matched, it is the man that wins. Put the best sailing-master into either boat, and he will win.

Yet it is fine for us to speculate in face of unbroken traditions, though vague, and losing themselves in fable. The traditions have got footing, and refuse to be disturbed. The kitchen clock is more convenient than sidereal time. We must use the popular category, as we do by the Linnæan classification, for convenience, and not as exact and final. Otherwise, we are presently confounded, when the best-settled traits of one race are claimed by some new ethnologist as precisely characteristic of the rival tribe.

I found plenty of well-marked English types, the ruddy complexion fair and plump, robust men, with faces cut like a die, and a strong island speech and accent; a Norman type, with the complacency that belongs to that constitution. Others, who might be Americans, for anything that appeared in their complexion or form: and their speech was much less marked, and their thought much less bound. We will call them Saxons. Then the Roman has implanted his dark complexion in the trinity or quaternity of bloods.

1. The sources from which tradition derives their stock are mainly three. And, first, they are of the oldest blood of the world, — the Celtic. Some peoples are deciduous or transitory. Where are the Greeks? where the Etrurians? where the Romans? But the Celts or Sidonides are an old family, of whose beginning there is no memory, and their end is likely to be still more remote in the future; for they have endurance and productiveness. They planted Britain, and gave to the seas and mountains names which are poems, and imitate the pure voices of nature. They are favorably remembered in the oldest records of Europe. They had no violent feudal tenure, but the husbandman owned the land. They had an alphabet, astronomy, priestly culture, and a sublime creed. They have a hidden and precarious genius. They made the best popular literature of the Middle Ages in the songs of Merlin, and the tender and delicious mythology of Arthur.

2. The English come mainly from the Germans, whom the Romans found hard to conquer in two hundred and ten years, — say, impossible to conquer, — when one remembers the long sequel; a people about whom, in the old empire, the rumor ran, there was never any that meddled with them that repented it not.

3. Charlemagne, halting one day in a town of Narbonnese Gaul, looked out of a window, and saw a fleet of Northmen cruising in the Mediterranean. They even entered the port of the town where he was, causing no small alarm and sudden manning and arming of his galleys. As they put out to sea again, the emperor gazed long after them, his eyes bathed in tears. “I am tormented with sorrow,” he said, “when I foresee the evils they will bring on my posterity.” There was reason for these Xerxes’ tears. The men who have built a ship and invented the rig, — cordage, sail, compass, and pump, — the working in and out of port, have acquired much more than a ship. Now arm them, and every shore is at their mercy. For, if they have not numerical superiority where they anchor, they have only to sail a mile or two to find it. Bonaparte’s art of war, namely, of concentrating force on the point of attack, must always be theirs who have the choice of the battle-ground. Of course they come into the fight from a higher ground of power than the land-nations; and can engage them on shore with a victorious advantage in the retreat. As soon as the shores are sufficiently peopled to make piracy a losing business, the same skill and courage are ready for the service of trade.

The *Heimskringla*,³ or Sagas of the Kings of Norway, collected by Snorro Sturleson, is the Iliad and Odyssey of English history. Its portraits, like Homer’s, are strongly individualized. The Sagas describe a monarchical republic like Sparta. The government disappears before the importance of citizens. In Norway, no Persian masses fight and perish to aggrandize a king, but the actors are bonders or landholders, every one of whom is named and personally and patronymically described, as the king’s friend and companion. A sparse population gives this high worth to every man. Individuals are often noticed as very handsome persons, which trait only brings the story nearer to the English race. Then the solid material interest predominates, so dear to English understanding, wherein the association is logical, between merit and land. The heroes of the Sagas are not the knights of South Europe. No vaporing of France and Spain has corrupted them. They are substantial farmers, whom the rough times have forced to defend their properties. They have weapons which they use in a determined manner, by no means for chivalry, but for their acres. They are people considerably advanced in rural arts, living amphibiously on a rough coast, and drawing half their food from the sea, and half from the land. They have herds of cows, and malt, wheat, bacon, butter, and cheese. They fish in the

fiord, and hunt the deer. A king among these farmers has a varying power, sometimes not exceeding the authority of a sheriff. A king was maintained much as, in some of our country districts, a winter-schoolmaster is quartered, a week here, a week there, and a fortnight on the next farm, — on all the farms in rotation. This the king calls going into guest-quarters; and it was the only way in which, in a poor country, a poor king, with many retainers, could be kept alive, when he leaves his own farm to collect his dues through the kingdom.

These Norsemen are excellent persons in the main, with good sense, steadiness, wise speech, and prompt action. But they have a singular turn for homicide; their chief end of man is to murder or to be murdered; oars, scythes, harpoons, crow-bars, peat-knives, and hayforks are tools valued by them all the more for their charming aptitude for assassinations. A pair of kings, after dinner, will divert themselves by thrusting each his sword through the other's body, as did Yngve and Alf. Another pair ride out on a morning for a frolic, and, finding no weapon near, will take the bits out of their horses' mouths, and crush each other's heads with them, as did Alric and Eric. The sight of a tent-cord or a cloak-string puts them on hanging somebody, a wife, or a husband, or, best of all, a king. If a farmer has so much as a hayfork, he sticks it into a King Dag. King Ingiald finds it vastly amusing to burn up half a dozen kings in a hall, after getting them drunk. Never was poor gentleman so surfeited with life, so furious to be rid of it, as the Northman. If he cannot pick any other quarrel, he will get himself comfortably gored by a bull's horns, like Egil, or slain by a land-slide, like the agricultural King Onund. Odin died in his bed, in Sweden; but it was a proverb of ill condition, to die the death of old age. King Hake of Sweden cuts and slashes in battle, as long as he can stand, then orders his war-ship, loaded with his dead men and their weapons, to be taken out to sea, the tiller shipped, and the sails spread; being left alone, he sets fire to some tar-wood, and lies down contented on deck. The wind blew off the land, the ship flew burning in clear flame, out between the islets into the ocean, and there was the right end of King Hake.

The early Sagas are sanguinary and piratical; the later are of a noble strain. History rarely yields us better passages than the conversation between King Sigurd the Crusader, and King Eystein, his brother, on their respective merits, — one, the soldier, and the other, a lover of the arts of peace.

But the reader of the Norman history must steel himself by holding fast the remote compensations which result from animal vigor. As the old fossil world shows that the first steps of reducing the chaos were confided to saurians and other huge and horrible animals, so the foundations of the new civility were to be laid by the most savage men.

The Normans came out of France into England worse men than they went into it, one hundred and sixty years before. They had lost their own language, and learned the Romance or barbarous Latin of the Gauls; and had acquired, with the language, all the vices it had names for. The conquest has obtained, in the chronicles, the name of the “memory of sorrow.” Twenty thousand thieves landed at Hastings. These founders of the House of Lords were greedy and ferocious dragoons, sons of greedy and ferocious pirates. They were all alike, they took everything they could carry, they burned, harried, violated, tortured, and killed, until everything English was brought to the verge of ruin. Such, however, is the illusion of antiquity and wealth, that decent and dignified men now existing boast their descent from these filthy thieves, who showed a far juster conviction of their own merits, by assuming for their types the swine, goat, jackal, leopard, wolf, and snake, which they severally resembled.

England yielded to the Danes and Northmen in the tenth and eleventh centuries, and was the receptacle into which all the mettle of that strenuous population was poured. The continued draught of the best men in Norway, Sweden, and Denmark, to these piratical expeditions, exhausted those countries, like a tree which bears much fruit when young, and these have been second-rate powers ever since. The power of the race migrated, and left Norway void. King Olaf said: “When King Harold, my father, went westward to England, the chosen men in Norway followed him; but Norway was so emptied then, that such men have not since been to find in the country, nor especially such a leader as King Harold was for wisdom and bravery.”

It was a tardy recoil of these invasions, when, in 1801, the British government sent Nelson to bombard the Danish forts in the Sound; and, in 1807, Lord Cathcart, at Copenhagen, took the entire Danish fleet, as it lay in the basins, and all the equipments from the Arsenal, and carried them to England. Konghelle, the town where the kings of Norway, Sweden, and Denmark were wont to meet, is now rented to a private English gentleman for a hunting-ground.

It took many generations to trim, and comb, and perfume the first boat-load of Norse pirates into royal highnesses and most noble Knights of the Garter: but every sparkle of ornament dates back to the Norse boat. There will be time enough to mellow this strength into civility and religion. It is a medical fact, that the children of the blind see; the children of felons have a healthy conscience. Many a mean, dastardly boy is, at the age of puberty, transformed into a serious and generous youth.

The mildness of the following ages has not quite effaced these traits of Odin; as the rudiment of a structure matured in the tiger is said to be still found unabsorbed in the Caucasian man. The nation has a tough, acrid, animal nature,

which centuries of churching and civilizing have not been able to sweeten. Alfiori said, "the crimes of Italy were the proof of the superiority of the stock"; and one may say of England, that this watch moves on a splinter of adamant. The English uncultured are a brutal nation. The crimes recorded in their calendars leave nothing to be desired in the way of cold malignity. Dear to the English heart is a fair stand-up fight. The brutality of the manners in the lower class appears in the boxing, bear-baiting, cock-fighting, love of executions, and in the readiness for a set-to in the streets, delightful to the English of all classes. The costermongers of London streets hold cowardice in loathing:— "we must work our fists well; we are all handy with our fists." The public schools are charged with being bear-gardens of brutal strength, and are liked by the people for that cause. The fagging is a trait of the same quality. Medwin, in the *Life of Shelley*, relates, that, at a military school, they rolled up a young man in a snowball, and left him so in his room, while the other cadets went to church; — and crippled him for life. They have retained impressment, deck-flogging, army-flogging, and school-flogging. Such is the ferocity of the army discipline, that a soldier sentenced to flogging, sometimes prays that his sentence may be commuted to death. Flogging, banished from the armies of Western Europe, remains here by the sanction of the Duke of Wellington. The right of the husband to sell the wife has been retained down to our times. The Jews have been the favorite victims of royal and popular persecution. Henry III. mortgaged all the Jews in the kingdom to his brother, the Earl of Cornwall, as security for money which he borrowed. The torture of criminals, and the rack for extorting evidence, were slowly disused. Of the criminal statutes, Sir Samuel Romilly said, "I have examined the codes of all nations, and ours is the worst, and worthy of the Anthropophagi." In the last session (18:18), the House of Commons was listening to details of flogging and torture practised in the jails.

As soon as this land, thus geographically posted, got a hardy people into it, they could not help becoming the sailors and factors of the globe. From childhood, they dabbled in water, they swum like fishes, their playthings were boats. In the case of the ship-money, the judges delivered it for law, that "England being an island, the very midland shires therein are all to be accounted maritime": and Fuller adds, "the genius even of land-locked countries driving the natives with a maritime dexterity." As early as the conquest, it is remarked in explanation of the wealth of England, that its merchants trade to all countries.

The English, at the present day, have great vigor of body and endurance. Other countrymen look slight and undersized beside them, and invalids. They are bigger men than the Americans. I suppose a hundred English taken at random out of the street would weigh a fourth more than so many Americans.

Yet, I am told, the skeleton is not larger. They are round, ruddy, and handsome; at least, the whole bust is well formed; and there is a tendency to stout and powerful frames. I remarked the stoutness, on my first landing at Liverpool; porter, drayman, coachman, guard, — what substantial, respectable, grandfatherly figures, with costume and manners to suit. The American has arrived at the old mansion-house, and finds himself among uncles, aunts, and grandsires. The pictures on the chimney-tiles of his nursery were pictures of these people. Here they are in the identical costumes and air, which so took him.

It is the fault of their forms that they grow stocky, and the women have that disadvantage, — few tall, slender figures of flowing shape, but stunted and thickset persons. The French say, that the Englishwomen have two left hands. But, in all ages, they are a handsome race. The bronze monuments of crusaders lying cross-legged, in the Temple Church at London, and those in Worcester and in Salisbury Cathedrals, which are seven hundred years old, are of the same type as the best youthful heads of men now in England; — please by beauty of the same character, an expression blending good-nature, valor, and refinement, and, mainly, by that uncorrupt youth in the face of manhood, which is daily seen in the streets of London.

Both branches of the Scandinavian race are distinguished for beauty. The anecdote of the handsome captives which Saint Gregory found at Rome, A.D. 600, is matched by the testimony of the Norman chroniclers, five centuries later, who wondered at the beauty and long flowing hair of the young English captives. Meantime, the Heimskringla has frequent occasion to speak of the personal beauty of its heroes. When it is considered what humanity, what resources of mental and moral power, the traits of the blond race betoken, — its accession to empire marks a new and finer epoch, wherein the old mineral force shall be subjugated at last by humanity, and shall plough in its furrow henceforward. It is not a final race, once a crab always crab, but a race with a future.

On the English face are combined decision and nerve, with the fair complexion, blue eyes, and open and florid aspect. Hence the love of truth, hence the sensibility, the fine perception, and poetic construction. The fair Saxon man, with open front, and honest meaning, domestic, affectionate, is not the wood out of which cannibal, or inquisitor, or assassin is made. But he is moulded for law, lawful trade, civility, marriage, the nurture of children, for colleges, churches, charities, and colonies.

They are rather manly than warlike. When the war is over, the mask falls from the affectionate and domestic tastes, which make them women in kindness. This union of qualities is fabled in their national legend of *Beauty and the Beast*,

or long before, in the Greek legend of *Hermaphrodite*. The two sexes are co-present in the English mind. I apply to Britannia, queen of seas and colonies, the words in which her latest novelist portrays his heroine: "She is as mild as she is game, and as game as she is mild." The English delight in the antagonism which combines in one person the extremes of courage and tenderness. Nelson, dying at Trafalgar, sends his love to Lord Collingwood, and, like an innocent school-boy that goes to bed, says, "Kiss me, Hardy," and turns to sleep. Lord Collingwood, his comrade, was of a nature the most affectionate and domestic. Admiral Rodney's figure approached to delicacy and effeminacy, and he declared himself very sensible to fear, which he surmounted only by considerations of honor and public duty. Clarendon says, the Duke of Buckingham was so modest and gentle, that some courtiers attempted to put affronts on him, until they found that this modesty and effeminacy was only a mask for the most terrible determination. And Sir Edward Parry said of Sir John Franklin, that, "if he found Wellington Sound open, he explored it; for he was a man who never turned his back on a danger, yet of that tenderness, that he would not brush away a mosquito." Even for their highwaymen the same virtue is claimed, and Robin Hood comes described to us as *mitissimus prædonum*, the gentlest thief. But they know where their war-dogs lie. Cromwell, Blake, Marlborough, Chatham, Nelson, and Wellington are not to be trifled with, and the brutal strength which lies at the bottom of society, the animal ferocity of the quays and cock-pits, the bullies of the costermongers of Shoreditch, Seven Dials, and Spitalfields, they know how to wake up.

They have a vigorous health, and last well into middle and old age. The old men are as red as roses, and still handsome. A clear skin, a peach-bloom complexion, and good teeth are found all over the island. They use a plentiful and nutritious diet. The operative cannot subsist on water-cresses. Beef, mutton, wheat-bread, and malt-liquors are universal among the first-class laborers. Good feeding is a chief point of national pride among the vulgar, and, in their caricatures, they represent the Frenchman as a poor, starved body. It is curious that Tacitus found the English beer already in use among the Germans: "They make from barley or wheat a drink corrupted into some resemblance to wine." Lord Chief Justice Fortescue in Henry VI.'s time, says, "The inhabitants of England drink no water, unless at certain times, on a religious score, and by way of penance." The extremes of poverty and ascetic penance, it would seem, never reach cold water in England. Wood, the antiquary, in describing the poverty and maceration of Father Lacey, an English Jesuit, does not deny him beer. He says, "his bed was under a thatching, and the way to it up a ladder; his fare was coarse; his drink, of a penny a gawn, or gallon."

They have more constitutional energy than any other people. They think, with Henri Quatre, that manly exercises are the foundation of that elevation of mind which gives one nature ascendant over another; or, with the Arabs, that the days spent in the chase are not counted in the length of life. They box, run, shoot, ride, row, and sail from pole to pole. They eat and drink, and live jolly in the open air, putting a bar of solid sleep between day and day. They walk and ride as fast as they can, their heads bent forward, as if urged on some pressing affair. The French say, that Englishmen in the street always walk straight before them like mad dogs. Men and women walk with infatuation. As soon as he can handle a gun, hunting is the fine art of every Englishman of condition. They are the most voracious people of prey that ever existed. Every season turns out the aristocracy into the country, to shoot and fish. The more vigorous run out of the island to Europe, to America, to Asia, to Africa, and Australia, to hunt with fury by gun, by trap, by harpoon, by lasso, with clog, with horse, with elephant, or with dromedary, all the game that is in nature. These men have written the game-books of all countries, as Hawker, Scrope, Murray, Herbert, Maxwell, Gumming, and a host of travellers. The people at home are addicted to boxing, running, leaping, and rowing matches.

I suppose, the dogs and horses must be thanked for the fact, that the men have muscles almost as tough and supple as their own. If in every efficient man, there is first a fine animal, in the English race it is of the best breed, a wealthy, juicy, broad-chested creature, steeped in ale and good cheer, and a little overloaded by his flesh. Men of animal nature rely, like animals, on their instincts. The Englishman associates well with dogs and horses. His attachment to the horse arises from the courage and address required to manage it. The horse finds out who is afraid of it, and does not disguise its opinion. Their young boiling clerks and lusty collegians like the company of horses better than the company of professors. I suppose, the horses are better company for them. The horse has more uses than Buffon noted. If you go into the streets, every driver in bus or dray is a bully, and, if I wanted a good troop of soldiers, I should recruit among the stables. Add a certain degree of refinement to the vivacity of these riders, and you obtain the precise quality which makes the men and women of polite society formidable.

They come honestly by their horsemanship, with *Hengst* and *Horsa* for their Saxon founders. The other branch of their race had been Tartar nomads. The horse was all their wealth. The children were fed on mares' milk. The pastures of Tartary were still remembered by the tenacious practice of the Norsemen to eat horse-flesh at religious feasts. In the Danish invasions, the marauders seized upon horses where they landed, and were at once converted into a body of expert

cavalry.

At one time, this skill seems to have declined. Two centuries ago, the English horse never performed any eminent service beyond the seas; and the reason assigned was, that the genius of the English hath always more inclined them to foot-service, as pure and proper manhood, without any mixture; whilst, in a victory on horseback, the credit ought to be divided betwixt the man and his horse. But in two hundred years, a change has taken place. Now, they boast that they understand horses better than any other people in the world, and that their horses are become their second selves.

“William the Conqueror being,” says Camden, “better affected to beasts than to men, imposed heavy fines and punishments on those that should meddle with his game.” The Saxon Chronicle says, “he loved the tall deer as if he were their father.” And rich Englishmen have followed his example, according to their ability, ever since, in encroaching on the tillage and commons with their game-preserves. It is a proverb in England, that it is safer to shoot a man than a hare. The severity of the game-laws certainly indicates an extravagant sympathy of the nation with horses and hunters. The gentlemen are always on horseback, and have brought horses to an ideal perfection, — the English racer is a factitious breed. A score or two of mounted gentlemen may frequently be seen running like centaurs down a hill nearly as steep as the roof of a house. Every inn-room is lined with pictures of races; telegraphs communicate, every hour, tidings of the heats from Newmarket and Ascot: and the House of Commons adjourns over the ‘Derby Day.’

ABILITY.

The Saxon and the Northman are both Scandinavians. History does not allow us to fix the limits of the application of these names with any accuracy; but from the residence of a portion of these people in France, and from some effect of that powerful soil on their blood and manners, the Norman has come popularly to represent in England the aristocratic, and the Saxon the democratic principle. And though, I doubt not, the nobles are of both tribes, and the workers of both, yet we are forced to use the names a little mythically, one to represent the worker, and the other the enjoyer.

The island was a prize for the best race. Each of the dominant races tried its fortune in turn. The Phoenician, the Celt, and the Goth had already got in. The Roman came, but in the very day when his fortune culminated. He looked in the eyes of a new people that was to supplant his own. He disembarked his legions, erected his camps and towers, — presently he heard bad news from Italy, and worse and worse, every year: at last, he made a handsome compliment of roads and walls, and departed. But the Saxon seriously settled in the land, builded, tilled, fished, and traded, with German truth and adhesiveness. The Dane came, and divided with him. Last of all, the Norman, or French-Dane, arrived, and formally conquered, harried, and ruled the kingdom. A century later, it came out, that the Saxon had the most bottom and longevity, had managed to make the victor speak the language and accept the law and usage of the victim; forced the baron to dictate Saxon terms to Norman kings; and, step by step, got all the essential securities of civil liberty invented and confirmed. The genius of the race and the genius of the place conspired to this effect. The island is lucrative to free labor, but not worth possession on other terms. The race was so intellectual, that a feudal or military tenure could not last longer than the war. The power of the Saxon-Danes, so thoroughly beaten in the war, that the name of English and villein were synonymous, yet so vivacious as to extort charters from the kings, stood on the strong personality of these people. Sense and economy must rule in a world which is made of sense and economy, and the banker, with his seven per cent, drives the earl out of his castle. A nobility of soldiers cannot keep down a commonalty of shrewd scientific persons. What signifies a pedigree of a hundred links, against a cotton-spinner with steam in his mill; or, against a company of broad-shouldered Liverpool merchants, for whom Stephenson and Brunel are contriving locomotives and a tubular bridge?

These Saxons are the hands of mankind. They have the taste for toil, a distaste for pleasure or repose, and the telescopic appreciation of distant gain.

They are the wealth-makers, — and by dint of mental faculty which has its own conditions. The Saxon works after liking, or, only for himself; and to set him at work, and to begin to draw his monstrous values out of barren Britain, all dishonor, fret, and barrier must be removed, and then his energies begin to play.

The Scandinavian fancied himself surrounded by Trolls, — a kind of goblin men, with vast power of work and skilful production, — divine stevedores, carpenters, reapers, smiths, and masons, swift to reward every kindness done them, with gifts of gold and silver. In all English history, this dream comes to pass. Certain Trolls or working brains, under the names of Alfred, Bede, Caxton, Bracton, Camden, Drake, Selden, Dugdale, Newton, Gibbon, Brindley, Watt, Wedgwood, dwell in the troll-mounts of Britain, and turn the sweat of their face to power and renown.

If the race is good, so is the place. Nobody landed on this spell-bound island with impunity. The enchantments of barren shingle and rough weather transformed every adventurer into a laborer. Each vagabond that arrived bent his neck to the yoke of gain, or found the air too tense for him. The strong survived, the weaker went to the ground. Even the pleasure-hunters and sots of England are of a tougher texture. A hard temperament had been formed by Saxon and Saxon-Dane, and such of these French or Normans as could reach it, were naturalized in every sense.

All the admirable expedients or means hit upon in England must be looked at as growths or irresistible offshoots of the expanding mind of the race. A man of that brain thinks and acts thus; and his neighbor, being afflicted with the same kind of brain, though he is rich, and called a baron, or a duke, thinks the same thing, and is ready to allow the justice of the thought and act in his retainer or tenant, though sorely against his baronial or ducal will.

The island was renowned in antiquity for its breed of mastiffs, so fierce, that when their teeth were set, you must cut their heads off to part them. The man was like his dog. The people have that nervous bilious temperament, which is known by medical men to resist every means employed to make its possessor subservient to the will of others. The English game is main force to main force, the planting of foot to foot, fair play and open field, — a rough tug without trick or dodging, till one or both come to pieces. King Ethelwald spoke the language of his race, when he planted himself at Wimborne, and said, 'he would do one of two things, or there live, or there lie.' They hate craft and subtlety. They neither poison, nor waylay, nor assassinate; and, when they have pounded each other to a poultice, they will shake hands and be friends for the remainder of their lives.

You shall trace these Gothic touches at school, at country fairs, at the hustings, and in parliament. No artifice, no breach of truth and plain dealing, —

not so much as secret ballot, is suffered in the island. In parliament, the tactics of the opposition is to resist every step of the government, by a pitiless attack; and in a bargain, no prospect of advantage is so dear to the merchant, as the thought of being tricked is mortifying.

Sir Kenelm Digby, a courtier of Charles and James, who won the sea-fight of Scanderoon, was a model Englishman in his day. "His person was handsome and gigantic, he had so graceful elocution and noble address, that, had he been dropt out of the clouds in any part of the world, he would have made himself respected: he was skilled in six tongues, and master of arts and arms."⁴ Sir Kenelm wrote a book, "Of Bodies and of Souls," in which he propounds, that "syllogisms do breed or rather are all the variety of man's life. They are the steps by which we walk in all our businesses. Man, as he is man, doth nothing else but weave such chains. Whatsoever he doth, swarving from this work, lie doth as deficient from the nature of man: and, if he do aught beyond this, by breaking out into divers sorts of exterior actions, he findeth, nevertheless, in this linked sequel of simple discourses, the art, the cause, the rule, the bounds, and the model of it."⁵

There spoke the genius of the English people. There is a necessity on them to be logical. They would hardly greet the good that did not logically fall, — as if it excluded their own merit, or shook their understandings. They are jealous of minds that have much facility of association, from an instinctive fear that the seeing many relations to their thought might impair this serial continuity and lucrative concentration. They are impatient of genius, or of minds addicted to contemplation, and cannot conceal their contempt for sallies of thought, however lawful, whose steps they cannot count by their wonted rule. Neither do they reckon better a syllogism that ends in syllogism. For they have a supreme eye to facts, and theirs is a logic that brings salt to soup, hammer to nail, oar to boat, the logic of cooks, carpenters, and chemists, following the sequence of nature, and one on which words make no impression. Their mind is not dazzled by its own means, but locked and bolted to results. They love men, who, like Samuel Johnson, a doctor in the schools, would jump out of his syllogism the instant his major proposition was in danger, to save that, at all hazards. Their practical vision is spacious, and they can hold many threads without entangling them. All the steps they orderly take; but with the high logic of never confounding the minor and major proposition; keeping their eye on their aim, in all the complicity and delay incident to the several series of means they employ. There is room in their minds for this and that, — a science of degrees. In the courts, the independence of the judges and the loyalty of the suitors are equally excellent. In Parliament, they have hit on that capital invention of freedom, a constitutional

opposition. And when courts and Parliament are both deaf, the plaintiff is not silenced. Calm, patient, his weapon of defence from year to year is the obstinate reproduction of the grievance, with calculations and estimates. But, meantime, he is drawing numbers and money to his opinion, resolved that if all remedy fails, right of revolution is at the bottom of his charter-box. They are bound to see their measure carried, and stick to it through ages of defeat.

Into this English logic, however, an infusion of justice enters, not so apparent in other races, — a belief in the existence of two sides, and the resolution to see fair play. There is on every question an appeal from the assertion of the parties to the proof of what is asserted. They are impious in their scepticism of a theory, but kiss the dust before a fact. Is it a machine, is it a charter, is it a boxer in the ring, is it a candidate on the hustings, — the universe of Englishmen will suspend their judgment, until the trial can be had. They are not to be led by a phrase, they want a working plan, a working machine, a working constitution, and will sit out the trial, and abide by the issue, and reject all preconceived theories. In politics they put blunt questions, which must be answered; who is to pay the taxes? what will you do for trade? what for corn? what for the spinner?

This singular fairness and its results strike the French with surprise. Philip de Commines says: “Now, in my opinion, among all the sovereignties I know in the world, that in which the public good is best attended to, and the least violence exercised on the people, is that of England.” Life is safe, and personal rights; and what is freedom, without security? whilst, in France, ‘fraternity,’ ‘equality,’ and ‘indivisible unity’ are names for assassination. Montesquieu said: “England is the freest country in the world. If a man in England had as many enemies as hairs on his head, no harm would happen to him.”

Their self-respect, their faith in causation, and their realistic logic or coupling of means to ends, have given them the leadership of the modern world. Montesquieu said, “No people have true common-sense but those who are born in England.” This common-sense is a perception of all the conditions of our earthly existence, of laws that can be stated, and of laws that cannot be stated, or that are learned only by practice, in which allowance for friction is made. They are impious in their scepticism of theory, and in high departments they are cramped and sterile. But the unconditional surrender to facts, and the choice of means to reach their ends, are as admirable as with ants and bees.

The bias of the nation is a passion for utility. They love the lever, the screw, and pulley, the Flanders draught-horse, the waterfall, wind-mills, tide-mills; the sea and the wind to bear their freight-ships. More than the diamond Koh-i-noor, which glitters among their crown-jewels, they prize that dull pebble which is wiser than a man, whose poles turn themselves to the poles of the world, and

whose axis is parallel to the axis of the world. Now, their toys are steam and galvanism. They are heavy at the fine arts, but adroit at the coarse; not good in jewelry or mosaics, but the best iron-masters, colliers, wool-combers, and tanners in Europe. They apply themselves to agriculture, to draining, to resisting encroachments of sea, wind, travelling sands, cold and wet subsoil; to fishery, to manufacture of indispensable staples, — salt, plumbago, leather, wool, glass, pottery, and brick, — to bees and silk-worms; and by their steady combinations they succeed. A manufacturer sits down to dinner in a suit of clothes which was wool on a sheep's back at sunrise. You dine with a gentleman on venison, pheasant, quail, pigeons, poultry, mushrooms, and pineapples, all the growth of his estate. They are neat husbands for ordering all their tools pertaining to house and field. All are well kept. There is no want and no waste. They study use and fitness in their building, in the order of their dwellings, and in their dress. The Frenchman invented the ruffle, the Englishman added the shirt. The Englishman wears a sensible coat buttoned to the chin, of rough but solid and lasting texture. If he is a lord, he dresses a little worse than a commoner. They have diffused the taste for plain substantial hats, shoes, and coats through Europe. They think him the best dressed man, whose dress is so fit for his use that you cannot notice or remember to describe it.

They secure the essentials in their diet, in their arts and manufactures. Every article of cutlery shows, in its shape, thought and long experience of workmen. They put the expense in the right place, as, in their sea-steamers, in the solidity of the machinery and the strength of the boat. The admirable equipment of their arctic ships carries London to the pole. They build roads, aqueducts, warm and ventilate houses. And they have impressed their directness and practical habit on modern civilization.

In trade, the Englishman believes that nobody breaks who ought not to break; and, that, if he do not make trade everything, it will make him nothing; and acts on this belief. The spirit of system, attention to details, and the subordination of details, or, the not driving things too finely (which is charged on the Germans), constitute that despatch of business, which makes the mercantile power of England.

In war, the Englishman looks to his means. He is of the opinion of Civilis, his German ancestor, whom Tacitus reports as holding “that the gods are on the side of the strongest”; — a sentence which Bonaparte unconsciously translated, when he said, “that he had noticed, that Providence always favored the heaviest battalion.” Their military science propounds that if the weight of the advancing column is greater than that of the resisting, the latter is destroyed. Therefore Wellington, when he came to the army in Spain, had every man weighed, first

with accoutrements, and then without; believing that the force of an army depended on the weight and power of the individual soldiers, in spite of cannon. Lord Palmerston told the House of Commons, that more care is taken of the health and comfort of English troops than of any other troops in the world; and that hence the English can put more men into the ranks, on the day of action, on the field of battle, than any other army. Before the bombardment of the Danish forts in the Baltic, Nelson spent day after day, himself in the boats, on the exhausting service of sounding the channel. Clerk of Eldin's celebrated manoeuvre of breaking the line of sea-battle, and Nelson's feat of *doubling*, or stationing his ships one on the outer bow, and another on the outer quarter of each of the enemy's, were only translations into naval tactics of Bonaparte's rule of concentration. Lord Collingwood was accustomed to tell his men, that, if they could fire three well-directed broadsides in five minutes, no vessel could resist them; and, from constant practice, they came to do it in three minutes and a half.

But conscious that no race of better men exists, they rely most on the simplest means; and do not like ponderous and difficult tactics, but delight to bring the affair hand to hand, where the victory lies with the strength, courage, and endurance of the individual combatants. They adopt every improvement in rig, in motor, in weapons, but they fundamentally believe that the best stratagem in naval war is to lay your ship close alongside of the enemy's ship, and bring all your guns to bear on him, until you or he go to the bottom. This is the old fashion, which never goes out of fashion, neither in nor out of England.

It is not usually a point of honor, nor a religious sentiment, and never any whim that they will shed their blood for; but usually property, and right measured by property, that breeds revolution. They have no Indian taste for a tomahawk-dance, no French taste for a badge or a proclamation. The Englishman is peaceably minding his business and earning his day's wages. But if you offer to lay hand on his day's wages, on his cow, or his right in common, or his shop, he will fight to the Judgment. Magna-charta, jury-trial, *habeas-corpus*, star-chamber, ship-money, Popery, Plymouth colony, American Revolution, are all questions involving a yeoman's right to his dinner, and, except as touching that, would not have lashed the British nation to rage and revolt.

Whilst they are thus instinct with a spirit of order, and of calculation, it must be owned they are capable of larger views; but the indulgence is expensive to them, costs great crises, or accumulations of mental power. In common, the horse works best with blinders. Nothing is more in the line of English thought, than our unvarnished Connecticut question, "Pray, sir, how do you get your living when you are at home?" The questions of freedom, of taxation, of

privilege, are money questions. Heavy fellows, steeped in beer and fleshpots, they are hard of hearing and dim of sight. Their drowsy minds need to be flagellated by war and trade and politics and persecution. They cannot well read a principle, except by the light of fagots and of burning towns.

Tacitus says of the Germans, “powerful only in sudden efforts, they are impatient of toil and labor.” This highly destined race, if it had not somewhere added the chamber of patience to its brain, would not have built London. I know not from which of the tribes and temperaments that went to the composition of the people this tenacity was supplied, but they clinch every nail they drive. They have no running for luck, and no immoderate speed. They spend largely on their fabric, and await the slow return. Their leather lies tanning seven years in the vat. At Rogers’s mills, in Sheffield, where I was shown the process of making a razor and a penknife, I was told there is no luck in making good steel; that they make no mistakes, every blade in the hundred and in the thousand is good. And that is characteristic of all their work, — no more is attempted than is done.

When Thor and his companions arrive at Utgard, he is told that “nobody is permitted to remain here, unless he understand some art, and excel in it all other men.” The same question is still put to the posterity of Thor. A nation of laborers, every man is trained to some one art or detail, and aims at perfection in that: not content unless he has something in which he thinks he surpasses all other men. He would rather not do anything at all, than not do it well. I suppose no people have such thoroughness: from the highest to the lowest, every man meaning to be master of his art.

“To show capacity,” a Frenchman described as the end of a speech in debate: “no,” said an Englishman, “but to set your shoulder at the wheel, — to advance the business.” Sir Samuel Romilly refused to speak in popular assemblies, confining himself to the House of Commons, where a measure can be carried by a speech. The business of the House of Commons is conducted by a few persons, but these are hard-worked. Sir Robert Peel “knew the Blue Books by heart.” His colleagues and rivals carry Hansard in their heads. The high civil and legal offices are not beds of ease, but posts which exact frightful amounts of mental labor. Many of the great leaders, like Pitt, Canning, Castlereagh, Romilly, are soon worked to death. They are excellent judges in England of a good worker, and when they find one, like Clarendon, Sir Philip Warwick, Sir William Coventry, Ashley, Burke, Thurlow, Mansfield, Pitt, Eldon, Peel, or Russell, there is nothing too good or too high for him.

They have a wonderful heat in the pursuit of a public aim. Private persons exhibit, in scientific and antiquarian researches, the same pertinacity as the nation showed in the coalitions in which it yoked Europe against the Empire of

Bonaparte, one after the other defeated, and still renewed, until the sixth hurled him from his seat.

Sir John Herschel, in completion of the work of his father, who had made the catalogue of the stars of the northern hemisphere, expatriated himself for years at the Cape of Good Hope, finished his inventory of the southern heaven, came home, and redacted it in eight years more; — a work whose value does not begin until thirty years have elapsed, and thenceforward a record to all ages of the highest import. The Admiralty sent out the Arctic expeditions year after year, in search of Sir John Franklin, until, at last, they have threaded their way through polar pack and Behring's Straits, and solved the geographical problem. Lord Elgin, at Athens, saw the imminent ruin of the Greek remains, set up his scaffoldings, in spite of epigrams, and, after five years' labor to collect them, got his marbles on shipboard. The ship struck a rock, and went to the bottom. He had them all fished up, by divers, at a vast expense, and brought to London; not knowing that Haydon, Fuseli, and Canova, and all good heads in all the world, were to be his applauders. In the same spirit, were the excavation and research by Sir Charles Fellows, for the Xanthian monument; and of Layard, for his Nineveh sculptures.

The nation sits in the immense city they have builded, a London extended into every man's mind, though he live in Van Dieman's Land or Capetown. Faithful performance of what is undertaken to be performed, they honor in themselves, and exact in others, as certificate of equality with themselves. The modern world is theirs. They have made and make it day by day. The commercial relations of the world are so intimately drawn to London, that every dollar on earth contributes to the strength of the English government. And if all the wealth in the planet should perish by war or deluge, they know themselves competent to replace it.

They have approved their Saxon blood, by their sea-going qualities; their descent from Odin's smiths, by their hereditary skill in working in iron; their British birth, by husbandry and immense wheat harvests; and justified their occupancy of the centre of habitable land, by their supreme ability and cosmopolitan spirit. They have tilled, builded, forged, spun, and woven. They have made the island a thoroughfare; and London a shop, a law-court, a record-office, and scientific bureau, inviting to strangers; a sanctuary to refugees of every political and religious opinion; and such a city, that almost every active man, in any nation, finds himself, at one time or other, forced to visit it.

In every path of practical activity, they have gone even with the best. There is no secret of war, in which they have not shown mastery. The steam-chamber of Watt, the locomotive of Stephenson, the cotton-mule of Roberts, perform the

labor of the world. There is no department of literature, of science, or of useful art, in which they have not produced a first-rate book. It is England, whose opinion is waited for on the merit of a new invention, an improved science. And in the complications of the trade and politics of their vast empire, they have been equal to every exigency, with counsel and with conduct. Is it their luck, or is it in the chambers of their brain, — it is their commercial advantage, that whatever light appears in better method or happy invention, breaks out *in their race*. They are a family to which a destiny attaches, and the Banshee has sworn that a male heir shall never be wanting. They have a wealth of men to fill important posts, and the vigilance of party criticism insures the selection of a competent person.

A proof of the energy of the British people is the highly artificial construction of the whole fabric. The climate and geography, I said, were factitious, as if the hands of man had arranged the conditions. The same character pervades the whole kingdom. Bacon said, “Rome was a state not subject to paradoxes”; but England subsists by antagonisms and contradictions. The foundations of its greatness are the rolling waves; and, from first to last, it is a museum of anomalies. This foggy and rainy country furnishes the world with astronomical observations. Its short rivers do not afford water-power, but the land shakes under the thunder of the mills. There is no gold-mine of any importance, but there is more gold in England than in all other countries. It is too far north for the culture of the vine, but the wines of all countries are in its docks. The French Comte de Lauraguais said, “no fruit ripens in England but a baked apple”; but oranges and pineapples are as cheap in London as in the Mediterranean. The Mark-Lane Express, or the Custom-House Returns bear out to the letter the vaunt of Pope, —

“Let India boast her palms, nor envy we
The weeping amber, nor the spicy tree,
While, by our oaks, those precious loads are borne,
And realms commanded which those trees adorn.”

The native cattle are extinct, but the island is full of artificial breeds. The agriculturist Bakewell created sheep and cows and horses to order, and breeds in which everything was omitted but what is economical. The cow is sacrificed to her bag, the ox to his surloin. Stall-feeding makes sperm-mills of the cattle, and converts the stable to a chemical factory. The rivers, lakes, and ponds, too much fished, or obstructed by factories, are artificially filled with the eggs of salmon, turbot, and herring.

Chat Moss and the fens of Lincolnshire and Cambridgeshire are unhealthy and too barren to pay rent. By cylindrical tiles, and gutta-percha tubes, five

millions of acres of bad land have been drained and put on equality with the best, for rape-culture and grass. The climate too, which was already believed to have become, milder and drier by the enormous consumption of coal, is so far reached by this new action, that fogs and storms are said to disappear. In due course, all England will be drained, and rise a second time out of the waters. The latest step was to call in the aid of steam to agriculture. Steam is almost an Englishman. I do not know but they will send him to Parliament, next, to make laws. He weaves, forges, saws, pounds, fans, and now he must pump, grind, dig, and plough for the farmer. The markets created by the manufacturing population have erected agriculture into a great thriving and spending industry. The value of the houses in Britain is equal to the value of the soil. Artificial aids of all kinds are cheaper than the natural resources. No man can afford to walk, when the parliamentary train carries him for a penny a mile. Gas-burners are cheaper than daylight in numberless floors in the cities. All the houses in London buy their water. The English trade does not exist for the exportation of native products, but on its manufactures, or the making well everything which is ill made elsewhere. They make ponchos for the Mexican, bandannas for the Hindoo, ginseng for the Chinese, beads for the Indian, laces for the Flemings, telescopes for astronomers, cannons for kings.

The Board of Trade caused the best models of Greece and Italy to be placed within the reach of every manufacturing population. They caused to be translated from foreign languages and illustrated by elaborate drawings, the most approved works of Munich, Berlin, and Paris. They have ransacked Italy to find new forms, to add a grace to the products of their looms, their potteries, and their foundries.⁶

The nearer we look, the more artificial is their social system. Their law is a network of fictions. Their property, a scrip or certificate of right to interest on money that no man ever saw. Their social classes are made by statute. Their ratios of power and representation are historical and legal. The last reform-bill took away political power from a mound, a ruin, and a stone-wall, whilst Birmingham and Manchester, whose mills paid for the wars of Europe, had no representative. Purity in the elective Parliament is secured by the purchase of seats.⁷ Foreign power is kept by armed colonies; power at home, by a standing army of police. The pauper lives better than the free laborer; the thief better than the pauper; and the transported felon better than the one under imprisonment. The crimes are factitious, as smuggling, poaching, non-conformity, heresy, and treason. Better, they say in England, kill a man than a hare. The sovereignty of the seas is maintained by the impressment of seamen. "The impressment of seamen," said Lord Eldon, "is the life of our navy." Solvency is maintained by

means of a national debt, on the principle, “if you will not lend me the money, how can I pay you?” For the administration of justice, Sir Samuel Romilly’s expedient for clearing the arrears of business in Chancery, was, the chancellor’s staying away entirely from his court. Their system of education is factitious. The Universities galvanize dead languages into a semblance of life. Their church is artificial. The manners and customs of society are artificial; — made-up men with made-up manners; — and thus the whole is Birminghamized, and we have a nation whose existence is a work of art; — a cold, barren, almost arctic isle, being made the most fruitful, luxurious, and imperial land in the whole earth.

Man in England submits to be a product of political economy. On a bleak moor, a mill is built, a banking-house is opened, and men come in, as water in a sluice-way, and towns and cities rise. Man is made as a Birmingham button. The rapid doubling of the population dates from Watt’s steam-engine. A landlord, who owns a province, says, “the tenantry are unprofitable; let me have sheep.” He unroofs the houses, and ships the population to America. The nation is accustomed to the instantaneous creation of wealth. It is the maxim of their economists, “that the greater part in value of the wealth now existing in England has been produced by human hands within the last twelve months.” Meantime, three or four days’ rain will reduce hundreds to starving in London.

One secret of their power is their mutual good understanding. Not only good minds are born among them, but all the people have good minds. Every nation has yielded some good wit, if, as has chanced to many tribes, only one. But the intellectual organization of the English admits a communicableness of knowledge and ideas among them all. An electric touch by any of their national ideas, melts them into one family, and brings the hoards of power which their individuality is always hiving, into use and play for all. Is it the smallness of the country, or is it the pride and affection of race, — they have solidarity, or responsibleness, and trust in each other.

Their minds, like wool, admit of a dye which is more lasting than the cloth. They embrace their cause with more tenacity than their life. Though not military, yet every common subject by the poll is fit to make a soldier of. These private reserved mute family-men can adopt a public end with all their heat, and this strength of affection makes the romance of their heroes. The difference of rank does not divide the national heart. The Danish poet Oehlenschläger complains, that who writes in Danish writes to two hundred readers. In Germany, there is one speech for the learned, and another for the masses, to that extent, that, it is said, no sentiment or phrase from the works of any great German writer is ever heard among the lower classes. But in England, the language of the noble is the language of the poor. In Parliament, in pulpits, in theatres, when the speakers

rise to thought and passion, the language becomes idiomatic; the people in the street best understand the best words. And their language seems drawn from the Bible, the common law, and the works of Shakspeare, Bacon, Milton, Pope, Young, Cowper, Burns, and Scott. The island has produced two or three of the greatest men that ever existed, but they were not solitary in their own time. Men quickly embodied what Newton found out, in Greenwich observatories, and practical navigation. The boys knew all that Hutton knew of strata, or Dalton of atoms, or Harvey of blood-vessels; and these studies, once dangerous, are in fashion. So what is invented or known in agriculture, or in trade, or in war, or in art, or in literature, and antiquities. A great ability, not amassed on a few giants, but poured into the general mind, so that each of them could at a pinch stand in the shoes of the other; and they are more bound in character than differenced in ability or in rank. The laborer is a possible lord. The lord is a possible basket-maker. Every man carries the English system in his brain, knows what is confided to him, and does therein the best he can. The chancellor carries England on his mace, the midshipman at the point of his dirk, the smith on his hammer, the cook in the bowl of his spoon; the postilion cracks his whip for England, and the sailor times his oars to "God save the King!" The very felons have their pride in each other's English stanchness. In politics and in war, they hold together as by hooks of steel. The charm in Nelson's history is, the unselfish greatness; the assurance of being supported to the uttermost by those whom he supports to the uttermost. Whilst they are some ages ahead of the rest of the world in the art of living; whilst in some directions they do not represent the modern spirit, but constitute it, — this vanguard of civility and power they coldly hold, marching in phalanx, lock-step, foot after foot, file after file of heroes, ten thousand deep.

MANNERS.

I find the Englishman to be him of all men who stands firmest in his shoes. They have in themselves what they value in their horses, mettle and bottom. On the day of my arrival at Liverpool, a gentleman, in describing to me the Lord Lieutenant of Ireland, happened to say, "Lord Clarendon has pluck like a cock, and will fight till he dies"; and, what I heard first I heard last, and the one thing the English value, is *pluck*. The word is not beautiful, but on the quality they signify by it the nation is unanimous. The cabmen have it; the merchants have it; the bishops have it; the women have it; the journals have it; the Times newspaper, they say, is the pluckiest thing in England, and Sidney Smith had made it a proverb, that little Lord John Russell, the minister, would take the command of the Channel fleet to-morrow.

They require you to dare to be of your own opinion, and they hate the practical cowards who cannot in affairs answer directly yes or no. They dare to displease, nay, they will let you break all the commandments, if you do it natively, and with spirit. You must be somebody; then you may do this or that, as you will.

Machinery has been applied to all work, and carried to such perfection, that little is left for the men but to mind the engines and feed the furnaces. But the machines require punctual service, and as they never tire, they prove too much for their tenders. Mines, forges, mills, breweries, railroads, steam-pump, steam-plough, drill of regiments, drill of police, rule of court, and shop-rule, have operated to give a mechanical regularity to all the habit and action of men. A terrible machine has possessed itself of the ground, the air, the men and women, and hardly even thought is free.

The mechanical might and organization require in the people constitution and answering spirits; and he who goes among them must have some weight of metal. At last, you take your hint from the fury of life you find, and say, one thing is plain, this is no country for faint-hearted people: don't creep about diffidently; make up your mind; take your own course, and you shall find respect and furtherance.

It requires, men say, a good constitution to travel in Spain. I say as much of England, for other cause, simply on account of the vigor and brawn of the people. Nothing but the most serious business could give one any counterweight to these Baresarks, though they were only to order eggs and muffins for their breakfast. The Englishman speaks with all his body. His elocution is stomachic, — as the American's is labial. The Englishman is very petulant and precise

about his accommodation at inns, and on the roads; a quiddle about his toast and his chop, and every species of convenience, and loud and pungent in his expressions of impatience at any neglect. His vivacity betrays itself, at all points, in his manners, in his respiration, and the inarticulate noises he makes in clearing the throat, — all significant of burly strength. He has stamina; he can take the initiative in emergencies. He has that *aplomb*, which results from a good adjustment of the moral and physical nature, and the obedience of all the powers to the will; as if the axes of his eyes were united to his backbone, and only moved with the trunk.

This vigor appears in the incuriosity, and stony neglect, each of every other. Each man walks, eats, drinks, shaves, dresses, gesticulates, and, in every manner, acts, and suffers without reference to the bystanders, in his own fashion, only careful not to interfere with them, or annoy them; not that he is trained to neglect the eyes of his neighbors, — he is really occupied with his own affair, and does not think of them. Every man in this polished country consults only his convenience, as much as a solitary pioneer in Wisconsin. I know not where any personal eccentricity is so freely allowed, and no man gives himself any concern with it. An Englishman walks in a pouring rain, swinging his closed umbrella like a walking-stick; wears a wig, or a shawl, or a saddle, or stands on his head, and no remark is made. And as he has been doing this for several generations, it is now in the blood.

In short, every one of these islanders is an island himself, safe, tranquil, incommunicable. In a company of strangers, you would think him deaf; his eyes never wander from his table and newspaper. He is never betrayed into any curiosity or unbecoming emotion. They have all been trained in one severe school of manners, and never put off the harness. He does not give his hand. He does not let you meet his eye. It is almost an affront to look a man in the face, without being introduced. In mixed or in select companies they do not introduce persons; so that a presentation is a circumstance as valid as a contract. Introductions are sacraments. He withholds his name. At the hotel, he is hardly willing to whisper it to the clerk at the book-office. If he give you his private address on a card, it is like an avowal of friendship; and his bearing on being introduced is cold, even though he is seeking your acquaintance, and is studying how he shall serve you.

It was an odd proof of this impressive energy, that, in my lectures, I hesitated to read and threw out for its impertinence many a disparaging phrase, which I had been accustomed to spin, about poor, thin, unable mortals; so much had the fine physique and the personal vigor of this robust race worked on my imagination.

I happened to arrive in England at the moment of a commercial crisis. But it was evident that, let who will fail, England will not. These people have sat here a thousand years, and here will continue to sit. They will not break up, or arrive at any desperate revolution, like their neighbors; for they have as much energy, as much continence of character, as they ever had. The power and possession which surround them are their own creation, and they exert the same commanding industry at this moment.

