NOTE

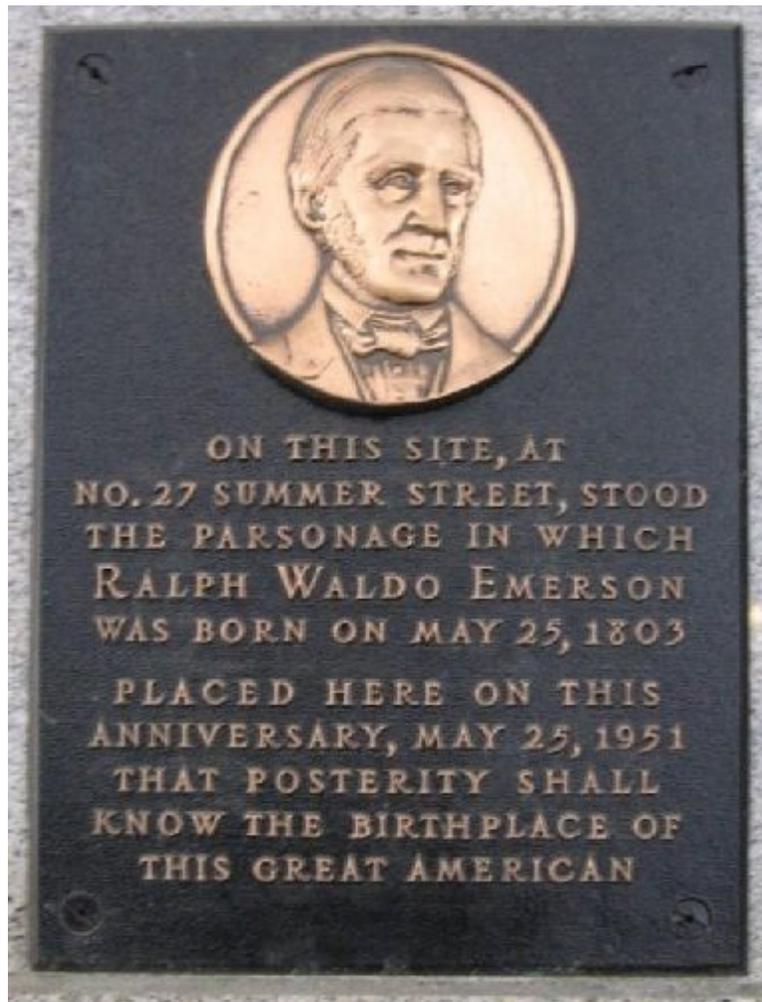

When reading poetry on an eReader, it is advisable to use a small font size, which will allow the lines of poetry to display correctly.

The Poetry of Ralph Waldo Emerson

Summer Street, Boston, Massachusetts — the site of Emerson's birthplace

A plaque commemorating the author's birthplace

A scene of central Boston, 1803 — the year Emerson was born

BRIEF INTRODUCTION: RALPH WALDO EMERSON

Ralph Waldo Emerson was born in Boston, Massachusetts, on May 25, 1803 and he was the son of Ruth Haskins and the Rev. William Emerson, a Unitarian minister. He was the second of five sons who survived into adulthood and his father died from stomach cancer on May 12, 1811, less than two weeks before the poet's eighth birthday. Raised by his mother, with the help of several other women in the family, Emerson was particularly inspired by his aunt Mary Moody Emerson, who lived with the family off and on, maintaining a constant correspondence with Emerson until her death in 1863. He later referred to his Aunt Mary as his "earliest and best teacher," and a "spirited and original genius in her own right".

Emerson's formal schooling began at the Boston Latin School in 1812 when he was nine and in October 1817, aged 14, Emerson went to Harvard College and was appointed freshman messenger for the president — a position that meant he had to fetch misbehaving students and send messages to faculty. Midway through his junior year, Emerson began keeping a list of books he had read and started a journal in a series of notebooks that would be later called *Wide World*. During this uncertain time, he took various outside jobs to cover his school expenses, including working as a waiter for the Junior Commons and as an occasional teacher with his uncle Samuel in Waltham, Massachusetts. Serving as Class Poet, he presented an original poem on Harvard's Class Day, a month before his official graduation on August 29, 1821, when he was 18 years old. Emerson was not conspicuous as a student and graduated in the exact middle of his class of 59 peers.

In 1826, suffering from poor health, Emerson decided to seek out warmer climates. He travelled to St. Augustine, Florida, where he took long walks on the beach and began writing poetry in earnest for the first time. While in St. Augustine, he made the acquaintance of Prince Achille Murat, who was the nephew of Napoleon Bonaparte. Only two years Emerson's senior, they became close friends and enjoyed sharing one another's company, engaging in enlightening discussions on religion, society, philosophy, and government; Emerson considered Murat an important influence in his intellectual education.

After completing his education at Harvard, Emerson assisted his brother William in a school for young women that was established in their mother's house, after he had successfully created his own school in Chelmsford,

Massachusetts. When William went to Göttingen to study divinity, Emerson took charge of the school all by himself. Over the next several years, he made his living as a schoolmaster, before deciding to study at Harvard Divinity School.

Emerson met his first wife, Ellen Louisa Tucker, in Concord, New Hampshire on Christmas Day, 1827, and married her when she was 18. The couple moved to Boston, with Emerson's mother Ruth moving with them to help take care of Ellen, who was already sick with tuberculosis. Less than two years later, she died at the age of 20 on February 8, 1831, after uttering her last words: "I have not forgotten the peace and joy." Emerson was heavily affected by her loss, visiting her grave in Roxbury daily. In a journal entry dated March 29, 1832, he wrote, "I visited Ellen's tomb & opened the coffin."

Having completed his divinity studies, Emerson was invited by Boston's Second Church to serve as junior pastor and he was ordained on January 11, 1829. His initial salary was \$1,200 a year, increasing to \$1,400 in July, but with his church role he took on other responsibilities, including the role of chaplain to the Massachusetts legislature and being a member of the Boston school committee. During this period, following the death of his wife, he began to doubt his beliefs, disagreeing with the church's methods. Writing in his journal in June 1832, he records: "I have sometimes thought that, in order to be a good minister, it was necessary to leave the ministry. The profession is antiquated. In an altered age, we worship in the dead forms of our forefathers." His disagreements with church officials over the administration of the Communion service and misgivings about public prayer eventually led to his resignation in 1832. As he wrote, "This mode of commemorating Christ is not suitable to me. That is reason enough why I should abandon it."

Emerson toured Europe in 1833 and later wrote of his travels in the 1856 book *English Traits*. He left aboard the brig Jasper on Christmas Day, 1832, sailing first to Malta. During his European trip, he spent several months in Italy, visiting Rome, Florence and Venice, among other cities. When in Rome, he met with John Stuart Mill, who gave him a letter of recommendation to meet Thomas Carlyle. He went to Switzerland, and had to be dragged by fellow passengers to visit Voltaire's home in Ferney. Moving north to England, Emerson met William Wordsworth, Samuel Taylor Coleridge, and Thomas Carlyle. The latter in particular was a strong influence on Emerson, who would later serve as an unofficial literary agent in the United States for Carlyle and in March 1835, Emerson tried to convince Carlyle to come to America to lecture. The two writers would maintain a close correspondence until Carlyle's death in 1881.

Emerson returned to the United States on October 9, 1833, and lived with his

mother in Newton, Massachusetts, until October, 1834, when he moved to Concord, Massachusetts, to live with his step-grandfather Dr. Ezra Ripley at what was later named The Old Manse. At this time he closely monitored the budding Lyceum movement, which provided lectures on many topics. The lyceums, mechanics' institutes, and agriculture organisations flourished in the United States before and after the Civil War. They were important in the development of adult education in America. During this period hundreds of informal associations were established for the purpose of improving the social, intellectual, and moral fabric of society. The lyceum movement — with its lectures, dramatic performances, class instructions, and debates — contributed significantly to the education of the adult American in the 19th century. Noted lecturers, entertainers and readers would travel the “lyceum circuit,” going from town to town or state to state to entertain, speak, or debate at a variety of locations. Emerson saw for himself a possible career as a lecturer and on November 5, 1833, he made the first of what would eventually be approximately 1,500 lectures, discussing *The Uses of Natural History in Boston*. This was an expanded account of his experience in Paris. In this lecture, he set out some of his important beliefs and the ideas he would later develop in his first published essay *Nature*, which is now regarded as a founding Transcendentalist text.

At this time Emerson had met Lydia Jackson, a devout Christian, who was a gifted debater that shared his Transcendentalist beliefs. On January 24, 1835, Emerson wrote a letter to Lydia proposing marriage and she accepted. In July 1835, he bought a house on the Cambridge and Concord Turnpike in Concord, Massachusetts that he named “Bush”; which is now open to the public as the Ralph Waldo Emerson House. Emerson quickly became one of the leading citizens in the town, where he gave a lecture to commemorate the 200th anniversary of the town of Concord on September 12, 1835. Two days later, he married Lydia Jackson in her home town of Plymouth, Massachusetts and moved to the new home in Concord together with Emerson's mother on September 15.

On September 8, 1836, the day before the publication of his groundbreaking work *Nature*, Emerson met with Frederic Henry Hedge, George Putnam and George Ripley to plan periodic gatherings of other like-minded intellectuals. This was the beginning of the Transcendental Club, which served as a centre for the movement. Its first official meeting was held on September 19, 1836 and on September 1, 1837, women attended a meeting of the Transcendental Club for the first time. Emerson invited Margaret Fuller, Elizabeth Hoar and Sarah Ripley for dinner at his home before the meeting to ensure that they would be present for the evening get-together. Fuller would later prove to be an important figure

in Transcendentalism.

In 1837, Emerson befriended Henry David Thoreau and encouraged the young writer to begin keeping a journal, which Emerson himself religiously adhered to throughout his life. In March 1837, Emerson gave a series of lectures on *The Philosophy of History at Boston's Masonic Temple*, which was the first time he managed a lecture series on his own, marking the beginning of a dedicated career as a lecturer. The profits from this series of lectures were much larger than when he was paid by an organisation to talk and Emerson continued to manage his own lectures often throughout his lifetime. He would eventually give as many as eighty lectures a year, travelling across the northern part of the United States, and as far as St. Louis, Des Moines, Minneapolis and California.

It was in 1841 that Emerson published *Essays*, his second book, which included the famous essay, "Self-Reliance", receiving favourable reviews in London and Paris. This book laid the foundations for Emerson's international fame. From 1847 to 1848, the author toured England, Scotland, and Ireland, and he also found time to visit Paris between the February Revolution and the bloody June Days. When he arrived, he saw the stumps where trees had been cut down to form barricades in the February riots. On May 21 he stood on the Champ de Mars in the midst of mass celebrations for concord, peace and labour. He wrote in his journal: "At the end of the year we shall take account, & see if the Revolution was worth the trees." The trip left an important imprint on Emerson's later work. Emerson later came to see the American Civil War as a 'revolution' that shared common ground with the European revolutions of 1848.

Emerson was staunchly anti-slavery and gave a number of lectures during the pre-Civil War years, beginning as early as November, 1837. From 1844 he took a more active role in opposing slavery, giving a number of speeches and lectures, and he notably welcomed John Brown to his home during Brown's visits to Concord. Once the American Civil War broke out, Emerson made it clear that he advocated the immediate emancipation of the slaves.

Emerson visited Washington, D.C, at the end of January 1862, where he gave a public lecture at the Smithsonian on January 31, 1862. In this lecture he famously declared: "The South calls slavery an institution... I call it destitution... Emancipation is the demand of civilization". The next day, Emerson's friend Charles Sumner took him to meet Lincoln at the White House. The President was familiar with the author's work, having previously seen him lecture. In 1865, Emerson spoke at a memorial service held for Lincoln in Concord: "Old as history is, and manifold as are its tragedies, I doubt if any death has caused so much pain as this has caused, or will have caused, on its announcement."

On May 6, 1862, Emerson's protégé Henry David Thoreau died of

tuberculosis at the age of 44 and Emerson delivered his eulogy. For the rest of his life, Emerson often referred to Thoreau as his best friend, in spite of a falling out that began in 1849 after Thoreau published *A Week on the Concord and Merrimack Rivers*.

In 1867, Emerson's health was declining, as demonstrated by his writing less in his journals, and he also started having memory problems, suffering from aphasia. By the end of the decade, he forgot his own name at times and, when anyone asked how he felt, he responded, "Quite well; I have lost my mental faculties, but am perfectly well".

The author's Concord home caught fire on July 24, 1872 and Emerson called for help from his neighbours. The flames were too dangerous to tackle and they had to give up putting the fire out, concentrating instead on saving as many objects as possible. Donations were collected by friends to help the Emersons rebuild, including \$5,000 gathered by Francis Cabot Lowell, another \$10,000 collected by LeBaron Russell Briggs, and a personal donation of \$1,000 from George Bancroft. Support for shelter was offered as well; though the Emersons ended up staying with family at the Old Manse, invitations came from Anne Lynch Botta, James Elliot Cabot, James Thomas Fields and Annie Adams Fields. The fire marked an end to Emerson's serious lecturing career; from then on, he would lecture only on special occasions and only in front of familiar audiences.

While the house was being rebuilt, Emerson embarked on a final trip abroad, visiting England, continental Europe and, of all places, Egypt. He left on October 23, 1872, along with his daughter Ellen while his wife spent time at the Old Manse and with friends. Emerson and his daughter Ellen returned to the United States on the ship *Olympus* along with their good friend Charles Eliot Norton on April 15, 1873. Their return to Concord was celebrated by the town and school was cancelled for that day.

Sadly, the problems with his memory had become embarrassing to Emerson and he ceased his public appearances by 1879. In April 1882, he was found to be suffering from pneumonia and Emerson passed away on April 27, 1882.

As a lecturer and orator, Emerson gradually became the leading voice of intellectual culture in the United States, establishing himself as one of the pioneers of the lecturing system. He was well-respected by his fellow writers and lecturers, who easily acknowledged his ability to influence and inspire others. Emerson's poetry and other writings not only influenced his contemporaries, such as Walt Whitman and Henry David Thoreau, but would continue to influence thinkers and writers in the United States and around the world down to the present. Notable thinkers who recognise Emerson's influence

include Nietzsche and William James, Emerson's godson.

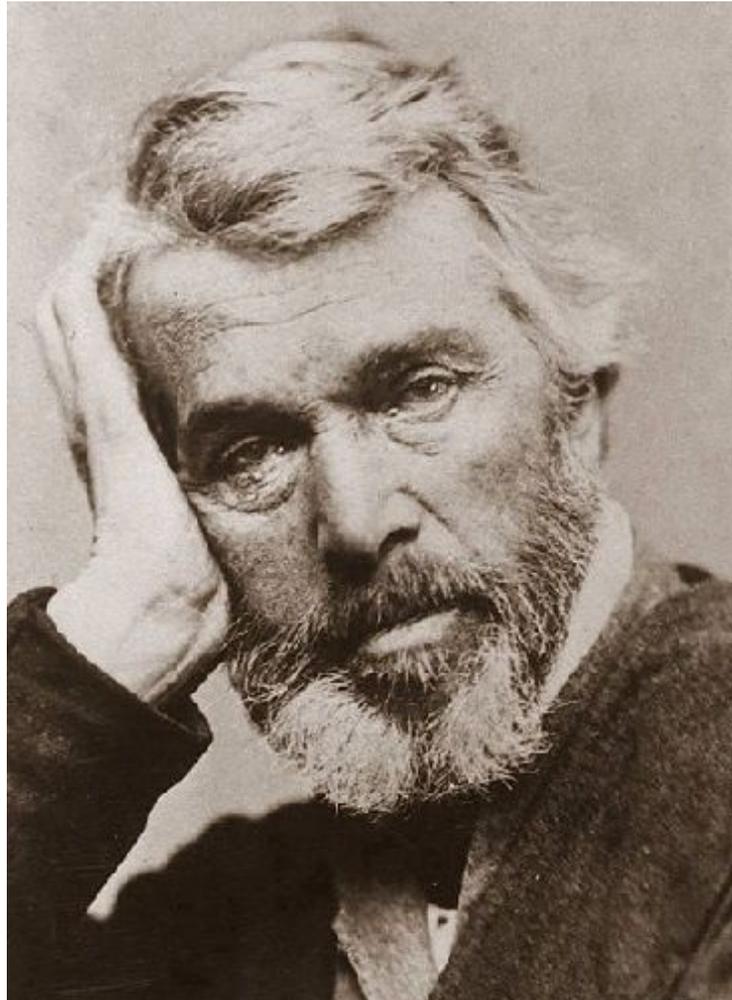

Emerson as a young man

Achille Murat (1801-1847) was the eldest son of the upstart King of Naples during the First French Empire and later in life mayor of Tallahassee, Florida in the United States. He was a great source of inspiration to Emerson in his early writings.

Murat's house in St. Augustine, Florida, which Emerson visited many times

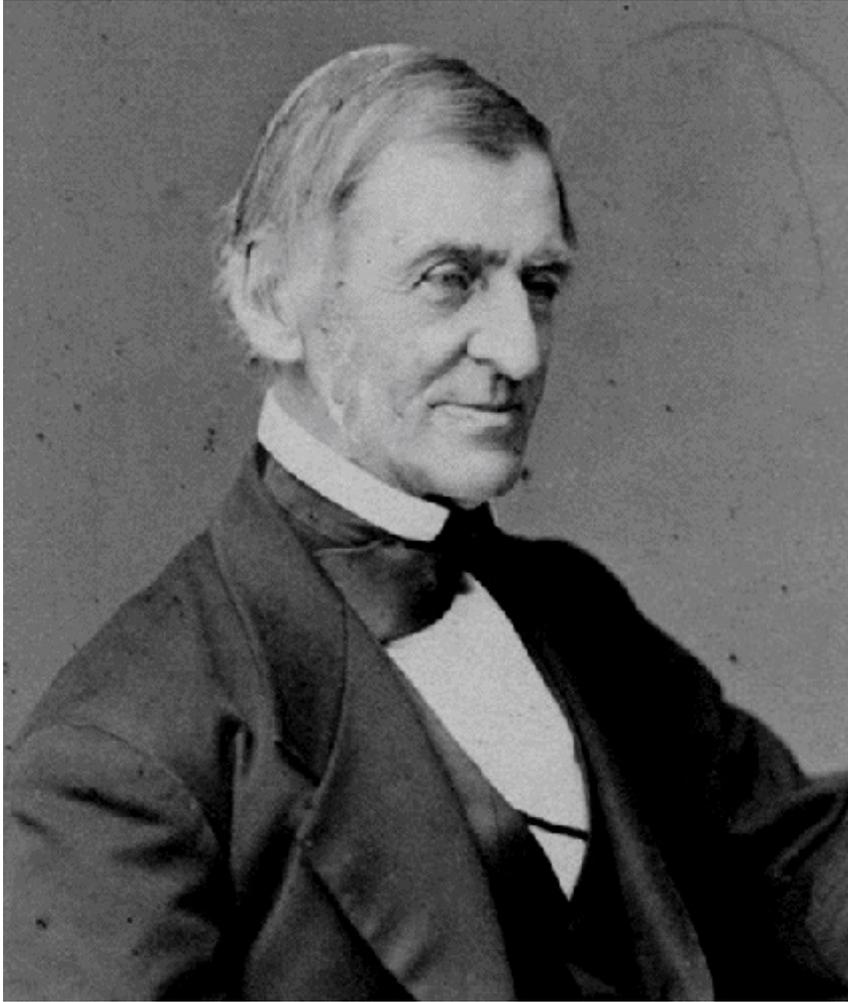

Thomas Carlyle (1795-1881) was a Scottish philosopher, satirical writer, essayist, historian and teacher during the Victorian era, who greatly inspired Emerson during his English travels.

Poems of Youth and Early Manhood

THE BELL

I love thy music, mellow bell,
I love thine iron chime,
To life or death, to heaven or hell,
Which calls the sons of Time.

Thy voice upon the deep
The home-bound sea-boy hails,
It charms his cares to sleep,
It cheers him as he sails.

To house of God and heavenly joys
Thy summons called our sires,
And good men thought thy sacred voice
Disarmed the thunder's fires.

And soon thy music, sad death-bell,
Shall lift its notes once more,
And mix my requiem with the wind
That sweeps my native shore.

THOUGHT

I am not poor, but I am proud,
Of one inalienable right,
Above the envy of the crowd, —
Thought's holy light.

Better it is than gems or gold,
And oh! it cannot die,
But thought will glow when the sun grows cold,
And mix with Deity.

PRAYER

When success exalts thy lot,
God for thy virtue lays a plot:
And all thy life is for thy own,
Then for mankind's instruction shown;
And though thy knees were never bent,
To Heaven thy hourly prayers are sent,
And whether formed for good or ill,
Are registered and answered still.

1826 [?].

I bear in youth the sad infirmities
That use to undo the limb and sense of age;
It hath pleased Heaven to break the dream of bliss
Which lit my onward way with bright presage,
And my unserviceable limbs forego.
The sweet delight I found in fields and farms,
On windy hills, whose tops with morning glow,
And lakes, smooth mirrors of Aurora's charms.
Yet I think on them in the silent night,
Still breaks that morn, though dim, to Memory's eye,
And the firm soul does the pale train defy
Of grim Disease, that would her peace affright.
Please God, I'll wrap me in mine innocence,
And bid each awful Muse drive the damned harpies hence.

CAMBRIDGE, 1827.

Be of good cheer, brave spirit; steadfastly
Serve that low whisper thou hast served; for know,
God hath a select family of sons
Now scattered wide thro' earth, and each alone,
Who are thy spiritual kindred, and each one
By constant service to, that inward law,
Is weaving the sublime proportions
Of a true monarch's soul. Beauty and strength,
The riches of a spotless memory,
The eloquence of truth, the wisdom got
By searching of a clear and loving eye
That seeth as God seeth. These are their gifts,
And Time, who keeps God's word, brings on the day
To seal the marriage of these minds with thine,
Thine everlasting lovers. Ye shall be
The salt of all the elements, world of the world.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

TO-DAY

I rake no coffined clay, nor publish wide
The resurrection of departed pride.
Safe in their ancient crannies, dark and deep,
Let kings and conquerors, saints and soldiers sleep —
Late in the world, — too late perchance for fame,
Just late enough to reap abundant blame, —
I choose a novel theme, a bold abuse
Of critic charters, an unlaurelled Muse.

Old mouldy men and books and names and lands
Disgust my reason and defile my hands.
I had as lief respect an ancient shoe,
As love old things *for age*, and hate the new.
I spurn the Past, my mind disdains its nod,
Nor kneels in homage to so mean a God.
I laugh at those who, while they gape and gaze,
The bald antiquity of China praise.
Youth is (whatever cynic tubs pretend)
The fault that boys and nations soonest mend.

FAME

Ah Fate, cannot a man
Be wise without a beard?
East, West, from Beer to Dan,
Say, was it never heard
That wisdom might in youth be gotten,
Or wit be ripe before 't was rotten?

He pays too high a price
For knowledge and for fame
Who sells his sinews to be wise,
His teeth and bones to buy a name,
And crawls through life a paralytic
To earn the praise of bard and critic.

Were it not better done,
To dine and sleep through forty years;
Be loved by few; be feared by none;
Laugh life away; have wine for tears;
And take the mortal leap undaunted,
Content that all we asked was granted?

But Fate will not permit
The seed of gods to die,
Nor suffer sense to win from wit
Its guerdon in the sky,
Nor let us hide, whate'er our pleasure,
The world's light underneath a measure.

Go then, sad youth, and shine;
Go, sacrifice to Fame;
Put youth, joy, health upon the shrine,
And life to fan the flame;
Being for Seeming bravely barter
And die to Fame a happy martyr.

1824.

THE SUMMONS

A sterner errand to the silken troop
Has quenched the uneasy blush that warmed my cheek;
I am commissioned in my day of joy
To leave my woods and streams and the sweet sloth
Of prayer and song that were my dear delight,
To leave the rudeness of my woodland life,
Sweet twilight walks and midnight solitude
And kind acquaintance with the morning stars
And the glad hey-day of my household hours,
The innocent mirth which sweetens daily bread,
Railing in love to those who rail again,
By mind's industry sharpening the love of life —
Books, Muses, Study, fireside, friends and love,
I loved ye with true love, so fare ye well!

I was a boy; boyhood slid gayly by
And the impatient years that trod on it
Taught me new lessons in the lore of life.
I've learned the sum of that sad history
All woman-born do know, that hoped-for days,
Days that come dancing on fraught with delights,
Dash our blown hopes as they limp heavily by.
But I, the bantling of a country Muse,
Abandon all those toys with speed to obey
The King whose meek ambassador I go.

THE RIVER

And I behold once more
My old familiar haunts; here the blue river,
The same blue wonder that my infant eye
Admired, sage doubting whence the traveller came, —
Whence brought his sunny bubbles ere he washed
The fragrant flag-roots in my father's fields,
And where thereafter in the world he went.
Look, here he is, unaltered, save that now
He hath broke his banks and flooded all the vales
With his redundant waves.
Here is the rock where, yet a simple child,
I caught with bended pin my earliest fish,
Much triumphing, — and these the fields
Over whose flowers I chased the butterfly
A blooming hunter of a fairy fine.
And hark! where overhead the ancient crows
Hold their sour conversation in the sky: —
These are the same, but I am not the same,
But wiser than I was, and wise enough
Not to regret the changes, tho' they cost
Me many a sigh. Oh, call not Nature dumb;
These trees and stones are audible to me,
These idle flowers, that tremble in the wind,
I understand their faery syllables,
And all their sad significance. The wind,
That rustles down the well-known forest road —
It hath a sound more eloquent than speech.
The stream, the trees, the grass, the sighing wind,
All of them utter sounds of 'monishment
And grave parental love.
They are not of our race, they seem to say,
And yet have knowledge of our moral race,
And somewhat of majestic sympathy,
Something of pity for the puny clay,
That holds and boasts the immeasurable mind.
I feel as I were welcome to these trees

After long months of weary wandering,
Acknowledged by their hospitable boughs;
They know me as their son, for side by side,
They were coeval with my ancestors,
Adorned with them my country's primitive times,
And soon may give my dust their funeral shade.

CONCORD, June, 1827.

GOOD HOPE

The cup of life is not so shallow
That we have drained the best,
That all the wine at once we swallow
And lees make all the rest.

Maids of as soft a bloom shall marry
As Hymen yet hath blessed,
And fairer forms are in the quarry
Than Phidias released.

1827.

LINES TO ELLEN

Tell me, maiden, dost thou use
Thyself thro' Nature to diffuse?
All the angles of the coast
Were tenanted by thy sweet ghost,
Bore thy colors every flower,
Thine each leaf and berry bore;
All wore thy badges and thy favors
In their scent or in their savors,
Every moth with painted wing,
Every bird in carolling,
The wood-boughs with thy manners waved,
The rocks uphold thy name engraved,
The sod throbb'd friendly to my feet,
And the sweet air with thee was sweet.
The saffron cloud that floated warm
Studied thy motion, took thy form,
And in his airy road benign
Recalled thy skill in bold design,
Or seemed to use his privilege
To gaze o'er the horizon's edge,
To search where now thy beauty glowed,
Or made what other purlieus proud.

1829.

SECURITY

Though her eye seek other forms
And a glad delight below,
Yet the love the world that warms
Bids for me her bosom glow.

She must love me till she find
Another heart as large and true.
Her soul is frank as the ocean wind,
And the world has only two.

If Nature hold another heart
That knows a purer flame than me,
I too therein could challenge part
And learn of love a new degree.

1829.

A dull uncertain brain,
But gifted yet to know
That God has cherubim who go
Singing an immortal strain,
Immortal here below.
I know the mighty bards,
I listen when they sing,
And now I know
The secret store
Which these explore
When they with torch of genius pierce
The tenfold clouds that cover
The riches of the universe
From God's adoring lover.
And if to me it is not given
To fetch one ingot thence
Of the unfading gold of Heaven
His merchants may dispense,
Yet well I know the royal mine,
And know the sparkle of its ore

AND KNOW THE SPARK OF ITS GLE,
Know Heaven's truth from lies that shine —
Explored they teach us to explore.

1831.

A MOUNTAIN GRAVE

Why fear to die
And let thy body lie
Under the flowers of June,
Thy body food
For the ground-worms' brood
And thy grave smiled on by the visiting moon.

Amid great Nature's halls
Girt in by mountain walls
And washed with waterfalls
It would please me to die,
Where every wind that swept my tomb
Goes loaded with a free perfume
Dealt out with a God's charity.

I should like to die in sweets,
A hill's leaves for winding-sheets,
And the searching sun to see
That I am laid with decency.
And the commissioned wind to sing
His mighty psalm from fall to spring
And annual tunes commemorate
Of Nature's child the common fate.

WILLIAMSTOWN, VERMONT, 1 June, 1831.

A LETTER

Dear brother, would you know the life,
Please God, that I would lead?
On the first wheels that quit this weary town
Over yon western bridges I would ride
And with a cheerful benison forsake
Each street and spire and roof, incontinent.
Then would I seek where God might guide my steps,
Deep in a woodland tract, a sunny farm,
Amid the mountain counties, Hants, Franklin, Berks,
Where down the rock ravine a river roars,
Even from a brook, and where old woods
Not tamed and cleared cumber the ground
With their centennial wrecks.
Find me a slope where I can feel the sun
And mark the rising of the early stars.
There will I bring my books, — my household gods,
The reliquaries of my dead saint, and dwell
In the sweet odor of her memory.
Then in the uncouth solitude unlock
My stock of art, plant dials in the grass,
Hang in the air a bright thermometer
And aim a telescope at the inviolate sun.

CHARDON ST., BOSTON, 1831.

Day by day returns
The everlasting sun,
Replenishing material urns
With God's unspared donation;
But the day of day,
The orb within the mind,
Creating fair and good alway,
Shines not as once it shined.

*

Vast the realm of Being is,
In the waste one nook is his;
Whatsoever hap befalls
In his vision's narrow walls
He is here to testify.

1831.

HYMN

There is in all the sons of men
A love that in the spirit dwells,
That panteth after things unseen,
And tidings of the future tells.

And God hath built his altar here
To keep this fire of faith alive,
And sent his priests in holy fear
To speak the truth — for truth to strive.

And hither come the pensive train
Of rich and poor, of young and old,
Of ardent youth untouched by pain,
Of thoughtful maids and manhood bold.

They seek a friend to speak the word
Already trembling on their tongue,
To touch with prophet's hand the chord
Which God in human hearts hath strung.

To speak the plain reproof of sin
That sounded in the soul before,
And bid you let the angels in
That knock at meek contrition's door.

A friend to lift the curtain up
That hides from man the mortal goal,
And with glad thoughts of faith and hope
Surprise the exulting soul.

Sole source of light and hope assured,
O touch thy servant's lips with power,
So shall he speak to us the word
Thyself dost give forever more.

SELF-RELIANCE

Henceforth, please God, forever I forego
The yoke of men's opinions. I will be
Light-hearted as a bird, and live with God.
I find him in the bottom of my heart,
I hear continually his voice therein.

*

The little needle always knows the North,
The little bird remembereth his note,
And this wise Seer within me never errs.
I never taught it what it teaches me;
I only follow, when I act aright.

October 9, 1832.

And when I am entombed in my place,
Be it remembered of a single man,
He never, though he dearly loved his race,
For fear of human eyes swerved from his plan.

Oh what is Heaven but the fellowship
Of minds that each can stand against the world
By its own meek and incorruptible will?

The days pass over me
And I am still the same;
The aroma of my life is gone
With the flower with which it came.

1833.

WRITTEN IN NAPLES

We are what we are made; each following day
Is the Creator of our human mould
Not less than was the first; the all-wise God
Gilds a few points in every several life,
And as each flower upon the fresh hillside,
And every colored petal of each flower,
Is sketched and dyed, each with a new design,
Its spot of purple, and its streak of brown,
So each man's life shall have its proper lights,
And a few joys, a few peculiar charms,
For him round in the melancholy hours
And reconcile him to the common days.
Not many men see beauty in the fogs
Of close low pine-woods in a river town;
Yet unto me not morn's magnificence,
Nor the red rainbow of a summer eve,
Nor Rome, nor joyful Paris, nor the halls
Of rich men blazing hospitable light,
Nor wit, nor eloquence, — no, nor even the song
Of any woman that is now alive, —
Hath such a soul, such divine influence,
Such resurrection of the happy past,
As is to me when I behold the morn
Ope in such law moist roadside, and beneath
Peep the blue violets out of the black loam,
Pathetic silent poets that sing to me
Thine elegy, sweet singer, sainted wife.

WRITTEN AT ROME

Alone in Rome. Why, Rome is lonely too; —
Besides, you need not be alone; the soul
Shall have society of its own rank.
Be great, be true, and all the Scipios,
The Catos, the wise patriots of Rome,
Shall flock to you and tarry by your side,
And comfort you with their high company.
Virtue alone is sweet society,
It keeps the key to all heroic hearts,
And opens you a welcome in them all.
You must be like them if you desire them,
Scorn trifles and embrace a better aim
Than wine or sleep or praise;
Hunt knowledge as the lover wooes a maid,
And ever in the strife of your own thoughts
Obey the nobler impulse; that is Rome:
That shall command a senate to your side;
For there is no might in the universe
That can contend with love. It reigns forever.
Wait then, sad friend, wait in majestic peace
The hour of heaven. Generously trust
Thy fortune's web to the beneficent hand
That until now has put his world in fee
To thee. He watches for thee still. His love
Broods over thee, and as God lives in heaven,
However long thou walkest solitary,
The hour of heaven shall come, the man appear.

WEBSTER

1831

Let Webster's lofty face
Ever on thousands shine,
A beacon set that Freedom's race
Might gather omens from that radiant sign.

FROM THE PHI BETA KAPPA POEM

1834

Ill fits the abstemious Muse a crown to weave
For living brows; ill fits them to receive:
And yet, if virtue abrogate the law,
One portrait — fact or fancy — we may draw;
A form which Nature cast in the heroic mould
Of them who rescued liberty of old;
He, when the rising storm of party roared,
Brought his great forehead to the council board,
There, while hot heads perplexed with fears the state,
Calm as the morn the manly patriot sate;
Seemed, when at last his clarion accents broke,
As if the conscience of the country spoke.
Not on its base Monadnoc surer stood,
Than he to common sense and common good:
No mimic; from his breast his counsel drew,
Believed the eloquent was aye the true;
He bridged the gulf from th' always good and wise
To that within the vision of small eyes.
Self-centred; when he launched the genuine word
It shook or captivated all who heard,
Ran from his mouth to mountains and the sea,
And burned in noble hearts proverb and prophecy.

1854

Why did all manly gifts in Webster fail?
He wrote on Nature's grandest brow, *For Sale*.

Poems, 1847

GOOD-BYE

Good-bye, proud world! I'm going home:
Thou art not my friend, and I'm not thine.
Long through thy weary crowds I roam;
A river-ark on the ocean brine,
Long I've been tossed like the driven foam:
But now, proud world! I'm going home.

Good-bye to Flattery's fawning face;
To Grandeur with his wise grimace;
To upstart Wealth's averted eye;
To supple Office, low and high;
To crowded halls, to court and street;
To frozen hearts and hasting feet;
To those who go, and those who come;
Good-bye, proud world! I'm going home.

I am going to my own hearth-stone,
Bosomed in yon green hills alone, —
secret nook in a pleasant land,
Whose groves the frolic fairies planned;
Where arches green, the livelong day,
Echo the blackbird's roundelay,
And vulgar feet have never trod
A spot that is sacred to thought and God.

O, when I am safe in my sylvan home,
I tread on the pride of Greece and Rome;
And when I am stretched beneath the pines,
Where the evening star so holy shines,
I laugh at the lore and the pride of man,
At the sophist schools and the learned clan;
For what are they all, in their high conceit,
When man in the bush with God may meet?

EACH AND ALL

Little thinks, in the field, yon red-cloaked clown
Of thee from the hill-top looking down;
The heifer that lows in the upland farm,
Far-heard, lows not thine ear to charm;
The sexton, tolling his bell at noon,
Deems not that great Napoleon
Stops his horse, and lists with delight,
Whilst his files sweep round yon Alpine height;
Nor knowest thou what argument
Thy life to thy neighbor's creed has lent.
All are needed by each one;
Nothing is fair or good alone.
I thought the sparrow's note from heaven,
Singing at dawn on the alder bough;
I brought him home, in his nest, at even;
He sings the song, but it cheers not now,
For I did not bring home the river and sky; —
He sang to my ear, — they sang to my eye.
The delicate shells lay on the shore;
The bubbles of the latest wave
Fresh pearls to their enamel gave,
And the bellowing of the savage sea
Greeted their safe escape to me.
I wiped away the weeds and foam,
I fetched my sea-born treasures home;
But the poor, unsightly, noisome things
Had left their beauty on the shore
With the sun and the sand and the wild uproar.
The lover watched his graceful maid,
As 'mid the virgin train she strayed,
Nor knew her beauty's best attire
Was woven still by the snow-white choir.
At last she came to his hermitage,
Like the bird from the woodlands to the cage; —
The gay enchantment was undone,
A gentle wife, but fairy none.

'Then I said, 'I covet truth;
Beauty is unripe childhood's cheat;
I leave it behind with the games of youth:' —
As I spoke, beneath my feet
The ground-pine curled its pretty wreath,
Running over the club-moss burrs;
I inhaled the violet's breath;
Around me stood the oaks and firs;
Pine-cones and acorns lay on the ground;
Over me soared the eternal sky.
Full of light and of deity;
Again I saw, again I heard,
The rolling river, the morning bird; —
Beauty through my senses stole;
I yielded myself to the perfect whole.

THE PROBLEM

I like a church; I like a cowl;
I love a prophet of the soul;
And on my heart monastic aisles
Fall like sweet strains, or pensive smiles
Yet not for all his faith can see
Would I that cowlèd churchman be.

Why should the vest on him allure,
Which I could not on me endure?

Not from a vain or shallow thought
His awful Jove young Phidias brought;
Never from lips of cunning fell
The thrilling Delphic oracle;
Out from the heart of nature rolled
The burdens of the Bible old;
The litanies of nations came,
Like the volcano's tongue of flame,
Up from the burning core below, —
The canticles of love and woe:
The hand that rounded Peter's dome
And groined the aisles of Christian Rome
Wrought in a sad sincerity;
Himself from God he could not free;
He builded better than he knew; —
The conscious stone to beauty grew.

Know'st thou what wove yon woodbird's nest
Of leaves, and feathers from her breast?
Or how the fish outbuilt her shell,
Painting with morn each annual cell?
Or how the sacred pine-tree adds
To her old leaves new myriads?
Such and so grew these holy piles,
Whilst love and terror laid the tiles.
Earth proudly wears the Parthenon,
As the best gem upon her zone

As the best gem upon her zone,
And Morning opes with haste her lids
To gaze upon the Pyramids;
O'er England's abbeys bends the sky,
As on its friends, with kindred eye;
For out of Thought's interior sphere
These wonders rose to upper air;
And Nature gladly gave them place,
Adopted them into her race,
And granted them an equal date
With Andes and with Ararat.

These temples grew as grows the grass;
Art might obey, but not surpass.
The passive Master lent his hand
To the vast soul that o'er him planned;
And the same power that reared the shrine
Bestrode the tribes that knelt within.
Ever the fiery Pentecost
Girds with one flame the countless host,
Trances the heart through chanting choirs,
And through the priest the mind inspires.
The word unto the prophet spoken
Was writ on tables yet unbroken;
The word by seers or sibyls told,
In groves of oak, or fanes of gold,
Still floats upon the morning wind,
Still whispers to the willing mind.
One accent of the Holy Ghost
The heedless world hath never lost.
I know what say the fathers wise, —
The Book itself before me lies,
Old *Chrysostom*, best *Augustine*,
And he who blent both in his line,
The younger *Golden Lips* or mines,
Taylor, the Shakspeare of divines.
His words are music in my ear,
I see his cowlèd portrait dear;
And yet, for all his faith could see,

I would not the good bishop be.

TO RHEA

Thee, dear friend, a brother soothes,
Not with flatteries, but truths,
Which tarnish not, but purify
To light which dims the morning's eye.
I have come from the spring-woods,
From the fragrant solitudes; —
Listen what the poplar-tree
And murmuring waters counselled me.

If with love thy heart has burned;
If thy love is unreturned;
Hide thy grief within thy breast,
Though it tear thee unexpressed;
For when love has once departed
From the eyes of the false-hearted,
And one by one has torn off quite
The bandages of purple light;
Though thou wert the loveliest
Form the soul had ever dressed,
Thou shalt seem, in each reply,
A vixen to his altered eye;
Thy softest pleadings seem too bold,
Thy praying lute will seem to scold;
Though thou kept the straightest road,
Yet thou erreth far and broad.

But thou shalt do as do the gods
In their cloudless periods;
For of this lore be thou sure, —
Though thou forget, the gods, secure,
Forget never their command,
But make the statute of this land.
As they lead, so follow all,
Ever have done, ever shall.
Warning to the blind and deaf,
'T is written on the iron leaf,

*Who drinks of Cupid's nectar cup
Loveth downward, and not up;
He who loves, of gods or men,
Shall not by the same be loved again;
His sweetheart's idolatry
Falls, in turn, a new degree.
When a god is once beguiled
By beauty of a mortal child
And by her radiant youth delighted,
He is not fooled, but warily knoweth
His love shall never be requited.
And thus the wise Immortal doeth, —
'T is his study and delight
To bless that creature day and night;
From all evils to defend her;
In her lap to pour all splendor;
To ransack earth for riches rare,
And fetch her stars to deck her hair:
He mixes music with her thoughts,
And saddens her with heavenly doubts:
All grace, all good his great heart knows,
Profuse in love, the king bestows,
Saying, 'Hearken! Earth, Sea, Air!
This monument of my despair
Build I to the All-Good, All-Fair.
Not for a private good,
But I, from my beatitude,
Albeit scorned as none was scorned,
Adorn her as was none adorned.
I make this maiden an ensample
To Nature, through her kingdoms ample,
Whereby to model newer races,
Statelier forms and fairer faces;
To carry man to new degrees
Of power and of comeliness.
These presents be the hostages
Which I pawn for my release.
See to thyself, O Universe!
Thou art better, and not worse.' —*

And the god, having given all,
Is freed forever from his thrall.

THE VISIT

Askest, 'How long thou shalt stay?'
Devastator of the day!
Know, each substance and relation,
Thorough nature's operation,
Hath its unit, bound and metre;
And every new compound
Is some product and repeater, —
Product of the earlier found.
But the unit of the visit,
The encounter of the wise, —
Say, what other metre is it
Than the meeting of the eyes?
Nature poureth into nature
Through the channels of that feature,
Riding on the ray of sight,
Fleeter far than whirlwinds go,
Or for service, or delight,
Hearts to hearts their meaning show,
Sum their long experience,
And import intelligence.
Single look has drained the breast;
Single moment years confessed.
The duration of a glance
Is the term of convenance,
And, though thy rede be church or state,
Frugal multiples of that.
Speeding Saturn cannot halt;
Linger, — thou shalt rue the fault:
If Love his moment overstay,
Hatred's swift repulsions play.

URIEL

It fell in the ancient periods
Which the brooding soul surveys,
Or ever the wild Time coined itself
Into calendar months and days.

This was the lapse of Uriel,
Which in Paradise befell.
Once, among the Pleiads walking,
Seyd overheard the young gods talking;
And the treason, too long pent,
To his ears was evident.
The young deities discussed
Laws of form, and metre just,
Orb, quintessence, and sunbeams,
What subsisteth, and what seems.
One, with low tones that decide,
And doubt and reverend use defied,
With a look that solved the sphere,
And stirred the devils everywhere,
Gave his sentiment divine
Against the being of a line.
'Line in nature is not found;
Unit and universe are round;
In vain produced, all rays return;
Evil will bless, and ice will burn.'
As Uriel spoke with piercing eye,
A shudder ran around the sky;
The stern old war-gods shook their heads,
The seraphs frowned from myrtle-beds;
Seemed to the holy festival
The rash word boded ill to all;
The balance-beam of Fate was bent;
The bounds of good and ill were rent;
Strong Hades could not keep his own,
But all slid to confusion.

A sad self-knowledge, withering, fell

A sad self-knowledge, widening, fell
On the beauty of Uriel;
In heaven once eminent, the god
Withdrew, that hour, into his cloud;
Whether doomed to long gyration
In the sea of generation,
Or by knowledge grown too bright
To hit the nerve of feebler sight.
Straightway, a forgetting wind
Stole over the celestial kind,
And their lips the secret kept,
If in ashes the fire-seed slept.
But now and then, truth-speaking things
Shamed the angels' veiling wings;
And, shrilling from the solar course,
Or from fruit of chemic force,
Procession of a soul in matter,
Or the speeding change of water,
Or out of the good of evil born,
Came Uriel's voice of cherub scorn,
And a blush tinged the upper sky,
And the gods shook, they knew not why.

THE WORLD-SOUL

Thanks to the morning light,
Thanks to the foaming sea,
To the uplands of New Hampshire,
To the green-haired forest free;
Thanks to each man of courage,
To the maids of holy mind,
To the boy with his games undaunted
Who never looks behind.

Cities of proud hotels,
Houses of rich and great,
Vice nestles in your chambers,
Beneath your roofs of slate.
It cannot conquer folly, —
Time-and-space-conquering steam, —
And the light-outspeeding telegraph
Bears nothing on its beam.

The politics are base;
The letters do not cheer;
And 'tis far in the deeps of history,
The voice that speaketh clear.
Trade and the streets ensnare us,
Our bodies are weak and worn;
We plot and corrupt each other,
And we despoil the unborn.

Yet there in the parlor sits
Some figure of noble guise, —
Our angel, in a stranger's form,
Or woman's pleading eyes;
Or only a flashing sunbeam
In at the window-pane;
Or Music pours on mortals
Its beautiful disdain.

The inevitable morning
Finds them who in cellars be;
And be sure the all-loving Nature
Will smile in a factory.
Yon ridge of purple landscape,
Yon sky between the walls,
Hold all the hidden wonders
In scanty intervals.

Alas! the Sprite that haunts us
Deceives our rash desire;
It whispers of the glorious gods,
And leaves us in the mire.
We cannot learn the cipher
That's writ upon our cell;
Stars taunt us by a mystery
Which we could never spell.

If but one hero knew it,
The world would blush in flame;
The sage, till he hit the secret,
Would hang his head for shame.
Our brothers have not read it,
Not one has found the key;
And henceforth we are comforted, —
We are but such as they.

Still, still the secret presses;
The nearing clouds draw down;
The crimson morning flames into
The fopperies of the town.
Within, without the idle earth,
Stars weave eternal rings;
The sun himself shines heartily,
And shares the joy he brings.

And what if Trade sow cities
Like shells along the shore,
And thatch with towns the prairie broad

With railways ironed o'er? —
They are but sailing foam-bells
Along Thought's causing stream,
And take their shape and sun-color
From him that sends the dream.

For Destiny never swerves
Nor yields to men the helm;
He shoots his thought, by hidden nerves,
Throughout the solid realm.
The patient Daemon sits,
With roses and a shroud;
He has his way, and deals his gifts, —
But ours is not allowed.

He is no churl nor trifler,
And his viceroy is none, —
Love-without-weakness, —
Of Genius sire and son.
And his will is not thwarted;
The seeds of land and sea
Are the atoms of his body bright,
And his behest obey.

He serveth the servant,
The brave he loves amain;
He kills the cripple and the sick,
And straight begins again;
For gods delight in gods,
And thrust the weak aside;
To him who scorns their charities
Their arms fly open wide.

When the old world is sterile
And the ages are effete,
He will from wrecks and sediment
The fairer world complete.
He forbids to despair;
His cheeks mantle with mirth;

And the unimagined good of men
Is yearning at the birth.

Spring still makes spring in the mind
When sixty years are told;
Love wakes anew this throbbing heart,
And we are never old;
Over the winter glaciers
I see the summer glow,
And through the wild-piled snow-drift
The warm rosebuds below.

[Alphabetical List of Poems](#)

THE SPHINX

The Sphinx is drowsy,
Her wings are furled:
Her ear is heavy,
She broods on the world.
“Who’ll tell me my secret,
The ages have kept? —
I awaited the seer
While they slumbered and slept: — “The fate of the man-child,
The meaning of man;
Known fruit of the unknown;
Daedalian plan;
Out of sleeping a waking,
Out of waking a sleep;
Life death overtaking;
Deep underneath deep?

“Erect as a sunbeam,
Upspringeth the palm;
The elephant browses,
Undaunted and calm;
In beautiful motion
The thrush plies his wings;
Kind leaves of his covert,
Your silence he sings.

“The waves, unashamed,
In difference sweet,
Play glad with the breezes,
Old playfellows meet;
The journeying atoms,
Primordial wholes,
Firmly draw, firmly drive,
By their animate poles.

“Sea, earth, air, sound, silence.
Plant, quadruped, bird,

By one music enchanted,
One deity stirred, —
Each the other adorning,
Accompany still;
Night veileth the morning,
The vapor the hill.

“The babe by its mother
Lies bathèd in joy;
Glide its hours uncounted, —
The sun is its toy;
Shines the peace of all being,
Without cloud, in its eyes;
And the sum of the world
In soft miniature lies.

“But man crouches and blushes,
Absconds and conceals;
He creepeth and peepeth,
He palter and steals;
Infirm, melancholy,
Jealous glancing around,
An oaf, an accomplice,
He poisons the ground.

“Out spoke the great mother,
Beholding his fear; —
At the sound of her accents
Cold shuddered the sphere: —
‘Who has drugged my boy’s cup?
Who has mixed my boy’s bread?
Who, with sadness and madness,
Has turned my child’s head?’”

I heard a poet answer
Aloud and cheerfully,
‘Say on, sweet Sphinx! thy dirges
Are pleasant songs to me.
Deep love lieth under

These pictures of time;
They fade in the light of
Their meaning sublime.

“The fiend that man harries
Is love of the Best;
Yawns the pit of the Dragon,
Lit by rays from the Blest.
The Lethe of Nature
Can’t trance him again,
Whose soul sees the perfect,
Which his eyes seek in vain.

“To vision profounder,
Man’s spirit must dive;
His aye-rolling orb
At no goal will arrive;
The heavens that now draw him
With sweetness untold,
Once found, — for new heavens
He spurneth the old.

“Pride ruined the angels,
Their shame them restores;
Lurks the joy that is sweetest
In stings of remorse.
Have I a lover
Who is noble and free? —
I would he were nobler
Than to love me.

“Eterne alternation
Now follows, now flies;
And under pain, pleasure, —
Under pleasure, pain lies.
Love works at the centre,
Heart-heaving away;
Forth speed the strong pulses
To the borders of day.

“Dull Sphinx, Jove keep thy five wits;
Thy sight is growing blear;
Rue, myrrh and cummin for the Sphinx,
Her muddy eyes to clear!”
The old Sphinx bit her thick lip, —
Said, “Who taught thee me to name?
I am thy spirit, yoke-fellow;
Of thine eye I am eyebeam.

“Thou art the unanswered question;
Couldst see thy proper eye,
Alway it asketh, asketh;
And each answer is a lie.
So take thy quest through nature,
It through thousand natures ply;
Ask on, thou clothed eternity;
Time is the false reply.”

Uprose the merry Sphinx,
And crouched no more in stone;
She melted into purple cloud,
She silvered in the moon;
She spired into a yellow flame;
She flowered in blossoms red;
She flowed into a foaming wave:
She stood Monadnoc’s head.

Thorough a thousand voices
Spoke the universal dame;
“Who telleth one of my meanings
Is master of all I am.”

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

ALPHONSO OF CASTILE

I, Alphonso, live and learn,
Seeing Nature go astern.
Things deteriorate in kind;
Lemons run to leaves and rind;
Meagre crop of figs and limes;
Shorter days and harder times.
Flowering April cools and dies
In the insufficient skies.
Imps, at high midsummer, blot
Half the sun's disk with a spot;
'Twill not now avail to tan
Orange cheek or skin of man.
Roses bleach, the goats are dry,
Lisbon quakes, the people cry.
Yon pale, scrawny fisher fools,
Gaunt as bitterns in the pools,
Are no brothers of my blood; —
They discredit Adamhood.
Eyes of gods! ye must have seen,
O'er your ramparts as ye lean,
The general debility;
Of genius the sterility;
Mighty projects countermanded;
Rash ambition, brokenhanded;
Puny man and scentless rose
Tormenting Pan to double the dose.
Rebuild or ruin: either fill
Of vital force the wasted rill,
Or tumble all again in heap
To weltering Chaos and to sleep.

Say, Seigniors, are the old Niles dry,
Which fed the veins of earth and sky,
That mortals miss the loyal heats,
Which drove them erst to social feats;
Now, to a savage selfness grown,

I think nature barely serves for one;
With science poorly mask their hurt;
And vex the gods with question pert,
Immensely curious whether you
Still are rulers, or Mildew?

Masters, I'm in pain with you;
Masters, I'll be plain with you;
In my palace of Castile,
I, a king, for kings can feel.
There my thoughts the matter roll,
And solve and oft resolve the whole.
And, for I'm styled Alphonse the Wise,
Ye shall not fail for sound advice.
Before ye want a drop of rain,
Hear the sentiment of Spain.

You have tried famine: no more try it;
Ply us now with a full diet;
Teach your pupils now with plenty,
For one sun supply us twenty.
I have thought it thoroughly over, —
State of hermit, state of lover;
We must have society,
We cannot spare variety.
Hear you, then, celestial fellows!
Fits not to be overzealous;
Steads not to work on the clean jump,
Nor wine nor brains perpetual pump.
Men and gods are too extense;
Could you slacken and condense?
Your rank overgrowths reduce
Till your kinds abound with juice?
Earth, crowded, cries, 'Too many men!'
My counsel is, kill nine in ten,
And bestow the shares of all
On the remnant decimal.
Add their nine lives to this cat;
Stuff their nine brains in one hat;
Make his frame and forces square

With the labors he must dare;
Thatch his flesh, and even his years
With the marble which he rears.
There, growing slowly old at ease
No faster than his planted trees,
He may, by warrant of his age,
In schemes of broader scope engage.
So shall ye have a man of the sphere
Fit to grace the solar year.

[*Alphabetical List of Poems*](#)

MITHRIDATES

I cannot spare water or wine,
Tobacco-leaf, or poppy, or rose;
From the earth-poles to the Line,
All between that works or grows,
Every thing is kin of mine.

Give me agates for my meat;
Give me cantharids to eat;
From air and ocean bring me foods,
From all zones and altitudes; —

From all natures, sharp and slimy,
Salt and basalt, wild and tame:
Tree and lichen, ape, sea-lion,
Bird, and reptile, be my game.

Ivy for my fillet band;
Blinding dog-wood in my hand;
Hemlock for my sherbet cull me,
And the prussic juice to lull me;
Swing me in the upas boughs,
Vampyre-fanned, when I carouse.

Too long shut in strait and few,
Thinly dieted on dew,
I will use the world, and sift it,
To a thousand humors shift it,
As you spin a cherry.
O doleful ghosts, and goblins merry!
O all you virtues, methods, mights,
Means, appliances, delights,
Reputed wrongs and braggart rights,
Smug routine, and things allowed,
Minorities, things under cloud!
Hither! take me, use me, fill me,
Vein and artery, though ye kill me!

TO J.W.

Set not thy foot on graves;
Hear what wine and roses say;
The mountain chase, the summer waves,
The crowded town, thy feet may well delay.

Set not thy foot on graves;
Nor seek to unwind the shroud
Which charitable Time
And Nature have allowed
To wrap the errors of a sage sublime.

Set not thy foot on graves;
Care not to strip the dead
Of his sad ornament,
His myrrh, and wine, and rings, His sheet of lead,
And trophies buried:
Go, get them where he earned them when alive;
As resolutely dig or dive.

Life is too short to waste
In critic peep or cynic bark,
Quarrel or reprimand:
'T will soon be dark;
Up! mind thine own aim, and
God speed the mark!

DESTINY

That you are fair or wise is vain,
Or strong, or rich, or generous;
You must add the untaught strain
That sheds beauty on the rose.
There's a melody born of melody,
Which melts the world into a sea.
Toil could never compass it;
Art its height could never hit;
It came never out of wit;
But a music music-born
Well may Jove and Juno scorn.
Thy beauty, if it lack the fire
Which drives me mad with sweet desire,
What boots it? What the soldier's mail,
Unless he conquer and prevail?
What all the goods thy pride which lift,
If thou pine for another's gift?
Alas! that one is born in blight,
Victim of perpetual slight:
When thou lookest on his face,
Thy heart saith, 'Brother, go thy ways!
None shall ask thee what thou doest,
Or care a rush for what thou knowest,
Or listen when thou repliest,
Or remember where thou liest,
Or how thy supper is sodden;'

And another is born
To make the sun forgotten.
Surely he carries a talisman
Under his tongue;
Broad his shoulders are and strong;
And his eye is scornful,
Threatening and young.
I hold it of little matter
Whether your jewel be of pure water,
A rose diamond or a white,

—

But whether it dazzle me with light.
I care not how you are dressed,
In coarsest weeds or in the best;
Nor whether your name is base or brave:
Nor for the fashion of your behavior;
But whether you charm me,
Bid my bread feed and my fire warm me
And dress up Nature in your favor.
One thing is forever good;
That one thing is Success, —
Dear to the Eumenides,
And to all the heavenly brood.
Who bides at home, nor looks abroad,
Carries the eagles, and masters the sword.

GUY

Mortal mixed of middle clay,
Attempered to the night and day,
Interchangeable with things,
Needs no amulets nor rings.
Guy possessed the talisman
That all things from him began;
And as, of old, Polycrates
Chained the sunshine and the breeze,
So did Guy betimes discover
Fortune was his guard and lover;
In strange junctures, felt, with awe,
His own symmetry with law;
That no mixture could withstand
The virtue of his lucky hand.
He gold or jewel could not lose,
Nor not receive his ample dues.
Fearless Guy had never foes,
He did their weapons decompose.
Aimed at him, the blushing blade
Healed as fast the wounds it made.
If on the foeman fell his gaze,
Him it would straightway blind or craze,
In the street, if he turned round,
His eye the eye 't was seeking found.

It seemed his Genius discreet
Worked on the Maker's own receipt,
And made each tide and element
Stewards of stipend and of rent;
So that the common waters fell
As costly wine into his well.
He had so sped his wise affairs
That he caught Nature in his snares.
Early or late, the falling rain
Arrived in time to swell his grain;
Stream could not so perversely wind

But corn of Guy's was there to grind:
The siroc found it on its way,
To speed his sails, to dry his hay;
And the world's sun seemed to rise
To drudge all day for Guy the wise.
In his rich nurseries, timely skill
Strong crab with nobler blood did fill;
The zephyr in his garden rolled
From plum-trees vegetable gold;
And all the hours of the year
With their own harvest honored were.
There was no frost but welcome came,
Nor freshet, nor midsummer flame.
Belonged to wind and world the toil
And venture, and to Guy the oil.

HAMATREYA

Bulkeley, Hunt, Willard, Hosmer, Meriam, Flint,
Possessed the land which rendered to their toil
Hay, corn, roots, hemp, flax, apples, wool and wood.
Each of these landlords walked amidst his farm,
Saying, 'Tis mine, my children's and my name's.
How sweet the west wind sounds in my own trees!
How graceful climb those shadows on my hill!
I fancy these pure waters and the flags
Know me, as does my dog: we sympathize;
And, I affirm, my actions smack of the soil.'

Where are these men? Asleep beneath their grounds:
And strangers, fond as they, their furrows plough.
Earth laughs in flowers, to see her boastful boys
Earth-proud, proud of the earth which is not theirs;
Who steer the plough, but cannot steer their feet
Clear of the grave.
They added ridge to valley, brook to pond,
And sighed for all that bounded their domain;
'This suits me for a pasture; that's my park;
We must have clay, lime, gravel, granite-ledge,
And misty lowland, where to go for peat.
The land is well, — lies fairly to the south.
'Tis good, when you have crossed the sea and back,
To find the sitfast acres where you left them.'
Ah! the hot owner sees not Death, who adds
Him to his land, a lump of mould the more.
Hear what the Earth says: — [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

EARTH-SONG

‘Mine and yours;
Mine, not yours.
Earth endures;
Stars abide —
Shine down in the old sea;
Old are the shores;
But where are old men?
I who have seen much,
Such have I never seen.

‘The lawyer’s deed
Ran sure,
In tail,
To them, and to their heirs
Who shall succeed,
Without fail,
Forevermore.

‘Here is the land,
Shaggy with wood,
With its old valley,
Mound and flood.
But the heritors? — Fled like the flood’s foam.
The lawyer, and the laws,
And the kingdom,
Clean swept herefrom.

‘They called me theirs,
Who so controlled me;
Yet every one
Wished to stay, and is gone,
How am I theirs,
If they cannot hold me,
But I hold them?’

When I heard the Earth-song
I was no longer brave:

My avarice cooled
Like lust in the chill of the grave.

THE RHODORA: ON BEING ASKED, WHENCE IS THE FLOWER?

In May, when sea-winds pierced our solitudes,
I found the fresh Rhodora in the woods,
Spreading its leafless blooms in a damp nook,
To please the desert and the sluggish brook.
The purple petals, fallen in the pool,
Made the black water with their beauty gay;
Here might the red-bird come his plumes to cool.
And court the flower that cheapens his array.
Rhodora! if the sages ask thee why
This charm is wasted on the earth and sky,
Tell them, dear, that if eyes were made for seeing,
Then Beauty is its own excuse for being:
Why thou wert there, O rival of the rose!
I never thought to ask, I never knew:
But, in my simple ignorance, suppose
The self-same Power that brought me there brought you.

THE HUMBLE-BEE

Burly, dozing humble-bee,
Where thou art is clime for me.
Let them sail for Porto Rique,
Far-off heats through seas to seek;
I will follow thee alone,
Thou animated torrid-zone!
Zigzag steerer, desert cheerer,
Let me chase thy waving lines;
Keep me nearer, me thy hearer,
Singing over shrubs and vines.

Insect lover of the sun,
Joy of thy dominion!
Sailor of the atmosphere;
Swimmer through the waves of air;
Voyager of light and noon;
Epicurean of June;
Wait, I prithee, till I come
Within earshot of thy hum, —
All without is martyrdom.

When the south wind, in May days,
With a net of shining haze
Silvers the horizon wall,
And with softness touching all,
Tints the human countenance
With a color of romance,
And infusing subtle heats,
Turns the sod to violets,
Thou, in sunny solitudes,
Rover of the underwoods,
The green silence dost displace
With thy mellow, breezy bass.

Hot midsummer's petted crone,
Sweet to me thy drowsy tone
Tells of countless sunny hours

Years of countless sunny hours,
Long days, and solid banks of flowers;
Of gulfs of sweetness without bound
In Indian wildernesses found;
Of Syrian peace, immortal leisure,
Firmest cheer, and bird-like pleasure.

Aught unsavory or unclean
Hath my insect never seen;
But violets and bilberry bells,
Maple-sap and daffodels,
Grass with green flag half-mast high,
Succory to match the sky,
Columbine with horn of honey,
Scented fern, and agrimony,
Clover, catchfly, adder's-tongue
And brier-roses, dwelt among;
All beside was unknown waste,
All was picture as he passed.

Wiser far than human seer,
Yellow-breeched philosopher!
Seeing only what is fair,
Sipping only what is sweet,
Thou dost mock at fate and care,
Leave the chaff, and take the wheat.
When the fierce northwestern blast
Cools sea and land so far and fast,
Thou already slumberest deep;
Woe and want thou canst outsleep;
Want and woe, which torture us,
Thy sleep makes ridiculous.

BERRYING

'May be true what I had heard, —
Earth's a howling wilderness,
Truculent with fraud and force,'
Said I, strolling through the pastures,
And along the river-side.
Caught among the blackberry vines,
Feeding on the Ethiops sweet,
Pleasant fancies overtook me.
I said, 'What influence me preferred,
Elect, to dreams thus beautiful?'
The vines replied, 'And didst thou deem
No wisdom from our berries went?'

THE SNOW-STORM

Announced by all the trumpets of the sky,
Arrives the snow, and, driving o'er the fields,
Seems nowhere to alight: the whited air
Hides hills and woods, the river, and the heaven,
And veils the farm-house at the garden's end.
The sled and traveller stopped, the courier's feet
Delayed, all friends shut out, the housemates sit
Around the radiant fireplace, enclosed
In a tumultuous privacy of storm.

Come see the north wind's masonry.
Out of an unseen quarry
Furnished with tile, the fierce artificer
Curves his white bastions with projected roof
Round every windward stake, or tree, or door.
Speeding, the myriad-handed, his wild work
So fanciful, so savage, nought cares he
For number or proportion. Mockingly,
On coop or kennel he hangs Parian wreaths;
A swan-like form invests the hidden thorn;
Fills up the farmer's lane from wall to wall,
Maugre the farmer's sighs; and at the gate
A tapering turret overtops the work.
And when his hours are numbered, and the world
Is all his own, retiring, as he were not,
Leaves, when the sun appears, astonished Art
To mimic in slow structures, stone by stone,
Built in an age, the mad wind's night-work,
The frolic architecture of the snow.

WOODNOTES I

1

When the pine tosses its cones
To the song of its waterfall tones,
Who speeds to the woodland walks?
To birds and trees who talks?
Caesar of his leafy Rome,
There the poet is at home.
He goes to the river-side, —
Not hook nor line hath he;
He stands in the meadows wide, —
Nor gun nor scythe to see.
Sure some god his eye enchants:
What he knows nobody wants.
In the wood he travels glad,
Without better fortune had,
Melancholy without bad.
Knowledge this man prizes best
Seems fantastic to the rest:
Pondering shadows, colors, clouds,
Grass-buds and caterpillar-shrouds,
Boughs on which the wild bees settle,
Tints that spot the violet's petal,
Why Nature loves the number five,
And why the star-form she repeats:
Lover of all things alive,
Wonderer at all he meets,
Wonderer chiefly at himself,
Who can tell him what he is?
Or how meet in human elf
Coming and past eternities?

2

And such I knew, a forest seer,
A minstrel of the natural year,

Foreteller of the vernal ides,
Wise harbinger of spheres and tides,
A lover true, who knew by heart
Each joy the mountain dales impart;
It seemed that Nature could not raise
A plant in any secret place,
In quaking bog, on snowy hill,
Beneath the grass that shades the rill,
Under the snow, between the rocks,
In damp fields known to bird and fox.
But he would come in the very hour
It opened in its virgin bower,
As if a sunbeam showed the place,
And tell its long-descended race.
It seemed as if the breezes brought him,
It seemed as if the sparrows taught him;
As if by secret sight he knew
Where, in far fields, the orchis grew.
Many haps fall in the field
Seldom seen by wishful eyes,
But all her shows did Nature yield,
To please and win this pilgrim wise.
He saw the partridge drum in the woods;
He heard the woodcock's evening hymn;
He found the tawny thrushes' broods;
And the shy hawk did wait for him;
What others did at distance hear,
And guessed within the thicket's gloom,
Was shown to this philosopher,
And at his bidding seemed to come.

3

In unploughed Maine he sought the lumberers' gang
Where from a hundred lakes young rivers sprang;
He trode the unplanted forest floor, whereon
The all-seeing sun for ages hath not shone;
Where feeds the moose, and walks the surly bear,
And up the tall mast runs the woodpecker.
He saw beneath dim aisles, in odorous beds

He saw beneath him aisles, in odorous beds,
 The slight Linnaea hang its twin-born heads,
 And blessed the monument of the man of flowers,
 Which breathes his sweet fame through the northern bowers.
 He heard, when in the grove, at intervals,
 With sudden roar the aged pine-tree falls, —
 One crash, the death-hymn of the perfect tree,
 Declares the close of its green century.
 Low lies the plant to whose creation went
 Sweet influence from every element;
 Whose living towers the years conspired to build,
 Whose giddy top the morning loved to gild.
 Through these green tents, by eldest Nature dressed,
 He roamed, content alike with man and beast.
 Where darkness found him he lay glad at night;
 There the red morning touched him with its light.
 Three moons his great heart him a hermit made,
 So long he roved at will the boundless shade.
 The timid it concerns to ask their way,
 And fear what foe in caves and swamps can stray,
 To make no step until the event is known,
 And ills to come as evils past bemoan.
 Not so the wise; no coward watch he keeps
 To spy what danger on his pathway creeps;
 Go where he will, the wise man is at home,
 His hearth the earth, — his hall the azure dome;
 Where his clear spirit leads him, there's his road
 By God's own light illumined and foreshowed.

4

'T was one of the charmèd days
 When the genius of God doth flow;
 The wind may alter twenty ways,
 A tempest cannot blow;
 It may blow north, it still is warm;
 Or south, it still is clear;
 Or east, it smells like a clover-farm;
 Or west, no thunder fear.
 The musing neasant. lowly great.

Beside the forest water sate;
The rope-like pine-roots crosswise grown
Composed the network of his throne;
The wide lake, edged with sand and grass,
Was burnished to a floor of glass,
Painted with shadows green and proud
Of the tree and of the cloud.
He was the heart of all the scene;
On him the sun looked more serene;
To hill and cloud his face was known, —
It seemed the likeness of their own;
They knew by secret sympathy
The public child of earth and sky.
'You ask,' he said, 'what guide
Me through trackless thickets led,
Through thick-stemmed woodlands rough and wide.
I found the water's bed.
The watercourses were my guide;
I travelled grateful by their side,
Or through their channel dry;
They led me through the thicket damp,
Through brake and fern, the beavers' camp,
Through beds of granite cut my road,
And their resistless friendship showed.
The falling waters led me,
The foodful waters fed me,
And brought me to the lowest land,
Unerring to the ocean sand.
The moss upon the forest bark
Was pole-star when the night was dark;
The purple berries in the wood
Supplied me necessary food;
For Nature ever faithful is
To such as trust her faithfulness.
When the forest shall mislead me,
When the night and morning lie,
When sea and land refuse to feed me,
'T will be time enough to die;
Then will yet my mother yield

A pillow in her greenest field,
Nor the June flowers scorn to cover
The clay of their departed lover.'

WOODNOTES II

*As sunbeams stream through liberal space And nothing jostle or displace, So
waved the pine-tree through my thought And fanned the dreams it never brought.*

‘Whether is better, the gift or the donor?
Come to me,’
Quoth the pine-tree,
‘I am the giver of honor.
My garden is the cloven rock,
And my manure the snow;
And drifting sand-heaps feed my stock,
In summer’s scorching glow.
He is great who can live by me:
The rough and bearded forester
Is better than the lord;
God fills the script and canister,
Sin piles the loaded board.
The lord is the peasant that was,
The peasant the lord that shall be;
The lord is hay, the peasant grass,
One dry, and one the living tree.
Who liveth by the ragged pine
Foundeth a heroic line;
Who liveth in the palace hall
Waneth fast and spendeth all.
He goes to my savage haunts,
With his chariot and his care;
My twilight realm he disenchants,
And finds his prison there.

‘What prizes the town and the tower?
Only what the pine-tree yields;
Sinew that subdued the fields;
The wild-eyed boy, who in the woods
Chants his hymn to hills and floods,
Whom the city’s poisoning spleen
Made not pale, or fat, or lean;
Whom the rain and the wind nuzzeth

whom the rain and the wind purgeu,
Whom the dawn and the day-star urgeth,
In whose cheek the rose-leaf blusheth,
In whose feet the lion rusheth,
Iron arms, and iron mould,
That know not fear, fatigue, or cold.
I give my rafters to his boat,
My billets to his boiler's throat,
And I will swim the ancient sea
To float my child to victory,
And grant to dwellers with the pine
Dominion o'er the palm and vine.
Who leaves the pine-tree, leaves his friend,
Unnerves his strength, invites his end.
Cut a bough from my parent stem,
And dip it in thy porcelain vase;
A little while each russet gem
Will swell and rise with wonted grace;
But when it seeks enlarged supplies,
The orphan of the forest dies.
Whoso walks in solitude
And inhabiteth the wood,
Choosing light, wave, rock and bird,
Before the money-loving herd,
Into that forester shall pass,
From these companions, power and grace.
Clean shall he be, without, within,
From the old adhering sin,
All ill dissolving in the light
Of his triumphant piercing sight:
Not vain, sour, nor frivolous;
Not mad, athirst, nor garrulous;
Grave, chaste, contented, though retired,
And of all other men desired.
On him the light of star and moon
Shall fall with purer radiance down;
All constellations of the sky
Shed their virtue through his eye.
Him Nature giveth for defence
His formidable innocence:

HIS FORMIDABLE INNOCENCE,
The mounting sap, the shells, the sea,
All spheres, all stones, his helpers be;
He shall meet the speeding year,
Without wailing, without fear;
He shall be happy in his love,
Like to like shall joyful prove;
He shall be happy whilst he wooes,
Muse-born, a daughter of the Muse.
But if with gold she bind her hair,
And deck her breast with diamond,
Take off thine eyes, thy heart forbear,
Though thou lie alone on the ground.

‘Heed the old oracles,
Ponder my spells;
Song wakes in my pinnacles
When the wind swells.
Soundeth the prophetic wind,
The shadows shake on the rock behind,
And the countless leaves of the pine are strings
Tuned to the lay the wood-god sings.
Hearken! Hearken!
If thou wouldst know the mystic song
Chanted when the sphere was young.
Aloft, abroad, the paeon swells;
O wise man! hear’st thou half it tells?
O wise man! hear’st thou the least part?
’Tis the chronicle of art.
To the open ear it sings
Sweet the genesis of things,
Of tendency through endless ages,
Of star-dust, and star-pilgrimages,
Of rounded worlds, of space and time,
Of the old flood’s subsiding slime,
Of chemic matter, force and form,
Of poles and powers, cold, wet, and warm:
The rushing metamorphosis
Dissolving all that fixture is,

Melts things that be to things that seem,
And solid nature to a dream.
O, listen to the undersong,
The ever old, the ever young;
And, far within those cadent pauses,
The chorus of the ancient Causes!
Delights the dreadful Destiny
To fling his voice into the tree,
And shock thy weak ear with a note
Breathed from the everlasting throat.
In music he repeats the pang
Whence the fair flock of Nature sprang.
O mortal! thy ears are stones;
These echoes are laden with tones
Which only the pure can hear;
Thou canst not catch what they recite
Of Fate and Will, of Want and Right,
Of man to come, of human life,
Of Death and Fortune, Growth and Strife.'

Once again the pine-tree sung: —
'Speak not thy speech my boughs among:
Put off thy years, wash in the breeze;
My hours are peaceful centuries.
Talk no more with feeble tongue;
No more the fool of space and time,
Come weave with mine a nobler rhyme.
Only thy Americans
Can read thy line, can meet thy glance,
But the runes that I rehearse
Understands the universe;
The least breath my boughs which tossed
Brings again the Pentecost;
To every soul resounding clear
In a voice of solemn cheer, —
"Am I not thine? Are not these thine?"
And they reply, "Forever mine!"
My branches speak Italian,
English, German, Basque, Castilian,

Mountain speech to Highlanders,
Ocean tongues to islanders,
To Fin and Lap and swart Malay,
To each his bosom-secret say.

‘Come learn with me the fatal song
Which knits the world in music strong,
Come lift thine eyes to lofty rhymes,
Of things with things, of times with times,
Primal chimes of sun and shade,
Of sound and echo, man and maid,
The land reflected in the flood,
Body with shadow still pursued.
For Nature beats in perfect tune,
And rounds with rhyme her every rune,
Whether she work in land or sea,
Or hide underground her alchemy.
Thou canst not wave thy staff in air,
Or dip thy paddle in the lake,
But it carves the bow of beauty there,
And the ripples in rhymes the oar forsake.
The wood is wiser far than thou;
The wood and wave each other know
Not unrelated, unaffied,
But to each thought and thing allied,
Is perfect Nature’s every part,
Rooted in the mighty Heart,
But thou, poor child! unbound, unrhymed,
Whence camest thou, misplaced, mistimed,
Whence, O thou orphan and defrauded?
Is thy land peeled, thy realm marauded?
Who thee divorced, deceived and left?
Thee of thy faith who hath bereft,
And torn the ensigns from thy brow,
And sunk the immortal eye so low?
Thy cheek too white, thy form too slender,
Thy gait too slow, thy habits tender
For royal man; — they thee confess
An exile from the wilderness, —

The hills where health with health agrees,
And the wise soul expels disease.
Hark! in thy ear I will tell the sign
By which thy hurt thou may'st divine.
When thou shalt climb the mountain cliff,
Or see the wide shore from thy skiff,
To thee the horizon shall express
But emptiness on emptiness;
There lives no man of Nature's worth
In the circle of the earth;
And to thine eye the vast skies fall,
Dire and satirical,
On clucking hens and prating fools,
On thieves, on drudges and on dolls.
And thou shalt say to the Most High,
"Godhead! all this astronomy,
And fate and practice and invention,
Strong art and beautiful pretension,
This radiant pomp of sun and star,
Throes that were, and worlds that are,
Behold! were in vain and in vain; —
It cannot be, — I will look again.
Surely now will the curtain rise,
And earth's fit tenant me surprise; —
But the curtain doth *not* rise,
And Nature has miscarried wholly
Into failure, into folly."

'Alas! thine is the bankruptcy,
Blessed Nature so to see.
Come, lay thee in my soothing shade,
And heal the hurts which sin has made.
I see thee in the crowd alone;
I will be thy companion.
Quit thy friends as the dead in doom,
And build to them a final tomb;
Let the starred shade that nightly falls
Still celebrate their funerals,
And the bell of beetle and of bee

Knell their melodious memory.
Behind thee leave thy merchandise,
Thy churches and thy charities;
And leave thy peacock wit behind;
Enough for thee the primal mind
That flows in streams, that breathes in wind:
Leave all thy pedant lore apart;
God hid the whole world in thy heart.
Love shuns the sage, the child it crowns,
Gives all to them who all renounce.
The rain comes when the wind calls;
The river knows the way to the sea;
Without a pilot it runs and falls,
Blessing all lands with its charity;
The sea tosses and foams to find
Its way up to the cloud and wind;
The shadow sits close to the flying ball;
The date fails not on the palm-tree tall;
And thou, — go burn thy wormy pages, —
Shalt outsee seers, and outwit sages.
Oft didst thou thread the woods in vain
To find what bird had piped the strain: —
Seek not, and the little eremite
Flies gayly forth and sings in sight.

‘Hearken once more!
I will tell thee the mundane lore.
Older am I than thy numbers wot,
Change I may, but I pass not.
Hitherto all things fast abide,
And anchored in the tempest ride.
Trenchant time behoves to hurry
All to yeon and all to bury:
All the forms are fugitive,
But the substances survive.
Ever fresh the broad creation,
A divine improvisation,
From the heart of God proceeds,
A single will, a million deeds.
Once slapt the world an egg of stone

Once slept the world an egg of stone,
And pulse, and sound, and light was none;
And God said, "Throb!" and there was motion
And the vast mass became vast ocean.
Onward and on, the eternal Pan,
Who layeth the world's incessant plan,
Halteth never in one shape,
But forever doth escape,
Like wave or flame, into new forms
Of gem, and air, of plants, and worms.
I, that to-day am a pine,
Yesterday was a bundle of grass.
He is free and libertine,
Pouring of his power the wine
To every age, to every race;
Unto every race and age
He emptieth the beverage;
Unto each, and unto all,
Maker and original.
The world is the ring of his spells,
And the play of his miracles.
As he giveth to all to drink,
Thus or thus they are and think.
With one drop sheds form and feature;
With the next a special nature;
The third adds heat's indulgent spark;
The fourth gives light which eats the dark;
Into the fifth himself he flings,
And conscious Law is King of kings.
As the bee through the garden ranges,
From world to world the godhead changes;
As the sheep go feeding in the waste,
From form to form He maketh haste;
This vault which glows immense with light
Is the inn where he lodges for a night.
What reck's such Traveller if the bowers
Which bloom and fade like meadow flowers
A bunch of fragrant lilies be,
Or the stars of eternity?
Alike to him the better, the worse —

THOU SEEK'ST HIM THE BETTER, THE WORSE,
The glowing angel, the outcast corse.
Thou metest him by centuries,
And lo! he passes like the breeze;
Thou seek'st in globe and galaxy,
He hides in pure transparency;
Thou askest in fountains and in fires,
He is the essence that inquires.
He is the axis of the star;
He is the sparkle of the spar;
He is the heart of every creature;
He is the meaning of each feature;
And his mind is the sky.
Than all it holds more deep, more high.'

MONADNOC

Thousand minstrels woke within me,
‘Our music’s in the hills;’ —
Gayest pictures rose to win me,
Leopard-colored rills.
‘Up! — If thou knew’st who calls
To twilight parks of beech and pine,
High over the river intervals,
Above the ploughman’s highest line,
Over the owner’s farthest walls!
Up! where the airy citadel
O’erlooks the surging landscape’s swell!
Let not unto the stones the Day
Her lily and rose, her sea and land display.
Read the celestial sign!
Lo! the south answers to the north;
Bookworm, break this sloth urbane;
A greater spirit bids thee forth
Than the gray dreams which thee detain.
Mark how the climbing Oreads
Beckon thee to their arcades;
Youth, for a moment free as they,
Teach thy feet to feel the ground,
Ere yet arrives the wintry day
When Time thy feet has bound.
Take the bounty of thy birth,
Taste the lordship of the earth.’

I heard, and I obeyed, —
Assured that he who made the claim,
Well known, but loving not a name,
Was not to be gainsaid.
Ere yet the summoning voice was still,
I turned to Cheshire’s haughty hill.
From the fixed cone the cloud-rack flowed
Like ample banner flung abroad
To all the dwellers in the plains

Round about, a hundred miles,
With salutation to the sea and to the bordering isles.
In his own loom's garment dressed,
By his proper bounty blessed,
Fast abides this constant giver,
Pouring many a cheerful river;
To far eyes, an aerial isle
Unploughed, which finer spirits pile,
Which morn and crimson evening paint
For bard, for lover and for saint;
An eyemark and the country's core,
Inspirer, prophet evermore;
Pillar which God aloft had set
So that men might it not forget;
It should be their life's ornament,
And mix itself with each event;
Gauge and calendar and dial,
Weatherglass and chemic phial,
Garden of berries, perch of birds,
Pasture of pool-haunting herds,
Graced by each change of sum untold,
Earth-baking heat, stone-cleaving cold.

The Titan heeds his sky-affairs,
Rich rents and wide alliance shares;
Mysteries of color daily laid
By morn and eve in light and shade;
And sweet varieties of chance,
And the mystic seasons' dance;
And thief-like step of liberal hours
Thawing snow-drift into flowers.
O, wondrous craft of plant and stone
By eldest science wrought and shown!

'Happy,' I said, 'whose home is here!
Fair fortunes to the mountaineer!
Boon Nature to his poorest shed
Has royal pleasure-grounds outspread.'
Intent, I searched the region round,

And in low hut the dweller round:
Woe is me for my hope's downfall!
Is yonder squalid peasant all
That this proud nursery could breed
For God's vicegerency and stead?
Time out of mind, this forge of ores;
Quarry of spars in mountain pores;
Old cradle, hunting-ground and bier
Of wolf and otter, bear and deer;
Well-built abode of many a race;
Tower of observance searching space;
Factory of river and of rain;
Link in the Alps' globe-girding chain;
By million changes skilled to tell
What in the Eternal standeth well,
And what obedient Nature can; —
Is this colossal talisman
Kindly to plant and blood and kind,
But speechless to the master's mind?
I thought to find the patriots
In whom the stock of freedom roots;
To myself I oft recount
Tales of many a famous mount, —
Wales, Scotland, Uri, Hungary's dells:
Bards, Roys, Scanderbegs and Tells;
And think how Nature in these towers
Uplifted shall condense her powers,
And lifting man to the blue deep
Where stars their perfect courses keep,
Like wise preceptor, lure his eye
To sound the science of the sky,
And carry learning to its height
Of untried power and sane delight:
The Indian cheer, the frosty skies,
Rear purer wits, inventive eyes, —
Eyes that frame cities where none be,
And hands that stablish what these see:
And by the moral of his place
Hint summits of heroic grace;
Man in these crags a fastness find

man in these crags a fastness find
To fight pollution of the mind;
In the wide thaw and ooze of wrong,
Adhere like this foundation strong,
The insanity of towns to stem
With simpleness for stratagem.
But if the brave old mould is broke,
And end in churls the mountain folk
In tavern cheer and tavern joke,
Sink, O mountain, in the swamp!
Hide in thy skies, O sovereign lamp!
Perish like leaves, the highland breed
No sire survive, no son succeed!

Soft! let not the offended muse
Toil's hard hap with scorn accuse.
Many hamlets sought I then,
Many farms of mountain men.
Rallying round a parish steeple
Nestle warm the highland people,
Coarse and boisterous, yet mild,
Strong as giant, slow as child.
Sweat and season are their arts,
Their talismans are ploughs and carts;
And well the youngest can command
Honey from the frozen land;
With cloverheads the swamp adorn,
Change the running sand to corn;
For wolf and fox, bring lowing herds,
And for cold mosses, cream and curds:
Weave wood to canisters and mats;
Drain sweet maple juice in vats.
No bird is safe that cuts the air
From their rifle or their snare;
No fish, in river or in lake,
But their long hands it thence will take;
Whilst the country's flinty face,
Like wax, their fashioning skill betrays,
To fill the hollows, sink the hills,
Bridge gulfs. drain swamps. build dams and mills.

And fit the bleak and howling waste
For homes of virtue, sense and taste.
The World-soul knows his own affair,
Forelooking, when he would prepare
For the next ages, men of mould
Well embodied, well ensouled,
He cools the present's fiery glow,
Sets the life-pulse strong but slow:
Bitter winds and fasts austere
His quarantines and grottoes, where
He slowly cures decrepit flesh,
And brings it infantile and fresh.
Toil and tempest are the toys
And games to breathe his stalwart boys:
They bide their time, and well can prove,
If need were, their line from Jove;
Of the same stuff, and so allayed,
As that whereof the sun is made,
And of the fibre, quick and strong,
Whose throbs are love, whose thrills are song.

Now in sordid weeds they sleep,
In dulness now their secret keep;
Yet, will you learn our ancient speech,
These the masters who can teach.
Fourscore or a hundred words
All their vocal muse affords;
But they turn them in a fashion
Past clerks' or statesmen's art or passion.
I can spare the college bell,
And the learned lecture, well;
Spare the clergy and libraries,
Institutes and dictionaries,
For that hardy English root
Thrives here, unvalued, underfoot.
Rude poets of the tavern hearth,
Squandering your unquoted mirth,
Which keeps the ground and never soars,
While Jake retorts and Reuben roars;

Scoff of yeoman strong and stark,
Goes like bullet to its mark;
While the solid curse and jeer
Never balk the waiting ear.

On the summit as I stood,
O'er the floor of plain and flood
Seemed to me, the towering hill
Was not altogether still,
But a quiet sense conveyed:
If I err not, thus it said: —

'Many feet in summer seek,
Oft, my far-appearing peak;
In the dreaded winter time,
None save dappling shadows climb,
Under clouds, my lonely head,
Old as the sun, old almost as the shade;
And comest thou
To see strange forests and new snow,
And tread uplifted land?
And leavest thou thy lowland race,
Here amid clouds to stand?
And wouldst be my companion
Where I gaze, and still shall gaze,
Through tempering nights and flashing days,
When forests fall, and man is gone,
Over tribes and over times,
At the burning Lyre,
Nearing me,
With its stars of northern fire,
In many a thousand years?

'Gentle pilgrim, if thou know
The gamut old of Pan,
And how the hills began,
The frank blessings of the hill
Fall on thee, as fall they will.

'Let him heed who can and will;
Enchantment fixed me here
To stand the hurts of time, until
In mightier chant I disappear.

If thou trowest
How the chemic eddies play,
Pole to pole, and what they say;
And that these gray crags
Not on crags are hung,
But beads are of a rosary
On prayer and music strung;
And, credulous, through the granite seeming,
Seest the smile of Reason beaming; —
Can thy style-discerning eye
The hidden-working Builder spy,
Who builds, yet makes no chips, no din,
With hammer soft as snowflake's flight; —
Knowest thou this?
O pilgrim, wandering not amiss!
Already my rocks lie light,
And soon my cone will spin.

'For the world was built in order,
And the atoms march in tune;
Rhyme the pipe, and Time the warder,
The sun obeys them and the moon.
Orb and atom forth they prance,
When they hear from far the rune;
None so backward in the troop,
When the music and the dance
Reach his place and circumstance,
But knows the sun-creating sound,
And, though a pyramid, will bound.

'Monadnoc is a mountain strong,
Tall and good my kind among;
But well I know, no mountain can,
Zion or Meru, measure with man.
For it is on zodiacs writ,

A monument in fact to wit.

AGAMANT IS SOIT TO WIT:

And when the greater comes again
With my secret in his brain,
I shall pass, as glides my shadow
Daily over hill and meadow.

‘Through all time, in light, in gloom
Well I hear the approaching feet
On the flinty pathway beat
Of him that cometh, and shall come;
Of him who shall as lightly bear
My daily load of woods and streams,
As doth this round sky-cleaving boat
Which never strains its rocky beams;
Whose timbers, as they silent float,
Alps and Caucasus uprear,
And the long Alleghanies here,
And all town-sprinkled lands that be,
Sailing through stars with all their history.

‘Every morn I lift my head,
See New England underspread,
South from Saint Lawrence to the Sound,
From Katskill east to the sea-bound.
Anchored fast for many an age,
I await the bard and sage,
Who, in large thoughts, like fair pearl-seed,
Shall string Monadnoc like a bead.
Comes that cheerful troubadour,
This mound shall throb his face before,
As when, with inward fires and pain,
It rose a bubble from the plain.
When he cometh, I shall shed,
From this wellspring in my head,
Fountain-drop of spicier worth
Than all vintage of the earth.
There’s fruit upon my barren soil
Costlier far than wine or oil.
There’s a berry blue and gold, —
Autumn-ripe. its juices hold

Sparta's stoutness, Bethlehem's heart,
Asia's rancor, Athens' art,
Slowsure Britain's secular might,
And the German's inward sight.
I will give my son to eat
Best of Pan's immortal meat,
Bread to eat, and juice to drain;
So the coinage of his brain
Shall not be forms of stars, but stars,
Nor pictures pale, but Jove and Mars,
He comes, but not of that race bred
Who daily climb my specular head.
Oft as morning wreathes my scarf,
Fled the last plumule of the Dark,
Pants up hither the spruce clerk
From South Cove and City Wharf.
I take him up my rugged sides,
Half-repentant, scant of breath, —
Bead-eyes my granite chaos show,
And my midsummer snow:
Open the daunting map beneath, —
All his county, sea and land,
Dwarfed to measure of his hand;
His day's ride is a furlong space,
His city-tops a glimmering haze.
I plant his eyes on the sky-hoop bounding;
"See there the grim gray rounding
Of the bullet of the earth
Whereon ye sail,
Tumbling steep
In the uncontinented deep."
He looks on that, and he turns pale.
'T is even so, this treacherous kite,
Farm-furrowed, town-incrusted sphere,
Thoughtless of its anxious freight,
Plunges eyeless on forever;
And he, poor parasite,
Cooped in a ship he cannot steer, —
Who is the captain he knows not,

Port or pilot trows not, —
Risk or ruin he must share.
I scowl on him with my cloud,
With my north wind chill his blood;
I lame him, clattering down the rocks;
And to live he is in fear.
Then, at last, I let him down
Once more into his dapper town,
To chatter, frightened, to his clan
And forget me if he can.'

As in the old poetic fame
The gods are blind and lame,
And the simular despite
Betrays the more abounding might,
So call not waste that barren cone
Above the floral zone,
Where forests starve:
It is pure use; —
What sheaves like those which here we glean and bind
Of a celestial Ceres and the Muse?

Ages are thy days,
Thou grand affirmer of the present tense,
And type of permanence!
Firm ensign of the fatal Being,
Amid these coward shapes of joy and grief,
That will not bide the seeing!

Hither we bring
Our insect miseries to thy rocks;
And the whole flight, with folded wing,
Vanish, and end their murmuring, —
Vanish beside these dedicated blocks,
Which who can tell what mason laid?
Spoils of a front none need restore,
Replacing frieze and architrave; —
Where flowers each stone rosette and metope brave;
Still is the haughty pile erect
Of the old building Intellect

Of the old building intellect.

Complement of human kind,
Holding us at vantage still,
Our sumptuous indigence,
O barren mound, thy plenties fill!
We fool and prate;
Thou art silent and sedate.
To myriad kinds and times one sense
The constant mountain doth dispense;
Shedding on all its snows and leaves,
One joy it joys, one grief it grieves.
Thou seest, O watchman tall,
Our towns and races grow and fall,
And imagest the stable good
For which we all our lifetime grope,
In shifting form the formless mind,
And though the substance us elude,
We in thee the shadow find.
Thou, in our astronomy
An opaker star,
Seen haply from afar,
Above the horizon's hoop,
A moment, by the railway troop,
As o'er some bolder height they speed, —
By circumspect ambition,
By errant gain,
By feasters and the frivolous, —
Recallest us,
And makest sane.
Mute orator! well skilled to plead,
And send conviction without phrase,
Thou dost succor and remede
The shortness of our days,
And promise, on thy Founder's truth,
Long morrow to this mortal youth.

FABLE

The mountain and the squirrel
Had a quarrel,
And the former called the latter 'Little Prig;
Bun replied,
'You are doubtless very big;
But all sorts of things and weather
Must be taken in together,
To make up a year
And a sphere.
And I think it no disgrace
To occupy my place.
If I'm not so large as you,
You are not so small as I,
And not half so spry.
I'll not deny you make
A very pretty squirrel track;
Talents differ; all is well and wisely put;
If I cannot carry forests on my back,
Neither can you crack a nut.'

ODE INSCRIBED TO W.H. CHANNING

Though loath to grieve
The evil time's sole patriot,
I cannot leave
My honied thought
For the priest's cant,
Or statesman's rant.

If I refuse
My study for their politique,
Which at the best is trick,
The angry Muse
Puts confusion in my brain.

But who is he that prates
Of the culture of mankind,
Of better arts and life?
Go, blindworm, go,
Behold the famous States
Harrying Mexico
With rifle and with knife!

Or who, with accent bolder,
Dare praise the freedom-loving mountaineer?
I found by thee, O rushing Contoocook!
And in thy valleys, Agiochook!
The jackals of the negro-holder.

The God who made New Hampshire
Taunted the lofty land
With little men; —
Small bat and wren
House in the oak: —
If earth-fire cleave
The upheaved land, and bury the folk,
The southern crocodile would grieve.
Virtue palter; Right is hence;
Freedom praised. but hid:

Funeral eloquence
Rattles the coffin-lid.

What boots thy zeal,
O glowing friend,
That would indignant rend
The northland from the south?
Wherefore? to what good end?
Boston Bay and Bunker Hill
Would serve things still; —
Things are of the snake.

The horseman serves the horse,
The neatherd serves the neat,
The merchant serves the purse,
The eater serves his meat;
'T is the day of the chattel,
Web to weave, and corn to grind;
Things are in the saddle,
And ride mankind.

There are two laws discrete,
Not reconciled, —
Law for man, and law for thing;
The last builds town and fleet,
But it runs wild,
And doth the man unking.

'T is fit the forest fall,
The steep be graded,
The mountain tunnelled,
The sand shaded,
The orchard planted,
The glebe tilled,
The prairie granted,
The steamer built.

Let man serve law for man;
Live for friendship, live for love,
For truth's and harmony's behoof.

FOR truth and harmony's behoof,
The state may follow how it can,
As Olympus follows Jove.

Yet do not I implore
The wrinkled shopman to my sounding woods,
Nor bid the unwilling senator
Ask votes of thrushes in the solitudes.
Every one to his chosen work; —
Foolish hands may mix and mar;
Wise and sure the issues are.
Round they roll till dark is light,
Sex to sex, and even to odd; —
The over-god
Who marries Right to Might,
Who peoples, unpeoples, —
He who exterminates
Races by stronger races,
Black by white faces, —
Knows to bring honey
Out of the lion;
Grafts gentlest scion
On pirate and Turk.

The Cossack eats Poland,
Like stolen fruit;
Her last noble is ruined,
Her last poet mute:
Straight, into double band
The victors divide;
Half for freedom strike and stand; —
The astonished Muse finds thousands at her side.

ASTRAEA

Each the herald is who wrote
His rank, and quartered his own coat.
There is no king nor sovereign state
That can fix a hero's rate;
Each to all is venerable,
Cap-a-pie invulnerable,
Until he write, where all eyes rest,
Slave or master on his breast.
I saw men go up and down,
In the country and the town,
With this tablet on their neck,
'Judgment and a judge we seek.'
Not to monarchs they repair,
Nor to learned jurist's chair;
But they hurry to their peers,
To their kinsfolk and their dears;
Louder than with speech they pray, —
'What am I? companion, say.'
And the friend not hesitates
To assign just place and mates;
Answers not in word or letter,
Yet is understood the better;
Each to each a looking-glass,
Reflects his figure that doth pass.
Every wayfarer he meets
What himself declared repeats,
What himself confessed records,
Sentences him in his words;
The form is his own corporal form,
And his thought the penal worm.
Yet shine forever virgin minds,
Loved by stars and purest winds,
Which, o'er passion throned sedate,
Have not hazarded their state;
Disconcert the searching spy,
Rendering to a curious eye

The durance of a granite ledge.
To those who gaze from the sea's edge
It is there for benefit;
It is there for purging light;
There for purifying storms;
And its depths reflect all forms;
It cannot parley with the mean, —
Pure by impure is not seen.
For there's no sequestered grot,
Lone mountain tarn, or isle forgot,
But Justice, journeying in the sphere,
Daily stoops to harbor there.

ÉTIENNE DE LA BOÉCE

I serve you not, if you I follow,
Shadowlike, o'er hill and hollow;
And bend my fancy to your leading,
All too nimble for my treading.
When the pilgrimage is done,
And we've the landscape overrun,
I am bitter, vacant, thwarted,
And your heart is unsupported.
Vainly valiant, you have missed
The manhood that should yours resist, —
Its complement; but if I could,
In severe or cordial mood,
Lead you rightly to my altar,
Where the wisest Muses falter,
And worship that world-warming spark
Which dazzles me in midnight dark,
Equalizing small and large,
While the soul it doth surcharge,
Till the poor is wealthy grown,
And the hermit never alone, —
The traveller and the road seem one
With the errand to be done, —
That were a man's and lover's part,
That were Freedom's whitest chart.

COMPENSATION

Why should I keep holiday
When other men have none?
Why but because, when these are gay,
I sit and mourn alone?

And why, when mirth unseals all tongues,
Should mine alone be dumb?
Ah! late I spoke to silent throngs,
And now their hour is come.

[*Alphabetical List of Poems*](#)

FORBEARANCE

Hast thou named all the birds without a gun?
Loved the wood-rose, and left it on its stalk?
At rich men's tables eaten bread and pulse?
Unarmed, faced danger with a heart of trust?
And loved so well a high behavior,
In man or maid, that thou from speech refrained,
Nobility more nobly to repay?
O, be my friend, and teach me to be thine!

THE PARK

The prosperous and beautiful
To me seem not to wear
The yoke of conscience masterful,
Which galls me everywhere.

I cannot shake off the god;
On my neck he makes his seat;
I look at my face in the glass, —
My eyes his eyeballs meet.

Enchanters! Enchantresses!
Your gold makes you seem wise;
The morning mist within your grounds
More proudly rolls, more softly lies.

Yet spake yon purple mountain,
Yet said yon ancient wood,
That Night or Day, that Love or Crime,
Leads all souls to the Good.

FORERUNNERS

Long I followed happy guides,
I could never reach their sides;
Their step is forth, and, ere the day
Breaks up their leaguer, and away.
Keen my sense, my heart was young,
Right good-will my sinews strung,
But no speed of mine avails
To hunt upon their shining trails.
On and away, their hasting feet
Make the morning proud and sweet;
Flowers they strew, — I catch the scent;
Or tone of silver instrument
Leaves on the wind melodious trace;
Yet I could never see their face.
On eastern hills I see their smokes,
Mixed with mist by distant lochs.
I met many travellers
Who the road had surely kept;
They saw not my fine revellers, —
These had crossed them while they slept.
Some had heard their fair report,
In the country or the court.
Fleetest couriers alive
Never yet could once arrive,
As they went or they returned,
At the house where these sojourned.
Sometimes their strong speed they slacken,
Though they are not overtaken;
In sleep their jubilant troop is near, —
I tuneful voices overhear;
It may be in wood or waste, —
At unawares 't is come and past.
Their near camp my spirit knows
By signs gracious as rainbows.
I thenceforward and long after
Listen for their harp-like laughter,

And carry in my heart, for days,
Peace that hallows rudest ways.

SURSUM CORDA

Seek not the spirit, if it hide
Inexorable to thy zeal:
Trembler, do not whine and chide:
Art thou not also real?
Stoop not then to poor excuse;
Turn on the accuser roundly; say,
‘Here am I, here will I abide
Forever to myself soothfast;
Go thou, sweet Heaven, or at thy pleasure stay!’
Already Heaven with thee its lot has cast,
For only it can absolutely deal.

ODE TO BEAUTY

Who gave thee, O Beauty,
The keys of this breast, —
Too credulous lover
Of blest and unblest?
Say, when in lapsed ages
Thee knew I of old?
Or what was the service
For which I was sold?
When first my eyes saw thee,
I found me thy thrall,
By magical drawings,
Sweet tyrant of all!
I drank at thy fountain
False waters of thirst;
Thou intimate stranger,
Thou latest and first!
Thy dangerous glances
Make women of men;
New-born, we are melting
Into nature again.

Lavish, lavish promiser,
Nigh persuading gods to err!
Guest of million painted forms,
Which in turn thy glory warms!
The frailest leaf, the mossy bark,
The acorn's cup, the raindrop's arc,
The swinging spider's silver line,
The ruby of the drop of wine,
The shining pebble of the pond,
Thou inscribest with a bond,
In thy momentary play,
Would bankrupt nature to repay.

Ah, what avails it
To hide or to shun
Whom the Infinite One

whom the infinite One
Hath granted his throne?
The heaven high over
Is the deep's lover;
The sun and sea,
Informed by thee,
Before me run
And draw me on,
Yet fly me still,
As Fate refuses
To me the heart Fate for me chooses.
Is it that my opulent soul
Was mingled from the generous whole;
Sea-valleys and the deep of skies
Furnished several supplies;
And the sands whereof I'm made
Draw me to them, self-betrayed?

I turn the proud portfolio
Which holds the grand designs
Of Salvator, of Guercino,
And Piranesi's lines.
I hear the lofty paeans
Of the masters of the shell,
Who heard the starry music
And recount the numbers well;
Olympian bards who sung
Divine Ideas below,
Which always find us young
And always keep us so.
Oft, in streets or humblest places,
I detect far-wandered graces,
Which, from Eden wide astray,
In lowly homes have lost their way.

Thee gliding through the sea of form,
Like the lightning through the storm,
Somewhat not to be possessed,
Somewhat not to be caressed,
No feet so fleet could ever find,

No perfect form could ever bind.
Thou eternal fugitive,
Hovering over all that live,
Quick and skilful to inspire
Sweet, extravagant desire,
Starry space and lily-bell
Filling with thy roseate smell,
Wilt not give the lips to taste
Of the nectar which thou hast.

All that's good and great with thee
Works in close conspiracy;
Thou hast bribed the dark and lonely
To report thy features only,
And the cold and purple morning
Itself with thoughts of thee adorning;
The leafy dell, the city mart,
Equal trophies of thine art;
E'en the flowing azure air
Thou hast touched for my despair;
And, if I languish into dreams,
Again I meet the ardent beams.
Queen of things! I dare not die
In Being's deeps past ear and eye;
Lest there I find the same deceiver
And be the sport of Fate forever.
Dread Power, but dear! if God thou be,
Unmake me quite, or give thyself to me!

GIVE ALL TO LOVE

Give all to love;
Obey thy heart;
Friends, kindred, days,
Estate, good-fame,
Plans, credit and the Muse, —
Nothing refuse.

‘T is a brave master;
Let it have scope:
Follow it utterly,
Hope beyond hope:
High and more high
It dives into noon,
With wing unspent,
Untold intent;
But it is a god,
Knows its own path
And the outlets of the sky.

It was never for the mean;
It requireth courage stout.
Souls above doubt,
Valor unbending,
It will reward, —
They shall return
More than they were,
And ever ascending.

Leave all for love;
Yet, hear me, yet,
One word more thy heart behoved,
One pulse more of firm endeavor, —
Keep thee to-day,
To-morrow, forever,
Free as an Arab
Of thy beloved.

Cling with life to the maid;
But when the surprise,
First vague shadow of surmise
Flits across her bosom young,
Of a joy apart from thee,
Free be she, fancy-free;
Nor thou detain her vesture's hem,
Nor the palest rose she flung
From her summer diadem.

Though thou loved her as thyself,
As a self of purer clay,
Though her parting dims the day,
Stealing grace from all alive;
Heartily know,
When half-gods go.
The gods arrive.

TO ELLEN AT THE SOUTH

The green grass is bowing,
The morning wind is in it;
'T is a tune worth thy knowing,
Though it change every minute.

'T is a tune of the Spring;
Every year plays it over
To the robin on the wing,
And to the pausing lover.

O'er ten thousand, thousand acres,
Goes light the nimble zephyr;
The Flowers — tiny sect of Shakers —
Worship him ever.

Hark to the winning sound!
They summon thee, dearest, —
Saying, 'We have dressed for thee the ground,
Nor yet thou appearest.

'O hasten;' 't is our time,
Ere yet the red Summer
Scorch our delicate prime,
Loved of bee, — the tawny hummer.

'O pride of thy race!
Sad, in sooth, it were to ours,
If our brief tribe miss thy face,
We poor New England flowers.

'Fairest, choose the fairest members
Of our lithe society;
June's glories and September's
Show our love and piety.

'Thou shalt command us all, —
April's cowslip, summer's clover,

To the gentian in the fall,
Blue-eyed pet of blue-eyed lover.

‘O come, then, quickly come!
We are budding, we are blowing;
And the wind that we perfume
Sings a tune that’s worth the knowing.’

TO ELLEN

And Ellen, when the graybeard years
Have brought us to life's evening hour,
And all the crowded Past appears
A tiny scene of sun and shower, Then, if I read the page aright
Where Hope, the soothsayer, reads our lot,
Thyself shalt own the page was bright,
Well that we loved, woe had we not, When Mirth is dumb and Flattery's fled,
And mute thy music's dearest tone,
When all but Love itself is dead
And all but deathless Reason gone.

TO EVA

O fair and stately maid, whose eyes
Were kindled in the upper skies
At the same torch that lighted mine;
For so I must interpret still
Thy sweet dominion o'er my will,
A sympathy divine.

Ah! let me blameless gaze upon
Features that seem at heart my own;
Nor fear those watchful sentinels,
Who charm the more their glance forbids,
Chaste-glowing, underneath their lids,
With fire that draws while it repels.

**LINES WRITTEN BY ELLEN LOUISA TUCKER SHORTLY
BEFORE HER MARRIAGE TO MR. EMERSON**

Love scatters oil
On Life's dark sea,
Sweetens its toil —
Our helmsman he.

Around him hover
Odorous clouds;
Under this cover
His arrows he shrouds.

The cloud was around me,
I knew not why
Such sweetness crowned me.
While Time shot by.

No pain was within,
But calm delight,
Like a world without sin,
Or a day without night.

The shafts of the god
Were tipped with down,
For they drew no blood,
And they knit no frown.

I knew of them not
Until Cupid laughed loud,
And saying "You're caught!"
Flew off in the cloud.

O then I awoke,
And I lived but to sigh,
Till a clear voice spoke, —
And my tears are dry.

THE VIOLET

BY ELLEN LOUISA TUCKER

Why lingerest thou, pale violet, to see the dying year;
Are Autumn's blasts fit music for thee, fragile one, to hear;
Will thy clear blue eye, upward bent, still keep its chastened glow,
Still tearless lift its slender form above the wintry snow?

Why wilt thou live when none around reflects thy pensive ray?
Thou bloomest here a lonely thing in the clear autumn day.
The tall green trees, that shelter thee, their last gay dress put on;
There will be nought to shelter thee when their sweet leaves are gone.

O Violet, like thee, how blest could I lie down and die,
When summer light is fading, and autumn breezes sigh;
When Winter reigned I'd close my eye, but wake with bursting Spring,
And live with living nature, a pure rejoicing thing.

I had a sister once who seemed just like a violet;
Her morning sun shone bright and calmly purely set;
When the violets were in their shrouds, and Summer in its pride,
She laid her hopes at rest, and in the year's rich beauty died.

THE AMULET

Your picture smiles as first it smiled;
The ring you gave is still the same;
Your letter tells, O changing child!
No tidings *since* it came.

Give me an amulet
That keeps intelligence with you, —
Red when you love, and rosier red,
And when you love not, pale and blue.

Alas! that neither bonds nor vows
Can certify possession;
Torments me still the fear that love
Died in its last expression.

THINE EYES STILL SHINED

Thine eyes still shined for me, though far
I lonely roved the land or sea:
As I behold yon evening star,
Which yet beholds not me.

This morn I climbed the misty hill
And roamed the pastures through;
How danced thy form before my path
Amidst the deep-eyed dew!

When the redbird spread his sable wing,
And showed his side of flame;
When the rosebud ripened to the rose,
In both I read thy name.

EROS

The sense of the world is short, —
Long and various the report, —
 To love and be beloved;
Men and gods have not outlearned it;
And, how oft soe'er they've turned it,
 Not to be improved.

[*Chronological List of Poems*](#)

HERMIONE

On a mound an Arab lay,
And sung his sweet regrets
And told his amulets:
The summer bird
His sorrow heard,
And, when he heaved a sigh profound,
The sympathetic swallow swept the ground.

‘If it be, as they said, she was not fair,
Beauty’s not beautiful to me,
But sceptred genius, aye inorbed,
Culminating in her sphere.
This Hermione absorbed
The lustre of the land and ocean,
Hills and islands, cloud and tree,
In her form and motion.

‘I ask no bauble miniature,
Nor ringlets dead
Shorn from her comely head,
Now that morning not disdains
Mountains and the misty plains
Her colossal portraiture;
They her heralds be,
Steeped in her quality,
And singers of her fame
Who is their Muse and dame.

‘Higher, dear swallows! mind not what I say.
Ah! heedless how the weak are strong,
Say, was it just,
In thee to frame, in me to trust,
Thou to the Syrian couldst belong?

‘I am of a lineage
That each for each doth fast engage;
In old Bassora’s schools. I seemed

Hermit vowed to books and gloom, —
Ill-bestead for gay bridegroom.
I was by thy touch redeemed;
When thy meteor glances came,
We talked at large of worldly fate,
And drew truly every trait.

‘Once I dwelt apart,
Now I live with all;
As shepherd’s lamp on far hill-side
Seems, by the traveller espied,
A door into the mountain heart,
So didst thou quarry and unlock
Highways for me through the rock.

‘Now, deceived, thou wanderest
In strange lands unblest;
And my kindred come to soothe me.
Southwind is my next of blood;
He is come through fragrant wood,
Drugged with spice from climates warm,
And in every twinkling glade,
And twilight nook,
Unveils thy form.
Out of the forest way
Forth paced it yesterday;
And when I sat by the watercourse,
Watching the daylight fade,
It throbbed up from the brook.

‘River and rose and crag and bird,
Frost and sun and eldest night,
To me their aid preferred,
To me their comfort plight; —
“Courage! we are thine allies,
And with this hint be wise, —
The chains of kind
The distant bind;
Deed thou doest she must do,

Above her will, be true;
And, in her strict resort
To winds and waterfalls
And autumn's sunlit festivals,
To music, and to music's thought,
Inextricably bound,
She shall find thee, and be found.
Follow not her flying feet;
Come to us herself to meet.”

INITIAL, DAEMONIC AND CELESTIAL LOVE

I. THE INITIAL LOVE

Venus, when her son was lost,
Cried him up and down the coast,
In hamlets, palaces and parks,
And told the truant by his marks, —
Golden curls, and quiver and bow.
This befell how long ago!
Time and tide are strangely changed,
Men and manners much deranged:
None will now find Cupid latent
By this foolish antique patent.
He came late along the waste,
Shod like a traveller for haste;
With malice dared me to proclaim him,
That the maids and boys might name him.

Boy no more, he wears all coats,
Frocks and blouses, capes, capotes;
He bears no bow, or quiver, or wand,
Nor chaplet on his head or hand.
Leave his weeds and heed his eyes, —
All the rest he can disguise.
In the pit of his eye's a spark
Would bring back day if it were dark;
And, if I tell you all my thought,
Though I comprehend it not,
In those unfathomable orbs
Every function he absorbs;
Doth eat, and drink, and fish, and shoot,
And write, and reason, and compute,
And ride, and run, and have, and hold,
And whine, and flatter, and regret,
And kiss, and couple, and beget,
By those roving eyeballs bold.

Undaunted are their courages

Guidance are their courages,
Right Cossacks in their forages;
Fleeter they than any creature, —
They are his steeds, and not his feature;
Inquisitive, and fierce, and fasting,
Restless, predatory, hasting;
And they pounce on other eyes
As lions on their prey;
And round their circles is writ,
Plainer than the day,
Underneath, within, above, —
Love — love — love — love.
He lives in his eyes;
There doth digest, and work, and spin,
And buy, and sell, and lose, and win;
He rolls them with delighted motion,
Joy-tides swell their mimic ocean.
Yet holds he them with tautest rein,
That they may seize and entertain
The glance that to their glance opposes,
Like fiery honey sucked from roses.
He palmistry can understand,
Imbibing virtue by his hand
As if it were a living root;
The pulse of hands will make him mute;
With all his force he gathers balms
Into those wise, thrilling palms.

Cupid is a casuist,
A mystic and a cabalist, —
Can your lurking thought surprise,
And interpret your device.
He is versed in occult science,
In magic and in clairvoyance,
Oft he keeps his fine ear strained,
And Reason on her tiptoe pained
For aëry intelligence,
And for strange coincidence.
But it touches his quick heart
When Fate by omens takes his part,

And chance-dropped hints from Nature's sphere
Deeply soothe his anxious ear.

Heralds high before him run;
He has ushers many a one;
He spreads his welcome where he goes,
And touches all things with his rose.
All things wait for and divine him, —
How shall I dare to malign him,
Or accuse the god of sport?
I must end my true report,
Painting him from head to foot,
In as far as I took note,
Trusting well the matchless power
Of this young-eyed emperor
Will clear his fame from every cloud
With the bards and with the crowd.

He is wilful, mutable,
Shy, untamed, inscrutable,
Swifter-fashioned than the fairies.
Substance mixed of pure contraries;
His vice some elder virtue's token,
And his good is evil-spoken.
Failing sometimes of his own,
He is headstrong and alone;
He affects the wood and wild,
Like a flower-hunting child;
Buries himself in summer waves,
In trees, with beasts, in mines and caves,
Loves nature like a hornèd cow,
Bird, or deer, or caribou.

Shun him, nymphs, on the fleet horses!
He has a total world of wit;
O how wise are his discourses!
But he is the arch-hypocrite,
And, through all science and all art,
Seeks alone his counterpart.

He is a Dandy of the East

He is a Puritan of the East,
He is an augur and a priest,
And his soul will melt in prayer,
But word and wisdom is a snare;
Corrupted by the present toy
He follows joy, and only joy.
There is no mask but he will wear;
He invented oaths to swear;
He paints, he carves, he chants, he prays,
And holds all stars in his embrace.
He takes a sovran privilege
Not allowed to any liege;
For Cupid goes behind all law,
And right into himself does draw;
For he is sovereignly allied, —
Heaven's oldest blood flows in his side, —
And interchangeably at one
With every king on every throne,
That no god dare say him nay,
Or see the fault, or seen betray;
He has the Muses by the heart,
And the stern Parcae on his part.

His many signs cannot be told;
He has not one mode, but manifold,
Many fashions and addresses,
Piques, reproaches, hurts, caresses.
He will preach like a friar,
And jump like Harlequin;
He will read like a crier,
And fight like a Paladin.
Boundless is his memory;
Plans immense his term prolong;
He is not of counted age,
Meaning always to be young.
And his wish is intimacy,
Intimater intimacy,
And a stricter privacy;
The impossible shall yet be done,
And being two shall still be one

And, being two, shall still be one.
As the wave breaks to foam on shelves,
Then runs into a wave again,
So lovers melt their sundered selves,
Yet melted would be twain.

II. THE DAEMONIC LOVE

Man was made of social earth,
Child and brother from his birth,
Tethered by a liquid cord
Of blood through veins of kindred poured.
Next his heart the fireside band
Of mother, father, sister, stand;
Names from awful childhood heard
Throbs of a wild religion stirred; —
Virtue, to love, to hate them, vice;
Till dangerous Beauty came, at last,
Till Beauty came to snap all ties;
The maid, abolishing the past,
With lotus wine obliterates
Dear memory's stone-incarved traits,
And, by herself, supplants alone
Friends year by year more inly known.
When her calm eyes opened bright,
All else grew foreign in their light.
It was ever the self-same tale,
The first experience will not fail;
Only two in the garden walked,
And with snake and seraph talked.

Close, close to men,
Like undulating layer of air,
Right above their heads,
The potent plain of Daemons spreads.
Stands to each human soul its own,
For watch and ward and furtherance,
In the snares of Nature's dance;
And the lustre and the grace
To fascinate each youthful heart,

Beaming from its counterpart,
Translucent through the mortal covers,
Is the Daemon's form and face.
To and fro the Genius hies, —
A gleam which plays and hovers
Over the maiden's head,
And dips sometimes as low as to her eyes.
Unknown, albeit lying near,
To men, the path to the Daemon sphere;
And they that swiftly come and go
Leave no track on the heavenly snow.
Sometimes the airy synod bends,
And the mighty choir descends,
And the brains of men thenceforth,
In crowded and in still resorts,
Teem with unwonted thoughts:
As, when a shower of meteors
Cross the orbit of the earth,
And, lit by fringent air,
Blaze near and far,
Mortals deem the planets bright
Have slipped their sacred bars,
And the lone seaman all the night
Sails, astonished, amid stars.

Beauty of a richer vein,
Graces of a subtler strain,
Unto men these moonmen lend,
And our shrinking sky extend.
So is man's narrow path
By strength and terror skirted;
Also (from the song the wrath
Of the Genii be averted!
The Muse the truth uncolored speaking)
The Daemons are self-seeking:
Their fierce and limitary will
Draws men to their likeness still.
The erring painter made Love blind, —
Highest Love who shines on all;
Him, radiant, sharpest sighted god

From, radiant, sharpest-sighted god,
None can bewilder;
Whose eyes pierce
The universe,
Path-finder, road-builder,
Mediator, royal giver;
Rightly seeing, rightly seen,
Of joyful and transparent mien.
'T is a sparkle passing
From each to each, from thee to me,
To and fro perpetually;
Sharing all, daring all,
Levelling, displacing
Each obstruction, it unites
Equals remote, and seeming opposites.
And ever and forever Love
Delights to build a road:
Unheeded Danger near him strides,
Love laughs, and on a lion rides.
But Cupid wears another face,
Born into Daemons less divine:
His roses bleach apace,
His nectar smacks of wine.
The Daemon ever builds a wall,
Himself encloses and includes,
Solitude in solitudes:
In like sort his love doth fall.
He doth elect
The beautiful and fortunate,
And the sons of intellect,
And the souls of ample fate,
Who the Future's gates unbar, —
Minions of the Morning Star.
In his prowess he exults,
And the multitude insults.
His impatient looks devour
Oft the humble and the poor;
And, seeing his eye glare,
They drop their few pale flowers,
Gathered with hope to please

Gauged with hope to please,
Along the mountain towers, —
Lose courage, and despair.
He will never be gainsaid, —
Pitiless, will not be stayed;
His hot tyranny
Burns up every other tie.
Therefore comes an hour from Jove
Which his ruthless will defies,
And the dogs of Fate unties.
Shiver the palaces of glass;
Shrivel the rainbow-colored walls,
Where in bright Art each god and sibyl dwelt
Secure as in the zodiac's belt;
And the galleries and halls,
Wherein every siren sung,
Like a meteor pass.
For this fortune wanted root
In the core of God's abysm, —
Was a weed of self and schism;
And ever the Daemonic Love
Is the ancestor of wars
And the parent of remorse.

III. THE CELESTIAL LOVE

But God said,
'I will have a purer gift;
There is smoke in the flame;
New flowerets bring, new prayers uplift,
And love without a name.
Fond children, ye desire
To please each other well;
Another round, a higher,
Ye shall climb on the heavenly stair,
And selfish preference forbear;
And in right deserving,
And without a swerving
Each from your proper state,
Weave roses for your mate.

'Deep, deep are loving eyes,
Flowed with naphtha fiery sweet;
And the point is paradise,
Where their glances meet:
Their reach shall yet be more profound,
And a vision without bound:
The axis of those eyes sun-clear
Be the axis of the sphere:
So shall the lights ye pour amain
Go, without check or intervals,
Through from the empyrean walls
Unto the same again.'

Higher far into the pure realm,
Over sun and star,
Over the flickering Daemon film,
Thou must mount for love;
Into vision where all form
In one only form dissolves;
In a region where the wheel
On which all beings ride
Visibly revolves;
Where the starred, eternal worm
Girds the world with bound and term;
Where unlike things are like;
Where good and ill,
And joy and moan,
Melt into one.

There Past, Present, Future, shoot
Triple blossoms from one root;
Substances at base divided,
In their summits are united;
There the holy essence rolls,
One through separated souls;
And the sunny Aeon sleeps
Folding Nature in its deeps,
And every fair and every good,
Known in part, or known impure,

10 men below,
In their archetypes endure.
The race of gods,
Or those we erring own,
Are shadows flitting up and down
In the still abodes.
The circles of that sea are laws
Which publish and which hide the cause.

Pray for a beam
Out of that sphere,
Thee to guide and to redeem.
O, what a load
Of care and toil,
By lying use bestowed,
From his shoulders falls who sees
The true astronomy,
The period of peace.
Counsel which the ages kept
Shall the well-born soul accept.
As the overhanging trees
Fill the lake with images, —
As garment draws the garment's hem,
Men their fortunes bring with them.
By right or wrong,
Lands and goods go to the strong.
Property will brutally draw
Still to the proprietor;
Silver to silver creep and wind,
And kind to kind.

Nor less the eternal poles
Of tendency distribute souls.
There need no vows to bind
Whom not each other seek, but find.
They give and take no pledge or oath, —
Nature is the bond of both:
No prayer persuades, no flattery fawns, —
Their noble meanings are their pawns.
Plain and cold is their address.

Power have they for tenderness;
And, so thoroughly is known
Each other's counsel by his own,
They can parley without meeting;
Need is none of forms of greeting;
They can well communicate
In their innermost estate;
When each the other shall avoid,
Shall each by each be most enjoyed.

Not with scarfs or perfumed gloves
Do these celebrate their loves:
Not by jewels, feasts and savors,
Not by ribbons or by favors,
But by the sun-spark on the sea,
And the cloud-shadow on the lea,
The soothing lapse of morn to mirk,
And the cheerful round of work.
Their cords of love so public are,
They intertwine the farthest star:
The throbbing sea, the quaking earth,
Yield sympathy and signs of mirth;
Is none so high, so mean is none,
But feels and seals this union;
Even the fell Furies are appeased,
The good applaud, the lost are eased.

Love's hearts are faithful, but not fond,
Bound for the just, but not beyond;
Not glad, as the low-loving herd,
Of self in other still preferred,
But they have heartily designed
The benefit of broad mankind.
And they serve men austerely,
After their own genius, clearly,
Without a false humility;
For this is Love's nobility, —
Not to scatter bread and gold,
Goods and raiment bought and sold;

But to hold fast his simple sense,
And speak the speech of innocence,
And with hand and body and blood,
To make his bosom-counsel good.
He that feeds men serveth few;
He serves all who dares be true.

THE APOLOGY

Think me not unkind and rude
That I walk alone in grove and glen;
I go to the god of the wood
To fetch his word to men.

Tax not my sloth that I
Fold my arms beside the brook;
Each cloud that floated in the sky
Writes a letter in my book.

Chide me not, laborious band,
For the idle flowers I brought;
Every aster in my hand
Goes home loaded with a thought.

There was never mystery
But 'tis figured in the flowers;
Was never secret history
But birds tell it in the bowers.

One harvest from thy field
Homeward brought the oxen strong;
A second crop thine acres yield,
Which I gather in a song.

[*Alphabetical List of Poems*](#)

MERLIN I

Thy trivial harp will never please
Or fill my craving ear;
Its chords should ring as blows the breeze,
Free, peremptory, clear.
No jingling serenader's art,
Nor tinkle of piano strings,
Can make the wild blood start
In its mystic springs.
The kingly bard
Must smite the chords rudely and hard,
As with hammer or with mace;
That they may render back
Artful thunder, which conveys
Secrets of the solar track,
Sparks of the supersolar blaze.
Merlin's blows are strokes of fate,
Chiming with the forest tone,
When boughs buffet boughs in the wood;
Chiming with the gasp and moan
Of the ice-imprisoned flood;
With the pulse of manly hearts;
With the voice of orators;
With the din of city arts;
With the cannonade of wars;
With the marches of the brave;
And prayers of might from martyrs' cave.

Great is the art,
Great be the manners, of the bard.
He shall not his brain encumber
With the coil of rhythm and number;
But, leaving rule and pale forethought,
He shall aye climb
For his rhyme.
'Pass in, pass in,' the angels say,
'In to the upper doors,

Next poem: [The Song of the Clans](#)

NOR count compartments of the floors,
But mount to paradise
By the stairway of surprise.'

Blameless master of the games,
King of sport that never shames,
He shall daily joy dispense
Hid in song's sweet influence.
Forms more cheerly live and go,
What time the subtle mind
Sings aloud the tune whereto
Their pulses beat,
And march their feet,
And their members are combined.

By Sybarites beguiled,
He shall no task decline;
Merlin's mighty line
Extremes of nature reconciled, —
Bereaved a tyrant of his will,
And made the lion mild.
Songs can the tempest still,
Scattered on the stormy air,
Mould the year to fair increase,
And bring in poetic peace.

He shall not seek to weave,
In weak, unhappy times,
Efficacious rhymes;
Wait his returning strength.
Bird that from the nadir's floor
To the zenith's top can soar, —
The soaring orbit of the muse exceeds that journey's length.
Nor profane affect to hit
Or compass that, by meddling wit,
Which only the propitious mind
Publishes when 't is inclined.
There are open hours
When the God's will sallies free,
And the dull idiot might see

The flowing fortunes of a thousand years; —
Sudden, at unawares,
Self-moved, fly-to the doors.
Nor sword of angels could reveal
What they conceal.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

MERLIN II

The rhyme of the poet
Modulates the king's affairs;
Balance-loving Nature
Made all things in pairs.
To every foot its antipode;
Each color with its counter glowed;
To every tone beat answering tones,
Higher or graver;
Flavor gladly blends with flavor;
Leaf answers leaf upon the bough;
And match the paired cotyledons.
Hands to hands, and feet to feet,
In one body grooms and brides;
Eldest rite, two married sides
In every mortal meet.
Light's far furnace shines,
Smelting balls and bars,
Forging double stars,
Glittering twins and trines.
The animals are sick with love,
Lovesick with rhyme;
Each with all propitious Time
Into chorus wove.

Like the dancers' ordered band,
Thoughts come also hand in hand;
In equal couples mated,
Or else alternated;
Adding by their mutual gage,
One to other, health and age.
Solitary fancies go
Short-lived wandering to and fro,
Most like to bachelors,
Or an ungiven maid,
Not ancestors,
With no posterity to make the lie afraid,

Or keep truth undecayed.
Perfect-paired as eagle's wings,
Justice is the rhyme of things;
Trade and counting use
The self-same tuneful muse;
And Nemesis,
Who with even matches odd,
Who athwart space redresses
The partial wrong,
Fills the just period,
And finishes the song.

Subtle rhymes, with ruin rife,
Murmur in the house of life,
Sung by the Sisters as they spin;
In perfect time and measure they
Build and unbuild our echoing clay.
As the two twilights of the day
Fold us music-drunken in.

[Alphabetical List of Poems](#)

BACCHUS

Bring me wine, but wine which never grew
In the belly of the grape,
Or grew on vine whose tap-roots, reaching through,
Under the Andes to the Cape,
Suffer no savor of the earth to scape.

Let its grapes the morn salute
From a nocturnal root,
Which feels the acrid juice
Of Styx and Erebus;
And turns the woe of Night,
By its own craft, to a more rich delight.

We buy ashes for bread;
We buy diluted wine;
Give me of the true, —
Whose ample leaves and tendrils curled
Among the silver hills of heaven
Draw everlasting dew;
Wine of wine,
Blood of the world,
Form of forms, and mould of statures,
That I intoxicated,
And by the draught assimilated,
May float at pleasure through all natures;
The bird-language rightly spell,
And that which roses say so well.

Wine that is shed
Like the torrents of the sun
Up the horizon walls,
Or like the Atlantic streams, which run
When the South Sea calls.

Water and bread,
Food which needs no transmuting,
Rainbow-flowering. wisdom-fruiting.

Wine which is already man,
Food which teach and reason can.

Wine which Music is, —
Music and wine are one, —
That I, drinking this,
Shall hear far Chaos talk with me;
Kings unborn shall walk with me;
And the poor grass shall plot and plan
What it will do when it is man.
Quickened so, will I unlock
Every crypt of every rock.

I thank the joyful juice
For all I know; —
Winds of remembering
Of the ancient being blow,
And seeming-solid walls of use
Open and flow.

Pour, Bacchus! the remembering wine;
Retrieve the loss of me and mine!
Vine for vine be antidote,
And the grape requite the lote!
Haste to cure the old despair, —
Reason in Nature's lotus drenched,
The memory of ages quenched;
Give them again to shine;
Let wine repair what this undid;
And where the infection slid,
A dazzling memory revive;
Refresh the faded tints,
Recut the aged prints,
And write my old adventures with the pen
Which on the first day drew,
Upon the tablets blue,
The dancing Pleiads and eternal men.

Alphabetical List of Poems

MEROPS

What care I, so they stand the same, —
Things of the heavenly mind, —
How long the power to give them name
Taries yet behind?

Thus far to-day your favors reach,
O fair, appeasing presences!
Ye taught my lips a single speech,
And a thousand silences.

Space grants beyond his fated road
No inch to the god of day;
And copious language still bestowed
One word, no more, to say.

THE HOUSE

There is no architect
Can build as the Muse can;
She is skilful to select
Materials for her plan; Slow and warily to choose
Rafters of immortal pine,
Or cedar incorruptible,
Worthy her design, She threads dark Alpine forests
Or valleys by the sea,
In many lands, with painful steps,
Ere she can find a tree.

She ransacks mines and ledges
And quarries every rock,
To hew the famous adamant
For each eternal block — She lays her beams in music,
In music every one,
To the cadence of the whirling world
Which dances round the sun — That so they shall not be displaced
By lapses or by wars,
But for the love of happy souls
Outlive the newest stars.

SAADI

Trees in groves,
Kine in droves,
In ocean sport the scaly herds,
Wedge-like cleave the air the birds,
To northern lakes fly wind-borne ducks,
Browse the mountain sheep in flocks,
Men consort in camp and town,
But the poet dwells alone.

God, who gave to him the lyre,
Of all mortals the desire,
For all breathing men's behoof,
Straitly charged him, 'Sit aloof;'
Annexed a warning, poets say,
To the bright premium, —
Ever, when twain together play,
Shall the harp be dumb.

Many may come,
But one shall sing;
Two touch the string,
The harp is dumb.
Though there come a million,
Wise Saadi dwells alone.

Yet Saadi loved the race of men, —
No churl, immured in cave or den;
In bower and hall
He wants them all,
Nor can dispense
With Persia for his audience;
They must give ear,
Grow red with joy and white with fear;
But he has no companion;
Come ten, or come a million,
Good Saadi dwells alone.

Be thou ware where Saadi dwells;
Wisdom of the gods is he, —
Entertain it reverently.
Gladly round that golden lamp
Sylvan deities encamp,
And simple maids and noble youth
Are welcome to the man of truth.
Most welcome they who need him most,
They feed the spring which they exhaust;
For greater need
Draws better deed:
But, critic, spare thy vanity,
Nor show thy pompous parts,
To vex with odious subtlety
The cheerer of men's hearts.

Sad-eyed Fakirs swiftly say
Endless dirges to decay,
Never in the blaze of light
Lose the shudder of midnight;
Pale at overflowing noon
Hear wolves barking at the moon;
In the bower of dalliance sweet
Hear the far Avenger's feet:
And shake before those awful Powers,
Who in their pride forgive not ours.
Thus the sad-eyed Fakirs preach:
'Bard, when thee would Allah teach,
And lift thee to his holy mount,
He sends thee from his bitter fount
Wormwood, — saying, "Go thy ways;
Drink not the Malaga of praise,
But do the deed thy fellows hate,
And compromise thy peaceful state;
Smite the white breasts which thee fed.
Stuff sharp thorns beneath the head
Of them thou shouldst have comforted;
For out of woe and out of crime
Draws the heart a lore sublime.'"

And yet it seemeth not to me
That the high gods love tragedy;
For Saadi sat in the sun,
And thanks was his contrition;
For haircloth and for bloody whips,
Had active hands and smiling lips;
And yet his runes he rightly read,
And to his folk his message sped.
Sunshine in his heart transferred
Lighted each transparent word,
And well could honoring Persia learn
What Saadi wished to say;
For Saadi's nightly stars did burn
Brighter than Jami's day.

Whispered the Muse in Saadi's cot:
'O gentle Saadi, listen not,
Tempted by thy praise of wit,
Or by thirst and appetite
For the talents not thine own,
To sons of contradiction.
Never, son of eastern morning,
Follow falsehood, follow scorning.
Denounce who will, who will deny,
And pile the hills to scale the sky;
Let theist, atheist, pantheist,
Define and wrangle how they list,
Fierce conserver, fierce destroyer, —
But thou, joy-giver and enjoyer,
Unknowing war, unknowing crime,
Gentle Saadi, mind thy rhyme;
Heed not what the brawlers say,
Heed thou only Saadi's lay.

'Let the great world bustle on
With war and trade, with camp and town;
A thousand men shall dig and eat;
At forge and furnace thousands sweat;
And thousands sail the purple sea,
And give or take the stroke of war

And give or take the stroke of war,
Or crowd the market and bazaar;
Oft shall war end, and peace return,
And cities rise where cities burn,
Ere one man my hill shall climb,
Who can turn the golden rhyme.
Let them manage how they may,
Heed thou only Saadi's lay.
Seek the living among the dead, —
Man in man is imprisonèd;
Barefooted Dervish is not poor,
If fate unlock his bosom's door,
So that what his eye hath seen
His tongue can paint as bright, as keen;
And what his tender heart hath felt
With equal fire thy heart shalt melt.
For, whom the Muses smile upon,
And touch with soft persuasion,
His words like a storm-wind can bring
Terror and beauty on their wing;
In his every syllable
Lurketh Nature veritable;
And though he speak in midnight dark, —
In heaven no star, on earth no spark, —
Yet before the listener's eye
Swims the world in ecstasy,
The forest waves, the morning breaks,
The pastures sleep, ripple the lakes,
Leaves twinkle, flowers like persons be,
And life pulsates in rock or tree.
Saadi, so far thy words shall reach:
Suns rise and set in Saadi's speech!

And thus to Saadi said the Muse:
'Eat thou the bread which men refuse;
Flee from the goods which from thee flee;
Seek nothing, — Fortune seeketh thee.
Nor mount, nor dive; all good things keep
The midway of the eternal deep.
Wish not to fill the isles with eyes

To fetch thee birds of paradise:
On thine orchard's edge belong
All the brags of plume and song;
Wise Ali's sunbright sayings pass
For proverbs in the market-place:
Through mountains bored by regal art,
Toil whistles as he drives his cart.
Nor scour the seas, nor sift mankind,
A poet or a friend to find:
Behold, he watches at the door!
Behold his shadow on the floor!
Open innumerable doors
The heaven where unveiled Allah pours
The flood of truth, the flood of good,
The Seraph's and the Cherub's food.
Those doors are men: the Pariah hind
Admits thee to the perfect Mind.
Seek not beyond thy cottage wall
Redeemers that can yield thee all:
While thou sittest at thy door
On the desert's yellow floor,
Listening to the gray-haired crones,
Foolish gossips, ancient drones,
Saadi, see! they rise in stature
To the height of mighty Nature,
And the secret stands revealed
Fraudulent Time in vain concealed, —
That blessed gods in servile masks
Plied for thee thy household tasks.'

HOLIDAYS

From fall to spring, the russet acorn,
Fruit beloved of maid and boy,
Lent itself beneath the forest,
To be the children's toy.

Pluck it now! In vain, — thou canst not;
Its root has pierced yon shady mound;
Toy no longer — it has duties;
It is anchored in the ground.

Year by year the rose-lipped maiden,
Playfellow of young and old,
Was frolic sunshine, dear to all men,
More dear to one than mines of gold.

Whither went the lovely hoyden?
Disappeared in blessed wife;
Servant to a wooden cradle,
Living in a baby's life.

Still thou playest; — short vacation
Fate grants each to stand aside;
Now must thou be man and artist, —
'T is the turning of the tide.

XENOPHANES

By fate, not option, frugal Nature gave
One scent to hyson and to wall-flower,
One sound to pine-groves and to waterfalls,
One aspect to the desert and the lake.
It was her stern necessity: all things
Are of one pattern made; bird, beast and flower,
Song, picture, form, space, thought and character
Deceive us, seeming to be many things,
And are but one. Beheld far off, they part
As God and devil; bring them to the mind,
They dull its edge with their monotony.
To know one element, explore another,
And in the second reappears the first.
The specious panorama of a year
But multiplies the image of a day, —
A belt of mirrors round a taper's flame;
And universal Nature, through her vast
And crowded whole, an infinite paroquet,
Repeats one note.

THE DAY'S RATION

When I was born,
From all the seas of strength Fate filled a chalice,
Saying, 'This be thy portion, child; this chalice,
Less than a lily's, thou shalt daily draw
From my great arteries, — nor less, nor more.'
All substances the cunning chemist Time
Melts down into that liquor of my life, —
Friends, foes, joys, fortunes, beauty and disgust.
And whether I am angry or content,
Indebted or insulted, loved or hurt,
All he distils into sidereal wine
And brims my little cup; heedless, alas!
Of all he sheds how little it will hold,
How much runs over on the desert sands.
If a new Muse draw me with splendid ray,
And I uplift myself into its heaven,
The needs of the first sight absorb my blood,
And all the following hours of the day
Drag a ridiculous age.
To-day, when friends approach, and every hour
Brings book, or starbright scroll of genius,
The little cup will hold not a bead more,
And all the costly liquor runs to waste;
Nor gives the jealous lord one diamond drop
So to be husbanded for poorer days.
Why need I volumes, if one word suffice?
Why need I galleries, when a pupil's draught
After the master's sketch fills and o'erfills
My apprehension? Why seek Italy,
Who cannot circumnavigate the sea
Of thoughts and things at home, but still adjourn
The nearest matters for a thousand days?