They are positive, methodical, cleanly, and formal, loving routine, and conventional ways; loving truth and religion, to be sure, but inexorable on points of form. All the world praises the comfort and private appointments of an English inn, and of English households. You are sure of neatness and of personal decorum. A Frenchman may possibly be clean: an Englishman is conscientiously clean. A certain order and complete propriety is found in his dress and in his belongings.

Born in a harsh and wet climate, which keeps him in doors whenever he is at rest, and being of an affectionate and loyal temper, he dearly loves his house. If he is rich, he buys a demesne, and builds a hall; if he is in middle condition, he spares no expense on his house. Without, it is all planted; within, it is wainscoted, carved, curtained, hung with pictures, and filled with good furniture. 'T is a passion which survives all others, to deck and improve it. Hither he brings all that is rare and costly, and with the national tendency to sit fast in the same spot for many generations, it comes to be, in the course of time, a museum of heirlooms, gifts, and trophies of the adventures and exploits of the family. He is very fond of silver plate, and, though he have no gallery of portraits of his ancestors, he has of their punch-bowls and porringers. Incredible amounts of plate are found in good houses, and the poorest have some spoon or saucepan, gift of a godmother, saved out of better times.

An English family consists of a few persons, who, from youth to age, are found revolving within a few feet of each other, as if tied by some invisible ligature, tense as that cartilage which we have seen attaching the two Siamese. England produces under favorable conditions of ease and culture the finest women in the world. And, as the men are affectionate and true-hearted, the women inspire and refine them. Nothing can be more delicate without being fantastical, nothing more firm and based in nature and sentiment, than the courtship and mutual carriage of the sexes. The song of 1596 says, "The wife of every Englishman is counted blest." The sentiment of Imogen in Cymbeline is copied from English nature; and not less the Portia of Brutus, the Kate Percy, and the Desdemona. The romance does not exceed the height of noble passion in Mrs. Lucy Hutchinson, or in Lady Russell, or even as one discerns through the

plain prose of Pepys's Diary, the sacred habit of an English wife. Sir Samuel Romilly could not bear the death of his wife. Every class has its noble and tender examples.

Domesticity is the taproot which enables the nation to branch wide and high. The motive and end of their trade and empire is to guard the independence and privacy of their homes. Nothing so much marks their manners as the concentration on their household ties. This domesticity is carried into court and camp. Wellington governed India and Spain and his own troops, and fought battles like a good family-man, paid his debts, and, though general of an army in Spain, could not stir abroad for fear of public creditors. This taste for house and parish merits has of course its doting and foolish side. Mr. Cobbett attributes the huge popularity of Perceval, prime minister in 1810, to the fact that he was wont to go to church every Sunday, with a large quarto gilt prayer-book under one arm, his wife hanging on the other, and followed by a long brood of children.

They keep their old customs, costumes, and pomps, their wig and mace, sceptre and crown. The Middle Ages still lurk in the streets of London. The Knights of the Bath take oath to defend injured ladies; the gold-stick-in-waiting survives. They repeated the ceremonies of the eleventh century in the coronation of the present Queen. A hereditary tenure is natural to them. Offices, farms, trades, and traditions descend so. Their leases run for a hundred and a thousand years. Terms of service and partnership are lifelong, or are inherited. "Holdship has been with me," said Lord Eldon, "eight-and-twenty years, knows all my business and books." Antiquity of usage is sanction enough. Wordsworth says of the small freeholders of Westmoreland, "Many of these humble sons of the hills had a consciousness that the land which they tilled had for more than five hundred years been possessed by men of the same name and blood." The ship-carpenter in the public yards, my lord's gardener and porter, have been there for more than a hundred years, grandfather, father, and son.

The English power resides also in their dislike of change. They have difficulty in bringing their reason to act, and on all occasions use their memory first. As soon as they have rid themselves of some grievance, and settled the better practice, they make haste to fix it as a finality, and never wish to hear of alteration more.

Every Englishman is an embryonic chancellor: his instinct is to search for a precedent. The favorite phrase of their law is, "a custom whereof the memory of man runneth not back to the contrary." The barons say, "Nolumus mutari"; and the cockneys stifle the curiosity of the foreigner on the reason of any practice, with, "Lord, sir, it was always so." They hate innovation. Bacon told them, Time was the right reformer; Chatham, that "confidence was a plant of slow growth";

Canning, to “advance with the times”; and Wellington, that “habit was ten times nature.” All their statesmen learn the irresistibility of the tide of custom, and have invented many fine phrases to cover this slowness of perception, and prehensibility of tail.

A sea-shell should be the crest of England, not only because it represents a power built on the waves, but also the hard finish of the men. The Englishman is finished like a cowry or a murex. After the spire and the spines are formed, or, with the formation, a juice exudes, and a hard enamel varnishes every part. The keeping of the proprieties is as indispensable as clean, linen. No merit quite countervails the want of this, whilst this sometimes stands in lieu of all. “T is in bad taste,” is the most formidable word an Englishman can pronounce. But this Japan costs them dear. There is a prose in certain Englishmen, which exceeds in wooden deadness all rivalry with other countrymen. There is a knell in the conceit and externality of their voice, which seems to say, *Leave all hope behind*. In this Gibraltar of propriety, mediocrity gets entrenched, and consolidated, and founded in adamant. An Englishman of fashion is like one of those souvenirs, bound in gold vellum, enriched with delicate engravings, on thick hot-pressed paper, fit for the hands of ladies and princes, but with nothing in it worth reading or remembering.

A severe decorum rules the court and the cottage. When Thalberg, the pianist, was one evening performing before the Queen, at Windsor, in a private party, the Queen accompanied him with her voice. The circumstance took air, and all England shuddered from sea to sea. The indecorum was never repeated. Cold, repressive manners prevail. No enthusiasm is permitted except at the opera. They avoid everything marked. They require a tone of voice that excites no attention in the room. Sir Philip Sidney is one of the patron saints of England, of whom Wotton said, “His wit was the measure of congruity.”

Pretension and vaporing are once for all distasteful. They keep to the other extreme of low tone in dress and manners. They avoid pretension and go right to the heart of the thing. They hate nonsense, sentimentalism, and highflown expression; they use a studied plainness. Even Brummell their fop was marked by the severest simplicity in dress. They value themselves on the absence of everything theatrical in the public business, and on conciseness and going to the point, in private affairs.

In an aristocratical country, like England, not the Trial by Jury, but the dinner is the capital institution. It is the mode of doing honor to a stranger, to invite him to eat, — and has been for many hundred years. “And they think,” says the Venetian traveller of 1500, “no greater honor can be conferred or received, than to invite others to eat with them, or to be invited themselves, and they would

sooner give five or six ducats to provide an entertainment for a person, than a groat to assist him in any distress.”⁸ It is reserved to the end of the day, the family-hour being generally six, in London, and, if any company is expected, one or two hours later. Every one dresses for dinner, in his own house, or in another man’s. The guests are expected to arrive within half an hour of the time fixed by card of invitation, and nothing but death or mutilation is permitted to detain them. The English dinner is precisely the model on which our own are constructed in the Atlantic cities. The company sit one or two hours, before the ladies leave the table. The gentlemen remain over their wine an hour longer, and rejoin the ladies in the drawing-room, and take coffee. The dress dinner generates a talent of table-talk, which reaches great perfection: the stories are so good, that one is sure they must have been often told before, to have got such happy turns. Hither come all manner of clever projects, bits of popular science, of practical invention, of miscellaneous humor; political, literary, and personal news; railroads, horses, diamonds, agriculture, horticulture, pisciculture, and wine.

English stories, *bon-mots*, and the recorded table-talk of their wits, are as good as the best of the French. In America, we are apt scholars, but have not yet attained the same perfection: for the range of nations from which London draws, and the steep contrasts of condition, create the picturesque in society, as broken country makes picturesque landscape, whilst our prevailing equality makes a prairie tameness: and secondly, because the usage of a dress-dinner every day at dark has a tendency to hive and produce to advantage everything good. Much attrition has worn every sentence into a bullet. Also one meets now and then with polished men, who know everything, have tried everything, can do everything, and are quite superior to letters and science. What could they not, if only they would?

TRUTH.

The Teutonic tribes have a national singleness of heart, which contrasts with the Latin races. The German name has a proverbial significance of sincerity and honest meaning. The arts bear testimony to it. The faces of clergy and laity in old sculptures and illuminated missals are charged with earnest belief. Add to this hereditary rectitude, the punctuality and precise dealing which commerce creates, and you have the English truth and credit. The government strictly performs its engagements. The subjects do not understand trifling on its part. When any breach of promise occurred, in the old days of prerogative, it was resented by the people as an intolerable grievance. And, in modern times, any slipperiness in the government of political faith, or any repudiation or crookedness in matters of finance, would bring the whole nation to a committee of inquiry and reform. Private men keep their promises, never so trivial. Down goes the flying word on the tablets, and is indelible as Domesday Book.

Their practical power rests on their national sincerity. Veracity derives from instinct, and marks superiority in organization. Nature has endowed some animals with cunning, as a compensation for strength withheld; but it has provoked the malice of all others, as if avengers of public wrong. In the nobler kinds, where strength could be afforded, her races are loyal to truth, as truth is the foundation of the social state. Beasts that make no truce with man, do not break faith with each other. 'T is said, that the wolf, who makes a *cache* of his prey, and brings his fellows with him to the spot, if, on digging it is not found, is instantly and unresistingly torn in pieces. English veracity seems to result on a sounder animal structure, as if they could afford it. They are blunt in saying what they think, sparing of promises, and they require plain dealing of others. We will not have to do with a man in a mask. Let us know the truth. Draw a straight line, hit whom and where it will. Alfred, whom the affection of the nation makes the type of their race, is called by a writer at the Norman Conquest, the *truth-speaker*; *Alueredus veridicus*. Geoffrey of Monmouth says of King Aurelius, uncle of Arthur, that "above all things he hated a lie." The Northman Guttorm said to King Olaf, "It is royal work to fulfil royal words." The mottoes of their families are monitory proverbs, as, *Fare fac*, — Say, do, — of the Fairfaxes; *Say and seal*, of the house of Fiennes; *Vero nil verius*, of the De Veres. To be king of their word, is their pride. When they unmask cant, they say, "The English of this is," etc.; and to give the lie is the extreme insult. The phrase of the lowest of the people is "honor-bright," and their vulgar praise, "his word is as good as his bond." They hate shuffling and equivocation, and the cause is damaged in the

public opinion, on which any paltering can be fixed. Even Lord Chesterfield, with his French breeding, when he came to define a gentleman, declared that truth made his distinction; and nothing ever spoken by him would find so hearty a suffrage from his nation. The Duke of Wellington, who had the best right to say so, advises the French General Kellermann, that he may rely on the parole of an English officer. The English, of all classes, value themselves on this trait, as distinguishing them from the French, who, in the popular belief, are more polite than true. An Englishman understates, avoids the superlative, checks himself in compliments, alleging, that in the French language, one cannot speak without lying.

They love reality in wealth, power, hospitality, and do not easily learn to make a show, and take the world as it goes. They are not fond of ornaments, and if they wear them, they must be gems. They read gladly in old Fuller, that a lady, in the reign of Elizabeth, “would have as patiently digested a lie, as the wearing of false stones or pendants of counterfeit pearl.” They have the earth-hunger, or preference for property in land, which is said to mark the Teutonic nations. They build of stone; public and private buildings are massive and durable. In comparing their ships’ houses, and public offices with the American, it is commonly said, that they spend a pound, where we spend a dollar. Plain rich clothes, plain rich equipage, plain rich finish throughout their house and belongings, mark the English truth.

They confide in each other, — English believes in English. The French feel the superiority of this probity. The Englishman is not springing a trap for his admiration, but is honestly minding his business. The Frenchman is vain. Madame de Staël says, that the English irritated Napoleon, mainly, because they have found out how to unite success with honesty. She was not aware how wide an application her foreign readers would give to the remark. Wellington discovered the ruin of Bonaparte’s affairs, by his own probity. He augured ill of the empire, as soon as he saw that it was mendacious, and lived by war. If war do not bring in its sequel new trade, better agriculture and manufactures, but only games, fireworks, and spectacles, — no prosperity could support it; much less, a nation decimated for conscripts, and out of pocket, like France. So he drudged for years on his military works at Lisbon, and from this base at last extended his gigantic lines to Waterloo, believing in his countrymen and their syllogisms above all the rhodomontade of Europe.

At a St. George’s festival, in Montreal, where I happened to be a guest, since my return home, I observed that the chairman complimented his compatriots, by saying, “they confided that wherever they met an Englishman, they found a man who would speak the truth.” And one cannot think this festival fruitless, if, all

over the world, on the 23d of April, wherever two or three English are found, they meet to encourage each other in the nationality of veracity.

In the power of saying rude truth, sometimes in the lion's mouth, no men surpass them. On the king's birthday, when each bishop was expected to offer the king a purse of gold, Latimer gave Henry VIII. a copy of the Vulgate, with a mark at the passage, "Whoremongers and adulterers God will judge"; and they so honor stoutness in each other, that the king passed it over. They are tenacious of their belief, and cannot easily change their opinions to suit the hour. They are like ships with too much head on to come quickly about, nor will prosperity or even adversity be allowed to shake their habitual view of conduct. Whilst I was in London, M. Guizot arrived there on his escape from Paris, in February, 1843. Many private friends called on him. His name was immediately proposed as an honorary member to the Athenæum. M. Guizot was blackballed. Certainly, they knew the distinction of his name. But the Englishman is not fickle. He had really made up his mind, now for years as he read his newspaper, to hate and despise M. Guizot; and the altered position of the man as an illustrious exile, and a guest in the country, makes no difference to him, as it would instantly, to an American.

They require the same adherence, thorough conviction and reality in public men. It is the want of character which makes the low reputation of the Irish members. "See them," they said, "one hundred and twenty-seven all voting like sheep, never proposing anything, and all but four voting the income tax," — which was an ill-judged concession of the government, relieving Irish property from the burdens charged on English.

They have a horror of adventurers in or out of Parliament. The ruling passion of Englishmen, in these days, is a terror of humbug. In the same proportion, they value honesty, stoutness, and adherence to your own. They like a man committed to his objects. They hate the French, as frivolous; they hate the Irish, as aimless; they hate the Germans, as professors. In February, 1848, they said, Look, the French king and his party fell for want of a shot; they had not conscience to shoot, so entirely was the pith and heart of monarchy eaten out.

They attack their own politicians every day, on the same grounds, as adventurers. They love stoutness in standing for your right, in declining money or promotion that costs any concession. The barrister refuses the silk gown of Queen's Counsel, if his junior have it one day earlier. Lord Collingwood would not accept his medal for victory on 14th February, 1797, if he did not receive one for victory on 1st June, 1794; and the long-withholden medal was accorded. When Castlereagh dissuaded Lord Wellington from going to the king's levee, until the unpopular Cintra business had been explained, he replied: "You furnish me a reason for going. I will go to this, or I will never go to a king's levee." The

radical mob at Oxford cried after the tory Lord Eldon, "There's old Eldon; cheer him; he never ratted." They have given the parliamentary nickname of *Trimmers* to the time-servers, whom English character does not love.⁹

They are very liable in their politics to extraordinary delusions, thus, to believe what stands recorded in the gravest books, that the movement of 10th April, 1848, was urged or assisted by foreigners: which, to be sure, is paralleled by the democratic whimsey in this country, which I have noticed to be shared by men sane on other points, that the English are at the bottom of the agitation of slavery, in American politics: and then again to the French popular legends on the subject of *perfidious Albion*. But suspicion will make fools of nations as of citizens.

A slow temperament makes them less rapid and ready than other countrymen, and has given occasion to the observation that English wit comes afterwards, — which the French denote as *esprit d'escalier*. This dulness makes their attachment to home, and their adherence in all foreign countries to home habits. The Englishman who visits Mount Etna will carry his teakettle to the top. The old Italian author of the "Relation of England" (in 1500) says: "I have it on the best information, that, when the war is actually raging most furiously, they will seek for good eating, and all their other comforts, without thinking what harm might befall them." Then their eyes seem to be set at the bottom of a tunnel, and they affirm the one small fact they know, with the best faith in the world that nothing else exists. And, as their own belief in guineas is perfect, they readily, on all occasions, apply the pecuniary argument as final. Thus when the Rochester rappings began to be heard of in England, a man deposited £100 in a sealed box in the Dublin Bank, and then advertised in the newspapers to all somnambulists, mesmerizers, and others, that whoever could tell him the number of his note should have the money. He let it lie there six months, the newspapers now and then, at his instance, stimulating the attention of the adepts; but none could ever tell him; and he said, "Now let me never be bothered more with this proven lie." It is told of a good Sir John, that he heard a case stated by counsel, and made up his mind; then the counsel for the other side taking their turn to speak, he found himself so unsettled and perplexed, that he exclaimed, "So help me God! I will never listen to evidence again." Any number of delightful examples of this English stolidity are the anecdotes of Europe. I knew a very worthy man, — a magistrate, I believe he was, in the town of Derby, — who went to the opera, to see Malibrau. In one scene, the heroine was to rush across a ruined bridge. Mr. B. arose, and mildly yet firmly called the attention of the audience and the performers to the fact that, in his judgment, the bridge was unsafe! This English stolidity contrasts with French wit and tact. The French, it

is commonly said, have greatly more influence in Europe than the English. What influence the English have is by brute force of wealth and power; that of the French by affinity and talent. The Italian is subtle, the Spaniard treacherous: tortures, it was said, could never wrest from an Egyptian the confession of a secret. None of these traits belong to the Englishman. His choler and conceit force everything out. Defoe, who knew his countrymen well, says of them: —

“In close intrigue, their faculty ‘s but weak,
For generally whate’er they know, they speak,
And often their own counsels undermine
By mere infirmity without design;
From whence, the learned say, it doth proceed,
That English treasons never can succeed;
For they ‘re so open-hearted, you may know
Their own most secret thoughts, and others’ too.”

CHARACTER.

The English race are reputed morose. I do not know that they have sadder brows than their neighbors of northern climates. They are sad by comparison with the singing and dancing nations: not sadder, but slow and staid, as finding their joys at home. They, too, believe that where there is no enjoyment of life, there can be no vigor and art in speech or thought; that your merry heart goes all the way, your sad one tires in a mile. This trait of gloom has been fixed on them by French travellers, who, from Froissart, Voltaire, Le Sage, Mirabeau, down to the lively journalists of the *feuilletons*, have spent their wit on the solemnity of their neighbors. The French say, gay conversation is unknown in their island: the Englishman finds no relief from reflection except in reflection: when he wishes for amusement, he goes to work: his hilarity is like an attack of fever. Religion, the theatre, and the reading the books of his country, all feed and increase his natural melancholy. The police does not interfere with public diversions. It thinks itself bound in duty to respect the pleasures and rare gayety of this inconsolable nation; and their well-known courage is entirely attributable to their disgust of life.

I suppose their gravity of demeanor and their few words have obtained this reputation. As compared with the Americans, I think them cheerful and contented. Young people, in our country, are much more prone to melancholy. The English have a mild aspect, and a ringing, cheerful voice. They are large-natured, and not so easily amused as the southerners, and are among them as grown people among children, requiring war, or trade, or engineering, or science, instead of frivolous games. They are proud and private, and, even if disposed to recreation, will avoid an open garden. They sported sadly; *ils s'amusaient tristement, selon la coutume de leur pays*, said Froissart; and, I suppose, never nation built their party walls so thick, or their garden fences so high. Meat and wine produce no effect on them: they are just as cold, quiet, and composed, at the end, as at the beginning of dinner.

The reputation of taciturnity they have enjoyed for six or seven hundred years; and a kind of pride in bad public speaking is noted in the House of Commons, as if they were willing to show that they did not live by their tongues, or thought they spoke well enough if they had the tone of gentlemen. In mixed company, they shut their mouths. A Yorkshire mill-owner told me, he had ridden more than once all the way from London to Leeds, in the first-class carriage, with the same persons, and no word exchanged. The club-houses were established to cultivate social habits, and it is rare that more than two eat

together, and oftenest one eats alone. Was it then a stroke of humor in the serious Swedenborg, or was it only his pitiless logic, that made him shut up the English souls in a heaven by themselves?

They are contradictorily described as sour, splenetic, and stubborn, — and as mild, sweet, and sensible. The truth is, they have great range and variety of character. Commerce sends abroad multitudes of different classes. The choleric Welshman, the fervid Scot, the bilious resident in the East or West Indies, are wide of the perfect behavior of the educated and dignified man of family. So is the burly farmer; so is the country ‘squire, with his narrow and violent life. In every inn, is the Commercial-Room, in which ‘travellers,’ or bagmen who carry patterns, and solicit orders, for the manufacturers, are wont to be entertained. It easily happens that this class should characterize England to the foreigner, who meets them on the road, and at every public house, whilst the gentry avoid the taverns, or seclude themselves whilst in them.

But these classes are the right English stock, and may fairly show the national qualities, before yet art and education have dealt with them. They are good lovers, good haters, slow but obstinate admirers, and, in all things, very much steeped in their temperament, like men hardly awaked from deep sleep, which they enjoy. Their habits and instincts cleave to nature. They are of the earth, earthy; and of the sea, as the sea-kinds, attached to it for what it yields them, and not from any sentiment. They are full of coarse strength, rude exercise, butcher’s meat, and sound sleep; and suspect any poetic insinuation or any hint for the conduct of life which reflects on this animal existence, as if somebody were fumbling at the umbilical cord and might stop their supplies. They doubt a man’s sound judgment, if he does not eat with appetite, and shake their heads if he is particularly chaste. Take them as they come, you shall find in the common people a surly indifference, sometimes gruffness and ill temper; and, in minds of more power, magazines of inexhaustible war, challenging

“The ruggedest hour that time and spite dare bring
To frown upon the enraged Northumberland.”

They are headstrong believers and defenders of their opinion, and not less resolute in maintaining their whim and perversity. Hezekiah Woodward wrote a book against the Lord’s Prayer. And one can believe that Burton the Anatomist of Melancholy, having predicted from the stars the hour of his death, slipped the knot himself round his own neck, not to falsify his horoscope.

Their looks bespeak an invincible stoutness; they have extreme difficulty to run away, and will die game. Wellington said of the young coxcombs of the Life-Guards delicately brought up, “But the puppies fight well”; and Nelson said of his sailors, “They really mind shot no more than peas.” Of absolute stoutness

no nation has more or better examples. They are good at storming redoubts, at boarding frigates, at dying in the last ditch, or any desperate service which has daylight and honor in it; but not, I think, at enduring the rack, or any passive obedience, like jumping off a castle-roof at the word of a czar. Being both vascular and highly organized, so as to be very sensible of pain; and intellectual, so as to see reason and glory in a matter.

Of that constitutional force, which yields the supplies of the day, they have the more than enough, the excess which creates courage on fortitude, genius in poetry, invention in mechanics, enterprise in trade, magnificence in wealth, splendor in ceremonies, petulance and projects in youth. The young men have a rude health which runs into peccant humors. They drink brandy like water, cannot expend their quantities of waste strength on riding, hunting, swimming, and fencing, and run into absurd frolics with the gravity of the Eumenides. They stoutly carry into every nook and corner of the earth their turbulent sense; leaving no lie uncontradicted, no pretension unexamined. They chew hasheesh; cut themselves with poisoned creases; swing their hammock in the boughs of the Bohon Upas; taste every poison; buy every secret; at Naples, they put St. Januarius's blood in an alembic; they saw a hole into the head of the "winking Virgin," to know why she winks; measure with an English foot-rule every cell of the Inquisition, every Turkish caaba, every Holy of holies; translate and send to Bantley the arcanum bribed and bullied away from shuddering Bramins; and measure their own strength by the terror they cause. These travellers are of every class, the best and the worst; and it may easily happen that those of rudest behavior are taken notice of and remembered. The Saxon melancholy in the vulgar rich and poor appears as gushes of ill-humor, which every check exasperates into sarcasm and vituperation. There are multitudes of rude young English who have the self-sufficiency and bluntness of their nation, and who, with their disdain of the rest of mankind, and with this indigestion and cholera, have made the English traveller a proverb for uncomfortable and offensive manners. It was no bad description of the Briton generically, what was said two hundred years ago, of one particular Oxford scholar: "He was a very bold man, uttered anything that came into his mind, not only among his companions, but in public coffee-houses, and would often speak his mind of particular persons then accidentally present, without examining the company he was in; for which he was often reprimanded, and several times threatened to be kicked and beaten."

The common Englishman is prone to forget a cardinal article in the bill of social rights, that every man has a right to his own ears. No man can claim to usurp more than a few cubic feet of the audibilities of a public room, or to put upon the company the loud statements of his crotchets or personalities.

But it is in the deep traits of race that the fortunes of nations are written, and however derived, whether a happier tribe or mixture of tribes, the air, or what circumstance, that mixed for them the golden mean of temperament, — here exists the best stock in the world, broad-fronted, broad-bottomed, best for depth, range, and equability, men of aplomb and reserves, great range and many moods, strong instincts, yet apt for culture; war-class as well as clerks; earls and tradesmen; wise minority, as well as foolish majority; abysmal temperament, hiding wells of wrath, and glooms on which no sunshine settles; alternated with a common-sense and humanity which hold them fast to every piece of cheerful duty; making this temperament a sea to which all storms are superficial; a race to which their fortunes flow, as if they alone had the elastic organization at once fine and robust enough for dominion; as if the burly, inexpressive, now mute and contumacious, now fierce and sharp-tongued dragon, which once made the island light with his fiery breath, had bequeathed his ferocity to his conqueror. They hide virtues under vices, or the semblance of them. It is the misshapen hairy Scandinavian troll again, who lifts the cart out of the mire, or “threshes the corn that ten day-laborers could not end,” but it is done in the dark, and with muttered maledictions. He is a churl with a soft place in his heart, whose speech is a brash of bitter waters, but who loves to help you at a pinch. He says no, but serves you, and your thanks disgust him. Here was lately a cross-grained miser, odd and ugly, resembling in countenance the portrait of Punch, with the laugh left out; rich by his own industry; sulking in a lonely house; who never gave a dinner to any man, and disdained all courtesies; yet as true a worshipper of beauty in form and color as ever existed, and profusely pouring over the cold mind of his countrymen creations of grace and truth, removing the reproach of sterility from English art, catching from their savage climate every fine hint, and importing into their galleries every tint and trait of sunnier cities and skies; making an era in painting; and, when he saw that the splendor of one of his pictures in the Exhibition dimmed his rival’s that hung next it, secretly took a brush and blackened his own.

They do not wear their heart in their sleeve for daws to peck at. They have that phlegm or staidness, which it is a compliment to disturb. “Great men,” said Aristotle, “are always of a nature originally melancholy.” ‘T is the habit of a mind which attaches to abstractions with a passion which gives vast results. They dare to displease, they do not speak to expectation. They like the sayers of No, better than the sayers of Yes. Each of them has an opinion which he feels it becomes him to express all the more that it differs from yours. They are meditating opposition. This gravity is inseparable from minds of great resources.

There is an English hero superior to the French, the German, the Italian, or

the Greek. When he is brought to the strife with fate, he sacrifices a richer material possession, and on more purely metaphysical grounds. He is there with his own consent, face to face with fortune, which he defies. On deliberate choice, and from grounds of character, he has elected his part to live and die for, and dies with grandeur. This race has added new elements to humanity, and has a deeper root in the world.

They have great range of scale, from ferocity to exquisite refinement. With larger scale, they have great retrieving power. After running each tendency to an extreme, they try another tack with equal heat. More intellectual than other races, when they live with other races, they do not take their language, but bestow their own. They subsidize other nations, and are not subsidized. They proselyte, and are not proselyted. They assimilate other races to themselves, and are not assimilated. The English did not calculate the conquest of the Indies. It fell to their character. So they administer in different parts of the world, the codes of every empire and race: in Canada, old French law; in the Mauritius, the Code Napoleon; in the West Indies, the edicts of the Spanish Cortes; in the East Indies, the Laws of Menu; in the Isle of Man, of the Scandinavian Thing; at the Cape of Good Hope, of the Old Netherlands; and in the Ionian Islands, the Pandects of Justinian.

They are very conscious of their advantageous position in history. England is the lawgiver, the patron, the instructor, the ally. Compare the tone of the French and of the English press: the first querulous, captious, sensitive, about English opinion; the English press is never timorous about French opinion, but arrogant and contemptuous.

They are testy and headstrong through an excess of will and bias; churlish as men sometimes please to be who do not forget a debt, who ask no favors, and who will do what they like with their own. With education and intercourse these asperities wear off, and leave the good-will pure. If anatomy is reformed according to national tendencies, I suppose, the spleen will hereafter be found in the Englishman, not found in the American, and differencing the one from the other. I anticipate another anatomical discovery, that this organ will be found to be cortical and caducous, that they are superficially morose, but at last tender-hearted, herein differing from Rome and the Latin nations. Nothing savage, nothing mean resides in the English heart. They are subject to panics of credulity and of rage, but the temper of the nation, however disturbed, settles itself soon and easily, as, in this temperate zone, the sky after whatever storms clears again, and serenity is its normal condition.

A saving stupidity masks and protects their perception as the curtain of the eagle's eye. Our swifter Americans, when they first deal with English,

pronounce them stupid; but, later, do them justice as people who wear well, or hide their strength. To understand the power of performance that is in their finest wits, in the patient Newton, or in the versatile transcendent poets, or in the Dugdales, Gibbons, Hallams, Eldons, and Peels, one should see how English day-laborers hold out. High and low, they are of an unctuous texture. There is an adipocere in their constitution, as if they had oil also for their mental wheels, and could perform vast amounts of work without damaging themselves.

Even the scale of expense on which people live, and to which scholars and professional men conform, proves the tension of their muscle, when vast numbers are found who can each lift this enormous load. I might even add, their daily feasts argue a savage vigor of body.

No nation was ever so rich in able men: “Gentlemen,” as Charles I. said of Strafford, “whose abilities might make a prince rather afraid than ashamed in the greatest affairs of state”: men of such temper, that, like Baron Vere, “had one seen him returning from a victory, he would by his silence have suspected that he had lost the day; and, had he beheld him in a retreat, he would have collected him a conqueror by the cheerfulness of his spirit.”¹⁰

The following passage from the *Heimskringla* might almost stand as a portrait of the modern Englishman: “Haldor was very stout and strong, and remarkably handsome in appearances. King Harold gave him this testimony, that he, among all his men, cared least about doubtful circumstances, whether they betokened danger or pleasure; for, whatever turned up, he was never in higher nor in lower spirits, never slept less nor more on account of them, nor ate nor drank but according to his custom. Haldor was not a man of many words, but short in conversation, told his opinion bluntly, and was obstinate and hard; and this could not please the king, who had many clever people about him, zealous in his service. Haldor remained a short time with the king, and then came to Iceland, where he took up his abode in Hiardaholt, and dwelt in that farm to a very advanced age.”[#]

[#] *Heimskringla*, Laing’s translation, Vol. III. p. 37.

The national temper, in the civil history, is not flashy or whiffling. The slow, deep, English mass smoulders with fire, which at last sets all its borders in flame. The wrath of London is not French wrath, but has a long memory, and, in its hottest heat, a register and rule.

Half their strength they put not forth. They are capable of a sublime resolution, and if hereafter the war of races, often predicted, and making itself a war of opinions also (a question of despotism and liberty coming from Eastern Europe), should menace the English civilization, these sea-kings may take once again to their floating castles, and find a new home and a second millennium of

power in their colonies.

The stability of England is the security of the modern world. If the English race were as mutable as the French, what reliance? But the English stand for liberty. The conservative, money-loving, lord-loving English are yet liberty-loving; and so freedom is safe: for they have more personal force than other people. The nation always resist the immoral action of their government. They think humanely on the affairs of France, of Turkey, of Poland, of Hungary, of Schleswig Holstein, though overborne by the statecraft of the rulers at last.

Does the early history of each tribe show the permanent bias, which, though not less potent, is masked, as the tribe spreads its activity into colonies, commerce, codes, arts, letters? The early history shows it, as the musician plays the air which he proceeds to conceal in a tempest of variations. In Alfred, in the Northmen, one may read the genius of the English society, namely, that private life is the place of honor. Glory, a career, and ambition, words familiar to the longitude of Paris, are seldom heard in English speech. Nelson wrote from their hearts his homely telegraph, "England expects every man to do his duty."

For actual service, for the dignity of a profession, or to appease diseased or inflamed talent, the army and navy may be entered (the worst boys doing well in the navy); and the civil service, in departments where serious official work is done; and they hold in esteem the barrister engaged in the severer studies of the law. But the calm, sound, and most British Briton shrinks from public life, as charlatanism, and respects an economy founded on agriculture, coal-mines, manufactures, or trade, which secures an independence through the creation of real values.

They wish neither to command or obey, but to be kings in their own houses. They are intellectual and deeply enjoy literature; they like well to have the world served up to them in books, maps, models, and every mode of exact information, and, though not creators in the art, they value its refinement. They are ready for leisure, can direct and fill their own day, nor need so much as others the constraint of a necessity. But the history of the nation discloses, at every turn, this original predilection for private independence, and, however this inclination may have been disturbed by the bribes with which their vast colonial power has warped men out of orbit, the inclination endures, and forms and reforms the laws, letters, manners, and occupations. They choose that welfare which is compatible with the commonwealth, knowing that such alone is stable; as wise merchants prefer investments in three per cents.

COCKAYNE.

The English are a nation of humorists. Individual right is pushed to the uttermost bound compatible with public order. Property is so perfect, that it seems the craft of that race, and not to exist elsewhere. The king cannot step on an acre which the peasant refuses to sell. A testator endows a dog or a rookery, and Europe cannot interfere with his absurdity. Every individual has his particular way of living, which he pushes to folly, and the decided sympathy of his compatriots is engaged to back up Mr. Crump's whim by statutes, and chancellors, and horse-guards. There is no freak so ridiculous but some Englishman has attempted to immortalize by money and law. British citizenship is as omnipotent as Roman was. Mr. Cockayne is very sensible of this. The pury man means by freedom the right to do as he pleases, and does wrong in order to feel his freedom, and makes a conscience of persisting in it.

He is intensely patriotic, for his country is so small. His confidence in the power and performance of his nation makes him provokingly incurious about other nations. He dislikes foreigners. Swedenborg, who lived much in England, notes "the similitude of minds among the English, in consequence of which they contract familiarity with friends who are of that nation, and seldom with others; and they regard foreigners, as one looking through a telescope from the top of a palace regards those who dwell or wander about out of the city." A much older traveller, the Venetian who wrote the "Relation of England,"¹¹ in 1500, says: "The English are great lovers of themselves, and of everything belonging to them. They think that there are no other men than themselves, and no other world but England; and, whenever they see a handsome foreigner, they say that he looks like an Englishman, and it is a great pity he should not be an Englishman; and whenever they partake of any delicacy with a foreigner, they ask him whether such a thing is made in his country." When he adds epithets of praise, his climax is "so English"; and when he wishes to pay you the highest compliment, he says, I should not know you from an Englishman. France is, by its natural contrast, a kind of blackboard on which English character draws its own traits in chalk. This arrogance habitually exhibits itself in allusions to the French. I suppose that all men of English blood in America, Europe, or Asia have a secret feeling of joy that they are not French natives. Mr. Coleridge is said to have given public thanks to God, at the close of a lecture, that he had defended him from being able to utter a single sentence in the French language. I have found that Englishmen have such a good opinion of England, that the ordinary phrases, in all good society, of postponing or disparaging one's own

things in talking with a stranger, are seriously mistaken by them for an insuppressible homage to the merits of their nation; and the New-Yorker or Pennsylvanian who modestly laments the disadvantage of a new country, log-huts, and savages, is surprised by the instant and unfeigned commiseration of the whole company, who plainly account all the world out of England a heap of rubbish.

The same insular limitation pinches his foreign politics. He sticks to his traditions and usages, and, so help him God! he will force his island by-laws down the throat of great countries, like India, China, Canada, Australia, and not only so, but impose Wapping on the Congress of Vienna, and trample down all nationalities with his taxed boots. Lord Chatham goes for liberty, and no taxation without representation; — for that is British law; but not a hobnail shall they dare make in America, but buy their nails in England, — for that also is British law; and the fact that British commerce was to be re-created by the independence of America, took them all by surprise.

In short, I am afraid that English nature is so rank and aggressive as to be a little incompatible with every other. The world is not wide enough for two.

But, beyond this nationality, it must be admitted, the island offers a daily worship to the old Norse god Brage, celebrated among our Scandinavian forefathers, for his eloquence and majestic air. The English have a steady courage, that fits them for great attempts and endurance: they have also a petty courage, through which every man delights in showing himself for what he is, and in doing what he can; so that, in all companies, each of them has too good an opinion of himself to imitate anybody. He hides no defect of his form, features, dress, connection, or birthplace, for he thinks every circumstance belonging to him comes recommended to you. If one of them have a bald, or a red, or a green head, or bow legs, or a scar, or mark, or a paunch, or a squeaking or a raven voice, he has persuaded himself that there is something modish and becoming in it, and that it sits well on him.

But nature makes nothing in vain, and this little superfluity of self-regard in the English brain is one of the secrets of their power and history. It sets every man on being and doing what he really is and can. It takes away a dodging, skulking, secondary air, and encourages a frank and manly bearing, so that each man makes the most of himself, and loses no opportunity for want of pushing. A man's personal defects will commonly have with the rest of the world precisely that importance which they have to himself. If he makes light of them, so will other men. We all find in these a convenient meter of character, since a little man would be ruined by the vexation. I remember a shrewd politician, in one of our Western cities, told me "that he had known several successful statesmen

made by their foible.” And another, an ex-governor of Illinois, said to me: “If a man knew anything, he would sit in a corner and be modest; but he is such an ignorant peacock, that he goes bustling up and down, and hits on extraordinary discoveries.”

There is also this benefit in brag, that the speaker is unconsciously expressing his own ideal. Humor him by all means, draw it all out, and hold him to it. Their culture generally enables the travelled English to avoid any ridiculous extremes of this self-pleasing, and to give it an agreeable air. Then the natural disposition is fostered by the respect which they find entertained in the world for English ability. It was said of Louis XIV., that his gait and air were becoming enough in so great a monarch, yet would have been ridiculous in another man; so the prestige of the English name warrants a certain confident bearing, which a Frenchman or Belgian could not carry. At all events, they feel themselves at liberty to assume the most extraordinary tone on the subject of English merits.

An English lady on the Rhine hearing a German speaking of her party as foreigners, exclaimed, “No, we are not foreigners; we are English: it is you that are foreigners.” They tell you daily, in London, the story of the Frenchman and Englishman who quarrelled. Both were unwilling to fight, but their companions put them up to it; at last, it was agreed, that they should fight alone, in the dark, and with pistols: the candles were put out, and the Englishman, to make sure not to hit anybody, fired up the chimney, and brought down the Frenchman. They have no curiosity about foreigners, and answer any information you may volunteer, with “Oh! Oh!” until the informant makes up his mind, that they shall die in their ignorance, for any help he will offer. There are really no limits to this conceit, though brighter men among them make painful efforts to be candid.

The habit of brag runs through all classes, from the *Times* newspaper through politicians and poets, through Wordsworth, Carlyle, Mill, and Sydney Smith, down to the boys of Eton. In the gravest treatise on political economy, in a philosophical essay, in books of science, one is surprised by the most innocent exhibition of unflinching nationality. In a tract on Corn, a most amiable and accomplished gentleman writes thus: “Though Britain, according to Bishop Berkeley’s idea, were surrounded by a wall of brass ten thousand cubits in height, still, she would as far excel the rest of the globe in riches, as she now does, both in this secondary quality, and in the more important ones of freedom, virtue, and science.”¹²

The English dislike the American structure of society, whilst yet trade, mills, public education, and chartism are doing what they can to create in England the same social condition. America is the paradise of the economists; is the favorable exception invariably quoted to the rules of ruin; but when he speaks

directly of the Americans, the islander forgets his philosophy, and remembers his disparaging anecdotes.

But this childish patriotism costs something, like all narrowness. The English sway of their colonies has no root of kindness. They govern by their arts and ability; they are more just than kind; and, whenever an abatement of their power is felt, they have not conciliated the affection on which to rely.

Coarse local distinctions, as those of nation, province, or town, are useful in the absence of real ones; but we must not insist on these accidental lines. Individual traits are always triumphing over national ones. There is no fence in metaphysics discriminating Greek, or English, or Spanish science. Æsop and Montaigne, Cervantes and Saadi, are men of the world; and to wave our own flag at the dinner-table or in the University, is to carry the boisterous dulness of a fire-club into a polite circle. Nature and destiny are always on the watch for our follies. Nature trips us up when we strut; and there are curious examples in history on this very point of national pride.

George of Cappadocia, born at Epiphania in Cilicia, was a low parasite, who got a lucrative contract to supply the army with bacon. A rogue and informer, he got rich, and was forced to run from justice. He saved his money, embraced Arianism, collected a library, and got promoted by a faction to the episcopal throne of Alexandria. When Julian came, A.D. 301, George was dragged to prison; the prison was burst open by the mob, and George was lynched, as he deserved. And this precious knave became, in good time, Saint George of England, patron of chivalry, emblem of victory and civility, and the pride of the best blood of the modern world.

Strange, that the solid truth-speaking Briton should derive from an impostor. Strange, that the New World should have no better luck, — that broad America must wear the name of a thief. Amerigo Vespucci, the pickle-dealer at Seville, who went out, in 1499, a subaltern with Hojeda, and whose highest naval rank was boatswain's mate in an expedition that never sailed, managed in this lying world to supplant Columbus, and baptize half the earth with his own dishonest name. Thus nobody can throw stones. We are equally badly off in our founders; and the false pickle-dealer is an offset to the false bacon-seller.

WEALTH.

There is no country in which so absolute a homage is paid to wealth. In America, there is a touch of shame when a man exhibits the evidences of large property, as if, after all, it needed apology. But the Englishman has pure pride in his wealth, and esteems it a final certificate. A coarse logic rules throughout all English souls; — if you have merit, can you not show it by your good clothes, and coach, and horses? How can a man be a gentleman without a pipe of wine? Haydon says, “There is a fierce resolution to make every man live according to the means he possesses.” There is a mixture of religion in it. They are under the Jewish law, and read with sonorous emphasis that their days shall be long in the land, they shall have sows and daughters, flocks and herds, wine and oil. In exact proportion is the reproach of poverty. They do not wish to be represented except by opulent men. An Englishman who has lost his fortune is said to have died of a broken heart. The last term of insult is, “a beggar.” Nelson said, “The want of fortune is a crime which I can never get over.” Sydney Smith said, “Poverty is infamous in England.” And one of their recent writers speaks, in reference to a private and scholastic life, of “the grave moral deterioration which follows an empty exchequer.” You shall find this sentiment, if not so frankly put, yet deeply implied, in the novels and romances of the present century, and not only in these, but in biography, and in the votes of public assemblies, in the tone of the preaching, and in the table-talk.

I was lately turning over Wood’s *Athenæ Oxonienses*, and looking naturally for another standard in a chronicle of the scholars of Oxford for two hundred years. But I found the two disgraces in that, as in most English books, are, first, disloyalty to Church and State, and, second, to be born poor, or to come to poverty. A natural fruit of England is the brutal political economy. Malthus finds no cover laid at nature’s table for the laborer’s son. In 1809, the majority in Parliament expressed itself by the language of Mr. Fuller in the House of Commons, “If you do not like the country, damn you, you can leave it.” When Sir S. Romilly proposed his bill forbidding parish officers to bind children apprentices at a greater distance than forty miles from their home, Peel opposed, and Mr. Wortley said, “though, in the higher ranks, to cultivate family affections was a good thing, ‘t was not so among the lower orders. Better take them away from those who might deprave them. And it was highly injurious to trade to stop binding to manufacturers, as it must raise the price of labor, and of manufactured goods.”

The respect for truth of facts in England is equalled only by the respect for

wealth. It is at once the pride of art of the Saxon, as he is a wealth-maker, and his passion for independence. The Englishman believes that every man must take care of himself, and has himself to thank, if he do not mend his condition. To pay their debts is their national point of honor. From the Exchequer and the East India House to the huckster's shop, everything prospers, because it is solvent. The British armies are solvent, and pay for what they take. The British empire is solvent; for, in spite of the huge national debt, the valuation mounts. During the war from 1789 to 1815, whilst they complained that they were taxed within an inch of their lives, and, by dint of enormous taxes, were subsidizing all the continent against France, the English were growing rich every year faster than any people ever grew before. It is their maxim, that the weight of taxes must be calculated, not by what is taken, but by what is left. Solvency is in the ideas and mechanism of an Englishman. The Crystal Palace is not considered honest until it pays; no matter how much convenience, beauty, or *éclat*, it must be self-supporting. They are contented with slower steamers, as long as they know that swifter boats lose money. They proceed logically by the double method of labor and thrift. Every household exhibits an exact economy, and nothing of that uncalculated headlong expenditure which families use in America. If they cannot pay, they do not buy; for they have no presumption of better fortunes next year, as our people have; and they say without shame, I cannot afford it. Gentlemen do not hesitate to ride in the second-class cars, or in the second cabin. An economist, or a man who can proportion his means and his ambition, or bring the year round with expenditure which expresses his character, without embarrassing one day of his future, is already a master of life, and a freeman. Lord Burleigh writes to his son, "that one ought never to devote more than two thirds of his income to the ordinary expenses of life, since the extraordinary will be certain to absorb the other third."

The ambition to create value evokes every kind of ability, government becomes a manufacturing corporation, and every house a mill. The headlong bias to utility will let no talent lie in a napkin, — if possible, will teach spiders to weave silk stockings. An Englishman, while he eats and drinks no more, or not much more than another man, labors three times as many hours in the course of a year, as an other European; or, his life as a workman is three lives. He works fast. Everything in England is at a quick pace. They have reinforced their own productivity, by the creation of that marvellous machinery which differences this age from any other age.

'T is a curious chapter in modern history, the growth of the machine-shop. Six hundred years ago, Roger Bacon explained the precession of the equinoxes, the consequent necessity of the reform of the calendar; measured the length of

the year, invented gunpowder; and announced (as if looking from his lofty cell, over five centuries, into ours) “that machines can be constructed to drive ships more rapidly than a whole galley of rowers could do; nor would they need anything but a pilot to steer them. Carriages also might be constructed to move with an incredible speed, without the aid of any animal. Finally, it would not be impossible to make machines, which, by means of a suit of wings, should fly in the air in the manner of birds.” But the secret slept with Bacon. The six hundred years have not yet fulfilled his words. Two centuries ago, the sawing of timber was done by hand; the carriage-wheels ran on wooden axles; the land was tilled by wooden ploughs. And it was to little purpose that they had pit-coal or that looms were improved, unless Watt and Stephenson had taught them to work force-pumps and power-looms by steam. The great strides were all taken within the last hundred years. The life of Sir Robert Peel, in his day the model Englishman, very properly has, for a frontispiece, a drawing of the spinning-jenny, which wove the web of his fortunes. Hargreaves invented the spinning-jenny, and died in a workhouse. Arkwright improved the invention; and the machine dispensed with the work of ninety-nine men: that is, one spinner could do as much work as one hundred had done before. The loom was improved further. But the men would sometimes strike for wages, and combine against the masters, and, about 1829-30, much fear was felt, lest the trade would be drawn away by these interruptions, and the emigration of the spinners, to Belgium and the United States. Iron and steel are very obedient. Whether it were not possible to make a spinner that would not rebel, nor mutter, nor scowl, nor strike for wages, nor emigrate? At the solicitation of the masters, after a mob and riot at Staley Bridge, Mr. Roberts of Manchester undertook to create this peaceful fellow, instead of the quarrelsome fellow God had made. After a few trials, he succeeded, and, in 1830, procured a patent for his self-acting mule; a creation, the delight of mill-owners, and “destined,” they said, “to restore order among the industrious classes”; a machine requiring only a child’s hand to piece the broken yarns. As Arkwright had destroyed domestic spinning, so Roberts destroyed the factory spinner. The power of machinery in Great Britain, in mills, has been computed to be equal to 600,000,000 men, one man being able by the aid of steam to do the work which required two hundred and fifty men to accomplish fifty years ago. The production has been commensurate. England already had this laborious race, rich soil, water, wood, coal, iron, and favorable climate. Eight hundred years ago, commerce had made it rich, and it was recorded, “England is the richest of all the northern nations.” The Norman historians recite, that “in 1067, William carried with him into Normandy, from England, more gold and silver than had ever before been seen in Gaul.” But when, to this

labor and trade and these native resources was added this goblin of steam, with his myriad arms, never tired, working night and day everlastingly, the amassing of property has run out of all figures. It makes the motor of the last ninety years. The steam-pipe has added to her population and wealth the equivalent of four or five Englands. Forty thousand ships are entered in Lloyd's lists. The yield of wheat has gone on from 2,000,000 quarters in the time of the Stuarts, to 13,000,000 in 1854. A thousand million pounds sterling are said to compose the floating money of commerce. In 1848, Lord John Russell stated that the people of this country had laid out £300,000,000 of capital in railways, in the last four years. But a better measure than these sounding figures is the estimate, that there is wealth enough in England to support the entire population in idleness for one year.

The wise, versatile, all-giving machinery makes chisels, roads, locomotives, telegraphs. Whitworth divides a bar to a millionth of an inch. Steam twines huge cannon into wreaths, as easily as it braids straw, and vies with the volcanic forces which twisted the strata. It can clothe shingle mountains with ship-oaks, make sword-blades that will cut gun-barrels in two. In Egypt, it can plant forests, and bring rain after three thousand years. Already it is ruddering the balloon, and the next war will be fought in the air. But another machine more potent in England than steam is the Bank.

It votes an issue of bills, population is stimulated, and cities rise; it refuses loans, and emigration empties the country; trade sinks; revolutions break out; kings are dethroned. By these new agents our social system is moulded. By dint of steam and of money, war and commerce are changed. Nations have lost their old omnipotence; the patriotic tie does not hold. Nations are getting obsolete, we go and live where we will. Steam has enabled men to choose what law they will live under. Money makes place for them. The telegraph is a limp-band that will hold the Fenris-wolf of war. For now, that a telegraph line runs through France and Europe, from London, every message it transmits makes stronger by one thread the band which war will have to cut.