BLIGHT

Give me truths;
For I am weary of the surfaces,
And die of inanition. If I knew
Only the herbs and simples of the wood,
Rue, cinquefoil, gill, vervain and agrimony,
Blue-vetch and trillium, hawkweed, sassafras,
Milkweeds and murky brakes, quaint pipes and sundew,
And rare and virtuous roots, which in these woods
Draw untold juices from the common earth,
Untold, unknown, and I could surely spell
Their fragrance, and their chemistry apply
By sweet affinities to human flesh,
Driving the foe and stablishing the friend, —
O, that were much, and I could be a part
Of the round day, related to the sun
And planted world, and full executor
Of their imperfect functions.
But these young scholars, who invade our hills,
Bold as the engineer who fells the wood,
And travelling often in the cut he makes,
Love not the flower they pluck, and know it not,
And all their botany is Latin names.
The old men studied magic in the flowers,
And human fortunes in astronomy,
And an omnipotence in chemistry,
Preferring things to names, for these were men,
Were unitarians of the united world,
And, wheresoever their clear eye-beams fell,
They caught the footsteps of the SAME. Our eyes
Are armed, but we are strangers to the stars,
And strangers to the mystic beast and bird,
And strangers to the plant and to the mine.
The injured elements say, 'Not in us;'
And night and day, ocean and continent,
Fire, plant and mineral say, 'Not in us;'
And haughtily return us stare for stare.

For we invade them impiously for gain;
We devastate them unreligiously,
And coldly ask their pottage, not their love.
Therefore they shove us from them, yield to us
Only what to our griping toil is due;
But the sweet affluence of love and song,
The rich results of the divine consents
Of man and earth, of world beloved and lover,
The nectar and ambrosia, are withheld;
And in the midst of spoils and slaves, we thieves
And pirates of the universe, shut out
Daily to a more thin and outward rind,
Turn pale and starve. Therefore, to our sick eyes,
The stunted trees look sick, the summer short,
Clouds shade the sun, which will not tan our hay,
And nothing thrives to reach its natural term;
And life, shorn of its venerable length,
Even at its greatest space is a defeat,
And dies in anger that it was a dupe;
And, in its highest noon and wantonness,
Is early frugal, like a beggar's child;
Even in the hot pursuit of the best aims
And prizes of ambition, checks its hand,
Like Alpine cataracts frozen as they leaped,
Chilled with a miserly comparison
Of the toy's purchase with the length of life.

MUSKETAQUID

Because I was content with these poor fields,
Low, open meads, slender and sluggish streams,
And found a home in haunts which others scorned,
The partial wood-gods overpaid my love,
And granted me the freedom of their state,
And in their secret senate have prevailed
With the dear, dangerous lords that rule our life,
Made moon and planets parties to their bond,
And through my rock-like, solitary wont
Shot million rays of thought and tenderness.
For me, in showers, in sweeping showers, the Spring
Visits the valley; — break away the clouds, —
I bathe in the morn's soft and silvered air,
And loiter willing by yon loitering stream.
Sparrows far off, and nearer, April's bird,
Blue-coated, — flying before from tree to tree,
Courageous sing a delicate overture
To lead the tardy concert of the year.
Onward and nearer rides the sun of May;
And wide around, the marriage of the plants
Is sweetly solemnized. Then flows amain
The surge of summer's beauty; dell and crag,
Hollow and lake, hillside and pine arcade,
Are touched with genius. Yonder ragged cliff
Has thousand faces in a thousand hours.

Beneath low hills, in the broad interval
Through which at will our Indian rivulet
Winds mindful still of sannup and of squaw,
Whose pipe and arrow oft the plough unburies,
Here in pine houses built of new-fallen trees,
Supplanters of the tribe, the farmers dwell.
Traveller, to thee, perchance, a tedious road,
Or, it may be, a picture; to these men,
The landscape is an armory of powers,
Which, one by one, they know to draw and use.

They harness beast, bird, insect, to their work;
They prove the virtues of each bed of rock,
And, like the chemist 'mid his loaded jars,
Draw from each stratum its adapted use
To drug their crops or weapon their arts withal.
They turn the frost upon their chemic heap,
They set the wind to winnow pulse and grain,
They thank the spring-flood for its fertile slime,
And, on cheap summit-levels of the snow,
Slide with the sledge to inaccessible woods
O'er meadows bottomless. So, year by year,
They fight the elements with elements
(That one would say, meadow and forest walked,
Transmuted in these men to rule their like),
And by the order in the field disclose
The order regnant in the yeoman's brain.

What these strong masters wrote at large in miles,
I followed in small copy in my acre;
For there's no rood has not a star above it;
The cordial quality of pear or plum
Ascends as gladly in a single tree
As in broad orchards resonant with bees;
And every atom poises for itself,
And for the whole. The gentle deities
Showed me the lore of colors and of sounds,
The innumerable tenements of beauty.
The miracle of generative force,
Far-reaching concords of astronomy
Felt in the plants and in the punctual birds;
Better, the linked purpose of the whole,
And, chiefest prize, found I true liberty
In the glad home plain-dealing Nature gave.
The polite found me impolite; the great
Would mortify me, but in vain; for still
I am a willow of the wilderness,
Loving the wind that bent me. All my hurts
My garden spade can heal. A woodland walk,
A quest of river-grapes, a mocking thrush,
A wild-rose or rock-loving columbine

A wild rose, or rock-loving columbine,
Salve my worst wounds.
For thus the wood-gods murmured in my ear:
'Dost love our manners? Canst thou silent lie?
Canst thou, thy pride forgot, like Nature pass
Into the winter night's extinguished mood?
Canst thou shine now, then darkle,
And being latent, feel thyself no less?
As, when the all-worshipped moon attracts the eye,
The river, hill, stems, foliage are obscure,
Yet envies none, none are unenviable.'

DIRGE

CONCORD, 1838

I reached the middle of the mount
Up which the incarnate soul must climb,
And paused for them, and looked around,
With me who walked through space and time.

Five rosy boys with morning light
Had leaped from one fair mother's arms,
Fronted the sun with hope as bright,
And greeted God with childhood's psalms.

Knows he who tills this lonely field
To reap its scanty corn,
What mystic fruit his acres yield
At midnight and at morn?

In the long sunny afternoon
The plain was full of ghosts;
I wandered up, I wandered down,
Beset by pensive hosts.

The winding Concord gleamed below,
Pouring as wide a flood
As when my brothers, long ago,
Came with me to the wood.

But they are gone, — the holy ones
Who trod with me this lovely vale;
The strong, star-bright companions
Are silent, low and pale.

My good, my noble, in their prime,
Who made this world the feast it was
Who learned with me the lore of time,
Who loved this dwelling-place!

They took this valley for their toy,
They played with it in every mood;
A cell for prayer, a hall for joy, —
They treated Nature as they would.

They colored the horizon round;
Stars flamed and faded as they bade,
All echoes hearkened for their sound, —
They made the woodlands glad or mad.

I touch this flower of silken leaf,
Which once our childhood knew;
Its soft leaves wound me with a grief
Whose balsam never grew.

Hearken to yon pine-warbler
Singing aloft in the tree!
Hearest thou, O traveller,
What he singeth to me?

Not unless God made sharp thine ear
With sorrow such as mine,
Out of that delicate lay could'st thou
Its heavy tale divine.

‘Go, lonely man,’ it saith;
‘They loved thee from their birth;
Their hands were pure, and pure their faith, —
There are no such hearts on earth.

‘Ye drew one mother’s milk,
One chamber held ye all;
A very tender history
Did in your childhood fall.

‘You cannot unlock your heart,
The key is gone with them;
The silent organ loudest chants
The master’s requiem.’

THRENODY

The South-wind brings
Life, sunshine and desire,
And on every mount and meadow
Breathes aromatic fire;
But over the dead he has no power,
The lost, the lost, he cannot restore;
And, looking over the hills, I mourn
The darling who shall not return.

I see my empty house,
I see my trees repair their boughs;
And he, the wondrous child,
Whose silver warble wild
Outvalued every pulsing sound
Within the air's cerulean round, —
The hyacinthine boy, for whom
Morn well might break and April bloom,
The gracious boy, who did adorn
The world whereinto he was born,
And by his countenance repay
The favor of the loving Day, —
Has disappeared from the Day's eye;
Far and wide she cannot find him;
My hopes pursue, they cannot bind him.
Returned this day, the South-wind searches,
And finds young pines and budding birches;
But finds not the budding man;
Nature, who lost, cannot remake him;
Fate let him fall, Fate can't retake him;
Nature, Fate, men, him seek in vain.

And whither now, my truant wise and sweet,
O, whither tend thy feet?
I had the right, few days ago,
Thy steps to watch, thy place to know:
How have I forfeited the right?
Hast thou forgot me in a new delight?

Must thou forget me in a new delight:
I hearken for thy household cheer,
O eloquent child!
Whose voice, an equal messenger,
Conveyed thy meaning mild.
What though the pains and joys
Whereof it spoke were toys
Fitting his age and ken,
Yet fairest dames and bearded men,
Who heard the sweet request,
So gentle, wise and grave,
Bended with joy to his behest
And let the world's affairs go by,
A while to share his cordial game,
Or mend his wicker wagon-frame,
Still plotting how their hungry fear
That winsome voice again might hear;
For his lips could well pronounce
Words that were persuasions.

Gentlest guardians marked serene
His early hope, his liberal mien;
Took counsel from his guiding eyes
To make this wisdom earthly wise.
Ah, vainly do these eyes recall
The school-march, each day's festival,
When every morn my bosom glowed
To watch the convoy on the road;
The babe in willow wagon closed,
With rolling eyes and face composed;
With children forward and behind,
Like Cupids studiously inclined;
And he the chieftain paced beside,
The centre of the troop allied,
With sunny face of sweet repose,
To guard the babe from fancied foes.
The little captain innocent
Took the eye with him as he went;
Each village senior paused to scan
And speak the lovely caravan.

From the window I look out
To mark thy beautiful parade,
Stately marching in cap and coat
To some tune by fairies played; —
A music heard by thee alone
To works as noble led thee on.

Now Love and Pride, alas! in vain,
Up and down their glances strain.
The painted sled stands where it stood;
The kennel by the corded wood;
His gathered sticks to stanch the wall
Of the snow-tower, when snow should fall;
The ominous hole he dug in the sand,
And childhood's castles built or planned;
His daily haunts I well discern, —
The poultry-yard, the shed, the barn, —
And every inch of garden ground
Paced by the blessed feet around,
From the roadside to the brook
Whereinto he loved to look.
Step the meek fowls where erst they ranged;
The wintry garden lies unchanged;
The brook into the stream runs on;
But the deep-eyed boy is gone.

On that shaded day,
Dark with more clouds than tempests are,
When thou didst yield thy innocent breath
In birdlike heavings unto death,
Night came, and Nature had not thee;
I said, 'We are mates in misery.'
The morrow dawned with needless glow;
Each snowbird chirped, each fowl must crow;
Each tramper started; but the feet
Of the most beautiful and sweet
Of human youth had left the hill
And garden, — they were bound and still.
There's not a sparrow or a wren,

There's not a blade of autumn grain,
Which the four seasons do not tend
And tides of life and increase lend;
And every chick of every bird,
And weed and rock-moss is preferred.
O ostrich-like forgetfulness!
O loss of larger in the less!
Was there no star that could be sent,
No watcher in the firmament,
No angel from the countless host
That loiters round the crystal coast,
Could stoop to heal that only child,
Nature's sweet marvel undefiled,
And keep the blossom of the earth,
Which all her harvests were not worth?
Not mine, — I never called thee mine,
But Nature's heir, — if I repine,
And seeing rashly torn and moved
Not what I made, but what I loved,
Grow early old with grief that thou
Must to the wastes of Nature go, —
'T is because a general hope
Was quenched, and all must doubt and grope.
For flattering planets seemed to say
This child should ill of ages stay,
By wondrous tongue, and guided pen,
Bring the flown Muses back to men.
Perchance not he but Nature ailed,
The world and not the infant failed.
It was not ripe yet to sustain
A genius of so fine a strain,
Who gazed upon the sun and moon
As if he came unto his own,
And, pregnant with his grander thought,
Brought the old order into doubt.
His beauty once their beauty tried;
They could not feed him, and he died,
And wandered backward as in scorn,
To wait an aeon to be born.

Ill day which made this beauty waste,
Plight broken, this high face defaced!
Some went and came about the dead;
And some in books of solace read;
Some to their friends the tidings say;
Some went to write, some went to pray;
One tarried here, there hurried one;
But their heart abode with none.
Covetous death bereaved us all,
To aggrandize one funeral.
The eager fate which carried thee
Took the largest part of me:
For this losing is true dying;
This is lordly man's down-lying,
This his slow but sure reclining,
Star by star his world resigning.

O child of paradise,
Boy who made dear his father's home,
In whose deep eyes
Men read the welfare of the times to come,
I am too much bereft.
The world dishonored thou hast left.
O truth's and nature's costly lie!
O trusted broken prophecy!
O richest fortune sourly crossed!
Born for the future, to the future lost!

The deep Heart answered, 'Weepest thou?
Worthier cause for passion wild
If I had not taken the child.
And deemest thou as those who pore,
With aged eyes, short way before, —
Think'st Beauty vanished from the coast
Of matter, and thy darling lost?
Taught he not thee — the man of eld,
Whose eyes within his eyes beheld
Heaven's numerous hierarchy span
The mystic gulf from God to man?
To be alone wilt thou begin

To be alone with thee begin
When worlds of lovers hem thee in?
To-morrow, when the masks shall fall
That dizen Nature's carnival,
The pure shall see by their own will,
Which overflowing Love shall fill,
'T is not within the force of fate
The fate-conjoined to separate.
But thou, my votary, weepest thou?
I gave thee sight — where is it now?
I taught thy heart beyond the reach
Of ritual, bible, or of speech;
Wrote in thy mind's transparent table,
As far as the incommunicable;
Taught thee each private sign to raise
Lit by the supersolar blaze.
Past utterance, and past belief,
And past the blasphemy of grief,
The mysteries of Nature's heart;
And though no Muse can these impart,
Throb thine with Nature's throbbing breast,
And all is clear from east to west.

'I came to thee as to a friend;
Dearest, to thee I did not send
Tutors, but a joyful eye,
Innocence that matched the sky,
Lovely locks, a form of wonder,
Laughter rich as woodland thunder,
That thou might'st entertain apart
The richest flowering of all art:
And, as the great all-loving Day
Through smallest chambers takes its way,
That thou might'st break thy daily bread
With prophet, savior and head;
That thou might'st cherish for thine own
The riches of sweet Mary's Son,
Boy-Rabbi, Israel's paragon.
And thoughtest thou such guest

Would in thy hall take up his rest?
Would rushing life forget her laws,
Fate's glowing revolution pause?
High omens ask diviner guess;
Not to be conned to tediousness
And know my higher gifts unbind
The zone that girds the incarnate mind.
When the scanty shores are full
With Thought's perilous, whirling pool;
When frail Nature can no more,
Then the Spirit strikes the hour:
My servant Death, with solving rite,
Pours finite into infinite.
Wilt thou freeze love's tidal flow,
Whose streams through Nature circling go?
Nail the wild star to its track
On the half-climbed zodiac?
Light is light which radiates,
Blood is blood which circulates,
Life is life which generates,
And many-seeming life is one, —
Wilt thou transfix and make it none?
Its onward force too starkly pent
In figure, bone and lineament?
Wilt thou, uncalled, interrogate,
Talker! the unreplying Fate?
Nor see the genius of the whole
Ascendant in the private soul,
Beckon it when to go and come,
Self-announced its hour of doom?
Fair the soul's recess and shrine,
Magic-built to last a season;
Masterpiece of love benign,
Fairer than expansive reason
Whose omen 'tis, and sign.
Wilt thou not ope thy heart to know
What rainbows teach, and sunsets show?
Verdict which accumulates
From lengthening scroll of human fates,

Voice of earth to earth returned,
Prayers of saints that inly burned, —
Saying, *What is excellent,*
As God lives, is permanent;
Hearts are dust, hearts' loves remain;
Heart's love will meet thee again.
Revere the Maker; fetch thine eye
Up to his style, and manners of the sky.
Not of adamant and gold
Built he heaven stark and cold;
No, but a nest of bending reeds,
Flowering grass and scented weeds;
Or like a traveller's fleeing tent,
Or bow above the tempest bent;
Built of tears and sacred flames,
And virtue reaching to its aims;
Built of furtherance and pursuing,
Not of spent deeds, but of doing.
Silent rushes the swift Lord
Through ruined systems still restored,
Broadsowing, bleak and void to bless,
Plants with worlds the wilderness;
Waters with tears of ancient sorrow
Apples of Eden ripe to-morrow.
House and tenant go to ground,
Lost in God, in Godhead found.'

CONCORD HYMN

SUNG AT THE COMPLETION OF THE BATTLE MONUMENT, JULY 4,
1837

By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood
And fired the shot heard round the world.

The foe long since in silence slept;
Alike the conqueror silent sleeps;
And Time the ruined bridge has swept
Down the dark stream which seaward creeps.

On this green bank, by this soft stream,
We set to-day a votive stone;
That memory may their deed redeem,
When, like our sires, our sons are gone.

Spirit, that made those heroes dare
To die, and leave their children free,
Bid Time and Nature gently spare
The shaft we raise to them and thee.

May-Day and Other Pieces

MAY-DAY

Daughter of Heaven and Earth, coy Spring,
With sudden passion languishing,
Teaching Barren moors to smile,
Painting pictures mile on mile,
Holds a cup with cowslip-wreaths,
Whence a smokeless incense breathes.
The air is full of whistlings bland;
What was that I heard
Out of the hazy land?
Harp of the wind, or song of bird,
Or vagrant booming of the air,
Voice of a meteor lost in day?
Such tidings of the starry sphere
Can this elastic air convey.
Or haply 'twas the cannonade
Of the pent and darkened lake,
Cooled by the pendent mountain's shade,
Whose deeps, till beams of noonday break,
Afflicted moan, and latest hold
Even into May the iceberg cold.
Was it a squirrel's pettish bark,
Or clarionet of jay? or hark
Where yon wedged line the Nestor leads,
Steering north with raucous cry
Through tracts and provinces of sky,
Every night alighting down
In new landscapes of romance,
Where darkling feed the clamorous clans
By lonely lakes to men unknown.
Come the tumult whence it will,
Voice of sport, or rush of wings,
It is a sound, it is a token
That the marble sleep is broken,
And a change has passed on things.

When late I walked, in earlier days,

All was stiff and stark;
Knee-deep snows choked all the ways,
In the sky no spark;
Firm-braced I sought my ancient woods,
Struggling through the drifted roads;
The whited desert knew me not,
Snow-ridges masked each darling spot;
The summer dells, by genius haunted,
One arctic moon had disenchanted.
All the sweet secrets therein hid
By Fancy, ghastly spells undid.
Eldest mason, Frost, had piled
Swift cathedrals in the wild;
The piny hosts were sheeted ghosts
In the star-lit minster aisled.
I found no joy: the icy wind
Might rule the forest to his mind.
Who would freeze on frozen lakes?
Back to books and sheltered home,
And wood-fire flickering on the walls,
To hear, when, 'mid our talk and games,
Without the baffled North-wind calls.
But soft! a sultry morning breaks;
The ground-pines wash their rusty green,
The maple-tops their crimson tint,
On the soft path each track is seen,
The girl's foot leaves its neater print.
The pebble loosened from the frost
Asks of the urchin to be tost.
In flint and marble beats a heart,
The kind Earth takes her children's part,
The green lane is the school-boy's friend,
Low leaves his quarrel apprehend,
The fresh ground loves his top and ball,
The air rings jocund to his call,
The brimming brook invites a leap,
He dives the hollow, climbs the steep.
The youth sees omens where he goes,
And speaks all languages the rose,

The wood-fly mocks with tiny voice
The far halloo of human voice;
The perfumed berry on the spray
Smacks of faint memories far away.
A subtle chain of countless rings
The next into the farthest brings,
And, striving to be man, the worm
Mounts through all the spires of form.

The caged linnet in the Spring
Hearkens for the choral glee,
When his fellows on the wing
Migrate from the Southern Sea;
When trellised grapes their flowers unmask,
And the new-born tendrils twine,
The old wine darkling in the cask
Feels the bloom on the living vine,
And bursts the hoops at hint of Spring:
And so, perchance, in Adam's race,
Of Eden's bower some dream-like trace
Survived the Flight and swam the Flood,
And wakes the wish in youngest blood
To tread the forfeit Paradise,
And feed once more the exile's eyes;
And ever when the happy child
In May beholds the blooming wild,
And hears in heaven the bluebird sing,
'Onward,' he cries, 'your baskets bring, —
In the next field is air more mild,
And o'er yon hazy crest is Eden's balmier spring.'

Not for a regiment's parade,
Nor evil laws or rulers made,
Blue Walden rolls its cannonade,
But for a lofty sign
Which the Zodiac threw,
That the bondage-days are told.
And waters free as winds shall flow.
Lo! how all the tribes combine

To rout the flying foe.
See, every patriot oak-leaf throws
His elfin length upon the snows,
Not idle, since the leaf all day
Draws to the spot the solar ray,
Ere sunset quarrying inches down,
And halfway to the mosses brown;
While the grass beneath the rime
Has hints of the propitious time,
And upward pries and perforates
Through the cold slab a thousand gates,
Till green lances peering through
Bend happy in the welkin blue.

As we thaw frozen flesh with snow,
So Spring will not her time forerun,
Mix polar night with tropic glow,
Nor cloy us with unshaded sun,
Nor wanton skip with bacchic dance,
But she has the temperance
Of the gods, whereof she is one, —
Masks her treasury of heat
Under east winds crossed with sleet.
Plants and birds and humble creatures
Well accept her rule austere;
Titan-born, to hardy natures
Cold is genial and dear.
As Southern wrath to Northern right
Is but straw to anthracite;
As in the day of sacrifice,
When heroes piled the pyre,
The dismal Massachusetts ice
Burned more than others' fire,
So Spring guards with surface cold
The garnered heat of ages old.
Hers to sow the seed of bread,
That man and all the kinds be fed;
And, when the sunlight fills the hours,
Dissolves the crust, displays the flowers.

Beneath the calm, within the light,
A hid unruly appetite
Of swifter life, a surer hope,
Strains every sense to larger scope,
Impatient to anticipate
The halting steps of aged Fate.
Slow grows the palm, too slow the pearl:
When Nature falters, fain would zeal
Grasp the felloes of her wheel,
And grasping give the orbs another whirl.
Turn swiftness round, O tardy ball!
And sun this frozen side.
Bring hither back the robin's call,
Bring back the tulip's pride.

Why chidest thou the tardy Spring?
The hardy bunting does not chide;
The blackbirds make the maples ring
With social cheer and jubilee;
The redwing flutes his *o-ka-lee*,
The robins know the melting snow;
The sparrow meek, prophetic-eyed,
Her nest beside the snow-drift weaves,
Secure the osier yet will hide
Her callow brood in mantling leaves, —
And thou, by science all undone,
Why only must thy reason fail
To see the southing of the sun?

The world rolls round, — mistrust it not, —
Befalls again what once befell;
All things return, both sphere and mote,
And I shall hear my bluebird's note,
And dream the dream of Auburn dell.

April cold with dropping rain
Willows and lilacs brings again,
The whistle of returning birds,
And trumpet-lowing of the herds.

The scarlet maple-keys betray
What potent blood hath modest May,
What fiery force the earth renews,
The wealth of forms, the flush of hues;
What joy in rosy waves outpoured
Flows from the heart of Love, the Lord.

Hither rolls the storm of heat;
I feel its finer billows beat
Like a sea which me infolds;
Heat with viewless fingers moulds,
Swells, and mellows, and matures,
Paints, and flavors, and allures,
Bird and brier inly warms,
Still enriches and transforms,
Gives the reed and lily length,
Adds to oak and oxen strength,
Transforming what it doth infold,
Life out of death, new out of old,
Painting fawns' and leopards' fells,
Seethes the gulf-encrimsoning shells,
Fires gardens with a joyful blaze
Of tulips, in the morning's rays.
The dead log touched bursts into leaf,
The wheat-blade whispers of the sheaf.
What god is this imperial Heat,
Earth's prime secret, sculpture's seat?
Doth it bear hidden in its heart
Water-line patterns of all art?
Is it Daedalus? is it Love?
Or walks in mask almighty Jove,
And drops from Power's redundant horn
All seeds of beauty to be born?

Where shall we keep the holiday,
And duly greet the entering May?
Too strait and low our cottage doors,
And all unmeet our carpet floors;
Nor spacious court, nor monarch's hall,

Suffice to hold the festival.
Up and away! where haughty woods
Front the liberated floods:
We will climb the broad-backed hills,
Hear the uproar of their joy;
We will mark the leaps and gleams
Of the new-delivered streams,
And the murmuring rivers of sap
Mount in the pipes of the trees,
Giddy with day, to the topmost spire,
Which for a spike of tender green
Bartered its powdery cap;
And the colors of joy in the bird,
And the love in its carol heard,
Frog and lizard in holiday coats,
And turtle brave in his golden spots;
While cheerful cries of crag and plain
Reply to the thunder of river and main.

As poured the flood of the ancient sea
Spilling over mountain chains,
Bending forests as bends the sedge,
Faster flowing o'er the plains, —
A world-wide wave with a foaming edge
That rims the running silver sheet, —
So pours the deluge of the heat
Broad northward o'er the land,
Painting artless paradises,
Drugging herbs with Syrian spices,
Fanning secret fires which glow
In columbine and clover-blow,
Climbing the northern zones,
Where a thousand pallid towns
Lie like cockles by the main,
Or tented armies on a plain.
The million-handed sculptor moulds
Quaintest bud and blossom folds,
The million-handed painter pours
Opal hues and purple dye;

Azaleas flush the island floors,
And the tints of heaven reply.

Wreaths for the May! for happy Spring
To-day shall all her dowry bring,
The love of kind, the joy, the grace,
Hymen of element and race,
Knowing well to celebrate
With song and hue and star and state,
With tender light and youthful cheer,
The spouses of the new-born year.

Spring is strong and virtuous,
Broad-sowing, cheerful, plenteous,
Quickening underneath the mould
Grains beyond the price of gold.
So deep and large her bounties are,
That one broad, long midsummer day
Shall to the planet overpay
The ravage of a year of war.

Drug the cup, thou butler sweet,
And send the nectar round;
The feet that slid so long on sleet
Are glad to feel the ground.
Fill and saturate each kind
With good according to its mind,
Fill each kind and saturate
With good agreeing with its fate,
And soft perfection of its plan —
Willow and violet, maiden and man.

The bitter-sweet, the haunting air
Creepeth, bloweth everywhere;
It preys on all, all prey on it.
Blooms in beauty, thinks in wit,
Stings the strong with enterprise,
Makes travellers long for Indian skies,
And where it comes this courier fleet

Fans in all hearts expectance sweet,
As if to-morrow should redeem
The vanished rose of evening's dream.
By houses lies a fresher green,
On men and maids a ruddier mien,
As if Time brought a new relay
Of shining virgins every May,
And Summer came to ripen maids
To a beauty that not fades.

I saw the bud-crowned Spring go forth,
Stepping daily onward north
To greet staid ancient cavaliers
Filing single in stately train.
And who, and who are the travellers?
They were Night and Day, and Day and Night,
Pilgrims wight with step forthright.
I saw the Days deformed and low,
Short and bent by cold and snow;
The merry Spring threw wreaths on them,
Flower-wreaths gay with bud and bell;
Many a flower and many a gem,
They were refreshed by the smell,
They shook the snow from hats and shoon,
They put their April raiment on;
And those eternal forms,
Unhurt by a thousand storms,
Shot up to the height of the sky again,
And danced as merrily as young men.
I saw them mask their awful glance
Sidewise meek in gossamer lids;
And to speak my thought if none forbids
It was as if the eternal gods,
Tired of their starry periods,
Hid their majesty in cloth
Woven of tulips and painted moth.
On carpets green the maskers march
Below May's well-appointed arch,
Each star, each god; each grace amain,

Every joy and virtue speed,
Marching duly in her train,
And fainting Nature at her need
Is made whole again.

'Twas the vintage-day of field and wood,
When magic wine for bards is brewed;
Every tree and stem and chink
Gushed with syrup to the brink.
The air stole into the streets of towns,
Refreshed the wise, reformed the clowns,
And betrayed the fund of joy
To the high-school and medalled boy:
On from hall to chamber ran,
From youth to maid, from boy to man,
To babes, and to old eyes as well.
'Once more,' the old man cried, 'ye clouds,
Airy turrets purple-piled,
Which once my infancy beguiled,
Beguile me with the wonted spell.
I know ye skilful to convoy
The total freight of hope and joy
Into rude and homely nooks,
Shed mocking lustres on shelf of books,
On farmer's byre, on pasture rude,
And stony pathway to the wood.
I care not if the pomps you show
Be what they soothfast appear,
Or if yon realms in sunset glow
Be bubbles of the atmosphere.
And if it be to you allowed
To fool me with a shining cloud,
So only new griefs are consoled
By new delights, as old by old,
Frankly I will be your guest,
Count your change and cheer the best.
The world hath overmuch of pain, —
If Nature give me joy again,
Of such deceit I'll not complain.'

Ah! well I mind the calendar,
Faithful through a thousand years,
Of the painted race of flowers,
Exact to days, exact to hours,
Counted on the spacious dial
Yon brodered zodiac girds.
I know the trusty almanac
Of the punctual coming-back,
On their due days, of the birds.
I marked them yestermorn,
A flock of finches darting
Beneath the crystal arch,
Piping, as they flew, a march, —
Belike the one they used in parting
Last year from yon oak or larch;
Dusky sparrows in a crowd,
Diving, darting northward free,
Suddenly betook them all,
Every one to his hole in the wall,
Or to his niche in the apple-tree.
I greet with joy the choral trains
Fresh from palms and Cuba's canes.
Best gems of Nature's cabinet,
With dews of tropic morning wet,
Beloved of children, bards and Spring,
O birds, your perfect virtues bring,
Your song, your forms, your rhythmic flight,
Your manners for the heart's delight,
Nestle in hedge, or barn, or roof,
Here weave your chamber weather-proof,
Forgive our harms, and condescend
To man, as to a lubber friend,
And, generous, teach his awkward race
Courage and probity and grace!

Poets praise that hidden wine
Hid in milk we drew
At the barrier of Time,
When our life was new.

We had eaten fairy fruit,
We were quick from head to foot,
All the forms we looked on shone
As with diamond dew's thereon.
What cared we for costly joys,
The Museum's far-fetched toys?
Gleam of sunshine on the wall
Poured a deeper cheer than all
The revels of the Carnival.
We a pine-grove did prefer
To a marble theatre,
Could with gods on mallows dine,
Nor cared for spices or for wine.
Wreaths of mist and rainbow spanned.
Arch on arch, the grimmest land;
Whittle of a woodland bird
Made the pulses dance,
Note of horn in valleys heard
Filled the region with romance.

None can tell how sweet,
How virtuous, the morning air;
Every accent vibrates well;
Not alone the wood-bird's call,
Or shouting boys that chase their ball,
Pass the height of minstrel skill,
But the ploughman's thoughtless cry,
Lowing oxen, sheep that bleat,
And the joiner's hammer-beat,
Softened are above their will,
Take tones from groves they wandered through
Or flutes which passing angels blew.
All grating discords melt,
No dissonant note is dealt,
And though thy voice be shrill
Like rasping file on steel,
Such is the temper of the air,
Echo waits with art and care,
And will the faults of song repair.

So by remote Superior Lake,
And by resounding Mackinac,
When northern storms the forest shake,
And billows on the long beach break,
The artful Air will separate
Note by note all sounds that grate,
Smothering in her ample breast
All but godlike words,
Reporting to the happy ear
Only purified accords.
Strangely wrought from barking waves,
Soft music daunts the Indian braves, —
Convent-chanting which the child
Hears pealing from the panther's cave
And the impenetrable wild.

Soft on the South-wind sleeps the haze:
So on thy broad mystic van
Lie the opal-colored days,
And waft the miracle to man.
Soothsayer of the eldest gods,
Repairer of what harms betide,
Revealer of the inmost powers
Prometheus proffered, Jove denied;
Disclosing treasures more than true,
Or in what far to-morrow due;
Speaking by the tongues of flowers,
By the ten-tongued laurel speaking,
Singing by the oriole songs,
Heart of bird the man's heart seeking;
Whispering hints of treasure hid
Under Morn's unlifted lid,
Islands looming just beyond
The dim horizon's utmost bound; —
Who can, like thee, our rags upbraid,
Or taunt us with our hope decayed?
Or who like thee persuade,
Making the splendor of the air,
The morn and sparkling dew, a snare?

Or who resent
Thy genius, wiles and blandishment?

There is no orator prevails
To beckon or persuade
Like thee the youth or maid:
Thy birds, thy songs, thy brooks, thy gales,
Thy blooms, thy kinds,
Thy echoes in the wilderness,
Soothe pain, and age, and love's distress,
Fire fainting will, and build heroic minds.

For thou, O Spring! canst renovate
All that high God did first create.
Be still his arm and architect,
Rebuild the ruin, mend defect;
Chemist to vamp old worlds with new,
Coat sea and sky with heavenlier blue,
New tint the plumage of the birds,
And slough decay from grazing herds,
Sweep ruins from the scarped mountain,
Cleanse the torrent at the fountain,
Purge alpine air by towns defiled,
Bring to fair mother fairer child,
Not less renew the heart and brain,
Scatter the sloth, wash out the stain,
Make the aged eye sun-clear,
To parting soul bring grandeur near.
Under gentle types, my Spring
Masks the might of Nature's king,
An energy that searches thorough
From Chaos to the dawning morrow;
Into all our human plight,
The soul's pilgrimage and flight;
In city or in solitude,
Step by step, lifts bad to good,
Without halting, without rest,
Lifting Better up to Best;
Planting seeds of knowledge pure,

Through earth to ripen, through heaven endure.

THE ADIRONDACS

A JOURNAL

DEDICATED TO MY FELLOW TRAVELLERS IN AUGUST, 1858

Wise and polite, — and if I drew
Their several portraits, you would own
Chaucer had no such worthy crew,
Nor Boccace in Decameron.

We crossed Champlain to Keeseville with our friends,
Thence, in strong country carts, rode up the forks
Of the Ausable stream, intent to reach
The Adirondac lakes. At Martin's Beach
We chose our boats; each man a boat and guide, —
Ten men, ten guides, our company all told.

Next morn, we swept with oars the Saranac,
With skies of benediction, to Round Lake,
Where all the sacred mountains drew around us,
Taháwus, Seaward, MacIntyre, Baldhead,
And other Titans without muse or name.
Pleased with these grand companions, we glide on,
Instead of flowers, crowned with a wreath of hills.
We made our distance wider, boat from boat,
As each would hear the oracle alone.
By the bright morn the gay flotilla slid
Through files of flags that gleamed like bayonets,
Through gold-moth-haunted beds of pickerel-flower,
Through scented banks of lilies white and gold,
Where the deer feeds at night, the teal by day,
On through the Upper Saranac, and up
Père Raquette stream, to a small tortuous pass
Winding through grassy shallows in and out,
Two creeping miles of rushes, pads and sponge,
To Follansbee Water and the Lake of Loons.

Northward the length of Follansbee we rowed,
Under low mountains, whose unbroken ridge
Ponderous with beechen forest sloped the shore.
A pause and council: then, where near the head
Due east a bay makes inward to the land
Between two rocky arms, we climb the bank,
And in the twilight of the forest noon
Wield the first axe these echoes ever heard.
We cut young trees to make our poles and thwarts,
Barked the white spruce to weatherfend the roof,
Then struck a light and kindled the camp-fire.

The wood was sovran with centennial trees, —
Oak, cedar, maple, poplar, beech and fir,
Linden and spruce. In strict society
Three conifers, white, pitch and Norway pine,
Five-leaved, three-leaved and two-leaved, grew thereby,
Our patron pine was fifteen feet in girth,
The maple eight, beneath its shapely tower.

‘Welcome!’ the wood-god murmured through the leaves, —
‘Welcome, though late, unknowing, yet known to me.’
Evening drew on; stars peeped through maple-boughs,
Which o’erhung, like a cloud, our camping fire.
Decayed millennial trunks, like moonlight flecks,
Lit with phosphoric crumbs the forest floor.

Ten scholars, wonted to lie warm and soft
In well-hung chambers daintily bestowed,
Lie here on hemlock-boughs, like Sacs and Sioux,
And greet unanimous the joyful change.
So fast will Nature acclimate her sons,
Though late returning to her pristine ways.
Off soundings, seamen do not suffer cold;
And, in the forest, delicate clerks, unbrowned,
Sleep on the fragrant brush, as on down-beds.
Up with the dawn, they fancied the light air
That circled freshly in their forest dress
Made them to boys again. Happier that they

Slipped off their pack of duties, leagues behind,
At the first mounting of the giant stairs.
No placard on these rocks warned to the polls,
No door-bell heralded a visitor,
No courier waits, no letter came or went,
Nothing was ploughed, or reaped, or bought, or sold;
The frost might glitter, it would blight no crop,
The falling rain will spoil no holiday.
We were made freemen of the forest laws,
All dressed, like Nature, fit for her own ends,
Essaying nothing she cannot perform.

In Adirondac lakes

At morn or noon, the guide rows bareheaded:
Shoes, flannel shirt, and kersey trousers make
His brief toilette: at night, or in the rain,
He dons a surcoat which he doffs at morn:
A paddle in the right hand, or an oar,
And in the left, a gun, his needful arms.
By turns we praised the stature of our guides,
Their rival strength and suppleness, their skill
To row, to swim, to shoot, to build a camp,
To climb a lofty stem, clean without boughs
Full fifty feet, and bring the eaglet down:
Temper to face wolf, bear, or catamount,
And wit to trap or take him in his lair.
Sound, ruddy men, frolic and innocent,
In winter, lumberers; in summer, guides;
Their sinewy arms pull at the oar untired
Three times ten thousand strokes, from morn to eve.

Look to yourselves, ye polished gentlemen!
No city airs or arts pass current here.
Your rank is all reversed; let men or cloth
Bow to the stalwart churls in overalls:
They are the doctors of the wilderness,
And we the low-prized laymen.
In sooth, red flannel is a saucy test
Which few can put on with impunity.

What make you, master, fumbling at the oar?
Will you catch crabs? Truth tries pretension here.
The sallow knows the basket-maker's thumb;
The oar, the guide's. Dare you accept the tasks
He shall impose, to find a spring, trap foxes,
Tell the sun's time, determine the true north,
Or stumbling on through vast self-similar woods
To thread by night the nearest way to camp?

Ask you, how went the hours?
All day we swept the lake, searched every cove,
North from Camp Maple, south to Osprey Bay,
Watching when the loud dogs should drive in deer,
Or whipping its rough surface for a trout;
Or, bathers, diving from the rock at noon;
Challenging Echo by our guns and cries;
Or listening to the laughter of the loon;
Or, in the evening twilight's latest red,
Beholding the procession of the pines;
Or, later yet, beneath a lighted jack,
In the boat's bows, a silent night-hunter
Stealing with paddle to the feeding-grounds
Of the red deer, to aim at a square mist.
Hark to that muffled roar! a tree in the woods
Is fallen: but hush! it has not scared the buck
Who stands astonished at the meteor light,
Then turns to bound away, — is it too late?

Our heroes tried their rifles at a mark,
Six rods, sixteen, twenty, or forty-five;
Sometimes their wits at sally and retort,
With laughter sudden as the crack of rifle;
Or parties scaled the near acclivities
Competing seekers of a rumored lake,
Whose unauthenticated waves we named
Lake Probability, — our carbuncle,
Long sought, not found.

Two Doctors in the camp

Dissected the slain deer, weighed the trout's brain,
Captured the lizard, salamander, shrew,
Crab, mice, snail, dragon-fly, minnow and moth;
Insatiate skill in water or in air
Waved the scoop-net, and nothing came amiss;
The while, one leaden got of alcohol
Gave an impartial tomb to all the kinds.
Not less the ambitious botanist sought plants,
Orchis and gentian, fern and long whip-scorpion,
Rosy polygonum, lake-margin's pride,
Hypnum and hydnum, mushroom, sponge and moss,
Or harebell nodding in the gorge of falls.
Above, the eagle flew, the osprey screamed,
The raven croaked, owls hooted, the woodpecker
Loud hammered, and the heron rose in the swamp.
As water poured through hollows of the hills
To feed this wealth of lakes and rivulets,
So Nature shed all beauty lavishly
From her redundant horn.

Lords of this realm,
Bounded by dawn and sunset, and the day
Rounded by hours where each outdid the last
In miracles of pomp, we must be proud,
As if associates of the sylvan gods.
We seemed the dwellers of the zodiac,
So pure the Alpine element we breathed,
So light, so lofty pictures came and went.
We trode on air, contemned the distant town,
Its timorous ways, big trifles, and we planned
That we should build, hard-by, a spacious lodge
And how we should come hither with our sons,
Hereafter, — willing they, and more adroit.

Hard fare, hard bed and comic misery, —
The midge, the blue-fly and the mosquito
Painted our necks, hands, ankles, with red bands:
But, on the second day, we heed them not,
Nay, we saluted them Auxiliaries,

Whom earlier we had chid with spiteful names.
For who defends our leafy tabernacle
From bold intrusion of the travelling crowd, —
Who but the midge, mosquito and the fly,
Which past endurance sting the tender cit,
But which we learn to scatter with a smudge,
Or baffle by a veil, or slight by scorn?

Our foaming ale we drank from hunters' pans,
Ale, and a sup of wine. Our steward gave
Venison and trout, potatoes, beans, wheat-bread;
All ate like abbots, and, if any missed
Their wonted convenance, cheerly hid the loss
With hunters' appetite and peals of mirth.
And Stillman, our guides' guide, and Commodore,
Crusoe, Crusader, Pius Aeneas, said aloud,
"Chronic dyspepsia never came from eating
Food indigestible": — then murmured some,
Others applauded him who spoke the truth.

Nor doubt but visitings of graver thought
Checked in these souls the turbulent heyday
'Mid all the hints and glories of the home.
For who can tell what sudden privacies
Were sought and found, amid the hue and cry
Of scholars furloughed from their tasks and let
Into this Oreads' fended Paradise,
As chapels in the city's thoroughfares,
Whither gaunt Labor slips to wipe his brow
And meditate a moment on Heaven's rest.
Judge with what sweet surprises Nature spoke
To each apart, lifting her lovely shows
To spiritual lessons pointed home,
And as through dreams in watches of the night,
So through all creatures in their form and ways
Some mystic hint accosts the vigilant,
Not clearly voiced, but waking a new sense
Inviting to new knowledge, one with old.
Hark to that petulant chirp! what ails the warbler?

Mark his capricious ways to draw the eye.
Now soar again. What wilt thou, restless bird,
Seeking in that chaste blue a bluer light,
Thirsting in that pure for a purer sky?

And presently the sky is changed; O world!
What pictures and what harmonies are thine!
The clouds are rich and dark, the air serene,
So like the soul of me, what if 't were me?
A melancholy better than all mirth.
Comes the sweet sadness at the retrospect,
Or at the foresight of obscurer years?
Like yon slow-sailing cloudy promontory
Whereon the purple iris dwells in beauty
Superior to all its gaudy skirts.
And, that no day of life may lack romance,
The spiritual stars rise nightly, shedding down
A private beam into each several heart.
Daily the bending skies solicit man,
The seasons chariot him from this exile,
The rainbow hours bedeck his glowing chair,
The storm-winds urge the heavy weeks along,
Suns haste to set, that so remoter lights
Beckon the wanderer to his vaster home.

With a vermilion pencil mark the day
When of our little fleet three cruising skiffs
Entering Big Tupper, bound for the foaming Falls
Of loud Bog River, suddenly confront
Two of our mates returning with swift oars.
One held a printed journal waving high
Caught from a late-arriving traveller,
Big with great news, and shouted the report
For which the world had waited, now firm fact,
Of the wire-cable laid beneath the sea,
And landed on our coast, and pulsating
With ductile fire. Loud, exulting cries
From boat to boat, and to the echoes round,
Greet the glad miracle. Thought's new-found path

Shall supplement henceforth all trodden ways,
Match God's equator with a zone of art,
And lift man's public action to a height
Worthy the enormous cloud of witnesses,
When linkèd hemispheres attest his deed.
We have few moments in the longest life
Of such delight and wonder as there grew, —
Nor yet unsuited to that solitude:
A burst of joy, as if we told the fact
To ears intelligent; as if gray rock
And cedar grove and cliff and lake should know
This feat of wit, this triumph of mankind;
As if we men were talking in a vein
Of sympathy so large, that ours was theirs,
And a prime end of the most subtle element
Were fairly reached at last. Wake, echoing caves!
Bend nearer, faint day-moon! Yon thundertops,
Let them hear well! 'tis theirs as much as ours.

A spasm throbbing through the pedestals
Of Alp and Andes, isle and continent,
Urging astonished Chaos with a thrill
To be a brain, or serve the brain of man.
The lightning has run masterless too long;
He must to school and learn his verb and noun
And teach his nimbleness to earn his wage,
Spelling with guided tongue man's messages
Shot through the weltering pit of the salt sea.
And yet I marked, even in the manly joy
Of our great-hearted Doctor in his boat
(Perchance I erred), a shade of discontent;
Or was it for mankind a generous shame,
As of a luck not quite legitimate,
Since fortune snatched from wit the lion's part?
Was it a college pique of town and gown,
As one within whose memory it burned
That not academicians, but some lout,
Found ten years since the Californian gold?
And now, again, a hungry company

Of traders, led by corporate sons of trade,
Perversely borrowing from the shop the tools
Of science, not from the philosophers,
Had won the brightest laurel of all time.
'Twas always thus, and will be; hand and head
Are ever rivals: but, though this be swift,
The other slow, — this the Prometheus,
And that the Jove, — yet, howsoever hid,
It was from Jove the other stole his fire,
And, without Jove, the good had never been.
It is not Iroquois or cannibals,
But ever the free race with front sublime,
And these instructed by their wisest too,
Who do the feat, and lift humanity.
Let not him mourn who best entitled was,
Nay, mourn not one: let him exult,
Yea, plant the tree that bears best apples, plant,
And water it with wine, nor watch askance
Whether thy sons or strangers eat the fruit:
Enough that mankind eat and are refreshed.

We flee away from cities, but we bring
The best of cities with us, these learned classifiers,
Men knowing what they seek, armed eyes of experts.
We praise the guide, we praise the forest life:
But will we sacrifice our dear-bought lore
Of books and arts and trained experiment,
Or count the Sioux a match for Agassiz?
O no, not we! Witness the shout that shook
Wild Tupper Lake; witness the mute all-hail
The joyful traveller gives, when on the verge
Of craggy Indian wilderness he hears
From a log cabin stream Beethoven's notes
On the piano, played with master's hand.
'Well done!' he cries; 'the bear is kept at bay,
The lynx, the rattlesnake, the flood, the fire;
All the fierce enemies, ague, hunger, cold,
This thin spruce roof, this clayed log-wall,
This wild plantation will suffice to chase.

Now speed the gay celerities of art,
What in the desert was impossible
Within four walls is possible again, —
Culture and libraries, mysteries of skill,
Traditioned fame of masters, eager strife
Of keen competing youths, joined or alone
To outdo each other and extort applause.
Mind wakes a new-born giant from her sleep.
Twirl the old wheels! Time takes fresh start again,
On for a thousand years of genius more.’

The holidays were fruitful, but must end;
One August evening had a cooler breath;
Into each mind intruding duties crept;
Under the cinders burned the fires of home;
Nay, letters found us in our paradise:
So in the gladness of the new event
We struck our camp and left the happy hills.
The fortunate star that rose on us sank not;
The prodigal sunshine rested on the land,
The rivers gambolled onward to the sea,
And Nature, the inscrutable and mute,
Permitted on her infinite repose
Almost a smile to steal to cheer her sons,
As if one riddle of the Sphinx were guessed.

BRAHMA

If the red slayer think he slays,
Or if the slain think he is slain,
They know not well the subtle ways
I keep, and pass, and turn again.

Far or forgot to me is near;
Shadow and sunlight are the same;
The vanished gods to me appear;
And one to me are shame and fame.

They reckon ill who leave me out;
When me they fly, I am the wings;
I am the doubter and the doubt,
And I the hymn the Brahmin sings.

The strong gods pine for my abode,
And pine in vain the sacred Seven;
But thou, meek lover of the good!
Find me, and turn thy back on heaven.

NEMESIS

Already blushes on thy cheek
The bosom thought which thou must speak;
The bird, how far it haply roam
By cloud or isle, is flying home;
The maiden fears, and fearing runs
Into the charmed snare she shuns;
And every man, in love or pride,
Of his fate is never wide.

Will a woman's fan the ocean smooth?
Or prayers the stony Parcae soothe,
Or coax the thunder from its mark?
Or tapers light the chaos dark?
In spite of Virtue and the Muse,
Nemesis will have her dues,
And all our struggles and our toils
Tighter wind the giant coils.

FATE

Deep in the man sits fast his fate
To mould his fortunes, mean or great:
Unknown to Cromwell as to me
Was Cromwell's measure or degree;
Unknown to him as to his horse,
If he than his groom be better or worse.
He works, plots, fights, in rude affairs,
With squires, lords, kings, his craft compares,
Till late he learned, through doubt and fear,
Broad England harbored not his peer:
Obeying time, the last to own
The Genius from its cloudy throne.
For the prevision is allied
Unto the thing so signified;
Or say, the foresight that awaits
Is the same Genius that creates.

FREEDOM

Once I wished I might rehearse
Freedom's paeon in my verse,
That the slave who caught the strain
Should throb until he snapped his chain,
But the Spirit said, 'Not so;
Speak it not, or speak it low;
Name not lightly to be said,
Gift too precious to be prayed,
Passion not to be expressed
But by heaving of the breast:
Yet, — wouldst thou the mountain find
Where this deity is shrined,
Who gives to seas and sunset skies
Their unspent beauty of surprise,
And, when it lists him, waken can
Brute or savage into man;
Or, if in thy heart he shine,
Blends the starry fates with thine,
Draws angels nigh to dwell with thee,
And makes thy thoughts archangels be;
Freedom's secret wilt thou know? —
Counsel not with flesh and blood;
Loiter not for cloak or food;
Right thou feelest, rush to do.'

ODE SUNG IN THE TOWN HALL, CONCORD, JULY 4, 1857

O tenderly the haughty day
Fills his blue urn with fire;
One morn is in the mighty heaven,
And one in our desire.

The cannon booms from town to town,
Our pulses beat not less,
The joy-bells chime their tidings down,
Which children's voices bless.

For He that flung the broad blue fold
O'er-mantling land and sea,
One third part of the sky unrolled
For the banner of the free.

The men are ripe of Saxon kind
To build an equal state, —
To take the statute from the mind
And make of duty fate.

United States! the ages plead, —
Present and Past in under-song, —
Go put your creed into your deed,
Nor speak with double tongue.

For sea and land don't understand,
Nor skies without a frown
See rights for which the one hand fights
By the other cloven down.

Be just at home; then write your scroll
Of honor o'er the sea,
And bid the broad Atlantic roll,
A ferry of the free.

And henceforth there shall be no chain,
Save underneath the sea

The wires shall murmur through the main
Sweet songs of liberty.

The conscious stars accord above,
The waters wild below,
And under, through the cable wove,
Her fiery errands go.

For He that worketh high and wise.
Nor pauses in his plan,
Will take the sun out of the skies
Ere freedom out of man.

BOSTON HYMN READ IN MUSIC HALL, JANUARY 1, 1863

The word of the Lord by night
To the watching Pilgrims came,
As they sat by the seaside,
And filled their hearts with flame.

God said, I am tired of kings,
I suffer them no more;
Up to my ear the morning brings
The outrage of the poor.

Think ye I made this ball
A field of havoc and war,
Where tyrants great and tyrants small
Might harry the weak and poor?

My angel, — his name is Freedom, —
Choose him to be your king;
He shall cut pathways east and west
And fend you with his wing.

Lo! I uncover the land
Which I hid of old time in the West,
As the sculptor uncovers the statue
When he has wrought his best; I show Columbia, of the rocks
Which dip their foot in the seas
And soar to the air-borne flocks
Of clouds and the boreal fleece.

I will divide my goods;
Call in the wretch and slave:
None shall rule but the humble.
And none but Toil shall have.

I will have never a noble,
No lineage counted great;
Fishers and choppers and ploughmen
Shall constitute a state.

Go, cut down trees in the forest
And trim the straightest boughs;
Cut down trees in the forest
And build me a wooden house.

Call the people together,
The young men and the sires,
The digger in the harvest-field,
Hireling and him that hires; And here in a pine state-house
They shall choose men to rule
In every needful faculty,
In church and state and school.

Lo, now! if these poor men
Can govern the land and sea
And make just laws below the sun,
As planets faithful be.

And ye shall succor men;
'Tis nobleness to serve;
Help them who cannot help again:
Beware from right to swerve.

I break your bonds and masterships,
And I unchain the slave:
Free be his heart and hand henceforth
As wind and wandering wave.

I cause from every creature
His proper good to flow:
As much as he is and doeth,
So much he shall bestow.

But, laying hands on another
To coin his labor and sweat,
He goes in pawn to his victim
For eternal years in debt.

To-day unbind the captive,
So only are ye unbound;

Lift up a people from the dust,
Trump of their rescue, sound!

Pay ransom to the owner
And fill the bag to the brim.
Who is the owner? The slave is owner,
And ever was. Pay him.

O North! give him beauty for rags,
And honor, O South! for his shame;
Nevada! coin thy golden crags
With Freedom's image and name.

Up! and the dusky race
That sat in darkness long, —
Be swift their feet as antelopes.
And as behemoth strong.

Come, East and West and North,
By races, as snow-flakes,
And carry my purpose forth,
Which neither halts nor shakes.

My will fulfilled shall be,
For, in daylight or in dark,
My thunderbolt has eyes to see
His way home to the mark.

VOLUNTARIES

I

Low and mournful be the strain,
Haughty thought be far from me;
Tones of penitence and pain,
Meanings of the tropic sea;
Low and tender in the cell
Where a captive sits in chains.
Crooning ditties treasured well
From his Afric's torrid plains.
Sole estate his sire bequeathed, —
Hapless sire to hapless son, —
Was the wailing song he breathed,
And his chain when life was done.

What his fault, or what his crime?
Or what ill planet crossed his prime?
Heart too soft and will too weak
To front the fate that crouches near, —
Dove beneath the vulture's beak; —
Will song dissuade the thirsty spear?
Dragged from his mother's arms and breast,
Displaced, disfurnished here,
His wistful toil to do his best
Chilled by a ribald jeer.
Great men in the Senate sate,
Sage and hero, side by side,
Building for their sons the State,
Which they shall rule with pride.
They forbore to break the chain
Which bound the dusky tribe,
Checked by the owners' fierce disdain,
Lured by 'Union' as the bribe.
Destiny sat by, and said,
'Pang for pang your seed shall pay,
Hide in false peace your coward head,

I bring round the harvest day.'

II

Freedom all winged expands,
Nor perches in a narrow place;
Her broad van seeks unplanted lands;
She loves a poor and virtuous race.
Clinging to a colder zone
Whose dark sky sheds the snowflake down,
The snowflake is her banner's star,
Her stripes the boreal streamers are.
Long she loved the Northman well;
Now the iron age is done,
She will not refuse to dwell
With the offspring of the Sun;
Foundling of the desert far,
Where palms plume, siroccos blaze,
He roves unhurt the burning ways
In climates of the summer star.
He has avenues to God
Hid from men of Northern brain,
Far beholding, without cloud,
What these with slowest steps attain.
If once the generous chief arrive
To lead him willing to be led,
For freedom he will strike and strive,
And drain his heart till he be dead.

III

In an age of fops and toys,
Wanting wisdom, void of right,
Who shall nerve heroic boys
To hazard all in Freedom's fight, —
Break sharply off their jolly games,
Forsake their comrades gay
And quit proud homes and youthful dames
For famine, toil and fray?

Yet on the nimble air benign
Speed nimbler messages,
That waft the breath of grace divine
To hearts in sloth and ease.
So nigh is grandeur to our dust,
So near is God to man,
When Duty whispers low, *Thou must*,
The youth replies, *I can*.

IV

O, well for the fortunate soul
Which Music's wings infold,
Stealing away the memory
Of sorrows new and old!
Yet happier he whose inward sight,
Stayed on his subtle thought,
Shuts his sense on toys of time,
To vacant bosoms brought.
But best befriended of the God
He who, in evil times,
Warned by an inward voice,
Heeds not the darkness and the dread,
Biding by his rule and choice,
Feeling only the fiery thread
Leading over heroic ground,
Walled with mortal terror round,
To the aim which him allures,
And the sweet heaven his deed secures.
Peril around, all else appalling,
Cannon in front and leaden rain
Him duty through the clarion calling
To the van called not in vain.

Stainless soldier on the walls,
Knowing this, — and knows no more, —
Whoever fights, whoever falls,
Justice conquers evermore,
Justice after as before, —

And he who battles on her side,
God, though he were ten times slain,
Crowns him victor glorified,
Victor over death and pain.

V

Blooms the laurel which belongs
To the valiant chief who fights;
I see the wreath, I hear the songs
Lauding the Eternal Rights,
Victors over daily wrongs:
Awful victors, they misguide
Whom they will destroy,
And their coming triumph hide
In our downfall, or our joy:
They reach no term, they never sleep,
In equal strength through space abide;
Though, feigning dwarfs, they crouch and creep,
The strong they slay, the swift outstride:
Fate's grass grows rank in valley clods,
And rankly on the castled steep, —
Speak it firmly, these are gods,
All are ghosts beside.

LOVE AND THOUGHT

Two well-assorted travellers use
The highway, Eros and the Muse.
From the twins is nothing hidden,
To the pair is nought forbidden;
Hand in hand the comrades go
Every nook of Nature through:
Each for other they were born,
Each can other best adorn;
They know one only mortal grief
Past all balsam or relief;
When, by false companions crossed,
The pilgrims have each other lost.

UNA

Roving, roving, as it seems,
Una lights my clouded dreams;
Still for journeys she is dressed;
We wander far by east and west.

In the homestead, homely thought,
At my work I ramble not;
If from home chance draw me wide,
Half-seen Una sits beside.

In my house and garden-plot,
Though beloved, I miss her not;
But one I seek in foreign places,
One face explore in foreign faces.

At home a deeper thought may light
The inward sky with chrysolite,
And I greet from far the ray,
Aurora of a dearer day.

But if upon the seas I sail,
Or trundle on the glowing rail,
I am but a thought of hers,
Loveliest of travellers.

So the gentle poet's name
To foreign parts is blown by fame,
Seek him in his native town,
He is hidden and unknown.

BOSTON

Sicut patribus, sit Deus nobis.

The rocky nook with hilltops three
Looked eastward from the farms,
And twice each day the flowing sea
Took Boston in its arms;
The men of yore were stout and poor,
And sailed for bread to every shore.

And where they went on trade intent
They did what freemen can,
Their dauntless ways did all men praise,
The merchant was a man.
The world was made for honest trade, —
To plant and eat be none afraid.

The waves that rocked them on the deep
To them their secret told;
Said the winds that sung the lads to sleep,
'Like us be free and bold!'
The honest waves refused to slaves
The empire of the ocean caves.

Old Europe groans with palaces,
Has lords enough and more; —
We plant and build by foaming seas
A city of the poor; —
For day by day could Boston Bay
Their honest labor overpay.

We grant no dukedoms to the few,
We hold like rights, and shall; —
Equal on Sunday in the pew,
On Monday in the mall,
For what avail the plough or sail,
Or land or life, if freedom fail?

The noble craftsman we promote,
Disown the knave and fool;
Each honest man shall have his vote,
Each child shall have his school.
A union then of honest men,
Or union never more again.

The wild rose and the barberry thorn
Hung out their summer pride,
Where now on heated pavements worn
The feet of millions stride.

Fair rose the planted hills behind
The good town on the bay,
And where the western hills declined
The prairie stretched away.

What care though rival cities soar
Along the stormy coast,
Penn's town, New York and Baltimore,
If Boston knew the most!

They laughed to know the world so wide;
The mountains said, 'Good-day!
We greet you well, you Saxon men,
Up with your towns and stay!'
The world was made for honest trade, —
To plant and eat be none afraid.

'For you,' they said, 'no barriers be,
For you no sluggard rest;
Each street leads downward to the sea,
Or landward to the west.'

O happy town beside the sea,
Whose roads lead everywhere to all;
Than thine no deeper moat can be,
No stouter fence, no steeper wall!

Bad news from George on the English throne;

‘You are thriving well,’ said he;
‘Now by these presents be it known
You shall pay us a tax on tea;
’Tis very small, — no load at all, —
Honor enough that we send the call.

‘Not so,’ said Boston, ‘good my lord,
We pay your governors here
Abundant for their bed and board,
Six thousand pounds a year.
(Your Highness knows our homely word)
Millions for self-government,
But for tribute never a cent.’

The cargo came! and who could blame
If *Indians* seized the tea,
And, chest by chest, let down the same,
Into the laughing sea?
For what avail the plough or sail,
Or land or life, if freedom fail?

The townsmen braved the English king,
Found friendship in the French,
And honor joined the patriot ring
Low on their wooden bench.

O bounteous seas that never fail!
O day remembered yet!
O happy port that spied the sail
Which wafted Lafayette!
Pole-star of light in Europe’s night,
That never faltered from the right.

Kings shook with fear, old empires crave
The secret force to find
Which fired the little State to save
The rights of all mankind.

But right is might through all the world;

Province to province faithful clung,
Through good and ill the war-bolt hurled,
Till Freedom cheered and joy-bells rung.

The sea returning day by day
Restores the world-wide mart;
So let each dweller on the Bay
Fold Boston in his heart,
Till these echoes be choked with snows,
Or over the town blue ocean flows.

Let the blood of her hundred thousands
Throb in each manly vein;
And the wits of all her wisest,
Make sunshine in her brain.
For you can teach the lightning speech,
And round the globe your voices reach.

And each shall care for other,
And each to each shall bend,
To the poor a noble brother,
To the good an equal friend.

A blessing through the ages thus
Shield all thy roofs and towers!
GOD WITH THE FATHERS, SO WITH US,
Thou darling town of ours!

RUBIES

They brought me rubies from the mine,
And held them to the sun;
I said, they are drops of frozen wine
From Eden's vats that run.

I looked again, — I thought them hearts
Of friends to friends unknown;
Tides that should warm each neighboring life
Are locked in sparkling stone.

But fire to thaw that ruddy snow,
To break enchanted ice,
And give love's scarlet tides to flow, —
When shall that sun arise?

MERLIN'S SONG

I

Of Merlin wise I learned a song, —
Sing it low or sing it loud,
It is mightier than the strong,
And punishes the proud.
I sing it to the surging crowd, —
Good men it will calm and cheer,
Bad men it will chain and cage —
In the heart of the music peals a strain
Which only angels hear;
Whether it waken joy or rage
Hushed myriads hark in vain,
Yet they who hear it shed their age,
And take their youth again.

II

Hear what British Merlin sung,
Of keenest eye and truest tongue.
Say not, the chiefs who first arrive
Usurp the seats for which all strive;
The forefathers this land who found
Failed to plant the vantage-ground;
Ever from one who comes to-morrow
Men wait their good and truth to borrow.
But wilt thou measure all thy road,
See thou lift the lightest load.
Who has little, to him who has less, can spare,
And thou, Cyndyllan's son! beware
Ponderous gold and stuffs to bear,
To falter ere thou thy task fulfil, —
Only the light-armed climb the hill.
The richest of all lords is Use,
And ruddy Health the loftiest Muse.
Live in the sunshine, swim the sea,

Drink the wild air's salubrity:
When the star Canope shines in May,
Shepherds are thankful and nations gay.
The music that can deepest reach,
And cure all ill, is cordial speech:
Mask thy wisdom with delight,
Toy with the bow, yet hit the white.
Of all wit's uses, the main one
Is to live well with who has none.

THE TEST

(Musa loquitur.) I hung my verses in the wind,
Time and tide their faults may find.
All were winnowed through and through,
Five lines lasted sound and true;
Five were smelted in a pot
Than the South more fierce and hot;
These the siroc could not melt,
Fire their fiercer flaming felt,
And the meaning was more white
Than July's meridian light.
Sunshine cannot bleach the snow,
Nor time unmake what poets know.
Have you eyes to find the five
Which five hundred did survive?

[*Alphabetical List of Poems*](#)

SOLUTION

I am the Muse who sung alway
By Jove, at dawn of the first day.
Star-crowned, sole-sitting, long I wrought
To fire the stagnant earth with thought:
On spawning slime my song prevails,
Wolves shed their fangs, and dragons scales;
Flushed in the sky the sweet May-morn,
Earth smiled with flowers, and man was born.
Then Asia yeaned her shepherd race,
And Nile substructs her granite base, —
Tented Tartary, columned Nile, —
And, under vines, on rocky isle,
Or on wind-blown sea-marge bleak,
Forward stepped the perfect Greek:
That wit and joy might find a tongue,
And earth grow civil, HOMER sung.

Flown to Italy from Greece,
I brooded long and held my peace,
For I am wont to sing uncalled,
And in days of evil plight
Unlock doors of new delight;
And sometimes mankind I appalled
With a bitter horoscope,
With spasms of terror for balm of hope.
Then by better thought I lead
Bards to speak what nations need;
So I folded me in fears,
And DANTE searched the triple spheres,
Moulding Nature at his will,
So shaped, so colored, swift or still,
And, sculptor-like, his large design
Etched on Alp and Apennine.

Seethed in mists of Penmanmaur,
Taught by Plinlimmon's Druid power,

England's genius filled all measure
Of heart and soul, of strength and pleasure,
Gave to the mind its emperor,
And life was larger than before:
Nor sequent centuries could hit
Orbit and sum of SHAKSPEARE'S wit.
The men who lived with him became
Poets, for the air was fame.

Far in the North, where polar night
Holds in check the frolic light,
In trance upborne past mortal goal
The Swede EMANUEL leads the soul.
Through snows above, mines underground,
The inks of Erebus he found;
Rehearsed to men the damned wails
On which the seraph music sails.
In spirit-worlds he trod alone,
But walked the earth unmarked, unknown,
The near bystander caught no sound, —
Yet they who listened far aloof
Heard rendings of the skyey roof,
And felt, beneath, the quaking ground;
And his air-sown, unheeded words,
In the next age, are flaming swords.

In newer days of war and trade,
Romance forgot, and faith decayed,
When Science armed and guided war,
And clerks the Janus-gates unbar,
When France, where poet never grew,
Halved and dealt the globe anew,
GOETHE, raised o'er joy and strife,
Drew the firm lines of Fate and Life
And brought Olympian wisdom down
To court and mart, to gown and town.
Stooping, his finger wrote in clay
The open secret of to-day.

So bloom the unfading petals five,
And verses that all verse outlive.

HYMN SUNG AT THE SECOND CHURCH, AT THE ORDINATION OF REV. CHANDLER ROBBINS

We love the venerable house
Our fathers built to God; —
In heaven are kept their grateful vows,
Their dust endears the sod.

Here holy thoughts a light have shed
From many a radiant face,
And prayers of humble virtue made
The perfume of the place.

And anxious hearts have pondered here
The mystery of life,
And prayed the eternal Light to clear
Their doubts, and aid their strife.

From humble tenements around
Came up the pensive train,
And in the church a blessing found
That filled their homes again; For faith and peace and mighty love
That from the Godhead flow,
Showed them the life of Heaven above
Springs from the life below.

They live with God; their homes are dust;
Yet here their children pray,
And in this fleeting lifetime trust
To find the narrow way.

On him who by the altar stands,
On him thy blessing fall,
Speak through his lips thy pure commands,
Thou heart that lovest all.

NATURE I

Winters know
Easily to shed the snow,
And the untaught Spring is wise
In cowslips and anemonies.
Nature, hating art and pains,
Baulks and baffles plotting brains;
Casualty and Surprise
Are the apples of her eyes;
But she dearly loves the poor,
And, by marvel of her own,
Strikes the loud pretender down.
For Nature listens in the rose
And hearkens in the berry's bell
To help her friends, to plague her foes,
And like wise God she judges well.
Yet doth much her love excel
To the souls that never fell,
To swains that live in happiness
And do well because they please,
Who walk in ways that are unfamed,
And feats achieve before they're named.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

NATURE II

She is gamesome and good,
But of mutable mood, —
No dreary repeater now and again,
She will be all things to all men.
She who is old, but nowise feeble,
Pours her power into the people,
Merry and manifold without bar,
Makes and moulds them what they are,
And what they call their city way
Is not their way, but hers,
And what they say they made to-day,
They learned of the oaks and firs.
She spawneth men as mallows fresh,
Hero and maiden, flesh of her flesh;
She drugs her water and her wheat
With the flavors she finds meet,
And gives them what to drink and eat;
And having thus their bread and growth,
They do her bidding, nothing loath.
What's most theirs is not their own,
But borrowed in atoms from iron and stone,
And in their vaunted works of Art
The master-stroke is still her part.

THE ROMANY GIRL

The sun goes down, and with him takes
The coarseness of my poor attire;
The fair moon mounts, and aye the flame
Of Gypsy beauty blazes higher.

Pale Northern girls! you scorn our race;
You captives of your air-tight halls,
Wear out indoors your sickly days,
But leave us the horizon walls.

And if I take you, dames, to task,
And say it frankly without guile,
Then you are Gypsies in a mask,
And I the lady all the while.

If on the heath, below the moon,
I court and play with paler blood,
Me false to mine dare whisper none, —
One sallow horseman knows me good.

Go, keep your cheek's rose from the rain,
For teeth and hair with shopmen deal;
My swarthy tint is in the grain,
The rocks and forest know it real.

The wild air bloweth in our lungs,
The keen stars twinkle in our eyes,
The birds gave us our wily tongues,
The panther in our dances flies.

You doubt we read the stars on high,
Nathless we read your fortunes true;
The stars may hide in the upper sky,
But without glass we fathom you.

DAYS

Daughters of Time, the hypocritic Days,
Muffled and dumb like barefoot dervishes,
And marching single in an endless file,
Bring diadems and fagots in their hands.
To each they offer gifts after his will,
Bread, kingdoms, stars, and sky that holds them all.
I, in my pleached garden, watched the pomp,
Forgot my morning wishes, hastily
Took a few herbs and apples, and the Day
Turned and departed silent. I, too late,
Under her solemn fillet saw the scorn.

MY GARDEN

If I could put my woods in song
And tell what's there enjoyed,
All men would to my gardens throng,
And leave the cities void.

In my plot no tulips blow, —
Snow-loving pines and oaks instead;
And rank the savage maples grow
From Spring's faint flush to Autumn red.

My garden is a forest ledge
Which older forests bound;
The banks slope down to the blue lake-edge,
Then plunge to depths profound.

Here once the Deluge ploughed,
Laid the terraces, one by one;
Ebbing later whence it flowed,
They bleach and dry in the sun.

The sowers made haste to depart, —
The wind and the birds which sowed it;
Not for fame, nor by rules of art,
Planted these, and tempests flowed it.

Waters that wash my garden-side
Play not in Nature's lawful web,
They heed not moon or solar tide, —
Five years elapse from flood to ebb.

Hither hasted, in old time, Jove,
And every god, — none did refuse;
And be sure at last came Love,
And after Love, the Muse.

Keen ears can catch a syllable,
As if one spake to another,

In the hemlocks tall, untamable,
And what the whispering grasses smother.

Aeolian harps in the pine
Ring with the song of the Fates;
Infant Bacchus in the vine, —
Far distant yet his chorus waits.

Canst thou copy in verse one chime
Of the wood-bell's peal and cry,
Write in a book the morning's prime,
Or match with words that tender sky?

Wonderful verse of the gods,
Of one import, of varied tone;
They chant the bliss of their abodes
To man imprisoned in his own.

Ever the words of the gods resound;
But the porches of man's ear
Seldom in this low life's round
Are unsealed that he may hear.

Wandering voices in the air
And murmurs in the wold
Speak what I cannot declare,
Yet cannot all withhold.

When the shadow fell on the lake,
The whirlwind in ripples wrote
Air-bells of fortune that shine and break,
And omens above thought.

But the meanings cleave to the lake,
Cannot be carried in book or urn;
Go thy ways now, come later back,
On waves and hedges still they burn.

These the fates of men forecast,
Of better men than live to-day;

If who can read them comes at last
He will spell in the sculpture, 'Stay.'

THE CHARTIST'S COMPLAINT

Day! hast thou two faces,
Making one place two places?
One, by humble farmer seen,
Chill and wet, unlighted, mean,
Useful only, triste and damp,
Serving for a laborer's lamp?
Have the same mists another side,
To be the appanage of pride,
Gracing the rich man's wood and lake,
His park where amber mornings break,
And treacherously bright to show
His planted isle where roses glow?
O Day! and is your mightiness
A sycophant to smug success?
Will the sweet sky and ocean broad
Be fine accomplices to fraud?
O Sun! I curse thy cruel ray:
Back, back to chaos, harlot Day!

THE TITMOUSE

You shall not be overbold
When you deal with arctic cold,
As late I found my lukewarm blood
Chilled wading in the snow-choked wood.
How should I fight? my foeman fine
Has million arms to one of mine:
East, west, for aid I looked in vain,
East, west, north, south, are his domain.
Miles off, three dangerous miles, is home;
Must borrow his winds who there would come.
Up and away for life! be fleet! —
The frost-king ties my fumbling feet,
Sings in my ears, my hands are stones,
Curdles the blood to the marble bones,
Tugs at the heart-strings, numbs the sense,
And hems in life with narrowing fence.
Well, in this broad bed lie and sleep, —
The punctual stars will vigil keep, —
Embalmed by purifying cold;
The winds shall sing their dead-march old,
The snow is no ignoble shroud,
The moon thy mourner, and the cloud.

Softly, — but this way fate was pointing,
'T was coming fast to such anointing,
When piped a tiny voice hard by,
Gay and polite, a cheerful cry,
Chic-chic-a-dee-de! saucy note
Out of sound heart and merry throat,
As if it said, 'Good day, good sir!
Fine afternoon, old passenger!
Happy to meet you in these places,
Where January brings few faces.'

This poet, though he live apart,
Moved by his hospitable heart,

Sped, when I passed his sylvan fort,
To do the honors of his court,
As fits a feathered lord of land;
Flew near, with soft wing grazed my hand,
Hopped on the bough, then, darting low,
Prints his small impress on the snow,
Shows feats of his gymnastic play,
Head downward, clinging to the spray.

Here was this atom in full breath,
Hurling defiance at vast death;
This scrap of valor just for play
Fronts the north-wind in waistcoat gray,
As if to shame my weak behavior;
I greeted loud my little savior,
'You pet! what dost here? and what for?
In these woods, thy small Labrador,
At this pinch, wee San Salvador!
What fire burns in that little chest
So frolic, stout and self-possesst?
Henceforth I wear no stripe but thine;
Ashes and jet all hues outshine.
Why are not diamonds black and gray,
To ape thy dare-devil array?
And I affirm, the spacious North
Exists to draw thy virtue forth.
I think no virtue goes with size;
The reason of all cowardice
Is, that men are overgrown,
And, to be valiant, must come down
To the titmouse dimension.'

'T is good will makes intelligence,
And I began to catch the sense
Of my bird's song: 'Live out of doors
In the great woods, on prairie floors.
I dine in the sun; when he sinks in the sea,
I too have a hole in a hollow tree;
And I like less when Summer beats

With stifling beams on these retreats,
Than noontide twilights which snow makes
With tempest of the blinding flakes.
For well the soul, if stout within,
Can arm impregnably the skin;
And polar frost my frame defied,
Made of the air that blows outside.’

With glad remembrance of my debt,
I homeward turn; farewell, my pet!
When here again thy pilgrim comes,
He shall bring store of seeds and crumbs.
Doubt not, so long as earth has bread,
Thou first and foremost shalt be fed;
The Providence that is most large
Takes hearts like thine in special charge,
Helps who for their own need are strong,
And the sky doats on cheerful song.
Henceforth I prize thy wiry chant
O’er all that mass and minster vaunt;
For men mis-hear thy call in Spring,
As ‘t would accost some frivolous wing,
Crying out of the hazel copse, *Phe-be!*
And, in winter, *Chic-a-dee-dee!*
I think old Caesar must have heard
In northern Gaul my dauntless bird,
And, echoed in some frosty wold,
Borrowed thy battle-numbers bold.
And I will write our annals new,
And thank thee for a better clew,
I, who dreamed not when I came here
To find the antidote of fear,
Now hear thee say in Roman key,
Paeon! Veni, vidi, vici.

THE HARP

One musician is sure,
His wisdom will not fail,
He has not tasted wine impure,
Nor bent to passion frail.
Age cannot cloud his memory,
Nor grief untune his voice,
Ranging down the ruled scale
From tone of joy to inward wail,
Tempering the pitch of all
In his windy cave.
He all the fables knows,
And in their causes tells, —
Knows Nature's rarest moods,
Ever on her secret broods.
The Muse of men is coy,
Oft courted will not come;
In palaces and market squares
Entreated, she is dumb;
But my minstrel knows and tells
The counsel of the gods,
Knows of Holy Book the spells,
Knows the law of Night and Day,
And the heart of girl and boy,
The tragic and the gay,
And what is writ on Table Round
Of Arthur and his peers;
What sea and land discoursing say
In sidereal years.
He renders all his lore
In numbers wild as dreams,
Modulating all extremes, —
What the spangled meadow saith
To the children who have faith;
Only to children children sing,
Only to youth will spring be spring.

Who is the Bard thus magnified?
When did he sing? and where abide?

Chief of song where poets feast
Is the wind-harp which thou seest
In the casement at my side.

Aeolian harp,
How strangely wise thy strain!
Gay for youth, gay for youth,
(Sweet is art, but sweeter truth,)
In the hall at summer eve
Fate and Beauty skilled to weave.
From the eager opening strings
Rung loud and bold the song.
Who but loved the wind-harp's note?
How should not the poet doat
On its mystic tongue,
With its primeval memory,
Reporting what old minstrels told
Of Merlin locked the harp within, —
Merlin paying the pain of sin,
Pent in a dungeon made of air, —
And some attain his voice to hear,
Words of pain and cries of fear,
But pillowed all on melody,
As fits the griefs of bards to be.
And what if that all-echoing shell,
Which thus the buried Past can tell,
Should rive the Future, and reveal
What his dread folds would fain conceal?
It shares the secret of the earth,
And of the kinds that owe her birth.
Speaks not of self that mystic tone,
But of the Overgods alone:
It trembles to the cosmic breath, —
As it heareth, so it saith;
Obeying meek the primal Cause,
It is the tongue of mundane laws.

And this, at least, I dare affirm,
Since genius too has bound and term,
There is no bard in all the choir,
Not Homer's self, the poet sire,
Wise Milton's odes of pensive pleasure,
Or Shakspeare, whom no mind can measure,
Nor Collins' verse of tender pain,
Nor Byron's clarion of disdain,
Scott, the delight of generous boys,
Or Wordsworth, Pan's recording voice, —
Not one of all can put in verse,
Or to this presence could rehearse
The sights and voices ravishing
The boy knew on the hills in spring,
When pacing through the oaks he heard
Sharp queries of the sentry-bird,
The heavy grouse's sudden whir,
The rattle of the kingfisher;
Saw bonfires of the harlot flies
In the lowland, when day dies;
Or marked, benighted and forlorn,
The first far signal-fire of morn.
These syllables that Nature spoke,
And the thoughts that in him woke,
Can adequately utter none
Save to his ear the wind-harp lone.
Therein I hear the Parcae reel
The threads of man at their humming wheel,
The threads of life and power and pain,
So sweet and mournful falls the strain.
And best can teach its Delphian chord
How Nature to the soul is moored,
If once again that silent string,
As erst it wont, would thrill and ring.

Not long ago at eventide,
It seemed, so listening, at my side
A window rose, and, to say sooth,
I looked forth on the fields of youth:

I saw fair boys bestriding steeds,
I knew their forms in fancy weeds,
Long, long concealed by Sundering fates,
Mates of my youth, — yet not my mates,
Stronger and bolder far than I,
With grace, with genius, well attired,
And then as now from far admired,
Followed with love
They knew not of,
With passion cold and shy.
O joy, for what recoveries rare!
Renewed, I breathe Elysian air,
See youth's glad mates in earliest bloom, —
Break not my dream, obtrusive tomb!
Or teach thou, Spring! the grand recoil
Of life resurgent from the soil
Wherein was dropped the mortal spoil.

SEASHORE

I heard or seemed to hear the chiding Sea
Say, Pilgrim, why so late and slow to come?
Am I not always here, thy summer home?
Is not my voice thy music, morn and eve?
My breath thy healthful climate in the heats,
My touch thy antidote, my bay thy bath?
Was ever building like my terraces?
Was ever couch magnificent as mine?
Lie on the warm rock-ledges, and there learn
A little hut suffices like a town.
I make your sculptured architecture vain,
Vain beside mine. I drive my wedges home,
And carve the coastwise mountain into caves.
Lo! here is Rome and Nineveh and Thebes,
Karnak and Pyramid and Giant's Stairs
Half piled or prostrate; and my newest slab
Older than all thy race.

Behold the Sea,
The opaline, the plentiful and strong,
Yet beautiful as is the rose in June,
Fresh as the trickling rainbow of July;
Sea full of food, the nourisher of kinds,
Purger of earth, and medicine of men;
Creating a sweet climate by my breath,
Washing out harms and griefs from memory,
And, in my mathematic ebb and flow,
Giving a hint of that which changes not.
Rich are the sea-gods: — who gives gifts but they?
They grope the sea for pearls, but more than pearls:
They pluck Force thence, and give it to the wise.
For every wave is wealth to Daedalus,
Wealth to the cunning artist who can work
This matchless strength. Where shall he find, O waves!
A load your Atlas shoulders cannot lift?

I with my hammer pounding evermore
The rocky coast, smite Andes into dust,
Strewing my bed, and, in another age,
Rebuild a continent of better men.
Then I unbar the doors: my paths lead out
The exodus of nations: I disperse
Men to all shores that front the hoary main.

I too have arts and sorceries;
Illusion dwells forever with the wave.
I know what spells are laid. Leave me to deal
With credulous and imaginative man;
For, though he scoop my water in his palm,
A few rods off he deems it gems and clouds.
Planting strange fruits and sunshine on the shore,
I make some coast alluring, some lone isle,
To distant men, who must go there, or die.

SONG OF NATURE

Mine are the night and morning,
The pits of air, the gulf of space,
The sportive sun, the gibbous moon,
The innumerable days.

I hide in the solar glory,
I am dumb in the pealing song,
I rest on the pitch of the torrent,
In slumber I am strong.

No numbers have counted my tallies,
No tribes my house can fill,
I sit by the shining Fount of Life
And pour the deluge still; And ever by delicate powers
Gathering along the centuries
From race on race the rarest flowers,
My wreath shall nothing miss.

And many a thousand summers
My gardens ripened well,
And light from meliorating stars
With firmer glory fell.

I wrote the past in characters
Of rock and fire the scroll,
The building in the coral sea,
The planting of the coal.

And thefts from satellites and rings
And broken stars I drew,
And out of spent and aged things
I formed the world anew; What time the gods kept carnival,
Tricked out in star and flower,
And in cramp elf and saurian forms
They swathed their too much power.

Time and Thought were my surveyors,

They laid their courses well,
They boiled the sea, and piled the layers
Of granite, marl and shell.

But he, the man-child glorious, —
Where tarries he the while?
The rainbow shines his harbinger,
The sunset gleams his smile.

My boreal lights leap upward,
Forthright my planets roll,
And still the man-child is not born,
The summit of the whole.

Must time and tide forever run?
Will never my winds go sleep in the west?
Will never my wheels which whirl the sun
And satellites have rest?

Too much of donning and doffing,
Too slow the rainbow fades,
I weary of my robe of snow,
My leaves and my cascades; I tire of globes and races,
Too long the game is played;
What without him is summer's pomp,
Or winter's frozen shade?

I travail in pain for him,
My creatures travail and wait;
His couriers come by squadrons,
He comes not to the gate.

Twice I have moulded an image,
And thrice outstretched my hand,
Made one of day and one of night
And one of the salt sea-sand.

One in a Judaeen manger,
And one by Avon stream,
One over against the mouths of Nile,

And one in the Academe.

I moulded kings and saviors,
And bards o'er kings to rule; —
But fell the starry influence short,
The cup was never full.

Yet whirl the glowing wheels once more,
And mix the bowl again;
Seethe, Fate! the ancient elements,
Heat, cold, wet, dry, and peace, and pain.

Let war and trade and creeds and song
Blend, ripen race on race,
The sunburnt world a man shall breed
Of all the zones and countless days.

No ray is dimmed, no atom worn,
My oldest force is good as new,
And the fresh rose on yonder thorn
Gives back the bending heavens in dew.

TWO RIVERS

Thy summer voice, Musketaquit,
Repeats the music of the rain;
But sweeter rivers pulsing flit
Through thee, as thou through Concord Plain.

Thou in thy narrow banks art pent:
The stream I love unbounded goes
Through flood and sea and firmament;
Through light, through life, it forward flows.

I see the inundation sweet,
I hear the spending of the stream
Through years, through men, through Nature fleet,
Through love and thought, through power and dream.

Musketaquit, a goblin strong,
Of shard and flint makes jewels gay;
They lose their grief who hear his song,
And where he winds is the day of day.

So forth and brighter fares my stream, —
Who drink it shall not thirst again;
No darkness stains its equal gleam.
And ages drop in it like rain.

WALDEINSAMKEIT

I do not count the hours I spend
In wandering by the sea;
The forest is my loyal friend,
Like God it useth me.

In plains that room for shadows make
Of skirting hills to lie,
Bound in by streams which give and take
Their colors from the sky; Or on the mountain-crest sublime,
Or down the oaken glade,
O what have I to do with time?
For this the day was made.

Cities of mortals woe-begone
Fantastic care derides,
But in the serious landscape lone
Stern benefit abides.

Sheen will tarnish, honey cloy,
And merry is only a mask of sad,
But, sober on a fund of joy,
The woods at heart are glad.

There the great Planter plants
Of fruitful worlds the grain,
And with a million spells enchants
The souls that walk in pain.

Still on the seeds of all he made
The rose of beauty burns;
Through times that wear and forms that fade,
Immortal youth returns.

The black ducks mounting from the lake,
The pigeon in the pines,
The bittern's boom, a desert make
Which no false art refines.

Down in yon watery nook,
Where bearded mists divide,
The gray old gods whom Chaos knew,
The sires of Nature, hide.

Aloft, in secret veins of air,
Blows the sweet breath of song,
O, few to scale those uplands dare,
Though they to all belong!

See thou bring not to field or stone
The fancies found in books;
Leave authors' eyes, and fetch your own,
To brave the landscape's looks.

Oblivion here thy wisdom is,
Thy thrift, the sleep of cares;
For a proud idleness like this
Crowns all thy mean affairs.

TERMINUS

It is time to be old,
To take in sail: —
The god of bounds,
Who sets to seas a shore,
Came to me in his fatal rounds,
And said: 'No more!
No farther shoot
Thy broad ambitious branches, and thy root.
Fancy departs: no more invent;
Contract thy firmament
To compass of a tent.
There's not enough for this and that,
Make thy option which of two;
Economize the failing river,
Not the less revere the Giver,
Leave the many and hold the few.
Timely wise accept the terms,
Soften the fall with wary foot;
A little while
Still plan and smile,
And, — fault of novel germs, —
Mature the unfallen fruit.
Curse, if thou wilt, thy sires,
Bad husbands of their fires,
Who, when they gave thee breath,
Failed to bequeath
The needful sinew stark as once,
The Baresark marrow to thy bones,
But left a legacy of ebbing veins,
Inconstant heat and nerveless reins, —
Amid the Muses, left thee deaf and dumb,
Amid the gladiators, halt and numb.'

As the bird trims her to the gale,
I trim myself to the storm of time,
I man the rudder, reef the sail,

Obey the voice at eve obeyed at prime:
'Lowly faithful, banish fear,
Right onward drive unharmed;
The port, well worth the cruise, is near,
And every wave is charmed.'

THE NUN'S ASPIRATION

The yesterday doth never smile,
The day goes drudging through the while,
Yet, in the name of Godhead, I
The morrow front, and can defy;
Though I am weak, yet God, when prayed,
Cannot withhold his conquering aid.
Ah me! it was my childhood's thought,
If He should make my web a blot
On life's fair picture of delight,
My heart's content would find it right.
But O, these waves and leaves, —
When happy stoic Nature grieves,
No human speech so beautiful
As their murmurs mine to lull.
On this altar God hath built
I lay my vanity and guilt;
Nor me can Hope or Passion urge
Hearing as now the lofty dirge
Which blasts of Northern mountains hymn,
Nature's funeral high and dim, —
Sable pageantry of clouds,
Mourning summer laid in shrouds.
Many a day shall dawn and die,
Many an angel wander by,
And passing, light my sunken turf
Moist perhaps by ocean surf,
Forgotten amid splendid tombs,
Yet wreathed and hid by summer blooms.
On earth I dream; — I die to be:
Time, shake not thy bald head at me.
I challenge thee to hurry past
Or for my turn to fly too fast.
Think me not numbed or halt with age,
Or cares that earth to earth engage,
Caught with love's cord of twisted beams,
Or mired by climate's gross extremes.

I tire of shams, I rush to be:
I pass with yonder comet free, —
Pass with the comet into space
Which mocks thy aeons to embrace;
Aeons which tardily unfold
Realm beyond realm, — extent untold;
No early morn, no evening late, —
Realms self-upheld, disdainful Fate,
Whose shining sons, too great for fame,
Never heard thy weary name;
Nor lives the tragic bard to say
How drear the part I held in one,
How lame the other limped away.

APRIL

The April winds are magical
And thrill our tuneful frames;
The garden walks are passional
To bachelors and dames.
The hedge is gemmed with diamonds,
The air with Cupids full,
The cobweb clues of Rosamond
Guide lovers to the pool.
Each dimple in the water,
Each leaf that shades the rock
Can cozen, pique and flatter,
Can parley and provoke.
Goodfellow, Puck and goblins,
Know more than any book.
Down with your doleful problems,
And court the sunny brook.
The south-winds are quick-witted,
The schools are sad and slow,
The masters quite omitted
The lore we care to know.

MAIDEN SPEECH OF THE AEOLIAN HARP

Soft and softer hold me, friends!
Thanks if your genial care
Unbind and give me to the air.
Keep your lips or finger-tips
For flute or spinet's dancing chips;
I await a tenderer touch,
I ask more or not so much:
Give me to the atmosphere, —
Where is the wind, my brother, — where?
Lift the sash, lay me within,
Lend me your ears, and I begin.
For gentle harp to gentle hearts
The secret of the world imparts;
And not to-day and not to-morrow
Can drain its wealth of hope and sorrow;
But day by day, to loving ear
Unlocks new sense and loftier cheer.
I've come to live with you, sweet friends,
This home my minstrel-journeyings ends.
Many and subtle are my lays,
The latest better than the first,
For I can mend the happiest days
And charm the anguish of the worst.

CUPIDO

The solid, solid universe
Is pervious to Love;
With bandaged eyes he never errs,
Around, below, above.
His blinding light
He flingeth white
On God's and Satan's brood,
And reconciles
By mystic wiles
The evil and the good.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

THE PAST

The debt is paid,
The verdict said,
The Furies laid,
The plague is stayed.
All fortunes made;
Turn the key and bolt the door,
Sweet is death forevermore.
Nor haughty hope, nor swart chagrin,
Nor murdering hate, can enter in.
All is now secure and fast;
Not the gods can shake the Past;
Flies-to the adamantine door
Bolted down forevermore.
None can reënter there, —
No thief so politic,
No Satan with a royal trick
Steal in by window, chink, or hole,
To bind or unbind, add what lacked,
Insert a leaf, or forge a name,
New-face or finish what is packed,
Alter or mend eternal Fact.

THE LAST FAREWELL

LINES WRITTEN BY THE AUTHOR'S BROTHER, EDWARD BLISS
EMERSON, WHILST SAILING OUT OF BOSTON HARBOR, BOUND FOR
THE ISLAND OF PORTO RICO, IN 1832

Farewell, ye lofty spires
That cheered the holy light!
Farewell, domestic fires
That broke the gloom of night!
Too soon those spires are lost,
Too fast we leave the bay,
Too soon by ocean tost
From hearth and home away,
Far away, far away.

Farewell the busy town,
The wealthy and the wise,
Kind smile and honest frown
From bright, familiar eyes.
All these are fading now;
Our brig hastes on her way,
Her unremembering prow
Is leaping o'er the sea,
Far away, far away.

Farewell, my mother fond,
Too kind, too good to me;
Nor pearl nor diamond
Would pay my debt to thee.
But even thy kiss denies
Upon my cheek to stay;
The winged vessel flies,
And billows round her play,
Far away, far away.

Farewell, my brothers true,
My betters, yet my peers;

How desert without you
My few and evil years!
But though aye one in heart,
Together sad or gay,
Rude ocean doth us part;
We separate to-day,
 Far away, far away.

Farewell, thou fairest one,
Unplighted yet to me,
Uncertain of thine own
I gave my heart to thee.
That untold early love
I leave untold to-day,
My lips in whisper move
Farewell to ...!
 Far away, far away.

Farewell I breathe again
To dim New England's shore,
My heart shall beat not when
I pant for thee no more.
In yon green palmy isle,
Beneath the tropic ray,
I murmur never while
For thee and thine I pray;
 Far away, far away.

IN MEMORIAM E. B. E.

I mourn upon this battle-field,
But not for those who perished here.
Behold the river-bank
Whither the angry farmers came,
In sloven dress and broken rank,
Nor thought of fame.
Their deed of blood
All mankind praise;
Even the serene Reason says,
It was well done.
The wise and simple have one glance
To greet yon stern head-stone,
Which more of pride than pity gave
To mark the Briton's friendless grave.
Yet it is a stately tomb;
The grand return
Of eve and morn,
The year's fresh bloom,
The silver cloud,
Might grace the dust that is most proud.

Yet not of these I muse
In this ancestral place,
But of a kindred face
That never joy or hope shall here diffuse.

Ah, brother of the brief but blazing star!
What hast thou to do with these
Haunting this bank's historic trees?
Thou born for noblest life,
For action's field, for victor's car,
Thou living champion of the right?
To these their penalty belonged:
I grudge not these their bed of death,
But thine to thee, who never wronged
The poorest that drew breath.

All inborn power that could
Consist with homage to the good
Flamed from his martial eye;
He who seemed a soldier born,
He should have the helmet worn,
All friends to fend, all foes defy,
Fronting foes of God and man,
Frowning down the evil-doer,
Battling for the weak and poor.
His from youth the leader's look
Gave the law which others took,
And never poor beseeching glance
Shamed that sculptured countenance.

There is no record left on earth,
Save in tablets of the heart,
Of the rich inherent worth,
Of the grace that on him shone,
Of eloquent lips, of joyful wit:
He could not frame a word unfit,
An act unworthy to be done;
Honor prompted every glance,
Honor came and sat beside him,
In lowly cot or painful road,
And evermore the cruel god
Cried "Onward!" and the palm-crown showed,
Born for success he seemed,
With grace to win, with heart to hold,
With shining gifts that took all eyes,
With budding power in college-halls,
As pledged in coming days to forge
Weapons to guard the State, or scourge
Tyrants despite their guards or walls.
On his young promise Beauty smiled,
Drew his free homage unbeguiled,
And prosperous Age held out his hand,
And richly his large future planned,
And troops of friends enjoyed the tide, —
All, all was given, and only health denied.

I see him with superior smile
Hunted by Sorrow's grisly train
In lands remote, in toil and pain,
With angel patience labor on,
With the high port he wore erewhile,
When, foremost of the youthful band,
The prizes in all lists he won;
Nor bate one jot of heart or hope,
And, least of all, the loyal tie
Which holds to home 'neath every sky,
The joy and pride the pilgrim feels
In hearts which round the hearth at home
Keep pulse for pulse with those who roam.

What generous beliefs console
The brave whom Fate denies the goal!
If others reach it, is content;
To Heaven's high will his will is bent.
Firm on his heart relied,
What lot soe'er betide,
Work of his hand
He nor repents nor grieves,
Pleads for itself the fact,
As unrepenting Nature leaves
Her every act.

Fell the bolt on the branching oak;
The rainbow of his hope was broke;
No craven cry, no secret tear, —
He told no pang, he knew no fear;
Its peace sublime his aspect kept,
His purpose woke, his features slept;
And yet between the spasms of pain
His genius beamed with joy again.

O'er thy rich dust the endless smile
Of Nature in thy Spanish isle
Hints never loss or cruel break
And sacrifice for love's dear sake,

Nor mourn the unalterable Days
That Genius goes and Folly stays.
What matters how, or from what ground,
The freed soul its Creator found?
Alike thy memory embalms
That orange-grove, that isle of palms,
And these loved banks, whose oak-bough bold
Root in the blood of heroes old.

*

Elements and Mottoes

EXPERIENCE

The lords of life, the lords of life, —
I saw them pass
In their own guise,
Like and unlike,
Portly and grim, —
Use and Surprise,
Surface and Dream,
Succession swift and spectral Wrong,
Temperament without a tongue,
And the inventor of the game
Omnipresent without name; —
Some to see, some to be guessed,
They marched from east to west:
Little man, least of all,
Among the legs of his guardians tall,
Walked about with puzzled look.
Him by the hand dear Nature took,
Dearest Nature, strong and kind,
Whispered, 'Darling, never mind!
To-morrow they will wear another face,
The founder thou; these are thy race!'

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

COMPENSATION

The wings of Time are black and white,
Pied with morning and with night.
Mountain tall and ocean deep
Trembling balance duly keep.
In changing moon and tidal wave
Glow the feud of Want and Have.
Gauge of more and less through space,
Electric star or pencil plays,
The lonely Earth amid the balls
That hurry through the eternal halls,
A makeweight flying to the void,
Supplemental asteroid,
Or compensatory spark,
Shoots across the neutral Dark.

Man's the elm, and Wealth the vine;
Stanch and strong the tendrils twine:
Though the frail ringlets thee deceive,
None from its stock that vine can reave.
Fear not, then, thou child infirm,
There's no god dare wrong a worm;
Laurel crowns cleave to deserts,
And power to him who power exerts.
Hast not thy share? On winged feet,
Lo it rushes thee to meet;
And all that Nature made thy own,
Floating in air or pent in stone,
Will rive the hills and swim the sea,
And, like thy shadow, follow thee.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

POLITICS

Gold and iron are good
To buy iron and gold;
All earth's fleece and food
For their like are sold.
Boded Merlin wise,
Proved Napoleon great,
Nor kind nor coinage buys
Aught above its rate.
Fear, Craft and Avarice
Cannot rear a State.
Out of dust to build
What is more than dust,
Walls Amphion piled
Phoebus stablish must.
When the Muses nine
With the Virtues meet,
Find to their design
An Atlantic seat,
By green orchard boughs
Fended from the heat,
here the statesman ploughs
Furrow for the wheat, —
When the Church is social worth,
When the state-house is the hearth,
Then the perfect State is come,
The republican at home.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

HEROISM

Ruby wine is drunk by knaves,
Sugar spends to fatten slaves,
Rose and vine-leaf deck buffoons;
Thunder-clouds are Jove's festoons,
Drooping oft in wreaths of dread,
Lightning-knotted round his head;
The hero is not fed on sweets,
Daily his own heart he eats;
Chambers of the great are jails,
And head-winds right for royal sails.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

CHARACTER

The sun set, but set not his hope:
Stars rose; his faith was earlier up:
Fixed on the enormous galaxy,
Deeper and older seemed his eye;
And matched his sufferance sublime
The taciturnity of time.
He spoke, and words more soft than rain
Brought the Age of Gold again:
His action won such reverence sweet
As hid all measure of the feat.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

CULTURE

Can rules or tutors educate
The semigod whom we await?
He must be musical,
Tremulous, impressional,
Alive to gentle influence
Of landscape and of sky,
And tender to the spirit-touch
Of man's or maiden's eye:
But, to his native centre fast,
Shall into Future fuse the Past,
And the world's flowing fates in his own mould recast.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

FRIENDSHIP

A ruddy drop of manly blood
The surging sea outweighs,
The world uncertain comes and goes;
The lover rooted stays.
I fancied he was fled, —
And, after many a year,
Glowed unexhausted kindness,
Like daily sunrise there.
My careful heart was free again,
O friend, my bosom said,
Through thee alone the sky is arched,
Through thee the rose is red;
All things through thee take nobler form,
And look beyond the earth,
The mill-round of our fate appears
A sun-path in thy worth.
Me too thy nobleness has taught
To master my despair;
The fountains of my hidden life
Are through thy friendship fair.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

SPIRITUAL LAWS

The living Heaven thy prayers respect,
House at once and architect,
Quarrying man's rejected hours,
Builds therewith eternal towers;
Sole and self-commanded works,
Fears not undermining days,
Grows by decays,
And, by the famous might that lurks
In reaction and recoil,
Makes flame to freeze and ice to boil;
Forging, through swart arms of Offence,
The silver seat of Innocence.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

BEAUTY

Was never form and never face
So sweet to SEYD as only grace
Which did not slumber like a stone,
But hovered gleaming and was gone.
Beauty chased he everywhere,
In flame, in storm, in clouds of air.
He smote the lake to feed his eye
With the beryl beam of the broken wave;
He flung in pebbles well to hear
The moment's music which they gave.
Oft pealed for him a lofty tone
From nodding pole and belting zone.
He heard a voice none else could hear
From centred and from errant sphere.
The quaking earth did quake in rhyme,
Seas ebb'd and flow'd in epic chime.
In dens of passion, and pits of woe,
He saw strong Eros struggling through,
To sun the dark and solve the curse,
And beam to the bounds of the universe.
While thus to love he gave his days
In loyal worship, scorning praise,
How spread their lures for him in vain
Thieving Ambition and paltering Gain!
He thought it happier to be dead,
To die for Beauty, than live for bread.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

MANNERS

Grace, Beauty and Caprice
Build this golden portal;
Graceful women, chosen men,
Dazzle every mortal.
Their sweet and lofty countenance
His enchanted food;
He need not go to them, their forms
Beset his solitude.
He looketh seldom in their face,
His eyes explore the ground, —
The green grass is a looking-glass
Whereon their traits are found.
Little and less he says to them,
So dances his heart in his breast;
Their tranquil mien bereaveth him
Of wit, of words, of rest.
Too weak to win, too fond to shun
The tyrants of his doom,
The much deceived Endymion
Slips behind a tomb.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

ART

Give to barrows, trays and pans
Grace and glimmer of romance;
Bring the moonlight into noon
Hid in gleaming piles of stone;
On the city's paved street
Plant gardens lined with lilacs sweet;
Let spouting fountains cool the air,
Singing in the sun-baked square;
Let statue, picture, park and hall,
Ballad, flag and festival,
The past restore, the day adorn,
And make to-morrow a new morn.
So shall the drudge in dusty frock
Spy behind the city clock
Retinues of airy kings,
Skirts of angels, starry wings,
His fathers shining in bright fables,
His children fed at heavenly tables.
'T is the privilege of Art
Thus to play its cheerful part,
Man on earth to acclimate
And bend the exile to his fate,
And, moulded of one element
With the days and firmament,
Teach him on these as stairs to climb,
And live on even terms with Time;
Whilst upper life the slender rill
Of human sense doth overflow.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

UNITY

Space is ample, east and west,
But two cannot go abreast,
Cannot travel in it two:
Yonder masterful cuckoo
Crowds every egg out of the nest,
Quick or dead, except its own;
A spell is laid on sod and stone,
Night and Day were tampered with,
Every quality and pith
Surcharged and sultry with a power
That works its will on age and hour.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

WORSHIP

This is he, who, felled by foes,
Sprung harmless up, refreshed by blows:
He to captivity was sold,
But him no prison-bars would hold:
Though they sealed him in a rock,
Mountain chains he can unlock:
Thrown to lions for their meat,
The crouching lion kissed his feet;
Bound to the stake, no flames appalled,
But arched o'er him an honoring vault.
This is he men miscall Fate,
Threading dark ways, arriving late,
But ever coming in time to crown
The truth, and hurl wrong-doers down.
He is the oldest, and best known,
More near than aught thou call'st thy own,
Yet, greeted in another's eyes,
Disconcerts with glad surprise.
This is Jove, who, deaf to prayers,
Floods with blessings unawares.
Draw, if thou canst, the mystic line
Severing rightly his from thine,
Which is human, which divine.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

PRUDENCE

Theme no poet gladly sung,
Fair to old and foul to young;
Scorn not thou the love of parts,
And the articles of arts.
Grandeur of the perfect sphere
Thanks the atoms that cohere.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

NATURE

I

A subtle chain of countless rings
The next unto the farthest brings;
The eye reads omens where it goes,
And speaks all languages the rose;
And, striving to be man, the worm
Mounts through all the spires of form.

II

The rounded world is fair to see,
Nine times folded in mystery:
Though baffled seers cannot impart
The secret of its laboring heart,
Throb thine with Nature's throbbing breast,
And all is clear from east to west.
Spirit that lurks each form within
Beckons to spirit of its kin;
Self-kindled every atom glows
And hints the future which it owes.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

THE INFORMING SPIRIT

I

There is no great and no small
To the Soul that maketh all:
And where it cometh, all things are;
And it cometh everywhere.

II

I am owner of the sphere,
Of the seven stars and the solar year,
Of Caesar's hand, and Plato's brain,
Of Lord Christ's heart, and Shakspeare's strain.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

CIRCLES

Nature centres into balls,
And her proud ephemerals,
Fast to surface and outside,
Scan the profile of the sphere;
Knew they what that signified,
A new genesis were here.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

INTELLECT

Go, speed the stars of Thought
On to their shining goals; —
The sower scatters broad his seed;
The wheat thou strew'st be souls.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

GIFTS

Gifts of one who loved me, —
'T was high time they came;
When he ceased to love me,
Time they stopped for shame.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

PROMISE

In countless upward-striving waves
The moon-drawn tide-wave strives;
In thousand far-transplanted grafts
The parent fruit survives;
So, in the new-born millions,
The perfect Adam lives.
Not less are summer mornings dear
To every child they wake,
And each with novel life his sphere
Fills for his proper sake.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

CARITAS

In the suburb, in the town,
On the railway, in the square,
Came a beam of goodness down
Doubling daylight everywhere:
Peace now each for malice takes,
Beauty for his sinful weeds,
For the angel Hope aye makes
Him an angel whom she leads.

[Chronological List of Poems](#)

POWER

His tongue was framed to music,
And his hand was armed with skill;
His face was the mould of beauty,
And his heart the throne of will.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

WEALTH

Who shall tell what did befall,
Far away in time, when once,
Over the lifeless ball,
Hung idle stars and suns?
What god the element obeyed?
Wings of what wind the lichen bore,
Wafting the puny seeds of power,
Which, lodged in rock, the rock abrade?
And well the primal pioneer
Knew the strong task to it assigned,
Patient through Heaven's enormous year
To build in matter home for mind.
From air the creeping centuries drew
The matted thicket low and wide,
This must the leaves of ages strew
The granite slab to clothe and hide,
Ere wheat can wave its golden pride.
What smiths, and in what furnace, rolled
(In dizzy aeons dim and mute
The reeling brain can ill compute)
Copper and iron, lead and gold?
What oldest star the fame can save
Of races perishing to pave
The planet with a floor of lime?
Dust is their pyramid and mole:
Who saw what ferns and palms were pressed
Under the tumbling mountain's breast,
In the safe herbal of the coal?
But when the quarried means were piled,
All is waste and worthless, till
Arrives the wise selecting will,
And, out of slime and chaos, Wit
Draws the threads of fair and fit.
Then temples rose, and towns, and marts,
The shop of toil, the hall of arts;
Then flew the sail across the seas

To feed the North from tropic trees;
The storm-wind wove, the torrent span,
Where they were bid, the rivers ran;
New slaves fulfilled the poet's dream,
Galvanic wire, strong-shouldered steam.
Then docks were built, and crops were stored,
And ingots added to the hoard.
But though light-headed man forget,
Remembering Matter pays her debt:
Still, through her motes and masses, draw
Electric thrills and ties of law,
Which bind the strengths of Nature wild
To the conscience of a child.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

ILLUSIONS

Flow, flow the waves hated,
Accursed, adored,
The waves of mutation;
No anchorage is.
Sleep is not, death is not;
Who seem to die live.
House you were born in,
Friends of your spring-time,
Old man and young maid,
Day's toil and its guerdon,
They are all vanishing,
Fleeing to fables,
Cannot be moored.
See the stars through them,
Through treacherous marbles.
Know the stars yonder,
The stars everlasting,
Are fugitive also,
And emulate, vaulted,
The lambent heat lightning
And fire-fly's flight.

When thou dost return
On the wave's circulation,
Behold the shimmer,
The wild dissipation,
And, out of endeavor
To change and to flow,
The gas become solid,
And phantoms and nothings
Return to be things,
And endless imbroglio
Is law and the world, —
Then first shalt thou know,
That in the wild turmoil,
Horsed on the Proteus,
The wild heat of the world

From the highest to power,
And to endurance.

NATURE IN LEASTS

As sings the pine-tree in the wind,
So sings in the wind a sprig of the pine;
Her strength and soul has laughing France
Shed in each drop of wine.

[Greek: ADAKRYN NEMONTAI AIONA]

‘A New commandment,’ said the smiling Muse,
‘I give my darling son, Thou shalt not preach’; —
Luther, Fox, Behmen, Swedenborg, grew pale,
And, on the instant, rosier clouds upbore
Hafiz and Shakspeare with their shining choirs.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

Fragments

THE POET

I

Right upward on the road of fame
With sounding steps the poet came;
Born and nourished in miracles,
His feet were shod with golden bells,
Or where he stepped the soil did peal
As if the dust were glass and steel.
The gallant child where'er he came
Threw to each fact a tuneful name.
The things whereon he cast his eyes
Could not the nations rebaptize,
Nor Time's snows hide the names he set,
Nor last posterity forget.
Yet every scroll whereon he wrote
In latent fire his secret thought,
Fell unregarded to the ground,
Unseen by such as stood around.
The pious wind took it away,
The reverent darkness hid the lay.
Methought like water-haunting birds
Divers or dippers were his words,
And idle clowns beside the mere
At the new vision gape and jeer.
But when the noisy scorn was past,
Emerge the wingèd words in haste.
New-bathed, new-trimmed, on healthy wing,
Right to the heaven they steer and sing.

A Brother of the world, his song
Sounded like a tempest strong
Which tore from oaks their branches broad,
And stars from the ecliptic road.
Times wore he as his clothing-weeds,
He sowed the sun and moon for seeds.
As melts the iceberg in the seas,

As clouds give rain to the eastern breeze,
As snow-banks thaw in April's beam,
The solid kingdoms like a dream
Resist in vain his motive strain,
They totter now and float amain.
For the Muse gave special charge
His learning should be deep and large,
And his training should not scant
The deepest lore of wealth or want:
His flesh should feel, his eyes should read
Every maxim of dreadful Need;
In its fulness he should taste
Life's honeycomb, but not too fast;
Full fed, but not intoxicated;
He should be loved; he should be hated;
A blooming child to children dear,
His heart should palpitate with fear.

And well he loved to quit his home
And, Calmuck, in his wagon roam
To read new landscapes and old skies; —
But oh, to see his solar eyes
Like meteors which chose their way
And rived the dark like a new day!
Not lazy grazing on all they saw,
Each chimney-pot and cottage door,
Farm-gear and village picket-fence,
But, feeding on magnificence,
They bounded to the horizon's edge
And searched with the sun's privilege.
Landward they reached the mountains old
Where pastoral tribes their flocks infold,
Saw rivers run seaward by cities high
And the seas wash the low-hung sky;
Saw the endless rack of the firmament
And the sailing moon where the cloud was rent,
And through man and woman and sea and star
Saw the dance of Nature forward and far,
Through worlds and races and terms and times
Saw musical order and pairing rhymes

Saw musical order and pairing rhymes.

II

The gods talk in the breath of the woods,
They talk in the shaken pine,
And fill the long reach of the old seashore
With dialogue divine;
And the poet who overhears
Some random word they say
Is the fated man of men
Whom the ages must obey:
One who having nectar drank
Into blissful orgies sank;
He takes no mark of night or day,
He cannot go, he cannot stay,
He would, yet would not, counsel keep,
But, like a walker in his sleep
With staring eye that seeth none,
Ridiculously up and down
Seeks how he may fitly tell
The heart-o' erlading miracle.

Not yet, not yet,
Impatient friend, —
A little while attend;
Not yet I sing: but I must wait,
My hand upon the silent string,
Fully until the end.
I see the coming light,
I see the scattered gleams,
Aloft, beneath, on left and right
The stars' own ether beams;
These are but seeds of days,
Not yet a steadfast morn,
An intermittent blaze,
An embryo god unborn.

How all things sparkle,
The dust is alive,

To the birth they arrive:
I snuff the breath of my morning afar,
I see the pale lustres condense to a star:
The fading colors fix,
The vanishing are seen,
And the world that shall be
Twins the world that has been.
I know the appointed hour,
I greet my office well,
Never faster, never slower
Revolves the fatal wheel!
The Fairest enchants me,
The Mighty commands me,
Saying, 'Stand in thy place;
Up and eastward turn thy face;
As mountains for the morning wait,
Coming early, coming late,
So thou attend the enriching Fate
Which none can stay, and none accelerate.
I am neither faint nor weary,
Fill thy will, O faultless heart!
Here from youth to age I tarry, —
Count it flight of bird or dart.
My heart at the heart of things
Heeds no longer lapse of time,
Rushing ages moult their wings,
Bathing in thy day sublime.

The sun set, but set not his hope: —
Stars rose, his faith was earlier up:
Fixed on the enormous galaxy,
Deeper and older seemed his eye,
And matched his sufferance sublime
The taciturnity of Time.

Beside his hut and shading oak,
Thus to himself the poet spoke,
'I have supped to-night with gods,
I will not go under a wooden roof:
As I walked among the hills

AS I WALKED AMONG THE MOUNTAINS
In the love which Nature fills,
The great stars did not shine aloof,
They hurried down from their deep abodes
And hemmed me in their glittering troop.

‘Divine Inviters! I accept
The courtesy ye have shown and kept
From ancient ages for the bard,
To modulate
With finer fate
A fortune harsh and hard.
With aim like yours
I watch your course,
Who never break your lawful dance
By error or intemperance.
O birds of ether without wings!
O heavenly ships without a sail!
O fire of fire! O best of things!
O mariners who never fail!
Sail swiftly through your amber vault,
An animated law, a presence to exalt.’

Ah, happy if a sun or star
Could chain the wheel of Fortune’s car,
And give to hold an even state,
Neither dejected nor elate,
That haply man upraised might keep
The height of Fancy’s far-eyed steep.
In vain: the stars are glowing wheels,
Giddy with motion Nature reels,
Sun, moon, man, undulate and stream,
The mountains flow, the solids seem,
Change acts, reacts; back, forward hurled,
And pause were palsy to the world. —
The morn is come: the starry crowds
Are hid behind the thrice-piled clouds;
The new day lowers, and equal odds
Have changed not less the guest of gods;
Discrowned and timid, thoughtless, worn,

The child of genius sits forlorn:
Between two sleeps a short day's stealth,
'Mid many ails a brittle health,
A cripple of God, half true, half formed,
And by great sparks Promethean warmed,
Constrained by impotence to adjourn
To infinite time his eager turn,
His lot of action at the urn.
He by false usage pinned about
No breath therein, no passage out,
Cast wishful glances at the stars
And wishful saw the Ocean stream: —
'Merge me in the brute universe,
Or lift to a diviner dream!'

Beside him sat enduring love,
Upon him noble eyes did rest,
Which, for the Genius that there strove.
The follies bore that it invest.
They spoke not, for their earnest sense
Outran the craft of eloquence.

He whom God had thus preferred, —
To whom sweet angels ministered,
Saluted him each morn as brother,
And bragged his virtues to each other, —
Alas! how were they so beguiled,
And they so pure? He, foolish child,
A facile, reckless, wandering will,
Eager for good, not hating ill,
Thanked Nature for each stroke she dealt;
On his tense chords all strokes were felt,
The good, the bad with equal zeal,
He asked, he only asked, to feel.
Timid, self-pleasing, sensitive,
With Gods, with fools, content to live;
Bended to fops who bent to him;
Surface with surfaces did swim.

‘G... ..’

Sorrow, sorrow! the angels cried,
'Is this dear Nature's manly pride?
Call hither thy mortal enemy,
Make him glad thy fall to see!
Yon waterflag, yon sighing osier,
A drop can shake, a breath can fan;
Maidens laugh and weep; Composure
Is the pudency of man,'

Again by night the poet went
From the lighted halls
Beneath the darkling firmament
To the seashore, to the old seawalls,
Out shone a star beneath the cloud,
The constellation glittered soon, —
You have no lapse; so have ye glowed
But once in your dominion.
And yet, dear stars, I know ye shine
Only by needs and loves of mine;
Light-loving, light-asking life in me
Feeds those eternal lamps I see.
And I to whom your light has spoken,
I, pining to be one of you,
I fall, my faith is broken,
Ye scorn me from your deeps of blue.
Or if perchance, ye orbs of Fate,
Your ne'er averted glance
Beams with a will compassionate
On sons of time and chance,
Then clothe these hands with power
In just proportion,
Nor plant immense designs
Where equal means are none.'

CHORUS OF SPIRITS

Means, dear brother, ask them not;
Soul's desire is means enow,
Pure content is angel's lot,

Thine own theatre art thou.

Gentler far than falls the snow
In the woodwalks still and low
Fell the lesson on his heart
And woke the fear lest angels part.

POET

I see your forms with deep content,
I know that ye are excellent,
 But will ye stay?
I hear the rustle of wings,
Ye meditate what to say
Ere ye go to quit me for ever and aye.

SPIRITS

Brother, we are no phantom band;
Brother, accept this fatal hand.
Aches thine unbelieving heart
With the fear that we must part?
See, all we are rooted here
By one thought to one same sphere;
From thyself thou canst not flee, —
From thyself no more can we.

POET

Suns and stars their courses keep,
But not angels of the deep:
Day and night their turn observe,
But the day of day may swerve.
Is there warrant that the waves
Of thought in their mysterious caves
Will heap in me their highest tide,
In me therewith beatified?
Unsure the ebb and flood of thought,
The moon comes back, — the Spirit not.

SPIRITS

Brother, sweeter is the Law
Than all the grace Love ever saw;
We are its suppliants. By it, we
Draw the breath of Eternity;
Serve thou it not for daily bread, —
Serve it for pain and fear and need.
Love it, though it hide its light;
By love behold the sun at night.
If the Law should thee forget,
More enamoured serve it yet;
Though it hate thee, suffer long;
Put the Spirit in the wrong;
Brother, no decrepitude
Chills the limbs of Time;
As fleet his feet, his hands as good,
His vision as sublime:
On Nature's wheels there is no rust;
Nor less on man's enchanted dust
Beauty and Force alight.

FRAGMENTS ON THE POET AND THE POETIC GIFT

I

There are beggars in Iran and Araby,
SAID was hungrier than all;
Hafiz said he was a fly
That came to every festival.
He came a pilgrim to the Mosque
On trail of camel and caravan,
Knew every temple and kiosk
Out from Mecca to Ispahan;
Northward he went to the snowy hills,
At court he sat in the grave Divan.
His music was the south-wind's sigh,
His lamp, the maiden's downcast eye,
And ever the spell of beauty came
And turned the drowsy world to flame.
By lake and stream and gleaming hall
And modest copse and the forest tall,
Where'er he went, the magic guide
Kept its place by the poet's side.
Said melted the days like cups of pearl,
Served high and low, the lord and the churl,
Loved harebells nodding on a rock,
A cabin hung with curling smoke,
Ring of axe or hum of wheel
Or gleam which use can paint on steel,
And huts and tents; nor loved he less
Stately lords in palaces,
Princely women hard to please,
Fenced by form and ceremony,
Decked by courtly rites and dress
And etiquette of gentillesse.
But when the mate of the snow and wind,
He left each civil scale behind:
Him wood-gods fed with honey wild
And of his memory beguiled.

He loved to watch and wake
When the wing of the south-wind whipt the lake
And the glassy surface in ripples brake
And fled in pretty frowns away
Like the flitting boreal lights,
Rippling roses in northern nights,
Or like the thrill of Aeolian strings
In which the sudden wind-god rings.
In caves and hollow trees he crept
And near the wolf and panther slept.
He came to the green ocean's brim
And saw the wheeling sea-birds skim,
Summer and winter, o'er the wave,
Like creatures of a skiey mould,
Impassible to heat or cold.
He stood before the tumbling main
With joy too tense for sober brain;
He shared the life of the element,
The tie of blood and home was rent:
As if in him the welkin walked,
The winds took flesh, the mountains talked,
And he the bard, a crystal soul
Sphered and concentric with the whole.

II

The Dervish whined to Said,
"Thou didst not tarry while I prayed.
Beware the fire that Eblis burned,"
But Saadi coldly thus returned,
"Once with manlike love and fear
I gave thee for an hour my ear,
I kept the sun and stars at bay,
And love, for words thy tongue could say.
I cannot sell my heaven again
For all that rattles in thy brain."

III

Said Saadi: "When I stood before

Said Saadi, when I stood before
Hassan the camel-driver's door,
I scorned the fame of Timour brave;
Timour, to Hassan, was a slave.
In every glance of Hassan's eye
I read great years of victory,
And I, who cower mean and small
In the frequent interval
When wisdom not with me resides,
Worship Toil's wisdom that abides.
I shunned his eyes, that faithful man's,
I shunned the toiling Hassan's glance."

IV

The civil world will much forgive
To bards who from its maxims live,
But if, grown bold, the poet dare
Bend his practice to his prayer
And following his mighty heart
Shame the times and live apart, —
Vae solis! I found this,
That of goods I could not miss
If I fell within the line,
Once a member, all was mine,
Houses, banquets, gardens, fountains,
Fortune's delectable mountains;
But if I would walk alone,
Was neither cloak nor crumb my own.
And thus the high Muse treated me,
Directly never greeted me,
But when she spread her dearest spells,
Feigned to speak to some one else.
I was free to overhear,
Or I might at will forbear;
Yet mark me well, that idle word
Thus at random overheard
Was the symphony of spheres,
And proverb of a thousand years,

The light wherewith all planets shone,
The livery all events put on,
It fell in rain, it grew in grain,
It put on flesh in friendly form,
Frowned in my foe and growled in storm,
It spoke in Tullius Cicero,
In Milton and in Angelo:
I travelled and found it at Rome;
Eastward it filled all Heathendom
And it lay on my hearth when I came home.

V

Mask thy wisdom with delight,
Toy with the bow, yet hit the white,
As Jelaleddin old and gray;
He seemed to bask, to dream and play
Without remoter hope or fear
Than still to entertain his ear
And pass the burning summer-time
In the palm-grove with a rhyme;
Heedless that each cunning word
Tribes and ages overheard:
Those idle catches told the laws
Holding Nature to her cause.

God only knew how Saadi dined;
Roses he ate, and drank the wind;
He freelier breathed beside the pine,
In cities he was low and mean;
The mountain waters washed him clean
And by the sea-waves he was strong;
He heard their medicinal song,
Asked no physician but the wave,
No palace but his sea-beat cave.

Saadi held the Muse in awe,
She was his mistress and his law;
A twelvemonth he could silence hold,
Nor ran to speak till she him told:

Not fail to speak till she him told,
He felt the flame, the fanning wings,
Nor offered words till they were things,
Glad when the solid mountain swims
In music and uplifting hymns.

Charmed from fagot and from steel,
Harvests grew upon his tongue,
Past and future must reveal
All their heart when Saadi sung;
Sun and moon must fall amain
Like sower's seeds into his brain,
There quickened to be born again.

The free winds told him what they knew,
Discoursed of fortune as they blew;
Omens and signs that filled the air
To him authentic witness bare;
The birds brought auguries on their wings,
And carolled undeceiving things
Him to beckon, him to warn;
Well might then the poet scorn
To learn of scribe or courier
Things writ in vaster character;
And on his mind at dawn of day
Soft shadows of the evening lay.

*

Pale genius roves alone,
No scout can track his way,
None credits him till he have shown
His diamonds to the day.

Not his the feaster's wine,
Nor land, nor gold, nor power,
By want and pain God screeneth him
Till his elected hour.

Go, speed the stars of Thought
On their shining spheres

On to their shining goals: —
The sower scatters broad his seed,
The wheat thou strew'st be souls.

I grieve that better souls than mine
Docile read my measured line:
High destined youths and holy maids
Hallow these my orchard shades;
Environ me and me baptize
With light that streams from gracious eyes.
I dare not be beloved and known,
I ungrateful, I alone.

Ever find me dim regards,
Love of ladies, love of bards,
Marked forbearance, compliments,
Tokens of benevolence.
What then, can I love myself?
Fame is profitless as pelf,
A good in Nature not allowed
They love me, as I love a cloud
Sailing falsely in the sphere,
Hated mist if it come near.

For thought, and not praise;
Thought is the wages
For which I sell days,
Will gladly sell ages
And willing grow old
Deaf, and dumb, and blind, and cold,
Melting matter into dreams,
Panoramas which I saw
And whatever glows or seems
Into substance, into Law.

For Fancy's gift
Can mountains lift;
The Muse can knit
What is past, what is done,
With the web that's just begun;

Making free with time and size,
Dwindles here, there magnifies,
Swells a rain-drop to a tun;
So to repeat
No word or feat
Crowds in a day the sum of ages,
And blushing Love outwits the sages.

Try the might the Muse affords
And the balm of thoughtful words;
Bring music to the desolate;
Hang roses on the stony fate.

But over all his crowning grace,
Wherefor thanks God his daily praise,
Is the purging of his eye
To see the people of the sky:
From blue mount and headland dim
Friendly hands stretch forth to him,
Him they beckon, him advise
Of heavenlier prosperities
And a more excelling grace
And a truer bosom-glow
Than the wine-fed feasters know.
They turn his heart from lovely maids,
And make the darlings of the earth
Swainish, coarse and nothing worth:
Teach him gladly to postpone
Pleasures to another stage
Beyond the scope of human age,
Freely as task at eve undone
Waits unblamed to-morrow's sun.

By thoughts I lead
Bards to say what nations need;
What imports, what irks and what behooves,
Framed afar as Fates and Loves.

And as the light divides the dark

Through with living swords,
So shall thou pierce the distant age
With adamant words.

I framed his tongue to music,
I armed his hand with skill,
I moulded his face to beauty
And his heart the throne of Will.

For every God
Obeys the hymn, obeys the ode.

For art, for music over-thrilled,
The wine-cup shakes, the wine is spilled.

Hold of the Maker, not the Made;
Sit with the Cause, or grim or glad.

That book is good
Which puts me in a working mood.
Unless to Thought is added Will,
Apollo is an imbecile.
What parts, what gems, what colors shine, —
Ah, but I miss the grand design.

Like vaulters in a circus round
Who leap from horse to horse, but never touch the ground.

For Genius made his cabin wide,
And Love led Gods therein to bide.

The atom displaces all atoms beside,
And Genius unspheres all souls that abide.

To transmute crime to wisdom, so to stem
The vice of Japhet by the thought of Shem.

He could condense cerulean ether
Into the very best sole-leather.

For here the ant-hill shunned to tread

FORGOT THE AIR-FIRM, SHAMMED TO DEAD,
In mercy, on one little head.

I have no brothers and no peers,
And the dearest interferes:
When I would spend a lonely day,
Sun and moon are in my way.

The brook sings on, but sings in vain
Wanting the echo in my brain.

He planted where the deluge ploughed.
His hired hands were wind and cloud;
His eyes detect the Gods concealed
In the hummock of the field.

For what need I of book or priest,
Or sibyl from the mummied East,
When every star is Bethlehem star?
I count as many as there are
Cinquefoils or violets in the grass,
So many saints and saviors,
So many high behaviors
Salute the bard who is alive
And only sees what he doth give.

Coin the day-dawn into lines
In which its proper splendor shines;
Coin the moonlight into verse
Which all its marvel shall rehearse,
Chasing with words fast-flowing things; nor try
To plant thy shrivelled pedantry
On the shoulders of the sky.

Ah, not to me those dreams belong!
A better voice peals through my song.

The Muse's hill by Fear is guarded,
A bolder foot is still rewarded.

His instant thought a noet smoke.

And filled the age his fame;
An inch of ground the lightning strook
But lit the sky with flame.

If bright the sun, he tarries,
All day his song is heard;
And when he goes he carries
No more baggage than a bird.

The Asmodean feat is mine,
To spin my sand-heap into twine.

Slighted Minerva's learnèd tongue,
But leaped with joy when on the wind
The shell of Clio rung.

FRAGMENTS ON NATURE AND LIFE

NATURE

The patient Pan,
Drunken with nectar,
Sleeps or feigns slumber,
Drowsily humming
Music to the march of time.
This poor tooting, creaking cricket,
Pan, half asleep, rolling over
His great body in the grass,
Tooting, creaking,
Feigns to sleep, sleeping never;
'T is his manner,
Well he knows his own affair,
Piling mountain chains of phlegm
On the nervous brain of man,
As he holds down central fires
Under Alps and Andes cold;
Haply else we could not live,
Life would be too wild an ode.

Come search the wood for flowers, —
Wild tea and wild pea,
Grapevine and succory,
Coreopsis
And liatris,
Flaunting in their bowers;
Grass with green flag half-mast high,
Succory to match the sky,
Columbine with horn of honey,
Scented fern and agrimony;
Forest full of essences
Fit for fairy presences,
Peppermint and sassafras,
Sweet fern, mint and vernal grass,
Panax, black birch, sugar maple,
Sweet and scented fern Dian's table

Sweet and scent for Dian's table,
Elder-blow, sarsaparilla,
Wild rose, lily, dry vanilla, —
Spices in the plants that run
To bring their first fruits to the sun.
Earliest heats that follow frore
Nervèd leaf of hellebore,
Sweet willow, checkerberry red,
With its savory leaf for bread.
Silver birch and black
With the selfsame spice
Found in polygala root and rind,
Sassafras, fern, benzöine,
Mouse-ear, cowslip, wintergreen,
Which by aroma may compel
The frost to spare, what scents so well.

Where the fungus broad and red
Lifts its head,
Like poisoned loaf of elfin bread,
Where the aster grew
With the social goldenrod,
In a chapel, which the dew
Made beautiful for God: —
O what would Nature say?
She spared no speech to-day:
The fungus and the bulrush spoke,
Answered the pine-tree and the oak,
The wizard South blew down the glen,
Filled the straits and filled the wide,
Each maple leaf turned up its silver side.
All things shine in his smoky ray,
And all we see are pictures high;
Many a high hillside,
While oaks of pride
Climb to their tops,
And boys run out upon their leafy ropes.
The maple street
In the houseless wood,
Voices followed after

voices followed after,
Every shrub and grape leaf
Rang with fairy laughter.
I have heard them fall
Like the strain of all
King Oberon's minstrelsy.
Would hear the everlasting
And know the only strong?
You must worship fasting,
You must listen long.
Words of the air
Which birds of the air
Carry aloft, below, around,
To the isles of the deep,
To the snow-capped steep,
To the thundercloud.

For Nature, true and like in every place,
Will hint her secret in a garden patch,
Or in lone corners of a doleful heath,
As in the Andes watched by fleets at sea,
Or the sky-piercing horns of Himmaleh;
And, when I would recall the scenes I dreamed
On Adirondac steeps, I know
Small need have I of Turner or Daguerre,
Assured to find the token once again
In silver lakes that unexhausted gleam
And peaceful woods beside my cottage door.

What all the books of ages paint, I have.
What prayers and dreams of youthful genius feign,
I daily dwell in, and am not so blind
But I can see the elastic tent of day
Belike has wider hospitality
Than my few needs exhaust, and bids me read
The quaint devices on its mornings gay.
Yet Nature will not be in full possessed,
And they who truliest love her, heralds are
And harbingers of a majestic race,
Who, having more absorbed, more largely yield,

And walk on earth as the sun walks in the sphere.

But never yet the man was found
Who could the mystery expound,
Though Adam, born when oaks were young,
Endured, the Bible says, as long;
But when at last the patriarch died
The Gordian noose was still untied.
He left, though goodly centuries old,
Meek Nature's secret still untold.

Atom from atom yawns as far
As moon from earth, or star from star.

When all their blooms the meadows flaunt
To deck the morning of the year,
Why tinge thy lustres jubilant
With forecast or with fear?

Teach me your mood, O patient stars!
Who climb each night the ancient sky,
Leaving on space no shade, no scars,
No trace of age, no fear to die.

The sun athwart the cloud thought it no sin
To use my land to put his rainbows in.

For joy and beauty planted it,
With faerie gardens cheered,
And boding Fancy haunted it
With men and women weird.

What central flowing forces, say,
Make up thy splendor, matchless day?

Day by day for her darlings to her much she added more;
In her hundred-gated Thebes every chamber was a door,
A door to something grander, — loftier walls, and vaster floor.

She paints with white and red the moors

to draw the nations out of doors.

A score of airy miles will smooth
Rough Monadnoc to a gem.

THE EARTH

Our eyeless bark sails free
 Though with boom and spar
Andes, Alp or Himmalee,
 Strikes never moon or star.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THE HEAVENS

Wisp and meteor nightly falling,
But the Stars of God remain.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

TRANSITION

See yonder leafless trees against the sky,
How they diffuse themselves into the air,
And, ever subdividing, separate
Limbs into branches, branches into twigs.
As if they loved the element, and hasted
To dissipate their being into it.

Parks and ponds are good by day;
I do not delight
In black acres of the night,
Nor my unseasoned step disturbs
The sleeps of trees or dreams of herbs.

In Walden wood the chickadee
Runs round the pine and maple tree
Intent on insect slaughter:
O tufted entomologist!
Devour as many as you list,
Then drink in Walden water.

The low December vault in June be lifted high,
And largest clouds be flakes of down in that enormous sky.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

THE GARDEN

Many things the garden shows,
And pleased I stray
From tree to tree
Watching the white pear-bloom,
Bee-infested quince or plum.
I could walk days, years, away
Till the slow ripening, secular tree
Had reached its fruiting-time,
Nor think it long.

Solar insect on the wing
In the garden murmuring,
Soothing with thy summer horn
Swains by winter pinched and worn.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

BIRDS

Darlings of children and of bard,
Perfect kinds by vice unmarred,
All of worth and beauty set
Gems in Nature's cabinet;
These the fables she esteems
Reality most like to dreams.
Welcome back, you little nations,
Far-travelled in the south plantations;
Bring your music and rhythmic flight,
Your colors for our eyes' delight:
Freely nestle in our roof,
Weave your chamber weatherproof;
And your enchanting manners bring
And your autumnal gathering.
Exchange in conclave general
Greetings kind to each and all,
Conscious each of duty done
And unstained as the sun.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

WATER

The water understands
Civilization well;
It wets my foot, but prettily
It chills my life, but wittily,
It is not disconcerted,
It is not broken-hearted:
Well used, it decketh joy,
Adorneth, doubleth joy:
Ill used, it will destroy,
In perfect time and measure
With a face of golden pleasure
Elegantly destroy.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

NAHANT

All day the waves assailed the rock,
I heard no church-bell chime,
The sea-beat scorns the minster clock
And breaks the glass of Time.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

SUNRISE

Would you know what joy is hid
In our green Musketaquid,
And for travelled eyes what charms
Draw us to these meadow farms,
Come and I will show you all
Makes each day a festival.
Stand upon this pasture hill,
Face the eastern star until
The slow eye of heaven shall show
The world above, the world below.

Behold the miracle!
Thou saw'st but now the twilight sad
And stood beneath the firmament,
A watchman in a dark gray tent,
Waiting till God create the earth, —
Behold the new majestic birth!
The mottled clouds, like scraps of wool,
Steeped in the light are beautiful.
What majestic stillness broods
Over these colored solitudes.
Sleeps the vast East in pleasèd peace,
Up the far mountain walls the streams increase
Inundating the heaven
With spouting streams and waves of light
Which round the floating isles unite: —
See the world below
Baptized with the pure element,
A clear and glorious firmament
Touched with life by every beam.
I share the good with every flower,
I drink the nectar of the hour: —
This is not the ancient earth
Whereof old chronicles relate
The tragic tales of crime and fate;
But rather, like its beads of dew
And dew-kissed meadows fresh and green

And dew-dent violets, fresh and new,
An exhalation of the time.

NIGHT IN JUNE

I left my dreary page and sallied forth,
Received the fair inscriptions of the night;
The moon was making amber of the world,
Glittered with silver every cottage pane,
The trees were rich, yet ominous with gloom.

 The meadows broad
From ferns and grapes and from the folded flowers
Sent a nocturnal fragrance; harlot flies
Flashed their small fires in air, or held their court
In fairy groves of herds-grass.

He lives not who can refuse me;
All my force saith, Come and use me:
A gleam of sun, a summer rain,
And all the zone is green again.

Seems, though the soft sheen all enchants,
Cheers the rough crag and mournful dell,
As if on such stern forms and haunts
A wintry storm more fitly fell.

Put in, drive home the sightless wedges
And split to flakes the crystal ledges.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

MAIA

Illusion works impenetrable,
Weaving webs innumerable,
Her gay pictures never fail,
Crowds each on other, veil on veil,
Charmer who will be believed
By man who thirsts to be deceived.

Illusions like the tints of pearl,
Or changing colors of the sky,
Or ribbons of a dancing girl
That mend her beauty to the eye.

The cold gray down upon the quinces lieth
And the poor spinners weave their webs thereon
To share the sunshine that so spicy is.

Samson stark, at Dagon's knee,
Gropes for columns strong as he;
When his ringlets grew and curled,
Groped for axle of the world.

But Nature whistled with all her winds,
Did as she pleased and went her way.

[Alphabetical List of Poems](#)

LIFE

A train of gay and clouded days
Dappled with joy and grief and praise,
Beauty to fire us, saints to save,
Escort us to a little grave.

No fate, save by the victim's fault, is low,
For God hath writ all dooms magnificent,
So guilt not traverses his tender will.

Around the man who seeks a noble end,
Not angels but divinities attend.

From high to higher forces
The scale of power uprears,
The heroes on their horses,
The gods upon their spheres.

This shining moment is an edifice
Which the Omnipotent cannot rebuild.

Roomy Eternity
Casts her schemes rarely,
And an aeon allows
For each quality and part
Of the multitudinous
And many-chambered heart.

The beggar begs by God's command,
And gifts awake when givers sleep,
Swords cannot cut the giving hand
Nor stab the love that orphans keep.

In the chamber, on the stairs,
Lurking dumb,
Go and come
Lemurs and Lars.

Such another peerless queen
Only could her mirror show.