The introduction of these elements gives new resources to existing proprietors. A sporting duke may fancy that the state depends on the House of Lords, but the engineer sees, that every stroke of the steam-piston gives value to the duke's land, fills it with tenants; doubles, quadruples, centuples the duke's capital, and creates new measures and new necessities for the culture of his children. Of course, it draws the nobility into the competition as stockholders in the mine, the canal, the railway, in the application of steam to agriculture, and sometimes into trade. But it also introduces large classes into the same competition; the old energy of the Norse race arms itself with these magnificent

powers; new men prove an overmatch for the land-owner, and the mill buys out the castle. Scandinavian Thor, who once forged his bolts in icy Hecla, and built galleys by lonely fiords, in England, has advanced with the times, has shorn his beard, enters Parliament, sits down at a desk in the India House, and lends Miollnir to Birmingham for a steam-hammer.

The creation of wealth in England in the last ninety years is a main fact in modern history. The wealth of London determines prices all over the globe. All things precious, or useful, or amusing, or intoxicating, are sucked into this commerce and floated to London. Some English private fortunes reach, and some exceed, a million of dollars a year. A hundred thousand palaces adorn the island. All that can feed the senses and passions, all that can succor the talent, or arm the hands of the intelligent middle class who never spare in what they buy for their own consumption; all that can aid science, gratify taste, or soothe comfort, is in open market. Whatever is excellent and beautiful in civil, rural, or ecclesiastic architecture; in fountain, garden, or grounds; the English noble crosses sea and land to see and to copy at home. The taste and science of thirty peaceful generations; the gardens which Evelyn planted; the temples and pleasure-houses which Inigo Jones and Christopher Wren built; the wood that Gibbons carved; the taste of foreign and domestic artists, Shenstone, Pope, Brown, Loudon, Paxton, are in the vast auction, and the hereditary principle heaps on the owner of to-day the benefit of ages of owners. The present possessors are to the full as absolute as any of their fathers, in choosing and procuring what they like. This comfort and splendor, the breadth of lake and mountain, tillage, pasture, and park, sumptuous castle and modern villa, — all consist with perfect order. They have no revolutions; no horse-guards dictating to the crown; no Parisian *poissardes* and barricades; no mob; but drowsy habitude, daily dress-dinners, wine, and ale, and beer, and gin, and sleep.

With this power of creation, and this passion for independence, property has reached an ideal perfection. It is felt and treated as the national life-blood. The laws are framed to give property the securest possible basis, and the provisions to lock and transmit it have exercised the cunningest heads in a profession which never admits a fool. The rights of property nothing but felony and treason can override. The house is a castle which the king cannot enter. The Bank is a strong-box to which the king has no key. Whatever surly sweetness possession can give, is tasted in England to the dregs. Vested rights are awful things, and absolute possession gives the smallest freeholder identity of interest with the duke. High stone fences and padlocked garden gates announce the absolute will of the owner to be alone. Every whim of exaggerated egotism is put into stone and iron, into silver and gold, with costly deliberation and detail.

An Englishman hears that the Queen Dowager wishes to establish some claim to put her park paling a rod forward into his grounds, so as to get a coachway, and save her a mile to the avenue. Instantly he transforms his paling into stone masonry, solid as the walls of Cuma, and all Europe cannot prevail on him to sell or compound for an inch of the land. They delight in a freak as the proof of their sovereign freedom. Sir Edward Boynton, at Spic Park, at Cadenham, on a precipice of incomparable prospect, built a house like a long barn, which had not a window on the prospect side. Strawberry Hill of Horace Walpole, Fonthill Abbey of Mr. Beckford, were freaks; and Newstead Abbey became one in the hands of Lord Byron.

But the proudest result of this creation has been the great and refined forces it has put at the disposal of the private citizen. In the social world, an Englishman to-day has the best lot. He is a king in a plain coat. He goes with the most powerful protection, keeps the best company, is armed by the best education, is seconded by wealth; and his English name and accidents are like a flourish of trumpets announcing him. This, with his quiet style of manners, gives him the power of a sovereign, without the inconveniences which belong to that rank. I much prefer the condition of an English gentleman of the better class, to that of any potentate in Europe, — whether for travel, or for opportunity of society, or for access to means of science or study, or for mere comfort and easy healthy relation to people at home.

Such, as we have seen, is the wealth of England, a mighty mass, and made good in whatever details we care to explore. The cause and spring of it is the wealth of temperament in the people. The wonder of Britain is this plenteous nature. Her worthies are ever surrounded by as good men as themselves; each is a captain a hundred strong, and that wealth of men is represented again in the faculty of each individual, — that he has waste strength, power to spare. The English are so rich, and seem to have established a taproot in the bowels of the planet, because they are constitutionally fertile and creative.

But a man must keep an eye on his servants, if he would not have them rule him. Man is a shrewd inventor, and is ever taking the hint of a new machine from his own structure, adapting some secret of his own anatomy in iron, wood, and leather, to some required function in the work of the world. But it is found that the machine unmans the user. What he gains in making cloth, he loses in general power. There should be temperance in making cloth, as well as in eating. A man should not be a silkworm; nor a nation a tent of caterpillars. The robust rural Saxon degenerates in the mills to the Leicester stockinger, to the imbecile Manchester spinner, — far on the way to be spiders and needles. The incessant repetition of the same hand-work dwarfs the man, robs him of his strength, wit,

and versatility, to make a pin-polisher, a buckle-maker, or any other specialty; and presently, in a change of industry, whole towns are sacrificed like ant-hills, when, the fashion of shoestrings supersedes buckles, when cotton takes the place of linen, or railways of turnpikes, or when commons are enclosed by landlords. Then society is admonished of the mischief of the division of labor, and that the best political economy is care and culture of men; for, in these crises, all are ruined except such as are proper individuals, capable of thought, and of new choice and the application of their talent to new labor. Then again come in new calamities. England is aghast at the disclosure of her fraud in the adulteration of food, of drugs, and of almost every fabric in her mills and shops; finding that milk will not nourish, nor sugar sweeten, nor bread satisfy, nor pepper bite the tongue, nor glue stick. In true England all is false and forged. This too is the reaction of machinery, but of the larger machinery of commerce. 'T is not, I suppose, want of probity, so much as the tyranny of trade, which necessitates a perpetual competition of underselling, and that again a perpetual deterioration of the fabric.

The machinery has proved, like the balloon, unmanageable, and flies away with the aeronaut. Steam from the first hissed and screamed to warn him; it was dreadful with its explosion, and crushed the engineer. The machinist has wrought and watched, engineers and firemen without number have been sacrificed in learning to tame and guide the monster. But harder still it has proved to resist and rule the dragon Money, with his paper wings. Chancellors and Boards of Trade, Pitt, Peel, and Robinson, and their Parliaments, and their whole generation, adopted false principles, and went to their graves in the belief that they were enriching the country which they were impoverishing. They congratulated each other on ruinous expedients. It is rare to find a merchant who knows why a crisis occurs in trade, why prices rise or fall, or who knows the mischief of paper-money. In the culmination of national prosperity, in the annexation of countries; building of ships, depots, towns; in the influx of tons of gold and silver; amid the chuckle of chancellors and financiers, it was found that bread rose to famine prices, that the yeoman was forced to sell his cow and pig, his tools, and his acre of land; and the dreadful barometer of the poor-rates was touching the point of ruin. The poor-rate was sucking in the solvent classes, and forcing an exodus of farmers and mechanics. What befalls from the violence of financial crises, befalls daily in the violence of artificial legislation.

Such a wealth has England earned, ever new, bounteous, and augmenting. But the question recurs, does she take the step beyond, namely, to the wise use, in view of the supreme wealth of nations? We estimate the wisdom of nations by seeing what they did with their surplus capital. And, in view of these injuries,

some compensation has been attempted in England. A part of the money earned returns to the brain to buy schools, libraries, bishops, astronomers, chemists, and artists with; and a part to repair the wrongs of this intemperate weaving, by hospitals, savings-banks, Mechanics' Institutes, public grounds, and other charities and amenities. But the antidotes are frightfully inadequate, and the evil requires a deeper cure, which time and a simpler social organization must supply. At present, she does not rule her wealth. She is simply a good England, but no divinity, or wise and instructed soul. She too is in the stream of fate, one victim more in a common catastrophe.

But being in the fault, she has the misfortune of greatness to be held as the chief offender. England must be held responsible for the despotism of expense. Her prosperity, the splendor which so much manhood and talent and perseverance has thrown upon vulgar aims, is the very argument of materialism. Her success strengthens the hands of base wealth. Who can propose to youth poverty and wisdom, when mean gain has arrived at the conquest of letters and arts; when English success has grown out of the very renunciation of principles, and the dedication to outsides. A civility of trifles, of money and expense, an erudition of sensation takes place, and the putting as many impediments as we can, between the man and his objects. Hardly the bravest among them have the manliness to resist it successfully. Hence, it has come, that not the aims of a manly life, but the means of meeting a certain ponderous expense, is that which is to be considered by a youth in England, emerging from his minority. A large family is reckoned a misfortune. And it is a consolation in the death of the young, that a source of expense is closed.

ARISTOCRACY.

The feudal character of the English state, now that it is getting obsolete, glares a little, in contrast with the democratic tendencies. The inequality of power and property shocks republican nerves. Palaces, halls, villas, walled parks, all over England, rival the splendor of royal seats. Many of the halls, like Haddon, or Kedleston, are beautiful desolations. The proprietor never saw them, or never lived in them. Primogeniture built these sumptuous piles, and, I suppose, it is the sentiment of every traveller, as it was mine, 'T was well to come ere these were gone. Primogeniture is a cardinal rule of English property and institutions. Laws, customs, manners, the very persons and faces, affirm it.

The frame of society is aristocratic, the taste of the people is loyal. The estates, names, and manners of the nobles flatter the fancy of the people, and conciliate the necessary support. In spite of broken faith, stolen charters, and the devastation of society by the profligacy of the court, we take sides as we read for the loyal England and King Charles's "return to his right" with his Cavaliers, — knowing what a heartless trifler he is, and what a crew of God-forsaken robbers they are. The people of England knew as much. But the fair idea of a settled government connecting itself with heraldic names, with the written and oral history of Europe, and, at last, with the Hebrew religion, and the oldest traditions of the world, was too pleasing a vision to be shattered by a few offensive realities, and the politics of shoemakers and costermongers. The hopes of the commoners take the same direction with the interest of the patricians. Every man who becomes rich buys land, and does what he can to fortify the nobility, into which he hopes to rise. The Anglican clergy are identified with the aristocracy. Time and law have made the joining and moulding perfect in every part. The Cathedrals, the Universities, the national music, the popular romances, conspire to uphold the heraldry, which the current politics of the day are sapping. The taste of the people is conservative. They are proud of the castles, and of the language and symbol of chivalry. Even the word "lord" is the luckiest style that is used in any language to designate a patrician. The superior education and manners of the nobles recommend them to the country.

The Norwegian pirate got what he could, and held it for his eldest son. The Norman noble, who was the Norwegian pirate baptized, did likewise. There was this advantage of Western over Oriental nobility, that this was recruited from below. English history is aristocracy with the doors open. Who has courage and faculty, let him come in. Of course, the terms of admission to this club are hard and high. The selfishness of the nobles comes in aid of the interest of the nation

to require signal merit. Piracy and war gave place to trade, politics, and letters; the war-lord to the law-lord; the law-lord to the merchant and the mill-owner; but the privilege was kept, whilst the means of obtaining it were changed.

The foundations of these families lie deep in Norwegian exploits by sea, and Saxon sturdiness on land. All nobility in its beginnings was somebody's natural superiority. The things these English have done were not done without peril of life, nor without wisdom and conduct; and the first hands, it may be presumed, were often challenged to show their right to their honors, or yield them to better men. "He that will be a head, let him be a bridge," said the Welsh chief Benegridran, when he carried all his men over the river on his back. "He shall have the book," said the mother of Alfred, "who can read it"; and Alfred won it by that title: and I make no doubt that feudal tenure was no sinecure, but baron, knight, and tenant often had their memories refreshed, in regard to the service by which they held their lands. The De Veres, Bohuns, Mowbrays, and Plantagenets were not addicted to contemplation. The Middle Age adorned itself with proofs of manhood and devotion. Of Richard Beauchamp, Earl of Warwick, the Emperor told Henry V. that no Christian king had such another knight for wisdom, nurture, and manhood, and caused him to be named, "Father of curtesie." "Our success in France," says the historian, "lived and died with him."¹³

The war-lord earned his honors, and no donation of land was large, as long as it brought the duty of protecting it, hour by hour, against a terrible enemy. In France and in England, the nobles were, down to a late day, born and bred to war; and the duel, which in peace still held them to the risks of war, diminished the envy that, in trading and studious nations, would else have pried into their title. They were looked on as men who played high for a great stake.

Great estates are not sinecures, if they are to be kept great. A creative economy is the fuel of magnificence. In the same line of Warwick, the successor next but one to Beauchamp was the stout earl of Henry VI. and Edward IV. Few esteemed themselves in the mode, whose heads were not adorned with the black ragged staff, his badge. At his house in London, six oxen were daily eaten at a breakfast; and every tavern was full of his meat; and who had any acquaintance in his family, should have as much boiled and roast as he could carry on a long dagger.

The new age brings new qualities into request, the virtues of pirates gave way to those of planters, merchants, senators, and scholars. Comity, social talent, and fine manners, no doubt, have had their part also. I have met somewhere with a historiette, which, whether more or less true in its particulars, carries a general truth. "How came the Duke of Bedford by his great landed estates? His ancestor

having travelled on the continent, a lively, pleasant man, became the companion of a foreign prince wrecked on the Dorsetshire coast, where Mr. Russell lived. The prince recommended him to Henry VIII., who, liking his company, gave him a large share of the plundered church lands.”

The pretence is that the noble is of unbroken descent from the Norman, and has never worked for eight hundred years. But the fact is otherwise. Where is Bohun? where is De Vere? The lawyer, the farmer, the silk-mercator, lies *perdu* under the coronet, and winks to the antiquary to say nothing; especially skilful lawyers, nobody’s sons, who did some piece of work at a nice moment for government, and were rewarded with ermine.

The national tastes of the English do not lead them to the life of the courtier, but to secure the comfort and independence of their homes. The aristocracy are marked by their predilection for country-life. They are called the county-families. They have often no residence in London, and only go thither for a short time, during the season, to see the opera; but they concentrate the love and labor of many generations on the building, planting, and decoration of their homesteads. Some of them are too old and too proud to wear titles, or, as Sheridan said of Coke, “disdain to hide their head in a coronet”; and some curious examples are cited to show the stability of English families. Their proverb is, that, fifty miles from London, a family will last a hundred years; at a hundred miles, two hundred years; and so on; but I doubt that steam, the enemy of time, as well as of space, will disturb these ancient rules. Sir Henry Wotton says of the first Duke of Buckingham: “He was born at Brookeby in Leicestershire, where his ancestors had chiefly continued about the space of four hundred years, rather without obscurity, than with any great lustre.”¹⁴ Wraxall says, that, in 1781, Lord Surrey, afterwards Duke of Norfolk, told him, that when the year 1783 should arrive, he meant to give a grand festival to all the descendants of the body of Jockey of Norfolk, to mark the day when the dukedom should have remained three hundred years in their house, since its creation by Richard III. Pepys tells us, in writing of an Earl Oxford, in 1666, that the honor had now remained in that name and blood six hundred years.

This long descent of families and this cleaving through ages to the same spot of ground captivates the imagination. It has too a connection with the names of the towns and districts of the country.

The names are excellent, — an atmosphere of legendary melody spread over the land. Older than all epics and histories, which clothe a nation, this undershirt sits close to the body. What history too, and what stores of primitive and savage observation, it infolds! Cambridge is the bridge of the Cam; Sheffield, the field of the river Sheaf; Leicester, the *castra* or camp of the Lear or Leir (now Soar);

Rochdale, of the Roch; Exeter or Excester, the *castra* of the Ex; Exmouth, Dartmouth, Sidmouth, Teignmouth, the mouths of the Ex, Dart, Sid, and Teign Rivers. Waltham is strong town; Radcliffe is red cliff; and so on; — a sincerity and use in naming very striking to an American, whose country is whitewashed all over by unmeaning names, the cast-off clothes of the country from which its emigrants came; or, named at a pinch from a psalm-tune. But the English are those “barbarians” of Jamblichus, who “are stable in their manners, and firmly continue to employ the same words, which also are dear to the gods.”

‘T is an old sneer, that the Irish peerage drew their names from playbooks. The English lords do not call their lands after their own names, but call themselves after their lands; as if the man represented the country that bred him; and they rightly wear the token of the glebe that gave them birth; suggesting that the tie is not cut, but that there in London, — the crags of Argyle, the kail of Cornwall, the downs of Devon, the iron of Wales, the clays of Stafford, are neither forgetting nor forgotten, but know the man who was born by them, and who, like the long line of his fathers, has carried that crag, that shore, dale, fen, or woodland in his blood and manners. It has, too, the advantage of suggesting responsibility. A susceptible man could not wear a name which represented in a strict sense a city or a county of England, without hearing in it a challenge to duty and honor.

The predilection of the patricians for residence in the country, combined with the degree of liberty possessed by the peasant, makes the safety of the English hall. Mirabeau wrote prophetically from England, in 1784: “If revolution break out in France, I tremble for the aristocracy: their châteaux will be reduced to ashes, and their blood spilt in torrents. The English tenant would defend his lord to the last extremity.” The English go to their estates for grandeur. The French live at court, and exile themselves to their estates for economy. As they do not mean to live with their tenants, they do not conciliate them, but wring from them the last sous. Evelyn writes from Blois, in 1644: “The wolves are here in such numbers, that they often come and take children out of the streets; yet will not the Duke, who is sovereign here, permit them to be destroyed.”

In evidence of the wealth amassed by ancient families, the traveller is shown the palaces in Piccadilly, Burlington House, Devonshire House, Lansdowne House in Berkshire Square, and, lower down in the city, a few noble houses which still withstand in all their amplitude the encroachment of streets. The Duke of Bedford includes or included a mile square in the heart of London, where the British Museum, once Montague House, now stands, and the land occupied by Woburn Square, Bedford Square, Russell Square. The Marquis of Westminster built within a few years the series of squares called Belgravia.

Stafford House is the noblest palace in London. Northumberland House holds its place by Charing Cross. Chesterfield House remains in Audley Street. Sion House and Holland House are in the suburbs. But most of the historical houses are masked or lost in the modern uses to which trade or charity has converted them. A multitude of town palaces contain inestimable galleries of art.

In the country, the size of private estates is more impressive. From Barnard Castle I rode on the highway twenty-three miles from High Force, a fall of the Tees, towards Darlington, past Raby Castle, through the estate of the Duke of Cleveland. The Marquis of Breadalbane rides out of his house a hundred miles in a straight line to the sea, on his own property. The Duke of Sutherland owns the county of Sutherland, stretching across Scotland from sea to sea. The Duke of Devonshire, besides his other estates, owns 96,000 acres in the county of Derby. The Duke of Richmond has 40,000 acres at Goodwood, and 300,000 at Gordon Castle. The Duke of Norfolk's park in Sussex is fifteen miles in circuit. An agriculturist bought lately the island of Lewes, in Hebrides, containing 500,000 acres. The possessions of the Earl of Lonsdale gave him eight seats in Parliament. This is the Heptarchy again; and before the Reform of 1832, one hundred and fifty-four persons sent three hundred and seven members to Parliament. The borough-mongers governed England.

These large domains are growing larger. The great estates are absorbing the small freeholds. In 1786, the soil of England was owned by 250,000 corporations and proprietors; and, in 1822, by 32,000. These broad estates find room in this narrow island. All over England, scattered at short intervals among ship-yards, mills, mines, and forges, are the paradises of the nobles, where the livelong repose and refinement are heightened by the contrast with the roar of industry and necessity, out of which you have stepped aside.

I was surprised to observe the very small attendance usually in the House of Lords. Out of 573 peers, on ordinary days, only twenty or thirty. Where are they? I asked. "At home on their estates, devoured by *ennui*, or in the Alps, or up the Rhine, in the Harz Mountains, or in Egypt, or in India, on the Ghauts." But, with such interests at stake, how can these men afford to neglect them? "O," replied my friend, "why should they work for themselves, when every man in England works for them, and will suffer before they come to harm?" The hardest radical instantly uncovers, and changes his tone to a lord. It was remarked on the 10th April, 1848 (the day of the Chartist demonstration), that the upper classes were, for the first time, actively interesting themselves in their own defence, and men of rank were sworn special constables, with the rest. "Besides, why need they sit out the debate? Has not the Duke of Wellington, at this moment, their proxies, — the proxies of fifty peers in his pocket, to vote for them, if there be

an emergency?”

It is however true, that the existence of the House of Peers as a branch of the government entitles them to fill half the Cabinet; and their weight of property and station gives them a virtual nomination of the other half; whilst they have their share in the subordinate offices, as a school of training. This monopoly of political power has given them their intellectual and social eminence in Europe. A few law lords and a few political lords take the brunt of public business. In the army, the nobility fill a large part of the high commissions, and give to these a tone of expense and splendor, and also of exclusiveness. They have borne their full share of duty and danger in this service; and there are few noble families which have not paid in some of their members, the debt of life or limb, in the sacrifices of the Russian war. For the rest, the nobility have the lead in matters of state, and of expense; in questions of taste, in social usages, in convivial and domestic hospitalities. In general, all that is required of them is to sit securely, to preside at public meetings, to countenance charities, and to give the example of that decorum so dear to the British heart.

If one asks, in the critical spirit of the day, what service this class have rendered? — uses appear, or they would have perished long ago. Some of these are easily enumerated, others more subtle make a part of unconscious history. Their institution is one step in the progress of society. For a race yields a nobility in some form, however we name the lords, as surely as it yields women.

The English nobles are high-spirited, active, educated men, born to wealth and power, who have run through every country, and kept in every country the best company, have seen every secret of art and nature, and, when men of any ability or ambition, have been consulted in the conduct of every important action. You cannot wield great agencies without lending yourself to them, and when it happens that the spirit of the earl meets his rank and duties, we have the best examples of behavior. Power of any kind readily appears in the manners; and beneficent power, *le talent de bien faire*, gives a majesty which cannot be concealed or resisted.

These people seem to gain as much as they lose by their position. They survey society, as from the top of St. Paul's, and if they never hear plain truth from men, they see the best of everything, in every kind, and they see things so grouped and amassed as to infer easily the sum and genius, instead of tedious particularities. Their good behavior deserves all its fame, and they have that simplicity, and that air of repose, which are the finest ornament of greatness.

The upper classes have only birth, say the people here, and not thoughts. Yes, but they have manners, and 't is wonderful, how much talent runs into manners: — nowhere and never so much as in England. They have the sense of

superiority, the absence of all the ambitious effort which disgusts in the aspiring classes, a pure tone of thought and feeling, and the power to command, among their other luxuries, the presence of the most accomplished men in their festive meetings.

Loyalty is in the English a sub-religion. They wear the laws as ornaments, and walk by their faith in their painted May-Fair, as if among the forms of gods. The economist of 1855 who asks, of what use are the lords? may learn of Franklin to ask, of what use is a baby? They have been a social church proper to inspire sentiments mutually honoring the lover and the loved. Politeness is the ritual of society, as prayers are of the church; a school of manners, and a gentle blessing to the age in which it grew. 'T is a romance adorning English life with a larger horizon; a midway heaven, fulfilling to their sense their fairy tales and poetry. This, just as far as the breeding of the nobleman, really made him brave, handsome, accomplished, and great-hearted.

On general grounds, whatever tends to form manners, or to finish men, has a great value. Every one who has tasted the delight of friendship, will respect every social guard which our manners can establish, tending to secure from the intrusion of frivolous and distasteful people. The jealousy of every class to guard itself, is a testimony to the reality they have found in life. When a man once knows that he has done justice to himself, let him dismiss all terrors of aristocracy as superstitions, so far as he is concerned. He who keeps the door of a mine, whether of cobalt, or mercury, or nickel, or plumbago, securely knows that the world cannot do without him. Everybody who is real is open and ready for that which is also real.

Besides, these are they who make England that strongbox and museum it is; who gather and protect works of art, dragged from amidst burning cities and revolutionary countries, and brought hither out of all the world. I look with respect at houses six, seven, eight hundred, or, like Warwick Castle, nine hundred years old. I pardoned high park fences, when I saw, that, besides does and pheasants, these have preserved Arundel marbles, Townley galleries, Howard and Spenserian libraries, Warwick and Portland vases, Saxon manuscripts, monastic architectures, millennial trees, and breeds of cattle elsewhere extinct. In these manors, after the frenzy of war and destruction subsides a little, the antiquary finds the frailest Roman jar, or crumbling Egyptian mummy-case, without so much as a new layer of dust, keeping the series of history unbroken, and waiting for its interpreter, who is sure to arrive. These lords are the treasurers and librarians of mankind, engaged by their pride and wealth to this function.

Yet there were other works for British dukes to do. George Loudon,

Quintinye, Evelyn, had taught them to make gardens. Arthur Young, Bakewell, and Mechi have made them agricultural. Scotland was a camp until the day of Culloden. The Dukes of Athol, Sutherland, Buccleugh, and the Marquis of Breadalbane have introduced the rape-culture, the sheep-farm, wheat, drainage, the plantation of forests, the artificial replenishment of lakes and ponds with fish, the renting of game-preserves. Against the cry of the old tenantry, and the sympathetic cry of the English press, they have rooted out and planted anew, and now six millions of people live, and live better on the same land that fed three millions.

The English barons, in every period, have been brave and great, after the estimate and opinion of their times. The grand old halls scattered up and down in England are dumb vouchers to the state and broad hospitality of their ancient lords. Shakspeare's portraits of good Duke Humphrey, of Warwick, of Northumberland, of Talbot, were drawn in strict consonance with the traditions. A sketch of the Earl of Shrewsbury, from the pen of Queen Elizabeth's Archbishop Parker;¹⁵ Lord Herbert of Cherbury's autobiography; the letters and essays of Sir Philip Sidney; the anecdotes preserved by the antiquaries Fuller and Collins; some glimpses at the interiors of noble houses, which we owe to Pepys and Evelyn; the details which Ben Jonson's masques (performed at Kenilworth, Althorpe, Belvoir, and other noble houses) record or suggest; down to Aubrey's passages of the life of Hobbes in the house of the Earl of Devon, are favorable pictures of a romantic style of manners. Penshurst still shines for us, and its Christmas revels, "where logs not burn, but men." At Wilton House, the "Arcadia" was written, amidst conversations with Fulke Greville, Lord Brooke, a man of no vulgar mind, as his own poems declare him. I must hold Ludlow Castle an honest house, for which Milton's "Comus" was written, and the company nobly bred which performed it with knowledge and sympathy. In the roll of nobles are found poets, philosophers, chemists, astronomers, also men of solid virtues and of lofty sentiments; often they have been the friends and patrons of genius and learning, and especially of the fine arts; and at this moment, almost every great house has its sumptuous picture-gallery.

Of course, there is another side to this gorgeous show. Every victory was the defeat of a party only less worthy. Castles are proud things, but 't is safest to be outside of them. War is a foul game, and yet war is not the worst part of aristocratic history. In later times, when the baron, educated only for war, with his brains paralyzed by his stomach, found himself idle at home, he grew fat and wanton, and a sorry brute. Grammont, Pepys, and Evelyn show the kennels to which the king and court went in quest of pleasure. Prostitutes taken from the theatres were made duchesses, their bastards dukes and earls. "The young men

sat uppermost, the old serious lords were out of favor.” The discourse that the king’s companions had with him was “poor and frothy.” No man who valued his head might do what these pot-companions familiarly did with the king. In logical sequence of these dignified revels, Pepys can tell the beggarly shifts to which the king was reduced, who could not find paper at his council table, and “no handkerchers” in his wardrobe, “and but three bands to his neck,” and the linen-draper and the stationer were out of pocket, and refusing to trust him, and the baker will not bring bread any longer. Meantime, the English Channel was swept, and London threatened by the Dutch fleet, manned too by English sailors, who, having been cheated of their pay for years by the king, enlisted with the enemy.

The Selwyn correspondence in the reign of George III. discloses a rottenness in the aristocracy, which threatened to decompose the state. The sycophancy and sale of votes and honor, for place and title; lewdness, gaming, smuggling, bribery, and cheating; the sneer at the childish indiscretion of quarrelling with ten thousand a year; the want of ideas; the splendor of the titles, and the apathy of the nation, are instructive, and make the reader pause and explore the firm bounds which confined these vices to a handful of rich men. In the reign of the Fourth George, things do not seem to have mended, and the rotten debauchee let down from a window by an inclined plane into his coach to take the air, was a scandal to Europe which the ill fame of his queen and of his family did nothing to retrieve.

Under the present reign, the perfect decorum of the Court is thought to have put a check on the gross vices of the aristocracy; yet gaming, racing, drinking, and mistresses bring them down, and the democrat can still gather scandals, if he will. Dismal anecdotes abound, verifying the gossip of the last generation of dukes served by bailiffs, with all their plate in pawn; of great lords living by the showing of their houses; and of an old man wheeled in his chair from room to room, whilst his chambers are exhibited to the visitor for money: of ruined dukes and earls living in exile for debt. The historic names of the Buckingham, Beauforts, Marlboroughs, and Hertfords have gained no new lustre, and now and then darker scandals break out, ominous as the new chapters added under the Orleans dynasty to the “*Causes Célèbres*” in France. Even peers, who are men of worth and public spirit, are overtaken and embarrassed by their vast expense. The respectable Duke of Devonshire, willing to be the Mecænas and Lucullus of his island, is reported to have said that he cannot live at Chatsworth but one month in the year. Their many houses eat them up. They cannot sell them, because they are entailed. They will not let them, for pride’s sake, but keep them empty, aired, and the grounds mown and dressed, at a cost of four or five

thousand pounds a year. The spending is for a great part in servants, in many houses exceeding a hundred.

Most of them are only chargeable with idleness, which, because it squanders such vast power of benefit, has the mischief of crime. "They might be little Providences on earth," said my friend, "and they are, for the most part, jockeys and fops." Campbell says: "Acquaintance with the nobility, I could never keep up. It requires a life of idleness, dressing, and attendance on their parties." I suppose, too, that a feeling of self-respect is driving cultivated men out of this society, as if the noble were slow to receive the lessons of the times, and had not learned to disguise his pride of place. A man of wit, who is also one of the celebrities of wealth and fashion, confessed to his friend, that he could not enter their houses without being made to feel that they were great lords, and he a low plebeian. With the tribe of *artistes*, including the musical tribe, the patrician morgue keeps no terms, but excludes them. When Julia Grisi and Mario sang at the houses of the Duke of Wellington and other grandees, a ribbon was stretched between the singer and the company.

When every noble was a soldier, they were carefully bred to great personal prowess. The education of a soldier is a simpler affair than that of an earl in the nineteenth century. And this was very seriously pursued; they were expert in every species of equitation, to the most dangerous practices, and this down to the accession of William of Orange. But graver men appear to have trained their sons for civil affairs. Elizabeth extended her thought to the future; and Sir Philip Sidney in his letter to his brother, and Milton and Evelyn, gave plain and hearty counsel. Already, too, the English noble and squire were preparing for the career of the country-gentleman, and his peaceable expense. They went from city to city, learning receipts to make perfumes, sweet powders, pomanders, antidotes, gathering seeds, gems, coins, and divers curiosities, preparing for a private life thereafter, in which they should take pleasure in these recreations.

All advantages given to absolve the young patrician from intellectual labor are of course mistaken. "In the university, noblemen are exempted from the public exercises for the degree, etc., by which they attain a degree called honorary. At the same time the fees they must pay for matriculation, and on all other occasions, are much higher."¹⁶ Fuller records "the observation of foreigners, that Englishmen, by making their children gentlemen, before they are men, cause they are so seldom wise men." This cockering justifies Dr. Johnson's bitter apology for primogeniture, "that it makes but one fool in a family."

The revolution in society has reached this class. The great powers of industrial art have no exclusion of name or blood. The tools of our time, namely, steam, ships, printing, money, and popular education, belong to those who can

handle them; and their effect has been, that advantages once confined to men of family are now open to the whole middle class. The road that grandeur levels for his coach, toil can travel in his cart.

This is more manifest every day, but I think it is true throughout English history. English history, wisely read, is the vindication of the brain of that people. Here, at last, were climate and condition friendly to the working faculty. Who now will work and dare, shall rule. This is the charter, or the chartism, which fogs, and seas, and rains proclaimed, — that intellect and personal force should make the law; that industry and administrative talent should administer; that work should wear the crown. I know that not this, but something else is pretended. The fiction with which the noble and the bystander equally please themselves is, that the former is of unbroken descent from the Norman, and so has never worked for eight hundred years. All the families are new, but the name is old, and they have made a covenant with their memories not to disturb it. But the analysis of the peerage and gentry shows the rapid decay and extinction of old families, the continual recruiting of these from new blood. The doors, though ostentatiously guarded, are really open, and hence the power of the bribe. All the barriers to rank only whet the thirst, and enhance the prize. “Now,” said Nelson, when clearing for battle, “a peerage, or Westminster Abbey!” “I have no illusion left,” said Sidney Smith, “but the Archbishop of Canterbury.” “The lawyers,” said Burke, “are only birds of passage in this House of Commons,” and then added, with a new figure, “they have their best bower anchor in the House of Lords.”

Another stride that has been taken, appears in the perishing of heraldry. Whilst the privileges of nobility are passing to the middle class, the badge is discredited, and the titles of lordship are getting musty and cumbersome. I wonder that sensible men have not been already impatient of them. They belong, with wigs, powder, and scarlet coats, to an earlier age, and may be advantageously consigned, with paint and tattoo, to the dignitaries of Australia and Polynesia.

A multitude of English, educated at the universities, bred into their society with manners, ability, and the gifts of fortune, are every day confronting the peers on a footing of equality, and outstripping them, as often, in the race of honor and influence. That cultivated class is large and ever enlarging. It is computed that, with titles and without, there are seventy thousand of these people coming and going in London, who make up what is called high society. They cannot shut their eyes to the fact that an untitled nobility possess all the power without the inconveniences that belong to rank, and the rich Englishman goes over the world at the present day, drawing more than all the advantages

which the strongest of his kings could command.

UNIVERSITIES.

Of British universities, Cambridge has the most illustrious names on its list. At the present day, too, it has the advantage of Oxford, counting in its *alumni* a greater number of distinguished scholars. I regret that I had but a single day wherein to see King's College Chapel, the beautiful lawns and gardens of the colleges, and a few of its gownsmen.

But I availed myself of some repeated invitations to Oxford, where I had introductions to Dr. Daubeny, Professor of Botany, and to the Regius Professor of Divinity, as well as to a valued friend, a Fellow of Oriel, and went thither on the last day of March, 1848. I was the guest of my friend in Oriel, was housed close upon that college, and I lived on college hospitalities.

My new friends showed me their cloisters, the Bodleian Library, the Randolph Gallery, Merton Hall, and the rest. I saw several faithful, high-minded young men, some of them in the mood of making sacrifices for peace of mind, — a topic, of course, on which I had no counsel to offer. Their affectionate and gregarious ways reminded me at once of the habits of *our* Cambridge men, though I imputed to these English an advantage in their secure and polished manners. The halls are rich with oaken wainscoting and ceiling. The pictures of the founders hang from the walls; the tables glitter with plate. A youth came forward to the upper table, and pronounced the ancient form of grace before meals, which, I suppose, has been in use here for ages, *Benedictus benedicat; benedicatur, benedicatur.*

It is a curious proof of the English use and wont, or of their good-nature, that these young men are locked up every night at nine o'clock, and the porter at each hall is required to give the name of any belated student who is admitted after that hour. Still more descriptive is the fact, that out of twelve hundred young men, comprising the most spirited of the aristocracy, a duel has never occurred.

Oxford is old, even in England, and conservative. Its foundations date from Alfred, and even from Arthur, if, as is alleged, the Pheryllt of the Druids had a seminary here. In the reign of Edward I., it is pretended, here were thirty thousand students; and nineteen most noble foundations were then established. Chaucer found it as firm as if it had always stood; and it is in British story, rich with great names, the school of the island, and the link of England to the learned of Europe. Hither came Erasmus, with delight, in 1497. Albericus Gentilis, in 1580, was relieved and maintained by the university. Albert Alaskie, a noble Polonian, Prince of Sirad, who visited England to admire the wisdom of Queen Elizabeth, was entertained with stage-plays in the Refectory of Christ-church, in

1583. Isaac Casaubon, coming from Henri Quatre of France, by invitation of James I., was admitted to Christ's College, in July, 1613. I saw the Ashmolean Museum, whither Elias Ashmole, in 1682, sent twelve cart-loads of rarities. Here indeed was the Olympia of all Antony Wood's and Aubrey's games and heroes, and every inch of ground has its lustre. For Wood's *Athenæ Oxonienses*, or calendar of the writers of Oxford for two hundred years, is a lively record of English manners and merits, and as much a national monument as Purchas's Pilgrims or Hansard's Register. On every side, Oxford is redolent of age and authority. Its gates shut of themselves against modern innovation. It is still governed by the statutes of Archbishop Laud. The books in Merton Library are still chained to the wall. Here, on August 27, 1660, John Milton's *Pro Populo Anglicano Defensio* and *Iconoclastes* were committed to the flames. I saw the school-court or quadrangle, where, in 1683, the Convocation caused the Leviathan of Thomas Hobbes to be publicly burnt. I do not know whether this learned body have yet heard of the Declaration of American Independence, or whether the Ptolemaic astronomy does not still hold its ground against the novelties of Copernicus.

As many sons, almost so many benefactors. It is usual for a nobleman, or indeed for almost every wealthy student, on quitting college, to leave behind him some article of plate; and gifts of all values, from a hall, or a fellowship, or a library, down to a picture or a spoon, are continually accruing, in the course of a century. My friend Doctor J. gave me the following anecdote. In Sir Thomas Lawrence's collection at London were the cartoons of Raphael and Michel Angelo. This inestimable prize was offered to Oxford University for seven thousand pounds. The offer was accepted, and the committee charged with the affair had collected three thousand pounds, when among other friends they called on Lord Eldon. Instead of a hundred pounds, he surprised them by putting down his name for three thousand pounds. They told him, they should now very easily raise the remainder. "No," he said, "your men have probably already contributed all they can spare; I can as well give the rest": and he withdrew his check for three thousand, and wrote four thousand pounds. I saw the whole collection in April, 1848.

In the Bodleian Library, Dr. Bandinel showed me the manuscript Plato, of the date of A.D. 896, brought by Dr. Clarke from Egypt; a manuscript Virgil, of the same century; the first Bible printed at Mentz (I believe in 1450); and a duplicate of the same, which had been deficient in about twenty leaves at the end. But, one day, being in Venice, he bought a room full of books and manuscripts — every scrap and fragment — for four thousand louis d'ors, and had the doors locked and sealed by the consul. On proceeding, afterwards, to examine his purchase, he

found the twenty deficient pages of his Mentz Bible, in perfect order; brought them to Oxford, with the rest of his purchase, and placed them in the volume; but has too much awe for the Providence that appears in bibliography also, to suffer the reunited parts to be rebound. The oldest building here is two hundred years younger than the frail manuscript brought by Dr. Clarke from Egypt. No candle or fire is ever lighted in the Bodleian. Its catalogue is the standard catalogue on the desk of every library in Oxford. In each several college, they underscore in red ink on this catalogue the titles of books contained in the library of that college, — the theory being that the Bodleian has all books. This rich library spent during the last year (1847) for the purchase of books £1,668.

The logical English train a scholar as they train an engineer. Oxford is a Greek factory, as Wilton mills weave carpet, and Sheffield grinds steel. They know the use of a tutor, as they know the use of a horse; and they draw the greatest amount of benefit out of both. The reading-men are kept by hard walking, hard riding, and measured eating and drinking, at the top of their condition, and two days before the examination, do no work, but lounge, ride, or run, to be fresh on the college doomsday. Seven years' residence is the theoretic period for a master's degree. In point of fact, it has long been three years' residence, and four years more of standing. This "three years" is about twenty-one months in all.¹⁷

"The whole expense," says Professor Sewel, "of ordinary college tuition at Oxford, is about sixteen guineas a year." But this plausible statement may deceive a reader unacquainted with the fact, that the principal teaching relied on is private tuition. And the expenses of private tuition are reckoned at from £50 to £70 a year, or \$1,000 for the whole course of three years and a half. At Cambridge \$750 a year is economical, and \$1,500 not extravagant.¹⁸

The number of students and of residents, the dignity of the authorities, the value of the foundations, the history and the architecture, the known sympathy of entire Britain in what is done there, justify a dedication to study in the undergraduate, such as cannot easily be in America, where his college is half suspected by the Freshman to be insignificant in the scale beside trade and politics. Oxford is a little aristocracy in itself, numerous and dignified enough to rank with other estates in the realm; and where fame and secular promotion are to be had for study, and in a direction which has the unanimous respect of all cultivated nations.

This aristocracy, of course, repairs its own losses; fills places, as they fall vacant, from the body of students. The number of fellowships at Oxford is 540, averaging £200 a year, with lodging and diet at the college. If a young American, loving learning, and hindered by poverty, were offered a home, a

table, the walks, and the library, in one of these academical palaces, and a thousand dollars a year as long as he chose to remain a bachelor, he would dance for joy. Yet these young men thus happily placed, and paid to read, are impatient of their few checks, and many of them preparing to resign their fellowships. They shuddered at the prospect of dying a Fellow, and they pointed out to me a paralytic old man, who was assisted into the hall. As the number of undergraduates at Oxford is only about 1,200 or 1,300, and many of these are never competitors, the chance of a fellowship is very great. The income of the nineteen colleges is conjectured at £150,000 a year.

The effect of this drill is the radical knowledge of Greek and Latin, and of mathematics, and the solidity and taste of English criticism. Whatever luck there may be in this or that award, an Eton captain can write Latin longs and shorts, can turn the Court-Guide into hexameters, and it is certain that a Senior Classic can quote correctly from the *Corpus Poetarum*, and is critically learned in all the humanities. Greek erudition exists on the Isis and Cam, whether the Maud man or the Brazen Nose man be properly ranked or not; the atmosphere is loaded with Greek learning; the whole river has reached a certain height, and kills all that growth of weeds, which this Castalian water kills. The English nature takes culture kindly. So Milton thought. It refines the Norseman. Access to the Greek mind lifts his standard of taste. He has enough to think of, and, unless of an impulsive nature, is indisposed from writing or speaking, by the fulness of his mind, and the new severity of his taste. The great silent crowd of thorough-bred Grecians always known to be around him, the English writer cannot ignore. They prune his orations, and point his pen. Hence, the style and tone of English journalism. The men have learned accuracy and comprehension, logic, and pace, or speed of working. They have bottom, endurance, wind. When born with good constitutions, they make those eupeptic studying-mills, the cast-iron men, the *dura ilia*, whose powers of performance compare with ours, as the steam-hammer with the music-box; — Cokes, Mansfields, Seldens, and Bentleys, and when it happens that a superior brain puts a rider on this admirable horse, we obtain those masters of the world who combine the highest energy in affairs, with a supreme culture.

It is contended by those who have been bred at Eton, Harrow, Rugby, and Westminster, that the public sentiment within each of those schools is high-toned and manly; that, in their playgrounds, courage is universally admired, meanness despised, manly feelings and generous conduct are encouraged; that an unwritten code of honor deals to the spoiled child of rank and to the child of upstart wealth an even-handed justice, purges their nonsense out of both, and does all that can be done to make them gentlemen.

Again, at the universities, it is urged, that all goes to form what England values as the flower of its national life, — a well-educated gentleman. The German Huber, in describing to his countrymen the attributes of an English gentleman, frankly admits, that “in Germany, we have nothing of the kind. A gentleman must possess a political character, an independent and public position, or, at least, the right of assuming it. He must have average opulence, either of his own, or in his family. He should also have bodily activity and strength, unattainable by our sedentary life in public offices. The race of English gentlemen presents an appearance of manly vigor and form, not elsewhere to be found among an equal number of persons. No other nation produces the stock. And in England, it has deteriorated. The university is a decided presumption in any man’s favor. And so eminent are the members that a glance at the calendars will show that in all the world one cannot be in better company than on the books of one of the larger Oxford or Cambridge colleges.”¹⁹

These seminaries are finishing schools for the upper classes, and not for the poor. The useful is exploded. The definition of a public school is “a school which excludes all that could fit a man for standing behind a counter.”²⁰

No doubt, the foundations have been perverted. Oxford, which equals in wealth several of the smaller European states, shuts up the lectureships which were made “public for all men thereunto to have concourse”; misspends the revenues bestowed for such youths “as should be most meet for towardness, poverty, and painfulness”; there is gross favoritism; many chairs and many fellowships are made beds of ease; and ’tis likely that the university will know how to resist and make inoperative the terrors of parliamentary inquiry; no doubt, their learning is grown obsolete; but Oxford also has its merits, and I found here also proof of the national fidelity and thoroughness. Such knowledge as they prize they possess and impart. Whether in course or by indirection, whether by a cramming tutor or by examiners with prizes and foundation scholarships, education according to the English notion of it is acquired. I looked over the Examination Papers of the year 1848, for the various scholarships and fellowships, the Lusby, the Hertford, the Dean-Ireland, and the University (copies of which were kindly given me by a Greek professor), containing the tasks which many competitors had victoriously performed, and I believed they would prove too severe tests for the candidates for a Bachelor’s degree in Yale or Harvard. And, in general, here was proof of a more searching study in the appointed directions, and the knowledge pretended to be conveyed was conveyed. Oxford sends out yearly twenty or thirty very able men, and three or four hundred well-educated men.

The diet and rough exercise secure a certain amount of old Norse power. A

fop will fight, and, in exigent circumstances, will play the manly part. In seeing these youths, I believed I saw already an advantage in vigor and color and general habit, over their contemporaries in the American colleges. No doubt much of the power and brilliancy of the reading-men is merely constitutional or hygienic. With a hardier habit and resolute gymnastics, with five miles more walking, or five ounces less eating, or with a saddle and gallop of twenty miles a day, with skating and rowing matches, the American would arrive at as robust exegesis, and cheery and hilarious tone. I should readily concede these advantages, which it would be easy to acquire, if I did not find also that they read better than we, and write better.

English wealth falling on their school and university training, makes a systematic reading of the best authors, and to the end of a knowledge how the things whereof they treat really stand: whilst pamphleteer or journalist reading for an argument for a party, or reading to write, or, at all events, for some by end imposed on them, must read meanly and fragmentarily. Charles I. said, that he understood English law as well as a gentleman ought to understand it.

Then they have access to books; the rich libraries collected at every one of many thousands of houses, give an advantage not to be attained by a youth in this country, when one thinks how much more and better may be learned by a scholar, who, immediately on hearing of a book, can consult it, than by one who is on the quest for years, and reads inferior books, because he cannot find the best.

Again, the great number of cultivated men keep each other up to a high standard. The habit of meeting well-read and knowing men teaches the art of omission and selection.

Universities are, of course, hostile to geniuses, which seeing and using ways of their own, discredit the routine: as churches and monasteries persecute youthful saints. Yet we all send our sons to college, and, though he be a genius, he must take his chance. The university must be retrospective. The gale that gives direction to the vanes on all its towers blows out of antiquity. Oxford is a library, and the professors must be librarians. And I should as soon think of quarrelling with the janitor for not magnifying his office by hostile sallies into the street, like the Governor of Kertch or Kinburn, as of quarrelling with the professors for not admiring the young neologists who pluck the beards of Euclid and Aristotle, or for not attempting themselves to fill their vacant shelves as original writers.

It is easy to carp at colleges, and the college, if we will wait for it, will have its own turn. Genius exists there also, but will not answer a call of a committee of the House of Commons. It is rare, precarious, eccentric, and darkling.

England is the land of mixture and surprise, and when you have settled it that the universities are moribund, out comes a poetic influence from the heart of Oxford, to mould the opinions of cities, to build their houses as simply as birds their nests, to give veracity to art, and charm mankind, as an appeal to moral order always must. But besides this restorative genius, the best poetry of England of this age, in the old forms, comes from two graduates of Cambridge.

RELIGION.

No people, at the present day, can be explained by their national religion. They do not feel responsible for it; it lies far outside of them. Their loyalty to truth and their labor and expenditure rest on real foundations, and not on a national church. And English life, it is evident, does not grow out of the Athanasian creed, or the Articles, or the Eucharist. It is with religion as with marriage. A youth marries in haste; afterwards, when his mind is opened to the reason of the conduct of life, he is asked, what he thinks of the institution of marriage, and of the right relations of the sexes. 'I should have much to say,' he might reply, 'if the question were open, but I have a wife and children, and all question is closed for me.' In the barbarous days of a nation, some cultus is formed or imported; altars are built, tithes are paid, priests ordained. The education and expenditure of the country take that direction, and when wealth, refinement, great men, and ties to the world supervene, its prudent men say, why fight against Fate, or lift these absurdities which are now mountainous? Better find some niche or crevice in this mountain of stone which religious ages have quarried and carved, wherein to bestow yourself, than attempt anything ridiculously and dangerously above your strength, like removing it.

In seeing old castles and cathedrals, I sometimes say, as to-day, in front of Dundee Church tower, which is eight hundred years old, 'this was built by another and a better race than any that now look on it.' And, plainly, there has been great power of sentiment at work in this island, of which these buildings are the proofs: as volcanic basalts show the work of fire which has been extinguished for ages. England felt the full heat of the Christianity which fermented Europe, and drew, like the chemistry of fire, a firm line between barbarism and culture. The power of the religious sentiment put an end to human sacrifices, checked appetite, inspired the crusades, inspired resistance to tyrants, inspired self-respect, set bounds to serfdom and slavery, founded liberty, created the religious architecture, — York, Newstead, Westminster, Fountains Abbey, Ripon, Beverley, and Dundee, — works to which the key is lost, with the sentiment which created them; inspired the English Bible, the liturgy, the monkish histories, the chronicle of Richard of Devizes. The priest translated the Vulgate, and translated the sanctities of old hagiology into English virtues on English ground. It was a certain affirmative or aggressive state of the Caucasian races. Man awoke refreshed by the sleep of ages. The violence of the Northern savages exasperated Christianity into power. It lived by the love of the people. Bishop Wilfrid manumitted two hundred and fifty serfs, whom he found attached

to the soil. The clergy obtained respite from labor for the boor on the Sabbath, and on church festivals. "The lord who compelled his boor to labor between sunset on Saturday and sunset on Sunday, forfeited him altogether." The priest came out of the people, and sympathized with his class. The church was the mediator, check, and democratic principle in Europe. Latimer, Wicliffe, Arundel, Cobham, Antony Parsons, Sir Harry Vane, George Fox, Penn, Bunyan, are the democrats, as well as the saints of their times. The Catholic Church, thrown on this toiling, serious people, has made in fourteen centuries a massive system, close fitted to the manners and genius of the country, at once domestical and stately. In the long time, it has blended with everything in heaven above and the earth beneath. It moves through a zodiac of feasts and fasts, names every day of the year, every town and market and headland and monument, and has coupled itself with the almanac, that no court can be held, no field ploughed, no horse shod, without some leave from the church. All maxims of prudence or shop or farm are fixed and dated by the church. Hence, its strength in the agricultural districts. The distribution of land into parishes enforces a church sanction to every civil privilege; and the gradation of the clergy, — prelates for the rich, and curates for the poor, — with the fact that a classical education has been secured to the clergyman, makes them "the link which unites the sequestered peasantry with the intellectual advancement of the age."²¹

The English Church has many certificates to show, of humble effective service in humanizing the people, in cheering and refining men, feeding, healing, and educating. It has the seal of martyrs and confessors; the noblest books; a sublime architecture; a ritual marked by the same secular merits, nothing cheap or purchasable.

From this slow-grown church important reactions proceed; much for culture, much for giving a direction to the nation's affection and will to-day. The carved and pictured chapel — its entire surface animated with image and emblem — made the parish-church a sort of book and Bible to the people's eye.

Then, when the Saxon instinct had secured a service in the vernacular tongue, it was the tutor and university of the people. In York minster, on the day of the enthronization of the new archbishop, I heard the service of evening prayer read and chanted in the choir. It was strange to hear the pretty pastoral of the betrothal of Rebecca and Isaac, in the morning of the world, read with circumstantiality in York minster, on the 13th January, 1848, to the decorous English audience, just fresh from the Times newspaper and their wine; and listening with all the devotion of national pride. That was binding old and new to some purpose. The reverence for the Scriptures is an element of civilization, for thus has the history of the world, been preserved, and is preserved. Here in England every day a

chapter of Genesis, and a leader in the Times.

Another part of the same service on this occasion was not insignificant. Handel's coronation anthem, *God save the King*, was played by Dr. Camidge on the organ, with sublime effect. The minster and the music were made for each other. It was a hint of the part the church plays as a political engine. From his infancy, every Englishman is accustomed to hear daily prayers for the queen, for the royal family, and the Parliament, by name; and this lifelong consecration of these personages cannot be without influence on his opinions.

The universities, also, are parcel of the ecclesiastical system, and their first design is to form the clergy. Thus the clergy for a thousand years have been the scholars of the nation.

The national temperament deeply enjoys the unbroken order and tradition of its church; the liturgy, ceremony, architecture; the sober grace, the good company, the connection with the throne, and with history, which adorn it. And whilst it endears itself thus to men of more taste than activity, the stability of the English nation is passionately enlisted to its support, from its inextricable connection with the cause of public order, with politics, and with the funds.

Good churches are not built by bad men; at least there must be probity and enthusiasm somewhere in society. These minsters were neither built nor filled by atheists. No church has had more learned, industrious, or devoted men; plenty of "clerks and bishops, who, out of their gowns, would turn their backs on no man."²² Their architecture still glows with faith in immortality. Heats and genial periods arrive in history, or, shall we say, plenitudes of Divine Presence, by which high tides are caused in the human spirit, and great virtues and talents appear, as in the eleventh, twelfth, thirteenth, and again in the sixteenth and seventeenth centuries, when the nation was full of genius and piety.

But the age of the Wicliffes, Cobhams, Arundels, Becket; of the Latimers, Mores, Cranmers; of the Taylors, Leightons, Herberts; of the Sherlocks, and Butlers, is gone. Silent revolutions in opinion have made it impossible that men like these should return or find a place in their once sacred stalls. The spirit that dwelt in this church has glided away to animate other activities; and they who come to the old shrines find apes and players rustling the old garments.

The religion of England is part of good breeding. When you see on the Continent the well-dressed Englishman come into his ambassador's chapel, and put his face for silent prayer into his smooth-brushed hat, one cannot help feeling how much national pride prays with him, and the religion of a gentleman. So far is he from attaching any meaning to the words, that he believes himself to have done almost the generous thing, and that it is very condescending in him to pray to God. A great duke said on the occasion of a victory, in the House of Lords,

that he thought the Almighty God had not been well used by them, and that it would become their magnanimity, after so great successes, to take order that a proper acknowledgment be made. It is the church of the gentry; but it is not the church of the poor. The operatives do not own it, and gentlemen lately testified in the House of Commons that in their lives they never saw a poor man in a ragged coat inside a church.

The torpidity on the side of religion of the vigorous English understanding shows how much wit and folly can agree in one brain. Their religion is a quotation; their church is a doll; and any examination is interdicted with screams of terror. In good company, you expect them to laugh at the fanaticism of the vulgar; but they do not; they are the vulgar.

The English, in common perhaps with Christendom in the nineteenth century, do not respect power, but only performance; value ideas only for an economic result. Wellington esteems a saint only as far as he can be an army chaplain: "Mr. Briscoll, by his admirable conduct and good sense, got the better of Methodism, which had appeared among the soldiers, and once among the officers." They value a philosopher as they value an apothecary who brings bark or a drench; and inspiration is only some blowpipe, or a finer mechanical aid.

I suspect that there is in an Englishman's brain a valve that can be closed at pleasure, as an engineer shuts off steam. The most sensible and well-informed men possess the power of thinking just so far as the bishop in religious matters, and as the chancellor of the exchequer in politics. They talk with courage and logic, and show you magnificent results; but the same men who have brought free-trade or geology to their present standing, look grave and lofty, and shut down their valve, as soon as the conversation approaches the English Church. After that, you talk with a box-turtle.

The action of the university, both in what is taught, and in the spirit of the place, is directed more on producing an English gentleman, than a saint or a psychologist. It ripens a bishop, and extrudes a philosopher. I do not know that there is more cabalism in the Anglican, than in other churches, but the Anglican clergy are identified with the aristocracy. They say, here, that, if you talk with a clergyman, you are sure to find him well bred, informed, and candid, he entertains your thought or your project with sympathy and praise. But if a second clergyman come in, the sympathy is at an end: two together are inaccessible to your thought, and, whenever it comes to action, the clergyman invariably sides with his church.

The Anglican church is marked by the grace and good sense of its forms, by the manly grace of its clergy. The gospel it preaches is, 'By taste are ye saved.' It keeps the old structures in repair, spends a world of money in music and

building; and in buying Pugin, and architectural literature. It has a general good name for amenity and mildness. It is not in ordinary a persecuting church; it is not inquisitorial, not even inquisitive, is perfectly well bred, and can shut its eyes on all proper occasions. If you let it alone, it will let you alone. But its instinct is hostile to all change in politics, literature, or social arts. The church has not been the founder of the London University, of the Mechanics' Institutes, of the Free School, or whatever aims at diffusion of knowledge. The Platonists of Oxford are as bitter against this heresy, as Thomas Taylor.

The doctrine of the Old Testament is the religion of England. The first leaf of the New Testament it does not open. It believes in a Providence which does not treat with levity a pound sterling. They are neither transcendentalists nor Christians. They put up no Socratic prayer, much less any saintly prayer for the queen's mind; ask neither for light nor right, but say bluntly, "Grant her in health and wealth long to live." And one traces this Jewish prayer in all English private history, from the prayers of King Richard, in Richard of Devizes' Chronicle, to those in the diaries of Sir Samuel Romilly, and of Haydon the painter. "Abroad with my wife," writes Pepys piously, "the first time that ever I rode in my own coach; which do make my heart rejoice and praise God, and pray him to bless it to me, and continue it." The bill for the naturalization of the Jews (in 1753) was resisted by petitions from all parts of the kingdom, and by petition from the city of London, reprobating this bill, as "tending extremely to the dishonor of the Christian religion, and extremely injurious to the interests and commerce of the kingdom in general, and of the city of London in particular."

But they have not been able to congeal humanity by act of Parliament. "The heavens journey still and sojourn not," and arts, wars, discoveries, and opinion go onward at their own pace. The new age has new desires, new enemies, new trades, new charities, and reads the Scriptures with new eyes. The chatter of French politics, the steam-whistle, the hum of the mill, and the noise of embarking emigrants, had quite put most of the old legends out of mind; so that when you came to read the liturgy to a modern congregation, it was almost absurd in its unfitness, and suggested a masquerade of old costumes.

No chemist has prospered in the attempt to crystallize a religion. It is endogenous, like the skin, and other vital organs. A new statement every day. The prophet and apostle knew this, and the non-conformist confutes the conformists, by quoting the texts they must allow. It is the condition of a religion, to require religion for its expositor. Prophet and apostle can only be rightly understood by prophet and apostle. The statesman knows that the religious element will not fail, any more than the supply of fibrine and chyle; but it is in its nature constructive, and will organize such a church as it wants. The

wise legislator will spend on temples, schools, libraries, colleges, but will shun the enriching of priests. If, in any manner, he can leave the election and paying of the priest to the people, he will do well. Like the Quakers, he may resist the separation of a class of priests, and create opportunity and expectation in the society, to run to meet natural endowment, in this kind. But, when wealth accrues to a chaplaincy, a bishopric, or rectorship, it requires moneyed men for its stewards, who will give it another direction than to the mystics of their day. Of course, money will do after its kind, and will steadily work to unspiritualize and unchurch the people to whom it was bequeathed. The class certain to be excluded from all preferment are the religious, — and driven to other churches; — which is nature's *vis medicatrix*.

The curates are ill paid, and the prelates are overpaid. This abuse draws into the church the children of the nobility, and other unfit persons, who have a taste for expense. Thus a bishop is only a surpliced merchant. Through his lawn, I can see the bright buttons of the shopman's coat glitter. A wealth like that of Durham makes almost a premium on felony. Brougham, in a speech in the House of Commons on the Irish elective franchise, said, "How will the reverend bishops of the other house be able to express their due abhorrence of the crime of perjury, who solemnly declare in the presence of God, that when they are called upon to accept a living, perhaps of £4,000 a year, at that very instant, they are moved by the Holy Ghost to accept the office and administration thereof, and for no other reason whatever?" The modes of initiation are more damaging than custom-house oaths. The bishop is elected by the Dean and Prebends of the cathedral. The Queen sends these gentlemen a *congé d'élire*, or leave to elect; but also sends them the name of the person whom they are to elect. They go into the cathedral, chant and pray, and beseech the Holy Ghost to assist them in their choice; and, after these invocations, invariably find that the dictates of the Holy Ghost agree with the recommendations of the Queen.

But you must pay for conformity. All goes well as long as you run with conformists. But you, who are an honest man in other particulars, know, that there is alive somewhere a man whose honesty reaches to this point also, that he shall not kneel to false gods, and, on the day when you meet him, you sink into the class of counterfeits. Besides, this succumbing has grave penalties. If you take in a lie, you must take in all that belongs to it. England accepts this ornamented national church, and it glazes the eyes, bloats the flesh, gives the voice a stertorous clang, and clouds the understanding of the receivers.

The English Church, undermined by German criticism, had nothing left but tradition, and was led logically back to Romanism. But that was an element which only hot heads could breathe: in view of the educated class, generally, it

was not a fact to front the sun; and the alienation of such men from the church became complete.

Nature, to be sure, had her remedy. Religious persons are driven out of the Established Church into sects, which instantly rise to credit, and hold the Establishment in check. Nature has sharper remedies, also. The English, abhorring change in all things, abhorring it most in matters of religion, cling to the last rag of form, and are dreadfully given to cant. The English (and I wish it were confined to them, but 't is a taint in the Anglo-Saxon blood in both hemispheres), the English and the Americans cant beyond all other nations. The French relinquish all that industry to them. What is so odious as the polite bows to God, in our books and newspapers? The popular press is flagitious in the exact measure of its sanctimony, and the religion of the day is a theatrical Sinai, where the thunders are supplied by the property-man. The fanaticism and hypocrisy create satire. Punch finds an inexhaustible material. Dickens writes novels on Exeter Hall humanity. Thackeray exposes the heartless high life. Nature revenges herself more summarily by the heathenism of the lower classes. Lord Shaftesbury calls the poor thieves together, and reads sermons to them, and they call it 'gas.' George Borrow summons the Gypsies to hear his discourse on the Hebrews in Egypt, and reads to them the Apostles' creed in Romany. "When I had concluded," he says, "I looked around me. The features of the assembly were twisted, and the eyes of all turned upon me with a frightful squint: not an individual present but squinted; the genteel Pepa, the good-humored Chicharona, the Cosdami, all squinted: the Gypsy jockey squinted worst of all."

The church at this moment is much to be pitied. She has nothing left but possession. If a bishop meets an intelligent gentleman, and reads fatal interrogations in his eyes, he has no resource but to take wine with him. False position introduces cant, perjury, simony, and ever a lower class of mind and character into the clergy; and, when the hierarchy is afraid of science and education, afraid of piety, afraid of tradition, and afraid of theology, there is nothing left but to quit a church which is no longer one.

But the religion of England, — is it the Established Church? no; is it the sects? no; they are only perpetuations of some private man's dissent, and are to the Established Church as cabs are to a coach, cheaper and more convenient, but really the same thing. Where dwells the religion? Tell me first where dwells electricity, or motion, or thought, or gesture. They do not dwell or stay at all. Electricity cannot be made fast, mortared up and ended, like London Monument, or the Tower, so that you shall know where to find it, and keep it fixed, as the English do with their things, forevermore; it is passing, glancing, gesticular; it is a traveller, a newness, a surprise, a secret, which perplexes them, and puts them

out. Yet, if religion be the doing of all good, and for its sake the suffering of all evil, *souffrir de tout le monde et ne faire souffrir personne*, that divine secret has existed in England from the days of Alfred to those of Romilly, of Clarkson, and of Florence Nightingale, and in thousands who have no fame.

LITERATURE.

A strong common-sense, which it is not easy to unseat or disturb, marks the English mind for a thousand years; a rude strength newly applied to thought, as of sailors and soldiers who had lately learned to read. They have no fancy, and never are surprised into a covert or witty word, such as pleased the Athenians and Italians, and was convertible into a fable not long after; but they delight in strong earthy expression, not mistakable, coarsely true to the human body, and, though spoken among princes, equally fit and welcome to the mob. This homeliness, veracity, and plain style appear in the earliest extant works, and in the latest. It imports into songs and ballads the smell of the earth, the breath of cattle, and, like a Dutch painter, seeks a household charm, though by pails and pans. They ask their constitutional utility in verse. The kail and herrings are never out of sight. The poet nimbly recovers himself from every sally of the imagination. The English muse loves the farm-yard, the lane and market. She says, with De Staël, "I tramp in the mire with wooden shoes, whenever they would force me into the clouds." For, the Englishman has accurate perceptions; takes hold of things by the right end, and there is no slipperiness in his grasp. He loves the axe, the spade, the oar, the gun, the steam-pipe: he has built the engine he uses. He is materialist, economical, mercantile. He must be treated with sincerity and reality, with muffins and not the promise of muffins; and prefers his hot chop, with perfect security and convenience in the eating of it, to the chances of the amplest and Frenchiest bill of fare, engraved on embossed paper. When he is intellectual, and a poet or a philosopher, he carries the same hard truth and the same keen machinery into the mental sphere. His mind must stand on a fact. He will not be baffled, or catch at clouds, but the mind must have a symbol palpable and resisting. What he relishes in Dante, is the vice-like tenacity with which he holds a mental image before the eyes, as if it were a scutcheon painted on a shield. Byron "liked something craggy to break his mind upon." A taste for plain strong speech, what is called a biblical style, marks the English. It is in Alfred, and the Saxon Chronicle, and in the Sagas of the Northmen. Latimer was homely. Hobbes was perfect in the "noble vulgar speech." Donne, Bunyan, Milton, Taylor, Evelyn, Pepys, Hooker, Cotton, and the translators, wrote it. How realistic or materialistic in treatment of his subject is Swift. He describes his fictitious persons as if for the police. Defoe has no insecurity or choice, Hudibras has the same hard mentality, — keeping the truth at once to the senses, and to the intellect.

It is not less seen in poetry. Chaucer's hard painting of his Canterbury

pilgrims satisfies the senses. Shakspeare, Spenser, and Milton, in their loftiest ascents, have this national grip and exactitude of mind. This mental materialism makes the value of English transcendental genius; in these writers, and in Herbert, Henry More, Donne, and Sir Thomas Browne. The Saxon materialism and narrowness, exalted into the sphere of intellect, makes the very genius of Shakspeare and Milton. When it reaches the pure element, it treads the clouds as securely as the adamant. Even in its elevations, materialistic, its poetry is common-sense inspired; or iron raised to white heat.

The marriage of the two qualities is in their speech. It is a tacit rule of the language to make the frame or skeleton of Saxon words, and, when elevation or ornament is sought, to interweave Roman; but sparingly; nor is a sentence made of Roman words alone, without loss of strength. The children and laborers use the Saxon unmixed. The Latin unmixed is abandoned to the colleges and Parliament. Mixture is a secret of the English island; and, in their dialect, the male principle is the Saxon; the female, the Latin; and they are combined in every discourse. A good writer, if he has indulged in a Roman roundness, makes haste to chasten and nerve his period by English monosyllables.

When the Gothic nations came into Europe, they found it lighted with the sun and moon of Hebrew and of Greek genius. The tablets of their brain, long kept in the dark, were finely sensible to the double glory. To the images from this twin source (of Christianity and art), the mind became fruitful as by the incubation of the Holy Ghost. The English mind flowered in every faculty. The common-sense was surprised and inspired. For two centuries, England was philosophic, religious, poetic. The mental furniture seemed of larger scale; the memory capacious like the storehouse of the rains. The ardor and endurance of study; the boldness and facility of their mental construction; their fancy, and imagination, and easy spanning of vast distances of thought; the enterprise or accosting of new subjects; and, generally, the easy exertion of power, astonish, like the legendary feats of Guy of Warwick. The union of Saxon precision and Oriental soaring, of which Shakspeare is the perfect example, is shared in less degree by the writers of two centuries. I find not only the great masters out of all rivalry and reach, but the whole writing of the time charged with a masculine force and freedom.

There is a hygienic simpleness, rough vigor, and closeness to the matter in hand, even in the second and third class of writers; and, I think, in the common style of the people, as one finds it in the citation of wills, letters, and public documents, in proverbs, and forms of speech. The more hearty and sturdy expression may indicate that the savageness of the Norseman was not all gone. Their dynamic brains hurled off their words, as the revolving stone hurls off

scraps of grit. I could cite from the seventeenth century sentences and phrases of edge not to be matched in the nineteenth. Their poets by simple force of mind equalized themselves with the accumulated science of ours. The country gentlemen had a posset or drink they called October; and the poets, as if by this hint, knew how to distil the whole season into their autumnal verses: and, as nature, to pique the more, sometimes works up deformities into beauty, in some rare Aspasia, or Cleopatra; and, as the Greek art wrought many a vase or column, in which too long, or too lithe, or nodes, or pits and flaws, are made a beauty of; so these were so quick and vital, that they could charm and enrich by mean and vulgar objects.

A man must think that age well taught and thoughtful, by which masques and poems, like those of Ben Jonson, full of heroic sentiment in a manly style, were received with favor. The unique fact in literary history, the unsurprised reception of Shakspeare, — the reception proved by his making his fortune; and the apathy proved by the absence of all contemporary panegyric, — seems to demonstrate an elevation in the mind of the people. Judge of the splendor of a nation, by the insignificance of great individuals in it. The manner in which they learned Greek and Latin, before our modern facilities were yet ready, without dictionaries, grammars, or indexes, by lectures of a professor, followed by their own searchings, — required a more robust memory, and cooperation of all the faculties; and their scholars, Camden, Usher, Selden, Mede, Gataker, Hooker, Taylor, Burton, Bentley, Brian Walton, acquired the solidity and method of engineers.

The influence of Plato tinges the British genius. Their minds loved analogy; were cognizant of resemblances, and climbers on the staircase of unity. 'T is a very old strife between those who elect to see identity, and those who elect to see discrepancies; and it renews itself in Britain. The poets, of course, are of one part; the men of the world, of the other. But Britain had many disciples of Plato, — More, Hooker, Bacon, Sidney, Lord Brooke, Herbert, Browne, Donne, Spenser, Chapman, Milton, Crashaw, Norris, Cudworth, Berkeley, Jeremy Taylor.

Lord Bacon has the English duality. His centuries of observations, on useful science, and his experiments, I suppose, were worth nothing. One hint of Franklin, or Watt, or Dalton, or Davy, or any one who had a talent for experiment, was worth all his lifetime of exquisite trifles. But he drinks of a diviner stream, and marks the influx of idealism into England. Where that goes, is poetry, health, and progress. The rules of its genesis or its diffusion are not known. That knowledge, if we had it, would supersede all we call science of the mind. It seems an affair of race, or of meta-chemistry; — the vital point being,

— how far the sense of unity, or instinct of seeking resemblances predominated. For, wherever the mind takes a step, it is, to put itself at one with a larger class, discerned beyond the lesser class with which it has been conversant. Hence, all poetry, and all affirmative action comes.

Bacon, in the structure of his mind, held of the analogists, of the idealists, or (as we popularly say, naming from the best example) Platonists. Whoever discredits analogy, and requires heaps of facts, before any theories can be attempted, has no poetic power, and nothing original or beautiful will be produced by him. Locke is as surely the influx of decomposition and of prose, as Bacon and the Platonists, of growth. The Platonic is the poetic tendency; the so-called scientific is the negative and poisonous. 'T is quite certain, that Spenser, Burns, Byron, and Wordsworth will be Platonists; and that the dull men will be Lockists. Then politics and commerce will absorb from the educated class men of talents without genius, precisely because such have no resistance.

Bacon, capable of ideas, yet devoted to ends, required in his map of the mind, first of all, universality, or *prima philosophia*, the receptacle for all such profitable observations and axioms as fall not within the compass of any of the special parts of philosophy, but are more common, and of a higher stage. He held this element essential: it is never out of mind: he never spares rebukes for such as neglect it; believing that no perfect discovery can be made in a flat or level, but you must ascend to a higher science. "If any man thinketh philosophy and universality to be idle studies, he does not consider that all professions are from thence served and supplied; and this I take to be a great cause that has hindered the progression of learning, because these fundamental knowledges have been studied but in passage." He explained himself by giving various quaint examples of the summary or common laws, of which each science has its own illustration. He complains, that "he finds this part of learning very deficient, the profounder sort of wits drawing a bucket now and then for their own use, but the spring-head unvisited. This was the *dry light* which did scorch and offend most men's watery natures." Plato had signified the same sense, when he said: "All the great arts require a subtle and speculative research into the law of nature, since loftiness of thought and perfect mastery over every subject seem to be derived from some such source as this. This Pericles had, in addition to a great natural genius. For, meeting with Anaxagoras, who was a person of this kind, he attached himself to him, and nourished himself with sublime speculations on the absolute intelligence; and imported thence into the oratorical art whatever could be useful to it."

A few generalizations always circulate in the world, whose authors we do not rightly know, which astonish, and appear to be avenues to vast kingdoms of

thought, and these are in the world *constants*, like the Copernican and Newtonian theories in physics. In England, these may be traced usually to Shakspeare, Bacon, Milton, or Hooker, even to Van Helmont and Behmen, and do all have a kind of filial retrospect to Plato and the Greeks. Of this kind is Lord Bacon's sentence, that "Nature is commanded by obeying her"; his doctrine of poetry, which "accommodates the shows of things to the desires of the mind"; or the Zoroastrian definition of poetry, mystical, yet exact, "apparent pictures of unapparent natures"; Spenser's creed, that "soul is form, and doth the body make"; the theory of Berkeley, that we have no certain assurance of the existence of matter; Doctor Samuel Clarke's argument for theism from the nature of space and time; Harrington's political rule, that power must rest on land, — a rule which requires to be liberally interpreted; the theory of Swedenborg, so cosmically applied by him, that the man makes his heaven and hell; Hegel's study of civil history, as the conflict of ideas and the victory of the deeper thought; the identity-philosophy of Schelling, couched in the statement that "all difference is quantitative." So the very announcement of the theory of gravitation, of Kepler's three harmonic laws, and even of Dalton's doctrine of definite proportions, finds a sudden response in the mind, which remains a superior evidence to empirical demonstrations. I cite these generalizations, some of which are more recent, merely to indicate a class. Not these particulars, but the mental plane or the atmosphere from which they emanate, was the home and element of the writers and readers in what we loosely call the Elizabethan age (say in literary history, the period from 1575 to 1625), yet a period almost short enough to justify Ben Jonson's remark on Lord Bacon: "About his time, and within his view, were born all the wits that could honor a nation, or help study."

Such richness of genius had not existed more than once before. These heights could not be maintained. As we find stumps of vast trees in our exhausted soils, and have received traditions of their ancient fertility to tillage, so history reckons epochs in which the intellect of famed races became effete. So it fared with English genius. These heights were followed by a meanness, and a descent of the mind into lower levels; the loss of wings; no high speculation. Locke, to whom the meaning of ideas was unknown, became the type of philosophy, and his "understanding" the measure, in all nations, of the English intellect. His countrymen forsook the lofty sides of Parnassus, on which they had once walked with echoing steps, and disused the studies once so beloved; the powers of thought fell into neglect. The later English want the faculty of Plato and Aristotle, of grouping men in natural classes by an insight of general laws, so deep, that the rule is deduced with equal precision from few subjects or from one, as from multitudes of lives. Shakspeare is supreme in that, as in all the great

mental energies. The German's generalize: the English cannot interpret the German mind. German science comprehends the English. The absence of the faculty in England is shown by the timidity which accumulates mountains of facts, as a bad general wants myriads of men and miles of redoubts, to compensate the inspirations of courage and conduct.

The English shrink from a generalization. "They do not look abroad into universality, or they draw only a bucketful at the fountain of the First Philosophy for their occasion, and do not go to the spring-head." Bacon, who said this, is almost unique among his countrymen in that faculty, at least among the prose-writers. Milton, who was the stair or high table-land to let down the English genius from the summits of Shakspeare, used this privilege sometimes in poetry, more rarely in prose. For a long interval afterwards, it is not found. Burke was addicted to generalizing, but his was a shorter line; as his thoughts have less depth, they have less compass. Hume's abstractions are not deep or wise. He owes his fame to one keen observation, that no copula had been detected between any cause and effect, either in physics or in thought; that the term cause and effect was loosely or gratuitously applied to what we know only as consecutive, not at all as causal. Dr. Johnson's written abstractions have little value: the tone of feeling in them makes their chief worth.

Mr. Hallam, a learned and elegant scholar, has written the history of European literature for three centuries, — a performance of great ambition, inasmuch as a judgment was to be attempted on every book. But his eye does not reach to the ideal standards; the verdicts are all dated from London: all new thought must be cast into the old moulds. The expansive element which creates literature is steadily denied. Plato is resisted, and his school. Hallam is uniformly polite, but with deficient sympathy; writes with resolute generosity, but is unconscious of the deep worth which lies in the mystics, and which often outvalues as a seed of power and a source of revolution all the correct writers and shining reputations of their day. He passes in silence, or dismisses with a kind of contempt, the profounder masters: a lover of ideas is not only uncongenial, but unintelligible. Hallam inspires respect by his knowledge and fidelity, by his manifest love of good books, and he lifts himself to own better than almost any the greatness of Shakspeare, and better than Johnson he appreciates Milton. But in Hallam, or in the firmer intellectual nerve of Mackintosh, one still finds the same type of English genius. It is wise and rich, but it lives on its capital. It is retrospective. How can it discern and hail the new forms that are looming up on the horizon, — new and gigantic thoughts which cannot dress themselves out of any old wardrobe of the past?

The essays, the fiction, and the poetry of the day have the like municipal

limits. Dickens, with preternatural apprehension of the language of manners, and the varieties of street life, with pathos and laughter, with patriotic and still enlarging generosity, writes London tracts. He is a painter of English details, like Hogarth; local and temporary in his tints and style, and local in his aims. Bulwer, an industrious writer, with occasional ability, is distinguished for his reverence of intellect as a temporality, and appeals to the worldly ambition of the student. His romances tend to fan these low flames. Their novelists despair of the heart. Thackeray finds that God has made no allowance for the poor thing in his universe; — more ‘s the pity, he thinks; — but ‘t is not for us to be wiser: we must renounce ideals, and accept London.

The brilliant Macaulay, who expresses the tone of the English governing classes of the day, explicitly teaches, that good means good to eat, good to wear, material commodity; that the glory of modern philosophy is its direction on “fruit”; to yield economical inventions; and that its merit is to avoid ideas, and avoid morals. He thinks it the distinctive merit of the Baconian philosophy, in its triumph over the old Platonic, its disentangling the intellect from theories of the all-Fair and all-Good, and pinning it down to the making a better sick-chair and a better wine-whey for an invalid; — this not ironically, but in good faith; — that, “solid advantage,” as he calls it, meaning always sensual benefit, is the only good. The eminent benefit of astronomy is the better navigation it creates to enable the fruit-ships to bring home their lemons and wine to the London grocer. It was a curious result, in which the civility and religion of England for a thousand years ends in denying morals, and reducing the intellect to a saucepan. The critic hides his scepticism under the English cant of practical. To convince the reason, to touch the conscience, is romantic pretension. The fine arts fall to the ground. Beauty, except as luxurious commodity, does not exist. It is very certain, I may say in passing, that if Lord Bacon had been only the sensualist his critic pretends, he would never have acquired the fame which now entitles him to this patronage. It is because he had imagination, the leasures of the spirit, and basked in an element of contemplation out of all modern English atmospheric gauges, that he is impressive to the imaginations of men, and has become a potentate not to be ignored. Sir David Brewster sees the high place of Bacon, without finding Newton indebted to him, and thinks it a mistake. Bacon occupies it by specific gravity or levity, not by any feat he did, or by any tutoring more or less of Newton, etc., but an effect of the same cause which showed itself more pronounced afterwards in Hooke, Boyle, and Halley.

Coleridge, a catholic mind, with a hunger for ideas, with eyes looking before and after to the highest bards and sages, and who wrote and spoke the only high criticism in his time, is one of those who save England from the reproach of no

longer possessing the capacity to appreciate what rarest wit the island has yielded. Yet the misfortune of his life, his vast attempts but most inadequate performings, failing to accomplish any one masterpiece, seems to mark the closing of an era. Even in him, the traditional Englishman was too strong for the philosopher, and he fell into *accommodations*: and, as Burke had striven to idealize the English State, so Coleridge ‘narrowed his mind’ in the attempt to reconcile the Gothic rule and dogma of the Anglican Church, with eternal ideas. But for Coleridge, and a lurking taciturn minority, uttering itself in occasional criticism, oftener in private discourse, one would say, that in Germany and in America is the best mind in England rightly respected. It is the surest sign of national decay, when the Bramins can no longer read or understand the Braminical philosophy.

In the decomposition and asphyxia that followed all this materialism, Carlyle was driven by his disgust at the pettiness and the cant, into the preaching of Fate. In comparison with all this rottenness, any check, any cleansing, though by fire, seemed desirable and beautiful. He saw little difference in the gladiators, or the “causes” for which they combated; the one comfort was, that they were all going speedily into the abyss together. And his imagination, finding no nutriment in any creation, avenged itself by celebrating the majestic beauty of the laws of decay. The necessities of mental structure force all minds into a few categories, and where impatience of the tricks of men makes Nemesis amiable, and builds altars to the negative Deity, the inevitable recoil is to heroism or the gallantry of the private heart, which decks its immolation with glory, in the unequal combat of will against fate.

Wilkinson, the editor of Swedenborg, the annotator of Fourier, and the champion of Halmeman, has brought to metaphysics and to physiology a native vigor, with a catholic perception of relations, equal to the highest attempts, and a rhetoric like the armory of the invincible knights of old. There is in the action of his mind a long Atlantic roll not known except in deepest waters, and only lacking what ought to accompany such powers, a manifest centrality. If his mind does not rest in immovable biases, perhaps the orbit is larger, and the return is not yet: but a master should inspire a confidence that he will adhere to his convictions, and give his present studies always the same high place.

It would be easy to add exceptions to the liminary tone of English thought, and much more easy to adduce examples of excellence in particular veins; and if, going out of the region of dogma, we pass into that of general culture, there is no end to the graces and amenities, wit, sensibility, and erudition, of the learned class. But the artificial succor which marks all English performance, appears in letters also: much of their æsthetic production is antiquarian and manufactured,

and literary reputations have been achieved by forcible men, whose relation to literature was purely accidental, but who were driven by tastes and modes they found in vogue into their several careers. So, at this moment, every ambitious young man studies geology; so members of Parliament are made, and churchmen.

The bias of Englishmen to practical skill has reacted on the national mind. They are incapable of an inutility, and respect the five mechanic powers even in their song. The voice of their modern muse has a slight hint of the steam-whistle, and the poem is created as an ornament and finish of their monarchy, and by no means as the bird of a new morning which forgets the past world in the full enjoyment of that which is forming. They are with difficulty ideal; they are the most conditioned men, as if, having the best conditions, they could not bring themselves to forfeit them. Every one of them is a thousand years old, and lives by his memory; and when you say this, they accept it as praise.

Nothing comes to the book-shops but politics, travels, statistics, tabulation, and engineering, and even what is called philosophy and letters is mechanical in its structure, as if inspiration had ceased, as if no vast hope, no religion, no song of joy, no wisdom, no analogy, existed any more. The tone of colleges and of scholars and of literary society has this mortal air. I seem to walk on a marble floor, where nothing will grow. They exert every variety of talent on a lower ground, and may be said to live and act in a sub-mind. They have lost all commanding views in literature, philosophy, and science. A good Englishman shuts himself out of three fourths of his mind, and confines himself to one fourth. He has learning, good sense, power of labor, and logic: but a faith in the laws of the mind like that of Archimedes; a belief like that of Euler and Kepler, that experience must follow and not lead the laws of the mind; a devotion to the theory of politics, like that of Hooker, and Milton, and Harrington, the modern English mind repudiates.

I fear the same fault lies in their science, since they have known how to make it repulsive, and bereave nature of its charm; — though perhaps the complaint flies wider, and the vice attaches to many more than to British physicists. The eye of the naturalist must have a scope like nature itself, a susceptibility to all impressions, alive to the heart as well as to the logic of creation. But English science puts humanity to the door. It wants the connection which is the test of genius. The science is false by not being poetic. It isolates the reptile or mollusk it assumes to explain; whilst reptile or mollusk only exists in system, in relation. The poet only sees it as an inevitable step in the path of the Creator. But, in England, one hermit finds this fact, and another finds that, and lives and dies ignorant of its value. There are great exceptions, of John Hunter, a man of ideas;

perhaps of Robert Brown, the botanist; and of Richard Owen, who has imported into Britain the German homologies, and enriched science with contributions of his own, adding sometimes the divination of the old masters to the unbroken power of labor in the English mind. But for the most part, the natural science in England is out of its loyal alliance with morals, and is as void of imagination and free play of thought, as conveyancing. It stands in strong contrast with the genius of the Germans, those semi-Greeks, who love analogy, and, by means of their height of view, preserve their enthusiasm, and think for Europe.

No hope, no sublime augury, cheers the student, no secure striding from experiment onward to a foreseen law, but only a casual dipping here and there, like diggers in California “prospecting for a placer” that will pay. A horizon of brass of the diameter of his umbrella shuts down around his senses. Squalid contentment with conventions, satire at the names of philosophy and religion, parochial and shop-till politics, and idolatry of usage, betray the ebb of life and spirit. As they trample on nationalities to reproduce London and Londoners in Europe and Asia, so they fear the hostility of ideas, of poetry, of religion, — ghosts which they cannot lay; and, having attempted to domesticate and dress the Blessed Soul itself in English broadcloth and gaiters, they are tormented with fear that herein lurks a force that will sweep their system away. The artists say, “Nature puts us out”; the scholars have become un-ideal. They parry earnest speech with banter and levity; they laugh you down, or they change the subject. “The fact is,” say they over their wine, “all that about liberty, and so forth, is gone by; it won’t do any longer.” The practical and comfortable oppress them with inexorable claims, and the smallest fraction of power remains for heroism and poetry. No poet dares murmur of beauty out of the precinct of his rhymes. No priest dares hint at a Providence which does not respect English utility. The island is a roaring volcano of fate, of material values, of tariffs, and laws of repression, glutted markets and low prices.

In the absence of the highest aims, of the pure love of knowledge, and the surrender to nature, there is the suppression of the imagination, the priapism of the senses and the understanding; we have the factitious instead of the natural; tasteless expense, arts of comfort, and the rewarding as an illustrious inventor whosoever will contrive one impediment more to interpose between the man and his objects.

Thus poetry is degraded, and made ornamental. Pope and his school wrote poetry fit to put round frosted cake. What did Walter Scott write without stint? a rhymed traveller’s guide to Scotland. And the libraries of verses they print have this Birmingham character. How many volumes of well-bred metre we must jingle through, before we can be filled, taught, renewed! We want the

miraculous; the beauty which we can manufacture at no mill, — can give no account of; the beauty of which Chaucer and Chapman had the secret. The poetry of course is low and prosaic; only now and then, as in Wordsworth, conscientious; or in Byron, passional; or in Tennyson, factitious. But if I should count the poets who have contributed to the Bible of existing England sentences of guidance and consolation which are still glowing and effective, — how few! Shall I find my heavenly bread in the reigning poets? Where is great design in modern English poetry? The English have lost sight of the fact that poetry exists to speak the spiritual law, and that no wealth of description or of fancy is yet essentially new, and out of the limits of prose, until this condition is reached. Therefore the grave old poets, like the Greek artists, heeded their designs, and less considered the finish. It was their office to lead to the divine sources, out of which all this, and much more, readily springs; and, if this religion is in the poetry, it raises us to some purpose, and we can well afford some staidness; or hardness, or want of popular tune in the verses.

The exceptional fact of the period is the genius of Wordsworth. He had no master but nature and solitude. “He wrote a poem,” says Landor, “without the aid of war.” His verse is the voice of sanity in a worldly and ambitious age. One regrets that his temperament was not more liquid and musical. He has written longer than he was inspired. But for the rest, he has no competitor.

Tennyson is endowed precisely in points where Wordsworth wanted. There is no finer ear than Tennyson’s, nor more command of the keys of language. Color, like the dawn, flows over the horizon from his pencil, in waves so rich that we do not miss the central form. Through all his refinements, too, he has reached the public, — a certificate of good sense and general power, since he who aspires to be the English poet must be as large as London, not in the same kind as London, but in his own kind. But he wants a subject, and climbs no mount of vision to bring its secrets to the people. He contents himself with describing the Englishman as he is, and proposes no better. There are all degrees in poetry, and we must be thankful for every beautiful talent. But it is only a first success, when the ear is gained. The best office of the best poets has been to show how low and uninspired was their general style, and that only once or twice they have struck the high chord.

That expansiveness which is the essence of the poetic element, they have not. It was no Oxonian, but Hafiz, who said: “Let us be crowned with roses, let us drink wine, and break up the tiresome old roof of heaven into new forms.” A stanza of the song of nature the Oxonian has no ear for, and he does not value the salient and curative influence of intellectual action, studious of truth, without a by-end.

By the law of contraries, I look for an irresistible taste for Orientalism in Britain. For a self-conceited modish life, made up of trifles, clinging to a corporeal civilization, hating ideas, there is no remedy like the Oriental largeness. That astonishes and disconcerts English decorum. For once there is thunder it never heard, light it never saw, and power which trifles with time and space. I am not surprised, then, to find an Englishman like Warren Hastings, who had been struck with the grand style of thinking in the Indian writings, deprecating the prejudices of his countrymen, while offering them a translation of the Bhagvat. "Might I," he says, "an unlettered man, venture to prescribe bounds to the latitude of criticism, I should exclude, in estimating the merit of such a production, all rules drawn from the ancient or modern literature of Europe, all references to such sentiments or manners as are become the standards of propriety for opinion and action in our own modes, and, equally, all appeals to our revealed tenets, of religion and moral duty." [#] He goes on to bespeak indulgence to "ornaments of fancy unsuited to our taste, and passages elevated to a tract of sublimity into which our habits of judgment will find it difficult to pursue them."

[#] Preface to Wilkins's Translation of the Bhagvat Geeta.

Meantime, I know that a retrieving power lies in the English race, which seems to make any recoil possible; in other words, there is at all times a minority of profound minds existing in the nation, capable of appreciating every soaring of intellect and every hint of tendency. While the constructive talent seems dwarfed and superficial, the criticism is often in the noblest tone, and suggests the presence of the invisible gods. I can well believe what I have often heard, that there are two nations in England; but it is not the Poor and the Rich; nor is it the Normans and Saxons; nor the Celt and the Goth. These are each always becoming the other; for Robert Owen does not exaggerate the power of circumstance. But the two complexions, or two styles of mind, — the perceptive class, and the practical finality class, — are ever in counterpoise, interacting mutually; one, in hopeless minorities; the other, in huge masses; one studious, contemplative, experimenting; the other, the ungrateful pupil, scornful of the source, whilst availing itself of the knowledge for gain; these two nations, of genius and of animal force, though the first consist of only a dozen souls, and the second of twenty millions, forever by their discord and their accord yield the power of the English State.

THE "TIMES."

The power of the newspaper is familiar in America, and in accordance with our political system. In England, it stands in antagonism with the feudal institutions, and it is all the more beneficent succor against the secretive tendencies of a monarchy. The celebrated Lord Somers "knew of no good law proposed and passed in his time, to which the public papers had not directed his attention." There is no corner and no night. A relentless inquisition drags every secret to the day, turns the glare of this solar microscope on every malfeasance, so as to make the public a more terrible spy than any foreigner; and no weakness can be taken advantage of by an enemy, since the whole people are already forewarned. Thus England rids herself of those incrustations which have been the ruin of old states. Of course, this inspection is feared. No antique privilege, no comfortable monopoly, but sees surely that its days are counted; the people are familiarized with the reason of reform, and, one by one, take away every argument of the obstructives. "So your Grace likes the comfort of reading the newspapers," said Lord Mansfield to the Duke of Northumberland; "mark my words; you and I shall not live to see it, but this young gentleman (Lord Eldon) may, or it may be a little later; but a little sooner or later, these newspapers will most assuredly write the dukes of Northumberland out of their titles and possessions, and the country out of its king." The tendency in England towards social and political institutions like those of America, is inevitable, and the ability of its journals is the driving force.

England is full of manly, clever, well-bred men who possess the talent of writing off-hand pungent paragraphs, expressing with clearness and courage their opinion on any person or performance. Valuable or not, it is a skill that is rarely found, out of the English journals. The English do this, as they write poetry, as they ride and box, by being educated to it. Hundreds of clever Praeds, and Freres, and Froudes, and Hoods, and Hooks, and Maginns, and Mills, and Macaulays, make poems, or short essays for a journal, as they make speeches in Parliament and on the hustings, or, as they shoot and ride. It is a quite accidental and arbitrary direction of their general ability. Rude health and spirits, an Oxford education, and the habits of society are implied, but not a ray of genius. It comes of the crowded state of the professions, the violent interest which all men take in politics, the facility of experimenting in the journals, and high pay.

The most conspicuous result of this talent is the "Times" newspaper. No power in England is more felt, more feared, or more obeyed. What you read in the morning in that journal, you shall hear in the evening in all society. It has

ears everywhere, and its information is earliest, completest, and surest. It has risen, year by year, and victory by victory, to its present authority. I asked one of its old contributors, whether it had once been abler than it is now. "Never," he said; "these are its palmiest days." It has shown those qualities which are dear to Englishmen, unflinching adherence to its objects, prodigal intellectual ability, and a towering assurance, backed by the perfect organization in its printing-house, and its world-wide network of correspondence and reports. It has its own history and famous trophies. In 1820, it adopted the cause of Queen Caroline, and carried it against the king. It adopted a poor-law system, and almost alone lifted it through. When Lord Brougham was in power, it decided against him, and pulled him down. It declared war against Ireland, and conquered it. It adopted the League against the Corn Laws, and, when Cobden had begun to despair, it announced his triumph. It denounced and discredited the French Republic of 1848, and checked every sympathy with it in England, until it had enrolled 200,000 special constables to watch the Chartists, and make them ridiculous on the 10th April. It first denounced and then adopted the new French Empire, and urged the French Alliance and its results. It has entered into each municipal, literary, and social question, almost with a controlling voice. It has done bold and seasonable service in exposing frauds which threatened the commercial community. Meantime, it attacks its rivals by perfecting its printing machinery, and will drive them out of circulation; for the only limit to the circulation of the "Times" is the impossibility of printing copies fast enough; since a daily paper can only be new and seasonable for a few hours. It will kill all but that paper which is diametrically in opposition; since many papers, first and last, have lived by their attacks on the leading journal.

The late Mr. Walter was printer of the "Times," and had gradually arranged the whole *materiel* of it in perfect system. It is told, that when he demanded a small share in the proprietary, and was refused, he said, "As you please, gentlemen; and you may take away the 'Times' from this office when you will; I shall publish the 'New Times' next Monday morning." The proprietors, who had already complained that his charges for printing were excessive, found that they were in his power, and gave him whatever he wished.

I went one day with a good friend to the "Times": office, which was entered through a pretty garden-yard, in Printing-House Square. We walked with some circumspection, as if we were entering a powder-mill; but the door was opened by a mild old woman, and, by dint of some transmission of cards, we were at last conducted into the parlor of Mr. Morris, a very gentle person, with no hostile appearances. The statistics are now quite out of date, but I remember he told us that the daily printing was then 35,000 copies; that on the 1st March, 1848, the

greatest number ever printed, — 54,000 were issued; that, since February, the daily circulation had increased by 8,000 copies. The old press they were then using printed five or six thousand sheets per hour; the new machine, for which they were then building an engine, would print twelve thousand per hour. Our entertainer confided us to a courteous assistant to show us the establishment, in which, I think, they employed a hundred and twenty men. I remember, I saw the reporters' room, in which they redact their hasty stenographs, but the editor's room, and who is in it, I did not see, though I shared the curiosity of mankind respecting it.

The staff of the "Times" has always been made up of able men. Old Walter, Sterling, Bacon, Barnes, Alsiger, Horace Twiss, Jones Loyd, John Oxenford, Mr. Mosely, Mr. Bailey, have contributed to its renown in their special departments. But it has never wanted the first pens for occasional assistance. Its private information is inexplicable, and recalls the stories of Fouché's police, whose omniscience made it believed that the Empress Josephine must be in his pay. It has mercantile and political correspondents in every foreign city; and its expresses outrun the despatches of the government. One hears anecdotes of the rise of its servants, as of the functionaries of the India House. I was told of the dexterity of one of its reporters, who, finding himself, on one occasion, where the magistrates had strictly forbidden reporters, put his hands into his coat-pocket, and with pencil in one hand, and tablet in the other, did his work.

The influence of this journal is a recognized power in Europe, and, of course, none is more conscious of it than its conductors. The tone of its articles has often been the occasion of comment from the official organs of the continental courts, and sometimes the ground of diplomatic complaint. What would the "Times" say? is a terror in Paris, in Berlin, in Vienna, in Copenhagen, and in Nepaul. Its consummate discretion and success exhibit the English skill of combination. The daily paper is the work of many hands, chiefly, it is said, of young men recently from the University, and perhaps reading law in chambers in London. Hence the academic elegance, and classic allusion, which adorn its columns. Hence, too, the heat and gallantry of its onset. But the steadiness of the aim suggests the belief that this fire is directed and fed by older engineers; as if persons of exact information, and with settled views of policy, supplied the writers with the basis of fact, and the object to be attained, and availed themselves of their younger energy and eloquence to plead the cause. Both the council and the executive departments gain by this division. Of two men of equal ability, the one who does not write, but keeps his eye on the course of public affairs, will have the higher judicial wisdom. But the parts are kept in concert; all the articles appear to proceed from a single will. The "Times" never disapproves of what itself has

said, or cripples itself by apology for the absence of the editor, or the indiscretion of him who held the pen. It speaks out bluff and bold, and sticks to what it says. It draws from any number of learned and skilful contributors; but a more learned and skilful person supervises, corrects, and co-ordinates. Of this closet, the secret does not transpire. No writer is suffered to claim the authorship of any paper; everything good, from whatever quarter, comes out editorially; and thus, by making the paper everything, and those who write it nothing, the character and the awe of the journal gain.

The English like it for its complete information. A statement of fact in the "Times" is as reliable as a citation from Hansard. Then, they like its independence; they do not know, when they take it up, what their paper is going to say; but, above all, for the nationality and confidence of its tone. It thinks for them all; it is their understanding and day's ideal daguerretyped. When I see them reading its columns, they seem to me becoming every moment more British. It has the national courage, not rash and petulant, but considerate and determined. No dignity or wealth is a shield from its assault. It attacks a duke as readily as a policeman, and with the most provoking airs of condescension. It makes rude work with the Board of Admiralty. The Bench of Bishops is still less safe. One bishop fares badly for his rapacity, and another for his bigotry, and a third for his courtliness. It addresses occasionally a hint to majesty itself, and sometimes a hint which is taken. There is an air of freedom even in their advertising columns, which speaks well for England to a foreigner. On the days when I arrived in London in 1847, I read among the daily announcements, one offering a reward of fifty pounds to any person who would put a nobleman, described by name and title, late a member of Parliament, into any county jail in England, he having been convicted of obtaining money under false pretences.

Was never such arrogancy as the tone of this paper. Every slip of an Oxonian or Cantabrigian who writes his first leader assumes that we subdued the earth before we sat down to write this particular "Times." One would think the world was on its knees to the "Times" Office, for its daily breakfast. But this arrogance is calculated. Who would care for it, if it "surmised," or "dared to confess," or "ventured to predict," etc.? No; *it is so*, and so it shall be.