Easy to match what others do,
Perform the feat as well as they;
Hard to out-do the brave, the true,
And find a loftier way:
The school decays, the learning spoils
Because of the sons of wine;
How snatch the stripling from their toils? —
Yet can one ray of truth divine
The blaze of revellers' feasts outshine.

Of all wit's uses the main one
Is to live well with who has none.

The tongue is prone to lose the way,
Not so the pen, for in a letter
We have not better things to say,
But surely say them better.

She walked in flowers around my field
As June herself around the sphere.

Friends to me are frozen wine;
I wait the sun on them should shine.

You shall not love me for what daily spends;
You shall not know me in the noisy street,
Where I, as others, follow petty ends;
Nor when in fair saloons we chance to meet;
Nor when I'm jaded, sick, anxious or mean.
But love me then and only, when you know
Me for the channel of the rivers of God
From deep ideal fontal heavens that flow.

To and fro the Genius flies,
A light which plays and hovers
Over the maiden's head
And dips sometimes as low as to her eyes.

Of her faults I take no note,
Fault and folly are not mine;
Comes the Genius, — all's forgot,
Replunged again into that upper sphere
He scatters wide and wild its lustres here.

Love
Asks nought his brother cannot give;
Asks nothing, but does all receive.
Love calls not to his aid events;
He to his wants can well suffice:
Asks not of others soft consents,
Nor kind occasion without eyes;
Nor plots to ope or bolt a gate,
Nor heeds Condition's iron walls, —
Where he goes, goes before him Fate;
Whom he uniteth, God installs;
Instant and perfect his access
To the dear object of his thought,
Though foes and land and seas between
Himself and his love intervene.

The brave Empedocles, defying fools,
Pronounced the word that mortals hate to hear —
“I am divine, I am not mortal made;
I am superior to my human weeds.”
Not Sense but Reason is the Judge of truth;
Reason's twofold, part human, part divine;
That human part may be described and taught,
The other portion language cannot speak.

Tell men what they knew before;
Paint the prospect from their door.

Him strong Genius urged to roam,
Stronger Custom brought him home.

That each should in his house abide.
Therefore was the world so wide.

Thou shalt make thy house
The temple of a nation's vows.
Spirits of a higher strain
Who sought thee once shall seek again.
I detected many a god
Forth already on the road,
Ancestors of beauty come
In thy breast to make a home.

The archangel Hope
Looks to the azure cope,
Waits through dark ages for the morn,
Defeated day by day, but unto victory born.

As the drop feeds its fated flower,
As finds its Alp the snowy shower,
Child of the omnific Need,
Hurl'd into life to do a deed,
Man drinks the water, drinks the light.

Ever the Rock of Ages melts
Into the mineral air,
To be the quarry whence to build
Thought and its mansions fair.

Go if thou wilt, ambrosial flower,
Go match thee with thy seeming peers;
I will wait Heaven's perfect hour
Through the innumerable years.

Yes, sometimes to the sorrow-stricken
Shall his own sorrow seem impertinent,
A thing that takes no more root in the world
Than doth the traveller's shadow on the rock.

But if thou do thy best,
Without remission, without rest,
And invite the sunbeam,
And abhor to feign or seem
Even to those who thee should love

And thy behavior approve;
If thou go in thine own likeness,
Be it health, or be it sickness;
If thou go as thy father's son,
If thou wear no mask or lie,
Dealing purely and nakedly, —

*

Ascending thorough just degrees
To a consummate holiness,
As angel blind to trespass done,
And bleaching all souls like the sun.

From the stores of eldest matter,
The deep-eyed flame, obedient water,
Transparent air, all-feeding earth,
He took the flower of all their worth,
And, best with best in sweet consent,
Combined a new temperament.

REX

The bard and mystic held me for their own,
I filled the dream of sad, poetic maids,
I took the friendly noble by the hand,
I was the trustee of the hand-cart man,
The brother of the fisher, porter, swain,
And these from the crowd's edge well pleased beheld
The service done to me as done to them.

With the key of the secret he marches faster,
From strength to strength, and for night brings day;
While classes or tribes, too weak to master
The flowing conditions of life, give way.

SUUM CUIQUE

Wilt thou seal up the avenues of ill?
Pay every debt as if God wrote the bill.

If curses be the wage of love,
Hide in thy skies, thou fruitless Jove,
 Not to be named:
 It is clear
Why the gods will not appear;
 They are ashamed.

When wrath and terror changed Jove's regal port,
And the rash-leaping thunderbolt fell short.

Shun passion, fold the hands of thrift,
 Sit still and Truth is near:
Suddenly it will uplift
 Your eyelids to the sphere:
Wait a little, you shall see
The portraiture of things to be.

The rules to men made evident
By Him who built the day,
The columns of the firmament
Not firmer based than they.

On bravely through the sunshine and the showers!
Time hath his work to do and we have ours.

THE BOHEMIAN HYMN

In many forms we try
To utter God's infinity,
But the boundless hath no form,
And the Universal Friend
Doth as far transcend
An angel as a worm.

The great Idea baffles wit,
Language falters under it,
It leaves the learned in the lurch;
Nor art, nor power, nor toil can find
The measure of the eternal Mind,
Nor hymn, nor prayer, nor church.

PAN

O what are heroes, prophets, men,
But pipes through which the breath of Pan doth blow
A momentary music. Being's tide
Swells hitherward, and myriads of forms
Live, robed with beauty, painted by the sun;
Their dust, pervaded by the nerves of God,
Throbs with an overmastering energy
Knowing and doing. Ebbs the tide, they lie
White hollow shells upon the desert shore,
But not the less the eternal wave rolls on
To animate new millions, and exhale
Races and planets, its enchanted foam.

SEPTEMBER

In the turbulent beauty
Of a gusty Autumn day,
Poet on a sunny headland
Sighed his soul away.

Farms the sunny landscape dappled,
Swandown clouds dappled the farms,
Cattle lowed in mellow distance
Where far oaks outstretched their arms.

Sudden gusts came full of meaning,
All too much to him they said,
Oh, south winds have long memories,
Of that be none afraid.

I cannot tell rude listeners
Half the tell-tale South-wind said, —
'T would bring the blushes of yon maples
To a man and to a maid.

OCTOBER

October woods wherein
The boy's dream comes to pass,
And Nature squanders on the boy her pomp,
And crowns him with a more than royal crown,
And unimagined splendor waits his steps.
The gazing urchin walks through tents of gold,
Through crimson chambers, porphyry and pearl,
Pavilion on pavilion, garlanded,
Incensed and starred with lights and airs and shapes,
Color and sound, music to eye and ear,
Beyond the best conceit of pomp or power.

PETER'S FIELD

[Knows he who tills this lonely field
To reap its scanty corn,
What mystic fruit his acres yield
At midnight and at morn?]

That field by spirits bad and good,
By Hell and Heaven is haunted,
And every rood in the hemlock wood
I know is ground enchanted.

[In the long sunny afternoon
The plain was full of ghosts:
I wandered up, I wandered down,
Beset by pensive hosts.]

For in those lonely grounds the sun
Shines not as on the town,
In nearer arcs his journeys run,
And nearer stoops the moon.

There in a moment I have seen
The buried Past arise;
The fields of Thessaly grew green,
Old gods forsook the skies.

I cannot publish in my rhyme
What pranks the greenwood played;
It was the Carnival of time,
And Ages went or stayed.

To me that spectral nook appeared
The mustering Day of Doom,
And round me swarmed in shadowy troop
Things past and things to come.

The darkness haunteth me elsewhere;
There I am full of light;

In every whispering leaf I hear
More sense than sages write.

Underwoods were full of pleasance,
All to each in kindness bend,
And every flower made obeisance
As a man unto his friend.

Far seen, the river glides below,
Tossing one sparkle to the eyes:
I catch thy meaning, wizard wave;
The River of my Life replies.

MUSIC

Let me go where'er I will,
I hear a sky-born music still:
It sounds from all things old,
It sounds from all things young,
From all that's fair, from all that's foul,
Peals out a cheerful song.

It is not only in the rose,
It is not only in the bird,
Not only where the rainbow glows,
Nor in the song of woman heard,
But in the darkest, meanest things
There alway, alway something sings.

'T is not in the high stars alone,
Nor in the cup of budding flowers,
Nor in the redbreast's mellow tone,
Nor in the bow that smiles in showers,
But in the mud and scum of things
There alway, alway something sings.

[Alphabetical List of Poems](#)

COSMOS

Who saw the hid beginnings
When Chaos and Order strove,
Or who can date the morning.
The purple flaming of love?

I saw the hid beginnings
When Chaos and Order strove,
And I can date the morning prime
And purple flame of love.

Song breathed from all the forest,
The total air was fame;
It seemed the world was all torches
That suddenly caught the flame.

*

Is there never a retroscope mirror
In the realms and corners of space
That can give us a glimpse of the battle
And the soldiers face to face?

Sit here on the basalt courses
Where twisted hills betray
The seat of the world-old Forces
Who wrestled here on a day.

*

When the purple flame shoots up,
And Love ascends his throne,
I cannot hear your songs, O birds,
For the witchery of my own.

And every human heart
Still keeps that golden day
And rings the bells of jubilee

On its own First of May.

THE MIRACLE

I have trod this path a hundred times
With idle footsteps, crooning rhymes.
I know each nest and web-worm's tent,
The fox-hole which the woodchucks rent,
Maple and oak, the old Divan
Self-planted twice, like the banian.
I know not why I came again
Unless to learn it ten times ten.
To read the sense the woods impart
You must bring the throbbing heart.
Love is aye the counterforce, —
Terror and Hope and wild Remorse,
Newest knowledge, fiery thought,
Or Duty to grand purpose wrought.
Wandering yester morn the brake,
I reached this heath beside the lake,
And oh, the wonder of the power,
The deeper secret of the hour!
Nature, the supplement of man,
His hidden sense interpret can; —
What friend to friend cannot convey
Shall the dumb bird instructed say.
Passing yonder oak, I heard
Sharp accents of my woodland bird;
I watched the singer with delight, —
But mark what changed my joy to fright, —
When that bird sang, I gave the theme;
That wood-bird sang my last night's dream,
A brown wren was the Daniel
That pierced my trance its drift to tell,
Knew my quarrel, how and why,
Published it to lake and sky,
Told every word and syllable
In his flippant chirping babble,
All my wrath and all my shames,
Nay, God is witness, gave the names.

THE WATERFALL

A patch of meadow upland
Reached by a mile of road,
Soothed by the voice of waters,
With birds and flowers bestowed.

Hither I come for strength
Which well it can supply,
For Love draws might from terrene force
And potencies of sky.

The tremulous battery Earth
Responds to the touch of man;
It thrills to the antipodes,
From Boston to Japan.

The planets' child the planet knows
And to his joy replies;
To the lark's trill unfolds the rose,
Clouds flush their gayest dyes.

When Ali prayed and loved
Where Syrian waters roll,
Upward the ninth heaven thrilled and moved;
At the tread of the jubilant soul.

WALDEN

In my garden three ways meet,
Thrice the spot is blest;
Hermit-thrush comes there to build,
Carrier-doves to nest.

There broad-armed oaks, the copses' maze,
The cold sea-wind detain;
Here sultry Summer overstays
When Autumn chills the plain.

Self-sown my stately garden grows;
The winds and wind-blown seed,
Cold April rain and colder snows
My hedges plant and feed.

From mountains far and valleys near
The harvests sown to-day
Thrive in all weathers without fear, —
Wild planters, plant away!

In cities high the careful crowds
Of woe-worn mortals darkling go,
But in these sunny solitudes
My quiet roses blow.

Methought the sky looked scornful down
On all was base in man,
And airy tongues did taunt the town,
'Achieve our peace who can!'

What need I holier dew
Than Walden's haunted wave,
Distilled from heaven's alembic blue,
Steeped in each forest cave?

[If Thought unlock her mysteries,
If Friendship on me smile,

I walk in marble galleries,
I talk with kings the while.]

How drearily in College hall
The Doctor stretched the hours,
But in each pause we heard the call
Of robins out of doors.

The air is wise, the wind thinks well,
And all through which it blows,
If plants or brain, if egg or shell,
Or bird or biped knows; And oft at home 'mid tasks I heed,
I heed how wears the day;
We must not halt while fiercely speed
The spans of life away.

What boots it here of Thebes or Rome
Or lands of Eastern day?
In forests I am still at home
And there I cannot stray.

[Alphabetical List of Poems](#)

THE ENCHANTER

In the deep heart of man a poet dwells
Who all the day of life his summer story tells;
Scatters on every eye dust of his spells,
Scent, form and color; to the flowers and shells
Wins the believing child with wondrous tales;
Touches a cheek with colors of romance,
And crowds a history into a glance;
Gives beauty to the lake and fountain,
Spies oversea the fires of the mountain;
When thrushes ope their throat, 't is he that sings,
And he that paints the oriole's fiery wings.
The little Shakspeare in the maiden's heart
Makes Romeo of a plough-boy on his cart;
Opens the eye to Virtue's starlike meed
And gives persuasion to a gentle deed.

WRITTEN IN A VOLUME OF GOETHE

Six thankful weeks, — and let it be
A meter of prosperity, —
In my coat I bore this book,
And seldom therein could I look,
For I had too much to think,
Heaven and earth to eat and drink.
Is he hapless who can spare
In his plenty things so rare?

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

RICHES

Have ye seen the caterpillar
Fouly warking in his nest?
'T is the poor man getting siller,
Without cleanness, without rest.

Have ye seen the butterfly
In braw claithing drest?
'T is the poor man gotten rich,
In rings and painted vest.

The poor man crawls in web of rags
And sore bested with woes.
But when he flees on riches' wings,
He laugheth at his foes.

[*Alphabetical List of Poems*](#)

PHILOSOPHER

Philosophers are lined with eyes within,
And, being so, the sage unmakes the man.
In love, he cannot therefore cease his trade;
Scarce the first blush has overspread his cheek,
He feels it, introverts his learned eye
To catch the unconscious heart in the very act.

His mother died, — the only friend he had, —
Some tears escaped, but his philosophy
Couched like a cat sat watching close behind
And throttled all his passion. Is't not like
That devil-spider that devours her mate
Scarce freed from her embraces?

FAME

Ah Fate! cannot a man
Be wise without a beard?
From East to West, from Beersheba to Dan,
Say, was it never heard,
That wisdom might in youth be gotten,
Or wit be ripe before't was rotten?

He pays too high a price
For knowledge and for fame,
Who gives his sinews, to be wise,
His teeth and bones, to buy a name,
And crawls through life a paralytic,
To earn the praise of bard and critic.

Is it not better done,
To dine and sleep through forty years,
Be loved by few, be feared by none,
Laugh life away, have wine for tears,
And take the mortal leap undaunted,
Content that all we asked was granted?

But Fate will not permit
The seed of gods to die,
Nor suffer Sense to win from Wit
Its guerdon in the sky,
Nor let us hide, whate'er our pleasure,
The world's light underneath a measure.

Go then, sad youth, and shine!
Go, sacrifice to fame;
Put love, joy, health, upon the shrine,
And life to fan the flame!
Thy hapless self for praises barter,
And die to Fame an honored martyr.

WILLIAM RUFUS AND THE JEW

“May it please my lord the king, — there’s a Jew at the door.”
— “Let him in,” said the king, “what’s he waiting there for?”
— “I wot, Sir, you come from Abraham’s loins,
Love not Christ, eat no pork, do no good with your coins.”
“My lord the king! I do as Moses bids;
Eschewing all evil, I shut my coffer lids;
From the law of my fathers, God forbid I should swerve;
The uncircumcised Nazarite, my race must not serve;
But Isaac my son to the Gentiles hath gone over,
And no means can I find my first-born to recover.
I would give fifty marks, and my gabardine to boot,
To the Rabbi that would bring him from the Christian faith about;
But phylacteried Rabbins live far over sea,
I cannot go to them, and they will not come to me.
Will it please my lord the king, from the house of Magog,
To bring my son back to his own synagogue.”
— “Why I ‘ll be the Rabbi, — where’s a fitter Pharisee?
Count me out the fifty marks, and go send your son to me.”
The king filled his mouth with arguments and jibes,
To win the boy back to the faith of the tribes,
But Isaac the Jew was so hard and stiff-necked,
That by no means could the king come to any effect;
So he paid the Jew back twenty marks of his gains;
Quoth he, “I think I ‘ll keep the thirty for the payment of my pains.”

MY THOUGHTS

Many are the thoughts that come to me
In my lonely musing;
And they drift so strange and swift,
There's no time for choosing
Which to follow, for to leave
Any, seems a losing.

When they come, they come in flocks,
As on glancing feather,
Startled birds rise one by one
In autumnal weather,
Waking one another up
From the sheltering heather.

Some so merry that I laugh,
Some are grave and serious,
Some so trite, their least approach
Is enough to weary us: —
Others flit like midnight ghosts,
Shrouded and mysterious.

There are thoughts that o'er me steal,
Like the day when dawning;
Great thoughts winged with melody
Common utterance scorning,
Moving in an inward tune,
And an inward morning.

Some have dark and drooping wings,
Children all of sorrow;
Some are as gay, as if today
Could see no cloudy morrow, —
And yet, like light and shade, they each
Must from the other borrow.

One by one they come to me
On their destined mission;

One by one I see them fade
With no hopeless vision;
For they've led me on a step
To their home Elysian.

MOTTO TO “CONSIDERATIONS BY THE WAY.”

Hear what British Merlin sung,
Of keenest eye and truest tongue.
Say not, the chiefs who first arrive
Usurp the seats for which all strive;
The forefathers this land who found
Failed to plant the vantage-ground;
Ever from one who comes to-morrow
Men wait their good and truth to borrow.
But wilt thou measure all thy road,
See thou lift the lightest load.
Who has little, to him who has less, can spare,
And thou, Cyndyllan’s son! beware
Ponderous gold and stuffs to bear,
To falter ere thou thy task fulfil, —
Only the light-armed climb the hill.
The richest of all lords is Use,
And ruddy Health the loftiest Muse.
Live in the sunshine, swim the sea,
Drink the wild air’s salubrity:
Where the star Canope shines in May,
Shepherds are thankful, and nations gay.
The music that can deepest reach,
And cure all ill, is cordial speech:
Mask thy wisdom with delight,
Toy with the bow, yet hit the white.
Of all wit’s uses, the main one
Is to live well with who has none.
Cleave to thine acre; the round year
Will fetch all fruits and virtues here:
Fool and foe may harmless roam,
Loved and lovers bide at home.
A day for toil, an hour for sport,
But for a friend is life too short.

MOTTO TO “NEW ENGLAND REFORMERS.”

In the suburb, in the town,
On the railway, in the square,
Came a beam of goodness down
Doubling daylight everywhere:
Peace now each for malice takes,
Beauty for his sinful weeds,
For the angel Hope aye makes
Him an angel whom she leads.

MOTTO TO "FATE."

Delicate omens traced in air
To the lone bard true witness bare;
Birds with auguries on their wings
Chanted undeceiving things
Him to beckon, him to warn;
Well might then the poet scorn
To learn of scribe or courier
Hints writ in vaster character;
And on his mind, at dawn of day,
Soft shadows of the evening lay.
For the prevision is allied
Unto the thing so signified;
Or say, the foresight that awaits
Is the same Genius that creates.

MOTTO TO "ILLUSIONS."

Flow, flow the waves hated,
Accursed, adored,
The waves of mutation:
No anchorage is.
Sleep is not, death is not;
Who seem to die live.
Flouse you were born in,
Friends of your spring-time,
Old man and young maid,
Day's toil and its guerdon,
They are all vanishing,
Fleeing to fables,
Cannot be moored.
See the stars through them,
Through treacherous marbles.
Know, the stars yonder,
The stars everlasting,
Are fugitive also,
And emulate, vaulted,
The lambent heat-lightning,
And fire-fly's flight.

When thou dost return
On the wave's circulation,
Beholding the shimmer,
The wild dissipation,
And, out of endeavor
To change and to flow,
The gas become solid,
And phantoms and nothings
Return to be things,
And endless imbroglio
Is law and the world, —
Then first shalt thou know,
That in the wild turmoil,
Horsed on the Proteus,
The wind that the waves

From the highest to power,
And to endurance.

THE CUP OF LIFE IS NOT SO SHALLOW

The cup of life is not so shallow
That we have drained the best,
That all the wine at once we swallow,
And lees make all the rest.

Maids of as soft a bloom shall marry
As Hymen yet hath blessed,
And fairer forms are in the quarry
Than Angelo released.

WHERE IS SKRYMIR? GIANT SKRYMIR?

Where is Skrymir? Giant Skrymir?
Come transplant the woods for me!
Scoop up yonder aged ash,
Centennial pine, mahogany beech,
Oaks that grew in the dark ages
Heedful, bring them, set them straight,
In sifted soil, before my porch;
Now turn the river on their roots,
So the new top shall not droop
His tall erected plume, nor a leaf wilt.

SOUTH WIND

In the turbulent beauty
Of a gusty autumn day,
Poet in a wood-crowned headland
Sighed his soul away.
Farms the sunny landscape dappled,
Swan-down clouds dappled the farms,
Catde lowed in hazy distance
Where far oaks outstretched their arms.
Sudden gusts came full of meaning,
All too much to him they said; —
Southwinds have long memories,
Of that be none afraid.
I cannot tell rude listeners
Half the telltale South wind said,
T'would bring the blushes of yon maples
To a man and to a maid.

THERE ARE BEGGARS IN IRAN AND ARABY

There are beggars in Iran and Araby,
Said was hungrier than all;
Men said he was a fly
That came to every festival,
Also he came to the mosque
In trail of camel and caravan,
Out from Mecca to Isphahan; —
Northward he went to the snowy hills, —
At court he sat in the grave divan.
His music was the south wind's sigh,
His lamp the maiden's downcast eye,
And ever the spell of beauty came
And turned the drowsy world to flame.
By lake and stream and gleaming hall,
And modest copse, and the forest tall,
Where'er he went the magic guide
Kept its place by the poet's side.
Tell me the world is a talisman,
To read it must be the art of man;
Said melted the days in cups like pearl,
Served high and low, the lord and the churl;
Loved harebells nodding on a rock,
A cabin hung with curling smoke,
And huts and tents, nor loved he less
Stately lords in palaces,
Fenced by form and ceremony.

QUOTH SAADI, WHEN I STOOD BEFORE

Quoth Saadi, when I stood before
Hassan the camel-driver's door,
I scorned the fame of Timour brave, —
Timour to Hassan was a slave.
In every glance of Hassan's eye
I read great years of victory;
And I, who cower mean and small
In the frequent interval
When Wisdom not with me resides,
Worship toil's wisdom that abides;
I shunned his eye, — the faithful man's,
I shunned the toiling Hassan's glance.

DANTE'S VITA NUOVA

THE NEW LIFE OF DANTE ALIGHIERI

I

In that part of the book of my memory before which little could be read, is found this title, The New Life begins. Under which rubric, I find written the words which it is my purpose to copy in this book, and if not all, at least their sense.

II

Nine times already after my birth was the heaven of light returned to the same point in its proper gyration, when to my eyes first appeared the gracious lady of my mind, who was called Beatrice by many who did not know her name. She had then been so long in this life that in her time the starry heaven had moved towards the East one of the twelve parts of a degree, so that she appeared to me as at the beginning of her ninth year, & I saw her about the end of mine and she appeared to me clothed in a very noble lowly colour and becoming red, girt & adorned in the mode which belonged to her tender youth. At that moment, I say verily the spirit of life which dwells in the secretest chamber of the heart did so quake that it appeared violently in my least pulses, and trembling said,

Ecce deus fortior me; veniens dominabitur mihi.
Behold a god stronger than I who cometh to rule me.

At that moment, the animal spirit which dwells in the chamber into which all the sensuous spirits carry their perceptions, began to marvel much, &, speaking specially to the spirits of sight, said,

Now hath appeared our Supreme Good.
Apparuit jam Beatitudo nostra.

At that moment, the natural spirit which dwells in that part where our nourishment is supplied, began to weep & weeping said,

Heu miser, quia frequenter impeditus ero deinceps.
Wo is me I am henceforth to have my way no longer.

From that hour forth, I say, that, Love ruled my soul, which was so much disposed by him & he began to take over me so much lordship & governance, through the strength which my imagination gave to him, that it behoved me to do all his pleasure to the utmost, & he commanded me many times that I should seek to see this youngest angel; wherefore I in my boyhood many times went seeking her, & I saw her with such new & such praiseworthy manners that certainly those words of the Poet Homer might be spoken of her,

“She seemed not the daughter of a mortal, but of a god.”

And it was so that her image which continually abode with me, (was it the presumption of Love to subdue me) was always of so noble virtue that it never suffered Love to rule me without the faithful counsel of reason in matters wherein such counsel were good to hear. But since the controuling the passions & manners of so much youth may seem to some fabulous, I will quit these, & passing over many things which might be taken from the book where these lie hidden, I will come to those words which are written in my memory under longer paragraphs.

III

When so many days were past that nine years were exactly completed after the forewritten appearance of this most gentle maid, — in the last of these days, it happened, that this wonderful lady appeared to me clothed in the purest white, in the middle between two gentlewomen who were of maturer age; & passing through a road turned her eyes towards that part where I was, very fearful, and by her ineffable courtesy which is today requited in the other world, saluted me virtuously, so that it appeared to me then that I saw all the limits of happiness. The hour when her sweetest salute arrived at me, was precisely the ninth of that day, and inasmuch as it was the first time that her words turned to arrive at my ears, I took so much sweetness, that, like one intoxicated, I departed from the company & withdrew to a solitary place of my chamber, & set myself to think on this most courteous one. And thinking of her, there came to me a sweet sleep in which appeared to me a marvellous vision, wherein I seemed to see in my chamber a cloud of the colour of fire, within which I discerned a figure of a signor of aspect fearful to the beholder.

And he appeared to have so much joy in himself, that it was wonderful, and he said many things, which I did not understand, except a few, among which I heard these words; I am thy lord.

In his arms appeared to me to sleep a person naked save that she was lightly infolded in a bloodred cloth, whom I beholding very attentively knew that she was the lady of peace, who had the day before deigned to salute me, & in one of his hands it appeared that he held something which burned wholly, & it seemed to me that he said to me these words;

Vide cor tuum.

And when he had remained some time it appeared to me that he waked her who slept, and so prevailed by his genius that he made her eat that thing which burned in her hand which she eat doubtfully. After a little while his joy turned into bitterest lamentation, and thus complaining he took again this lady in his arms, and with her he seemed to me to go towards heaven. Whence I suffered so great anguish that my weak sleep could not bear, so it broke, & I awaked. And immediately I began to reflect, & found that the hour in which this dream had appeared to me was the fourth of the night, so that it appeared plainly that it was the first hour of the nine last hours of the night. I thinking of this which had appeared to me proposed to make it known to many who were the famous poets (trovatori) in that time. And because I had already seen by myself the art of saying words in rhyme, I proposed to make a sonnet, in which I should salute all the faithful of love, & praying them that they would judge my vision, I should write them what I had seen in my dream, & I then begun this sonnet.

To each taken soul & gentle heart,
To whose sight comes the present word,
To the end that they may write again their thought
Greeting in the name of their lord, that is, Love.
Already was it the third hour
Of the time when every star is most bright,
When Love appeared to me suddenly
Whose substance seen made me tremble.
Glad seemed Love, holding
My heart in his hand, & in his arms had
My lady asleep rolled in a garment;
Then he waked her, and with that burning heart
Fed he her lowly trembling;
Then bewailing it, he seemed to go away.

This sonnet was answered by many & with different meanings; among which

respondents was he whom I call first among my friends (Guido Cavalcanti). And he wrote this sonnet.

You have seen, in my judgment, every valour,
And every game, & every good which man feels,
As if you were in proof of a mighty lord
Who ruled the world of honour.
Then live in places where grief dies,
And hold reason in your pious mind
Yes go gently in dreams to the race
Who carry their heart without pain.
Seeing her carry the heart of you,
Death demands your lady,
Feeds on the living heart of her timid.
When it appeared to you that she went away grieving
It was the sweet dream which was completed
That its contrary came conquering it.

And this was the beginning of the friendship between me & him, when he knew that it was I that had sent this to him. The true meaning of the said sonnet was not seen then by any one, but now is manifest to the most simple.

IV

And after this vision my natural spirit began to be impeded in its operation because the soul was all given up to thinking of this most gentle one, whence I became in a little time after, of so frail & weak a condition, that many friends grieved at my face, and many full of envy persisted to know of me that which I wished to conceal altogether, from others, and I becoming sensible of the evil demand which they made me, through the will of love which commanded me according to the counsel of reason, answered them, that love was that which had governed me thus. I spoke of love because I carried in my face so many of his ensigns which could not be covered & when they asked on whose account this love had thus destroyed me I smiling looked at them & said nothing to them.

V

One day it happened that this most gentle one sat in a place where were heard words of the Queen of Glory, & I was in a place from whence I could see my

chief joy, and in the midst between her & me in a right line sat a gentlewoman of very pleasant aspect who beheld many times with wonder my glances which appeared to terminate on her, whence many were informed of her looking. And so much was this regarded, that, on leaving that place I heard some one say near me, See how such a lady destroys the person of this man. And naming her, I heard that they spoke of her who was placed midway in the right line which begun from the most gentle Beatrice & terminated in my eyes. Then I comforted myself much, assuring myself that my secret was not communicated to others that day by my face, & immediately I thought of making of this gentlewoman a screen of the truth, and I carried this so well in a little time that my secret was believed to be known by many persons who spoke to me of it. Through this gentlewoman I concealed myself some years & months & to make it more credible to others, I made for her certain little pieces in rhyme, which it is not my purpose to write here, except insofar as they concern the most gentle Beatrice; and therefore I will leave them all, only I shall write one which appears to be in praise of her.

VI

I say that in the time when this gentlewoman was the screen of so much love, there arose on my part a wish to record the name of the most gentle, and to accompany it with many names of ladies, & specially with the name of this gentlewoman, and having taken the names of sixty the fairest women of the city, where my lady was placed by the most High Lord, I composed an epistle under the form of service, which I will not copy, & should not have mentioned except to say this, that composing it, it strangely happened that in no other number would the name of my lady stand, except in the *ninth*, among the names of these ladies.

VII

The gentlewoman through whom I had for some time concealed my inclination, happened to quit the abovementioned city & went into a distant country; I as it were frightened from my fine defence, greatly discomforted myself more than I should have believed beforehand, & thinking that if I should not speak somewhat dolorously of her departure, people would very soon become aware of my secret, I proposed to make a lament, in a sonnet which I will copy, because my lady was the immediate cause of certain words which are in the sonnet as appears to whoso understands it; and then I wrote this sonnet;

O ye who pass by the way of Love,
Attend & behold,
If any sorrow be great as mine.
And I pray only that you will hear me
And then imagine
If I am the lodging & the key of every grief.
Love, not truly by my small goodness
But by his own nobility
Placed me in a life so sweet & gentle
That I heard myself say secretly many times
Ah! by what worth
Does the heart so lightly possess this treasure?
Now have I lost all my presumption
Which arose out of the amorous treasure
Wherefore I remain poor
In a fashion, which to speak, breeds doubt.
So that wishing to do as those
Who through shame conceal their want,
I outwardly show a gladness
And within from the heart I pine & bewail.

VIII

After the departure of this gentlewoman, it was the pleasure of the Lord of the Angels to call to his glory a lady of very gentle countenance who was a great favourite in this city, whose body I saw lie without life in the midst of many ladies who lamented her. I also lamenting, proposed to myself to say some words of her death in guerdon of this, that I had once seen her with my lady; & on that, I touched in the last part of the words which I wrote of her, as appears plainly to whoso understands it; and I said then these two sonnets; of which the first begins;

Lament lovers, since Love laments,
Seeing what cause he had to weep.
Love hears with pity ladies cry
Showing bitter grief in their eyes,
Because rough Death in gentle heart
Hath wrought his cruel work,
Spoiling that which the world praises

In a gentle dame, out of honour.
Hear how much horror Love felt,
Since I saw him lament in true form
Over the beautiful dead image;
And I looked toward the Heaven often
Where the gentle soul was already placed,
Who was a lady of so gay an aspect.
and the second;
Rough Death, enemy of pity,
Ancient mother of grief,
Indisputable heavy judgment
Thou hast given matter of grief to the heart;
Wherefore I go sad.
The tongue wearies of blaming thee
And if thou wouldst make request for grace
It behoves that I tell
Your offence with every cruel injury;
Not because it is hidden from people
But to make angry at it
Whoso nourishes himself with Love henceforth.
From the world thou hast divided courtesy,
And that which in a lady is virtue to prize.
In gay youth
Thou hast destroyed amorous beauty
I will no more discover what dame she is
Except by her known virtues.
Whoso does not merit salvation
Let her never hope to have her company.

IX

Some days after the death of this lady, something occurred which required me to leave the city abovementioned, & to go towards those parts where was the gentlewoman who had been my defence. It chanced that my journey did not reach so far as to where she was, and although I was in the company of many according to the appearance, the going displeased me so that my sighs could not exhale the anguish which the heart felt, because I was departing from my felicity. And yet my sweetest lord who ruled me through the virtue of the most gentle lady, in my imagination appeared like a pilgrim lightly clad, & with

coarse clothes, He seemed to me astonished & looked on the ground, except that sometimes his eyes turned to a beautiful running river, very clear, which ran along the road in which I walked. It seemed to me that Love called me, & said to me these words; "I come from that lady who has long been thy defence, & I know that her return will not be.

And therefore this heart which I made thee to have from her, I have with me & I carry it to a lady who shall be thy defence as this one was, (and he named her to me so that I knew her well) but notwithstanding if of these words I have spoken to thee, thou speakest anything, tell it in a fashion that by them may not be discerned the feigned love which thou hast shown to this one, & which it will behove thee to show to others." And having said these words, this my imagination disappeared very suddenly through the large part which it appeared to me that Love had given me of himself. And, as if changed in countenance, I rode that day very thoughtful, &, attended by many sighs, on the next day I began thus this sonnet.

Riding the other day through a road
Sad at going where it displeased me
I found Love in the midst of the way
In the light dress of a pilgrim.
His semblance appeared mean
As if he had lost his lordship,
And sighing thoughtful came
So as not to see the people, his head down;
When he saw me, he called me by name,
And said, I come from the distant place
Where was your heart by my will,
And I bring it back to serve a new pleasure.
Then I took of him so great part
That he disappeared & I knew not how.

X

After my return I set myself to seek this lady whom my lord had named to me in the road of sighs &, that my story may be short, I say, that in a little time I made her my defence so much, that too many people spoke of her, beyond all the limits of courtesy, whereat I often was sorely grieved. And for this cause, that is, of this excessive fame, which appeared as if I had viciously defamed myself, that

most gentle one who was the destroyer of all vices, & queen of the virtues, passing in some place, denied to me her sweetest salute, in which consisted all my peace. And digressing somewhat from the present argument, I wish to explain what her salutation operated virtuously in me.

XI

I say that when she appeared from any part, through the hope of her wonderful sweetness no enemy remained to me; also there was added to me a flame of charity, which made me pardon whoever had offended me. And if any one had demanded aught of me, my answer would have been only Love, with a face clothed in humility; and when she was at hand ready to salute, a spirit of Love destroying all the other sensuous spirits, advanced forth the weak spirits of sight and said to them, Go to honour your lady, & he remained in the place of them; and whoso had wished to know Love, could do so, beholding the tremor of my eyes. And when this gentlest lady saluted me, not that Love was such a medium that he could shade from me the intolerable clearness, but he, as by excess of sweetness became such that my body, which now was all under his regiment, often moved itself as something heavily inanimate, so that it plainly appeared that in her salute dwelt my peace, which many times filled & overran my capacity.

XII

Now returning to the argument, I say, that when this joy was denied me, there came to me so much grief, that withdrawing from all company, I went into a lonely place to bathe the ground with bitterest tears. And, after some time, this weeping being stopped, I went into my chamber, where I could lament without being heard, and there calling pity from the Lady of all courtesy, & saying, O Love, aid thy faithful servant, — I slept like a beaten child worn out with crying. It happened in the midst of my sleep, that I seemed to see in my chamber beside me a youth clothed in whitest vestments & thinking much how much he looked at me there where I lay, & when he had looked at me some time, it seemed to me, that, sighing he called me; & he said to me these words.

Fili mi, tempus est ut pretermictantur simulacra nostra.

Then it appeared to me that I knew him who called me thus, as many times in

my sighs he had called me and considering him I thought that he wept piteously & he seemed to expect some word from me, whence taking courage began to speak thus with him. Lord of nobleness, why weepest thou? and he said to me these words; "I am, as it were, the centre of the circle, to whom all the parts of the circumference are alike. But not so, thou."

Then thinking on his words, it seemed to me that he had spoken very obscurely, so that I forced myself to speak, & said these words to him, "What is that, my Lord, which you say with so much obscurity?" And he replied to me in the vulgar speech. "Do not ask more than is useful to you." And yet I began to speak with him of the salute which had been denied me. And asking the cause, it was answered in this manner. "This our Beatrice heard from certain persons that the lady whom I named to thee in the road of sighs received some displeasure from you. And therefore this most gentle one who is the contrary of all annoys, did not deign to salute your person, fearing lest it should be hurtful. Wherefore to the end that she may truly know something of the secret you have kept through so long a consuetude, I wish that you should say certain words, first, in which you comprise the power which I hold over you through her, & how you were hers, so early, from her infancy & of this call as witness him who knows it and pray him that he tell her it, & I who know this, willingly will converse with her of it, & by this she shall know your will, knowing which, she will understand the words of those deceived persons. Make these words as a means, so that thou shalt not speak to her immediately, which is not fit nor send them into any place without me where they can be heard by her, but adorn diem with sweet harmony in which I will be in all parts where it behoves;" and, having said these words, he disappeared, & my dream was broken.

Wherefore recollecting myself I found that this vision had appeared to me in the ninth hour of the day. And before I went out of the chamber, I proposed to make a ballad in which that was done which my lord had imposed on me, and I made this Ballad;

Ballad, I wish that you should find Love
And with him go before my lady
So that my excuse which thou shalt sing
My lord may reason with her,
Thou ballad goest so courteously
That without company
Thou shouldst have courage in all parts;
But if thou wouldst go secretly

But if thou wouldst go secretly,
Find Love again first,
Who perhaps it is not good sense to leave
Because she who ought to hear thee
If she is, as I believe, in truth angry with me
If thou by him be not attended
Easily may do you a dishonour.
With sweet sound, when thou art with him,
Begin these words;
After thou hast sought pity,
Lady, he who sent me to you
If it please you
If there be excuse would that you should hear it of me
Love is here who through your beauty
Makes him, as he will, change face,
Then because he made him look at another
Think you not that his heart is changed.
Tell her; lady his heart is set
With such firm faith
That to serve you he has every thought ready;
Early was yours & he never swerved.
If she do not believe you
Tell her to ask Love whether it be true;
And at last make to her a humble prayer
(To pardon it if it were a trouble to her)
That she would command me by messenger that I should die.
And she shall see her good servant obey.
And say to her who is the key of all pity
Before I become free
That I shall know how to tell my good reason
Through the grace of my sweet notes;
Remain thou here with her
And tell of thy servant what you will.
And if she by thy prayer pardon him,
Cause that she announce to him a fair seeming peace.
My gentle ballad, when it pleases thee
Move in such form that you have honor.
Should any man confront me & say that he knew not to what purpose was this
speaking in the second person, since the ballad is nothing else than these words
which I speak then I say that this doubt I intend to solve & clear up in this little

which I speak, then I say, that this doubt I intend to solve & clear up in this little book, in part even more doubtful, and then he may here understand who doubts more than one who should confront me in the manner proposed.

XIII

After the abovementioned vision, having already spoken the words which Love had charged me to say, many & diverse thoughts began to combat & to try me, each, as it were, irresistible; among which thoughts, four hindered most the repose of life. One of them was this. Good is the lordship of Love since it draws the mind of the faithful from all vile matters. Another was this. The lordship of love is not good, since by how much faith the faithful yields, by so much the more sharp & grievous crises it requires him to pass. Another was this; The name of love is so sweet to hear, that it appears to me impossible that its proper operation should be in most things other than sweet, because names follow the things named, as it is written, *Nomina sunt consequentia rerum*. The fourth was this; The lady through whom Love binds thee thus, is not like other ladies, that she may lightly be removed from the heart. — And each assaulted me so long, that it made me stand like one who knows not by what way he shall take his road, who wishes to go & knows not his path. And if I thought of wishing to seek a common passage for them, that is, one in which they should all agree, this was very displeasing to me, that is, to cry out & to throw myself into the arms of pity. And remaining in this state, there came to me a willingness to write rhymes and, I then said this sonnet;

All my thoughts speak of Love
And have in them so great variety,
That one makes me wish his power,
Another foolish talks of his valour,
Another hopeful brings me grief,
Another makes me complain often,
And they agree only in asking pity.
Trembling with fear which is in the heart.
Therefore I know not what theme to take.
And I would speak; and I know not what to say;
Thus I find myself in amorous error
And if with all I would make agreement
It would need that I should call my enemy
My lady Pity who defends me

XIV

After the battle of these different thoughts it happened that this most gentle one was in a place where many gentle ladies were assembled, to which place I was conducted by a friendly person thinking to do me a great pleasure, inasmuch as he led me where so many ladies displayed their beauties, wherefore I, not knowing whither I was led, & confiding in the person who was one that had led his friend to the end of life, said to him, Why are we come to these ladies? Then he said, that he did thus that they should be worthily served. It is true that here they were gathered to the company of a gentlewoman who was that day married, and, therefore, according to the custom in that city, it behoved that they should give her their company in the first sitting down at table in the house of her bridegroom. So that I, believing that I did this friend a pleasure, made myself ready to stand at the sendee of these ladies in his company; and in the end of my making ready, it appeared to me that I felt a strange tremor begin on the left side of my breast, & extend itself suddenly through all parts of my body. Then I say that I turned my person feignedly to a picture which surrounded this house, & fearing lest others should be aware of my trembling, I lifted my eyes, & beholding the ladies, I saw among them the most gentle Beatrice.

Then were my spirits destroyed through the force with which Love took me, seeing himself in such nearness to the most gentle lady, that there did not remain in life any but the spirits of sight, & even these remained outside of their organs, because Love wished to stand in their most noble place to see the wonder of this lady. And as soon as I was other than at first, I was much grieved for these *little spirits* (spiritelli) who lamented aloud, & said, If this one had not dazzled us out of our places, we could have remained to see the marvel of this dame, as our peers also remain. I say that many of these ladies becoming aware of my transfiguration, began to wonder, &, discoursing, bantered concerning me and that most gentle one. Therefore the friend of good faith took me by the hand & leading me out of the sight of these ladies, asked me what ailed me? Then I answered somewhat, & rallied my dead-like spirits, & these fugitives being returned to their seats, I said to my friend these words,— “I have had my feet in that part of the life beyond, from which there is no more power in the understanding to return.” And having parted with him, I returned to my chamber of tears, where, weeping & ashamed, I said to myself, If this lady knew my condition, I do not believe that she would so mistake my person; rather would she surely have much pity on me. And remaining in this grief, I proposed to speak some words, in which, addressing her, I might signify to her the cause of

my transfiguration; & I would say that I know well that she knows me not, & that if she knew me, I believe that pity of it would come to others, & I proposed to tell her them (the words or verses) desiring that they would come by chance into her audience, & then I said this sonnet;

With the other dames you deride my sight
And do not know the lady who moves me
That I assumed to you a strange face
When I beheld your beauty.
If you knew it, your compassion could not
Hold out longer against me the accustomed trial
That when Love found me so near to you
He took courage & so much security
That haughtily among my tremulous spirits,
Some he slew, & some he drove out,
So that he alone remained to see you.
Wherefore I change myself into the form of another
But not so that I do not well taste now
The woes of the tormented fugitives.

XV

After the new transfiguration, there came to me a strong thought, which rarely left me, nay which was always with me; since you came to so ridiculous appearance, when you were near this lady, why then do you seek to see her? If you were asked anything by her, what wouldst thou have to answer?

Granting that thou shouldest have each of thy powers liberated, in as much as thou shouldest answer her. And to this replied another humble thought, & said, I would tell her that so soon as I imagine her wonderful beauty, so soon have I the desire to behold her, which is of so much force that it kills & destroys in my memory all which can rise against it, & therefore these past sufferings do not restrain me from seeking the view of her. Therefore, I, moved by such thoughts, proposed to say certain words in which excusing myself to her with such passion, I described also how it was with me in her presence; & I said then this sonnet;

Whatever in the mind hinders dies
When I come to behold you, o beautiful joy,
And when I am near you I hear I love

AND WHEN I AM NEAR YOU, I HEAR LOVE
Who says, Fly, if you are loath to die.
The face shows the colour of the heart
Fainting where it leans;
And through the drunkenness of great fear
The stones seem to cry, Die, die;
It were a sin in whom should then see me
If he should not comfort the astonished soul
Only showing that he grieved for me
For pity which shall kill your contempt
Which cries in the sad expression
Of the eyes which desire their own death

XVI

After that which I had said in this sonnet I had an inclination to say also words in which I might say the four things also abovementioned concerning my state, which it did not seem to me I had yet made known. The first of which is, that, often I grieved when my memory moved the fancy to imagine what Love had made me become. The second is, that, Love often suddenly assailed me so strongly that there remained no other life in me except the thought which spoke of this lady.

The third; that, when this battle of love so assaulted me, I moved myself, as it were, all discoloured, to see this lady, believing that the sight of her would defend me from this array, forgetting all which had befallen me through approaching so much gentleness. The fourth is, how such a sight not only did not defend me, but finally discomfited the little life I had; and therefore I said this sonnet;

Often comes to mind
The dark quality Love gives me
And such pity rises, that often
I say, Ah! Happened it so to another?
For suddenly Love assaults me
So that life almost leaves me
A living spirit only remains
(And this remains, because he speaks of you)
Then I force myself to seek aid
And thus dead-like & without strength

I come to see you trusting to be healed
And if I lift my eyes to look at you
In the heart begins a quaking
Which drives the soul from the pulses.

XVII

After I had said these three sonnets in which I addressed this lady, because they were, as it were, reporters of all my condition, believing that I should be silent & say no more, since I seemed to me to have expressed myself sufficiently. Since then I refrained from speaking to her. It behoved me to take new & nobler argument than the past, &, because the occasion of my new subject is delightful to hear, I will relate it as briefly as I can.

XVIII

Whereas many persons by my countenance had become acquainted with my secret, certain ladies who were met for their mutual entertainment, knew well my heart, because each of them had been present at my many discomfitures, & I passing near them as led by my chance, was called by one of these gentlewomen and she who spoke to me was a lady of very graceful speech, so that when I joined them, & saw well that my most gentle lady was not there, recollecting myself, I saluted them, & inquired their pleasure. The ladies were many, among whom were some who laughed among themselves: others of them looked at me, awaiting what I should say: others of them spoke apart, of whom one turning her eyes towards me, & calling me by name, said these words; "To what end lovest thou this lady of thine, since thou canst not sustain her presence? Tell us what is the end of such a love, which should be a thing wholly new." And when she had spoken these words, not only she but all the others began to listen for my reply. Then I said these words; Ladies, the end of my love was truly the salute (saluto) of this lady, of whom perhaps you have heard, and therein abides the happiness of the end of all my desires; but since it pleases her to deny it to me, my lord Love (I thank him for it) has placed all my firmness in that which cannot be taken away. Then these ladies began to speak among themselves, & if sometimes we see fall water mixed with beautiful snow, so seemed it to me to hear their words come forth mingled with sighs; and after they had spoken awhile apart, again said to me that lady who had first spoken, these words; "We pray thee that thou wouldest tell us where is thy felicity?" And I, answering her, said thus much; "In those words which praise my lady." Then answered me this one who

spoke before, "If thou toldest me truly, those words which thou saidest describing thy condition, thou wouldst have turned with another intention."

Whereupon, I thinking on these words, as one ashamed, departed from them, & came away speaking to myself; 'Since there is so much felicity in those words which praise my lady, why have I used others,' and therefore I proposed to take for the argument of my speaking evermore this which should be the praise of this most gentle one, & thinking much on that point it seemed to me that I had undertaken too high argument for me. So that I dared not begin, & so waited several days, with desire to speak & with fear to commence.

XIX

It then chanced that passing through a road along which ran a very clear brook, I felt such willingness to speak that I began to think of the manner I used and I thought that to speak of her, was not fit; but that I ought to speak to ladies in the second person, and not to every lady, but only to those who are gentle, & who are not merely women. Then I say, that my tongue spoke as if moved by itself, & I said then "Ladies who apprehend love." These words I laid up in my mind with great joy thinking to take them for my beginning; therefore being afterwards returned to the abovenamed City, & thinking for some days, I began the regular ode in the usual manner, as follows.

Ladies, who have heard of Love,
I wish to speak with you of my Lady,
Not because I think I can perfect her praise
But to discourse that I may relieve my mind;
I say, that thinking on her worth
Love so gently taught me to feel
That if I then did not lose my fire
I would put all men in love by my speech.
And I do not wish to speak so proudly
That I might become vile through fear,
But I will treat of her gentle estate
For her sake lightly,
Ladies & amorous maidens with you,
Since it is not fit to speak to others of her.
An Angel calls in the divine intellect,
And says, Sire, in the world is seen

A living wonder, which issues
From a soul which even up hither shines.
Heaven which has no other defect
Than wanting her, asks her of the Lord.
And each saint asks Mercy
Only pity pleads on our part.
That the Lord says who understands it of my lady;
Dear children now suffer me in peace;
Pleases me that your hope is so great,
There is one who expects to lose her
And who will say in Hell to the Ill-born,
I have seen the hope of the Blessed.
My Lady is desired in highest heaven.
Now I proceed to make you know her virtue:
I say, that whoso would seem a gentle lady,
Go with her; since when she goes in the road
Love casts in evil hearts a frost
So that every thought of theirs freezes,
And whatever can stand there to see,
Must become a noble thing, or die.
And when any one finds that he is worthy
To see her, he proves his virtue,
For that happens to him that imparts health
And so humbles him that he forgets all sin.
Yet has God, through greater grace, given,
That he cannot end ill, who has spoken to her.
Love said of her; A mortal thing —
How can it be so adorned, & so pure?
Then he beheld her & swore by himself
That God did not mean to make a new thing.
Color of pearl in her form, as
It befits a lady to have, not out of measure,
She has as much goodness as nature can;
By her pattern beauty is tried;
From her eyes, as she moves them,
Proceed spirits of love inflamed,
Which enkindle the eyes of whoso watches her,
And pass through, so that each finds the heart.
You see Love painted in the face

So that none can behold her steadily.
Canzone! I know that you will go speaking
To many dames, when I shall send you forth.
Now I warn you, since I have trained you up
For the daughter of Love, young & smooth,
That where you go, you say praying,
'Direct me to go, since I am sent
To her for whose praise I am adorned';
And if you will not go as a vain one,
Nor remain where are mean people,
Endeavour if you can to be made known
Alone to a lady, or to a courteous man,
Who shall swiftly deserve thee.
Thou wilt find Love; with him, her;
Commend me to him as you ought.

XX

After this sonnet had got abroad a little, because a friend had heard it, his desire moved him to pray me that I would tell him what is Love, having, perhaps, through the words he had heard, a hope of me beyond what was due. Then I thinking that after such a piece, it would be fine to discourse somewhat, of love, & thinking that my friend should be served, I proposed to speak words in which I should treat of love, & then I said this sonnet.

Love & the gentle heart are one thing;
As the Sage in his precept has it;
And you may dare be one without the other,
As well as a rational soul without reason.
Nature, when it is amorous, makes
Love the Sire, the heart for his abode
Within which sleeping he reposes
As little and as long as he will.
Beauty then appears in wise woman,
Which pleases the eyes, so that within the heart
Is born desire of the pleasant object,
And so abides in it,
That it causes the spirit of Love to awake.
And the like does a valiant man, in a woman.

XXI

After I had treated of Love in the rhyme aforesaid, there came to me the wish to speak words also in praise of this most gentle one, by which I might show how, through her, this love awoke, & how not only it awoke where it had slept, but where it is not in energy & there working wonderfully, made it appear; and then I said;

In her eyes my Lady carries Love,
Because she makes that noble which she looks upon.
Where she passes, every man turns to see her,
And whom she salutes, his heart quakes,
So that looking down, his whole countenance is changed,
And on every fault of his sighs.
Flees before her, all anger, & pride.
Aid me, Ladies, to do her honour,
Every sweetness, every lowly thought
Is born in the heart of him who hears her speak,
Therefore is he blessed who first sees her.
How she looks when she smiles a little,
Cannot be told, nor held in the mind,
So new & so gentle a miracle is it.

XXII

Not many days after this, it pleased that glorious Lord who refused not himself to die, that he who was the father of so great a marvel as this most noble Beatrice, departing out of this life should ascend to the eternal glory. Therefore, because such departure is woeful to those who remain, and were his friends, and there is no friendship so close as that of a good father with a good child, and this lady was at the summit of goodness, and her father, as many believed, and as was true, was good in a high degree, it is manifest that this lady was bitterly full of grief, & when, according to the custom of the city, ladies with ladies & men with men assembled there, where this Beatrice piteously lamented, — I seeing so many ladies return from her, heard them speak their words of this most gentle one, how she lamented, among which words I heard them say, “Indeed she wept so that whoever saw her might die with pity.” Then these ladies passed by, & I remained in so great sadness that some tears then bathed my face; which I concealed, covering my eyes often with my hands; and if I had not expected to

hear again of her, since I was in place where most of those ladies passed who came from her, I should have concealed myself immediately when my tears came, & yet tarrying longer in the same place, ladies also passed near me conversing together in these words, "Which of us can ever be glad, who have heard this lady speak so piteously?" After these came others, saying, "This one weeps neither more nor less than if he had seen her as we saw her." Others then said of me, "You shall see this one so changed that he does not appear to be himself." And thus these ladies passing, I heard their words of her & of me (in this manner I have set down), thinking whereupon, I proposed to say such words as I might worthily find occasion, in which words I comprised all which I had heard from these ladies, and, since I should willingly have questioned them, if it had not been blameable, I took occasion to speak as if I had, & as if they had answered me, and I made two sonnets; and in the first I ask whatever I had to ask, & in the other I report their answer, taking that which I heard from them as they would have said to me in reply; & I began the first;

Ye who wear a lowly semblance
With downcast eyes showing grief,
Whence come you that your colour
Appears like that of stone?
Saw ye our gentle Lady,
Her face bathed in the pity of Love?
Tell me, ladies, what the heart says
Since I see you go with honest action,
And if ye come from so great piety,
Please you to stay here with me a little,
And hide nothing of her from me.
I see tears in your eyes,
And I see you come so disfigured
That my heart quakes to see you so.

The second;

Art thou he who has discoursed with us often
Of our lady, alone speaking to us?
Thy voice resembles him well
But thy sad form appears of quite another.
Ah! why weepest thou so cordially,
That you compel others to pity thee?
Hast thou seen her weep, that thou canst not

Must thou see her weep, that thou canst not
Conceal at all thy woful mind?
Leave us to weep, & to go disconsolate,
(And it were sin, if we should not,)
Who in her sorrow have heard her speak.
She has in her face sorrow so wise
That who would have beheld her
Would fall dead before her.

XXIII

After this, in a few days, it chanced that in (some) part of my body there fell on me a grievous infirmity, from which I suffered for many days the bitterest pain, which brought me to such debility, that I was forced to remain like those who cannot move themselves. In the ninth day, feeling my pain as it were intolerable, there came to me a thought of my lady. And when I had thought a little of her, & I returned to think of my debilitated life, and seeing how frail was its duration, even if I were well, I began to bewail myself of so much misery, and, deeply sighing, I said to myself, Of necessity, it must be that the most gentle Beatrice will some time die; and then I felt such an amazement of fear that I closed my eyes, and began to work like a raving person, & to imagine in this manner. In the commencement of the wandering which my fancy made, appeared to me certain faces of ladies dishevelled, who said to me, "Thou too shalt die;" and after these ladies appeared certain different faces horrible to see, who said to me, "Thou art dead." Thus my fancy beginning to wander, I came to that pass, that I knew not where I was, & I seemed to see ladies go dishevelled, weeping in a manner wonderfully sad, & it appeared to me that I saw the sun darkened, so that the stars showed themselves in such a colour that I thought they also wept, & very great earthquakes, & I, admiring in such a fancy, & greatly afraid, imagined that some friend came & said to me, "Now knowest thou not thy wonderful lady is departed from this world?" Then began I to weep very piteously, & not only wept in fancy, but I wept with my eyes, bathing them with real tears. I imagined that I looked towards the heaven & I seemed to see a multitude of angels who returned upward, & had before them a very white little cloud, & I thought these angels sang gloriously, and the words of their song I seemed to hear were these, Osanna in excelsis. And others heard I none. Then it seemed to me that the heart, where so much love was, said to me, True it is that our lady lies dead; and through this I seemed to go to see the body in which that most noble soul had been. & so strong was the erroneous fancy that it showed me this lady living

dead, & I thought that ladies dressed her, her head, namely, with a white veil; And I thought her face had such an aspect of humility, that it seemed to me that it said, "I am to see the beginning of peace." In this imagination I felt such humility from beholding her, that I called Death, & said, "Sweetest Death, come to me, and be not rough with me, since thou oughtest to be gentle, seeing where thou hast been. Now come to me who desire thee much. Thou seest that I already wear thy complexion. And when I had seen fulfilled all the doleful mysteries which are used towards the bodies of the dead, I thought I returned to my chamber, & here I looked towards Heaven, & so strong was my fancy, that weeping I began to say with true voice, "Oh beautiful soul, how happy is he who sees thee!" And I saying these words with dolorous sobs, and calling death that he should come to me, a young & gentle lady who was by my bedside believing that my weeping & my words were only for the pain of my infirmity, began to lament with fear, and other ladies who were near the chamber, having compassion of me who wept, & of the lamentation which they saw this lady make, causing her to depart from me, (she who was my nearest blood-relation,) they came towards me to wake me, believing that I was dreaming, & they bade me sleep no more, & not to disorder myself, & on their thus speaking to me the strong fantasy ceased at the moment when I would say, "O Beatrice! blessed mayest thou be!", and I had already said, "O Beatrice!" And recovering myself, I opened my eyes & saw that I was deceived, and as soon as I had called this name, my voice was so broken with the sob of grief, that these ladies could not understand me, (as I believe.) Add, that I waked, and was much ashamed, although through some admonition of love I turned myself from them, and when they saw me, they began to say, He appears as dead, & to say apart, Let us devise how to comfort him. Then they said many things to comfort me, & sometimes they inquired whereof I had had fear; Then I being somewhat reassured, and the imaginary disaster understood by me, I answered them, I will tell you what I have suffered.

Then I began from the beginning, & told them unto the end what I had seen, suppressing the name of this most gentle one. Then afterwards, being healed of this infirmity, I proposed to speak words of this which had befallen me, since it seemed to me an amorous thing to hear, & so I said it in this canzone.

A gentle dame & young
Well adorned with human gentleness
Who was there where I often invoked death
Seeing my eyes full of sorrow
And hearing my vain words

Was moved with fear to tears.
And other ladies who were apprised by me
For what she lamented with me
Made her depart
And approached to make me hear
One said Do not sleep
And one said Why do you grieve
Then I left my new fancy
Invoking the name of my lady
My voice was so mournful
So broken with anguish & tears
That I alone heard the name in my heart
And with looks of shame
That overspread my face
Love made me turn towards them
And such was my colour
As the speaking of the death of others brings.
Ah let us comfort this one
Said one to the other softly
And they said often
What seest thou that thou faintest
And when I was a little recovered
I said, Ladies I will tell it you.
While I thought on my frail life
And saw how short its term is,
Love pitied me in the heart where he dwells,
Because my soul was so sad
That sighing I said in my thought
It will befall that my lady will die.
Thence I took such dismay
That my eyes closed, being weighed down
And my spirits were so discouraged
That they went wandering each his way
Then given up to imagination
Out of knowledge, out of truth,
Faces of afflicted ladies appeared to me
Who said to me, Thou wilt die, thou wilt die,
Then I saw many vague forms
In the vain imagination in which I was

And I seemed to be I know not where
And to see ladies go dishevelled
Weeping & lamenting
Who shot up flames of sadness
Then methought gradually
The sun was darkened & the moon appeared
And they wept, he and she.
The birds fell flying thro the air
And the earth quaked
And a man appeared to me pale & faint
Saying What dost thou knowest thou not
Thy lady is dead who was so fair?
I lifted my eyes bathed in tears
And saw what seemed a shower of manna
Angels who returned up into heaven
And they bore a little cloud before them
After which they cried Hosanna
And if they had said more I would tell you
Then said Love I hide it from you no more
Come & see thy lady who lies dead.
The fallacious imagination
Led me to see my dead lady
And when I had seen her
Methought ladies covered her with a veil
And she bore in her looks true lowliness
Which seemed to say I am in peace.
I became in grief so humble
Seeing in her such finished humility
That I said Death I hold thee very gentle
Thou shouldst ever be a delicate thing
Since thou dwellest in my lady
And thou oughtest to have pity & not disdain.
See I come to thee with such desire
To be of thine that I resemble thee in faith
Come since the heart seeks thee
Then I departed every grief being fulfilled
And when I was alone
I said looking towards the other kingdom
Blessed, o beautiful soul, is whoever sees thee.

Ladies, you called me then, I thank you.

XXIV

After this vain imagination, it happened one day that I sitting thoughtful in some place, felt a quaking commence in my heart as if I had been in the presence of this lady, then I say that there came to me an imagination of Love, who appeared to come from that place where my lady stood, & I thought that he said in my heart, "See thou bless the day when I took thee, since thou oughtest to do it," and certainly my heart seemed so glad that it did not appear to me to be my heart, through its new condition; and a little after, these words which my heart said to me with the tongue of love, I saw come towards me a gentle lady who was of famous beauty, and was long since the wife of my first friend (Guido Cavalcanti). The name of this lady was Giovanna, save that through her beauty, as some believe, the name of Primavera (The Spring) was bestowed on her, & so was she called.

And looking near her, I saw come the wonderful Beatrice. These ladies came near me, one after the other, and I thought that Love spoke in my heart & said, "This first one is named Primavera, only for this coming of today, since I moved the bestower of her name to call her also Primavera, because *prima verra* (she shall first see) the day when Beatrice shall show herself according to the imagination of her faithful servant; and if I also wish to consider her name to signify that she is what (the Spring) Primavera is." And then I thought that I said other words to myself, that "whoever wishes to consider subtilly this Beatrice, would call her Love, through the strong resemblance which she has to me," whereupon I afterwards musing, proposed to write in rhyme to my first friend, suppressing certain words which it seemed fit to omit, I thinking that also his heart would admire the beauty of that gentle primavera (spring), and I said this sonnet;

I felt awaken within my heart
An amorous spirit which slept,
Then saw! Love come from far
So cheerful that hardly I knew him
Saying, Bethink thee to do me honour;
And at each word, he smiled;
And my lord remaining with me a little while,
I looking in that quarter whence he came,
Saw Mona Vanna and Mona Rice

COME TOWARDS THAT PLACE WHERE I WAS,
The one marvel after the other;
It is as if my mind said to me again,
Love said to me, This is Primavera,
And this is called Love, who so resembles me.

XXV

Could any person capable of clearing up these things, here doubt of that which I say of Love, as if it were a thing by itself, & not only an intelligent substance, but as if it were a corporeal substance, which in reality is false, since Love is not by itself as a substance but is an accident in a substance, and as I may say of it, as if he were a body, nay, as if he were a man, appears from three things which I say of him. I say that I saw him come; and to come imports locomotion, and, according to the philosopher, body alone can be locomotive. If it appear that I rank Love as a body, I say also of it, that he laughs, & that he speaks, which things seem to be proper to man, especially laughter, & therefore it seems I make him a man. To clear this matter, as far as the present necessity requires, we must first understand, that anciently there were no speakers of Love in the vernacular tongue, on the contrary, the speakers of love were certain poets in the Latin tongue, (among us, I say) that happened which happened in other nations, and still happens, that as in Greece not vernacular but lettered poets handled these things, and not many years have passed since those vernacular poets appeared who speak rhyme in the vernacular; so much is to be said of verses in Latin (if with any adequateness & mark) that there is too little time; and if we wish to regard the Occitan dialect (Langue d'Oc) or the Northern French (Langue d'Oui) we do not find these things before the present time, for five hundred years. And the reason why some conspicuous persons had the fame of knowledge & poetry is that they were the first (writers) in the Northern French (Langue d'Oui). And the first who began to speak as a vernacular poet, did so, because he wished to make his mistress understand his words, to whom latin verses were not intelligible. And this is against those who rhyme on other than amatory subjects, because that mode of speaking was first used to speak of Love. Therefore, since to poets may be conceded a greater license of speech than to prose speakers, and these speakers in rhyme are nothing else than vernacular poets, it is fit & reasonable that they should be indulged in a greater liberty of speech than other vernacular speakers. Therefore if any figure or rhetorical trope is conceded to poets, it is conceded to the rhymers. If then we find that the poets have addressed inanimate things as if they had sense or reason, & have made them speak

together & not only things true, but things not true, that is, have spoken of things which cannot speak, & have said that many accidents speak, as if they were substances & men, it is fit that the speaker in rhyme should do the like, not indeed without reason, but with reason, which might be expressed in prose. That the poets have spoken in this manner appears by Virgil, who says that Juno, that is, a goddess unfriendly to the Trojans, spoke to Æolus, lord of the winds, as in the first of the Æneid; Æole namque tibi, &c and that this lord replied;

Tuus, o regina, quid optes
Explorare labor; mihi jussa capessere fas est

In the same poet, an inanimate thing speaks to animated things, in the Second of the Æneid;

Dardanidae duri In Lucan, an animated thing speaks to an inanimate;
Multum Roma tamen debes civilibus armis.

In Horace, a man speaks to his own knowledge as to another person, and not only are the words those of Horace, but he speaks them as out of the midst of Homer in his *Ars Pœtica*;

Dic mihi Musa virum.

In Ovid, Love speaks as if it were a human person, in the beginning of the book called The Remedy of Love;

Bella mihi video, bella parantur, ait.

And hence it is manifest to whosoever hesitates at any part of this my little book, & provided that some coarse person do not take a license from it, I say that neither the poets speak thus without reason, nor ought the rhymers to speak thus not having some reason in them of that which they say. Since great shame would accrue to him who should rhyme things under the guise of a trope or rhetorical figure, & being interrogated, should not know how to strip his words of such a garment in a guise that they should have a true meaning. And this my first friend & I knew very well those persons who rhymed so absurdly.

XXVI

That most gentle lady of whom we have discoursed in the preceding words,

came into so great grace of the people, that when she passed through the street persons ran to see her, whence a miserable joy came to me, and when she was near any one, so much honour came into that person's heart, that he dared not lift up his eyes nor reply to her salute. And of this, many as witnesses could testify to what was incredible.

She, crowned & clothed in humility, went showing no glorying in that which she saw or heard. Many said, when she had passed, "This is not a woman, but is like one of the most beautiful angels of heaven." Others said; "This is a wonder, & blessed be the Lord who knows how to work so wonderfully." I say that she showed herself so gentle & so full of charms, that those who saw her felt in themselves an excellent beauty and so sweet that they did not know how to express nor was there any one who could look at her who at first without sighs. These & more wonderful things proceeded from her well & virtuously. Wherefore I thinking thus wishing to take up again the pen in her praise, proposed to speak words in which I should give to understand her wonderful & excellent works to the end that not only such as could see her with eyes, but also others might know of her what I could make known by words & then I said this sonnet.

So gentle & so gracious appears
My Lady when she salutes others,
That every tongue trembling becomes mute,
And the eyes dare not behold her.
She goes on hearing herself praised
Benignly clothed with humility
And it seems that she is something descended
From heaven to show a miracle in earth.
She shows herself pleasing to whoso beholds her
That she sends through his eyes a sweetness to the heart
Which none can apprehend who does not taste it;
And it seems that from her lips proceeds
A soft spirit, full of Love,
Which goes to the soul, saying, Sigh.

I say that this my lady came into such grace that not only was she honoured & praised, but through her were many honoured & praised. And I seeing that, & wishing to make it known to such as saw it not, proposed also to speak words in which this should be signified, & then I said this sonnet.

He sees perfectly all wellbeing
Who sees my lady among ladies
Those who go with her are holden
To render thanks to God for her beautiful grace.
And her beauty is of such virtue
That no envy proceeds from it to others
Rather it makes them go with her clothed
With the gentleness of love & of faith
The sight of her makes everything humble
And does not make her alone pleasing
But each through her receives honour
And in her acts she is so gentle
That no one can recall her to mind
Without sighing in the sweetness of Love.

XXVII

After this I begun to think one day on what I had said of my lady in the two preceding sonnets, & considering that I had not spoken of that which in the present time wrought in me it seemed to me that I had spoken the truth defectively, & therefore I proposed to add words in which I should say how her virtue wrought in me & not thinking that this could be told in the shortness of a sonnet I begun this canzone.

So long has Love held me
And trained me to his lordship
That as it was strong in me at first
So now it remains sweet at my heart,
Therefore when his courage so seizes me,
That it seems the spirits flee away,
Then my frail soul feels
Such sweetness that my face grows pale.
Then Love in me takes so much virtue
That he makes my spirits go speaking
And they issue forth calling
My lady to give me more favor;
This happens wherever she sees me,
And so humble is she that you would not believe it.

XXVIII

XXVIII

How is the populous city become solitary and she is a widow who was queen of nations. I was still in the preparation of this canzone & had completed this stanza abovewritten when the Lord of justice called this most gentle one to glorify, under the sign of the Queen, the Blessed Mary, Himself, whose name was always in the utmost reverence in the words of this Beatrice. And although it might be grateful here to say somewhat of her departure from us, it is not my design to treat it here for three reasons; first, that such is not the present argument if we will respect the proem which precedes this book. Secondly that even if it were within our present design yet my tongue would not be sufficient to treat that as it ought to be treated; Thirdly, that supposing both the first & the second, it is not fit that I should treat of that which being treated would require that I should be a praiser of myself, which thing is entirely blameable in whatsoever person.

And therefore I leave such a discourse to another commentator. Nevertheless since several times the number nine has occurred in the foregoing words, whence it seems that it was not without reason & in her departure that number seems to have had much reason, it may behove us here to say something as far as belongs to the subject. Wherefore I will say first how it had place in her departure & then will assign some reason why this number was so friendly to her.

XXIX

I say that her soul departed, (according to the time-measure of Italy) in the first hour of the ninth day of the month: and according to the measure of Syria she departed in the ninth month of the year since the first month there is Tismin which with us is October, & according to our measure, she departed in that year of our era (that is, in that year of the Lord,) in which the perfect number was completed nine times in that century of the world in which she was placed, and she was of the thirteenth century of Christians. And this may be one reason of it. Since according to Ptolemy, & according to the Christian truth there be nine heavens which revolve, and according to the faith of Astrology these heavens are operative here below according to their united habitude, this number was friendly to her, to give to understand that in her nativity all the nine moveable heavens went perfectly together; this is one reason of that. But more subtilly thinking, according to the ineffable truth, this number was herself, I speak by

similitude, & that I mean thus.

The number three is the root of nine since, without any number, multiplied by itself it makes nine as we see plainly that three times three make nine. Then if three by itself is the factor of nine, and the (factor or) maker of miracles is three, that is, Father, Son, & Holy Spirit which are three & one. This lady was accompanied by this number of nine, to give to understand, that she was a nine, that is a miracle, whose root that is of the miracle, is only that wonderful Trinity. Perhaps also by a more subtle person this would appear in more subtle reason; but this is what I see, & what pleases me more.

XXX

After this most gentle lady had departed from this world this city remained as it were a widow & despoiled of all dignity. Wherefor I also lamenting in this desolate city wrote to the princes of the land somewhat of her estate. And if any one should blame me that I do not here set down the words which follow what I here quote, I excuse myself because my design was not from the beginning to write otherwise than for the people. Therefore since the words which follow those which are quoted, are all latin, it would be out of my design, if I wrote them and the like intention I know that this my first friend had, to whom I write, this is, since I wrote to him only in the vernacular.

XXXI

After my eyes had for some time wept & were so wearied that I could not relieve my sadness I thought of relieving it by some sad words & then I proposed to make a canzone in which lamenting I conversed of her, my grief for whom was made the destroyer of my life, & I begun

Eyes grieving for pity at heart
Have suffered the pain of tears
So that they remain vanquished
Now if I wish to relieve the woe
Which little by little leads me to death
It behoves me to speak
And because I remember that I spoke
Of my lady whilst she lived
Gentle ladies willingly with you
I will not speak to others

I will not speak to others

Than to a gentle heart which is a lady
And I will then say of her weeping
That suddenly she has gone to heaven
And has left Love grieving with me.
Beatrice is gone into high heaven
Into realms where the angels have peace
And stands with them & you ladies has she left
Not there has the quality of cold rapt her
Nor that of heat, as it has rapt others,
But it was her great benignity
Which shining from her humility
Passed the heavens with so much virtue
That it made the Eternal Sire wonder
So that sweet desire
Came to him to summon so much health
And made her come to him from here below,
Because he saw that this troublesome life
Was not worthy of so gentle a being.
Parted from her beautiful person
Full of grace the gentle soul
And mounted glorious into worthy place.
Who weeps her not when he speaks of her
Has heart of stone, so wicked & base
That a benign spirit could not enter there.
There is not in a bad heart so high genius
That can imagine anything of her,
And therefore such will not weep for her.
But sadness & sobs of grief
And a death of sorrow
And a life despoiled of all solace
Comes to such as at any time saw in thought
What she was, and how she is taken.
My sighs give me deep anguish
When thought in the deep mind
Brings to me that which has cut my heart.
And often thinking on death
Comes to me a desire of it so sweet
That it changes the color of my face
When the thought of her becomes fixed

When the thought of her becomes mine
Pain attacks me from every side
That I recover myself through the pain I feel
And I become such
That shame drives me from the company.
Then weeping alone in my sorrow
I call Beatrice & I say Art thou too dead
And whilst I call her I am consoled
With weeping & with sighing
My heart pines away wherever I am,
So that it wearies whoever sees it
And what has been my life since
My lady went into the new world
No tongue can tell
And yet, o my Ladies, though I should desire it,
I should not know how to tell you what I am
Bitter life has so afflicted me
And it is so injured
That every man seems to say to me, I abandon you
Seeing my fainting
But be it as it may, my lady sees it,
And I hope yet a reward from her
My pious canzone now go lamenting
And find the dames & the damsels
Unto whom thy sisters
Were wont to carry joy
And thou who art a daughter of sorrow
Go disconsolate & stand with them
Sad that Beatrice more beautiful than all
Is gone to the feet of the Lord
And has left Love with me lamenting.

XXXII

After this canzone was said, one came to me who in the degrees of friendship is friendly to me, next to the first, and this one was so near in blood to that beautiful person that none was more near than he. And when he conversed with me he prayed me that I would say to him some thing for a lady who was dead and he feigned his words so that it appeared that he spoke of another who was

certainly dead, therefore I becoming sensible that this one spoke only of that blessed soul, said that I would do that which he had entreated of me. Therefore then thinking I proposed to make a sonnet in which I bewailed myself & to give it to this friend so that it appeared that I had made it for him, and thus it was;

O gentle hearts, whom pity desires,
Come to hear my sighs,
Which disconsolate go their way;
And but for them I should die with grief,
Because my eyes would be worse than I could bear,
Weary of weeping so much for my lady,
That they would choak the heart by lamenting.
You shall hear them often call
My gentle lady who is gone away
To the world worthy of her virtue,
And despise now this life
In the person of the mourning soul
Abandoned by her welfare.

XXXIII

After I had spoken this sonnet thinking that this was for him who designed to ask it, as if it were made by him I saw that this service appeared to me poor & naked for a person so near to this beloved one. And therefore before I gave him the abovewritten sonnet, I said two stanzas of a canzone, the one indeed for him, & the other for me. And though to one who should not read attentively it might seem that both of them were spoken by one person, yet whoever looks at them attentively will see that different persons, that one does not call his lady and the other does as plainly appears. This canzone & the abovewritten sonnet I gave to him, saying to him that I had made it for him alone. The canzone begins

How often alas, I remember.

In the first stanza, this my friend and near kinsman of hers, laments himself. In the second, I lament; that is, in the other stanza, which begins,

There is heard in my sighs,

And thus it appears that in this canzone two persons deplore, one complaining as

a brother the other as a lover.

How often alas I remember
That I may never more
Behold the Lady, therefore I go sorrowing thus;
My woeworn mind
Concentrates so much grief within the heart
That I say, My Soul, why dost thou not depart
Since the torments which thou shalt carry
In the world which is already so troublesome to you
Make me pensive with much fear
Wherefore, I call on Death
As gentle, & my sweet repose
And I say, Come to me, with such love,
That I am envious of such as die.

There is heard in my sighs
An undertone of pity
Which calls on Death continually
To it turn all my desires
Since my Lady
Was reached by his cruelty.
Because the pleasure of her beauty
Withdrawing itself from our view
Becomes spiritual beauty & grand
Which through the heaven expands,
The light of Love, which greets the Angels;
And makes their high & subtle intellect
Wonder, so gentle it is.

XXXIV

On that day on which the year was completed in which this lady was made one of the citizens of the Eternal Life I sat in a place, where, recollecting myself, I drew an angel on certain tablets, and while I was drawing, I turned my eyes and saw beside me men to whom it behoved that I should do reverence and they saw what I did and according to what was then told me, they had been there for some while, before I had been aware of them. When I saw them, I rose, & saluting them I said, "I was just now in another place, & I was thinking of that." Then

these departing and I returning to my work, that is, of drawing, whilst I wrought, the thought came to me of saying words in rhyme as for an Anniversary piece to her, and to write it to them who came to me; & I said then this sonnet which has two beginnings; one is;

Into my thought had come
The gentle Lady who for virtue
Was by the most high Lord
Placed in the heaven of humility, where is Mary,
&c &c

The second is;

Into my thought had come
That gentle lady whom Love mourns
To that degree that her virtue
Would draw you to see what I do.
Love who in the mind feels her,
Was waked in the dissolved heart,
And said to my sighs, Go forth
For each may go lamenting.
Forth issued they from my breast
With a voice which often leads
Sad tears to my sad eyes
But those which go not forth, with greater pain
Come saying, O noble mind!
Today the year is complete, since thou didst mount to heaven.

XXXV

Then for some time although I was in a place in which I remembered the time past, I remained very thoughtful, & with painful thoughts so that they made me appear abroad a spectacle of fright. Therefore I becoming sensible of my state, lifted my eyes to see if others saw me. Then I saw that a gentle lady from a window looked at me so piteously that all pity appeared collected in her. Therefore because when the wretched see in others pity for them so much the more they lament as having pity of themselves, I then perceived my eyes begin to wish to weep & yet fearing to exhibit my vile life I withdrew myself from the eyes of that gentle person & said to myself "It cannot be that with this pious lady

there should not be very noble love” then I proposed to say a sonnet in which I should speak to her, & I comprised in it all which is narrated in this account, and I began.

My eyes beheld how much compassion
Appeared in your figure
When you saw the deeds & the form
Which from grief I many times showed
Then was I aware that you contemplated
The quality of my dark life
So that the fear entered my heart
Of showing my vileness in your eyes
And I took myself from before you, feeling
That the tears started from my heart
Which were moved by sight of you
Then I said in my sad soul
Blessed is in that lady the love
Which makes me weep thus.

XXXVI

It afterwards happened that whenever this lady saw me she made a piteous face & of a pale colour, as it were, like that of love. Therefore I often was reminded of my most noble lady who always showed a similar colour, & truly many times not being able to weep nor to relieve my sadness I went to see this compassionate lady, who seemed to have drawn tears out of my eyes by the sight of her, & then there came to me the will to say words also, speaking to her, & I said this sonnet.

Colour of Love and semblances of pity
Have never taken so wonderfully
The face of the lady

XXXVII

I came so far through the sight of this lady that my eyes begun to delight too much to see her, wherefore often I tormented myself in my heart & held myself for very vile, & many times I blasphemed the vanity of my eyes & said to them in my thought; Now I have accustomed you to cause to weep whosoever saw

your sad condition, & now it appears that you wish to belie it for this lady who looked at you but who would not have looked at you, had not the thought so much weighed on her of the glorious lady whom you were wont to lament. But inasmuch as you can, cause that I remind you of her, O evil eyes! that never until after death your tears shall be restrained. And when I had thus spoken, myself to my eyes, & the largest sighs assailed me, and painfullest, — to the end that this battle which I had with myself should not remain only by the wretch who felt it I proposed to make a sonnet, & to comprise in it this horrible condition, & I said thus;

The bitter tears which ye shed
O mine eyes for so long time
Made others wonder
With pity as ye see
Now methinks ye would forget it
If I, on my part, were such a felon
That I did not disturb you with every reason
Reminding you of her whom ye lamented
Your vanity makes me think
And alarms me so that I vehemently fear
The sight of the lady who beholds you;
Ye should never until death
Forget our lady who is dead;
So says my heart, & then sigheth.

XXXVIII

I recovered then the sight of this lady in so new condition that many times I thought of her as of a person who pleased me too much & I thought of her thus; This is a gentle fair young & wise lady, who has appeared perhaps through the will of love in order that my life might repose & many times I thought more amorously, so that the heart consented in it that is, in its reasoning & when I had consented so, I reconsidered it as moved by reason, & I said to myself; Ah! what thought is this, that in so vile mode would console me, & not let me think otherwise? Then arose another thought & I said to myself — Now thou hast been in so much tribulation, why wilt thou not withdraw thyself from so much bitterness? Thou seest that this is one breathing which may bring the desires of love forward & is moved by so gentle a party as that of the eyes of this lady who has shown herself so pitying. Wherefore I having often thus contended with my

self yet would not say any words, & because the battle of thoughts conquered those who spoke for her, methought it behoved me to speak to her & I said this sonnet, which begins;

Gentle thought which speaks of you
Comes often to stay with me
And talks of love so softly
That it makes the heart consent to him
The soul says to the Heart, Who is this
Who comes to console our mind?
And is its virtue so strong
That it will suffer no other thought to abide?
He answered her; O thoughtful soul
This is a new little-spirit of love
Which brings its desires forth to me
And its life & all its strength
Is moved by the eyes of this pitying one
Who so concerned herself in our sufferings.

And I call that gentle, inasmuch as it speaks of a gentle lady, which, on other grounds, was most vile. I make in this sonnet parties of myself, according as my thoughts were divided in two; the one party I call Heart, that is, appetite; the other I call Soul, that is, reason; and I speak as one speaks to the other. And that it is fit to call the appetite Heart, & the reason, Soul, is very manifest to those to whom I am pleased that this should appear. It is true that in the preceding sonnet I make the party of the Heart counter to that of the Eyes and this appears contrary to that which I say in the present and therefore I say that there also I design the Heart for the appetite since I had a greater desire to remember that most gentle Lady of mine than to behold this one. Though I had some appetite for this yet it appeared to me slight. Thus it appears that one saying is not contrary to the other.

XXXIX

Against this adversary of the reason arose, one day, as it were in the ninth hour a strong imagination in me that I thought I saw this only Beatrice in those bloodred garments in which she first appeared to my eyes and she seemed youthfull, of the same age as when I first beheld her. Then I began to think of her

& recollecting her in the order of the past time my heart began to repent itself bitterly of the desire to which it had been so basely abandoned for some days, contrary to the constancy of reason. And this mischievous desire being driven out my thoughts turned themselves all to their most gentle Beatrice & I say, that, from that hour forward I began to think so, with all my heart ashamed, that the spirits manifested this many times because as it were all said in their outgoing that which was thought in the heart, namely, the honour of this most gentle one & how she had parted from us. And it often happened that some thought had in it so much grief that I forgot it and there where I was by this rekindling of sighs my intermitted weeping was renewed in a manner that my eyes appeared to be two things which desired only to weep & it often happened that through the long continuing of the weeping a purple colour came out around them which was wont to appear for some witness to others, whence it seemed that they were fitly punished for their vanity. So that thenceforward they could not look at any person who looked at them in a manner to draw them to an understanding. Wherefore I willing that such wicked desire & vain temptation should appear destroyed, so that the rhymed words which I had before said could not breed any doubt proposed to make a sonnet, in which I should comprise the sense of this state of mind & I said

Alas, through the force of many sighs
Which proceed from the thoughts which are in the heart
The eyes are conquered & have no strength
To look at the person who looks at them.
And they are come to that, that they seem two desires
Of weeping & of showing grief.
And often they so lament, that Love
Encircles them with a crown of martyrs.
These thoughts & the sighs which I cast out
Become within the heart so bitter
That Love there faints and so suffers
Because they have in these dolorous (eyes)
Written the sweet name of My Lady,
And many words, of her death.
I said, Alas! so much was I ashamed that my eyes had been thus frivolous.

XL

After this tribulation it happened at that time that many people came to see that

Blessed image which Jesus Christ left to us, for the example of his most beautiful figure, my Lady gloriously beholds, that some pilgrims passed by a road which is as it were the midst of the city where was born, lived, & died the most gentle Lady, and they went (as it appeared to me) very thoughtful. Then I, thinking on them, said to myself, These pilgrims appear to me to come from distant parts, & — I do not believe that they have even heard speak of this lady, & they know nothing of her; rather their thoughts are of other things, than of those here; they perhaps are thinking of their distant friends, whom we do not know. Then I said to myself I know that if they were of the neighboring country, they would appear in some sort disturbed passing through the midst of this painful city. Then I said to myself, If I could detain them a little I would make them weep before they go forth of this city, because I would speak words which should cause to weep whoever heard them. Then these having passed out of my sight, I proposed to make a sonnet in which I should signify that which I had said to myself & to the end that it should appear more piteous I proposed to speak as if I had addressed them, & I said this sonnet;

Ah Pilgrims who go thoughtful
On things perhaps which are not here present,
Come ye from so distant a tribe
As ye show in your aspect
That ye do not weep as ye pass
Through the midst of the mourning city,
As those persons who seem
To know nothing of its woe.
If you will stay & hear it
Verily my heart with sighs tells me
That ye shall go forth of it with tears
It has lost its Beatrice;
And the words which man can say of her
Have power to make others weep.

I said Pilgrims, in the large sense of the word as pilgrims may be understood in two senses in a liberal & a strict one, in the one, inasmuch as whosoever goes out of his country is a pilgrim; in the other, one is not a pilgrim unless he goes towards the house of St James, or returns. There are moreover three modes in which those people are properly distinguished who travel in the service of the Most High. They are called
Palmers who go beyond sea, whence they often fetch home palms. They are
called Pilgrims as men go to the house of Calixtus because the church of St

called Pilgrims as many as go to the house of Galizia because the sepulchre of St James was farther from his country than of any other apostle. They are called Romans (Romei) as many as go to Rome, thither, where these whom I call Pilgrims were going.

XLI

Then two gentle ladies sent to me praying me that I would send them some of these my rhymed words; and I considering their nobility, proposed to send them these, and to make something new which I might send them with these, so that I might more honorably fulfil their requests; and I then said a sonnet which tells of my state, & sent it to them in company with the preceding, & with another which begins, *Come to hear See*. The sonnet which I then made, is;

Beyond the hope which goes largest
Passes the sigh which comes from my heart,
New tidings, that Love weeping placed in it, then draws up again;
When he is come there where he would be,
He sees a lady who receives honour,
And shines so that by her splendour
The pilgrim soul beholds her;
Sees her such that when he tells me,
I understand him not; so subtilly he speaks
To the mourning heart that he makes it speak.
I know that he speaks of that gentle one,
Because often he mentions Beatrice,
So that I understand him well, o Ladies dear!

XLII

After this sonnet, appeared to me a wonderful vision, in which I saw things which made me determine to say no more of this Blessed one, until I could more worthily discourse of her; and to come at that, I study to the utmost, as she verily knows. So that, if it shall be the pleasure of Him to whom all things live, that my life should continue for some years, I hope to say of her that which was never said of any one; and then may it please him who is the Lord of courtesy, that my soul, if it be possible, may go to see the glory of Him who is blessed through all ages.

The End of Dante's New Life.

SONNET OF MICHEL ANGELO BUONAROTTI Never did sculptor's
dream unfold

A form which marble doth not hold
In its white block; yet it therein shall find
Only the hand secure and bold
Which still obeys the mind.
So hide in thee, thou heavenly dame,
The ill I shun, the good I claim;
I alas! not well alive,
Miss the aim whereto I strive.
Not love, nor beauty's pride,
Nor Fortune, nor thy coldness, can I chide,
If, whilst within thy heart abide
Both death and pity, my unequal skill
Fails of the life, but draws the death and ill.

THE EXILE FROM THE PERSIAN OF KERMANI

In Farsistan the violet spreads
Its leaves to the rival sky;
I ask how far is the Tigris flood,
And the vine that grows thereby?

Except the amber morning wind,
Not one salutes me here;
There is no lover in all Bagdat
To offer the exile cheer.

I know that thou, O morning wind!
O'er Kernan's meadow blowest,
And thou, heart-warming nightingale!
My father's orchard knowest.

The merchant hath stuffs of price,
And gems from the sea-washed strand,
And princes offer me grace
To stay in the Syrian land; But what is gold *for*, but for gifts?
And dark, without love, is the day;
And all that I see in Bagdat
Is the Tigris to float me away.

FROM HAFIZ

I said to heaven that glowed above,
O hide yon sun-filled zone,
Hide all the stars you boast;
For, in the world of love
And estimation true,
The heaped-up harvest of the moon
Is worth one barley-corn at most,
The Pleiads' sheaf but two.

If my darling should depart,
And search the skies for prouder friends,
God forbid my angry heart
In other love should seek amends.

When the blue horizon's hoop
Me a little pinches here,
Instant to my grave I stoop,
And go find thee in the sphere.

EPITAPH

Bethink, poor heart, what bitter kind of jest
Mad Destiny this tender stripling played;
For a warm breast of maiden to his breast,
She laid a slab of marble on his head.

They say, through patience, chalk
Becomes a ruby stone;
Ah, yes! but by the true heart's blood
The chalk is crimson grown.

FRIENDSHIP

Thou foolish Hafiz! Say, do churls
Know the worth of Oman's pearls?
Give the gem which dims the moon
To the noblest, or to none.

Dearest, where thy shadow falls,
Beauty sits and Music calls;
Where thy form and favor come,
All good creatures have their home.

On prince or bride no diamond stone
Half so gracious ever shone,
As the light of enterprise
Beaming from a young man's eyes.

SONG OF SEYD NIMETOLLAH OF KUHISTAN

[Among the religious customs of the dervishes is an astronomical dance, in which the dervish imitates the movements of the heavenly bodies, by spinning on his own axis, whilst at the same time he revolves round the Sheikh in the centre, representing the sun; and, as he spins, he sings the Song of Seyd Nimetollah of Kuhistan.]

Spin the ball! I reel, I burn,
Nor head from foot can I discern,
Nor my heart from love of mine,
Nor the wine-cup from the wine.
All my doing, all my leaving,
Reaches not to my perceiving;
Lost in whirling spheres I rove,
And know only that I love.

I am seeker of the stone,
Living gem of Solomon;
From the shore of souls arrived,
In the sea of sense I dived;
But what is land, or what is wave,
To me who only jewels crave?
Love is the air-fed fire intense,
And my heart the frankincense;
As the rich aloes flames, I glow,
Yet the censer cannot know.
I'm all-knowing, yet unknowing;
Stand not, pause not, in my going.

Ask not me, as Muftis can,
To recite the Alcoran;
Well I love the meaning sweet, —
I tread the book beneath my feet.

Lo! the God's love blazes higher,
Till all difference expire.
What are Moslems? what are Giaours?

All are Love's, and all are ours.
I embrace the true believers,
But I reckon not of deceivers.
Firm to Heaven my bosom clings,
Heedless of inferior things;
Down on earth there, underfoot,
What men chatter know I not.

THE PHOENIX

My phoenix long ago secured
His nest in the sky-vault's cope;
In the body's cage immured,
He is weary of life's hope.

Round and round this heap of ashes
Now flies the bird amain,
But in that odorous niche of heaven
Nestles the bird again.

Once flies he upward, he will perch
On Tuba's golden bough;
His home is on that fruited arch
Which cools the blest below.

If over this world of ours
His wings my phoenix spread,
How gracious falls on land and sea
The soul-refreshing shade!

Either world inhabits he,
Sees oft below him planets roll;
His body is all of air compact,
Of Allah's love his soul.

Come! — the palace of heaven rests on aëry pillars, —
Come, and bring me wine; our days are wind.
I declare myself the slave of that masculine soul
Which ties and alliance on earth once forever renounces.
Told I thee yester-morn how the Iris of heaven
Brought to me in my cup a gospel of joy?
O high-flying falcon! the Tree of Life is thy perch;
This nook of grief fits thee ill for a nest.
Hearken! they call to thee down from the ramparts of heaven;
I cannot divine what holds thee here in a net.
I, too, have a counsel for thee; oh, mark it and keep it,
Since I received the same from the Master above:

Seek not for faith or for truth in a world of light-minded girls;
A thousand suitors reckons this dangerous bride.
This jest of the world, which tickles me, leave to my vagabond self.
Accept whatever befalls; uncover thy brow from thy locks;
Neither to me nor to thee was option imparted;
Neither endurance nor truth belongs to the laugh of the rose.
The loving nightingale mourns; — cause enow for mourning; —
Why envies the bird the streaming verses of Hafiz?
Know that a god bestowed on him eloquent speech.

BY BREATH OF BEDS OF ROSES DRAWN

By breath of beds of roses drawn,
I found the grove in the morning pure,
In the concert of the nightingales
My drunken brain to cure.

With unrelated glance
I looked the rose in the eye;
The rose in the hour of gloaming
Flamed like a lamp hard-by.

She was of her beauty proud,
And prouder of her youth,
The while unto her flaming heart
The bulbul gave his truth.

The sweet narcissus closed
Its eye, with passion pressed;
The tulips out of envy burned
Moles in their scarlet breast.

The lilies white prolonged
Their sworded tongue to the smell;
The clustering anemones
Their pretty secrets tell.

WHILE ROSES BLOOMED ALONG THE PLAIN

While roses bloomed along the plain,
The nightingale to the falcon said,
“Why, of all birds, must thou be dumb?
With closed mouth thou utterest,
Though dying, no last word to man.
Yet sitt’st thou on the hand of princes,
And feedest on the grouse’s breast,
Whilst I, who hundred thousand jewels
Squander in a single tone,
Lo! I feed myself with worms,
And my dwelling is the thorn.” —
The falcon answered, “Be all ear:
I, experienced in affairs,
See fifty things, say never one;
But thee the people prizes not,
Who, doing nothing, say’st a thousand.
To me, appointed to the chase,
The king’s hand gives the grouse’s breast;
Whilst a chatterer like thee
Must gnaw worms in the thorn. Farewell!”

BODY AND SOUL

A painter in China once painted a hall; —
Such a web never hung on an emperor's wall; —
One half from his brush with rich colors did run,
The other he touched with a beam of the sun;
So that all which delighted the eye in one side,
The same, point for point, in the other replied.

In thee, friend, that Tyrian chamber is found;
Thine the star-pointing roof, and the base on the ground:
Is one half depicted with colors less bright?
Beware that the counterpart blazes with light!

POEM FROM “BIRD CONVERSATIONS.”

The bird-soul was ashamed;
Their body was quite annihilated;
They had cleaned themselves from the dust,
And were by the light ensouled.
What was, and was not, — the Past, —
Was wiped out from their breast.
The sun from near-by beamed
Clearest light into their soul;
The resplendence of the Simorg beamed
As one back from all three.
They knew not, amazed, if they
Were either this or that.
They saw themselves all as Simorg,
Themselves in the eternal Simorg.
When to the Simorg up they looked,
They beheld him among themselves;
And when they looked on each other,
They saw themselves in the Simorg.
A single look grouped the two parties,
The Simorg emerged, the Simorg vanished,
This in that, and that in this,
As the world has never heard.
So remained they, sunk in wonder,
Thoughtless in deepest thinking,
And quite unconscious of themselves.
Speechless prayed they to the Highest
To open this secret,
And to unlock *Thou* and *We*.
There came an answer without tongue. —
“The Highest is a sun-mirror;
Who comes to Him sees himself therein,
Sees body and soul, and soul and body:
When you came to the Simorg,
Three therein appeared to you,
And, had fifty of you come,
So had you seen yourselves as many.

Him has none of us yet seen.
Ants see not the Pleiades.
Can the gnat grasp with his teeth
The body of the elephant?
What you see is He not;
What you hear is He not.
The valleys which you traverse,
The actions which you perform,
They lie under our treatment
And among our properties.
You as three birds are amazed,
Impatient, heartless, confused:
Far over you am I raised,
Since I am in act Simorg.
Ye blot out my highest being,
That ye may find yourselves on my throne;
Forever ye blot out yourselves,
As shadows in the sun. Farewell!”

NO. 13 HYMN WRITTEN IN CONCORD SEPT. 1814

Come heavenly Muse my voice inspire
Teach me to tune the poet's lyre
In feeble notes that I may sing
And let Religion guide the string.
The works of God demand a song
From spirits and the angelic throng
O then let mortals also raise
In humbler strains their songs of praise
My soul O look around and see
How many things are made for thee
For thee the fields are cover'd o'er,
For thee the harvest yields its store,
Speech, reason, sight, and every sense
Is given thee by Providence
God's praise is sung by every rill
O then let not my tongue be still
Let morn, and noon, and shady night
Hear praise to him who made the light
And to his Son who willing came
To save mankind from death and shame.

ON THE DEATH OF MR. JOHN HASKINS

See the calm exit of the aged Saint,
Without a murmur, and without complaint,
Whil'st round him gathered his dear children stand
And some one holds his withered pallid hand.
He bids them trust in God, nor mourn nor weep;
He breathes Religion, and then falls asleep.
Then on angelic wings he flies to God,
Rejoiced to leave this earthly mortal clod.
His head is covered with a crown of gold.
A golden harp his hands immortal hold.

LINES ON THE DEATH OF MISS. M. B. FARNHAM

Come heavenly Muse a suppliant asks thine aid,
No common theme his feeble pen pursues,
Where the blue grave-stone marks the silent dead,
There would he go and there in silence muse.

Here let unhallowed feet ne'er bend their way,
Here where decaying, youth & Beauty sleeps,
Here where cold Death holds his imperious sway,
And fond affection clad in mourning weeps.

Lowly beneath this green and nameless sod,
Rests the frail body of departed worth;
Her happy soul has mounted to her god,
And gone forever from this narrow Earth.

Her's was the brightness of the noonday Sun
Her fancy brilliant as his golden rays,
Judgement & Reason, mounted on the throne,
And pure Religion shone in all her ways.

Long as the life blood flows within the veins,
Long as the throbbing heart persists to move,
So long shall thought of Mary lessen pains,
And bring to Memory all her cares, and love.

Her brilliant taste, and manners well refined,
Shone with bright splendor on this lower earth,
Her graceful form, and modesty combined,
Proclaimed her value, excellence, and worth.

Farewel thou dear departed! ah farewell,
Peace to thine ashes in their clay cold bed,
Till the last trump shalt burst thy narrow cell,
And bid thee leave the mansions of the dead.

POEM ON ELOQUENCE BY R. W. EMERSON

When oer the world the son of genius rose
And woke mankind from indolent repose
When Science first diffused her genial rays
And Learning fair enlightened elder days
Then Eloquence descending from above
Left the high palace of Olympian Jove
To earth's fair field she bent her airy way
Guided by Hermes from the realms of day
Thrice happy Greece her lighting footsteps bore
When first the Goddess on earthly shore
In thy fair realm Polymnia fix'd her throne
And raised her sacred fane, — nor there alone —
Where to bright knowledge Ignorance gave way
Where Superstition fled the dawn of day
There in the temple of the Muses shone
Polymnia star by radiant lustre known.
First mid the band that sought her courts for fame
Stood cloth'd in light the great Athenian name
Hail great Demosthenes! thine ardent soul
Could nature's arts and nature's self controul
Thy speech inspired with accents clear and loud
Flash'd like the lightning from the thunder cloud
As the fierce flame that rends the rumbling ground
With sudden blaze throws dire destruction round
From Etna's top with mad resistless force
In liquid fire precipitates its course
Nor shepherd's hut nor prince's stately tower
Can save the tenant from the torrents power
Thus from thy lips the fire of Hermes flow'd
And from a mortal almost made a God
Gave thee the power the hearts of men to bind
The magic springs to know that actuate the mind
The strong in war thy strength resist in vain
The great and brave obey thy guiding vein
Twas with that power endued each sep'rate clause
Drew from the listening crowds the loud applause.

When Freedom from thy lips in thunder spoke
And all her spirit flash'd in every look.
When Phillip vainly tried each subtle art
To tempt with venal gold each patriot's heart
Rous'd by their "last great man" they tried the field
But not those Greeks unknowing how to yield —
One mercy more oh! had the Gods bestow'd
Courage on him whose lips with ardour glow'd
Then had led their armies to the plain
And falling Greece had conquered once again
The dubious field of battle's strife been won
And set majestic had their falling sun
But time forbids that more the muse should name
Of Grecian orators well known to fame
Farewell to Greece of liberal arts the nurse
Turn now Oh Muse to Rome direct thy course
See where with awful majesty arise
Her mighty leaders eloquent & wise
See great Hortentius to a greater yield
And stript of laurels quit the long-fought field [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

ORIGINAL— “APROPOS.”

Night slowly stretches o'er the changing skies
And killing darkness shrouds the rolling Earth
Up to her well-known rock the night-owl hies
And wizard hags begin their cursed mirth.

A misty cloud bedims the rising moon
Few are the stars that cheer the evening sky
And dark and gloomy is the night; and soon
The light that issues from those stars will die.

This night, I deem, the moon is in her spell
And fiends have mutter'd incantations dire
This night in revelry, the hags of hell
Dance in deep cave, around th'infernal fire Ah! bleakly blows the Ocean's
stormy blast
Grim Water-Sprites bestride the foaming wave,
Woe to the hapless bark, the towering mast
The careworn sailor finds tonight his Grave!

On Ballans lonely moor what sounds were heard!
When the chill night brought on the darkness drear
And in thy lofty towers lone Villagird!
What startling noise came sudden on the ear.

I passed at eve the foot of Ben-lide's hill
I heard a voice as the sad breeze blew by
Starting I listened — all again was still
Nought through the mist could mortal sight descry.

WILLIAM DOES THY FRIGID SOUL

William does thy frigid soul,
The charms of poetry deny,
And think thy heart beyond controul,
Of each Parnassian Deity?

This I suspect from that cold look,
Quenching like ice Apollo's fire,
With which each vagrant verse you took,
When offer'd from my humble lyre.

Not that in truth I mean to say,
I ever had a lyre — not I —
Rhymers you know have got a way,
To Tell a *bumper*, alias *lie*. — — I love quotations — Dr Gibbs —
Or some one else perhaps — has said,
— Poets have leave to publish fibs,
And t'is a portion of their trade — But to return — ti's wrong to say,
That I should not have leave to write,
My maxim is — write while it's day, —
For soon, forsooth it will be night, That is — poor Ralph must versify,
Through College *like a thousand drums*
But when well *through* then then oh my
The dark dull *night* of *Business* comes While this my letter you peruse,
Frown no long-faced *apostrophe*,
Dare not to blame the wayward muse,
Nor scowl the *scroflous* brow at me — [Chronological List of Poems](#)

SONG: SHOUT FOR THOSE WHOSE COURSE IS DONE

Tune “Scots wha hue wi’ Wallace bled.”

Shout for those whose course is done, —
Bow you to their setting sun,
— Souls of patriots who won
Noble Liberty.

Fell Brittainia’s tyrant power
Quailed in combats fearful hour;
Lowly did the Lion cower
To their victory.

Stars of Freedom’s spangled banner!
Burst ye forth in loud hosanne,
While the morning breezes fan her
Passing cheerfully.

Celebrate with song today,
Feats of eras far away
Ruin to the British sway
O’er Columbia [Chronological List of Poems](#)

VALEDICTORY POEM

Gambol and song and jubilee are done,
Life's motley pilgrimage must be begun; —
Another scene is crowding on the last, —
Perhaps a darkened picture of the past;
And we, who leave Youth's fairy vales behind,
Where Joy hath hailed us on the summer wind,
Would fain, with fond delay, prolong the hour,
Which sternly strikes at Friendship's golden power.
Then chide us not, though idly we may strew
Some blooming chaplets in the way we view.
We cannot weep — while Hope is dancing nigh, —
We may not smile at Sorrow's withering eye.
On Youth's last threshold, while we doubtful stand,
What crowded scenes of various hues expand, —
A thousand fears the fields of Time deform,
Hope's gilded rainbows resting on the storm.

Oh long ago, while Freedom yet was young,
Her wreaths ungathered, and her praise unsung,
While Europe languished in barbaric night,
And young Columbus kindled life and light, —
Fate's finger pointed to the brooding cloud
Which wrapped a new world in its ponderous shroud.

On three full ages has the seal been set
Since, o'er this land, Fate's awful Angels met; —
This land, — the scene of glory unrevealed,
Pregnant with powers her Genius woke to wield.
Here stood those Angels, on our mountain strand,
And looked through Time, and waved their charmed wand.
Hailed the full hour when God proclaims its birth,
A new and blissful paradise on earth.
Thrice o'er the clime they flapped their dusky wings,
To lodge rich virtues in its secret springs,
And ere its gale and mortal banner furled,
Charm bound its shores, the asylum of the World.

Then bade the breezes waft Columbus on,
To crown the triumph which the hero won.
Columbus comes; — far *land* bedims the sky,
And rapture kindled in his eagle eye.
With awe struck soul, the trembling sailor feels
What man dishonoured, & what God reveals;
Found the first Eden's pomp of hills and woods,
Lost in vast Ocean's watery solitudes.
Like that rare bird the enamoured Ethiop praised
Whose peerless beauty all unworshipped blazed,
Gift of the Sun, his golden plumage shone,
In Afric's boundless solitudes, — alone.

Back to the crowded multitudes of men,
Swelled with glad tidings, came the sail again;
Europe's loud welcome bade the wanderers hail,
Delighted Wonder listened to their tale.
The eyes of men were fastened on the scene,
Whose distant beauty charmed with light serene.
Adventurous hosts, from Europe's tower-crowned shore,
Claimed boundless realms unvisited before;
But 'mid the shouts of rushing nations, — came,
And louder than the trumpet voice of fame,
Prophetic sounds, in solemn murmur heard,
The oracles of Fate breathed out the thrilling word.

— 'When dying Europe mourns her lost renown,
'Her wasted honour, and her broken crown;
'When Vice and Ruin rend the earth with sin,
'And pour the deluge of destruction in,
'Corruption scorches with his tainted breath,
'And hundred-handed Havoc rides on death; —
'Be thou — fair land! their refuge, and their stay,
'The pillared gate to Glory's narrow way.
The sound had ceased, the unearthly host retired
Dark in the North, — and men, with awe, admired.

Time rolls away, but Nature stands the same;
Her starry host, her mountain wrapped in flame,

Earth, air, and heaven, which smiled benignant then
On those far travellers from the haunts of men,
With equal lustre now look calmly on
This youthful band, — this goal which they have won;
Perhaps bear with them, in their counsels high,
The *near* fulfilment of old prophecy;
And *we*, perchance, may claim with joy to be
The Ministers of Fate, the priests of Destiny.

Here, in the halls of Fate, we proudly stand,
Youth's holy fires by Hope's broad pinion fanned;
And while we wait what Destiny betides,
Gaze on the forms which fairy Fancy guides;
Bright apparitions floating on the air,
Which soft approaching claim a guardian care.
Shall I see *FORTUNE* wave her silken robe,
Or strong *AMBITION* comprehend the globe?
Shall warbling *MUSES* steal the soul away
To the rich stores of legendary lay?
Shall *HONOUR* trace the heraldry of Fame,
Or *BEAUTY* come, as Cleopatra came? —
— Not to dull sense shall forms like these appear,
But conscious feeling finds them hovering near.
These are the living principles, which weave

Lifes treacherous web, to flatter and deceive;
Through every age, they lead the lot of life,
And grasp the Urn with human fortunes rife
The early minstrel, when his kindling eye
Marked the bright stars illuminate the sky,
Saw these wild phantoms, in those planets, roll
The tides of fortune to their fearful goal.
There, robed in light, the Genii of the stars
Launch, in refulgent space, their diamond cars;
Or, in pavilions of celestial pride,
Serene above all influence beside,
Vent the bold joy, which swells the glorious soul,
Rich with the rapture of secure controul.
They read the silent mysteries of fate,

The slow revealings of the future state;
Trace the colossal shades of coming time,
Pregnant with unknown prodigies of crime,
While passing on, to ill-omened birth,
Low in the hapless atmosphere of earth.
— These were proud visions, and though part were feigned,
Enough of Truth's sweet union remained.

We may not stoop dull folly's round to creep,
And we must climb *Ambitions* rugged steep;
What though the toil should vex the soul with pain, —
Beyond its woes, there is a crown to gain.
We look for days of joy, and groves of peace,
Where all the turmoils of ambition cease;
We love that garland, which the scholar wears,
Who wreaths new blossoms with successive years,
Crouched in his cot, amid romantic bowers,
Domestic visions wing the happy hours,
When mellow eve shall paint the saffron sky,
And light the star of Hesperus on high,
Hush the wild warble of the lonely grove,
And charm the hamlet with the tales of love,
Then, the glad sire shall gather round his door,
His ruddy boys, to list his fairy lore;
By every soothing spell to Nature known
She courts him willing to her sylvan throne;

While, o'er his sense, her bright enchantment steals,
Enamoured Memory all her stores reveals;
The star oft seen in youth's rejoicing prime
Rolls back his soul along the tides of time;
Recalls the spring-time of his health and pride,
His gay companions bounding at his side;
The reckless shout which shook the college hall, —
The classic lesson potent to appal, —
The gorgeous dreams which ardent fancy wove
To gild the blushing morning of his love; —
All these shall rise for Memory's brilliant theme,
And float in beauty, like an angel's dream.

The old man's fearless gaze salutes the sky,
Ere savage death hath shut his glazing eye.
When the grave closed o'er Athens' laurell'd son,
The fair-haired Muses wept in Helicon;
Be ours that tear, — fair Nature's holiest gem,
That song, for aye, shall be our requiem.

But let not eager fancy roam so far,
Whose tale should now remind us what we are.
In this bright age, with seeds of glory sown,
The hand of fate hath placed us, — not our own.
When the old world is crumbling with decay,
And empires unregarded, pass away,
When the world's days of infancy are told,
And Nature's crowded destinies unfold,
Perhaps tis ours — when strength and grandeur fail,
And pride and power confess that man is frail,
When vanquish'd Virtue's reign is fully past,
And stern Corruption climbs the throne at last,
And men kneel down beneath that wasting sway, —
Perhaps tis ours to rend the veil away;
To bid men see their honour, and their bliss,
The proud connection of that world and this;
To shew the triumphs of a loftier scene,
Than on this humble ball hath ever been,
Ourselves, heavens honoured instruments prepared,
Whose little band even savage Death has spared.

Let not the censure of presumption blot
The venial boldness of aspiring thought;
For proudest deeds, the lowliest means are made,
Where the dark schemes of Providence are laid,
So when, of old, to strike a lawless sway,
The arm of Nemesis was shrined in clay,
When the black host of earthborn giants strove
To rend Olympus from the might of Jove,
When Terror reddened on the Almighty's cheek,
And even Jove's thunders whispered they were weak,
Then was the might, which blessed high heaven with peace,
Found in the arm of youthful Hercules.

I stand in the arms of youthful heroes,
So heaven may bid this young unhonoured land
Lead the long changes which mankind demand.

I seek no pardon if my wayward lays
Flow too profusely with my country's praise;
Shall a vain taunt proscribe my love of home,
Bid the heart sicken, sacred feeling roam?
Shall paltry ridicule assail the name,
Which twines its honours with Columbia's fame?
The man whose soul, with patriot ardor thrills
To scorn the proud world from his native hills?

But what be these but idle dreams of hope
Which soon shall fade, and leave the blind to grope?
Ah! what be these, amid the night of life,
The certain, near, inevitable strife?
We stand on slippery paths; the Ocean's roar
Is loud around us, — and the world, before; —
Thousands have crossed the gulf, — but few can tell
Of all that countless multitude — how well.
No glorious lustre gathers round their name,
Or gives their virtues to the trump of Fame.
As if men bless them with a brief renown,
Oh think how sadly purchased was that crown,
How malice blights the name it would destroy,
— Think on *Columbus chained*, — canst *thou* be crowned with joy?

When mighty thoughts come crowding on the soul,
And Fancy's dreams in sparkling lustre roll,
Let not the dreamer heed her baneful charms,
Perfidious smiles and Folly's winning arms;
Fancy and Hope in chill Despair shall end,
He clasps a viper whom he thought a *friend*,
And when he finds the rapture of renown,
— That crown of glory is a thorny crown.

We meet to part; then haste, no more delay
To bid farewell, and stretch our sail away;
And if a kindred sympathy shall rise

Here in the hearts, and friendships, which we prize,
Our heartfelt wish shall gratefully respond,
And God will sanction this fraternal bond.
And we shall cherish long this parting day,
When *Beauty* smiled to cheer us on our way.
Think not that heart, and feeling's vital glow
Part from the little pageant which we show, —
No; brightly shrined in Memory's hallowed cell,
All that we leave, and weep to leave, shall dwell.
One debt of gratitude remains unpaid
To those who led us through Minerva's shade;
The thanks we offer, not by words expressed,
Let future years of grateful toil attest;
Be this our pride and boast to offer here
A freewill homage, grateful & sincere.

There is no joy to tear ourselves away
From scenes endeared by life's young holiday.
When many days have dimmed the eye with tears,
And darkening round, the sky of life appears,
How will our hearts rejoice to look behind
On these old halls, and call the past to mind.
Spots, where while studies, friends, & pleasures bless,
We dreamed the dreams of youthful happiness;
Or learned to venerate the guardian care
Enthroned in Learning's consecrated Chair;
Where ancient Science, with a frown severe,
Appalled the trifler, as he ventured near;

Here where we learned to wield the *gun* and *quill*,
Recite in sections, and in sections drill:
Here where we learned, still studious to excel
In arts and arms, to cheer, and to *rebel*;
Recall the pleasant faces which we knew,
Which oft put on a sombre colouring too;
The strange vicissitudes of life, which speak
In anxious paleness, on the sufferer's cheek,
Who, while cold terror shakes his frame throughout,
Asks, with a ghastly smile, 'Are the *parts* out?'

And many a one, whose sorrow, & whose fears,
Like Arethusa, melt himself to tears,
Short youth; disaster trembles in his eye,
An inch too *short* to join “the Company.”
In whom both art & nature joined to strive
To reach the lofty limit,— “five feet, five”;
Perchance, in Commons Hall too sparely fed,
His hopes, alas! proved higher than his head.

Enough; — Affection may not linger here,
Repeating fond farewells, and vows sincere;
Impatient Time doth knit his sullen brow,
Gird up your loins for fates dread mandate now!
May Glory wait you on your proudest ways,
The wise applaud you, while the world obeys,
May Joy attend the journey which we fear,
And may God speed our perilous career!

FROM FRODMER'S DRAMA "THE FRIENDS."

Malcolm, I love thee more than women love
And pure and warm and equal is the feeling
Which binds us and our destinies forever
But there are seasons in the change of times
When strong excitement kindles up the light
Of ancient memories [Chronological List of Poems](#)

DEDICATION

Quem fugis? Aut quis te nostris complexibus arcet?
Haec memorans, cinerem et sopitos suscitât ignes.
Virgilian lot.

This song to one whose unimproved talents and unattained friendship have interested the writer in his character & fate.

By the unacknowledged tie
Which binds us to each other
By the pride of feeling high
Which friendship's name can smother By the cold encountering eyes
Whose language deeply thrilling
Rebelle against the prompt surmise
Which told the heart was willing; By all which you have felt and feel
My eager gaze returning
I offer to this silent zeal
On youthful altars burning, All the classic hours which fill
This little urn of honour;
Minerva guide & pay the pen
Your hand conferred upon her.

IDEALISM

Deep in the soul a strong delusion dwells,
A curious round of fairly fashioned dreams;
Yet quietly, the pleasant vision swells
Its gay proportions far around; the streams
Of the wide universe their wealth supply,
Their everlasting sources furnish forth
The fabled splendours, whose immortal dye
Colours the scene with hues which mock the summer sky
And oh how sweetly, in youth's seraph soul,
That vision, like the light of heaven, doth rest
Its name is Life; its Hours their circle roll
Like angels in the robes of morning drest;
And every phantom of the train is blest
Who shakes his plumes upon the odorous air,
Or lights a star upon his azure crest
And while the lovely beam reposes there
Joy in the guileless heart his welcome will prepare [Chronological List of Poems](#)

I SPREAD MY GORGEOUS SAIL

I spread my gorgeous sail
Upon a starless sea
And oer the deep with a chilly gale
My painted bark sailed fast & free — Old Ocean shook his waves
Beneath the roaring wind,
But the little keel of the mariner braves
The foaming abyss, & the midnight blind.

The firmament darkened overhead,
Below, the surges swelled, —
My bark ran low in the watery bed,
As the tempest breath its course compelled.

I took my silver lyre,
And waked its voice on high; —
The wild blasts were hushed to admire,
And the stars looked out from the charmed sky.

Bear me then, ye wild waters,
To Apollo's Delphian isle,
My name is *Music*, in Castalie known,
Where bowers of joy the Nine beguile. — [Chronological List of Poems](#)

A SHOUT TO THE SHEPHERDS

Freshly, gaily, the rivulet flows
Beside its emerald bank
Each silver bubble in beauty goes
Adown the stream & briefly glows
Till it reach the broad flags & the alders dank.
Shepherds, who love the lay
Of untaught bards in oaken shades
Brighteyed Apollos of the forest glades
Hither, hither, turn your way.
Come to the grassy border of the brook
Here where the ragged hawthorn dips
His prickly buds of perfume in the wave
And thence again a costly fragrance sips
Drinking with each balmy floweret's lips
Pure from the Naiad's welling urn
While overhead the embowering elms
Bow their broad branches & keep out the day.
Hither, hither, turn your way.
Good bye.

I WEAR NO BADGE; NO TINSEL STAR

I wear no badge; no tinsel star
Glitters upon my breast;
Nor jewelled crown nor victor's car
Rob me of rest.

I am not poor, but I am proud
Of one inalienable right,
Above the envy of the crowd —
Thought's holy light.

Better it is than gems or gold,
And oh! it cannot die,
But thought will glow when the Sun grows cold,
And mix with Deity.

I love thy music, mellow bell,
I love thine iron chime,
To life or death, to heaven or hell,
Which calls the Sons of Time.

Thy voice upon the deep
The homebound sea-boy hails,
It charms his cares to sleep,
It cheers him as he sails.

To house of God & heavenly joys
Thy summons called our sires,
And good men thought thy sacred voice
Disarmed the thunder's fires.

And soon thy music, sad death-bell!
Shall lift its notes once more,
And mix my requiem with the wind
That sweeps my native shore.

I RAKE NO COFFINED CLAY, NOR PUBLISH WIDE

I rake no coffined clay, nor publish wide
The resurrection of departed pride
Safe in their ancient crannies dark & deep
Let kings & conquerors saints & soldiers sleep.
Late in the world too late perchance for fame
Just late enough to reap abundant blame
I choose a novel theme, a bold abuse
Of critic charters, an unlaurelled muse.

Old mouldy men & books & names & lands
Disgust my reason & defile my hands
I had as lief respect an ancient shoe
As love Old things *for age*, & hate the new.
I spurn the Past, my mind disdains its nod
Nor kneels in homage to so mean a god.
I laugh at those who while they — & gaze
The bald antiquity of China praise.
Youth is (whatever Cynic tubs pretend)
The fault that boys & nations soonest mend.

O WHAT HAVE I TO DO

O What have I to do
With merriment & jollities
Youths golden hair & sparkling eyes?
And deafening games that children prize

I am not made to tune a lute
Nor amble in a soft saloon
Nor mine the grace of kind salute
To mien of pride & heart of stone

My pulse is slow my blood is cold
My stammering tongue is rudely tuned

I care not who shall kiss the cup
That Fashion holds to Beauty up
Nor who shall slip thro' the smiling throng
With honied lyes upon his tongue
The swift hours that go singing by
Tell not the triflers they must die

Man to his work the merry to their wine
Friend to his friend folly to festivals
All hopes & humors to their several ends
Sages to schools, young Passion to its love
Ambition to its task and me to mine.
I am not charged with dallying messages
That thus I mingle in this glittering crowd
Seeing with strange eyes their buffooneries

I am not tangled in the cobweb net
That wanton Beauty weaves for youth so knit
To some fair maid he follows with his eye
A sterner errand to the silken troop
Has quenched the uneasy blush that warmed my cheek
I am commissioned in my day of joy
To leave my woods & streams & the sweet sloth
Of prayer & song that were my dear delight

To leave the rudeness of my woodland life
Sweet twilight walks and midnight solitude
And kind acquaintance with the morning stars
& the smooth passage of my household hours
The innocent mirth which sweetens daily bread
Railing in love at those who rail again by mind's industry sharpening the love of
life
Books, Muses, study, fireside, friends, & love,
I loved ye with true love, so fare ye well.

I was a boy; boyhood slid gaily by
And the impatient years that trod on it
Taught me new lessons in the lore of life.

I've learned the burthen of that sad history
All woman born do know, that hoped for days
Days that come dancing on fraught with delights
Dash our blown hopes as they limp heavily by
But I — the banding of a country Muse
Abandon all those toys with speed to obey
The King whose meek ambassador I go.

HAVE YE SEEN THE CATERPILLAR

Have ye seen the caterpillar
Fouly warking in his nest?
Tis the poor man getting siller,
Without cleanness, without rest.
Have you seen the butterfly
In braw claithing drest?
Tis the poor man gotten rich,
In rings & painted vest.
The poor man crawls in web of rags,
And sore bested with woes,
But when he flees on riches' wings,
He laugheth at his foes.

THE PANOPLY OF PARADISE IS MINE

The panoply of Paradise is mine
No armourer wrought it on Eteian forge
No dear luxurious maiden brought the gift
By lying bards profanely deemed divine
I am clad in mail of celestial proof
I brandish Michael's sword of flame
And I come to quell the pride of the world
But avaunt these toys of poesy Why wrap
The fiery truths in riddles dark
Truth treads on the pride of Plato
Truth treads on lovesick rhymes
The fashion of riddling priests
The trick of Delphos & Dodona
The cunning of Homer & Hesiod
Mischievous polytheists who deceived mankind
These delusions are overpast.
The altar of the Capitoline god is crushed
The spindle of ancient Fate is broken
The sisters do not spin the eternal thread
There is no fire glowing on Persic mountains
Where the sun was greeted with fragrant spikenard
The Nile breeds crocodiles in his slime
And the pyramids are by great Alcairo
But the swarthy votary will not adore the reptile
And the dead oppressor is not entombed in the piles
The immortal Gods are deceased
Go let your fabled muses chant their obituary.
Do you see how the world slides away
How its huge pomps dwindle to unsubstantial things
Tho' they were dear to the heart & solid to the eye
There is a sentence on the lip of Tully
That Truth shall last tho' the fabrics of imagination decay.
Many incidents up & down in the world shall verify
The simple oracle.
The proud hieroglyphic shall be the child's bauble alphabet
The spectral tale that blanched the forefather's cheek

Makes merriment for vermillion maids.
Fools judge by outside show, for while
The champion vanquishes in vain
And armed kings are met unprofitably
(Great things that have no harvest home)
The unconscious wit scratches his paper in a corner
And the words that are writ
Burn like pains in ten thousand memories
And are chanted in thunder to the four winds.
And the pillars of social fabrics are shaken at the sound like bulrushes.

THE SPIRITS OF THE WISE, SIT ON THE CLOUDS

The spirits of the wise, sit on the clouds
And mock the ambition of man
For his breath is vapour; his beauty the colour of a cloud
And his body & soul are parted by a sun, a storm
Or the feeble fork of a poor worm
And who shall tell his household
Whither the soul of the dead man is gone.
Is it gone to live in torture
Enduring a dread resurrection into pain
And perceive mortal plagues in an immortal body
Sighing to the heavy centuries, that bring
No light no hope in their immeasurable train?
Is it gone to farther regions of unequal lot
To a land where the colours of love & disgust
Are blended anew in the texture of the web
And the web is stained with black & bloody clouds.
Is it gone to harmonies of joy
To the ardour of virtue & the wealth of truth
Is it gone to blank oblivion
The mockery of hope & virtue & the death of God.
Alas! Alas! Alas!
Wo is me! for the sad survivor
Tho' Fortune threw good not evil in his way
Showering the roses of pleasure & the laurel of Fame
Whilst his brother breasted the driving snows
Alas for the sad survivor.
He walks the long streets of his native City
But the peopled street is like the desolate sea.
Men study his face and its lofty lines
And love the graceful tones of pride & power
Rolled with rich thunder of eloquent words.
In the bosom of his own land.
They love him and they honour him
And they think his heart leaps at the voice of their praise.
But their thoughts are dark & their eyes are dim
And they cannot see that a noble nature

Must pine or be matched with noble things.
It is ill with the living, it is well with the dead.
It is better with the dead who live
Than it is with the living who die daily.
Oh Life, thou art a house wherein Fears inhabit
And when Man, poor pilgrim, enters the doors
They flock unto him with icy hands
They lead him in their shivering company
And if he come to a shining room
They tell him it leads to a dungeon tower.

MY DAYS ROLL BY ME LIKE A TRAIN OF DREAMS

My days roll by me like a train of dreams
A host of joyless undistinguished forms
Cloud after cloud my firmament deforms
While the sweet Eye of Heaven his purple gleams
Pour in rich rivers of Promethean beams
On all his ample family beside
On me on me the day forgets to dawn
Encountering darkness clasps me like a bride
Tombs rise around and from each cell forlorn
Starts with an ominous cry some ghastly child
Of death & darkness, summoning me to mourn
Companion of the clod brother of worms —
The future has no hope and memory mild
Gives not the blessed light that once my woes beguiled.

THE BLACKBIRD'S SONG THE BLACKBIRD'S SONG

The blackbird's song the blackbird's song
Still still it warbles in my ear
Tho' I have travelled many a mile
From the sweet woods where the bird is found.

The sound rings shrilly in my ear
It vibrates strong on every nerve
Impels the blood in a swifter tide
And riots thro' all the house of life.

It hurries me back my sense my eye
My ear, my heart, to the dusky lake
Whose silent margin I trod alone
When the morn sent me on my way.

The sun was veiled in summer clouds
Nor spared one beam to welcome me
The wind in the chambers of the mount
Lay couched nor breathed his gay good morrow.

But where the chestnut & the oak
Fringed the smooth lake with leaves
And on the slender boughs of the birch
And amid the berries of the cedar tree There tilting & shaking down the dew
Sang his good song the merry blackbird
Quoth he, I hope you like music young man —
For I'm determined to be heard.

And straightway as he sang, the sound
Woke every bird in the silent woods
On a thousand sprays, above around
They poured their notes to the sylvan gods.

Then the shy ducks that were swimming there
Skirred along the lake to a distant cove
And the pelican started from the reeds
And poised his broad wings on the morning air.

And I am here
On the green earth contemplating the moon
Much marvelling what may betide tomorrow
I love my life [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

I AM AN EXILE FROM MY HOME; HEAVILY

I am an exile from my home; heavily
And all alone I walk the long sea shore
And find no joy. The trees the bushes talk to me
And the small fly that whispers in my ear.
Ah me I do not love the look
Of foreign men
And we is me that I forsook
My little home my lamp my book
To find across the foaming seas
This cheerless fen.

He must have
Droll fancies sometimes cross his quiet thoughts,
Who in my vagrant verse shall look to find
A holiday from study or from toil,
And consolation to his mortal care.
Such idler will not be a man of name,
But must be, & therein resembles me,
A little liable to ridicule,
Because he cares a particle too much
For the opinion of the fickle world;
And notes how Merit does not swim to place
In th' tides of this world, — & feels the scandal oft
Of low salute to men of meaner mould;
And yet has felt, albeit with scorn the while,
A kind of justice in the Seneschal,
The uncivil fate, that made his fortunes vile.
I am frank, my friend, your eye has found
A gipsy muse that reads your lineaments
To tell the faithful fortunes of your life.
Go to, I'll feed my humour to the full,
And still expand the pleasant commentary.
Who loves my verse is one whose roving eye
Detects more beauty than his tongue will own
In art & nature. Nay his traitor tongue
Sometimes consenting to the coxcomb's jest,
Reveals the beauties which delight his soul

Derides the beauty which delights his soul.
He is a man, who, though he told it not,
Mourned in the hour of manhood whilst he saw
The rich imagination which had tinged
Each earthly thing with hues from paradise
Forsake forever his instructed eye,
Bewailed its loss & felt how dearly bought
Is wisdom at the price of happiness.

Ah me, sometimes in
And sometimes when the dainty southwind blew
Its soft luxurious airs, & called the clouds
Mustering their hosts from all the sunny bays, —
Then when the piping wind & sounding sea
And tossing boughs combined their cadences,
The sweet & solemn melody they made
Enticed him oft in heady wantonness
To scoff at knowledge, mock the forms of life,
Cast off his years & be a boy again.
Then has he left his books, & vulgar cares,
And sallied forth across the freshened fields
With all the heart of highborn cavalier
In quest of forest glades hid from the sun,
And dim enchantments that therein abide.

I had rather follow him than talk to him;
Fast fast he leaves the villages behind,
As one who loathed them, yet he loathes them not,
And snuffs the scents which on the dallying gale
The woods send out as gentle harbingers
Bro't from their inmost glens to lure the step
Of the pleased pilgrim to their alleys green.
I know the pleasures of this humour well
And, please you, reader, I'll remember them.
First the glad sense of solitude, the sure
The absolute deliverance from the yoke
Of social forms, that are as tedious
Oft to a fretful & romantic man
As a mosquito's song at summer eve.
In the wood he is alone, & for the hollow chat

Of men that do not love, & will not think,
He has the unpretending company
Of birds & squirrels & the fine race of flowers.
He forms his friendships with the flowers
Whose habits or whose hue may please him best,
Goes by the red & yellow populace
That with their vulgar beauty spot the plain
To find the honoured orchis — seldom seen,
The low pyrola with a lilac's smell,
Or the small cinque-foil, the wild strawberry's friend.
He speculates with love on Nature's forms
Admires a calyx much as Winkelmann
The architecture of a Doric Pile
Not more he doated on the []Of frieze or triglyph or on architrave,
Than doth this dreamer, on the slender shaft
With awns & stipules graced, that lifts in air
The lily or the loosestrife, tapestried with leaves.
And close below
The faithful capsule to transmit its race
Like from its like to another year of flowers,
Once more to be the food of tuneful bird
Low stooping on swift wing, or busy bee,
Or the small nameless eaters that can find
A country in a leaf. — [Chronological List of Poems](#)

ST. AUGUSTINE

For fifteen winter days
I sailed upon the deep, & turned my back
Upon the Northern lights, & burning Bear,
On the twin Bears fast tethered to the Pole
And the cold orbs that hang by them in heaven,
Till star by star they sank into the sea.
Full swelled the sail before the driving wind,
Till the stout pilot turned his prow to land,
Where peered, mid orange groves & citron boughs,
The little city of Saint Augustine.

Slow slid the vessel to the fragrant shore,
Loitering along Matanzas' sunny waves,
And under Anastasia's verdant isle.
I saw Saint Mark's grim bastions, piles of stone
Planting their deep foundations in the sea,
And speaking to the eye a thousand things
Of Spain, a thousand heavy histories.
Under these bleached walls of old renown
Our ship was moored.

— An hour of busy noise,
And I was made a quiet citizen,
Pacing my chamber in a Spanish street.
An exile's bread is salt, his heart is sad, —
Happy, he saith, the eye that never saw
The smoke ascending from a stranger's fire!

Yet much is here
Than can beguile the months of banishment
To the pale travellers whom Disease hath sent
Hither for genial air from Northern homes.
Oh many a tragic story can be read, —
Dim vestiges of a romantic past,
Within the small peninsula of sand.
Here is the old land of America
And in this sea-sirt nook the infant stens

And in this sea-girt rock, the infant steps
First foot-prints of that Genius giant-grown
That daunts the nations with his power today.

Inquisitive of such, I walk alone
Along the narrow streets, unpaved & old,
Among few dwellers, and the jealous doors
And windows barred upon the public way.

I explored
The castle & the ruined monastery
Unpeopled town, ruins of streets of stone,
Pillars upon the margin of the sea,
With worn inscriptions oft explored in vain,
Then with a keener scrutiny, I marked
The motley population. Hither come
The forest families, timid & tame
Not now as once with stained tomahawk
The restless red man left his council fire,
Or when, with Mexique art, he painted haughtily
On canvas woven in his boundless woods
His simple symbols for his foes to read.
Not such an one is yon poor vagabond
Who in unclean & sloven apathy
Brings venison from the forest, — silly trade.
Alas! red men are few, red men are feeble,
They are few & feeble, & must pass away. —
— And here,
The dark Minorcan, sad & separate,
Wrapt in his cloak, strolls with unsocial eye:
By day, basks idle in the sun, then seeks his food
All night upon the waters, stilly plying
His hook & line in all the moonlit bays.
Here steals the sick man with uncertain gait
Looks with a feeble spirit at things around
As if he sighing said, “What is’t to me?
“I dwell afar; — far from this cheerless fen
“My wife, my children strain their eyes to me
“And oh! in vain. Wo, we is me! I feel
“In spite of hope, these wishful eyes no more

“Shall see New England’s wood-crowned hills again.”

X X X X X

(Here is a chasm very much to be regretted in the original manuscript.)

X X X X X X

There liest thou, little city of the deep,
And always hearest the unceasing sound
By day & night in summer & in frost,
The roar of waters on thy coral shore.
But softening southward in thy gentle clime
Even the rude sea relents to clemency,
Feels the kind ray of that benignant sun
And pours warm billows up the beach of shells.
Farewell; & fair befall thee, gentle town!
The prayer of those who thank thee for their life,
The benison of those thy fragrant airs,
And simple hospitality hath blest,
Be to thee ever as the rich perfume
Of a good name, & pleasant memory!

AWED I BEHOLD ONCE MORE

Awed I behold once more
My old familiar haunts; here the blue river
The same blue wonder that my infant eye
Admired, sage doubting whence the traveller came, —
Whence brought his sunny bubbles ere he washed
The fragrant flag roots in my father's fields,
And where thereafter in the world he went.

Look, here he is unaltered, save that now
He hath broke his banks & flooded all the vales
With his redundant waves.

Here is the rock where yet a simple child
I caught with bended pin my earliest fish,
Much triumphing, — And these the fields
Over whose flowers I chased the butterfly,
A blooming hunter of a fairy fine.
And hark! where overhead the ancient crows
Hold their sour conversation in the sky.
These are the same, but I am not the same
But wiser than I was, & wise enough
Not to regret the changes, tho' they cost
Me many a sigh. Oh call not Nature dumb;
These trees & stones are audible to me,
These idle flowers, that tremble in the wind,
I understand their faery syllables,
And all their sad significance. This wind,
That rustles down the well-known forest road —
It hath a sound more eloquent than speech.
The stream, the trees, the grass, the sighing wind,
All of them utter sounds of admonishment
And grave parental love.

They are not of our race, they seem to say,
And yet have knowledge of our moral race,
And somewhat of majestic sympathy,
Something of pity for the nuny clay

Something of pity for the party clay,
That holds & boasts the immeasurable mind.

I feel as if I were welcome to these trees
After long months of weary wandering,
Acknowledged by their hospitable boughs;
They know me as their son, for side by side,
They were coeval with my ancestors,
Adorned with them my country's primitive times,
And soon may give my dust their funeral shade.

AN ANCIENT LADY WHO DWELT IN ROME

An ancient lady who dwelt in Rome
Bro't Tarquin the King her Album from home
Nine ponderous volumes conveyed in a cart
And mentioned that this was only a part
And requested the monarch to buy the nine tomes
At a price he thought might buy nine Romes.
The unmannerly king refused to buy
A lady's Album appraised so high,
And she, to show her honest ire,
Threw the three first volumes into the fire,
And offered the king the rest of her lore
At the price she had fixed for the nine before.
The king was amazed at the lady's story,
But the argument now was an *a fortiori*,
And he flatly refused to redeem the volumes,
Whatever might be or might not in their columns.
The lady departed, & straightway burned
Three more of the six, & then returned [Chronological List of Poems](#)

BE OF GOOD CHEER, BRAVE SPIRIT; STEADFASTLY

Be of good cheer, brave spirit; steadfastly
Serve that low whisper thou hast served; for know,
God hath a select family of Sons
Now scattered wide thro' earth, & each alone,
Who are thy spiritual kindred, & each one
By constant service to that inward law,
Is rearing the sublime proportions
Of a true monarch's soul. Beauty & Strength The riches of a spotless memory,
The eloquence of truth, the wisdom got
By searching of a clear & loving eye
That seeth as God seeth These are their gifts
And Time who keeps God's word brings on the day
To seal the marriage of these minds with thine
Thine everlasting lovers. Ye shall be
The salt of all the elements, world of the world [Chronological List of Poems](#)

THE WINDS ARE COLD, THE DAYS ARE DARK

The winds are cold, the days are dark,
In this unlovely land
The East wind rises with the tide
To chill the populous strand Above me shines no Syrian moon
With warm luxurious glow,
Nor golden orange groves at noon
Perfume the world below.

Yet more I prize this frozen land,
This iron soil of ours,
Than fields by Indian breezes fanned
And crimsoned oer with flowers [Chronological List of Poems](#)

WRITTEN IN SICKNESS

I bear in youth the sad infirmities
That use to undo the limb & sense of age:
It hath pleased Heaven to break the dream of bliss
Which lit my onward way with bright presage,
And my unserviceable limbs forego
The sweet delight I found in fields & farms,
On windy hills, whose tops with morning glow,
And lakes, smooth mirrors of Aurora's charms.
Yet I think on them in the silent night,
Still breaks that morn, though dim, to Memory's eye
And the firm soul does the pale train defy
Of grim Disease, that would her peace affright.
Please God, I'll wrap me in mine innocence
And bid each awful Muse drive the damned harpies hence.

OIL & WINE

Oil & Wine,
Sparkling gems, & rich attire,
House & lands that men desire,
— Ye may seek at Plutus' shrine.

High renown,
Plaudits from desiring throngs,
Echoed far by poets songs
Are dowry to the Victors crown.

Royal state,
Diamond star, & cap of gold,
Bedizened throne, how hard to hold!
— Are got by force, or fraud, or fate.

Man must learn — .
In haunts of care, in fields of strife,
Are bought the glittering goods of life,
These to ashes turn.

But go thou home,
Home to the mansion of the mind,
If solid good thy search would find,
In the bright bower of Joy, & Thought's immortal dome.

ALL THAT THY VIRGIN SOUL CAN ASK BE THINE

All that thy virgin soul can ask be thine
Beautiful Ellen Let this prayer be mine
The first devotion that my soul has paid
To mortal grace it pays to thee fair maid
I am enamoured of thy loveliness
Lovesick with thy sweet beauty which shall bless
With its glad light my path of life around
Which now is joyless where thou art not found
Now am I stricken with the sympathy
That binds the whole world in electric tie
I hail love's birth within my hermit breast
And welcome the bright ordinance to be blest
I was a hermit whom the lone Muse cheers,
I sped apart my solitary years,
I found no joy in woman's meaning eye
When Fashion's merry mob were dancing by;
Yet had I read the law all laws above,
— Great Nature hath ordained the heart to love —
Yet had I heard that in this mortal state
To every mind exists its natural mate,
That God at first did marry soul to soul
Tho' lands divide & seas between them roll.
Then eagerly I searched each circle round
I panted for my mate, but no mate found
I saw bright eyes, fair forms, complexions fine,
But not a single soul that spoke to mine.
At last the star broke thro' the hiding cloud,
At last I found thee in the silken crowd
I found thee, Ellen, born to love & shine,
And I who found am blessed to call thee mine.

DEAR ELLEN, MANY A GOLDEN YEAR

Dear Ellen, many a golden year
May ripe, then dim, thy beauty's bloom
But never shall the hour appear
In sunny joy, in sorrow's gloom,
When aught shall hinder me from telling
My ardent love, all loves excelling.

The spot is not in the rounded earth,
In cities vast, in islands lone,
Where I will not proclaim thy worth,
And glory that thou art mine own;
Will you, nill you, I'll say I love thee,
Be the moon of June or of March above thee.

And when this porcelain clay of thine
Is laid beneath the cold earth's flowers,
And close beside reposes mine,
Prey to the sun & air & showers,
I'll find thy soul in the upper sphere,
And say I love thee in Paradise here.

I CALL HER BEAUTIFUL; — SHE SAYS

I call her beautiful; — she says
Go to; your words are idle;
My lips began to speak her praise,
My lips she tried to bridle.
But, Ellen, I must tell you this,
Your prohibition wasted is,
Unless among your things you find
A little jail to hold the mind;
If you should dazzle out mine eyes,
As dimmer suns sometimes have done,
My sleepless ears, those judges wise,
Would say, Tis the *voice* of the Peerless one.
And if your witchery decree
That my five senses closed should be,
The little image in my soul
Is Ellen out of Ellen's controul,
And whilst I live in the Universe
I will say tis my beauty, for better, for worse.

DEAR BROTHER, WOULD YOU KNOW THE LIFE

Dear brother, would you know the life
Please God, that I would lead?
On the first wheels that quit this weary town
Over yon western bridges I would ride
And with a cheerful benison forsake
Each street & spire & roof incontinent.
Then would I seek where God might guide my steps,
Deep in a woodland tract, a sunny farm,
Amid the mountain counties, Hants Franklin Berks,
Where down the rock ravine a river roars,
Even from a brook, & where old woods
Not tamed & cleared, cumber the ample ground
With their centennial wrecks.
Find me a slope where I can feel the sun
And mark the rising of the early stars.
There will I bring my books, my household gods,
The reliquaires of my dead saint, & dwell
In the sweet odor of her memory.
There, in the uncouth solitude, unlock
My stock of art, plant dials, in the grass,
Hang in the air a bright thermometer,
And aim a telescope at the inviolate Sun.

DOST THOU NOT HEAR ME ELLEN

Dost thou not hear me Ellen
Is thy ear deaf to me
Is thy radiant eye
Dark that it cannot see In yonder ground thy limbs are laid
Under the snow
And earth has no spot so dear above
As that below And there I know the heart is still
And the eye is shut & the ear is dull

But the spirit that dwelt in mine
The spirit wherein mine dwelt
The soul of Ellen the thought divine
From God, that came — for all that felt Does it not know me now
Does it not share my thought
Is it prisoned from Waldo's prayer
Is its glowing love forgot [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

TEACH ME I AM FORGOTTEN BY THE DEAD

Teach me I am forgotten by the dead
And that the dead is by herself forgot
And I no longer would keep terms with me.
I would not murder, steal, or fornicate,
Nor with ambition break the peace of towns
But I would bury my ambition
The hope & action of my sovereign soul
In miserable ruin. Not a hope
Should ever make a holiday for me
I would not be the fool of accident
I would not have a project seek an end
That needed aught
Beyond the handful of my present means
The sun of Duty drop from his firmament
To be a rushlight for each petty end
I would not harm my fellow men
On this low argument, *'twould harm myself* [Chronological List of Poems](#)

SHALL THE MUSE SING FOR THOUSANDS & NOT SING

Shall the Muse sing for thousands & not sing
For thee a Muse thyself of sweetest lay
I would forget my
What is life for & what is Memory
If it wants room for thee Is it a curse
Can it contain all painful circumstance
Each dull degrading fact & make life stale
With its street calendar its tavern roll
And can it not sanctify itself with thee
Yea fill the soul with odoriferous thought
By limning there thy lineaments in the serene
& Spiritual beauty God drest thee withal
And write the story of an angel's life
And all thy ministry to thine & mine
And me

Shalt thou go to thy grave unsung
Shall no flower be plucked for thee
Shall no rites be paid no death bell rung
When the desire of all eyes is gone

'Tis well for we
Are on the outside of that world
Wherein thou enterest fair & free
And all the rites we pay
Are symbols bodily
Gropings in the dark
Around the door

Thou art gone in to God
Thou walkest in heaven's day
Thou talkest with the seraphim
The select sons of truth
Thou addest a verse to their hymn
And curious speculation occupies
Thy radiant eyes
Every thought fresh wonders brings

Every thought fresh wonders bring
On his planetary wings
And every thought is a chapel where
Thou perfumest heaven with prayer
And the eldest born of Godhead say
What star beams new on us today
And yet thou hast a bond on earth
Which thou wilt keep in heaven
The nearer to the throne thou goest
The more place it will have in thy holy breast.

For I know that the Universe cannot blot
From a holy soul its true record
And so on a cherub's wings I fly
To the Holy of Holies of the Lord

If the heart is raised by heavenly choirs
That which here made heaven is not lost
And so I rise on her risen desires
Amid the pure martyrs' host.

If there is joy when a sinner comes
There's sympathy when
The dust lies on thy head
In the dark sepulchre
Thou hast gone alone to thy bed
Peace calm peace to her,
But oh what funeral is thine
My holy wife
Sad thoughts in every kindred breast
That knew thou hadst passed from life
And in the breast you loved

In the Soul that was dear to you
Dark hopeless visions roved
And a perpetual yew

And every day renews
The unrepaired regret

WHAT FROM THIS BARREN BEING DO WE REAP

What from this barren being do we reap
And what shall hinder the wise
From lying down to sleep in the earth
The innocent child is dead
The blushing cheek of youth is cold
Genius hath untimely fled
Nor hath the world a face
To fill thy vacant place
O radiant daughter of light & love
Too rich in the graces that dwell above
To be lent long to the sinful earth
God had garnished with thy birth.
Thou wert pure as they are not
Who dwell upon this murky spot
And every thing that's fair below.

DUST UNTO DUST! AND SHALL NO MORE BE SAID

Dust unto dust! and shall no more be said
Ellen for thee, and shall a common fate
Blend thy last hour with the last hours of all?
Of thee my wife, my undefiled, my dear?
The muse thy living beauty could inspire
Shall spare one verse to strew thy urn
Or be forever silent. Ellen is dead
She who outshone all beauty yet knew not
That she was beautiful, she who was fair After another mould than flesh &
blood.
Her beauty was of God — The maker's hand
Yet rested on his work,
And cast an atmosphere of sanctity
Around her steps that pleased old age & youth.
Yea that not won the eye, but did persuade
The soul by realizing human hopes,
Teaching that faith & love were not a dream,
Teaching that purity had yet a shrine,
And that the innocent & affectionate thoughts
That harbour in the bosom of a child
Might live embodied in a riper form,
And dwell with wisdom never bought by sin.
Blessed, sweet singer, were the ears that heard
To her, the eye that saw, bare witness.
The holy light of her eye did prophesy
The impatient heaven that called her hence.

WHY FEAR TO DIE

Why fear to die
And let thy body lie
Under the flowers of June
Thy body food
For the groundworm's brood
And thy grave smiled on by the visiting moon Amid great Nature's halls,
Girt in by mountain walls,
And washed with waterfalls, It would please me to die,
Where every wind that sweeps my tomb
Goes loaded with a free perfume,
Dealt out with a God's charity.

I should like to lie in sweets,
A hill's leaves for winding sheets,
And the searching sun to see
That I'm laid with decency
And the commissioned wind to sing
His mighty Psalm from fall to spring
And annual tunes commemorate
Of nature's child the common fate.

I AM ALONE. SAD IS MY SOLITUDE

I am alone. Sad is my solitude.
O thou sweet daughter of God, my angel wife,
Why dost thou leave me thus in the great stranger world
Without one sign or token, one remembrancer
Sent o'er the weary lands that sunder us
To say I greet thee with a beating heart.
Does thy heart beat with mine? does thy blue eye
Ever look northward with desire, O do thy prayers
Remember me when thou hallowest thy maker's name,
Remember him
Who never failed to grace his orison
With thy dear name, believes it acceptable
And prays, that he may pray for thee — [Chronological List of Poems](#)

ON THEE HAS GOD CONFERRED

On thee has God conferred
A bodily presence mean as Paul's
Yet made thee bearer of a word
That sleepy nations as with trumpet calls O noble heart accept
With equal thanks the talent & disgrace
The splendid town unwept
Nourish thy power in a private place.

Think not that unattended
By heavenly Powers thou steal'st to solitude
Nor even on earth all unbefriended
Tho no sweet rabble shouts on thee intrude Let Webster's lofty face
Ever on thousands shine
A beacon set that Freedom's race
Might gather omens from that radiant sign.

[Chronological List of Poems](#)

ALL THE GREAT & GOOD

All the great & good,
And all the fair,
As if in a disdainful mood,
Forsake the world, & to the grave repair.

Is there a sage
Needed to curb the unruly times; —
He hastes to quit the stage,
And blushing leaves his country to its crimes.

Is there an angel drest
In weeds of mortal beauty, whom high Heaven
With all sweet perfections doth invest; —
It hastes to take what it hath given.

And, as the delicate snow
Which latest fell, the thieving wind first takes
So thou, dear wife, must go,
As frail, as spotless, as those new fallen flakes.

Let me not fear to die,
But let me live so well,
As to win this mark of death from on high,
That I with God, & thee, dear heart, may dwell.

WHERE ART THOU

Where art thou
Thou beautiful dream
Whom every grace & every joy
Clothed in sunbeams dearest, best
Whom every fleeting hour in new graces drest
And every wondering eye that saw thee blest Where art thou now
Sad I miss thy beaming brow
I miss thy radiant eye
The joyful noon of my life is past
My sun is set my moon is gone
Each star of hope sunk one by one
And in this cold, damp, silent eve of life
I walk alone oh Ellen, oh my wife.

One by one those graces come
Day by day to memory's eye
Which thou worest as a robe
And I live over thy history
Thy thots were wove in beauty
Wisdom drest in dewbright flowers;
And sad & sportive hours
Had swelled alike the potent melody [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

I LIVE AMONG IDEAL MEN

I live among ideal men
I know graces
I cannot find in human faces
And I would gladly know
Where I got my vision,
If the earth does not hold its archetype

With open eye & ear
I move thro all this world of men
And well their various gifts discern
What I cannot do, they do
If I do not covet their powers
Not less do I mark & prize them

Yet still from all its journeys wide
The eye comes back unsatisfied
No living man can yet pretend
To earn the sacred name of Friend.

And that wherein alike all fail
Is the easiest part of virtue
To wit, simplicity & truth
The native ornaments of human youth.

WHAT AVAILS IT ME

What avails it me
That I have many friends
If when my walking ends
I come back to a lonely house What boots it that I dwell
In a city free and rich and old
If the long streets never hold
The only form I love What avails it I have bread
Raiment and books and leisure
Access to wisdom and to pleasure
If Ellen still is dead In my chamber she is not
From my parlour joy is gone
Round the house I roam and groan
The glory of my house is fled What avails it me
That I have many thoughts
That the nimble brain can run
Through all lands that see the sun
Hath a record of each race
That have had a dwelling place If only I have right of seeing
In this wilderness of being
And from the vision glorious
Must come back to my lonely house.

SHE NEVER COMES TO ME

She never comes to me
She promised me a thousand times
That she would dearly dearly love me
That in sickness & in health
Others present others absent
Whilst air was round & heaven above me
She would be present as my life
My holy gentle tender wife She promised in my secret ear
When none but God & I could hear
That she would cleave to me forever There was one will between us
There was one heart within us
And God upon his children smiled
As we the hours with love beguiled And now I am alone
Unheard I moan
She never comes to me
Sits never by my side
I never hear her voice
She comes not even to my dreams
O Ellen And comes she not
Ask thy heart, Waldo.
Doth she break her word
Doth not her love embrace thee yet
Even from the Spirits' land?

LEAVE ME, FEAR! THY THROBS ARE BASE

Leave me, Fear! thy throbs are base,
Trembling for the body's sake.
Come, Love! who dost the spirit raise,
Because for others thou dost wake.
O it is beautiful in death
To hide the shame of human nature's end
In sweet & wary serving of a friend.
Love is true Glory's field, where the last breath
Expires in troops of honorable cares.
The wound of Fate the hero cannot feel
Smit with the heavenlier smart of social zeal.
It draws immortal day
In soot & ashes of our clay.
It is the virtue that enchants it.
It is the face of God that haunts it.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

IF THOU CANST BEAR

If thou canst bear
Strong meat of simple truth
If thou durst my words compare
With what thou thinkest in the soul's free youth

Then take this fact unto thy soul —
God dwells in thee. —
It is no metaphor nor parable
It is unknown to thousands & to thee
Yet there is God.

He is in thy world
But thy world knows him not
He is the mighty Heart
From which life's varied pulses part

Clouded & shrouded there doth sit
The Infinite
Embosomed in a man
And thou art stranger to thy guest
And know'st not what thou dost invest.
The clouds that veil his light within
Are thy thick woven webs of sin
Which his glory struggling through
Darkens to thine evil hue

Then bear thyself, o man!
Up to the scale & compass of thy guest
Soul of thy soul.
Be great as doth beseem
The ambassador who bears
The royal presence where he goes.
Give up to thy soul —
Let it have its way —
It is, I tell thee, God himself,

The selfsame One that rules the Whole
Tho' he speaks thro' thee with a stifled voice
And looks thro' thee shorn of his beams

But if thou listen to his voice
If thou obey the royal thought
It will grow clearer to thine ear
More glorious to thine eye
The clouds will burst that veil him now
And thou shalt see the Lord.

Therefore be great
Not proud, too great to be proud
Let not thine eyes rove
Peep not in corners; let thine eyes
Look straight before thee as befits
The simplicity of Power.
And in thy closet carry state
Filled with light walk therein
And as a King
Would do no treason to his own empire
So do not thou to thine.

This is the reason why thou dost recognize
Things now first revealed
Because in thee resides
The Spirit that lives in all
And thou canst learn the laws of Nature
Because its author is latent in thy breast.
And in the Word
A wise man, Daniel, is the man
In whom the Spirit of the mighty gods abides
His goodness doth permit the deity within
To appear in his own light

Therefore o happy youth
Happy if thou dost know & love this truth
Thou art unto thyself a law
And since the Soul of things is in thee
They needest nothing out of thee

Thou needest nothing out of mee.
The law, the gospel, & the Providence,
Heaven, Hell, the Judgment, & the stores
Immeasurable of Truth & Good
All these thou must find

Within thy single mind
Or never find.
Thou art the *law*.;
The *gospel* has no revelation
Of peace or hope until there is response
From the deep chambers of thy mind thereto
The rest is straw
It can reveal no truth unknown before.
The *Providence*
Thou art thyself that doth dispense
Wealth to thy work Want to thy sloth
Glory to goodness to Neglect the Moth
Thou sow'st the wind, the whirlwind reapest
Thou payest the wages
Of thy own work, through all ages.
The almighty energy within
Crowneth Virtue curseth Sin
Virtue sees by its own light
Stumbleth Sin in selfmade night.

Who approves thee doing right?
God in thee
Who condemns thee doing wrong?
God in thee
Who punishes thine evil deed?
God in thee
What is thine evil meed?
Thy worse mind, with error blind
And more prone to evil
That is, the greater hiding of the God within
The loss of peace
The terrible displeasure of this inmate
And next the consequence
More faintly as more distant wrought

Upon our outward fortunes
Which decay with vice
With virtue rise.

The selfsame God
By the same law

Makes the souls of angels glad
And the souls of devils sad

There is nothing else but God
Where e'er I look
All things hasten back to him
Light is but his shadow dim.

Shall I ask wealth or power of God who gave
An image of himself to be my Soul
As well might swilling Ocean ask a wave
Or the starred firmament a dying coal
For that which is in me lives in the whole

A DULL UNCERTAIN BRAIN

A dull uncertain brain
But gifted yet to know
That God has Seraphim who go
Singing an immortal strain
Immortal here below
I know the mighty bards
I listen when they sing
And more I know
The Secret store
Which these explore
When they with torch of genius pierce
The tenfold clouds that cover
The riches of the Universe
From God's adoring lover.
And if to me it is not given
To bring one ingot thence
Of that unfading gold of heaven
His merchants may dispense
Yet well I know the royal mine
And know the sparkle of its ore
Celestial truths from lies that shine
Explored they teach us to explore.

THERE IS IN ALL THE SONS OF MEN

There is in all the sons of men
A love that in the spirit dwells
That panteth after things unseen
And tidings of the Future tells And God hath built his altar here
To keep this fire of faith alive
And set his priests in holy fear
To speak the truth — for truth to survive.

And hither come the pensive train
Of rich & poor of young & old,
Of ardent youths untouched by pain
Of thoughtful maids & manhood bold They seek a friend to speak the word
Already trembling on their tongue
To touch with prophet's hand the Chord
Which God in human hearts hath strung To speak the plain reproof of sin
That sounded in the soul before
And bid them let the angels in
That knock at humble Sorrow's door.

They come to hear of faith & hope
That fill the exulting soul
They come to lift the curtain up
That hides the mortal goal O thou sole source of hope assured
O give thy servant power
So shall he speak to us the word
Thyself dost give forevermore [Chronological List of Poems](#)

I WILL NOT LIVE OUT OF ME

I will not live out of me
I will not see with others' eyes
My good is good, my evil ill
I would be free — I cannot be
While I take things as others please to rate them
I dare attempt to lay out my own road
That which myself delights in shall be Good
That which I do not want, — indifferent,
That which I hate is Bad. That's flat
Henceforth, please God, forever I forego
The yoke of men's opinions. I will be
Lighthearted as a bird & live with God.
I find him in the bottom of my heart
I hear continually his Voice therein
And books, & priests, & worlds, I less esteem
Who says the heart's a blind guide? It is not.
My heart did never counsel me to sin
I wonder where it got its wisdom
For in the darkest maze amid the sweetest baits
Or amid horrid dangers never once
Did that gentle Angel fail of his oracle
The little needle always knows the north
The little bird remembereth his note
And this wise Seer never errs
I never taught it what it teaches me
I only follow when I act aright.
Whence then did this Omniscient Spirit come?
From God it came. It is the Deity.

HARD IS IT TO PERSUADE THE PUBLIC MIND OF ITS PLAIN DUTY & TRUE INTEREST

Hard is it to persuade the public mind of its plain duty & true interest
And hard to find a straight road to renown
And hard for young men to get honest gold
And hard to find a perfect wife
And mid the armies of imperfect men
To find a friend hardest of all
All good is hard to come by
Yet all these are easilier done
Than to live well one day — to be a Man.
Who speaks the truth outspeaks our Everett
Who acts his thought takes place of Washington
And who prefers music of his Reason
Above the thunder of all men's example
Embraces the beatitude of God.
Alas! that evermore the worldly hands
Hang back behind the charitable Will.

HEARST THOU, SWEET SPIRIT, THOU HAST HEARD BEFORE

Hearst thou, sweet spirit, thou hast heard before —
In heaven perchance
The heavy tidings had a golden sound
Thy dear sister, sharer of thy thots
While yet, dear Ellen, thou didst linger here,
Meekly receives the death blows, one by one,
And as thou, blessed wife, didst wither once in February's cold eye,
From month to month,
Passing from earth an angel into heaven
So, in her turn, she hastes upon thy steps,
And leaves two mourners following presently.

WRITTEN IN NAPLES, MARCH, 1833

We are what we are made; each following day
Is the Creator of our human mould
Not less than was the first; the all wise God
Gilds a few points in every several life
And as each flower upon the fresh hill-side,
And every coloured petal of each flower,
Is sketched and dyed each with a new design,
Its spot of purple, & its streak of brown,
So each man's life shall have its proper lights,
And a few joys, a few peculiar charms,
For him round in the melancholy hours,
And reconcile him to the common days.
Not many men see beauty in the fogs
Of close low pine-woods in a river town:
Yet unto me not morn's magnificence,
Nor the red rainbow of a summer eve,
Nor Rome, nor joyful Paris, nor the halls
Of rich men blazing hospitable light,
Nor wit, nor eloquence, no, nor even the song
Of any woman that is now alive,
Hath such a soul, such divine influence,
Such resurrection of the happy past,
As is to me when I behold the morn
Ope in such low moist road-side, & beneath
Peep the blue violets out of the black loam,
Pathetic silent poets that sing to me
Thine elegy, sweet singer, sainted wife!

WHAT IS IT TO SAIL

What is it to sail
Upon the calm blue sea
To ride as a cloud
Over the purple floor
With golden mists for company?

And Day & Night are drest
Ever in their jocund vest,
And the water is warm to the hands,
And far below you see motes of light
By day, & streams of fire by night.

What is it to sail
Upon the stormy sea,
To drive with naked spars
Before the roaring gale,
Hemmed round with ragged clouds,
Foaming & hissing & thumping waves
The reeling cabin is cold & wet,
The masts are strained, & the sail is torn,
The gale blows fiercer as the night sets in
Scarce can the seaman aloft master his struggling reef,
Even the stout captain in his coat of storms
Sighs as he glances astern at the white, white combs

And the passenger sits unsocial
And puts his book aside
And leans upon his hand.
Yet is the difference less
Between this gray sea & that golden one
Than twixt the moods of the man that sails upon it
Today & yesterday.

ALONE IN ROME! WHY ROME IS LONELY TOO

Alone in Rome! Why Rome is lonely too,
Virtue alone is sweet society.
It keeps the key to all heroic hearts,
And opens you a welcome when you dare.
You must be like them, if you challenge them,
Scorn trifles, & embrace a better aim
Than wine, or sleep, or praise,
Hunt knowledge, as the lover woos a maid,
And ever, in the strife of your own tho'ts,
Obey the nobler impulse. That is Rome.
That shall command a senate to your side
For there is no force in the universe
That can contend with love.
Wait then, sad friend, wait in majestic peace
The hour of Heaven [Chronological List of Poems](#)

AT SEA, SEPTEMBER 1833

Oft as I paced the deck,
My thought recurred on the uncertain sea
To what is faster than the solid land.
My Country! can the heart clasp realm so vast
As the broad oceans that wash thee inclose?
Is not the charity ambitious
That meets its arms about a continent?
And yet the sages praise the preference
Of my own cabin to a baron's hall.
Chide it not then, but count it honesty
The insidious love & hate that curl the lip
Of the frank Yankee in the tenements
Of ducal & of royal rank abroad;
His supercilious ignorance
Of lordship, heraldry, & ceremony;
Nor less, his too tenacious memory,
Amid the particolored treasuries
That deck the Louvre & the Pitti House,
Of the brave steamboats puffing by New York,
Boston's half-island, & the Hadley Farms
Washed by Connecticut's psalm-loving stream.
Yea, if the ruddy Englishman speak true,
In Rome's basilica, and underneath
The frescoed sky of its audacious dome,
Dauntless Kentucky chews, & counts the cost,
And builds the shrine with dollars in his head.
Arrived in Italy, his first demand, —
'Has the star-bearing squadron left Leghorn?'

I WILL NOT HESITATE TO SPEAK THE WORD

I will not hesitate to speak the word
Committed to me. It is not of men
It is not of myself — no vain discourse
Empty oration, tinkling soulless talk
My heart lies open to the Universe
I read only what there is writ I speak
The sincere word that's whispered in my ear
I am an organ in the mouth of God
My prophecy the music of his lips.
Tho' harsh in evil ears 'tis harmony
To patient wise & faithful hearts whose love
Cooperates with his
Concord of heaven & earth. Author divine
Of what I am & what I say, vouchsafe
To cleanse me that my folly may not hide
Thy truth nor my infirmity disguise
The Omnipotence that animates my clay.
Thou Lord dost clothe thy attributes with flesh
And named it man a morning spectacle
Unto the universe exhibiting
A manifold & mystic lesson [Chronological List of Poems](#)

POEM, SPOKEN BEFORE THE SOCIETY, AUGUST, 1834

Is not this house a harp whose living chords,
Touched by a Poet with electric words,
Would vibrate with a harmony more true
Than Handel's married thunders ever knew?
But I, — mere lover of the Bards' sweet speech,
A simple seeker of the truth they teach,
Having no skill to play, must touch a string
That even to fumbling hands may music bring.
For who can love AMERICA, but seems
Clothed with some favor from its woods and streams?

His hand who hung in space this sun-burnt ball
Made Man the Heart in harmony with all
And each man to his native country tied
With the twin ligaments of love & pride.
And shall it be by antique men alone
In petty states can patriot zeal be shown
They vaunt their pastures at a kingdom's worth
And we be dumb, whose lands balance the earth.

What purpose to man friendly hid so long
Columbia from the subtle & the strong,
Almost from pole to pole its green extent
Yet measured — only by the firmament.
Along the enormous tract in every belt
Of latitude, a several climate felt:
Under the arctic morn, red snow and moss,
Flora's cold elements, the rocks emboss.
Southward, the rose, the apple, and the corn,
Thank the sweet influence of night and morn;
The palm-tree shakes its feathers on the Line,
And round the cane and plantain, curls the vine.

Thou shalt not covet; leave those lands alone,
Content to speculate within thine own.
As the stars shine in heaven, so genial shine
Thy stars, my country, to all lands a sign!

My state, my country, to all lands a sign.
The little traveller from Britain's isle
Lost in these far-spread states, may chirp and smile
At unbred men; because his dinner cools,
The country's naught, — the countrymen are fools.
For him an ill-served soup hath disenchanted
The mighty hemisphere his fathers planted;
He sees not, by the famous pilgrims won,
A hundred Englands opening to the sun.

These northern fields, once the bear's range and den
Bread, iron, oak, and coal, they yield to men.
Richer than purple hills of oil & wine,
Our barren mountains give their son, the Pine;
Borne on whose planks, the hardy fishers float
Round earth, wherever waves will bear a boat.

Angels might lean to see man going forth
With axe & plough to tame the savage earth;
The builder's saw and hammer never rest;
A village climbs each hill with whitening crest;
Lowell, Bangor, & Rochester express
To pleased God the redeemed wilderness:
See the green line of culture westward run

O'er hill, swamp, prairie, to the setting sun:
Yon wagon, disappearing in the woods,
Transplants the Saxon germ to lovelier solitudes,
Bearing the wife, the babes, — basket & store —
To greet with English tongue Pacific's shore.
What's Italy? What's England; Flanders France
That may compare with this inheritance
Prisons of cooped up millions born too late
Whose loss were gain to the oerburdened state
Here shall a man be rated at his worth
And nature's freshest roses hail his birth.

Best name that Time can in his annals find
Columbia styled the Asylum of mankind
Blest office! to the exile to dispense

With open hand a God's munificence
Say to him there is room for us and him
In the deep woods & by the Ocean's brim;
Yes greet sad Europe's exile to your shores
Let love unbar to him the mountain doors
Bid homeless Poland prove this side the main
The freedom she hath perilled all to gain
Give Erin's starving outcast, wholesome meat;
And England's haggard weaver slumber sweet.

Ah thou poor orphan! did the pitiless bed
Of feudal earth that bare thee grudge thee bread?
Was man so cheap in yon preserves of game
That thou must bend thy body as in shame
At being man; in Want, did life begin;
Thy only happiness the joys of sin;
Was it thine added crime some shame to feel,
To be for life the treadle of a wheel?
Come, clear thy brow; the hospitable Hours
Shall weave thy future web with healing flowers.
Welcome! in this continent thou shalt see
God's blessing broad enough to cover thee.
Come, teach thy lip to smile; that hopeless brow
I'll fit the firmament that shades thee now.
Go climb the Allegany's strait defiles;

Speed up Missouri twice a thousand miles,
Traverse the unplanted forest floor, whereon
The allseeing sun for ages hath not shone;
Build where thou wilt thy home in Freedom's soil,
And bare thy strong arms to a freeman's toil;
Plenty shall fill for thee her laughing horn,
And fields be jocund when thy son is born;
Go rear, — for truth the British gibe prevents, —
A race of captains, judges, presidents.

Small praise I deem it that this continent
Provides the beggar bread, clothing, content;
But greater praise no lands have claimed or can

Than this, — we make the vagabond a man.
Him for whom Thought & Freedom were but words
Whose substance was monopolized by lords
Open in him that inward eye whose view
Doth re-create the Universe anew
Is the rose fair? behold it glows for him;
For him the sea shells blush; the dolphins swim;
The perfumed morning sheds her diamond dew;
All sights and sounds in him their spirit infuse;
The keen October's air, when trees are gay
With rainbow plumage, deepening day by day;
The midnights pomp when yonder horned moon
Rivals days golden with a silver moon;
But more than all, he was for Virtue born,
Though thrown neglected on his country's scorn
And every gift benignant heaven let fall
On Man, the exile *here* is heir of all.

Yes, ope the hospitable forest wide
Unto poor men from all the realms of pride
So shall the New World pay the old its debt
For the great pair, — Columbus, — Lafayette;
From yon serene heaven leaning they shall see
The land which one would find, and one would free.

Alas for France! her truest heart is fled:
Her long-descended noble lieth dead
— The best of heroes in the worst of times
His spotless life relieves his country's crimes
Permit the vagrant muse to grace her verse
Borrowing a garland from his recent hearse

Ten years are flown since this great heir of fame
Stood here among us — to his children came
In his clear atmosphere of honor stood
And warmed us with the glory of the good
You know Who knows it not in any clime
The jubilee & triumph of that time
The nation followed him with eyes of love
As if he were some Genius from above

AS if he were some Genius from above
Uprose the farmer by his apple-tree
Tarried the sailor ere he put to sea.
The story of his life through all mouths ran
And swelling crowds hemmed in the heroic man
They pored insatiate on his seamed face
As if to search therein the spirit's grace
In calm simplicity the old man stood
As one on sights of joy unused to brood
Seemed his great heart more easily would brave
A martyr for man's liberty — the grave
He wore no badge — no mark the eye could see
Adorned only with his history.

So seemed to us; but envious Carlists prate
He was a good man but was never great;
His simple figure in the rich saloons
And halting foot displeased the court buffoons
He had a fixed smile, a farmers face,
Nor looked like marquis of the ancient race.
Ah! could these worshippers of ribbons read
In mortal features an immortal need!
That smile has braved Bourbon's & Orleans' frown,
That farmer's face outfaced Napoleon.
That patient worshipper of right was known
Where gayer lineaments might not be shown

In war's red lines, & in the popular shock
When foaming thousands bellowed, 'To the block!'
A tower immovable in Factions sea,
The patriarch, 'mid the nations, of the free.
Smile did he? twas for Freedoms livelong hope
When all but he quailed at her horoscope;
Write on his tomb— 'He never failed to smile
Gainst death, for freedom & for man the while.'
But when a man to noble place pretends
Take the old touchstone Judge him by his friends
There were two men in this our latter age
Might challenge greatness on a Roman page

One had a patriot's, one a monarch's heart, —
Both soldiers — Washington and Bonaparte.
On Lafayette in arms leaned Washington,
— When saw the world such pair? — father and son.
Napoleon, when all Europe knelt around him,
Sought Lafayette, — fain with his love had bound him,
And he whom Europe served, proud of its chain,
Sued to the great republican in vain.

Rich is the living map the eagle sees
Sailing o'er Auburn in the harvest breeze;
Bright streams, white towns, & man sustaining farms,
And Boston folded in the Ocean's arms;
— O'er town & suburb broods her public dome,
And speaks to countless eyes of Law & Home. —
And farther than that wind-borne eagle flies
Beyond the Southern Horn, or northern ice,
The errands of the pleasant land are done,
As shod with winds o'er seas her envoys run.
Fair heritage! only by Virtue strong,
Be thou the tower of right, abolisher of wrong.
What charms the man that views from hill or tower
These gathered symbols of a people's power.
Is it that round him six score thousand men
Feed fat each day to sleep out night again.
If there to grudge, to rob, to mob, they dwell,
The wolf, the wild cat might be there as well.

If ancient Virtue's fire is gone & spent,
Perish these piles of Art & ornament!
Burn church & schoolhouse, which our license mock,
And let the gallant vessel rot in the dock.
The world-encircling merchant sink his goods
And with his babes pick berries in the woods:
Nay let the rotten land suck in the seas,
And the whales pasture mid our college trees!

But if the children of New England feel
With their high lifted fate an even zeal

If to be native of this law-ruled earth
Shall be in the world synonymous with worth;
Who eats his bread by Massachusetts' streams
Shall steadfast aim to be the thing he seems
Shall love the country that him bore & bred
Revere the memory of her worthy dead
Feel his heart beat with throbs no sneer withstands
At Concord, Bunker's height, and Plymouth sands
And, his debt owned to God & to good men,
Cannot lay down his dust in dust again
Till he, by studious thought, or deed of love,
Have sealed his kindred with the blest above;
— Enamoured of such worthiness shall Fate
Concede the commonwealth a longer date.
And when remotest times together view
Acts of the elder England & the New
One self same genius shall shine through them all
From ancient Runnimeade to Faneuil Hall.

That genius is the Saxon love of Law
And Freedom, whence our daily peace we draw.
For see how Heaven preserves us; when, of late,
Ill omened birds screamed shipwreck to the state,
Then, to redeem the law from the law's foes,
An unexpected strength at once arose;
Thundered from lips long silent, voices wise,
And patriot anger flamed in quiet eyes.

Ill fits the abstemious muse a crown to weave
For living brows; — ill fits them to receive:
And yet, if Virtue abrogate the law,
One portrait, — fact or fancy — we may draw:
A form which nature cast in the heroic mould
Of them who rescued liberty of old;
He, when the rising storm of party roared,
Brought his great forehead to the council board:
There, when hot heads perplexed with fears the state,
Calm as the morn, the manly patriot sate;
Seemed, when at last his clarion accents broke,
As if the commonwealth of the commonwealth

AS IF the conscience of the country spoke.
Not on its base Monadnoc surer stood
Than he to common sense and common good
No mimic; — from his breast his counsel drew
Believed the eloquent was aye the true;
He bridged the gulf from the alway good & wise,
To that within the vision of small eyes.
Self centred; when he launched the genuine word
It shook or captivated all who heard;
Ran from his mouth to mountains & the sea,
And burned in noble hearts proverb & prophecy.
Not old but wise, — for justice born to strive, —
God keep New England's WEBSTER long alive!

Yet even this day of hope may be o'er cast
And future months resemble months now past
O countrymen! though every cheek may burn
With crimson shame from time this lesson learn
The towers that generations did combine
To build & grace, a rat may undermine.

I speak unto the generous & the good
Unto New England's choicest brotherhood
Trust not the guarding sea, the fertile land
Nor fleets, nor hosts, nor law's unsure command;
Build in the soul your citadel apart, —
The true New England is the patriots heart.
The day of elder states may come to us
When public faith shall be ridiculous.

When times are changed, and the old cement gone,
Nor longer laws can yield protection;
Even then, when justice is put up to sale,
Shall one resource redress the unequal scale
For, the true man, as long as earth shall stand,
Is to himself a state, a law, a land;
In his own breast shall read the righteous laws,
His own heart argue injured Virtues cause,
With cheerful brow undauntedly shall face
Or frowning kings, or roaring populace;

And, spending in man's cause his latest breath,
Shall greet with joy sublime the Angel Death.

S. R.

Demure apothecary
Whose early reverend genius my young eye
With wonder followed, & undoubting joy,
Believing in that cold & modest form

Brooded always the everlasting mind.
And that thou faithful didst obey the soul,
So should the splendid favour of the God
From thine observed lips shower words of fire,
Pictures that cast before the common eye,

I know for mine, & all men know for theirs.
How is the fine gold dim! the lofty low!
And thou, reputed speaker for the soul,
Forgoest the matchless benefit, & now,
Sleek deacon of the New Jerusalem,

Thou hast defied the offering world to be
A blind man's blind man.
Was it not worth ambition
To be the bard of nature to these times
With words like things,

An universal speech that did present
All natural creatures, and the eye beheld
A lake, a rose tree, when he named their names?

And better was it to cower before the phantoms
One self-deceiving mystic drew in swarms
Wherever rolled his visionary eye,
The Swedish Pluto of a world of ghosts,
Eyes without light, men without character,
Nature a cave of theologians? —

And lo! the young men of the land
Decline the strife of virtue, fail to be
The bringers of glad thought, preferring Ease

Ease & irresolution & the wine
Of placid rich men, they consent to be
Danglers & dolls. With these, not thou, not thou,
O noblest youth, not thou wilt there remain!
Up! for thy life, & for thy people's life!
And be the sun's light & the rainbow's glow,
And by the power of picture, to the eye
Show wherefore it was made. Unlock
The world of sound to the astonished ear,
And thus by thee shall man be twice a man.
Were it not better than to boast thyself
Father of fifty sons, flesh of thy flesh,
Rather to live earth's better bachelor
Planting ethereal seed in souls,

Spreading abroad thy being in the being
Of men whom thou dost foster & inform,
Fill with new hopes, & shake with grand desire?

PHILOSOPHERS ARE LINED WITH EYES WITHIN

Philosophers are lined with eyes within
And being so the sage unmakes the man
He is in love he cannot therefore cease his trade
Scarce the first blush has overspread his cheek
He feels it, introverts his learned eye
To catch the unconscious heart in the very act
His mother died, the only friend he had
Some tears escaped but his philosophy
Couched like a cat sat watching close behind
And throttled all his passion. Is't not like
That devil-spider that devours her mate
Scarce freed from her embraces [Chronological List of Poems](#)

THE SIMPLE PEOPLE EACH WITH BASKET OR TOOL

The simple people each with basket or tool
Had left the young & resolute to rule
But strange disorder in the councils crept
Whilst they in farm & orchard toiled & slept
The farmer & the merchant missed their mart
And no reward attends the craftsman's art
Awaking from their lethargy they hear
Rude words which neither land nor sea will bear
A great concourse surrounds a single man
And waits obsequious
Watches his words, & predicates his will
Uprose the farmer by his apple tree
Tarried the sailor ere he put to sea
And who is he & who are ye he said
And what care I if ye are tail or head
Shall I who know not of the trade of state
Who know not, care not for the statesmans fate
Scarce hold the name of parties & of banks
Measures or leaders, officers or ranks
Shall I descend so low to ask or hear
What one man does or says with hope or fear
Follow the chance direction of his eye
Find his smile Fortune his frown poverty
God made these eyes: fear's watch they cannot keep
God made this frame erect, it cannot creep.

LET ME GO WHERE E'ER I WILL

Let me go where e'er I will
I hear a skyborn music still
It sounds from all things old
It sounds from all things young
From all that's fair from all that's foul
Peals out a cheerful song
It is not only in the Rose
It is not only in the bird
Not only where the Rainbow glows
Nor in the song of woman heard
But in the darkest meanest things
Theres always always something sings.

Tis not in the high stars alone
Nor in the cups of budding flowers
Nor in the redbreast's mellow tone
Nor in the bow that smiles in showers
But in the mud & scum of things
Theres always always something sings.

LOOK DANGER IN THE EYE IT VANISHES

Look danger in the eye it vanishes
Anatomize that roaring populace
Big dire & overwhelming as they seem
Piecemeal t'is nothing. Some of them scream
Fearing the others some are lookers on
One of them hectic day by day consumes
And one will die tomorrow of the flux
One of them has already changed his mind
And falls out with the ringleader and one
Has seen his creditor amidst the crowd
And flees. And there are heavy eyes
That miss their sleep & meditate retreat.
A few malignant heads keep up the din
The rest are idle boys.

IN THE DEEP HEART OF MAN A POET DWELLS

In the deep heart of man a poet dwells
Who all the day of life his summer story tells
Scatters on every eye dust of his spells
Scent form & color to the flowers & shells
Wins the believing child with wondrous tales
Touches a cheek with colors of romance
And crowds a history into a glance
Gives beauty to the lake & fountain
Spies over sea the fires of the mountain
When thrushes ope their throat, tis he that sings
And he that paints the oriole's fiery wings
The little Shakspeare in the maidens heart
Makes Romeo of a ploughboy on his cart
Opens the eye to Virtues starlike meed
And gives persuasion to a gentle deed.

O WHAT ARE HEROES PROPHETS MEN

O what are heroes prophets men
But pipes through which the breath of Pan doth blow
A momentary music. Being's tide
Swells hitherward & myriads of forms
Live, robed with beauty, painted by the Sun:
Their dust pervaded by the nerves of God
Throbs with an overmastering energy
Knowing & doing. Ebbs the tide, they lie
White hollow shells upon the desert shore.
But not the less the eternal wave rolls on
To animate new millions, & exhale
Races & planets its enchanted foam.

WOODS

A Prose Sonnet

Wise are ye, O ancient woods! wiser than man. Whoso goeth in your paths or into your thickets where no paths are, read-eth the same cheerful lesson whether he be a young child or a hundred years old. Comes he in good fortune or bad, ye say the same things, & from age to age. Ever the needles of the pine grow & fall, the acorns on the oak, the maples redden in autumn, & at all times of the year the ground pine & the pyrola bud & root under foot. What is called fortune & what is called Time by men — ye know them not. Men have not language to describe one moment of your eternal life. This I would ask of you, o sacred Woods, when ye shall next give me somewhat to say, give me also the tune wherein to say it. Give me a tune of your own like your winds or rains or brooks or birds; for the songs of men grow old when they have been often repeated, but yours, though a man have heard them for seventy years, are never the same, but always new, like time itself, or like love.

I HAVE SUPPED WITH THE GODS TONIGHT

I have supped with the gods tonight
Shall I come under wooden roofs?
As I walked on the hills
The great stars did not shine aloof
But they hurried down from their deep abodes
And hemmed me in their glittering troop [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

ONCE THE PRIEST

Once the priest
Lived in an age
Of narrow & strait experience
Narrow & strait it cut his cowl
Narrow & strait it pinched his soul
The times are changed, the ball is known
The lands are found, the forest shown,
The woods are felled, the cities rise,
Swift fly the ships, the letter flies,
The train along the railroad skates
It leaves the land behind like ages past
The foreland flows to it in river fast
Missouri is the merchant's mart
Iowa learns the Saxon Art
What should the old priest in a world like this
The new time will have a new priest I wis
He must know the house where he belongs
His ear must catch its many tongues
On the Bourse in Louvre walk
In Lloyd's in Wall Street talk
His fine ear judge in the theater
In Caucus know the ballots go
And what the Barroom gossips so
What books the people write & read
What Reforms the restless breed
What the loghut thinks of the White House He should know all things, all things
see
And present at their secret be [Chronological List of Poems](#)

KIND & HOLY WERE THE WORDS

Kind & holy were the words —
O how trustingly they fell!
Music wants such sweet accords —
Sister, this thy perfect spell.
All the woman now was dropt,
All the friend came forth to me,
The beauty I had pictured oft
Was vanished utterly
Before the dearer emanation
Of undefiled affection,
Of earnest, wistful, ancient love,
With clear & liquid eye,
Older than the gods above,
Fountain of their deity.
Yet thou showed me no love
For the sake of love,
That for meaner souls was made
To whom passion is their bread.
Thou didst wrap thy love in thought
It to me in wisdom taught
In the rapid utterance
Of thy noble aim & hope
In the clear deliverance
Of the will's & wisdoms scope.
Now pleasant fall the blinding snows,
And gay to me the darkest night,
A merry catch the cold wind blows,
And Pain can yield its own delight,
Whilst thou to me & I to thee belong
By the high kin of thought, O Sister of my song!

THE DISCONTENTED POET: A MASQUE

Lonely he sat, the men were strange
The women all forbidden
Too closely pent in narrow range
Between two sleeps a short day's stealth
Mid many ails a brittle health
Counts his scant stock of native wealth
By conscience sorely chidden

His loves were sharp sharp pains
Outlets to his thoughts were none
A wandering fire within his veins
His soul was smouldered & undone
A cripple of God, half true, half formed,
And by great sparks Promethean warmed

Constrained by impotence to adjourn
To infinite time his eager turn,
His lot of action from the Urn.

He by false usage pinned about
No breath therein, no passage out,
Cast wishful glances at the stars
And wishful hailed the Ocean stream,
"Merge me in the brute Universe
Or lift to some diviner dream."

Beside him sat enduring love:
Upon him noble eyes did rest,
Which for the genius that there strove
The follies bore that it invest:
They spoke not: for their earnest sense
Outran the craft of eloquence:

The holy lovers peaceful sate
Through extacy inanimate
As marble statues in a hall,
Yet was their silence musical;

The only plaints, the sole replies,
Were those long looks of liquid eyes.

Chorus Yon waterflags, yon sighing osier,
A drop can shake, a breath can fan
Maidens laugh & weep: Composure
Is the pudency of man.

Chorus Means, — dear brother, ask them not;
Soul's desire is means enow;
Pure content is angels lot;
Thine own theatre art thou.

Poet I see your forms with deep content
I know that ye are excellent;
But will ye stay?
I hear the rustle of wings
Ye meditate what to say
When ye go to quit me forever & aye.

Chorus Brother, we are no phantom band,
Brother accept this fatal hand
Aches thy unbelieving heart
With the fear that we must part?
See all we are rooted here
By one thought to one same sphere;
From thyself thou canst not flee,
From thyself no more can we.

Poet Suns & stars their courses keep,
But not angels of the deep;
Day & night their turn observe,
But the day of day may swerve.
Is there warrant that the waves
Of thought from their mysterious caves
Will heap in me their highest tide
In me therewith beatified?
Unsure the ebb & flow of thought, —
The moon comes back, the spirit not.

Chorus Brother, sweeter is the Law
Than all the grace Love ever saw
We are its suppliants. By it we
Draw the breath of eternity:
Serve thou it not for daily bread
Serve it for pain & fear & dread.
Love it, though it hide its light;
By love behold the Sun at night;
If the Law should thee forget,
More enamoured serve it yet:
Though it hate thee, — suffer long, —
Put the Spirit in the wrong, —
That were a deed to sing in Eden,
By the waters of life to Seraphs heeding.

—

LOVE

Asks nought his brother cannot give
Asks nothing but does all receive
Love calls not to his aid events
He to his wants can well suffice
Asks not of others soft consents
Nor kind Occasion without eyes
Nor plots to ope or bolt a gate
Nor heeds Condition's iron walls
Where he goes, goes before him Fate;
Whom he uniteth God instals;
Instant & perfect his access
To the dear object of his thought,
Though foes & lands & seas between
Himself & his love intervene.

HE WALKED THE STREETS OF GREAT NEW YORK

He walked the streets of great New York
Full of men, the men were full of blood
Signs of power, signs of worth,
Yet all seemed trivial
As the ceaseless cry
Of the newsboys in the street
Now men do not listen after
The voice in the breast
Which makes the thunder mean
But the Great God hath departed
And they listen after Scott & Byron
I met no gods — I harboured none,
As I walked by noon & night alone
The crowded ways
And yet I found in the heart of the town
A few children of God nestling in his bosom
Not detached as all the crowd appeared
each one a sutlers boat
Cruising for private gain
But these seemed undetached united
Lovers of Love, of Truth,
And as among Indians they say
The One the One is known
So under the eaves of Wall Street
Brokers had met the Eternal
In the city of surfaces
Where I a swain became a surface
I found & worshipped Him.
Always thus neighbored well
The two contemporaries dwell
The World which by the world is known
And Wisdom seeking still its own
I walked with men
Who seemed as if they were chairs or stools
Tables or shopwindows or champagne baskets
For these they loved & were if truly seen

I walked with others of their wisdom gave me proof
Who brought the starry heaven
As near as the house roof [Chronological List of Poems](#)

WHERE THE FUNGUS BROAD & RED

Where the fungus broad & red
Lifts its head
Like poisoned loaf of elfin bread
Where the aster grew
With the social goldenrod
In a chapel which the dew
Made beautiful for God
The maple street
In the houseless wood
O what would nature say
She spared no speech today
The fungus & the bulrush spoke
Answered the pinetree & the oak
The wizard South blew down the glen
Filled the straits & filled the wide,
Each maple leaf turned up its silver side.
All things shine in his damp ray
And all we see are pictures high
Many a high hill side
Which oaks of pride
Climb to their tops
And boys run out upon their leafy ropes

In the houseless wood
Voices followed after
Every shrub & grapeleaf
Rang with fairy laughter
I have heard them fall
Like the strain of all
King Oberons minstrelsy
Would hear the everlasting
And know the only strong
You must worship fasting
You must listen long
Words of the air
Which birds of the air
Come to fetch and carry

Carry afloat below around
To the isles of the deep
To the snow capped steep
To the thundercloud
To the loud bazaar
To the haram of Caliph & Kremlin of Czar
Is the verse original
Let its numbers rise & fall
As the winds do when they call
One to another

Come search the wood for flowers
Wild tea & wild pea
Grape vine & succory
Coreopsis
And liatris
Flaunting in their bowers
Grass with greenflag halfmast high
Succory to match the sky
Columbine with horn of honey
Scented fern & agrimony
Forest full of essences

Fit for fairy presences,
Peppermint & sassafras
Sweet fern, mint, & vernal grass,
Panax, black birch, sugar maple,
Sweet & scent for Dian's table,
Elder-blow, sarsaparilla,
Wild-rose, lily, dry vanilla.

THE SKEPTIC

Madness, madness,
Madness from the gods!
To every brain a several vein
Of madness from the gods!
Their heads they toss each one aloft
They toss their heads with pride,
Though to break free they struggle oft
And shoulder each aside
What boots it, though their arms stretch out,
And wings behind their shoulders sprout,
If as at first, also at last,
Their planted feet like trees are fast,
Rooted in the slime of Fate,
Sepulchre predestinate:
As if their feet were flint, & soon
All the trunk will grow to stone.
Not one has surmounted
The Destiny yet:
Not one has accounted
To Conscience his debt.
Many in the dark have groped,
Many for the dawn have hoped,
And some more brave, or else more blind,
The freedom all desire, pretend to find.
Of all past men
Not one has snapped the chain
All enter life, each one the dupe
Of the arch-deceiver Hope:
Each hears the Siren whisper; 'he,
Though first of men, shall yet be free;'
That one of their own stem,
Man of Ur, or Bethlehem,
Jove or Alcides,
Mahmoud or Moses,
From their eye shall pluck the beam
And their heart from death redeem.

But Destiny sat still,
And had her will.
Know thou surely
That there is yet no prophet's ken,
No seer in the sons of men,
Those in whom thou dost confide,
Whom thy love has deified,
With a superabundant trust, —
Their words are wind, their forms are dust.
O thousand blossomed but barren tree!
Much-pretending, helped they thee?
Merchant & statesman
Poet & craftsman
Prophet & judge
Pirate & drudge
One fortune levels
Human angels human devils
For ever when a human brain
Its perfect purpose will attain
Then suddenly the pitiless
Performance-hating Nemesis
Withdraws the prize like a painted slide
And a new bauble is supplied
He that threatens is threatened
Who terrifieth is afraid [Chronological List of Poems](#)

KNOWS HE WHO TILLS THIS LONELY FIELD

Knows he who tills this lonely field
To reap its scanty corn
What mystic fruit his acres yield
At midnight & at morn That field by spirits bad & good
By Hell & Heaven is haunted
And every rood in the hemlock wood
I know is ground enchanted In the long sunny afternoon
The plain was full of ghosts
I wandered up I wandered down
Beset by pensive hosts For in those lonely grounds the sun
Shines not as on the town
In nearer arcs his journeys run
And nearer stoops the moon There in a moment I have seen
The buried Past arise
The fields of Thessaly grew green
Old gods forsook the skies I cannot publish in my rhyme
What pranks the greenwood played
It was the Carnival of time
And Ages went or stayed To me that spectral nook appeared
The mustering Day of doom
And round me swarmed in shadowy troop
Things past & things to come The darkness haunteth me elsewhere
There I am full of light
In every whispering leaf I hear
More sense than sages write There is no mystery
But tis figured in the flowers
There is no history
But tis calendared in the bowers Underwoods were full of pleasance
All to each in kindness bend
And every flower made obeisance
As a man unto his friend.

ON THAT NIGHT THE POET WENT

On that night the poet went
From the lighted halls
Beneath the darkling firmament
To the sea shore to the old sea walls
Dark was night upon the seas
Darker was the poet's mind
For his shallow suppleness
Black abyss of penitence
The wind blew keen, the poet threw
His cloak apart to feel the cold
The wind he said is free & true
But I am mean and sold.
Out shone a star between the clouds
The constellation glittered soon,
"You have no lapse! so have ye glowed
But once in your dominion.
And I to whom your light has spoke
I pining to be one of you
I fall, my faith is broken
Ye scorn me from your deeps of Blue
And yet dear stars I know ye shine
Only by needs & loves of mine
Light loving light asking Life in me
Feeds those eternal lamps I see [Chronological List of Poems](#)

[*Alphabetical List of Poems*](#)

LIFE IS GREAT

Life is great
Men are small
Were it not for the Power
To which each testifies
We could not suppress a titter.
The Soul is in eternity.
As a man stands in the landscape
He is very small,
But he is apprised that the other is large
And being so apprized
Partakes of its scope.
When once he has believed
And become doubly alive
Threescore & ten orbits of the sun
To him short term appears
And he finds it not unworthy
To live long only for a few lessons
Assured he shall pass through a million forms
And in each acquire the appropriate facts
So that one day he will emerge
Armed at all points a god,
A demigod, a chrysal soul
Sphered & centred to the whole.

[Alphabetical List of Poems](#)

BUT O TO SEE HIS SOLAR EYES

But O to see his solar eyes
Like meteors which chose their way
And rived the dark like a new day
Not lazy gazing on all they saw
Each chimney pot & cottage door
Farmgear & every picket fence
But feeding on magnificence
They bounded to the horizon's edge
And searched with the sun's privilege
Landward they reached the mountains old
Where pastoral tribes the flocks infold
Saw rivers run seaward from forest high
And the seas wash the low hung sky
Saw the endless rack of the firmament
And the sailing moon where the cloud was rent
And thro' man & woman & sea & star
Saw the dance of nature go
Thro' worlds & races & terms & times
Saw musical order & pairing rhymes.

WHO SAW THE HID BEGINNINGS

Who saw the hid beginnings
When Chaos & Order strove?
Or who can date the morning prime
And purple flame of love?

I saw the hid beginnings
When Chaos & Order strove,
And I can date the morning prime
And purple flame of Love.

Song breather from all the forest,
The total air was fame;
It seemed the world was all torches
That suddenly caught the flame.

Is there never a retroscope mirror
In the realms & corners of space,
That can give us a glimpse of the battle
And the soldiers face to face?

Sit here on the basalt ranges,
Where twisted hills betray
The feet of the world-old Forces
Who wrestled here on a day.

When the purple flame shoots up,
And Love ascends his throne,
I cannot hear your songs, o birds,
For the witchery of my own.

And every human heart
Still keeps that golden day,
And rings the bells of jubilee
On its own First of May.

WHAT NEVER WAS NOT, & STILL WILL BE

What never was not, & still will be,
Weighs in sand, grows in tree
Burns in fire primaeval Force
Lodged they say in Chaos once
Shooting thence it runs its course
Filling Space with moons & suns
Now it binds, & now it rives,
Feigns to perish yet revives
To bud & breed, to cling & hold,
Never wanes by waxing old,
The decaying of the fruit
Feeding fat the younger root
Nor less in souls
The subtle potentate controls
Pours thro mans tyrannic will
Fatal streams of empire still [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

ENOUGH IS DONE HIGHMINDED FRIEND GO SLEEP

Enough is done highminded friend go sleep
And leave me here to weep
With joy & envy at thy vestibule
And kneel to be admitted of thy school
Go sleep serene, for now thy deeds will wake
And other slumberers will rudely shake
Sleep, for thy deed will answer for thee loud
And crown thee absent to the wishful crowd
Actions are sons & daughters. O who need
In action sweat who's father to a deed?
Who longer pines or hoards, that once hath won
Engine or art a frigate or a town?
Thy genius which still drave thee as a ghost
Comes forth in actions that are uppermost
And that which rent thee with unkindly throes
Born is more sweet than apple or the rose
Henceforth our easy faith will grant thee all
Undone as done will thee the Master call
In thee the arts revive; the spritely seer
That looked thro Phidias has found a peer
We shall not fear the loss of arts again
Forgive us bards of Judah & of Greece
If we seem heedless of your memories
He has reinstated man on his own heart
And we shall rightly read the hint you gave
And henceforth leave your graveclothes in the grave Cheered us with plenty
For now we see the niggard cowardice
Ended so quick the inventory of arts
And six or seven branches could comprize
All the fine arts all the humanities On a few plants & stones our commerce waits
Corn cotton cane vine iron opium wheat
Hemp flax as these grow or fade
The wealth of states is stablished or unmade
There's not a weed waves in the wind
But is the girdle that will empires bind
As many arts & circles radiant

Of handmaid crafts & callings adjutant
With all their pensioners & appanage
As are the stuffs our chemistry engage [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THOU SHALT MAKE THY HOUSE

Thou shalt make thy house
The temple of a nation's vows
Spirits of a higher strain
Who sought thee once shall seek again
I detected many a god
Forth already on the road
Ancestors of beauty come
In thy breast to make a home [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THE GODS WALK IN THE BREATH OF THE WOODS

The gods walk in the breath of the woods
They walk by the sounding pine,
And fill the long reach of the old seashore
With colloquy divine
And the poet who overhears
Each random word they say
Is the prophet without peers
Whom kings & lords obey.

WOULD YOU KNOW WHAT JOY IS HID

Would you know what joy is hid
In our green Musketaquid
And for travelled eyes what charms
Draw us to these meadow farms
Come & I will show you all
Makes each day a festival
Stand upon this pasture hill
Face the eastern star until
The slow eye of heaven shall show
The world above the world below
The mottled clouds like scraps of wool
Steeped in the light are beautiful
And what majestic stillness broods
Over those colored solitudes
Sleeps the vast East in pleased peace
Whilst up behind yon mountain walls
The silent river flows [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

TELL ME MAIDEN DOST THOU USE

Tell me maiden dost thou use
Thyself thro nature to diffuse
All the angles of the coast
Were tenanted by thy sweet ghost
Bore thy colours every flower
Thine each leaf & berry bore
All wore thy badges & thy favours
In their scent or in their savours
Every moth with painted wing
Every bird in caroling
The woodboughs with thy manners waved
The rocks uphold thy name engraved
The sod throbb'd friendly to my feet
And the sweet air with thee was sweet
The saffron cloud that floated warm
Studied thy motion, took thy form,
And in his airy road benign
Recalled thy skill in bold design
Or seemed to use his privilege
To gaze over the horizon's edge
To search where now thy beauty glow'd
Or made what other purlieus proud?

ELIZABETH HOAR

Almost I am tempted to essay
For sympathetic eyes the portraiture
Of the good angels that environ me.
My sister is a Greek in mind & face
And well embodies to these latest years
The truth of those high sculptors old who drew
In marble or in bronze, on vase or frieze
The perfect forms of Pallas or the Muse;
Forms in simplicity complete
And beauty of the soul disdaining art.
So bright, so positive, so much itself,
Yet so adapted to the work it wrought
It drew true love, but was complete alone.
She seemed to commune with herself, & say,
I cannot stoop to custom & the crowd,
For either I will marry with a star,
Or I will pick threads in a factory.
So perfect in her action, one would say,
She condescended if she added speech.
Her look was sympathy, & though she spoke
Better than all the rest, she did not speak
Worthy of her. She read in many books,
And loved the Greek as t'were her mother tongue
She knew the value of the passing day
Thought it no mark of virtue to be scornful
Or cry for better company, but held [Chronological List of Poems](#)

EACH DAY A SOLID GOOD; NEVER MISTOOK

Each day a solid good; never mistook
The fashionable judgment for her own.
So keen perception that no judge or scribe
Could vie with her unerring estimate.
When through much silence & delay she spoke,
It was the Mind's own oracle, through joy
And love of truth or beauty so perceived:
Never a poor return on self.

PROTEUS

Poet bred in Saadi's school
Can wind the world off any spool,
Knows the lore of more & less.
Brahma stooped from the sky
& made the sun of the slime.
He made, of a toad, an archangel,
Of bats & bugs, a god as well,
If he should wash your eyes with rue,
You would remember
How hated were the forms you clasp,
And that once you adored the mummies,
Trust nothing that you see
It changes while you look
Do not think him a dunce
Who wore bells & foolscap once
He is the teacher of ages
For there is no wise man
Men are vascular only,
Constructive men only,
Pipes or channels, clay or crystal
Thro' them rolls the stream today
To roll tomorrow otherwheres
And leave these dry & mean
As high as thy perception goes,
Thou canst not overpraise the great
Yet grander heroes shine beyond.
We tread the ladder's lowest round
And before the Deity
Thy gods are pismires

Flow flow the waves hated
Accursed adored!
The waves of mutation;
No anchorage is.
Sleep is not, death is not,
Who seem to die, live.

House you were born in
Friends of your youth
Old man & young maid
Early toil & its gains
They are all vanishing
Fleeing to fables
Cannot be moored
See the stars through them,
The treacherous marbles
Know, the stars yonder
The stars everlasting
Are fugitive also
And emulate, vaulted,
The passing heat-lightning
or firefly's flight

When thou dost return
On the wave's circulation
Beholding the shimmer
The wild dissipation,
And out of endeavor
To change & to flow,
The gas become solid
And phantasms & nothings
Return to be things
And endless imbroglia
Is law & the world,
Then first shalt thou know
That in the wild turmoil
Horsed on the Proteus
Only canst thou ride to power.
And to Endurance.

Much thou must suffer
Be shocked & derided
Lose faith to gain faith,
Ah worse! must I say it?
Lose thy virtue, lose thy soul,
To gain the incorruptible.
The scale in this world

Of greatness & height
Is reversed in the other.
Crown of power, is fashioned
Of dust of abasement.

TO EVERY CREATURE

To every creature
Adam gave its name
Let each to all unmask its feature
And cognizance
Moth or bug or worm or snail
Mite or fly or atomy
Nor each nor any fail
Its lineage to proclaim
Not a plant obscure
But some bright morn its flowers unfold
And tell the Universe
Its family & fame.
No fly or aphid bites the leaf
But comes a chance
When egg or fretted path betray
The petty thief,
And his small malfaisance.
Many things the garden shows
And pleased I stray
From tree to tree
Watching the white pear bloom
Bee infested quince or plum.
I could walk days, years, away
Till the slow ripening secular tree
Had reached its fruiting time
Nor think it long [Chronological List of Poems](#)

POUR THE WINE! POUR THE WINE!

Pour the wine! pour the wine!
As it changes to foam,
So flashes the day-god
Rushing abroad,
Ever new & unlooked for,
In furthest & smallest
Comes royally home.
In spider wise
Will again geometrize,
Will in bee & gnat keep time
With the annual solar chime;
Aphides like emperors
Sprawl & play their pair of hours For Fancys gift
Can mountains lift;
The Muse can knit
What is past & what is done
With the web that's just begun,
Making free with time & size,
Dwindles here, there magnifies
Swells a rain-drop to a tun;
So to repeat
No word or feat,
Crowds in a day the sum of ages,
And blushing Love outwits the sages.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

HEARTILY HEARTILY

Heartily heartily
Nothing be false
Men ocular jocular
Work with the fingertips
Speak no deeper than the lips
Blow, good northwind, I grow nervous
Good wind, blow away all trace
Of the spectral populace.

POETS ARE COLORPOTS

Poets are colorpots
Dovesnecks & opaline
Exquisite daintiness
Vapors of wine
Delicate gloom
Barrel of opium
Blowing simoom
Cloud-collecting, dissipating
Brain relaxing enervating
Put your body on your word
Man & sonnet at accord
Set your foot upon the scales
My foot weighs just a pound
Said the cruel Yankee captain
Trucking for his precious bales
Of ermine skin & silver fur
With the painted islander.

IS JOVE IMMORTAL

Is Jove immortal
So is Cerberus at his portal
Nothing but lying is mean
Never let thy banner down
Rat & worm & wolverine
Have the old dazzle of God's crown
And in the Zodiack are seen
Health & Power become the wise
Fill the gaps with charities
Scatter this vetch everywhere
It will take root in the air
But he the dreaded Fates will please
Who has no eye or time for pease
God having shaped him like a wedge
And driven him to his forepledge
Forth as from a gun.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

HEARTILY HEARTILY SING

Heartily heartily sing
Ever be true in town or grove
Bears & men must have their swing
Of berries, & honey, & love.
There's no idiot like the wise
And most virtue's cowardice
What each is born to let him do
Let the devil himself be true
And he has an open track
And all planets at his back
Bare good meaning is an ass
Virtue brings its will to pass
He is wise who marries his end
Makes heaven & earth & hell his friend
Rushes to his deed
Will crack nature or succeed
Values in the issue had
Tis all one
What feat is done
Alike to build an iron way
From Montreal to Boston Bay
Or make a shanty glad.

CHLADNI STREWED ON GLASS THE SAND

Chladni strewed on glass the sand
Then struck the glass its music sweet
The sand flew into symmetry
Then with altered hand
drew discords, & the sand scattered formless,
We cannot find a foreign land
Into new laws we never come
Tho we run along the diameter
Of sidereal space.
Sing, & the rock will crystallize
Sing, & the plant will grow.

Obey one law above, below,
light, heat, & sound, each a liquid wave
And Beauty for the guide I gave
To lead where you should go.

The notes of the stream shall prate
Of the current that floats them on.

COMRADE OF THE SNOW & WIND

Comrade of the snow & wind
He left each civil scale behind
Him woodgods fed with honey wild
And of his memory beguiled
In caves & hollow trees he crept
And near the wolf & panther slept
He came to the green ocean's rim
And saw the sea birds skim
Summer & winter oer the wave
Like creatures made of skiey mould
Impassible to heat or cold.
He stood beside the main
Beautiful but insane
He felt himself as if the sky walked
Or the son of the wind
There was no man near
To mete himself withal [Chronological List of Poems](#)

NEW ENGLAND CAPITALIST

What are his machines
Of steel, brass, leather, oak, & ivory,
But manikins & miniatures,
Dwarfs of one faculty, measured from him,
As nimbly he applies his bending self
Unto the changing world, thus making that
Another weapon of his conquering will?
He built the mills, & by his polities, made
The arms of millions turn them.

Stalwart New Hampshire, mother of men,
Sea-dented Maine, reluctant Carolina,
Must drag his coach, & by arts of peace
He, in the plenitude of love & honor,
Eats up the poor, — poor citizen poor state.
Much has he done,
Has made his telegraph,
Propeller, car, postoffice, phototype,
His coast survey, vote by majority,
His life assurance, & star registry,
Preludes & hints of what he meditates; —
Now let him make a harp!

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

ON A RAISIN STONE

On a raisin stone
The wheels of nature turn,
Out of it the fury comes
Wherewith the spondyls burn.
And, because the seed of the vine
Is creation's heart,
Wash with wine those eyes of thine
To know the hidden part.
Wine is translated wit,
Wine is the day of day,
Wine from the veiled secret
Tears the veil away.

POET OF POETS

Poet of poets
Is Time, the distiller,
Chemist, refiner:
Time hath a vitriol
Which can dissolve
Towns into melody,
Rubbish to gold.
Burn up the libraries!
Down with the colleges!
Raze the foundations!
Drive out the doctors!
Rout the philosophers!
Exile the critics!
Men of particulars,
Narrowing niggardly
Something to nothing.
All their ten thousand ways
End in the Néant.

All through the countryside
Rush locomotives:
Prosperous grocers
Poring on newspapers
Over their shop fires
Settle the State.
But, for the Poet, —
Seldom in centuries
Comes the well-tempered
Musical man.
He is the waited-for,
He is the complement,
One man of all men.
The random wayfarer
Counts him of his kin.
This is he that should come
The tongue of the secret,
The heart of the secret.

the key of the casket,
Of Past & of Future.
Sudden the lustre
That hovered round cities,
Round bureaus of Power,
Or Chambers of Commerce,
Round banks, or round beauties,
Or state-rending factions,
Has quit them, & perches
Well pleased on his form.
True bard never cared
To flatter the princes
Costs time to live with them.
Ill genius affords it,
Preengaged to the skies.
Foremost of all men
The Poet inherits
Badge of nobility,
Charter of Earth;
Free of the city,
Free of the meadows,
Knight of each order,
Sworn of each guild,
Fellow of monarchs,
And, what is better,
Mate of all men.

Pan's paths are wonderful.
Subtile his counsel.
Wisdom needs circumstance,
Many concomitants, Goes not in purple,
Steals along secretly,
Shunning the eye;
Has the dominion
Of men & the planet,
On this sole condition, —
She shall not assume it.
When the crown first incloses
The brows of her son,
The Muse him denotes

The Muse hath deposed
From kingdom & throne.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

SEE THE SPHERES RUSHING

See the spheres rushing, —
Poet that tracks them
With emulous eye,
What lovest thou?
Planet, or orbit?
Whether the pipe,
Or the lay, it discourses?
In heaven, up yonder,
All the astronomy,
Sun-dance & star blaze,
Is Emblem of love.

Nought is of worth
In earth or in sky
But Love & Thought only.
Fast perish the mankind,
Firm bideth the thought,
Clothes it with Adam-kind,
Puts on a new suit
Of earth & of stars.
He will come one day
Who can articulate
That which unspoken
Vaults itself over us,
Globes itself under us,
Looks out of lovers' eyes,
Dies, & is born again; —
He who can speak well;
Men hearing delighted
Shall say, *that is ours*
Trees hearing shall blossom,
Rocks hearing shall tremble,
And range themselves dreamlike
In new compositions,
Architecture of thought.
Then will appear

What the old centuries,
Aeons were groping for,
Times of discomfiture,
Bankrupt millenniums.

[Alphabetical List of Poems](#)

THE PATIENT PAN

The patient Pan,
Drunken with nectar
Sleeps or feigns slumber
Drowsily humming
Music to the march of Time.
This poor tooting creaking cricket,
Pan half asleep, rolling over
His great body in the grass,
Tooting, creaking,
Feigns to sleep, sleeping never:
Tis his manner,
Well he knows his own affair,
Piling mountain-chains of phlegm
On the nervous brain of man,
As he holds down central fires
Under Alps & Andes cold.
Haply else we could not live
Life would be too wild an ode
Sun & planet would explode
Ah! the poor Adamkind
Fault of supplies
From the fire fountains
We busybodies
Ever experiment
See what will come of it
Prove the quaint substances
Prove our bodies, prove our essence
Fortunes, genius, elements,
Try a foot, try a hand,
Then plunge the body in
Then our wits characters
And our gods if we can
Analysing analysing
As the chemist his new stone
Puts to azote, puts to chlorine,
Puts to vegetable blues.

Ah my poor apothecaries,
Can ye never wiselier sit,
Meddle less & more accept,
With dignity not overstepped
Skies have their etiquette We are faithful to time
Time measured in moments
Only so many
Share of Methusalem
Share of the babe
Hundredhanded, hundredeyed,
Fussy & anxious
We would so gladly
Serve an apprenticeship
Day by day faithfully
Learn the use of Adam's tools
Fire & water, azote, carbon,
Gravity levity
Hatred attraction
Animals chemistry
Botany land
Have a right to our flesh
Know the honest earth by heart Do the feat of Archimedes
If the earth reject her sons
Till theyve learned her alphabeta
None but Hooke & Newton dare
Cross the threshold when it thunders.
Life is all too short for farming
All too short for architecture
All too short to learn the tongues
And for philosophy
Life's done ere weve begun to think.
Solid farming haw & geeing
Drive uphill the loaded team
Bud the pear & dig potatoes
What time Lyra's in the Zenith
That is wholesome as it makes
Man as massive as the glebe
Pricks dropsical pretension
Tames the infinite romance

Underpins the falcon turrets

High as fly falcons, fancy builds [Chronological List of Poems](#)

WHAT ALL THE BOOKS OF AGES PAINT, I HAVE

What all the books of ages paint, I have.
What prayers & dreams of youthful genius feign,
I daily dwell in, & am not so blind
But I can see the elastic tent of day
Belike has wider hospitality
Than my few needs exhaust, & bids me read
The quaint devices on its mornings gay.
Yet nature will not be in full possessed,
And they who truest love her, heralds are
And harbingers of a majestic race,
Who, having more absorbed, more largely yield,
And walk on earth as the sun walks in the sphere.

THE CIVIL WORLD WILL MUCH FORGIVE

The civil world will much forgive
To bards who from its maxims live
But if, grown bold, the poet dare
Bend his practice to his prayer,
And, following his mighty heart
Shame the time, & live apart,
Vae solis!

I found this, —
That of goods I could not miss
If I fell within the line,
Once a member, all was mine,
Houses, banquets, gardens, fountains,
Fortune's delectable mountains;
But if I would walk alone,
Was neither cloak nor crumb my own [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

MASK THY WISDOM WITH DELIGHT

Mask thy wisdom with delight,
Toy with the bow, yet hit the white.
The lesson which the Muses say
Was sweet to hear & to obey.
He loved to round a verse, & play,
Without remoter hope, or fear,
Or purpose, than to please his ear.
And all the golden summer-time
Rung out the hours with happy rhyme.
Meantime every cunning word
Tribes & ages overheard:
Those idle catches told the laws
Holding nature to her Cause.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

ROOMY ETERNITY

Roomy Eternity
Casts her schemes rarely,
And an aeon allows
For each quality and part
In the multitudinous
And many-chambered heart.

O BOSTON CITY LECTURE-HEARING

O Boston city lecture-hearing,
O Unitarian God-fearing,
But more, I fear, bad men-revering;
Too civil by half, thine evil guest
Makes thee his byword & his jest,
And scorns the men that honeyed the pest,
Piso & Atticus, with the rest.
Thy fault is much civility,
Thy bane, respectability.
And thou hadst been as wise, & wiser,
Lacking the Daily Advertiser.
Ah, gentlemen, — for you are gentle, —
And mental maids, not sentimental.

[*Alphabetical List of Poems*](#)

A PATCH OF MEADOW & UPLAND

A patch of meadow & upland
Reached by a mile of road,
Soothed by the voice of waters,
With birds & flowers bestowed.

This is my book of Chronicles,
Code, Psalter, lexicon,
My Genesis & calendar
I read it as I run.

It is my consolation
In mild or poignant grief,
My park & my gymnasium,
My out-of-door relief.

I come to it for strength,
Which it can well supply,
For Love draws might from terrene force
And potences of sky.

The tremulous battery, earth,
Responds to touch of man,
It thrills to the antipodes,
From Boston to Japan.

The planets' child the planet knows
And to his joy replies;
To the lark's trill unfolds the rose,
Clouds flush their gayest dyes.

When Ali prayed & loved
Where Syrian waters roll,
Upward the ninth heaven thrilled & moved
At the tread of the jubilant soul.

PARKS & PONDS ARE GOOD BY DAY

Parks & ponds are good by day,
But where's the husband doth delight
In black acres of the night?
Not my unseasoned step disturbs
The sleeps of trees or dreams of herbs

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

CLOUD UPON CLOUD

Cloud upon cloud.
Clouds after rain
Value standeth in success,
But the same value
Hideth in failure,
In poverty, mourning,
In solitude, crime;
The value adhesive
Sticks to them all
Refuses to sunder
From man, from man.
Differ servitude & rank
As chains that clank not, chains that clank
The last shall be first
The first be postponed
The latest promoted
At the end of the day
It first will appear
Who never surrendered
Who combated stoutly,
Where God was the while
We strutted we coxcombs
So condescendingly
Bowing & giving
Affecting to give
Virtue is a cockney grown [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

PAPAS BLONDINE

Papas Blondine
Grew tall & wise
Eschewing vanities
And loved the truth
Can Truth suffice?
The years shall show:
Truth is put upon its trial
Her judgment will not brook denial
In her large memory
Is never fact forgotten
And she will know
If Truth's as true as she
In action & in word
If the false world can afford
That any sterling be And if it prove that things are rotten
She will frankly call them so
She who is real,
She who cannot aught conceal,
She that hypocrisy disdains,
Never palters, never feigns,
But well believes
That she may dare
Confess her faith in any air
That honest meaning will not fail
Over falsehood to prevail
She will launch her thought nor fear it
Speak the truth to who will hear it.
But still as now
With pure good will And Bounty sculptured on thy brow
Give the downhearted world
Hints of Eternal cheer.

Brave maid obey thy heart
Accept what rule it shall impart
Nor heed one word of all the voices gay
Which in their manifolded quire

Stoop to Fashion & stoop to please
Flatter worthless ease In every house a welcome guest
For her good heart & searching eye
Though she bring this sunlike test
In lieu of a polished lie.
She can weave & embroider
Can write & draw
And like a mirror report
Orderly beautiful all she sees
But when she signs her name
With plain verity content
Never prefixed a compliment
And in whatever circle came
Never stooped to utter one
Who if polite society
Did not exist, would it invent,
By her practice show its laws,
Grace without compliment.
Grace that grows from pure intent
Grace that fascinates & draws
Advance life as now
Bearer of good news
Or if disaster come
Evil news were not allowed
To dim her eye, her aspect cloud
Or choke her cheerful voice
Tell ill news as thou tellest good
Nor mar thy quiet in the broil
Adorn thy self with hardihood
With ice bath fortify the blood,
arctic winds blew round her bed
Hard fare & charitable toil [Chronological List of Poems](#)

OCTOBER WOODS, WHEREIN

October woods, wherein
The boy's dream comes to pass,
And nature squanders on the boy her pomp
And crowns him with a more than royal crown
And unimagined splendor waits his steps
The urchin walks thro tents of gold
Thro crimson chambers porphyry & pearl
Pavilion on pavilion garlanded
Incensed & starred with lights & airs & shapes
And sounds, music
Beyond the best conceit of pomp or power [Chronological List of Poems](#)

HOW DREARILY IN COLLEGE HALL

How drearily in College hall
The Doctor stretched the hours!
But in each pause we heard the call
Of robins out of doors.

The air is wise, the wind thinks well,
And all through which it blows,
If plant or brain, if egg or cell,
To joyful beauty grows.

And oft at home 'mid tasks I heed
I heed how wears the day —
We must not halt while fiercely speed
The spans of life away.

Who asketh here of Thebes or Rome
Or lands of eastern day?
In forests joy is still at home,
And there I cannot stray.

[*Alphabetical List of Poems*](#)

THE LAND WAS ALL ELECTRIC

The land was all electric
There was no need of trumpets
As they float by coast & crag
There was no need of banners
Every zephyr was a bugle
Every maple was a flag
Each steeple was a rallying sign
The tocsin was its bell
Sharp steel was the lieutenant
And powder was his men.

The mountain echoes roar,
Every crutch became a pike,
The woods & meadows murmured war,
And the valleys shouted, Strike!

FOR NATURE TRUE & LIKE IN EVERY PLACE

For Nature true & like in every place
Will hint her secret in a garden patch,
or in lone corners of a doleful heath,
As in the Andes watched by fleets at sea
or the sky-piercing horns of Himmaleh
or Europe's pilgrims at Niagara
And when I would recall the scenes I dreamed
On Adirondac steeps I know
Small need have I of Turner or Daguerre,
Assured to find the token once again
In silver lakes that unexhausted gleam,
And peaceful woods beside my cottage door.

JAMES RUSSELL LOWELL

As I left my door,
The muse came by,
Said, "Whither away?"
I, well-pleased to praise myself,
And in such presence raise myself,
Replied, 'To keep thy bards birthday'
— "O happy morn! o happy eve!" —
The muse rejoined, "And dost thou weave
For noble night a noble rhyme,
And up to song through friendship climb?
For every guest
Ere he can rest
Plucks for my son or flower or fruit
In sign of Nature's glad salute."

— 'Alas! thou know'st,
Dearest muse, I cannot boast
Of any grace from thee:
To thy spare bounty, queen, thou ow'st,
No verse will flow from me.
Beside, the bard himself, profuse
In thy accomplishment,
Does Comedy & Lyric use,
And to thy sisters all too dear,
Too gifted, than that he can chuse
To raise an eyebrow's hint severe
On the toiling good intention
Of ill-equipped incomprehension.'

"The bard is loyal,"
Said the queen
With haughtier mien,
"And hear thou this, my mandate royal:
Instant to the Sibyl's chair,
To the Delphic maid repair,
He has reached the middle date
Stars tonight that culminate

Stars tonight that culminate
Shed beams fair & fortunate:
Go inquire his horoscope,
Half of memory, half of hope.”

FROM PAQUES TO NOEL

From Paques to Noel,
Prophets & Bards,
Merlin, Llewellyn,
Highborn Hoel,
Wellborn Lowell,
What said the Sibyl?
What was the fortune
She sung for him? —
“Strength for the hour.”

Man of marrow, man of mark,
Virtue lodged in sinew stark,
Rich supplies & never stinted,
More behind at need is hinted,
Never cumbered with the morrow,
Never knew corroding sorrow,
Too well gifted to have found
Yet his opulence’s bound, Most at home in mounting fun,
Broadest joke, & luckiest pun,
Masking in the mantling tones
Of his rich laugh-loving voice,
In speeding troops of social joys,
And in volleys of wild mirth,
Purer metal, rarest worth,
Logic, passion, cordial zeal,
Such as bard & hero feel.

Strength for the hour, —
For the day sufficient power,
Well advised, too easily great
His large fleece to antedate.

But, if another temper come,
If on the sun shall creep a gloom,
A time & tide too exigent,
When the old mounds are torn & rent,

More proud, more strong competitors
Marshal the lists for Emperors,
— Then, the pleasant bard will know
To put this frolic masque behind him,
Like an old summer cloak,
And in sky-born mail to bind him,
And single-handed cope with Time,
And parry & deal the thunderstroke.

FROM NATURE'S BEGINNING

From Nature's beginning
Sin blunders & brags,
True making, true winning
Go hidden in rags.

Wit has the creation
Of worlds & their fame
On one stipulation,
— Renouncing the same.

What wilt thou? the Forces?
Or skies which they breed?
The strain it discourses
Or Pan? or his reed?

If the crown once incloses
The brows of her son,
The Muse him deposes
From kingdom & throne [Chronological List of Poems](#)

AT PLYMOUTH IN THE FRIENDLY CROWD

At Plymouth in the friendly crowd
Mamma was not a little proud
To see her beaming candlesticks
Almost outshine their lighted wicks
Why not? since shafts of solid silver
Might tempt the Plymouth saints to pilfer
But Time, a more relentless thief
Betrayed Mamma & these to grief
He stole the silver grain by grain
Nothing but copper would remain
But when Aladdin came to town
Hiding his famed lamp in his gown
Touched the old sticks with fingers new
As if with starshine riddled through
And now they beam like her own feats
Of mercy in the Concord streets.

SONG OF TALIESIN

Vain Bards! I can discover all,
What befel or shall befall.
I come seeking what is lost,
And my aim shall not be crossed.
Strong am I who this demand,
More strong my tongue than Arthur's hand
Three hundred potent songs & more
Are hidden in the strain I pour:
No foemen in these mountains dwell
On whom I cannot cast a spell;
Nor stone nor brass, nor iron ring
Can fetter Elphin when I sing;
All that I seek this hand can find,
All Gates unbar, all bonds unbind.

MAY

When all their blooms the meadows flaunt
To deck the morning of the year,
Why tinge thy lustres jubilant
With forecast or with fear?

Softens the air so sharp and rude,
What can the heart do less?
If Earth put off her savage mood,
Let us learn gentleness.

The purple flame all bosoms girds,
And Love ascends his throne;
I cannot hear your songs, O birds!
For the witchery of my own.

Each human heart this tide makes free
To keep the golden day,
And ring the bells of jubilee
On its own First of May.

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

THE MIRACLE

I have trod this path a hundred times
With idle footsteps, crooning rhymes,
I know each nest & web-worms tent;
The fox-hole which the woodchucks rent
Maple & oak, the old "divan,"
Self-planted twice like the banian;
I know not why I came again
Unless to learn it ten times ten.
To read the sense the woods impart,
You must bring the throbbing heart;
Love is aye the counterforce,
Terror, & Hope, & wild Remorse.
Newest knowledge, fiery thought,
Or Duty to grand purpose wrought.

Wandering yester-morn the brake,
I reached the margin of the lake,
And oh! the wonder of the power,
The deeper secret of the hour! —
Nature, the supplement of Man,
His hidden sense interpret can, —
What friend to friend cannot convey
Shall the dumb bird instructed say.
Passing yonder oak, I heard
Sharp accents of my woodland bird, —
I watched the singer with delight, —
But mark what changed my joy to fright,
When that bird sang, I gave the theme, —
That wood-bird sang my last night's dream,
A brown wren was the Daniel
That pierced my trance its drift to tell;
It knew my quarrel, how and why,
Published it to lake and sky, —
Told every word and syllable
In his flippant chirping babble,
All my wrath, & all my shames,

May, Heaven be witness, — gave the names.

THE BEST OF LIFE IS PRESENCE OF A MUSE

The best of life is presence of a muse
Who does not wish to wander, comes by stealth,
Divulging to the heart she sets a flame
No popular tale, no bauble for the mart.
When the wings grow that draw the gazing crowd,
Ofttimes poor Genius fluttering near the earth
Is wrecked upon the turrets of the town:
But, lifted till he meets the steadfast gales
Calm blowing from the Everlasting West [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THE PILGRIMS

Behold I make partition
In this new world I have built,
For slavery differs from freedom
As honor is wide from guilt.

Lo now to Freedom I assign
And make partition fair,
All space above the waterline
All ground below the air.

And what's beside may slavery claim
Her residue & share,
Within the earth to hide her shame,
Or climb above the air.

Firm to the pole he knots the cord,
And to the tropics drew,
About the round globe's quarter broad,
Along the welkin blue.

Hills clapped their hands, the rivers shined,
The seas applauding roar,
The elements were of one mind,
As they had been of yore.

I AM NOT BLACK IN MY MIND

I am not black in my mind
But born to make black fair:
On the battlefield my master find, —
His white corpse taints the air.
Eve roved in Paradise, I've heard,
With no more baggage than a bird;
Exiled, she soon found necessary
More garments than she liked to carry;
Adam devised valise & sack,
And trunk & tray her weeds to pack,
But when the hatbox he invented,
Dear Eve declared herself contented;
Eden was well — Angels prefer it —
She thought the outworld had its merit;
And now transmits to Ellen dear
This sable cube of comfort here.

TRIMOUNTAIN

Sicut cum patribus sit Deus nobis

The land that has no song
Shall have a song today,
The granite ledge is dumb too long,
The vales have much to say.
Its men can teach the lightning speech,
And round the globe their voices reach.

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THE ROCKY NOOK WITH HILLTOPS THREE

The rocky Nook with hilltops three
Looked eastward from the farms,
And twice a day the flowing sea
Took Boston in its arms:
The men of yore were stout & poor,
And sailed for bread to every shore.

The waves that rocked them on the deep
To them their secret told,
Said the winds that sung the lads to sleep,
“Like us be free & bold.
The honest waves refuse to slaves
The empire of the Ocean caves.”

And where they went, on trade intent,
They did what freemen can;
Their dauntless ways did all men praise,
The merchant was a man.
The world was made for honest trade,
To plant & eat be none afraid.

Old Europe groans with palaces
Has lords enough & more
We plant & build by foaming seas
A city of the poor.
For what avail the plough & sail,
Or land, or life, if freedom fail?

The noble craftsman we promote,
Disown the knave & fool;
Each honest man shall have his vote,
Each child shall have his school.

We grant no dukedoms to the few,
We hold like rights & shall,
Equal on Sunday in the pew,
On Monday in the mall.

Fair rose the planted hills behind
The good town on the Bay,
And where the western slopes declined
The prairie stretched away.

Out from the many-fountained earth
The rivers gushed & foamed,
Sweet airs from every forest forth
Around the mountains roamed.

What rival towers majestic soar
Along the stormy coast, —
Penn's town, New York, & Baltimore,
If Boston knew the most!

They laughed to know the world so wide,
The mountains said, "Good-day!
We greet you well, you Saxon men,
Up with your towns, & stay."

"For you," they said, "no barriers be,
For you no sluggard's rest;
Each street leads downward to the Sea,
Or land-ward to the West."

The townsmen braved the English King,
Found friendship in the French,
And Honor joined the patriot ring
Low on their wooden bench.

O bounteous seas that never fail!
O day remembered yet!
O happy port that spied the sail
Which wafted Lafayette!
Abdiel bright, in Europe's night,
That never faltered from the right.

O pity that I pause, —
The song disdainingly shuns

To name the noble sires, because
Of the unworthy sons:
For what avail the plough & sail,
Or land, or life, if freedom fail?

But there was chaff within the flour,
And one was false in ten;
And reckless clerks in lust of power
Forgot the rights of men;
Cruel & blind did file their mind,
And sell the blood of human kind.

Your town is full of gentle names
By patriots once were watchwords made;
Those war-cry names are muffled shames
On recreant sons mislaid.
What slave shall dare a name to wear
Once Freedom's passport everywhere?

O welaway! if this be so,
And man cannot afford the right,
And if the wage of love is woe,
And honest dealing yield despite.
For what avail the plough & sail,
Or land, or life, if freedom fail?

Hie to the woods, sleek citizen!
Back to the sea, go landsmen down!
Climb the White Hills, sleek aldermen,
And vacant leave the town:
Ere these echoes be choked with snows,
Or over the roofs blue Ocean flows.

The sea returning day by day
Restores the world-wide mart,
So let each dweller on the Bay
Fold Boston in his heart.
For what avail the plough & sail,
Or land or life, if freedom fail?

Let the blood of her hundred thousands
Throb in each manly vein
And the wit of all her wisest
Make sunshine in his brain.
A union then of honest men,
Or Union nevermore again.

And each shall care for other,
And each to each shall bend,
To the poor a noble brother,
To the good an equal friend.

A blessing through the ages thus
Shield all thy roofs & towers!
God with the fathers, So with us!
Thou darling town of ours!

THE MUSE

The Muse
Can at pleasure use
Every syllable men have heard
And can move with every word
Need not mimic, plot or veer
But speak right onward without fear
She need not turn aside
Or half convey & half suppress
New meaning in a worn-out phrase
She will not walk in crooked ways
But bend the language to her
Make the language bend to her
Not unable not afraid
To say what never yet was said
She need not stray from her path
To find the words of love or wrath
The world is as rich in nouns & verbs
As in sea sand or in herbs [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

IN MY GARDEN THREE WAYS MEET

In my garden three ways meet,
Thrice the spot is blest;
Hermit thrush comes there to build
Carrier doves to rest.

The broad armed oaks, the copse's maze
The cold sea-wind detain;
And sultry summer overstays
When autumn chills the plain.

Self-sown my stately garden grows,
The winds and wind-blown seed,
Cold April rain, and colder snows
My hedges plant and feed.

From mountains far and valleys near,
The harvests sown to-day,
Thrive in all weathers without fear, —
Wild planters plant away!

In cities high the careful crowd
Of woe-worn mortals darkling go,
But in these sunny solitudes
My quiet roses blow.

Methought the sky looked scornful down
On all was base in man,
And airy tongues did taunt the town,
Achieve our peace who can!

What need I holier dew
Than Walden's haunted wave,
Distilled from heaven's alembic blue,
Steeped in each forest cave.

If Thought unlock her mysteries,
If Friendship on me smile,

I walk in marble galleries,
I talk with kings the while.

And chiefest thou, whom Genius loved,
Daughter of sounding seas,
Whom Nature pampered in these groves,
And lavished all to please.

What wealth of mornings in her year,
What planets in her sky!
She chose her best thy heart to cheer,
Thy beauty to supply.

Now younger pilgrims find the stream,
The willows and the vine,
But aye to me the happiest seem
To draw the dregs of wine.

THERMOMETER

Mine to watch the sun at work
Or if he hide in clouds & shirk
I test the force of wood & bark,
And keep the pitcoal to the mark
On my white enamelled scale
The warning numbers never fail
From sixty up to seventy one
The grades of household comfort run
If they climb a hairsbreadth higher
Fling wide the door, put out the fire,
Each year will have its holidays
Which I report nor blame nor praise
Twice I dive twenty below zero
Twice climb to heat would blacken Nero
But health & heart will prosper more
At the mean point of 54

UPON A ROCK YET UNCREATE

Upon a rock yet uncreate
Amid a Chaos inchoate
An uncreated being sate
Beneath him rock
Above him cloud
And the cloud was rock
And the rock was cloud
The rock then growing soft & warm
The cloud began to take a form
A form chaotic vast & vague
Which issued in the cosmic egg
Then the being uncreate
Upon the egg did incubate
And thus became an incubator
And of the egg did allegate
And thus became an alligator
And the incubate was potentate
But the alligator was potentator [Chronological List of Poems](#)

ALAS, ALAS, THAT I AM BETRAYED

Alas, Alas, that I am betrayed
By my flying days, it is then the looking glass,
Not the mind, if self love do not tarnish it
Alas that he who foolish frets in desire
Not heeding the flying time
Finds himself, like me, at one instant, old.
Nor know I how to repent, nor do I make myself ready,
Nor advise myself with death at the door.
Enemy of myself
Vainly I pour out plaints & sighs
Since there is no harm equal to lost time *Michelangelo*

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

WO IS ME WOE'S ME WHEN I THINK

Wo is me woe's me when I think
Of my spent years I find not one
Among so many days; not one was mine.
Hopes which betrayed me, vain longing,
Tears, love, fiery glow, & sigh,
For not one mortal affection is longer new to me
Held me fast, & now, I know it, & learn it,
And from goodness & truth ever severed,
Go I forth, from day to day, further;
Ever the shadows grow longer; ever deeper
Sinks for me the sun;
And I am ready to fall infirm & outworn.

Michelangelo

[*Alphabetical List of Poems*](#)

THE POWER OF A BEAUTIFUL FACE LIFTS ME TO HEAVEN

The power of a beautiful face lifts me to heaven
Since else in earth is none that delights me
And I mount living among the elect souls,
A grace which seldom falls to a mortal.

So well with its Maker the work consents,
That I rise to him through divine conceptions
And here I shape all thoughts & words,
Burning, loving, through this gentle form: Whence, if ever from two beautiful
eyes
I know not how to turn my look, I know in them
The light which shows me the way which guides me to God.

And if, kindled at their light, I burn,
In my noble flame sweedy shines
The eternal joy which smiles in heaven.

Michelangelo

BOY BRING THE BOWL FULL OF WINE

Boy bring the bowl full of wine
Bring me two bowls of the purest wine
I take wine to be the love-potion
This stuff for old & young, bring
Sun & moon are the wine & the glass
In the midst of the moon bring me the sun
How the understanding strives so earnestly
Bring bands made of wine for the stupid head
Fan this dissolving glow,
That is, instead of water bring wine
Goes the rose by, say gladly:
Nectar of pearls & blood of the rose, bring.
Sounds not the nightingale it is right
Sound of glass & sound of wine, bring.
Mourn for nothing, since past is past
Harp & lute tones therefore bring
Only in dreams enjoy I my love
Then bring wine for wine brings sleep
Am I drunken What is to do
That I may be well drunken bring one glass more
One two cups bring to Hafiz
Be it now well or ill done, bring.

Hafiz

DESIRE NO BREAD, FORSAKE THE GUEST HALL OF THE EARTH

Desire no bread, forsake the guest hall of the earth,
The earth is a host who murders his guests

Hafiz

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THE RED ROSE BLOOMS

The red rose blooms
The nightingale is drunken
Now leave free course to drinking
Ye reverencers of wine The building of Sorrow it seemed so firm
Piled of granite gray
O see how the crystal glass
Has already shattered it & broke Bring wine; before the Throne
Which hears our wishes
Drunkard & sage are one
And prince & groom Since I must one day leave
This two-ported guest house
It is all one whether my lifes course
Be high or humble It is not possible without sorrow
And without grief to live
Since on the day of Destiny was
Sorrow assigned to us For being & not-being cumber thee not
Be ever of glad heart
The end of every excellence
Is the Chaos & the Night Pomp, Asaph, the East-wind-horse,
The knowledge of the bird language,
Is all gone to the winds
And profits not the king Mount not from the straight way
In to the air with wings
The arrow flies into the air & falls
Again to earth How can the tongue of thy quill
Thank Hafiz therefor
That thy words steadily from mouth
to mouth fly.

Hafiz

MANY OUR NEEDS, YET WE SPARE PRAYERS

Many our needs, yet we spare prayers
Since thro' thy nature have we no need of praying
The Nature of my beloved is the world-showing mirror
Ah it has taught me that thy need is no need
Long time I endured the torments of the ship
Since the pearls are mine, what do I want of the sea
Beggars! the soul-squandering life of the beloved
Knows thy petition. She has no need of explanation
Prince of beauty, by God! I am burned up by love.
Ask me finally still, Have the beggars really need?
Thou importunate flee I have nothing to do with thee
My friends are there Is there need of enemies
Thy word conquers Hafiz, of itself appears virtue
Envy & empty strife with the adversary are not needful *Hafiz*

[Alphabetical List of Poems](#)

EARLY AFTER THE NIGHT LONG REVEL

Early after the night long revel
Took I lyre plectrum & bowl
Bridled the horse of Reason
Drove it with spurrs to the town of revellers See the host flatters me
That I fear not the blinding of Destiny
Thou the aim of the arrow of speech
Said the host with bows of brows Little profits it thee
Tho thou embrace me like a belt
Spread the net for others
Over the net the Auka soars Host & trusted are one
Every difference is only a pretence
Reach us the boats of Sohra
That we save us out of these waters Ah how enjoyed the Shah
Who in himself is constantly enamoured
All is riddle Hafiz
To explain it to us is mere talk.

Hafiz

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

THOU WHO WITH THY LONG HAIR

Thou who with thy long hair
As with thy chains art come
Thine be opportunity
Since to capture slaves thou comest O show thyself benign
And change thy mood
Since they to resign
Thou to ask & claim comest Be it in peace be it in war
To yield to thee it is my doom
Since in every event thou art
With entrancing kisses come Fire & water mingled are
In thy swelling ruby lip
Evil eyes be far!
As a juggler thou art come Honor to thy soft heart
And a good work wouldst thou do
Pray for all the dead
Whom thine eyelashes slew Say what boots my virtue
Since thou intent to steal the heart's treasures
All drunken & confused
To my still chamber art come See Hafis said he to me
Thy coat with spots soiled
Wert thou safe from this company
Once home again?

Hafiz

[Alphabetical List of Poems](#)

KNOWST THOU THE LUCK THE FRIENDS FACE TO SEE

Knowst thou the luck the friends face to see
Rather to beg near him than a prince to be
Tis easy out of the soul to banish lust
Not easy the friend from the soul to thrust
With my own heart go I like a flower
There tear I the garment of good name
Now kiss I secretly with the roses, as the East wind,
Now hearken I the secrets of the nightingale
Kiss the friends lips when thou canst
Otherwise wilt thou in the lips bite full of sorrow
Seize the chance of talking with thy friend
Who knows if we meet again on the way.

Hafiz [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

UNTRUTH IS BECOME THE MODE

Untruth is become the mode
And no man knows of friendship & truth
The worthy nears now the worthless
And stretch out their hands for a gift
Whoso in the world is virtuous & wise
Is no moment free from care & sorrow
On the other side the dunce lives in plenty
With gold & honour overlaid
And if a poet fluent as water
Full of heart speaking to mind & to soul
So yields him avarice no shilling
Tho his songs were worthy of Abusina
Yesterday said Reason to the Understanding
Go forth suffer & complain not
In satisfaction seek thy kingdom
And drink wine instead of other potions
Hafiz follow thou this good counsel
Then the thy foot fall thy head shall rise *Hafiz*

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

NOVICE, HEAR ME WHAT I SAY

Novice, hear me what I say
So shalt thou be purified
Whilst thou dost not tread the way,
Thou canst not be a guide.

Pride of the gazing school,
Lord of thy companions,
Mark, hear boy thou too shalt be
One day the sire of sons Sleeping, eating, drinking,
The spark of love withstood,
Eat not, sleep not, love in thinking
Will come rushing like a flood.

A beam of the love of Allah
Once fall thy soul upon,
By God I know thou then wilt be
More brilliant than the sun.

As learned magians do,
Thy hand from brass withhold,
That thou in life true alchemist
May turn all stones to gold.

From thy footsole to thy head
A beam of God thou burnest,
So []thout foot or head
To the hest of God thou turnest Go leap into the waves,
And have no doubt or care,
And the flowing of the seven broad seas
Shall never wet thy hair.

If Allah's face on thee
Look down with love benign,
Who disbelieves that thou also
To his face turnest thine?

And though thy form & fortune

Were broken waste & void
Dream not of thy eternal root
A fibre is destroyed *Hafiz*

I SAID TO THE EAST WIND

I said to the East wind
On the tulip-enriched plain,
Of what martyrs are these the bloody corpse-cloths?
He said, Dear Hafiz, to you & me
Has no one told this.
Tell thou of wine-ruby, of silver-chin,
Seize the skirt of thy friend,
Care not for the enemy,
Be God's man & fear not the Devil.

Hafiz

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

WE WISH LIKE THE GLASS

We wish like the glass
All clean to be; who wishes it not
The East wind breathes out in scents
Spices & perfumes
Why changes not the inner mind
Violet earth into musk?

Hafiz

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

WHEN IN ETERNITY THE LIGHT

When in eternity the light
Of thy beauty glistened, *Love was,*
Which set the worlds on fire
Beams trickled from thy cheeks,
Angels saw them & remained cold
Indignant turned they then to men
See, the Understanding prayed
for a spark his light to kindle.
Jealousy was the dazzling spark *Hafiz*

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

SECRETLY TO LOVE & TO DRINK, WHAT IS IT? TIS A DISSOLUTE

Secretly to love & to drink, what is it? tis a dissolute
day's work.

I side with the open drunkards, be it as it may.

Loose the knots of the heart & cumber thee no farther
for the lot

No geometer has yet disentangled this confusion.

At the trade & changes of Time wonder not;

The like enchantments keeps Destiny ready.

Hold the glass discreetly, it was put together

Of the skulls of Jamschid, Keikobad, & Behmen,

Who teaches us where Kai was & Nimrod are gone

How the throne of Jamschid fell in pieces at last

See Ferhad, how he longs for the lips of Schirin

Out of the flood of tears sprang tulips before him.

Come I will be riotous & wasted by wine

Who knows but I shall find treasures in a desolate
house Hafiz [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THIS EFFERVESCING GENTLEMAN WHO DESPISES A SECRET

This effervescing gentleman who despises a secret
Scorns me since I am riotous & enamoured,
Look at the virtues of lovers not at their faults
Since who is not virtuous himself, sees faults.

People of heart have the key to the treasure of the heart
Let none henceforth doubt of this refined truth
Shepherd in the vale of Rest thy wish will then be first
fulfilled.

When thou several years hast served the Jethro of the heart
Blood trickles from the eye of Hafiz as if he were enchanted
When he as old man remembers the days of youth *Hafiz*

O friend blame not Hafiz,
While his glances so follow you,
I have in him all the time
Only your friend seen.

Hafiz

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THE WAY OF LOVE IS UNLIMITED

The way of love is unlimited
The soul is there sacrificed
There is no other way.

Scare me not with reason
Bring wine. Since Reason as watchman
Has nothing here to do When thou givest thy heart to love
Tis good time tis a good thing
Use no counsel first Who smote me? Ask thine eye,
O sweet child, let this not lie
As guilt against my Destiny As the new moon needs a sharp eye
So thou an intelligent one; not every one
Sees the young crescent Use drinking with wisdom
The way to it as to a treasure is not
Open to every man *Hafiz*

BRING WINE RELEASE ME

Bring wine release me
From care
Only with wine they drive
Sorrow away There are no other lamps
In society
Than wine & the face
Of the handsome cupbearer Be not proud of the Enchantment
Of thy eyelashes
Since pride profits not
Oft have I proved.

Master thou oft well advisest me
Not to love
But this lesson is
No law for me Love befouls only the heart
Of great men
Since thou hast no love
Thou art excused To a wink sacrificed I
My virtue
Ah therein is all my store
Of good works The luck of enjoyment is there
Bating separation
And the land of the heart is now
Again arable Hafiz

[Alphabetical List of Poems](#)

IT IS CERTAIN THAT WHO HIS MIND

It is certain that who his mind
In his friend concentered has
Has good luck to his handmaid
Higher than the Understanding
Is the cabinet of love,
Who has his soul in his own sleeve
Kisses only the door.
The mouth of the friend perchance
Is the seal of Solomons hand
Which under the power of a ruby
Has the world at command
My friend has a musk down
And lips like fireglow
I will flatter the beauty finely
Who has this & that.
As long as thou art in the earth
Use occasion, work & climb
Since the Grave has a plenty
of unprofitable time.
Happy who sees the poor
Without contempt
While the first place of honour
Has many poor sitters
It screens from harms body & soul
The hearts prayer of the poor;
Whilst he who is ashamed of the poor
Has no good end.

Hafiz

[*Chronological List of Poems*](#)

[Alphabetical List of Poems](#)

SO LONG AS THERE'S A TRACE

So long as there's a trace
Of wine & banquet house
My head will lie in the dust
Of the threshold of the winehouse
Ask thou for grace hereafter
At my gravestone
That will be the pilgrim city
Of all the drinkers of wine
The ring of mine host hangs
Forever in my ear.
I am; what I was
My dust will be again.
Go, blind hermit, go,
Since to thee & me alike
The secret is hidden,
And always will be.
My well beloved went
Abroad today to hunt
Whomsoever the lot had doomed
To bleed at the heart.
A place on which the sole
Of thy foot falls
Will be the resort
Of all reasonable men.
From the day when by love
I am laid as in the grave
Until the Judgment, my eye
Will be by thine
So long the luck of Hafiz
Will be no better
The hair of his love
Will be in the hands of another.

Hafiz [Chronological List of Poems](#)

[Alphabetical List of Poems](#)

TO WHOM A GLASS FULL OF RED WINE

To whom a glass full of red wine
Was given in the morning
To him was a place in heaven
By the Lord given.
Be no saint; look not
Too closely after drunkards
To them was on the day of lots
The love-bias given.

Hafiz

NOW TELLS THE FLOWER

Now tells the flower
Histories of May
Who fetters himself with gold
He is not wise.

Cheer thy heart with wine:
The Earth is only
A house to which our bones
Give the mortar.

Seek not in thy friend, truth;
Truth is dead;
Holy fire comes not
Out of Church lamps.

Blacken thou not my name
For my riot;
Who knows what the lot
Inscribed on the brow?

Turn not thy steps
From the grave of Hafiz,
Since though in sins sunken
He expects Heaven Hafiz

WHO GAVE THY CHEEK THE MIXED TINT

Who gave thy cheek the mixed tint
Of tulip & rose
Is also in state to give
Patience & rest to me poor
Who taught cruelty
To thy dark hair
Is also in state to give
The right against myself
I gave up hope of Ferhad
Once for all on the day
When I learned he had given
His heart to Schirin
Surely I have no treasure
Yet am I richly satisfied
God has given that to the Shah
And this to the beggar
The bride of the world is truly
Outwardly richly dressed
Who enjoys her must give
His soul for a dowry.
At the cedar's foot by the brook
Lift I freer my hands
When now the blowing of the East
Gives tidings of May *Hafiz*

[Chronological List of Poems](#)

IN THY HOLIDAY OF LIFE

In thy holiday of life,
Use occasion, work & climb,
The sepulchre has overmuch
Unprofitable time.

Hafiz

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THE ROGUISH WIND AND I

The roguish wind and I
Are truly an amorous pair;
Me burns the sparkle of thine eye,
He fans thy scented hair.

Hafiz

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

THE TREACHEROUS WIND PIPES A LEWD SONG

The treacherous wind pipes a lewd song,
Makes saints perverse, & angels bad;
Shall we sit & see such wrong,
And not cry out like mad!
Fie! what flute pants in the North?
What viol in the west?
Steals Virtue not from men of worth?
Corrupts he not the best?
Shall this pass in silence by?
Shall we not make hue & cry?

Hafiz

[*Chronological List of Poems*](#)

[*Alphabetical List of Poems*](#)

WE WOULD DO NOUGHT BUT GOOD

We would do nought but good,
Else shall dishonor come
On the day when the flying soul
Hies backward to its home.

Hafiz

[Alphabetical List of Poems](#)

LO! WHERE FROM HEAVEN'S HIGH ROOF

Lo! where from Heaven's high roof
Misfortune staggers down;
We, just from harm to stand aloof,
Will to the wineshop run.

Hafiz

[Chronological List of Poems](#)

[Alphabetical List of Poems](#)

DRINK WINE, AND THE HEAVEN

Drink wine, and the heaven
New lustre diffuses,
And doubt not that sinning
Has also its uses.

The builder of Heaven
Has sundered the earth,
So that no footway
Leads out of it forth: On turnpikes of wonder
Wine leads the mind forth,
Straight, sidewise & upward
Southward and north.

Stands the vault adamantine
Until the last day;
The wine-cup shall ferry
Thee o'er it away.

Hafiz

I SHALL GO FROM MY SICKBED TO HEAVEN

I shall go from my sickbed to heaven
If, on my last march, thou holdest a torch for me
The wind-borne dust is heavy from thy attraction
Think on me, I am an older servant.
Not every poet sings inspired songs
My sly falcon grasps firmly the partridge of song.
Believest me not? Go ask the pictures of Sina
Whether Mani did not wish a stroke from my ink?
The nightingale says, Up cupbearer, good morning,
Still rings in my head the lute-tone of yesterday,
Ask not Hafiz, ask me, of revelry & love,
Since flask & cups are to me the moon & pleiads.

Hafiz

[*Alphabetical List of Poems*](#)

SEE & HEAR THE FRAUD, THE MALICE OF THE CHANGE OF FORTUNE

See & hear the fraud, the malice of the change of fortune,
Every eye is blind, every ear is deaf.
Many whom the sun & the moon had served for a bolster
Lay down their head at last in ashes & dust.
Will thy thumb-ring span the bow of Fate?
Will a shield ward off the strokes of Destiny?
Though thou screen thyself with iron walls, & brazen gates,
Ever the hand of your Fate crashes in.
Never mind the trembling light in the lamp of life,
Night follows on light, sugar only conceals poison.

Hafiz

WHO LOVES HIS FRIEND WITH HIS HEART OF HEARTS

Who loves his friend with his heart of hearts
Bends not his head though the sky rain darts,
O, our lifetime wastes to no lofty end
Till the hero is matched with an equal friend.
Poison from the hand of my love were food,
The sweet & the bane do the heart good.
Knowst thou shy Saadi sits ever alone?
Because he cannot part from the darling one.

Saadi

[*Alphabetical List of Poems*](#)

HAD I THE WORLD FOR MY ENEMY

Had I the world for my enemy
Yet kept the treasure of a true friend,
Never should I ask whether things were
Or were not, in this world.
A ship on the high seas
Doth the state of a lover resemble.
Overboard cast they the cargo
If so they can save their lives.

Saadi

SALVE SENESCENTEM

Saadi's poem on Old Age

Now is the time when weakness comes, — & strength goes
The magic of sweet words — I lose
The harvest wind cuts keen: the tender sheen and shade
And pink & purple light upon thy garland fade
To my foot fails the power — of manly stride in streets;
Happy he who soonest to his orchard hut — retreats.
Saadi's whole power lies — in sweet words
Keep this all the rest may go to beast & birds *Saadi*

[Alphabetical List of Poems](#)

IN SENA HAR, MY FIRST BORN SLEEPS

In Senahar, my first born sleeps;
Stunned with the blow, poor Saadi weeps;
Tho' youth more fresh than Jussuf blooms,
The charnelworm his cheek consumes.
Where is the palm, star-topped, earth-footed,
Which the brute storm has not uprooted?
I muttered,— "Perish God on high,
Since pure youth dies as greybeards die!"
I staggered to my darling's tomb,
And tore the sealed stone therefrom,
Then frantic, tottering, void of wit,
Groped down into that marble pit.
When grief was spent, & reason came,
Methought I heard my son exclaim
'If my dark house thy heart affright
'Saadi strive upwards to the light
'Wilt thou give graves the blaze of noon
'High hearts can work that wonder soon
The crowd believe that harvests grow
Where never man did barley sow.
But Saadi saw the fruit enchanted
By bending sower truly planted.

SHAH SANDSCHAR, WHOSE LOWEST SLAVE

Shah Sandschar, whose lowest slave
Is on this earth a king;
The mole of his despotic command
Adorns men & daemons.
When his wrath burns on earth,
Nothing in heaven is secure.
Looks he on the world with power,
Life mounts in it.
Where his name is named,
Is the love of gold unknown.
Death, out of fear of him, clatters his dry bones.
The deep-hid secret is discovered by thy wit;
Unrest is stilled by thee, unrest which know no limits.
When thy wrath glowed
The wolves become tame in the wood,
The world would not stand, if thy foot held it not firm,
In the desert, his breath restores the equipoise of the air.
The Lion of the Zodiack is a picture of the lions of his
banner.
Hope leads his light bridle,
His heavy stirrup leads death.
Ambush of destiny lies
For all, behind his arrow.
When his bow moves,
It is already the Last Day.
Whom his onset marks out,
To him is life not appointed:
And the ghost of the Holy Ghost

Were not sure of its time.
None holds himself once firm in the stirrup, save Victory.
A hundred conquerors heaven strikes dead
Before thee, as thy right.
O Lord, take him into thy pay. It is his only wish.
Is he not of thy circle? Stands he yet at thy door?
Buy him, ere thou yet knowest him,
O Lord, take him into thy pay.

Or instantly his price will rise.
Once every ten years let him kiss thy hand,
Only one day let him stand in thy Forecourts.

Suffer in thy lands, o Shah! a poet, tho' rough & rude,
But in thy praise is he finer than a hair.
Steadily so long as the tongue speaks, sounds thy name in
prayer.

As long as there is gold, will thy name be coined on it.
Of thee, Time stands in need, as Space stands in need of
Time;

So long as men give & take, Thou shalt give & take
lordship.

Rule thou forever, so will rule subsist.

THE SOUL

I am the falcon of the spirit world,
Escaped out of highest heaven
Who out of desire of the hunt,
Am fallen into earthly form
Of the Mount Kaf am I the Simorg,
Whom the net of Being holds imprisoned
Of Paradise am I the Peacock,
Who has escaped from his nest.

ARABIAN BALLAD

1 — Under the rock on the trail
He lies slain
Into whose blood
No dew falls 2 A great load laid he on me
And died;
God knows, this load
Will I lift.

2 — Heir of my revenge
Is my sister's son,
The warlike,
The irreconcilable.

4 Mute sweats he poison,
As the otter sweats;
As the snake breathes venom
Against which no enchantment avails 3 — The stern message came to us
Of the heavy woe;
The stoutest had they
Overpowered.

6 Me had Destiny plundered
Striking down my friend,
Whose dearest friend
Was left unhurt.

4 — Sunshine was he
On the cold day,
And when the dogstar burned
He was shade & coolness.

5 — Dry were his hips
Not slow;
Moist his hand,
Bold & strong.

9 With firm mind

Followed he his aim
Until he rested,
Then rested also the firm mind.

10 The rain cloud was he
Imparting gifts;
And, when he attacked,
The terrible lion.

11 Stately before men,
Black haired, long-robed,
When rushing on the foe
A lean wolf.

6 — Two cups offered he,
Honey and wormwood;
Fare of such kind
Tasted each.

7 — Terrible rode he alone;
No man accompanied him;
Like the sword of Yemen,
With teeth adorned.

8 — At noon we young men set forth
On the war trail
Rode all night
Like sweeping clouds without rest 9 — Every one was a sword
Girt with a sword;
Out of the sheath drawn
A glancing lightning 10 — They sipped the spirit of sleep,
But, when they nodded their heads,
We smote them,
And they were away 11 — Our vengeance was complete.
There escaped of two tribes
Quite little,
The least.

12 — And when the Hudselite
Had broken his lance to kill his man

The man with his lance
Slew the Hudselite.

19 On a rough resting place
They laid him, —
On a sharp rock, where the very camels
Broke their paws.

13 — When the morning greeted him there,
The murdered, on the grim place,
Was he robbed,
The booty carried away.

14 — But now are murdered by me
The Hudseleites with deep wounds;
Pity makes me not unhappy
Itself is murdered.

15 — The spear's thirst was assuaged
With the first drink;
To it was not denied
Repeated drinks.

23 Now is wine again permitted
Which first was forbidden:
With much toil
I won this permission.

16 — To sword & spear,
And to horse, gave I
This favor,
Which is now the good of all.

25 Reach then the bowl,
O Sawab Ben Amre!
Since my body, at the command of my uncle
Is now one great wound.

17 — And the cup of death
Reached we to the Hudseleites

Whose working is wo,
Blindness, & ruin.

18 — Then laughed the hyenas
At the death of the Hudseleites;
And thou sawest the wolves
Whose faces shone.

19 — The noblest vultures flew thither
They stepped from corpse to corpse
And from the richly prepared feast
They could not rise into the air.

SONG OF SEYD NIMETOLLAH OF KUHISTAN
THE PRINCIPLE OF ALL THINGS; ENTRAILS MADE
THE SECRET THAT SHOULD NOT BE BLOWN
ON EARTH'S WIDE THOROUGHFARES BELOW
SUNSHINE WAS HE
GO BOLDLY FORTH, AND FEAST ON BEING'S BANQUET
COLOR, TASTE, AND SMELL, SMARAGDUS, SUGAR, AND MUSK
LOOSE THE KNOTS OF THE HEART; NEVER THINK ON THY FATE
THERE RESIDES IN THE GRIEVING
I WILL BE DRUNK AND DOWN WITH WINE
TO BE WISE THE DULL BRAIN SO EARNESTLY THROBS
THE BUILDER OF HEAVEN
I BATTER THE WHEEL OF HEAVEN
TIS WRIT ON PARADISE'S GATE
THE WORLD IS A BRIDE SUPERBLY DRESSED
I AM: WHAT I AM
WHAT LOVELIER FORMS THINGS WEAR
TAKE MY HEART IN THY HAND, O BEAUTIFUL BOY OF SCHIRAZI!
OUT OF THE EAST, AND OUT OF THE WEST, NO MAN UNDERSTANDS
ME
FIT FOR THE PLEIADS' AZURE CHORD
I HAVE NO HOARDED TREASURE
HIGH HEART, O HAFIZ! THOUGH NOT THINE
O HAFIZ! SPEAK NOT OF THY NEED
OFT HAVE I SAID, I SAY IT ONCE MORE
THE PHOENIX

BY BREATH OF BEDS OF ROSES DRAWN
ALL DAY THE RAIN
O'ER THE GARDEN WATER GOES THE WIND ALONE
WHILST I DISDAIN THE POPULACE
A FRIEND IS HE, WHO, HUNTED AS A FOE
THE CHEMIST OF LOVE
AND SINCE ROUND LINES ARE DRAWN
AH, COULD I HIDE ME IN MY SONG
FAIR FALL THY SOFT HEART
THEY STREW IN THE PATH OF KINGS AND CZARS
I KNOW THIS PERILOUS LOVE-LANE
PLUNGE IN YON ANGRY' WAVES
WHILE ROSES BLOOMED ALONG THE PLAIN
BODY AND SOUL
I READ ON THE PORCH OF A PALACE BOLD
THE ETERNAL WATCHER, WHO DOTH WAKE
POEM FROM "BIRD CONVERSATIONS."
TIS HEAVY ODDS
AT THE LAST DAY, MEN SHALL WEAR
FOOLED THOU MUST BE, THOUGH WISEST OF THE WISE

NO. 13 HYMN WRITTEN IN CONCORD SEPT. 1814
ON THE DEATH OF MR. JOHN HASKINS
LINES ON THE DEATH OF MISS. M. B. FARNHAM
POEM ON ELOQUENCE BY R. W. EMERSON
ORIGINAL— "APROPOS."
WILLIAM DOES THY FRIGID SOUL
SONG: SHOUT FOR THOSE WHOSE COURSE IS DONE
PERHAPS THY LOT IN LIFE IS HIGHER
VALEDICTORY POEM
FROM FRODMER'S DRAMA "THE FRIENDS."
DEDICATION
IDEALISM
I SPREAD MY GORGEOUS SAIL
A SHOUT TO THE SHEPHERDS
I WEAR NO BADGE; NO TINSEL STAR
I RAKE NO COFFINED CLAY, NOR PUBLISH WIDE

O WHAT HAVE I TO DO
HAVE YE SEEN THE CATERPILLAR
THE PANOPLY OF PARADISE IS MINE
NO FATE, SAVE BY THE VICTIM'S FAULT, IS LOW
WHEN SUCCESS EXALTS THY LOT
THE SPIRITS OF THE WISE, SIT ON THE CLOUDS
LET NOT CONCEITED SAGES LAUGH ALOUD
MY DAYS ROLL BY ME LIKE A TRAIN OF DREAMS
ONE HAND WASHES THE OTHER
WHOSO ALAS IS YOUNG
WHEN THY SOUL
THE BLACKBIRD'S SONG THE BLACKBIRD'S SONG
I AM AN EXILE FROM MY HOME; HEAVILY
ST. AUGUSTINE
AWED I BEHOLD ONCE MORE
AN ANCIENT LADY WHO DWELT IN ROME
BE OF GOOD CHEER, BRAVE SPIRIT; STEADFASTLY
THE WINDS ARE COLD, THE DAYS ARE DARK
WRITTEN IN SICKNESS
OIL & WINE
ALL THAT THY VIRGIN SOUL CAN ASK BE THINE
THAT WANDERING FIRE TO ME APPEARS
THOUGH HER EYE SEEK OTHER FORMS
DEAR ELLEN, MANY A GOLDEN YEAR
I CALL HER BEAUTIFUL; — SHE SAYS
I'VE FOUND THE DAINTY MALICE OUT
AND DO I WASTE MY TIME
AND THOUGH HE DEARLY PRIZED THE BARDS OF FAME
AND ELLEN, WHEN THE GREYBEARD YEARS
THE BRAVE EMPEDOCLES DEFYING FOOLS
DEAR BROTHER, WOULD YOU KNOW THE LIFE
DOST THOU NOT HEAR ME ELLEN
TEACH ME I AM FORGOTTEN BY THE DEAD
WHY SHOULD I LIVE
SHALL THE MUSE SING FOR THOUSANDS & NOT SING
WHAT FROM THIS BARREN BEING DO WE REAP
DUST UNTO DUST! AND SHALL NO MORE BE SAID

THE DAYS PASS OVER ME
WHY FEAR TO DIE
I AM ALONE. SAD IS MY SOLITUDE
ON THEE HAS GOD CONFERRED
ALL THE GREAT & GOOD
SEEMED TO ME — NEVER MAID
WHERE ART THOU
I LIVE AMONG IDEAL MEN
WHAT AVAILS IT ME
SHE NEVER COMES TO ME
LEAVE ME, FEAR! THY THROBS ARE BASE
IF THOU CANST BEAR
A DULL UNCERTAIN BRAIN
THERE IS IN ALL THE SONS OF MEN
I WILL NOT LIVE OUT OF ME
HARD IS IT TO PERSUADE THE PUBLIC MIND OF ITS PLAIN DUTY &
TRUE INTEREST
ALWAYS DAY & NIGHT
HEARST THOU, SWEET SPIRIT, THOU HAST HEARD BEFORE
NONE SPARES ANOTHER YET IT PLEASES ME
WRITTEN IN NAPLES, MARCH, 1833
WHAT IS IT TO SAIL
ALONE IN ROME! WHY ROME IS LONELY TOO
AT SEA, SEPTEMBER 1833
I WILL NOT HESITATE TO SPEAK THE WORD
THE SUN IS THE SOLE INCONSUMABLE FIRE
POEM, SPOKEN BEFORE THE SOCIETY, AUGUST, 1834
O WHAT IS HEAVEN BUT THE FELLOWSHIP
AH STRANGE STRANGE STRANGE
SEE YONDER LEAFLESS TREES AGAINST THE SKY
DO THAT WHICH YOU CAN DO
FEW ARE FREE
VAN BUREN
THE FUTURE

PHILOSOPHERS ARE LINED WITH EYES WITHIN
THE SIMPLE PEOPLE EACH WITH BASKET OR TOOL
ON BRAVELY THROUGH THE SUNSHINE & THE SHOWERS
LET ME GO WHERE E'ER I WILL
AND WHEN I AM ENTOMBED IN MY PLACE
BARD OR DUNCE IS BLEST, BUT HARD
IT TAKES PHILOSOPHER OR FOOL
TELL MEN WHAT THEY KNEW BEFORE
I USE THE KNIFE
THERE IS NO EVIL BUT CAN SPEAK
THE SEA REFLECTS THE ROSY SKY
IN THIS SOUR WORLD, O SUMMERWIND
LOOK DANGER IN THE EYE IT VANISHES
AS I WALKED IN THE WOOD
I SAT UPON THE GROUND
GOOD CHARLES THE SPRINGS ADORER
AROUND THE MAN WHO SEEKS A NOBLE END
IN THE DEEP HEART OF MAN A POET DWELLS
O WHAT ARE HEROES PROPHETS MEN
YET SOMETIME TO THE SORROW STRICKEN
WHEN THOU SITTEST MOPING
WOODS
I HAVE SUPPED WITH THE GODS TONIGHT
ONCE THE PRIEST
NATURES WEB STAR BROIDERED
FOR THAT A MAN IS A MARK
THE BOHEMIAN HYMN
KIND & HOLY WERE THE WORDS
BLUEBEARD. LET THE GENTLE WIFE PREPARE
DIVINE INVITERS! I ACCEPT
GO IF THOU WILT AMBROSIAL FLOWER
IN WALDEN WOOD THE CHICKADEE
STAR SEER COPERNICUS
AT LAST THE POET SPOKE
THE DISCONTENTED POET: A MASQUE
LOVE

HOLD OF THE MAKER, NOT THE MADE
HE WALKED THE STREETS OF GREAT NEW YORK
THE ARCHANGEL HOPE
ATOM FROM ATOM YAWNS AS FAR
I GRIEVE THAT BETTER SOULS THAN MINE
NANTASKET
WATER
WHERE THE FUNGUS BROAD & RED
THE SKEPTIC
WHEN JANE WAS ABSENT EDGAR'S EYE
I HAVE FOUND A NOBLER LOVE
FINE PRESENTIMENTS CONTROLLED HIM
WE SAUNTERED AMIDST MIRACLES
THIS WORLD IS TEDIOUS
WHAT ARE ALL THE FLOWERS
A PAIR OF CRYSTAL EYES WILL LEAD ME
KNOWS HE WHO TILLS THIS LONELY FIELD
FAR SEEN THE RIVER GLIDES BELOW
FROM THE STORES OF ELDEST MATTER
AND THE BEST GIFT OF GOD
STOUT SPARTA SHRINED THE GOD OF LAUGHTER
BROTHER, NO DECREPITUDE
WHO KNOWS THIS OR THAT
SAADI LOVED THE NEW & OLD
BUT IF THOU DO THY BEST
AN ANCIENT DROP OF FEUDAL BLOOD
THESE TREES LIKE THO'TS THAT TO VISIONS CONGEAL
VAIN AGAINST HIM WERE HOSTILE BLOWS
LIKE VAULTERS IN THE CIRCUS ROUND
IF HE GO APART
NATURE WILL NOT LOSE
THE CROWNING HOUR WHEN BODIES VIE WITH SOULS
AND AS THE LIGHT DIVIDED THE DARK
WHEN DEVILS BITE
COMFORT WITH A PURRING CAT
I CANNOT FIND A PLACE SO LONELY
HE WHOM GOD HAD THUS PREFERRED

BENDED TO FOPS WHO BENT TO HIM
ON THAT NIGHT THE POET WENT
YE HAVE GRACE
THE DERVISH WHINED TO SAID
LIFE IS GREAT
THE HUSBAND HAS THE NEAREST ACRES
FROM A FAR MOUNTAIN CREEPING DOWN
IN DREAMY WOODS, WHAT FORMS ABOUND
BUT O TO SEE HIS SOLAR EYES
WHO SAW THE HID BEGINNINGS
WHAT NEVER WAS NOT, & STILL WILL BE
ENOUGH IS DONE HIGHMINDED FRIEND GO SLEEP
THOU SHALT MAKE THY HOUSE
THE GODS WALK IN THE BREATH OF THE WOODS
WOULD YOU KNOW WHAT JOY IS HID
TELL ME MAIDEN DOST THOU USE
I HAVE NO BROTHERS & NO PEERS
SOLAR INSECT ON THE WING
AND MAN OF WIT & MARK
I KNOW THE APPOINTED HOUR
YOU SHALL NOT LOVE ME FOR WHAT DAILY SPENDS
NOR WHEN IN FAIR SALOONS WE CHANCE TO MEET
ELIZABETH HOAR
EACH DAY A SOLID GOOD; NEVER MISTOOK
PROTEUS
TO EVERY CREATURE
CLOUD UPON CLOUD
SINCE THE DEVIL HOPPING ON
SAMSON STARK AT DAGON'S KNEE
POUR THE WINE! POUR THE WINE!
HEARTILY HEARTILY
POETS ARE COLORPOTS
THANKS TO THOSE WHO GO & COME
IS JOVE IMMORTAL
HEARTILY HEARTILY SING
THANK THE GODS THY GOVERNORS
IF THY BODY PINE

SCHOLAR IS A BALL THATS SPENT
ASK NOT TREASURES FROM HIS STORE
KING. IF FARMERS MAKE MY LAND SECURE
INTELLECT
CHLADNI STREWED ON GLASS THE SAND
I MUST NOT BORROW LIGHT
GO INTO THE GARDEN
BUT AS THIS FUGITIVE SUNLIGHT
COMRADE OF THE SNOW & WIND
GOD ONLY KNEW HOW SAADI DINED
FRIENDS TO ME ARE FROZEN WINE
THAT EACH SHOULD IN HIS HOUSE ABIDE
NEW ENGLAND CAPITALIST
ON A RAISIN STONE
GO OUT INTO NATURE AND PLANT TREES
BUT GOD WILL KEEP HIS PROMISE YET
POET OF POETS
SEE THE SPHERES RUSHING
THE PATIENT PAN
TO TRANSMUTE CRIME TO WISDOM, & TO STEM
PALE GENIUS ROVES ALONE
BURN YOUR LITERARY VERSES
INTELLECT
WHAT ALL THE BOOKS OF AGES PAINT, I HAVE
THE CIVIL WORLD WILL MUCH FORGIVE
MASK THY WISDOM WITH DELIGHT
ROOMY ETERNITY
DARK FLOWER OF CHESHIRE GARDEN
TERMINUS
I TO MY GARDEN WENT
MORE SWEET THAN MY REFRAIN
WISP & METEOR NIGHTLY FALLING
GOD THE LORD SAVE MASSACHUSETTS
A POET IS AT HOME
O BOSTON CITY LECTURE-HEARING
A PATCH OF MEADOW & UPLAND
AND HE LIKE ME IS NOT TOO PROUD

PARKS & PONDS ARE GOOD BY DAY
CLOUD UPON CLOUD
FOR LYRA YET SHALL BE THE POLE
A SCORE OF AIRY MILES WILL SMOOTH
ALL THINGS REHEARSE
WEBSTER
THE ATOM DISPLACES ALL ATOMS BESIDE
I HAVE AN ARROW THAT CAN FIND ITS MARK
FROM HIGH TO HIGHER FORCES
ALL DAY THE WAVES ASSAILED THE ROCK
HONOR BRIGHT O MUSE
SUCH ANOTHER PEERLESS QUEEN
SEE HOW ROMANCE ADHERES
WITH THE KEY OF THE SECRET HE MARCHES FASTER
FOR WHAT NEED I OF BOOK OR PRIEST
AND RIVAL COXCOMBS WITH ENAMORED STARE
FOR JOY & BEAUTY PLANTED IT
PAPAS BLONDINE
THE ASMODAEAN FEAT BE MINE
A PUFF OF AIR OR DRY OR DAMP
COIN THE DAYDAWN INTO LINES
HE LOVED TO WATCH & WAKE
SHE WALKED IN FLOWERS AROUND MY FIELD
THE BIRD WAS GONE THE GHASTLY TREES
PEDANTS ALL
IF BRIGHT THE SUN, HE TARRIES
TEACH ME YOUR MOOD, O PATIENT STARS!
O SUN! TAKE OFF THY HOOD OF CLOUDS
AS THE DROP FEEDS ITS FATED FLOWER
I LEAVE THE BOOK, I LEAVE THE WINE
GENTLE SPRING HAS CHARMED THE EARTH
THE CORAL WORM BENEATH THE SEA
EASY TO MATCH WHAT OTHERS DO
IF WISHES WOULD CARRY ME OVER THE LAND
MAIA
SEYD PLANTED WHERE THE DELUGE PLOUGHED
FOR EVERY GOD

FOR GENIUS MADE HIS CABIN WIDE
HE LIVES NOT WHO CAN REFUSE ME
FORBORE THE ANT HILL, SHUNNED TO TREAD
BY ART, BY MUSIC, OVERTHRILLED
BORROW URANIA'S SUBTILE WINGS
THE COMRADE OR THE BOOK IS GOOD
IS THE PACE OF NATURE SLOW?
WHY HONOR THE NEW MEN
I NEVER KNEW BUT ONE
THINK NOT THE GODS RECEIVE THY PRAYER
TURTLE IN SWAMP
INSPIRED WE MUST FORGET OUR BOOKS
SHE HAD WEALTH OF MORNINGS IN HER YEAR
WHEN WRATH & TERROR CHANGED JOVE'S REGAL PORT
SOFTENS THE AIR SO COLD & RUDE
SPICES IN THE PLANTS THAT RUN
SHE PAINTS WITH WHITE & RED THE MOORS
THE EARTH
THE SUN ATHWART THE CLOUD THOUGHT IT NO SIN
OCTOBER WOODS, WHEREIN
HOW DREARILY IN COLLEGE HALL
IF CURSES BE THE WAGE OF LOVE
THE LAND WAS ALL ELECTRIC
FOR NATURE TRUE & LIKE IN EVERY PLACE
HISTORY & PROPHECY ARE ALIKE
THE COIL OF SPACE THE CONES OF LIGHT
THE HEAVY BLUE CHAIN
THIS SHINING HOUR IS AN EDIFICE
HE COULD CONDENSE CERULEAN ETHER
THE SPARROW IS RICH IN HER NEST
JAMES RUSSELL LOWELL
FROM PAQUES TO NOEL
EVER THE ROCK OF AGES MELTS
BUT NEVER YET THE MAN WAS FOUND
FROM NATURE'S BEGINNING
A QUEEN REJOICES IN HER PEERS
BY KINDS I KEEP MY KINDS IN CHECK

BUT NATURE WHISTLED WITH ALL HER WINDS
DEAR ARE THE PLEASANT MEMORIES
THE GENIAL SPARK THE POET FELT
ONE NIGHT HE DREAMED OF A PALACE FAIR
THE LOW DECEMBER VAULT IN JUNE BE UP-LIFTED HIGH
AT PLYMOUTH IN THE FRIENDLY CROWD
OLD AGE
TO THE CLOCK
NATURE SAYS
SHUN PASSION, FOLD THE HANDS OF THRIFT
TO THE MIZEN, THE MAIN, & THE FORE
THE RULES TO MEN MADE EVIDENT
TOO LATE THE ANXIOUS FIRE CAME
HIS INSTANT THOUGHT THE POET SPOKE
TRY THE MIGHT THE MUSE AFFORDS
SAADI HELD THE MUSE IN AWE
NO SONG SO TUNEFUL, QUOTH THE FOX
LIFE
SONG OF TALIESIN
SEEMED, THO' THE SOFT SHEEN ALL ENCHANTS
NATURE SAITH
ILLUSIONS LIKE THE TINTS OF PEARL
INSCRIPTION ON A WELL IN MEMORY
LETTERS
MAY
THE MIRACLE
A DANGEROUS GIFT & GRACE IS MINE
AND HUNGRY DEBT BESEIGED MY DOOR
USE WILL IN MAN NEW GRACE REVEAL
PUT IN, DRIVE HOME THE SIGHTLESS WEDGES
WHAT FLOWING CENTRAL FORCES, SAY
THE BEST OF LIFE IS PRESENCE OF A MUSE
THE PILGRIMS
I CARE NOT WHITHER I MAY GO
I AM NOT BLACK IN MY MIND
TRIMOUNTAIN
THE ROCKY NOOK WITH HILLTOPS THREE

FOR LUCIFER, THAT OLD ATHLETE
TRAITORS THO' PLUMED & STEEL EQUIPPED
THE MUSE
IN MY GARDEN THREE WAYS MEET
THERMOMETER
NATURE
SEASHORE
THINGS OFT MISCALLING, AS THE HEN
ON THE CHAMBER, ON THE STAIRS
AH! NOT TO ME THESE DREAMS BELONG
FOR DEATHLESS POWERS TO VERSE BELONG
UPON A ROCK YET UNCREATE
ALAS, ALAS, THAT I AM BETRAYED
WO IS ME WOE'S ME WHEN I THINK
SWEET, SWEET, IS SLEEP, — AH! SWEETER, TO BE STONE
THE POWER OF A BEAUTIFUL FACE LIFTS ME TO HEAVEN
BOY BRING THE BOWL FULL OF WINE
WHO ROYALLY BEDDED
DESIRE NO BREAD, FORSAKE THE GUEST HALL OF THE EARTH
THE RED ROSE BLOOMS
MANY OUR NEEDS, YET WE SPARE PRAYERS
EARLY AFTER THE NIGHT LONG REVEL
THOU WHO WITH THY LONG HAIR
ART THOU WISE, FOUR THINGS RESIGN
KNOWST THOU THE LUCK THE FRIENDS FACE TO SEE
UNTRUTH IS BECOME THE MODE
NOVICE, HEAR ME WHAT I SAY
LAMENT NOT, O HAFIZ, THE DISTRIBUTION
HAFIZ THOU ART FROM ETERNITY
HAFIZ SINCE ON THE WORLD
I SAID TO THE EAST WIND
WE WISH LIKE THE GLASS
WHEN IN ETERNITY THE LIGHT
SECRETLY TO LOVE & TO DRINK, WHAT IS IT? TIS A DISSOLUTE
THIS EFFERVESCING GENTLEMAN WHO DESPISES A SECRET
STAND UP, THAT WE MAY SACRIFICE THE SOUL
O FRIEND BLAME NOT HAFIZ

THE WAY OF LOVE IS UNLIMITED
HIS LEARNING TRULY LIFTED HAFIZ TO HEAVEN
THOUSAND DANGERS OF RUIN HAS THE STREET OF LOVE
BRING WINE RELEASE ME
BLAME ME NOT THOU HOARSE PREACHER
I NEVER WENT OUT OF MY COUNTRY
FOR HIS CONSTANT DWELLING PLACE HAS HAFIZ
OUR SHAH'S COUNSEL IS THE EFFLUX
IF THY DARLING FAVOR THEE
NO PHYSICIAN HAS A BALSAM FOR MY WO
SPARE THOU NEITHER TIME NOR BLOOD FOR THY FRIEND
IT IS CERTAIN THAT WHO HIS MIND
WHO DEDICATES HIMSELF TO THE GLASS
WINE RESEMBLES THE LORD JESUS
DRINK TILL THE TURBANS ARE ALL UNBOUND
SO LONG AS THERE'S A TRACE
TO WHOM A GLASS FULL OF RED WINE
IN BOUNDING YOUTH THE NIGHT & RAIN
THE NINEFOLD TABLE OF HEAVEN
SHOULD I SHED MY TEARS
PRINCE THE BALL OF HEAVEN SHOULD
SINCE YOU SET NO WORTH ON THE HEART
NOW TELLS THE FLOWER
GOOD IS WHAT GOES ON THE ROAD OF NATURE
REACH ME WINE NO COUNSEL WEAKENS THE CONCLUSION OF
HAS THINE ENEMY SLANDERED THY HOUSE
YET ALL COMES OUT OF THIS, THAT ONE DOOR
HEAR WHAT THE GLASS WILL TELL THEE
FREE THYSELF FROM WO
AND HAD HAFIZ
THY SONGS O HAFIZ
WHO COMPARES A POEM
THY POEMS HAFIZ SHAME THE ROSE LEAVES
IN THE KINGDOM OF POESY HAFIZ WAVES LIKE A BANNER
WHERE O WHERE IS THE MESSAGE WHICH TODAY
COME LET US STREW ROSES
WHO GAVE THY CHEEK THE MIXED TINT

DRINK, HEAR MY COUNSEL, MY SON, THAT THE WORLD FRET THEE
RULER AFTER WORD & THOUGHT
O FOLLOW THE SONNET'S FLIGHT
O HAFIZ, GIVE ME THOUGHT
IN THY HOLIDAY OF LIFE
THE ROGUISH WIND AND I
THE TREACHEROUS WIND PIPES A LEWD SONG
WE WOULD DO NOUGHT BUT GOOD
LO! WHERE FROM HEAVEN'S HIGH ROOF
DRINK WINE, AND THE HEAVEN
A STATELY BRIDE IS THE SHINING WORLD
WHO EVER SUFFERED AS I FROM SEPARATION?
I SHALL GO FROM MY SICKBED TO HEAVEN
SEE & HEAR THE FRAUD, THE MALICE OF THE CHANGE OF
FORTUNE
WHO LOVES HIS FRIEND WITH HIS HEART OF HEARTS
HAD I THE WORLD FOR MY ENEMY
SALVE SENESCENTEM
THE PAIN OF LOVE'S A BETTER FATE
IN SENA HAR, MY FIRST BORN SLEEPS
UNBAR THE DOOR, SINCE THOU THE OPENER ART
FOR TWO REWARDS, & NOUGHT BESIDE
SHAH SANDSCHAR, WHOSE LOWEST SLAVE
WILT THOU LIFE'S BEST ELIXIR DRAIN?
THE SOUL
TEACH YOUR CHILD TO EARN HIS MEAL
ONLY THREE THINGS LENGTHEN LIFE
FOR PEARLS, PLUNGE IN THE SEA
ARABIAN BALLAD
FORTUNE AND HOPE! I'VE MADE MY PORT

I NEVER KNEW BUT ONE
I USE THE KNIFE
I AM ALONE. SAD IS MY SOLITUDE
I AM AN EXILE FROM MY HOME; HEAVILY
I AM NOT BLACK IN MY MIND
I AM OWNER OF THE SPHERE
I AM: WHAT I AM
I BATTER THE WHEEL OF HEAVEN
I CALL HER BEAUTIFUL; — SHE SAYS
I CANNOT FIND A PLACE SO LONELY
I CARE NOT WHITHER I MAY GO
I GRIEVE THAT BETTER SOULS THAN MINE
I HAVE AN ARROW THAT CAN FIND ITS MARK
I HAVE FOUND A NOBLER LOVE
I HAVE NO BROTHERS & NO PEERS
I HAVE NO HOARDED TREASURE

I HAVE SUPPED WITH THE GODS TONIGHT
I KNOW THE APPOINTED HOUR
I KNOW THIS PERILOUS LOVE-LANE
I LEAVE THE BOOK, I LEAVE THE WINE
I LEFT MY DREAMY PAGE & SALLIED FORTH
I LIVE AMONG IDEAL MEN
I MUST NOT BORROW LIGHT
I NEVER WENT OUT OF MY COUNTRY
I RAKE NO COFFINED CLAY, NOR PUBLISH WIDE
I READ ON THE PORCH OF A PALACE BOLD
I SAID TO THE EAST WIND
I SAT UPON THE GROUND
I SHALL GO FROM MY SICKBED TO HEAVEN
I SPREAD MY GORGEOUS SAIL
I TO MY GARDEN WENT
I WEAR NO BADGE; NO TINSEL STAR
I WILL BE DRUNK AND DOWN WITH WINE
I WILL NOT HESITATE TO SPEAK THE WORD
I WILL NOT LIVE OUT OF ME
I'VE FOUND THE DAINY MALICE OUT
IDEALISM
IF BRIGHT THE SUN, HE TARRIES
IF CURSES BE THE WAGE OF LOVE
IF HE GO APART
IF THOU CANST BEAR
IF THY BODY PINE
IF THY DARLING FAVOR THEE

NATURE: ADDRESSES AND LECTURES

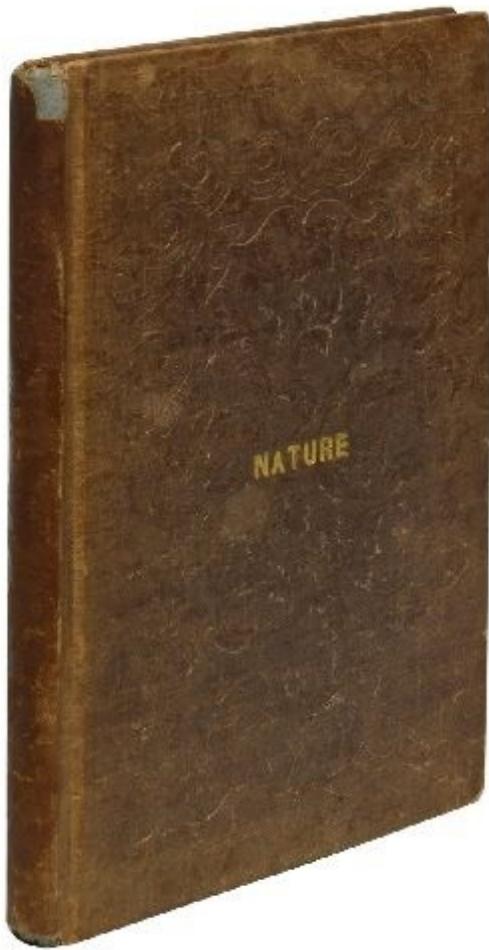

Published anonymously in 1836, the seminal essay *Nature* is widely regarded as the foundation work of Transcendentalism, in which Emerson delineates his own belief system of a non-traditional appreciation of nature. Transcendentalism suggests that divinity suffuses all nature, proposing that we can only understand reality through the study of nature. Following a visit to the Muséum National d'Histoire Naturelle in Paris, Emerson was inspired to give a set of lectures on nature, which were delivered in Boston, leading on to the publication of *Nature*.