The morality and patriotism of the "Times" claims only to be representative, and by no means ideal. It gives the argument, not of the majority, but of the commanding class. Its editors know better than to defend Russia, or Austria, or English vested rights, on abstract grounds. But they give a voice to the class who, at the moment, take the lead; and they have an instinct for finding where the power now lies, which is eternally shifting its banks. Sympathizing with, and speaking for the class that rules the hour, yet, being apprised of every ground-

swell, every Chartist resolution, every Church squabble, every strike in the mills, they detect the first tremblings of change. They watch the hard and bitter struggles of the authors of each liberal movement, year by year, — watching them only to taunt and obstruct them, — until, at last, when they see that these have established their fact, that power is on the point of passing to them, they strike in, with the voice of a monarch, astonish those whom they succor, as much as those whom they desert, and make victory sure. Of course, the aspirants see that the “Times” is one of the goods of fortune, not to be won but by winning their cause.

“Punch” is equally an expression of English good sense, as the “London Times.” It is the comic version of the same sense. Many of its caricatures are equal to the best pamphlets, and will convey to the eye in an instant the popular view which was taken of each turn of public affairs. Its sketches are usually made by masterly hands, and sometimes with genius; the delight of every class, because uniformly guided by that taste which is tyrannical in England. It is a new trait of the nineteenth century, that the wit and humor of England, as in Punch, so in the humorists, Jerrold, Dickens, Thackeray, Hood, have taken the direction of humanity and freedom.

The “Times,” like every important institution, shows the way to a better. It is a living index of the colossal British power. Its existence honors the people who dare to print all they know, dare to know all the facts, and do not wish to be flattered by hiding the extent of the public disaster. There is always safety in valor. I wish I could add, that this journal aspired to deserve the power it wields, by guidance of the public sentiment to the right. It is usually pretended, in Parliament and elsewhere, that the English press has a high tone, — which it has not. It has an imperial tone, as of a powerful and independent nation. But as with other empires, its tone is prone to be official, and even officinal. The “Times” shares all the limitations of the governing classes, and wishes never to be in a minority. If only it dared to cleave to the right, to show the right to be the only expedient, and feed its batteries from the central heart of humanity, it might not have so many men of rank among its contributors, but genius would be its cordial and invincible ally; it might now and then bear the brunt of formidable combinations, but no journal is ruined by wise courage. It would be the natural leader of British reform; its proud function, that of being the voice of Europe, the defender of the exile and patriot against despots, would be more effectually discharged; it would have the authority which is claimed for that dream of good men not yet come to pass, an International Congress; and the least of its victories would be to give to England a new millennium of beneficent power.

STONEHENGE.

It had been agreed between my friend Mr. C. and me, that before I left England we should make an excursion together to Stonehenge, which neither of us had seen; and the project pleased my fancy with the double attraction of the monument and the companion. It seemed a bringing together of extreme points, to visit the oldest religious monument in Britain in company with her latest thinker, and one whose influence may be traced in every contemporary book. I was glad to sum up a little my experiences, and to exchange a few reasonable words on the aspects of England, with a man on whose genius I set a very high value, and who had as much penetration, and as severe a theory of duty as any person in it. On Friday, 7th July, we took the South-western Railway through Hampshire to Salisbury, where we found a carriage to convey us to Amesbury. The fine weather and my friend's local knowledge of Hampshire, in which he is wont to spend a part of every summer, made the way short. There was much to say, too, of the travelling Americans, and their usual objects in London. I thought it natural that they should give some time to works of art collected here, which they cannot find at home, and a little to scientific clubs and museums, which, at this moment, make London very attractive. But my philosopher was not contented. Art and 'high art' is a favorite target for his wit. "Yes, *Kunst* is a great delusion, and Goethe and Schiller wasted a great deal of good time on it": — and he thinks he discovers that old Goethe found this out, and, in his later writings, changed his tone. As soon as men begin to talk of art, architecture, and antiquities, nothing good comes of it. He wishes to go through the British Museum in silence, and thinks a sincere man will see something, and say nothing. In these days, he thought, it would become an architect to consult only the grim necessity, and say, 'I can build you a coffin for such dead persons as you are, and for such dead purposes as you have, but you shall have no ornament.' For the science, he had, if possible, even less tolerance, and compared the savans of Somerset House to the boy who asked Confucius "how many stars in the sky?" Confucius replied, "he minded things near him"; then said the boy, "how many hairs are there in your eyebrows?" Confucius said, "he didn't know and didn't care."

Still speaking of the Americans, C. complained that they dislike the coldness and exclusiveness of the English, and run away to France, and go with their countrymen, and are amused, instead of manfully staying in London, and confronting Englishmen, and acquiring their culture, who really have much to teach them.

I told C. that I was easily dazzled, and was accustomed to concede readily all that an Englishman would ask; I saw everywhere in the country proofs of sense and spirit, and success of every sort: I like the people: they are as good as they are handsome; they have everything, and can do everything: but meantime, I surely know, that, as soon as I return to Massachusetts, I shall lapse at once into the feeling, which the geography of America inevitably inspires, that we play the game with immense advantage; that there and not here is the seat and centre of the British race; and that no skill or activity can long compete with the prodigious natural advantages of that country, in the hands of the same race; and that England, an old and exhausted island, must one day be contented, like other parents, to be strong only in her children. But this was a proposition which no Englishman of whatever condition can easily entertain.

We left the train at Salisbury, and took a carriage to Amesbury, passing by Old Sarum, a bare, treeless hill, once containing the town which sent two members to Parliament, — now, not a hut, — and, arriving at Amesbury, stopped at the George Inn. After dinner, we walked to Salisbury Plain. On the broad downs, under the gray sky, not a house was visible, nothing but Stonehenge, which looked like a group of brown dwarfs in the wide expanse, — Stonehenge and the barrows, which rose like green bosses about the plain, and a few hay-ricks. On the top of a mountain, the old temple would not be more impressive. Far and wide a few shepherds with their flocks sprinkled the plain, and a bagman drove along the road. It looked as if the wide margin given in this crowded isle to this primeval temple were accorded by the veneration of the British race to the old egg out of which all their ecclesiastical structures and history had proceeded. Stonehenge is a circular colonnade with a diameter of a hundred feet, and enclosing a second and a third colonnade within. We walked round the stones, and clambered over them, to wont ourselves with their strange aspect and groupings, and found a nook sheltered from the wind among them, where C. lighted his cigar. It was pleasant to see, that just this simplest of all simple structures — two upright stones and a lintel laid across — had long outstood all later churches, and all history, and were like what is most permanent on the face of the planet: these, and the barrows, — mere mounds (of which there are a hundred and sixty within a circle of three miles about Stonehenge), like the same mound on the plain of Troy, which still makes good to the passing mariner on Hellespont, the vaunt of Homer and the fame of Achilles. Within the enclosure grow buttercups, nettles, and, all around, wild thyme, daisy, meadow-sweet, golden-rod, thistle, and the carpeting grass. Over us, larks were soaring and singing, — as my friend said: “the larks which were hatched last year, and the wind which was hatched many thousand years ago.” We counted and

measured by paces the biggest stones, and soon knew as much as any man can suddenly know of the inscrutable temple. There are ninety-four stones, and there were once probably one hundred and sixty. The temple is circular, and uncovered, and the situation fixed astronomically; — the grand entrances here, and at Abury, being placed exactly north-east, “as all the gates of the old cavern temples are.” How came the stones here? for these *sarsens* or Druidical sandstones are not found in this neighborhood. The *sacrificial stone*, as it is called, is the only one in all these blocks, that can resist the action of fire, and as I read in the books, must have been brought one hundred and fifty miles.

On almost every stone we found the marks of the mineralogist’s hammer and chisel. The nineteen smaller stones of the inner circle are of granite. I, who had just come from Professor Sedgwick’s Cambridge Museum of megatheria and mastodons, was ready to maintain that some cleverer elephants or mylodonta had borne off and laid these rocks one on another. Only the good beasts must have known how to cut a well-wrought tenon and mortise, and to smooth the surface of some of the stones. The chief mystery is, that any mystery should have been allowed to settle on so remarkable a monument, in a country on which all the muses have kept their eyes now for eighteen hundred years. We are not yet too late to learn much more than is known of this structure. Some diligent Fellowes or Layard will arrive, stone by stone, at the whole history, by that exhaustive British sense and perseverance, so whimsical in its choice of objects, which leaves its own Stonehenge or Choir Gaur to the rabbits, whilst it opens pyramids, and uncovers Nineveh. Stonehenge, in virtue of the simplicity of its plan, and its good preservation, is as if new and recent; and, a thousand years hence, men will thank this age for the accurate history it will yet eliminate. We walked in and out, and took again and again a fresh look at the uncanny stones. The old sphinx put our petty differences of nationality out of sight. To these conscious stones we two pilgrims were alike known and near. We could equally well revere their old British meaning. My philosopher was subdued and gentle. In this quiet house of destiny, he happened to say, “I plant cypresses wherever I go, and if I am in search of pain, I cannot go wrong.” The spot, the gray blocks, and their rude order, which refuses to be disposed of, suggested to him the flight of ages, and the succession of religious. The old times of England impress C. much; he reads little, he says, in these last years, but “*Acta Sanctorum*,” the fifty-three volumes of which are in the “London Library.” He finds all English history therein. He can see, as he reads, the old saint of Iona sitting there, and writing, a man to men. The *Acta Sanctorum* show plainly that the men of those times believed in God, and in the immortality of the soul, as their abbeys and cathedrals testify:

now, even the puritanism is all gone. London is pagan. He fancied that greater men had lived in England than any of her writers; and, in fact, about the time when those writers appeared, the last of these were already gone.

We left the mound in the twilight, with the design to return the next morning, and coming back two miles to our inn, we were met by little showers, and late as it was, men and women were out attempting to protect their spread windrows. The grass grows rank and dark in the showery England. At the inn, there was only milk for one cup of tea. When we called for more, the girl brought us three drops. My friend was annoyed who stood for the credit of an English inn, and still more, the next morning, by the dog-cart, sole procurable vehicle, in which we were to be sent to Wilton. I engaged the local antiquary, Mr. Brown, to go with us to Stonehenge, on our way, and show us what he knew of the “astronomical” and “sacrificial” stones. I stood on the last, and he pointed to the upright, or rather, inclined stone, called the “astronomical,” and bade me notice that its top ranged with the sky-line. “Yes.” Very well. Now, at the summer solstice, the sun rises exactly over the top of that stone, and, at the Druidical temple at Abury, there is also an astronomical stone, in the same relative positions.

In the silence of tradition, this one relation to science becomes an important clew; but we were content to leave the problem, with the rocks. Was this the “Giants’ Dance” which Merlin brought from Killaraus, in Ireland, to be Uther Pendragon’s monument to the British nobles whom Hengist slaughtered here, as Geoffrey of Monmouth relates? or was it a Roman work, as Inigo Jones explained to King James; or identical in design and style with the East Indian temples of the sun; as Davies in the Celtic Researches maintains? Of all the writers, Stukeley is the best. The heroic antiquary, charmed with the geometric perfections of his ruin, connects it with the oldest monuments and religion of the world, and, with the courage of his tribe, does not stick to say, “the Deity who made the world by the scheme of Stonehenge.” He finds that the *cursus*²³ on Salisbury Plain stretches across the downs, like a line of latitude upon the globe, and the meridian line of Stonehenge passes exactly through the middle of this *cursus*. But here is the high point of the theory: the Druids had the magnet; laid their courses by it; their cardinal points in Stonehenge, Ambresbury, and elsewhere, which vary a little from true east and west, followed the variations of the compass. The Druids were Phoenicians. The name of the magnet is *lapis Heracleus*, and Hercules was the god of the Phoenicians. Hercules, in the legend, drew his bow at the sun, and the sun-god gave him a golden cup, with which he sailed over the ocean. What was this, but a compass-box? This cup or little boat,

in which the magnet was made to float on water, and so show the north, was probably its first form, before it was suspended on a pin. But science was an *arcanum*, and, as Britain was a Phoenician secret, so they kept their compass a secret, and it was lost with the Tyrian commerce. The golden fleece, again, of Jason, was the compass, — a bit of loadstone, easily supposed to be the only one in the world, and therefore naturally awakening the cupidity and ambition of the young heroes of a maritime nation to join in an expedition to obtain possession of this wise stone. Hence the fable that the ship *Argo* was loquacious and oracular. There is also some curious coincidence in the names. Apollodorus makes *Magnes* the son of *Æolus*, who married *Nais*. On hints like these, Stukeley builds again the grand colonnade into historic harmony, and computing backward by the known variations of the compass, bravely assigns the year 406 before Christ for the date of the temple.

For the difficulty of handling and carrying stones of this size, the like is done in all cities, every day, with no other aid than horse-power. I chanced to see a year ago men at work on the substructure of a house in Bowdoin Square, in Boston, swinging a block of granite of the size of the largest of the Stonehenge columns with an ordinary derrick. The men were common masons, with paddies to help, nor did they think they were doing anything remarkable. I suppose there were as good men a thousand years ago. And we wonder how Stonehenge was built and forgotten. After spending half an hour on the spot, we set forth in our dog-cart over the downs for Wilton, C. not suppressing some threats and evil omens on the proprietors, for keeping these broad plains a wretched sheep-walk when so many thousands of Englishmen were hungry and wanted labor. But I heard afterwards that it is not an economy to cultivate this land, which only yields one crop on being broken up, and is then spoiled.

We came to Wilton and to Wilton Hall, — the renowned seat of the Earls of Pembroke, a house known to Shakspeare and Massinger, the frequent home of Sir Philip Sidney, where he wrote the *Arcadia*; where he conversed with Lord Brooke, a man of deep thought, and a poet, who caused to be engraved on his tombstone, “Here lies Fulke Greville Lord Brooke, the friend of Sir Philip Sidney.” It is now the property of the Earl of Pembroke, and the residence of his brother, Sidney Herbert, Esq., and is esteemed a noble specimen of the English manor-hall. My friend had a letter from Mr. Herbert to his housekeeper, and the house was shown. The state drawing-room is a double cube, thirty feet high, by thirty wide, by sixty feet long: the adjoining room is a single cube, of thirty feet every way. Although these apartments and the long library were full of good family portraits, Vandykes and other; and though there were some good pictures, and a quadrangle cloister full of antique and modern statuary, — to which C.,

catalogue in hand, did all too much justice, — yet the eye was still drawn to the windows, to a magnificent lawn, on which grew the finest cedars in England. I had not seen more charming grounds. We went out, and walked over the estate. We crossed a bridge built by Inigo Jones over a stream, of which the gardener did not know the name, (*Qu. Alph?*) watched the deer; climbed to the lonely sculptured summer-house, on a hill backed by a wood; came down into the Italian garden, and into a French pavilion, garnished with French busts; and so, again to the house, where we found a table laid for us with bread, meats, peaches, grapes, and wine.

On leaving Wilton House, we took the coach for Salisbury. The Cathedral which was finished six hundred years ago has even a spruce and modern air, and its spire is the highest in England. I know not why, but I had been more struck with one of no fame at Coventry, which rises three hundred feet from the ground, with the lightness of a mullein-plant, and not at all implicated with the church. Salisbury is now esteemed the culmination of the Gothic art in England, as the buttresses are fully unmasked, and honestly detailed from the sides of the pile. The interior of the Cathedral is obstructed by the organ in the middle, acting like a screen. I know not why in real architecture the hunger of the eye for length of line is so rarely gratified. The rule of art is that a colonnade is more beautiful the longer it is, and that *ad infinitum*. And the nave of a church is seldom so long that it need be divided by a screen.

We loitered in the church, outside the choir, whilst service was said. Whilst we listened to the organ, my friend remarked, the music is good and yet not quite religious, but somewhat as if a monk were panting to some fine Queen of Heaven. C. was unwilling, and we did not ask to have the choir shown us, but returned to our inn, after seeing another old church of the place. We passed in the train Clarendon Park, but could see little but the edge of a wood, though C. had wished to pay closer attention to the birthplace of the Decrees of Clarendon. At Bishopstoke we stopped, and found Mr. H., who received us in his carriage, and took us to his house at Bishops Waltham.

On Sunday, we had much discourse on a very rainy day. My friends ask, whether there were any Americans? — any with an American idea, — any theory of the right future of that country? Thus challenged, I bethought myself neither of caucuses nor congress, neither of presidents nor of cabinet-ministers, nor of such as would make of America another Europe. I thought only of the simplest and purest minds; I said, ‘Certainly yes; but those who hold it are fanatics of a dream which I should hardly care to relate to your English ears, to which it might be only ridiculous, — and yet it is the only true.’ So I opened the dogma of no government and non-resistance, and anticipated the objections and

the fun, and procured a kind of hearing for it. I said, it is true that I have never seen in any country a man of sufficient valor to stand for this truth, and yet it is plain to me that no less valor than this can command my respect. I can easily see the bankruptcy of the vulgar musket-worship, — though great men be musket-worshippers; and 't is certain, as God liveth, the gun that does not need another gun, the law of love and justice alone, can effect a clean revolution. I fancied that one or two of my anecdotes made some impression on C., and I insisted that the manifest absurdity of the view to English feasibility could make no difference to a gentleman; that as to our secure tenure of our mutton-chop and spinage in London or in Boston, the soul might quote Talleyrand, "*Monsieur, je n'en vois pas la nécessité.*"²⁴ As I had thus taken in the conversation the saint's part, when dinner was announced, C. refused to go out before me,— "he was altogether too wicked." I planted my back against the wall, and our host wittily rescued us from the dilemma, by saying, he was the wickedest, and would walk out first, then C. followed, and I went last.

On the way to Winchester, whither our host accompanied us in the afternoon, my friends asked many questions respecting American landscape, forests, houses, — my house, for example. It is not easy to answer these queries well. There I thought, in America, lies nature sleeping, overgrowing, almost conscious, too much by half for man in the picture, and so giving a certain tristesse, like the rank vegetation of swamps and forests seen at night, steeped in dews and rains, which it loves; and on it man seems not able to make much impression. There, in that great sloven continent, in high Alleghany pastures, in the sea-wide, sky-skirted prairie, still sleeps and murmurs and hides the great mother, long since driven away from the trim hedge-rows and over-cultivated garden of England. And, in England, I am quite too sensible of this. Every one is on his good behavior, and must be dressed for dinner at six. So I put off my friends with very inadequate details, as best I could.

Just before entering Winchester, we stopped at the Church of Saint Cross, and, after looking through the quaint antiquity, we demanded a piece of bread and a draught of beer, which the founder, Henry de Blois, in 1136, commanded should be given to every one who should ask it at the gate. We had both, from the old couple who take care of the church. Some twenty people, every day, they said, make the same demand. This hospitality of seven hundred years' standing did not hinder C. from pronouncing a malediction on the priest who receives £2,000 a year, that were meant for the poor, and spends a pittance on this small-beer and crumbs.

In the Cathedral, I was gratified, at least by the ample dimensions. The length of line exceeds that of any other English church; being 556 feet by 250 in

breadth of transept. I think I prefer this church to all I have seen, except Westminster and York. Here was Canute buried, and here Alfred the Great was crowned and buried, and here the Saxon kings: and, later, in his own church, William of Wykeham. It is very old: part of the crypt into which we went down and saw the Saxon and Norman arches of the old church on which the present stands, was built fourteen or fifteen hundred years ago. Sharon Turner says: "Alfred was buried at Winchester, in the Abbey he had founded there, but his remains were removed by Henry I. to the new Abbey in the meadows at Hyde, on the northern quarter of the city, and laid under the high altar. The building was destroyed at the Reformation, and what is left of Alfred's body now lies covered by modern buildings, or buried in the ruins of the old."²⁵ William of Wykeham's shrine tomb was unlocked for us, and C. took hold of the recumbent statue's marble hands, and patted them affectionately, for he rightly values the brave man who built Windsor, and this Cathedral, and the School here, and New College at Oxford. But it was growing late in the afternoon. Slowly we left the old house, and parting with our host, we took the train for London.

PERSONAL.

In these comments on an old journey now revised after seven busy years have much changed men and things in England, I have abstained from reference to persons, except in the last chapter, and in one or two cases where the fame of the parties seemed to have given the public a property in all that concerned them. I must further allow myself a few notices, if only as an acknowledgment of debts that cannot be paid. My journeys were cheered by so much kindness from new friends, that my impression of the island is bright with agreeable memories both of public societies and of households; and, what is nowhere better found than in England, a cultivated person fitly surrounded by a happy home, "with honor, love, obedience, troops of friends," is of all institutions the best. At the landing in Liverpool, I found my Manchester correspondent awaiting me, a gentleman whose kind reception was followed by a train of friendly and effective attentions which never rested whilst I remained in the country. A man of sense and of letters, the editor of a powerful local journal, he added to solid virtues an infinite sweetness and *bonhommie*. There seemed a pool of honey about his heart which lubricated all his speech and action with fine jets of mead. An equal good-fortune attended many later accidents of my journey, until the sincerity of English kindness ceased to surprise. My visit fell in the fortunate days when Mr. Bancroft was the American Minister in London, and at his house, or through his good offices, I had easy access to excellent persons and to privileged places. At the house of Mr. Carlyle, I met persons eminent in society and in letters. The privileges of the Athenæum and of the Reform Clubs were hospitably opened to me, and I found much advantage in the circles of the "Geologic," the "Antiquarian," and the "Royal Societies." Every day in London gave me new opportunities of meeting men and women who give splendor to society. I saw Rogers, Hallam, Macaulay, Milnes, Milman, Barry Cornwall, Dickens, Thackeray, Tennyson, Leigh Hunt, D'Israeli, Helps, Wilkinson, Bailey, Kenyon, and Forster: the younger poets, Clough, Arnold, and Patmore; and, among the men of science, Robert Brown, Owen, Sedgwick, Faraday, Buckland, Lyell, De la Beche, Hooker, Carpenter, Babbage, and Edward Forbes. It was my privilege also to converse with Miss Baillie, with Lady Morgan, with Mrs. Jameson, and Mrs. Somerville. A finer hospitality made many private houses not less known and dear. It is not in distinguished circles that wisdom and elevated characters are usually found, or, if found, not confined thereto; and my recollections of the best hours go back to private conversations in different parts of the kingdom, with persons little known. Nor am I insensible to the courtesy which frankly

opened to me some noble mansions, if I do not adorn my page with their names. Among the privileges of London, I recall with pleasure two or three signal days, one at Kew, where Sir William Hooker showed me all the riches of the vast botanic garden; one at the Museum, where Sir Charles Fellowes explained in detail the history of his Ionic trophy-monument; and still another, on which Mr. Owen accompanied my countryman Mr. H. and myself through the Hunterian Museum.

The like frank hospitality, bent on real service, I found among the great and the humble, wherever I went; in Birmingham, in Oxford, in Leicester, in Nottingham, in Sheffield, in Manchester, in Liverpool. At Edinburgh, through the kindness of Dr. Samuel Brown, I made the acquaintance of De Quincey, of Lord Jeffrey, of Wilson, of Mrs. Crowe, of the Messrs. Chambers, and of a man of high character and genius, the short-lived painter David Scott.

At Ambleside, in March, 1848, I was for a couple of days the guest of Miss Martineau, then newly returned from her Egyptian tour. On Sunday afternoon, I accompanied her to Rydal Mount. And as I have recorded a visit to Wordsworth, many years before, I must not forget this second interview. We found Mr. Wordsworth asleep on the sofa. He was at first silent and indisposed, as an old man, suddenly waked, before he had ended his nap; but soon became full of talk on the French news. He was nationally bitter on the French: bitter on Scotchmen, too. No Scotchman, he said, can write English. He detailed the two models, on one or the other of which all the sentences of the historian Robertson are framed. Nor could Jeffrey, nor the Edinburgh Reviewers write English, nor can who is a pest to the English tongue. Incidentally he added, Gibbon cannot write English. The *Edinburgh Review* wrote what would tell and what would sell. It had however changed the tone of its literary criticism from the time when a certain letter was written to the editor by Coleridge. Mrs. W. had the Editor's answer in her possession. Tennyson he thinks a right poetic genius, though with some affectation. He had thought an elder brother of Tennyson at first the better poet, but must now reckon Alfred the true one.... In speaking of I know not what style, he said, "To be sure it was the manner, but then you know the matter always comes out of the manner." He thought Rio Janeiro the best place in the world for a great capital city.... We talked of English national character. I told him it was not creditable that no one in all the country knew anything of Thomas Taylor, the Platonist, whilst in every American library his translations are found. I said, if Plato's Republic were published in England as a new book to-day, do you think it would find any readers? — he confessed, it would not: "And yet," he added after a pause, with that complacency which never deserts a true-born Englishman,— "and yet we have embodied it all."

His opinions of French, English, Irish, and Scotch seemed rashly formulized from little anecdotes of what had befallen himself and members of his family, in a diligence or stage-coach. His face sometimes lighted up, but his conversation was not marked by special force or elevation. Yet perhaps it is a high compliment to the cultivation of the English generally, when we find such a man not distinguished. He had a healthy look, with a weather-beaten face, his face corrugated, especially the large nose.

Miss Martineau, who lived near him, praised him to me, not for his poetry, but for thrift and economy; for having afforded to his country neighbors an example of a modest household, where comfort and culture were secured without any display. She said, that, in his early housekeeping at the cottage where he first lived, he was accustomed to offer his friends bread and plainest fare: if they wanted anything more, they must pay him for their board. It was the rule of the house. I replied, that it evinced English pluck more than any anecdote I knew. A gentleman in the neighborhood told the story of Walter Scott's once staying a week with Wordsworth, and slipping out every day under pretence of a walk, to the Swan Inn, for a cold cut and porter; and one day passing with Wordsworth the inn, he was betrayed by the landlord's asking him if he had come for his porter. Of course, this trait would have another look in London, and there you will hear from different literary men, that Wordsworth had no personal friend, that he was not amiable, that he was parsimonious, *etc.* Landor, always generous, says that he never praised anybody. A gentleman in London showed me a watch that once belonged to Milton, whose initials are engraved on its face. He said, he once showed this to Wordsworth, who took it in one hand, then drew out his own watch, and held it up with the other, before the company, but no one making the expected remark, he put back his own in silence. I do not attach much importance to the disparagement of Wordsworth among London scholars. Who reads him well will know, that in following the strong bent of his genius, he was careless of the many, careless also of the few, self-assured that he should "create the taste by which he is to be enjoyed." He lived long enough to witness the revolution he had wrought, and "to see what he foresaw." There are torpid places in his mind, there is something hard and sterile in his poetry, want of grace and variety, want of due catholicity and cosmopolitan scope: he had conformities to English politics and traditions; he had egotistic puerilities in the choice and treatment of his subjects; but let us say of him, that, alone in his time, he treated the human mind well, and with an absolute trust. His adherence to his poetic creed rested on real inspirations. The Ode on Immortality is the high-water mark which the intellect has reached in this age. New means were employed, and new realms added to the empire of the muse, by his courage.

RESULT.

England is the best of actual nations. It is no ideal framework, it is an old pile built in different ages, with repairs, additions, and makeshifts; but you see the poor best you have got. London is the epitome of our times, and the Rome of to-day. Broad-fronted, broad-bottomed Teutons, they stand in solid phalanx foursquare to the points of compass; they constitute the modern world, they have earned their vantage-ground, and held it through ages of adverse possession. They are well marked and differing from other leading races. England is tender-hearted. Rome was not. England is not so public in its bias; private life is its place of honor. Truth in private life, untruth in public, marks these home-loving men. Their political conduct is not decided by general views, but by internal intrigues and personal and family interest. They cannot readily see beyond England. The history of Rome and Greece, when written by their scholars, degenerates into English party pamphlets. They cannot see beyond England, nor in England can they transcend the interests of the governing classes. "English principles" mean a primary regard to the interests of property. England, Scotland, and Ireland combine to check the colonies. England and Scotland combine to check Irish manufactures and trade. England rallies at home to check Scotland. In England, the strong classes check the weaker. In the home population of near thirty millions, there are but one million voters. The Church punishes dissent, punishes education. Down to a late day, marriages performed by dissenters were illegal. A bitter class-legislation gives power to those who are rich enough to buy a law. The game-laws are a proverb of oppression. Pauperism incrusts and clogs the state, and in hard times becomes hideous. In bad seasons, the porridge was diluted. Multitudes lived miserably by shell-fish and sea-ware. In cities, the children are trained to beg, until they shall be old enough to rob. Men and women were convicted of poisoning scores of children for burial fees. In Irish districts, men deteriorated in size and shape. The nose sunk, the gums were exposed, with diminished brain and brutal form. During the Australian emigration, multitudes were rejected by the commissioners as being too emaciated for useful colonists. During the Russian war, few of those that offered as recruits were found up to the medical standard, though it had been reduced.

The foreign policy of England, though ambitious and lavish of money, has not often been generous or just. It has a principal regard to the interest of trade, checked however by the aristocratic bias of the ambassador, which usually puts him in sympathy with the continental Courts. It sanctioned the partition of Poland, it betrayed Genoa, Sicily, Parga, Greece, Turkey, Rome, and Hungary.

Some public regards they have. They have abolished slavery in the West Indies, and put an end to human sacrifices in the East. At home they have a certain statute hospitality. England keeps open doors, as a trading country must, to all nations. It is one of their fixed ideas, and wrathfully supported by their laws in unbroken sequence for a thousand years. In *Magna Charta* it was ordained, that all “merchants shall have safe and secure conduct to go out and come into England, and to stay there, and to pass as well by land as by water, to buy and sell by the ancient allowed customs, without any evil toll, except in time of war, or when they shall be of any nation at war with us.” It is a statute and obliged hospitality, and peremptorily maintained. But this shop-rule had one magnificent effect. It extends its cold unalterable courtesy to political exiles of every opinion, and is a fact which might give additional light to that portion of the planet seen from the farthest star. But this perfunctory hospitality puts no sweetness into their unaccommodating manners, no check on that puissant nationality which makes their existence incompatible with all that is not English.

What we must say about a nation is a superficial dealing with symptoms. We cannot go deep enough into the biography of the spirit who never throws himself entire into one hero, but delegates his energy in parts or spasms to vicious and defective individuals. But the wealth of the source is seen in the plenitude of English nature. What variety of power and talent; what facility and plenteousness of knighthood, lordship, ladyship, royalty, loyalty; what a proud chivalry is indicated in “Collins’s Peerage,” through eight hundred years! What dignity resting on what reality and stoutness! What courage in war, what sinew in labor, what cunning workmen, what inventors and engineers, what seamen and pilots, what clerks and scholars! No one man and no few men can represent them. It is a people of myriad personalities. Their many-headedness is owing to the advantageous position of the middle class, who are always the source of letters and science. Hence the vast plenty of their æsthetic production. As they are many-headed, so they are many-nationed; their colonization annexes archipelagoes and continents, and their speech seems destined to be the universal language of men. I have noted the reserve of power in the English temperament. In the island, they never let out all the length of all the reins, there is no Berserkir rage, no abandonment or ecstasy of will or intellect, like that of the Arabs in the time of Mahomet, or like that which intoxicated France in 1789. But who would see the uncoiling of that tremendous spring, the explosion of their well-husbanded forces, must follow the swarms which, pouring now for two hundred years from the British islands, have sailed, and rode, and traded, and planted, through all climates, mainly following the belt of empire, the temperate zones, carrying the Saxon seed, with its instinct for liberty and law, for arts and

for thought, — acquiring under some skies a more electric energy than the native air allows, — to the conquest of the globe. Their colonial policy, obeying the necessities of a vast empire, has become liberal. Canada and Australia have been contented with substantial independence. They are expiating the wrongs of India, by benefits: first, in works for the irrigation of the peninsula, and roads and telegraphs; and secondly, in the instruction of the people, to qualify them for self-government, when the British power shall be finally called home.

Their mind is in a state of arrested development, — a divine cripple like Vulcan; a blind *savant* like Huber and Sanderson. They do not occupy themselves on matters of general and lasting import, but on a corporeal civilization, on goods that perish in the using. But they read with good intent, and what they learn they incarnate. The English mind turns every abstraction it can receive into a portable utensil, or a working institution. Such is their tenacity, and such their practical turn, that they hold all they gain. Hence we say, that only the English race can be trusted with freedom, — freedom which is double-edged and dangerous to any but the wise and robust. The English designate the kingdoms emulous of free institutions as the sentimental nations. Their own culture is not an outside varnish, but is thorough and secular in families and the race. They are oppressive with their temperament, and all the more that they are refined. I have sometimes seen them walk with my countrymen, when I was forced to allow them every advantage, and their companions seemed bags of bones. There is cramp limitation in their habit of thought, sleepy routine, and a tortoise's instinct to hold hard to the ground with his claws, lest he should be thrown on his back. There is a drag of inertia which resists reform in every shape; law-reform, army-reform, extension of suffrage, Jewish franchise, Catholic emancipation, — the abolition of slavery, of impressment, penal code, and entails. They praise this drag, under the formula, that it is the excellence of the British constitution, that no law can anticipate the public opinion. These poor tortoises must hold hard, for they feel no wings sprouting at their shoulders. Yet somewhat divine warms at their heart, and waits a happier hour. It hides in their sturdy will. "Will," said the old philosophy, "is the measure of power," and personality is the token of this race. *Quid vult valde vult*. What they do they do with a will. You cannot account for their success by their Christianity, commerce, charter, common law, Parliament, or letters, but by the contumacious sharp-tongued energy of English *naturel*, with a poise impossible to disturb, which makes all these its instruments. They are slow and reticent, and are like a dull good horse which lets every nag pass him, but with whip and spur will run down every racer in the field. They are right in their

feeling, though wrong in their speculation.

The feudal system survives in the steep inequality of property and privilege, in the limited franchise, in the social barriers which confine patronage and promotion to a caste, and still more in the submissive ideas pervading these people. The fagging of the schools is repeated in the social classes. An Englishman shows no mercy to those below him in the social scale, as he looks for none from those above him; any forbearance from his superiors surprises him, and they suffer in his good opinion. But the feudal system can be seen with less pain on large historical grounds. It was pleaded in mitigation of the rotten borough, that it worked well, that substantial justice was done. Fox, Burke, Pitt, Erskine, Wilberforce, Sheridan, Romilly, or whatever national men, were by this means sent to Parliament, when their return by large constituencies would have been doubtful. So now we say, that the right measures of England are the men it bred; that it has yielded more able men in five hundred years than any other nation; and, though we must not play Providence, and balance the chances of producing ten great men against the comfort of ten thousand mean men, yet retrospectively we may strike the balance, and prefer one Alfred, one Shakspeare, one Milton, one Sidney, one Raleigh, one Wellington, to a million foolish democrats.

The American system is more democratic, more humane; yet the American people do not yield better or more able men, or more inventions or books or benefits, than the English. Congress is not wiser or better than Parliament. France has abolished its suffocating old *régime*, but is not recently marked by any more wisdom or virtue.

The power of performance has not been exceeded, — the creation of value. The English have given importance to individuals, a principal end and fruit of every society. Every man is allowed and encouraged to be what he is, and is guarded in the indulgence of his whim. “Magna Charta,” said Rushworth, “is such a fellow that he will have no sovereign.” By this general activity, and by this sacredness of individuals, they have in seven hundred years evolved the principles of freedom. It is the land of patriots, martyrs, sages, and bards, and if the ocean out of which it emerged should wash it away, it will be remembered as an island famous for immortal laws, for the announcements of original right which make the stone tables of liberty.

SPEECH AT MANCHESTER.

A few days after my arrival at Manchester, in November, 1847, the Manchester Athenæum gave its annual Banquet in the Free-Trade Hall. With other guests, I was invited to be present, and to address the company. In looking over recently a newspaper report of my remarks, I incline to reprint it, as fitly expressing the feeling with which I entered England, and which agrees well enough with the more deliberate results of better acquaintance recorded in the foregoing pages. Sir Archibald Alison, the historian, presided, and opened the meeting with a speech. He was followed by Mr. Cobden, Lord Brackley, and others, among whom was Mr. Cruikshank, one of the contributors to "Punch." Mr. Dickens's letter of apology for his absence was read. Mr. Jerrold, who had been announced, did not appear. On being introduced to the meeting I said: —

Mr. Chairman and Gentlemen: It is pleasant to me to meet this great and brilliant company, and doubly pleasant to see the faces of so many distinguished persons on this platform. But I have known all these persons already. When I was at home, they were as near to me as they are to you. The arguments of the League and its leader are known to all the friends of free trade. The gayeties and genius, the political, the social, the parietal wit of "Punch" go duly every fortnight to every boy and girl in Boston and New York. Sir, when I came to sea, I found the "History of Europe"²⁶ on the ship's cabin table, the property of the captain; — a sort of programme or play-bill to tell the seafaring New-Englander what he shall find on his landing here. And as for Dombey, sir, there is no land where paper exists to print on, where it is not found; no man who can read, that does not read it, and, if he cannot, he finds some charitable pair of eyes that can, and hears it.

But these things are not for me to say; these compliments, though true, would better come from one who felt and understood these merits more. I am not here to exchange civilities with you, but rather to speak of that which I am sure interests these gentlemen more than their own praises; of that which is good in holidays and working-days, the same in one century and in another century. That which lures a solitary American in the woods with the wish to see England, is the moral peculiarity of the Saxon race, — its commanding sense of right and wrong, — the love and devotion to that, — this is the imperial trait, which arms them with the sceptre of the globe. It is this which lies at the foundation of that aristocratic character, which certainly wanders into strange vagaries, so that its origin is often lost sight of, but which, if it should lose this, would find itself paralyzed; and in trade, and in the mechanic's shop, gives that honesty in

performance, that thoroughness and solidity of work, which is a national characteristic. This conscience is one element, and the other is that loyal adherence, that habit of friendship, that homage of man to man, running through all classes, — the electing of worthy persons to a certain fraternity, to acts of kindness and warm and staunch support, from year to year, from youth to age, — which is alike lovely and honorable to those who render and those who receive it; — which stands in strong contrast with the superficial attachments of other races, their excessive courtesy, and short-lived connection.

You will think me very pedantic, gentlemen, but holiday though it be, I have not the smallest interest in any holiday, except as it celebrates real and not pretended joys; and I think it just, in this time of gloom and commercial disaster, of affliction and beggary in these districts, that on these very accounts I speak of, you should not fail to keep your literary anniversary. I seem to hear you say, that, for all that is come and gone yet, we will not reduce by one chaplet or one oak-leaf the braveries of our annual feast. For I must tell you, I was given to understand in my childhood, that the British island from which my forefathers came, was no lotus-garden, no paradise of serene sky and roses and music and merriment all the year round, no, but a cold, foggy, mournful country, where nothing grew well in the open air, but robust men and virtuous women, and these of a wonderful fibre and endurance; that their best parts were slowly revealed; their virtues did not come out until they quarrelled: they did not strike twelve the first time; good lovers, good haters, and you could know little about them till you had seen them long, and little good of them till you had seen them in action; that in prosperity they were moody and dumpish, but in adversity they were grand. Is it not true, sir, that the wise ancients did not praise the ship parting with flying colors from the port, but only that brave sailer which came back with torn sheets and battered sides, stript of her banners, but having ridden out the storm? And so, gentlemen, I feel in regard to this aged England, with the possessions, honors, and trophies, and also with the infirmities of a thousand years gathering around her, irretrievably committed as she now is to many old customs which cannot be suddenly changed; pressed upon by the transitions of trade, and new and all incalculable modes, fabrics, arts, machines, and competing populations, — I see her not dispirited, not weak, but well remembering that she has seen dark days before; indeed, with a kind of instinct that she sees a little better in a cloudy day, and that in storm of battle and calamity, she has a secret vigor and a pulse like a cannon. I see her in her old age, not decrepit, but young, and still daring to believe in her power of endurance and expansion. Seeing this, I say, All hail! mother of nations, mother of heroes, with strength still equal to the time; still wise to entertain and swift to execute the policy which the mind and

heart of mankind require in the present hour, and thus only hospitable to the foreigner, and truly a home to the thoughtful and generous who are born in the soil. So be it! so let it be! If it be not so, if the courage of England goes with the chances of a commercial crisis, I will go back to the capes of Massachusetts, and my own Indian stream, and say to my countrymen, the old race are all gone, and the elasticity and hope of mankind must henceforth remain on the Alleghauy ranges, or nowhere.

THE END

THE CONDUCT OF LIFE

This collection was published in 1860 and is composed of nine essays, each preceded by a poem. These nine essays are largely based on lectures Emerson gave throughout the United States, including speeches for a young, mercantile audience in the lyceums of the Midwestern boomtowns of the 1850s. Three years after publishing his *English Traits*, Boston's Ticknor & Fields announced on 27 December 1859, an "early appearance" of a new book by Emerson titled *The Conduct of Life*. Confirmed as "completed" on 10 November 1860, Emerson's seventh major work came out on 12 December of the same year — simultaneously in America and in Great Britain. The book was advertised as "matured philosophy of the transatlantic sage" and sold as a collector's item "uniform in size and style with Mr. Emerson's previous works."

Though hailed by Thomas Carlyle as "the writer's best book" and despite its commercial success, initial critical reactions to *The Conduct of Life* were mixed at best. *The Knickerbocker* praised it for its "healthy tone" and called it "the most practical of Mr. Emerson's works," while *The Atlantic Monthly* attested that "literary ease and flexibility do not always advance with an author's years" and thought the essays inferior to Emerson's earlier work. Yale's *The New Englander* while complimenting Emerson's abilities, criticised the book as depicting "a universe bereft of its God" and described its author as writing "with the air of a man who is accustomed to be looked up to with admiring and unquestioning deference." Littell's *Living Age* found the book to contain the "weakest kind of commonplace elaborately thrown into unintelligible shapes" and claimed it to read in parts like an "emasculate passage of Walt Whitman."

In this book, Emerson sets out to answer, what he calls, "the question of the times: 'How shall I live?'" In the first essay, *Fate*, Emerson introduces the basic idealist principles of *The Conduct of Life* and seeks to reconcile the seemingly contradicting ideas of freedom and fate through a unifying Weltgeist-approach. He claims that even though the "bulk of mankind believe in two gods" — namely free will and Providence — these concepts are really "under one dominion" and expressions of the same beneficial force. "A breath of will blows eternally," he writes "through the universe of souls in the direction of the Right and Necessary." Historical and societal events are therefore not merely an expression of individual actions and thought but result of "the will of all mind" and necessitated by nature: "When there is something to be done, the world

knows how to get it done.”

FATE.

Delicate omens traced in air
To the lone bard true witness bare;
Birds with auguries on their wings

Chanted undeceiving things
Him to beckon, him to warn;
Well might then the poet scorn
To learn of scribe or courier
Hints writ in vaster character;
And on his mind, at dawn of day,
Soft shadows of the evening lay.

For the prevision is allied
Unto the thing so signified;
Or say, the foresight that awaits
Is the same Genius that creates.

It chanced during one winter, a few years ago, that our cities were bent on discussing the theory of the Age. By an odd coincidence, four or five noted men were each reading a discourse to the citizens of Boston or New York, on the Spirit of the Times. It so happened that the subject had the same prominence in some remarkable pamphlets and journals issued in London in the same season. To me, however, the question of the times resolved itself into a practical question of the conduct of life. How shall I live? We are incompetent to solve the times. Our geometry cannot span the huge orbits of the prevailing ideas, behold their return, and reconcile their opposition. We can only obey our own polarity. 'Tis fine for us to speculate and elect our course, if we must accept an irresistible dictation.

In our first steps to gain our wishes, we come upon immovable limitations. We are fired with the hope to reform men. After many experiments, we find that we must begin earlier, — at school. But the boys and girls are not docile; we can make nothing of them. We decide that they are not of good stock. We must begin our reform earlier still, — at generation: that is to say, there is Fate, or laws of the world.

But if there be irresistible dictation, this dictation understands itself. If we must accept Fate, we are not less compelled to affirm liberty, the significance of the individual, the grandeur of duty, the power of character. This is true, and that other is true. But our geometry cannot span these extreme points, and reconcile them. What to do? By obeying each thought frankly, by harping, or, if you will, pounding on each string, we learn at last its power. By the same obedience to other thoughts, we learn theirs, and then comes some reasonable hope of harmonizing them. We are sure, that, though we know not how, necessity does comport with liberty, the individual with the world, my polarity with the spirit of the times. The riddle of the age has for each a private solution. If one would study his own time, it must be by this method of taking up in turn each of the leading topics which belong to our scheme of human life, and, by firmly stating all that is agreeable to experience on one, and doing the same justice to the opposing facts in the others, the true limitations will appear. Any excess of emphasis, on one part, would be corrected, and a just balance would be made.

But let us honestly state the facts. Our America has a bad name for superficialness. Great men, great nations, have not been boasters and buffoons, but perceivers of the terror of life, and have manned themselves to face it. The Spartan, embodying his religion in his country, dies before its majesty without a question. The Turk, who believes his doom is written on the iron leaf in the moment when he entered the world, rushes on the enemy's sabre with undivided will. The Turk, the Arab, the Persian, accepts the foreordained fate.

“On two days, it steads not to run from thy grave,
The appointed, and the unappointed day;
On the first, neither balm nor physician can save,
Nor thee, on the second, the Universe slay.”

The Hindoo, under the wheel, is as firm. Our Calvinists, in the last generation, had something of the same dignity. They felt that the weight of the Universe held them down to their place. What could *they* do? Wise men feel that there is something which cannot be talked or voted away, — a strap or belt which girds the world.

“The Destiny, minister general,
That executeth in the world o'er all,
The purveyance which God hath seen before,
So strong it is, that tho' the world had sworn
The contrary of a thing by yea or nay,
Yet sometime it shall fallen on a day
That falleth not oft in a thousand year;
For, certainly, our appetites here,
Be it of war, or peace, or hate, or love,
All this is ruled by the sight above.”
CHAUCER: *The Knight's Tale*.

The Greek Tragedy expressed the same sense: “Whatever is fated, that will take place. The great immense mind of Jove is not to be transgressed.”

Savages cling to a local god of one tribe or town. The broad ethics of Jesus were quickly narrowed to village theologies, which preach an election or favoritism. And, now and then, an amiable parson, like Jung Stilling, or Robert Huntington, believes in a pistareen-Providence, which, whenever the good man wants a dinner, makes that somebody shall knock at his door, and leave a half-

dollar. But Nature is no sentimentalist, — does not cosset or pamper us. We must see that the world is rough and surly, and will not mind drowning a man or a woman; but swallows your ship like a grain of dust. The cold, inconsiderate of persons, tingles your blood, benumbs your feet, freezes a man like an apple. The diseases, the elements, fortune, gravity, lightning, respect no persons. The way of Providence is a little rude. The habit of snake and spider, the snap of the tiger and other leapers and bloody jumpers, the crackle of the bones of his prey in the coil of the anaconda, — these are in the system, and our habits are like theirs. You have just dined, and, however scrupulously the slaughter-house is concealed in the graceful distance of miles, there is complicity, — expensive races, — race living at the expense of race. The planet is liable to shocks from comets, perturbations from planets, rendings from earthquake and volcano, alterations of climate, precessions of equinoxes. Rivers dry up by opening of the forest. The sea changes its bed. Towns and counties fall into it. At Lisbon, an earthquake killed men like flies. At Naples, three years ago, ten thousand persons were crushed in a few minutes. The scurvy at sea; the sword of the climate in the west of Africa, at Cayenne, at Panama, at New Orleans, cut off men like a massacre. Our western prairie shakes with fever and ague. The cholera, the small-pox, have proved as mortal to some tribes, as a frost to the crickets, which, having filled the summer with noise, are silenced by a fall of the temperature of one night. Without uncovering what does not concern us, or counting how many species of parasites hang on a bombyx; or groping after intestinal parasites, or infusory biters, or the obscurities of alternate generation; — the forms of the shark, the *labrus*, the jaw of the sea-wolf paved with crushing teeth, the weapons of the grampus, and other warriors hidden in the sea, — are hints of ferocity in the interiors of nature. Let us not deny it up and down. Providence has a wild, rough, incalculable road to its end, and it is of no use to try to whitewash its huge, mixed instrumentalities, or to dress up that terrific benefactor in a clean shirt and white neckcloth of a student in divinity.

Will you say, the disasters which threaten mankind are exceptional, and one need not lay his account for cataclysms every day? Aye, but what happens once, may happen again, and so long as these strokes are not to be parried by us, they must be feared.

But these shocks and ruins are less destructive to us, than the stealthy power of other laws which act on us daily. An expense of ends to means is fate; — organization tyrannizing over character. The menagerie, or forms and powers of the spine, is a book of fate: the bill of the bird, the skull of the snake, determines tyrannically its limits. So is the scale of races, of temperaments; so is sex; so is climate; so is the reaction of talents imprisoning the vital power in certain

directions. Every spirit makes its house; but afterwards the house confines the spirit.

The gross lines are legible to the dull: the cabman is phrenologist so far: he looks in your face to see if his shilling is sure. A dome of brow denotes one thing; a pot-belly another; a squint, a pugnose, mats of hair, the pigment of the epidermis, betray character. People seem sheathed in their tough organization. Ask Spurzheim, ask the doctors, ask Quetelet, if temperaments decide nothing? or if there be anything they do not decide? Read the description in medical books of the four temperaments, and you will think you are reading your own thoughts which you had not yet told. Find the part which black eyes, and which blue eyes, play severally in the company. How shall a man escape from his ancestors, or draw off from his veins the black drop which he drew from his father's or his mother's life? It often appears in a family, as if all the qualities of the progenitors were potted in several jars, — some ruling quality in each son or daughter of the house, — and sometimes the unmixed temperament, the rank unmitigated elixir, the family vice, is drawn off in a separate individual, and the others are proportionally relieved. We sometimes see a change of expression in our companion, and say, his father, or his mother, comes to the windows of his eyes, and sometimes a remote relative. In different hours, a man represents each of several of his ancestors, as if there were seven or eight of us rolled up in each man's skin, — seven or eight ancestors at least, — and they constitute the variety of notes for that new piece of music which his life is. At the corner of the street, you read the possibility of each passenger, in the facial angle, in the complexion, in the depth of his eye. His parentage determines it. Men are what their mothers made them. You may as well ask a loom which weaves huckaback, why it does not make cashmere, as expect poetry from this engineer, or a chemical discovery from that jobber. Ask the digger in the ditch to explain Newton's laws: the fine organs of his brain have been pinched by overwork and squalid poverty from father to son, for a hundred years. When each comes forth from his mother's womb, the gate of gifts closes behind him. Let him value his hands and feet, he has but one pair. So he has but one future, and that is already predetermined in his lobes, and described in that little fatty face, pig-eye, and squat form. All the privilege and all the legislation of the world cannot meddle or help to make a poet or a prince of him.