Within the essay, Emerson divides nature into four usages; Commodity, Beauty, Language and Discipline, and with these distinctions he defines the ways by which humans use nature for their basic needs, their desire for delight, their communication with one another and their understanding of the world.

According to Emerson, humans must take themselves away from society's flaws and distractions in order to experience a "wholeness" with nature for which we are naturally suited. He believes that solitude is the only way humans can fully adhere to what nature has to offer. Reflecting upon this idea of solitude and humans' search for this ideal, Emerson states, "To go into solitude, a man needs to retire as much from his chamber as from society. I am not solitary whilst I read and write, though nobody is with me. But if a man would be alone, let him look at the stars." Clearly, a person must allow nature to "take him away," society can destroy humans' wholeness. Nature and humans must create a reciprocal relationship, "Nature, in its ministry to man, is only the material, but is also the process and the result. All the parts incessantly work into each other's hands for the profit of man. The wind sows the seed; the sun evaporates the sea; the wind blows the vapor to the field; the ice, on the other side of the planet, condenses rain on this; the rain feeds the plant; the plant feeds the animal; and thus the endless circulations of the divine charity nourish man," as Jefferson says, nature and humans need each other to be beneficial. This relationship that Emerson depicts is somewhat spiritual; humans must recognize the spirit of nature, and accept it as the Universal Being. "Nature is not fixed but fluid. Spirit alters, moulds, makes it. The immobility or bruteness of nature, is the absence of spirit; to pure spirit, it is fluid, it is volatile, it is obedient." Emerson explains that nature is not "fixed or fluid;" to a pure spirit, but that nature is *everything*.

The groundbreaking essay has influenced leading writers and thinkers across the world since its first publication in 1836. When Henry David Thoreau read

the essay as a senior at Harvard College, it had a profound effect on his outlook. *Nature* eventually became an essential influence for Thoreau's later writings, including his seminal book *Walden*. In fact, Thoreau wrote *Walden* while living in a self-built cabin on land that Emerson owned, having befriended the author and sought his advice and guidance before beginning his famous experiment.

Henry David Thoreau (1817-1862), who was destined to become a leading author, poet, philosopher, historian and Transcendentalist, was deeply inspired by Emerson's landmark essay 'Nature'.

NATURE

A subtle chain of countless rings
The next unto the farthest brings;
The eye reads omens where it goes,
And speaks all languages the rose;
And, striving to be man, the worm
Mounts through all the spires of form.

CHAPTER I. NATURE.

TO go into solitude, a man needs to retire as much from his chamber as from society. I am not solitary whilst I read and write, though nobody is with me. But if a man would be alone, let him look at the stars. The rays that come from those heavenly worlds, will separate between him and what he touches. One might think the atmosphere was made transparent with this design, to give man, in the heavenly bodies, the perpetual presence of the sublime. Seen in the streets of cities, how great they are! If the stars should appear one night in a thousand years, how would men believe and adore; and preserve for many generations the remembrance of the city of God which had been shown! But every night come out these envoys of beauty, and light the universe with their admonishing smile.

The stars awaken a certain reverence, because though always present, they are inaccessible; but all natural objects make a kindred impression, when the mind is open to their influence. Nature never wears a mean appearance. Neither does the wisest man extort her secret, and lose his curiosity by finding out all her perfection. Nature never became a toy to a wise spirit. The flowers, the animals, the mountains, reflected the wisdom of his best hour, as much as they had delighted the simplicity of his childhood.

When we speak of nature in this manner, we have a distinct but most poetical sense in the mind. We mean the integrity of impression made by manifold natural objects. It is this which distinguishes the stick of timber of the wood-cutter, from the tree of the poet. The charming landscape which I saw this morning, is indubitably made up of some twenty or thirty farms. Miller owns this field, Locke that, and Manning the woodland beyond. But none of them owns the landscape. There is a property in the horizon which no man has but he whose eye can integrate all the parts, that is, the poet. This is the best part of these men's farms, yet to this their warranty-deeds give no title.

To speak truly, few adult persons can see nature. Most persons do not see the sun. At least they have a very superficial seeing. The sun illuminates only the eye of the man, but shines into the eye and the heart of the child. The lover of nature is he whose inward and outward senses are still truly adjusted to each other; who has retained the spirit of infancy even into the era of manhood. His intercourse with heaven and earth, becomes part of his daily food. In the presence of nature, a wild delight runs through the man, in spite of real sorrows. Nature says, — he is my creature, and maugre all his impertinent griefs, he shall be glad with me. Not the sun or the summer alone, but every hour and season yields its tribute of delight; for every hour and change corresponds to and

authorizes a different state of the mind, from breathless noon to grimmest midnight. Nature is a setting that fits equally well a comic or a mourning piece. In good health, the air is a cordial of incredible virtue. Crossing a bare common, in snow puddles, at twilight, under a clouded sky, without having in my thoughts any occurrence of special good fortune, I have enjoyed a perfect exhilaration. I am glad to the brink of fear. In the woods too, a man casts off his years, as the snake his slough, and at what period soever of life, is always a child. In the woods, is perpetual youth. Within these plantations of God, a decorum and sanctity reign, a perennial festival is dressed, and the guest sees not how he should tire of them in a thousand years. In the woods, we return to reason and faith. There I feel that nothing can befall me in life, — no disgrace, no calamity, (leaving me my eyes,) which nature cannot repair. Standing on the bare ground, — my head bathed by the blithe air, and uplifted into infinite space, — all mean egotism vanishes. I become a transparent eye-ball; I am nothing; I see all; the currents of the Universal Being circulate through me; I am part or particle of God. The name of the nearest friend sounds then foreign and accidental: to be brothers, to be acquaintances, — master or servant, is then a trifle and a disturbance. I am the lover of uncontained and immortal beauty. In the wilderness, I find something more dear and connate than in streets or villages. In the tranquil landscape, and especially in the distant line of the horizon, man beholds somewhat as beautiful as his own nature.

The greatest delight which the fields and woods minister, is the suggestion of an occult relation between man and the vegetable. I am not alone and unacknowledged. They nod to me, and I to them. The waving of the boughs in the storm, is new to me and old. It takes me by surprise, and yet is not unknown. Its effect is like that of a higher thought or a better emotion coming over me, when I deemed I was thinking justly or doing right.

Yet it is certain that the power to produce this delight, does not reside in nature, but in man, or in a harmony of both. It is necessary to use these pleasures with great temperance. For, nature is not always tricked in holiday attire, but the same scene which yesterday breathed perfume and glittered as for the frolic of the nymphs, is overspread with melancholy today. Nature always wears the colors of the spirit. To a man laboring under calamity, the heat of his own fire hath sadness in it. Then, there is a kind of contempt of the landscape felt by him who has just lost by death a dear friend. The sky is less grand as it shuts down over less worth in the population.

CHAPTER II. COMMODITY.

WHOEVER considers the final cause of the world, will discern a multitude of uses that result. They all admit of being thrown into one of the following classes; Commodity; Beauty; Language; and Discipline.

Under the general name of Commodity, I rank all those advantages which our senses owe to nature. This, of course, is a benefit which is temporary and mediate, not ultimate, like its service to the soul. Yet although low, it is perfect in its kind, and is the only use of nature which all men apprehend. The misery of man appears like childish petulance, when we explore the steady and prodigal provision that has been made for his support and delight on this green ball which floats him through the heavens. What angels invented these splendid ornaments, these rich conveniences, this ocean of air above, this ocean of water beneath, this firmament of earth between? this zodiac of lights, this tent of dropping clouds, this striped coat of climates, this fourfold year? Beasts, fire, water, stones, and corn serve him. The field is at once his floor, his work-yard, his play-ground, his garden, and his bed.

“More servants wait on man
Than he’ll take notice of.” —

Nature, in its ministry to man, is not only the material, but is also the process and the result. All the parts incessantly work into each other’s hands for the profit of man. The wind sows the seed; the sun evaporates the sea; the wind blows the vapor to the field; the ice, on the other side of the planet, condenses rain on this; the rain feeds the plant; the plant feeds the animal; and thus the endless circulations of the divine charity nourish man.

The useful arts are reproductions or new combinations by the wit of man, of the same natural benefactors. He no longer waits for favoring gales, but by means of steam, he realizes the fable of Aeolus’s bag, and carries the two and thirty winds in the boiler of his boat. To diminish friction, he paves the road with iron bars, and, mounting a coach with a ship-load of men, animals, and merchandise behind him, he darts through the country, from town to town, like an eagle or a swallow through the air. By the aggregate of these aids, how is the face of the world changed, from the era of Noah to that of Napoleon! The private poor man hath cities, ships, canals, bridges, built for him. He goes to the post-office, and the human race run on his errands; to the book-shop, and the human race read and write of all that happens, for him; to the court-house, and nations

repair his wrongs. He sets his house upon the road, and the human race go forth every morning, and shovel out the snow, and cut a path for him.

But there is no need of specifying particulars in this class of uses. The catalogue is endless, and the examples so obvious, that I shall leave them to the reader's reflection, with the general remark, that this mercenary benefit is one which has respect to a farther good. A man is fed, not that he may be fed, but that he may work.

CHAPTER III. BEAUTY.

A NOBLER want of man is served by nature, namely, the love of Beauty.

The ancient Greeks called the world *κοσμος*, beauty. Such is the constitution of all things, or such the plastic power of the human eye, that the primary forms, as the sky, the mountain, the tree, the animal, give us a delight *in and for themselves*; a pleasure arising from outline, color, motion, and grouping. This seems partly owing to the eye itself. The eye is the best of artists. By the mutual action of its structure and of the laws of light, perspective is produced, which integrates every mass of objects, of what character soever, into a well colored and shaded globe, so that where the particular objects are mean and unaffecting, the landscape which they compose, is round and symmetrical. And as the eye is the best composer, so light is the first of painters. There is no object so foul that intense light will not make beautiful. And the stimulus it affords to the sense, and a sort of infinitude which it hath, like space and time, make all matter gay. Even the corpse has its own beauty. But besides this general grace diffused over nature, almost all the individual forms are agreeable to the eye, as is proved by our endless imitations of some of them, as the acorn, the grape, the pine-cone, the wheat-ear, the egg, the wings and forms of most birds, the lion's claw, the serpent, the butterfly, sea-shells, flames, clouds, buds, leaves, and the forms of many trees, as the palm.

For better consideration, we may distribute the aspects of Beauty in a threefold manner.

1. First, the simple perception of natural forms is a delight. The influence of the forms and actions in nature, is so needful to man, that, in its lowest functions, it seems to lie on the confines of commodity and beauty. To the body and mind which have been cramped by noxious work or company, nature is medicinal and restores their tone. The tradesman, the attorney comes out of the din and craft of the street, and sees the sky and the woods, and is a man again. In their eternal calm, he finds himself. The health of the eye seems to demand a horizon. We are never tired, so long as we can see far enough.

But in other hours, Nature satisfies by its loveliness, and without any mixture of corporeal benefit. I see the spectacle of morning from the hill-top over against my house, from day-break to sun-rise, with emotions which an angel might share. The long slender bars of cloud float like fishes in the sea of crimson light. From the earth, as a shore, I look out into that silent sea. I seem to partake its rapid transformations: the active enchantment reaches my dust, and I dilate and conspire with the morning wind. How does Nature deify us with a few and cheap

elements! Give me health and a day, and I will make the pomp of emperors ridiculous. The dawn is my Assyria; the sun-set and moon-rise my Paphos, and unimaginable realms of faerie; broad noon shall be my England of the senses and the understanding; the night shall be my Germany of mystic philosophy and dreams.

Not less excellent, except for our less susceptibility in the afternoon, was the charm, last evening, of a January sunset. The western clouds divided and subdivided themselves into pink flakes modulated with tints of unspeakable softness; and the air had so much life and sweetness, that it was a pain to come within doors. What was it that nature would say? Was there no meaning in the live repose of the valley behind the mill, and which Homer or Shakspeare could not reform for me in words? The leafless trees become spires of flame in the sunset, with the blue east for their back-ground, and the stars of the dead calices of flowers, and every withered stem and stubble rimed with frost, contribute something to the mute music.

The inhabitants of cities suppose that the country landscape is pleasant only half the year. I please myself with the graces of the winter scenery, and believe that we are as much touched by it as by the genial influences of summer. To the attentive eye, each moment of the year has its own beauty, and in the same field, it beholds, every hour, a picture which was never seen before, and which shall never be seen again. The heavens change every moment, and reflect their glory or gloom on the plains beneath. The state of the crop in the surrounding farms alters the expression of the earth from week to week. The succession of native plants in the pastures and roadsides, which makes the silent clock by which time tells the summer hours, will make even the divisions of the day sensible to a keen observer. The tribes of birds and insects, like the plants punctual to their time, follow each other, and the year has room for all. By water-courses, the variety is greater. In July, the blue pontederia or pickerel-weed blooms in large beds in the shallow parts of our pleasant river, and swarms with yellow butterflies in continual motion. Art cannot rival this pomp of purple and gold. Indeed the river is a perpetual gala, and boasts each month a new ornament.

But this beauty of Nature which is seen and felt as beauty, is the least part. The shows of day, the dewy morning, the rainbow, mountains, orchards in blossom, stars, moonlight, shadows in still water, and the like, if too eagerly hunted, become shows merely, and mock us with their unreality. Go out of the house to see the moon, and 't is mere tinsel; it will not please as when its light shines upon your necessary journey. The beauty that shimmers in the yellow afternoons of October, who ever could clutch it? Go forth to find it, and it is gone: 't is only a mirage as you look from the windows of diligence.

2. The presence of a higher, namely, of the spiritual element is essential to its perfection. The high and divine beauty which can be loved without effeminacy, is that which is found in combination with the human will. Beauty is the mark God sets upon virtue. Every natural action is graceful. Every heroic act is also decent, and causes the place and the bystanders to shine. We are taught by great actions that the universe is the property of every individual in it. Every rational creature has all nature for his dowry and estate. It is his, if he will. He may divest himself of it; he may creep into a corner, and abdicate his kingdom, as most men do, but he is entitled to the world by his constitution. In proportion to the energy of his thought and will, he takes up the world into himself. "All those things for which men plough, build, or sail, obey virtue;" said Sallust. "The winds and waves," said Gibbon, "are always on the side of the ablest navigators." So are the sun and moon and all the stars of heaven. When a noble act is done, — perchance in a scene of great natural beauty; when Leonidas and his three hundred martyrs consume one day in dying, and the sun and moon come each and look at them once in the steep defile of Thermopylae; when Arnold Winkelried, in the high Alps, under the shadow of the avalanche, gathers in his side a sheaf of Austrian spears to break the line for his comrades; are not these heroes entitled to add the beauty of the scene to the beauty of the deed? When the bark of Columbus nears the shore of America; — before it, the beach lined with savages, fleeing out of all their huts of cane; the sea behind; and the purple mountains of the Indian Archipelago around, can we separate the man from the living picture? Does not the New World clothe his form with her palm-groves and savannahs as fit drapery? Ever does natural beauty steal in like air, and envelope great actions. When Sir Harry Vane was dragged up the Tower-hill, sitting on a sled, to suffer death, as the champion of the English laws, one of the multitude cried out to him, "You never sate on so glorious a seat." Charles II., to intimidate the citizens of London, caused the patriot Lord Russel to be drawn in an open coach, through the principal streets of the city, on his way to the scaffold. "But," his biographer says, "the multitude imagined they saw liberty and virtue sitting by his side." In private places, among sordid objects, an act of truth or heroism seems at once to draw to itself the sky as its temple, the sun as its candle. Nature stretcheth out her arms to embrace man, only let his thoughts be of equal greatness. Willingly does she follow his steps with the rose and the violet, and bend her lines of grandeur and grace to the decoration of her darling child. Only let his thoughts be of equal scope, and the frame will suit the picture. A virtuous man is in unison with her works, and makes the central figure of the visible sphere. Homer, Pindar, Socrates, Phocion, associate themselves fitly in our memory with the geography and climate of Greece. The visible heavens and

earth sympathize with Jesus. And in common life, whosoever has seen a person of powerful character and happy genius, will have remarked how easily he took all things along with him, — the persons, the opinions, and the day, and nature became ancillary to a man.

3. There is still another aspect under which the beauty of the world may be viewed, namely, as it becomes an object of the intellect. Beside the relation of things to virtue, they have a relation to thought. The intellect searches out the absolute order of things as they stand in the mind of God, and without the colors of affection. The intellectual and the active powers seem to succeed each other, and the exclusive activity of the one, generates the exclusive activity of the other. There is something unfriendly in each to the other, but they are like the alternate periods of feeding and working in animals; each prepares and will be followed by the other. Therefore does beauty, which, in relation to actions, as we have seen, comes unsought, and comes because it is unsought, remain for the apprehension and pursuit of the intellect; and then again, in its turn, of the active power. Nothing divine dies. All good is eternally reproductive. The beauty of nature reforms itself in the mind, and not for barren contemplation, but for new creation.

All men are in some degree impressed by the face of the world; some men even to delight. This love of beauty is Taste. Others have the same love in such excess, that, not content with admiring, they seek to embody it in new forms. The creation of beauty is Art.

The production of a work of art throws a light upon the mystery of humanity. A work of art is an abstract or epitome of the world. It is the result or expression of nature, in miniature. For, although the works of nature are innumerable and all different, the result or the expression of them all is similar and single. Nature is a sea of forms radically alike and even unique. A leaf, a sun-beam, a landscape, the ocean, make an analogous impression on the mind. What is common to them all, — that perfectness and harmony, is beauty. The standard of beauty is the entire circuit of natural forms, — the totality of nature; which the Italians expressed by defining beauty “*il piu nell' uno.*” Nothing is quite beautiful alone: nothing but is beautiful in the whole. A single object is only so far beautiful as it suggests this universal grace. The poet, the painter, the sculptor, the musician, the architect, seek each to concentrate this radiance of the world on one point, and each in his several work to satisfy the love of beauty which stimulates him to produce. Thus is Art, a nature passed through the alembic of man. Thus in art, does nature work through the will of a man filled with the beauty of her first works.

The world thus exists to the soul to satisfy the desire of beauty. This element I

call an ultimate end. No reason can be asked or given why the soul seeks beauty. Beauty, in its largest and profoundest sense, is one expression for the universe. God is the all-fair. Truth, and goodness, and beauty, are but different faces of the same All. But beauty in nature is not ultimate. It is the herald of inward and eternal beauty, and is not alone a solid and satisfactory good. It must stand as a part, and not as yet the last or highest expression of the final cause of Nature.

CHAPTER IV. LANGUAGE.

LANGUAGE is a third use which Nature subserves to man. Nature is the vehicle, and threefold degree.

1. Words are signs of natural facts.
2. Particular natural facts are symbols of particular spiritual facts.
3. Nature is the symbol of spirit.

1. Words are signs of natural facts. The use of natural history is to give us aid in supernatural history: the use of the outer creation, to give us language for the beings and changes of the inward creation. Every word which is used to express a moral or intellectual fact, if traced to its root, is found to be borrowed from some material appearance. *Right* means *straight*; *wrong* means *twisted*. *Spirit* primarily means *wind*; *transgression*, the crossing of a *line*; *supercilious*, the *raising of the eyebrow*. We say the *heart* to express emotion, the *head* to denote thought; and *thought* and *emotion* are words borrowed from sensible things, and now appropriated to spiritual nature. Most of the process by which this transformation is made, is hidden from us in the remote time when language was framed; but the same tendency may be daily observed in children. Children and savages use only nouns or names of things, which they convert into verbs, and apply to analogous mental acts.

2. But this origin of all words that convey a spiritual import, — so conspicuous a fact in the history of language, — is our least debt to nature. It is not words only that are emblematic; it is things which are emblematic. Every natural fact is a symbol of some spiritual fact. Every appearance in nature corresponds to some state of the mind, and that state of the mind can only be described by presenting that natural appearance as its picture. An enraged man is a lion, a cunning man is a fox, a firm man is a rock, a learned man is a torch. A lamb is innocence; a snake is subtle spite; flowers express to us the delicate affections. Light and darkness are our familiar expression for knowledge and ignorance; and heat for love. Visible distance behind and before us, is respectively our image of memory and hope.

Who looks upon a river in a meditative hour, and is not reminded of the flux of all things? Throw a stone into the stream, and the circles that propagate themselves are the beautiful type of all influence. Man is conscious of a universal soul within or behind his individual life, wherein, as in a firmament, the natures of Justice, Truth, Love, Freedom, arise and shine. This universal soul, he calls Reason: it is not mine, or thine, or his, but we are its; we are its property and men. And the blue sky in which the private earth is buried, the sky

with its eternal calm, and full of everlasting orbs, is the type of Reason. That which, intellectually considered, we call Reason, considered in relation to nature, we call Spirit. Spirit is the Creator. Spirit hath life in itself. And man in all ages and countries, embodies it in his language, as the FATHER.

It is easily seen that there is nothing lucky or capricious in these analogies, but that they are constant, and pervade nature. These are not the dreams of a few poets, here and there, but man is an analogist, and studies relations in all objects. He is placed in the centre of beings, and a ray of relation passes from every other being to him. And neither can man be understood without these objects, nor these objects without man. All the facts in natural history taken by themselves, have no value, but are barren, like a single sex. But marry it to human history, and it is full of life. Whole Floras, all Linnaeus' and Buffon's volumes, are dry catalogues of facts; but the most trivial of these facts, the habit of a plant, the organs, or work, or noise of an insect, applied to the illustration of a fact in intellectual philosophy, or, in any way associated to human nature, affects us in the most lively and agreeable manner. The seed of a plant, — to what affecting analogies in the nature of man, is that little fruit made use of, in all discourse, up to the voice of Paul, who calls the human corpse a seed,— “It is sown a natural body; it is raised a spiritual body.” The motion of the earth round its axis, and round the sun, makes the day, and the year. These are certain amounts of brute light and heat. But is there no intent of an analogy between man's life and the seasons? And do the seasons gain no grandeur or pathos from that analogy? The instincts of the ant are very unimportant, considered as the ant's; but the moment a ray of relation is seen to extend from it to man, and the little drudge is seen to be a monitor, a little body with a mighty heart, then all its habits, even that said to be recently observed, that it never sleeps, become sublime.

Because of this radical correspondence between visible things and human thoughts, savages, who have only what is necessary, converse in figures. As we go back in history, language becomes more picturesque, until its infancy, when it is all poetry; or all spiritual facts are represented by natural symbols. The same symbols are found to make the original elements of all languages. It has moreover been observed, that the idioms of all languages approach each other in passages of the greatest eloquence and power. And as this is the first language, so is it the last. This immediate dependence of language upon nature, this conversion of an outward phenomenon into a type of somewhat in human life, never loses its power to affect us. It is this which gives that piquancy to the conversation of a strong-natured farmer or back-woodsman, which all men relish.

A man's power to connect his thought with its proper symbol, and so to utter

it, depends on the simplicity of his character, that is, upon his love of truth, and his desire to communicate it without loss. The corruption of man is followed by the corruption of language. When simplicity of character and the sovereignty of ideas is broken up by the prevalence of secondary desires, the desire of riches, of pleasure, of power, and of praise, — and duplicity and falsehood take place of simplicity and truth, the power over nature as an interpreter of the will, is in a degree lost; new imagery ceases to be created, and old words are perverted to stand for things which are not; a paper currency is employed, when there is no bullion in the vaults. In due time, the fraud is manifest, and words lose all power to stimulate the understanding or the affections. Hundreds of writers may be found in every long-civilized nation, who for a short time believe, and make others believe, that they see and utter truths, who do not of themselves clothe one thought in its natural garment, but who feed unconsciously on the language created by the primary writers of the country, those, namely, who hold primarily on nature.

But wise men pierce this rotten diction and fasten words again to visible things; so that picturesque language is at once a commanding certificate that he who employs it, is a man in alliance with truth and God. The moment our discourse rises above the ground line of familiar facts, and is inflamed with passion or exalted by thought, it clothes itself in images. A man conversing in earnest, if he watch his intellectual processes, will find that a material image, more or less luminous, arises in his mind, cotemporaneous with every thought, which furnishes the vestment of the thought. Hence, good writing and brilliant discourse are perpetual allegories. This imagery is spontaneous. It is the blending of experience with the present action of the mind. It is proper creation. It is the working of the Original Cause through the instruments he has already made.

These facts may suggest the advantage which the country-life possesses for a powerful mind, over the artificial and curtailed life of cities. We know more from nature than we can at will communicate. Its light flows into the mind evermore, and we forget its presence. The poet, the orator, bred in the woods, whose senses have been nourished by their fair and appeasing changes, year after year, without design and without heed, — shall not lose their lesson altogether, in the roar of cities or the broil of politics. Long hereafter, amidst agitation and terror in national councils, — in the hour of revolution, — these solemn images shall reappear in their morning lustre, as fit symbols and words of the thoughts which the passing events shall awaken. At the call of a noble sentiment, again the woods wave, the pines murmur, the river rolls and shines, and the cattle low upon the mountains, as he saw and heard them in his infancy.

And with these forms, the spells of persuasion, the keys of power are put into his hands.

3. We are thus assisted by natural objects in the expression of particular meanings. But how great a language to convey such pepper-corn informations! Did it need such noble races of creatures, this profusion of forms, this host of orbs in heaven, to furnish man with the dictionary and grammar of his municipal speech? Whilst we use this grand cipher to expedite the affairs of our pot and kettle, we feel that we have not yet put it to its use, neither are able. We are like travellers using the cinders of a volcano to roast their eggs. Whilst we see that it always stands ready to clothe what we would say, we cannot avoid the question, whether the characters are not significant of themselves. Have mountains, and waves, and skies, no significance but what we consciously give them, when we employ them as emblems of our thoughts? The world is emblematic. Parts of speech are metaphors, because the whole of nature is a metaphor of the human mind. The laws of moral nature answer to those of matter as face to face in a glass. "The visible world and the relation of its parts, is the dial plate of the invisible." The axioms of physics translate the laws of ethics. Thus, "the whole is greater than its part;" "reaction is equal to action;" "the smallest weight may be made to lift the greatest, the difference of weight being compensated by time;" and many the like propositions, which have an ethical as well as physical sense. These propositions have a much more extensive and universal sense when applied to human life, than when confined to technical use.

In like manner, the memorable words of history, and the proverbs of nations, consist usually of a natural fact, selected as a picture or parable of a moral truth. Thus; A rolling stone gathers no moss; A bird in the hand is worth two in the bush; A cripple in the right way, will beat a racer in the wrong; Make hay while the sun shines; 'T is hard to carry a full cup even; Vinegar is the son of wine; The last ounce broke the camel's back; Long-lived trees make roots first; — and the like. In their primary sense these are trivial facts, but we repeat them for the value of their analogical import. What is true of proverbs, is true of all fables, parables, and allegories.

This relation between the mind and matter is not fancied by some poet, but stands in the will of God, and so is free to be known by all men. It appears to men, or it does not appear. When in fortunate hours we ponder this miracle, the wise man doubts, if, at all other times, he is not blind and deaf;

— "Can these things be,
And overcome us like a summer's cloud,
Without our special wonder?"

for the universe becomes transparent, and the light of higher laws than its own, shines through it. It is the standing problem which has exercised the wonder and the study of every fine genius since the world began; from the era of the Egyptians and the Brahmins, to that of Pythagoras, of Plato, of Bacon, of Leibnitz, of Swedenborg. There sits the Sphinx at the road-side, and from age to age, as each prophet comes by, he tries his fortune at reading her riddle. There seems to be a necessity in spirit to manifest itself in material forms; and day and night, river and storm, beast and bird, acid and alkali, preexist in necessary Ideas in the mind of God, and are what they are by virtue of preceding affections, in the world of spirit. A Fact is the end or last issue of spirit. The visible creation is the terminus or the circumference of the invisible world. "Material objects," said a French philosopher, "are necessarily kinds of *scoriae* of the substantial thoughts of the Creator, which must always preserve an exact relation to their first origin; in other words, visible nature must have a spiritual and moral side."

This doctrine is abstruse, and though the images of "garment," "scoriae," "mirror," &c., may stimulate the fancy, we must summon the aid of subtler and more vital expositors to make it plain. "Every scripture is to be interpreted by the same spirit which gave it forth," — is the fundamental law of criticism. A life in harmony with nature, the love of truth and of virtue, will purge the eyes to understand her text. By degrees we may come to know the primitive sense of the permanent objects of nature, so that the world shall be to us an open book, and every form significant of its hidden life and final cause.

A new interest surprises us, whilst, under the view now suggested, we contemplate the fearful extent and multitude of objects; since "every object rightly seen, unlocks a new faculty of the soul." That which was unconscious truth, becomes, when interpreted and defined in an object, a part of the domain of knowledge, — a new weapon in the magazine of power.

CHAPTER V. DISCIPLINE.

IN view of the significance of nature, we arrive at once at a new fact, that nature is a discipline. This use of the world includes the preceding uses, as parts of itself.

Space, time, society, labor, climate, food, locomotion, the animals, the mechanical forces, give us sincerest lessons, day by day, whose meaning is unlimited. They educate both the Understanding and the Reason. Every property of matter is a school for the understanding, — its solidity or resistance, its inertia, its extension, its figure, its divisibility. The understanding adds, divides, combines, measures, and finds nutriment and room for its activity in this worthy scene. Meantime, Reason transfers all these lessons into its own world of thought, by perceiving the analogy that marries Matter and Mind.

1. Nature is a discipline of the understanding in intellectual truths. Our dealing with sensible objects is a constant exercise in the necessary lessons of difference, of likeness, of order, of being and seeming, of progressive arrangement; of ascent from particular to general; of combination to one end of manifold forces. Proportioned to the importance of the organ to be formed, is the extreme care with which its tuition is provided, — a care pretermitted in no single case. What tedious training, day after day, year after year, never ending, to form the common sense; what continual reproduction of annoyances, inconveniences, dilemmas; what rejoicing over us of little men; what disputing of prices, what reckonings of interest, — and all to form the Hand of the mind; — to instruct us that “good thoughts are no better than good dreams, unless they be executed!”

The same good office is performed by Property and its filial systems of debt and credit. Debt, grinding debt, whose iron face the widow, the orphan, and the sons of genius fear and hate; — debt, which consumes so much time, which so cripples and disheartens a great spirit with cares that seem so base, is a preceptor whose lessons cannot be forgone, and is needed most by those who suffer from it most. Moreover, property, which has been well compared to snow,— “if it fall level to-day, it will be blown into drifts to-morrow,” — is the surface action of internal machinery, like the index on the face of a clock. Whilst now it is the gymnastics of the understanding, it is hiving in the foresight of the spirit, experience in profounder laws.

The whole character and fortune of the individual are affected by the least inequalities in the culture of the understanding; for example, in the perception of differences. Therefore is Space, and therefore Time, that man may know that

things are not huddled and lumped, but sundered and individual. A bell and a plough have each their use, and neither can do the office of the other. Water is good to drink, coal to burn, wool to wear; but wool cannot be drunk, nor water spun, nor coal eaten. The wise man shows his wisdom in separation, in gradation, and his scale of creatures and of merits is as wide as nature. The foolish have no range in their scale, but suppose every man is as every other man. What is not good they call the worst, and what is not hateful, they call the best.

In like manner, what good heed, nature forms in us! She pardons no mistakes. Her yea is yea, and her nay, nay.

The first steps in Agriculture, Astronomy, Zoölogy, (those first steps which the farmer, the hunter, and the sailor take,) teach that nature's dice are always loaded; that in her heaps and rubbish are concealed sure and useful results.

How calmly and genially the mind apprehends one after another the laws of physics! What noble emotions dilate the mortal as he enters into the counsels of the creation, and feels by knowledge the privilege to BE! His insight refines him. The beauty of nature shines in his own breast. Man is greater that he can see this, and the universe less, because Time and Space relations vanish as laws are known.

Here again we are impressed and even daunted by the immense Universe to be explored. "What we know, is a point to what we do not know." Open any recent journal of science, and weigh the problems suggested concerning Light, Heat, Electricity, Magnetism, Physiology, Geology, and judge whether the interest of natural science is likely to be soon exhausted.

Passing by many particulars of the discipline of nature, we must not omit to specify two.

The exercise of the Will or the lesson of power is taught in every event. From the child's successive possession of his several senses up to the hour when he saith, "Thy will be done!" he is learning the secret, that he can reduce under his will, not only particular events, but great classes, nay the whole series of events, and so conform all facts to his character. Nature is thoroughly mediate. It is made to serve. It receives the dominion of man as meekly as the ass on which the Saviour rode. It offers all its kingdoms to man as the raw material which he may mould into what is useful. Man is never weary of working it up. He forges the subtle and delicate air into wise and melodious words, and gives them wing as angels of persuasion and command. One after another, his victorious thought comes up with and reduces all things, until the world becomes, at last, only a realized will, — the double of the man.

2. Sensible objects conform to the premonitions of Reason and reflect the

conscience. All things are moral; and in their boundless changes have an unceasing reference to spiritual nature. Therefore is nature glorious with form, color, and motion, that every globe in the remotest heaven; every chemical change from the rudest crystal up to the laws of life; every change of vegetation from the first principle of growth in the eye of a leaf, to the tropical forest and antediluvian coal-mine; every animal function from the sponge up to Hercules, shall hint or thunder to man the laws of right and wrong, and echo the Ten Commandments. Therefore is nature ever the ally of Religion: lends all her pomp and riches to the religious sentiment. Prophet and priest, David, Isaiah, Jesus, have drawn deeply from this source. This ethical character so penetrates the bone and marrow of nature, as to seem the end for which it was made. Whatever private purpose is answered by any member or part, this is its public and universal function, and is never omitted. Nothing in nature is exhausted in its first use. When a thing has served an end to the uttermost, it is wholly new for an ulterior service. In God, every end is converted into a new means. Thus the use of commodity, regarded by itself, is mean and squalid. But it is to the mind an education in the doctrine of Use, namely, that a thing is good only so far as it serves; that a conspiring of parts and efforts to the production of an end, is essential to any being. The first and gross manifestation of this truth, is our inevitable and hated training in values and wants, in corn and meat.

It has already been illustrated, that every natural process is a version of a moral sentence. The moral law lies at the centre of nature and radiates to the circumference. It is the pith and marrow of every substance, every relation, and every process. All things with which we deal, preach to us. What is a farm but a mute gospel? The chaff and the wheat, weeds and plants, blight, rain, insects, sun, — it is a sacred emblem from the first furrow of spring to the last stack which the snow of winter overtakes in the fields. But the sailor, the shepherd, the miner, the merchant, in their several resorts, have each an experience precisely parallel, and leading to the same conclusion: because all organizations are radically alike. Nor can it be doubted that this moral sentiment which thus scents the air, grows in the grain, and impregnates the waters of the world, is caught by man and sinks into his soul. The moral influence of nature upon every individual is that amount of truth which it illustrates to him. Who can estimate this? Who can guess how much firmness the sea-beaten rock has taught the fisherman? how much tranquillity has been reflected to man from the azure sky, over whose unspotted deeps the winds forevermore drive flocks of stormy clouds, and leave no wrinkle or stain? how much industry and providence and affection we have caught from the pantomime of brutes? What a searching preacher of self-command is the varying phenomenon of Health!

Herein is especially apprehended the unity of Nature, — the unity in variety, — which meets us everywhere. All the endless variety of things make an identical impression. Xenophanes complained in his old age, that, look where he would, all things hastened back to Unity. He was weary of seeing the same entity in the tedious variety of forms. The fable of Proteus has a cordial truth. A leaf, a drop, a crystal, a moment of time is related to the whole, and partakes of the perfection of the whole. Each particle is a microcosm, and faithfully renders the likeness of the world.

Not only resemblances exist in things whose analogy is obvious, as when we detect the type of the human hand in the flipper of the fossil saurus, but also in objects wherein there is great superficial unlikeness. Thus architecture is called “frozen music,” by De Stael and Goethe. Vitruvius thought an architect should be a musician. “A Gothic church,” said Coleridge, “is a petrified religion.” Michael Angelo maintained, that, to an architect, a knowledge of anatomy is essential. In Haydn’s oratorios, the notes present to the imagination not only motions, as, of the snake, the stag, and the elephant, but colors also; as the green grass. The law of harmonic sounds reappears in the harmonic colors. The granite is differenced in its laws only by the more or less of heat, from the river that wears it away. The river, as it flows, resembles the air that flows over it; the air resembles the light which traverses it with more subtile currents; the light resembles the heat which rides with it through Space. Each creature is only a modification of the other; the likeness in them is more than the difference, and their radical law is one and the same. A rule of one art, or a law of one organization, holds true throughout nature. So intimate is this Unity, that, it is easily seen, it lies under the undermost garment of nature, and betrays its source in Universal Spirit. For, it pervades Thought also. Every universal truth which we express in words, implies or supposes every other truth. *Omne verum vero consonat*. It is like a great circle on a sphere, comprising all possible circles; which, however, may be drawn, and comprise it, in like manner. Every such truth is the absolute Ens seen from one side. But it has innumerable sides.

The central Unity is still more conspicuous in actions. Words are finite organs of the infinite mind. They cannot cover the dimensions of what is in truth. They break, chop, and impoverish it. An action is the perfection and publication of thought. A right action seems to fill the eye, and to be related to all nature. “The wise man, in doing one thing, does all; or, in the one thing he does rightly, he sees the likeness of all which is done rightly.”

Words and actions are not the attributes of brute nature. They introduce us to the human form, of which all other organizations appear to be degradations. When this appears among so many that surround it, the spirit prefers it to all

others. It says, 'From such as this, have I drawn joy and knowledge; in such as this, have I found and beheld myself; I will speak to it; it can speak again; it can yield me thought already formed and alive.' In fact, the eye, — the mind, — is always accompanied by these forms, male and female; and these are incomparably the richest informations of the power and order that lie at the heart of things. Unfortunately, every one of them bears the marks as of some injury; is marred and superficially defective. Nevertheless, far different from the deaf and dumb nature around them, these all rest like fountain-pipes on the unfathomed sea of thought and virtue whereto they alone, of all organizations, are the entrances.

It were a pleasant inquiry to follow into detail their ministry to our education, but where would it stop? We are associated in adolescent and adult life with some friends, who, like skies and waters, are coextensive with our idea; who, answering each to a certain affection of the soul, satisfy our desire on that side; whom we lack power to put at such focal distance from us, that we can mend or even analyze them. We cannot choose but love them. When much intercourse with a friend has supplied us with a standard of excellence, and has increased our respect for the resources of God who thus sends a real person to outgo our ideal; when he has, moreover, become an object of thought, and, whilst his character retains all its unconscious effect, is converted in the mind into solid and sweet wisdom, — it is a sign to us that his office is closing, and he is commonly withdrawn from our sight in a short time.

CHAPTER VI. IDEALISM.

THUS is the unspeakable but intelligible and practicable meaning of the world conveyed to man, the immortal pupil, in every object of sense. To this one end of Discipline, all parts of nature conspire.

A noble doubt perpetually suggests itself, whether this end be not the Final Cause of the Universe; and whether nature outwardly exists. It is a sufficient account of that Appearance we call the World, that God will teach a human mind, and so makes it the receiver of a certain number of congruent sensations, which we call sun and moon, man and woman, house and trade. In my utter impotence to test the authenticity of the report of my senses, to know whether the impressions they make on me correspond with outlying objects, what difference does it make, whether Orion is up there in heaven, or some god paints the image in the firmament of the soul? The relations of parts and the end of the whole remaining the same, what is the difference, whether land and sea interact, and worlds revolve and intermingle without number or end, — deep yawning under deep, and galaxy balancing galaxy, throughout absolute space, — or, whether, without relations of time and space, the same appearances are inscribed in the constant faith of man? Whether nature enjoy a substantial existence without, or is only in the apocalypse of the mind, it is alike useful and alike venerable to me. Be it what it may, it is ideal to me, so long as I cannot try the accuracy of my senses.

The frivolous make themselves merry with the Ideal theory, if its consequences were burlesque; as if it affected the stability of nature. It surely does not. God never jests with us, and will not compromise the end of nature, by permitting any inconsequence in its procession. Any distrust of the permanence of laws, would paralyze the faculties of man. Their permanence is sacredly respected, and his faith therein is perfect. The wheels and springs of man are all set to the hypothesis of the permanence of nature. We are not built like a ship to be tossed, but like a house to stand. It is a natural consequence of this structure, that, so long as the active powers predominate over the reflective, we resist with indignation any hint that nature is more short-lived or mutable than spirit. The broker, the wheelwright, the carpenter, the toll-man, are much displeased at the intimation.

But whilst we acquiesce entirely in the permanence of natural laws, the question of the absolute existence of nature still remains open. It is the uniform effect of culture on the human mind, not to shake our faith in the stability of particular phenomena, as of heat, water, azote; but to lead us to regard nature as

a phenomenon, not a substance; to attribute necessary existence to spirit; to esteem nature as an accident and an effect.

To the senses and the unrenewed understanding, belongs a sort of instinctive belief in the absolute existence of nature. In their view, man and nature are indissolubly joined. Things are ultimates, and they never look beyond their sphere. The presence of Reason mars this faith. The first effort of thought tends to relax this despotism of the senses, which binds us to nature as if we were a part of it, and shows us nature aloof, and, as it were, afloat. Until this higher agency intervened, the animal eye sees, with wonderful accuracy, sharp outlines and colored surfaces. When the eye of Reason opens, to outline and surface are at once added, grace and expression. These proceed from imagination and affection, and abate somewhat of the angular distinctness of objects. If the Reason be stimulated to more earnest vision, outlines and surfaces become transparent, and are no longer seen; causes and spirits are seen through them. The best moments of life are these delicious awakenings of the higher powers, and the reverential withdrawing of nature before its God.

Let us proceed to indicate the effects of culture. 1. Our first institution in the Ideal philosophy is a hint from nature herself.

Nature is made to conspire with spirit to emancipate us. Certain mechanical changes, a small alteration in our local position apprizes us of a dualism. We are strangely affected by seeing the shore from a moving ship, from a balloon, or through the tints of an unusual sky. The least change in our point of view, gives the whole world a pictorial air. A man who seldom rides, needs only to get into a coach and traverse his own town, to turn the street into a puppet-show. The men, the women, — talking, running, bartering, fighting, — the earnest mechanic, the loungee, the beggar, the boys, the dogs, are unrealized at once, or, at least, wholly detached from all relation to the observer, and seen as apparent, not substantial beings. What new thoughts are suggested by seeing a face of country quite familiar, in the rapid movement of the rail-road car! Nay, the most wanted objects, (make a very slight change in the point of vision,) please us most. In a camera obscura, the butcher's cart, and the figure of one of our own family amuse us. So a portrait of a well-known face gratifies us. Turn the eyes upside down, by looking at the landscape through your legs, and how agreeable is the picture, though you have seen it any time these twenty years!

In these cases, by mechanical means, is suggested the difference between the observer and the spectacle, — between man and nature. Hence arises a pleasure mixed with awe; I may say, a low degree of the sublime is felt from the fact, probably, that man is hereby apprized, that, whilst the world is a spectacle, something in himself is stable.

2. In a higher manner, the poet communicates the same pleasure. By a few strokes he delineates, as on air, the sun, the mountain, the camp, the city, the hero, the maiden, not different from what we know them, but only lifted from the ground and afloat before the eye. He unfixes the land and the sea, makes them revolve around the axis of his primary thought, and disposes them anew. Possessed himself by a heroic passion, he uses matter as symbols of it. The sensual man conforms thoughts to things; the poet conforms things to his thoughts. The one esteems nature as rooted and fast; the other, as fluid, and impresses his being thereon. To him, the refractory world is ductile and flexible; he invests dust and stones with humanity, and makes them the words of the Reason. The Imagination may be defined to be, the use which the Reason makes of the material world. Shakspeare possesses the power of subordinating nature for the purposes of expression, beyond all poets. His imperial muse tosses the creation like a bauble from hand to hand, and uses it to embody any caprice of thought that is upper-most in his mind. The remotest spaces of nature are visited, and the farthest sundered things are brought together, by a subtle spiritual connection. We are made aware that magnitude of material things is relative, and all objects shrink and expand to serve the passion of the poet. Thus, in his sonnets, the lays of birds, the scents and dyes of flowers, he finds to be the *shadow* of his beloved; time, which keeps her from him, is his *chest*; the suspicion she has awakened, is her *ornament*;

The ornament of beauty is Suspect,
A crow which flies in heaven's sweetest air.

His passion is not the fruit of chance; it swells, as he speaks, to a city, or a state.

No, it was builded far from accident;
It suffers not in smiling pomp, nor falls
Under the brow of thralling discontent;
It fears not policy, that heretic,
That works on leases of short numbered hours,
But all alone stands hugely politic.

In the strength of his constancy, the Pyramids seem to him recent and transitory. The freshness of youth and love dazzles him with its resemblance to morning.

Take those lips away
Which so sweetly were forsworn;
And those eyes, — the break of day,
Lights that do mislead the morn.

The wild beauty of this hyperbole, I may say, in passing, it would not be easy to match in literature.

This transfiguration which all material objects undergo through the passion of the poet, — this power which he exerts to dwarf the great, to magnify the small, — might be illustrated by a thousand examples from his Plays. I have before me the *Tempest*, and will cite only these few lines.

ARIEL. The strong based promontory
Have I made shake, and by the spurs plucked up
The pine and cedar.

Prospero calls for music to soothe the frantic Alonzo, and his companions;

A solemn air, and the best comforter
To an unsettled fancy, cure thy brains
Now useless, boiled within thy skull.

Again;

The charm dissolves apace,
And, as the morning steals upon the night,
Melting the darkness, so their rising senses
Begin to chase the ignorant fumes that mantle
Their clearer reason.

Their understanding
Begins to swell: and the approaching tide
Will shortly fill the reasonable shores
That now lie foul and muddy.

The perception of real affinities between events, (that is to say, of *ideal* affinities, for those only are real,) enables the poet thus to make free with the most imposing forms and phenomena of the world, and to assert the predominance of the soul.

3. Whilst thus the poet animates nature with his own thoughts, he differs from the philosopher only herein, that the one proposes Beauty as his main end; the

other Truth. But the philosopher, not less than the poet, postpones the apparent order and relations of things to the empire of thought. "The problem of philosophy," according to Plato, "is, for all that exists conditionally, to find a ground unconditioned and absolute." It proceeds on the faith that a law determines all phenomena, which being known, the phenomena can be predicted. That law, when in the mind, is an idea. Its beauty is infinite. The true philosopher and the true poet are one, and a beauty, which is truth, and a truth, which is beauty, is the aim of both. Is not the charm of one of Plato's or Aristotle's definitions, strictly like that of the Antigone of Sophocles? It is, in both cases, that a spiritual life has been imparted to nature; that the solid seeming block of matter has been pervaded and dissolved by a thought; that this feeble human being has penetrated the vast masses of nature with an informing soul, and recognised itself in their harmony, that is, seized their law. In physics, when this is attained, the memory disburthens itself of its cumbrous catalogues of particulars, and carries centuries of observation in a single formula.

Thus even in physics, the material is degraded before the spiritual. The astronomer, the geometer, rely on their irrefragable analysis, and disdain the results of observation. The sublime remark of Euler on his law of arches, "This will be found contrary to all experience, yet is true;" had already transferred nature into the mind, and left matter like an outcast corpse.

4. Intellectual science has been observed to beget invariably a doubt of the existence of matter. Turgot said, "He that has never doubted the existence of matter, may be assured he has no aptitude for metaphysical inquiries." It fastens the attention upon immortal necessary uncreated natures, that is, upon Ideas; and in their presence, we feel that the outward circumstance is a dream and a shade. Whilst we wait in this Olympus of gods, we think of nature as an appendix to the soul. We ascend into their region, and know that these are the thoughts of the Supreme Being. "These are they who were set up from everlasting, from the beginning, or ever the earth was. When he prepared the heavens, they were there; when he established the clouds above, when he strengthened the fountains of the deep. Then they were by him, as one brought up with him. Of them took he counsel."

Their influence is proportionate. As objects of science, they are accessible to few men. Yet all men are capable of being raised by piety or by passion, into their region. And no man touches these divine natures, without becoming, in some degree, himself divine. Like a new soul, they renew the body. We become physically nimble and lightsome; we tread on air; life is no longer irksome, and we think it will never be so. No man fears age or misfortune or death, in their serene company, for he is transported out of the district of change. Whilst we

behold unveiled the nature of Justice and Truth, we learn the difference between the absolute and the conditional or relative. We apprehend the absolute. As it were, for the first time, *we exist*. We become immortal, for we learn that time and space are relations of matter; that, with a perception of truth, or a virtuous will, they have no affinity.

5. Finally, religion and ethics, which may be fitly called, — the practice of ideas, or the introduction of ideas into life, — have an analogous effect with all lower culture, in degrading nature and suggesting its dependence on spirit. Ethics and religion differ herein; that the one is the system of human duties commencing from man; the other, from God. Religion includes the personality of God; Ethics does not. They are one to our present design. They both put nature under foot. The first and last lesson of religion is, “The things that are seen, are temporal; the things that are unseen, are eternal.” It puts an affront upon nature. It does that for the unschooled, which philosophy does for Berkeley and Viasa. The uniform language that may be heard in the churches of the most ignorant sects, is,— “Contemn the unsubstantial shows of the world; they are vanities, dreams, shadows, unrealities; seek the realities of religion.” The devotee flouts nature. Some theosophists have arrived at a certain hostility and indignation towards matter, as the Manichean and Plotinus. They distrusted in themselves any looking back to these flesh-pots of Egypt. Plotinus was ashamed of his body. In short, they might all say of matter, what Michael Angelo said of external beauty, “it is the frail and weary weed, in which God dresses the soul, which he has called into time.”

It appears that motion, poetry, physical and intellectual science, and religion, all tend to affect our convictions of the reality of the external world. But I own there is something ungrateful in expanding too curiously the particulars of the general proposition, that all culture tends to imbue us with idealism. I have no hostility to nature, but a child’s love to it. I expand and live in the warm day like corn and melons. Let us speak her fair. I do not wish to fling stones at my beautiful mother, nor soil my gentle nest. I only wish to indicate the true position of nature in regard to man, wherein to establish man, all right education tends; as the ground which to attain is the object of human life, that is, of man’s connection with nature. Culture inverts the vulgar views of nature, and brings the mind to call that apparent, which it uses to call real, and that real, which it uses to call visionary. Children, it is true, believe in the external world. The belief that it appears only, is an afterthought, but with culture, this faith will as surely arise on the mind as did the first.

The advantage of the ideal theory over the popular faith, is this, that it presents the world in precisely that view which is most desirable to the mind. It

is, in fact, the view which Reason, both speculative and practical, that is, philosophy and virtue, take. For, seen in the light of thought, the world always is phenomenal; and virtue subordinates it to the mind. Idealism sees the world in God. It beholds the whole circle of persons and things, of actions and events, of country and religion, not as painfully accumulated, atom after atom, act after act, in an aged creeping Past, but as one vast picture, which God paints on the instant eternity, for the contemplation of the soul. Therefore the soul holds itself off from a too trivial and microscopic study of the universal tablet. It respects the end too much, to immerse itself in the means. It sees something more important in Christianity, than the scandals of ecclesiastical history, or the niceties of criticism; and, very incurious concerning persons or miracles, and not at all disturbed by chasms of historical evidence, it accepts from God the phenomenon, as it finds it, as the pure and awful form of religion in the world. It is not hot and passionate at the appearance of what it calls its own good or bad fortune, at the union or opposition of other persons. No man is its enemy. It accepts whatsoever befalls, as part of its lesson. It is a watcher more than a doer, and it is a doer, only that it may the better watch.

CHAPTER VII. SPIRIT.

IT is essential to a true theory of nature and of man, that it should contain somewhat progressive. Uses that are exhausted or that may be, and facts that end in the statement, cannot be all that is true of this brave lodging wherein man is harbored, and wherein all his faculties find appropriate and endless exercise. And all the uses of nature admit of being summed in one, which yields the activity of man an infinite scope. Through all its kingdoms, to the suburbs and outskirts of things, it is faithful to the cause whence it had its origin. It always speaks of Spirit. It suggests the absolute. It is a perpetual effect. It is a great shadow pointing always to the sun behind us.

The aspect of nature is devout. Like the figure of Jesus, she stands with bended head, and hands folded upon the breast. The happiest man is he who learns from nature the lesson of worship.

Of that ineffable essence which we call Spirit, he that thinks most, will say least. We can foresee God in the coarse, and, as it were, distant phenomena of matter; but when we try to define and describe himself, both language and thought desert us, and we are as helpless as fools and savages. That essence refuses to be recorded in propositions, but when man has worshipped him intellectually, the noblest ministry of nature is to stand as the apparition of God. It is the organ through which the universal spirit speaks to the individual, and strives to lead back the individual to it.

When we consider Spirit, we see that the views already presented do not include the whole circumference of man. We must add some related thoughts.

Three problems are put by nature to the mind; What is matter? Whence is it? and Whereto? The first of these questions only, the ideal theory answers. Idealism saith: matter is a phenomenon, not a substance. Idealism acquaints us with the total disparity between the evidence of our own being, and the evidence of the world's being. The one is perfect; the other, incapable of any assurance; the mind is a part of the nature of things; the world is a divine dream, from which we may presently awake to the glories and certainties of day. Idealism is a hypothesis to account for nature by other principles than those of carpentry and chemistry. Yet, if it only deny the existence of matter, it does not satisfy the demands of the spirit. It leaves God out of me. It leaves me in the splendid labyrinth of my perceptions, to wander without end. Then the heart resists it, because it balks the affections in denying substantive being to men and women. Nature is so pervaded with human life, that there is something of humanity in all, and in every particular. But this theory makes nature foreign to me, and does not

account for that consanguinity which we acknowledge to it.

Let it stand, then, in the present state of our knowledge, merely as a useful introductory hypothesis, serving to apprise us of the eternal distinction between the soul and the world.

But when, following the invisible steps of thought, we come to inquire, Whence is matter? and Whereto? many truths arise to us out of the recesses of consciousness. We learn that the highest is present to the soul of man, that the dread universal essence, which is not wisdom, or love, or beauty, or power, but all in one, and each entirely, is that for which all things exist, and that by which they are; that spirit creates; that behind nature, throughout nature, spirit is present; one and not compound, it does not act upon us from without, that is, in space and time, but spiritually, or through ourselves: therefore, that spirit, that is, the Supreme Being, does not build up nature around us, but puts it forth through us, as the life of the tree puts forth new branches and leaves through the pores of the old. As a plant upon the earth, so a man rests upon the bosom of God; he is nourished by unfailing fountains, and draws, at his need, inexhaustible power. Who can set bounds to the possibilities of man? Once inhale the upper air, being admitted to behold the absolute natures of justice and truth, and we learn that man has access to the entire mind of the Creator, is himself the creator in the finite. This view, which admonishes me where the sources of wisdom and power lie, and points to virtue as to

“The golden key
Which opes the palace of eternity,”

carries upon its face the highest certificate of truth, because it animates me to create my own world through the purification of my soul.

The world proceeds from the same spirit as the body of man. It is a remoter and inferior incarnation of God, a projection of God in the unconscious. But it differs from the body in one important respect. It is not, like that, now subjected to the human will. Its serene order is inviolable by us. It is, therefore, to us, the present expositor of the divine mind. It is a fixed point whereby we may measure our departure. As we degenerate, the contrast between us and our house is more evident. We are as much strangers in nature, as we are aliens from God. We do not understand the notes of birds. The fox and the deer run away from us; the bear and tiger rend us. We do not know the uses of more than a few plants, as corn and the apple, the potato and the vine. Is not the landscape, every glimpse of which hath a grandeur, a face of him? Yet this may show us what discord is between man and nature, for you cannot freely admire a noble landscape, if

laborers are digging in the field hard by. The poet finds something ridiculous in his delight, until he is out of the sight of men.

CHAPTER VIII. PROSPECTS.

IN inquiries respecting the laws of the world and the frame of things, the highest reason is always the truest. That which seems faintly possible — it is so refined, is often faint and dim because it is deepest seated in the mind among the eternal verities. Empirical science is apt to cloud the sight, and, by the very knowledge of functions and processes, to bereave the student of the manly contemplation of the whole. The savant becomes unpoetic. But the best read naturalist who lends an entire and devout attention to truth, will see that there remains much to learn of his relation to the world, and that it is not to be learned by any addition or subtraction or other comparison of known quantities, but is arrived at by untaught sallies of the spirit, by a continual self-recovery, and by entire humility. He will perceive that there are far more excellent qualities in the student than preciseness and infallibility; that a guess is often more fruitful than an indisputable affirmation, and that a dream may let us deeper into the secret of nature than a hundred concerted experiments.

For, the problems to be solved are precisely those which the physiologist and the naturalist omit to state. It is not so pertinent to man to know all the individuals of the animal kingdom, as it is to know whence and whereto is this tyrannizing unity in his constitution, which evermore separates and classifies things, endeavoring to reduce the most diverse to one form. When I behold a rich landscape, it is less to my purpose to recite correctly the order and superposition of the strata, than to know why all thought of multitude is lost in a tranquil sense of unity. I cannot greatly honor minuteness in details, so long as there is no hint to explain the relation between things and thoughts; no ray upon the *metaphysics* of conchology, of botany, of the arts, to show the relation of the forms of flowers, shells, animals, architecture, to the mind, and build science upon ideas. In a cabinet of natural history, we become sensible of a certain occult recognition and sympathy in regard to the most unwieldly and eccentric forms of beast, fish, and insect. The American who has been confined, in his own country, to the sight of buildings designed after foreign models, is surprised on entering York Minster or St. Peter's at Rome, by the feeling that these structures are imitations also, — faint copies of an invisible archetype. Nor has science sufficient humanity, so long as the naturalist overlooks that wonderful congruity which subsists between man and the world; of which he is lord, not because he is the most subtle inhabitant, but because he is its head and heart, and finds something of himself in every great and small thing, in every mountain stratum, in every new law of color, fact of astronomy, or atmospheric influence which

observation or analysis lay open. A perception of this mystery inspires the muse of George Herbert, the beautiful psalmist of the seventeenth century. The following lines are part of his little poem on Man.

“Man is all symmetry,
Full of proportions, one limb to another,
And to all the world besides.
Each part may call the farthest, brother;
For head with foot hath private amity,
And both with moons and tides.

“Nothing hath got so far
But man hath caught and kept it as his prey;
His eyes dismount the highest star;
He is in little all the sphere.
Herbs gladly cure our flesh, because that they
Find their acquaintance there.

“For us, the winds do blow,
The earth doth rest, heaven move, and fountains flow;
Nothing we see, but means our good,
As our delight, or as our treasure;
The whole is either our cupboard of food,
Or cabinet of pleasure.

“The stars have us to bed:
Night draws the curtain; which the sun withdraws.
Music and light attend our head.
All things unto our flesh are kind,
In their descent and being; to our mind,
In their ascent and cause.

“More servants wait on man
Than he'll take notice of. In every path,
He treads down that which doth befriend him
When sickness makes him pale and wan.
Oh mighty love! Man is one world, and hath
Another to attend him.”

The perception of this class of truths makes the attraction which draws men to science, but the end is lost sight of in attention to the means. In view of this half-sight of science, we accept the sentence of Plato, that, "poetry comes nearer to vital truth than history." Every surmise and vaticination of the mind is entitled to a certain respect, and we learn to prefer imperfect theories, and sentences, which contain glimpses of truth, to digested systems which have no one valuable suggestion. A wise writer will feel that the ends of study and composition are best answered by announcing undiscovered regions of thought, and so communicating, through hope, new activity to the torpid spirit.

I shall therefore conclude this essay with some traditions of man and nature, which a certain poet sang to me; and which, as they have always been in the world, and perhaps reappear to every bard, may be both history and prophecy.

'The foundations of man are not in matter, but in spirit. But the element of spirit is eternity. To it, therefore, the longest series of events, the oldest chronologies are young and recent. In the cycle of the universal man, from whom the known individuals proceed, centuries are points, and all history is but the epoch of one degradation.

'We distrust and deny inwardly our sympathy with nature. We own and disown our relation to it, by turns. We are, like Nebuchadnezzar, dethroned, bereft of reason, and eating grass like an ox. But who can set limits to the remedial force of spirit?

'A man is a god in ruins. When men are innocent, life shall be longer, and shall pass into the immortal, as gently as we awake from dreams. Now, the world would be insane and rabid, if these disorganizations should last for hundreds of years. It is kept in check by death and infancy. Infancy is the perpetual Messiah, which comes into the arms of fallen men, and pleads with them to return to paradise.

'Man is the dwarf of himself. Once he was permeated and dissolved by spirit. He filled nature with his overflowing currents. Out from him sprang the sun and moon; from man, the sun; from woman, the moon. The laws of his mind, the periods of his actions externized themselves into day and night, into the year and the seasons. But, having made for himself this huge shell, his waters retired; he no longer fills the veins and veinlets; he is shrunk to a drop. He sees, that the structure still fits him, but fits him colossally. Say, rather, once it fitted him, now it corresponds to him from far and on high. He adores timidly his own work. Now is man the follower of the sun, and woman the follower of the moon. Yet sometimes he starts in his slumber, and wonders at himself and his house, and muses strangely at the resemblance betwixt him and it. He perceives that if his law is still paramount, if still he have elemental power, if his word is sterling yet

in nature, it is not conscious power, it is not inferior but superior to his will. It is Instinct.' Thus my Orphic poet sang.

At present, man applies to nature but half his force. He works on the world with his understanding alone. He lives in it, and masters it by a penny-wisdom; and he that works most in it, is but a half-man, and whilst his arms are strong and his digestion good, his mind is imbruted, and he is a selfish savage. His relation to nature, his power over it, is through the understanding; as by manure; the economic use of fire, wind, water, and the mariner's needle; steam, coal, chemical agriculture; the repairs of the human body by the dentist and the surgeon. This is such a resumption of power, as if a banished king should buy his territories inch by inch, instead of vaulting at once into his throne. Meantime, in the thick darkness, there are not wanting gleams of a better light, — occasional examples of the action of man upon nature with his entire force, — with reason as well as understanding. Such examples are; the traditions of miracles in the earliest antiquity of all nations; the history of Jesus Christ; the achievements of a principle, as in religious and political revolutions, and in the abolition of the Slave-trade; the miracles of enthusiasm, as those reported of Swedenborg, Hohenlohe, and the Shakers; many obscure and yet contested facts, now arranged under the name of Animal Magnetism; prayer; eloquence; self-healing; and the wisdom of children. These are examples of Reason's momentary grasp of the sceptre; the exertions of a power which exists not in time or space, but an instantaneous in-streaming causing power. The difference between the actual and the ideal force of man is happily figured by the schoolmen, in saying, that the knowledge of man is an evening knowledge, *vespertina cognitio*, but that of God is a morning knowledge, *matutina cognitio*.

The problem of restoring to the world original and eternal beauty, is solved by the redemption of the soul. The ruin or the blank, that we see when we look at nature, is in our own eye. The axis of vision is not coincident with the axis of things, and so they appear not transparent but opaque. The reason why the world lacks unity, and lies broken and in heaps, is, because man is disunited with himself. He cannot be a naturalist, until he satisfies all the demands of the spirit. Love is as much its demand, as perception. Indeed, neither can be perfect without the other. In the uttermost meaning of the words, thought is devout, and devotion is thought. Deep calls unto deep. But in actual life, the marriage is not celebrated. There are innocent men who worship God after the tradition of their fathers, but their sense of duty has not yet extended to the use of all their faculties. And there are patient naturalists, but they freeze their subject under the wintry light of the understanding. Is not prayer also a study of truth, — a sally of the soul into the unfound infinite? No man ever prayed heartily, without learning

something. But when a faithful thinker, resolute to detach every object from personal relations, and see it in the light of thought, shall, at the same time, kindle science with the fire of the holiest affections, then will God go forth anew into the creation.

It will not need, when the mind is prepared for study, to search for objects. The invariable mark of wisdom is to see the miraculous in the common. What is a day? What is a year? What is summer? What is woman? What is a child? What is sleep? To our blindness, these things seem unaffecting. We make fables to hide the baldness of the fact and conform it, as we say, to the higher law of the mind. But when the fact is seen under the light of an idea, the gaudy fable fades and shrivels. We behold the real higher law. To the wise, therefore, a fact is true poetry, and the most beautiful of fables. These wonders are brought to our own door. You also are a man. Man and woman, and their social life, poverty, labor, sleep, fear, fortune, are known to you. Learn that none of these things is superficial, but that each phenomenon has its roots in the faculties and affections of the mind. Whilst the abstract question occupies your intellect, nature brings it in the concrete to be solved by your hands. It were a wise inquiry for the closet, to compare, point by point, especially at remarkable crises in life, our daily history, with the rise and progress of ideas in the mind.

So shall we come to look at the world with new eyes. It shall answer the endless inquiry of the intellect, — What is truth? and of the affections, — What is good? by yielding itself passive to the educated Will. Then shall come to pass what my poet said; ‘Nature is not fixed but fluid. Spirit alters, moulds, makes it. The immobility or bruteness of nature, is the absence of spirit; to pure spirit, it is fluid, it is volatile, it is obedient. Every spirit builds itself a house; and beyond its house a world; and beyond its world, a heaven. Know then, that the world exists for you. For you is the phenomenon perfect. What we are, that only can we see. All that Adam had, all that Caesar could, you have and can do. Adam called his house, heaven and earth; Caesar called his house, Rome; you perhaps call yours, a cobbler’s trade; a hundred acres of ploughed land; or a scholar’s garret. Yet line for line and point for point, your dominion is as great as theirs, though without fine names. Build, therefore, your own world. As fast as you conform your life to the pure idea in your mind, that will unfold its great proportions. A correspondent revolution in things will attend the influx of the spirit. So fast will disagreeable appearances, swine, spiders, snakes, pests, madhouses, prisons, enemies, vanish; they are temporary and shall be no more seen. The sordor and filths of nature, the sun shall dry up, and the wind exhale. As when the summer comes from the south; the snow-banks melt, and the face of the earth becomes green before it, so shall the advancing spirit create its

ornaments along its path, and carry with it the beauty it visits, and the song which enchants it; it shall draw beautiful faces, warm hearts, wise discourse, and heroic acts, around its way, until evil is no more seen. The kingdom of man over nature, which cometh not with observation, — a dominion such as now is beyond his dream of God, — he shall enter without more wonder than the blind man feels who is gradually restored to perfect sight.’

THE AMERICAN SCHOLAR

This address was delivered at Cambridge in 1837, before the Harvard Chapter of the Phi Beta Kappa Society, a college fraternity composed of the first twenty-five men in each graduating class. The society has annual meetings, which have been the occasion for addresses from the most distinguished scholars and thinkers of the day.

Mr. President and Gentlemen,

I greet you on the recommencement of our literary year. Our anniversary is one of hope, and, perhaps, not enough of labor. We do not meet for games of strength or skill, for the recitation of histories, tragedies, and odes, like the ancient Greeks; for parliaments of love and poesy, like the Troubadours; nor for the advancement of science, like our co-temporaries in the British and European capitals. Thus far, our holiday has been simply a friendly sign of the survival of the love of letters amongst a people too busy to give to letters any more. As such it is precious as the sign of an indestructible instinct. Perhaps the time is already come when it ought to be, and will be, something else; when the sluggard intellect of this continent will look from under its iron lids and fill the postponed expectation of the world with something better than the exertions of mechanical skill. Our day of dependence, our long apprenticeship to the learning of other lands, draws to a close. The millions that around us are rushing into life cannot always be fed on the sere remains of foreign harvests. Events, actions arise that must be sung, that will sing themselves. Who can doubt that poetry will revive and lead in a new age, as the star in the constellation Harp, which now flames in our zenith, astronomers announce, shall one day be the pole-star for a thousand years?

In the light of this hope I accept the topic which not only usage but the nature of our association seem to prescribe to this day, — the American Scholar. Year by year we come up hither to read one more chapter of his biography. Let us inquire what new lights, new events, and more days have thrown on his character, his duties, and his hopes.

It is one of those fables which out of an unknown antiquity convey an unlooked-for wisdom, that the gods, in the beginning, divided Man into men, that he might be more helpful to himself; just as the hand was divided into fingers, the better to answer its end.

The old fable covers a doctrine ever new and sublime; that there is One Man, — present to all particular men only partially, or through one faculty; and that you must take the whole society to find the whole man. Man is not a farmer, or

a professor, or an engineer, but he is all. Man is priest, and scholar, and statesman, and producer, and soldier. In the *divided* or social state these functions are parceled out to individuals, each of whom aims to do his stint of the joint work, whilst each other performs his. The fable implies that the individual, to possess himself, must sometimes return from his own labor to embrace all the other laborers. But, unfortunately, this original unit, this fountain of power, has been so distributed to multitudes, has been so minutely subdivided and peddled out, that it is spilled into drops, and cannot be gathered. The state of society is one in which the members have suffered amputation from the trunk and strut about so many walking monsters, — a good finger, a neck, a stomach, an elbow, but never a man.

Man is thus metamorphosed into a thing, into many things. The planter, who is Man sent out into the field to gather food, is seldom cheered by any idea of the true dignity of his ministry. He sees his bushel and his cart, and nothing beyond, and sinks into the farmer, instead of Man on the farm. The tradesman scarcely ever gives an ideal worth to his work, but is ridden by the routine of his craft, and the soul is subject to dollars. The priest becomes a form; the attorney a statute-book; the mechanic a machine; the sailor a rope of the ship.

In this distribution of functions the scholar is the delegated intellect. In the right state he is *Man Thinking*. In the degenerate state, when the victim of society, he tends to become a mere thinker, or, still worse, the parrot of other men's thinking.

In this view of him, as Man Thinking, the whole theory of his office is contained. Him Nature solicits with all her placid, all her monitory pictures. Him the past instructs. Him the future invites. Is not indeed every man a student, and do not all things exist for the student's behoof? And, finally, is not the true scholar the only true master? But as the old oracle said, "All things have two handles: Beware of the wrong one." In life, too often, the scholar errs with mankind and forfeits his privilege. Let us see him in his school, and consider him in reference to the main influences he receives.

I. The first in time and the first in importance of the influences upon the mind is that of nature. Every day, the sun; and, after sunset, Night and her stars. Ever the winds blow; ever the grass grows. Every day, men and women, conversing, beholding and beholden. The scholar must needs stand wistful and admiring before this great spectacle. He must settle its value in his mind. What is nature to him? There is never a beginning, there is never an end, to the inexplicable continuity of this web of God, but always circular power returning into itself. Therein it resembles his own spirit, whose beginning, whose ending, he never

can find, — so entire, so boundless. Far too as her splendors shine, system on system shooting like rays, upward, downward, without center, without circumference, — in the mass and in the particle, Nature hastens to render account of herself to the mind. Classification begins. To the young mind everything is individual, stands by itself. By and by it finds how to join two things and see in them one nature; then three, then three thousand; and so, tyrannized over by its own unifying instinct, it goes on tying things together, diminishing anomalies, discovering roots running under ground whereby contrary and remote things cohere and flower out from one stem. It presently learns that since the dawn of history there has been a constant accumulation and classifying of facts. But what is classification but the perceiving that these objects are not chaotic, and are not foreign, but have a law which is also a law of the human mind? The astronomer discovers that geometry, a pure abstraction of the human mind, is the measure of planetary motion. The chemist finds proportions and intelligible method throughout matter; and science is nothing but the finding of analogy, identity, in the most remote parts. The ambitious soul sits down before each refractory fact; one after another reduces all strange constitutions, all new powers, to their class and their law, and goes on forever to animate the last fiber of organization, the outskirts of nature, by insight.

Thus to him, to this school-boy under the bending dome of day, is suggested that he and it proceed from one Root; one is leaf and one is flower; relation, sympathy, stirring in every vein. And what is that root? Is not that the soul of his soul? — A thought too bold? — A dream too wild? Yet when this spiritual light shall have revealed the law of more earthly natures, — when he has learned to worship the soul, and to see that the natural philosophy that now is, is only the first gropings of its gigantic hand, — he shall look forward to an ever-expanding knowledge as to a becoming creator. He shall see that nature is the opposite of the soul, answering to it part for part. One is seal and one is print. Its beauty is the beauty of his own mind. Its laws are the laws of his own mind. Nature then becomes to him the measure of his attainments. So much of nature as he is ignorant of, so much of his own mind does he not yet possess. And, in fine, the ancient precept, “Know thyself,” and the modern precept, “Study nature,” become at last one maxim.

II. The next great influence into the spirit of the scholar is the mind of the Past, — in whatever form, whether of literature, of art, of institutions, that mind is inscribed. Books are the best type of the influence of the past, and perhaps we shall get at the truth, — learn the amount of this influence more conveniently, — by considering their value alone.

The theory of books is noble. The scholar of the first age received into him the world around; brooded thereon; gave it the new arrangement of his own mind, and uttered it again. It came into him life; it went out from him truth. It came to him short-lived actions; it went out from him immortal thoughts. It came to him business; it went from him poetry. It was dead fact; now, it is quick thought. It can stand, and it can go. It now endures, it now flies, it now inspires. Precisely in proportion to the depth of mind from which it issued, so high does it soar, so long does it sing.

Or, I might say, it depends on how far the process had gone, of transmuting life into truth. In proportion to the completeness of the distillation, so will the purity and imperishableness of the product be. But none is quite perfect. As no air-pump can by any means make a perfect vacuum, so neither can any artist entirely exclude the conventional, the local, the perishable from his book, or write a book of pure thought, that shall be as efficient, in all respects, to a remote posterity, as to contemporaries, or rather to the second age. Each age, it is found, must write its own books; or rather, each generation for the next succeeding. The books of an older period will not fit this.

Yet hence arises a grave mischief. The sacredness which attaches to the act of creation, the act of thought, is instantly transferred to the record. The poet chanting was felt to be a divine man. Henceforth the chant is divine also. The writer was a just and wise spirit. Henceforward it is settled the book is perfect; as love of the hero corrupts into worship of his statue. Instantly the book becomes noxious. The guide is a tyrant. We sought a brother, and lo, a governor. The sluggish and perverted mind of the multitude, always slow to open to the incursions of Reason, having once so opened, having once received this book, stands upon it, and makes an outcry if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by Man Thinking, by men of talent, that is, who start wrong, who set out from accepted dogmas, not from their own sight of principles. Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon, have given; forgetful that Cicero, Locke and Bacon were only young men in libraries when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm. Hence the book-learned class, who value books, as such; not as related to nature and the human constitution, but as making a sort of Third Estate with the world and soul. Hence the restorers of readings, the emendators, the bibliomaniacs of all degrees. This is bad; this is worse than it seems.

Books are the best of things, well used; abused, among the worst. What is the right use? What is the one end which all means go to effect? They are for

nothing but to inspire. I had better never see a book than to be warped by its attraction clean out of my own orbit, and made a satellite instead of a system. The one thing in the world of value is the active soul, — the soul, free, sovereign, active. This every man is entitled to; this every man contains within him, although in almost all men obstructed, and as yet unborn. The soul active sees absolute truth and utters truth, or creates. In this action it is genius; not the privilege of here and there a favorite, but the sound estate of every man. In its essence it is progressive. The book, the college, the school of art, the institution of any kind, stop with some past utterance of genius. This is good, say they, — let us hold by this. They pin me down. They look backward and not forward. But genius always looks forward. The eyes of man are set in his forehead, not in his hindhead. Man hopes. Genius creates. To create, — to create, — is the proof of a divine presence. Whatever talents may be, if the man create not, the pure efflux of the Deity is not his; — cinders and smoke there may be, but not yet flame. There are creative manners, there are creative actions, and creative words; manners, actions, words, that is, indicative of no custom or authority, but springing spontaneous from the mind's own sense of good and fair.

On the other part, instead of being its own seer, let it receive always from another mind its truth, though it were in torrents of light, without periods of solitude, inquest, and self-recovery; and a fatal disservice is done. Genius is always sufficiently the enemy of genius by over-influence. The literature of every nation bear me witness. The English dramatic poets have Shakespearized now for two hundred years.

Undoubtedly there is a right way of reading, so it be sternly subordinated. Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times. When he can read God directly, the hour is too precious to be wasted in other men's transcripts of their readings. But when the intervals of darkness come, as come they must, — when the soul seeth not, when the sun is hid and the stars withdraw their shining, — we repair to the lamps which were kindled by their ray, to guide our steps to the East again, where the dawn is. We hear, that we may speak. The Arabian proverb says, "A fig-tree, looking on a fig-tree, becometh fruitful."

It is remarkable, the character of the pleasure we derive from the best books. They impress us ever with the conviction that one nature wrote and the same reads. We read the verses of one of the great English poets, of Chaucer, of Marvell, of Dryden, with the most modern joy, — with a pleasure, I mean, which is in great part caused by the abstraction of all *time* from their verses. There is some awe mixed with the joy of our surprise, when this poet, who lived in some past world, two or three hundred years ago, says that which lies close to

my own soul, that which I also had well-nigh thought and said. But for the evidence thence afforded to the philosophical doctrine of the identity of all minds, we should suppose some pre-established harmony, some foresight of souls that were to be, and some preparation of stores for their future wants, like the fact observed in insects, who lay up food before death for the young grub they shall never see.

I would not be hurried by any love of system, by any exaggeration of instincts, to underrate the Book. We all know that as the human body can be nourished on any food, though it were boiled grass and the broth of shoes, so the human mind can be fed by any knowledge. And great and heroic men have existed who had almost no other information than by the printed page. I only would say that it needs a strong head to bear that diet. One must be an inventor to read well. As the proverb says, "He that would bring home the wealth of the Indies must carry out the wealth of the Indies." There is then creative reading as well as creative writing. When the mind is braced by labor and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world. We then see, what is always true, that as the seer's hour of vision is short and rare among heavy days and months, so is its record, perchance, the least part of his volume. The discerning will read, in his Plato or Shakespeare, only that least part, — only the authentic utterances of the oracle; — all the rest he rejects, were it never so many times Plato's and Shakespeare's.

Of course there is a portion of reading quite indispensable to a wise man. History and exact science he must learn by laborious reading. Colleges, in like manner, have their indispensable office, — to teach elements. But they can only highly serve us when they aim not to drill, but to create; when they gather from far every ray of various genius to their hospitable halls, and by the concentrated fires set the hearts of their youth on flame. Thought and knowledge are natures in which apparatus and pretension avail nothing. Gowns and pecuniary foundations, though of towns of gold, can never countervail the least sentence or syllable of wit. Forget this, and our American colleges will recede in their public importance, whilst they grow richer every year.

III. There goes in the world a notion that the scholar should be a recluse, a valetudinarian, — as unfit for any handiwork or public labor as a penknife for an axe. The so-called "practical men" sneer at speculative men, as if, because they speculate or *see*, they could do nothing. I have heard it said that the clergy — who are always, more universally than any other class, the scholars of their day

— are addressed as women; that the rough, spontaneous conversation of men they do not hear, but only a mincing and diluted speech. They are often virtually disfranchised; and indeed there are advocates for their celibacy. As far as this is true of the studious classes, it is not just and wise. Action is with the scholar subordinate, but it is essential. Without it he is not yet man. Without it thought can never ripen into truth. Whilst the world hangs before the eye as a cloud of beauty, we cannot even see its beauty. Inaction is cowardice, but there can be no scholar without the heroic mind. The preamble of thought, the transition through which it passes from the unconscious to the conscious, is action. Only so much do I know, as I have lived. Instantly we know whose words are loaded with life, and whose not.

The world — this shadow of the soul, or *other me*, lies wide around. Its attractions are the keys which unlock my thoughts and make me acquainted with myself. I launch eagerly into this resounding tumult. I grasp the hands of those next me, and take my place in the ring to suffer and to work, taught by an instinct that so shall the dumb abyss be vocal with speech. I pierce its order; I dissipate its fear; I dispose of it within the circuit of my expanding life. So much only of life as I know by experience, so much of the wilderness have I vanquished and planted, or so far have I extended my being, my dominion. I do not see how any man can afford, for the sake of his nerves and his nap, to spare any action in which he can partake. It is pearls and rubies to his discourse. Drudgery, calamity, exasperation, want, are instructors in eloquence and wisdom. The true scholar grudges every opportunity of action passed by, as a loss of power.

It is the raw material out of which the intellect molds her splendid products. A strange process too, this by which experience is converted into thought, as a mulberry-leaf is converted into satin. The manufacture goes forward at all hours.

The actions and events of our childhood and youth are now matters of calmest observation. They lie like fair pictures in the air. Not so with our recent actions, — with the business which we now have in hand. On this we are quite unable to speculate. Our affections as yet circulate through it. We no more feel or know it than we feel the feet, or the hand, or the brain of our body. The new deed is yet a part of life, — remains for a time immersed in our unconscious life. In some contemplative hour it detaches itself from the life like a ripe fruit, to become a thought of the mind. Instantly it is raised, transfigured; the corruptible has put on incorruption. Henceforth it is an object of beauty, however base its origin and neighborhood. Observe, too, the impossibility of antedating this act. In its grub state it cannot fly, it cannot shine, it is a dull grub. But suddenly, without

observation, the selfsame thing unfurls beautiful wings, and is an angel of wisdom. So is there no fact, no event, in our private history, which shall not, sooner or later, lose its adhesive, inert form, and astonish us by soaring from our body into the empyrean. Cradle and infancy, school and playground, the fear of boys, and dogs, and ferules, the love of little maids and berries, and many another fact that once filled the whole sky, are gone already; friend and relative, profession and party, town and country, nation and world, must also soar and sing.

Of course, he who has put forth his total strength in fit actions has the richest return of wisdom. I will not shut myself out of this globe of action, and transplant an oak into a flower-pot, there to hunger and pine; nor trust the revenue of some single faculty, and exhaust one vein of thought, much like those Savoyards, who, getting their livelihood by carving shepherds, shepherdesses, and smoking Dutchmen, for all Europe, went out one day to the mountain to find stock, and discovered that they had whittled up the last of their pine-trees. Authors we have, in numbers, who have written out their vein, and who, moved by a commendable prudence, sail for Greece or Palestine, follow the trapper into the prairie, or ramble round Algiers, to replenish their merchantable stock.

If it were only for a vocabulary, the scholar would be covetous of action. Life is our dictionary. Years are well spent in country labors; in town; in the insight into trades and manufactures; in frank intercourse with many men and women; in science; in art; to the one end of mastering in all their facts a language by which to illustrate and embody our perceptions. I learn immediately from any speaker how much he has already lived, through the poverty or the splendor of his speech. Life lies behind us as the quarry from whence we get tiles and copestones for the masonry of to-day. This is the way to learn grammar. Colleges and books only copy the language which the field and the work-yard made.

But the final value of action, like that of books, and better than books, is that it is a resource. That great principle of Undulation in nature, that shows itself in the inspiring and expiring of the breath; in desire and satiety; in the ebb and flow of the sea; in day and night; in heat and cold; and, as yet more deeply ingrained in every atom and every fluid, is known to us under the name of Polarity, — these “fits of easy transmission and reflection,” as Newton called them, are the law of nature because they are the law of spirit.

The mind now thinks, now acts, and each fit reproduces the other. When the artist has exhausted his materials, when the fancy no longer paints, when thoughts are no longer apprehended and books are a weariness, — he has always the resource *to live*. Character is higher than intellect. Thinking is the function.

Living is the functionary. The stream retreats to its source. A great soul will be strong to live, as well as strong to think. Does he lack organ or medium to impart his truth? He can still fall back on this elemental force of living them. This is a total act. Thinking is a partial act. Let the grandeur of justice shine in his affairs. Let the beauty of affection cheer his lowly roof. Those "far from fame," who dwell and act with him, will feel the force of his constitution in the doings and passages of the day better than it can be measured by any public and designed display. Time shall teach him that the scholar loses no hour which the man lives. Herein he unfolds the sacred germ of his instinct, screened from influence. What is lost in seemliness is gained in strength. Not out of those on whom systems of education have exhausted their culture comes the helpful giant to destroy the old or to build the new, but out of unhandselled savage nature; out of terrible Druids and Berserkers come at last Alfred and Shakespeare. I hear therefore with joy whatever is beginning to be said of the dignity and necessity of labor to every citizen. There is virtue yet in the hoe and the spade, for learned as well as for unlearned hands. And labor is everywhere welcome; always we are invited to work; only be this limitation observed, that a man shall not for the sake of wider activity sacrifice any opinion to the popular judgments and modes of action.

I have now spoken of the education of the scholar by nature, by books, and by action. It remains to say somewhat of his duties.

They are such as become Man Thinking. They may all be comprised in self-trust. The office of the scholar is to cheer, to raise, and to guide men by showing them facts amidst appearances. He plies the slow, unhonored, and unpaid task of observation. Flamsteed and Herschel, in their glazed observatories, may catalogue the stars with the praise of all men, and, the results being splendid and useful, honor is sure. But he, in his private observatory, cataloguing obscure and nebulous stars of the human mind, which as yet no man has thought of as such, — watching days and months sometimes for a few facts; correcting still his old records, — must relinquish display and immediate fame. In the long period of his preparation he must betray often an ignorance and shiftlessness in popular arts, incurring the disdain of the able who shoulder him aside. Long he must stammer in his speech; often forego the living for the dead. Worse yet, he must accept — how often! — poverty and solitude. For the ease and pleasure of treading the old road, accepting the fashions, the education, the religion of society, he takes the cross of making his own, and, of course, the self-accusation, the faint heart, the frequent uncertainty and loss of time, which are the nettles and tangling vines in the way of the self-relying and self-directed; and the state of virtual hostility in which he seems to stand to society, and especially to

educated society. For all this loss and scorn, what offset? He is to find consolation in exercising the highest functions of human nature. He is one who raises himself from private considerations and breathes and lives on public and illustrious thoughts. He is the world's eye. He is the world's heart. He is to resist the vulgar prosperity that retrogrades ever to barbarism, by preserving and communicating heroic sentiments, noble biographies, melodious verse, and the conclusions of history. Whatsoever oracles the human heart, in all emergencies, in all solemn hours, has uttered as its commentary on the world of actions, — these he shall receive and impart. And whatsoever new verdict Reason from her inviolable seat pronounces on the passing men and events of to-day, — this he shall hear and promulgate.

These being his functions, it becomes him to feel all confidence in himself, and to defer never to the popular cry. He and he only knows the world. The world of any moment is the merest appearance. Some great decorum, some fetich of a government, some ephemeral trade, or war, or man, is cried up by half mankind and cried down by the other half, as if all depended on this particular up or down. The odds are that the whole question is not worth the poorest thought which the scholar has lost in listening to the controversy. Let him not quit his belief that a popgun is a popgun, though the ancient and honorable of the earth affirm it to be the crack of doom. In silence, in steadiness, in severe abstraction, let him hold by himself; add observation to observation, patient of neglect, patient of reproach, and bide his own time, — happy enough if he can satisfy himself alone that this day he has seen something truly. Success treads on every right step. For the instinct is sure that prompts him to tell his brother what he thinks. He then learns that in going down into the secrets of his own mind he has descended into the secrets of all minds. He learns that he who has mastered any law in his private thoughts is master to that extent of all men whose language he speaks, and of all into whose language his own can be translated. The poet, in utter solitude remembering his spontaneous thoughts and recording them, is found to have recorded that which men in cities vast find true for them also. The orator distrusts at first the fitness of his frank confessions, his want of knowledge of the persons he addresses, until he finds that he is the complement of his hearers; — that they drink his words because he fulfills for them their own nature; the deeper he dives into his privatest, secretest presentiment, to his wonder he finds this is the most acceptable, most public and universally true. The people delight in it; the better part of every man feels — This is my music; this is myself.

In self-trust all the virtues are comprehended. Free should the scholar be, — free and brave. Free even to the definition of freedom, “without any hindrance

that does not arise out of his own constitution.” Brave; for fear is a thing which a scholar by his very function puts behind him. Fear always springs from ignorance. It is a shame to him if his tranquility, amid dangerous times, arise from the presumption that like children and women his is a protected class; or if he seek a temporary peace by the diversion of his thoughts from politics or vexed questions, hiding his head like an ostrich in the flowering bushes, peeping into microscopes, and turning rhymes, as a boy whistles to keep his courage up. So is the danger a danger still; so is the fear worse. Manlike let him turn and face it. Let him look into its eye and search its nature, inspect its origin, — see the whelping of this lion, — which lies no great way back; he will then find in himself a perfect comprehension of its nature and extent; he will have made his hands meet on the other side, and can henceforth defy it and pass on superior. The world is his who can see through its pretension. What deafness, what stone-blind custom, what overgrown error you behold is there only by sufferance, — by your sufferance. See it to be a lie, and you have already dealt it its mortal blow.

Yes, we are the cowed, — we the trustless. It is a mischievous notion that we are come late into nature; that the world was finished a long time ago. As the world was plastic and fluid in the hands of God, so it is ever to so much of his attributes as we bring to it. To ignorance and sin it is flint. They adapt themselves to it as they may; but in proportion as a man has any thing in him divine, the firmament flows before him and takes his signet and form. Not he is great who can alter matter, but he who can alter my state of mind. They are the kings of the world who give the color of their present thought to all nature and all art, and persuade men, by the cheerful serenity of their carrying the matter, that this thing which they do is the apple which the ages have desired to pluck, now at last ripe, and inviting nations to the harvest. The great man makes the great thing. Wherever Macdonald sits, there is the head of the table. Linnæus makes botany the most alluring of studies, and wins it from the farmer and the herb-woman: Davy, chemistry; and Cuvier, fossils. The day is always his who works in it with serenity and great aims. The unstable estimates of men crowd to him whose mind is filled with a truth, as the heaped waves of the Atlantic follow the moon.

For this self-trust, the reason is deeper than can be fathomed, — darker than can be enlightened. I might not carry with me the feeling of my audience in stating my own belief. But I have already shown the ground of my hope, in adverting to the doctrine that man is one. I believe man has been wronged; he has wronged himself. He has almost lost the light that can lead him back to his prerogatives. Men are become of no account. Men in history, men in the world

of to-day, are bugs, are spawn, and are called "the mass" and "the herd." In a century, in a millenium, one or two men; that is to say, one or two approximations to the right state of every man. All the rest behold in the hero or the poet their own green and crude being, — ripened; yes, and are content to be less, so *that* may attain to its full stature. What a testimony, full of grandeur, full of pity, is borne to the demands of his own nature, by the poor clansman, the poor partisan, who rejoices in the glory of his chief! The poor and the low find some amends to their immense moral capacity, for their acquiescence in a political and social inferiority. They are content to be brushed like flies from the path of a great person, so that justice shall be done by him to that common nature which it is the dearest desire of all to see enlarged and glorified. They sun themselves in the great man's light, and feel it to be their own element. They cast the dignity of man from their downtrod selves upon the shoulders of a hero, and will perish to add one drop of blood to make that great heart beat, those giant sinews combat and conquer. He lives for us, and we live in him.

Men such as they are very naturally seek money or power; and power because it is as good as money, — the "spoils," so called, "of office." And why not? For they aspire to the highest, and this, in their sleep-walking, they dream is highest. Wake them and they shall quit the false good and leap to the true, and leave governments to clerks and desks. This revolution is to be wrought by the gradual domestication of the idea of Culture. The main enterprise of the world for splendor, for extent, is the upbuilding of a man. Here are the materials strewn along the ground. The private life of one man shall be a more illustrious monarchy, more formidable to its enemy, more sweet and serene in its influence to its friend, than any kingdom in history. For a man, rightly viewed, comprehendeth the particular natures of all men. Each philosopher, each bard, each actor has only done for me, as by a delegate, what one day I can do for myself. The books which once we valued more than the apple of the eye, we have quite exhausted. What is that but saying that we have come up with the point of view which the universal mind took through the eyes of one scribe; we have been that man, and have passed on. First, one, then another, we drain all cisterns, and waxing greater by all these supplies, we crave a better and a more abundant food. The man has never lived that can feed us ever. The human mind cannot be enshrined in a person who shall set a barrier on any one side to this unbounded, unboundable empire. It is one central fire, which, flaming now out of the lips of Etna, lightens the capes of Sicily, and now out of the throat of Vesuvius, illuminates the towers and vineyards of Naples. It is one light which beams out of a thousand stars. It is one soul which animates all men.

But I have dwelt perhaps tediously upon this abstraction of the Scholar. I ought not to delay longer to add what I have to say of nearer reference to the time and to this country.

Historically, there is thought to be a difference in the ideas which predominate over successive epochs, and there are data for marking the genius of the Classic, of the Romantic, and now of the Reflective or Philosophical age. With the views I have intimated of the oneness or the identity of the mind through all individuals, I do not much dwell on these differences. In fact, I believe each individual passes through all three. The boy is a Greek; the youth, romantic; the adult, reflective. I deny not, however, that a revolution in the leading idea may be distinctly enough traced.

Our age is bewailed as the age of Introversion. Must that needs be evil? We, it seems, are critical. We are embarrassed with second thoughts. We cannot enjoy anything for hankering to know whereof the pleasure consists. We are lined with eyes. We see with our feet. The time is infected with Hamlet's unhappiness, —

“Sicklied o'er with the pale cast of thought.”

Is it so bad then? Sight is the last thing to be pitied. Would we be blind? Do we fear lest we should outsee nature and God, and drink truth dry? I look upon the discontent of the literary class as a mere announcement of the fact that they find themselves not in the state of mind of their fathers, and regret the coming state as untried; as a boy dreads the water before he has learned that he can swim. If there is any period one would desire to be born in, is it not the age of Revolution; when the old and the new stand side by side and admit of being compared; when the energies of all men are searched by fear and by hope; when the historic glories of the old can be compensated by the rich possibilities of the new era? This time, like all times, is a very good one, if we but know what to do with it.

I read with some joy of the auspicious signs of the coming days, as they glimmer already through poetry and art, through philosophy and science, through church and state.

One of these signs is the fact that the same movement which effected the elevation of what was called the lowest class in the state assumed in literature a very marked and as benign an aspect. Instead of the sublime and beautiful, the near, the low, the common, was explored and poetized. That which had been negligently trodden under foot by those who were harnessing and provisioning themselves for long journeys into far countries, is suddenly found to be richer than all foreign parts. The literature of the poor, the feelings of the child, the philosophy of the street, the meaning of household life, are the topics of the time. It is a great stride. It is a sign — is it not? — of new vigor when the

extremities are made active, when currents of warm life run into the hands and the feet. I ask not for the great, the remote, the romantic; what is doing in Italy or Arabia; what is Greek art, or Provençal minstrelsy; I embrace the common, I explore and sit at the feet of the familiar, the low. Give me insight into to-day, and you may have the antique and future worlds. What would we really know the meaning of? The meal in the firkin; the milk in the pan; the ballad in the street; the news of the boat; the glance of the eye; the form and the gait of the body; — show me the ultimate reason of these matters; show me the sublime presence of the highest spiritual cause lurking, as always it does lurk, in these suburbs and extremities of nature; let me see every trifle bristling with the polarity that ranges it instantly on an eternal law; and the shop, the plow, and the ledger referred to the like cause by which light undulates and poets sing; — and the world lies no longer a dull miscellany and lumber-room, but has form and order: there is no trifle, there is no puzzle, but one design unites and animates the farthest pinnacle and the lowest trench.

This idea has inspired the genius of Goldsmith, Burns, Cowper, and, in a newer time, of Goethe, Wordsworth, and Carlyle. This idea they have differently followed and with various success. In contrast with their writing, the style of Pope, of Johnson, of Gibbon, looks cold and pedantic. This writing is blood-warm. Man is surprised to find that things near are not less beautiful and wondrous than things remote. The near explains the far. The drop is a small ocean. A man is related to all nature. This perception of the worth of the vulgar is fruitful in discoveries. Goethe, in this very thing the most modern of the moderns, has shown us, as none ever did, the genius of the ancients.

There is one man of genius who has done much for this philosophy of life, whose literary value has never yet been rightly estimated: — I mean Emanuel Swedenborg. The most imaginative of men, yet writing with the precision of a mathematician, he endeavored to engraft a purely philosophical Ethics on the popular Christianity of his time. Such an attempt of course must have difficulty which no genius could surmount. But he saw and showed the connexion between nature and the affections of the soul. He pierced the emblematic or spiritual character of the visible, audible, tangible world. Especially did his shade-loving muse hover over and interpret the lower parts of nature; he showed the mysterious bond that allies moral evil to the foul material forms, and has given in epical parables a theory of insanity, of beasts, of unclean and fearful things.

Another sign of our times, also marked by an analogous political movement, is the new importance given to the single person. Everything that tends to insulate the individual — to surround him with barriers of natural respect, so that each man shall feel the world is his, and man shall treat with man as a sovereign

state with a sovereign state — tends to true union as well as greatness. “I learned,” said the melancholy Pestalozzi, “that no man in God’s wide earth is either willing or able to help any other man.” Help must come from the bosom alone. The scholar is that man who must take up into himself all the ability of the time, all the contributions of the past, all the hopes of the future. He must be an university of knowledges. If there be one lesson more than another that should pierce his ear, it is — The world is nothing, the man is all; in yourself is the law of all nature, and you know not yet how a globule of sap ascends; in yourself slumbers the whole of Reason; it is for you to know all; it is for you to dare all. Mr. President and Gentlemen, this confidence in the unsearched might of man belongs, by all motives, by all prophecy, by all preparation, to the American Scholar. We have listened too long to the courtly muses of Europe. The spirit of the American freeman is already suspected to be timid, imitative, tame. Public and private avarice make the air we breathe thick and fat. The scholar is decent, indolent, complaisant. See already the tragic consequence. The mind of this country, taught to aim at low objects, eats upon itself. There is no work for any one but the decorous and the complaisant. Young men of the fairest promise, who begin life upon our shores, inflated by the mountain winds, shined upon by all the stars of God, find the earth below not in unison with these, but are hindered from action by the disgust which the principles on which business is managed inspire, and turn drudges, or die of disgust, some of them suicides. What is the remedy? They did not yet see, and thousands of young men as hopeful now crowding to the barriers for the career do not yet see, that if the single man plant himself indomitably on his instincts, and there abide, the huge world will come round to him. Patience, — patience; with the shades of all the good and great for company; and for solace the perspective of your own infinite life; and for work the study and the communication of principles, the making those instincts prevalent, the conversion of the world. Is it not the chief disgrace in the world, not to be an unit; not to be reckoned one character; not to yield that peculiar fruit which each man was created to bear, but to be reckoned in the gross, in the hundred, or the thousand, of the party, the section, to which we belong; and our opinion predicted geographically, as the north, or the south? Not so, brothers and friends, — please God, ours shall not be so. We will walk on our own feet; we will work with our own hands; we will speak our own minds. Then shall man be no longer a name for pity, for doubt, and for sensual indulgence. The dread of man and the love of man shall be a wall of defense and a wreath of joy around all. A nation of men will for the first time exist, because each believes himself inspired by the Divine Soul which also inspires all men.

AN ADDRESS

Delivered before the Senior Class in Divinity College, Cambridge, Sunday Evening, July 15, 1838

IN this refulgent summer it has been a luxury to draw the breath of life. The grass grows, the buds burst, the meadow is spotted with fire and gold in the tint of flowers. The air is full of birds, and sweet with the breath of the pine, the balm-of-Gilead, and the new hay. Night brings no gloom to the heart with its welcome shade. Through the transparent darkness the stars pour their almost spiritual rays. Man under them seems a young child, and his huge globe a toy. The cool night bathes the world as with a river, and prepares his eyes again for the crimson dawn. The mystery of nature was never displayed more happily. The corn and the wine have been freely dealt to all creatures, and the never-broken silence with which the old bounty goes forward has not yielded yet one word of explanation. One is constrained to respect the perfection of this world, in which our senses converse. How wide, how rich, what invitation from every property it gives to every faculty of man! In its fruitful soils; in its navigable sea; in its mountains of metal and stone; in its forests of all woods; in its animals; in its chemical ingredients; in the powers and path of light, heat, attraction, and life, — it is well worth the pith and heart of great men to subdue and enjoy it. The planters, the mechanics, the inventors, the astronomers, the builders of cities and the captains, history delights to honor.

But when the mind opens, and reveals the laws which traverse the universe, and make things what they are, then shrinks the great world at once into a mere illustration and fable of this mind. What am I? and What is? asks the human spirit with a curiosity newkindled, but never to be quenched. Behold these outrunning laws, which our imperfect apprehension can see tend this way and that, but not come full circle. Behold these infinite relations, so like, so unlike; many, yet one. I would study, I would know, I would admire forever. These works of thought have been the entertainments of the human spirit in all ages.

A more secret, sweet, and overpowering beauty appears to man when his heart and mind open to the sentiment of virtue. Then he is instructed in what is above him. He learns that his being is without bound; that to the good, to the perfect, he is born, low as he now lies in evil and weakness. That which he venerates is still his own, though he has not realized it yet. *He ought*. He knows

the sense of that grand word, though his analysis fails entirely to render account of it. When in innocency, or when by intellectual perception, he attains to say:—“I love the Right; Truth is beautiful within and without forevermore. Virtue, I am thine; save me; use me; thee will I serve, day and night, in great, in small, that I may be not virtuous, but virtue;” — then is the end of the creation answered, and God is well pleased.

The sentiment of virtue is a reverence and delight in the presence of certain divine laws. It perceives that this homely game of life we play, covers, under what seem foolish details, principles that astonish. The child amidst his baubles is learning the action of light, motion, gravity, muscular force; and in the game of human life, love, fear, justice, appetite, man, and God interact. These laws refuse to be adequately stated. They will not be written out on paper, or spoken by the tongue. They elude our persevering thought; yet we read them hourly in each other's faces, in each other's actions, in our own remorse. The moral traits which are all globed into every virtuous act and thought, — in speech, we must sever, and describe or suggest by painful enumeration of many particulars. Yet, as this sentiment is the essence of all religion, let me guide your eye to the precise objects of the sentiment, by an enumeration of some of those classes of facts in which this element is conspicuous.

The intuition of the moral sentiment is an insight of the perfection of the laws of the soul. These laws execute themselves. They are out of time, out of space, and not subject to circumstance. Thus, in the soul of man there is a justice whose retributions are instant and entire. He who does a good deed is instantly ennobled. He who does a mean deed is by the action itself contracted. He who puts off impurity, thereby puts on purity. If a man is at heart just, then in so far is he God; the safety of God, the immortality of God, the majesty of God, do enter into that man with justice. If a man dissemble, deceive, he deceives himself, and goes out of acquaintance with his own being. A man in the view of absolute goodness adores with total humility. Every step so downward is a step upward. The man who renounces himself comes to himself.

See how this rapid intrinsic energy worketh everywhere, righting wrongs, correcting appearances, and bringing up facts to a harmony with thoughts. Its operation in life, though slow to the senses, is, at last, as sure as in the soul. By it, a man is made the Providence to himself, dispensing good to his goodness, and evil to his sin. Character is always known. Thefts never enrich; alms never impoverish; murder will speak out of stone walls. The least admixture of a lie —

for example, the taint of vanity, the least attempt to make a good impression, a favorable appearance — will instantly vitiate the effect. But speak the truth, and all nature and all spirits help you with unexpected furtherance. Speak the truth, and all things alive or brute are vouchers, and the very roots of the grass underground there do seem to stir and move to bear you witness. See again the perfection of the Law as it applies itself to the affections, and becomes the law of society. As we are, so we associate. The good, by affinity, seek the good; the vile, by affinity, the vile. Thus of their own volition souls proceed into heaven, into hell.

These facts have always suggested to man the sublime creed, that the world is not the product of manifold power, but of one will, of one mind; and that one mind is everywhere active, in each ray of the star, in each wavelet of the pool; and whatever opposes that will is everywhere balked and baffled, because things are made so, and not otherwise. Good is positive. Evil is merely privative, not absolute: it is like cold, which is the privation of heat. All evil is so much death or nonentity. Benevolence is absolute and real. So much benevolence as a man hath, so much life hath he. For all things proceed out of this same spirit, which is differently named love, justice, temperance, in its different applications, just as the ocean receives different names on the several shores which it washes. All things proceed out of the same spirit, and all things conspire with it. Whilst a man seeks good ends, he is strong by the whole strength of Nature. In so far as he roves from these ends, he bereaves himself of power, of auxiliaries; his being shrinks out of all remote channels, he becomes less and less, a mote, a point, until absolute badness is absolute death.

The perception of this law of laws awakens in the mind a sentiment which we call the religious sentiment, and which makes our highest happiness. Wonderful is its power to charm and to command. It is a mountain air. It is the embalmer of the world. It is myrrh and storax, and chlorine and rosemary. It makes the sky and the hills sublime, and the silent song of the stars is it. By it is the universe made safe and habitable, not by science or power. Thought may work cold and intransitive in things, and find no end or unity; but the dawn of the sentiment of virtue on the heart gives and is the assurance that Law is sovereign over all natures; and the worlds, time, space, eternity, do seem to break out into joy.

This sentiment is divine and deifying. It is the beatitude of man. It makes him illimitable. Through it the soul first knows itself. It corrects the capital mistake

of the infant man, who seeks to be great by following the great, and hopes to derive advantages *from another*, by showing the fountain of all good to be in himself, and that he, equally with every man, is an inlet into the deeps of Reason. When he says, "I ought;" when love warns him; when he chooses, warned from on high, the good and the great deed, — then deep melodies wander through his soul from Supreme Wisdom. Then he can worship, and be enlarged by his worship; for he can never go behind this sentiment. In the sublimest flights of the soul, rectitude is never surmounted, love is never outgrown.

This sentiment lies at the foundation of society, and successively creates all forms of worship. The principle of veneration never dies out. Man fallen into superstition, into sensuality, is never quite without the visions of the moral sentiment. In like manner all the expressions of this sentiment are sacred and permanent in proportion to their purity. The expressions of this sentiment affect us more than all other compositions. The sentences of the oldest time, which ejaculate this piety, are still fresh and fragrant. This thought dwelled always deepest in the minds of men in the devout and contemplative East; not alone in Palestine, where it reached its purest expression, but in Egypt, in Persia, in India, in China. Europe has always owed to Oriental genius its divine impulses. What these holy bards said, all sane men found agreeable and true. And the unique impression of Jesus upon mankind, whose name is not so much written as ploughed into the history of this world, is proof of the subtle virtue of this infusion.

Meantime, whilst the doors of the temple stand open, night and day, before every man, and the oracles of this truth cease never, it is guarded by one stern condition; this, namely, it is an intuition. It cannot be received at second hand. Truly speaking, it is not instruction, but provocation, that I can receive from another soul. What he announces, I must find true in me, or wholly reject; and on his word, or as his second, be he who he may, I can accept nothing. On the contrary, the absence of this primary faith is the presence of degradation. As is the flood, so is the ebb. Let this faith depart, and the very words it spake, and the things it made, become false and hurtful. Then falls the church, the state, art, letters, life. The doctrine of the divine nature being forgotten, a sickness infects and dwarfs the constitution. Once man was all; now he is an appendage, a nuisance. And because the indwelling Supreme Spirit cannot wholly be got rid of, the doctrine of it suffers this perversion, that the divine nature is attributed to one or two persons, and denied to all the rest, and denied with fury. The doctrine

of inspiration is lost; the base doctrine of the majority of voices usurps the place of the doctrine of the soul. Miracles, prophecy, poetry; the ideal life, the holy life, exist as ancient history merely; they are not in the belief nor in the aspiration of society; but, when suggested, seem ridiculous. Life is comic or pitiful as soon as the high ends of being fade out of sight, and man becomes nearsighted, and can only attend to what addresses the senses.

These general views, which, whilst they are general, none will contest, find abundant illustration in the history of religion, and especially in the history of the Christian church. In that, all of us have had our birth and nurture. The truth contained in that, you, my young friends, are now setting forth to teach. As the Cultus, or established worship of the civilized world, it has great historical interest for us. Of its blessed words, which have been the consolation of humanity, you need not that I should speak. I shall endeavor to discharge my duty to you, on this occasion, by pointing out two errors in its administration, which daily appear more gross from the point of view we have just now taken.

Jesus Christ belonged to the true race of prophets. He saw with open eye the mystery of the soul. Drawn by its severe harmony, ravished with its beauty, he lived in it, and had his being there. Alone in all history, he estimated the greatness of man. One man was true to what was in you and me. He saw that God incarnates himself in man, and evermore goes forth anew to take possession of his world. He said, in this jubilee of sublime emotion:— “I am divine. Through me, God acts; through me, speaks. Would you see God, see me; or, see thee, when thou also thinkest as I now think.” But what a distortion did his doctrine and memory suffer in the same, in the next, and the following ages! There is no doctrine of the Reason which will bear to be taught by the Understanding. The understanding caught this high chant from the poet’s lips, and said, in the next age:— “This was Jehovah come down out of heaven. I will kill you if you say he was a man.” The idioms of his language and the figures of his rhetoric have usurped the place of his truth; and churches are not built on his principles, but on his tropes. Christianity became a Mythus, as the poetic teaching of Greece and of Egypt, before. He spoke of miracles; for he felt that man’s life was a miracle, and all that man doth, and he knew that this daily miracle shines, as the character ascends. But the word “miracle,” as pronounced by Christian churches, gives a false impression; it is “monster.” It is not one with the blowing clover and the falling rain.

He felt respect for Moses and the prophets; but no unfit tenderness at

postponing their initial revelations to the hour and the man that now is, to the eternal revelation in the heart. Thus was he a true man. Having seen that the law in us is commanding he would not suffer it to be commanded. Boldly, with hand, and heart, and life, he declared it was God. Thus is he, as I think, the only soul in history who has appreciated the worth of a man.

1. In this point of view we become very sensible of the first defect of historical Christianity. Historical Christianity has fallen into the error that corrupts all attempts to communicate religion. As it appears to us, and as it has appeared for ages, it is not the doctrine of the soul, but an exaggeration of the personal, the positive, the ritual. It has dwelt, it dwells, with noxious exaggeration about the *person* of Jesus. The soul knows no persons. It invites every man to expand to the full circle of the universe, and will have no preferences but those of spontaneous love. But by this Eastern monarchy of a Christianity, which indolence and fear have built, the friend of man is made the injurer of man. The manner in which his name is surrounded with expressions, which were once sallies of admiration and love, but are now petrified into official titles, kills all generous sympathy and liking. All who hear me, feel that the language that describes Christ to Europe and America is not the style of friendship and enthusiasm to a good and noble heart, but is appropriated and formal, — paints a demigod, as the Orientals or the Greeks would describe Osiris or Apollo. Accept the injurious impositions of our early catechetical instruction, and even honesty and self denial were but splendid sins if they did not wear the Christian name. One would rather be

“A pagan, suckled in a creed outworn,”

than to be defrauded of his manly right in coming into nature, and finding not names and places, not land and professions, but even virtue and truth, foreclosed and monopolized. You shall not be a man even. You shall not own the world; you shall not dare, and live after the infinite Law that is in you, and in company with the infinite Beauty which heaven and earth reflect to you in all lovely forms; but you must subordinate your nature to Christ’s nature, you must accept our interpretations, and take his portrait as the vulgar draw it.

That is always best which gives me to myself. The sublime is excited in me by the great stoical doctrine, Obey thyself. That which shows God in me, fortifies me. That which shows God out of me, makes me a wart and a wen. There is no longer a necessary reason for my being. Already the long shadows of untimely oblivion creep over me, and I shall de cease forever.

The divine bards are the friends of my virtue, of my intellect, of my strength. They admonish me that the gleams which flash across my mind are not mine, but God's; that they had the like, and were not disobedient to the heavenly vision. So I love them. Noble provocations go out from them, inviting me to resist evil, to subdue the world, and to Be. And thus by his holy thoughts Jesus serves us, and thus only. To aim to convert a man by miracles is a profanation of the soul. A true conversion, a true Christ, is now, as always, to be made by the reception of beautiful sentiments. It is true that a great and rich soul, like his, falling among the simple, does so preponderate, that, as his did, it names the world. The world seems to them to exist for him, and they have not yet drunk so deeply of his sense as to see that only by coming again to themselves, or to God in themselves, can they grow forevermore. It is a low benefit to give me something; it is a high benefit to enable me to do somewhat of myself. The time is coming when all men will see that the gift of God to the soul is not a vaunting, overpowering, excluding sanctity, but a sweet, natural goodness, a goodness like thine and mine, and that so invites thine and mine to be and to grow.

The injustice of the vulgar tone of preaching is not less flagrant to Jesus than to the souls which it profanes. The preachers do not see that they make his gospel not glad, and shear him of the locks of beauty and the attributes of heaven. When I see a majestic Epaminondas or Washington; when I see among my contemporaries a true orator, an upright judge, a dear friend; when I vibrate to the melody and fancy of a poem, — I see beauty that is to be desired. And so lovely, and with yet more entire consent of my human being, sounds in my ear the severe music of the bards that have sung of the true God in all ages. Now, do not degrade the life and dialogues of Christ out of the circle of this charm, by insulation and peculiarity. Let them lie as they befell, alive and warm, part of human life, and of the landscape, and of the cheerful day.

2. The second defect of the traditionary and limited way of using the mind of Christ is a consequence of the first; this, namely, that the Moral Nature, that law of laws, whose revelations introduce greatness, yea, God himself, into the open soul, is not explored as the fountain of the established teaching in society. Men have come to speak of the revelation as somewhat long ago given and done, as if God were dead. The injury to faith throttles the preacher, and the goodliest of institutions becomes an uncertain and inarticulate voice.

It is very certain that it is the effect of conversation with the beauty of the soul, to beget a desire and need to impart to others the knowledge and love. If utterance is denied, the thought lies like a burden on the man. Always the seer is a sayer. Somehow his dream is told; somehow he publishes it with solemn joy; sometimes with pencil on canvas; sometimes with chisel on stone; sometimes in towers and aisles of granite his soul's worship is builded; sometimes in anthems of indefinite music; but clearest and most permanent, in words.

The man enamored of this excellency becomes its priest or poet. The office is coeval with the world. But observe the condition, the spiritual limitation of the office. The spirit only can teach. Not any profane man, not any sensual, not any liar, not any slave can teach, but only he can give, who has; he only can create, who is. The man on whom the soul descends, through whom the soul speaks, alone can teach. Courage, piety, love, wisdom, can teach; and every man can open his door to these angels, and they shall bring him the gift of tongues. But the man who aims to speak as books enable, as synods use, as the fashion guides, and as interest commands, babbles. Let him hush.

To this holy office you propose to devote yourselves. I wish you may feel your call in throbs of desire and hope. The office is the first in the world. It is of that reality, that it cannot suffer the deduction of any falsehood. And it is my duty to say to you, that the need was never greater of new revelation than now. From the views I have already expressed, you will infer the sad conviction, which I share, I believe, with numbers, of the universal decay and now almost death of faith in society. The soul is not preached. The Church seems to totter to its fall, almost all life extinct. On this occasion any complaisance would be criminal which told you, whose hope and commission it is to preach the faith of Christ, that the faith of Christ is preached.

It is time that this ill-suppressed murmur of all thoughtful men against the famine of our churches; this moaning of the heart because it is bereaved of the consolation, the hope, the grandeur, that come alone out of the culture of the moral nature, — should be heard through the sleep of indolence and over the din of routine. This great and perpetual office of the preacher is not discharged. Preaching is the expression of the moral sentiment in application to the duties of life. In how many churches, by how many prophets, tell me, is man made sensible that he is an infinite soul; that the earth and heavens are passing into his mind; that he is drinking forever the soul of God? Where now sounds the persuasion, that by its very melody imparadises my heart, and so affirms its own

origin in heaven? Where shall I hear words such as in elder ages drew men to leave all and follow, — father and mother, house and land, wife and child? Where shall I hear these august laws of moral being so pronounced as to fill my ear, and I feel ennobled by the offer of my uttermost action and passion? The test of the true faith, certainly, should be its power to charm and command the soul, as the laws of nature control the activity of the hands, — so commanding that we find pleasure and honor in obeying. The faith should blend with the light of rising and of setting suns, with the flying cloud, the singing bird, and the breath of flowers. But now the priest's Sabbath has lost the splendor of nature; it is unlovely; we are glad when it is done; we can make, we do make, even sitting in our pews, a far better, holier, sweeter, for ourselves.

Wherever the pulpit is usurped by a formalist, then is the worshipper defrauded and disconsolate. We shrink as soon as the prayers begin, which do not uplift, but smite and offend us. We are fain to wrap our cloaks about us, and secure, as best we can, a solitude that hears not. I once heard a preacher who sorely tempted me to say I would go to church no more. Men go, thought I, where they are wont to go, else had no soul entered the temple in the afternoon. A snow-storm was falling around us. The snow-storm was real; the preacher merely spectral; and the eye felt the sad contrast in looking at him, and then out of the window behind him, into the beautiful meteor of the snow. He had lived in vain. He had no one word intimating that he had laughed or wept, was married or in love, had been commended, or cheated, or chagrined. If he had ever lived and acted, we were none the wiser for it. The capital secret of his profession, namely, to convert life into truth, he had not learned. Not one fact in all his experience had he yet imported into his doctrine. This man had ploughed and planted, and talked, and bought, and sold; he had read books; he had eaten and drunken; his head aches; his heart throbs; he smiles and suffers; yet was there not a surmise, a hint, in all the discourse, that he had ever lived at all. Not a line did he draw out of real history. The true preacher can be known by this, that he deals out to the people his life, — life passed through the fire of thought. But of the bad preacher, it could not be told from his sermon what age of the world he fell in; whether he had a father or a child; whether he was a freeholder or a pauper; whether he was a citizen or a countryman; or any other fact of his biography. It seemed strange that the people should come to church. It seemed as if their houses were very unentertaining, that they should prefer this thoughtless clamor. It shows that there is a commanding attraction in the moral sentiment that can lend a faint tint of light to dulness and ignorance, coming in its name and place. The good hearer is sure he has been touched sometimes; is sure there

is somewhat to be reached, and some word that can reach it. When he listens to these vain words, he comforts himself by their relation to his remembrance of better hours, and so they clatter and echo unchallenged.

I am not ignorant that when we preach unworthily, it is not always quite in vain. There is a good ear, in some men, that draws supplies to virtue out of very indifferent nutriment. There is poetic truth concealed in all the common-places of prayer and of sermons, and though foolishly spoken, they may be wisely heard; for each is some select expression that broke out in a moment of piety from some stricken or jubilant soul, and its excellency made it remembered. The prayers and even the dogmas of our church are like the zodiac of Denderah, and the astronomical monuments of the Hindoos, wholly insulated from anything now extant in the life and business of the people. They mark the height to which the waters once rose. But this docility is a check upon the mischief from the good and devout. In a large portion of the community, the religious service gives rise to quite other thoughts and emotions. We need not chide the negligent servant. We are struck with pity, rather, at the swift retribution of his sloth. Alas for the unhappy man that is called to stand in the pulpit, and not give bread of life! Everything that befalls, accuses him. Would he ask contributions for the missions, foreign or domestic? Instantly his face is suffused with shame, to propose to his parish that they should send money a hundred or a thousand miles, to furnish such poor fare as they have at home, and would do well to go the hundred or the thousand miles to escape. Would he urge people to a godly way of living; and can he ask a fellow-creature to come to Sabbath meetings, when he and they all know what is the poor uttermost they can hope for therein? Will he invite them privately to the Lord's Supper? He dares not. If no heart warm this rite, the hollow, dry, creaking formality is too plain, than that he can face a man of wit and energy, and put the invitation without terror. In the street, what has he to say to the bold village blasphemer? The village blasphemer sees fear in the face, form, and gait of the minister.

Let me not taint the sincerity of this plea by any oversight of the claims of good men. I know and honor the purity and strict conscience of numbers of the clergy. What life the public worship retains, it owes to the scattered company of pious men who minister here and there in the churches, and who, sometimes accepting with too great tenderness the tenet of the elders, have not accepted from others, but from their own heart, the genuine impulses of virtue, and so still command our love and awe, to the sanctity of character. Moreover, the exceptions are not so much to be found in a few eminent preachers, as in the

better hours, the truer inspirations of all, — nay, in the sincere moments of every man. But with whatever exception, it is still true that tradition characterizes the preaching of this country; that it comes out of the memory and not out of the soul; that it aims at what is usual and not at what is necessary and eternal; that thus historical Christianity destroys the power of preaching, by withdrawing it from the exploration of the moral nature of man, where the sublime is, where are the resources of astonishment and power. What a cruel injustice it is to that Law, the joy of the whole earth, which alone can make thought dear and rich; that Law whose fatal sureness the astronomical orbits poorly emulate, that it is travestied and depreciated, that it is behooted and behowled, and not a trait, not a word of it articulated. The pulpit in losing sight of this Law loses its reason, and gropes after it knows not what. And for want of this culture the soul of the community is sick and faithless. It wants nothing so much as a stern, high, stoical, Christian discipline, to make it know itself and the divinity that speaks through it. Now man is ashamed of himself; he skulks and sneaks through the world, to be tolerated, to be pitied, and scarcely in a thousand years does any man dare to be wise and good, and so draw after him the tears and blessings of his kind.

Certainly there have been periods when, from the inactivity of the intellect on certain truths, a greater faith was possible in names and persons. The Puritans in England and America found in the Christ of the Catholic Church, and in the dogmas inherited from Rome, scope for their austere piety and their longings for civil freedom. But their creed is passing away, and none arises in its room. I think no man can go with his thoughts about him into one of our churches, without feeling that what hold the public worship has on men is gone, or going. It has lost its grasp on the affection of the good and the fear of the bad. In the country, neighborhoods, half parishes are signing off, — to use the local term. It is already beginning to indicate character and religion to withdraw from the religious meetings. I have heard a devout person who prized the Sabbath say in bitterness of heart: “On Sundays it seems wicked to go to church.” And the motive that holds the best there, is now only a hope and a waiting. What was once a mere circumstance, that the best and the worst men in the parish, the poor and the rich, the learned and the ignorant, young and old, should meet one day as fellows in one house, in sign of an equal right in the soul, — has come to be a paramount motive for going thither.

My friends, in these two errors, I think I find the causes of a decaying church and a wasting unbelief. And what greater calamity can fall upon a nation than the loss of worship? Then all things go to decay. Genius leaves the temple, to

haunt the senate or the market. Literature becomes frivolous. Science is cold. The eye of youth is not lighted by the hope of other worlds, and age is without honor. Society lives to trifles, and when men die we do not mention them.

And now, my brothers, you will ask, What in these desponding days can be done by us? The remedy is already declared in the ground of our complaint of the Church. We have contrasted the Church with the Soul. In the soul, then, let the redemption be sought. Wherever a man comes, there comes revolution. The old is for slaves. When a man comes, all books are legible, all things transparent, all religions are forms. He is religious. Man is the wonderworker. He is seen amid miracles. All men bless and curse. He saith yea and nay, only. The stationariness of religion; the assumption that the age of inspiration is past, that the Bible is closed; the fear of degrading the character of Jesus by representing him as a man, — indicate with sufficient clearness the falsehood of our theology. It is the office of a true teacher to show us that God is, not was; that He speaketh, not spake. The true Christianity — a faith like Christ's in the infinitude of man — is lost. None believeth in the soul of man, but only in some man or person old and departed. Ah me! no man goeth alone. All men go in flocks to this saint or that poet, avoiding the God who seeth in secret. They cannot see in secret; they love to be blind in public. They think society wiser than their soul, and know not that one soul, and their soul, is wiser than the whole world. See how nations and races flit by on the sea of time, and leave no ripple to tell where they floated or sunk, and one good soul shall make the name of Moses, or of Zeno, or of Zoroaster reverend forever. None essayeth the stern ambition to be the Self of the nation and of Nature, but each would be an easy secondary to some Christian scheme, or sectarian connection, or some eminent man. Once leave your own knowledge of God, your own sentiment, and take secondary knowledge, as St. Paul's, or George Fox's, or Swedenborg's, and you get wide from God with every year this secondary form lasts, and if, as now, for centuries, — the chasm yawns to that breadth, that men can scarcely be convinced there is in them anything divine.

Let me admonish you, first of all, to go alone; to refuse the good models, even those which are sacred in the imagination of men, and dare to love God without mediator or veil. Friends enough you shall find who will hold up to your emulation Wesleys and Oberlins, Saints and Prophets. Thank God for these good men, but say, "I also am a man." Imitation cannot go above its model. The imitator dooms himself to hopeless mediocrity. The inventor did it, because it was natural to him, and so in him it has a charm. In the imitator, something else

is natural, and he bereaves himself of his own beauty, to come short of another man's.

Yourselves a new-born bard of the Holy Ghost, — cast behind you all conformity, and acquaint men at first hand with Deity. Look to it first and only, that fashion, custom, authority, pleasure, and money are nothing to you, — are not bandages over your eyes, that you cannot see, — but live with the privilege of the immeasurable mind. Not too anxious to visit periodically all families and each family in your parish connection, — when you meet one of these men or women, be to them a divine man; be to them thought or virtue; let their timid aspirations find in you a friend; let their trampled instincts be genially tempted out in your atmosphere; let their doubts know that you have doubted, and their wonder feel that you have wondered. By trusting your own heart, you shall gain more confidence in other men. For all our penny-wisdom, for all our soul-destroying slavery to habit, it is not to be doubted that all men have sublime thoughts; that all men value the few real hours of life; they love to be heard; they love to be caught up into the vision of principles. We mark with light in the memory the few interviews we have had, in the dreary years of routine and of sin, with souls that made our souls wiser; that spoke what we thought; that told us what we knew; that gave us leave to be what we inly were. Discharge to men the priestly office, and, present or absent, you shall be followed with their love as by an angel.

And to this end let us not aim at common degrees of merit. Can we not leave to such as love it the virtue that glitters for the commendation of society, and ourselves pierce the deep solitudes of absolute ability and worth? We easily come up to the standard of goodness in society. Society's praise can be cheaply secured, and almost all men are content with those easy merits; but the instant effect of conversing with God will be to put them away. There are persons who are not actors, not speakers, but influences; persons too great for fame, for display; who disdain eloquence; to whom all we call art and artist seems too nearly allied to show and by-ends, to the exaggeration of the finite and selfish, and loss of the universal. The orators, the poets, the commanders encroach on us only as fair women do, by our allowance and homage. Slight them by preoccupation of mind, slight them as you can well afford to do, by high and universal aims, and they instantly feel that you have right, and that it is in lower places that they must shine. They also feel your right; for they with you are open to the influx of the all-knowing Spirit, which annihilates before its broad noon the little shades and gradations of intelligence in the compositions we call wiser

and wisest.

In such high communion let us study the grand strokes of rectitude: a bold benevolence, an independence of friends so that not the unjust wishes of those who love us will impair our freedom, but we shall resist for truth's sake the freest flow of kindness, and appeal to sympathies far in advance; and — what is the highest form in which we know this beautiful element — a certain solidity of merit, that has nothing to do with opinion, and which is so essentially and manifestly virtue, that it is taken for granted that the right, the brave, the generous step will be taken by it, and nobody thinks of commending it. You would compliment a coxcomb doing a good act, but you would not praise an angel. The silence that accepts merit as the most natural thing in the world is the highest applause. Such souls, when they appear, are the Imperial Guard of Virtue, the perpetual reserve, the dictators of fortune. One needs not praise their courage, — they are the heart and soul of nature. Oh my friends, there are resources in us on which we have not drawn. There are men who rise refreshed on hearing a threat; men to whom a crisis which intimidates and paralyzes the majority — demanding not the faculties of prudence and thrift, but comprehension, immovableness, the readiness of sacrifice — comes graceful and beloved as a bride. Napoleon said of Massena, that he was not himself until the battle began to go against him; then, when the dead began to fall in ranks around him, awoke his powers of combination, and he put on terror and victory as a robe. So it is in rugged crises, in unwearable endurance, and in aims which put sympathy out of question, and the angel is shown. But these are heights that we can scarce remember and look up to, without contrition and shame. Let us thank God that such things exist.

And now let us do what we can to rekindle the smouldering, nigh quenched fire on the altar. The evils of the Church that now is are manifest. The question returns, what shall we do? I confess, all attempts to project and establish a Cultus with new rites and forms seem to me in vain. Faith makes us, and not we it, and faith makes its own forms. All attempts to contrive a system are as cold as the new worship introduced by the French to the goddess of Reason, — today, pasteboard and filigree, and ending tomorrow in madness, and murder. Rather let the breath of new life be breathed by you through the forms already existing. For, if once you are alive, you shall find they shall become plastic and new. The remedy to their deformity is, first, Soul, and second, Soul, and evermore, Soul. A whole popedom of forms one pulsation of virtue can uplift and vivify.

Two inestimable advantages Christianity has given us: first, the Sabbath, the jubilee of the whole world; whose light dawns welcome alike into the closet of the philosopher, into the garret of toil, and into prison cells, and everywhere suggests, even to the vile, the dignity of spiritual being. Let it stand forevermore a temple, which new love, new faith, new sight shall restore to more than its first splendor to mankind. And secondly, the institution of preaching, — the speech of man to men, — essentially the most flexible of all organs, of all forms. What hinders that now, everywhere, in pulpits, in lecture-rooms, in houses, in fields, wherever the invitation of men or your own occasions lead you, you spoke the very truth, as your life and conscience teach it, and cheer the waiting, fainting hearts of men with new hope and new revelation?

I look for the hour when that supreme Beauty which ravished the souls of those Eastern men, and chiefly of those Hebrews, and through their lips spoke oracles to all time, shall speak in the West also. The Hebrew and Greek Scriptures contain immortal sentences that have been bread of life to millions. But they have no epical integrity; are fragmentary; are not shown in their order to the intellect. I look for the new Teacher, that shall follow so far those shining laws, that he shall see them come full circle; shall see their rounding complete grace; shall see the world to be the mirror of the soul; shall see the identity of the law of gravitation with purity of heart; and shall show that the Ought, that Duty, is one thing with Science, with Beauty, and with Joy.

LITERARY ETHICS

An Oration delivered before the Literary Societies of Dartmouth College, July 24, 1838

GENTLEMEN,

The invitation to address you this day, with which you have honored me, was so welcome, that I made haste to obey it. A summons to celebrate with scholars a literary festival, is so alluring to me, as to overcome the doubts I might well entertain of my ability to bring you any thought worthy of your attention. I have reached the middle age of man; yet I believe I am not less glad or sanguine at the meeting of scholars, than when, a boy, I first saw the graduates of my own College assembled at their anniversary. Neither years nor books have yet availed to extirpate a prejudice then rooted in me, that a scholar is the favorite of Heaven and earth, the excellency of his country, the happiest of men. His duties lead him directly into the holy ground where other men's aspirations only point. His successes are occasions of the purest joy to all men. Eyes is he to the blind; feet is he to the lame. His failures, if he is worthy, are inlets to higher advantages. And because the scholar, by every thought he thinks, extends his dominion into the general mind of men, he is not one, but many. The few scholars in each country, whose genius I know, seem to me not individuals, but societies; and, when events occur of great import, I count over these representatives of opinion, whom they will affect, as if I were counting nations. And, even if his results were incommunicable; if they abode in his own spirit; the intellect hath somewhat so sacred in its possessions, that the fact of his existence and pursuits would be a happy omen.

Meantime I know that a very different estimate of the scholar's profession prevails in this country, and the importunity, with which society presses its claim upon young men, tends to pervert the views of the youth in respect to the culture of the intellect. Hence the historical failure, on which Europe and America have so freely commented. This country has not fulfilled what seemed the reasonable expectation of mankind. Men looked, when all feudal straps and bandages were snapped asunder, that nature, too long the mother of dwarfs, should reimburse itself by a brood of Titans, who should laugh and leap in the continent, and run up the mountains of the West with the errand of genius and of love. But the mark of American merit in painting, in sculpture, in poetry, in fiction, in eloquence, seems to be a certain grace without grandeur, and itself not new but derivative; a vase of fair outline, but empty, — which whoso sees, may fill with what wit and

character is in him, but which does not, like the charged cloud, overflow with terrible beauty, and emit lightnings on all beholders.

I will not lose myself in the desultory questions, what are the limitations, and what the causes of the fact. It suffices me to say, in general, that the diffidence of mankind in the soul has crept over the American mind; that men here, as elsewhere, are indisposed to innovation, and prefer any antiquity, any usage, any livery productive of ease or profit, to the unproductive service of thought.

Yet, in every sane hour, the service of thought appears reasonable, the despotism of the senses insane. The scholar may lose himself in schools, in words, and become a pedant; but when he comprehends his duties, he above all men is a realist, and converses with things. For, the scholar is the student of the world, and of what worth the world is, and with what emphasis it accosts the soul of man, such is the worth, such the call of the scholar.

The want of the times, and the propriety of this anniversary, concur to draw attention to the doctrine of Literary Ethics. What I have to say on that doctrine distributes itself under the topics of the resources, the subject, and the discipline of the scholar.

I. The resources of the scholar are proportioned to his confidence in the attributes of the Intellect. The resources of the scholar are co-extensive with nature and truth, yet can never be his, unless claimed by him with an equal greatness of mind. He cannot know them until he has beheld with awe the infinitude and impersonality of the intellectual power. When he has seen, that it is not his, nor any man's, but that it is the soul which made the world, and that it is all accessible to him, he will know that he, as its minister, may rightfully hold all things subordinate and answerable to it. A divine pilgrim in nature, all things attend his steps. Over him stream the flying constellations; over him streams Time, as they, scarcely divided into months and years. He inhales the year as a vapor: its fragrant midsummer breath, its sparkling January heaven. And so pass into his mind, in bright transfiguration, the grand events of history, to take a new order and scale from him. He is the world; and the epochs and heroes of chronology are pictorial images, in which his thoughts are told. There is no event but sprung somewhere from the soul of man; and therefore there is none but the soul of man can interpret. Every presentiment of the mind is executed somewhere in a gigantic fact. What else is Greece, Rome, England, France, St. Helena? What else are churches, literatures, and empires? The new man must feel that he is new, and has not come into the world mortgaged to the opinions and usages of Europe, and Asia, and Egypt. The sense of spiritual independence is like the lovely varnish of the dew, whereby the old, hard, peaked earth, and its old self-same productions, are made new every morning, and shining with the

last touch of the artist's hand. A false humility, a complaisance to reigning schools, or to the wisdom of antiquity, must not defraud me of supreme possession of this hour. If any person have less love of liberty, and less jealousy to guard his integrity, shall he therefore dictate to you and me? Say to such doctors, We are thankful to you, as we are to history, to the pyramids, and the authors; but now our day is come; we have been born out of the eternal silence; and now will we live, — live for ourselves, — and not as the pall-bearers of a funeral, but as the upholders and creators of our age; and neither Greece nor Rome, nor the three Unities of Aristotle, nor the three Kings of Cologne, nor the College of the Sorbonne, nor the Edinburgh Review, is to command any longer. Now that we are here, we will put our own interpretation on things, and our own things for interpretation. Please himself with complaisance who will, — for me, things must take my scale, not I theirs. I will say with the warlike king, “God gave me this crown, and the whole world shall not take it away.”

The whole value of history, of biography, is to increase my self-trust, by demonstrating what man can be and do. This is the moral of the Plutarchs, the Cudworths, the Tennemanns, who give us the story of men or of opinions. Any history of philosophy fortifies my faith, by showing me, that what high dogmas I had supposed were the rare and late fruit of a cumulative culture, and only now possible to some recent Kant or Fichte, — were the prompt improvisations of the earliest inquirers; of Parmenides, Heraclitus, and Xenophanes. In view of these students, the soul seems to whisper, ‘There is a better way than this indolent learning of another. Leave me alone; do not teach me out of Leibnitz or Schelling, and I shall find it all out myself.’

Still more do we owe to biography the fortification of our hope. If you would know the power of character, see how much you would impoverish the world, if you could take clean out of history the lives of Milton, Shakspeare, and Plato, — these three, and cause them not to be. See you not, how much less the power of man would be? I console myself in the poverty of my thoughts; in the paucity of great men, in the malignity and dulness of the nations, by falling back on these sublime recollections, and seeing what the prolific soul could beget on actual nature; — seeing that Plato was, and Shakspeare, and Milton, — three irrefragable facts. Then I dare; I also will essay to be. The humblest, the most hopeless, in view of these radiant facts, may now theorize and hope. In spite of all the rueful abortions that squeak and gibber in the street, in spite of slumber and guilt, in spite of the army, the bar-room, and the jail, *have been* these glorious manifestations of the mind; and I will thank my great brothers so truly for the admonition of their being, as to endeavor also to be just and brave, to aspire and to speak. Plotinus too, and Spinoza, and the immortal bards of

philosophy, — that which they have written out with patient courage, makes me bold. No more will I dismiss, with haste, the visions which flash and sparkle across my sky; but observe them, approach them, domesticate them, brood on them, and draw out of the past, genuine life for the present hour.

To feel the full value of these lives, as occasions of hope and provocation, you must come to know, that each admirable genius is but a successful diver in that sea whose floor of pearls is all your own. The impoverishing philosophy of ages has laid stress on the distinctions of the individual, and not on the universal attributes of man. The youth, intoxicated with his admiration of a hero, fails to see, that it is only a projection of his own soul, which he admires. In solitude, in a remote village, the ardent youth loiters and mourns. With inflamed eye, in this sleeping wilderness, he has read the story of the Emperor Charles the Fifth, until his fancy has brought home to the surrounding woods, the faint roar of cannonades in the Milanese, and marches in Germany. He is curious concerning that man's day. What filled it? the crowded orders, the stern decisions, the foreign despatches, the Castilian etiquette? The soul answers — Behold his day here! In the sighing of these woods, in the quiet of these gray fields, in the cool breeze that sings out of these northern mountains; in the workmen, the boys, the maidens, you meet, — in the hopes of the morning, the ennui of noon, and sauntering of the afternoon; in the disquieting comparisons; in the regrets at want of vigor; in the great idea, and the puny execution; — behold Charles the Fifth's day; another, yet the same; behold Chatham's, Hampden's, Bayard's, Alfred's, Scipio's, Pericles's day, — day of all that are born of women. The difference of circumstance is merely costume. I am tasting the self-same life, — its sweetness, its greatness, its pain, which I so admire in other men. Do not foolishly ask of the inscrutable, obliterated past, what it cannot tell, — the details of that nature, of that day, called Byron, or Burke; — but ask it of the enveloping Now; the more quaintly you inspect its evanescent beauties, its wonderful details, its spiritual causes, its astounding whole, — so much the more you master the biography of this hero, and that, and every hero. Be lord of a day, through wisdom and justice, and you can put up your history books.

An intimation of these broad rights is familiar in the sense of injury which men feel in the assumption of any man to limit their possible progress. We resent all criticism, which denies us any thing that lies in our line of advance. Say to the man of letters, that he cannot paint a Transfiguration, or build a steamboat, or be a grand-marshal, — and he will not seem to himself depreciated. But deny to him any quality of literary or metaphysical power, and he is piqued. Concede to him genius, which is a sort of Stoical *plenum* annulling the comparative, and he is content; but concede him talents never so rare, denying him genius, and he is

aggrieved. What does this mean? Why simply, that the soul has assurance, by instincts and presentiments, of *all* power in the direction of its ray, as well as of the special skills it has already acquired.

In order to a knowledge of the resources of the scholar, we must not rest in the use of slender accomplishments, — of faculties to do this and that other feat with words; but we must pay our vows to the highest power, and pass, if it be possible, by assiduous love and watching, into the visions of absolute truth. The growth of the intellect is strictly analogous in all individuals. It is larger reception. Able men, in general, have good dispositions, and a respect for justice; because an able man is nothing else than a good, free, vascular organization, whereinto the universal spirit freely flows; so that his fund of justice is not only vast, but infinite. All men, in the abstract, are just and good; what hinders them, in the particular, is, the momentary predominance of the finite and individual over the general truth. The condition of our incarnation in a private self, seems to be, a perpetual tendency to prefer the private law, to obey the private impulse, to the exclusion of the law of universal being. The hero is great by means of the predominance of the universal nature; he has only to open his mouth, and it speaks; he has only to be forced to act, and it acts. All men catch the word, or embrace the deed, with the heart, for it is verily theirs as much as his; but in them this disease of an excess of organization cheats them of equal issues. Nothing is more simple than greatness; indeed, to be simple is to be great. The vision of genius comes by renouncing the too officious activity of the understanding, and giving leave and amplest privilege to the spontaneous sentiment. Out of this must all that is alive and genial in thought go. Men grind and grind in the mill of a truism, and nothing comes out but what was put in. But the moment they desert the tradition for a spontaneous thought, then poetry, wit, hope, virtue, learning, anecdote, all flock to their aid. Observe the phenomenon of extempore debate. A man of cultivated mind, but reserved habits, sitting silent, admires the miracle of free, impassioned, picturesque speech, in the man addressing an assembly; — a state of being and power, how unlike his own! Presently his own emotion rises to his lips, and overflows in speech. He must also rise and say somewhat. Once embarked, once having overcome the novelty of the situation, he finds it just as easy and natural to speak, — to speak with thoughts, with pictures, with rhythmical balance of sentences, — as it was to sit silent; for, it needs not to do, but to suffer; he only adjusts himself to the free spirit which gladly utters itself through him; and motion is as easy as rest.

II. I pass now to consider the task offered to the intellect of this country. The view I have taken of the resources of the scholar, presupposes a subject as broad. We do not seem to have imagined its riches. We have not heeded the invitation it

holds out. To be as good a scholar as Englishmen are; to have as much learning as our contemporaries; to have written a book that is read; satisfies us. We assume, that all thought is already long ago adequately set down in books, — all imaginations in poems; and what we say, we only throw in as confirmatory of this supposed complete body of literature. A very shallow assumption. Say rather, all literature is yet to be written. Poetry has scarce chanted its first song. The perpetual admonition of nature to us, is, ‘The world is new, untried. Do not believe the past. I give you the universe a virgin to-day.’

By Latin and English poetry, we were born and bred in an oratorio of praises of nature, — flowers, birds, mountains, sun, and moon; — yet the naturalist of this hour finds that he knows nothing, by all their poems, of any of these fine things; that he has conversed with the mere surface and show of them all; and of their essence, or of their history, knows nothing. Further inquiry will discover that nobody, — that not these chanting poets themselves, knew any thing sincere of these handsome natures they so commended; that they contented themselves with the passing chirp of a bird, that they saw one or two mornings, and listlessly looked at sunsets, and repeated idly these few glimpses in their song. But go into the forest, you shall find all new and undescribed. The screaming of the wild geese flying by night; the thin note of the companionable titmouse, in the winter day; the fall of swarms of flies, in autumn, from combats high in the air, pattering down on the leaves like rain; the angry hiss of the wood-birds; the pine throwing out its pollen for the benefit of the next century; the turpentine exuding from the tree; — and, indeed, any vegetation; any animation; any and all, are alike unattempted. The man who stands on the seashore, or who rambles in the woods, seems to be the first man that ever stood on the shore, or entered a grove, his sensations and his world are so novel and strange. Whilst I read the poets, I think that nothing new can be said about morning and evening. But when I see the daybreak, I am not reminded of these Homeric, or Shakspearian, or Miltonic, or Chaucerian pictures. No; but I feel perhaps the pain of an alien world; a world not yet subdued by the thought; or, I am cheered by the moist, warm, glittering, budding, melodious hour, that takes down the narrow walls of my soul, and extends its life and pulsation to the very horizon. *That* is morning, to cease for a bright hour to be a prisoner of this sickly body, and to become as large as nature.

The noonday darkness of the American forest, the deep, echoing, aboriginal woods, where the living columns of the oak and fir tower up from the ruins of the trees of the last millennium; where, from year to year, the eagle and the crow see no intruder; the pines, bearded with savage moss, yet touched with grace by the violets at their feet; the broad, cold lowland, which forms its coat of vapor with the stillness of subterranean crystallization; and where the traveller, amid

the repulsive plants that are native in the swamp, thinks with pleasing terror of the distant town; this beauty, — haggard and desert beauty, which the sun and the moon, the snow and the rain, repaint and vary, has never been recorded by art, yet is not indifferent to any passenger. All men are poets at heart. They serve nature for bread, but her loveliness overcomes them sometimes. What mean these journeys to Niagara; these pilgrims to the White Hills? Men believe in the adaptations of utility, always: in the mountains, they may believe in the adaptations of the eye. Undoubtedly, the changes of geology have a relation to the prosperous sprouting of the corn and peas in my kitchen garden; but not less is there a relation of beauty between my soul and the dim crags of Agiocochook up there in the clouds. Every man, when this is told, hearkens with joy, and yet his own conversation with nature is still unsung.

Is it otherwise with civil history? Is it not the lesson of our experience that every man, were life long enough, would write history for himself? What else do these volumes of extracts and manuscript commentaries, that every scholar writes, indicate? Greek history is one thing to me; another to you. Since the birth of Niebuhr and Wolf, Roman and Greek History have been written anew. Since Carlyle wrote French History, we see that no history, that we have, is safe, but a new classifier shall give it new and more philosophical arrangement. Thucydides, Livy, have only provided materials. The moment a man of genius pronounces the name of the Pelasgi, of Athens, of the Etrurian, of the Roman people, we see their state under a new aspect. As in poetry and history, so in the other departments. There are few masters or none. Religion is yet to be settled on its fast foundations in the breast of man; and politics, and philosophy, and letters, and art. As yet we have nothing but tendency and indication.

This starting, this warping of the best literary works from the adamant of nature, is especially observable in philosophy. Let it take what tone of pretension it will, to this complexion must it come, at last. Take, for example, the French Eclecticism, which Cousin esteems so conclusive; there is an optical illusion in it. It avows great pretensions. It looks as if they had all truth, in taking all the systems, and had nothing to do, but to sift and wash and strain, and the gold and diamonds would remain in the last colander. But, Truth is such a flyaway, such a slyboot, so untransportable and unbarrelable a commodity, that it is as bad to catch as light. Shut the shutters never so quick, to keep all the light in, it is all in vain; it is gone before you can cry, Hold. And so it happens with our philosophy. Translate, collate, distil all the systems, it steads you nothing; for truth will not be compelled, in any mechanical manner. But the first observation you make, in the sincere act of your nature, though on the veriest trifle, may open a new view of nature and of man, that, like a menstruum, shall dissolve all theories in it;

shall take up Greece, Rome, Stoicism, Eclecticism, and what not, as mere data and food for analysis, and dispose of your world-containing system, as a very little unit. A profound thought, anywhere, classifies all things: a profound thought will lift Olympus. The book of philosophy is only a fact, and no more inspiring fact than another, and no less; but a wise man will never esteem it anything final and transcending. Go and talk with a man of genius, and the first word he utters, sets all your so-called knowledge afloat and at large. Then Plato, Bacon, Kant, and the Eclectic Cousin, condescend instantly to be men and mere facts.

I by no means aim, in these remarks, to disparage the merit of these or of any existing compositions; I only say that any particular portraiture does not in any manner exclude or fore-stall a new attempt, but, when considered by the soul, warps and shrinks away. The inundation of the spirit sweeps away before it all our little architecture of wit and memory, as straws and straw-huts before the torrent. Works of the intellect are great only by comparison with each other; *Ivanhoe* and *Waverley* compared with *Castle Radcliffe* and the *Porter* novels; but nothing is great, — not mighty *Homer* and *Milton*, — beside the infinite Reason. It carries them away as a flood. They are as a sleep.

Thus is justice done to each generation and individual, — wisdom teaching man that he shall not hate, or fear, or mimic his ancestors; that he shall not bewail himself, as if the world was old, and thought was spent, and he was born into the dotage of things; for, by virtue of the Deity, thought renews itself inexhaustibly every day, and the thing whereon it shines, though it were dust and sand, is a new subject with countless relations.

III. Having thus spoken of the resources and the subject of the scholar, out of the same faith proceeds also the rule of his ambition and life. Let him know that the world is his, but he must possess it by putting himself into harmony with the constitution of things. He must be a solitary, laborious, modest, and charitable soul.

He must embrace solitude as a bride. He must have his glees and his glooms alone. His own estimate must be measure enough, his own praise reward enough for him. And why must the student be solitary and silent? That he may become acquainted with his thoughts. If he pines in a lonely place, hankering for the crowd, for display, he is not in the lonely place; his heart is in the market; he does not see; he does not hear; he does not think. But go cherish your soul; expel companions; set your habits to a life of solitude; then, will the faculties rise fair and full within, like forest trees and field flowers; you will have results, which, when you meet your fellow-men, you can communicate, and they will gladly receive. Do not go into solitude only that you may presently come into public.

Such solitude denies itself; is public and stale. The public can get public experience, but they wish the scholar to replace to them those private, sincere, divine experiences, of which they have been defrauded by dwelling in the street. It is the noble, manlike, just thought, which is the superiority demanded of you, and not crowds but solitude confers this elevation. Not insulation of place, but independence of spirit is essential, and it is only as the garden, the cottage, the forest, and the rock, are a sort of mechanical aids to this, that they are of value. Think alone, and all places are friendly and sacred. The poets who have lived in cities have been hermits still. Inspiration makes solitude anywhere. Pindar, Raphael, Angelo, Dryden, De Stael, dwell in crowds, it may be, but the instant thought comes, the crowd grows dim to their eye; their eye fixes on the horizon, — on vacant space; they forget the bystanders; they spurn personal relations; they deal with abstractions, with verities, with ideas. They are alone with the mind.

Of course, I would not have any superstition about solitude. Let the youth study the uses of solitude and of society. Let him use both, not serve either. The reason why an ingenious soul shuns society, is to the end of finding society. It repudiates the false, out of love of the true. You can very soon learn all that society can teach you for one while. Its foolish routine, an indefinite multiplication of balls, concerts, rides, theatres, can teach you no more than a few can. Then accept the hint of shame, of spiritual emptiness and waste, which true nature gives you, and retire, and hide; lock the door; shut the shutters; then welcome falls the imprisoning rain, — dear hermitage of nature. Recollect the spirits. Have solitary prayer and praise. Digest and correct the past experience; and blend it with the new and divine life.

You will pardon me, Gentlemen, if I say, I think that we have need of a more rigorous scholastic rule; such an asceticism, I mean, as only the hardihood and devotion of the scholar himself can enforce. We live in the sun and on the surface, — a thin, plausible, superficial existence, and talk of muse and prophet, of art and creation. But out of our shallow and frivolous way of life, how can greatness ever grow? Come now, let us go and be dumb. Let us sit with our hands on our mouths, a long, austere, Pythagorean lustrum. Let us live in corners, and do chores, and suffer, and weep, and drudge, with eyes and hearts that love the Lord. Silence, seclusion, austerity, may pierce deep into the grandeur and secret of our being, and so diving, bring up out of secular darkness, the sublimities of the moral constitution. How mean to go blazing, a gaudy butterfly, in fashionable or political saloons, the fool of society, the fool of notoriety, a topic for newspapers, a piece of the street, and forfeiting the real prerogative of the russet coat, the privacy, and the true and warm heart of the

citizen!

Fatal to the man of letters, fatal to man, is the lust of display, the seeming that unmakes our being. A mistake of the main end to which they labor, is incident to literary men, who, dealing with the organ of language, — the subtlest, strongest, and longest-lived of man's creations, and only fitly used as the weapon of thought and of justice, — learn to enjoy the pride of playing with this splendid engine, but rob it of its almightiness by failing to work with it. Extricating themselves from the tasks of the world, the world revenges itself by exposing, at every turn, the folly of these incomplete, pedantic, useless, ghostly creatures. The scholar will feel, that the richest romance, — the noblest fiction that was ever woven, — the heart and soul of beauty, — lies enclosed in human life. Itself of surpassing value, it is also the richest material for his creations. How shall he know its secrets of tenderness, of terror, of will, and of fate? How can he catch and keep the strain of upper music that peals from it? Its laws are concealed under the details of daily action. All action is an experiment upon them. He must bear his share of the common load. He must work with men in houses, and not with their names in books. His needs, appetites, talents, affections, accomplishments, are keys that open to him the beautiful museum of human life. Why should he read it as an Arabian tale, and not know, in his own beating bosom, its sweet and smart? Out of love and hatred, out of earnings, and borrowings, and lendings, and losses; out of sickness and pain; out of wooing and worshipping; out of travelling, and voting, and watching, and caring; out of disgrace and contempt, comes our tuition in the serene and beautiful laws. Let him not slur his lesson; let him learn it by heart. Let him endeavor exactly, bravely, and cheerfully, to solve the problem of that life which is set before him. And this, by punctual action, and not by promises or dreams. Believing, as in God, in the presence and favor of the grandest influences, let him deserve that favor, and learn how to receive and use it, by fidelity also to the lower observances.

This lesson is taught with emphasis in the life of the great actor of this age, and affords the explanation of his success. Bonaparte represents truly a great recent revolution, which we in this country, please God, shall carry to its farthest consummation. Not the least instructive passage in modern history, seems to me a trait of Napoleon, exhibited to the English when he became their prisoner. On coming on board the *Bellerophon*, a file of English soldiers drawn up on deck, gave him a military salute. Napoleon observed, that their manner of handling their arms differed from the French exercise, and, putting aside the guns of those nearest him, walked up to a soldier, took his gun, and himself went through the motion in the French mode. The English officers and men looked on with

astonishment, and inquired if such familiarity was usual with the Emperor.

In this instance, as always, that man, with whatever defects or vices, represented performance in lieu of pretension. Feudalism and Orientalism had long enough thought it majestic to do nothing; the modern majesty consists in work. He belonged to a class, fast growing in the world, who think, that what a man can do is his greatest ornament, and that he always consults his dignity by doing it. He was not a believer in luck; he had a faith, like sight, in the application of means to ends. Means to ends, is the motto of all his behavior. He believed that the great captains of antiquity performed their exploits only by correct combinations, and by justly comparing the relation between means and consequences; efforts and obstacles. The vulgar call good fortune that which really is produced by the calculations of genius. But Napoleon, thus faithful to facts, had also this crowning merit; that, whilst he believed in number and weight, and omitted no part of prudence, he believed also in the freedom and quite incalculable force of the soul. A man of infinite caution, he neglected never the least particular of preparation, of patient adaptation; yet nevertheless he had a sublime confidence, as in his all, in the sallies of the courage, and the faith in his destiny, which, at the right moment, repaired all losses, and demolished cavalry, infantry, king, and kaiser, as with irresistible thunderbolts. As they say the bough of the tree has the character of the leaf, and the whole tree of the bough, so, it is curious to remark, Bonaparte's army partook of this double strength of the captain; for, whilst strictly supplied in all its appointments, and everything expected from the valor and discipline of every platoon, in flank and centre, yet always remained his total trust in the prodigious revolutions of fortune, which his reserved Imperial Guard were capable of working, if, in all else, the day was lost. Here he was sublime. He no longer calculated the chance of the cannon-ball. He was faithful to tactics to the uttermost, — and when all tactics had come to an end, then, he dilated, and availed himself of the mighty saltations of the most formidable soldiers in nature.

Let the scholar appreciate this combination of gifts, which, applied to better purpose, make true wisdom. He is a revealer of things. Let him first learn the things. Let him not, too eager to grasp some badge of reward, omit the work to be done. Let him know, that, though the success of the market is in the reward, true success is the doing; that, in the private obedience to his mind; in the sedulous inquiry, day after day, year after year, to know how the thing stands; in the use of all means, and most in the reverence of the humble commerce and humble needs of life, — to hearken what *they* say, and so, by mutual reaction of thought and life, to make thought solid, and life wise; and in a contempt for the gabble of to-day's opinions, the secret of the world is to be learned, and the skill

truly to unfold it is acquired. Or, rather, is it not, that, by this discipline, the usurpation of the senses is overcome, and the lower faculties of man are subdued to docility; through which, as an unobstructed channel, the soul now easily and gladly flows?

The good scholar will not refuse to bear the yoke in his youth; to know, if he can, the uttermost secret of toil and endurance; to make his own hands acquainted with the soil by which he is fed, and the sweat that goes before comfort and luxury. Let him pay his tithe, and serve the world as a true and noble man; never forgetting to worship the immortal divinities, who whisper to the poet, and make him the utterer of melodies that pierce the ear of eternal time. If he have this twofold goodness, — the drill and the inspiration, — then he has health; then he is a whole, and not a fragment; and the perfection of his endowment will appear in his compositions. Indeed, this twofold merit characterizes ever the productions of great masters. The man of genius should occupy the whole space between God or pure mind, and the multitude of uneducated men. He must draw from the infinite Reason, on one side; and he must penetrate into the heart and sense of the crowd, on the other. From one, he must draw his strength; to the other, he must owe his aim. The one yokes him to the real; the other, to the apparent. At one pole, is Reason; at the other, Common Sense. If he be defective at either extreme of the scale, his philosophy will seem low and utilitarian; or it will appear too vague and indefinite for the uses of life.

The student, as we all along insist, is great only by being passive to the superincumbent spirit. Let this faith, then, dictate all his action. Snares and bribes abound to mislead him; let him be true nevertheless. His success has its perils too. There is somewhat inconvenient and injurious in his position. They whom his thoughts have entertained or inflamed, seek him before yet they have learned the hard conditions of thought. They seek him, that he may turn his lamp on the dark riddles whose solution they think is inscribed on the walls of their being. They find that he is a poor, ignorant man, in a white-seamed, rusty coat, like themselves, no wise emitting a continuous stream of light, but now and then a jet of luminous thought, followed by total darkness; moreover, that he cannot make of his infrequent illumination a portable taper to carry whither he would, and explain now this dark riddle, now that. Sorrow ensues. The scholar regrets to damp the hope of ingenuous boys; and the youth has lost a star out of his new flaming firmament. Hence the temptation to the scholar to mystify; to hear the question; to sit upon it; to make an answer of words, in lack of the oracle of things. Not the less let him be cold and true, and wait in patience, knowing that truth can make even silence eloquent and memorable. Truth shall be policy enough for him. Let him open his breast to all honest inquiry, and be an artist

superior to tricks of art. Show frankly as a saint would do, your experience, methods, tools, and means. Welcome all comers to the freest use of the same. And out of this superior frankness and charity, you shall learn higher secrets of your nature, which gods will bend and aid you to communicate.

If, with a high trust, he can thus submit himself, he will find that ample returns are poured into his bosom, out of what seemed hours of obstruction and loss. Let him not grieve too much on account of unfit associates. When he sees how much thought he owes to the disagreeable antagonism of various persons who pass and cross him, he can easily think that in a society of perfect sympathy, no word, no act, no record, would be. He will learn, that it is not much matter what he reads, what he does. Be a scholar, and he shall have the scholar's part of every thing. As, in the counting-room, the merchant cares little whether the cargo be hides or barilla; the transaction, a letter of credit or a transfer of stocks; be it what it may, his commission comes gently out of it; so you shall get your lesson out of the hour, and the object, whether it be a concentrated or a wasteful employment, even in reading a dull book, or working off a stint of mechanical day labor, which your necessities or the necessities of others impose.

Gentlemen, I have ventured to offer you these considerations upon the scholar's place, and hope, because I thought, that, standing, as many of you now do, on the threshold of this College, girt and ready to go and assume tasks, public and private, in your country, you would not be sorry to be admonished of those primary duties of the intellect, whereof you will seldom hear from the lips of your new companions. You will hear every day the maxims of a low prudence. You will hear, that the first duty is to get land and money, place and name. 'What is this Truth you seek? what is this Beauty?' men will ask, with derision. If, nevertheless, God have called any of you to explore truth and beauty, be bold, be firm, be true. When you shall say, 'As others do, so will I: I renounce, I am sorry for it, my early visions; I must eat the good of the land, and let learning and romantic expectations go, until a more convenient season;' — then dies the man in you; then once more perish the buds of art, and poetry, and science, as they have died already in a thousand thousand men. The hour of that choice is the crisis of your history; and see that you hold yourself fast by the intellect. It is this domineering temper of the sensual world, that creates the extreme need of the priests of science; and it is the office and right of the intellect to make and not take its estimate. Bend to the persuasion which is flowing to you from every object in nature, to be its tongue to the heart of man, and to show the besotted world how passing fair is wisdom. Forewarned that the vice of the times and the country is an excessive pretension, let us seek the

shade, and find wisdom in neglect. Be content with a little light, so it be your own. Explore, and explore. Be neither chided nor flattered out of your position of perpetual inquiry. Neither dogmatize, nor accept another's dogmatism. Why should you renounce your right to traverse the star-lit deserts of truth, for the premature comforts of an acre, house, and barn? Truth also has its roof, and bed, and board. Make yourself necessary to the world, and mankind will give you bread, and if not store of it, yet such as shall not takeaway your property in all men's possessions, in all men's affections, in art, in nature, and in hope.

You will not fear, that I am enjoining too stern an asceticism. Ask not, Of what use is a scholarship that systematically retreats? or, Who is the better for the philosopher who conceals his accomplishments, and hides his thoughts from the waiting world? Hides his thoughts! Hide the sun and moon. Thought is all light, and publishes itself to the universe. It will speak, though you were dumb, by its own miraculous organ. It will flow out of your actions, your manners, and your face. It will bring you friendships. It will impledge you to truth by the love and expectation of generous minds. By virtue of the laws of that Nature, which is one and perfect, it shall yield every sincere good that is in the soul, to the scholar beloved of earth and heaven.

THE METHOD OF NATURE

*An Oration delivered before the Society of the Adelpi Waterville College,
Maine, August 11, 1841*

GENTLEMEN,

Let us exchange congratulations on the enjoyments and the promises of this literary anniversary. The land we live in has no interest so dear, if it knew its want, as the fit consecration of days of reason and thought. Where there is no vision, the people perish. The scholars are the priests of that thought which establishes the foundations of the earth. No matter what is their special work or profession, they stand for the spiritual interest of the world, and it is a common calamity if they neglect their post in a country where the material interest is so predominant as it is in America. We hear something too much of the results of machinery, commerce, and the useful arts. We are a puny and a fickle folk. Avarice, hesitation, and following, are our diseases. The rapid wealth which hundreds in the community acquire in trade, or by the incessant expansions of our population and arts, enchants the eyes of all the rest; the luck of one is the hope of thousands, and the bribe acts like the neighborhood of a gold mine to impoverish the farm, the school, the church, the house, and the very body and feature of man.

I do not wish to look with sour aspect at the industrious manufacturing village, or the mart of commerce. I love the music of the water-wheel; I value the railway; I feel the pride which the sight of a ship inspires; I look on trade and every mechanical craft as education also. But let me discriminate what is precious herein. There is in each of these works an act of invention, an intellectual step, or short series of steps taken; that act or step is the spiritual act; all the rest is mere repetition of the same a thousand times. And I will not be deceived into admiring the routine of handicrafts and mechanics, how splendid soever the result, any more than I admire the routine of the scholars or clerical class. That splendid results ensue from the labors of stupid men, is the fruit of higher laws than their will, and the routine is not to be praised for it. I would not have the laborer sacrificed to the result, — I would not have the laborer sacrificed to my convenience and pride, nor to that of a great class of such as me. Let there be worse cotton and better men. The weaver should not be bereaved of his superiority to his work, and his knowledge that the product or the skill is of no value, except so far as it embodies his spiritual prerogatives. If I see nothing to admire in the unit, shall I admire a million units? Men stand in awe of the city, but do not honor any individual citizen; and are continually yielding to this

dazzling result of numbers, that which they would never yield to the solitary example of any one.

Whilst the multitude of men degrade each other, and give currency to desponding doctrines, the scholar must be a bringer of hope, and must reinforce man against himself. I sometimes believe that our literary anniversaries will presently assume a greater importance, as the eyes of men open to their capabilities. Here, a new set of distinctions, a new order of ideas, prevail. Here, we set a bound to the respectability of wealth, and a bound to the pretensions of the law and the church. The bigot must cease to be a bigot to-day. Into our charmed circle, power cannot enter; and the sturdiest defender of existing institutions feels the terrific inflammability of this air which condenses heat in every corner that may restore to the elements the fabrics of ages. Nothing solid is secure; every thing tilts and rocks. Even the scholar is not safe; he too is searched and revised. Is his learning dead? Is he living in his memory? The power of mind is not mortification, but life. But come forth, thou curious child! hither, thou loving, all-hoping poet! hither, thou tender, doubting heart, who hast not yet found any place in the world's market fit for thee; any wares which thou couldst buy or sell, — so large is thy love and ambition, — thine and not theirs is the hour. Smooth thy brow, and hope and love on, for the kind heaven justifies thee, and the whole world feels that thou art in the right.

We ought to celebrate this hour by expressions of manly joy. Not thanks, not prayer seem quite the highest or truest name for our communication with the infinite, — but glad and conspiring reception, — reception that becomes giving in its turn, as the receiver is only the All-Giver in part and in infancy. I cannot, — nor can any man, — speak precisely of things so sublime, but it seems to me, the wit of man, his strength, his grace, his tendency, his art, is the grace and the presence of God. It is beyond explanation. When all is said and done, the rapt saint is found the only logician. Not exhortation, not argument becomes our lips, but paeans of joy and praise. But not of adulation: we are too nearly related in the deep of the mind to that we honor. It is God in us which checks the language of petition by a grander thought. In the bottom of the heart, it is said; 'I am, and by me, O child! this fair body and world of thine stands and grows. I am; all things are mine: and all mine are thine.'

The festival of the intellect, and the return to its source, cast a strong light on the always interesting topics of Man and Nature. We are forcibly reminded of the old want. There is no man; there hath never been. The Intellect still asks that a man may be born. The flame of life flickers feebly in human breasts. We demand of men a richness and universality we do not find. Great men do not content us. It is their solitude, not their force, that makes them conspicuous.

There is somewhat indigent and tedious about them. They are poorly tied to one thought. If they are prophets, they are egotists; if polite and various, they are shallow. How tardily men arrive at any result! how tardily they pass from it to another! The crystal sphere of thought is as concentric as the geological structure of the globe. As our soils and rocks lie in strata, concentric strata, so do all men's thinkings run laterally, never vertically. Here comes by a great inquisitor with auger and plumb-line, and will bore an Artesian well through our conventions and theories, and pierce to the core of things. But as soon as he probes the crust, behold gimlet, plumb-line, and philosopher take a lateral direction, in spite of all resistance, as if some strong wind took everything off its feet, and if you come month after month to see what progress our reformer has made, — not an inch has he pierced, — you still find him with new words in the old place, floating about in new parts of the same old vein or crust. The new book says, 'I will give you the key to nature,' and we expect to go like a thunderbolt to the centre. But the thunder is a surface phenomenon, makes a skin-deep cut, and so does the sage. The wedge turns out to be a rocket. Thus a man lasts but a very little while, for his monomania becomes insupportably tedious in a few months. It is so with every book and person: and yet — and yet — we do not take up a new book, or meet a new man, without a pulse-beat of expectation. And this invincible hope of a more adequate interpreter is the sure prediction of his advent.

In the absence of man, we turn to nature, which stands next. In the divine order, intellect is primary; nature, secondary; it is the memory of the mind. That which once existed in intellect as pure law, has now taken body as Nature. It existed already in the mind in solution; now, it has been precipitated, and the bright sediment is the world. We can never be quite strangers or inferiors in nature. It is flesh of our flesh, and bone of our bone. But we no longer hold it by the hand; we have lost our miraculous power; our arm is no more as strong as the frost; nor our will equivalent to gravity and the elective attractions. Yet we can use nature as a convenient standard, and the meter of our rise and fall. It has this advantage as a witness, it cannot be debauched. When man curses, nature still testifies to truth and love. We may, therefore, safely study the mind in nature, because we cannot steadily gaze on it in mind; as we explore the face of the sun in a pool, when our eyes cannot brook his direct splendors.

It seems to me, therefore, that it were some suitable paean, if we should piously celebrate this hour by exploring the *method of nature*. Let us see *that*, as nearly as we can, and try how far it is transferable to the literary life. Every earnest glance we give to the realities around us, with intent to learn, proceeds from a holy impulse, and is really songs of praise. What difference can it make

whether it take the shape of exhortation, or of passionate exclamation, or of scientific statement? These are forms merely. Through them we express, at last, the fact, that God has done thus or thus.

In treating a subject so large, in which we must necessarily appeal to the intuition, and aim much more to suggest, than to describe, I know it is not easy to speak with the precision attainable on topics of less scope. I do not wish in attempting to paint a man, to describe an air-fed, unimpassioned, impossible ghost. My eyes and ears are revolted by any neglect of the physical facts, the limitations of man. And yet one who conceives the true order of nature, and beholds the visible as proceeding from the invisible, cannot state his thought, without seeming to those who study the physical laws, to do them some injustice. There is an intrinsic defect in the organ. Language overstates. Statements of the infinite are usually felt to be unjust to the finite, and blasphemous. Empedocles undoubtedly spoke a truth of thought, when he said, "I am God;" but the moment it was out of his mouth, it became a lie to the ear; and the world revenged itself for the seeming arrogance, by the good story about his shoe. How can I hope for better hap in my attempts to enunciate spiritual facts? Yet let us hope, that as far as we receive the truth, so far shall we be felt by every true person to say what is just.

The method of nature: who could ever analyze it? That rushing stream will not stop to be observed. We can never surprise nature in a corner; never find the end of a thread; never tell where to set the first stone. The bird hastens to lay her egg: the egg hastens to be a bird. The wholeness we admire in the order of the world, is the result of infinite distribution. Its smoothness is the smoothness of the pitch of the cataract. Its permanence is a perpetual inchoation. Every natural fact is an emanation, and that from which it emanates is an emanation also, and from every emanation is a new emanation. If anything could stand still, it would be crushed and dissipated by the torrent it resisted, and if it were a mind, would be crazed; as insane persons are those who hold fast to one thought, and do not flow with the course of nature. Not the cause, but an ever novel effect, nature descends always from above. It is unbroken obedience. The beauty of these fair objects is imported into them from a metaphysical and eternal spring. In all animal and vegetable forms, the physiologist concedes that no chemistry, no mechanics, can account for the facts, but a mysterious principle of life must be assumed, which not only inhabits the organ, but makes the organ.

How silent, how spacious, what room for all, yet without place to insert an atom, — in graceful succession, in equal fulness, in balanced beauty, the dance of the hours goes forward still. Like an odor of incense, like a strain of music, like a sleep, it is inexact and boundless. It will not be dissected, nor unravelled,

nor shown. Away profane philosopher! seekest thou in nature the cause? This refers to that, and that to the next, and the next to the third, and everything refers. Thou must ask in another mood, thou must feel it and love it, thou must behold it in a spirit as grand as that by which it exists, ere thou canst know the law. Known it will not be, but gladly beloved and enjoyed.

The simultaneous life throughout the whole body, the equal serving of innumerable ends without the least emphasis or preference to any, but the steady degradation of each to the success of all, allows the understanding no place to work. Nature can only be conceived as existing to a universal and not to a particular end, to a universe of ends, and not to one, — a work of *ecstasy*, to be represented by a circular movement, as intention might be signified by a straight line of definite length. Each effect strengthens every other. There is no revolt in all the kingdoms from the commonweal: no detachment of an individual. Hence the catholic character which makes every leaf an exponent of the world. When we behold the landscape in a poetic spirit, we do not reckon individuals. Nature knows neither palm nor oak, but only vegetable life, which sprouts into forests, and festoons the globe with a garland of grasses and vines.

That no single end may be selected, and nature judged thereby, appears from this, that if man himself be considered as the end, and it be assumed that the final cause of the world is to make holy or wise or beautiful men, we see that it has not succeeded. Read alternately in natural and in civil history, a treatise of astronomy, for example, with a volume of French *Memoires pour servir*. When we have spent our wonder in computing this wasteful hospitality with which boon nature turns off new firmaments without end into her wide common, as fast as the madrepores make coral, — suns and planets hospitable to souls, — and then shorten the sight to look into this court of Louis Quatorze, and see the game that is played there, — duke and marshal, abbe and madame, — a gambling table where each is laying traps for the other, where the end is ever by some lie or fetch to outwit your rival and ruin him with this solemn fop in wig and stars, — the king; one can hardly help asking if this planet is a fair specimen of the so generous astronomy, and if so, whether the experiment have not failed, and whether it be quite worth while to make more, and glut the innocent space with so poor an article.

I think we feel not much otherwise if, instead of beholding foolish nations, we take the great and wise men, the eminent souls, and narrowly inspect their biography. None of them seen by himself — and his performance compared with his promise or idea, will justify the cost of that enormous apparatus of means by which this spotted and defective person was at last procured.

To questions of this sort, nature replies, 'I grow.' All is nascent, infant. When

we are dizzied with the arithmetic of the savant toiling to compute the length of her line, the return of her curve, we are steadied by the perception that a great deal is doing; that all seems just begun; remote aims are in active accomplishment. We can point nowhere to anything final; but tendency appears on all hands: planet, system, constellation, total nature is growing like a field of maize in July; is becoming somewhat else; is in rapid metamorphosis. The embryo does not more strive to be man, than yonder burr of light we call a nebula tends to be a ring, a comet, a globe, and parent of new stars. Why should not then these messieurs of Versailles strut and plot for tabourets and ribbons, for a season, without prejudice to their faculty to run on better errands by and by?

But nature seems further to reply, 'I have ventured so great a stake as my success, in no single creature. I have not yet arrived at any end. The gardener aims to produce a fine peach or pear, but my aim is the health of the whole tree, — root, stem, leaf, flower, and seed, — and by no means the pampering of a monstrous pericarp at the expense of all the other functions.'

In short, the spirit and peculiarity of that impression nature makes on us, is this, that it does not exist to any one or to any number of particular ends, but to numberless and endless benefit; that there is in it no private will, no rebel leaf or limb, but the whole is oppressed by one superincumbent tendency, obeys that redundancy or excess of life which in conscious beings we call *ecstasy*.

With this conception of the genius or method of nature, let us go back to man. It is true, he pretends to give account of himself to himself, but, at last, what has he to recite but the fact that there is a Life not to be described or known otherwise than by possession? What account can he give of his essence more than *so it was to be*? The *royal* reason, the Grace of God seems the only description of our multiform but ever identical fact. There is virtue, there is genius, there is success, or there is not. There is the incoming or the receding of God: that is all we can affirm; and we can show neither how nor why. Self-accusation, remorse, and the didactic morals of self-denial and strife with sin, is a view we are constrained by our constitution to take of the fact seen from the platform of action; but seen from the platform of intellection, there is nothing for us but praise and wonder.

The termination of the world in a man, appears to be the last victory of intelligence. The universal does not attract us until housed in an individual. Who heeds the waste abyss of possibility? The ocean is everywhere the same, but it has no character until seen with the shore or the ship. Who would value any number of miles of Atlantic brine bounded by lines of latitude and longitude? Confine it by granite rocks, let it wash a shore where wise men dwell, and it is

filled with expression; and the point of greatest interest is where the land and water meet. So must we admire in man, the form of the formless, the concentration of the vast, the house of reason, the cave of memory. See the play of thoughts! what nimble gigantic creatures are these! what saurians, what palaiotheria shall be named with these agile movers? The great Pan of old, who was clothed in a leopard skin to signify the beautiful variety of things, and the firmament, his coat of stars, — was but the representative of thee, O rich and various Man! thou palace of sight and sound, carrying in thy senses the morning and the night and the unfathomable galaxy; in thy brain, the geometry of the City of God; in thy heart, the bower of love and the realms of right and wrong. An individual man is a fruit which it cost all the foregoing ages to form and ripen. The history of the genesis or the old mythology repeats itself in the experience of every child. He too is a demon or god thrown into a particular chaos, where he strives ever to lead things from disorder into order. Each individual soul is such, in virtue of its being a power to translate the world into some particular language of its own; if not into a picture, a statue, or a dance, — why, then, into a trade, an art, a science, a mode of living, a conversation, a character, an influence. You admire pictures, but it is as impossible for you to paint a right picture, as for grass to bear apples. But when the genius comes, it makes fingers: it is pliancy, and the power of transferring the affair in the street into oils and colors. Raphael must be born, and Salvator must be born.

There is no attractiveness like that of a new man. The sleepy nations are occupied with their political routine. England, France and America read Parliamentary Debates, which no high genius now enlivens; and nobody will read them who trusts his own eye: only they who are deceived by the popular repetition of distinguished names. But when Napoleon unrolls his map, the eye is commanded by original power. When Chatham leads the debate, men may well listen, because they must listen. A man, a personal ascendancy is the only great phenomenon. When nature has work to be done, she creates a genius to do it. Follow the great man, and you shall see what the world has at heart in these ages. There is no omen like that.

But what strikes us in the fine genius is that which belongs of right to every one. A man should know himself for a necessary actor. A link was wanting between two craving parts of nature, and he was hurled into being as the bridge over that yawning need, the mediator betwixt two else unmarriageable facts. His two parents held each of one of the wants, and the union of foreign constitutions in him enables him to do gladly and gracefully what the assembled human race could not have sufficed to do. He knows his materials; he applies himself to his work; he cannot read, or think, or look, but he unites the hitherto separated

strands into a perfect cord. The thoughts he delights to utter are the reason of his incarnation. Is it for him to account himself cheap and superfluous, or to linger by the wayside for opportunities? Did he not come into being because something must be done which he and no other is and does? If only he *sees*, the world will be visible enough. He need not study where to stand, nor to put things in favorable lights; in him is the light, from him all things are illuminated, to their centre. What patron shall he ask for employment and reward? Hereto was he born, to deliver the thought of his heart from the universe to the universe, to do an office which nature could not forego, nor he be discharged from rendering, and then immerse again into the holy silence and eternity out of which as a man he arose. God is rich, and many more men than one he harbors in his bosom, biding their time and the needs and the beauty of all. Is not this the theory of every man's genius or faculty? Why then goest thou as some Boswell or listening worshipper to this saint or to that? That is the only lese-majesty. Here art thou with whom so long the universe travailed in labor; darest thou think meanly of thyself whom the stalwart Fate brought forth to unite his ragged sides, to shoot the gulf, to reconcile the irreconcilable?

Whilst a necessity so great caused the man to exist, his health and erectness consist in the fidelity with which he transmits influences from the vast and universal to the point on which his genius can act. The ends are momentary: they are vents for the current of inward life which increases as it is spent. A man's wisdom is to know that all ends are momentary, that the best end must be superseded by a better. But there is a mischievous tendency in him to transfer his thought from the life to the ends, to quit his agency and rest in his acts: the tools run away with the workman, the human with the divine. I conceive a man as always spoken to from behind, and unable to turn his head and see the speaker. In all the millions who have heard the voice, none ever saw the face. As children in their play run behind each other, and seize one by the ears and make him walk before them, so is the spirit our unseen pilot. That well-known voice speaks in all languages, governs all men, and none ever caught a glimpse of its form. If the man will exactly obey it, it will adopt him, so that he shall not any longer separate it from himself in his thought, he shall seem to be it, he shall be it. If he listen with insatiable ears, richer and greater wisdom is taught him, the sound swells to a ravishing music, he is borne away as with a flood, he becomes careless of his food and of his house, he is the fool of ideas, and leads a heavenly life. But if his eye is set on the things to be done, and not on the truth that is still taught, and for the sake of which the things are to be done, then the voice grows faint, and at last is but a humming in his ears. His health and greatness consist in his being the channel through which heaven flows to earth, in short, in the

fulness in which an ecstatical state takes place in him. It is pitiful to be an artist, when, by forbearing to be artists, we might be vessels filled with the divine overflowings, enriched by the circulations of omniscience and omnipresence. Are there not moments in the history of heaven when the human race was not counted by individuals, but was only the Influenced, was God in distribution, God rushing into multiform benefit? It is sublime to receive, sublime to love, but this lust of imparting as from *us*, this desire to be loved, the wish to be recognized as individuals, — is finite, comes of a lower strain.

Shall I say, then, that, as far as we can trace the natural history of the soul, its health consists in the fulness of its reception, — call it piety, call it veneration — in the fact, that enthusiasm is organized therein. What is best in any work of art, but that part which the work itself seems to require and do; that which the man cannot do again, that which flows from the hour and the occasion, like the eloquence of men in a tumultuous debate? It was always the theory of literature, that the word of a poet was authoritative and final. He was supposed to be the mouth of a divine wisdom. We rather envied his circumstance than his talent. We too could have gladly prophesied standing in that place. We so quote our Scriptures; and the Greeks so quoted Homer, Theognis, Pindar, and the rest. If the theory has receded out of modern criticism, it is because we have not had poets. Whenever they appear, they will redeem their own credit.

This ecstatical state seems to direct a regard to the whole and not to the parts; to the cause and not to the ends; to the tendency, and not to the act. It respects genius and not talent; hope, and not possession: the anticipation of all things by the intellect, and not the history itself; art, and not works of art; poetry, and not experiment; virtue, and not duties.

There is no office or function of man but is rightly discharged by this divine method, and nothing that is not noxious to him if detached from its universal relations. Is it his work in the world to study nature, or the laws of the world? Let him beware of proposing to himself any end. Is it for use? nature is debased, as if one looking at the ocean can remember only the price of fish. Or is it for pleasure? he is mocked: there is a certain infatuating air in woods and mountains which draws on the idler to want and misery. There is something social and intrusive in the nature of all things; they seek to penetrate and overpower, each the nature of every other creature, and itself alone in all modes and throughout space and spirit to prevail and possess. Every star in heaven is discontented and insatiable. Gravitation and chemistry cannot content them. Ever they woo and court the eye of every beholder. Every man who comes into the world they seek to fascinate and possess, to pass into his mind, for they desire to republish themselves in a more delicate world than that they occupy. It is not enough that

they are Jove, Mars, Orion, and the North Star, in the gravitating firmament: they would have such poets as Newton, Herschel and Laplace, that they may re-exist and re-appear in the finer world of rational souls, and fill that realm with their fame. So is it with all immaterial objects. These beautiful basilisks set their brute, glorious eyes on the eye of every child, and, if they can, cause their nature to pass through his wondering eyes into him, and so all things are mixed.

Therefore man must be on his guard against this cup of enchantments, and must look at nature with a supernatural eye. By piety alone, by conversing with the cause of nature, is he safe and commands it. And because all knowledge is assimilation to the object of knowledge, as the power or genius of nature is ecstatic, so must its science or the description of it be. The poet must be a rhapsodist: his inspiration a sort of bright casualty: his will in it only the surrender of will to the Universal Power, which will not be seen face to face, but must be received and sympathetically known. It is remarkable that we have out of the deeps of antiquity in the oracles ascribed to the half fabulous Zoroaster, a statement of this fact, which every lover and seeker of truth will recognize. "It is not proper," said Zoroaster, "to understand the Intelligible with vehemence, but if you incline your mind, you will apprehend it: not too earnestly, but bringing a pure and inquiring eye. You will not understand it as when understanding some particular thing, but with the flower of the mind. Things divine are not attainable by mortals who understand sensual things, but only the light-armed arrive at the summit."

And because ecstasy is the law and cause of nature, therefore you cannot interpret it in too high and deep a sense. Nature represents the best meaning of the wisest man. Does the sunset landscape seem to you the palace of Friendship, — those purple skies and lovely waters the amphitheatre dressed and garnished only for the exchange of thought and love of the purest souls? It is that. All other meanings which base men have put on it are conjectural and false. You cannot bathe twice in the same river, said Heraclitus; and I add, a man never sees the same object twice: with his own enlargement the object acquires new aspects.

Does not the same law hold for virtue? It is vitiated by too much will. He who aims at progress, should aim at an infinite, not at a special benefit. The reforms whose fame now fills the land with Temperance, Anti-Slavery, Non-Resistance, No Government, Equal Labor, fair and generous as each appears, are poor bitter things when prosecuted for themselves as an end. To every reform, in proportion to its energy, early disgusts are incident, so that the disciple is surprised at the very hour of his first triumphs, with chagrins, and sickness, and a general distrust: so that he shuns his associates, hates the enterprise which lately seemed so fair, and meditates to cast himself into the arms of that society and manner of

life which he had newly abandoned with so much pride and hope. Is it that he attached the value of virtue to some particular practices, as, the denial of certain appetites in certain specified indulgences, and, afterward, found himself still as wicked and as far from happiness in that abstinence, as he had been in the abuse? But the soul can be appeased not by a deed but by a tendency. It is in a hope that she feels her wings. You shall love rectitude and not the disuse of money or the avoidance of trade: an unimpeded mind, and not a monkish diet; sympathy and usefulness, and not hoeing or cooeping. Tell me not how great your project is, the civil liberation of the world, its conversion into a Christian church, the establishment of public education, cleaner diet, a new division of labor and of land, laws of love for laws of property; — I say to you plainly there is no end to which your practical faculty can aim, so sacred or so large, that, if pursued for itself, will not at last become carrion and an offence to the nostril. The imaginative faculty of the soul must be fed with objects immense and eternal. Your end should be one inapprehensible to the senses: then will it be a god always approached, — never touched; always giving health. A man adorns himself with prayer and love, as an aim adorns an action. What is strong but goodness, and what is energetic but the presence of a brave man? The doctrine in vegetable physiology of the *presence*, or the general influence of any substance over and above its chemical influence, as of an alkali or a living plant, is more predicable of man. You need not speak to me, I need not go where you are, that you should exert magnetism on me. Be you only whole and sufficient, and I shall feel you in every part of my life and fortune, and I can as easily dodge the gravitation of the globe as escape your influence.

But there are other examples of this total and supreme influence, besides Nature and the conscience. “From the poisonous tree, the world,” say the Brahmins, “two species of fruit are produced, sweet as the waters of life, Love or the society of beautiful souls, and Poetry, whose taste is like the immortal juice of Vishnu.” What is Love, and why is it the chief good, but because it is an overpowering enthusiasm? Never self-possessed or prudent, it is all abandonment. Is it not a certain admirable wisdom, preferable to all other advantages, and whereof all others are only secondaries and indemnities, because this is that in which the individual is no longer his own foolish master, but inhales an odorous and celestial air, is wrapped round with awe of the object, blending for the time that object with the real and only good, and consults every omen in nature with tremulous interest. When we speak truly, — is not he only unhappy who is not in love? his fancied freedom and self-rule — is it not so much death? He who is in love is wise and is becoming wiser, sees newly every time he looks at the object beloved, drawing from it with his eyes and his mind

those virtues which it possesses. Therefore if the object be not itself a living and expanding soul, he presently exhausts it. But the love remains in his mind, and the wisdom it brought him; and it craves a new and higher object. And the reason why all men honor love, is because it looks up and not down; aspires and not despairs.

And what is Genius but finer love, a love impersonal, a love of the flower and perfection of things, and a desire to draw a new picture or copy of the same? It looks to the cause and life: it proceeds from within outward, whilst Talent goes from without inward. Talent finds its models, methods, and ends, in society, exists for exhibition, and goes to the soul only for power to work. Genius is its own end, and draws its means and the style of its architecture from within, going abroad only for audience, and spectator, as we adapt our voice and phrase to the distance and character of the ear we speak to. All your learning of all literatures would never enable you to anticipate one of its thoughts or expressions, and yet each is natural and familiar as household words. Here about us coils forever the ancient enigma, so old and so unutterable. Behold! there is the sun, and the rain, and the rocks: the old sun, the old stones. How easy were it to describe all this fitly; yet no word can pass. Nature is a mute, and man, her articulate speaking brother, lo! he also is a mute. Yet when Genius arrives, its speech is like a river; it has no straining to describe, more than there is straining in nature to exist. When thought is best, there is most of it. Genius sheds wisdom like perfume, and advertises us that it flows out of a deeper source than the foregoing silence, that it knows so deeply and speaks so musically, because it is itself a mutation of the thing it describes. It is sun and moon and wave and fire in music, as astronomy is thought and harmony in masses of matter.

What is all history but the work of ideas, a record of the incomputable energy which his infinite aspirations infuse into man? Has any thing grand and lasting been done? Who did it? Plainly not any man, but all men: it was the prevalence and inundation of an idea. What brought the pilgrims here? One man says, civil liberty; another, the desire of founding a church; and a third, discovers that the motive force was plantation and trade. But if the Puritans could rise from the dust, they could not answer. It is to be seen in what they were, and not in what they designed; it was the growth and expansion of the human race, and resembled herein the sequent Revolution, which was not begun in Concord, or Lexington, or Virginia, but was the overflowing of the sense of natural right in every clear and active spirit of the period. Is a man boastful and knowing, and his own master? — we turn from him without hope: but let him be filled with awe and dread before the Vast and the Divine, which uses him glad to be used, and our eye is riveted to the chain of events. What a debt is ours to that old

religion which, in the childhood of most of us, still dwelt like a sabbath morning in the country of New England, teaching privation, self-denial and sorrow! A man was born not for prosperity, but to suffer for the benefit of others, like the noble rock-maple which all around our villages bleeds for the service of man. Not praise, not men's acceptance of our doing, but the spirit's holy errand through us absorbed the thought. How dignified was this! How all that is called talents and success, in our noisy capitals, becomes buzz and din before this man-worthiness! How our friendships and the complaisances we use, shame us now! Shall we not quit our companions, as if they were thieves and pot-companions, and betake ourselves to some desert cliff of mount Katahdin, some unvisited recess in Moosehead Lake, to bewail our innocency and to recover it, and with it the power to communicate again with these sharers of a more sacred idea?

And what is to replace for us the piety of that race? We cannot have theirs: it glides away from us day by day, but we also can bask in the great morning which rises forever out of the eastern sea, and be ourselves the children of the light. I stand here to say, Let us worship the mighty and transcendent Soul. It is the office, I doubt not, of this age to annul that adulterous divorce which the superstition of many ages has effected between the intellect and holiness. The lovers of goodness have been one class, the students of wisdom another, as if either could exist in any purity without the other. Truth is always holy, holiness always wise. I will that we keep terms with sin, and a sinful literature and society, no longer, but live a life of discovery and performance. Accept the intellect, and it will accept us. Be the lowly ministers of that pure omniscience, and deny it not before men. It will burn up all profane literature, all base current opinions, all the false powers of the world, as in a moment of time. I draw from nature the lesson of an intimate divinity. Our health and reason as men needs our respect to this fact, against the heedlessness and against the contradiction of society. The sanity of man needs the poise of this immanent force. His nobility needs the assurance of this inexhaustible reserved power. How great soever have been its bounties, they are a drop to the sea whence they flow. If you say, 'the acceptance of the vision is also the act of God:' — I shall not seek to penetrate the mystery, I admit the force of what you say. If you ask, 'How can any rules be given for the attainment of gifts so sublime?' I shall only remark that the solicitations of this spirit, as long as there is life, are never forborne. Tenderly, tenderly, they woo and court us from every object in nature, from every fact in life, from every thought in the mind. The one condition coupled with the gift of truth is its use. That man shall be learned who reduceth his learning to practice. Emanuel Swedenborg affirmed that it was opened to him, "that the spirits who knew truth in this life, but did it not, at death shall lose their knowledge." "If

knowledge,” said Ali the Caliph, “calleth unto practice, well; if not, it goeth away.” The only way into nature is to enact our best insight. Instantly we are higher poets, and can speak a deeper law. Do what you know, and perception is converted into character, as islands and continents were built by invisible infusories, or, as these forest leaves absorb light, electricity, and volatile gases, and the gnarled oak to live a thousand years is the arrest and fixation of the most volatile and ethereal currents. The doctrine of this Supreme Presence is a cry of joy and exultation. Who shall dare think he has come late into nature, or has missed anything excellent in the past, who seeth the admirable stars of possibility, and the yet untouched continent of hope glittering with all its mountains in the vast West? I praise with wonder this great reality, which seems to drown all things in the deluge of its light. What man seeing this, can lose it from his thoughts, or entertain a meaner subject? The entrance of this into his mind seems to be the birth of man. We cannot describe the natural history of the soul, but we know that it is divine. I cannot tell if these wonderful qualities which house to-day in this mortal frame, shall ever reassemble in equal activity in a similar frame, or whether they have before had a natural history like that of this body you see before you; but this one thing I know, that these qualities did not now begin to exist, cannot be sick with my sickness, nor buried in any grave; but that they circulate through the Universe: before the world was, they were. Nothing can bar them out, or shut them in, but they penetrate the ocean and land, space and time, form and essence, and hold the key to universal nature. I draw from this faith courage and hope. All things are known to the soul. It is not to be surprised by any communication. Nothing can be greater than it. Let those fear and those fawn who will. The soul is in her native realm, and it is wider than space, older than time, wide as hope, rich as love. Pusillanimity and fear she refuses with a beautiful scorn: they are not for her who putteth on her coronation robes, and goes out through universal love to universal power.

MAN THE REFORMER

A Lecture read before the Mechanics' Apprentices' Library Association, Boston, January 25, 1841

Mr. President, and Gentlemen,

I wish to offer to your consideration some thoughts on the particular and general relations of man as a reformer. I shall assume that the aim of each young man in this association is the very highest that belongs to a rational mind. Let it be granted, that our life, as we lead it, is common and mean; that some of those offices and functions for which we were mainly created are grown so rare in society, that the memory of them is only kept alive in old books and in dim traditions; that prophets and poets, that beautiful and perfect men, we are not now, no, nor have even seen such; that some sources of human instruction are almost unnamed and unknown among us; that the community in which we live will hardly bear to be told that every man should be open to ecstasy or a divine illumination, and his daily walk elevated by intercourse with the spiritual world. Grant all this, as we must, yet I suppose none of my auditors will deny that we ought to seek to establish ourselves in such disciplines and courses as will deserve that guidance and clearer communication with the spiritual nature. And further, I will not dissemble my hope, that each person whom I address has felt his own call to cast aside all evil customs, timidities, and limitations, and to be in his place a free and helpful man, a reformer, a benefactor, not content to slip along through the world like a footman or a spy, escaping by his nimbleness and apologies as many knocks as he can, but a brave and upright man, who must find or cut a straight road to everything excellent in the earth, and not only go honorably himself, but make it easier for all who follow him, to go in honor and with benefit.

In the history of the world the doctrine of Reform had never such scope as at the present hour. Lutherans, Hernhutters, Jesuits, Monks, Quakers, Knox, Wesley, Swedenborg, Bentham, in their accusations of society, all respected something, — church or state, literature or history, domestic usages, the market town, the dinner table, coined money. But now all these and all things else hear the trumpet, and must rush to judgment, — Christianity, the laws, commerce, schools, the farm, the laboratory; and not a kingdom, town, statute, rite, calling, man, or woman, but is threatened by the new spirit.

What if some of the objections whereby our institutions are assailed are extreme and speculative, and the reformers tend to idealism; that only shows the

extravagance of the abuses which have driven the mind into the opposite extreme. It is when your facts and persons grow unreal and fantastic by too much falsehood, that the scholar flies for refuge to the world of ideas, and aims to recruit and replenish nature from that source. Let ideas establish their legitimate sway again in society, let life be fair and poetic, and the scholars will gladly be lovers, citizens, and philanthropists.

It will afford no security from the new ideas, that the old nations, the laws of centuries, the property and institutions of a hundred cities, are built on other foundations. The demon of reform has a secret door into the heart of every lawmaker, of every inhabitant of every city. The fact, that a new thought and hope have dawned in your breast, should apprise you that in the same hour a new light broke in upon a thousand private hearts. That secret which you would fain keep, — as soon as you go abroad, lo! there is one standing on the doorstep, to tell you the same. There is not the most bronzed and sharpened money-catcher, who does not, to your consternation, almost, quail and shake the moment he hears a question prompted by the new ideas. We thought he had some semblance of ground to stand upon, that such as he at least would die hard; but he trembles and flees. Then the scholar says, `Cities and coaches shall never impose on me again; for, behold every solitary dream of mine is rushing to fulfilment. That fancy I had, and hesitated to utter because you would laugh, — the broker, the attorney, the market-man are saying the same thing. Had I waited a day longer to speak, I had been too late. Behold, State Street thinks, and Wall Street doubts, and begins to prophesy!'

It cannot be wondered at, that this general inquest into abuses should arise in the bosom of society, when one considers the practical impediments that stand in the way of virtuous young men. The young man, on entering life, finds the way to lucrative employments blocked with abuses. The ways of trade are grown selfish to the borders of theft, and supple to the borders (if not beyond the borders) of fraud. The employments of commerce are not intrinsically unfit for a man, or less genial to his faculties, but these are now in their general course so vitiated by derelictions and abuses at which all connive, that it requires more vigor and resources than can be expected of every young man, to right himself in them; he is lost in them; he cannot move hand or foot in them. Has he genius and virtue? the less does he find them fit for him to grow in, and if he would thrive in them, he must sacrifice all the brilliant dreams of boyhood and youth as dreams; he must forget the prayers of his childhood; and must take on him the harness of routine and obsequiousness. If not so minded, nothing is left him but to begin the world anew, as he does who puts the spade into the ground for food. We are all implicated, of course, in this charge; it is only necessary to ask a few questions

as to the progress of the articles of commerce from the fields where they grew, to our houses, to become aware that we eat and drink and wear perjury and fraud in a hundred commodities. How many articles of daily consumption are furnished us from the West Indies; yet it is said, that, in the Spanish islands, the venality of the officers of the government has passed into usage, and that no article passes into our ships which has not been fraudulently cheapened. In the Spanish islands, every agent or factor of the Americans, unless he be a consul, has taken oath that he is a Catholic, or has caused a priest to make that declaration for him. The abolitionist has shown us our dreadful debt to the southern negro. In the island of Cuba, in addition to the ordinary abominations of slavery, it appears, only men are bought for the plantations, and one dies in ten every year, of these miserable bachelors, to yield us sugar. I leave for those who have the knowledge the part of sifting the oaths of our custom-houses; I will not inquire into the oppression of the sailors; I will not pry into the usages of our retail trade. I content myself with the fact, that the general system of our trade, (apart from the blacker traits, which, I hope, are exceptions denounced and unshared by all reputable men,) is a system of selfishness; is not dictated by the high sentiments of human nature; is not measured by the exact law of reciprocity; much less by the sentiments of love and heroism, but is a system of distrust, of concealment, of superior keenness, not of giving but of taking advantage. It is not that which a man delights to unlock to a noble friend; which he meditates on with joy and self-approval in his hour of love and aspiration; but rather what he then puts out of sight, only showing the brilliant result, and atoning for the manner of acquiring, by the manner of expending it. I do not charge the merchant or the manufacturer. The sins of our trade belong to no class, to no individual. One plucks, one distributes, one eats. Every body partakes, every body confesses, — with cap and knee volunteers his confession, yet none feels himself accountable. He did not create the abuse; he cannot alter it. What is he? an obscure private person who must get his bread. That is the vice, — that no one feels himself called to act for man, but only as a fraction of man. It happens therefore that all such ingenuous souls as feel within themselves the irrepressible strivings of a noble aim, who by the law of their nature must act simply, find these ways of trade unfit for them, and they come forth from it. Such cases are becoming more numerous every year.

But by coming out of trade you have not cleared yourself. The trail of the serpent reaches into all the lucrative professions and practices of man. Each has its own wrongs. Each finds a tender and very intelligent conscience a disqualification for success. Each requires of the practitioner a certain shutting of the eyes, a certain dapperness and compliance, an acceptance of customs, a

sequestration from the sentiments of generosity and love, a compromise of private opinion and lofty integrity. Nay, the evil custom reaches into the whole institution of property, until our laws which establish and protect it, seem not to be the issue of love and reason, but of selfishness. Suppose a man is so unhappy as to be born a saint, with keen perceptions, but with the conscience and love of an angel, and he is to get his living in the world; he finds himself excluded from all lucrative works; he has no farm, and he cannot get one; for, to earn money enough to buy one, requires a sort of concentration toward money, which is the selling himself for a number of years, and to him the present hour is as sacred and inviolable as any future hour. Of course, whilst another man has no land, my title to mine, your title to yours, is at once vitiated. Inextricable seem to be the twinings and tendrils of this evil, and we all involve ourselves in it the deeper by forming connections, by wives and children, by benefits and debts.

Considerations of this kind have turned the attention of many philanthropic and intelligent persons to the claims of manual labor, as a part of the education of every young man. If the accumulated wealth of the past generations is thus tainted, — no matter how much of it is offered to us, — we must begin to consider if it were not the nobler part to renounce it, and to put ourselves into primary relations with the soil and nature, and abstaining from whatever is dishonest and unclean, to take each of us bravely his part, with his own hands, in the manual labor of the world.

But it is said, 'What! will you give up the immense advantages reaped from the division of labor, and set every man to make his own shoes, bureau, knife, wagon, sails, and needle? This would be to put men back into barbarism by their own act.' I see no instant prospect of a virtuous revolution; yet I confess, I should not be pained at a change which threatened a loss of some of the luxuries or conveniences of society, if it proceeded from a preference of the agricultural life out of the belief, that our primary duties as men could be better discharged in that calling. Who could regret to see a high conscience and a purer taste exercising a sensible effect on young men in their choice of occupation, and thinning the ranks of competition in the labors of commerce, of law, and of state? It is easy to see that the inconvenience would last but a short time. This would be great action, which always opens the eyes of men. When many persons shall have done this, when the majority shall admit the necessity of reform in all these institutions, their abuses will be redressed, and the way will be open again to the advantages which arise from the division of labor, and a man may select the fittest employment for his peculiar talent again, without compromise.

But quite apart from the emphasis which the times give to the doctrine, that the manual labor of society ought to be shared among all the members, there are

reasons proper to every individual, why he should not be deprived of it. The use of manual labor is one which never grows obsolete, and which is inapplicable to no person. A man should have a farm or a mechanical craft for his culture. We must have a basis for our higher accomplishments, our delicate entertainments of poetry and philosophy, in the work of our hands. We must have an antagonism in the tough world for all the variety of our spiritual faculties, or they will not be born. Manual labor is the study of the external world. The advantage of riches remains with him who procured them, not with the heir. When I go into my garden with a spade, and dig a bed, I feel such an exhilaration and health, that I discover that I have been defrauding myself all this time in letting others do for me what I should have done with my own hands. But not only health, but education is in the work. Is it possible that I who get indefinite quantities of sugar, hominy, cotton, buckets, crockery ware, and letter paper, by simply signing my name once in three months to a cheque in favor of John Smith and Co. traders, get the fair share of exercise to my faculties by that act, which nature intended for me in making all these far-fetched matters important to my comfort? It is Smith himself, and his carriers, and dealers, and manufacturers, it is the sailor, the hidedrogher, the butcher, the negro, the hunter, and the planter, who have intercepted the sugar of the sugar, and the cotton of the cotton. They have got the education, I only the commodity. This were all very well if I were necessarily absent, being detained by work of my own, like theirs, work of the same faculties; then should I be sure of my hands and feet, but now I feel some shame before my wood-chopper, my ploughman, and my cook, for they have some sort of self-sufficiency, they can contrive without my aid to bring the day and year round, but I depend on them, and have not earned by use a right to my arms and feet.

Consider further the difference between the first and second owner of property. Every species of property is preyed on by its own enemies, as iron by rust; timber by rot; cloth by moths; provisions by mould, putridity, or vermin; money by thieves; an orchard by insects; a planted field by weeds and the inroad of cattle; a stock of cattle by hunger; a road by rain and frost; a bridge by freshets. And whoever takes any of these things into his possession, takes the charge of defending them from this troop of enemies, or of keeping them in repair. A man who supplies his own want, who builds a raft or a boat to go a fishing, finds it easy to caulk it, or put in a thole-pin, or mend the rudder. What he gets only as fast as he wants for his own ends, does not embarrass him, or take away his sleep with looking after. But when he comes to give all the goods he has year after year collected, in one estate to his son, house, orchard, ploughed land, cattle, bridges, hardware, wooden-ware, carpets, cloths,

provisions, books, money, and cannot give him the skill and experience which made or collected these, and the method and place they have in his own life, the son finds his hands full, — not to use these things, — but to look after them and defend them from their natural enemies. To him they are not means, but masters. Their enemies will not remit; rust, mould, vermin, rain, sun, freshet, fire, all seize their own, fill him with vexation, and he is converted from the owner into a watchman or a watch-dog to this magazine of old and new chattels. What a change! Instead of the masterly good humor, and sense of power, and fertility of resource in himself; instead of those strong and learned hands, those piercing and learned eyes, that supple body, and that mighty and prevailing heart, which the father had, whom nature loved and feared, whom snow and rain, water and land, beast and fish seemed all to know and to serve, we have now a puny, protected person, guarded by walls and curtains, stoves and down beds, coaches, and men-servants and women-servants from the earth and the sky, and who, bred to depend on all these, is made anxious by all that endangers those possessions, and is forced to spend so much time in guarding them, that he has quite lost sight of their original use, namely, to help him to his ends, — to the prosecution of his love; to the helping of his friend, to the worship of his God, to the enlargement of his knowledge, to the serving of his country, to the indulgence of his sentiment, and he is now what is called a rich man, — the menial and runner of his riches.

Hence it happens that the whole interest of history lies in the fortunes of the poor. Knowledge, Virtue, Power are the victories of man over his necessities, his march to the dominion of the world. Every man ought to have this opportunity to conquer the world for himself. Only such persons interest us, Spartans, Romans, Saracens, English, Americans, who have stood in the jaws of need, and have by their own wit and might extricated themselves, and made man victorious.

I do not wish to overstate this doctrine of labor, or insist that every man should be a farmer, any more than that every man should be a lexicographer. In general, one may say, that the husbandman's is the oldest, and most universal profession, and that where a man does not yet discover in himself any fitness for one work more than another, this may be preferred. But the doctrine of the Farm is merely this, that every man ought to stand in primary relations with the work of the world, ought to do it himself, and not to suffer the accident of his having a purse in his pocket, or his having been bred to some dishonorable and injurious craft, to sever him from those duties; and for this reason, that labor is God's education; that he only is a sincere learner, he only can become a master, who learns the secrets of labor, and who by real cunning extorts from nature its sceptre.

Neither would I shut my ears to the plea of the learned professions, of the poet, the priest, the lawgiver, and men of study generally; namely, that in the experience of all men of that class, the amount of manual labor which is necessary to the maintenance of a family, indisposes and disqualifies for intellectual exertion. I know, it often, perhaps usually, happens, that where there is a fine organization apt for poetry and philosophy, that individual finds himself compelled to wait on his thoughts, to waste several days that he may enhance and glorify one; and is better taught by a moderate and dainty exercise, such as rambling in the fields, rowing, skating, hunting, than by the downright drudgery of the farmer and the smith. I would not quite forget the venerable counsel of the Egyptian mysteries, which declared that “there were two pairs of eyes in man, and it is requisite that the pair which are beneath should be closed, when the pair that are above them perceive, and that when the pair above are closed, those which are beneath should be opened.” Yet I will suggest that no separation from labor can be without some loss of power and of truth to the seer himself; that, I doubt not, the faults and vices of our literature and philosophy, their too great fineness, effeminacy, and melancholy, are attributable to the enervated and sickly habits of the literary class. Better that the book should not be quite so good, and the bookmaker abler and better, and not himself often a ludicrous contrast to all that he has written.

But granting that for ends so sacred and dear, some relaxation must be had, I think, that if a man find in himself any strong bias to poetry, to art, to the contemplative life, drawing him to these things with a devotion incompatible with good husbandry, that man ought to reckon early with himself, and, respecting the compensations of the Universe, ought to ransom himself from the duties of economy, by a certain rigor and privation in his habits. For privileges so rare and grand, let him not stint to pay a great tax. Let him be a caenobite, a pauper, and if need be, celibate also. Let him learn to eat his meals standing, and to relish the taste of fair water and black bread. He may leave to others the costly conveniences of housekeeping, and large hospitality, and the possession of works of art. Let him feel that genius is a hospitality, and that he who can create works of art needs not collect them. He must live in a chamber, and postpone his self-indulgence, forewarned and forearmed against that frequent misfortune of men of genius, — the taste for luxury. This is the tragedy of genius, — attempting to drive along the ecliptic with one horse of the heavens and one horse of the earth, there is only discord and ruin and downfall to chariot and charioteer.

The duty that every man should assume his own vows, should call the institutions of society to account, and examine their fitness to him, gains in

emphasis, if we look at our modes of living. Is our housekeeping sacred and honorable? Does it raise and inspire us, or does it cripple us instead? I ought to be armed by every part and function of my household, by all my social function, by my economy, by my feasting, by my voting, by my traffic. Yet I am almost no party to any of these things. Custom does it for me, gives me no power therefrom, and runs me in debt to boot. We spend our incomes for paint and paper, for a hundred trifles, I know not what, and not for the things of a man. Our expense is almost all for conformity. It is for cake that we run in debt; 't is not the intellect, not the heart, not beauty, not worship, that costs so much. Why needs any man be rich? Why must he have horses, fine garments, handsome apartments, access to public houses, and places of amusement? Only for want of thought. Give his mind a new image, and he flees into a solitary garden or garret to enjoy it, and is richer with that dream, than the fee of a county could make him. But we are first thoughtless, and then find that we are moneyless. We are first sensual, and then must be rich. We dare not trust our wit for making our house pleasant to our friend, and so we buy ice-creams. He is accustomed to carpets, and we have not sufficient character to put floor-cloths out of his mind whilst he stays in the house, and so we pile the floor with carpets. Let the house rather be a temple of the Furies of Lacedaemon, formidable and holy to all, which none but a Spartan may enter or so much as behold. As soon as there is faith, as soon as there is society, comfits and cushions will be left to slaves. Expense will be inventive and heroic. We shall eat hard and lie hard, we shall dwell like the ancient Romans in narrow tenements, whilst our public edifices, like theirs, will be worthy for their proportion of the landscape in which we set them, for conversation, for art, for music, for worship. We shall be rich to great purposes; poor only for selfish ones.

Now what help for these evils? How can the man who has learned but one art, procure all the conveniences of life honestly? Shall we say all we think? — Perhaps with his own hands. Suppose he collects or makes them ill; — yet he has learned their lesson. If he cannot do that. — Then perhaps he can go without. Immense wisdom and riches are in that. It is better to go without, than to have them at too great a cost. Let us learn the meaning of economy. Economy is a high, humane office, a sacrament, when its aim is grand; when it is the prudence of simple tastes, when it is practised for freedom, or love, or devotion. Much of the economy which we see in houses, is of a base origin, and is best kept out of sight. Parched corn eaten to-day that I may have roast fowl to my dinner on Sunday, is a baseness; but parched corn and a house with one apartment, that I may be free of all perturbations, that I may be serene and docile to what the mind shall speak, and girt and road-ready for the lowest mission of knowledge or

goodwill, is frugality for gods and heroes.

Can we not learn the lesson of self-help? Society is full of infirm people, who incessantly summon others to serve them. They contrive everywhere to exhaust for their single comfort the entire means and appliances of that luxury to which our invention has yet attained. Sofas, ottomans, stoves, wine, game-fowl, spices, perfumes, rides, the theatre, entertainments, — all these they want, they need, and whatever can be suggested more than these, they crave also, as if it was the bread which should keep them from starving; and if they miss any one, they represent themselves as the most wronged and most wretched persons on earth. One must have been born and bred with them to know how to prepare a meal for their learned stomach. Meantime, they never bestir themselves to serve another person; not they! they have a great deal more to do for themselves than they can possibly perform, nor do they once perceive the cruel joke of their lives, but the more odious they grow, the sharper is the tone of their complaining and craving. Can anything be so elegant as to have few wants and to serve them one's self, so as to have somewhat left to give, instead of being always prompt to grab? It is more elegant to answer one's own needs, than to be richly served; inelegant perhaps it may look to-day, and to a few, but it is an elegance forever and to all.

I do not wish to be absurd and pedantic in reform. I do not wish to push my criticism on the state of things around me to that extravagant mark, that shall compel me to suicide, or to an absolute isolation from the advantages of civil society. If we suddenly plant our foot, and say, — I will neither eat nor drink nor wear nor touch any food or fabric which I do not know to be innocent, or deal with any person whose whole manner of life is not clear and rational, we shall stand still. Whose is so? Not mine; not thine; not his. But I think we must clear ourselves each one by the interrogation, whether we have earned our bread to-day by the hearty contribution of our energies to the common benefit? and we must not cease to *tend* to the correction of these flagrant wrongs, by laying one stone aright every day.

But the idea which now begins to agitate society has a wider scope than our daily employments, our households, and the institutions of property. We are to revise the whole of our social structure, the state, the school, religion, marriage, trade, science, and explore their foundations in our own nature; we are to see that the world not only fitted the former men, but fits us, and to clear ourselves of every usage which has not its roots in our own mind. What is a man born for but to be a Reformer, a Remaker of what man has made; a renouncer of lies; a restorer of truth and good, imitating that great Nature which embosoms us all, and which sleeps no moment on an old past, but every hour repairs herself, yielding us every morning a new day, and with every pulsation a new life? Let

him renounce everything which is not true to him, and put all his practices back on their first thoughts, and do nothing for which he has not the whole world for his reason. If there are inconveniences, and what is called ruin in the way, because we have so enervated and maimed ourselves, yet it would be like dying of perfumes to sink in the effort to reattach the deeds of every day to the holy and mysterious recesses of life.

The power, which is at once spring and regulator in all efforts of reform, is the conviction that there is an infinite worthiness in man which will appear at the call of worth, and that all particular reforms are the removing of some impediment. Is it not the highest duty that man should be honored in us? I ought not to allow any man, because he has broad lands, to feel that he is rich in my presence. I ought to make him feel that I can do without his riches, that I cannot be bought, — neither by comfort, neither by pride, — and though I be utterly penniless, and receiving bread from him, that he is the poor man beside me. And if, at the same time, a woman or a child discovers a sentiment of piety, or a juster way of thinking than mine, I ought to confess it by my respect and obedience, though it go to alter my whole way of life.

The Americans have many virtues, but they have not Faith and Hope. I know no two words whose meaning is more lost sight of. We use these words as if they were as obsolete as Selah and Amen. And yet they have the broadest meaning, and the most cogent application to Boston in 1841. The Americans have no faith. They rely on the power of a dollar; they are deaf to a sentiment. They think you may talk the north wind down as easily as raise society; and no class more faithless than the scholars or intellectual men. Now if I talk with a sincere wise man, and my friend, with a poet, with a conscientious youth who is still under the dominion of his own wild thoughts, and not yet harnessed in the team of society to drag with us all in the ruts of custom, I see at once how paltry is all this generation of unbelievers, and what a house of cards their institutions are, and I see what one brave man, what one great thought executed might effect. I see that the reason of the distrust of the practical man in all theory, is his inability to perceive the means whereby we work. Look, he says, at the tools with which this world of yours is to be built. As we cannot make a planet, with atmosphere, rivers, and forests, by means of the best carpenters' or engineers' tools, with chemist's laboratory and smith's forge to boot, — so neither can we ever construct that heavenly society you prate of, out of foolish, sick, selfish men and women, such as we know them to be. But the believer not only beholds his heaven to be possible, but already to begin to exist, — not by the men or materials the statesman uses, but by men transfigured and raised above themselves by the power of principles. To principles something else is possible

that transcends all the power of expedients.

Every great and commanding moment in the annals of the world is the triumph of some enthusiasm. The victories of the Arabs after Mahomet, who, in a few years, from a small and mean beginning, established a larger empire than that of Rome, is an example. They did they knew not what. The naked Derar, horsed on an idea, was found an overmatch for a troop of Roman cavalry. The women fought like men, and conquered the Roman men. They were miserably equipped, miserably fed. They were Temperance troops. There was neither brandy nor flesh needed to feed them. They conquered Asia, and Africa, and Spain, on barley. The Caliph Omar's walking stick struck more terror into those who saw it, than another man's sword. His diet was barley bread; his sauce was salt; and oftentimes by way of abstinence he ate his bread without salt. His drink was water. His palace was built of mud; and when he left Medina to go to the conquest of Jerusalem, he rode on a red camel, with a wooden platter hanging at his saddle, with a bottle of water and two sacks, one holding barley, and the other dried fruits.

But there will dawn ere long on our politics, on our modes of living, a nobler morning than that Arabian faith, in the sentiment of love. This is the one remedy for all ills, the panacea of nature. We must be lovers, and at once the impossible becomes possible. Our age and history, for these thousand years, has not been the history of kindness, but of selfishness. Our distrust is very expensive. The money we spend for courts and prisons is very ill laid out. We make, by distrust, the thief, and burglar, and incendiary, and by our court and jail we keep him so. An acceptance of the sentiment of love throughout Christendom for a season, would bring the felon and the outcast to our side in tears, with the devotion of his faculties to our service. See this wide society of laboring men and women. We allow ourselves to be served by them, we live apart from them, and meet them without a salute in the streets. We do not greet their talents, nor rejoice in their good fortune, nor foster their hopes, nor in the assembly of the people vote for what is dear to them. Thus we enact the part of the selfish noble and king from the foundation of the world. See, this tree always bears one fruit. In every household, the peace of a pair is poisoned by the malice, slyness, indolence, and alienation of domestics. Let any two matrons meet, and observe how soon their conversation turns on the troubles from their "help," as our phrase is. In every knot of laborers, the rich man does not feel himself among his friends, — and at the polls he finds them arrayed in a mass in distinct opposition to him. We complain that the politics of masses of the people are controlled by designing men, and led in opposition to manifest justice and the common weal, and to their own interest. But the people do not wish to be represented or ruled by the

ignorant and base. They only vote for these, because they were asked with the voice and semblance of kindness. They will not vote for them long. They inevitably prefer wit and probity. To use an Egyptian metaphor, it is not their will for any long time “to raise the nails of wild beasts, and to depress the heads of the sacred birds.” Let our affection flow out to our fellows; it would operate in a day the greatest of all revolutions. It is better to work on institutions by the sun than by the wind. The state must consider the poor man, and all voices must speak for him. Every child that is born must have a just chance for his bread. Let the amelioration in our laws of property proceed from the concession of the rich, not from the grasping of the poor. Let us begin by habitual imparting. Let us understand that the equitable rule is, that no one should take more than his share, let him be ever so rich. Let me feel that I am to be a lover. I am to see to it that the world is the better for me, and to find my reward in the act. Love would put a new face on this weary old world in which we dwell as pagans and enemies too long, and it would warm the heart to see how fast the vain diplomacy of statesmen, the impotence of armies, and navies, and lines of defence, would be superseded by this unarmed child. Love will creep where it cannot go, will accomplish that by imperceptible methods, — being its own lever, fulcrum, and power, — which force could never achieve. Have you not seen in the woods, in a late autumn morning, a poor fungus or mushroom, — a plant without any solidity, nay, that seemed nothing but a soft mush or jelly, — by its constant, total, and inconceivably gentle pushing, manage to break its way up through the frosty ground, and actually to lift a hard crust on its head? It is the symbol of the power of kindness. The virtue of this principle in human society in application to great interests is obsolete and forgotten. Once or twice in history it has been tried in illustrious instances, with signal success. This great, overgrown, dead Christendom of ours still keeps alive at least the name of a lover of mankind. But one day all men will be lovers; and every calamity will be dissolved in the universal sunshine.

Will you suffer me to add one trait more to this portrait of man the reformer? The mediator between the spiritual and the actual world should have a great prospective prudence. An Arabian poet describes his hero by saying,

“Sunshine was he
In the winter day;
And in the midsummer
Coolness and shade.”

He who would help himself and others, should not be a subject of irregular

and interrupted impulses of virtue, but a continent, persisting, immovable person, — such as we have seen a few scattered up and down in time for the blessing of the world; men who have in the gravity of their nature a quality which answers to the fly-wheel in a mill, which distributes the motion equably over all the wheels, and hinders it from falling unequally and suddenly in destructive shocks. It is better that joy should be spread over all the day in the form of strength, than that it should be concentrated into ecstasies, full of danger and followed by reactions. There is a sublime prudence, which is the very highest that we know of man, which, believing in a vast future, — sure of more to come than is yet seen, — postpones always the present hour to the whole life; postpones talent to genius, and special results to character. As the merchant gladly takes money from his income to add to his capital, so is the great man very willing to lose particular powers and talents, so that he gain in the elevation of his life. The opening of the spiritual senses disposes men ever to greater sacrifices, to leave their signal talents, their best means and skill of procuring a present success, their power and their fame, — to cast all things behind, in the insatiable thirst for divine communications. A purer fame, a greater power rewards the sacrifice. It is the conversion of our harvest into seed. As the farmer casts into the ground the finest ears of his grain, the time will come when we too shall hold nothing back, but shall eagerly convert more than we now possess into means and powers, when we shall be willing to sow the sun and the moon for seeds.

INTRODUCTORY LECTURE ON THE TIMES

Read at the Masonic Temple, Boston, December 2, 1841

The times, as we say — or the present aspects of our social state, theral Science, Agriculture, Art, Trade, Letters, have their root in an invisible spiritual reality. To appear in these aspects, they must first exist, or have some necessary foundation. Beside all the small reasons we assign, there is a great reason for the existence of every extant fact; a reason which lies grand and immovable, often unsuspected behind it in silence. The Times are the masquerade of the eternities; trivial to the dull, tokens of noble and majestic agents to the wise; the receptacle in which the Past leaves its history; the quarry out of which the genius of to-day is building up the Future. The Times — the nations, manners, institutions, opinions, votes, are to be studied as omens, as sacred leaves, whereon a weighty sense is inscribed, if we have the wit and the love to search it out. Nature itself seems to propound to us this topic, and to invite us to explore the meaning of the conspicuous facts of the day. Everything that is popular, it has been said, deserves the attention of the philosopher: and this for the obvious reason, that although it may not be of any worth in itself, yet it characterizes the people.

Here is very good matter to be handled, if we are skilful; an abundance of important practical questions which it behooves us to understand. Let us examine the pretensions of the attacking and defending parties. Here is this great fact of Conservatism, entrenched in its immense redoubts, with Himmaleh for its front, and Atlas for its flank, and Andes for its rear, and the Atlantic and Pacific seas for its ditches and trenches, which has planted its crosses, and crescents, and stars and stripes, and various signs and badges of possession, over every rood of the planet, and says, 'I will hold fast; and to whom I will, will I give; and whom I will, will I exclude and starve:' so says Conservatism; and all the children of men attack the colossus in their youth, and all, or all but a few, bow before it when they are old. A necessity not yet commanded, a negative imposed on the will of man by his condition a deficiency in his force, is the foundation on which it rests. Let this side be fairly stated. Meantime, on the other part, arises Reform, and offers the sentiment of Love as an overmatch to this material might. I wish to consider well this affirmative side, which has a loftier port and reason than heretofore, which encroaches on the other every day, puts it out of countenance, out of reason, and out of temper, and leaves it nothing but silence and possession.

The fact of aristocracy, with its two weapons of wealth and manners, is as

commanding a feature of the nineteenth century, and the American republic, as of old Rome, or modern England. The reason and influence of wealth, the aspect of philosophy and religion, and the tendencies which have acquired the name of Transcendentalism in Old and New England; the aspect of poetry, as the exponent and interpretation of these things; the fuller development and the freer play of Character as a social and political agent; — these and other related topics will in turn come to be considered.

But the subject of the Times is not an abstract question. We talk of the world, but we mean a few men and women. If you speak of the age, you mean your own platoon of people, as Milton and Dante painted in colossal their platoons, and called them Heaven and Hell. In our idea of progress, we do not go out of this personal picture. We do not think the sky will be bluer, or honey sweeter, or our climate more temperate, but only that our relation to our fellows will be simpler and happier. What is the reason to be given for this extreme attraction which *persons* have for us, but that they are the Age? they are the results of the Past; they are the heralds of the Future. They indicate, — these witty, suffering, blushing, intimidating figures of the only race in which there are individuals or changes, how far on the Fate has gone, and what it drives at. As trees make scenery, and constitute the hospitality of the landscape, so persons are the world to persons. A cunning mystery by which the Great Desart of thoughts and of planets takes this engaging form, to bring, as it would seem, its meanings nearer to the mind. Thoughts walk and speak, and look with eyes at me, and transport me into new and magnificent scenes. These are the pungent instructors who thrill the heart of each of us, and make all other teaching formal and cold. How I follow them with aching heart, with pining desire! I count myself nothing before them. I would die for them with joy. They can do what they will with me. How they lash us with those tongues! How they make the tears start, make us blush and turn pale, and lap us in Elysium to soothing dreams, and castles in the air! By tones of triumph; of dear love; by threats; by pride that freezes; these have the skill to make the world look bleak and inhospitable, or seem the nest of tenderness and joy. I do not wonder at the miracles which poetry attributes to the music of Orpheus, when I remember what I have experienced from the varied notes of the human voice. They are an incalculable energy which countervails all other forces in nature, because they are the channel of supernatural powers. There is no interest or institution so poor and withered, but if a new strong man could be born into it, he would immediately redeem and replace it. A personal ascendancy, — that is the only fact much worth considering. I remember, some years ago, somebody shocked a circle of friends of order here in Boston, who supposed that our people were identified with their religious denominations, by

declaring that an eloquent man, — let him be of what sect soever, — would be ordained at once in one of our metropolitan churches. To be sure he would; and not only in ours, but in any church, mosque, or temple, on the planet; but he must be eloquent, able to supplant our method and classification, by the superior beauty of his own. Every fact we have was brought here by some person; and there is none that will not change and pass away before a person, whose nature is broader than the person which the fact in question represents. And so I find the Age walking about in happy and hopeful natures, in strong eyes, and pleasant thoughts, and think I read it nearer and truer so, than in the statute-book, or in the investments of capital, which rather celebrate with mournful music the obsequies of the last age. In the brain of a fanatic; in the wild hope of a mountain boy, called by city boys very ignorant, because they do not know what his hope has certainly apprised him shall be; in the love-glance of a girl; in the hair-splitting conscientiousness of some eccentric person, who has found some new scruple to embarrass himself and his neighbors withal; is to be found that which shall constitute the times to come, more than in the now organized and accredited oracles. For, whatever is affirmative and now advancing, contains it. I think that only is real, which men love and rejoice in; not what they tolerate, but what they choose; what they embrace and avow, and not the things which chill, benumb, and terrify them.

And so why not draw for these times a portrait gallery? Let us paint the painters. Whilst the Daguerreotypist, with camera-obscura and silver plate, begins now to traverse the land, let us set up our Camera also, and let the sun paint the people. Let us paint the agitator, and the man of the old school, and the member of Congress, and the college-professor, the formidable editor, the priest, and reformer, the contemplative girl, and the fair aspirant for fashion and opportunities, the woman of the world who has tried and knows; — let us examine how well she knows. Could we indicate the indicators, indicate those who most accurately represent every good and evil tendency of the general mind, in the just order which they take on this canvass of Time; so that all witnesses should recognise a spiritual law, as each well known form flitted for a moment across the wall, we should have a series of sketches which would report to the next ages the color and quality of ours.

Certainly, I think, if this were done, there would be much to admire as well as to condemn; souls of as lofty a port, as any in Greek or Roman fame, might appear; men of great heart, of strong hand, and of persuasive speech; subtle thinkers, and men of wide sympathy, and an apprehension which looks over all history, and everywhere recognises its own. To be sure, there will be fragments and hints of men, more than enough: bloated promises, which end in nothing or

little. And then truly great men, but with some defect in their composition, which neutralizes their whole force. Here is a Damascus blade, such as you may search through nature in vain to parallel, laid up on the shelf in some village to rust and ruin. And how many seem not quite available for that idea which they represent! Now and then comes a bolder spirit, I should rather say, a more surrendered soul, more informed and led by God, which is much in advance of the rest, quite beyond their sympathy, but predicts what shall soon be the general fulness; as when we stand by the seashore, whilst the tide is coming in, a wave comes up the beach far higher than any foregoing one, and recedes; and for a long while none comes up to that mark; but after some time the whole sea is there and beyond it.

But we are not permitted to stand as spectators of the pageant which the times exhibit: we are parties also, and have a responsibility which is not to be declined. A little while this interval of wonder and comparison is permitted us, but to the end that we shall play a manly part. As the solar system moves forward in the heavens, certain stars open before us, and certain stars close up behind us; so is man's life. The reputations that were great and inaccessible change and tarnish. How great were once Lord Bacon's dimensions! he is now reduced almost to the middle height; and many another star has turned out to be a planet or an asteroid: only a few are the fixed stars which have no parallax, or none for us. The change and decline of old reputations are the gracious marks of our own growth. Slowly, like light of morning, it steals on us, the new fact, that we, who were pupils or aspirants, are now society: do compose a portion of that head and heart we are wont to think worthy of all reverence and heed. We are the representatives of religion and intellect, and stand in the light of Ideas, whose rays stream through us to those younger and more in the dark. What further relations we sustain, what new lodges we are entering, is now unknown. To-day is a king in disguise. To-day always looks mean to the thoughtless, in the face of an uniform experience, that all good and great and happy actions are made up precisely of these blank to-days. Let us not be so deceived. Let us unmask the king as he passes. Let us not inhabit times of wonderful and various promise without divining their tendency. Let us not see the foundations of nations, and of a new and better order of things laid, with roving eyes, and an attention preoccupied with trifles.

The two omnipresent parties of History, the party of the Past and the party of the Future, divide society to-day as of old. Here is the innumerable multitude of those who accept the state and the church from the last generation, and stand on no argument but possession. They have reason also, and, as I think, better reason than is commonly stated. No Burke, no Metternich has yet done full justice to

the side of conservatism. But this class, however large, relying not on the intellect but on instinct, blends itself with the brute forces of nature, is respectable only as nature is, but the individuals have no attraction for us. It is the dissenter, the theorist, the aspirant, who is quitting this ancient domain to embark on seas of adventure, who engages our interest. Omitting then for the present all notice of the stationary class, we shall find that the movement party divides itself into two classes, the actors, and the students.

The actors constitute that great army of martyrs who, at least in America, by their conscience and philanthropy, occupy the ground which Calvinism occupied in the last age, and compose the visible church of the existing generation. The present age will be marked by its harvest of projects for the reform of domestic, civil, literary, and ecclesiastical institutions. The leaders of the crusades against War, Negro slavery, Intemperance, Government based on force, Usages of trade, Court and Custom-house Oaths, and so on to the agitators on the system of Education and the laws of Property, are the right successors of Luther, Knox, Robinson, Fox, Penn, Wesley, and Whitfield. They have the same virtues and vices; the same noble impulse, and the same bigotry. These movements are on all accounts important; they not only check the special abuses, but they educate the conscience and the intellect of the people. How can such a question as the Slave trade be agitated for forty years by all the Christian nations, without throwing great light on ethics into the general mind? The fury, with which the slave-trader defends every inch of his bloody deck, and his howling auction-platform, is a trumpet to alarm the ear of mankind, to wake the dull, and drive all neutrals to take sides, and to listen to the argument and the verdict. The Temperance-question, which rides the conversation often thousand circles, and is tacitly recalled at every public and at every private table, drawing with it all the curious ethics of the Pledge, of the Wine-question, of the equity of the manufacture and the trade, is a gymnastic training to the casuistry and conscience of the time. Antimasonry had a deep right and wrong, which gradually emerged to sight out of the turbid controversy. The political questions touching the Banks; the Tariff; the limits of the executive power; the right of the constituent to instruct the representative; the treatment of the Indians; the Boundary wars; the Congress of nations; are all pregnant with ethical conclusions; and it is well if government and our social order can extricate themselves from these alembics, and find themselves still government and social order. The student of history will hereafter compute the singular value of our endless discussion of questions, to the mind of the period.

Whilst each of these aspirations and attempts of the people for the Better is magnified by the natural exaggeration of its advocates, until it excludes the

others from sight, and repels discreet persons by the unfairness of the plea, the movements are in reality all parts of one movement. There is a perfect chain, — see it, or see it not, — of reforms emerging from the surrounding darkness, each cherishing some part of the general idea, and all must be seen, in order to do justice to any one. Seen in this their natural connection, they are sublime. The conscience of the Age demonstrates itself in this effort to raise the life of man by putting it in harmony with his idea of the Beautiful and the Just. The history of reform is always identical; it is the comparison of the idea with the fact. Our modes of living are not agreeable to our imagination. We suspect they are unworthy. We arraign our daily employments. They appear to us unfit, unworthy of the faculties we spend on them. In conversation with a wise man, we find ourselves apologizing for our employments; we speak of them with shame. Nature, literature, science, childhood, appear to us beautiful; but not our own daily work, not the ripe fruit and considered labors of man. This beauty which the fancy finds in everything else, certainly accuses that manner of life we lead. Why should it be hateful? Why should it contrast thus with all natural beauty? Why should it not be poetic, and invite and raise us? Is there a necessity that the works of man should be sordid? Perhaps not. — Out of this fair Idea in the mind springs the effort at the Perfect. It is the interior testimony to a fairer possibility of life and manners, which agitates society every day with the offer of some new amendment. If we would make more strict inquiry concerning its origin, we find ourselves rapidly approaching the inner boundaries of thought, that term where speech becomes silence, and science conscience. For the origin of all reform is in that mysterious fountain of the moral sentiment in man, which, amidst the natural, ever contains the supernatural for men. That is new and creative. That is alive. That alone can make a man other than he is. Here or nowhere resides unbounded energy, unbounded power.

The new voices in the wilderness crying “Repent,” have revived a hope, which had well nigh perished out of the world, that the thoughts of the mind may yet, in some distant age, in some happy hour, be executed by the hands. That is the hope, of which all other hopes are parts. For some ages, these ideas have been consigned to the poet and musical composer, to the prayers and the sermons of churches; but the thought, that they can ever have any footing in real life, seems long since to have been exploded by all judicious persons. Milton, in his best tract, describes a relation between religion and the daily occupations, which is true until this time.

“A wealthy man, addicted to his pleasure and to his profits, finds religion to be a traffic so entangled, and of so many piddling accounts, that of all mysteries he cannot skill to keep a stock going upon that trade. What should he do? Fain

he would have the name to be religious; fain he would bear up with his neighbors in that. What does he, therefore, but resolve to give over toiling, and to find himself out some factor, to whose care and credit he may commit the whole managing of his religious affairs; some divine of note and estimation that must be. To him he adheres, resigns the whole warehouse of his religion, with all the locks and keys, into his custody; and indeed makes the very person of that man his religion; esteems his associating with him a sufficient evidence and commendatory of his own piety. So that a man may say, his religion is now no more within himself, but is become a dividual moveable, and goes and comes near him, according as that good man frequents the house. He entertains him, gives him gifts, feasts him, lodges him; his religion comes home at night, prays, is liberally supped, and sumptuously laid to sleep, rises, is saluted, and after the malmsey, or some well spiced beverage, and better breakfasted than he whose morning appetite would have gladly fed on green figs between Bethany and Jerusalem, his religion walks abroad at eight, and leaves his kind entertainer in the shop, trading all day without his religion.”

This picture would serve for our times. Religion was not invited to eat or drink or sleep with us, or to make or divide an estate, but was a holiday guest. Such omissions judge the church; as the compromise made with the slaveholder, not much noticed at first, every day appears more flagrant mischief to the American constitution. But now the purists are looking into all these matters. The more intelligent are growing uneasy on the subject of Marriage. They wish to see the character represented also in that covenant. There shall be nothing brutal in it, but it shall honor the man and the woman, as much as the most diffusive and universal action. Grimly the same spirit looks into the law of Property, and accuses men of driving a trade in the great boundless providence which had given the air, the water, and the land to men, to use and not to fence in and monopolize. It casts its eye on Trade, and Day Labor, and so it goes up and down, paving the earth with eyes, destroying privacy, and making thorough-lights. Is all this for nothing? Do you suppose that the reforms, which are preparing, will be as superficial as those we know?

By the books it reads and translates, judge what books it will presently print. A great deal of the profoundest thinking of antiquity, which had become as good as obsolete for us, is now re-appearing in extracts and allusions, and in twenty years will get all printed anew. See how daring is the reading, the speculation, the experimenting of the time. If now some genius shall arise who could unite these scattered rays! And always such a genius does embody the ideas of each time. Here is great variety and richness of mysticism, each part of which now only disgusts, whilst it forms the sole thought of some poor Perfectionist or

“Comer out,” yet, when it shall be taken up as the garniture of some profound and all-reconciling thinker, will appear the rich and appropriate decoration of his robes.

These reforms are our contemporaries; they are ourselves; our own light, and sight, and conscience; they only name the relation which subsists between us and the vicious institutions which they go to rectify. They are the simplest statements of man in these matters; the plain right and wrong. I cannot choose but allow and honor them. The impulse is good, and the theory; the practice is less beautiful. The Reformers affirm the inward life, but they do not trust it, but use outward and vulgar means. They do not rely on precisely that strength which wins me to their cause; not on love, not on a principle, but on men, on multitudes, on circumstances, on money, on party; that is, on fear, on wrath, and pride. The love which lifted men to the sight of these better ends, was the true and best distinction of this time, the disposition to trust a principle more than a material force. I think *that* the soul of reform; the conviction, that not sensualism, not slavery, not war, not imprisonment, not even government, are needed, — but in lieu of them all, reliance on the sentiment of man, which will work best the more it is trusted; not reliance on numbers, but, contrariwise, distrust of numbers, and the feeling that then are we strongest, when most private and alone. The young men, who have been vexing society for these last years with regenerative methods, seem to have made this mistake; they all exaggerated some special means, and all failed to see that the Reform of Reforms must be accomplished without means.

The Reforms have their high origin in an ideal justice, but they do not retain the purity of an idea. They are quickly organized in some low, inadequate form, and present no more poetic image to the mind, than the evil tradition which they reprobated. They mix the fire of the moral sentiment with personal and party heats, with measureless exaggerations, and the blindness that prefers some darling measure to justice and truth. Those, who are urging with most ardor what are called the greatest benefits of mankind, are narrow, self-pleasing, conceited men, and affect us as the insane do. They bite us, and we run mad also. I think the work of the reformer as innocent as other work that is done around him; but when I have seen it near, I do not like it better. It is done in the same way, it is done profanely, not piously; by management, by tactics, and clamor. It is a buzz in the ear. I cannot feel any pleasure in sacrifices which display to me such partiality of character. We do not want actions, but men; not a chemical drop of water, but rain; the spirit that sheds and showers actions, countless, endless actions. You have on some occasion played a bold part. You have set your heart and face against society, when you thought it wrong, and returned it frown for

frown. Excellent: now can you afford to forget it, reckoning all your action no more than the passing of your hand through the air, or a little breath of your mouth? The world leaves no track in space, and the greatest action of man no mark in the vast idea. To the youth diffident of his ability, and full of compunction at his unprofitable existence, the temptation is always great to lend himself to public movements, and as one of a party accomplish what he cannot hope to effect alone. But he must resist the degradation of a man to a measure. I must act with truth, though I should never come to act, as you call it, with effect. I must consent to inaction. A patience which is grand; a brave and cold neglect of the offices which prudence exacts, so it be done in a deep, upper piety; a consent to solitude and inaction, which proceeds out of an unwillingness to violate character, is the century which makes the gem. Whilst therefore I desire to express the respect and joy I feel before this sublime connection of reforms, now in their infancy around us, I urge the more earnestly the paramount duties of self-reliance. I cannot find language of sufficient energy to convey my sense of the sacredness of private integrity. All men, all things, the state, the church, yea the friends of the heart are phantasms and unreal beside the sanctuary of the heart. With so much awe, with so much fear, let it be respected.

The great majority of men, unable to judge of any principle until its light falls on a fact, are not aware of the evil that is around them, until they see it in some gross form, as in a class of intemperate men, or slaveholders, or soldiers, or fraudulent persons. Then they are greatly moved; and magnifying the importance of that wrong, they fancy that if that abuse were redressed, all would go well, and they fill the land with clamor to correct it. Hence the missionary and other religious efforts. If every island and every house had a Bible, if every child was brought into the Sunday School, would the wounds of the world heal, and man be upright?

But the man of ideas, accounting the circumstance nothing, judges of the commonwealth from the state of his own mind. 'If,' he says, 'I am selfish, then is there slavery, or the effort to establish it, wherever I go. But if I am just, then is there no slavery, let the laws say what they will. For if I treat all men as gods, how to me can there be such a thing as a slave?' But how frivolous is your war against circumstances. This denouncing philanthropist is himself a slave holder in every word and look. Does he free me? Does he cheer me? He is the state of Georgia, or Alabama, with their sanguinary slave-laws walking here on our north-eastern shores. We are all thankful he has no more political power, as we are fond of liberty ourselves. I am afraid our virtue is a little geographical. I am not mortified by our vice; that is obduracy; it colors and palter, it curses and swears, and I can see to the end of it; but, I own, our virtue makes me ashamed;

so sour and narrow, so thin and blind, virtue so vice-like. Then again, how trivial seem the contests of the abolitionist, whilst he aims merely at the circumstance of the slave. Give the slave the least elevation of religious sentiment, and he is no slave: you are the slave: he not only in his humility feels his superiority, feels that much deplored condition of his to be a fading trifle, but he makes you feel it too. He is the master. The exaggeration, which our young people make of his wrongs, characterizes themselves. What are no trifles to them, they naturally think are no trifles to Pompey.

We say, then, that the reforming movement is sacred in its origin; in its management and details timid and profane. These benefactors hope to raise man by improving his circumstances: by combination of that which is dead, they hope to make something alive. In vain. By new infusions alone of the spirit by which he is made and directed, can he be re-made and reinforced. The sad Pestalozzi, who shared with all ardent spirits the hope of Europe on the outbreak of the French Revolution, after witnessing its sequel, recorded his conviction, that "the amelioration of outward circumstances will be the effect, but can never be the means of mental and moral improvement." Quitting now the class of actors, let us turn to see how it stands with the other class of which we spoke, namely, the students.

A new disease has fallen on the life of man. Every Age, like every human body, has its own distemper. Other times have had war, or famine, or a barbarism domestic or bordering, as their antagonism. Our forefathers walked in the world and went to their graves, tormented with the fear of Sin, and the terror of the Day of Judgment. These terrors have lost their force, and our torment is Unbelief, the Uncertainty as to what we ought to do; the distrust of the value of what we do, and the distrust that the Necessity (which we all at last believe in) is fair and beneficent. Our Religion assumes the negative form of rejection. Out of love of the true, we repudiate the false: and the Religion is an abolishing criticism. A great perplexity hangs like a cloud on the brow of all cultivated persons, a certain imbecility in the best spirits, which distinguishes the period. We do not find the same trait in the Arabian, in the Hebrew, in Greek, Roman, Norman, English periods; no, but in other men a natural firmness. The men did not see beyond the need of the hour. They planted their foot strong, and doubted nothing. We mistrust every step we take. We find it the worst thing about time, that we know not what to do with it. We are so sharp-sighted that we can neither work nor think, neither read Plato nor not read him.

Then there is what is called a too intellectual tendency. Can there be too much intellect? We have never met with any such excess. But the criticism, which is levelled at the laws and manners, ends in thought, without causing a new method

of life. The genius of the day does not incline to a deed, but to a beholding. It is not that men do not wish to act; they pine to be employed, but are paralyzed by the uncertainty what they should do. The inadequacy of the work to the faculties, is the painful perception which keeps them still. This happens to the best. Then, talents bring their usual temptations, and the current literature and poetry with perverse ingenuity draw us away from life to solitude and meditation. This could well be borne, if it were great and involuntary; if the men were ravished by their thought, and hurried into ascetic extravagances. Society could then manage to release their shoulder from its wheel, and grant them for a time this privilege of sabbath. But they are not so. Thinking, which was a rage, is become an art. The thinker gives me results, and never invites me to be present with him at his invocation of truth, and to enjoy with him its proceeding into his mind.

So little action amidst such audacious and yet sincere profession, that we begin to doubt if that great revolution in the art of war, which has made it a game of posts instead of a game of battles, has not operated on Reform; whether this be not also a war of posts, a paper blockade, in which each party is to display the utmost resources of his spirit and belief, and no conflict occur; but the world shall take that course which the demonstration of the truth shall indicate.

But we must pay for being too intellectual, as they call it. People are not as light-hearted for it. I think men never loved lifeless. I question if care and doubt ever wrote their names so legibly on the faces of any population. This *Ennui*, for which we Saxons had no name, this word of France has got a terrific significance. It shortens life, and bereaves the day of its light. Old age begins in the nursery, and before the young American is put into jacket and trowsers, he says, 'I want something which I never saw before;' and 'I wish I was not I.' I have seen the same gloom on the brow even of those adventurers from the intellectual class, who had dived deepest and with most success into active life. I have seen the authentic act of anxiety and perplexity on the greatest forehead of the state. The canker worms have crawled to the topmost bough of the wild elm, and swing down from that. Is there less oxygen in the atmosphere? What has checked in this age the animal spirits which gave to our forefathers their bounding pulse?

But have a little patience with this melancholy humor. Their unbelief arises out of a greater Belief; their inaction out of a scorn of inadequate action. By the side of these men, the hot agitators have a certain cheap and ridiculous air; they even look smaller than the others. Of the two, I own, I like the speculators best. They have some piety which looks with faith to a fair Future, unprofaned by rash and unequal attempts to realize it. And truly we shall find much to console us, when we consider the cause of their uneasiness. It is the love of greatness, it is

the need of harmony, the contrast of the dwarfish Actual with the exorbitant Idea. No man can compare the ideas and aspirations of the innovators of the present day, with those of former periods, without feeling how great and high this criticism is. The revolutions that impend over society are not now from ambition and rapacity, from impatience of one or another form of government, but from new modes of thinking, which shall recompose society after a new order, which shall animate labor by love and science, which shall destroy the value of many kinds of property, and replace all property within the dominion of reason and equity. There was never so great a thought laboring in the breasts of men, as now. It almost seems as if what was aforesaid spoken fabulously and hieroglyphically, was now spoken plainly, the doctrine, namely, of the indwelling of the Creator in man. The spiritualist wishes this only, that the spiritual principle should be suffered to demonstrate itself to the end, in all possible applications to the state of man, without the admission of anything unspiritual, that is, anything positive, dogmatic, or personal. The excellence of this class consists in this, that they have believed; that, affirming the need of new and higher modes of living and action, they have abstained from the recommendation of low methods. Their fault is that they have stopped at the intellectual perception; that their will is not yet inspired from the Fountain of Love. But whose fault is this? and what a fault, and to what inquiry does it lead! We have come to that which is the spring of all power, of beauty and virtue, of art and poetry; and who shall tell us according to what law its inspirations and its informations are given or withholden?

I do not wish to be guilty of the narrowness and pedantry of inferring the tendency and genius of the Age from a few and insufficient facts or persons. Every age has a thousand sides and signs and tendencies; and it is only when surveyed from inferior points of view, that great varieties of character appear. Our time too is full of activity and performance. Is there not something comprehensive in the grasp of a society which to great mechanical invention, and the best institutions of property, adds the most daring theories; which explores the subtlest and most universal problems? At the manifest risk of repeating what every other Age has thought of itself, we might say, we think the Genius of this Age more philosophical than any other has been, righter in its aims, truer, with less fear, less fable, less mixture of any sort.

But turn it how we will, as we ponder this meaning of the times, every new thought drives us to the deep fact, that the Time is the child of the Eternity. The main interest which any aspects of the Times can have for us, is the great spirit which gazes through them, the light which they can shed on the wonderful questions, What we are? and Whither we tend? We do not wish to be deceived.

Here we drift, like white sail across the wild ocean, now bright on the wave, now darkling in the trough of the sea; — but from what port did we sail? Who knows? Or to what port are we bound? Who knows? There is no one to tell us but such poor weather-tossed mariners as ourselves, whom we speak as we pass, or who have hoisted some signal, or floated to us some letter in a bottle from far. But what know they more than we? They also found themselves on this wondrous sea. No; from the older sailors, nothing. Over all their speaking-trumpets, the gray sea and the loud winds answer, Not in us; not in Time. Where then but in Ourselves, where but in that Thought through which we communicate with absolute nature, and are made aware that, whilst we shed the dust of which we are built, grain by grain, till it is all gone, the law which clothes us with humanity remains new? where, but in the intuitions which are vouchsafed us from within, shall we learn the Truth? Faithless, faithless, we fancy that with the dust we depart and are not; and do not know that the law and the perception of the law are at last one; that only as much as the law enters us, becomes us, we are living men, — immortal with the immortality of this law. Underneath all these appearances, lies that which is, that which lives, that which causes. This ever renewing generation of appearances rests on a reality, and a reality that is alive.

To a true scholar the attraction of the aspects of nature, the departments of life, and the passages of his experience, is simply the information they yield him of this supreme nature which lurks within all. That reality, that causing force is moral. The Moral Sentiment is but its other name. It makes by its presence or absence right and wrong, beauty and ugliness, genius or depravation. As the granite comes to the surface, and towers into the highest mountains, and, if we dig down, we find it below the superficial strata, so in all the details of our domestic or civil life, is hidden the elemental reality, which ever and anon comes to the surface, and forms the grand men, who are the leaders and examples, rather than the companions of the race. The granite is curiously concealed under a thousand formations and surfaces, under fertile soils, and grasses, and flowers, under well-manured, arable fields, and large towns and cities, but it makes the foundation of these, and is always indicating its presence by slight but sure signs. So is it with the Life of our life; so close does that also hide. I read it in glad and in weeping eyes: I read it in the pride and in the humility of people: it is recognized in every bargain and in every complaisance, in every criticism, and in all praise: it is voted for at elections; it wins the cause with juries; it rides the stormy eloquence of the senate, sole victor; histories are written of it, holidays decreed to it; statues, tombs, churches, built to its honor; yet men seem to fear and to shun it, when it comes barely to view in our immediate neighborhood.

For that reality let us stand: that let us serve, and for that speak. Only as far as *that* shines through them, are these times or any times worth consideration. I wish to speak of the politics, education, business, and religion around us, without ceremony or false deference. You will absolve me from the charge of flippancy, or malignity, or the desire to say smart things at the expense of whomsoever, when you see that reality is all we prize, and that we are bound on our entrance into nature to speak for that. Let it not be recorded in our own memories, that in this moment of the Eternity, when we who were named by our names, flitted across the light, we were afraid of any fact, or disgraced the fair Day by a pusillanimous preference of our bread to our freedom. What is the scholar, what is the man *for*, but for hospitality to every new thought of his time? Have you leisure, power, property, friends? you shall be the asylum and patron of every new thought, every unproven opinion, every untried project, which proceeds out of good will and honest seeking. All the newspapers, all the tongues of to-day will of course at first defame what is noble; but you who hold not of to-day, not of the times, but of the Everlasting, are to stand for it: and the highest compliment man ever receives from heaven, is the sending to him its disguised and discredited angels.

THE CONSERVATIVE

A Lecture delivered at the Masonic Temple, Boston, December 9, 1841

The two parties which divide the state, the party of Conservatism and that of Innovation, are very old, and have disputed the possession of the world ever since it was made. This quarrel is the subject of civil history. The conservative party established the reverend hierarchies and monarchies of the most ancient world. The battle of patrician and plebeian, of parent state and colony, of old usage and accommodation to new facts, of the rich and the poor, reappears in all countries and times. The war rages not only in battle-fields, in national councils, and ecclesiastical synods, but agitates every man's bosom with opposing advantages every hour. On rolls the old world meantime, and now one, now the other gets the day, and still the fight renews itself as if for the first time, under new names and hot personalities.

Such an irreconcilable antagonism, of course, must have a correspondent depth of seat in the human constitution. It is the opposition of Past and Future, of Memory and Hope, of the Understanding and the Reason. It is the primal antagonism, the appearance in trifles of the two poles of nature.

There is a fragment of old fable which seems somehow to have been dropped from the current mythologies, which may deserve attention, as it appears to relate to this subject.

Saturn grew weary of sitting alone, or with none but the great Uranus or Heaven beholding him, and he created an oyster. Then he would act again, but he made nothing more, but went on creating the race of oysters. Then Uranus cried, 'a new work, O Saturn! the old is not good again.'

Saturn replied. 'I fear. There is not only the alternative of making and not making, but also of unmaking. Seest thou the great sea, how it ebbs and flows? so is it with me; my power ebbs; and if I put forth my hands, I shall not do, but undo. Therefore I do what I have done; I hold what I have got; and so I resist Night and Chaos.'

'O Saturn,' replied Uranus, 'thou canst not hold thine own, but by making more. Thy oysters are barnacles and cockles, and with the next flowing of the tide, they will be pebbles and sea-foam.'

'I see,' rejoins Saturn, 'thou art in league with Night, thou art become an evil eye; thou spakest from love; now thy words smite me with hatred. I appeal to Fate, must there not be rest?' 'I appeal to Fate also,' said Uranus, 'must there not be motion?' But Saturn was silent, and went on making oysters for a

thousand years.

After that, the word of Uranus came into his mind like a ray of the sun, and he made Jupiter; and then he feared again; and nature froze, the things that were made went backward, and, to save the world, Jupiter slew his father Saturn.

This may stand for the earliest account of a conversation on politics between a Conservative and a Radical, which has come down to us. It is ever thus. It is the counteraction of the centripetal and the centrifugal forces. Innovation is the salient energy; Conservatism the pause on the last movement. 'That which is was made by God,' saith Conservatism. 'He is leaving that, he is entering this other;' rejoins Innovation.

There is always a certain meanness in the argument of conservatism, joined with a certain superiority in its fact. It affirms because it holds. Its fingers clutch the fact, and it will not open its eyes to see a better fact. The castle, which conservatism is set to defend, is the actual state of things, good and bad. The project of innovation is the best possible state of things. Of course, conservatism always has the worst of the argument, is always apologizing, pleading a necessity, pleading that to change would be to deteriorate; it must saddle itself with the mountainous load of the violence and vice of society, must deny the possibility of good, deny ideas, and suspect and stone the prophet; whilst innovation is always in the right, triumphant, attacking, and sure of final success. Conservatism stands on man's confessed limitations; reform on his indisputable infinitude; conservatism on circumstance; liberalism on power; one goes to make an adroit member of the social frame; the other to postpone all things to the man himself; conservatism is debonnaire and social; reform is individual and imperious. We are reformers in spring and summer; in autumn and winter, we stand by the old; reformers in the morning, conservers at night. Reform is affirmative, conservatism negative; conservatism goes for comfort, reform for truth. Conservatism is more candid to behold another's worth; reform more disposed to maintain and increase its own. Conservatism makes no poetry, breathes no prayer, has no invention; it is all memory. Reform has no gratitude, no prudence, no husbandry. It makes a great difference to your figure and to your thought, whether your foot is advancing or receding. Conservatism never puts the foot forward; in the hour when it does that, it is not establishment, but reform. Conservatism tends to universal seeming and treachery, believes in a negative fate; believes that men's temper governs them; that for me, it avails not to trust in principles; they will fail me; I must bend a little; it distrusts nature; it thinks there is a general law without a particular application, law for all that does not include any one. Reform in its antagonism inclines to asinine resistance, to kick with hoofs; it runs to egotism and bloated self-conceit; it runs to a

bodiless pretension, to unnatural refining and elevation, which ends in hypocrisy and sensual reaction.

And so whilst we do not go beyond general statements, it may be safely affirmed of these two metaphysical antagonists, that each is a good half, but an impossible whole. Each exposes the abuses of the other, but in a true society, in a true man, both must combine. Nature does not give the crown of its approbation, namely, beauty, to any action or emblem or actor, but to one which combines both these elements; not to the rock which resists the waves from age to age, nor to the wave which lashes incessantly the rock, but the superior beauty is with the oak which stands with its hundred arms against the storms of a century, and grows every year like a sapling; or the river which ever flowing, yet is found in the same bed from age to age; or, greatest of all, the man who has subsisted for years amid the changes of nature, yet has distanced himself, so that when you remember what he was, and see what he is, you say, what strides! what a disparity is here!

Throughout nature the past combines in every creature with the present. Each of the convolutions of the sea-shell, each node and spine marks one year of the fish's life, what was the mouth of the shell for one season, with the addition of new matter by the growth of the animal, becoming an ornamental node. The leaves and a shell of soft wood are all that the vegetation of this summer has made, but the solid columnar stem, which lifts that bank of foliage into the air to draw the eye and to cool us with its shade, is the gift and legacy of dead and buried years.

In nature, each of these elements being always present, each theory has a natural support. As we take our stand on Necessity, or on Ethics, shall we go for the conservative, or for the reformer. If we read the world historically, we shall say, Of all the ages, the present hour and circumstance is the cumulative result; this is the best throw of the dice of nature that has yet been, or that is yet possible. If we see it from the side of Will, or the Moral Sentiment, we shall accuse the Past and the Present, and require the impossible of the Future.

But although this bifold fact lies thus united in real nature, and so united that no man can continue to exist in whom both these elements do not work, yet men are not philosophers, but are rather very foolish children, who, by reason of their partiality, see everything in the most absurd manner, and are the victims at all times of the nearest object. There is even no philosopher who is a philosopher at all times. Our experience, our perception is conditioned by the need to acquire in parts and in succession, that is, with every truth a certain falsehood. As this is the invariable method of our training, we must give it allowance, and suffer men to learn as they have done for six millenniums, a word at a time, to pair off into

insane parties, and learn the amount of truth each knows, by the denial of an equal amount of truth. For the present, then, to come at what sum is attainable to us, we must even hear the parties plead as parties.

That which is best about conservatism, that which, though it cannot be expressed in detail, inspires reverence in all, is the Inevitable. There is the question not only, what the conservative says for himself? but, why must he say it? What insurmountable fact binds him to that side? Here is the fact which men call Fate, and fate in dread degrees, fate behind fate, not to be disposed of by the consideration that the Conscience commands this or that, but necessitating the question, whether the faculties of man will play him true in resisting the facts of universal experience? For although the commands of the Conscience are *essentially* absolute, they are *historically* limitary. Wisdom does not seek a literal rectitude, but an useful, that is, a conditioned one, such a one as the faculties of man and the constitution of things will warrant. The reformer, the partisan loses himself in driving to the utmost some specialty of right conduct, until his own nature and all nature resist him; but Wisdom attempts nothing enormous and disproportioned to its powers, nothing which it cannot perform or nearly perform. We have all a certain intellection or presentiment of reform existing in the mind, which does not yet descend into the character, and those who throw themselves blindly on this lose themselves. Whatever they attempt in that direction, fails, and reacts suicidally on the actor himself. This is the penalty of having transcended nature. For the existing world is not a dream, and cannot with impunity be treated as a dream; neither is it a disease; but it is the ground on which you stand, it is the mother of whom you were born. Reform converses with possibilities, perchance with impossibilities; but here is sacred fact. This also was true, or it could not be: it had life in it, or it could not have existed; it has life in it, or it could not continue. Your schemes may be feasible, or may not be, but this has the endorsement of nature and a long friendship and cohabitation with the powers of nature. This will stand until a better cast of the dice is made. The contest between the Future and the Past is one between Divinity entering, and Divinity departing. You are welcome to try your experiments, and, if you can, to displace the actual order by that ideal republic you announce, for nothing but God will expel God. But plainly the burden of proof must lie with the projector. We hold to this, until you can demonstrate something better.

The system of property and law goes back for its origin to barbarous and sacred times; it is the fruit of the same mysterious cause as the mineral or animal world. There is a natural sentiment and prepossession in favor of age, of ancestors, of barbarous and aboriginal usages, which is a homage to the element of necessity and divinity which is in them. The respect for the old names of

places, of mountains, and streams, is universal. The Indian and barbarous name can never be supplanted without loss. The ancients tell us that the gods loved the Ethiopians for their stable customs; and the Egyptians and Chaldeans, whose origin could not be explored, passed among the junior tribes of Greece and Italy for sacred nations.

Moreover, so deep is the foundation of the existing social system, that it leaves no one out of it. We may be partial, but Fate is not. All men have their root in it. You who quarrel with the arrangements of society, and are willing to embroil all, and risk the indisputable good that exists, for the chance of better, live, move, and have your being in this, and your deeds contradict your words every day. For as you cannot jump from the ground without using the resistance of the ground, nor put out the boat to sea, without shoving from the shore, nor attain liberty without rejecting obligation, so you are under the necessity of using the Actual order of things, in order to disuse it; to live by it, whilst you wish to take away its life. The past has baked your loaf, and in the strength of its bread you would break up the oven. But you are betrayed by your own nature. You also are conservatives. However men please to style themselves, I see no other than a conservative party. You are not only identical with us in your needs, but also in your methods and aims. You quarrel with my conservatism, but it is to build up one of your own; it will have a new beginning, but the same course and end, the same trials, the same passions; among the lovers of the new I observe that there is a jealousy of the newest, and that the seceder from the seceder is as damnable as the pope himself. On these and the like grounds of general statement, conservatism plants itself without danger of being displaced. Especially before this *personal* appeal, the innovator must confess his weakness, must confess that no man is to be found good enough to be entitled to stand champion for the principle. But when this great tendency comes to practical encounters, and is challenged by young men, to whom it is no abstraction, but a fact of hunger, distress, and exclusion from opportunities, it must needs seem injurious. The youth, of course, is an innovator by the fact of his birth. There he stands, newly born on the planet, a universal beggar, with all the reason of things, one would say, on his side. In his first consideration how to feed, clothe, and warm himself, he is met by warnings on every hand, that this thing and that thing have owners, and he must go elsewhere. Then he says; If I am born into the earth, where is my part? have the goodness, gentlemen of this world, to show me my wood-lot, where I may fell my wood, my field where to plant my corn, my pleasant ground where to build my cabin.

‘Touch any wood, or field, or house-lot, on your peril,’ cry all the gentlemen of this world; ‘but you may come and work in ours, for us, and we will give you

a piece of bread.'

And what is that peril?

Knives and muskets, if we meet you in the act; imprisonment, if we find you afterward.

And by what authority, kind gentlemen?

By our law.

And your law, is it just?

As just for you as it was for us. We wrought for others under this law, and got our lands so.

I repeat the question, Is your law just?

Not quite just, but necessary. Moreover, it is juster now than it was when we were born; we have made it milder and more equal.

I will none of your law, returns the youth; it encumbers me. I cannot understand, or so much as spare time to read that needless library of your laws. Nature has sufficiently provided me with rewards and sharp penalties, to bind me not to transgress. Like the Persian noble of old, I ask "that I may neither command nor obey." I do not wish to enter into your complex social system. I shall serve those whom I can, and they who can will serve me. I shall seek those whom I love, and shun those whom I love not, and what more can all your laws render me?

With equal earnestness and good faith, replies to this plaintiff an upholder of the establishment, a man of many virtues:

Your opposition is feather-brained and overfine. Young man, I have no skill to talk with you, but look at me; I have risen early and sat late, and toiled honestly, and painfully for very many years. I never dreamed about methods; I laid my bones to, and drudged for the good I possess; it was not got by fraud, nor by luck, but by work, and you must show me a warrant like these stubborn facts in your own fidelity and labor, before I suffer you, on the faith of a few fine words, to ride into my estate, and claim to scatter it as your own.

Now you touch the heart of the matter, replies the reformer. To that fidelity and labor, I pay homage. I am unworthy to arraign your manner of living, until I too have been tried. But I should be more unworthy, if I did not tell you why I cannot walk in your steps. I find this vast network, which you call property, extended over the whole planet. I cannot occupy the bleakest crag of the White Hills or the Alleghany Range, but some man or corporation steps up to me to show me that it is his. Now, though I am very peaceable, and on my private account could well enough die, since it appears there was some mistake in my creation, and that I have been *missent* to this earth, where all the seats were already taken, yet I feel called upon in behalf of rational nature, which I

represent, to declare to you my opinion, that, if the Earth is yours, so also is it mine. All your aggregate existences are less to me a fact than is my own; as I am born to the earth, so the Earth is given to me, what I want of it to till and to plant; nor could I, without pusillanimity, omit to claim so much. I must not only have a name to live, I must live. My genius leads me to build a different manner of life from any of yours. I cannot then spare you the whole world. I love you better. I must tell you the truth practically; and take that which you call yours. It is God's world and mine; yours as much as you want, mine as much as I want. Besides, I know your ways; I know the symptoms of the disease. To the end of your power, you will serve this lie which cheats you. Your want is a gulf which the possession of the broad earth would not fill. Yonder sun in heaven you would pluck down from shining on the universe, and make him a property and privacy, if you could; and the moon and the north star you would quickly have occasion for in your closet and bed-chamber. What you do not want for use, you crave for ornament, and what your convenience could spare, your pride cannot.

On the other hand, precisely the defence which was set up for the British Constitution, namely, that with all its admitted defects, rotten boroughs and monopolies, it worked well, and substantial justice was somehow done; the wisdom and the worth did get into parliament, and every interest did by right, or might, or sleight, get represented; the same defence is set up for the existing institutions. They are not the best; they are not just; and in respect to you, personally, O brave young man! they cannot be justified. They have, it is most true, left you no acre for your own, and no law but our law, to the ordaining of which, you were no party. But they do answer the end, they are really friendly to the good; unfriendly to the bad; they second the industrious, and the kind; they foster genius. They really have so much flexibility as to afford your talent and character, on the whole, the same chance of demonstration and success which they might have, if there was no law and no property.

It is trivial and merely superstitious to say that nothing is given you, no outfit, no exhibition; for in this institution of *credit*, which is as universal as honesty and promise in the human countenance, always some neighbor stands ready to be bread and land and tools and stock to the young adventurer. And if in any one respect they have come short, see what ample retribution of good they have made. They have lost no time and spared no expense to collect libraries, museums, galleries, colleges, palaces, hospitals, observatories, cities. The ages have not been idle, nor kings slack, nor the rich niggardly. Have we not atoned for this small offence (which we could not help) of leaving you no right in the soil, by this splendid indemnity of ancestral and national wealth? Would you have been born like a gipsy in a hedge, and preferred your freedom on a heath,

and the range of a planet which had no shed or boschage to cover you from sun and wind, to this towered and citted world? to this world of Rome, and Memphis, and Constantinople, and Vienna, and Paris, and London, and New York? For thee Naples, Florence, and Venice, for thee the fair Mediterranean, the sunny Adriatic; for thee both Indies smile; for thee the hospitable North opens its heated palaces under the polar circle; for thee roads have been cut in every direction across the land, and fleets of floating palaces with every security for strength, and provision for luxury, swim by sail and by steam through all the waters of this world. Every island for thee has a town; every town a hotel. Though thou wast born landless, yet to thy industry and thrift and small condescension to the established usage, scores of servants are swarming in every strange place with cap and knee to thy command, scores, nay hundreds and thousands, for thy wardrobe, thy table, thy chamber, thy library, thy leisure; and every whim is anticipated and served by the best ability of the whole population of each country. The king on the throne governs for thee, and the judge judges; the barrister pleads, the farmer tills, the joiner hammers, the postman rides. Is it not exaggerating a trifle to insist on a formal acknowledgment of your claims, when these substantial advantages have been secured to you? Now can your children be educated, your labor turned to their advantage, and its fruits secured to them after your death. It is frivolous to say, you have no acre, because you have not a mathematically measured piece of land. Providence takes care that you shall have a place, that you are waited for, and come accredited; and, as soon as you put your gift to use, you shall have acre or acre's worth according to your exhibition of desert, acre, if you need land; acre's worth, if you prefer to draw, or carve, or make shoes, or wheels, to the tilling of the soil.

Besides, it might temper your indignation at the supposed wrong which society has done you, to keep the question before you, how society got into this predicament? Who put things on this false basis? No single man, but all men. No man voluntarily and knowingly; but it is the result of that degree of culture there is in the planet. The order of things is as good as the character of the population permits. Consider it as the work of a great and beneficent and progressive necessity, which, from the first pulsation of the first animal life, up to the present high culture of the best nations, has advanced thus far. Thank the rude fostermother though she has taught you a better wisdom than her own, and has set hopes in your heart which shall be history in the next ages. You are yourself the result of this manner of living, this foul compromise, this vituperated Sodom. It nourished you with care and love on its breast, as it had nourished many a lover of the right, and many a poet, and prophet, and teacher of men. Is it so irremediably bad? Then again, if the mitigations are considered, do not all the

mischiefs virtually vanish? The form is bad, but see you not how every personal character reacts on the form, and makes it new? A strong person makes the law and custom null before his own will. Then the principle of love and truth reappears in the strictest courts of fashion and property. Under the richest robes, in the darlings of the selectest circles of European or American aristocracy, the strong heart will beat with love of mankind, with impatience of accidental distinctions, with the desire to achieve its own fate, and make every ornament it wears authentic and real.

Moreover, as we have already shown that there is no pure reformer, so it is to be considered that there is no pure conservative, no man who from the beginning to the end of his life maintains the defective institutions; but he who sets his face like a flint against every novelty, when approached in the confidence of conversation, in the presence of friendly and generous persons, has also his gracious and relenting motions, and espouses for the time the cause of man; and even if this be a shortlived emotion, yet the remembrance of it in private hours mitigates his selfishness and compliance with custom.

The Friar Bernard lamented in his cell on Mount Cenis the crimes of mankind, and rising one morning before day from his bed of moss and dry leaves, he gnawed his roots and berries, drank of the spring, and set forth to go to Rome to reform the corruption of mankind. On his way he encountered many travellers who greeted him courteously; and the cabins of the peasants and the castles of the lords supplied his few wants. When he came at last to Rome, his piety and good will easily introduced him to many families of the rich, and on the first day he saw and talked with gentle mothers with their babes at their breasts, who told him how much love they bore their children, and how they were perplexed in their daily walk lest they should fail in their duty to them. 'What!' he said, 'and this on rich embroidered carpets, on marble floors, with cunning sculpture, and carved wood, and rich pictures, and piles of books about you?' 'Look at our pictures and books,' they said, 'and we will tell you, good Father, how we spent the last evening. These are stories of godly children and holy families and romantic sacrifices made in old or in recent times by great and not mean persons; and last evening, our family was collected, and our husbands and brothers discoursed sadly on what we could save and give in the hard times.' Then came in the men, and they said, 'What cheer, brother? Does thy convent want gifts?' Then the friar Bernard went home swiftly with other thoughts than he brought, saying, 'This way of life is wrong, yet these Romans, whom I prayed God to destroy, are lovers, they are lovers; what can I do?'

The reformer concedes that these mitigations exist, and that, if he proposed comfort, he should take sides with the establishment. Your words are excellent,

but they do not tell the whole. Conservatism is affluent and openhanded, but there is a cunning juggle in riches. I observe that they take somewhat for everything they give. I look bigger, but am less; I have more clothes, but am not so warm; more armor, but less courage; more books, but less wit. What you say of your planted, builded and decorated world, is true enough, and I gladly avail myself of its convenience; yet I have remarked that what holds in particular, holds in general, that the plant Man does not require for his most glorious flowering this pomp of preparation and convenience, but the thoughts of some beggarly Homer who strolled, God knows when, in the infancy and barbarism of the old world; the gravity and sense of some slave Moses who leads away his fellow slaves from their masters; the contemplation of some Scythian Anacharsis; the erect, formidable valor of some Dorian townsmen in the town of Sparta; the vigor of Clovis the Frank, and Alfred the Saxon, and Alaric the Goth, and Mahomet, Ali, and Omar the Arabians, Saladin the Curd, and Othman the Turk, sufficed to build what you call society, on the spot and in the instant when the sound mind in a sound body appeared. Rich and fine is your dress, O conservatism! your horses are of the best blood; your roads are well cut and well paved; your pantry is full of meats and your cellar of wines, and a very good state and condition are you for gentlemen and ladies to live under; but every one of these goods steals away a drop of my blood. I want the necessity of supplying my own wants. All this costly culture of yours is not necessary. Greatness does not need it. Yonder peasant, who sits neglected there in a corner, carries a whole revolution of man and nature in his head, which shall be a sacred history to some future ages. For man is the end of nature; nothing so easily organizes itself in every part of the universe as he; no moss, no lichen is so easily born; and he takes along with him and puts out from himself the whole apparatus of society and condition *extempore*, as an army encamps in a desert, and where all was just now blowing sand, creates a white city in an hour, a government, a market, a place for feasting, for conversation, and for love.