Jesus said, "When he looketh on her, he hath committed adultery." But he is an adulterer before he has yet looked on the woman, by the superfluity of animal, and the defect of thought, in his constitution. Who meets him, or who meets her, in the street, sees that they are ripe to be each other's victim.

In certain men, digestion and sex absorb the vital force, and the stronger these

are, the individual is so much weaker. The more of these drones perish, the better for the hive. If, later, they give birth to some superior individual, with force enough to add to this animal a new aim, and a complete apparatus to work it out, all the ancestors are gladly forgotten. Most men and most women are merely one couple more. Now and then, one has a new cell or camarilla opened in his brain, — an architectural, a musical, or a philological knack, some stray taste or talent for flowers, or chemistry, or pigments, or story-telling, a good hand for drawing, a good foot for dancing, an athletic frame for wide journeying, &c. — which skill nowise alters rank in the scale of nature, but serves to pass the time, the life of sensation going on as before. At last, these hints and tendencies are fixed in one, or in a succession. Each absorbs so much food and force, as to become itself a new centre. The new talent draws off so rapidly the vital force, that not enough remains for the animal functions, hardly enough for health; so that, in the second generation, if the like genius appear, the health is visibly deteriorated, and the generative force impaired.

People are born with the moral or with the material bias; — uterine brothers with this diverging destination: and I suppose, with high magnifiers, Mr. Fraunhofer or Dr. Carpenter might come to distinguish in the embryo at the fourth day, this is a Whig, and that a Free-soiler.

It was a poetic attempt to lift this mountain of Fate, to reconcile this despotism of race with liberty, which led the Hindoos to say, “Fate is nothing but the deeds committed in a prior state of existence.” I find the coincidence of the extremes of eastern and western speculation in the daring statement of Schelling, “there is in every man a certain feeling, that he has been what he is from all eternity, and by no means became such in time.” To say it less sublimely, — in the history of the individual is always an account of his condition, and he knows himself to be a party to his present estate.

A good deal of our politics is physiological. Now and then, a man of wealth in the heyday of youth adopts the tenet of broadest freedom. In England, there is always some man of wealth and large connection planting himself, during all his years of health, on the side of progress, who, as soon as he begins to die, checks his forward play, calls in his troops, and becomes conservative. All conservatives are such from personal defects. They have been effeminated by position or nature, born halt and blind, through luxury of their parents, and can only, like invalids, act on the defensive. But strong natures, backwoodsmen, New Hampshire giants, Napoleons, Burkes, Broughams, Websters, Kossuths, are inevitable patriots, until their life ebbs, and their defects and gout, palsy and money, warp them.

The strongest idea incarnates itself in majorities and nations, in the healthiest

and strongest. Probably, the election goes by avoirdupois weight, and, if you could weigh bodily the tonnage of any hundred of the Whig and the Democratic party in a town, on the Dearborn balance, as they passed the hayscales, you could predict with certainty which party would carry it. On the whole, it would be rather the speediest way of deciding the vote, to put the selectmen or the mayor and aldermen at the hayscales.

In science, we have to consider two things: power and circumstance. All we know of the egg, from each successive discovery, is, *another vesicle*; and if, after five hundred years, you get a better observer, or a better glass, he finds within the last observed another. In vegetable and animal tissue, it is just alike, and all that the primary power or spasm operates, is, still, vesicles, vesicles. Yes, — but the tyrannical Circumstance! A vesicle in new circumstances, a vesicle lodged in darkness, Oken thought, became animal; in light, a plant. Lodged in the parent animal, it suffers changes, which end in unsheathing miraculous capability in the unaltered vesicle, and it unlocks itself to fish, bird, or quadruped, head and foot, eye and claw. The Circumstance is Nature. Nature is, what you may do. There is much you may not. We have two things, — the circumstance, and the life. Once we thought, positive power was all. Now we learn, that negative power, or circumstance, is half. Nature is the tyrannous circumstance, the thick skull, the sheathed snake, the ponderous, rock-like jaw; necessitated activity; violent direction; the conditions of a tool, like the locomotive, strong enough on its track, but which can do nothing but mischief off of it; or skates, which are wings on the ice, but fetters on the ground.

The book of Nature is the book of Fate. She turns the gigantic pages, — leaf after leaf, — never returning one. One leaf she lays down, a floor of granite; then a thousand ages, and a bed of slate; a thousand ages, and a measure of coal; a thousand ages, and a layer of marl and mud: vegetable forms appear; her first misshapen animals, zoophyte, trilobium, fish; then, saurians, — rude forms, in which she has only blocked her future statue, concealing under these unwieldy monsters the fine type of her coming king. The face of the planet cools and dries, the races meliorate, and man is born. But when a race has lived its term, it comes no more again.

The population of the world is a conditional population; not the best, but the best that could live now; and the scale of tribes, and the steadiness with which victory adheres to one tribe, and defeat to another, is as uniform as the superposition of strata. We know in history what weight belongs to race. We see the English, French, and Germans planting themselves on every shore and market of America and Australia, and monopolizing the commerce of these countries. We like the nervous and victorious habit of our own branch of the

family. We follow the step of the Jew, of the Indian, of the Negro. We see how much will has been expended to extinguish the Jew, in vain. Look at the unpalatable conclusions of Knox, in his "Fragment of Races," — a rash and unsatisfactory writer, but charged with pungent and unforgettable truths. "Nature respects race, and not hybrids." "Every race has its own *habitat*." "Detach a colony from the race, and it deteriorates to the crab." See the shades of the picture. The German and Irish millions, like the Negro, have a great deal of guano in their destiny. They are ferried over the Atlantic, and carted over America, to ditch and to drudge, to make corn cheap, and then to lie down prematurely to make a spot of green grass on the prairie. One more fagot of these adamantine bandages, is, the new science of Statistics. It is a rule, that the most casual and extraordinary events — if the basis of population is broad enough — become matter of fixed calculation. It would not be safe to say when a captain like Bonaparte, a singer like Jenny Lind, or a navigator like Bowditch, would be born in Boston: but, on a population of twenty or two hundred millions, something like accuracy may be had.¹

"Everything which pertains to the human species, considered as a whole, belongs to the order of physical facts. The greater the number of individuals, the more does the influence of the individual will disappear, leaving predominance to a series of general facts dependent on causes by which society exists, and is preserved." — QUETELET.

'Tis frivolous to fix pedantically the date of particular inventions. They have all been invented over and over fifty times. Man is the arch machine, of which all these shifts drawn from himself are toy models. He helps himself on each emergency by copying or duplicating his own structure, just so far as the need is. 'Tis hard to find the right Homer, Zoroaster, or Menu; harder still to find the Tubal Cain, or Vulcan, or Cadmus, or Copernicus, or Fust, or Fulton, the indisputable inventor. There are scores and centuries of them. "The air is full of men." This kind of talent so abounds, this constructive tool-making efficiency, as if it adhered to the chemic atoms, as if the air he breathes were made of Vaucansons, Franklins, and Watts.

Doubtless, in every million there will be an astronomer, a mathematician, a comic poet, a mystic. No one can read the history of astronomy, without perceiving that Copernicus, Newton, Laplace, are not new men, or a new kind of men, but that Thales, Anaximenes, Hipparchus, Empedocles, Aristarchus, Pythagoras, Cænopides, had anticipated them; each had the same tense geometrical brain, apt for the same vigorous computation and logic, a mind parallel to the movement of the world. The Roman mile probably rested on a

measure of a degree of the meridian. Mahometan and Chinese know what we know of leap-year, of the Gregorian calendar, and of the precession of the equinoxes. As, in every barrel of cowries, brought to New Bedford, there shall be one *orangia*, so there will, in a dozen millions of Malays and Mahometans, be one or two astronomical skulls. In a large city, the most casual things, and things whose beauty lies in their casualty, are produced as punctually and to order as the baker's muffin for breakfast. Punch makes exactly one capital joke a week; and the journals contrive to furnish one good piece of news every day.

And not less work the laws of repression, the penalties of violated functions. Famine, typhus, frost, war, suicide, and effete races, must be reckoned calculable parts of the system of the world.

These are pebbles from the mountain, hints of the terms by which our life is walled up, and which show a kind of mechanical exactness, as of a loom or mill, in what we call casual or fortuitous events.

The force with which we resist these torrents of tendency looks so ridiculously inadequate, that it amounts to little more than a criticism or a protest made by a minority of one, under compulsion of millions. I seemed, in the height of a tempest, to see men overboard struggling in the waves, and driven about here and there. They glanced intelligently at each other, but 'twas little they could do for one another; 'twas much if each could keep afloat alone. Well, they had a right to their eye-beams, and all the rest was Fate.

We cannot trifle with this reality, this cropping-out in our planted gardens of the core of the world. No picture of life can have any veracity that does not admit the odious facts. A man's power is hooped in by a necessity, which, by many experiments, he touches on every side, until he learns its arc.

The element running through entire nature, which we popularly call Fate, is known to us as limitation. Whatever limits us, we call Fate. If we are brute and barbarous, the fate takes a brute and dreadful shape. As we refine, our checks become finer. If we rise to spiritual culture, the antagonism takes a spiritual form. In the Hindoo fables, Vishnu follows Maya through all her ascending changes, from insect and crawfish up to elephant; whatever form she took, he took the male form of that kind, until she became at last woman and goddess, and he a man and a god. The limitations refine as the soul purifies, but the ring of necessity is always perched at the top.

When the gods in the Norse heaven were unable to bind the Fenris Wolf with steel or with weight of mountains, — the one he snapped and the other he spurned with his heel, — they put round his foot a limp band softer than silk or cobweb, and this held him: the more he spurned it, the stiffer it drew. So soft and so stanch is the ring of Fate. Neither brandy, nor nectar, nor sulphuric ether, nor

hell-fire, nor ichor, nor poetry, nor genius, can get rid of this limp band. For if we give it the high sense in which the poets use it, even thought itself is not above Fate: that too must act according to eternal laws, and all that is wilful and fantastic in it is in opposition to its fundamental essence.

And, last of all, high over thought, in the world of morals, Fate appears as vindicator, levelling the high, lifting the low, requiring justice in man, and always striking soon or late, when justice is not done. What is useful will last; what is hurtful will sink. "The doer must suffer," said the Greeks: "you would soothe a Deity not to be soothed." "God himself cannot procure good for the wicked," said the Welsh triad. "God may consent, but only for a time," said the bard of Spain. The limitation is impassable by any insight of man. In its last and loftiest ascensions, insight itself, and the freedom of the will, is one of its obedient members. But we must not run into generalizations too large, but show the natural bounds or essential distinctions, and seek to do justice to the other elements as well.

Thus we trace Fate, in matter, mind, and morals, — in race, in retardations of strata, and in thought and character as well. It is everywhere bound or limitation. But Fate has its lord; limitation its limits; is different seen from above and from below; from within and from without. For, though Fate is immense, so is power, which is the other fact in the dual world, immense. If Fate follows and limits power, power attends and antagonizes Fate. We must respect Fate as natural history, but there is more than natural history. For who and what is this criticism that pries into the matter? Man is not order of nature, sack and sack, belly and members, link in a chain, nor any ignominious baggage, but a stupendous antagonism, a dragging together of the poles of the Universe. He betrays his relation to what is below him, — thick-skulled, small-brained, fishy, quadrumanous, — quadruped ill-disguised, hardly escaped into biped, and has paid for the new powers by loss of some of the old ones. But the lightning which explodes and fashions planets, maker of planets and suns, is in him. On one side, elemental order, sandstone and granite, rock-ledges, peat-bog, forest, sea and shore; and, on the other part, thought, the spirit which composes and decomposes nature, — here they are, side by side, god and devil, mind and matter, king and conspirator, belt and spasm, riding peacefully together in the eye and brain of every man.

Nor can he blink the freewill. To hazard the contradiction, — freedom is necessary. If you please to plant yourself on the side of Fate, and say, Fate is all; then we say, a part of Fate is the freedom of man. Forever wells up the impulse of choosing and acting in the soul. Intellect annuls Fate. So far as a man thinks, he is free. And though nothing is more disgusting than the crowing about liberty

by slaves, as most men are, and the flippant mistaking for freedom of some paper preamble like a "Declaration of Independence," or the statute right to vote, by those who have never dared to think or to act, yet it is wholesome to man to look not at Fate, but the other way: the practical view is the other. His sound relation to these facts is to use and command, not to cringe to them. "Look not on nature, for her name is fatal," said the oracle. The too much contemplation of these limits induces meanness. They who talk much of destiny, their birth-star, &c., are in a lower dangerous plane, and invite the evils they fear.

I cited the instinctive and heroic races as proud believers in Destiny. They conspire with it; a loving resignation is with the event. But the dogma makes a different impression, when it is held by the weak and lazy. 'Tis weak and vicious people who cast the blame on Fate. The right use of Fate is to bring up our conduct to the loftiness of nature. Rude and invincible except by themselves are the elements. So let man be. Let him empty his breast of his windy conceits, and show his lordship by manners and deeds on the scale of nature. Let him hold his purpose as with the tug of gravitation. No power, no persuasion, no bribe shall make him give up his point. A man ought to compare advantageously with a river, an oak, or a mountain. He shall have not less the flow, the expansion, and the resistance of these.

'Tis the best use of Fate to teach a fatal courage. Go face the fire at sea, or the cholera in your friend's house, or the burglar in your own, or what danger lies in the way of duty, knowing you are guarded by the cherubim of Destiny. If you believe in Fate to your harm, believe it, at least, for your good.

For, if Fate is so prevailing, man also is part of it, and can confront fate with fate. If the Universe have these savage accidents, our atoms are as savage in resistance. We should be crushed by the atmosphere, but for the reaction of the air within the body. A tube made of a film of glass can resist the shock of the ocean, if filled with the same water. If there be omnipotence in the stroke, there is omnipotence of recoil.

1. But Fate against Fate is only parrying and defence: there are, also, the noble creative forces. The revelation of Thought takes man out of servitude into freedom. We rightly say of ourselves, we were born, and afterward we were born again, and many times. We have successive experiences so important, that the new forgets the old, and hence the mythology of the seven or the nine heavens. The day of days, the great day of the feast of life, is that in which the inward eye opens to the Unity in things, to the omnipresence of law; — sees that what is must be, and ought to be, or is the best. This beatitude dips from on high down on us, and we see. It is not in us so much as we are in it. If the air come to our lungs, we breathe and live; if not, we die. If the light come to our eyes, we see;

else not. And if truth come to our mind, we suddenly expand to its dimensions, as if we grew to worlds. We are as lawgivers; we speak for Nature; we prophesy and divine.

This insight throws us on the party and interest of the Universe, against all and sundry; against ourselves, as much as others. A man speaking from insight affirms of himself what is true of the mind: seeing its immortality, he says, I am immortal; seeing its invincibility, he says, I am strong. It is not in us, but we are in it. It is of the maker, not of what is made. All things are touched and changed by it. This uses, and is not used. It distances those who share it, from those who share it not. Those who share it not are flocks and herds. It dates from itself; — not from former men or better men, — gospel, or constitution, or college, or custom. Where it shines, Nature is no longer intrusive, but all things make a musical or pictorial impression. The world of men show like a comedy without laughter: — populations, interests, government, history;— 'tis all toy figures in a toy house. It does not overvalue particular truths. We hear eagerly every thought and word quoted from an intellectual man. But, in his presence, our own mind is roused to activity, and we forget very fast what he says, much more interested in the new play of our own thought, than in any thought of his. 'Tis the majesty into which we have suddenly mounted, the impersonality, the scorn of egotisms, the sphere of laws, that engage us. Once we were stepping a little this way, and a little that way; now, we are as men in a balloon, and do not think so much of the point we have left, or the point we would make, as of the liberty and glory of the way.

Just as much intellect as you add, so much organic power. He who sees through the design, presides over it, and must will that which must be. We sit and rule, and, though we sleep, our dream will come to pass. Our thought, though it were only an hour old, affirms an oldest necessity, not to be separated from thought, and not to be separated from will. They must always have coexisted. It apprises us of its sovereignty and godhead, which refuse to be severed from it. It is not mine or thine, but the will of all mind. It is poured into the souls of all men, as the soul itself which constitutes them men. I know not whether there be, as is alleged, in the upper region of our atmosphere, a permanent westerly current, which carries with it all atoms which rise to that height, but I see, that when souls reach a certain clearness of perception, they accept a knowledge and motive above selfishness. A breath of will blows eternally through the universe of souls in the direction of the Right and Necessary. It is the air which all intellects inhale and exhale, and it is the wind which blows the worlds into order and orbit.

Thought dissolves the material universe, by carrying the mind up into a

sphere where all is plastic. Of two men, each obeying his own thought, he whose thought is deepest will be the strongest character. Always one man more than another represents the will of Divine Providence to the period.

2. If thought makes free, so does the moral sentiment. The mixtures of spiritual chemistry refuse to be analyzed. Yet we can see that with the perception of truth is joined the desire that it shall prevail. That affection is essential to will. Moreover, when a strong will appears, it usually results from a certain unity of organization, as if the whole energy of body and mind flowed in one direction. All great force is real and elemental. There is no manufacturing a strong will. There must be a pound to balance a pound. Where power is shown in will, it must rest on the universal force. Alaric and Bonaparte must believe they rest on a truth, or their will can be bought or bent. There is a bribe possible for any finite will. But the pure sympathy with universal ends is an infinite force, and cannot be bribed or bent. Whoever has had experience of the moral sentiment cannot choose but believe in unlimited power. Each pulse from that heart is an oath from the Most High. I know not what the word *sublime* means, if it be not the intimations in this infant of a terrific force. A text of heroism, a name and anecdote of courage, are not arguments, but sallies of freedom. One of these is the verse of the Persian Hafiz, "'Tis written on the gate of Heaven, 'Wo unto him who suffers himself to be betrayed by Fate!'" Does the reading of history make us fatalists? What courage does not the opposite opinion show! A little whim of will to be free gallantly contending against the universe of chemistry.

But insight is not will, nor is affection will. Perception is cold, and goodness dies in wishes; as Voltaire said, 'tis the misfortune of worthy people that they are cowards; "*un des plus grands malheurs des honnêtes gens c'est qu'ils sont des lâches.*" There must be a fusion of these two to generate the energy of will. There can be no driving force, except through the conversion of the man into his will, making him the will, and the will him. And one may say boldly, that no man has a right perception of any truth, who has not been reacted on by it, so as to be ready to be its martyr.

The one serious and formidable thing in nature is a will. Society is servile from want of will, and therefore the world wants saviours and religions. One way is right to go: the hero sees it, and moves on that aim, and has the world under him for root and support. He is to others as the world. His approbation is honor; his dissent, infamy. The glance of his eye has the force of sunbeams. A personal influence towers up in memory only worthy, and we gladly forget numbers, money, climate, gravitation, and the rest of Fate.

We can afford to allow the limitation, if we know it is the meter of the growing man. We stand against Fate, as children stand up against the wall in

their father's house, and notch their height from year to year. But when the boy grows to man, and is master of the house, he pulls down that wall, and builds a new and bigger. 'Tis only a question of time. Every brave youth is in training to ride and rule this dragon. His science is to make weapons and wings of these passions and retarding forces. Now whether, seeing these two things, fate and power, we are permitted to believe in unity? The bulk of mankind believe in two gods. They are under one dominion here in the house, as friend and parent, in social circles, in letters, in art, in love, in religion: but in mechanics, in dealing with steam and climate, in trade, in politics, they think they come under another; and that it would be a practical blunder to transfer the method and way of working of one sphere, into the other. What good, honest, generous men at home, will be wolves and foxes on change! What pious men in the parlor will vote for what reprobates at the polls! To a certain point, they believe themselves the care of a Providence. But, in a steamboat, in an epidemic, in war, they believe a malignant energy rules.

But relation and connection are not somewhere and sometimes, but everywhere and always. The divine order does not stop where their sight stops. The friendly power works on the same rules, in the next farm, and the next planet. But, where they have not experience, they run against it, and hurt themselves. Fate, then, is a name for facts not yet passed under the fire of thought; — for causes which are impenetrated.

But every jet of chaos which threatens to exterminate us, is convertible by intellect into wholesome force. Fate is unpenetrated causes. The water drowns ship and sailor, like a grain of dust. But learn to swim, trim your bark, and the wave which drowned it, will be cloven by it, and carry it, like its own foam, a plume and a power. The cold is inconsiderate of persons, tingles your blood, freezes a man like a dew-drop. But learn to skate, and the ice will give you a graceful, sweet, and poetic motion. The cold will brace your limbs and brain to genius, and make you foremost men of time. Cold and sea will train an imperial Saxon race, which nature cannot bear to lose, and, after cooping it up for a thousand years in yonder England, gives a hundred Englands, a hundred Mexicos. All the bloods it shall absorb and domineer: and more than Mexicos, — the secrets of water and steam, the spasms of electricity, the ductility of metals, the chariot of the air, the ruddered balloon are awaiting you.

The annual slaughter from typhus far exceeds that of war; but right drainage destroys typhus. The plague in the sea-service from scurvy is healed by lemon juice and other diets portable or procurable: the depopulation by cholera and small-pox is ended by drainage and vaccination; and every other pest is not less in the chain of cause and effect, and may be fought off. And, whilst art draws out

the venom, it commonly extorts some benefit from the vanquished enemy. The mischievous torrent is taught to drudge for man: the wild beasts he makes useful for food, or dress, or labor; the chemic explosions are controlled like his watch. These are now the steeds on which he rides. Man moves in all modes, by legs of horses, by wings of wind, by steam, by gas of balloon, by electricity, and stands on tiptoe threatening to hunt the eagle in his own element. There's nothing he will not make his carrier.

Steam was, till the other day, the devil which we dreaded. Every pot made by any human potter or brazier had a hole in its cover, to let off the enemy, lest he should lift pot and roof, and carry the house away. But the Marquis of Worcester, Watt, and Fulton bethought themselves, that, where was power, was not devil, but was God; that it must be availed of, and not by any means let off and wasted. Could he lift pots and roofs and houses so handily? he was the workman they were in search of. He could be used to lift away, chain, and compel other devils, far more reluctant and dangerous, namely, cubic miles of earth, mountains, weight or resistance of water, machinery, and the labors of all men in the world; and time he shall lengthen, and shorten space.

It has not fared much otherwise with higher kinds of steam. The opinion of the million was the terror of the world, and it was attempted, either to dissipate it, by amusing nations, or to pile it over with strata of society, — a layer of soldiers; over that, a layer of lords; and a king on the top; with clamps and hoops of castles, garrisons, and police. But, sometimes, the religious principle would get in, and burst the hoops, and rive every mountain laid on top of it. The Fultons and Watts of politics, believing in unity, saw that it was a power, and, by satisfying it, (as justice satisfies everybody,) through a different disposition of society, — grouping it on a level, instead of piling it into a mountain, — they have contrived to make of this terror the most harmless and energetic form of a State.

Very odious, I confess, are the lessons of Fate. Who likes to have a dapper phrenologist pronouncing on his fortunes? Who likes to believe that he has hidden in his skull, spine, and pelvis, all the vices of a Saxon or Celtic race, which will be sure to pull him down, — with what grandeur of hope and resolve he is fired, — into a selfish, huckstering, servile, dodging animal? A learned physician tells us, the fact is invariable with the Neapolitan, that, when mature, he assumes the forms of the unmistakable scoundrel. That is a little overstated, — but may pass.

But these are magazines and arsenals. A man must thank his defects, and stand in some terror of his talents. A transcendent talent draws so largely on his forces, as to lame him; a defect pays him revenues on the other side. The

sufferance, which is the badge of the Jew, has made him, in these days, the ruler of the rulers of the earth. If Fate is ore and quarry, if evil is good in the making, if limitation is power that shall be, if calamities, oppositions, and weights are wings and means, — we are reconciled.

Fate involves the melioration. No statement of the Universe can have any soundness, which does not admit its ascending effort. The direction of the whole, and of the parts, is toward benefit, and in proportion to the health. Behind every individual, closes organization: before him, opens liberty, — the Better, the Best. The first and worst races are dead. The second and imperfect races are dying out, or remain for the maturing of higher. In the latest race, in man, every generosity, every new perception, the love and praise he extorts from his fellows, are certificates of advance out of fate into freedom. Liberation of the will from the sheaths and clogs of organization which he has outgrown, is the end and aim of this world. Every calamity is a spur and valuable hint; and where his endeavors do not yet fully avail, they tell as tendency. The whole circle of animal life, — tooth against tooth, — devouring war, war for food, a yelp of pain and a grunt of triumph, until, at last, the whole menagerie, the whole chemical mass is mellowed and refined for higher use, — pleases at a sufficient perspective.

But to see how fate slides into freedom, and freedom into fate, observe how far the roots of every creature run, or find, if you can, a point where there is no thread of connection. Our life is consentaneous and far-related. This knot of nature is so well tied, that nobody was ever cunning enough to find the two ends. Nature is intricate, overlapped, interweaved, and endless. Christopher Wren said of the beautiful King's College chapel, "that, if anybody would tell him where to lay the first stone, he would build such another." But where shall we find the first atom in this house of man, which is all consent, inosculation, and balance of parts?

The web of relation is shown in *habitat*, shown in hybernation. When hybernation was observed, it was found, that, whilst some animals became torpid in winter, others were torpid in summer: hybernation then was a false name. The *long sleep* is not an effect of cold, but is regulated by the supply of food proper to the animal. It becomes torpid when the fruit or prey it lives on is not in season, and regains its activity when its food is ready.

Eyes are found in light; ears in auricular air; feet on land; fins in water; wings in air; and, each creature where it was meant to be, with a mutual fitness. Every zone has its own Fauna. There is adjustment between the animal and its food, its parasite, its enemy. Balances are kept. It is not allowed to diminish in numbers, nor to exceed. The like adjustments exist for man. His food is cooked, when he arrives; his coal in the pit; the house ventilated; the mud of the deluge dried; his

companions arrived at the same hour, and awaiting him with love, concert, laughter, and tears. These are coarse adjustments, but the invisible are not less. There are more belongings to every creature than his air and his food. His instincts must be met, and he has predisposing power that bends and fits what is near him to his use. He is not possible until the invisible things are right for him, as well as the visible. Of what changes, then, in sky and earth, and in finer skies and earths, does the appearance of some Dante or Columbus apprise us!

How is this effected? Nature is no spendthrift, but takes the shortest way to her ends. As the general says to his soldiers, "if you want a fort, build a fort," so nature makes every creature do its own work and get its living, — is it planet, animal, or tree. The planet makes itself. The animal cell makes itself; — then, what it wants. Every creature, — wren or dragon, — shall make its own lair. As soon as there is life, there is self-direction, and absorbing and using of material. Life is freedom, — life in the direct ratio of its amount. You may be sure, the new-born man is not inert. Life works both voluntarily and supernaturally in its neighborhood. Do you suppose, he can be estimated by his weight in pounds, or, that he is contained in his skin, — this reaching, radiating, jaculating fellow? The smallest candle fills a mile with its rays, and the papillæ of a man run out to every star.

When there is something to be done, the world knows how to get it done. The vegetable eye makes leaf, pericarp, root, bark, or thorn, as the need is; the first cell converts itself into stomach, mouth, nose, or nail, according to the want: the world throws its life into a hero or a shepherd; and puts him where he is wanted. Dante and Columbus were Italians, in their time: they would be Russians or Americans to-day. Things ripen, new men come. The adaptation is not capricious. The ulterior aim, the purpose beyond itself, the correlation by which planets subside and crystallize, then animate beasts and men, will not stop, but will work into finer particulars, and from finer to finest.

The secret of the world is, the tie between person and event. Person makes event, and event person. The "times," "the age," what is that, but a few profound persons and a few active persons who epitomize the times? — Goethe, Hegel, Metternich, Adams, Calhoun, Guizot, Peel, Cobden, Kossuth, Rothschild, Astor, Brunel, and the rest. The same fitness must be presumed between a man and the time and event, as between the sexes, or between a race of animals and the food it eats, or the inferior races it uses. He thinks his fate alien, because the copula is hidden. But the soul contains the event that shall befall it, for the event is only the actualization of its thoughts; and what we pray to ourselves for is always granted. The event is the print of your form. It fits you like your skin. What each does is proper to him. Events are the children of his body and mind. We learn

that the soul of Fate is the soul of us, as Hafiz sings,

Alas! till now I had not known,
My guide and fortune's guide are one.

All the toys that infatuate men, and which they play for, — houses, land, money, luxury, power, fame, are the selfsame thing, with a new gauze or two of illusion overlaid. And of all the drums and rattles by which men are made willing to have their heads broke, and are led out solemnly every morning to parade, — the most admirable is this by which we are brought to believe that events are arbitrary, and independent of actions. At the conjuror's, we detect the hair by which he moves his puppet, but we have not eyes sharp enough to descry the thread that ties cause and effect.

Nature magically suits the man to his fortunes, by making these the fruit of his character. Ducks take to the water, eagles to the sky, waders to the sea margin, hunters to the forest, clerks to counting-rooms, soldiers to the frontier. Thus events grow on the same stem with persons; are sub-persons. The pleasure of life is according to the man that lives it, and not according to the work or the place. Life is an ecstasy. We know what madness belongs to love, — what power to paint a vile object in hues of heaven. As insane persons are indifferent to their dress, diet, and other accommodations, and, as we do in dreams, with equanimity, the most absurd acts, so, a drop more of wine in our cup of life will reconcile us to strange company and work. Each creature puts forth from itself its own condition and sphere, as the slug sweats out its slimy house on the pear-leaf, and the woolly aphides on the apple perspire their own bed, and the fish its shell. In youth, we clothe ourselves with rainbows, and go as brave as the zodiac. In age, we put out another sort of perspiration, — gout, fever, rheumatism, caprice, doubt, fretting, and avarice.

A man's fortunes are the fruit of his character. A man's friends are his magnetisms. We go to Herodotus and Plutarch for examples of Fate; but we are examples. "*Quisque suos patimur manes.*" The tendency of every man to enact all that is in his constitution is expressed in the old belief, that the efforts which we make to escape from our destiny only serve to lead us into it: and I have noticed, a man likes better to be complimented on his position, as the proof of the last or total excellence, than on his merits.

A man will see his character emitted in the events that seem to meet, but which exude from and accompany him. Events expand with the character. As once he found himself among toys, so now he plays a part in colossal systems, and his growth is declared in his ambition, his companions, and his performance.

He looks like a piece of luck, but is a piece of causation; — the mosaic, angulated and ground to fit into the gap he fills. Hence in each town there is some man who is, in his brain and performance, an explanation of the tillage, production, factories, banks, churches, ways of living, and society, of that town. If you do not chance to meet him, all that you see will leave you a little puzzled: if you see him, it will become plain. We know in Massachusetts who built New Bedford, who built Lynn, Lowell, Lawrence, Clinton, Fitchburg, Holyoke, Portland, and many another noisy mart. Each of these men, if they were transparent, would seem to you not so much men, as walking cities, and, wherever you put them, they would build one.

History is the action and reaction of these two, — Nature and Thought; — two boys pushing each other on the curb-stone of the pavement. Everything is pusher or pushed: and matter and mind are in perpetual tilt and balance, so. Whilst the man is weak, the earth takes up him. He plants his brain and affections. By and by he will take up the earth, and have his gardens and vineyards in the beautiful order and productiveness of his thought. Every solid in the universe is ready to become fluid on the approach of the mind, and the power to flux it is the measure of the mind. If the wall remain adamant, it accuses the want of thought. To a subtler force, it will stream into new forms, expressive of the character of the mind. What is the city in which we sit here, but an aggregate of incongruous materials, which have obeyed the will of some man? The granite was reluctant, but his hands were stronger, and it came. Iron was deep in the ground, and well combined with stone; but could not hide from his fires. Wood, lime, stuffs, fruits, gums, were dispersed over the earth and sea, in vain. Here they are, within reach of every man's day-labor, — what he wants of them. The whole world is the flux of matter over the wires of thought to the poles or points where it would build. The races of men rise out of the ground preoccupied with a thought which rules them, and divided into parties ready armed and angry to fight for this metaphysical abstraction. The quality of the thought differences the Egyptian and the Roman, the Austrian and the American. The men who come on the stage at one period are all found to be related to each other. Certain ideas are in the air. We are all impressionable, for we are made of them; all impressionable, but some more than others, and these first express them. This explains the curious contemporaneousness of inventions and discoveries. The truth is in the air, and the most impressionable brain will announce it first, but all will announce it a few minutes later. So women, as most susceptible, are the best index of the coming hour. So the great man, that is, the man most imbued with the spirit of the time, is the impressionable man, — of a fibre irritable and delicate, like iodine to light. He feels the infinitesimal attractions. His mind is

righter than others, because he yields to a current so feeble as can be felt only by a needle delicately poised.

The correlation is shown in defects. Möller, in his *Essay on Architecture*, taught that the building which was fitted accurately to answer its end, would turn out to be beautiful, though beauty had not been intended. I find the like unity in human structures rather virulent and pervasive; that a crudity in the blood will appear in the argument; a hump in the shoulder will appear in the speech and handiwork. If his mind could be seen, the hump would be seen. If a man has a seesaw in his voice, it will run into his sentences, into his poem, into the structure of his fable, into his speculation, into his charity. And, as every man is hunted by his own *dæmon*, vexed by his own disease, this checks all his activity.

So each man, like each plant, has his parasites. A strong, astringent, bilious nature has more truculent enemies than the slugs and moths that fret my leaves. Such an one has curculios, borers, knife-worms: a swindler ate him first, then a client, then a quack, then smooth, plausible gentlemen, bitter and selfish as Moloch.

This correlation really existing can be divined. If the threads are there, thought can follow and show them. Especially when a soul is quick and docile; as Chaucer sings,

“Or if the soul of proper kind

Be so perfect as men find,
That it wot what is to come,
And that he warneth all and some
Of every of their adventures,
By previsions or figures;
But that our flesh hath not might

It to understand aright
For it is warned too darkly.” —

Some people are made up of rhyme, coincidence, omen, periodicity, and presage: they meet the person they seek; what their companion prepares to say to them, they first say to him; and a hundred signs apprise them of what is about to befall.

Wonderful intricacy in the web, wonderful constancy in the design this vagabond life admits. We wonder how the fly finds its mate, and yet year after year we find two men, two women, without legal or carnal tie, spend a great part of their best time within a few feet of each other. And the moral is, that what we seek we shall find; what we flee from flees from us; as Goethe said, “what we wish for in youth, comes in heaps on us in old age,” too often cursed with the granting of our prayer: and hence the high caution, that, since we are sure of having what we wish, we beware to ask only for high things.

One key, one solution to the mysteries of human condition, one solution to the old knots of fate, freedom, and foreknowledge, exists, the propounding, namely, of the double consciousness. A man must ride alternately on the horses of his private and his public nature, as the equestrians in the circus throw themselves nimbly from horse to horse, or plant one foot on the back of one, and the other foot on the back of the other. So when a man is the victim of his fate, has sciatica in his loins, and cramp in his mind; a club-foot and a club in his wit; a sour face, and a selfish temper; a strut in his gait, and a conceit in his affection; or is ground to powder by the vice of his race; he is to rally on his relation to the Universe, which his ruin benefits. Leaving the dæmon who suffers, he is to take sides with the Deity who secures universal benefit by his pain.

To offset the drag of temperament and race, which pulls down, learn this lesson, namely, that by the cunning co-presence of two elements, which is throughout nature, whatever lames or paralyzes you, draws in with it the divinity, in some form, to repay. A good intention clothes itself with sudden power. When a god wishes to ride, any chip or pebble will bud and shoot out winged feet, and serve him for a horse.

Let us build altars to the Blessed Unity which holds nature and souls in perfect solution, and compels every atom to serve an universal end. I do not wonder at a snow-flake, a shell, a summer landscape, or the glory of the stars; but at the necessity of beauty under which the universe lies; that all is and must be pictorial; that the rainbow, and the curve of the horizon, and the arch of the blue vault are only results from the organism of the eye. There is no need for foolish amateurs to fetch me to admire a garden of flowers, or a sun-gilt cloud,

or a waterfall, when I cannot look without seeing splendor and grace. How idle to choose a random sparkle here or there, when the indwelling necessity plants the rose of beauty on the brow of chaos, and discloses the central intention of Nature to be harmony and joy.

Let us build altars to the Beautiful Necessity. If we thought men were free in the sense, that, in a single exception one fantastical will could prevail over the law of things, it were all one as if a child's hand could pull down the sun. If, in the least particular, one could derange the order of nature, — who would accept the gift of life?

Let us build altars to the Beautiful Necessity, which secures that all is made of one piece; that plaintiff and defendant, friend and enemy, animal and planet, food and eater, are of one kind. In astronomy, is vast space, but no foreign system; in geology, vast time, but the same laws as to-day. Why should we be afraid of Nature, which is no other than “philosophy and theology embodied”? Why should we fear to be crushed by savage elements, we who are made up of the same elements? Let us build to the Beautiful Necessity, which makes man brave in believing that he cannot shun a danger that is appointed, nor incur one that is not; to the Necessity which rudely or softly educates him to the perception that there are no contingencies; that Law rules throughout existence, a Law which is not intelligent but intelligence, — not personal nor impersonal, — it disdains words and passes understanding; it dissolves persons; it vivifies nature; yet solicits the pure in heart to draw on all its omnipotence.

POWER.

His tongue was framed to music,
And his hand was armed with skill,
His face was the mould of beauty,
And his heart the throne of will.

There is not yet any inventory of a man's faculties, any more than a bible of his opinions. Who shall set a limit to the influence of a human being? There are men, who, by their sympathetic attractions, carry nations with them, and lead the activity of the human race. And if there be such a tie, that, wherever the mind of man goes, nature will accompany him, perhaps there are men whose magnetisms are of that force to draw material and elemental powers, and, where they appear, immense instrumentalities organize around them. Life is a search after power; and this is an element with which the world is so saturated, — there is no chink or crevice in which it is not lodged, — that no honest seeking goes unrewarded. A man should prize events and possessions as the ore in which this fine mineral is found; and he can well afford to let events and possessions, and the breath of the body go, if their value has been added to him in the shape of power. If he have secured the elixir, he can spare the wide gardens from which it was distilled. A cultivated man, wise to know and bold to perform, is the end to which nature works, and the education of the will is the flowering and result of all this geology and astronomy.

All successful men have agreed in one thing, — they were *causationists*. They believed that things went not by luck, but by law; that there was not a weak or a cracked link in the chain that joins the first and last of things. A belief in causality, or strict connection between every trifle and the principle of being, and, in consequence, belief in compensation, or, that nothing is got for nothing, — characterizes all valuable minds, and must control every effort that is made by an industrious one. The most valiant men are the best believers in the tension of the laws. "All the great captains," said Bonaparte, "have performed vast achievements by conforming with the rules of the art, — by adjusting efforts to obstacles."

The key to the age may be this, or that, or the other, as the young orators describe; — the key to all ages is — Imbecility; imbecility in the vast majority of men, at all times, and, even in heroes, in all but certain eminent moments; victims of gravity, custom, and fear. This gives force to the strong, — that the multitude have no habit of self-reliance or original action.

We must reckon success a constitutional trait. Courage, — the old physicians taught, (and their meaning holds, if their physiology is a little mythical,) — courage, or the degree of life, is as the degree of circulation of the blood in the arteries. “During passion, anger, fury, trials of strength, wrestling, fighting, a large amount of blood is collected in the arteries, the maintenance of bodily strength requiring it, and but little is sent into the veins. This condition is constant with intrepid persons.” Where the arteries hold their blood, is courage and adventure possible. Where they pour it unrestrained into the veins, the spirit is low and feeble. For performance of great mark, it needs extraordinary health. If Eric is in robust health, and has slept well, and is at the top of his condition, and thirty years old, at his departure from Greenland, he will steer west, and his ships will reach Newfoundland. But take out Eric, and put in a stronger and bolder man, — Biorn, or Thorfin, — and the ships will, with just as much ease, sail six hundred, one thousand, fifteen hundred miles further, and reach Labrador and New England. There is no chance in results. With adults, as with children, one class enter cordially into the game, and whirl with the whirling world; the others have cold hands, and remain bystanders; or are only dragged in by the humor and vivacity of those who can carry a dead weight. The first wealth is health. Sickness is poor-spirited, and cannot serve any one: it must husband its resources to live. But health or fulness answers its own ends, and has to spare, runs over, and inundates the neighborhoods and creeks of other men’s necessities.

All power is of one kind, a sharing of the nature of the world. The mind that is parallel with the laws of nature will be in the current of events, and strong with their strength. One man is made of the same stuff of which events are made; is in sympathy with the course of things; can predict it. Whatever befalls, befalls him first; so that he is equal to whatever shall happen. A man who knows men, can talk well on politics, trade, law, war, religion. For, everywhere, men are led in the same manners.

The advantage of a strong pulse is not to be supplied by any labor, art, or concert. It is like the climate, which easily rears a crop, which no glass, or irrigation, or tillage, or manures, can elsewhere rival. It is like the opportunity of a city like New York, or Constantinople, which needs no diplomacy to force capital or genius or labor to it. They come of themselves, as the waters flow to it. So a broad, healthy, massive understanding seems to lie on the shore of unseen rivers, of unseen oceans, which are covered with barks, that, night and day, are drifted to this point. That is poured into its lap, which other men lie plotting for. It is in everybody’s secret; anticipates everybody’s discovery; and if it do not command every fact of the genius and the scholar, it is because it is large and

sluggish, and does not think them worth the exertion which you do.

This affirmative force is in one, and is not in another, as one horse has the spring in him, and another in the whip. "On the neck of the young man," said Hafiz, "sparkles no gem so gracious as enterprise." Import into any stationary district, as into an old Dutch population in New York or Pennsylvania, or among the planters of Virginia, a colony of hardy Yankees, with seething brains, heads full of steam-hammer, pulley, crank, and toothed wheel, — and everything begins to shine with values. What enhancement to all the water and land in England, is the arrival of James Watt or Brunel! In every company, there is not only the active and passive sex, but, in both men and women, a deeper and more important *sex of mind*, namely, the inventive or creative class of both men and women, and the uninventive or accepting class. Each *plus* man represents his set, and, if he have the accidental advantage of personal ascendancy, — which implies neither more nor less of talent, but merely the temperamental or taming eye of a soldier or a schoolmaster, (which one has, and one has not, as one has a black moustache and one a blond,) then quite easily and without envy or resistance, all his coadjutors and feeders will admit his right to absorb them. The merchant works by book-keeper and cashier; the lawyer's authorities are hunted up by clerks; the geologist reports the surveys of his subalterns; Commander Wilkes appropriates the results of all the naturalists attached to the Expedition; Thorwaldsen's statue is finished by stone-cutters; Dumas has journeymen; and Shakspeare was theatre-manager, and used the labor of many young men, as well as the playbooks.

There is always room for a man of force, and he makes room for many. Society is a troop of thinkers, and the best heads among them take the best places. A feeble man can see the farms that are fenced and tilled, the houses that are built. The strong man sees the possible houses and farms. His eye makes estates, as fast as the sun breeds clouds.

When a new boy comes into school, when a man travels, and encounters strangers every day, or, when into any old club a new comer is domesticated, that happens which befalls, when a strange ox is driven into a pen or pasture where cattle are kept; there is at once a trial of strength between the best pair of horns and the new comer, and it is settled thenceforth which is the leader. So now, there is a measuring of strength, very courteous, but decisive, and an acquiescence thenceforward when these two meet. Each reads his fate in the other's eyes. The weaker party finds, that none of his information or wit quite fits the occasion. He thought he knew this or that: he finds that he omitted to learn the end of it. Nothing that he knows will quite hit the mark, whilst all the rival's arrows are good, and well thrown. But if he knew all the facts in the

encyclopædia, it would not help him: for this is an affair of presence of mind, of attitude, of aplomb: the opponent has the sun and wind, and, in every cast, the choice of weapon and mark; and, when he himself is matched with some other antagonist, his own shafts fly well and hit. 'Tis a question of stomach and constitution. The second man is as good as the first, — perhaps better; but has not stoutness or stomach, as the first has, and so his wit seems over-fine or under-fine.

Health is good, — power, life, that resists disease, poison, and all enemies, and is conservative, as well as creative. Here is question, every spring, whether to graft with wax, or whether with clay; whether to whitewash or to potash, or to prune; but the one point is the thrifty tree. A good tree, that agrees with the soil, will grow in spite of blight, or bug, or pruning, or neglect, by night and by day, in all weathers and all treatments. Vivacity, leadership, must be had, and we are not allowed to be nice in choosing. We must fetch the pump with dirty water, if clean cannot be had. If we will make bread, we must have contagion, yeast, emptyings, or what not, to induce fermentation into the dough: as the torpid artist seeks inspiration at any cost, by virtue or by vice, by friend or by fiend, by prayer or by wine. And we have a certain instinct, that where is great amount of life, though gross and peccant, it has its own checks and purifications, and will be found at last in harmony with moral laws.

We watch in children with pathetic interest, the degree in which they possess recuperative force. When they are hurt by us, or by each other, or go to the bottom of the class, or miss the annual prizes, or are beaten in the game, — if they lose heart, and remember the mischance in their chamber at home, they have a serious check. But if they have the buoyancy and resistance that preoccupies them with new interest in the new moment, — the wounds cicatrize, and the fibre is the tougher for the hurt.

One comes to value this *plus* health, when he sees that all difficulties vanish before it. A timid man listening to the alarmists in Congress, and in the newspapers, and observing the profligacy of party, — sectional interests urged with a fury which shuts its eyes to consequences, with a mind made up to desperate extremities, ballot in one hand, and rifle in the other, — might easily believe that he and his country have seen their best days, and he hardens himself the best he can against the coming ruin. But, after this has been foretold with equal confidence fifty times, and government six per cents have not declined a quarter of a mill, he discovers that the enormous elements of strength which are here in play, make our politics unimportant. Personal power, freedom, and the resources of nature strain every faculty of every citizen. We prosper with such vigor, that, like thrifty trees, which grow in spite of ice, lice, mice, and borers, so

we do not suffer from the profligate swarms that fatten on the national treasury. The huge animals nourish huge parasites, and the rancor of the disease attests the strength of the constitution. The same energy in the Greek *Demos* drew the remark, that the evils of popular government appear greater than they are; there is compensation for them in the spirit and energy it awakens. The rough and ready style which belongs to a people of sailors, foresters, farmers, and mechanics, has its advantages. Power educates the potentate. As long as our people quote English standards they dwarf their own proportions. A Western lawyer of eminence said to me he wished it were a penal offence to bring an English law-book into a court in this country, so pernicious had he found in his experience our deference to English precedent. The very word 'commerce' has only an English meaning, and is pinched to the cramp exigencies of English experience. The commerce of rivers, the commerce of railroads, and who knows but the commerce of air-balloons, must add an American extension to the pond-hole of admiralty. As long as our people quote English standards, they will miss the sovereignty of power; but let these rough riders, — legislators in shirt-sleeves, — Hoosier, Sucker, Wolverine, Badger, — or whatever hard head Arkansas, Oregon, or Utah sends, half orator, half assassin, to represent its wrath and cupidity at Washington, — let these drive as they may; and the disposition of territories and public lands, the necessity of balancing and keeping at bay the snarling majorities of German, Irish, and of native millions, will bestow promptness, address, and reason, at last, on our buffalo-hunter, and authority and majesty of manners. The instinct of the people is right. Men expect from good whigs, put into office by the respectability of the country, much less skill to deal with Mexico, Spain, Britain, or with our own malcontent members, than from some strong transgressor, like Jefferson, or Jackson, who first conquers his own government, and then uses the same genius to conquer the foreigner. The senators who dissented from Mr. Polk's Mexican war, were not those who knew better, but those who, from political position, could afford it; not Webster, but Benton and Calhoun.

This power, to be sure, is not clothed in satin. 'Tis the power of Lynch law, of soldiers and pirates; and it bullies the peaceable and loyal. But it brings its own antidote; and here is my point, — that all kinds of power usually emerge at the same time; good energy, and bad; power of mind, with physical health; the ecstasies of devotion, with the exasperations of debauchery. The same elements are always present, only sometimes these conspicuous, and sometimes those; what was yesterday foreground, being to-day background, — what was surface, playing now a not less effective part as basis. The longer the drought lasts, the more is the atmosphere surcharged with water. The faster the ball falls to the

sun, the force to fly off is by so much augmented. And, in morals, wild liberty breeds iron conscience; natures with great impulses have great resources, and return from far. In politics, the sons of democrats will be whigs; whilst red republicanism, in the father, is a spasm of nature to engender an intolerable tyrant in the next age. On the other hand, conservatism, ever more timorous and narrow, disgusts the children, and drives them for a mouthful of fresh air into radicalism.

Those who have most of this coarse energy, — the ‘bruisers,’ who have run the gauntlet of caucus and tavern through the county or the state, have their own vices, but they have the good nature of strength and courage. Fierce and unscrupulous, they are usually frank and direct, and above falsehood. Our politics fall into bad hands, and churchmen and men of refinement, it seems agreed, are not fit persons to send to Congress. Politics is a deleterious profession, like some poisonous handicrafts. Men in power have no opinions, but may be had cheap for any opinion, for any purpose, — and if it be only a question between the most civil and the most forcible, I lean to the last. These Hoosiers and Suckers are really better than the snivelling opposition. Their wrath is at least of a bold and manly cast. They see, against the unanimous declarations of the people, how much crime the people will bear; they proceed from step to step, and they have calculated but too justly upon their Excellencies, the New England governors, and upon their Honors, the New England legislators. The messages of the governors and the resolutions of the legislatures, are a proverb for expressing a sham virtuous indignation, which, in the course of events, is sure to be belied.

In trade, also, this energy usually carries a trace of ferocity. Philanthropic and religious bodies do not commonly make their executive officers out of saints. The communities hitherto founded by Socialists, — the Jesuits, the Port-Royalists, the American communities at New Harmony, at Brook Farm, at Zoar, are only possible, by installing Judas as steward. The rest of the offices may be filled by good burgesses. The pious and charitable proprietor has a foreman not quite so pious and charitable. The most amiable of country gentlemen has a certain pleasure in the teeth of the bull-dog which guards his orchard. Of the Shaker society, it was formerly a sort of proverb in the country, that they always sent the devil to market. And in representations of the Deity, painting, poetry, and popular religion have ever drawn the wrath from Hell. It is an esoteric doctrine of society, that a little wickedness is good to make muscle; as if conscience were not good for hands and legs, as if poor decayed formalists of law and order cannot run like wild goats, wolves, and conies; that, as there is a use in medicine for poisons, so the world cannot move without rogues; that

public spirit and the ready hand are as well found among the malignants. 'Tis not very rare, the coincidence of sharp private and political practice, with public spirit, and good neighborhood.

I knew a burly Boniface who for many years kept a public-house in one of our rural capitals. He was a knave whom the town could ill spare. He was a social, vascular creature, grasping and selfish. There was no crime which he did not or could not commit. But he made good friends of the selectmen, served them with his best chop, when they supped at his house, and also with his honor the Judge, he was very cordial, grasping his hand. He introduced all the fiends, male and female, into the town, and united in his person the functions of bully, incendiary, swindler, barkeeper, and burglar. He girdled the trees, and cut off the horses' tails of the temperance people, in the night. He led the rummies' and radicals in town-meeting with a speech. Meantime, he was civil, fat, and easy, in his house, and precisely the most public-spirited citizen. He was active in getting the roads repaired and planted with shade-trees; he subscribed for the fountains, the gas, and the telegraph; he introduced the new horse-rake, the new scraper, the baby-jumper, and what not, that Connecticut sends to the admiring citizens. He did this the easier, that the peddler stopped at his house, and paid his keeping, by setting up his new trap on the landlord's premises.

Whilst thus the energy for originating and executing work, deforms itself by excess, and so our axe chops off our own fingers, — this evil is not without remedy. All the elements whose aid man calls in, will sometimes become his masters, especially those of most subtle force. Shall he, then, renounce steam, fire, and electricity, or, shall he learn to deal with them? The rule for this whole class of agencies is, — all *plus* is good; only put it in the right place.

Men of this surcharge of arterial blood cannot live on nuts, herb-tea, and elegies; cannot read novels, and play whist; cannot satisfy all their wants at the Thursday Lecture, or the Boston Athenæum. They pine for adventure, and must go to Pike's Peak; had rather die by the hatchet of a Pawnee, than sit all day and every day at a counting-room desk. They are made for war, for the sea, for mining, hunting, and clearing; for hair-breadth adventures, huge risks, and the joy of eventful living. Some men cannot endure an hour of calm at sea. I remember a poor Malay cook, on board a Liverpool packet, who, when the wind blew a gale, could not contain his joy; "Blow!" he cried, "me do tell you, blow!" Their friends and governors must see that some vent for their explosive complexion is provided. The roisters who are destined for infamy at home, if sent to Mexico, will "cover you with glory," and come back heroes and generals. There are Oregons, Californias, and Exploring Expeditions enough appertaining to America, to find them in files to gnaw, and in crocodiles to eat. The young

English are fine animals, full of blood, and when they have no wars to breathe their riotous valors in, they seek for travels as dangerous as war, diving into Maelstroms; swimming Hellesponts; wading up the snowy Himmaleh; hunting lion, rhinoceros, elephant, in South Africa; gypsying with Borrow in Spain and Algiers; riding alligators in South America with Waterton; utilizing Bedouin, Sheik, and Pacha, with Layard; yachting among the icebergs of Lancaster Sound; peeping into craters on the equator; or running on the creases of Malays in Borneo.

The excess of virility has the same importance in general history, as in private and industrial life. Strong race or strong individual rests at last on natural forces, which are best in the savage, who, like the beasts around him, is still in reception of the milk from the teats of Nature. Cut off the connection between any of our works, and this aboriginal source, and the work is shallow. The people lean on this, and the mob is not quite so bad an argument as we sometimes say, for it has this good side. "March without the people," said a French deputy from the tribune, "and you march into night: their instincts are a finger-pointing of Providence, always turned toward real benefit. But when you espouse an Orleans party, or a Bourbon, or a Montalembert party, or any other but an organic party, though you mean well, you have a personality instead of a principle, which will inevitably drag you into a corner."

The best anecdotes of this force are to be had from savage life, in explorers, soldiers, and buccaneers. But who cares for fallings-out of assassins, and fights of bears, or grindings of icebergs? Physical force has no value, where there is nothing else. Snow in snow-banks, fire in volcanoes and solfataras is cheap. The luxury of ice is in tropical countries, and midsummer days. The luxury of fire is, to have a little on our hearth: and of electricity, not volleys of the charged cloud, but the manageable stream on the battery-wires. So of spirit, or energy; the rests or remains of it in the civil and moral man, are worth all the cannibals in the Pacific.

In history, the great moment is, when the savage is just ceasing to be a savage, with all his hairy Pelasgic strength directed on his opening sense of beauty: — and you have Pericles and Phidias, — not yet passed over into the Corinthian civility. Everything good in nature and the world is in that moment of transition, when the swarthy juices still flow plentifully from nature, but their astringency or acidity is got out by ethics and humanity.

The triumphs of peace have been in some proximity to war. Whilst the hand was still familiar with the sword-hilt, whilst the habits of the camp were still visible in the port and complexion of the gentleman, his intellectual power culminated: the compression and tension of these stern conditions is a training

for the finest and softest arts, and can rarely be compensated in tranquil times, except by some analogous vigor drawn from occupations as hardy as war.

We say that success is constitutional; depends on a *plus* condition of mind and body, on power of work, on courage: that it is of main efficacy in carrying on the world, and, though rarely found in the right state for an article of commerce, but oftener in the supersaturate or excess, which makes it dangerous and destructive, yet it cannot be spared, and must be had in that form, and absorbents provided to take off its edge.

The affirmative class monopolize the homage of mankind. They originate and execute all the great feats. What a force was coiled up in the skull of Napoleon! Of the sixty thousand men making his army at Eylau, it seems some thirty thousand were thieves and burglars. The men whom, in peaceful communities, we hold if we can, with iron at their legs, in prisons, under the muskets of sentinels, this man dealt with, hand to hand, dragged them to their duty, and won his victories by their bayonets.

This aboriginal might gives a surprising pleasure when it appears under conditions of supreme refinement, as in the proficient in high art. When Michel Angelo was forced to paint the Sistine Chapel in fresco, of which art he knew nothing, he went down into the Pope's gardens behind the Vatican, and with a shovel dug out ochres, red and yellow, mixed them with glue and water with his own hands, and having, after many trials, at last suited himself, climbed his ladders, and painted away, week after week, month after month, the sibyls and prophets. He surpassed his successors in rough vigor, as much as in purity of intellect and refinement. He was not crushed by his one picture left unfinished at last. Michel was wont to draw his figures first in skeleton, then to clothe them with flesh, and lastly to drape them. "Ah!" said a brave painter to me, thinking on these things, "if a man has failed, you will find he has dreamed instead of working. There is no way to success in our art, but to take off your coat, grind paint, and work like a digger on the railroad, all day and every day."

Success goes thus invariably with a certain plus or positive power: an ounce of power must balance an ounce of weight. And, though a man cannot return into his mother's womb, and be born with new amounts of vivacity, yet there are two economies, which are the best *succedanea* which the case admits. The first is, the stopping off decisively our miscellaneous activity, and concentrating our force on one or a few points; as the gardener, by severe pruning, forces the sap of the tree into one or two vigorous limbs, instead of suffering it to spindle into a sheaf of twigs.

"Enlarge not thy destiny," said the oracle: "endeavor not to do more than is given thee in charge." The one prudence in life is concentration; the one evil is

dissipation: and it makes no difference whether our dissipations are coarse or fine; property and its cares, friends, and a social habit, or politics, or music, or feasting. Everything is good which takes away one plaything and delusion more, and drives us home to add one stroke of faithful work. Friends, books, pictures, lower duties, talents, flatteries, hopes, — all are distractions which cause oscillations in our giddy balloon, and make a good poise and a straight course impossible. You must elect your work; you shall take what your brain can, and drop all the rest. Only so, can that amount of vital force accumulate, which can make the step from knowing to doing. No matter how much faculty of idle seeing a man has, the step from knowing to doing is rarely taken. 'Tis a stop out of a chalk circle of imbecility into fruitfulness. Many an artist lacking this, lacks all: he sees the masculine Angelo or Cellini with despair. He, too, is up to Nature and the First Cause in his thought. But the spasm to collect and swing his whole being into one act, he has not. The poet Campbell said, that “a man accustomed to work was equal to any achievement he resolved on, and, that, for himself, necessity not inspiration was the prompter of his muse.”

Concentration is the secret of strength in politics, in war, in trade, in short, in all management of human affairs. One of the high anecdotes of the world is the reply of Newton to the inquiry, “how he had been able to achieve his discoveries?”— “By always intending my mind.” Or if you will have a text from politics, take this from Plutarch: “There was, in the whole city, but one street in which Pericles was ever seen, the street which led to the market-place and the council house. He declined all invitations to banquets, and all gay assemblies and company. During the whole period of his administration, he never dined at the table of a friend.” Or if we seek an example from trade,— “I hope,” said a good man to Rothschild, “your children are not too fond of money and business: I am sure you would not wish that.”— “I am sure I should wish that: I wish them to give mind, soul, heart, and body to business, — that is the way to be happy. It requires a great deal of boldness and a great deal of caution, to make a great fortune, and when you have got it, it requires ten times as much wit to keep it. If I were to listen to all the projects proposed to me, I should ruin myself very soon. Stick to one business, young man. Stick to your brewery, (he said this to young Buxton,) and you will be the great brewer of London. Be brewer, and banker, and merchant, and manufacturer, and you will soon be in the Gazette.”

Many men are knowing, many are apprehensive and tenacious, but they do not rush to a decision. But in our flowing affairs a decision must be made, — the best, if you can; but any is better than none. There are twenty ways of going to a point, and one is the shortest; but set out at once on one. A man who has that presence of mind which can bring to him on the instant all he knows, is worth

for action a dozen men who know as much, but can only bring it to light slowly. The good Speaker in the House is not the man who knows the theory of parliamentary tactics, but the man who decides off-hand. The good judge is not he who does hair-splitting justice to every allegation, but who, aiming at substantial justice, rules something intelligible for the guidance of suitors. The good lawyer is not the man who has an eye to every side and angle of contingency, and qualifies all his qualifications, but who throws himself on your part so heartily, that he can get you out of a scrape. Dr. Johnson said, in one of his flowing sentences, "Miserable beyond all names of wretchedness is that unhappy pair, who are doomed to reduce beforehand to the principles of abstract reason all the details of each domestic day. There are cases where little can be said, and much must be done."

The second substitute for temperament is drill, the power of use and routine. The hack is a better roadster than the Arab barb. In chemistry, the galvanic stream, slow, but continuous, is equal in power to the electric spark, and is, in our arts, a better agent. So in human action, against the spasm of energy, we offset the continuity of drill. We spread the same amount of force over much time, instead of condensing it into a moment. 'Tis the same ounce of gold here in a ball, and there in a leaf. At West Point, Col. Buford, the chief engineer, pounded with a hammer on the trunnions of a cannon, until he broke them off. He fired a piece of ordnance some hundred times in swift succession, until it burst. Now which stroke broke the trunnion? Every stroke. Which blast burst the piece? Every blast. "*Diligence passe sens*" Henry VIII. was wont to say, or, great is drill. John Kemble said, that the worst provincial company of actors would go through a play better than the best amateur company. Basil Hall likes to show that the worst regular troops will beat the best volunteers. Practice is nine tenths. A course of mobs is good practice for orators. All the great speakers were bad speakers at first. Stumping it through England for seven years, made Cobden a consummate debater. Stumping it through New England for twice seven, trained Wendell Phillips. The way to learn German, is, to read the same dozen pages over and over a hundred times, till you know every word and particle in them, and can pronounce and repeat them by heart. No genius can recite a ballad at first reading, so well as mediocrity can at the fifteenth or twentieth reading. The rule for hospitality and Irish 'help,' is, to have the same dinner every day throughout the year. At last, Mrs. O'Shaughnessy learns to cook it to a nicety, the host learns to carve it, and the guests are well served. A humorous friend of mine thinks, that the reason why Nature is so perfect in her art, and gets up such inconceivably fine sunsets, is, that she has learned how, at last, by dint of doing the same thing so very often. Cannot one converse better

on a topic on which he has experience, than on one which is new? Men whose opinion is valued on 'Change, are only such as have a special experience, and off that ground their opinion is not valuable, "More are made good by exercitation, than by nature," said Democritus. The friction in nature is so enormous that we cannot spare any power. It is not question to express our thought, to elect our way, but to overcome resistances of the medium and material in everything we do. Hence the use of drill, and the worthlessness of amateurs to cope with practitioners. Six hours every day at the piano, only to give facility of touch; six hours a day at painting, only to give command of the odious materials, oil, ochres, and brushes. The masters say, that they know a master in music, only by seeing the pose of the hands on the keys; — so difficult and vital an act is the command of the instrument. To have learned the use of the tools, by thousands of manipulations; to have learned the arts of reckoning, by endless adding and dividing, is the power of the mechanic and the clerk. I remarked in England, in confirmation of a frequent experience at home, that, in literary circles, the men of trust and consideration, bookmakers, editors, university deans and professors, bishops, too, were by no means men of the largest literary talent, but usually of a low and ordinary intellectuality, with a sort of mercantile activity and working talent. Indifferent hacks and mediocrities tower, by pushing their forces to a lucrative point, or by working power, over multitudes of superior men, in Old as in New England.

I have not forgotten that there are sublime considerations which limit the value of talent and superficial success. We can easily overpraise the vulgar hero. There are sources on which we have not drawn. I know what I abstain from. I adjourn what I have to say on this topic to the chapters on Culture and Worship. But this force or spirit, being the means relied on by Nature for bringing the work of the day about, — as far as we attach importance to household life, and the prizes of the world, we must respect that. And I hold, that an economy may be applied to it; it is as much a subject of exact law and arithmetic as fluids and gases are; it may be husbanded, or wasted; every man is efficient only as he is a container or vessel of this force, and never was any signal act or achievement in history, but by this expenditure. This is not gold, but the gold-maker; not the fame, but the exploit.

If these forces and this husbandry are within reach of our will, and the laws of them can be read, we infer that all success, and all conceivable benefit for man, is also, first or last, within his reach, and has its own sublime economies by which it may be attained. The world is mathematical, and has no casualty, in all its vast and flowing curve. Success has no more eccentricity, than the gingham and muslin we weave in our mills. I know no more affecting lesson to our busy,

plotting New England brains, than to go into one of the factories with which we have lined all the watercourses in the States. A man hardly knows how much he is a machine, until he begins to make telegraph, loom, press, and locomotive, in his own image. But in these, he is forced to leave out his follies and hindrances, so that when we go to the mill, the machine is more moral than we. Let a man dare go to a loom, and see if he be equal to it. Let machine confront machine, and see how they come out. The world-mill is more complex than the calico-mill, and the architect stooped less. In the gingham-mill, a broken thread or a shred spoils the web through a piece of a hundred yards, and is traced back to the girl that wove it, and lessens her wages. The stockholder, on being shown this, rubs his hands with delight. Are you so cunning, Mr. Profitless, and do you expect to swindle your master and employer, in the web you weave? A day is a more magnificent cloth than any muslin, the mechanism that makes it is infinitely cunninger, and you shall not conceal the sleezy, fraudulent, rotten hours you have slipped into the piece, nor fear that any honest thread, or straighter steel, or more inflexible shaft, will not testify in the web.

WEALTH.

Who shall tell what did befall,
Far away in time, when once,
Over the lifeless ball,
Hung idle stars and suns?
What god the element obeyed?
Wings of what wind the lichen bore,
Wafting the puny seeds of power,
Which, lodged in rock, the rock abrade?

And well the primal pioneer
Knew the strong task to it assigned
Patient through Heaven's enormous year
To build in matter home for mind.
From air the creeping centuries drew
The matted thicket low and wide,
This must the leaves of ages strew
The granite slab to clothe and hide,
Ere wheat can wave its golden pride.
What smiths, and in what furnace, rolled
(In dizzy æons dim and mute
The reeling brain can ill compute)
Copper and iron, lead, and gold?
What oldest star the fame can save

Of races perishing to pave
The planet with a floor of lime?
Dust is their pyramid and mole:
Who saw what ferns and palms were pressed
Under the tumbling mountain's breast,
In the safe herbal of the coal?
But when the quarried means were piled,
All is waste and worthless, till
Arrives the wise selecting will,
And, out of slime and chaos, Wit
Draws the threads of fair and fit.
Then temples rose, and towns, and marts,
The shop of toil, the hall of arts;
Then flew the sail across the seas
To feed the North from tropic trees;
The storm-wind wove, the torrent span,
Where they were bid the rivers ran;
New slaves fulfilled the poet's dream,
Galvanic wire, strong-shouldered steam.
Then docks were built, and crops were stored,
And ingots added to the hoard.
But, though light-headed man forget,
Remembering Matter pays her debt:
Still, through her motes and masses, draw
Electric thrills and ties of Law,
Which bind the strengths of Nature wild
To the conscience of a child.

As soon as a stranger is introduced into any company, one of the first questions which all wish to have answered, is, How does that man get his living? And with reason. He is no whole man until he knows how to earn a blameless livelihood. Society is barbarous, until every industrious man can get his living without dishonest customs.

Every man is a consumer, and ought to be a producer. He fails to make his place good in the world, unless he not only pays his debt, but also adds something to the common wealth. Nor can he do justice to his genius, without making some larger demand on the world than a bare subsistence. He is by constitution expensive, and needs to be rich.

Wealth has its source in applications of the mind to nature, from the rudest strokes of spade and axe, up to the last secrets of art. Intimate ties subsist between thought and all production; because a better order is equivalent to vast amounts of brute labor. The forces and the resistances are Nature's, but the mind acts in bringing things from where they abound to where they are wanted; in wise combining; in directing the practice of the useful arts, and in the creation of finer values, by fine art, by eloquence, by song, or the reproductions of memory. Wealth is in applications of mind to nature, and the art of getting rich consists not in industry, much less in saving, but in a better order, in timeliness, in being at the right spot. One man has stronger arms, or longer legs; another sees by the course of streams, and growth of markets, where land will be wanted, makes a clearing to the river, goes to sleep, and wakes up rich. Steam is no stronger now, than it was a hundred years ago; but is put to better use. A clever fellow was acquainted with the expansive force of steam; he also saw the wealth of wheat and grass rotting in Michigan. Then he cunningly screws on the steam-pipe to the wheat-crop. Puff now, O Steam! The steam puffs and expands as before, but this time it is dragging all Michigan at its back to hungry New York and hungry England. Coal lay in ledges under the ground since the Flood, until a laborer with pick and windlass brings it to the surface. We may well call it black diamonds. Every basket is power and civilization. For coal is a portable climate. It carries the heat of the tropics to Labrador and the polar circle: and it is the means of transporting itself whithersoever it is wanted. Watt and Stephenson whispered in the ear of mankind their secret, that a half-ounce of coal will draw two tons a mile, and coal carries coal, by rail and by boat, to make Canada as warm as Calcutta, and with its comfort brings its industrial power.

When the farmer's peaches are taken from under the tree, and carried into town, they have a new look, and a hundredfold value over the fruit which grew on the same bough, and lies fulsomely on the ground. The craft of the merchant is this bringing a thing from where it abounds, to where it is costly.

Wealth begins in a tight roof that keeps the rain and wind out; in a good pump that yields you plenty of sweet water; in two suits of clothes, so to change your dress when you are wet; in dry sticks to burn; in a good double-wick lamp; and three meals; in a horse, or a locomotive, to cross the land; in a boat to cross the sea; in tools to work with; in books to read; and so, in giving, on all sides, by tools and auxiliaries, the greatest possible extension to our powers, as if it added feet, and hands, and eyes, and blood, length to the day, and knowledge, and good-will.

Wealth begins with these articles of necessity. And here we must recite the iron law which Nature thunders in these northern climates. First, she requires

that each man should feed himself. If, happily, his fathers have left him no inheritance, he must go to work, and by making his wants less, or his gains more, he must draw himself out of that state of pain and insult in which she forces the beggar to lie. She gives him no rest until this is done: she starves, taunts, and torments him, takes away warmth, laughter, sleep, friends, and daylight, until he has fought his way to his own loaf. Then, less peremptorily, but still with sting enough, she urges him to the acquisition of such things as belong to him. Every warehouse and shop-window, every fruit-tree, every thought of every hour, opens a new want to him, which it concerns his power and dignity to gratify. It is of no use to argue the wants down: the philosophers have laid the greatness of man in making his wants few; but will a man content himself with a hut and a handful of dried pease? He is born to be rich. He is thoroughly related; and is tempted out by his appetites and fancies to the conquest of this and that piece of nature, until he finds his well-being in the use of his planet, and of more planets than his own. Wealth requires, besides the crust of bread and the roof, — the freedom of the city, the freedom of the earth, travelling, machinery, the benefits of science, music, and fine arts, the best culture, and the best company. He is the rich man who can avail himself of all men's faculties. He is the richest man who knows how to draw a benefit from the labors of the greatest number of men, of men in distant countries, and in past times. The same correspondence that is between thirst in the stomach, and water in the spring, exists between the whole of man and the whole of nature. The elements offer their service to him. The sea, washing the equator and the poles, offers its perilous aid, and the power and empire that follow it, — day by day to his craft and audacity. "Beware of me," it says, "but if you can hold me, I am the key to all the lands." Fire offers, on its side, an equal power. Fire, steam, lightning, gravity, ledges of rock, mines of iron, lead, quicksilver, tin, and gold; forests of all woods; fruits of all climates; animals of all habits; the powers of tillage; the fabrics of his chemic laboratory; the webs of his loom; the masculine draught of his locomotive, the talismans of the machine-shop; all grand and subtile things, minerals, gases, ethers, passions, war, trade, government, are his natural playmates, and, according to the excellence of the machinery in each human being, is his attraction for the instruments he is to employ. The world is his tool-chest, and he is successful, or his education is carried on just so far, as is the marriage of his faculties with nature, or, the degree in which he takes up things into himself.

The strong race is strong on these terms. The Saxons are the merchants of the world; now, for a thousand years, the leading race, and by nothing more than their quality of personal independence, and, in its special modification,

pecuniary independence. No reliance for bread and games on the government, no clanship, no patriarchal style of living by the revenues of a chief, no marrying-on, — no system of clientship suits them; but every man must pay his scot. The English are prosperous and peaceable, with their habit of considering that every man must take care of himself, and has himself to thank, if he do not maintain and improve his position in society.

The subject of economy mixes itself with morals, inasmuch as it is a peremptory point of virtue that a man's independence be secured. Poverty demoralizes. A man in debt is so far a slave; and Wall-street thinks it easy for a *millionaire* to be a man of his word, a man of honor, but, that, in failing circumstances, no man can be relied on to keep his integrity. And when one observes in the hotels and palaces of our Atlantic capitals, the habit of expense, the riot of the senses, the absence of bonds, clanship, fellow-feeling of any kind, he feels, that, when a man or a woman is driven to the wall, the chances of integrity are frightfully diminished, as if virtue were coming to be a luxury which few could afford, or, as Burke said, "at a market almost too high for humanity." He may fix his inventory of necessities and of enjoyments on what scale he pleases, but if he wishes the power and privilege of thought, the chalking out his own career, and having society on his own terms, he must bring his wants within his proper power to satisfy.

The manly part is to do with might and main what you can do. The world is full of fops who never did anything, and who have persuaded beauties and men of genius to wear their fop livery, and these will deliver the fop opinion, that it is not respectable to be seen earning a living; that it is much more respectable to spend without earning; and this doctrine of the snake will come also from the elect sons of light; for wise men are not wise at all hours, and will speak five times from their taste or their humor, to once from their reason. The brave workman, who might betray his feeling of it in his manners, if he do not succumb in his practice, must replace the grace or elegance forfeited, by the merit of the work done. No matter whether he make shoes, or statues, or laws. It is the privilege of any human work which is well done to invest the doer with a certain haughtiness. He can well afford not to conciliate, whose faithful work will answer for him. The mechanic at his bench carries a quiet heart and assured manners, and deals on even terms with men of any condition. The artist has made his picture so true, that it disconcerts criticism. The statue is so beautiful, that it contracts no stain from the market, but makes the market a silent gallery for itself. The case of the young lawyer was pitiful to disgust, — a paltry matter of buttons or tweezer-cases; but the determined youth saw in it an aperture to insert his dangerous wedges, made the insignificance of the thing forgotten, and

gave fame by his sense and energy to the name and affairs of the Tittleton snuffbox factory.

Society in large towns is babyish, and wealth is made a toy. The life of pleasure is so ostentatious, that a shallow observer must believe that this is the agreed best use of wealth, and, whatever is pretended, it ends in cosseting. But, if this were the main use of surplus capital, it would bring us to barricades, burned towns, and tomahawks, presently. Men of sense esteem wealth to be the assimilation of nature to themselves, the converting of the sap and juices of the planet to the incarnation and nutriment of their design. Power is what they want, — not candy; — power to execute their design, power to give legs and feet, form and actuality to their thought, which, to a clear-sighted man, appears the end for which the Universe exists, and all its resources might be well applied. Columbus thinks that the sphere is a problem for practical navigation, as well as for closet geometry, and looks on all kings and peoples as cowardly landsmen, until they dare fit him out. Few men on the planet have more truly belonged to it. But he was forced to leave much of his map blank. His successors inherited his map, and inherited his fury to complete it.

So the men of the mine, telegraph, mill, map, and survey, — the monomaniacs, who talk up their project in marts, and offices, and entreat men to subscribe: — how did our factories get built? how did North America get netted with iron rails, except by the importunity of these orators, who dragged all the prudent men in? Is party the madness of many for the gain of a few? This *speculative* genius is the madness of few for the gain of the world. The projectors are sacrificed, but the public is the gainer. Each of these idealists, working after his thought, would make it tyrannical, if he could. He is met and antagonized by other speculators, as hot as he. The equilibrium is preserved by these counteractions, as one tree keeps down another in the forest, that it may not absorb all the sap in the ground. And the supply in nature of railroad presidents, copper-miners, grand-junctioners, smoke-burners, fire-annihilators, &c., is limited by the same law which keeps the proportion in the supply of carbon, of alum, and of hydrogen.

To be rich is to have a ticket of admission to the master-works and chief men of each race. It is to have the sea, by voyaging; to visit the mountains, Niagara, the Nile, the desert, Rome, Paris, Constantinople; to see galleries, libraries, arsenals, manufactories. The reader of Humboldt's "Cosmos" follows the marches of a man whose eyes, ears, and mind are armed by all the science, arts, and implements which mankind have any where accumulated, and who is using these to add to the stock. So is it with Denon, Beckford, Belzoni, Wilkinson, Layard, Kane, Lepsius, and Livingston. "The rich man," says Saadi, "is

everywhere expected and at home.” The rich take up something more of the world into man’s life. They include the country as well as the town, the ocean-side, the White Hills, the Far West, and the old European homesteads of man, in their notion of available material. The world is his, who has money to go over it. He arrives at the sea-shore, and a sumptuous ship has floored and carpeted for him the stormy Atlantic, and made it a luxurious hotel, amid the horrors of tempests. The Persians say, “’Tis the same to him who wears a shoe, as if the whole earth were covered with leather.”

Kings are said to have long arms, but every man should have long arms, and should pluck his living, his instruments, his power, and his knowing, from the sun, moon, and stars. Is not then the demand to be rich legitimate? Yet, I have never seen a rich man. I have never seen a man as rich as all men ought to be, or, with an adequate command of nature. The pulpit and the press have many commonplaces denouncing the thirst for wealth; but if men should take these moralists at their word, and leave off aiming to be rich, the moralists would rush to rekindle at all hazards this love of power in the people, lest civilization should be undone. Men are urged by their ideas to acquire the command over nature. Ages derive a culture from the wealth of Roman Cæsars, Leo Tenth, magnificent Kings of France, Grand Dukes of Tuscany, Dukes of Devonshire, Townleys, Vernons, and Peels, in England; or whatever great proprietors. It is the interest of all men, that there should be Vaticans and Louvres full of noble works of art; British Museums, and French Gardens of Plants, Philadelphia Academies of Natural History, Bodleian, Ambrosian, Royal, Congressional Libraries. It is the interest of all that there should be Exploring Expeditions; Captain Cooks to voyage round the world, Rosses, Franklins, Richardsons, and Kanes, to find the magnetic and the geographic poles. We are all richer for the measurement of a degree of latitude on the earth’s surface. Our navigation is safer for the chart. How intimately our knowledge of the system of the Universe rests on that! — and a true economy in a state or an individual will forget its frugality in behalf of claims like these.

Whilst it is each man’s interest, that, not only ease and convenience of living, but also wealth or surplus product should exist somewhere, it need not be in his hands. Often it is very undesirable to him. Goethe said well, “nobody should be rich but those who understand it.” Some men are born to own, and can animate all their possessions. Others cannot: their owning is not graceful; seems to be a compromise of their character: they seem to steal their own dividends. They should own who can administer; not they who hoard and conceal; not they who, the greater proprietors they are, are only the greater beggars, but they whose work carves out work for more, opens a path for all. For he is the rich man in

whom the people are rich, and he is the poor man in whom the people are poor: and how to give all access to the masterpieces of art and nature, is the problem of civilization. The socialism of our day has done good service in setting men on thinking how certain civilizing benefits, now only enjoyed by the opulent, can be enjoyed by all. For example, the providing to each man the means and apparatus of science, and of the arts. There are many articles good for occasional use, which few men are able to own. Every man wishes to see the ring of Saturn, the satellites and belts of Jupiter and Mars; the mountains and craters in the moon: yet how few can buy a telescope! and of those, scarcely one would like the trouble of keeping it in order, and exhibiting it. So of electrical and chemical apparatus, and many the like things. Every man may have occasion to consult books which he does not care to possess, such as cyclopedias, dictionaries, tables, charts, maps, and public documents: pictures also of birds, beasts, fishes, shells, trees, flowers, whose names he desires to know.

There is a refining influence from the arts of Design on a prepared mind, which is as positive as that of music, and not to be supplied from any other source. But pictures, engravings, statues, and casts, beside their first cost, entail expenses, as of galleries and keepers for the exhibition; and the use which any man can make of them is rare, and their value, too, is much enhanced by the numbers of men who can share their enjoyment. In the Greek cities, it was reckoned profane, that any person should pretend a property in a work of art, which belonged to all who could behold it. I think sometimes, — could I only have music on my own terms; — could I live in a great city, and know where I could go whenever I wished the ablution and inundation of musical waves, — that were a bath and a medicine.

If properties of this kind were owned by states, towns, and lyceums, they would draw the bonds of neighborhood closer. A town would exist to an intellectual purpose. In Europe, where the feudal forms secure the permanence of wealth in certain families, those families buy and preserve those things, and lay them open to the public. But in America, where democratic institutions divide every estate into small portions, after a few years, the public should step into the place of these proprietors, and provide this culture and inspiration for the citizen.

Man was born to be rich, or, inevitably grows rich by the use of his faculties; by the union of thought with nature. Property is an intellectual production. The game requires coolness, right reasoning, promptness, and patience in the players. Cultivated labor drives out brute labor. An infinite number of shrewd men, in infinite years, have arrived at certain best and shortest ways of doing, and this accumulated skill in arts, cultures, harvestings, curings, manufactures,

navigations, exchanges, constitutes the worth of our world to-day.

Commerce is a game of skill, which every man cannot play, which few men can play well. The right merchant is one who has the just average of faculties we call *common sense*; a man of a strong affinity for facts, who makes up his decision on what he has seen. He is thoroughly persuaded of the truths of arithmetic. There is always a reason, *in the man*, for his good or bad fortune, and so, in making money. Men talk as if there were some magic about this, and believe in magic, in all parts of life. He knows, that all goes on the old road, pound for pound, cent for cent, — for every effect a perfect cause, — and that good luck is another name for tenacity of purpose. He insures himself in every transaction, and likes small and sure gains. Probity and closeness to the facts are the basis, but the masters of the art add a certain long arithmetic. The problem is, to combine many and remote operations, with the accuracy and adherence to the facts, which is easy in near and small transactions; so to arrive at gigantic results, without any compromise of safety. Napoleon was fond of telling the story of the Marseilles banker, who said to his visitor, surprised at the contrast between the splendor of the banker's chateau and hospitality, and the meanness of the counting-room in which he had seen him,— “Young man, you are too young to understand how masses are formed, — the true and only power, — whether composed of money, water, or men, it is all alike, — a mass is an immense centre of motion, but it must be begun, it must be kept up:” — and he might have added, that the way in which it must be begun and kept up, is, by obedience to the law of particles.

Success consists in close appliance to the laws of the world, and, since those laws are intellectual and moral, an intellectual and moral obedience. Political Economy is as good a book wherein to read the life of man, and the ascendancy of laws over all private and hostile influences, as any Bible which has come down to us.

Money is representative, and follows the nature and fortunes of the owner. The coin is a delicate meter of civil, social, and moral changes. The farmer is covetous of his dollar, and with reason. It is no waif to him. He knows how many strokes of labor it represents. His bones ache with the day's work that earned it. He knows how much land it represents; — how much rain, frost, and sunshine. He knows that, in the dollar, he gives you so much discretion and patience, so much hoeing, and threshing. Try to lift his dollar; you must lift all that weight. In the city, where money follows the skit of a pen, or a lucky rise in exchange, it comes to be looked on as light. I wish the farmer held it dearer, and would spend it only for real bread; force for force.

The farmer's dollar is heavy, and the clerk's is light and nimble; leaps out of

his pocket; jumps on to cards and faro-tables: but still more curious is its susceptibility to metaphysical changes. It is the finest barometer of social storms, and announces revolutions.

Every step of civil advancement makes every man's dollar worth more. In California, the country where it grew, — what would it buy? A few years since, it would buy a shanty, dysentery, hunger, bad company, and crime. There are wide countries, like Siberia, where it would buy little else to-day, than some petty mitigation of suffering. In Rome, it will buy beauty and magnificence. Forty years ago, a dollar would not buy much in Boston. Now it will buy a great deal more in our old town, thanks to railroads, telegraphs, steamers, and the contemporaneous growth of New York, and the whole country. Yet there are many goods appertaining to a capital city, which are not yet purchasable here, no, not with a mountain of dollars. A dollar in Florida is not worth a dollar in Massachusetts. A dollar is not value, but representative of value, and, at last, of moral values. A dollar is rated for the corn it will buy, or to speak strictly, not for the corn or house-room, but for Athenian corn, and Roman house-room, — for the wit, probity, and power, which we eat bread and dwell in houses to share and exert. Wealth is mental; wealth is moral. The value of a dollar is, to buy just things: a dollar goes on increasing in value with all the genius, and all the virtue of the world. A dollar in a university, is worth more than a dollar in a jail; in a temperate, schooled, law-abiding community, than in some sink of crime, where dice, knives, and arsenic, are in constant play.

The "Bank-Note Detector" is a useful publication. But the current dollar, silver or paper, is itself the detector of the right and wrong where it circulates. Is it not instantly enhanced by the increase of equity? If a trader refuses to sell his vote, or adheres to some odious right, he makes so much more equity in Massachusetts; and every acre in the State is more worth, in the hour of his action. If you take out of State-street the ten honestest merchants, and put in ten roguish persons, controlling the same amount of capital, — the rates of insurance will indicate it; the soundness of banks will show it: the highways will be less secure: the schools will feel it; the children will bring home their little dose of the poison: the judge will sit less firmly on the bench, and his decisions be less upright; he has lost so much support and constraint, — which all need; and the pulpit will betray it, in a laxer rule of life. An apple-tree, if you take out every day for a number of days, a load of loam, and put in a load of sand about its roots, — will find it out. An apple-tree is a stupid kind of creature, but if this treatment be pursued for a short time, I think it would begin to mistrust something. And if you should take out of the powerful class engaged in trade a hundred good men, and put in a hundred bad, or, what is just the same thing,

introduce a demoralizing institution, would not the dollar, which is not much stupider than an apple-tree, presently find it out? The value of a dollar is social, as it is created by society. Every man who removes into this city, with any purchasable talent or skill in him, gives to every man's labor in the city, a new worth. If a talent is anywhere born into the world, the community of nations is enriched; and, much more, with a new degree of probity. The expense of crime, one of the principal charges of every nation, is so far stopped. In Europe, crime is observed to increase or abate with the price of bread. If the Rothschilds at Paris do not accept bills, the people at Manchester, at Paisley, at Birmingham, are forced into the highway, and landlords are shot down in Ireland. The police records attest it. The vibrations are presently felt in New York, New Orleans, and Chicago. Not much otherwise, the economical power touches the masses through the political lords. Rothschild refuses the Russian loan, and there is peace, and the harvests are saved. He takes it, and there is war, and an agitation through a large portion of mankind, with every hideous result, ending in revolution, and a new order.

Wealth brings with it its own checks and balances. The basis of political economy is non-interference. The only safe rule is found in the self-adjusting meter of demand and supply. Do not legislate. Meddle, and you snap the sinews with your sumptuary laws. Give no bounties: make equal laws: secure life and property, and you need not give alms. Open the doors of opportunity to talent and virtue, and they will do themselves justice, and property will not be in bad hands. In a free and just commonwealth, property rushes from the idle and imbecile, to the industrious, brave, and persevering.

The laws of nature play through trade, as a toy-battery exhibits the effects of electricity. The level of the sea is not more surely kept, than is the equilibrium of value in society, by the demand and supply: and artifice or legislation punishes itself, by reactions, gluts, and bankruptcies. The sublime laws play indifferently through atoms and galaxies. Whoever knows what happens in the getting and spending of a loaf of bread and a pint of beer; that no wishing will change the rigorous limits of pints and penny loaves; that, for all that is consumed, so much less remains in the basket and pot; but what is gone out of these is not wasted, but well spent, if it nourish his body, and enable him to finish his task; — knows all of political economy that the budgets of empires can teach him. The interest of petty economy is this symbolization of the great economy; the way in which a house, and a private man's methods, tally with the solar system, and the laws of give and take, throughout nature; and, however wary we are of the falsehoods and petty tricks which we suicidally play off on each other, every man has a certain satisfaction, whenever his dealing touches on the inevitable facts; when

he sees that things themselves dictate the price, as they always tend to do, and, in large manufactures, are seen to do. Your paper is not fine or coarse enough, — is too heavy, or too thin. The manufacturer says, he will furnish you with just that thickness or thinness you want; the pattern is quite indifferent to him; here is his schedule; — any variety of paper, as cheaper or dearer, with the prices annexed. A pound of paper costs so much, and you may have it made up in any pattern you fancy.

There is in all our dealings a self-regulation that supersedes chaffering. You will rent a house, but must have it cheap. The owner can reduce the rent, but so he incapacitates himself from making proper repairs, and the tenant gets not the house he would have, but a worse one; besides, that a relation a little injurious is established between landlord and tenant. You dismiss your laborer, saying, “Patrick, I shall send for you as soon as I cannot do without you.” Patrick goes off contented, for he knows that the weeds will grow with the potatoes, the vines must be planted, next week, and, however unwilling you may be, the cantelopes, crook-necks, and cucumbers will send for him. Who but must wish that all labor and value should stand on the same simple and surly market? If it is the best of its kind, it will. We must have joiner, locksmith, planter, priest, poet, doctor, cook, weaver, ostler; each in turn, through the year.

If a St. Michael’s pear sells for a shilling, it costs a shilling to raise it. If, in Boston, the best securities offer twelve *per cent.* for money, they have just six *per cent.* of insecurity. You may not see that the fine pear costs you a shilling, but it costs the community so much. The shilling represents the number of enemies the pear has, and the amount of risk in ripening it. The price of coal shows the narrowness of the coal-field, and a compulsory confinement of the miners to a certain district. All salaries are reckoned on contingent, as well as on actual services. “If the wind were always southwest by west,” said the skipper, “women might take ships to sea.” One might say, that all things are of one price; that nothing is cheap or dear; and that the apparent disparities that strike us, are only a shopman’s trick of concealing the damage in your bargain. A youth coming into the city from his native New Hampshire farm, with its hard fare still fresh in his remembrance, boards at a first-class hotel, and believes he must somehow have outwitted Dr. Franklin and Malthus, for luxuries are cheap. But he pays for the one convenience of a better dinner, by the loss of some of the richest social and educational advantages. He has lost what guards! what incentives! He will perhaps find by and by, that he left the Muses at the door of the hotel, and found the Furies inside. Money often costs too much, and power and pleasure are not cheap. The ancient poet said, “the gods sell all things at a fair price.”

There is an example of the compensations in the commercial history of this country. When the European wars threw the carrying-trade of the world, from 1800 to 1812, into American bottoms, a seizure was now and then made of an American ship. Of course, the loss was serious to the owner, but the country was indemnified; for we charged threepence a pound for carrying cotton, sixpence for tobacco, and so on; which paid for the risk and loss, and brought into the country an immense prosperity, early marriages, private wealth, the building of cities, and of states: and, after the war was over, we received compensation over and above, by treaty, for all the seizures. Well, the Americans grew rich and great. But the pay-day comes round. Britain, France, and Germany, which our extraordinary profits had impoverished, send out, attracted by the fame of our advantages, first their thousands, then their millions, of poor people, to share the crop. At first, we employ them, and increase our prosperity: but, in the artificial system of society and of protected labor, which we also have adopted and enlarged, there come presently checks and stoppages. Then we refuse to employ these poor men. But they will not so be answered. They go into the poor rates, and, though we refuse wages, we must now pay the same amount in the form of taxes. Again, it turns out that the largest proportion of crimes are committed by foreigners. The cost of the crime, and the expense of courts, and of prisons, we must bear, and the standing army of preventive police we must pay. The cost of education of the posterity of this great colony, I will not compute. But the gross amount of these costs will begin to pay back what we thought was a net gain from our transatlantic customers of 1800. It is vain to refuse this payment. We cannot get rid of these people, and we cannot get rid of their will to be supported. That has become an inevitable element of our politics; and, for their votes, each of the dominant parties courts and assists them to get it executed. Moreover, we have to pay, not what would have contented them at home, but what they have learned to think necessary here; so that opinion, fancy, and all manner of moral considerations complicate the problem.

There are a few measures of economy which will bear to be named without disgust; for the subject is tender, and we may easily have too much of it; and therein resembles the hideous animalcules of which our bodies are built up, — which, offensive in the particular, yet compose valuable and effective masses. Our nature and genius force us to respect ends, whilst we use means. We must use the means, and yet, in our most accurate using, somehow screen and cloak them, as we can only give them any beauty, by a reflection of the glory of the end. That is the good head, which serves the end, and commands the means. The rabble are corrupted by their means: the means are too strong for them, and they desert their end.

1. The first of these measures is that each man's expense must proceed from his character. As long as your genius buys, the investment is safe, though you spend like a monarch. Nature arms each man with some faculty which enables him to do easily some feat impossible to any other, and thus makes him necessary to society. This native determination guides his labor and his spending. He wants an equipment of means and tools proper to his talent. And to save on this point, were to neutralize the special strength and helpfulness of each mind. Do your work, respecting the excellence of the work, and not its acceptableness. This is so much economy, that, rightly read, it is the sum of economy. Profligacy consists not in spending years of time or chests of money, — but in spending them off the line of your career. The crime which bankrupts men and states, is, job-work; — declining from your main design, to serve a turn here or there. Nothing is beneath you, if it is in the direction of your life: nothing is great or desirable, if it is off from that. I think we are entitled here to draw a straight line, and say, that society can never prosper, but must always be bankrupt, until every man does that which he was created to do.

Spend for your expense, and retrench the expense which is not yours. Allston, the painter, was wont to say, that he built a plain house, and filled it with plain furniture, because he would hold out no bribe to any to visit him, who had not similar tastes to his own. We are sympathetic, and, like children, want everything we see. But it is a large stride to independence, — when a man, in the discovery of his proper talent, has sunk the necessity for false expenses. As the betrothed maiden, by one secure affection, is relieved from a system of slaveries, — the daily inculcated necessity of pleasing all, — so the man who has found what he can do, can spend on that, and leave all other spending. Montaigne said, “When he was a younger brother, he went brave in dress and equipage, but afterward his chateau and farms might answer for him.” Let a man who belongs to the class of nobles, those, namely, who have found out that they can do something, relieve himself of all vague squandering on objects not his. Let the realist not mind appearances. Let him delegate to others the costly courtesies and decorations of social life. The virtues are economists, but some of the vices are also. Thus, next to humility, I have noticed that pride is a pretty good husband. A good pride is, as I reckon it, worth from five hundred to fifteen hundred a year. Pride is handsome, economical: pride eradicates so many vices, letting none subsist but itself, that it seems as if it were a great gain to exchange vanity for pride. Pride can go without domestics, without fine clothes, can live in a house with two rooms, can eat potato, purslain, beans, lyed corn, can work on the soil, can travel afoot, can talk with poor men, or sit silent well-contented in fine saloons. But vanity costs money, labor, horses, men, women, health, and peace,

and is still nothing at last, a long way leading nowhere. — Only one drawback; proud people are intolerably selfish, and the vain are gentle and giving.

Art is a jealous mistress, and, if a man have a genius for painting, poetry, music, architecture, or philosophy, he makes a bad husband, and an ill provider, and should be wise in season, and not fetter himself with duties which will embitter his days, and spoil him for his proper work. We had in this region, twenty years ago, among our educated men, a sort of Arcadian fanaticism, a passionate desire to go upon the land, and unite farming to intellectual pursuits. Many effected their purpose, and made the experiment, and some became downright ploughmen; but all were cured of their faith that scholarship and practical farming, (I mean, with one's own hands,) could be united.

With brow bent, with firm intent, the pale scholar leaves his desk to draw a freer breath, and get a juster statement of his thought, in the garden-walk. He stoops to pull up a purslain, or a dock, that is choking the young corn, and finds there are two: close behind the last, is a third; he reaches out his hand to a fourth; behind that, are four thousand and one. He is heated and untuned, and, by and by, wakes up from his idiot dream of chickweed and red-root, to remember his morning thought, and to find, that, with his adamantine purposes, he has been duped by a dandelion. A garden is like those pernicious machineries we read of, every month, in the newspapers, which catch a man's coat-skirt or his hand, and draw in his arm, his leg, and his whole body to irresistible destruction. In an evil hour he pulled down his wall, and added a field to his homestead. No land is bad, but land is worse. If a man own land, the land owns him. Now let him leave home, if he dare. Every tree and graft, every hill of melons, row of corn, or quickset hedge, all he has done, and all he means to do, stand in his way, like duns, when he would go out of his gate. The devotion to these vines and trees he finds poisonous. Long free walks, a circuit of miles, free his brain, and serve his body. Long marches are no hardship to him. He believes he composes easily on the hills. But this pottering in a few square yards of garden is dispiriting and drivelling. The smell of the plants has drugged him, and robbed him of energy. He finds a catalepsy in his bones. He grows peevish and poor-spirited. The genius of reading and of gardening are antagonistic, like resinous and vitreous electricity. One is concentrative in sparks and shocks: the other is diffuse strength; so that each disqualifies its workman for the other's duties.

An engraver whose hands must be of an exquisite delicacy of stroke, should not lay stone walls. Sir David Brewster gives exact instructions for microscopic observation:— "Lie down on your back, and hold the single lens and object over your eye," &c. &c. How much more the seeker of abstract truth, who needs periods of isolation, and rapt concentration, and almost a going out of the body

to think!

2. Spend after your genius, *and by system*. Nature goes by rule, not by sallies and saltations. There must be system in the economies. Saving and unexpensiveness will not keep the most pathetic family from ruin, nor will bigger incomes make free spending safe. The secret of success lies never in the amount of money, but in the relation of income to outgo; as if, after expense has been fixed at a certain point, then new and steady rills of income, though never so small, being added, wealth begins. But in ordinary, as means increase, spending increases faster, so that, large incomes, in England and elsewhere, are found not to help matters; — the eating quality of debt does not relax its voracity. When the cholera is in the potato, what is the use of planting larger crops? In England, the richest country in the universe, I was assured by shrewd observers, that great lords and ladies had no more guineas to give away than other people; that liberality with money is as rare, and as immediately famous a virtue as it is here. Want is a growing giant whom the coat of Have was never large enough to cover. I remember in Warwickshire, to have been shown a fair manor, still in the same name as in Shakspeare's time. The rent-roll, I was told, is some fourteen thousand pounds a year: but, when the second son of the late proprietor was born, the father was perplexed how to provide for him. The eldest son must inherit the manor; what to do with this supernumerary? He was advised to breed him for the Church, and to settle him in the rectorship, which was in the gift of the family; which was done. It is a general rule in that country, that bigger incomes do not help anybody. It is commonly observed, that a sudden wealth, like a prize drawn in a lottery, or a large bequest to a poor family, does not permanently enrich. They have served no apprenticeship to wealth, and, with the rapid wealth, come rapid claims: which they do not know how to deny, and the treasure is quickly dissipated.

A system must be in every economy, or the best single expedients are of no avail. A farm is a good thing, when it begins and ends with itself, and does not need a salary, or a shop, to eke it out. Thus, the cattle are a main link in the chain-ring. If the non-conformist or æsthetic farmer leaves out the cattle, and does not also leave out the want which the cattle must supply, he must fill the gap by begging or stealing. When men now alive were born, the farm yielded everything that was consumed on it. The farm yielded no money, and the farmer got on without. If he fell sick, his neighbors came in to his aid: each gave a day's work; or a half day; or lent his yoke of oxen, or his horse, and kept his work even: hoed his potatoes, mowed his hay, reaped his rye; well knowing that no man could afford to hire labor, without selling his land. In autumn, a farmer could sell an ox or a hog, and get a little money to pay taxes withal. Now, the

farmer buys almost all he consumes, — tin-ware, cloth, sugar, tea, coffee, fish, coal, railroad-tickets, and newspapers.

A master in each art is required, because the practice is never with still or dead subjects, but they change in your hands. You think farm-buildings and broad acres a solid property: but its value is flowing like water. It requires as much watching as if you were decanting wine from a cask. The farmer knows what to do with it, stops every leak, turns all the streamlets to one reservoir, and decants wine: but a blunderhead comes out of Cornhill, tries his hand, and it all leaks away. So is it with granite streets, or timber townships, as with fruit or flowers. Nor is any investment so permanent, that it can be allowed to remain without incessant watching, as the history of each attempt to lock up an inheritance through two generations for an unborn inheritor may show.