These considerations, urged by those whose characters and whose fortunes are yet to be formed, must needs command the sympathy of all reasonable persons. But beside that charity which should make all adult persons interested for the youth, and engage them to see that he has a free field and fair play on his entrance into life, we are bound to see that the society, of which we compose a part, does not permit the formation or continuance of views and practices injurious to the honor and welfare of mankind. The objection to conservatism, when embodied in a party, is, that in its love of acts, it hates principles; it lives in the senses, not in truth; it sacrifices to despair; it goes for availableness in its candidate, not for worth; and for expediency in its measures, and not for the

right. Under pretence of allowing for friction, it makes so many additions and supplements to the machine of society, that it will play smoothly and softly, but will no longer grind any grist.

The conservative party in the universe concedes that the radical would talk sufficiently to the purpose, if we were still in the garden of Eden; he legislates for man as he ought to be; his theory is right, but he makes no allowance for friction; and this omission makes his whole doctrine false. The idealist retorts, that the conservative falls into a far more noxious error in the other extreme. The conservative assumes sickness as a necessity, and his social frame is a hospital, his total legislation is for the present distress, a universe in slippers and flannels, with bib and papspoon, swallowing pills and herb-tea. Sickness gets organized as well as health, the vice as well as the virtue. Now that a vicious system of trade has existed so long, it has stereotyped itself in the human generation, and misers are born. And now that sickness has got such a foot-hold, leprosy has grown cunning, has got into the ballot-box; the lepers outvote the clean; society has resolved itself into a Hospital Committee, and all its laws are quarantine. If any man resist, and set up a foolish hope he has entertained as good against the general despair, society frowns on him, shuts him out of her opportunities, her granaries, her refectories, her water and bread, and will serve him a sexton's turn. Conservatism takes as low a view of every part of human action and passion. Its religion is just as bad; a lozenge for the sick; a dolorous tune to beguile the distemper; mitigations of pain by pillows and anodynes; always mitigations, never remedies; pardons for sin, funeral honors, never self-help, renovation, and virtue. Its social and political action has no better aim; to keep out wind and weather, to bring the day and year about, and make the world last our day; not to sit on the world and steer it; not to sink the memory of the past in the glory of a new and more excellent creation; a timid cobbler and patcher, it degrades whatever it touches. The cause of education is urged in this country with the utmost earnestness, on what ground? why on this, that the people have the power, and if they are not instructed to sympathize with the intelligent, reading, trading, and governing class, inspired with a taste for the same competitions and prizes, they will upset the fair pageant of Judicature, and perhaps lay a hand on the sacred muniments of wealth itself, and new distribute the land. Religion is taught in the same spirit. The contractors who were building a road out of Baltimore, some years ago, found the Irish laborers quarrelsome and refractory, to a degree that embarrassed the agents, and seriously interrupted the progress of the work. The corporation were advised to call off the police, and build a Catholic chapel; which they did; the priest presently restored order, and the work went on prosperously. Such hints, be sure, are too valuable to be lost. If

you do not value the Sabbath, or other religious institutions, give yourself no concern about maintaining them. They have already acquired a market value as conservators of property; and if priest and church-member should fail, the chambers of commerce and the presidents of the Banks, the very innholders and landlords of the county would muster with fury to their support.

Of course, religion in such hands loses its essence. Instead of that reliance, which the soul suggests on the eternity of truth and duty, men are misled into a reliance on institutions, which, the moment they cease to be the instantaneous creations of the devout sentiment, are worthless. Religion among the low becomes low. As it loses its truth, it loses credit with the sagacious. They detect the falsehood of the preaching, but when they say so, all good citizens cry, Hush; do not weaken the state, do not take off the strait jacket from dangerous persons. Every honest fellow must keep up the hoax the best he can; must patronize providence and piety, and wherever he sees anything that will keep men amused, schools or churches or poetry, or picture-galleries or music, or what not, he must cry "Hist-a-boy," and urge the game on. What a compliment we pay to the good SPIRIT with our superserviceable zeal!

But not to balance reasons for and against the establishment any longer, and if it still be asked in this necessity of partial organization, which party on the whole has the highest claims on our sympathy? I bring it home to the private heart, where all such questions must have their final arbitrement. How will every strong and generous mind choose its ground, with the defenders of the old? or with the seekers of the new? Which is that state which promises to edify a great, brave, and beneficent man; to throw him on his resources, and tax the strength of his character? On which part will each of us find himself in the hour of health and of aspiration?

I understand well the respect of mankind for war, because that breaks up the Chinese stagnation of society, and demonstrates the personal merits of all men. A state of war or anarchy, in which law has little force, is so far valuable, that it puts every man on trial. The man of principle is known as such, and even in the fury of faction is respected. In the civil wars of France, Montaigne alone, among all the French gentry, kept his castle gates unbarred, and made his personal integrity as good at least as a regiment. The man of courage and resources is shown, and the effeminate and base person. Those who rise above war, and those who fall below it, it easily discriminates, as well as those, who, accepting its rude conditions, keep their own head by their own sword.

But in peace and a commercial state we depend, not as we ought, on our knowledge and all men's knowledge that we are honest men, but we cowardly lean on the virtue of others. For it is always at last the virtue of some men in the

society, which keeps the law in any reverence and power. Is there not something shameful that I should owe my peaceful occupancy of my house and field, not to the knowledge of my countrymen that I am useful, but to their respect for sundry other reputable persons, I know not whom, whose joint virtues still keep the law in good odor?

It will never make any difference to a hero what the laws are. His greatness will shine and accomplish itself unto the end, whether they second him or not. If he have earned his bread by drudgery, and in the narrow and crooked ways which were all an evil law had left him, he will make it at least honorable by his expenditure. Of the past he will take no heed; for its wrongs he will not hold himself responsible: he will say, all the meanness of my progenitors shall not bereave me of the power to make this hour and company fair and fortunate. Whatsoever streams of power and commodity flow to me, shall of me acquire healing virtue, and become fountains of safety. Cannot I too descend a Redeemer into nature? Whosoever hereafter shall name my name, shall not record a malefactor, but a benefactor in the earth. If there be power in good intention, in fidelity, and in toil, the north wind shall be purer, the stars in heaven shall glow with a kindlier beam, that I have lived. I am primarily engaged to myself to be a public servant of all the gods, to demonstrate to all men that there is intelligence and good will at the heart of things, and ever higher and yet higher leadings. These are my engagements; how can your law further or hinder me in what I shall do to men? On the other hand, these dispositions establish their relations to me. Wherever there is worth, I shall be greeted. Wherever there are men, are the objects of my study and love. Sooner or later all men will be my friends, and will testify in all methods the energy of their regard. I cannot thank your law for my protection. I protect it. It is not in its power to protect me. It is my business to make myself revered. I depend on my honor, my labor, and my dispositions, for my place in the affections of mankind, and not on any conventions or parchments of yours.

But if I allow myself in derelictions, and become idle and dissolute, I quickly come to love the protection of a strong law, because I feel no title in myself to my advantages. To the intemperate and covetous person no love flows; to him mankind would pay no rent, no dividend, if force were once relaxed; nay, if they could give their verdict, they would say, that his self-indulgence and his oppression deserved punishment from society, and not that rich board and lodging he now enjoys. The law acts then as a screen of his unworthiness, and makes him worse the longer it protects him.

In conclusion, to return from this alternation of partial views, to the high platform of universal and necessary history, it is a happiness for mankind that

innovation has got on so far, and has so free a field before it. The boldness of the hope men entertain transcends all former experience. It calms and cheers them with the picture of a simple and equal life of truth and piety. And this hope flowered on what tree? It was not imported from the stock of some celestial plant, but grew here on the wild crab of conservatism. It is much that this old and vituperated system of things has borne so fair a child. It predicts that amidst a planet peopled with conservatives, one Reformer may yet be born.

THE TRANSCENDENTALIST

A Lecture read at the Masonic Temple, Boston, January, 1842

The first thing we have to say respecting what are called *new views* here in New England, at the present time, is, that they are not new, but the very oldest of thoughts cast into the mould of these new times. The light is always identical in its composition, but it falls on a great variety of objects, and by so falling is first revealed to us, not in its own form, for it is formless, but in theirs; in like manner, thought only appears in the objects it classifies. What is popularly called Transcendentalism among us, is Idealism; Idealism as it appears in 1842. As thinkers, mankind have ever divided into two sects, Materialists and Idealists; the first class founding on experience, the second on consciousness; the first class beginning to think from the data of the senses, the second class perceive that the senses are not final, and say, the senses give us representations of things, but what are the things themselves, they cannot tell. The materialist insists on facts, on history, on the force of circumstances, and the animal wants of man; the idealist on the power of Thought and of Will, on inspiration, on miracle, on individual culture. These two modes of thinking are both natural, but the idealist contends that his way of thinking is in higher nature. He concedes all that the other affirms, admits the impressions of sense, admits their coherency, their use and beauty, and then asks the materialist for his grounds of assurance that things are as his senses represent them. But I, he says, affirm facts not affected by the illusions of sense, facts which are of the same nature as the faculty which reports them, and not liable to doubt; facts which in their first appearance to us assume a native superiority to material facts, degrading these into a language by which the first are to be spoken; facts which it only needs a retirement from the senses to discern. Every materialist will be an idealist; but an idealist can never go backward to be a materialist.

The idealist, in speaking of events, sees them as spirits. He does not deny the sensuous fact: by no means; but he will not see that alone. He does not deny the presence of this table, this chair, and the walls of this room, but he looks at these things as the reverse side of the tapestry, as the *other end*, each being a sequel or completion of a spiritual fact which nearly concerns him. This manner of looking at things, transfers every object in nature from an independent and anomalous position without there, into the consciousness. Even the materialist Condillac, perhaps the most logical expounder of materialism, was constrained to say, "Though we should soar into the heavens, though we should sink into the

abyss, we never go out of ourselves; it is always our own thought that we perceive." What more could an idealist say?

The materialist, secure in the certainty of sensation, mocks at fine-spun theories, at star-gazers and dreamers, and believes that his life is solid, that he at least takes nothing for granted, but knows where he stands, and what he does. Yet how easy it is to show him, that he also is a phantom walking and working amid phantoms, and that he need only ask a question or two beyond his daily questions, to find his solid universe growing dim and impalpable before his sense. The sturdy capitalist, no matter how deep and square on blocks of Quincy granite he lays the foundations of his banking-house or Exchange, must set it, at last, not on a cube corresponding to the angles of his structure, but on a mass of unknown materials and solidity, red-hot or white-hot, perhaps at the core, which rounds off to an almost perfect sphericity, and lies floating in soft air, and goes spinning away, dragging bank and banker with it at a rate of thousands of miles the hour, he knows not whither, — a bit of bullet, now glimmering, now darkling through a small cubic space on the edge of an unimaginable pit of emptiness. And this wild balloon, in which his whole venture is embarked, is a just symbol of his whole state and faculty. One thing, at least, he says is certain, and does not give me the headache, that figures do not lie; the multiplication table has been hitherto found unimpeachable truth; and, moreover, if I put a gold eagle in my safe, I find it again to-morrow; — but for these thoughts, I know not whence they are. They change and pass away. But ask him why he believes that an uniform experience will continue uniform, or on what grounds he founds his faith in his figures, and he will perceive that his mental fabric is built up on just as strange and quaking foundations as his proud edifice of stone.

In the order of thought, the materialist takes his departure from the external world, and esteems a man as one product of that. The idealist takes his departure from his consciousness, and reckons the world an appearance. The materialist respects sensible masses, Society, Government, social art, and luxury, every establishment, every mass, whether majority of numbers, or extent of space, or amount of objects, every social action. The idealist has another measure, which is metaphysical, namely, the *rank* which things themselves take in his consciousness; not at all, the size or appearance. Mind is the only reality, of which men and all other natures are better or worse reflectors. Nature, literature, history, are only subjective phenomena. Although in his action overpowered by the laws of action, and so, warmly cooperating with men, even preferring them to himself, yet when he speaks scientifically, or after the order of thought, he is constrained to degrade persons into representatives of truths. He does not respect labor, or the products of labor, namely, property, otherwise than as a manifold

symbol, illustrating with wonderful fidelity of details the laws of being; he does not respect government, except as far as it reiterates the law of his mind; nor the church; nor charities; nor arts, for themselves; but hears, as at a vast distance, what they say, as if his consciousness would speak to him through a pantomimic scene. His thought, — that is the Universe. His experience inclines him to behold the procession of facts you call the world, as flowing perpetually outward from an invisible, unsounded centre in himself, centre alike of him and of them, and necessitating him to regard all things as having a subjective or relative existence, relative to that aforesaid Unknown Centre of him.

From this transfer of the world into the consciousness, this beholding of all things in the mind, follow easily his whole ethics. It is simpler to be self-dependent. The height, the deity of man is, to be self-sustained, to need no gift, no foreign force. Society is good when it does not violate me; but best when it is likeliest to solitude. Everything real is self-existent. Everything divine shares the self-existence of Deity. All that you call the world is the shadow of that substance which you are, the perpetual creation of the powers of thought, of those that are dependent and of those that are independent of your will. Do not cumber yourself with fruitless pains to mend and remedy remote effects; let the soul be erect, and all things will go well. You think me the child of my circumstances: I make my circumstance. Let any thought or motive of mine be different from that they are, the difference will transform my condition and economy. I — this thought which is called I, — is the mould into which the world is poured like melted wax. The mould is invisible, but the world betrays the shape of the mould. You call it the power of circumstance, but it is the power of me. Am I in harmony with myself? my position will seem to you just and commanding. Am I vicious and insane? my fortunes will seem to you obscure and descending. As I am, so shall I associate, and, so shall I act; Caesar's history will paint out Caesar. Jesus acted so, because he thought so. I do not wish to overlook or to gainsay any reality; I say, I make my circumstance: but if you ask me, Whence am I? I feel like other men my relation to that Fact which cannot be spoken, or defined, nor even thought, but which exists, and will exist.

The Transcendentalist adopts the whole connection of spiritual doctrine. He believes in miracle, in the perpetual openness of the human mind to new influx of light and power; he believes in inspiration, and in ecstasy. He wishes that the spiritual principle should be suffered to demonstrate itself to the end, in all possible applications to the state of man, without the admission of anything unspiritual; that is, anything positive, dogmatic, personal. Thus, the spiritual measure of inspiration is the depth of the thought, and never, who said it? And so he resists all attempts to palm other rules and measures on the spirit than its

own.

In action, he easily incurs the charge of antinomianism by his avowal that he, who has the Lawgiver, may with safety not only neglect, but even contravene every written commandment. In the play of Othello, the expiring Desdemona absolves her husband of the murder, to her attendant Emilia. Afterwards, when Emilia charges him with the crime, Othello exclaims,

“You heard her say herself it was not I.”

Emilia replies,

“The more angel she, and thou the blacker devil.”

Of this fine incident, Jacobi, the Transcendental moralist, makes use, with other parallel instances, in his reply to Fichte. Jacobi, refusing all measure of right and wrong except the determinations of the private spirit, remarks that there is no crime but has sometimes been a virtue. “I,” he says, “am that atheist, that godless person who, in opposition to an imaginary doctrine of calculation, would lie as the dying Desdemona lied; would lie and deceive, as Pylades when he personated Orestes; would assassinate like Timoleon; would perjure myself like Epaminondas, and John de Witt; I would resolve on suicide like Cato; I would commit sacrilege with David; yea, and pluck ears of corn on the Sabbath, for no other reason than that I was fainting for lack of food. For, I have assurance in myself, that, in pardoning these faults according to the letter, man exerts the sovereign right which the majesty of his being confers on him; he sets the seal of his divine nature to the grace he accords.”

In like manner, if there is anything grand and daring in human thought or virtue, any reliance on the vast, the unknown; any presentiment; any extravagance of faith, the spiritualist adopts it as most in nature. The oriental mind has always tended to this largeness. Buddhism is an expression of it. The Buddhist who thanks no man, who says, “do not flatter your benefactors,” but who, in his conviction that every good deed can by no possibility escape its reward, will not deceive the benefactor by pretending that he has done more than he should, is a Transcendentalist.

You will see by this sketch that there is no such thing as a Transcendental *party*; that there is no pure Transcendentalist; that we know of none but prophets and heralds of such a philosophy; that all who by strong bias of nature have leaned to the spiritual side in doctrine, have stopped short of their goal. We have had many harbingers and forerunners; but of a purely spiritual life, history has afforded no example. I mean, we have yet no man who has leaned entirely on his character, and eaten angels’ food; who, trusting to his sentiments, found life

made of miracles; who, working for universal aims, found himself fed, he knew not how; clothed, sheltered, and weaponed, he knew not how, and yet it was done by his own hands. Only in the instinct of the lower animals, we find the suggestion of the methods of it, and something higher than our understanding. The squirrel hoards nuts, and the bee gathers honey, without knowing what they do, and they are thus provided for without selfishness or disgrace.

Shall we say, then, that Transcendentalism is the Saturnalia or excess of Faith; the presentiment of a faith proper to man in his integrity, excessive only when his imperfect obedience hinders the satisfaction of his wish. Nature is transcendental, exists primarily, necessarily, ever works and advances, yet takes no thought for the morrow. Man owns the dignity of the life which throbs around him in chemistry, and tree, and animal, and in the involuntary functions of his own body; yet he is balked when he tries to fling himself into this enchanted circle, where all is done without degradation. Yet genius and virtue predict in man the same absence of private ends, and of condescension to circumstances, united with every trait and talent of beauty and power.

This way of thinking, falling on Roman times, made Stoic philosophers; falling on despotic times, made patriot Catos and Brutuses; falling on superstitious times, made prophets and apostles; on popish times, made protestants and ascetic monks, preachers of Faith against the preachers of Works; on prelatical times, made Puritans and Quakers; and falling on Unitarian and commercial times, makes the peculiar shades of Idealism which we know.

It is well known to most of my audience, that the Idealism of the present day acquired the name of Transcendental, from the use of that term by Immanuel Kant, of Konigsberg, who replied to the skeptical philosophy of Locke, which insisted that there was nothing in the intellect which was not previously in the experience of the senses, by showing that there was a very important class of ideas, or imperative forms, which did not come by experience, but through which experience was acquired; that these were intuitions of the mind itself; and he denominated them *Transcendental* forms. The extraordinary profoundness and precision of that man's thinking have given vogue to his nomenclature, in Europe and America, to that extent, that whatever belongs to the class of intuitive thought, is popularly called at the present day *Transcendental*.

Although, as we have said, there is no pure Transcendentalist, yet the tendency to respect the intuitions, and to give them, at least in our creed, all authority over our experience, has deeply colored the conversation and poetry of the present day; and the history of genius and of religion in these times, though impure, and as yet not incarnated in any powerful individual, will be the history

of this tendency.

It is a sign of our times, conspicuous to the coarsest observer, that many intelligent and religious persons withdraw themselves from the common labors and competitions of the market and the caucus, and betake themselves to a certain solitary and critical way of living, from which no solid fruit has yet appeared to justify their separation. They hold themselves aloof: they feel the disproportion between their faculties and the work offered them, and they prefer to ramble in the country and perish of ennui, to the degradation of such charities and such ambitions as the city can propose to them. They are striking work, and crying out for somewhat worthy to do! What they do, is done only because they are overpowered by the humanities that speak on all sides; and they consent to such labor as is open to them, though to their lofty dream the writing of Iliads or Hamlets, or the building of cities or empires seems drudgery.

Now every one must do after his kind, be he asp or angel, and these must. The question, which a wise man and a student of modern history will ask, is, what that kind is? And truly, as in ecclesiastical history we take so much pains to know what the Gnostics, what the Essenes, what the Manichees, and what the Reformers believed, it would not misbecome us to inquire nearer home, what these companions and contemporaries of ours think and do, at least so far as these thoughts and actions appear to be not accidental and personal, but common to many, and the inevitable flower of the Tree of Time. Our American literature and spiritual history are, we confess, in the optative mood; but whoso knows these seething brains, these admirable radicals, these unsocial worshippers, these talkers who talk the sun and moon away, will believe that this heresy cannot pass away without leaving its mark.

They are lonely; the spirit of their writing and conversation is lonely; they repel influences; they shun general society; they incline to shut themselves in their chamber in the house, to live in the country rather than in the town, and to find their tasks and amusements in solitude. Society, to be sure, does not like this very well; it saith, Whoso goes to walk alone, accuses the whole world; he declareth all to be unfit to be his companions; it is very uncivil, nay, insulting; Society will retaliate. Meantime, this retirement does not proceed from any whim on the part of these separators; but if any one will take pains to talk with them, he will find that this part is chosen both from temperament and from principle; with some unwillingness, too, and as a choice of the less of two evils; for these persons are not by nature melancholy, sour, and unsocial, — they are not stockish or brute, — but joyous; susceptible, affectionate; they have even more than others a great wish to be loved. Like the young Mozart, they are rather ready to cry ten times a day, “But are you sure you love me?” Nay, if they tell

you their whole thought, they will own that love seems to them the last and highest gift of nature; that there are persons whom in their hearts they daily thank for existing, — persons whose faces are perhaps unknown to them, but whose fame and spirit have penetrated their solitude, — and for whose sake they wish to exist. To behold the beauty of another character, which inspires a new interest in our own; to behold the beauty lodged in a human being, with such vivacity of apprehension, that I am instantly forced home to inquire if I am not deformity itself: to behold in another the expression of a love so high that it assures itself, — assures itself also to me against every possible casualty except my unworthiness; — these are degrees on the scale of human happiness, to which they have ascended; and it is a fidelity to this sentiment which has made common association distasteful to them. They wish a just and even fellowship, or none. They cannot gossip with you, and they do not wish, as they are sincere and religious, to gratify any mere curiosity which you may entertain. Like fairies, they do not wish to be spoken of. Love me, they say, but do not ask who is my cousin and my uncle. If you do not need to hear my thought, because you can read it in my face and behavior, then I will tell it you from sunrise to sunset. If you cannot divine it, you would not understand what I say. I will not molest myself for you. I do not wish to be profaned.

And yet, it seems as if this loneliness, and not this love, would prevail in their circumstances, because of the extravagant demand they make on human nature. That, indeed, constitutes a new feature in their portrait, that they are the most exacting and extortionate critics. Their quarrel with every man they meet, is not with his kind, but with his degree. There is not enough of him, — that is the only fault. They prolong their privilege of childhood in this wise, of doing nothing, — but making immense demands on all the gladiators in the lists of action and fame. They make us feel the strange disappointment which overcasts every human youth. So many promising youths, and never a finished man! The profound nature will have a savage rudeness; the delicate one will be shallow, or the victim of sensibility; the richly accomplished will have some capital absurdity; and so every piece has a crack. 'T is strange, but this masterpiece is a result of such an extreme delicacy, that the most unobserved flaw in the boy will neutralize the most aspiring genius, and spoil the work. Talk with a seaman of the hazards to life in his profession, and he will ask you, "Where are the old sailors? do you not see that all are young men?" And we, on this sea of human thought, in like manner inquire, Where are the old idealists? where are they who represented to the last generation that extravagant hope, which a few happy aspirants suggest to ours? In looking at the class of counsel, and power, and wealth, and at the matronage of the land, amidst all the prudence and all the

triviality, one asks, Where are they who represented genius, virtue, the invisible and heavenly world, to these? Are they dead, — taken in early ripeness to the gods, — as ancient wisdom foretold their fate? Or did the high idea die out of them, and leave their unperfumed body as its tomb and tablet, announcing to all that the celestial inhabitant, who once gave them beauty, had departed? Will it be better with the new generation? We easily predict a fair future to each new candidate who enters the lists, but we are frivolous and volatile, and by low aims and ill example do what we can to defeat this hope. Then these youths bring us a rough but effectual aid. By their unconcealed dissatisfaction, they expose our poverty, and the insignificance of man to man. A man is a poor liminary benefactor. He ought to be a shower of benefits — a great influence, which should never let his brother go, but should refresh old merits continually with new ones; so that, though absent, he should never be out of my mind, his name never far from my lips; but if the earth should open at my side, or my last hour were come, his name should be the prayer I should utter to the Universe. But in our experience, man is cheap, and friendship wants its deep sense. We affect to dwell with our friends in their absence, but we do not; when deed, word, or letter comes not, they let us go. These exacting children advertise us of our wants. There is no compliment, no smooth speech with them; they pay you only this one compliment, of insatiable expectation; they aspire, they severely exact, and if they only stand fast in this watch-tower, and persist in demanding unto the end, and without end, then are they terrible friends, whereof poet and priest cannot choose but stand in awe; and what if they eat clouds, and drink wind, they have not been without service to the race of man.

With this passion for what is great and extraordinary, it cannot be wondered at, that they are repelled by vulgarity and frivolity in people. They say to themselves, It is better to be alone than in bad company. And it is really a wish to be met, — the wish to find society for their hope and religion, — which prompts them to shun what is called society. They feel that they are never so fit for friendship, as when they have quitted mankind, and taken themselves to friend. A picture, a book, a favorite spot in the hills or the woods, which they can people with the fair and worthy creation of the fancy, can give them often forms so vivid, that these for the time shall seem real, and society the illusion.

But their solitary and fastidious manners not only withdraw them from the conversation, but from the labors of the world; they are not good citizens, not good members of society; unwillingly they bear their part of the public and private burdens; they do not willingly share in the public charities, in the public religious rites, in the enterprises of education, of missions foreign or domestic, in the abolition of the slave-trade, or in the temperance society. They do not even

like to vote. The philanthropists inquire whether Transcendentalism does not mean sloth: they had as lief hear that their friend is dead, as that he is a Transcendentalist; for then is he paralyzed, and can never do anything for humanity. What right, cries the good world, has the man of genius to retreat from work, and indulge himself? The popular literary creed seems to be, 'I am a sublime genius; I ought not therefore to labor.' But genius is the power to labor better and more availably. Deserve thy genius: exalt it. The good, the illuminated, sit apart from the rest, censuring their dulness and vices, as if they thought that, by sitting very grand in their chairs, the very brokers, attorneys, and congressmen would see the error of their ways, and flock to them. But the good and wise must learn to act, and carry salvation to the combatants and demagogues in the dusty arena below.

On the part of these children, it is replied, that life and their faculty seem to them gifts too rich to be squandered on such trifles as you propose to them. What you call your fundamental institutions, your great and holy causes, seem to them great abuses, and, when nearly seen, paltry matters. Each 'Cause,' as it is called, — say Abolition, Temperance, say Calvinism, or Unitarianism, — becomes speedily a little shop, where the article, let it have been at first never so subtle and ethereal, is now made up into portable and convenient cakes, and retailed in small quantities to suit purchasers. You make very free use of these words 'great' and 'holy,' but few things appear to them such. Few persons have any magnificence of nature to inspire enthusiasm, and the philanthropies and charities have a certain air of quackery. As to the general course of living, and the daily employments of men, they cannot see much virtue in these, since they are parts of this vicious circle; and, as no great ends are answered by the men, there is nothing noble in the arts by which they are maintained. Nay, they have made the experiment, and found that, from the liberal professions to the coarsest manual labor, and from the courtesies of the academy and the college to the conventions of the cotillon-room and the morning call, there is a spirit of cowardly compromise and seeming, which intimates a frightful skepticism, a life without love, and an activity without an aim.

Unless the action is necessary, unless it is adequate, I do not wish to perform it. I do not wish to do one thing but once. I do not love routine. Once possessed of the principle, it is equally easy to make four or forty thousand applications of it. A great man will be content to have indicated in any the slightest manner his perception of the reigning Idea of his time, and will leave to those who like it the multiplication of examples. When he has hit the white, the rest may shatter the target. Every thing admonishes us how needlessly long life is. Every moment of a hero so raises and cheers us, that a twelve-month is an age. All that the brave

Xanthus brings home from his wars, is the recollection that, at the storming of Samos, “in the heat of the battle, Pericles smiled on me, and passed on to another detachment.” It is the quality of the moment, not the number of days, of events, or of actors, that imports.

New, we confess, and by no means happy, is our condition: if you want the aid of our labor, we ourselves stand in greater want of the labor. We are miserable with inaction. We perish of rest and rust: but we do not like your work.

‘Then,’ says the world, ‘show me your own.’

‘We have none.’

‘What will you do, then?’ cries the world.

‘We will wait.’

‘How long?’

‘Until the Universe rises up and calls us to work.’

‘But whilst you wait, you grow old and useless.’

‘Be it so: I can sit in a corner and *perish*, (as you call it,) but I will not move until I have the highest command. If no call should come for years, for centuries, then I know that the want of the Universe is the attestation of faith by my abstinence. Your virtuous projects, so called, do not cheer me. I know that which shall come will cheer me. If I cannot work, at least I need not lie. All that is clearly due to-day is not to lie. In other places, other men have encountered sharp trials, and have behaved themselves well. The martyrs were sawn asunder, or hung alive on meat-hooks. Cannot we screw our courage to patience and truth, and without complaint, or even with good-humor, await our turn of action in the Infinite Counsels?’

But, to come a little closer to the secret of these persons, we must say, that to them it seems a very easy matter to answer the objections of the man of the world, but not so easy to dispose of the doubts and objections that occur to themselves. They are exercised in their own spirit with queries, which acquaint them with all adversity, and with the trials of the bravest heroes. When I asked them concerning their private experience, they answered somewhat in this wise: It is not to be denied that there must be some wide difference between my faith and other faith; and mine is a certain brief experience, which surprised me in the highway or in the market, in some place, at some time, — whether in the body or out of the body, God knoweth, — and made me aware that I had played the fool with fools all this time, but that law existed for me and for all; that to me belonged trust, a child’s trust and obedience, and the worship of ideas, and I

should never be fool more. Well, in the space of an hour, probably, I was let down from this height; I was at my old tricks, the selfish member of a selfish society. My life is superficial, takes no root in the deep world; I ask, When shall I die, and be relieved of the responsibility of seeing an Universe which I do not use? I wish to exchange this flash-of-lightning faith for continuous daylight, this fever-glow for a benign climate.

These two states of thought diverge every moment, and stand in wild contrast. To him who looks at his life from these moments of illumination, it will seem that he skulks and plays a mean, shiftless, and subaltern part in the world. That is to be done which he has not skill to do, or to be said which others can say better, and he lies by, or occupies his hands with some plaything, until his hour comes again. Much of our reading, much of our labor, seems mere waiting: it was not that we were born for. Any other could do it as well, or better. So little skill enters into these works, so little do they mix with the divine life, that it really signifies little what we do, whether we turn a grindstone, or ride, or run, or make fortunes, or govern the state. The worst feature of this double consciousness is, that the two lives, of the understanding and of the soul, which we lead, really show very little relation to each other, never meet and measure each other: one prevails now, all buzz and din; and the other prevails then, all infinitude and paradise; and, with the progress of life, the two discover no greater disposition to reconcile themselves. Yet, what is my faith? What am I? What but a thought of serenity and independence, an abode in the deep blue sky? Presently the clouds shut down again; yet we retain the belief that this petty web we weave will at last be overshot and reticulated with veins of the blue, and that the moments will characterize the days. Patience, then, is for us, is it not? Patience, and still patience. When we pass, as presently we shall, into some new infinitude, out of this Iceland of negations, it will please us to reflect that, though we had few virtues or consolations, we bore with our indigence, nor once strove to repair it with hypocrisy or false heat of any kind.

But this class are not sufficiently characterized, if we omit to add that they are lovers and worshippers of Beauty. In the eternal trinity of Truth, Goodness, and Beauty, each in its perfection including the three, they prefer to make Beauty the sign and head. Something of the same taste is observable in all the moral movements of the time, in the religious and benevolent enterprises. They have a liberal, even an aesthetic spirit. A reference to Beauty in action sounds, to be sure, a little hollow and ridiculous in the ears of the old church. In politics, it has often sufficed, when they treated of justice, if they kept the bounds of selfish calculation. If they granted restitution, it was prudence which granted it. But the justice which is now claimed for the black, and the pauper, and the drunkard is

for Beauty, — is for a necessity to the soul of the agent, not of the beneficiary. I say, this is the tendency, not yet the realization. Our virtue totters and trips, does not yet walk firmly. Its representatives are austere; they preach and denounce; their rectitude is not yet a grace. They are still liable to that slight taint of burlesque which, in our strange world, attaches to the zealot. A saint should be as dear as the apple of the eye. Yet we are tempted to smile, and we flee from the working to the speculative reformer, to escape that same slight ridicule. Alas for these days of derision and criticism! We call the Beautiful the highest, because it appears to us the golden mean, escaping the dowdiness of the good, and the heartlessness of the true. — They are lovers of nature also, and find an indemnity in the inviolable order of the world for the violated order and grace of man.

There is, no doubt, a great deal of well-founded objection to be spoken or felt against the sayings and doings of this class, some of whose traits we have selected; no doubt, they will lay themselves open to criticism and to lampoons, and as ridiculous stories will be told of them as of any. There will be cant and pretension; there will be subtilty and moonshine. These persons are of unequal strength, and do not all prosper. They complain that everything around them must be denied; and if feeble, it takes all their strength to deny, before they can begin to lead their own life. Grave seniors insist on their respect to this institution, and that usage; to an obsolete history; to some vocation, or college, or etiquette, or beneficiary, or charity, or morning or evening call, which they resist, as what does not concern them. But it costs such sleepless nights, alienations and misgivings, — they have so many moods about it; — these old guardians never change *their* minds; they have but one mood on the subject, namely, that Antony is very perverse, — that it is quite as much as Antony can do, to assert his rights, abstain from what he thinks foolish, and keep his temper. He cannot help the reaction of this injustice in his own mind. He is braced-up and stilted; all freedom and flowing genius, all sallies of wit and frolic nature are quite out of the question; it is well if he can keep from lying, injustice, and suicide. This is no time for gaiety and grace. His strength and spirits are wasted in rejection. But the strong spirits overpower those around them without effort. Their thought and emotion comes in like a flood, quite withdraws them from all notice of these carping critics; they surrender themselves with glad heart to the heavenly guide, and only by implication reject the clamorous nonsense of the hour. Grave seniors talk to the deaf, — church and old book mumble and ritualize to an unheeding, preoccupied and advancing mind, and thus they by happiness of greater momentum lose no time, but take the right road at first.

But all these of whom I speak are not proficient; they are novices; they only

show the road in which man should travel, when the soul has greater health and prowess. Yet let them feel the dignity of their charge, and deserve a larger power. Their heart is the ark in which the fire is concealed, which shall burn in a broader and universal flame. Let them obey the Genius then most when his impulse is wildest; then most when he seems to lead to uninhabitable deserts of thought and life; for the path which the hero travels alone is the highway of health and benefit to mankind. What is the privilege and nobility of our nature, but its persistency, through its power to attach itself to what is permanent?

Society also has its duties in reference to this class, and must behold them with what charity it can. Possibly some benefit may yet accrue from them to the state. In our Mechanics' Fair, there must be not only bridges, ploughs, carpenters' planes, and baking troughs, but also some few finer instruments, — raingauges, thermometers, and telescopes; and in society, besides farmers, sailors, and weavers, there must be a few persons of purer fire kept specially as gauges and meters of character; persons of a fine, detecting instinct, who betray the smallest accumulations of wit and feeling in the bystander. Perhaps too there might be room for the excitors and monitors; collectors of the heavenly spark with power to convey the electricity to others. Or, as the storm-tossed vessel at sea speaks the frigate or 'line packet' to learn its longitude, so it may not be without its advantage that we should now and then encounter rare and gifted men, to compare the points of our spiritual compass, and verify our bearings from superior chronometers.

Amidst the downward tendency and proneness of things, when every voice is raised for a new road or another statute, or a subscription of stock, for an improvement in dress, or in dentistry, for a new house or a larger business, for a political party, or the division of an estate, — will you not tolerate one or two solitary voices in the land, speaking for thoughts and principles not marketable or perishable? Soon these improvements and mechanical inventions will be superseded; these modes of living lost out of memory; these cities rotted, ruined by war, by new inventions, by new seats of trade, or the geologic changes: — all gone, like the shells which sprinkle the seabeach with a white colony to-day, forever renewed to be forever destroyed. But the thoughts which these few hermits strove to proclaim by silence, as well as by speech, not only by what they did, but by what they forbore to do, shall abide in beauty and strength, to reorganize themselves in nature, to invest themselves anew in other, perhaps higher endowed and happier mixed clay than ours, in fuller union with the surrounding system.

THE YOUNG AMERICAN

A Lecture read before the Mercantile Library Association, Boston, February 7, 1844

GENTLEMEN:

It is remarkable, that our people have their intellectual culture from one country, and their duties from another. This false state of things is newly in a way to be corrected. America is beginning to assert itself to the senses and to the imagination of her children, and Europe is receding in the same degree. This their reaction on education gives a new importance to the internal improvements and to the politics of the country. Who has not been stimulated to reflection by the facilities now in progress of construction for travel and the transportation of goods in the United States?

This rage for road building is beneficent for America, where vast distance is so main a consideration in our domestic politics and trade, inasmuch as the great political promise of the invention is to hold the Union staunch, whose days seemed already numbered by the mere inconvenience of transporting representatives, judges, and officers across such tedious distances of land and water. Not only is distance annihilated, but when, as now, the locomotive and the steamboat, like enormous shuttles, shoot every day across the thousand various threads of national descent and employment, and bind them fast in one web, an hourly assimilation goes forward, and there is no danger that local peculiarities and hostilities should be preserved.

1. But I hasten to speak of the utility of these improvements in creating an American sentiment. An unlooked for consequence of the railroad, is the increased acquaintance it has given the American people with the boundless resources of their own soil. If this invention has reduced England to a third of its size, by bringing people so much nearer, in this country it has given a new celerity to *time*, or anticipated by fifty years the planting of tracts of land, the choice of water privileges, the working of mines, and other natural advantages. Railroad iron is a magician's rod, in its power to evoke the sleeping energies of land and water.

The railroad is but one arrow in our quiver, though it has great value as a sort of yard-stick, and surveyor's line. The bountiful continent is ours, state on state, and territory on territory, to the waves of the Pacific sea;

“Our garden is the immeasurable earth,

The heaven's blue pillars are Medea's house."

The task of surveying, planting, and building upon this immense tract, requires an education and a sentiment commensurate thereto. A consciousness of this fact, is beginning to take the place of the purely trading spirit and education which sprang up whilst all the population lived on the fringe of sea-coast. And even on the coast, prudent men have begun to see that every American should be educated with a view to the values of land. The arts of engineering and of architecture are studied; scientific agriculture is an object of growing attention; the mineral riches are explored; limestone, coal, slate, and iron; and the value of timber-lands is enhanced.

Columbus alleged as a reason for seeking a continent in the West, that the harmony of nature required a great tract of land in the western hemisphere, to balance the known extent of land in the eastern; and it now appears that we must estimate the native values of this broad region to redress the balance of our own judgments, and appreciate the advantages opened to the human race in this country, which is our fortunate home. The land is the appointed remedy for whatever is false and fantastic in our culture. The continent we inhabit is to be physic and food for our mind, as well as our body. The land, with its tranquilizing, sanative influences, is to repair the errors of a scholastic and traditional education, and bring us into just relations with men and things.

The habit of living in the presence of these invitations of natural wealth is not inoperative; and this habit, combined with the moral sentiment which, in the recent years, has interrogated every institution, usage, and law, has, naturally, given a strong direction to the wishes and aims of active young men to withdraw from cities, and cultivate the soil. This inclination has appeared in the most unlooked for quarters, in men supposed to be absorbed in business, and in those connected with the liberal professions. And, since the walks of trade were crowded, whilst that of agriculture cannot easily be, inasmuch as the farmer who is not wanted by others can yet grow his own bread, whilst the manufacturer or the trader, who is not wanted, cannot, — this seemed a happy tendency. For, beside all the moral benefit which we may expect from the farmer's profession, when a man enters it considerately, this promised the conquering of the soil, plenty, and beyond this, the adorning of the country with every advantage and ornament which labor, ingenuity, and affection for a man's home, could suggest.

Meantime, with cheap land, and the pacific disposition of the people, every thing invites to the arts of agriculture, of gardening, and domestic architecture. Public gardens, on the scale of such plantations in Europe and Asia, are now unknown to us. There is no feature of the old countries that strikes an American

with more agreeable surprise than the beautiful gardens of Europe; such as the Boboli in Florence, the Villa Borghese in Rome, the Villa d'Este in Tivoli, the gardens at Munich, and at Frankfort on the Main: works easily imitated here, and which might well make the land dear to the citizen, and inflame patriotism. It is the fine art which is left for us, now that sculpture, painting, and religious and civil architecture have become effete, and have passed into second childhood. We have twenty degrees of latitude wherein to choose a seat, and the new modes of travelling enlarge the opportunity of selection, by making it easy to cultivate very distant tracts, and yet remain in strict intercourse with the centres of trade and population. And the whole force of all the arts goes to facilitate the decoration of lands and dwellings. A garden has this advantage, that it makes it indifferent where you live. A well-laid garden makes the face of the country of no account; let that be low or high, grand or mean, you have made a beautiful abode worthy of man. If the landscape is pleasing, the garden shows it, — if tame, it excludes it. A little grove, which any farmer can find, or cause to grow near his house, will, in a few years, make cataracts and chains of mountains quite unnecessary to his scenery; and he is so contented with his alleys, woodlands, orchards, and river, that Niagara, and the Notch of the White Hills, and Nantasket Beach, are superfluities. And yet the selection of a fit house-lot has the same advantage over an indifferent one, as the selection to a given employment of a man who has a genius for that work. In the last case, the culture of years will never make the most painstaking apprentice his equal: no more will gardening give the advantage of a happy site to a house in a hole or on a pinnacle. In America, we have hitherto little to boast in this kind. The cities drain the country of the best part of its population: the flower of the youth, of both sexes, goes into the towns, and the country is cultivated by a so much inferior class. The land, — travel a whole day together, — looks poverty-stricken, and the buildings plain and poor. In Europe, where society has an aristocratic structure, the land is full of men of the best stock, and the best culture, whose interest and pride it is to remain half the year on their estates, and to fill them with every convenience and ornament. Of course, these make model farms, and model architecture, and are a constant education to the eye of the surrounding population. Whatever events in progress shall go to disgust men with cities, and infuse into them the passion for country life, and country pleasures, will render a service to the whole face of this continent, and will further the most poetic of all the occupations of real life, the bringing out by art the native but hidden graces of the landscape.

I look on such improvements, also, as directly tending to endear the land to the inhabitant. Any relation to the land, the habit of tilling it, or mining it, or

even hunting on it, generates the feeling of patriotism. He who keeps shop on it, or he who merely uses it as a support to his desk and ledger, or to his manufactory, values it less. The vast majority of the people of this country live by the land, and carry its quality in their manners and opinions. We in the Atlantic states, by position, have been commercial, and have, as I said, imbibed easily an European culture. Luckily for us, now that steam has narrowed the Atlantic to a strait, the nervous, rocky West is intruding a new and continental element into the national mind, and we shall yet have an American genius. How much better when the whole land is a garden, and the people have grown up in the bowers of a paradise. Without looking, then, to those extraordinary social influences which are now acting in precisely this direction, but only at what is inevitably doing around us, I think we must regard the *land* as a commanding and increasing power on the citizen, the sanative and Americanizing influence, which promises to disclose new virtues for ages to come.

2. In the second place, the uprise and culmination of the new and anti-feudal power of Commerce, is the political fact of most significance to the American at this hour.

We cannot look on the freedom of this country, in connexion with its youth, without a presentiment that here shall laws and institutions exist on some scale of proportion to the majesty of nature. To men legislating for the area betwixt the two oceans, betwixt the snows and the tropics, somewhat of the gravity of nature will infuse itself into the code. A heterogeneous population crowding on all ships from all corners of the world to the great gates of North America, namely, Boston, New York, and New Orleans, and thence proceeding inward to the prairie and the mountains, and quickly contributing their private thought to the public opinion, their toll to the treasury, and their vote to the election, it cannot be doubted that the legislation of this country should become more catholic and cosmopolitan than that of any other. It seems so easy for America to inspire and express the most expansive and humane spirit; new-born, free, healthful, strong, the land of the laborer, of the democrat, of the philanthropist, of the believer, of the saint, she should speak for the human race. It is the country of the Future. From Washington, proverbially 'the city of magnificent distances,' through all its cities, states, and territories, it is a country of beginnings, of projects, of designs, and expectations.

Gentlemen, there is a sublime and friendly Destiny by which the human race is guided, — the race never dying, the individual never spared, — to results affecting masses and ages. Men are narrow and selfish, but the Genius or Destiny is not narrow, but beneficent. It is not discovered in their calculated and voluntary activity, but in what befalls, with or without their design. Only what is

inevitable interests us, and it turns out that love and good are inevitable, and in the course of things. That Genius has infused itself into nature. It indicates itself by a small excess of good, a small balance in brute facts always favorable to the side of reason. All the facts in any part of nature shall be tabulated, and the results shall indicate the same security and benefit; so slight as to be hardly observable, and yet it is there. The sphere is flattened at the poles, and swelled at the equator; a form flowing necessarily from the fluid state, yet *the* form, the mathematician assures us, required to prevent the protuberances of the continent, or even of lesser mountains cast up at any time by earthquakes, from continually deranging the axis of the earth. The census of the population is found to keep an invariable equality in the sexes, with a trifling predominance in favor of the male, as if to counterbalance the necessarily increased exposure of male life in war, navigation, and other accidents. Remark the unceasing effort throughout nature at somewhat better than the actual creatures: *amelioration in nature*, which alone permits and authorizes amelioration in mankind. The population of the world is a conditional population; these are not the best, but the best that could live in the existing state of soils, gases, animals, and morals: the best that could *yet* live; there shall be a better, please God. This Genius, or Destiny, is of the sternest administration, though rumors exist of its secret tenderness. It may be styled a cruel kindness, serving the whole even to the ruin of the member; a terrible communist, reserving all profits to the community, without dividend to individuals. Its law is, you shall have everything as a member, nothing to yourself. For Nature is the noblest engineer, yet uses a grinding economy, working up all that is wasted to-day into to-morrow's creation; — not a superfluous grain of sand, for all the ostentation she makes of expense and public works. It is because Nature thus saves and uses, laboring for the general, that we poor particulars are so crushed and straitened, and find it so hard to live. She flung us out in her plenty, but we cannot shed a hair, or a paring of a nail, but instantly she snatches at the shred, and appropriates it to the general stock. Our condition is like that of the poor wolves: if one of the flock wound himself, or so much as limp, the rest eat him up incontinently.

That serene Power interposes the check upon the caprices and officiousness of our wills. Its charity is not our charity. One of its agents is our will, but that which expresses itself in our will, is stronger than our will. We are very forward to help it, but it will not be accelerated. It resists our meddling, eleemosynary contrivances. We devise sumptuary and relief laws, but the principle of population is always reducing wages to the lowest pittance on which human life can be sustained. We legislate against forestalling and monopoly; we would have a common granary for the poor; but the selfishness which hoards the corn for

high prices, is the preventive of famine; and the law of self-preservation is surer policy than any legislation can be. We concoct eleemosynary systems, and it turns out that our charity increases pauperism. We inflate our paper currency, we repair commerce with unlimited credit, and are presently visited with unlimited bankruptcy.

It is easy to see that the existing generation are conspiring with a beneficence, which, in its working for coming generations, sacrifices the passing one, which infatuates the most selfish men to act against their private interest for the public welfare. We build railroads, we know not for what or for whom; but one thing is certain, that we who build will receive the very smallest share of benefit. Benefit will accrue; they are essential to the country, but that will be felt not until we are no longer countrymen. We do the like in all matters: —

“Man’s heart the Almighty to the Future set
By secret and inviolable springs.”

We plant trees, we build stone houses, we redeem the waste, we make prospective laws, we found colleges and hospitals, for remote generations. We should be mortified to learn that the little benefit we chanced in our own persons to receive was the utmost they would yield.

The history of commerce, is the record of this beneficent tendency. The patriarchal form of government readily becomes despotic, as each person may see in his own family. Fathers wish to be the fathers of the minds of their children, and behold with impatience a new character and way of thinking presuming to show itself in their own son or daughter. This feeling, which all their love and pride in the powers of their children cannot subdue, becomes petulance and tyranny when the head of the clan, the emperor of an empire, deals with the same difference of opinion in his subjects. Difference of opinion is the one crime which kings never forgive. An empire is an immense egotism. “I am the State,” said the French Louis. When a French ambassador mentioned to Paul of Russia, that a man of consequence in St. Petersburg was interesting himself in some matter, the Czar interrupted him,— “There is no man of consequence in this empire, but he with whom I am actually speaking; and so long only as I am speaking to him, is he of any consequence.” And Nicholas, the present emperor, is reported to have said to his council, “The age is embarrassed with new opinions; rely on me, gentlemen, I shall oppose an iron will to the progress of liberal opinions.”

It is easy to see that this patriarchal or family management gets to be rather troublesome to all but the papa; the sceptre comes to be a crowbar. And this

unpleasant egotism, Feudalism opposes, and finally destroys. The king is compelled to call in the aid of his brothers and cousins, and remote relations, to help him keep his overgrown house in order; and this club of noblemen always come at last to have a will of their own; they combine to brave the sovereign, and call in the aid of the people. Each chief attaches as many followers as he can, by kindness, maintenance, and gifts; and as long as war lasts, the nobles, who must be soldiers, rule very well. But when peace comes, the nobles prove very whimsical and uncomfortable masters; their frolics turn out to be insulting and degrading to the commoner. Feudalism grew to be a bandit and brigand.

Meantime Trade had begun to appear: Trade, a plant which grows wherever there is peace, as soon as there is peace, and as long as there is peace. The luxury and necessity of the noble fostered it. And as quickly as men go to foreign parts, in ships or caravans, a new order of things springs up; new command takes place, new servants and new masters. Their information, their wealth, their correspondence, have made them quite other men than left their native shore. They are nobles now, and by another patent than the king's. Feudalism had been good, had broken the power of the kings, and had some good traits of its own; but it had grown mischievous, it was time for it to die, and, as they say of dying people, all its faults came out. Trade was the strong man that broke it down, and raised a new and unknown power in its place. It is a new agent in the world, and one of great function; it is a very intellectual force. This displaces physical strength, and instals computation, combination, information, science, in its room. It calls out all force of a certain kind that slumbered in the former dynasties. It is now in the midst of its career. Feudalism is not ended yet. Our governments still partake largely of that element. Trade goes to make the governments insignificant, and to bring every kind of faculty of every individual that can in any manner serve any person, *on sale*. Instead of a huge Army and Navy, and Executive Departments, it converts Government into an Intelligence-Office, where every man may find what he wishes to buy, and expose what he has to sell, not only produce and manufactures, but art, skill, and intellectual and moral values. This is the good and this the evil of trade, that it would put everything into market, talent, beauty, virtue, and man himself.

By this means, however, it has done its work. It has its faults, and will come to an end, as the others do. The philosopher and lover of man have much harm to say of trade; but the historian will see that trade was the principle of Liberty; that trade planted America and destroyed Feudalism; that it makes peace and keeps peace, and it will abolish slavery. We complain of its oppression of the poor, and of its building up a new aristocracy on the ruins of the aristocracy it destroyed. But the aristocracy of trade has no permanence, is not entailed, was the result of

toil and talent, the result of merit of some kind, and is continually falling, like the waves of the sea, before new claims of the same sort. Trade is an instrument in the hands of that friendly Power which works for us in our own despite. We design it thus and thus; it turns out otherwise and far better. This beneficent tendency, omnipotent without violence, exists and works. Every line of history inspires a confidence that we shall not go far wrong; that things mend. That is the moral of all we learn, that it warrants Hope, the prolific mother of reforms. Our part is plainly not to throw ourselves across the track, to block improvement, and sit till we are stone, but to watch the uprise of successive mornings, and to conspire with the new works of new days. Government has been a fossil; it should be a plant. I conceive that the office of statute law should be to express, and not to impede the mind of mankind. New thoughts, new things. Trade was one instrument, but Trade is also but for a time, and must give way to somewhat broader and better, whose signs are already dawning in the sky.

3. I pass to speak of the signs of that which is the sequel of trade.

In consequence of the revolution in the state of society wrought by trade, Government in our times is beginning to wear a clumsy and cumbrous appearance. We have already seen our way to shorter methods. The time is full of good signs. Some of them shall ripen to fruit. All this beneficent socialism is a friendly omen, and the swelling cry of voices for the education of the people, indicates that Government has other offices than those of banker and executioner. Witness the new movements in the civilized world, the Communism of France, Germany, and Switzerland; the Trades' Unions; the English League against the Corn Laws; and the whole *Industrial Statistics*, so called. In Paris, the blouse, the badge of the operative, has begun to make its appearance in the saloons. Witness, too, the spectacle of three Communities which have within a very short time sprung up within this Commonwealth, besides several others undertaken by citizens of Massachusetts within the territory of other States. These proceeded from a variety of motives, from an impatience of many usages in common life, from a wish for greater freedom than the manners and opinions of society permitted, but in great part from a feeling that the true offices of the State, the State had let fall to the ground; that in the scramble of parties for the public purse, the main duties of government were omitted, — the duty to instruct the ignorant, to supply the poor with work and with good guidance. These communists preferred the agricultural life as the most favorable condition for human culture; but they thought that the farm, as we manage it, did not satisfy the right ambition of man. The farmer after sacrificing pleasure, taste, freedom, thought, love, to his work, turns out often a bankrupt,

like the merchant. This result might well seem astounding. All this drudgery, from cockcrowing to starlight, for all these years, to end in mortgages and the auctioneer's flag, and removing from bad to worse. It is time to have the thing looked into, and with a sifting criticism ascertained who is the fool. It seemed a great deal worse, because the farmer is living in the same town with men who pretend to know exactly what he wants. On one side, is agricultural chemistry, coolly exposing the nonsense of our spendthrift agriculture and ruinous expense of manures, and offering, by means of a teaspoonful of artificial guano, to turn a sandbank into corn; and, on the other, the farmer, not only eager for the information, but with bad crops and in debt and bankruptcy, for want of it. Here are Etzlers and mechanical projectors, who, with the Fourierists, undoubtingly affirm that the smallest union would make every man rich; — and, on the other side, a multitude of poor men and women seeking work, and who cannot find enough to pay their board. The science is confident, and surely the poverty is real. If any means could be found to bring these two together!

This was one design of the projectors of the Associations which are now making their first feeble experiments. They were founded in love, and in labor. They proposed, as you know, that all men should take a part in the manual toil, and proposed to amend the condition of men, by substituting harmonious for hostile industry. It was a noble thought of Fourier, which gives a favorable idea of his system, to distinguish in his Phalanx a class as the Sacred Band, by whom whatever duties were disagreeable, and likely to be omitted, were to be assumed.

At least, an economical success seemed certain for the enterprise, and that agricultural association must, sooner or later, fix the price of bread, and drive single farmers into association, in self-defence; as the great commercial and manufacturing companies had already done. The Community is only the continuation of the same movement which made the joint-stock companies for manufactures, mining, insurance, banking, and so forth. It has turned out cheaper to make calico by companies; and it is proposed to plant corn, and to bake bread by companies.

Undoubtedly, abundant mistakes will be made by these first adventurers, which will draw ridicule on their schemes. I think, for example, that they exaggerate the importance of a favorite project of theirs, that of paying talent and labor at one rate, paying all sorts of service at one rate, say ten cents the hour. They have paid it so; but not an instant would a dime remain a dime. In one hand it became an eagle as it fell, and in another hand a copper cent. For the whole value of the dime is in knowing what to do with it. One man buys with it a land-title of an Indian, and makes his posterity princes; or buys corn enough to feed the world; or pen, ink, and paper, or a painter's brush, by which he can

communicate himself to the human race as if he were fire; and the other buys barley candy. Money is of no value; it cannot spend itself. All depends on the skill of the spender. Whether, too, the objection almost universally felt by such women in the community as were mothers, to an associate life, to a common table, and a common nursery, &c., setting a higher value on the private family with poverty, than on an association with wealth, will not prove insuperable, remains to be determined.

But the Communities aimed at a higher success in securing to all their members an equal and thorough education. And on the whole, one may say, that aims so generous, and so forced on them by the times, will not be relinquished, even if these attempts fail, but will be prosecuted until they succeed.

This is the value of the Communities; not what they have done, but the revolution which they indicate as on the way. Yes, Government must educate the poor man. Look across the country from any hill-side around us, and the landscape seems to crave Government. The actual differences of men must be acknowledged, and met with love and wisdom. These rising grounds which command the champaign below, seem to ask for lords, true lords, *land*-lords, who understand the land and its uses, and the applicabilities of men, and whose government would be what it should, namely, mediation between want and supply. How gladly would each citizen pay a commission for the support and continuation of good guidance. None should be a governor who has not a talent for governing. Now many people have a native skill for carving out business for many hands; a genius for the disposition of affairs; and are never happier than when difficult practical questions, which embarrass other men, are to be solved. All lies in light before them; they are in their element. Could any means be contrived to appoint only these! There really seems a progress towards such a state of things, in which this work shall be done by these natural workmen; and this, not certainly through any increased discretion shown by the citizens at elections, but by the gradual contempt into which official government falls, and the increasing disposition of private adventurers to assume its fallen functions. Thus the costly Post Office is likely to go into disuse before the private transportation-shop of Harnden and his competitors. The currency threatens to fall entirely into private hands. Justice is continually administered more and more by private reference, and not by litigation. We have feudal governments in a commercial age. It would be but an easy extension of our commercial system, to pay a private emperor a fee for services, as we pay an architect, an engineer, or a lawyer. If any man has a talent for righting wrong, for administering difficult affairs, for counselling poor farmers how to turn their estates to good husbandry, for combining a hundred private enterprises to a general benefit, let

him in the county-town, or in Court-street, put up his sign-board, Mr. Smith, *Governor*, Mr. Johnson, *Working king*.

How can our young men complain of the poverty of things in New England, and not feel that poverty as a demand on their charity to make New England rich? Where is he who seeing a thousand men useless and unhappy, and making the whole region forlorn by their inaction, and conscious himself of possessing the faculty they want, does not hear his call to go and be their king?

We must have kings, and we must have nobles. Nature provides such in every society, — only let us have the real instead of the titular. Let us have our leading and our inspiration from the best. In every society some men are born to rule, and some to advise. Let the powers be well directed, directed by love, and they would everywhere be greeted with joy and honor. The chief is the chief all the world over, only not his cap and his plume. It is only their dislike of the pretender, which makes men sometimes unjust to the accomplished man. If society were transparent, the noble would everywhere be gladly received and accredited, and would not be asked for his day's work, but would be felt as benefit, inasmuch as he was noble. That were his duty and stint, — to keep himself pure and purifying, the leaven of his nation. I think I see place and duties for a nobleman in every society; but it is not to drink wine and ride in a fine coach, but to guide and adorn life for the multitude by forethought, by elegant studies, by perseverance, self-devotion, and the remembrance of the humble old friend, by making his life secretly beautiful.

I call upon you, young men, to obey your heart, and be the nobility of this land. In every age of the world, there has been a leading nation, one of a more generous sentiment, whose eminent citizens were willing to stand for the interests of general justice and humanity, at the risk of being called, by the men of the moment, chimerical and fantastic. Which should be that nation but these States? Which should lead that movement, if not New England? Who should lead the leaders, but the Young American? The people, and the world, is now suffering from the want of religion and honor in its public mind. In America, out of doors all seems a market; in doors, an air-tight stove of conventionalism. Every body who comes into our houses savors of these habits; the men, of the market; the women, of the custom. I find no expression in our state papers or legislative debate, in our lyceums or churches, specially in our newspapers, of a high national feeling, no lofty counsels that rightfully stir the blood. I speak of those organs which can be presumed to speak a popular sense. They recommend conventional virtues, whatever will earn and preserve property; always the capitalist; the college, the church, the hospital, the theatre, the hotel, the road, the ship, of the capitalist, — whatever goes to secure, adorn, enlarge these, is good;

what jeopardizes any of these, is damnable. The `opposition' papers, so called, are on the same side. They attack the great capitalist, but with the aim to make a capitalist of the poor man. The opposition is against those who have money, from those who wish to have money. But who announces to us in journal, or in pulpit, or in the street, the secret of heroism,

“Man alone
Can perform the impossible?”

I shall not need to go into an enumeration of our national defects and vices which require this Order of Censors in the state. I might not set down our most proclaimed offences as the worst. It is not often the worst trait that occasions the loudest outcry. Men complain of their suffering, and not of the crime. I fear little from the bad effect of Repudiation; I do not fear that it will spread. Stealing is a suicidal business; you cannot repudiate but once. But the bold face and tardy repentance permitted to this local mischief, reveal a public mind so preoccupied with the love of gain, that the common sentiment of indignation at fraud does not act with its natural force. The more need of a withdrawal from the crowd, and a resort to the fountain of right, by the brave. The timidity of our public opinion, is our disease, or, shall I say, the publicness of opinion, the absence of private opinion. Good-nature is plentiful, but we want justice, with heart of steel, to fight down the proud. The private mind has the access to the totality of goodness and truth, that it may be a balance to a corrupt society; and to stand for the private verdict against popular clamor, is the office of the noble. If a humane measure is propounded in behalf of the slave, or of the Irishman, or the Catholic, or for the succor of the poor, that sentiment, that project, will have the homage of the hero. That is his nobility, his oath of knighthood, to succor the helpless and oppressed; always to throw himself on the side of weakness, of youth, of hope, on the liberal, on the expansive side, never on the defensive, the conserving, the timorous, the lock and bolt system. More than our good-will we may not be able to give. We have our own affairs, our own genius, which chains us to our proper work. We cannot give our life to the cause of the debtor, of the slave, or the pauper, as another is doing; but to one thing we are bound, not to blaspheme the sentiment and the work of that man, not to throw stumbling-blocks in the way of the abolitionist, the philanthropist, as the organs of influence and opinion are swift to do. It is for us to confide in the beneficent Supreme Power, and not to rely on our money, and on the state because it is the guard of money. At this moment, the terror of old people and of vicious people, is lest the Union of these States be destroyed: as if the Union had any other real

basis than the good pleasure of a majority of the citizens to be united. But the wise and just man will always feel that he stands on his own feet; that he imparts strength to the state, not receives security from it; and that if all went down, he and such as he would quite easily combine in a new and better constitution. Every great and memorable community has consisted of formidable individuals, who, like the Roman or the Spartan, lent his own spirit to the state and made it great. Yet only by the supernatural is a man strong; nothing is so weak as an egotist. Nothing is mightier than we, when we are vehicles of a truth before which the state and the individual are alike ephemeral.

Gentlemen, the development of our American internal resources, the extension to the utmost of the commercial system, and the appearance of new moral causes which are to modify the state, are giving an aspect of greatness to the Future, which the imagination fears to open. One thing is plain for all men of common sense and common conscience, that here, here in America, is the home of man. After all the deductions which are to be made for our pitiful politics, which stake every gravest national question on the silly die, whether James or whether Jonathan shall sit in the chair and hold the purse; after all the deduction is made for our frivolities and insanities, there still remains an organic simplicity and liberty, which, when it loses its balance, redresses itself presently, which offers opportunity to the human mind not known in any other region.

It is true, the public mind wants self-respect. We are full of vanity, of which the most signal proof is our sensitiveness to foreign and especially English censure. One cause of this is our immense reading, and that reading chiefly confined to the productions of the English press. It is also true, that, to imaginative persons in this country, there is somewhat bare and bald in our short history, and unsettled wilderness. They ask, who would live in a new country, that can live in an old? and it is not strange that our youths and maidens should burn to see the picturesque extremes of an antiquated country. But it is one thing to visit the pyramids, and another to wish to live there. Would they like tithes to the clergy, and sevenths to the government, and horse-guards, and licensed press, and grief when a child is born, and threatening, starved weavers, and a pauperism now constituting one-thirteenth of the population? Instead of the open future expanding here before the eye of every boy to vastness, would they like the closing in of the future to a narrow slit of sky, and that fast contracting to be no future? One thing, for instance, the beauties of aristocracy, we commend to the study of the travelling American. The English, the most conservative people this side of India, are not sensible of the restraint, but an American would seriously resent it. The aristocracy, incorporated by law and education, degrades life for the unprivileged classes. It is a questionable compensation to the

embittered feeling of a proud commoner, the reflection that a fop, who, by the magic of title, paralyzes his arm, and plucks from him half the graces and rights of a man, is himself also an aspirant excluded with the same ruthlessness from higher circles, since there is no end to the wheels within wheels of this spiral heaven. Something may be pardoned to the spirit of loyalty when it becomes fantastic; and something to the imagination, for the baldest life is symbolic. Philip II. of Spain rated his ambassador for neglecting serious affairs in Italy, whilst he debated some point of honor with the French ambassador; "You have left a business of importance for a ceremony." The ambassador replied, "Your majesty's self is but a ceremony." In the East, where the religious sentiment comes in to the support of the aristocracy, and in the Romish church also, there is a grain of sweetness in the tyranny; but in England, the fact seems to me intolerable, what is commonly affirmed, that such is the transcendent honor accorded to wealth and birth, that no man of letters, be his eminence what it may, is received into the best society, except as a lion and a show. The English have many virtues, many advantages, and the proudest history of the world; but they need all, and more than all the resources of the past to indemnify a heroic gentleman in that country for the mortifications prepared for him by the system of society, and which seem to impose the alternative to resist or to avoid it. That there are mitigations and practical alleviations to this rigor, is not an excuse for the rule. Commanding worth, and personal power, must sit crowned in all companies, nor will extraordinary persons be slighted or affronted in any company of civilized men. But the system is an invasion of the sentiment of justice and the native rights of men, which, however decorated, must lessen the value of English citizenship. It is for Englishmen to consider, not for us; we only say, let us live in America, too thankful for our want of feudal institutions. Our houses and towns are like mosses and lichens, so slight and new; but youth is a fault of which we shall daily mend. This land, too, is as old as the Flood, and wants no ornament or privilege which nature could bestow. Here stars, here woods, here hills, here animals, here men abound, and the vast tendencies concur of a new order. If only the men are employed in conspiring with the designs of the Spirit who led us hither, and is leading us still, we shall quickly enough advance out of all hearing of other's censures, out of all regrets of our own, into a new and more excellent social state than history has recorded.

ADDRESS ON THE ANNIVERSARY OF EMANCIPATION IN THE BRITISH WEST INDIES (1844)

Friends and Fellow Citizens,

We are met to exchange congratulations on the anniversary of an event singular in the history of civilization; a day of reason; of the clear light; of that which makes us better than a flock of birds and beasts: a day, which gave the immense fortification of a fact, — of gross history, — to ethical abstractions. It was the settlement, as far as a great Empire was concerned, of a question on which almost every leading citizen in it had taken care to record his vote; one which for many years absorbed the attention of the best and most eminent of mankind. I might well hesitate, coming from other studies, and without the smallest claim to be a special laborer in this work of humanity, to undertake to set this matter before you; which ought rather to be done by a strict cooperation of many well-advised persons; but I shall not apologize for my weakness. In this cause, no man's weakness is any prejudice; it has a thousand sons; if one man cannot speak, ten others can; and whether by the wisdom of its friends, or by the folly of the adversaries; by speech and by silence; by doing and by omitting to do, it goes forward. Therefore I will speak, — or, not I, but the might of liberty in my weakness. The subject is said to have the property of making dull men eloquent.

It has been in all men's experience a marked effect of the enterprise in behalf of the African, to generate an over-bearing and defying spirit. The institution of slavery seems to its opponent to have but one side, and he feels that none but a stupid or a malignant person can hesitate on a view of the facts. Under such an impulse, I was about to say, If any cannot speak, or cannot hear the words of freedom, let him go hence, — I had almost said, Creep into your grave, the universe has no need of you! But I have thought better: let him not go. When we consider what remains to be done for this interest, in this country, the dictates of humanity make us tender of such as are not yet persuaded. The hardest selfishness is to be borne with. Let us withhold every reproachful, and, if we can, every indignant remark. In this cause, we must renounce our temper, and the risings of pride. If there be any man who thinks the ruin of a race of men a small matter, compared with the last decoration and completions of his own comfort, — who would not so much as part with his ice-cream, to save them from rapine and manacles, I think, I must not hesitate to satisfy that man, that also his cream and vanilla are safer and cheaper, by placing the negro nation on a fair footing, than by robbing them. If the Virginian piques himself on the picturesque luxury

of his vassalage, on the heavy Ethiopian manners of his house-servants, their silent obedience, their hue of bronze, their turbaned heads, and would not exchange them for the more intelligent but precarious hired-service of whites, I shall not refuse to show him, that when their free-papers are made out, it will still be their interest to remain on his estate, and that the oldest planters of Jamaica are convinced, that it is cheaper to pay wages, than to own the slave.

The history of mankind interests us only as it exhibits a steady gain of truth and right, in the incessant conflict which it records, between the material and the moral nature. From the earliest monuments, it appears, that one race was victim, and served the other races. In the oldest temples of Egypt, negro captives are painted on the tombs of kings, in such attitudes as to show that they are on the point of being executed; and Herodotus, our oldest historian, relates that the Troglodytes hunted the Ethiopians in four-horse-chariots. From the earliest time, the negro has been an article of luxury to the commercial nations. So has it been, down to the day that has just dawned on the world. Language must be raked, the secrets of slaughter-houses and infamous holes that cannot front the day, must be ransacked, to tell what negro-slavery has been. These men, our benefactors, as they are producers of corn and wine, of coffee, of tobacco, of cotton, of sugar, of rum, and brandy, gentle and joyous themselves, and producers of comfort and luxury for the civilized world, — there seated in the finest climates of the globe, children of the sun, — I am heart-sick when I read how they came there, and how they are kept there. Their case was left out of the mind and out of the heart of their brothers. The prizes of society, the trumpet of fame, the privileges of learning, of culture, of religion, the decencies and joys of marriage, honor, obedience, personal authority, and a perpetual melioration into a finer civility, these were for all, but not for them. For the negro, was the slaveship to begin with, in whose filthy hold he sat in irons, unable to lie down; bad food, and insufficiency of that; disfranchisement; no property in the rags that covered him; no marriage, no right in the poor black woman that cherished him in her bosom, — no right to the children of his body; no security from the humors, none from the crimes, none from the appetites of his master: toil, famine, insult, and flogging; and, when he sunk in the furrow, no wind of good fame blew over him, no priest of salvation visited him with glad tidings: but he went down to death, with dusky dreams of African shadow-catchers and Obeahs hunting him. Very sad was the negro tradition, that the Great Spirit, in the beginning, offered the black man, whom he loved better than the buckra or white, his choice of two boxes, a big and a little one. The black man was greedy, and chose the largest. “The buckra box was full up with pen, paper, and whip, and the negro box with hoe and bill; and hoe and bill for negro to this day.”

But the crude element of good in human affairs must work and ripen, spite of whips, and plantation-laws, and West Indian interest. Conscience rolled on its pillow, and could not sleep. We sympathize very tenderly here with the poor aggrieved planter, of whom so many unpleasant things are said; but if we saw the whip applied to old men, to tender women; and, undeniably, though I shrink to say so, — pregnant women set in the treadmill for refusing to work, when, not they, but the eternal law of animal nature refused to work; — if we saw men's backs flayed with cowhides, and "hot rum poured on, superinduced with brine or pickle, rubbed in with a cornhusk, in the scorching heat of the sun;" — if we saw the runaways hunted with blood-hounds into swamps and hills; and, in cases of passion, a planter throwing his negro into a copper of boiling cane-juice, — if we saw these things with eyes, we too should wince. They are not pleasant sights. The blood is moral: the blood is anti-slavery: it runs cold in the veins: the stomach rises with disgust, and curses slavery. Well, so it happened; a good man or woman, a country-boy or girl, it would so fall out, once in a while saw these injuries, and had the indiscretion to tell of them. The horrid story ran and flew; the winds blew it all over the world. They who heard it, asked their rich and great friends, if it was true, or only missionary lies. The richest and greatest, the prime minister of England, the king's privy council were obliged to say, that it was too true. It became plain to all men, the more this business was looked into, that the crimes and cruelties of the slave-traders and slave-owners could not be overstated. The more it was searched, the more shocking anecdotes came up, — things not to be spoken. Humane persons who were informed of the reports, insisted on proving them. Granville Sharpe was accidentally made acquainted with the sufferings of a slave, whom a West Indian planter had brought with him to London, and had beaten with a pistol on his head so badly, that his whole body became diseased, and the man, useless to his master, who left him to go whither he pleased. The man applied to Mr. William Sharpe, a charitable surgeon, who attended the diseases of the poor. In process of time, he was healed. Granville Sharpe found him at his brother's, and procured a place for him in an apothecary's shop. The master accidentally met his recovered slave, and instantly endeavored to get possession of him again. Sharpe protected the slave. In consulting with the lawyers, they told Sharpe the laws were against him. Sharpe would not believe it; no prescription on earth could ever render such iniquities legal. But the decisions are against you, and Lord Mansfield, now chief justice of England, leans to the decisions.' Sharpe instantly sat down and gave himself to the study of English law for more than two years, until he had proved that the opinions relied on of Talbot and Yorke, were incompatible with the former English decisions, and with the whole spirit of English law. He

published his book in 1769, and he so filled the heads and hearts of his advocates, that when he brought the case of George Somerset, another slave, before Lord Mansfield, the slavish decisions were set aside, and equity affirmed. There is a sparkle of God's righteousness in Lord Mansfield's judgment, which does the heart good. Very unwilling had that great lawyer been to reverse the late decisions; he suggested twice from the bench, in the course of the trial, how the question might be got rid of: but the hint was not taken; the case was adjourned again and again, and judgment delayed. At last judgment was demanded, and on the 22d June, 1772, Lord Mansfield is reported to have decided in these words;

“Immemorial usage preserves the memory of positive law, long after all traces of the occasion, reason, authority, and time of its introduction, are lost; and in a case so odious as the condition of slaves, must be taken strictly; (tracing the subject to natural principles, the claim of slavery never can be supported.) The power claimed by this return never was in use here. We cannot say the cause set forth by this return is allowed or approved of by the laws of this kingdom; and therefore the man must be discharged.”

This decision established the principle that the “air of England is too pure for any slave to breathe,” but the wrongs in the islands were not thereby touched. Public attention, however, was drawn that way, and the methods of the stealing and the transportation from Africa, became noised abroad. The Quakers got the story. In their plain meeting-houses, and prim dwellings, this dismal agitation got entrance. They were rich: they owned for debt, or by inheritance, island property; they were religious, tender-hearted men and women; and they had to hear the news, and digest it as they could. Six Quakers met in London on the 6th July, 1783; William Dillwyn, Samuel Hoar, George Harrison, Thomas Knowles, John Lloyd, Joseph Woods, “to consider what step they should take for the relief and liberation of the negro slaves in the West Indies, and for the discouragement of the slave-trade on the coast of Africa.” They made friends and raised money for the slave; they interested their Yearly Meeting; and all English and all American Quakers. John Woolman of New Jersey, whilst yet an apprentice, was uneasy in his mind when he was set to write a bill of sale of a negro, for his master. He gave his testimony against the traffic, in Maryland and Virginia. Thomas Clarkson was a youth at Cambridge, England, when the subject given out for a Latin prize dissertation, was, “Is it right to make slaves of others against their will?” He wrote an essay, and won the prize; but he wrote too well for his own peace; he began to ask himself, if these things could be true; and if they were, he could no longer rest. He left Cambridge; he fell in with the six Quakers. They engaged him to act for them. He himself interested Mr.

Wilberforce in the matter. The shipmasters in that trade were the greatest miscreants, and guilty of every barbarity to their own crews. Clarkson went to Bristol, made himself acquainted with the interior of the slaveships, and the details of the trade. The facts confirmed his sentiment, "that Providence had never made that to be wise, which was immoral, and that the slave-trade — was as impolitic as it was unjust;" that it was found peculiarly fatal to those employed in it. More seamen died in that trade, in one year, than in the whole remaining trade of the country in two. Mr. Pitt and Mr. Fox were drawn into the generous enterprise. In 1788, the House of Commons voted Parliamentary inquiry. In 1791, a bill to abolish the trade was brought in by Wilberforce, and supported by him, and by Fox, and Burke, and Pitt, with the utmost ability and faithfulness; resisted by the planters, and the whole West Indian interest, and lost. During the next sixteen years, ten times, year after year, the attempt was renewed by Mr. Wilberforce, and ten times defeated by the planters. The king, and all the royal family but one, were against it. These debates are instructive, as they show on what grounds the trade was assailed and defended. Every thing generous, wise, and sprightly is sure to come to the attack. On the other part, are found cold prudence, barefaced selfishness, and silent votes. But the nation was aroused to enthusiasm. Every horrid fact became known. In 1791, three hundred thousand persons in Britain pledged themselves to abstain from all articles of island produce. The planters were obliged to give way; and in 1807, on the 25th March, the bill passed, and the slave-trade was abolished.

The assailants of slavery had early agreed to limit their political action on this subject to the abolition of the trade, but Granville Sharpe, as a matter of conscience; whilst he acted as chairman of the London Committee, felt constrained to record his protest against the limitation, declaring that slavery was as much a crime against the Divine law, as the slave-trade. The trade, under false flags, went on as before. In 1821, according to official documents presented to the American government by the Colonization Society, 200,000 slaves were deported from Africa. Nearly 30,000 were landed in the port of Havana alone. In consequence of the dangers of the trade growing out of the act of abolition, ships were built sharp for swiftness, and with a frightful disregard of the comfort of the victims they were destined to transport. They carried five, six, even seven hundred stowed in a ship built so narrow as to be unsafe, being made just broad enough on the beam to keep the sea. In attempting to make its escape from the pursuit of a man-of-war, one ship flung five hundred slaves alive into the sea. These facts went into Parliament. In the islands, was an ominous state of cruel and licentious society; every house had a dungeon attached to it; every slave was worked by the whip. There is no end to the tragic anecdotes in the municipal

records of the colonies. The boy was set to strip and to flog his own mother to blood, for a small offence. Looking in the face of his master by the negro was held to be violence by the island courts. He was worked sixteen hours, and his ration by law, in some islands, was a pint of flour and one salt herring a day. He suffered insult, stripes, mutilation, at the humor of the master: iron collars were riveted on their necks with iron prongs ten inches long; capsicum pepper was rubbed in the eyes of the females; and they were done to death with the most shocking levity between the master and manager, without fine or inquiry. And when, at last, some Quakers, Moravians, and Wesleyan and Baptist missionaries, following in the steps of Carey and Ward in the East Indies, had been moved to come and cheer the poor victim with the hope of some reparation, in a future world, of the wrongs he suffered in this, these missionaries were persecuted by the planters, their lives threatened, their chapels burned, and the negroes furiously forbidden to go near them. These outrages rekindled the flame of British indignation. Petitions poured into Parliament: a million persons signed their names to these; and in 1833, on the 14th May, Lord Stanley, minister of the colonies, introduced into the House of Commons his bill for the Emancipation.

The scheme of the minister, with such modification as it received in the legislature, proposed gradual emancipation; that on 1st August, 1834, all persons now slaves should be entitled to be registered as apprenticed laborers, and to acquire thereby all the rights and privileges of freemen, subject to the restriction of laboring under certain conditions. These conditions were, that the praedials should owe three fourths of the profits of their labor to their masters for six years, and the nonpraedials for four years. The other fourth of the apprentice's time was to be his own, which he might sell to his master, or to other persons; and at the end of the term of years fixed, he should be free.

With these provisions and conditions, the bill proceeds, in the twelfth section, in the following terms. "Be it enacted, that all and every person who, on the 1st August, 1834, shall be holden in slavery within any such British colony as aforesaid, shall upon and from and after the said 1st August, become and be to all intents and purposes free, and discharged of and from all manner of slavery, and shall be absolutely and forever manumitted; and that the children thereafter born to any such persons, and the offspring of such children, shall, in like manner, be free from their birth; and that from and after the 1st August, 1834, slavery shall be and is hereby utterly and forever abolished and declared unlawful throughout the British colonies, plantations, and possessions abroad."

The ministers, having estimated the slave products of the colonies in annual exports of sugar, rum, and coffee, at \$1,500,000 per annum, estimated the total value of the slave-property at 30,000,000 pounds sterling, and proposed to give

the planters, as a compensation for so much of the slaves' time as the act took from them, 20,000,000 pounds sterling, to be divided into nineteen shares for the nineteen colonies, and to be distributed to the owners of slaves by commissioners, whose appointment and duties were regulated by the Act. After much debate, the bill passed by large majorities. The apprenticeship system is understood to have proceeded from Lord Brougham, and was by him urged on his colleagues, who, it is said, were inclined to the policy of immediate emancipation.

The colonial legislatures received the act of Parliament with various degrees of displeasure, and, of course, every provision of the bill was criticised with severity. The new relation between the master and the apprentice, it was feared, would be mischievous; for the bill required the appointment of magistrates, who should hear every complaint of the apprentice, and see that justice was done him. It was feared that the interest of the master and servant would now produce perpetual discord between them. In the island of Antigua, containing 37,000 people, 30,000 being negroes, these objections had such weight, that the legislature rejected the apprenticeship system, and adopted absolute emancipation. In the other islands the system of the ministry was accepted.

The reception of it by the negro population was equal in nobleness to the deed. The negroes were called together by the missionaries and by the planters, and the news explained to them. On the night of the 31st July, they met everywhere at their churches and chapels, and at midnight, when the clock struck twelve, on their knees, the silent, weeping assembly became men; they rose and embraced each other; they cried, they sung, they prayed, they were wild with joy, but there was no riot, no feasting. I have never read anything in history more touching than the moderation of the negroes. Some American captains left the shore and put to sea, anticipating insurrection and general murder. With far different thoughts, the negroes spent the hour in their huts and chapels. I will not repeat to you the well-known paragraph, in which Messrs. Thome and Kimball, the commissioners sent out in the year 1837 by the American Anti-slavery Society, describe the occurrences of that night in the island of Antigua. It has been quoted in every newspaper, and Dr. Channing has given it additional fame. But I must be indulged in quoting a few sentences from the pages that follow it, narrating the behavior of the emancipated people on the next day.

“The first of August came on Friday, and a release was proclaimed from all work until the next Monday. The day was chiefly spent by the great mass of the negroes in the churches and chapels. The clergy and missionaries throughout the island were actively engaged, seizing the opportunity to enlighten the people on all the duties and responsibilities of their new relation, and urging them to the

attainment of that higher liberty with which Christ maketh his children free. In every quarter, we were assured, the day was like a sabbath. Work had ceased. The hum of business was still: tranquillity pervaded the towns and country. The planters informed us, that they went to the chapels where their own people were assembled, greeted them, shook hands with them, and exchanged the most hearty good wishes. At Grace Hill, there were at least a thousand persons around the Moravian Chapel who could not get in. For once the house of God suffered violence, and the violent took it by force. At Grace Bay, the people, all dressed in white, formed a procession, and walked arm in arm into the chapel. We were told that the dress of the negroes on that occasion was uncommonly simple and modest. There was not the least disposition to gaiety. Throughout the island, there was not a single dance known of, either day or night, nor so much as a fiddle played.” [Note from bottom of p. 13: “Emancipation in the West Indies: a Six Months Tour in Antigua, Barbadoes, and Jamaica, in the year 1837. By J. A. Thome and J. H. Kimball. New York, 1838.” — pp. 146, 147.”]

On the next Monday morning, with very few exceptions, every negro on every plantation was in the field at his work. In some places, they waited to see their master, to know what bargain he would make; but, for the most part, throughout the islands, nothing painful occurred. In June, 1835, the ministers, Lord Aberdeen and Sir George Grey, declared to the Parliament, that the system worked well; that now for ten months, from 1st August, 1834, no injury or violence had been offered to any white, and only one black had been hurt in 800,000 negroes: and, contrary to many sinister predictions, that the new crop of island produce would not fall short of that of the last year.

But the habit of oppression was not destroyed by a law and a day of jubilee. It soon appeared in all the islands, that the planters were disposed to use their old privileges, and overwork the apprentices; to take from them, under various pretences, their fourth part of their time; and to exert the same licentious despotism as before. The negroes complained to the magistrates, and to the governor. In the island of Jamaica, this ill blood continually grew worse. The governors, Lord Belmore, the Earl of Sligo, and afterwards Sir Lionel Smith, (a governor of their own class, who had been sent out to gratify the planters,) threw themselves on the side of the oppressed, and are at constant quarrel with the angry and bilious island legislature. Nothing can exceed the ill humor and sulkiness of the addresses of this assembly.

I may here express a general remark, which the history of slavery seems to justify, that it is not founded solely on the avarice of the planter. We sometimes say, the planter does not want slaves, he only wants the immunities and the luxuries which the slaves yield him; give him money, give him a machine that

will yield him as much money as the slaves, and he will thankfully let them go. He has no love of slavery, he wants luxury, and he will pay even this price of crime and danger for it. But I think experience does not warrant this favorable distinction, but shows the existence, beside the covetousness, of a bitterer element, the love of power, the voluptuousness of holding a human being in his absolute control. We sometimes observe, that spoiled children contract a habit of annoying quite wantonly those who have charge of them, and seem to measure their own sense of well-being, not by what they do, but by the degree of reaction they can cause. It is vain to get rid of them by not minding them: if purring and humming is not noticed, they squeal and screech; then if you chide and console them, they find the experiment succeeds, and they begin again. The child will sit in your arms contented, provided you do nothing. If you take a book and read, he commences hostile operations. The planter is the spoiled child of his unnatural habits, and has contracted in his indolent and luxurious climate the need of excitement by irritating and tormenting his slave.

Sir Lionel Smith defended the poor negro girls, prey to the licentiousness of the planters; they shall not be whipped with tamarind rods, if they do not comply with their master's will; he defended the negro women; they should not be wade to dig the cane-holes, (which is the very hardest of the field-work;) he defended the Baptist preachers and the stipendiary magistrates, who are the negroes' friends, from the power of the planter. The power of the planters, however, to oppress, was greater than the power of the apprentice and of his guardians to withstand. Lord Brougham and Mr. Buxton declared that the planter had not fulfilled his part in the contract, whilst the apprentices had fulfilled theirs; and demanded that the emancipation should be hastened, and the apprenticeship abolished. Parliament was compelled to pass additional laws for the defence and security of the negro, and in ill humor at these acts, the great island of Jamaica, with a population of half a million, and 300,000 negroes, early in 1838, resolved to throw up the two remaining years of apprenticeship, and to emancipate absolutely on the 1st August, 1838. In British Guiana, in Dominica, the same resolution had been earlier taken with more good will; and the other islands fell into the measure; so that on the 1st August, 1838, the shackles dropped from every British slave. The accounts which we have from all parties, both from the planters, and those too who were originally most opposed to the measure, and from the new freemen, are of the most satisfactory kind. The manner in which the new festival was celebrated, brings tears to the eyes. The First of August, 1838, was observed in Jamaica as a day of thanksgiving and prayer. Sir Lionel Smith, the governor, writes to the British Ministry, "It is impossible for me to do justice to the good order, decorum, and gratitude, which the whole laboring

population manifested on that happy occasion. Though joy beamed on every countenance, it was throughout tempered with solemn thankfulness to God, and the churches and chapels were everywhere filled with these happy people in humble offering of praise.”

The Queen, in her speech to the Lords and Commons, praised the conduct of the emancipated population: and, in 1840, Sir Charles Metcalfe, the new governor of Jamaica, in his address to the Assembly, expressed himself to that late exasperated body in these terms. “All those who are acquainted with the state of the island, know that our emancipated population are as free, as independent in their conduct, as well-conditioned, as much in the enjoyment of abundance, and as strongly sensible of the blessings of liberty, as any that we know of in any country. All disqualifications and distinctions of color have ceased; men of all colors have equal rights in law, and an equal footing in society, and every man’s position is settled by the same circumstances which regulate that point in other free countries, where no difference of color exists. It may be asserted, without fear of denial, that the former slaves of Jamaica are now as secure in all social rights, as freeborn Britons.” He further describes the erection of numerous churches, chapels, and schools, which the new population required, and adds that more are still demanded. The legislature, in their reply, echo the governor’s statement, and say, “The peaceful demeanor of the emancipated population redounds to their own credit, and affords a proof of their continued comfort and prosperity.”

I said, this event is signal in the history of civilization. There are many styles of civilization, and not one only. Ours is full of barbarities. There are many faculties in man, each of which takes its turn of activity, and that faculty which is paramount in any period, and exerts itself through the strongest nation, determines the civility of that age; and each age thinks its own the perfection of reason. Our culture is very cheap and intelligible. Unroof any house, and you shall find it. The well-being consists in having a sufficiency of coffee and toast, with a daily newspaper; a well-glazed parlor, with marbles, mirrors, and centre-table; and the excitement of a few parties and a few rides in a year. Such as one house, such are all. The owner of a New York manor imitates the mansion and equipage of the London nobleman; the Boston merchant rivals his brother of New York; and the villages copy Boston. There have been nations elevated by great sentiments. Such was the civility of Sparta and the Dorian race, whilst it was defective in some of the chief elements of ours. That of Athens, again, lay in an intellect dedicated to beauty. That of Asia Minor in poetry, music, and arts; that of Palestine in piety; that of Rome in military arts and virtues, exalted by a prodigious magnanimity; that of China and Japan in the last exaggeration of

decorum and etiquette. Our civility, England determines the style of, inasmuch as England is the strongest of the family of existing nations, and as we are the expansion of that people. It is that of a trading nation; it is a shopkeeping civility. The English lord is a retired shopkeeper, and has the prejudices and timidities of that profession. And we are shopkeepers, and have acquired the vices and virtues that belong to trade. We peddle, we truck, we sail, we row, we ride in cars, we creep in teams, we go in canals — to market, and for the sale of goods. The national aim and employment streams into our ways of thinking, our laws, our habits, and our manners. The customer is the immediate jewel of our souls. Him we flatter, him we feast, compliment, vote for, and will not contradict. It was or it seemed the dictate of trade, to keep the negro down. We had found a race who were less warlike, and less energetic shopkeepers than we; who had very little skill in trade. We found it very convenient to keep them at work, since, by the aid of a little whipping, we could get their work for nothing but their board and the cost of whips. What if it cost a few unpleasant scenes on the coast of Africa? That was a great way off; and the scenes could be endured by some sturdy, unscrupulous fellows, who could go for high wages and bring us the men, and need not trouble our ears with the disagreeable particulars. If any mention was made of homicide, madness, adultery, and intolerable tortures, we would let the church-bells ring louder, the church-organ swell its peal, and drown the hideous sound. The sugar they raised was excellent: nobody tasted blood in it. The coffee was fragrant; the tobacco was incense; the brandy made nations happy; the cotton clothed the world. What! all raised by these men, and no wages? Excellent! What a convenience! They seemed created by providence to bear the heat and the whipping, and make these fine articles.

But unhappily, most unhappily, gentlemen, man is born with intellect, as well as with a love of sugar, and with a sense of justice, as well as a taste for strong drink. These ripened, as well as those. You could not educate him, you could not get any poetry, any wisdom, any beauty in woman, any strong and commanding character in man, but these absurdities would still come flashing out, — these absurdities of a demand for justice, a generosity for the weak and oppressed. Unhappily too, for the planter, the laws of nature are in harmony with each other: that which the head and the heart demand, is found to be, in the long run, for what the grossest calculator calls his advantage. The moral sense is always supported by the permanent interest of the parties. Else, I know not how, in our world, any good would ever get done. It was shown to the planters that they, as well as the negroes, were slaves; that though they paid no wages, they got very poor work; that their estates were ruining them, under the finest climate; and that they needed the severest monopoly laws at home to keep them from bankruptcy.

The oppression of the slave recoiled on them. They were full of vices; their children were lumps of pride, sloth, sensuality and rottenness. The position of woman was nearly as bad as it could be, and, like other robbers, they could not sleep in security. Many planters have said, since the emancipation, that, before that day, they were the greatest slaves on the estates. Slavery is no scholar, no improver; it does not love the whistle of the railroad; it does not love the newspaper, the mailbag, a college, a book, or a preacher who has the absurd whim of saying what he thinks; it does not increase the white population; it does not improve the soil; everything goes to decay. For these reasons, the islands proved bad customers to England. It was very easy for manufacturers less shrewd than those of Birmingham and Manchester to see, that if the state of things in the islands was altered, if the slaves had wages, the slaves would be clothed, would build houses, would fill them with tools, with pottery, with crockery, with hardware; and negro women love fine clothes as well as white women. In every naked negro of those thousands, they saw a future customer. Meantime, they saw further, that the slave-trade, by keeping in barbarism the whole coast of eastern Africa, deprives them of countries and nations of customers, if once freedom and civility, and European manners could get a foothold there. But the trade could not be abolished, whilst this hungry West Indian market, with an appetite like the grave, cried, [“]More, more, bring me a hundred a day;” they could not expect any mitigation in the madness of the poor African war-chiefs. These considerations opened the eyes of the dullest in Britain. More than this, the West Indian estate was owned or mortgaged in England, and the owner and the mortgagee had very plain intimations that the feeling of English liberty was gaining every hour new mass and velocity, and the hostility to such as resisted it, would be fatal. The House of Commons would destroy the protection of island produce, and interfere on English politics in the island legislation: so they hastened to make the best of their position, and accepted the bill.

These considerations, I doubt not, had their weight, the interest of trade, the interest of the revenue, and, moreover, the good fame of the action. It was inevitable that men should feel these motives. But they do not appear to have had an excessive or unreasonable weight. On reviewing this history, I think the whole transaction reflects infinite honor on the people and parliament of England. It was a stately spectacle, to see the cause of human rights argued with so much patience and generosity, and with such a mass of evidence before that powerful people. It is a creditable incident in the history, that when, in 1789, the first privy-council report of evidence on the trade, a bulky folio, (embodying all the facts which the London Committee had been engaged for years in collecting,

and all the examinations before the council,) was presented to the House of Commons, a late day being named for the discussion, in order to give members time, — Mr. Wilberforce, Mr. Pitt, the prime minister, and other gentlemen, took advantage of the postponement, to retire into the country, to read the report. For months and years the bill was debated, with some consciousness of the extent of its relations by the first citizens of England, the foremost men of the earth; every argument was weighed, every particle of evidence was sifted, and laid in the scale; and, at last, the right triumphed, the poor man was vindicated, and the oppressor was flung out. I know that England has the advantage of trying the question at a wide distance from the spot where the nuisance exists: the planters are not, excepting in rare examples, members of the legislature. The extent of the empire, and the magnitude and number of other questions crowding into court, keep this one in balance, and prevent it from obtaining that ascendancy, and being urged with that intemperance, which a question of property tends to acquire. There are causes in the composition of the British legislature, and the relation of its leaders to the country and to Europe, which exclude much that is pitiful and injurious in other legislative assemblies. From these reasons, the question was discussed with a rare independence and magnanimity. It was not narrowed down to a paltry electioneering trap, and, I must say, a delight in justice, an honest tenderness for the poor negro, for man suffering these wrongs, combined with the national pride, which refused to give the support of English soil, or the protection of the English flag, to these disgusting violations of nature.

Forgive me, fellow citizens, if I own to you, that in the last few days that my attention has been occupied with this history, I have not been able to read a page of it, without the most painful comparisons. Whilst I have read of England, I have thought of New England. Whilst I have meditated in my solitary walks on the magnanimity of the English Bench and Senate, reaching out the benefit of the law to the most helpless citizen in her world-wide realm, I have found myself oppressed by other thoughts. As I have walked in the pastures and along the edge of woods, I could not keep my imagination on those agreeable figures, for other images that intruded on me. I could not see the great vision of the patriots and senators who have adopted the slave's cause: — they turned their backs on me. No: I see other pictures — of mean men: I see very poor, very ill-clothed, very ignorant men, not surrounded by happy friends, — to be plain, — poor black men of obscure employment as mariners, cooks, or stewards, in ships, yet citizens of this our Commonwealth of Massachusetts, — freeborn as we, — whom the slave-laws of the States of South Carolina, Georgia, and Louisiana, have arrested in the vessels in which they visited those ports, and shut up in jails so long as the vessel remained in port, with the stringent addition, that if the

shipmaster fails to pay the costs of this official arrest, and the board in jail, these citizens are to be sold for slaves, to pay that expense. This man, these men, I see, and no law to save them. Fellow citizens, this crime will not be hushed up any longer. I have learned that a citizen of Nantucket, walking in New Orleans, found a freeborn citizen of Nantucket, a man, too, of great personal worth, and, as it happened, very dear to him, as having saved his own life, working chained in the streets of that city, kidnapped by such a process as this. In the sleep of the laws, the private interference of two excellent citizens of Boston has, I have ascertained, rescued several natives of this State from these southern prisons. Gentlemen, I thought the deck of a Massachusetts ship was as much the territory of Massachusetts, as the floor on which we stand. It should be as sacred as the temple of God. The poorest fishing-smack, that floats under the shadow of an iceberg in the northern seas, or hunts the whale in the southern ocean, should be encompassed by her laws with comfort and protection, as much as within the arms of Cape Ann and Cape Cod. And this kidnapping is suffered within our own land and federation, whilst the fourth article of the Constitution of the United States ordains in terms, that, "The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States." If such a damnable outrage can be committed on the person of a citizen with impunity, let the Governor break the broad seal of the State; he bears the sword in vain. The Governor of Massachusetts is a trifler: the State-house in Boston is a play-house: the General Court is a dishonored body: if they make laws which they cannot execute. The great-hearted Puritans have left no posterity. The rich men may walk in State-street, but they walk without honor; and the farmers may brag their democracy in the country, but they are disgraced men. If the State has no power to defend its own people in its own shipping, because it has delegated that power to the Federal Government, has it no representation in the Federal Government? Are those men dumb? I am no lawyer, and cannot indicate the forms applicable to the case, but here is something which transcends all forms. Let the senators and representatives of the State, containing a population of a million freemen, go in a body before the Congress, and say, that they have a demand to make on them so imperative, that all functions of government must stop, until it is satisfied. If ordinary legislation cannot reach it, then extraordinary must be applied. The Congress should instruct the President to send to those ports of Charleston, Savannah, and New Orleans, such orders and such force, as should release, forthwith, all such citizens of Massachusetts as were holden in prison without the allegation of any crime, and should set on foot the strictest inquisition to discover where such persons, brought into slavery by these local laws, at any time heretofore, may now be. That first; — and then, let order be

taken to indemnify all such as have been incarcerated. As for dangers to the Union, from such demands! — the Union is already at an end, when the first citizen of Massachusetts is thus outraged. Is it an union and covenant in which the State of Massachusetts agrees to be imprisoned, and the State of Carolina to imprison? Gentlemen, I am loath to say harsh things, and perhaps I know too little of politics for the smallest weight to attach to any censure of mine, — but I am at a loss how to characterize the tameness and silence of the two senators and the ten representatives of the State at Washington. To what purpose, have we clothed each of those representatives with the power of seventy thousand persons, and each senator with near half a million, if they are to sit dumb at their desks, and see their constituents captured and sold; — perhaps to gentlemen sitting by them in the hall? There is a scandalous rumor that has been swelling louder of late years, — perhaps it is wholly false, — that members are bullied into silence by southern gentlemen. It is so cosy to omit to speak, or even to be absent when delicate things are to be handled. I may as well say what all then feel, that whilst our very amiable and very innocent representatives and senators at Washington, are accomplished lawyers and merchants, and very eloquent at dinners and at caucuses, there is a disastrous want of men from New England. I would gladly make exceptions, and you will not suffer me to forget one eloquent old man, in whose veins the blood of Massachusetts rolls, and who singly has defended the freedom of speech, and the rights of the free, against the usurpation of the slave-holder. But the reader of Congressional debates, in New England, is perplexed to see with what admirable sweetness and patience the majority of the free States, are schooled and ridden by the minority of slave-holders. What if we should send thither representatives who were a particle less amiable and less innocent? I entreat you, sirs, let not this stain attach, let not this misery accumulate any longer. If the managers of our political parties are too prudent and too cold; — if, most unhappily, the ambitious class of young men and political men have found out, that these neglected victims are poor and without weight; that they have no graceful hospitalities to offer; no valuable business to throw into any man's hands, no strong vote to cast at the elections; and therefore may with impunity be left in their chains or to the chance of chains, then let the citizens in their primary capacity take up their cause on this very ground, and say to the government of the State, and of the Union, that government exists to defend the weak and the poor and the injured party; the rich and the strong can better take care of themselves. And as an omen and assurance of success, I point you to the bright example which England set you, on this day, ten years ago.

There are other comparisons and other imperative duties which come sadly to mind, — but I do not wish to darken the hours of this day by crimination; I turn

gladly to the rightful theme, to the bright aspects of the occasion.

This event was a moral revolution. The history of it is before you. Here was no prodigy, no fabulous hero, no Trojan horse, no bloody war, but all was achieved by plain means of plain men, working not under a leader, but under a sentiment. Other revolutions have been the insurrection of the oppressed; this was the repentance of the tyrant. It was the masters revolting from their mastery. The slave-holder said, I will not hold slaves. The end was noble, and the means were pure. Hence, the elevation and pathos of this chapter of history. The lives of the advocates are pages of greatness, and the connexion of the eminent senators with this question, constitutes the immortalizing moments of those men's lives. The bare enunciation of the theses, at which the lawyers and legislators arrived, gives a blow to the heart of the reader. Lord Chancellor Northington is the author of the famous sentence, "As soon as any man puts his foot on English ground, he becomes free." "I was a slave," said the counsel of Somerset, speaking for his client, "for I was in America: I am now in a country, where the common rights of mankind are known and regarded." Granville Sharpe filled the ear of the judges with the sound principles, that had from time to time been affirmed by the legal authorities. "Derived power cannot be superior to the power from which it is derived." "The reasonableness of the law is the soul of the law." "It is better to suffer every evil, than to consent to any." Out it would come, the God's truth, out it came, like a bolt from a cloud, for all the mumbling of the lawyers. One feels very sensibly in all this history that a great heart and soul are behind there, superior to any man, and making use of each, in turn, and infinitely attractive to every person according to the degree of reason in his own mind, so that this cause has had the power to draw to it every particle of talent and of worth in England, from the beginning. All the great geniuses of the British senate, Fox, Pitt, Burke, Grenville, Sheridan, Grey, Canning, ranged themselves on its side; the poet Cowper wrote for it: Franklin, Jefferson, Washington, in this country, all recorded their votes. All men remember the subtlety and the fire of indignation, which the Edinburgh Review contributed to the cause; and every liberal mind, poet, preacher, moralist, statesman, has had the fortune to appear somewhere for this cause. On the other part, appeared the reign of pounds and shillings, and all manner of rage and stupidity; a resistance which drew from Mr. Huddleston in Parliament the observation, "That a curse attended this trade even in the mode of defending it. By a certain fatality, none but the vilest arguments were brought forward, which corrupted the very persons who used them. Every one of these was built on the narrow ground of interest, of pecuniary profit, of sordid gain, in opposition to every motive that had reference to humanity, justice, and religion, or to that great

principle which comprehended them all.” — This moral force perpetually reinforces and dignifies the friends of this cause. It gave that tenacity to their point which has insured ultimate triumph; and it gave that superiority in reason, in imagery, in eloquence, which makes in all countries anti-slavery meetings so attractive to the people. and has made it a proverb in Massachusetts, that, “eloquence is dog-cheap at the anti-slavery chapel?”

I will say further, that we are indebted mainly to this movement, and to the continuers of it, for the popular discussion of every point of practical ethics, and a reference of every question to the absolute standard. It is notorious, that the political, religious, and social schemes, with which the minds of men are now most occupied, have been matured, or at least broached, in the free and daring discussions of these assemblies. Men have become aware through the emancipation, and kindred events, of the presence of powers, which, in their days of darkness, they had overlooked. Virtuous men will not again rely on political agents. They have found out the deleterious effect of political association. Up to this day, we have allowed to statesmen a paramount social standing, and we bow low to them as to the great. We cannot extend this deference to them any longer. The secret cannot be kept, that the seats of power are filled by underlings, ignorant, timid, and selfish, to a degree to destroy all claim, excepting that on compassion, to the society of the just and generous. What happened notoriously to an American ambassador in England, that he found himself compelled to palter, and to disguise the fact that he was a slave-breeder, happens to men of state. Their vocation is a presumption against them, among well-meaning people. The superstition respecting power and office, is going to the ground. The stream of human affairs flows its own way, and is very little affected by the activity of legislators. What great masses of men wish done, will be done; and they do not wish it for a freak, but because it is their state and natural end. There are now other energies than force, other than political, which no man in future can allow himself to disregard. There is direct conversation and influence. A man is to make himself felt, by his proper force. The tendency of things runs steadily to this point, namely, to put every man on his merits, and to give him so much power as he naturally exerts — no more, no less. Of course, the timid and base persons, all who are conscious of no worth in themselves, and who owe all their place to the opportunities which the old order of things allowed them to deceive and defraud men, shudder at the change, and would fain silence every honest voice, and lock up every house where liberty and innovation can be pleaded for. They would raise mobs, for fear is very cruel. But the strong and healthy yeomen and husbands of the land, the self-sustaining class of inventive and industrious men, fear no competition or superiority. Come what

will, their faculty cannot be spared.

The First of August marks the entrance of a new element into modern politics, namely, the civilization of the negro. A man is added to the human family. Not the least affecting part of this history of abolition, is, the annihilation of the old indecent nonsense about the nature of the negro. In the case of the ship *Zong*, in 1781, whose master had thrown one hundred and thirty-two slaves alive into the sea, to cheat the underwriters, the first jury gave a verdict in favor of the master and owners: they had a right to do what they had done. Lord Mansfield is reported to have said on the bench, "The matter left to the jury is, — Was it from necessity? For they had no doubt, — though it shocks one very much, — that the case of slaves was the same as if horses had been thrown overboard. It is a very shocking case." But a more enlightened and humane opinion began to prevail. Mr. Clarkson, early in his career, made a collection of African productions and manufactures, as specimens of the arts and culture of the negro; comprising cloths and loom, weapons, polished stones and woods, leather, glass, dyes, ornaments, soap, pipe-bowls, and trinkets. These he showed to Mr. Pitt, who saw and handled them with extreme interest. "On sight of these," says Clarkson, "many sublime thoughts seemed to rush at once into his mind, some of which he expressed;" and hence appeared to arise a project which was always dear to him, of the civilization of Africa, — a dream which forever elevates his fame. In 1791, Mr. Wilberforce announced to the House of Commons, "We have already gained one victory: we have obtained for these poor creatures the recognition of their human nature, which, for a time, was most shamefully denied them." It was the sarcasm of Montesquieu, "it would not do to suppose that negroes were men, lest it should turn out that whites were not;" for, the white has, for ages, done what he could to keep the negro in that hoggish state. His laws have been furies. It now appears, that the negro race is, more than any other, susceptible of rapid civilization. The emancipation is observed, in the islands, to have brought for the negro a benefit as sudden as when a thermometer is brought out of the shade into the sun. It has given him eyes and ears. If, before, he was taxed with such stupidity, or such defective vision, that he could not set a table square to the walls of an apartment, he is now the principal, if not the only mechanic, in the West Indies; and is, besides, an architect, a physician, a lawyer, a magistrate, an editor, and a valued and increasing political power. The recent testimonies of Sturge, of Thome and Kimball, of Gurney, of Philipppo, are very explicit on this point, the capacity and the success of the colored and the black population in employments of skill, of profit, and of trust; and, best of all, is the testimony to their moderation. They receive hints and advances from the whites, that they will be gladly received as subscribers to the Exchange, as members of this or that

committee of trust. They hold back, and say to each other, that “social position is not to be gained by pushing.”

I have said that this event interests us because it came mainly from the concession of the whites; I add, that in part it is the earning of the blacks. They won the pity and respect which they have received, by their powers and native endowments. I think this a circumstance of the highest import. Their whole future is in it. Our planet, before the age of written history, had its races of savages, like the generations of sour paste, or the animalcules that wriggle and bite in a drop of putrid water. Who cares for these or for their wars? We do not wish a world of bugs or of birds; neither afterward of Scythians, Caraihs, or Feejees. The grand style of nature, her great periods, is all we observe in them. Who cares for oppressing white, or oppressed blacks, twenty centuries ago, more than for bad dreams? Eaters and food are in the harmony of nature; and there too is the germ forever protected, unfolding gigantic leaf after leaf, a newer flower, a richer fruit, in every period, yet its next product is never to be guessed. It will only save what is worth saving; and it saves not by compassion, but by power. It appoints no police to guard the lion, but his teeth and claws; no fort or city for the bird, but his wings; no rescue for flies and mites, but their spawning numbers, which no ravages can overcome. It deals with men after the same manner. If they are rude and foolish, down they must go. When at last in a race, a new principle appears, an idea, — that conserves it; ideas only save races. If the black man is feeble, and not important to the existing races, not on a parity with the best race, the black man must serve, and be exterminated. But if the black man carries in his bosom an indispensable element of a new and coming civilization, for the sake of that element, no wrong, nor strength, nor circumstance, can hurt him: he will survive and play his part. So now, the arrival in the world of such men as Toussaint, and the Haytian heroes, or of the leaders of their race in Barbadoes and Jamaica, outweighs in good omen all the English and American humanity. The anti-slavery of the whole world, is dust in the balance before this, — is a poor squeamishness and nervousness: the might and the right are here: here is the anti-slave: here is man: and if you have man, black or white is an insignificance. The intellect, — that is miraculous! Who has it, has the talisman: his skin and bones, though they were of the color of night, are transparent, and the everlasting stars shine through, with attractive beams. But a compassion for that which is not and cannot be useful or lovely, is degrading and futile. All the songs, and newspapers, and money-subscriptions, and vituperation of such as do not think with us, will avail nothing against a fact. I say to you, you must save yourself, black or white, man or woman; other help is none. I esteem the occasion of this jubilee to be the proud discovery, that the black race

can contend with the white; that, in the great anthem which we call history, a piece of many parts and vast compass, after playing a long time a very low and subdued accompaniment, they perceive the time arrived when they can strike in with effect, and take a master's part in the music. The civility of the world has reached that pitch, that their more moral genius is becoming indispensable, and the quality of this race is to be honored for itself. For this, they have been preserved in sandy deserts, in rice-swamps, in kitchens and shoe-shops, so long: now let them emerge, clothed and in their own form.

There remains the very elevated consideration which the subject opens, but which belongs to more abstract views than we are now taking, this namely, that the civility of no race can be perfect whilst another race is degraded. It is a doctrine alike of the oldest, and of the newest philosophy, that, man is one, and that you cannot injure any member, without a sympathetic injury to all the members. America is not civil, whilst Africa is barbarous.

These considerations seem to leave no choice for the action of the intellect and the conscience of the country. There have been moments in this, as well as in every piece of moral history, when there seemed room for the infusions of a skeptical philosophy; when it seemed doubtful, whether brute force would not triumph in the eternal struggle. I doubt not, that sometimes a despairing negro, when jumping over the ship's sides to escape from the white devils who surrounded him, has believed there was no vindication of right; it is horrible to think of, but it seemed so. I doubt not, that sometimes the negro's friend, in the face of scornful and brutal hundreds of traders and drivers, has felt his heart sink. Especially, it seems to me, some degree of despondency is pardonable, when he observes the men of conscience and of intellect, his own natural allies and champions, — those whose attention should be nailed to the grand objects of this cause, so hotly offended by whatever incidental petulances or infirmities of indiscreet defenders of the negro, as to permit themselves to be ranged with the enemies of the human race; and names which should be the alarums of liberty and the watchwords of truth, are mixed up with all the rotten rabble of selfishness and tyranny. I assure myself that this coldness and blindness will pass away. A single noble wind of sentiment will scatter them forever. I am sure that the good and wise elders, the ardent and generous youth will not permit what is incidental and exceptional to withdraw their devotion from the essential and permanent characters of the question. There have been moments, I said, when men might be forgiven, who doubted. Those moments are past. Seen in masses, it cannot be disputed, there is progress in human society. There is a blessed necessity by which the interest of men is always driving them to the right; and, again, making all crime mean and ugly. The genius of the Saxon race,

friendly to liberty; the enterprise, the very muscular vigor of this nation, are inconsistent with slavery. The Intellect, with blazing eye, looking through history from the beginning onward, gazes on this blot, and it disappears. The sentiment of Right, once very low and indistinct, but ever more articulate, because it is the voice of the universe, pronounces Freedom. The Power that built this fabric of things affirms it in the heart; and in the history of the First of August, has made a sign to the ages, of his will.

HISTORY.

There is no great and no small To the Soul that maketh all: And where it
cometh, all things are And it cometh everywhere.

I am owner of the sphere, Of the seven stars and the solar year, Of Caesar's
hand, and Plato's brain, Of Lord Christ's heart, and Shakspeare's strain.

HISTORY.

THERE is one mind common to all individual men. Every man is an inlet to the same and to all of the same. He that is once admitted to the right of reason is made a freeman of the whole estate. What Plato has thought, he may think; what a saint has felt, he may feel; what at any time has befallen any man, he can understand. Who hath access to this universal mind is a party to all that is or can be done, for this is the only and sovereign agent.

Of the works of this mind history is the record. Its genius is illustrated by the entire series of days. Man is explicable by nothing less than all his history. Without hurry, without rest, the human spirit goes forth from the beginning to embody every faculty, every thought, every emotion, which belongs to it, in appropriate events. But the thought is always prior to the fact; all the facts of history preexist in the mind as laws. Each law in turn is made by circumstances predominant, and the limits of nature give power to but one at a time. A man is the whole encyclopaedia of facts. The creation of a thousand forests is in one acorn, and Egypt, Greece, Rome, Gaul, Britain, America, lie folded already in the first man. Epoch after epoch, camp, kingdom, empire, republic, democracy, are merely the application of his manifold spirit to the manifold world.

This human mind wrote history, and this must read it. The Sphinx must solve her own riddle. If the whole of history is in one man, it is all to be explained from individual experience. There is a relation between the hours of our life and the centuries of time. As the air I breathe is drawn from the great repositories of nature, as the light on my book is yielded by a star a hundred millions of miles distant, as the poise of my body depends on the equilibrium of centrifugal and centripetal forces, so the hours should be instructed by the ages and the ages explained by the hours. Of the universal mind each individual man is one more incarnation. All its properties consist in him. Each new fact in his private experience flashes a light on what great bodies of men have done, and the crises of his life refer to national crises. Every revolution was first a thought in one man's mind, and when the same thought occurs to another man, it is the key to that era. Every reform was once a private opinion, and when it shall be a private opinion again it will solve the problem of the age. The fact narrated must correspond to something in me to be credible or intelligible. We, as we read, must become Greeks, Romans, Turks, priest and king, martyr and executioner; must fasten these images to some reality in our secret experience, or we shall learn nothing rightly. What befell Asdrubal or Caesar Borgia is as much an illustration of the mind's powers and depravations as what has befallen us. Each

new law and political movement has meaning for you. Stand before each of its tablets and say, 'Under this mask did my Proteus nature hide itself.' This remedies the defect of our too great nearness to ourselves. This throws our actions into perspective; and as crabs, goats, scorpions, the balance and the waterpot lose their meanness when hung as signs in the zodiac, so I can see my own vices without heat in the distant persons of Solomon, Alcibiades, and Catiline.

It is the universal nature which gives worth to particular men and things. Human life, as containing this, is mysterious and inviolable, and we hedge it round with penalties and laws. All laws derive hence their ultimate reason; all express more or less distinctly some command of this supreme, illimitable essence. Property also holds of the soul, covers great spiritual facts, and instinctively we at first hold to it with swords and laws and wide and complex combinations. The obscure consciousness of this fact is the light of all our day, the claim of claims; the plea for education, for justice, for charity; the foundation of friendship and love and of the heroism and grandeur which belong to acts of self-reliance. It is remarkable that involuntarily we always read as superior beings. Universal history, the poets, the romancers, do not in their stateliest pictures, — in the sacerdotal, the imperial palaces, in the triumphs of will or of genius, — anywhere lose our ear, anywhere make us feel that we intrude, that this is for better men; but rather is it true that in their grandest strokes we feel most at home. All that Shakspeare says of the king, yonder slip of a boy that reads in the corner feels to be true of himself. We sympathize in the great moments of history, in the great discoveries, the great resistances, the great prosperities of men; — because there law was enacted, the sea was searched, the land was found, or the blow was struck, for us, as we ourselves in that place would have done or applauded.

We have the same interest in condition and character. We honor the rich because they have externally the freedom, power, and grace which we feel to be proper to man, proper to us. So all that is said of the wise man by Stoic or Oriental or modern essayist, describes to each reader his own idea, describes his unattained but attainable self. All literature writes the character of the wise man. Books, monuments, pictures, conversation, are portraits in which he finds the lineaments he is forming. The silent and the eloquent praise him and accost him, and he is stimulated wherever he moves, as by personal allusions. A true aspirant therefore never needs look for allusions personal and laudatory in discourse. He hears the commendation, not of himself, but, more sweet, of that character he seeks, in every word that is said concerning character, yea further in every fact and circumstance, — in the running river and the rustling corn. Praise is looked,

homage tendered, love flows, from mute nature, from the mountains and the lights of the firmament.

These hints, dropped as it were from sleep and night, let us use in broad day. The student is to read history actively and not passively; to esteem his own life the text, and books the commentary. Thus compelled, the Muse of history will utter oracles, as never to those who do not respect themselves. I have no expectation that any man will read history aright who thinks that what was done in a remote age, by men whose names have resounded far, has any deeper sense than what he is doing to-day.

The world exists for the education of each man. There is no age or state of society or mode of action in history to which there is not somewhat corresponding in his life. Every thing tends in a wonderful manner to abbreviate itself and yield its own virtue to him. He should see that he can live all history in his own person. He must sit solidly at home, and not suffer himself to be bullied by kings or empires, but know that he is greater than all the geography and all the government of the world; he must transfer the point of view from which history is commonly read, from Rome and Athens and London, to himself, and not deny his conviction that he is the court, and if England or Egypt have any thing to say to him he will try the case; if not, let them for ever be silent. He must attain and maintain that lofty sight where facts yield their secret sense, and poetry and annals are alike. The instinct of the mind, the purpose of nature, betrays itself in the use we make of the signal narrations of history. Time dissipates to shining ether the solid angularity of facts. No anchor, no cable, no fences avail to keep a fact a fact. Babylon, Troy, Tyre, Palestine, and even early Rome are passing already into fiction. The Garden of Eden, the sun standing still in Gibeon, is poetry thenceforward to all nations. Who cares what the fact was, when we have made a constellation of it to hang in heaven an immortal sign? London and Paris and New York must go the same way. "What is history," said Napoleon, "but a fable agreed upon?" This life of ours is stuck round with Egypt, Greece, Gaul, England, War, Colonization, Church, Court and Commerce, as with so many flowers and wild ornaments grave and gay. I will not make more account of them. I believe in Eternity. I can find Greece, Asia, Italy, Spain and the Islands, — the genius and creative principle of each and of all eras, in my own mind.

We are always coming up with the emphatic facts of history in our private experience and verifying them here. All history becomes subjective; in other words there is properly no history, only biography. Every mind must know the whole lesson for itself, — must go over the whole ground. What it does not see, what it does not live, it will not know. What the former age has epitomized into a

formula or rule for manipular convenience, it will lose all the good of verifying for itself, by means of the wall of that rule. Somewhere, sometime, it will demand and find compensation for that loss, by doing the work itself. Ferguson discovered many things in astronomy which had long been known. The better for him.

History must be this or it is nothing. Every law which the state enacts indicates a fact in human nature; that is all. We must in ourselves see the necessary reason of every fact, — see how it could and must be. So stand before every public and private work; before an oration of Burke, before a victory of Napoleon, before a martyrdom of Sir Thomas More, of Sidney, of Marmaduke Robinson; before a French Reign of Terror, and a Salem hanging of witches; before a fanatic Revival and the Animal Magnetism in Paris, or in Providence. We assume that we under like influence should be alike affected, and should achieve the like; and we aim to master intellectually the steps and reach the same height or the same degradation that our fellow, our proxy has done.

All inquiry into antiquity, all curiosity respecting the Pyramids, the excavated cities, Stonehenge, the Ohio Circles, Mexico, Memphis, — is the desire to do away this wild, savage, and preposterous There or Then, and introduce in its place the Here and the Now. Belzoni digs and measures in the mummy-pits and pyramids of Thebes, until he can see the end of the difference between the monstrous work and himself. When he has satisfied himself, in general and in detail, that it was made by such a person as he, so armed and so motivated, and to ends to which he himself should also have worked, the problem is solved; his thought lives along the whole line of temples and sphinxes and catacombs, passes through them all with satisfaction, and they live again to the mind, or are now.

A Gothic cathedral affirms that it was done by us and not done by us. Surely it was by man, but we find it not in our man. But we apply ourselves to the history of its production. We put ourselves into the place and state of the builder. We remember the forest-dwellers, the first temples, the adherence to the first type, and the decoration of it as the wealth of the nation increased; the value which is given to wood by carving led to the carving over the whole mountain of stone of a cathedral. When we have gone through this process, and added thereto the Catholic Church, its cross, its music, its processions, its Saints' days and image-worship, we have as it were been the man that made the minster; we have seen how it could and must be. We have the sufficient reason.

The difference between men is in their principle of association. Some men classify objects by color and size and other accidents of appearance; others by intrinsic likeness, or by the relation of cause and effect. The progress of the

intellect is to the clearer vision of causes, which neglects surface differences. To the poet, to the philosopher, to the saint, all things are friendly and sacred, all events profitable, all days holy, all men divine. For the eye is fastened on the life, and slights the circumstance. Every chemical substance, every plant, every animal in its growth, teaches the unity of cause, the variety of appearance.

Upborne and surrounded as we are by this all-creating nature, soft and fluid as a cloud or the air, why should we be such hard pedants, and magnify a few forms? Why should we make account of time, or of magnitude, or of figure? The soul knows them not, and genius, obeying its law, knows how to play with them as a young child plays with graybeards and in churches. Genius studies the causal thought, and far back in the womb of things sees the rays parting from one orb, that diverge, ere they fall, by infinite diameters. Genius watches the monad through all his masks as he performs the metempsychosis of nature. Genius detects through the fly, through the caterpillar, through the grub, through the egg, the constant individual; through countless individuals the fixed species; through many species the genus; through all genera the steadfast type; through all the kingdoms of organized life the eternal unity. Nature is a mutable cloud which is always and never the same. She casts the same thought into troops of forms, as a poet makes twenty fables with one moral. Through the bruteness and toughness of matter, a subtle spirit bends all things to its own will. The adamant streams into soft but precise form before it, and whilst I look at it its outline and texture are changed again. Nothing is so fleeting as form; yet never does it quite deny itself. In man we still trace the remains or hints of all that we esteem badges of servitude in the lower races; yet in him they enhance his nobleness and grace; as Io, in Aeschylus, transformed to a cow, offends the imagination; but how changed when as Isis in Egypt she meets Osiris-Jove, a beautiful woman with nothing of the metamorphosis left but the lunar horns as the splendid ornament of her brows!

The identity of history is equally intrinsic, the diversity equally obvious. There is, at the surface, infinite variety of things; at the centre there is simplicity of cause. How many are the acts of one man in which we recognize the same character! Observe the sources of our information in respect to the Greek genius. We have the civil history of that people, as Herodotus, Thucydides, Xenophon, and Plutarch have given it; a very sufficient account of what manner of persons they were and what they did. We have the same national mind expressed for us again in their literature, in epic and lyric poems, drama, and philosophy; a very complete form. Then we have it once more in their architecture, a beauty as of temperance itself, limited to the straight line and the square, — a builded geometry. Then we have it once again in sculpture, the “tongue on the balance of

expression,” a multitude of forms in the utmost freedom of action and never transgressing the ideal serenity; like votaries performing some religious dance before the gods, and, though in convulsive pain or mortal combat, never daring to break the figure and decorum of their dance. Thus of the genius of one remarkable people we have a fourfold representation: and to the senses what more unlike than an ode of Pindar, a marble centaur, the peristyle of the Parthenon, and the last actions of Phocion?

Every one must have observed faces and forms which, without any resembling feature, make a like impression on the beholder. A particular picture or copy of verses, if it do not awaken the same train of images, will yet superinduce the same sentiment as some wild mountain walk, although the resemblance is nowise obvious to the senses, but is occult and out of the reach of the understanding. Nature is an endless combination and repetition of a very few laws. She hums the old well-known air through innumerable variations.

Nature is full of a sublime family likeness throughout her works, and delights in startling us with resemblances in the most unexpected quarters. I have seen the head of an old sachem of the forest which at once reminded the eye of a bald mountain summit, and the furrows of the brow suggested the strata of the rock. There are men whose manners have the same essential splendor as the simple and awful sculpture on the friezes of the Parthenon and the remains of the earliest Greek art. And there are compositions of the same strain to be found in the books of all ages. What is Guido’s *Rospigliosi Aurora* but a morning thought, as the horses in it are only a morning cloud? If any one will but take pains to observe the variety of actions to which he is equally inclined in certain moods of mind, and those to which he is averse, he will see how deep is the chain of affinity.

A painter told me that nobody could draw a tree without in some sort becoming a tree; or draw a child by studying the outlines of its form merely, — but, by watching for a time his motions and plays, the painter enters into his nature and can then draw him at will in every attitude. So Roos “entered into the inmost nature of a sheep.” I knew a draughtsman employed in a public survey who found that he could not sketch the rocks until their geological structure was first explained to him. In a certain state of thought is the common origin of very diverse works. It is the spirit and not the fact that is identical. By a deeper apprehension, and not primarily by a painful acquisition of many manual skills, the artist attains the power of awakening other souls to a given activity.

It has been said that “common souls pay with what they do, nobler souls with that which they are.” And why? Because a profound nature awakens in us by its actions and words, by its very looks and manners, the same power and beauty

that a gallery of sculpture or of pictures addresses.

Civil and natural history, the history of art and of literature, must be explained from individual history, or must remain words. There is nothing but is related to us, nothing that does not interest us, — kingdom, college, tree, horse, or iron shoe, — the roots of all things are in man. Santa Croce and the Dome of St. Peter's are lame copies after a divine model. Strasburg Cathedral is a material counterpart of the soul of Erwin of Steinbach. The true poem is the poet's mind; the true ship is the ship-builder. In the man, could we lay him open, we should see the reason for the last flourish and tendril of his work; as every spine and tint in the sea-shell preexists in the secreting organs of the fish. The whole of heraldry and of chivalry is in courtesy. A man of fine manners shall pronounce your name with all the ornament that titles of nobility could ever add.

The trivial experience of every day is always verifying some old prediction to us and converting into things the words and signs which we had heard and seen without heed. A lady with whom I was riding in the forest said to me that the woods always seemed to her to wait, as if the genii who inhabit them suspended their deeds until the wayfarer had passed onward; a thought which poetry has celebrated in the dance of the fairies, which breaks off on the approach of human feet. The man who has seen the rising moon break out of the clouds at midnight, has been present like an archangel at the creation of light and of the world. I remember one summer day in the fields my companion pointed out to me a broad cloud, which might extend a quarter of a mile parallel to the horizon, quite accurately in the form of a cherub as painted over churches, — a round block in the centre, which it was easy to animate with eyes and mouth, supported on either side by wide-stretched symmetrical wings. What appears once in the atmosphere may appear often, and it was undoubtedly the archetype of that familiar ornament. I have seen in the sky a chain of summer lightning which at once showed to me that the Greeks drew from nature when they painted the thunderbolt in the hand of Jove. I have seen a snow-drift along the sides of the stone wall which obviously gave the idea of the common architectural scroll to abut a tower.

By surrounding ourselves with the original circumstances we invent anew the orders and the ornaments of architecture, as we see how each people merely decorated its primitive abodes. The Doric temple preserves the semblance of the wooden cabin in which the Dorian dwelt. The Chinese pagoda is plainly a Tartar tent. The Indian and Egyptian temples still betray the mounds and subterranean houses of their forefathers. "The custom of making houses and tombs in the living rock," says Heeren in his *Researches on the Ethiopians*, "determined very naturally the principal character of the Nubian Egyptian architecture to the

colossal form which it assumed. In these caverns, already prepared by nature, the eye was accustomed to dwell on huge shapes and masses, so that when art came to the assistance of nature it could not move on a small scale without degrading itself. What would statues of the usual size, or neat porches and wings have been, associated with those gigantic halls before which only Colossi could sit as watchmen or lean on the pillars of the interior?"

The Gothic church plainly originated in a rude adaptation of the forest trees, with all their boughs, to a festal or solemn arcade; as the bands about the cleft pillars still indicate the green withes that tied them. No one can walk in a road cut through pine woods, without being struck with the architectural appearance of the grove, especially in winter, when the barrenness of all other trees shows the low arch of the Saxons. In the woods in a winter afternoon one will see as readily the origin of the stained glass window, with which the Gothic cathedrals are adorned, in the colors of the western sky seen through the bare and crossing branches of the forest. Nor can any lover of nature enter the old piles of Oxford and the English cathedrals, without feeling that the forest overpowered the mind of the builder, and that his chisel, his saw and plane still reproduced its ferns, its spikes of flowers, its locust, elm, oak, pine, fir and spruce.

The Gothic cathedral is a blossoming in stone subdued by the insatiable demand of harmony in man. The mountain of granite blooms into an eternal flower, with the lightness and delicate finish as well as the aerial proportions and perspective of vegetable beauty.

In like manner all public facts are to be individualized, all private facts are to be generalized. Then at once History becomes fluid and true, and Biography deep and sublime. As the Persian imitated in the slender shafts and capitals of his architecture the stem and flower of the lotus and palm, so the Persian court in its magnificent era never gave over the nomadism of its barbarous tribes, but travelled from Ecbatana, where the spring was spent, to Susa in summer and to Babylon for the winter.

In the early history of Asia and Africa, Nomadism and Agriculture are the two antagonist facts. The geography of Asia and of Africa necessitated a nomadic life. But the nomads were the terror of all those whom the soil or the advantages of a market had induced to build towns. Agriculture therefore was a religious injunction, because of the perils of the state from nomadism. And in these late and civil countries of England and America these propensities still fight out the old battle, in the nation and in the individual. The nomads of Africa were constrained to wander, by the attacks of the gad-fly, which drives the cattle mad, and so compels the tribe to emigrate in the rainy season and to drive off the cattle to the higher sandy regions. The nomads of Asia follow the pasturage from

month to month. In America and Europe the nomadism is of trade and curiosity; a progress, certainly, from the gad-fly of Astaboras to the Anglo and Italo-mania of Boston Bay. Sacred cities, to which a periodical religious pilgrimage was enjoined, or stringent laws and customs, tending to invigorate the national bond, were the check on the old rovers; and the cumulative values of long residence are the restraints on the itineracy of the present day. The antagonism of the two tendencies is not less active in individuals, as the love of adventure or the love of repose happens to predominate. A man of rude health and flowing spirits has the faculty of rapid domestication, lives in his wagon and roams through all latitudes as easily as a Calmuc. At sea, or in the forest, or in the snow, he sleeps as warm, dines with as good appetite, and associates as happily as beside his own chimneys. Or perhaps his facility is deeper seated, in the increased range of his faculties of observation, which yield him points of interest wherever fresh objects meet his eyes. The pastoral nations were needy and hungry to desperation; and this intellectual nomadism, in its excess, bankrupts the mind through the dissipation of power on a miscellany of objects. The home-keeping wit, on the other hand, is that continence or content which finds all the elements of life in its own soil; and which has its own perils of monotony and deterioration, if not stimulated by foreign infusions.

Every thing the individual sees without him corresponds to his states of mind, and every thing is in turn intelligible to him, as his onward thinking leads him into the truth to which that fact or series belongs.

The primeval world, — the Fore-World, as the Germans say, — I can dive to it in myself as well as grope for it with researching fingers in catacombs, libraries, and the broken reliefs and torsos of ruined villas.

What is the foundation of that interest all men feel in Greek history, letters, art, and poetry, in all its periods from the Heroic or Homeric age down to the domestic life of the Athenians and Spartans, four or five centuries later? What but this, that every man passes personally through a Grecian period. The Grecian state is the era of the bodily nature, the perfection of the senses, — of the spiritual nature unfolded in strict unity with the body. In it existed those human forms which supplied the sculptor with his models of Hercules, Phoebus, and Jove; not like the forms abounding in the streets of modern cities, wherein the face is a confused blur of features, but composed of incorrupt, sharply defined and symmetrical features, whose eye-sockets are so formed that it would be impossible for such eyes to squint and take furtive glances on this side and on that, but they must turn the whole head. The manners of that period are plain and fierce. The reverence exhibited is for personal qualities; courage, address, self-command, justice, strength, swiftness, a loud voice, a broad chest. Luxury and

elegance are not known. A sparse population and want make every man his own valet, cook, butcher and soldier, and the habit of supplying his own needs educates the body to wonderful performances. Such are the Agamemnon and Diomed of Homer, and not far different is the picture Xenophon gives of himself and his compatriots in the Retreat of the Ten Thousand. "After the army had crossed the river Teleboas in Armenia, there fell much snow, and the troops lay miserably on the ground covered with it. But Xenophon arose naked, and taking an axe, began to split wood; whereupon others rose and did the like." Throughout his army exists a boundless liberty of speech. They quarrel for plunder, they wrangle with the generals on each new order, and Xenophon is as sharp-tongued as any and sharper-tongued than most, and so gives as good as he gets. Who does not see that this is a gang of great boys, with such a code of honor and such lax discipline as great boys have?

The costly charm of the ancient tragedy, and indeed of all the old literature, is that the persons speak simply, — speak as persons who have great good sense without knowing it, before yet the reflective habit has become the predominant habit of the mind. Our admiration of the antique is not admiration of the old, but of the natural. The Greeks are not reflective, but perfect in their senses and in their health, with the finest physical organization in the world. Adults acted with the simplicity and grace of children. They made vases, tragedies, and statues, such as healthy senses should, — that is, in good taste. Such things have continued to be made in all ages, and are now, wherever a healthy physique exists; but, as a class, from their superior organization, they have surpassed all. They combine the energy of manhood with the engaging unconsciousness of childhood. The attraction of these manners is that they belong to man, and are known to every man in virtue of his being once a child; besides that there are always individuals who retain these characteristics. A person of childlike genius and inborn energy is still a Greek, and revives our love of the Muse of Hellas. I admire the love of nature in the Philoctetes. In reading those fine apostrophes to sleep, to the stars, rocks, mountains and waves, I feel time passing away as an ebbing sea. I feel the eternity of man, the identity of his thought. The Greek had it seems the same fellow-beings as I. The sun and moon, water and fire, met his heart precisely as they meet mine. Then the vaunted distinction between Greek and English, between Classic and Romantic schools, seems superficial and pedantic. When a thought of Plato becomes a thought to me, — when a truth that fired the soul of Pindar fires mine, time is no more. When I feel that we two meet in a perception, that our two souls are tinged with the same hue, and do as it were run into one, why should I measure degrees of latitude, why should I count Egyptian years?

The student interprets the age of chivalry by his own age of chivalry, and the days of maritime adventure and circumnavigation by quite parallel miniature experiences of his own. To the sacred history of the world he has the same key. When the voice of a prophet out of the deeps of antiquity merely echoes to him a sentiment of his infancy, a prayer of his youth, he then pierces to the truth through all the confusion of tradition and the caricature of institutions.

Rare, extravagant spirits come by us at intervals, who disclose to us new facts in nature. I see that men of God have from time to time walked among men and made their commission felt in the heart and soul of the commonest hearer. Hence evidently the tripod, the priest, the priestess inspired by the divine afflatus.

Jesus astonishes and overpowers sensual people. They cannot unite him to history, or reconcile him with themselves. As they come to revere their intuitions and aspire to live holily, their own piety explains every fact, every word.

How easily these old worships of Moses, of Zoroaster, of Menu, of Socrates, domesticate themselves in the mind. I cannot find any antiquity in them. They are mine as much as theirs.

I have seen the first monks and anchorites, without crossing seas or centuries. More than once some individual has appeared to me with such negligence of labor and such commanding contemplation, a haughty beneficiary begging in the name of God, as made good to the nineteenth century Simeon the Stylite, the Thebais, and the first Capuchins.

The priestcraft of the East and West, of the Magian, Brahmin, Druid, and Inca, is expounded in the individual's private life. The cramping influence of a hard formalist on a young child, in repressing his spirits and courage, paralyzing the understanding, and that without producing indignation, but only fear and obedience, and even much sympathy with the tyranny, — is a familiar fact, explained to the child when he becomes a man, only by seeing that the oppressor of his youth is himself a child tyrannized over by those names and words and forms of whose influence he was merely the organ to the youth. The fact teaches him how Belus was worshipped and how the Pyramids were built, better than the discovery by Champollion of the names of all the workmen and the cost of every tile. He finds Assyria and the Mounds of Cholula at his door, and himself has laid the courses.

Again, in that protest which each considerate person makes against the superstition of his times, he repeats step for step the part of old reformers, and in the search after truth finds, like them, new perils to virtue. He learns again what moral vigor is needed to supply the girdle of a superstition. A great licentiousness treads on the heels of a reformation. How many times in the history of the world has the Luther of the day had to lament the decay of piety in

his own household! “Doctor,” said his wife to Martin Luther, one day, “how is it that whilst subject to papacy we prayed so often and with such fervor, whilst now we pray with the utmost coldness and very seldom?”

The advancing man discovers how deep a property he has in literature, — in all fable as well as in all history. He finds that the poet was no odd fellow who described strange and impossible situations, but that universal man wrote by his pen a confession true for one and true for all. His own secret biography he finds in lines wonderfully intelligible to him, dotted down before he was born. One after another he comes up in his private adventures with every fable of Aesop, of Homer, of Hafiz, of Ariosto, of Chaucer, of Scott, and verifies them with his own head and hands.