When Mr. Cockayne takes a cottage in the country, and will keep his cow, he thinks a cow is a creature that is fed on hay, and gives a pail of milk twice a day. But the cow that he buys gives milk for three months; then her bag dries up. What to do with a dry cow? who will buy her? Perhaps he bought also a yoke of oxen to do his work; but they get blown and lame. What to do with blown and lame oxen? The farmer fats his, after the spring-work is done, and kills them in the fall. But how can Cockayne, who has no pastures, and leaves his cottage daily in the cars, at business hours, be pothered with fattening and killing oxen? He plants trees; but there must be crops, to keep the trees in ploughed land. What shall be the crops? He will have nothing to do with trees, but will have grass. After a year or two, the grass must be turned up and ploughed: now what crops? Credulous Cockayne!

3. Help comes in the custom of the country, and the rule of *Impera pando*. The rule is not to dictate, nor to insist on carrying out each of your schemes by ignorant wilfulness, but to learn practically the secret spoken from all nature, that things themselves refuse to be mismanaged, and will show to the watchful their own law. Nobody need stir hand or foot. The custom of the country will do it all. I know not how to build or to plant; neither how to buy wood, nor what to do with the house-lot, the field, or the wood-lot, when bought. Never fear: it is all settled how it shall be, long beforehand, in the custom of the country, whether to sand, or whether to clay it, when to plough, and how to dress, whether to grass, or to corn; and you cannot help or hinder it. Nature has her own best mode of doing each thing, and she has somewhere told it plainly, if we will keep our eyes and ears open. If not, she will not be slow in undeceiving us, when we prefer our own way to hers. How often we must remember the art of the surgeon, which, in replacing the broken bone, contents itself with releasing the parts from false position; they fly into place by the action of the muscles. On this art of

nature all our arts rely.

Of the two eminent engineers in the recent construction of railways in England, Mr. Brunel went straight from terminus to terminus, through mountains, over streams, crossing highways, cutting ducal estates in two, and shooting through this man's cellar, and that man's attic window, and so arriving at his end, at great pleasure to geometers, but with cost to his company. Mr. Stephenson, on the contrary, believing that the river knows the way, followed his valley, as implicitly as our Western Railroad follows the Westfield River, and turned out to be the safest and cheapest engineer. We say the cows laid out Boston. Well, there are worse surveyors. Every pedestrian in our pastures has frequent occasion to thank the cows for cutting the best path through the thicket, and over the hills: and travellers and Indians know the value of a buffalo-trail, which is sure to be the easiest possible pass through the ridge.

When a citizen, fresh from Dock-square, or Milk-street, comes out and buys land in the country, his first thought is to a fine outlook from his windows: his library must command a western view: a sunset every day, bathing the shoulder of Blue Hills, Wachusett, and the peaks of Monadnoc and Uncanoonuc. What, thirty acres, and all this magnificence for fifteen hundred dollars! It would be cheap at fifty thousand. He proceeds at once, his eyes dim with tears of joy, to fix the spot for his corner-stone. But the man who is to level the ground, thinks it will take many hundred loads of gravel to fill the hollow to the road. The stonemason who should build the well thinks he shall have to dig forty feet: the baker doubts he shall never like to drive up to the door: the practical neighbor cavils at the position of the barn; and the citizen comes to know that his predecessor the farmer built the house in the right spot for the sun and wind, the spring, and water-drainage, and the convenience to the pasture, the garden, the field, and the road. So Dock-square yields the point, and things have their own way. Use has made the farmer wise, and the foolish citizen learns to take his counsel. From step to step he comes at last to surrender at discretion. The farmer affects to take his orders; but the citizen says, You may ask me as often as you will, and in what ingenious forms, for an opinion concerning the mode of building my wall, or sinking my well, or laying out my acre, but the ball will rebound to you. These are matters on which I neither know, nor need to know anything. These are questions which you and not I shall answer.

Not less, within doors, a system settles itself paramount and tyrannical over master and mistress, servant and child, cousin and acquaintance. 'Tis in vain that genius or virtue or energy of character strive and cry against it. This is fate. And 'tis very well that the poor husband reads in a book of a new way of living, and resolves to adopt it at home: let him go home and try it, if he dare.

4. Another point of economy is to look for seed of the same kind as you sow: and not to hope to buy one kind with another kind. Friendship buys friendship; justice, justice; military merit, military success. Good husbandry finds wife, children, and household. The good merchant large gains, ships, stocks, and money. The good poet fame, and literary credit; but not either, the ether. Yet there is commonly a confusion of expectations on these points. Hotspur lives for the moment; praises himself for it; and despises Furlong, that he does not. Hotspur, of course, is poor; and Furlong a good provider. The odd circumstance is, that Hotspur thinks it a superiority in himself, this improvidence, which ought to be rewarded with Furlong's lands.

I have not at all completed my design. But we must not leave the topic, without casting one glance into the interior recesses. It is a doctrine of philosophy, that man is a being of degrees; that there is nothing in the world, which is not repeated in his body; his body being a sort of miniature or summary of the world: then that there is nothing in his body, which is not repeated as in a celestial sphere in his mind: then, there is nothing in his brain, which is not repeated in a higher sphere, in his moral system.

5. Now these things are so in Nature. All things ascend, and the royal rule of economy is, that it should ascend also, or, whatever we do must always have a higher aim. Thus it is a maxim, that money is another kind of blood. *Pecunia alter sanguis*: or, the estate of a man is only a larger kind of body, and admits of regimen analogous to his bodily circulations. So there is no maxim of the merchant, *e.g.*, "Best use of money is to pay debts;" "Every business by itself;" "Best time is present time;" "The right investment is in tools of your trade;" or the like, which does not admit of an extended sense. The counting-room maxims liberally expounded are laws of the Universe. The merchant's economy is a coarse symbol of the soul's economy. It is, to spend for power, and not for pleasure. It is to invest income; that is to say, to take up particulars into generals; days into integral eras, — literary, emotive, practical, of its life, and still to ascend in its investment. The merchant has but one rule, *absorb and invest*: he is to be capitalist: the scraps and filings must be gathered back into the crucible; the gas and smoke must be burned, and earnings must not go to increase expense, but to capital again. Well, the man must be capitalist. Will he spend his income, or will he invest? His body and every organ is under the same law. His body is a jar, in which the liquor of life is stored. Will he spend for pleasure? The way to ruin is short and facile. Will he not spend, but hoard for power? It passes through the sacred fermentations, by that law of Nature whereby everything climbs to higher platforms, and bodily vigor becomes mental and

moral vigor. The bread he eats is first strength and animal spirits: it becomes, in higher laboratories, imagery and thought; and in still higher results, courage and endurance. This is the right compound interest; this is capital doubled, quadrupled, centupled; man raised to his highest power.

The true thrift is always to spend on the higher plane; to invest and invest, with keener avarice, that he may spend in spiritual creation, and not in augmenting animal existence. Nor is the man enriched, in repeating the old experiments of animal sensation, nor unless through new powers and ascending pleasures, he knows himself by the actual experience of higher good, to be already on the way to the highest.

CULTURE

Can rules or tutors educate
The semigod whom we await?
He must be musical,
Tremulous, impressional,

Alive to gentle influence
Of landscape and of sky,
And tender to the spirit-touch
Of man's or maiden's eye:
But, to his native centre fast,
Shall into Future fuse the Past,
And the world's flowing fates in his own mould recast.

The word of ambition at the present day is Culture. Whilst all the world is in pursuit of power, and of wealth as a means of power, culture corrects the theory of success. A man is the prisoner of his power. A topical memory makes him an almanac; a talent for debate, a disputant; skill to get money makes him a miser, that is, a beggar. Culture reduces these inflammations by invoking the aid of other powers against the dominant talent, and by appealing to the rank of powers. It watches success. For performance, Nature has no mercy, and sacrifices the performer to get it done; makes a dropsy or a tympany of him. If she wants a thumb, she makes one at the cost of arms and legs, and any excess of power in one part is usually paid for at once by some defect in a contiguous part.

Our efficiency depends so much on our concentration, that Nature usually in the instances where a marked man is sent into the world, overloads him with bias, sacrificing his symmetry to his working power. It is said, no man can write but one book; and if a man have a defect, it is apt to leave its impression on all his performances. If she creates a policeman like Fouché, he is made up of suspicions and of plots to circumvent them. "The air," said Fouché, "is full of poniards." The physician Sanctorius spent his life in a pair of scales, weighing his food. Lord Coke valued Chaucer highly, because the Canon Yeman's Tale illustrates the statute *Hen. V. Chap. 4*, against alchemy. I saw a man who believed the principal mischiefs in the English state were derived from the devotion to musical concerts. A freemason, not long since, set out to explain to this country, that the principal cause of the success of General Washington, was, the aid he derived from the freemasons.

But worse than the harping on one string, Nature has secured individualism, by giving the private person a high conceit of his weight in the system. The pest of society is egotists. There are dull and bright, sacred and profane, coarse and fine egotists. 'Tis a disease that, like influenza, falls on all constitutions. In the distemper known to physicians as *chorea*, the patient sometimes turns round, and continues to spin slowly on one spot. Is egotism a metaphysical varioloid of

this malady? The man runs round a ring formed by his own talent, falls into an admiration of it, and loses relation to the world. It is a tendency in all minds. One of its annoying forms, is a craving for sympathy. The sufferers parade their miseries, tear the lint from their bruises, reveal their indictable crimes, that you may pity them. They like sickness, because physical pain will extort some show of interest from the bystanders, as we have seen children, who, finding themselves of no account when grown people come in, will cough till they choke, to draw attention.

This distemper is the scourge of talent, — of artists, inventors, and philosophers. Eminent spiritualists shall have an incapacity of putting their act or word aloof from them, and seeing it bravely for the nothing it is. Beware of the man who says, “I am on the eve of a revelation.” It is speedily punished, inasmuch as this habit invites men to humor it, and by treating the patient tenderly, to shut him up in a narrower selfism, and exclude him from the great world of God’s cheerful fallible men and women. Let us rather be insulted, whilst we are insultable. Religious literature has eminent examples, and if we run over our private list of poets, critics, philanthropists, and philosophers, we shall find them infected with this dropsy and elephantiasis, which we ought to have tapped.

This goitre of egotism is so frequent among notable persons, that we must infer some strong necessity in nature which it subserves; such as we see in the sexual attraction. The preservation of the species was a point of such necessity, that Nature has secured it at all hazards by immensely overloading the passion, at the risk of perpetual crime and order. So egotism has its root in the cardinal necessity by which each individual persists to be what he is.

This individuality is not only not inconsistent with culture, but is the basis of it. Every valuable nature is there in its own right, and the student we speak of must have a motherwit invincible by his culture, which uses all books, arts, facilities, and elegancies of intercourse, but is never subdued and lost in them. He only is a well-made man who has a good determination. And the end of culture is not to destroy this, God forbid! but to train away all impediment and mixture, and leave nothing but pure power. Our student must have a style and determination, and be a master in his own specialty. But, having this, he must put it behind him. He must have a catholicity, a power to see with a free and disengaged look every object. Yet is this private interest and self so overcharged, that, if a man seeks a companion who can look at objects for their own sake, and without affection or self-reference, he will find the fewest who will give him that satisfaction; whilst most men are afflicted with a coldness, an incuriosity, as soon as any object does not connect with their self-love. Though they talk of the

object before them, they are thinking of themselves, and their vanity is laying little traps for your admiration.

But after a man has discovered that there are limits to the interest which his private history has for mankind, he still converses with his family, or a few companions, — perhaps with half a dozen personalities that are famous in his neighborhood. In Boston, the question of life is the names of some eight or ten men. Have you seen Mr. Allston, Doctor Channing, Mr. Adams, Mr. Webster, Mr. Greenough? Have you heard Everett, Garrison, Father Taylor, Theodore Parker? Have you talked with Messieurs Turbinewheel, Summitlevel, and Lacofrupees? Then you may as well die. In New York, the question is of some other eight, or ten, or twenty. Have you seen a few lawyers, merchants, and brokers, — two or three scholars, two or three capitalists, two or three editors of newspapers? New York is a sucked orange. All conversation is at an end, when we have discharged ourselves of a dozen personalities, domestic or imported, which make up our American existence. Nor do we expect anybody to be other than a faint copy of these heroes.

Life is very narrow. Bring any club or company of intelligent men together again after ten years, and if the presence of some penetrating and calming genius could dispose them to frankness, what a confession of insanities would come up! The “causes” to which we have sacrificed, Tariff or Democracy, Whigism or Abolition, Temperance or Socialism, would show like roots of bitterness and dragons of wrath: and our talents are as mischievous as if each had been seized upon by some bird of prey, which had whisked him away from fortune, from truth, from the dear society of the poets, some zeal, some bias, and only when he was, now gray and nerveless, was it relaxing its claws, and he awaking to sober perceptions.

Culture is the suggestion from certain best thoughts, that a man has a range of affinities, through which he can modulate the violence of any master-tones that have a droning preponderance in his scale, and succor him against himself. Culture redresses his balance, puts him among his equals and superiors, revives the delicious sense of sympathy, and warns him of the dangers of solitude and repulsion.

’Tis not a compliment but a disparagement to consult a man only on horses, or on steam, or on theatres, or on eating, or on books, and, whenever he appears, considerately to turn the conversation to the bantling he is known to fondle. In the Norse heaven of our forefathers, Thor’s house had five hundred and forty floors; and man’s house has five hundred and forty floors. His excellence is facility of adaptation and of transition through many related points, to wide contrasts and extremes. Culture kills his exaggeration, his conceit of his village

or his city. We must leave our pets at home, when we go into the street, and meet men on broad grounds of good meaning and good sense. No performance is worth loss of geniality. 'Tis a cruel price we pay for certain fancy goods called fine arts and philosophy. In the Norse legend, Allfadir did not get a drink of Mimir's spring, (the fountain of wisdom,) until he left his eye in pledge. And here is a pedant that cannot unfold his wrinkles, nor conceal his wrath at interruption by the best, if their conversation do not fit his impertinency, — here is he to afflict us with his personalities. 'Tis incident to scholars, that each of them fancies he is pointedly odious in his community. Draw him out of this limbo of irritability. Cleanse with healthy blood his parchment skin. You restore to him his eyes which he left in pledge at Mimir's spring. If you are the victim of your doing, who cares what you do? We can spare your opera, your gazetteer, your chemic analysis, your history, your syllogisms. Your man of genius pays dear for his distinction. His head runs up into a spire, and instead of a healthy man, merry and wise, he is some mad dominie. Nature is reckless of the individual. When she has points to carry, she carries them. To wade in marshes and sea-margins is the destiny of certain birds, and they are so accurately made for this, that they are imprisoned in those places. Each animal out of its *habitat* would starve. To the physician, each man, each woman, is an amplification of one organ. A soldier, a locksmith, a bank-clerk, and a dancer could not exchange functions. And thus we are victims of adaptation.

The antidotes against this organic egotism, are, the range and variety of attractions, as gained by acquaintance with the world, with men of merit, with classes of society, with travel, with eminent persons, and with the high resources of philosophy, art, and religion: books, travel, society, solitude.

The hardest skeptic who has seen a horse broken, a pointer trained, or, who has visited a menagerie, or the exhibition of the Industrious Fleas, will not deny the validity of education. "A boy," says Plato, "is the most vicious of all wild beasts;" and, in the same spirit, the old English poet Gascoigne says, "a boy is better unborn than untaught." The city breeds one kind of speech and manners; the back-country a different style; the sea, another; the army, a fourth. We know that an army which can be confided in, may be formed by discipline; that, by systematic discipline all men may be made heroes: Marshal Lannes said to a French officer, "Know, Colonel, that none but a poltroon will boast that he never was afraid." A great part of courage is the courage of having done the thing before. And, in all human action, those faculties will be strong which are used. Robert Owen said, "Give me a tiger, and I will educate him." 'Tis inhuman to want faith in the power of education, since to meliorate, is the law of nature; and men are valued precisely as they exert onward or meliorating force. On the other

hand, poltroonery is the acknowledging an inferiority to be incurable.

Incapacity of melioration is the only mortal distemper. There are people who can never understand a trope, or any second or expanded sense given to your words, or any humor; but remain literalists, after hearing the music, and poetry, and rhetoric, and wit, of seventy or eighty years. They are past the help of surgeon or clergy. But even these can understand pitchforks and the cry of fire! and I have noticed in some of this class a marked dislike of earthquakes.

Let us make our education brave and preventive. Politics is an after-work, a poor patching. We are always a little late. The evil is done, the law is passed, and we begin the up-hill agitation for repeal of that of which we ought to have prevented the enacting. We shall one day learn to supersede politics by education. What we call our root-and-branch reforms of slavery, war, gambling, intemperance, is only medicating the symptoms. We must begin higher up, namely, in Education.

Our arts and tools give to him who can handle them much the same advantage over the novice, as if you extended his life, ten, fifty, or a hundred years. And I think it the part of good sense to provide every fine soul with such culture, that it shall not, at thirty or forty years, have to say, "This which I might do is made hopeless through my want of weapons."

But it is conceded that much of our training fails of effect; that all success is hazardous and rare; that a large part of our cost and pains is thrown away. Nature takes the matter into her own hands, and, though we must not omit any jot of our system, we can seldom be sure that it has availed much, or, that as much good would not have accrued from a different system.

Books, as containing the finest records of human wit, must always enter into our notion of culture. The best heads that ever existed, Pericles, Plato, Julius Cæsar, Shakspeare, Goethe, Milton, were well-read, universally educated men, and quite too wise to undervalue letters. Their opinion has weight, because they had means of knowing the opposite opinion. We look that a great man should be a good reader, or, in proportion to the spontaneous power should be the assimilating power. Good criticism is very rare, and always precious. I am always happy to meet persons who perceive the transcendent superiority of Shakspeare over all other writers. I like people who like Plato. Because this love does not consist with self-conceit.

But books are good only as far as a boy is ready for them. He sometimes gets ready very slowly. You send your child to the schoolmaster, but 'tis the schoolboys who educate him. You send him to the Latin class, but much of his tuition comes, on his way to school, from the shop-windows. You like the strict rules and the long terms; and he finds his best leading in a by-way of his own,

and refuses any companions but of his choosing. He hates the grammar and *Gradus*, and loves guns, fishing-rods, horses, and boats. Well, the boy is right; and you are not fit to direct his bringing up, if your theory leaves out his gymnastic training. Archery, cricket, gun and fishing-rod, horse and boat, are all educators, liberalizers; and so are dancing, dress, and the street-talk; and, — provided only the boy has resources, and is of a noble and ingenuous strain, — these will not serve him less than the books. He learns chess, whist, dancing, and theatricals. The father observes that another boy has learned algebra and geometry in the same time. But the first boy has acquired much more than these poor games along with them. He is infatuated for weeks with whist and chess; but presently will find out, as you did, that when he rises from the game too long played, he is vacant and forlorn, and despises himself. Thenceforward it takes place with other things, and has its due weight in his experience. These minor skills and accomplishments, for example, dancing, are tickets of admission to the dress-circle of mankind, and the being master of them enables the youth to judge intelligently of much, on which, otherwise, he would give a pedantic squint. Landor said, “I have suffered more from my bad dancing, than from all the misfortunes and miseries of my life put together.” Provided always the boy is teachable, (for we are not proposing to make a statue out of punk,) football, cricket, archery, swimming, skating, climbing, fencing, riding, are lessons in the art of power, which it is his main business to learn; — riding, specially, of which Lord Herbert of Cherbury said, “a good rider on a good horse is as much above himself and others as the world can make him.” Besides, the gun, fishing-rod, boat, and horse, constitute, among all who use them, secret freemasonries. They are as if they belonged to one club.

There is also a negative value in these arts. Their chief use to the youth, is, not amusement, but to be known for what they are, and not to remain to him occasions of heart-burn. We are full of superstitions. Each class fixes its eyes on the advantages it has not; the refined, on rude strength; the democrat, on birth and breeding. One of the benefits of a college education is, to show the boy its little avail. I knew a leading man in a leading city, who, having set his heart on an education at the university, and missed it, could never quite feel himself the equal of his own brothers who had gone thither. His easy superiority to multitudes of professional men could never quite countervail to him this imaginary defect. Balls, riding, wine-parties, and billiards, pass to a poor boy for something fine and romantic, which they are not; and a free admission to them on an equal footing, if it were possible, only once or twice, would be worth ten times its cost, by undeceiving him.

I am not much an advocate for travelling, and I observe that men run away to

other countries, because they are not good in their own, and run back to their own, because they pass for nothing in the new places. For the most part, only the light characters travel. Who are you that have no task to keep you at home? I have been quoted as saying captious things about travel; but I mean to do justice. I think, there is a restlessness in our people, which argues want of character. All educated Americans, first or last, go to Europe; — perhaps, because it is their mental home, as the invalid habits of this country might suggest. An eminent teacher of girls said, “the idea of a girl’s education, is, whatever qualifies them for going to Europe.” Can we never extract this tape-worm of Europe from the brain of our countrymen? One sees very well what their fate must be. He that does not fill a place at home, cannot abroad. He only goes there to hide his insignificance in a larger crowd. You do not think you will find anything there which you have not seen at home? The stuff of all countries is just the same. Do you suppose, there is any country where they do not scald milkpans, and swaddle the infants, and burn the brushwood, and broil the fish? What is true anywhere is true everywhere. And let him go where he will, he can only find so much beauty or worth as he carries.

Of course, for some men, travel may be useful. Naturalists, discoverers, and sailors are born. Some men are made for couriers, exchangers, envoys, missionaries, bearers of despatches, as others are for farmers and working-men. And if the man is of a light and social turn, and Nature has aimed to make a legged and winged creature, framed for locomotion, we must follow her hint, and furnish him with that breeding which gives currency, as sedulously as with that which gives worth. But let us not be pedantic, but allow to travel its full effect. The boy grown up on the farm, which he has never left, is said in the country to have had no chance, and boys and men of that condition look upon work on a railroad, or drudgery in a city, as opportunity. Poor country boys of Vermont and Connecticut formerly owed what knowledge they had, to their peddling trips to the Southern States. California and the Pacific Coast is now the university of this class, as Virginia was in old times. ‘To have some chance’ is their word. And the phrase ‘to know the world,’ or to travel, is synonymous with all men’s ideas of advantage and superiority. No doubt, to a man of sense, travel offers advantages. As many languages as he has, as many friends, as many arts and trades, so many times is he a man. A foreign country is a point of comparison, wherefrom to judge his own. One use of travel, is, to recommend the books and works of home; [we go to Europe to be Americanized;] and another, to find men. For, as Nature has put fruits apart in latitudes, a new fruit in every degree, so knowledge and fine moral quality she lodges in distant men. And thus, of the six or seven teachers whom each man wants among his

contemporaries, it often happens, that one or two of them live on the other side of the world.

Moreover, there is in every constitution a certain solstice, when the stars stand still in our inward firmament, and when there is required some foreign force, some diversion or alterative to prevent stagnation. And, as a medical remedy, travel seems one of the best. Just as a man witnessing the admirable effect of ether to lull pain, and meditating on the contingencies of wounds, cancers, lockjaws, rejoices in Dr. Jackson's benign discovery, so a man who looks at Paris, at Naples, or at London, says, 'If I should be driven from my own home, here, at least, my thoughts can be consoled by the most prodigal amusement and occupation which the human race in ages could contrive and accumulate.'

Akin to the benefit of foreign travel, the æsthetic value of railroads is to unite the advantages of town and country life, neither of which we can spare. A man should live in or near a large town, because, let his own genius be what it may, it will repel quite as much of agreeable and valuable talent as it draws, and, in a city, the total attraction of all the citizens is sure to conquer, first or last, every repulsion, and drag the most improbable hermit within its walls some day in the year. In town, he can find the swimming-school, the gymnasium, the dancing-master, the shooting-gallery, opera, theatre, and panorama; the chemist's shop, the museum of natural history; the gallery of fine arts; the national orators, in their turn; foreign travellers, the libraries, and his club. In the country, he can find solitude and reading, manly labor, cheap living, and his old shoes; moors for game, hills for geology, and groves for devotion. Aubrey writes, "I have heard Thomas Hobbes say, that, in the Earl of Devon's house, in Derbyshire, there was a good library and books enough for him, and his lordship stored the library with what books he thought fit to be bought. But the want of good conversation was a very great inconvenience, and, though he conceived he could order his thinking as well as another, yet he found a great defect. In the country, in long time, for want of good conversation, one's understanding and invention contract a moss on them, like an old paling in an orchard."

Cities give us collision. 'Tis said, London and New York take the nonsense out of a man. A great part of our education is sympathetic and social. Boys and girls who have been brought up with well-informed and superior people, show in their manners an inestimable grace. Fuller says, that "William, Earl of Nassau, won a subject from the King of Spain, every time he put off his hat." You cannot have one well-bred man, without a whole society of such. They keep each other up to any high point. Especially women; — it requires a great many cultivated women, — saloons of bright, elegant, reading women, accustomed to ease and

refinement, to spectacles, pictures, sculpture, poetry, and to elegant society, in order that you should have one Madame de Staël. The head of a commercial house, or a leading lawyer or politician is brought into daily contact with troops of men from all parts of the country, and those too the driving-wheels, the business men of each section, and one can hardly suggest for an apprehensive man a more searching culture. Besides, we must remember the high social possibilities of a million of men. The best bribe which London offers to-day to the imagination, is, that, in such a vast variety of people and conditions, one can believe there is room for persons of romantic character to exist, and that the poet, the mystic, and the hero may hope to confront their counterparts.

I wish cities could teach their best lesson, — of quiet manners. It is the foible especially of American youth, — pretension. The mark of the man of the world is absence of pretension. He does not make a speech; he takes a low business-tone, avoids all brag, is nobody, dresses plainly, promises not at all, performs much, speaks in monosyllables, hugs his fact. He calls his employment by its lowest name, and so takes from evil tongues their sharpest weapon. His conversation clings to the weather and the news, yet he allows himself to be surprised into thought, and the unlocking of his learning and philosophy. How the imagination is piqued by anecdotes of some great man passing incognito, as a king in gray clothes, — of Napoleon affecting a plain suit at his glittering levee; of Burns, or Scott, or Beethoven, or Wellington, or Goethe, or any container of transcendent power, passing for nobody; of Epaminondas, “who never says anything, but will listen eternally;” of Goethe, who preferred trifling subjects and common expressions in intercourse with strangers, worse rather than better clothes, and to appear a little more capricious than he was. There are advantages in the old hat and box-coat. I have heard, that, throughout this country, a certain respect is paid to good broadcloth; but dress makes a little restraint: men will not commit themselves. But the box-coat is like wine; it unlocks the tongue, and men say what they think. An old poet says, “Go far and go sparing,

For you’ll find it certain,
The poorer and the baser you appear,
The more you’ll look through still.”²

Beaumont and Fletcher: *The Tamer Tamed*.

Not much otherwise Milnes writes, in the “Lay of the Humble,”
“To me men are for what they are,
They wear no masks with me.”

'Tis odd that our people should have — not water on the brain, — but a little gas there. A shrewd foreigner said of the Americans, that, “whatever they say has a little the air of a speech.” Yet one of the traits down in the books as distinguishing the Anglo-Saxon, is, a trick of self-disparagement. To be sure, in old, dense countries, among a million of good coats, a fine coat comes to be no distinction, and you find humorists. In an English party, a man with no marked manners or features, with a face like red dough, unexpectedly discloses wit, learning, a wide range of topics, and personal familiarity with good men in all parts of the world, until you think you have fallen upon some illustrious personage. Can it be that the American forest has refreshed some weeds of old Pictish barbarism just ready to die out, — the love of the scarlet feather, of beads, and tinsel? The Italians are fond of red clothes, peacock plumes, and embroidery; and I remember one rainy morning in the city of Palermo, the street was in a blaze with scarlet umbrellas. The English have a plain taste. The equipages of the grandees are plain. A gorgeous livery indicates new and awkward city wealth. Mr. Pitt, like Mr. Pym, thought the title of *Mister* good against any king in Europe. They have piqued themselves on governing the whole world in the poor, plain, dark Committee-room which the House of Commons sat in, before the fire.

Whilst we want cities as the centres where the best things are found, cities degrade us by magnifying trifles. The countryman finds the town a chophouse, a barber's shop. He has lost the lines of grandeur of the horizon, hills and plains, and with them, sobriety and elevation. He has come among a supple, glib-tongued tribe, who live for show, servile to public opinion. Life is dragged down to a fracas of pitiful cares and disasters. You say the gods ought to respect a life whose objects are their own; but in cities they have betrayed you to a cloud of insignificant annoyances: “Mirmidons, race féconde,

Mirmidons,

Enfin nous commandons;

Jupiter livre le monde
Aux mirmidons, aux mirmidons.”³

'Tis heavy odds
Against the gods,
When they will match with myrmidons.
We spawning, spawning myrmidons,
Our turn to-day! we take command,
Jove gives the globe into the hand
Of myrmidons, of myrmidons.

Béranger.

What is odious but noise, and people who scream and bewail? people whose vane points always east, who live to dine, who send for the doctor, who coddle themselves, who toast their feet on the register, who intrigue to secure a padded chair, and a corner out of the draught. Suffer them once to begin the enumeration of their infirmities, and the sun will go down on the unfinished tale. Let these triflers put us out of conceit with petty comforts. To a man at work, the frost is but a color: the rain, the wind, he forgot them when he came in. Let us learn to live coarsely, dress plainly, and lie hard. The least habit of dominion over the palate has certain good effects not easily estimated. Neither will we be driven into a quiddling abstemiousness. 'Tis a superstition to insist on a special diet. All is made at last of the same chemical atoms.

A man in pursuit of greatness feels no little wants. How can you mind diet, bed, dress, or salutes or compliments, or the figure you make in company, or wealth, or even the bringing things to pass, when you think how paltry are the machinery and the workers? Wordsworth was praised to me, in Westmoreland, for having afforded to his country neighbors an example of a modest household where comfort and culture were secured, without display. And a tender boy who wears his rusty cap and outgrown coat, that he may secure the coveted place in college, and the right in the library, is educated to some purpose. There is a great deal of self-denial and manliness in poor and middle-class houses, in town and country, that has not got into literature, and never will, but that keeps the earth sweet; that saves on superfluities, and spends on essentials; that goes rusty, and educates the boy; that sells the horse, but builds the school; works early and late, takes two looms in the factory, three looms, six looms, but pays off the mortgage on the paternal farm, and then goes back cheerfully to work again.

We can ill spare the commanding social benefits of cities; they must be used; yet cautiously, and haughtily, — and will yield their best values to him who best

can do without them. Keep the town for occasions, but the habits should be formed to retirement. Solitude, the safeguard of mediocrity, is to genius the stern friend, the cold, obscure shelter where moult the wings which will bear it farther than suns and stars. He who should inspire and lead his race must be defended from travelling with the souls of other men, from living, breathing, reading, and writing in the daily, time-worn yoke of their opinions. "In the morning, — solitude;" said Pythagoras; that Nature may speak to the imagination, as she does never in company, and that her favorite may make acquaintance with those divine strengths which disclose themselves to serious and abstracted thought. 'Tis very certain that Plato, Plotinus, Archimedes, Hermes, Newton, Milton, Wordsworth, did not live in a crowd, but descended into it from time to time as benefactors: and the wise instructor will press this point of securing to the young soul in the disposition of time and the arrangements of living, periods and habits of solitude. The high advantage of university-life is often the mere mechanical one, I may call it, of a separate chamber and fire, — which parents will allow the boy without hesitation at Cambridge, but do not think needful at home. We say solitude, to mark the character of the tone of thought; but if it can be shared between two or more than two, it is happier, and not less noble. "We four," wrote Neander to his sacred friends, "will enjoy at Halle the inward blessedness of a *civitas Dei*, whose foundations are forever friendship. The more I know you, the more I dissatisfy and must dissatisfy all my wonted companions. Their very presence stupefies me. The common understanding withdraws itself from the one centre of all existence."

Solitude takes off the pressure of present importunities that more catholic and humane relations may appear. The saint and poet seek privacy to ends the most public and universal: and it is the secret of culture, to interest the man more in his public, than in his private quality. Here is a new poem, which elicits a good many comments in the journals, and in conversation. From these it is easy, at last, to eliminate the verdict which readers passed upon it; and that is, in the main, unfavorable. The poet, as a craftsman, is only interested in the praise accorded to him, and not in the censure, though it be just. And the poor little poet hearkens only to that, and rejects the censure, as proving incapacity in the critic. But the poet *cultivated* becomes a stockholder in both companies, — say Mr. Curfew, — in the Curfew stock, and in the *humanity* stock; and, in the last, exults as much in the demonstration of the unsoundness of Curfew, as his interest in the former gives him pleasure in the currency of Curfew. For, the depreciation of his Curfew stock only shows the immense values of the humanity stock. As soon as he sides with his critic against himself, with joy, he is a cultivated man.

We must have an intellectual quality in all property and in all action, or they are nought. I must have children, I must have events, I must have a social state and history, or my thinking and speaking want body or basis. But to give these accessories any value, I must know them as contingent and rather showy possessions, which pass for more to the people than to me. We see this abstraction in scholars, as a matter of course: but what a charm it adds when observed in practical men. Bonaparte, like Cæsar, was intellectual, and could look at every object for itself, without affection. Though an egotist à l'outrance, he could criticize a play, a building, a character, on universal grounds, and give a just opinion. A man known to us only as a celebrity in politics or in trade, gains largely in our esteem if we discover that he has some intellectual taste or skill; as when we learn of Lord Fairfax, the Long Parliament's general, his passion for antiquarian studies; or of the French regicide Carnot, his sublime genius in mathematics; or of a living banker, his success in poetry; or of a partisan journalist, his devotion to ornithology. So, if in travelling in the dreary wildernesses of Arkansas or Texas, we should observe on the next seat a man reading Horace, or Martial, or Calderon, we should wish to hug him. In callings that require roughest energy, soldiers, sea-captains, and civil engineers sometimes betray a fine insight, if only through a certain gentleness when off duty; a good-natured admission that there are illusions, and who shall say that he is not their sport? We only vary the phrase, not the doctrine, when we say, that culture opens the sense of beauty. A man is a beggar who only lives to the useful, and, however he may serve as a pin or rivet in the social machine, cannot be said to have arrived at self-possession. I suffer, every day, from the want of perception of beauty in people. They do not know the charm with which all moments and objects can be embellished, the charm of manners, of self-command, of benevolence. Repose and cheerfulness are the badge of the gentleman, — repose in energy. The Greek battle-pieces are calm; the heroes, in whatever violent actions engaged, retain a serene aspect; as we say of Niagara, that it falls without speed. A cheerful, intelligent face is the end of culture, and success enough. For it indicates the purpose of Nature and wisdom attained.

When our higher faculties are in activity, we are domesticated, and awkwardness and discomfort give place to natural and agreeable movements. It is noticed, that the consideration of the great periods and spaces of astronomy induces a dignity of mind, and an indifference to death. The influence of fine scenery, the presence of mountains, appeases our irritations and elevates our friendships. Even a high dome, and the expansive interior of a cathedral, have a sensible effect on manners. I have heard that stiff people lose something of their awkwardness under high ceilings, and in spacious halls. I think, sculpture and

painting have an effect to teach us manners, and abolish hurry.

But, over all, culture must reinforce from higher influx the empirical skills of eloquence, or of politics, or of trade, and the useful arts. There is a certain loftiness of thought and power to marshal and adjust particulars, which can only come from an insight of their whole connection. The orator who has once seen things in their divine order, will never quite lose sight of this, and will come to affairs as from a higher ground, and, though he will say nothing of philosophy, he will have a certain mastery in dealing with them, and an incapableness of being dazzled or frightened, which will distinguish his handling from that of attorneys and factors. A man who stands on a good footing with the heads of parties at Washington, reads the rumors of the newspapers, and the guesses of provincial politicians, with a key to the right and wrong in each statement, and sees well enough where all this will end. Archimedes will look through your Connecticut machine, at a glance, and judge of its fitness. And much more, a wise man who knows not only what Plato, but what Saint John can show him, can easily raise the affair he deals with, to a certain majesty. Plato says, Pericles owed this elevation to the lessons of Anaxagoras. Burke descended from a higher sphere when he would influence human affairs. Franklin, Adams, Jefferson, Washington, stood on a fine humanity, before which the brawls of modern senates are but pot-house politics.

But there are higher secrets of culture, which are not for the apprentices, but for proficients. These are lessons only for the brave. We must know our friends under ugly masks. The calamities are our friends. Ben Jonson specifies in his address to the Muse: — “Get him the time’s long grudge, the court’s ill-will, And, reconciled, keep him suspected still,

Make him lose all his friends, and, what is worse, Almost all ways to any better course;

With me thou leav’st a better Muse than thee,
And which thou brought’st me, blessed Poverty.”

We wish to learn philosophy by rote, and play at heroism. But the wiser God says, Take the shame, the poverty, and the penal solitude, that belong to truth-speaking. Try the rough water as well as the smooth. Rough water can teach lessons worth knowing. When the state is unquiet, personal qualities are more than ever decisive. Fear not a revolution which will constrain you to live five years in one. Don’t be so tender at making an enemy now and then. Be willing to go to Coventry sometimes, and let the populace bestow on you their coldest contempts. The finished man of the world must eat of every apple once. He must hold his hatreds also at arm’s length, and not remember spite. He has neither friends nor enemies, but values men only as channels of power.

He who aims high, must dread an easy home and popular manners. Heaven sometimes hedges a rare character about with ungainliness and odium, as the burr that protects the fruit. If there is any great and good thing in store for you, it will not come at the first or the second call, nor in the shape of fashion, ease, and city drawing-rooms. Popularity is for dolls. "Steep and craggy," said Porphyry, "is the path of the gods." Open your Marcus Antoninus. In the opinion of the ancients, he was the great man who scorned to shine, and who contested the frowns of fortune. They preferred the noble vessel too late for the tide, contending with winds and waves, dismantled and unrigged, to her companion borne into harbor with colors flying and guns firing. There is none of the social goods that may not be purchased too dear, and mere amiableness must not take rank with high aims and self-subsistency.

Bettine replies to Goethe's mother, who chides her disregard of dress,— "If I cannot do as I have a mind, in our poor Frankfort, I shall not carry things far." And the youth must rate at its true mark the inconceivable levity of local opinion. The longer we live, the more we must endure the elementary existence of men and women; and every brave heart must treat society as a child, and never allow it to dictate.

"All that class of the severe and restrictive virtues," said Burke, "are almost too costly for humanity." Who wishes to be severe? Who wishes to resist the eminent and polite, in behalf of the poor, and low, and impolite? and who that dares do it, can keep his temper sweet, his frolic spirits? The high virtues are not debonair, but have their redress in being illustrious at last. What forests of laurel we bring, and the tears of mankind, to those who stood firm against the opinion of their contemporaries! The measure of a master is his success in bringing all men round to his opinion twenty years later.

Let me say here, that culture cannot begin too early. In talking with scholars, I observe that they lost on ruder companions those years of boyhood which alone could give imaginative literature a religious and infinite quality in their esteem. I find, too, that the chance for appreciation is much increased by being the son of an appreciator, and that these boys who now grow up are caught not only years too late, but two or three births too late, to make the best scholars of. And I think it a presentable motive to a scholar, that, as, in an old community, a well-born proprietor is usually found, after the first heats of youth, to be a careful husband, and to feel a habitual desire that the estate shall suffer no harm by his administration, but shall be delivered down to the next heir in as good condition as he received it; — so, a considerate man will reckon himself a subject of that secular melioration by which mankind is mollified, cured, and refined, and will shun every expenditure of his forces on pleasure or gain, which will jeopardize

this social and secular accumulation.

The fossil strata show us that Nature began with rudimental forms, and rose to the more complex, as fast as the earth was fit for their dwelling-place; and that the lower perish, as the higher appear. Very few of our race can be said to be yet finished men. We still carry sticking to us some remains of the preceding inferior quadruped organization. We call these millions men; but they are not yet men. Half-engaged in the soil, pawing to get free, man needs all the music that can be brought to disengage him. If Love, red Love, with tears and joy; if Want with his scourge; if War with his cannonade; if Christianity with its charity; if Trade with its money; if Art with its portfolios; if Science with her telegraphs through the deeps of space and time; can set his dull nerves throbbing, and by loud taps on the tough chrysalis, can break its walls, and let the new creature emerge erect and free, — make way, and sing pæan! The age of the quadruped is to go out, — the age of the brain and of the heart is to come in. The time will come when the evil forms we have known can no more be organized. Man's culture can spare nothing, wants all the material. He is to convert all impediments into instruments, all enemies into power. The formidable mischief will only make the more useful slave. And if one shall read the future of the race hinted in the organic effort of Nature to mount and meliorate, and the corresponding impulse to the Better in the human being, we shall dare affirm that there is nothing he will not overcome and convert, until at last culture shall absorb the chaos and gehenna. He will convert the Furies into Muses, and the hells into benefit.

BEHAVIOR.

Grace, Beauty, and Caprice
Build this golden portal;
Graceful women, chosen men
Dazzle every mortal:

Their sweet and lofty countenance
His enchanting food;
He need not go to them, their forms
Beset his solitude.
He looketh seldom in their face,
His eyes explore the ground,
The green grass is a looking-glass
Whereon their traits are found.
Little he says to them,
So dances his heart in his breast,

Their tranquil mien bereaveth him
Of wit, of words, of rest.
Too weak to win, too fond to shun
The tyrants of his doom,

The much deceived Endymion
Slips behind a tomb.

The soul which animates Nature is not less significantly published in the figure, movement, and gesture of animated bodies, than in its last vehicle of articulate speech. This silent and subtile language is Manners; not *what*, but *how*. Life expresses. A statue has no tongue, and needs none. Good tableaux do not need declamation. Nature tells every secret once. Yes, but in man she tells it all the time, by form, attitude, gesture, mien, face, and parts of the face, and by the whole action of the machine. The visible carriage or action of the individual, as resulting from his organization and his will combined, we call manners. What are they but thought entering the hands and feet, controlling the movements of the body, the speech and behavior?

There is always a best way of doing everything, if it be to boil an egg. Manners are the happy ways of doing things; each once a stroke of genius or of love, — now repeated and hardened into usage. They form at last a rich varnish, with which the routine of life is washed, and its details adorned. If they are superficial, so are the dew-drops which give such a depth to the morning meadows. Manners are very communicable: men catch them from each other. Consuelo, in the romance, boasts of the lessons she had given the nobles in manners, on the stage; and, in real life, Talma taught Napoleon the arts of behavior. Genius invents fine manners, which the baron and the baroness copy very fast, and, by the advantage of a palace, better the instruction. They stereotype the lesson they have learned into a mode.

The power of manners is incessant, — an element as unconcealable as fire. The nobility cannot in any country be disguised, and no more in a republic or a democracy, than in a kingdom. No man can resist their influence. There are certain manners which are learned in good society, of that force, that, if a person have them, he or she must be considered, and is everywhere welcome, though without beauty, or wealth, or genius. Give a boy address and accomplishments, and you give him the mastery of palaces and fortunes where he goes. He has not the trouble of earning or owning them; they solicit him to enter and possess. We send girls of a timid, retreating disposition to the boarding-school, to the riding-school, to the ballroom, or wheresoever they can come into acquaintance and nearness of leading persons of their own sex; where they might learn address, and see it near at hand. The power of a woman of fashion to lead, and also to daunt and repel, derives from their belief that she knows resources and behaviors not known to them; but when these have mastered her secret, they learn to

confront her, and recover their self-possession.

Every day bears witness to their gentle rule. People who would obtrude, now do not obtrude. The mediocre circle learns to demand that which belongs to a high state of nature or of culture. Your manners are always under examination, and by committees little suspected, — a police in citizens' clothes, — but are awarding or denying you very high prizes when you least think of it.

We talk much of utilities, — but 'tis our manners that associate us. In hours of business, we go to him who knows, or has, or does this or that which we want, and we do not let our taste or feeling stand in the way. But this activity over, we return to the indolent state, and wish for those we can be at ease with: those who will go where we go, whose manners do not offend us, whose social tone chimes with ours. When we reflect on their persuasive and cheering force; how they recommend, prepare, and draw people together; how, in all clubs, manners make the members; how manners make the fortune of the ambitious youth; that, for the most part, his manners marry him, and, for the most part, he marries manners; when we think what keys they are, and to what secrets; what high lessons and inspiring tokens of character they convey; and what divination is required in us, for the reading of this fine telegraph, we see what range the subject has, and what relations to convenience, power, and beauty.

Their first service is very low, — when they are the minor morals: but 'tis the beginning of civility, — to make us, I mean, endurable to each other. We prize them for their rough-plastic, abstergent force; to get people out of the quadruped state; to get them washed, clothed, and set up on end; to slough their animal husks and habits; compel them to be clean; overawe their spite and meanness, teach them to stifle the base, and choose the generous expression, and make them know how much happier the generous behaviors are.

Bad behavior the laws cannot reach. Society is infested with rude, cynical, restless, and frivolous persons who prey upon the rest, and whom, a public opinion concentrated into good manners, forms accepted by the sense of all, can reach: — the contradictors and railers at public and private tables, who are like terriers, who conceive it the duty of a dog of honor to growl at any passer-by, and do the honors of the house by barking him out of sight: — I have seen men who neigh like a horse when you contradict them, or say something which they do not understand: — then the overbold, who make their own invitation to your hearth; the persevering talker, who gives you his society in large, saturating doses; the pitiers of themselves, — a perilous class; the frivolous Asmodeus, who relies on you to find him in ropes of sand to twist; the monotones; in short, every stripe of absurdity; — these are social inflictions which the magistrate cannot cure or defend you from, and which must be intrusted to the restraining

force of custom, and proverbs, and familiar rules of behavior impressed on young people in their school-days.

In the hotels on the banks of the Mississippi, they print, or used to print, among the rules of the house, that “no gentleman can be permitted to come to the public table without his coat;” and in the same country, in the pews of the churches, little placards plead with the worshipper against the fury of expectoration. Charles Dickens self-sacrificingly undertook the reformation of our American manners in unspeakable particulars. I think the lesson was not quite lost; that it held bad manners up, so that the churls could see the deformity. Unhappily, the book had its own deformities. It ought not to need to print in a reading-room a caution to strangers not to speak loud; nor to persons who look over fine engravings, that they should be handled like cobwebs and butterflies’ wings; nor to persons who look at marble statues, that they shall not smite them with canes. But, even in the perfect civilization of this city, such cautions are not quite needless in the Athenæum and City Library.

Manners are factitious, and grow out of circumstance as well as out of character. If you look at the pictures of patricians and of peasants, of different periods and countries, you will see how well they match the same classes in our towns. The modern aristocrat not only is well drawn in Titian’s Venetian doges, and in Roman coins and statues, but also in the pictures which Commodore Perry brought home of dignitaries in Japan. Broad lands and great interests not only arrive to such heads as can manage them, but form manners of power. A keen eye, too, will see nice gradations of rank, or see in the manners the degree of homage the party is wont to receive. A prince who is accustomed every day to be courted and deferred to by the highest grandees, acquires a corresponding expectation, and a becoming mode of receiving and replying to this homage.

There are always exceptional people and modes. English grandees affect to be farmers. Claverhouse is a fop, and, under the finish of dress, and levity of behavior, hides the terror of his war. But Nature and Destiny are honest, and never fail to leave their mark, to hang out a sign for each and for every quality. It is much to conquer one’s face, and perhaps the ambitious youth thinks he has got the whole secret when he has learned, that disengaged manners are commanding. Don’t be deceived by a facile exterior. Tender men sometimes have strong wills. We had, in Massachusetts, an old statesman, who had sat all his life in courts and in chairs of state, without overcoming an extreme irritability of face, voice, and bearing: when he spoke, his voice would not serve him; it cracked, it broke, it wheezed, it piped; — little cared he; he knew that it had got to pipe, or wheeze, or screech his argument and his indignation. When he sat down, after speaking, he seemed in a sort of fit, and held on to his chair with both hands: but

underneath all this irritability, was a puissant will, firm, and advancing, and a memory in which lay in order and method like geologic strata every fact of his history, and under the control of his will.

Manners are partly factitious, but, mainly, there must be capacity for culture in the blood. Else all culture is vain. The obstinate prejudice in favor of blood, which lies at the base of the feudal and monarchical fabrics of the old world, has some reason in common experience. Every man, — mathematician, artist, soldier, or merchant, — looks with confidence for some traits and talents in his own child, which he would not dare to presume in the child of a stranger. The Orientalists are very orthodox on this point. “Take a thorn-bush,” said the emir Abdel-Kader, “and sprinkle it for a whole year with water; — it will yield nothing but thorns. Take a date-tree, leave it without culture, and it will always produce dates. Nobility is the date-tree, and the Arab populace is a bush of thorns.”

A main fact in the history of manners is the wonderful expressiveness of the human body. If it were made of glass, or of air, and the thoughts were written on steel tablets within, it could not publish more truly its meaning than now. Wise men read very sharply all your private history in your look and gait and behavior. The whole economy of nature is bent on expression. The tell-tale body is all tongues. Men are like Geneva watches with crystal faces which expose the whole movement. They carry the liquor of life flowing up and down in these beautiful bottles, and announcing to the curious how it is with them. The face and eyes reveal what the spirit is doing, how old it is, what aims it has. The eyes indicate the antiquity of the soul, or, through how many forms it has already ascended. It almost violates the proprieties, if we say above the breath here, what the confessing eyes do not hesitate to utter to every street passenger.

Man cannot fix his eye on the sun, and so far seems imperfect. In Siberia, a late traveller found men who could see the satellites of Jupiter with their unarmed eye. In some respects the animals excel us. The birds have a longer sight, beside the advantage by their wings of a higher observatory. A cow can bid her calf by secret signal, probably of the eye, to run away, or to lie down and hide itself. The jockeys say of certain horses, that “they look over the whole ground.” The outdoor life, and hunting, and labor, give equal vigor to the human eye. A farmer looks out at you as strong as the horse; his eye-beam is like the stroke of a staff. An eye can threaten like a loaded and levelled gun, or can insult like hissing or kicking; or, in its altered mood, by beams of kindness, it can make the heart dance with joy.

The eye obeys exactly the action of the mind. When a thought strikes us, the eyes fix, and remain gazing at a distance; in enumerating the names of persons

or of countries, as France, Germany, Spain, Turkey, the eyes wink at each new name. There is no nicety of learning sought by the mind, which the eyes do not vie in acquiring. "An artist," said Michel Angelo, "must have his measuring tools not in the hand, but in the eye;" and there is no end to the catalogue of its performances, whether in indolent vision, (that of health and beauty,) or in strained vision, (that of art and labor.)