The beautiful fables of the Greeks, being proper creations of the imagination and not of the fancy, are universal verities. What a range of meanings and what perpetual pertinence has the story of Prometheus! Beside its primary value as the first chapter of the history of Europe, (the mythology thinly veiling authentic facts, the invention of the mechanic arts and the migration of colonies,) it gives the history of religion, with some closeness to the faith of later ages. Prometheus is the Jesus of the old mythology. He is the friend of man; stands between the unjust “justice” of the Eternal Father and the race of mortals, and readily suffers all things on their account. But where it departs from the Calvinistic Christianity and exhibits him as the defier of Jove, it represents a state of mind which readily appears wherever the doctrine of Theism is taught in a crude, objective form, and which seems the self-defence of man against this untruth, namely a discontent with the believed fact that a God exists, and a feeling that the obligation of reverence is onerous. It would steal if it could the fire of the Creator, and live apart from him and independent of him. The Prometheus Vincit is the romance of skepticism. Not less true to all time are the details of that stately apologue. Apollo kept the flocks of Admetus, said the poets. When the gods come among men, they are not known. Jesus was not; Socrates and Shakspeare were not. Antaeus was suffocated by the gripe of Hercules, but every time he touched his mother earth his strength was renewed. Man is the broken giant, and in all his weakness both his body and his mind are invigorated by habits of conversation with nature. The power of music, the power of poetry, to unfix and as it were clap wings to solid nature, interprets the riddle of Orpheus. The philosophical perception of identity through endless mutations of form makes him know the Proteus. What else am I who laughed or wept yesterday, who slept last night like a corpse, and this morning stood and ran? And what see I on any side but the transmigrations of Proteus? I can symbolize my thought by using the name of any creature, of any fact, because every creature is man agent

or patient. Tantalus is but a name for you and me. Tantalus means the impossibility of drinking the waters of thought which are always gleaming and waving within sight of the soul. The transmigration of souls is no fable. I would it were; but men and women are only half human. Every animal of the barn-yard, the field and the forest, of the earth and of the waters that are under the earth, has contrived to get a footing and to leave the print of its features and form in some one or other of these upright, heaven-facing speakers. Ah! brother, stop the ebb of thy soul, — ebbing downward into the forms into whose habits thou hast now for many years slid. As near and proper to us is also that old fable of the Sphinx, who was said to sit in the road-side and put riddles to every passenger. If the man could not answer, she swallowed him alive. If he could solve the riddle, the Sphinx was slain. What is our life but an endless flight of winged facts or events? In splendid variety these changes come, all putting questions to the human spirit. Those men who cannot answer by a superior wisdom these facts or questions of time, serve them. Facts encumber them, tyrannize over them, and make the men of routine, the men of sense, in whom a literal obedience to facts has extinguished every spark of that light by which man is truly man. But if the man is true to his better instincts or sentiments, and refuses the dominion of facts, as one that comes of a higher race; remains fast by the soul and sees the principle, then the facts fall aptly and supple into their places; they know their master, and the meanest of them glorifies him.

See in Goethe's Helena the same desire that every word should be a thing. These figures, he would say, these Chirons, Griffins, Phorkyas, Helen and Leda, are somewhat, and do exert a specific influence on the mind. So far then are they eternal entities, as real to-day as in the first Olympiad. Much revolving them he writes out freely his humor, and gives them body to his own imagination. And although that poem be as vague and fantastic as a dream, yet is it much more attractive than the more regular dramatic pieces of the same author, for the reason that it operates a wonderful relief to the mind from the routine of customary images, — awakens the reader's invention and fancy by the wild freedom of the design, and by the unceasing succession of brisk shocks of surprise.

The universal nature, too strong for the petty nature of the bard, sits on his neck and writes through his hand; so that when he seems to vent a mere caprice and wild romance, the issue is an exact allegory. Hence Plato said that "poets utter great and wise things which they do not themselves understand." All the fictions of the Middle Age explain themselves as a masked or frolic expression of that which in grave earnest the mind of that period toiled to achieve. Magic and all that is ascribed to it is a deep presentiment of the powers of science. The

shoes of swiftness, the sword of sharpness, the power of subduing the elements, of using the secret virtues of minerals, of understanding the voices of birds, are the obscure efforts of the mind in a right direction. The preternatural prowess of the hero, the gift of perpetual youth, and the like, are alike the endeavour of the human spirit “to bend the shows of things to the desires of the mind.”

In *Perceforest* and *Amadis de Gaul* a garland and a rose bloom on the head of her who is faithful, and fade on the brow of the inconstant. In the story of the Boy and the Mantle even a mature reader may be surprised with a glow of virtuous pleasure at the triumph of the gentle Venelas; and indeed all the postulates of elfin annals, — that the fairies do not like to be named; that their gifts are capricious and not to be trusted; that who seeks a treasure must not speak; and the like, — I find true in *Concord*, however they might be in *Cornwall* or *Bretagne*.

Is it otherwise in the newest romance? I read the *Bride of Lammermoor*. Sir William Ashton is a mask for a vulgar temptation, Ravenswood Castle a fine name for proud poverty, and the foreign mission of state only a Bunyan disguise for honest industry. We may all shoot a wild bull that would toss the good and beautiful, by fighting down the unjust and sensual. Lucy Ashton is another name for fidelity, which is always beautiful and always liable to calamity in this world.

But along with the civil and metaphysical history of man, another history goes daily forward, — that of the external world, — in which he is not less strictly implicated. He is the compend of time; he is also the correlative of nature. His power consists in the multitude of his affinities, in the fact that his life is intertwined with the whole chain of organic and inorganic being. In old Rome the public roads beginning at the Forum proceeded north, south, east, west, to the centre of every province of the empire, making each market-town of Persia, Spain and Britain pervious to the soldiers of the capital: so out of the human heart go as it were highways to the heart of every object in nature, to reduce it under the dominion of man. A man is a bundle of relations, a knot of roots, whose flower and fruitage is the world. His faculties refer to natures out of him and predict the world he is to inhabit, as the fins of the fish foreshow that water exists, or the wings of an eagle in the egg presuppose air. He cannot live without a world. Put Napoleon in an island prison, let his faculties find no men to act on, no Alps to climb, no stake to play for, and he would beat the air, and appear stupid. Transport him to large countries, dense population, complex interests and antagonist power, and you shall see that the man Napoleon, bounded that is by such a profile and outline, is not the virtual Napoleon. This is but Talbot’s shadow; —

“His substance is not here.

For what you see is but the smallest part
And least proportion of humanity;
But were the whole frame here,
It is of such a spacious, lofty pitch,
Your roof were not sufficient to contain it.”

— Henry VI.

Columbus needs a planet to shape his course upon. Newton and Laplace need myriads of age and thick-strewn celestial areas. One may say a gravitating solar system is already prophesied in the nature of Newton’s mind. Not less does the brain of Davy or of Gay-Lussac, from childhood exploring the affinities and repulsions of particles, anticipate the laws of organization. Does not the eye of the human embryo predict the light? the ear of Handel predict the witchcraft of harmonic sound? Do not the constructive fingers of Watt, Fulton, Whittemore, Arkwright, predict the fusible, hard, and temperable texture of metals, the properties of stone, water, and wood? Do not the lovely attributes of the maiden child predict the refinements and decorations of civil society? Here also we are reminded of the action of man on man. A mind might ponder its thought for ages and not gain so much self-knowledge as the passion of love shall teach it in a day. Who knows himself before he has been thrilled with indignation at an outrage, or has heard an eloquent tongue, or has shared the throb of thousands in a national exultation or alarm? No man can antedate his experience, or guess what faculty or feeling a new object shall unlock, any more than he can draw to-day the face of a person whom he shall see to-morrow for the first time.

I will not now go behind the general statement to explore the reason of this correspondency. Let it suffice that in the light of these two facts, namely, that the mind is One, and that nature is its correlative, history is to be read and written.

Thus in all ways does the soul concentrate and reproduce its treasures for each pupil. He too shall pass through the whole cycle of experience. He shall collect into a focus the rays of nature. History no longer shall be a dull book. It shall walk incarnate in every just and wise man. You shall not tell me by languages and titles a catalogue of the volumes you have read. You shall make me feel what periods you have lived. A man shall be the Temple of Fame. He shall walk, as the poets have described that goddess, in a robe painted all over with wonderful events and experiences; — his own form and features by their exalted intelligence shall be that variegated vest. I shall find in him the Foreworld; in his childhood the Age of Gold, the Apples of Knowledge, the Argonautic Expedition, the calling of Abraham, the building of the Temple, the Advent of Christ, Dark Ages, the Revival of Letters, the Reformation, the discovery of new lands, the opening of new sciences and new regions in man. He

shall be the priest of Pan, and bring with him into humble cottages the blessing of the morning stars, and all the recorded benefits of heaven and earth.

Is there somewhat overweening in this claim? Then I reject all I have written, for what is the use of pretending to know what we know not? But it is the fault of our rhetoric that we cannot strongly state one fact without seeming to belie some other. I hold our actual knowledge very cheap. Hear the rats in the wall, see the lizard on the fence, the fungus under foot, the lichen on the log. What do I know sympathetically, morally, of either of these worlds of life? As old as the Caucasian man, — perhaps older, — these creatures have kept their counsel beside him, and there is no record of any word or sign that has passed from one to the other. What connection do the books show between the fifty or sixty chemical elements and the historical eras? Nay, what does history yet record of the metaphysical annals of man? What light does it shed on those mysteries which we hide under the names Death and Immortality? Yet every history should be written in a wisdom which divined the range of our affinities and looked at facts as symbols. I am ashamed to see what a shallow village tale our so-called History is. How many times we must say Rome, and Paris, and Constantinople! What does Rome know of rat and lizard? What are Olympiads and Consulates to these neighboring systems of being? Nay, what food or experience or succor have they for the Esquimaux seal-hunter, for the Kanaka in his canoe, for the fisherman, the stevedore, the porter?

Broader and deeper we must write our annals, — from an ethical reformation, from an influx of the ever new, ever sanative conscience, — if we would trulier express our central and wide-related nature, instead of this old chronology of selfishness and pride to which we have too long lent our eyes. Already that day exists for us, shines in on us at unawares, but the path of science and of letters is not the way into nature. The idiot, the Indian, the child and unschooled farmer's boy stand nearer to the light by which nature is to be read, than the dissector or the antiquary.

SELF-RELIANCE.

“Ne te quaesiveris extra.”

“Man is his own star; and the soul that can
Render an honest and a perfect man,
Commands all light, all influence, all fate;

Nothing to him falls early or too late.
Our acts our angels are, or good or ill,
Our fatal shadows that walk by us still.”

Epilogue to Beaumont and Fletcher’s *Honest Man’s Fortune*.
Cast the bantling on the rocks,
Suckle him with the she-wolf’s teat,
Wintered with the hawk and fox.
Power and speed be hands and feet.

SELF-RELIANCE.

I READ the other day some verses written by an eminent painter which were original and not conventional. The soul always hears an admonition in such lines, let the subject be what it may. The sentiment they instil is of more value than any thought they may contain. To believe your own thought, to believe that what is true for you in your private heart is true for all men, — that is genius. Speak your latent conviction, and it shall be the universal sense; for the inmost in due time becomes the outmost, and our first thought is rendered back to us by the trumpets of the Last Judgment. Familiar as the voice of the mind is to each, the highest merit we ascribe to Moses, Plato and Milton is that they set at naught books and traditions, and spoke not what men, but what they thought. A man should learn to detect and watch that gleam of light which flashes across his mind from within, more than the lustre of the firmament of bards and sages. Yet he dismisses without notice his thought, because it is his. In every work of genius we recognize our own rejected thoughts; they come back to us with a certain alienated majesty. Great works of art have no more affecting lesson for us than this. They teach us to abide by our spontaneous impression with good-humored inflexibility then most when the whole cry of voices is on the other side. Else to-morrow a stranger will say with masterly good sense precisely what we have thought and felt all the time, and we shall be forced to take with shame our own opinion from another.

There is a time in every man's education when he arrives at the conviction that envy is ignorance; that imitation is suicide; that he must take himself for better for worse as his portion; that though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. The power which resides in him is new in nature, and none but he knows what that is which he can do, nor does he know until he has tried. Not for nothing one face, one character, one fact, makes much impression on him, and another none. This sculpture in the memory is not without preestablished harmony. The eye was placed where one ray should fall, that it might testify of that particular ray. We but half express ourselves, and are ashamed of that divine idea which each of us represents. It may be safely trusted as proportionate and of good issues, so it be faithfully imparted, but God will not have his work made manifest by cowards. A man is relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise shall give him no peace. It is a deliverance which does not deliver. In the attempt his genius deserts him; no muse befriends; no invention, no hope.

Trust thyself: every heart vibrates to that iron string. Accept the place the divine providence has found for you, the society of your contemporaries, the connection of events. Great men have always done so, and confided themselves childlike to the genius of their age, betraying their perception that the absolutely trustworthy was seated at their heart, working through their hands, predominating in all their being. And we are now men, and must accept in the highest mind the same transcendent destiny; and not minors and invalids in a protected corner, not cowards fleeing before a revolution, but guides, redeemers and benefactors, obeying the Almighty effort and advancing on Chaos and the Dark.

What pretty oracles nature yields us on this text in the face and behavior of children, babes, and even brutes! That divided and rebel mind, that distrust of a sentiment because our arithmetic has computed the strength and means opposed to our purpose, these have not. Their mind being whole, their eye is as yet unconquered, and when we look in their faces we are disconcerted. Infancy conforms to nobody; all conform to it; so that one babe commonly makes four or five out of the adults who prattle and play to it. So God has armed youth and puberty and manhood no less with its own piquancy and charm, and made it enviable and gracious and its claims not to be put by, if it will stand by itself. Do not think the youth has no force, because he cannot speak to you and me. Hark! in the next room his voice is sufficiently clear and emphatic. It seems he knows how to speak to his contemporaries. Bashful or bold then, he will know how to make us seniors very unnecessary.

The nonchalance of boys who are sure of a dinner, and would disdain as much as a lord to do or say aught to conciliate one, is the healthy attitude of human nature. A boy is in the parlor what the pit is in the playhouse; independent, irresponsible, looking out from his corner on such people and facts as pass by, he tries and sentences them on their merits, in the swift, summary way of boys, as good, bad, interesting, silly, eloquent, troublesome. He cumber himself never about consequences, about interests; he gives an independent, genuine verdict. You must court him; he does not court you. But the man is as it were clapped into jail by his consciousness. As soon as he has once acted or spoken with éclat he is a committed person, watched by the sympathy or the hatred of hundreds, whose affections must now enter into his account. There is no Lethe for this. Ah, that he could pass again into his neutrality! Who can thus avoid all pledges and, having observed, observe again from the same unaffected, unbiased, unbribable, unaffrighted innocence, — must always be formidable. He would utter opinions on all passing affairs, which being seen to be not private but necessary, would sink like darts into the ear of men and put them in fear.

These are the voices which we hear in solitude, but they grow faint and inaudible as we enter into the world. Society everywhere is in conspiracy against the manhood of every one of its members. Society is a joint-stock company, in which the members agree, for the better securing of his bread to each shareholder, to surrender the liberty and culture of the eater. The virtue in most request is conformity. Self-reliance is its aversion. It loves not realities and creators, but names and customs.

Whoso would be a man, must be a nonconformist. He who would gather immortal palms must not be hindered by the name of goodness, but must explore if it be goodness. Nothing is at last sacred but the integrity of your own mind. Absolve you to yourself, and you shall have the suffrage of the world. I remember an answer which when quite young I was prompted to make to a valued adviser who was wont to importune me with the dear old doctrines of the church. On my saying, "What have I to do with the sacredness of traditions, if I live wholly from within?" my friend suggested,— "But these impulses may be from below, not from above." I replied, "They do not seem to me to be such; but if I am the Devil's child, I will live then from the Devil." No law can be sacred to me but that of my nature. Good and bad are but names very readily transferable to that or this; the only right is what is after my constitution; the only wrong what is against it. A man is to carry himself in the presence of all opposition as if every thing were titular and ephemeral but he. I am ashamed to think how easily we capitulate to badges and names, to large societies and dead institutions. Every decent and well-spoken individual affects and sways me more than is right. I ought to go upright and vital, and speak the rude truth in all ways. If malice and vanity wear the coat of philanthropy, shall that pass? If an angry bigot assumes this bountiful cause of Abolition, and comes to me with his last news from Barbadoes, why should I not say to him, 'Go love thy infant; love thy wood-chopper; be good-natured and modest; have that grace; and never varnish your hard, uncharitable ambition with this incredible tenderness for black folk a thousand miles off. Thy love afar is spite at home.' Rough and graceless would be such greeting, but truth is handsomer than the affectation of love. Your goodness must have some edge to it, — else it is none. The doctrine of hatred must be preached, as the counteraction of the doctrine of love, when that pules and whines. I shun father and mother and wife and brother when my genius calls me. I would write on the lintels of the door-post, *Whim*. I hope it is somewhat better than whim at last, but we cannot spend the day in explanation. Expect me not to show cause why I seek or why I exclude company. Then again, do not tell me, as a good man did to-day, of my obligation to put all poor men in good situations. Are they my poor? I tell thee thou foolish philanthropist that I grudge

the dollar, the dime, the cent, I give to such men as do not belong to me and to whom I do not belong. There is a class of persons to whom by all spiritual affinity I am bought and sold; for them I will go to prison if need be; but your miscellaneous popular charities; the education at college of fools; the building of meeting-houses to the vain end to which many now stand; alms to sots, and the thousand-fold Relief Societies; — though I confess with shame I sometimes succumb and give the dollar, it is a wicked dollar which by and by I shall have the manhood to withhold.

Virtues are, in the popular estimate, rather the exception than the rule. There is the man and his virtues. Men do what is called a good action, as some piece of courage or charity, much as they would pay a fine in expiation of daily non-appearance on parade. Their works are done as an apology or extenuation of their living in the world, — as invalids and the insane pay a high board. Their virtues are penances. I do not wish to expiate, but to live. My life is for itself and not for a spectacle. I much prefer that it should be of a lower strain, so it be genuine and equal, than that it should be glittering and unsteady. I wish it to be sound and sweet, and not to need diet and bleeding. I ask primary evidence that you are a man, and refuse this appeal from the man to his actions. I know that for myself it makes no difference whether I do or forbear those actions which are reckoned excellent. I cannot consent to pay for a privilege where I have intrinsic right. Few and mean as my gifts may be, I actually am, and do not need for my own assurance or the assurance of my fellows any secondary testimony.

What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and in intellectual life, may serve for the whole distinction between greatness and meanness. It is the harder because you will always find those who think they know what is your duty better than you know it. It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.

The objection to conforming to usages that have become dead to you is that it scatters your force. It loses your time and blurs the impression of your character. If you maintain a dead church, contribute to a dead Bible-society, vote with a great party either for the government or against it, spread your table like base housekeepers, — under all these screens I have difficulty to detect the precise man you are: and of course so much force is withdrawn from your proper life. But do your work, and I shall know you. Do your work, and you shall reinforce yourself. A man must consider what a blindman's-buff is this game of conformity. If I know your sect, I anticipate your argument. I hear a preacher announce for his text and topic the expediency of one of the institutions of his

church. Do I not know beforehand that not possibly can he say a new and spontaneous word? Do I not know that with all this ostentation of examining the grounds of the institution he will do no such thing? Do I not know that he is pledged to himself not to look but at one side, the permitted side, not as a man, but as a parish minister? He is a retained attorney, and these airs of the bench are the emptiest affectation. Well, most men have bound their eyes with one or another handkerchief, and attached themselves to some one of these communities of opinion. This conformity makes them not false in a few particulars, authors of a few lies, but false in all particulars. Their every truth is not quite true. Their two is not the real two, their four not the real four; so that every word they say chagrins us and we know not where to begin to set them right. Meantime nature is not slow to equip us in the prison-uniform of the party to which we adhere. We come to wear one cut of face and figure, and acquire by degrees the gentlest asinine expression. There is a mortifying experience in particular, which does not fail to wreak itself also in the general history; I mean "the foolish face of praise," the forced smile which we put on in company where we do not feel at ease in answer to conversation which does not interest us. The muscles, not spontaneously moved but moved by a low usurping wilfulness, grow tight about the outline of the face with the most disagreeable sensation.

For nonconformity the world whips you with its displeasure. And therefore a man must know how to estimate a sour face. The by-standers look askance on him in the public street or in the friend's parlor. If this aversation had its origin in contempt and resistance like his own he might well go home with a sad countenance; but the sour faces of the multitude, like their sweet faces, have no deep cause, but are put on and off as the wind blows and a newspaper directs. Yet is the discontent of the multitude more formidable than that of the senate and the college. It is easy enough for a firm man who knows the world to brook the rage of the cultivated classes. Their rage is decorous and prudent, for they are timid, as being very vulnerable themselves. But when to their feminine rage the indignation of the people is added, when the ignorant and the poor are aroused, when the unintelligent brute force that lies at the bottom of society is made to growl and mow, it needs the habit of magnanimity and religion to treat it godlike as a trifle of no concernment.

The other terror that scares us from self-trust is our consistency; a reverence for our past act or word because the eyes of others have no other data for computing our orbit than our past acts, and we are loath to disappoint them.

But why should you keep your head over your shoulder? Why drag about this corpse of your memory, lest you contradict somewhat you have stated in this or that public place? Suppose you should contradict yourself; what then? It seems

to be a rule of wisdom never to rely on your memory alone, scarcely even in acts of pure memory, but to bring the past for judgment into the thousand-eyed present, and live ever in a new day. In your metaphysics you have denied personality to the Deity, yet when the devout motions of the soul come, yield to them heart and life, though they should clothe God with shape and color. Leave your theory, as Joseph his coat in the hand of the harlot, and flee.

A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines. With consistency a great soul has simply nothing to do. He may as well concern himself with his shadow on the wall. Speak what you think now in hard words and to-morrow speak what to-morrow thinks in hard words again, though it contradict every thing you said to-day.— ‘Ah, so you shall be sure to be misunderstood.’ — Is it so bad then to be misunderstood? Pythagoras was misunderstood, and Socrates, and Jesus, and Luther, and Copernicus, and Galileo, and Newton, and every pure and wise spirit that ever took flesh. To be great is to be misunderstood.

I suppose no man can violate his nature. All the sallies of his will are rounded in by the law of his being, as the inequalities of Andes and Himmaleh are insignificant in the curve of the sphere. Nor does it matter how you gauge and try him. A character is like an acrostic or Alexandrian stanza; — read it forward, backward, or across, it still spells the same thing. In this pleasing contrite wood-life which God allows me, let me record day by day my honest thought without prospect or retrospect, and, I cannot doubt, it will be found symmetrical, though I mean it not and see it not. My book should smell of pines and resound with the hum of insects. The swallow over my window should interweave that thread or straw he carries in his bill into my web also. We pass for what we are. Character teaches above our wills. Men imagine that they communicate their virtue or vice only by overt actions, and do not see that virtue or vice emit a breath every moment.

There will be an agreement in whatever variety of actions, so they be each honest and natural in their hour. For of one will, the actions will be harmonious, however unlike they seem. These varieties are lost sight of at a little distance, at a little height of thought. One tendency unites them all. The voyage of the best ship is a zigzag line of a hundred tacks. See the line from a sufficient distance, and it straightens itself to the average tendency. Your genuine action will explain itself and will explain your other genuine actions. Your conformity explains nothing. Act singly, and what you have already done singly will justify you now. Greatness appeals to the future. If I can be firm enough to-day to do right and scorn eyes, I must have done so much right before as to defend me now. Be it how it will, do right now. Always scorn appearances and you always may. The

force of character is cumulative. All the foregone days of virtue work their health into this. What makes the majesty of the heroes of the senate and the field, which so fills the imagination? The consciousness of a train of great days and victories behind. They shed an united light on the advancing actor. He is attended as by a visible escort of angels. That is it which throws thunder into Chatham's voice, and dignity into Washington's port, and America into Adams's eye. Honor is venerable to us because it is no ephemera. It is always ancient virtue. We worship it to-day because it is not of to-day. We love it and pay it homage because it is not a trap for our love and homage, but is self-dependent, self-derived, and therefore of an old immaculate pedigree, even if shown in a young person.

I hope in these days we have heard the last of conformity and consistency. Let the words be gazetted and ridiculous henceforward. Instead of the gong for dinner, let us hear a whistle from the Spartan fife. Let us never bow and apologize more. A great man is coming to eat at my house. I do not wish to please him; I wish that he should wish to please me. I will stand here for humanity, and though I would make it kind, I would make it true. Let us affront and reprimand the smooth mediocrity and squalid contentment of the times, and hurl in the face of custom and trade and office, the fact which is the upshot of all history, that there is a great responsible Thinker and Actor working wherever a man works; that a true man belongs to no other time or place, but is the centre of things. Where he is, there is nature. He measures you and all men and all events. Ordinarily, every body in society reminds us of somewhat else, or of some other person. Character, reality, reminds you of nothing else; it takes place of the whole creation. The man must be so much that he must make all circumstances indifferent. Every true man is a cause, a country, and an age; requires infinite spaces and numbers and time fully to accomplish his design; — and posterity seem to follow his steps as a train of clients. A man Caesar is born, and for ages after we have a Roman Empire. Christ is born, and millions of minds so grow and cleave to his genius that he is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man; as, Monachism, of the Hermit Antony; the Reformation, of Luther; Quakerism, of Fox; Methodism, of Wesley; Abolition, of Clarkson. Scipio, Milton called "the height of Rome"; and all history Resolves itself very easily into the biography of a few stout and earnest persons.

Let a man then know his worth, and keep things under his feet. Let him not peep or steal, or skulk up and down with the air of a charity-boy, a bastard, or an interloper in the world which exists for him. But the man in the street, finding no worth in himself which corresponds to the force which built a tower or

sculptured a marble god, feels poor when he looks on these. To him a palace, a statue, or a costly book have an alien and forbidding air, much like a gay equipage, and seem to say like that, 'Who are you, Sir?' Yet they all are his, suitors for his notice, petitioners to his faculties that they will come out and take possession. The picture waits for my verdict; it is not to command me, but I am to settle its claims to praise. That popular fable of the sot who was picked up dead drunk in the street, carried to the duke's house, washed and dressed and laid in the duke's bed, and, on his waking, treated with all obsequious ceremony like the duke, and assured that he had been insane, owes its popularity to the fact that it symbolizes so well the state of man, who is in the world a sort of sot, but now and then wakes up, exercises his reason and finds himself a true prince.

Our reading is mendicant and sycophantic. In history our imagination plays us false. Kingdom and lordship, power and estate, are a gaudier vocabulary than private John and Edward in a small house and common day's work; but the things of life are the same to both; the sum total of both is the same. Why all this deference to Alfred and Scanderbeg and Gustavus? Suppose they were virtuous; did they wear out virtue? As great a stake depends on your private act to-day, as followed their public and renowned steps. When private men shall act with original views, the lustre will be transferred from the actions of kings to those of gentlemen.

The world has been instructed by its kings, who have so magnetized the eyes of nations. It has been taught by this colossal symbol the mutual reverence that is due from man to man. The joyful loyalty with which men have everywhere suffered the king, the noble, or the great proprietor to walk among them by a law of his own, make his own scale of men and things and reverse theirs, pay for benefits not with money but with honor, and represent the law in his person, was the hieroglyphic by which they obscurely signified their consciousness of their own right and comeliness, the right of every man.

The magnetism which all original action exerts is explained when we inquire the reason of self-trust. Who is the Trustee? What is the aboriginal Self, on which a universal reliance may be grounded? What is the nature and power of that science-baffling star, without parallax, without calculable elements, which shoots a ray of beauty even into trivial and impure actions, if the least mark of independence appear? The inquiry leads us to that source, at once the essence of genius, of virtue, and of life, which we call Spontaneity or Instinct. We denote this primary wisdom as Intuition, whilst all later teachings are tuitions. In that deep force, the last fact behind which analysis cannot go, all things find their common origin. For the sense of being which in calm hours rises, we know not how, in the soul, is not diverse from things, from space, from light, from time,

from man, but one with them and proceeds obviously from the same source whence their life and being also proceed. We first share the life by which things exist and afterwards see them as appearances in nature and forget that we have shared their cause. Here is the fountain of action and of thought. Here are the lungs of that inspiration which giveth man wisdom and which cannot be denied without impiety and atheism. We lie in the lap of immense intelligence, which makes us receivers of its truth and organs of its activity. When we discern justice, when we discern truth, we do nothing of ourselves, but allow a passage to its beams. If we ask whence this comes, if we seek to pry into the soul that causes, all philosophy is at fault. Its presence or its absence is all we can affirm. Every man discriminates between the voluntary acts of his mind and his involuntary perceptions, and knows that to his involuntary perceptions a perfect faith is due. He may err in the expression of them, but he knows that these things are so, like day and night, not to be disputed. My wilful actions and acquisitions are but roving; — the idlest reverie, the faintest native emotion, command my curiosity and respect. Thoughtless people contradict as readily the statement of perceptions as of opinions, or rather much more readily; for they do not distinguish between perception and notion. They fancy that I choose to see this or that thing. But perception is not whimsical, but fatal. If I see a trait, my children will see it after me, and in course of time all mankind, — although it may chance that no one has seen it before me. For my perception of it is as much a fact as the sun.

The relations of the soul to the divine spirit are so pure that it is profane to seek to interpose helps. It must be that when God speaketh he should communicate, not one thing, but all things; should fill the world with his voice; should scatter forth light, nature, time, souls, from the centre of the present thought; and new date and new create the whole. Whenever a mind is simple and receives a divine wisdom, old things pass away, — means, teachers, texts, temples fall; it lives now, and absorbs past and future into the present hour. All things are made sacred by relation to it, — one as much as another. All things are dissolved to their centre by their cause, and in the universal miracle petty and particular miracles disappear. If therefore a man claims to know and speak of God and carries you backward to the phraseology of some old mouldered nation in another country, in another world, believe him not. Is the acorn better than the oak which is its fulness and completion? Is the parent better than the child into whom he has cast his ripened being? Whence then this worship of the past? The centuries are conspirators against the sanity and authority of the soul. Time and space are but physiological colors which the eye makes, but the soul is light: where it is, is day; where it was, is night; and history is an impertinence and an

injury if it be any thing more than a cheerful apologue or parable of my being and becoming.

Man is timid and apologetic; he is no longer upright; he dares not say 'I think,' 'I am,' but quotes some saint or sage. He is ashamed before the blade of grass or the blowing rose. These roses under my window make no reference to former roses or to better ones; they are for what they are; they exist with God to-day. There is no time to them. There is simply the rose; it is perfect in every moment of its existence. Before a leaf-bud has burst, its whole life acts; in the full-blown flower there is no more; in the leafless root there is no less. Its nature is satisfied and it satisfies nature in all moments alike. But man postpones or remembers; he does not live in the present, but with reverted eye laments the past, or, heedless of the riches that surround him, stands on tiptoe to foresee the future. He cannot be happy and strong until he too lives with nature in the present, above time.

This should be plain enough. Yet see what strong intellects dare not yet hear God himself unless he speak the phraseology of I know not what David, or Jeremiah, or Paul. We shall not always set so great a price on a few texts, on a few lives. We are like children who repeat by rote the sentences of grandames and tutors, and, as they grow older, of the men of talents and character they chance to see, — painfully recollecting the exact words they spoke; afterwards, when they come into the point of view which those had who uttered these sayings, they understand them and are willing to let the words go; for at any time they can use words as good when occasion comes. If we live truly, we shall see truly. It is as easy for the strong man to be strong, as it is for the weak to be weak. When we have new perception, we shall gladly disburden the memory of its hoarded treasures as old rubbish. When a man lives with God, his voice shall be as sweet as the murmur of the brook and the rustle of the corn.

And now at last the highest truth on this subject remains unsaid; probably cannot be said; for all that we say is the far-off remembering of the intuition. That thought by what I can now nearest approach to say it, is this. When good is near you, when you have life in yourself, it is not by any known or accustomed way; you shall not discern the footprints of any other; you shall not see the face of man; you shall not hear any name; — the way, the thought, the good shall be wholly strange and new. It shall exclude example and experience. You take the way from man, not to man. All persons that ever existed are its forgotten ministers. Fear and hope are alike beneath it. There is somewhat low even in hope. In the hour of vision there is nothing that can be called gratitude, nor properly joy. The soul raised over passion beholds identity and eternal causation, perceives the self-existence of Truth and Right, and calms itself with knowing

that all things go well. Vast spaces of nature, the Atlantic Ocean, the South Sea; long intervals of time, years, centuries, are of no account. This which I think and feel underlay every former state of life and circumstances, as it does underlie my present, and what is called life, and what is called death.

Life only avails, not the having lived. Power ceases in the instant of repose; it resides in the moment of transition from a past to a new state, in the shooting of the gulf, in the darting to an aim. This one fact the world hates; that the soul becomes; for that for ever degrades the past, turns all riches to poverty, all reputation to a shame, confounds the saint with the rogue, shoves Jesus and Judas equally aside. Why then do we prate of self-reliance? Inasmuch as the soul is present there will be power not confident but agent. To talk of reliance is a poor external way of speaking. Speak rather of that which relies because it works and is. Who has more obedience than I masters me, though he should not raise his finger. Round him I must revolve by the gravitation of spirits. We fancy it rhetoric when we speak of eminent virtue. We do not yet see that virtue is Height, and that a man or a company of men, plastic and permeable to principles, by the law of nature must overpower and ride all cities, nations, kings, rich men, poets, who are not.

This is the ultimate fact which we so quickly reach on this, as on every topic, the resolution of all into the ever-blessed ONE. Self-existence is the attribute of the Supreme Cause, and it constitutes the measure of good by the degree in which it enters into all lower forms. All things real are so by so much virtue as they contain. Commerce, husbandry, hunting, whaling, war, eloquence, personal weight, are somewhat, and engage my respect as examples of its presence and impure action. I see the same law working in nature for conservation and growth. Power is, in nature, the essential measure of right. Nature suffers nothing to remain in her kingdoms which cannot help itself. The genesis and maturation of a planet, its poise and orbit, the bended tree recovering itself from the strong wind, the vital resources of every animal and vegetable, are demonstrations of the self-sufficing and therefore self-relying soul.

Thus all concentrates: let us not rove; let us sit at home with the cause. Let us stun and astonish the intruding rabble of men and books and institutions, by a simple declaration of the divine fact. Bid the invaders take the shoes from off their feet, for God is here within. Let our simplicity judge them, and our docility to our own law demonstrate the poverty of nature and fortune beside our native riches.

But now we are a mob. Man does not stand in awe of man, nor is his genius admonished to stay at home, to put itself in communication with the internal ocean, but it goes abroad to beg a cup of water of the urns of other men. We

must go alone. I like the silent church before the service begins, better than any preaching. How far off, how cool, how chaste the persons look, begirt each one with a precinct or sanctuary! So let us always sit. Why should we assume the faults of our friend, or wife, or father, or child, because they sit around our hearth, or are said to have the same blood? All men have my blood and I have all men's. Not for that will I adopt their petulance or folly, even to the extent of being ashamed of it. But your isolation must not be mechanical, but spiritual, that is, must be elevation. At times the whole world seems to be in conspiracy to importune you with emphatic trifles. Friend, client, child, sickness, fear, want, charity, all knock at once at thy closet door and say,— 'Come out unto us.' But keep thy state; come not into their confusion. The power men possess to annoy me I give them by a weak curiosity. No man can come near me but through my act. "What we love that we have, but by desire we bereave ourselves of the love."

If we cannot at once rise to the sanctities of obedience and faith, let us at least resist our temptations; let us enter into the state of war and wake Thor and Woden, courage and constancy, in our Saxon breasts. This is to be done in our smooth times by speaking the truth. Check this lying hospitality and lying affection. Live no longer to the expectation of these deceived and deceiving people with whom we converse. Say to them, 'O father, O mother, O wife, O brother, O friend, I have lived with you after appearances hitherto. Henceforward I am the truth's. Be it known unto you that henceforward I obey no law less than the eternal law. I will have no covenants but proximities. I shall endeavour to nourish my parents, to support my family, to be the chaste husband of one wife, — but these relations I must fill after a new and unprecedented way. I appeal from your customs. I must be myself. I cannot break myself any longer for you, or you. If you can love me for what I am, we shall be the happier. If you cannot, I will still seek to deserve that you should. I will not hide my tastes or aversions. I will so trust that what is deep is holy, that I will do strongly before the sun and moon whatever inly rejoices me and the heart appoints. If you are noble, I will love you: if you are not, I will not hurt you and myself by hypocritical attentions. If you are true, but not in the same truth with me, cleave to your companions; I will seek my own. I do this not selfishly but humbly and truly. It is alike your interest, and mine, and all men's, however long we have dwelt in lies, to live in truth. Does this sound harsh to-day? You will soon love what is dictated by your nature as well as mine, and if we follow the truth it will bring us out safe at last.' — But so may you give these friends pain. Yes, but I cannot sell my liberty and my power, to save their sensibility. Besides, all persons have their moments of reason, when they look out into the region of

absolute truth; then will they justify me and do the same thing.

The populace think that your rejection of popular standards is a rejection of all standard, and mere antinomianism; and the bold sensualist will use the name of philosophy to gild his crimes. But the law of consciousness abides. There are two confessionals, in one or the other of which we must be shriven. You may fulfil your round of duties by clearing yourself in the direct, or in the reflex way. Consider whether you have satisfied your relations to father, mother, cousin, neighbor, town, cat, and dog; whether any of these can upbraid you. But I may also neglect this reflex standard and absolve me to myself. I have my own stern claims and perfect circle. It denies the name of duty to many offices that are called duties. But if I can discharge its debts it enables me to dispense with the popular code. If any one imagines that this law is lax, let him keep its commandment one day.

And truly it demands something godlike in him who has cast off the common motives of humanity and has ventured to trust himself for a taskmaster. High be his heart, faithful his will, clear his sight, that he may in good earnest be doctrine, society, law, to himself, that a simple purpose may be to him as strong as iron necessity is to others!

If any man consider the present aspects of what is called by distinction society, he will see the need of these ethics. The sinew and heart of man seem to be drawn out, and we are become timorous, desponding whimperers. We are afraid of truth, afraid of fortune, afraid of death and afraid of each other. Our age yields no great and perfect persons. We want men and women who shall renovate life and our social state, but we see that most natures are insolvent, cannot satisfy their own wants, have an ambition out of all proportion to their practical force and do lean and beg day and night continually. Our housekeeping is mendicant, our arts, our occupations, our marriages, our religion we have not chosen, but society has chosen for us. We are parlor soldiers. We shun the rugged battle of fate, where strength is born.

If our young men miscarry in their first enterprises they lose all heart. If the young merchant fails, men say he is ruined. If the finest genius studies at one of our colleges and is not installed in an office within one year afterwards in the cities or suburbs of Boston or New York, it seems to his friends and to himself that he is right in being disheartened and in complaining the rest of his life. A sturdy lad from New Hampshire or Vermont, who in turn tries all the professions, who teams it, farms it, peddles, keeps a school, preaches, edits a newspaper, goes to Congress, buys a township, and so forth, in successive years, and always like a cat falls on his feet, is worth a hundred of these city dolls. He walks abreast with his days and feels no shame in not 'studying a profession,'

for he does not postpone his life, but lives already. He has not one chance, but a hundred chances. Let a Stoic open the resources of man and tell men they are not leaning willows, but can and must detach themselves; that with the exercise of self-trust, new powers shall appear; that a man is the word made flesh, born to shed healing to the nations; that he should be ashamed of our compassion, and that the moment he acts from himself, tossing the laws, the books, idolatries and customs out of the window, we pity him no more but thank and revere him; — and that teacher shall restore the life of man to splendor and make his name dear to all history.

It is easy to see that a greater self-reliance must work a revolution in all the offices and relations of men; in their religion; in their education; in their pursuits; their modes of living; their association; in their property; in their speculative views.

1. In what prayers do men allow themselves! That which they call a holy office is not so much as brave and manly. Prayer looks abroad and asks for some foreign addition to come through some foreign virtue, and loses itself in endless mazes of natural and supernatural, and mediatorial and miraculous. Prayer that craves a particular commodity, any thing less than all good, is vicious. Prayer is the contemplation of the facts of life from the highest point of view. It is the soliloquy of a beholding and jubilant soul. It is the spirit of God pronouncing his works good. But prayer as a means to effect a private end is meanness and theft. It supposes dualism and not unity in nature and consciousness. As soon as the man is at one with God, he will not beg. He will then see prayer in all action. The prayer of the farmer kneeling in his field to weed it, the prayer of the rower kneeling with the stroke of his oar, are true prayers heard throughout nature, though for cheap ends. Caratach, in Fletcher's *Bonduca*, when admonished to inquire the mind of the god *Audate*, replies, —

“His hidden meaning lies in our endeavors;
Our valors are our best gods.”

Another sort of false prayers are our regrets. Discontent is the want of self-reliance: it is infirmity of will. Regret calamities if you can thereby help the sufferer; if not, attend your own work and already the evil begins to be repaired. Our sympathy is just as base. We come to them who weep foolishly and sit down and cry for company, instead of imparting to them truth and health in rough electric shocks, putting them once more in communication with their own reason. The secret of fortune is joy in our hands. Welcome evermore to gods and men is the self-helping man. For him all doors are flung wide; him all tongues greet, all honors crown, all eyes follow with desire. Our love goes out to him and embraces him because he did not need it. We solicitously and apologetically

caress and celebrate him because he held on his way and scorned our disapprobation. The gods love him because men hated him. "To the persevering mortal," said Zoroaster, "the blessed Immortals are swift."

As men's prayers are a disease of the will, so are their creeds a disease of the intellect. They say with those foolish Israelites, 'Let not God speak to us, lest we die. Speak thou, speak any man with us, and we will obey.' Everywhere I am hindered of meeting God in my brother, because he has shut his own temple doors and recites fables merely of his brother's, or his brother's brother's God. Every new mind is a new classification. If it prove a mind of uncommon activity and power, a Locke, a Lavoisier, a Hutton, a Bentham, a Fourier, it imposes its classification on other men, and lo! a new system. In proportion to the depth of the thought, and so to the number of the objects it touches and brings within reach of the pupil, is his complacency. But chiefly is this apparent in creeds and churches, which are also classifications of some powerful mind acting on the elemental thought of duty, and man's relation to the Highest. Such is Calvinism, Quakerism, Swedenborgism. The pupil takes the same delight in subordinating every thing to the new terminology as a girl who has just learned botany in seeing a new earth and new seasons thereby. It will happen for a time that the pupil will find his intellectual power has grown by the study of his master's mind. But in all unbalanced minds the classification is idolized, passes for the end and not for a speedily exhaustible means, so that the walls of the system blend to their eye in the remote horizon with the walls of the universe; the luminaries of heaven seem to them hung on the arch their master built. They cannot imagine how you aliens have any right to see, — how you can see; 'It must be somehow that you stole the light from us.' They do not yet perceive that light, unsystematic, indomitable, will break into any cabin, even into theirs. Let them chirp awhile and call it their own. If they are honest and do well, presently their neat new pincfold will be too strait and low, will crack, will lean, will rot and vanish, and the immortal light, all young and joyful, million-orbed, million-colored, will beam over the universe as on the first morning.

2. It is for want of self-culture that the superstition of Travelling, whose idols are Italy, England, Egypt, retains its fascination for all educated Americans. They who made England, Italy, or Greece venerable in the imagination did so by sticking fast where they were, like an axis of the earth. In manly hours we feel that duty is our place. The soul is no traveller; the wise man stays at home, and when his necessities, his duties, on any occasion call him from his house, or into foreign lands, he is at home still and shall make men sensible by the expression of his countenance that he goes, the missionary of wisdom and virtue, and visits cities and men like a sovereign and not like an interloper or a valet.

I have no churlish objection to the circumnavigation of the globe for the purposes of art, of study, and benevolence, so that the man is first domesticated, or does not go abroad with the hope of finding somewhat greater than he knows. He who travels to be amused, or to get somewhat which he does not carry, travels away from himself, and grows old even in youth among old things. In Thebes, in Palmyra, his will and mind have become old and dilapidated as they. He carries ruins to ruins.

Travelling is a fool's paradise. Our first journeys discover to us the indifference of places. At home I dream that at Naples, at Rome, I can be intoxicated with beauty and lose my sadness. I pack my trunk, embrace my friends, embark on the sea and at last wake up in Naples, and there beside me is the stern fact, the sad self, unrelenting, identical, that I fled from. I seek the Vatican and the palaces. I affect to be intoxicated with sights and suggestions, but I am not intoxicated. My giant goes with me wherever I go.

3. But the rage of travelling is a symptom of a deeper unsoundness affecting the whole intellectual action. The intellect is vagabond, and our system of education fosters restlessness. Our minds travel when our bodies are forced to stay at home. We imitate; and what is imitation but the travelling of the mind? Our houses are built with foreign taste; our shelves are garnished with foreign ornaments; our opinions, our tastes, our faculties, lean, and follow the Past and the Distant. The soul created the arts wherever they have flourished. It was in his own mind that the artist sought his model. It was an application of his own thought to the thing to be done and the conditions to be observed. And why need we copy the Doric or the Gothic model? Beauty, convenience, grandeur of thought and quaint expression are as near to us as to any, and if the American artist will study with hope and love the precise thing to be done by him, considering the climate, the soil, the length of the day, the wants of the people, the habit and form of the government, he will create a house in which all these will find themselves fitted, and taste and sentiment will be satisfied also.

Insist on yourself; never imitate. Your own gift you can present every moment with the cumulative force of a whole life's cultivation; but of the adopted talent of another you have only an extemporaneous half possession. That which each can do best, none but his Maker can teach him. No man yet knows what it is, nor can, till that person has exhibited it. Where is the master who could have taught Shakspeare? Where is the master who could have instructed Franklin, or Washington, or Bacon, or Newton? Every great man is a unique. The Scipionism of Scipio is precisely that part he could not borrow. Shakspeare will never be made by the study of Shakspeare. Do that which is assigned you, and you cannot hope too much or dare too much. There is at this

moment for you an utterance brave and grand as that of the colossal chisel of Phidias, or trowel of the Egyptians, or the pen of Moses or Dante, but different from all these. Not possibly will the soul, all rich, all eloquent, with thousand-cloven tongue, deign to repeat itself; but if you can hear what these patriarchs say, surely you can reply to them in the same pitch of voice; for the ear and the tongue are two organs of one nature. Abide in the simple and noble regions of thy life, obey thy heart and thou shalt reproduce the Foreworld again.

4. As our Religion, our Education, our Art look abroad, so does our spirit of society. All men plume themselves on the improvement of society, and no man improves.

Society never advances. It recedes as fast on one side as it gains on the other. It undergoes continual changes; it is barbarous, it is civilized, it is christianized, it is rich, it is scientific; but this change is not amelioration. For every thing that is given something is taken. Society acquires new arts and loses old instincts. What a contrast between the well-clad, reading, writing, thinking American, with a watch, a pencil and a bill of exchange in his pocket, and the naked New Zealander, whose property is a club, a spear, a mat and an undivided twentieth of a shed to sleep under! But compare the health of the two men and you shall see that the white man has lost his aboriginal strength. If the traveller tell us truly, strike the savage with a broad axe and in a day or two the flesh shall unite and heal as if you struck the blow into soft pitch, and the same blow shall send the white to his grave.

The civilized man has built a coach, but has lost the use of his feet. He is supported on crutches, but lacks so much support of muscle. He has a fine Geneva watch, but he fails of the skill to tell the hour by the sun. A Greenwich nautical almanac he has, and so being sure of the information when he wants it, the man in the street does not know a star in the sky. The solstice he does not observe; the equinox he knows as little; and the whole bright calendar of the year is without a dial in his mind. His note-books impair his memory; his libraries overload his wit; the insurance-office increases the number of accidents; and it may be a question whether machinery does not encumber; whether we have not lost by refinement some energy, by a Christianity entrenched in establishments and forms some vigor of wild virtue. For every Stoic was a Stoic; but in Christendom where is the Christian?

There is no more deviation in the moral standard than in the standard of height or bulk. No greater men are now than ever were. A singular equality may be observed between the great men of the first and of the last ages; nor can all the science, art, religion, and philosophy of the nineteenth century avail to educate greater men than Plutarch's heroes, three or four and twenty centuries

ago. Not in time is the race progressive. Phocion, Socrates, Anaxagoras, Diogenes, are great men, but they leave no class. He who is really of their class will not be called by their name, but will be his own man, and in his turn the founder of a sect. The arts and inventions of each period are only its costume and do not invigorate men. The harm of the improved machinery may compensate its good. Hudson and Behring accomplished so much in their fishing-boats as to astonish Parry and Franklin, whose equipment exhausted the resources of science and art. Galileo, with an opera-glass, discovered a more splendid series of celestial phenomena than any one since. Columbus found the New World in an undecked boat. It is curious to see the periodical disuse and perishing of means and machinery which were introduced with loud laudation a few years or centuries before. The great genius returns to essential man. We reckoned the improvements of the art of war among the triumphs of science, and yet Napoleon conquered Europe by the bivouac, which consisted of falling back on naked valor and disencumbering it of all aids. The Emperor held it impossible to make a perfect army, says Las Cases, "without abolishing our arms, magazines, commissaries and carriages, until, in imitation of the Roman custom, the soldier should receive his supply of corn, grind it in his hand-mill, and bake his bread himself."

Society is a wave. The wave moves onward, but the water of which it is composed does not. The same particle does not rise from the valley to the ridge. Its unity is only phenomenal. The persons who make up a nation to-day, next year die, and their experience with them.

And so the reliance on Property, including the reliance on governments which protect it, is the want of self-reliance. Men have looked away from themselves and at things so long that they have come to esteem the religious, learned and civil institutions as guards of property, and they deprecate assaults on these, because they feel them to be assaults on property. They measure their esteem of each other by what each has, and not by what each is. But a cultivated man becomes ashamed of his property, out of new respect for his nature. Especially he hates what he has if he see that it is accidental, — came to him by inheritance, or gift, or crime; then he feels that it is not having; it does not belong to him, has no root in him and merely lies there because no revolution or no robber takes it away. But that which a man is, does always by necessity acquire, and what the man acquires is living property, which does not wait the beck of rulers, or mobs, or revolutions, or fire, or storm, or bankruptcies, but perpetually renews itself wherever the man breathes. "Thy lot or portion of life," said the Caliph Ali, "is seeking after thee; therefore be at rest from seeking after it." Our dependence on these foreign goods leads us to our slavish respect for numbers. The political

parties meet in numerous conventions; the greater the concourse and with each new uproar of announcement, The delegation from Essex! The Democrats from New Hampshire! The Whigs of Maine! the young patriot feels himself stronger than before by a new thousand of eyes and arms. In like manner the reformers summon conventions and vote and resolve in multitude. Not so, O friends! will the God deign to enter and inhabit you, but by a method precisely the reverse. It is only as a man puts off all foreign support and stands alone that I see him to be strong and to prevail. He is weaker by every recruit to his banner. Is not a man better than a town? Ask nothing of men, and, in the endless mutation, thou only firm column must presently appear the upholder of all that surrounds thee. He who knows that power is inborn, that he is weak because he has looked for good out of him and elsewhere, and so perceiving, throws himself unhesitatingly on his thought, instantly rights himself, stands in the erect position, commands his limbs, works miracles; just as a man who stands on his feet is stronger than a man who stands on his head.

So use all that is called Fortune. Most men gamble with her, and gain all, and lose all, as her wheel rolls. But do thou leave as unlawful these winnings, and deal with Cause and Effect, the chancellors of God. In the Will work and acquire, and thou hast chained the wheel of Chance, and shalt sit hereafter out of fear from her rotations. A political victory, a rise of rents, the recovery of your sick or the return of your absent friend, or some other favorable event raises your spirits, and you think good days are preparing for you. Do not believe it. Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles.

COMPENSATION.

The wings of Time are black and white,
Pied with morning and with night.
Mountain tall and ocean deep
Trembling balance duly keep.
In changing moon, in tidal wave,
Glow the feud of Want and Have.
Gauge of more and less through space
Electric star and pencil plays.
The lonely Earth amid the balls
That hurry through the eternal halls,
A makeweight flying to the void,
Supplemental asteroid,
Or compensatory spark,

Shoots across the neutral Dark.

Man's the elm, and Wealth the vine,
Stanch and strong the tendrils twine:
Though the frail ringlets thee deceive,
None from its stock that vine can reave.
Fear not, then, thou child infirm,
There's no god dare wrong a worm.
Laurel crowns cleave to deserts
And power to him who power exerts;
Hast not thy share? On winged feet,
Lo! it rushes thee to meet;
And all that Nature made thy own,
Floating in air or pent in stone,
Will rive the hills and swim the sea
And, like thy shadow, follow thee.

COMPENSATION.

Ever since I was a boy I have wished to write a discourse on Compensation; for it seemed to me when very young that on this subject life was ahead of theology and the people knew more than the preachers taught. The documents too from which the doctrine is to be drawn, charmed my fancy by their endless variety, and lay always before me, even in sleep; for they are the tools in our hands, the bread in our basket, the transactions of the street, the farm and the dwelling-house; greetings, relations, debts and credits, the influence of character, the nature and endowment of all men. It seemed to me also that in it might be shown men a ray of divinity, the present action of the soul of this world, clean from all vestige of tradition; and so the heart of man might be bathed by an inundation of eternal love, conversing with that which he knows was always and always must be, because it really is now. It appeared moreover that if this doctrine could be stated in terms with any resemblance to those bright intuitions in which this truth is sometimes revealed to us, it would be a star in many dark hours and crooked passages in our journey, that would not suffer us to lose our way.

I was lately confirmed in these desires by hearing a sermon at church. The preacher, a man esteemed for his orthodoxy, unfolded in the ordinary manner the doctrine of the Last Judgment. He assumed that judgment is not executed in this world; that the wicked are successful; that the good are miserable; and then urged from reason and from Scripture a compensation to be made to both parties in the next life. No offence appeared to be taken by the congregation at this doctrine. As far as I could observe when the meeting broke up they separated without remark on the sermon.

Yet what was the import of this teaching? What did the preacher mean by saying that the good are miserable in the present life? Was it that houses and lands, offices, wine, horses, dress, luxury, are had by unprincipled men, whilst the saints are poor and despised; and that a compensation is to be made to these last hereafter, by giving them the like gratifications another day, — bank-stock and doubloons, venison and champagne? This must be the compensation intended; for what else? Is it that they are to have leave to pray and praise? to love and serve men? Why, that they can do now. The legitimate inference the disciple would draw was,— ‘We are to have such a good time as the sinners have now’; — or, to push it to its extreme import,— ‘You sin now; we shall sin by and by; we would sin now, if we could; not being successful, we expect our revenge to-morrow.’

The fallacy lay in the immense concession that the bad are successful; that

justice is not done now. The blindness of the preacher consisted in deferring to the base estimate of the market of what constitutes a manly success, instead of confronting and convicting the world from the truth; announcing the presence of the soul; the omnipotence of the will; and so establishing the standard of good and ill, of success and falsehood.

I find a similar base tone in the popular religious works of the day and the same doctrines assumed by the literary men when occasionally they treat the related topics. I think that our popular theology has gained in decorum, and not in principle, over the superstitions it has displaced. But men are better than their theology. Their daily life gives it the lie. Every ingenuous and aspiring soul leaves the doctrine behind him in his own experience, and all men feel sometimes the falsehood which they cannot demonstrate. For men are wiser than they know. That which they hear in schools and pulpits without afterthought, if said in conversation would probably be questioned in silence. If a man dogmatize in a mixed company on Providence and the divine laws, he is answered by a silence which conveys well enough to an observer the dissatisfaction of the hearer, but his incapacity to make his own statement.

I shall attempt in this and the following chapter to record some facts that indicate the path of the law of Compensation; happy beyond my expectation if I shall truly draw the smallest arc of this circle.

POLARITY, or action and reaction, we meet in every part of nature; in darkness and light; in heat and cold; in the ebb and flow of waters; in male and female; in the inspiration and expiration of plants and animals; in the equation of quantity and quality in the fluids of the animal body; in the systole and diastole of the heart; in the undulations of fluids, and of sound; in the centrifugal and centripetal gravity; in electricity, galvanism, and chemical affinity. Superinduce magnetism at one end of a needle, the opposite magnetism takes place at the other end. If the south attracts, the north repels. To empty here, you must condense there. An inevitable dualism bisects nature, so that each thing is a half, and suggests another thing to make it whole; as, spirit, matter; man, woman; odd, even; subjective, objective; in, out; upper, under; motion, rest; yea, nay.

Whilst the world is thus dual, so is every one of its parts. The entire system of things gets represented in every particle. There is somewhat that resembles the ebb and flow of the sea, day and night, man and woman, in a single needle of the pine, in a kernel of corn, in each individual of every animal tribe. The reaction, so grand in the elements, is repeated within these small boundaries. For example, in the animal kingdom the physiologist has observed that no creatures are favorites, but a certain compensation balances every gift and every defect. A surplusage given to one part is paid out of a reduction from another part of the

same creature. If the head and neck are enlarged, the trunk and extremities are cut short.

The theory of the mechanic forces is another example. What we gain in power is lost in time, and the converse. The periodic or compensating errors of the planets is another instance. The influences of climate and soil in political history are another. The cold climate invigorates. The barren soil does not breed fevers, crocodiles, tigers or scorpions.

The same dualism underlies the nature and condition of man. Every excess causes a defect; every defect an excess. Every sweet hath its sour; every evil its good. Every faculty which is a receiver of pleasure has an equal penalty put on its abuse. It is to answer for its moderation with its life. For every grain of wit there is a grain of folly. For every thing you have missed, you have gained something else; and for every thing you gain, you lose something. If riches increase, they are increased that use them. If the gatherer gathers too much, Nature takes out of the man what she puts into his chest; swells the estate, but kills the owner. Nature hates monopolies and exceptions. The waves of the sea do not more speedily seek a level from their loftiest tossing than the varieties of condition tend to equalize themselves. There is always some levelling circumstance that puts down the overbearing, the strong, the rich, the fortunate, substantially on the same ground with all others. Is a man too strong and fierce for society and by temper and position a bad citizen, — a morose ruffian, with a dash of the pirate in him? — Nature sends him a troop of pretty sons and daughters who are getting along in the dame's classes at the village school, and love and fear for them smooths his grim scowl to courtesy. Thus she contrives to intenerate the granite and felspar, takes the boar out and puts the lamb in and keeps her balance true.

The farmer imagines power and place are fine things. But the President has paid dear for his White House. It has commonly cost him all his peace, and the best of his manly attributes. To preserve for a short time so conspicuous an appearance before the world, he is content to eat dust before the real masters who stand erect behind the throne. Or, do men desire the more substantial and permanent grandeur of genius? Neither has this an immunity. He who by force of will or of thought is great and overlooks thousands, has the charges of that eminence. With every influx of light comes new danger. Has he light? he must bear witness to the light, and always outrun that sympathy which gives him such keen satisfaction, by his fidelity to new revelations of the incessant soul. He must hate father and mother, wife and child. Has he all that the world loves and admires and covets? — he must cast behind him their admiration, and afflict them by faithfulness to his truth, and become a byword and a hissing.

This law writes the laws of cities and nations. It is in vain to build or plot or combine against it. Things refuse to be mismanaged long. *Res nolunt diu male administrari*. Though no checks to a new evil appear, the checks exist, and will appear. If the government is cruel, the governor's life is not safe. If you tax too high, the revenue will yield nothing. If you make the criminal code sanguinary, juries will not convict. If the law is too mild, private vengeance comes in. If the government is a terrific democracy, the pressure is resisted by an over-charge of energy in the citizen, and life glows with a fiercer flame. The true life and satisfactions of man seem to elude the utmost rigors or felicities of condition and to establish themselves with great indifferency under all varieties of circumstances. Under all governments the influence of character remains the same, — in Turkey and in New England about alike. Under the primeval despots of Egypt, history honestly confesses that man must have been as free as culture could make him.

These appearances indicate the fact that the universe is represented in every one of its particles. Every thing in nature contains all the powers of nature. Every thing is made of one hidden stuff; as the naturalist sees one type under every metamorphosis, and regards a horse as a running man, a fish as a swimming man, a bird as a flying man, a tree as a rooted man. Each new form repeats not only the main character of the type, but part for part all the details, all the aims, furtherances, hindrances, energies and whole system of every other. Every occupation, trade, art, transaction, is a compend of the world and a correlative of every other. Each one is an entire emblem of human life; of its good and ill, its trials, its enemies, its course and its end. And each one must somehow accommodate the whole man and recite all his destiny.

The world globes itself in a drop of dew. The microscope cannot find the animalcule which is less perfect for being little. Eyes, ears, taste, smell, motion, resistance, appetite, and organs of reproduction that take hold on eternity, — all find room to consist in the small creature. So do we put our life into every act. The true doctrine of omnipresence is that God reappears with all his parts in every moss and cobweb. The value of the universe contrives to throw itself into every point. If the good is there, so is the evil; if the affinity, so the repulsion; if the force, so the limitation.

Thus is the universe alive. All things are moral. That soul which within us is a sentiment, outside of us is a law. We feel its inspiration; out there in history we can see its fatal strength. "It is in the world, and the world was made by it." Justice is not postponed. A perfect equity adjusts its balance in all parts of life. *Hoi kuboi Dios aei eupiptousi*, — The dice of God are always loaded. The world looks like a multiplication-table, or a mathematical equation, which, turn it how

you will, balances itself. Take what figure you will, its exact value, nor more nor less, still returns to you. Every secret is told, every crime is punished, every virtue rewarded, every wrong redressed, in silence and certainty. What we call retribution is the universal necessity by which the whole appears wherever a part appears. If you see smoke, there must be fire. If you see a hand or a limb, you know that the trunk to which it belongs is there behind.

Every act rewards itself, or, in other words integrates itself, in a twofold manner; first in the thing, or in real nature; and secondly in the circumstance, or in apparent nature. Men call the circumstance the retribution. The causal retribution is in the thing and is seen by the soul. The retribution in the circumstance is seen by the understanding; it is inseparable from the thing, but is often spread over a long time and so does not become distinct until after many years. The specific stripes may follow late after the offence, but they follow because they accompany it. Crime and punishment grow out of one stem. Punishment is a fruit that unsuspected ripens within the flower of the pleasure which concealed it. Cause and effect, means and ends, seed and fruit, cannot be severed; for the effect already blooms in the cause, the end preexists in the means, the fruit in the seed.

Whilst thus the world will be whole and refuses to be disparted, we seek to act partially, to sunder, to appropriate; for example, — to gratify the senses we sever the pleasure of the senses from the needs of the character. The ingenuity of man has always been dedicated to the solution of one problem, — how to detach the sensual sweet, the sensual strong, the sensual bright, etc., from the moral sweet, the moral deep, the moral fair; that is, again, to contrive to cut clean off this upper surface so thin as to leave it bottomless; to get a one end, without an other end. The soul says, ‘Eat;’ the body would feast. The soul says, ‘The man and woman shall be one flesh and one soul;’ the body would join the flesh only. The soul says, ‘Have dominion over all things to the ends of virtue;’ the body would have the power over things to its own ends.

The soul strives amain to live and work through all things. It would be the only fact. All things shall be added unto it, — power, pleasure, knowledge, beauty. The particular man aims to be somebody; to set up for himself; to truck and higgel for a private good; and, in particulars, to ride that he may ride; to dress that he may be dressed; to eat that he may eat; and to govern, that he may be seen. Men seek to be great; they would have offices, wealth, power, and fame. They think that to be great is to possess one side of nature, — the sweet, without the other side, the bitter.

This dividing and detaching is steadily counteracted. Up to this day it must be owned no projector has had the smallest success. The parted water reunites

behind our hand. Pleasure is taken out of pleasant things, profit out of profitable things, power out of strong things, as soon as we seek to separate them from the whole. We can no more halve things and get the sensual good, by itself, than we can get an inside that shall have no outside, or a light without a shadow. "Drive out Nature with a fork, she comes running back."

Life invests itself with inevitable conditions, which the unwise seek to dodge, which one and another brags that he does not know, that they do not touch him; — but the brag is on his lips, the conditions are in his soul. If he escapes them in one part they attack him in another more vital part. If he has escaped them in form and in the appearance, it is because he has resisted his life and fled from himself, and the retribution is so much death. So signal is the failure of all attempts to make this separation of the good from the bad, that the experiment would not be tried, — since to try it is to be mad, — but for the circumstance, that when the disease began in the will, of rebellion and separation, the intellect is at once infected, so that the man ceases to see God whole in each object, but is able to see the sensual allurements of an object and not see the sensual hurt; he sees the mermaid's head but not the dragon's tail, and thinks he can cut off that which he would have from that which he would not have. "How secret art thou who dwellest in the highest heavens in silence, O thou only great God, sprinkling with an unwearied providence certain penal blindnesses upon such as have unbridled desires!"

1 St. Augustine, Confessions, B. I.

The human soul is true to these facts in the painting of fable, of history, of law, of proverbs, of conversation. It finds a tongue in literature unawares. Thus the Greeks called Jupiter, Supreme Mind; but having traditionally ascribed to him many base actions, they involuntarily made amends to reason by tying up the hands of so bad a god. He is made as helpless as a king of England. Prometheus knows one secret which Jove must bargain for; Minerva, another. He cannot get his own thunders; Minerva keeps the key of them: —

"Of all the gods, I only know the keys

That ope the solid doors within whose vaults

His thunders sleep."

A plain confession of the in-working of the All and of its moral aim. The Indian mythology ends in the same ethics; and it would seem impossible for any fable to be invented and get any currency which was not moral. Aurora forgot to ask youth for her lover, and though Tithonus is immortal, he is old. Achilles is not quite invulnerable; the sacred waters did not wash the heel by which Thetis held him. Siegfried, in the Nibelungen, is not quite immortal, for a leaf fell on his back whilst he was bathing in the dragon's blood, and that spot which it

covered is mortal. And so it must be. There is a crack in every thing God has made. It would seem there is always this vindictive circumstance stealing in at unawares even into the wild poesy in which the human fancy attempted to make bold holiday and to shake itself free of the old laws, — this back-stroke, this kick of the gun, certifying that the law is fatal; that in nature nothing can be given, all things are sold.

This is that ancient doctrine of Nemesis, who keeps watch in the universe and lets no offence go unchastised. The Furies they said are attendants on justice, and if the sun in heaven should transgress his path they would punish him. The poets related that stone walls and iron swords and leathern thongs had an occult sympathy with the wrongs of their owners; that the belt which Ajax gave Hector dragged the Trojan hero over the field at the wheels of the car of Achilles, and the sword which Hector gave Ajax was that on whose point Ajax fell. They recorded that when the Thasians erected a statue to Theagenes, a victor in the games, one of his rivals went to it by night and endeavored to throw it down by repeated blows, until at last he moved it from its pedestal and was crushed to death beneath its fall.

This voice of fable has in it somewhat divine. It came from thought above the will of the writer. That is the best part of each writer which has nothing private in it; that which he does not know; that which flowed out of his constitution and not from his too active invention; that which in the study of a single artist you might not easily find, but in the study of many you would abstract as the spirit of them all. Phidias it is not, but the work of man in that early Hellenic world that I would know. The name and circumstance of Phidias, however convenient for history, embarrass when we come to the highest criticism. We are to see that which man was tending to do in a given period, and was hindered, or, if you will, modified in doing, by the interfering volitions of Phidias, of Dante, of Shakspeare, the organ whereby man at the moment wrought.

Still more striking is the expression of this fact in the proverbs of all nations, which are always the literature of reason, or the statements of an absolute truth without qualification. Proverbs, like the sacred books of each nation, are the sanctuary of the intuitions. That which the droning world, chained to appearances, will not allow the realist to say in his own words, it will suffer him to say in proverbs without contradiction. And this law of laws, which the pulpit, the senate and the college deny, is hourly preached in all markets and workshops by flights of proverbs, whose teaching is as true and as omnipresent as that of birds and flies.

All things are double, one against another. — Tit for tat; an eye for an eye; a tooth for a tooth; blood for blood; measure for measure; love for love. — Give

and it shall be given you. — He that watereth shall be watered himself. — What will you have? quoth God; pay for it and take it. — Nothing venture, nothing have. — Thou shalt be paid exactly for what thou hast done, no more, no less. — Who doth not work shall not eat. — Harm watch, harm catch. — Curses always recoil on the head of him who imprecates them. — If you put a chain around the neck of a slave, the other end fastens itself around your own. — Bad counsel confounds the adviser. — The Devil is an ass.

It is thus written, because it is thus in life. Our action is overmastered and characterized above our will by the law of nature. We aim at a petty end quite aside from the public good, but our act arranges itself by irresistible magnetism in a line with the poles of the world.

A man cannot speak but he judges himself. With his will or against his will he draws his portrait to the eye of his companions by every word. Every opinion reacts on him who utters it. It is a thread-ball thrown at a mark, but the other end remains in the thrower's bag. Or rather it is a harpoon hurled at the whale, unwinding, as it flies, a coil of cord in the boat, and, if the harpoon is not good, or not well thrown, it will go nigh to cut the steersman in twain or to sink the boat.

You cannot do wrong without suffering wrong. "No man had ever a point of pride that was not injurious to him," said Burke. The exclusive in fashionable life does not see that he excludes himself from enjoyment, in the attempt to appropriate it. The exclusionist in religion does not see that he shuts the door of heaven on himself, in striving to shut out others. Treat men as pawns and ninepins and you shall suffer as well as they. If you leave out their heart, you shall lose your own. The senses would make things of all persons; of women, of children, of the poor. The vulgar proverb, "I will get it from his purse or get it from his skin," is sound philosophy.

All infractions of love and equity in our social relations are speedily punished. They are punished by fear. Whilst I stand in simple relations to my fellow-man, I have no displeasure in meeting him. We meet as water meets water, or as two currents of air mix, with perfect diffusion and interpenetration of nature. But as soon as there is any departure from simplicity, and attempt at halfness, or good for me that is not good for him, my neighbor feels the wrong; he shrinks from me as far as I have shrunk from him; his eyes no longer seek mine; there is war between us; there is hate in him and fear in me.

All the old abuses in society, universal and particular, all unjust accumulations of property and power, are avenged in the same manner. Fear is an instructor of great sagacity and the herald of all revolutions. One thing he teaches, that there is rottenness where he appears. He is a carrion crow, and

though you see not well what he hovers for, there is death somewhere. Our property is timid, our laws are timid, our cultivated classes are timid. Fear for ages has boded and mowed and gibbered over government and property. That obscene bird is not there for nothing. He indicates great wrongs which must be revised.

Of the like nature is that expectation of change which instantly follows the suspension of our voluntary activity. The terror of cloudless noon, the emerald of Polycrates, the awe of prosperity, the instinct which leads every generous soul to impose on itself tasks of a noble asceticism and vicarious virtue, are the tremblings of the balance of justice through the heart and mind of man.

Experienced men of the world know very well that it is best to pay scot and lot as they go along, and that a man often pays dear for a small frugality. The borrower runs in his own debt. Has a man gained any thing who has received a hundred favors and rendered none? Has he gained by borrowing, through indolence or cunning, his neighbor's wares, or horses, or money? There arises on the deed the instant acknowledgment of benefit on the one part and of debt on the other; that is, of superiority and inferiority. The transaction remains in the memory of himself and his neighbor; and every new transaction alters according to its nature their relation to each other. He may soon come to see that he had better have broken his own bones than to have ridden in his neighbor's coach, and that "the highest price he can pay for a thing is to ask for it."

A wise man will extend this lesson to all parts of life, and know that it is the part of prudence to face every claimant and pay every just demand on your time, your talents, or your heart. Always pay; for first or last you must pay your entire debt. Persons and events may stand for a time between you and justice, but it is only a postponement. You must pay at last your own debt. If you are wise you will dread a prosperity which only loads you with more. Benefit is the end of nature. But for every benefit which you receive, a tax is levied. He is great who confers the most benefits. He is base, — and that is the one base thing in the universe, — to receive favors and render none. In the order of nature we cannot render benefits to those from whom we receive them, or only seldom. But the benefit we receive must be rendered again, line for line, deed for deed, cent for cent, to somebody. Beware of too much good staying in your hand. It will fast corrupt and worm worms. Pay it away quickly in some sort.

Labor is watched over by the same pitiless laws. Cheapest, say the prudent, is the dearest labor. What we buy in a broom, a mat, a wagon, a knife, is some application of good sense to a common want. It is best to pay in your land a skilful gardener, or to buy good sense applied to gardening; in your sailor, good sense applied to navigation; in the house, good sense applied to cooking, sewing,

serving; in your agent, good sense applied to accounts and affairs. So do you multiply your presence, or spread yourself throughout your estate. But because of the dual constitution of things, in labor as in life there can be no cheating. The thief steals from himself. The swindler swindles himself. For the real price of labor is knowledge and virtue, whereof wealth and credit are signs. These signs, like paper money, may be counterfeited or stolen, but that which they represent, namely, knowledge and virtue, cannot be counterfeited or stolen. These ends of labor cannot be answered but by real exertions of the mind, and in obedience to pure motives. The cheat, the defaulter, the gambler, cannot extort the knowledge of material and moral nature which his honest care and pains yield to the operative. The law of nature is, Do the thing, and you shall have the Power; but they who do not the thing have not the power.

Human labor, through all its forms, from the sharpening of a stake to the construction of a city or an epic, is one immense illustration of the perfect compensation of the universe. The absolute balance of Give and Take, the doctrine that every thing has its price, — and if that price is not paid, not that thing but something else is obtained, and that it is impossible to get any thing without its price, — is not less sublime in the columns of a ledger than in the budgets of states, in the laws of light and darkness, in all the action and reaction of nature. I cannot doubt that the high laws which each man sees implicated in those processes with which he is conversant, the stern ethics which sparkle on his chisel-edge, which are measured out by his plumb and foot-rule, which stand as manifest in the footing of the shop-bill as in the history of a state, — do recommend to him his trade, and though seldom named, exalt his business to his imagination.

The league between virtue and nature engages all things to assume a hostile front to vice. The beautiful laws and substances of the world persecute and whip the traitor. He finds that things are arranged for truth and benefit, but there is no den in the wide world to hide a rogue. Commit a crime, and the earth is made of glass. Commit a crime, and it seems as if a coat of snow fell on the ground, such as reveals in the woods the track of every partridge and fox and squirrel and mole. You cannot recall the spoken word, you cannot wipe out the foot-track, you cannot draw up the ladder, so as to leave no inlet or clew. Some damning circumstance always transpires. The laws and substances of nature, — water, snow, wind, gravitation, — become penalties to the thief.

On the other hand the law holds with equal sureness for all right action. Love, and you shall be loved. All love is mathematically just, as much as the two sides of an algebraic equation. The good man has absolute good, which like fire turns every thing to its own nature, so that you cannot do him any harm; but as the

royal armies sent against Napoleon, when he approached cast down their colors and from enemies became friends, so disasters of all kinds, as sickness, offence, poverty, prove benefactors: —

“Winds blow and waters roll
Strength to the brave, and power and deity,
Yet in themselves are nothing.”

The good are befriended even by weakness and defect. As no man had ever a point of pride that was not injurious to him, so no man had ever a defect that was not somewhere made useful to him. The stag in the fable admired his horns and blamed his feet, but when the hunter came, his feet saved him, and afterwards, caught in the thicket, his horns destroyed him. Every man in his lifetime needs to thank his faults. As no man thoroughly understands a truth until he has contended against it, so no man has a thorough acquaintance with the hindrances or talents of men until he has suffered from the one and seen the triumph of the other over his own want of the same. Has he a defect of temper that unfits him to live in society? Thereby he is driven to entertain himself alone and acquire habits of self-help; and thus, like the wounded oyster, he mends his shell with pearl.

Our strength grows out of our weakness. The indignation which arms itself with secret forces does not awaken until we are pricked and stung and sorely assailed. A great man is always willing to be little. Whilst he sits on the cushion of advantages, he goes to sleep. When he is pushed, tormented, defeated, he has a chance to learn something; he has been put on his wits, on his manhood; he has gained facts; learns his ignorance; is cured of the insanity of conceit; has got moderation and real skill. The wise man throws himself on the side of his assailants. It is more his interest than it is theirs to find his weak point. The wound cicatrizes and falls off from him like a dead skin and when they would triumph, lo! he has passed on invulnerable. Blame is safer than praise. I hate to be defended in a newspaper. As long as all that is said is said against me, I feel a certain assurance of success. But as soon as honeyed words of praise are spoken for me I feel as one that lies unprotected before his enemies. In general, every evil to which we do not succumb is a benefactor. As the Sandwich Islander believes that the strength and valor of the enemy he kills passes into himself, so we gain the strength of the temptation we resist.

The same guards which protect us from disaster, defect, and enmity, defend us, if we will, from selfishness and fraud. Bolts and bars are not the best of our institutions, nor is shrewdness in trade a mark of wisdom. Men suffer all their life long under the foolish superstition that they can be cheated. But it is as impossible for a man to be cheated by any one but himself, as for a thing to be

and not to be at the same time. There is a third silent party to all our bargains. The nature and soul of things takes on itself the guaranty of the fulfilment of every contract, so that honest service cannot come to loss. If you serve an ungrateful master, serve him the more. Put God in your debt. Every stroke shall be repaid. The longer The payment is withholden, the better for you; for compound interest on compound interest is the rate and usage of this exchequer.

The history of persecution is a history of endeavors to cheat nature, to make water run up hill, to twist a rope of sand. It makes no difference whether the actors be many or one, a tyrant or a mob. A mob is a society of bodies voluntarily bereaving themselves of reason and traversing its work. The mob is man voluntarily descending to the nature of the beast. Its fit hour of activity is night. Its actions are insane like its whole constitution. It persecutes a principle; it would whip a right; it would tar and feather justice, by inflicting fire and outrage upon the houses and persons of those who have these. It resembles the prank of boys, who run with fire-engines to put out the ruddy aurora streaming to the stars. The inviolate spirit turns their spite against the wrongdoers. The martyr cannot be dishonored. Every lash inflicted is a tongue of fame; every prison, a more illustrious abode; every burned book or house enlightens the world; every suppressed or expunged word reverberates through the earth from side to side. Hours of sanity and consideration are always arriving to communities, as to individuals, when the truth is seen and the martyrs are justified.

Thus do all things preach the indifferency of circumstances. The man is all. Every thing has two sides, a good and an evil. Every advantage has its tax. I learn to be content. But the doctrine of compensation is not the doctrine of indifferency. The thoughtless say, on hearing these representations, — What boots it to do well? there is one event to good and evil; if I gain any good I must pay for it; if I lose any good I gain some other; all actions are indifferent.

There is a deeper fact in the soul than compensation, to wit, its own nature. The soul is not a compensation, but a life. The soul is. Under all this running sea of circumstance, whose waters ebb and flow with perfect balance, lies the aboriginal abyss of real Being. Essence, or God, is not a relation or a part, but the whole. Being is the vast affirmative, excluding negation, self-balanced, and swallowing up all relations, parts and times within itself. Nature, truth, virtue, are the influx from thence. Vice is the absence or departure of the same. Nothing, Falsehood, may indeed stand as the great Night or shade on which as a background the living universe paints itself forth, but no fact is begotten by it; it cannot work, for it is not. It cannot work any good; it cannot work any harm. It is harm inasmuch as it is worse not to be than to be.

We feel defrauded of the retribution due to evil acts, because the criminal adheres to his vice and contumacy and does not come to a crisis or judgment anywhere in visible nature. There is no stunning confutation of his nonsense before men and angels. Has he therefore outwitted the law? Inasmuch as he carries the malignity and the lie with him he so far deceases from nature. In some manner there will be a demonstration of the wrong to the understanding also; but, should we not see it, this deadly deduction makes square the eternal account.

Neither can it be said, on the other hand, that the gain of rectitude must be bought by any loss. There is no penalty to virtue; no penalty to wisdom; they are proper additions of being. In a virtuous action I properly am; in a virtuous act I add to the world; I plant into deserts conquered from Chaos and Nothing and see the darkness receding on the limits of the horizon. There can be no excess to love, none to knowledge, none to beauty, when these attributes are considered in the purest sense. The soul refuses limits, and always affirms an Optimism, never a Pessimism.

His life is a progress, and not a station. His instinct is trust. Our instinct uses “more” and “less” in application to man, of the presence of the soul, and not of its absence, the brave man is greater than the coward; the true, the benevolent, the wise, is more a man and not less, than the fool and knave. There is no tax on the good of virtue, for that is the incoming of God himself, or absolute existence, without any comparative. Material good has its tax, and if it came without desert or sweat, has no root in me, and the next wind will blow it away. But all the good of nature is the soul’s, and may be had if paid for in nature’s lawful coin, that is, by labor which the heart and the head allow. I no longer wish to meet a good I do not earn, for example to find a pot of buried gold, knowing that it brings with it new burdens. I do not wish more external goods, — neither possessions, nor honors, nor powers, nor persons. The gain is apparent; the tax is certain. But there is no tax on the knowledge that the compensation exists and that it is not desirable to dig up treasure. Herein I rejoice with a serene eternal peace. I contract the boundaries of possible mischief. I learn the wisdom of St. Bernard,— “Nothing can work me damage except myself; the harm that I sustain I carry about with me, and never am a real sufferer but by my own fault.”

In the nature of the soul is the compensation for the inequalities of condition. The radical tragedy of nature seems to be the distinction of More and Less. How can Less not feel the pain; how not feel indignation or malevolence towards More? Look at those who have less faculty, and one feels sad and knows not well what to make of it. He almost shuns their eye; he fears they will upbraid God. What should they do? It seems a great injustice. But see the facts nearly

and these mountainous inequalities vanish. Love reduces them as the sun melts the iceberg in the sea. The heart and soul of all men being one, this bitterness of His and Mine ceases. His is mine. I am my brother and my brother is me. If I feel overshadowed and outdone by great neighbors, I can yet love; I can still receive; and he that loveth maketh his own the grandeur he loves. Thereby I make the discovery that my brother is my guardian, acting for me with the friendliest designs, and the estate I so admired and envied is my own. It is the nature of the soul to appropriate all things. Jesus and Shakspeare are fragments of the soul, and by love I conquer and incorporate them in my own conscious domain. His virtue, — is not that mine? His wit, — if it cannot be made mine, it is not wit.

Such also is the natural history of calamity. The changes which break up at short intervals the prosperity of men are advertisements of a nature whose law is growth. Every soul is by this intrinsic necessity quitting its whole system of things, its friends and home and laws and faith, as the shell-fish crawls out of its beautiful but stony case, because it no longer admits of its growth, and slowly forms a new house. In proportion to the vigor of the individual these revolutions are frequent, until in some happier mind they are incessant and all worldly relations hang very loosely about him, becoming as it were a transparent fluid membrane through which the living form is seen, and not, as in most men, an indurated heterogeneous fabric of many dates and of no settled character, in which the man is imprisoned. Then there can be enlargement, and the man of to-day scarcely recognizes the man of yesterday. And such should be the outward biography of man in time, a putting off of dead circumstances day by day, as he renews his raiment day by day. But to us, in our lapsed estate, resting, not advancing, resisting, not cooperating with the divine expansion, this growth comes by shocks.

We cannot part with our friends. We cannot let our angels go. We do not see that they only go out that archangels may come in. We are idolaters of the old. We do not believe in the riches of the soul, in its proper eternity and omnipresence. We do not believe there is any force in to-day to rival or recreate that beautiful yesterday. We linger in the ruins of the old tent where once we had bread and shelter and organs, nor believe that the spirit can feed, cover, and nerve us again. We cannot again find aught so dear, so sweet, so graceful. But we sit and weep in vain. The voice of the Almighty saith, 'Up and onward for evermore!' We cannot stay amid the ruins. Neither will we rely on the new; and so we walk ever with reverted eyes, like those monsters who look backwards.

And yet the compensations of calamity are made apparent to the understanding also, after long intervals of time. A fever, a mutilation, a cruel

disappointment, a loss of wealth, a loss of friends, seems at the moment unpaid loss, and unpayable. But the sure years reveal the deep remedial force that underlies all facts. The death of a dear friend, wife, brother, lover, which seemed nothing but privation, somewhat later assumes the aspect of a guide or genius; for it commonly operates revolutions in our way of life, terminates an epoch of infancy or of youth which was waiting to be closed, breaks up a wonted occupation, or a household, or style of living, and allows the formation of new ones more friendly to the growth of character. It permits or constrains the formation of new acquaintances and the reception of new influences that prove of the first importance to the next years; and the man or woman who would have remained a sunny garden-flower, with no room for its roots and too much sunshine for its head, by the falling of the walls and the neglect of the gardener is made the banian of the forest, yielding shade and fruit to wide neighborhoods of men.

SPIRITUAL LAWS.

The living Heaven thy prayers respect,
House at once and architect,
Quarrying man's rejected hours,
Builds therewith eternal towers;
Sole and self-commanded works,
Fears not undermining days,
Grows by decays,
And, by the famous might that lurks
In reaction and recoil,
Makes flame to freeze, and ice to boil;
Forging, through swart arms of Offence,
The silver seat of Innocence.

SPIRITUAL LAWS.

When the act of reflection takes place in the mind, when we look at ourselves in the light of thought, we discover that our life is embosomed in beauty. Behind us, as we go, all things assume pleasing forms, as clouds do far off. Not only things familiar and stale, but even the tragic and terrible are comely as they take their place in the pictures of memory. The river-bank, the weed at the water-side, the old house, the foolish person, however neglected in the passing, have a grace in the past. Even the corpse that has lain in the chambers has added a solemn ornament to the house. The soul will not know either deformity or pain. If in the hours of clear reason we should speak the severest truth, we should say that we had never made a sacrifice. In these hours the mind seems so great that nothing can be taken from us that seems much. All loss, all pain, is particular; the universe remains to the heart unhurt. Neither vexations nor calamities abate our trust. No man ever stated his griefs as lightly as he might. Allow for exaggeration in the most patient and sorely ridden hack that ever was driven. For it is only the finite that has wrought and suffered; the infinite lies stretched in smiling repose.

The intellectual life may be kept clean and healthful if man will live the life of nature and not import into his mind difficulties which are none of his. No man need be perplexed in his speculations. Let him do and say what strictly belongs to him, and though very ignorant of books, his nature shall not yield him any intellectual obstructions and doubts. Our young people are diseased with the theological problems of original sin, origin of evil, predestination and the like. These never presented a practical difficulty to any man, — never darkened across any man's road who did not go out of his way to seek them. These are the soul's mumps and measles and whooping-coughs, and those who have not caught them cannot describe their health or prescribe the cure. A simple mind will not know these enemies. It is quite another thing that he should be able to give account of his faith and expound to another the theory of his self-union and freedom. This requires rare gifts. Yet without this self-knowledge there may be a sylvan strength and integrity in that which he is. "A few strong instincts and a few plain rules" suffice us.

My will never gave the images in my mind the rank they now take. The regular course of studies, the years of academical and professional education have not yielded me better facts than some idle books under the bench at the Latin School. What we do not call education is more precious than that which we call so. We form no guess, at the time of receiving a thought, of its

comparative value. And education often wastes its effort in attempts to thwart and balk this natural magnetism, which is sure to select what belongs to it.

In like manner our moral nature is vitiated by any interference of our will. People represent virtue as a struggle, and take to themselves great airs upon their attainments, and the question is everywhere vexed when a noble nature is commended, whether the man is not better who strives with temptation. But there is no merit in the matter. Either God is there or he is not there. We love characters in proportion as they are impulsive and spontaneous. The less a man thinks or knows about his virtues the better we like him. Timoleon's victories are the best victories, which ran and flowed like Homer's verses, Plutarch said. When we see a soul whose acts are all regal, graceful and pleasant as roses, we must thank God that such things can be and are, and not turn sourly on the angel and say 'Crump is a better man with his grunting resistance to all his native devils.'

Not less conspicuous is the preponderance of nature over will in all practical life. There is less intention in history than we ascribe to it. We impute deep-laid far-sighted plans to Caesar and Napoleon; but the best of their power was in nature, not in them. Men of an extraordinary success, in their honest moments, have always sung, 'Not unto us, not unto us.' According to the faith of their times they have built altars to Fortune, or to Destiny, or to St. Julian. Their success lay in their parallelism to the course of thought, which found in them an unobstructed channel; and the wonders of which they were the visible conductors seemed to the eye their deed. Did the wires generate the galvanism? It is even true that there was less in them on which they could reflect than in another; as the virtue of a pipe is to be smooth and hollow. That which externally seemed will and immovableness was willingness and self-annihilation. Could Shakspeare give a theory of Shakspeare? Could ever a man of prodigious mathematical genius convey to others any insight into his methods? If he could communicate that secret it would instantly lose its exaggerated value, blending with the daylight and the vital energy the power to stand and to go.

The lesson is forcibly taught by these observations that our life might be much easier and simpler than we make it; that the world might be a happier place than it is; that there is no need of struggles, convulsions, and despairs, of the wringing of the hands and the gnashing of the teeth; that we miscreate our own evils. We interfere with the optimism of nature; for whenever we get this vantage-ground of the past, or of a wiser mind in the present, we are able to discern that we are begirt with laws which execute themselves.

The face of external nature teaches the same lesson. Nature will not have us fret and fume. She does not like our benevolence or our learning much better

than she likes our frauds and wars. When we come out of the caucus, or the bank, or the Abolition-convention, or the Temperance-meeting, or the Transcendental club into the fields and woods, she says to us, 'So hot? my little Sir.'

We are full of mechanical actions. We must needs intermeddle and have things in our own way, until the sacrifices and virtues of society are odious. Love should make joy; but our benevolence is unhappy. Our Sunday-schools and churches and pauper-societies are yokes to the neck. We pain ourselves to please nobody. There are natural ways of arriving at the same ends at which these aim, but do not arrive. Why should all virtue work in one and the same way? Why should all give dollars? It is very inconvenient to us country folk, and we do not think any good will come of it. We have not dollars; merchants have; let them give them. Farmers will give corn; poets will sing; women will sew; laborers will lend a hand; the children will bring flowers. And why drag this dead weight of a Sunday-school over the whole Christendom? It is natural and beautiful that childhood should inquire and maturity should teach; but it is time enough to answer questions when they are asked. Do not shut up the young people against their will in a pew and force the children to ask them questions for an hour against their will.

If we look wider, things are all alike; laws and letters and creeds and modes of living seem a travesty of truth. Our society is encumbered by ponderous machinery, which resembles the endless aqueducts which the Romans built over hill and dale and which are superseded by the discovery of the law that water rises to the level of its source. It is a Chinese wall which any nimble Tartar can leap over. It is a standing army, not so good as a peace. It is a graduated, titled, richly appointed empire, quite superfluous when town-meetings are found to answer just as well.

Let us draw a lesson from nature, which always works by short ways. When the fruit is ripe, it falls. When the fruit is despatched, the leaf falls. The circuit of the waters is mere falling. The walking of man and all animals is a falling forward. All our manual labor and works of strength, as prying, splitting, digging, rowing and so forth, are done by dint of continual falling, and the globe, earth, moon, comet, sun, star, fall for ever and ever.

The simplicity of the universe is very different from the simplicity of a machine. He who sees moral nature out and out and thoroughly knows how knowledge is acquired and character formed, is a pedant. The simplicity of nature is not that which may easily be read, but is inexhaustible. The last analysis can no wise be made. We judge of a man's wisdom by his hope, knowing that the perception of the inexhaustibleness of nature is an immortal

youth. The wild fertility of nature is felt in comparing our rigid names and reputations with our fluid consciousness. We pass in the world for sects and schools, for erudition and piety, and we are all the time jejune babes. One sees very well how Pyrrhonism grew up. Every man sees that he is that middle point whereof every thing may be affirmed and denied with equal reason. He is old, he is young, he is very wise, he is altogether ignorant. He hears and feels what you say of the seraphim, and of the tin-peddler. There is no permanent wise man except in the figment of the Stoics. We side with the hero, as we read or paint, against the coward and the robber; but we have been ourselves that coward and robber, and shall be again, — not in the low circumstance, but in comparison with the grandeurs possible to the soul.

A little consideration of what takes place around us every day would show us that a higher law than that of our will regulates events; that our painful labors are unnecessary and fruitless; that only in our easy, simple, spontaneous action are we strong, and by contenting ourselves with obedience we become divine. Belief and love, — a believing love will relieve us of a vast load of care. O my brothers, God exists. There is a soul at the centre of nature and over the will of every man, so that none of us can wrong the universe. It has so infused its strong enchantment into nature that we prosper when we accept its advice, and when we struggle to wound its creatures our hands are glued to our sides, or they beat our own breasts. The whole course of things goes to teach us faith. We need only obey. There is guidance for each of us, and by lowly listening we shall hear the right word. Why need you choose so painfully your place and occupation and associates and modes of action and of entertainment? Certainly there is a possible right for you that precludes the need of balance and wilful election. For you there is a reality, a fit place and congenial duties. Place yourself in the middle of the stream of power and wisdom which animates all whom it floats, and you are without effort impelled to truth, to right and a perfect contentment. Then you put all gainsayers in the wrong. Then you are the world, the measure of right, of truth, of beauty. If we will not be mar-plots with our miserable interferences, the work, the society, letters, arts, science, religion of men would go on far better than now, and the heaven predicted from the beginning of the world, and still predicted from the bottom of the heart, would organize itself, as do now the rose and the air and the sun.

I say, do not choose; but that is a figure of speech by which I would distinguish what is commonly called choice among men, and which is a partial act, the choice of the hands, of the eyes, of the appetites, and not a whole act of the man. But that which I call right or goodness, is the choice of my constitution; and that which I call heaven, and inwardly aspire after, is the state or

circumstance desirable to my constitution; and the action which I in all my years tend to do, is the work for my faculties. We must hold a man amenable to reason for the choice of his daily craft or profession. It is not an excuse any longer for his deeds that they are the custom of his trade. What business has he with an evil trade? Has he not a calling in his character?

Each man has his own vocation. The talent is the call. There is one direction in which all space is open to him. He has faculties silently inviting him thither to endless exertion. He is like a ship in a river; he runs against obstructions on every side but one, on that side all obstruction is taken away and he sweeps serenely over a deepening channel into an infinite sea. This talent and this call depend on his organization, or the mode in which the general soul incarnates itself in him. He inclines to do something which is easy to him and good when it is done, but which no other man can do. He has no rival. For the more truly he consults his own powers, the more difference will his work exhibit from the work of any other. His ambition is exactly proportioned to his powers. The height of the pinnacle is determined by the breadth of the base. Every man has this call of the power to do somewhat unique, and no man has any other call. The pretence that he has another call, a summons by name and personal election and outward "signs that mark him extraordinary, and not in the roll of common men," is fanaticism, and betrays obtuseness to perceive that there is one mind in all the individuals, and no respect of persons therein.

By doing his work he makes the need felt which he can supply, and creates the taste by which he is enjoyed. By doing his own work he unfolds himself. It is the vice of our public speaking that it has not abandonment. Somewhere, not only every orator but every man should let out all the length of all the reins; should find or make a frank and hearty expression of what force and meaning is in him. The common experience is that the man fits himself as well as he can to the customary details of that work or trade he falls into, and tends it as a dog turns a spit. Then is he a part of the machine he moves; the man is lost. Until he can manage to communicate himself to others in his full stature and proportion, he does not yet find his vocation. He must find in that an outlet for his character, so that he may justify his work to their eyes. If the labor is mean, let him by his thinking and character make it liberal. Whatever he knows and thinks, whatever in his apprehension is worth doing, that let him communicate, or men will never know and honor him aright. Foolish, whenever you take the meanness and formality of that thing you do, instead of converting it into the obedient spiracle of your character and aims.

We like only such actions as have already long had the praise of men, and do not perceive that any thing man can do may be divinely done. We think

greatness entailed or organized in some places or duties, in certain offices or occasions, and do not see that Paganini can extract rapture from a catgut, and Eulenstein from a jews-harp, and a nimble-fingered lad out of shreds of paper with his scissors, and Landseer out of swine, and the hero out of the pitiful habitation and company in which he was hidden. What we call obscure condition or vulgar society is that condition and society whose poetry is not yet written, but which you shall presently make as enviable and renowned as any. In our estimates let us take a lesson from kings. The parts of hospitality, the connection of families, the impressiveness of death, and a thousand other things, royalty makes its own estimate of, and a royal mind will. To make habitually a new estimate, — that is elevation.

What a man does, that he has. What has he to do with hope or fear? In himself is his might. Let him regard no good as solid but that which is in his nature and which must grow out of him as long as he exists. The goods of fortune may come and go like summer leaves; let him scatter them on every wind as the momentary signs of his infinite productiveness.

He may have his own. A man's genius, the quality that differences him from every other, the susceptibility to one class of influences, the selection of what is fit for him, the rejection of what is unfit, determines for him the character of the universe. A man is a method, a progressive arrangement; a selecting principle, gathering his like to him wherever he goes. He takes only his own out of the multiplicity that sweeps and circles round him. He is like one of those booms which are set out from the shore on rivers to catch drift-wood, or like the loadstone amongst splinters of steel. Those facts, words, persons, which dwell in his memory without his being able to say why, remain because they have a relation to him not less real for being as yet unapprehended. They are symbols of value to him as they can interpret parts of his consciousness which he would vainly seek words for in the conventional images of books and other minds. What attracts my attention shall have it, as I will go to the man who knocks at my door, whilst a thousand persons as worthy go by it, to whom I give no regard. It is enough that these particulars speak to me. A few anecdotes, a few traits of character, manners, face, a few incidents, have an emphasis in your memory out of all proportion to their apparent significance if you measure them by the ordinary standards. They relate to your gift. Let them have their weight, and do not reject them and cast about for illustration and facts more usual in literature. What your heart thinks great is great. The soul's emphasis is always right.

Over all things that are agreeable to his nature and genius the man has the highest right. Everywhere he may take what belongs to his spiritual estate, nor

can he take any thing else though all doors were open, nor can all the force of men hinder him from taking so much. It is vain to attempt to keep a secret from one who has a right to know it. It will tell itself. That mood into which a friend can bring us is his dominion over us. To the thoughts of that state of mind he has a right. All the secrets of that state of mind he can compel. This is a law which statesmen use in practice. All the terrors of the French Republic, which held Austria in awe, were unable to command her diplomacy. But Napoleon sent to Vienna M. de Narbonne, one of the old noblesse, with the morals, manners and name of that interest, saying that it was indispensable to send to the old aristocracy of Europe men of the same connection, which, in fact, constitutes a sort of free-masonry. M. de Narbonne in less than a fortnight penetrated all the secrets of the imperial cabinet.

Nothing seems so easy as to speak and to be understood. Yet a man may come to find that the strongest of defences and of ties, — that he has been understood; and he who has received an opinion may come to find it the most inconvenient of bonds.

If a teacher have any opinion which he wishes to conceal, his pupils will become as fully indoctrinated into that as into any which he publishes. If you pour water into a vessel twisted into coils and angles, it is vain to say, I will pour it only into this or that; — it will find its level in all. Men feel and act the consequences of your doctrine without being able to show how they follow. Show us an arc of the curve, and a good mathematician will find out the whole figure. We are always reasoning from the seen to the unseen. Hence the perfect intelligence that subsists between wise men of remote ages. A man cannot bury his meanings so deep in his book but time and like-minded men will find them. Plato had a secret doctrine, had he? What secret can he conceal from the eyes of Bacon? of Montaigne? of Kant? Therefore, Aristotle said of his works, “They are published and not published.”

No man can learn what he has not preparation for learning, however near to his eyes is the object. A chemist may tell his most precious secrets to a carpenter, and he shall be never the wiser, — the secrets he would not utter to a chemist for an estate. God screens us evermore from premature ideas. Our eyes are holden that we cannot see things that stare us in the face, until the hour arrives when the mind is ripened; then we behold them, and the time when we saw them not is like a dream.

Not in nature but in man is all the beauty and worth he sees. The world is very empty, and is indebted to this gilding, exalting soul for all its pride. “Earth fills her lap with splendors” not her own. The vale of Tempe, Tivoli and Rome are earth and water, rocks and sky. There are as good earth and water in a

thousand places, yet how unassuming!

People are not the better for the sun and moon, the horizon and the trees; as it is not observed that the keepers of Roman galleries or the valets of painters have any elevation of thought, or that librarians are wiser men than others. There are graces in the demeanor of a polished and noble person which are lost upon the eye of a churl. These are like the stars whose light has not yet reached us.

He may see what he maketh. Our dreams are the sequel of our waking knowledge. The visions of the night bear some proportion to the visions of the day. Hideous dreams are exaggerations of the sins of the day. We see our evil affections embodied in bad physiognomies. On the Alps the traveller sometimes beholds his own shadow magnified to a giant, so that every gesture of his hand is terrific. "My children," said an old man to his boys scared by a figure in the dark entry, "my children, you will never see any thing worse than yourselves." As in dreams, so in the scarcely less fluid events of the world every man sees himself in colossal, without knowing that it is himself. The good, compared to the evil which he sees, is as his own good to his own evil. Every quality of his mind is magnified in some one acquaintance, and every emotion of his heart in some one. He is like a quincunx of trees, which counts five, — east, west, north, or south; or an initial, medial, and terminal acrostic. And why not? He cleaves to one person and avoids another, according to their likeness or unlikeness to himself, truly seeking himself in his associates and moreover in his trade and habits and gestures and meats and drinks, and comes at last to be faithfully represented by every view you take of his circumstances.

He may read what he writes. What can we see or acquire but what we are? You have observed a skilful man reading Virgil. Well, that author is a thousand books to a thousand persons. Take the book into your two hands and read your eyes out, you will never find what I find. If any ingenious reader would have a monopoly of the wisdom or delight he gets, he is as secure now the book is Englished, as if it were imprisoned in the Pelews' tongue. It is with a good book as it is with good company. Introduce a base person among gentlemen, it is all to no purpose; he is not their fellow. Every society protects itself. The company is perfectly safe, and he is not one of them, though his body is in the room.

What avails it to fight with the eternal laws of mind, which adjust the relation of all persons to each other by the mathematical measure of their havings and beings? Gertrude is enamored of Guy; how high, how aristocratic, how Roman his mien and manners! to live with him were life indeed, and no purchase is too great; and heaven and earth are moved to that end. Well, Gertrude has Guy; but what now avails how high, how aristocratic, how Roman his mien and manners, if his heart and aims are in the senate, in the theatre and in the billiard-room, and

she has no aims, no conversation that can enchant her graceful lord?

He shall have his own society. We can love nothing but nature. The most wonderful talents, the most meritorious exertions really avail very little with us; but nearness or likeness of nature, — how beautiful is the ease of its victory! Persons approach us, famous for their beauty, for their accomplishments, worthy of all wonder for their charms and gifts; they dedicate their whole skill to the hour and the company, — with very imperfect result. To be sure it would be ungrateful in us not to praise them loudly. Then, when all is done, a person of related mind, a brother or sister by nature, comes to us so softly and easily, so nearly and intimately, as if it were the blood in our proper veins, that we feel as if some one was gone, instead of another having come; we are utterly relieved and refreshed; it is a sort of joyful solitude. We foolishly think in our days of sin that we must court friends by compliance to the customs of society, to its dress, its breeding, and its estimates. But only that soul can be my friend which I encounter on the line of my own march, that soul to which I do not decline and which does not decline to me, but, native of the same celestial latitude, repeats in its own all my experience. The scholar forgets himself and apes the customs and costumes of the man of the world to deserve the smile of beauty, and follows some giddy girl, not yet taught by religious passion to know the noble woman with all that is serene, oracular and beautiful in her soul. Let him be great, and love shall follow him. Nothing is more deeply punished than the neglect of the affinities by which alone society should be formed, and the insane levity of choosing associates by others' eyes.

He may set his own rate. It is a maxim worthy of all acceptance that a man may have that allowance he takes. Take the place and attitude which belong to you, and all men acquiesce. The world must be just. It leaves every man, with profound unconcern, to set his own rate. Hero or driveller, it meddles not in the matter. It will certainly accept your own measure of your doing and being, whether you sneak about and deny your own name, or whether you see your work produced to the concave sphere of the heavens, one with the revolution of the stars.

The same reality pervades all teaching. The man may teach by doing, and not otherwise. If he can communicate himself he can teach, but not by words. He teaches who gives, and he learns who receives. There is no teaching until the pupil is brought into the same state or principle in which you are; a transfusion takes place; he is you and you are he; then is a teaching, and by no unfriendly chance or bad company can he ever quite lose the benefit. But your propositions run out of one ear as they ran in at the other. We see it advertised that Mr. Grand will deliver an oration on the Fourth of July, and Mr. Hand before the

Mechanics' Association, and we do not go thither, because we know that these gentlemen will not communicate their own character and experience to the company. If we had reason to expect such a confidence we should go through all inconvenience and opposition. The sick would be carried in litters. But a public oration is an escapade, a non-committal, an apology, a gag, and not a communication, not a speech, not a man.

A like Nemesis presides over all intellectual works. We have yet to learn that the thing uttered in words is not therefore affirmed. It must affirm itself, or no forms of logic or of oath can give it evidence. The sentence must also contain its own apology for being spoken.

The effect of any writing on the public mind is mathematically measurable by its depth of thought. How much water does it draw? If it awakes you to think, if it lift you from your feet with the great voice of eloquence, then the effect is to be wide, slow, permanent, over the minds of men; if the pages instruct you not, they will die like flies in the hour. The way to speak and write what shall not go out of fashion is to speak and write sincerely. The argument which has not power to reach my own practice, I may well doubt will fail to reach yours. But take Sidney's maxim:— "Look in thy heart, and write." He that writes to himself writes to an eternal public. That statement only is fit to be made public which you have come at in attempting to satisfy your own curiosity. The writer who takes his subject from his ear and not from his heart, should know that he has lost as much as he seems to have gained, and when the empty book has gathered all its praise, and half the people say, 'What poetry! what genius!' it still needs fuel to make fire. That only profits which is profitable. Life alone can impart life; and though we should burst we can only be valued as we make ourselves valuable. There is no luck in literary reputation. They who make up the final verdict upon every book are not the partial and noisy readers of the hour when it appears, but a court as of angels, a public not to be bribed, not to be entreated and not to be overawed, decides upon every man's title to fame. Only those books come down which deserve to last. Gilt edges, vellum and morocco, and presentation-copies to all the libraries will not preserve a book in circulation beyond its intrinsic date. It must go with all Walpole's Noble and Royal Authors to its fate. Blackmore, Kotzebue, or Pollok may endure for a night, but Moses and Homer stand for ever. There are not in the world at any one time more than a dozen persons who read and understand Plato, — never enough to pay for an edition of his works; yet to every generation these come duly down, for the sake of those few persons, as if God brought them in his hand. "No book," said Bentley, "was ever written down by any but itself." The permanence of all books is fixed by no effort, friendly or hostile, but by their own specific gravity, or the

intrinsic importance of their contents to the constant mind of man. "Do not trouble yourself too much about the light on your statue," said Michael Angelo to the young sculptor; "the light of the public square will test its value."

In like manner the effect of every action is measured by the depth of the sentiment from which it proceeds. The great man knew not that he was great. It took a century or two for that fact to appear. What he did, he did because he must; it was the most natural thing in the world, and grew out of the circumstances of the moment. But now, every thing he did, even to the lifting of his finger or the eating of bread, looks large, all-related, and is called an institution.

These are the demonstrations in a few particulars of the genius of nature; they show the direction of the stream. But the stream is blood; every drop is alive. Truth has not single victories; all things are its organs, — not only dust and stones, but errors and lies. The laws of disease, physicians say, are as beautiful as the laws of health. Our philosophy is affirmative and readily accepts the testimony of negative facts, as every shadow points to the sun. By a divine necessity every fact in nature is constrained to offer its testimony.

Human character evermore publishes itself. The most fugitive deed and word, the mere air of doing a thing, the intimated purpose, expresses character. If you act you show character; if you sit still, if you sleep, you show it. You think because you have spoken nothing when others spoke, and have given no opinion on the times, on the church, on slavery, on marriage, on socialism, on secret societies, on the college, on parties and persons, that your verdict is still expected with curiosity as a reserved wisdom. Far otherwise; your silence answers very loud. You have no oracle to utter, and your fellow-men have learned that you cannot help them; for oracles speak. Doth not Wisdom cry and Understanding put forth her voice?

Dreadful limits are set in nature to the powers of dissimulation. Truth tyrannizes over the unwilling members of the body. Faces never lie, it is said. No man need be deceived who will study the changes of expression. When a man speaks the truth in the spirit of truth, his eye is as clear as the heavens. When he has base ends and speaks falsely, the eye is muddy and sometimes asquint.

I have heard an experienced counsellor say that he never feared the effect upon a jury of a lawyer who does not believe in his heart that his client ought to have a verdict. If he does not believe it his unbelief will appear to the jury, despite all his protestations, and will become their unbelief. This is that law whereby a work of art, of whatever kind, sets us in the same state of mind wherein the artist was when he made it. That which we do not believe we cannot adequately say, though we may repeat the words never so often. It was this

conviction which Swedenborg expressed when he described a group of persons in the spiritual world endeavoring in vain to articulate a proposition which they did not believe; but they could not, though they twisted and folded their lips even to indignation.

A man passes for that he is worth. Very idle is all curiosity concerning other people's estimate of us, and all fear of remaining unknown is not less so. If a man know that he can do any thing, — that he can do it better than any one else, — he has a pledge of the acknowledgment of that fact by all persons. The world is full of judgment-days, and into every assembly that a man enters, in every action he attempts, he is gauged and stamped. In every troop of boys that whoop and run in each yard and square, a new-comer is as well and accurately weighed in the course of a few days and stamped with his right number, as if he had undergone a formal trial of his strength, speed and temper. A stranger comes from a distant school, with better dress, with trinkets in his pockets, with airs and pretensions; an older boy says to himself, 'It's of no use; we shall find him out to-morrow.' 'What has he done?' is the divine question which searches men and transpierces every false reputation. A fop may sit in any chair of the world nor be distinguished for his hour from Homer and Washington; but there need never be any doubt concerning the respective ability of human beings. Pretension may sit still, but cannot act. Pretension never feigned an act of real greatness. Pretension never wrote an Iliad, nor drove back Xerxes, nor christianized the world, nor abolished slavery.

As much virtue as there is, so much appears; as much goodness as there is, so much reverence it commands. All the devils respect virtue. The high, the generous, the self-devoted sect will always instruct and command mankind. Never was a sincere word utterly lost. Never a magnanimity fell to the ground, but there is some heart to greet and accept it unexpectedly. A man passes for that he is worth. What he is engraves itself on his face, on his form, on his fortunes, in letters of light. Concealment avails him nothing, boasting nothing. There is confession in the glances of our eyes, in our smiles, in salutations, and the grasp of hands. His sin bedaubes him, mars all his good impression. Men know not why they do not trust him, but they do not trust him. His vice glasses his eye, cuts lines of mean expression in his cheek, pinches the nose, sets the mark of the beast on the back of the head, and writes O fool! fool! on the forehead of a king.

If you would not be known to do any thing, never do it. A man may play the fool in the drifts of a desert, but every grain of sand shall seem to see. He may be a solitary eater, but he cannot keep his foolish counsel. A broken complexion, a swinish look, ungenerous acts and the want of due knowledge, — all blab. Can a cook, a Chiffinch, an Iachimo be mistaken for Zeno or Paul? Confucius

exclaimed,— “How can a man be concealed? How can a man be concealed?”

On the other hand, the hero fears not that if he withhold the avowal of a just and brave act it will go unwitnessed and unloved. One knows it, — himself, — and is pledged by it to sweetness of peace and to nobleness of aim which will prove in the end a better proclamation of it than the relating of the incident. Virtue is the adherence in action to the nature of things, and the nature of things makes it prevalent. It consists in a perpetual substitution of being for seeming, and with sublime propriety God is described as saying, I AM.

The lesson which these observations convey is, Be, and not seem. Let us acquiesce. Let us take our bloated nothingness out of the path of the divine circuits. Let us unlearn our wisdom of the world. Let us lie low in the Lord's power and learn that truth alone makes rich and great.

If you visit your friend, why need you apologize for not having visited him, and waste his time and deface your own act? Visit him now. Let him feel that the highest love has come to see him, in thee its lowest organ. Or why need you torment yourself and friend by secret self-reproaches that you have not assisted him or complimented him with gifts and salutations heretofore? Be a gift and a benediction. Shine with real light and not with the borrowed reflection of gifts. Common men are apologies for men; they bow the head, excuse themselves with prolix reasons, and accumulate appearances because the substance is not.

We are full of these superstitions of sense, the worship of magnitude. We call the poet inactive, because he is not a president, a merchant, or a porter. We adore an institution, and do not see that it is founded on a thought which we have. But real action is in silent moments. The epochs of our life are not in the visible facts of our choice of a calling, our marriage, our acquisition of an office, and the like, but in a silent thought by the way-side as we walk; in a thought which revises our entire manner of life and says,— ‘Thus hast thou done, but it were better thus.’ And all our after years, like menials, serve and wait on this, and according to their ability execute its will. This revisal or correction is a constant force, which, as a tendency, reaches through our lifetime. The object of the man, the aim of these moments, is to make daylight shine through him, to suffer the law to traverse his whole being without obstruction, so that on what point soever of his doing your eye falls it shall report truly of his character, whether it be his diet, his house, his religious forms, his society, his mirth, his vote, his opposition. Now he is not homogeneous, but heterogeneous, and the ray does not traverse; there are no thorough lights, but the eye of the beholder is puzzled, detecting many unlike tendencies and a life not yet at one.

Why should we make it a point with our false modesty to disparage that man we are and that form of being assigned to us? A good man is contented. I love

and honor Epaminondas, but I do not wish to be Epaminondas. I hold it more just to love the world of this hour than the world of his hour. Nor can you, if I am true, excite me to the least uneasiness by saying, 'He acted and thou sittest still.' I see action to be good, when the need is, and sitting still to be also good. Epaminondas, if he was the man I take him for, would have sat still with joy and peace, if his lot had been mine. Heaven is large, and affords space for all modes of love and fortitude. Why should we be busybodies and superserviceable? Action and inaction are alike to the true. One piece of the tree is cut for a weathercock and one for the sleeper of a bridge; the virtue of the wood is apparent in both.

I desire not to disgrace the soul. The fact that I am here certainly shows me that the soul had need of an organ here. Shall I not assume the post? Shall I skulk and dodge and duck with my unseasonable apologies and vain modesty and imagine my being here impertinent? less pertinent than Epaminondas or Homer being there? and that the soul did not know its own needs? Besides, without any reasoning on the matter, I have no discontent. The good soul nourishes me and unlocks new magazines of power and enjoyment to me every day. I will not meanly decline the immensity of good, because I have heard that it has come to others in another shape.

Besides, why should we be cowed by the name of Action? 'Tis a trick of the senses, — no more. We know that the ancestor of every action is a thought. The poor mind does not seem to itself to be any thing unless it have an outside badge, — some Gentoo diet, or Quaker coat, or Calvinistic prayer-meeting, or philanthropic society, or a great donation, or a high office, or, any how, some wild contrasting action to testify that it is somewhat. The rich mind lies in the sun and sleeps, and is Nature. To think is to act.

Let us, if we must have great actions, make our own so. All action is of an infinite elasticity, and the least admits of being inflated with the celestial air until it eclipses the sun and moon. Let us seek one peace by fidelity. Let me heed my duties. Why need I go gadding into the scenes and philosophy of Greek and Italian history before I have justified myself to my benefactors? How dare I read Washington's campaigns when I have not answered the letters of my own correspondents? Is not that a just objection to much of our reading? It is a pusillanimous desertion of our work to gaze after our neighbors. It is peeping. Byron says of Jack Bunting, —

“He knew not what to say, and so he swore.”

I may say it of our preposterous use of books, — He knew not what to do, and so he read. I can think of nothing to fill my time with, and I find the Life of Brant. It is a very extravagant compliment to pay to Brant, or to General

Schuyler, or to General Washington. My time should be as good as their time, — my facts, my net of relations, as good as theirs, or either of theirs. Rather let me do my work so well that other idlers if they choose may compare my texture with the texture of these and find it identical with the best.

This over-estimate of the possibilities of Paul and Pericles, this underestimate of our own, comes from a neglect of the fact of an identical nature. Bonaparte knew but one merit, and rewarded in one and the same way the good soldier, the good astronomer, the good poet, the good player. The poet uses the names of Caesar, of Tamerlane, of Bonduca, of Belisarius; the painter uses the conventional story of the Virgin Mary, of Paul, of Peter. He does not therefore defer to the nature of these accidental men, of these stock heroes. If the poet write a true drama, then he is Caesar, and not the player of Caesar; then the selfsame strain of thought, emotion as pure, wit as subtle, motions as swift, mounting, extravagant, and a heart as great, self-sufficing, dauntless, which on the waves of its love and hope can uplift all that is reckoned solid and precious in the world, — palaces, gardens, money, navies, kingdoms, — marking its own incomparable worth by the slight it casts on these gauds of men; — these all are his, and by the power of these he rouses the nations. Let a man believe in God, and not in names and places and persons. Let the great soul incarnated in some woman's form, poor and sad and single, in some Dolly or Joan, go out to service, and sweep chambers and scour floors, and its effulgent daybeams cannot be muffled or hid, but to sweep and scour will instantly appear supreme and beautiful actions, the top and radiance of human life, and all people will get mops and brooms; until, lo! suddenly the great soul has enshrined itself in some other form and done some other deed, and that is now the flower and head of all living nature.

We are the photometers, we the irritable goldleaf and tinfoil that measure the accumulations of the subtle element. We know the authentic effects of the true fire through every one of its million disguises.

LOVE.

“I was as a gem concealed;
Me my burning ray revealed.”

Koran.

LOVE.

Every promise of the soul has innumerable fulfilments; each of its joys ripens into a new want. Nature, uncontainable, flowing, forelooking, in the first sentiment of kindness anticipates already a benevolence which shall lose all particular regards in its general light. The introduction to this felicity is in a private and tender relation of one to one, which is the enchantment of human life; which, like a certain divine rage and enthusiasm, seizes on man at one period and works a revolution in his mind and body; unites him to his race, pledges him to the domestic and civic relations, carries him with new sympathy into nature, enhances the power of the senses, opens the imagination, adds to his character heroic and sacred attributes, establishes marriage, and gives permanence to human society.

The natural association of the sentiment of love with the heyday of the blood seems to require that in order to portray it in vivid tints, which every youth and maid should confess to be true to their throbbing experience, one must not be too old. The delicious fancies of youth reject the least savor of a mature philosophy, as chilling with age and pedantry their purple bloom. And therefore I know I incur the imputation of unnecessary hardness and stoicism from those who compose the Court and Parliament of Love. But from these formidable censors I shall appeal to my seniors. For it is to be considered that this passion of which we speak, though it begin with the young, yet forsakes not the old, or rather suffers no one who is truly its servant to grow old, but makes the aged participators of it not less than the tender maiden, though in a different and nobler sort. For it is a fire that kindling its first embers in the narrow nook of a private bosom, caught from a wandering spark out of another private heart, glows and enlarges until it warms and beams upon multitudes of men and women, upon the universal heart of all, and so lights up the whole world and all nature with its generous flames. It matters not therefore whether we attempt to describe the passion at twenty, at thirty, or at eighty years. He who paints it at the first period will lose some of its later, he who paints it at the last, some of its earlier traits. Only it is to be hoped that by patience and the Muses' aid we may attain to that inward view of the law which shall describe a truth ever young and beautiful, so central that it shall commend itself to the eye, at whatever angle beholden.

And the first condition is, that we must leave a too close and lingering adherence to facts, and study the sentiment as it appeared in hope and not in history. For each man sees his own life defaced and disfigured, as the life of man

is not, to his imagination. Each man sees over his own experience a certain stain of error, whilst that of other men looks fair and ideal. Let any man go back to those delicious relations which make the beauty of his life, which have given him sincerest instruction and nourishment, he will shrink and moan. Alas! I know not why, but infinite compunctions embitter in mature life the remembrances of budding joy and cover every beloved name. Every thing is beautiful seen from the point of the intellect, or as truth. But all is sour, if seen as experience. Details are melancholy; the plan is seemly and noble. In the actual world — the painful kingdom of time and place — dwell care, and canker, and fear. With thought, with the ideal, is immortal hilarity, the rose of joy. Round it all the Muses sing. But grief cleaves to names, and persons, and the partial interests of to-day and yesterday.

The strong bent of nature is seen in the proportion which this topic of personal relations usurps in the conversation of society. What do we wish to know of any worthy person so much, as how he has sped in the history of this sentiment? What books in the circulating libraries circulate? How we glow over these novels of passion, when the story is told with any spark of truth and nature! And what fastens attention, in the intercourse of life, like any passage betraying affection between two parties? Perhaps we never saw them before, and never shall meet them again. But we see them exchange a glance, or betray a deep emotion, and we are no longer strangers. We understand them, and take the warmest interest in the development of the romance. All mankind love a lover. The earliest demonstrations of complacency and kindness are nature's most winning pictures. It is the dawn of civility and grace in the coarse and rustic. The rude village boy teases the girls about the school-house door; — but to-day he comes running into the entry, and meets one fair child disposing her satchel; he holds her books to help her, and instantly it seems to him as if she removed herself from him infinitely, and was a sacred precinct. Among the throng of girls he runs rudely enough, but one alone distances him; and these two little neighbors, that were so close just now, have learned to respect each other's personality. Or who can avert his eyes from the engaging, half-artful, half-artless ways of school-girls who go into the country shops to buy a skein of silk or a sheet of paper, and talk half an hour about nothing with the broad-faced, good-natured shop-boy. In the village they are on a perfect equality, which love delights in, and without any coquetry the happy, affectionate nature of woman flows out in this pretty gossip. The girls may have little beauty, yet plainly do they establish between them and the good boy the most agreeable, confiding relations, what with their fun and their earnest, about Edgar and Jonas and Almira, and who was invited to the party, and who danced at the dancing-school,

and when the singing-school would begin, and other nothings concerning which the parties cooed. By and by that boy wants a wife, and very truly and heartily will he know where to find a sincere and sweet mate, without any risk such as Milton deploras as incident to scholars and great men.

I have been told that in some public discourses of mine my reverence for the intellect has made me unjustly cold to the personal relations. But now I almost shrink at the remembrance of such disparaging words. For persons are love's world, and the coldest philosopher cannot recount the debt of the young soul wandering here in nature to the power of love, without being tempted to unsay, as treasonable to nature, aught derogatory to the social instincts. For though the celestial rapture falling out of heaven seizes only upon those of tender age, and although a beauty overpowering all analysis or comparison and putting us quite beside ourselves we can seldom see after thirty years, yet the remembrance of these visions outlasts all other remembrances, and is a wreath of flowers on the oldest brows. But here is a strange fact; it may seem to many men, in revising their experience, that they have no fairer page in their life's book than the delicious memory of some passages wherein affection contrived to give a witchcraft, surpassing the deep attraction of its own truth, to a parcel of accidental and trivial circumstances. In looking backward they may find that several things which were not the charm have more reality to this groping memory than the charm itself which embalmed them. But be our experience in particulars what it may, no man ever forgot the visitations of that power to his heart and brain, which created all things anew; which was the dawn in him of music, poetry, and art; which made the face of nature radiant with purple light, the morning and the night varied enchantments; when a single tone of one voice could make the heart bound, and the most trivial circumstance associated with one form is put in the amber of memory; when he became all eye when one was present, and all memory when one was gone; when the youth becomes a watcher of windows and studious of a glove, a veil, a ribbon, or the wheels of a carriage; when no place is too solitary and none too silent, for him who has richer company and sweeter conversation in his new thoughts than any old friends, though best and purest, can give him; for the figures, the motions, the words of the beloved object are not like other images written in water, but, as Plutarch said, "enamelled in fire," and make the study of midnight: — "Thou art not gone being gone, where'er thou art, Thou leav'st in him thy watchful eyes, in him thy loving heart."

In the noon and the afternoon of life we still throb at the recollection of days when happiness was not happy enough, but must be drugged with the relish of pain and fear; for he touched the secret of the matter who said of love, — "All

other pleasures are not worth its pains:”

and when the day was not long enough, but the night too must be consumed in keen recollections; when the head boiled all night on the pillow with the generous deed it resolved on; when the moonlight was a pleasing fever and the stars were letters and the flowers ciphers and the air was coined into song; when all business seemed an impertinence, and all the men and women running to and fro in the streets, mere pictures.

The passion rebuilds the world for the youth. It makes all things alive and significant. Nature grows conscious. Every bird on the boughs of the tree sings now to his heart and soul. The notes are almost articulate. The clouds have faces as he looks on them. The trees of the forest, the waving grass and the peeping flowers have grown intelligent; and he almost fears to trust them with the secret which they seem to invite. Yet nature soothes and sympathizes. In the green solitude he finds a dearer home than with men: — “Fountain-heads and pathless groves, Places which pale passion loves, Moonlight walks, when all the fowls Are safely housed, save bats and owls, A midnight bell, a passing groan, — These are the sounds we feed upon.”

Behold there in the wood the fine madman! He is a palace of sweet sounds and sights; he dilates; he is twice a man; he walks with arms akimbo; he soliloquizes; he accosts the grass and the trees; he feels the blood of the violet, the clover and the lily in his veins; and he talks with the brook that wets his foot.

The heats that have opened his perceptions of natural beauty have made him love music and verse. It is a fact often observed, that men have written good verses under the inspiration of passion, who cannot write well under any other circumstances.

The like force has the passion over all his nature. It expands the sentiment; it makes the clown gentle and gives the coward heart. Into the most pitiful and abject it will infuse a heart and courage to defy the world, so only it have the countenance of the beloved object. In giving him to another it still more gives him to himself. He is a new man, with new perceptions, new and keener purposes, and a religious solemnity of character and aims. He does not longer appertain to his family and society; he is somewhat; he is a person; he is a soul.

And here let us examine a little nearer the nature of that influence which is thus potent over the human youth. Beauty, whose revelation to man we now celebrate, welcome as the sun wherever it pleases to shine, which pleases everybody with it and with themselves, seems sufficient to itself. The lover cannot paint his maiden to his fancy poor and solitary. Like a tree in flower, so much soft, budding, informing loveliness is society for itself; and she teaches his eye why Beauty was pictured with Loves and Graces attending her steps. Her

existence makes the world rich. Though she extrudes all other persons from his attention as cheap and unworthy, she indemnifies him by carrying out her own being into somewhat impersonal, large, mundane, so that the maiden stands to him for a representative of all select things and virtues. For that reason the lover never sees personal resemblances in his mistress to her kindred or to others. His friends find in her a likeness to her mother, or her sisters, or to persons not of her blood. The lover sees no resemblance except to summer evenings and diamond mornings, to rainbows and the song of birds.

The ancients called beauty the flowering of virtue. Who can analyze the nameless charm which glances from one and another face and form? We are touched with emotions of tenderness and complacency, but we cannot find whereat this dainty emotion, this wandering gleam, points. It is destroyed for the imagination by any attempt to refer it to organization. Nor does it point to any relations of friendship or love known and described in society, but, as it seems to me, to a quite other and unattainable sphere, to relations of transcendent delicacy and sweetness, to what roses and violets hint and foreshow. We cannot approach beauty. Its nature is like opaline doves'-neck lustres, hovering and evanescent. Herein it resembles the most excellent things, which all have this rainbow character, defying all attempts at appropriation and use. What else did Jean Paul Richter signify, when he said to music, "Away! away! thou speakest to me of things which in all my endless life I have not found, and shall not find." The same fluency may be observed in every work of the plastic arts. The statue is then beautiful when it begins to be incomprehensible, when it is passing out of criticism and can no longer be defined by compass and measuring-wand, but demands an active imagination to go with it and to say what it is in the act of doing. The god or hero of the sculptor is always represented in a transition from that which is representable to the senses, to that which is not. Then first it ceases to be a stone. The same remark holds of painting. And of poetry the success is not attained when it lulls and satisfies, but when it astonishes and fires us with new endeavors after the unattainable. Concerning it Landor inquires "whether it is not to be referred to some purer state of sensation and existence."

In like manner, personal beauty is then first charming and itself when it dissatisfies us with any end; when it becomes a story without an end; when it suggests gleams and visions and not earthly satisfactions; when it makes the beholder feel his unworthiness; when he cannot feel his right to it, though he were Caesar; he cannot feel more right to it than to the firmament and the splendors of a sunset.

Hence arose the saying, "If I love you, what is that to you?" We say so because we feel that what we love is not in your will, but above it. It is not you,

but your radiance. It is that which you know not in yourself and can never know.

This agrees well with that high philosophy of Beauty which the ancient writers delighted in; for they said that the soul of man, embodied here on earth, went roaming up and down in quest of that other world of its own out of which it came into this, but was soon stupefied by the light of the natural sun, and unable to see any other objects than those of this world, which are but shadows of real things. Therefore the Deity sends the glory of youth before the soul, that it may avail itself of beautiful bodies as aids to its recollection of the celestial good and fair; and the man beholding such a person in the female sex runs to her and finds the highest joy in contemplating the form, movement, and intelligence of this person, because it suggests to him the presence of that which indeed is within the beauty, and the cause of the beauty.

If however, from too much conversing with material objects, the soul was gross, and misplaced its satisfaction in the body, it reaped nothing but sorrow; body being unable to fulfil the promise which beauty holds out; but if, accepting the hint of these visions and suggestions which beauty makes to his mind, the soul passes through the body and falls to admire strokes of character, and the lovers contemplate one another in their discourses and their actions, then they pass to the true palace of beauty, more and more inflame their love of it, and by this love extinguishing the base affection, as the sun puts out the fire by shining on the hearth, they become pure and hallowed. By conversation with that which is in itself excellent, magnanimous, lowly, and just, the lover comes to a warmer love of these nobilities, and a quicker apprehension of them. Then he passes from loving them in one to loving them in all, and so is the one beautiful soul only the door through which he enters to the society of all true and pure souls. In the particular society of his mate he attains a clearer sight of any spot, any taint which her beauty has contracted from this world, and is able to point it out, and this with mutual joy that they are now able, without offence, to indicate blemishes and hindrances in each other, and give to each all help and comfort in curing the same. And beholding in many souls the traits of the divine beauty, and separating in each soul that which is divine from the taint which it has contracted in the world, the lover ascends to the highest beauty, to the love and knowledge of the Divinity, by steps on this ladder of created souls.

Somewhat like this have the truly wise told us of love in all ages. The doctrine is not old, nor is it new. If Plato, Plutarch and Apuleius taught it, so have Petrarch, Angelo and Milton. It awaits a truer unfolding in opposition and rebuke to that subterranean prudence which presides at marriages with words that take hold of the upper world, whilst one eye is prowling in the cellar; so that its gravest discourse has a savor of hams and powdering-tubs. Worst, when this

sensualism intrudes into the education of young women, and withers the hope and affection of human nature by teaching that marriage signifies nothing but a housewife's thrift, and that woman's life has no other aim.

But this dream of love, though beautiful, is only one scene in our play. In the procession of the soul from within outward, it enlarges its circles ever, like the pebble thrown into the pond, or the light proceeding from an orb. The rays of the soul alight first on things nearest, on every utensil and toy, on nurses and domestics, on the house and yard and passengers, on the circle of household acquaintance, on politics and geography and history. But things are ever grouping themselves according to higher or more interior laws. Neighborhood, size, numbers, habits, persons, lose by degrees their power over us. Cause and effect, real affinities, the longing for harmony between the soul and the circumstance, the progressive, idealizing instinct, predominate later, and the step backward from the higher to the lower relations is impossible. Thus even love, which is the deification of persons, must become more impersonal every day. Of this at first it gives no hint. Little think the youth and maiden who are glancing at each other across crowded rooms with eyes so full of mutual intelligence, of the precious fruit long hereafter to proceed from this new, quite external stimulus. The work of vegetation begins first in the irritability of the bark and leaf-buds. From exchanging glances, they advance to acts of courtesy, of gallantry, then to fiery passion, to plighting troth and marriage. Passion beholds its object as a perfect unit. The soul is wholly embodied, and the body is wholly ensouled: — “Her pure and eloquent blood Spoke in her cheeks, and so distinctly wrought, That one might almost say her body thought.”

Romeo, if dead, should be cut up into little stars to make the heavens fine. Life, with this pair, has no other aim, asks no more, than Juliet, — than Romeo. Night, day, studies, talents, kingdoms, religion, are all contained in this form full of soul, in this soul which is all form. The lovers delight in endearments, in avowals of love, in comparisons of their regards. When alone, they solace themselves with the remembered image of the other. Does that other see the same star, the same melting cloud, read the same book, feel the same emotion, that now delight me? They try and weigh their affection, and adding up costly advantages, friends, opportunities, properties, exult in discovering that willingly, joyfully, they would give all as a ransom for the beautiful, the beloved head, not one hair of which shall be harmed. But the lot of humanity is on these children. Danger, sorrow, and pain arrive to them, as to all. Love prays. It makes covenants with Eternal Power in behalf of this dear mate. The union which is thus effected and which adds a new value to every atom in nature — for it transmutes every thread throughout the whole web of relation into a golden ray,

and bathes the soul in a new and sweeter element — is yet a temporary state. Not always can flowers, pearls, poetry, protestations, nor even home in another heart, content the awful soul that dwells in clay. It arouses itself at last from these endearments, as toys, and puts on the harness and aspires to vast and universal aims. The soul which is in the soul of each, craving a perfect beatitude, detects incongruities, defects and disproportion in the behavior of the other. Hence arise surprise, expostulation and pain. Yet that which drew them to each other was signs of loveliness, signs of virtue; and these virtues are there, however eclipsed. They appear and reappear and continue to attract; but the regard changes, quits the sign and attaches to the substance. This repairs the wounded affection. Meantime, as life wears on, it proves a game of permutation and combination of all possible positions of the parties, to employ all the resources of each and acquaint each with the strength and weakness of the other. For it is the nature and end of this relation, that they should represent the human race to each other. All that is in the world, which is or ought to be known, is cunningly wrought into the texture of man, of woman: — “The person love does to us fit, Like manna, has the taste of all in it.”

The world rolls; the circumstances vary every hour. The angels that inhabit this temple of the body appear at the windows, and the gnomes and vices also. By all the virtues they are united. If there be virtue, all the vices are known as such; they confess and flee. Their once flaming regard is sobered by time in either breast, and losing in violence what it gains in extent, it becomes a thorough good understanding. They resign each other without complaint to the good offices which man and woman are severally appointed to discharge in time, and exchange the passion which once could not lose sight of its object, for a cheerful, disengaged furtherance, whether present or absent, of each other's designs. At last they discover that all which at first drew them together, — those once sacred features, that magical play of charms, — was deciduous, had a prospective end, like the scaffolding by which the house was built; and the purification of the intellect and the heart from year to year is the real marriage, foreseen and prepared from the first, and wholly above their consciousness. Looking at these aims with which two persons, a man and a woman, so variously and correlatively gifted, are shut up in one house to spend in the nuptial society forty or fifty years, I do not wonder at the emphasis with which the heart prophesies this crisis from early infancy, at the profuse beauty with which the instincts deck the nuptial bower, and nature and intellect and art emulate each other in the gifts and the melody they bring to the epithalamium.

Thus are we put in training for a love which knows not sex, nor person, nor partiality, but which seeks virtue and wisdom everywhere, to the end of

increasing virtue and wisdom. We are by nature observers, and thereby learners. That is our permanent state. But we are often made to feel that our affections are but tents of a night. Though slowly and with pain, the objects of the affections change, as the objects of thought do. There are moments when the affections rule and absorb the man and make his happiness dependent on a person or persons. But in health the mind is presently seen again, — its overarching vault, bright with galaxies of immutable lights, and the warm loves and fears that swept over us as clouds must lose their finite character and blend with God, to attain their own perfection. But we need not fear that we can lose any thing by the progress of the soul. The soul may be trusted to the end. That which is so beautiful and attractive as these relations, must be succeeded and supplanted only by what is more beautiful, and so on for ever.

FRIENDSHIP.

A RUDDY drop of manly blood
The surging sea outweighs;
The world uncertain comes and goes, The lover rooted stays.
I fancied he was fled,
And, after many a year,
Glowed unexhausted kindness
Like daily sunrise there.
My careful heart was free again, — O friend, my bosom said,
Through thee alone the sky is arched, Through thee the rose is red,
All things through thee take nobler form And look beyond the earth,
The mill-round of our fate appears A sun-path in thy worth.
Me too thy nobleness has taught
To master my despair;
The fountains of my hidden life
Are through thy friendship fair.

FRIENDSHIP.

We have a great deal more kindness than is ever spoken. Maugre all the selfishness that chills like east winds the world, the whole human family is bathed with an element of love like a fine ether. How many persons we meet in houses, whom we scarcely speak to, whom yet we honor, and who honor us! How many we see in the street, or sit with in church, whom, though silently, we warmly rejoice to be with! Read the language of these wandering eye-beams. The heart knoweth.

The effect of the indulgence of this human affection is a certain cordial exhilaration. In poetry and in common speech, the emotions of benevolence and complacency which are felt towards others are likened to the material effects of fire; so swift, or much more swift, more active, more cheering, are these fine inward irradiations. From the highest degree of passionate love to the lowest degree of good-will, they make the sweetness of life.

Our intellectual and active powers increase with our affection. The scholar sits down to write, and all his years of meditation do not furnish him with one good thought or happy expression; but it is necessary to write a letter to a friend, — and forthwith troops of gentle thoughts invest themselves, on every hand, with chosen words. See, in any house where virtue and self-respect abide, the palpitation which the approach of a stranger causes. A commended stranger is expected and announced, and an uneasiness betwixt pleasure and pain invades all the hearts of a household. His arrival almost brings fear to the good hearts that would welcome him. The house is dusted, all things fly into their places, the old coat is exchanged for the new, and they must get up a dinner if they can. Of a commended stranger, only the good report is told by others, only the good and new is heard by us. He stands to us for humanity. He is what we wish. Having imagined and invested him, we ask how we should stand related in conversation and action with such a man, and are uneasy with fear. The same idea exalts conversation with him. We talk better than we are wont. We have the nimblest fancy, a richer memory, and our dumb devil has taken leave for the time. For long hours we can continue a series of sincere, graceful, rich communications, drawn from the oldest, secretest experience, so that they who sit by, of our own kinsfolk and acquaintance, shall feel a lively surprise at our unusual powers. But as soon as the stranger begins to intrude his partialities, his definitions, his defects, into the conversation, it is all over. He has heard the first, the last and best he will ever hear from us. He is no stranger now. Vulgarity, ignorance, misapprehension are old acquaintances. Now, when he comes, he may get the

order, the dress and the dinner, — but the throbbing of the heart and the communications of the soul, no more.

What is so pleasant as these jets of affection which make a young world for me again? What so delicious as a just and firm encounter of two, in a thought, in a feeling? How beautiful, on their approach to this beating heart, the steps and forms of the gifted and the true! The moment we indulge our affections, the earth is metamorphosed; there is no winter and no night; all tragedies, all ennuis vanish, — all duties even; nothing fills the proceeding eternity but the forms all radiant of beloved persons. Let the soul be assured that somewhere in the universe it should rejoin its friend, and it would be content and cheerful alone for a thousand years.

I awoke this morning with devout thanksgiving for my friends, the old and the new. Shall I not call God the Beautiful, who daily showeth himself so to me in his gifts? I chide society, I embrace solitude, and yet I am not so ungrateful as not to see the wise, the lovely and the noble-minded, as from time to time they pass my gate. Who hears me, who understands me, becomes mine, — a possession for all time. Nor is Nature so poor but she gives me this joy several times, and thus we weave social threads of our own, a new web of relations; and, as many thoughts in succession substantiate themselves, we shall by and by stand in a new world of our own creation, and no longer strangers and pilgrims in a traditionary globe. My friends have come to me unsought. The great God gave them to me. By oldest right, by the divine affinity of virtue with itself, I find them, or rather not I but the Deity in me and in them derides and cancels the thick walls of individual character, relation, age, sex, circumstance, at which he usually connives, and now makes many one. High thanks I owe you, excellent lovers, who carry out the world for me to new and noble depths, and enlarge the meaning of all my thoughts. These are new poetry of the first Bard, — poetry without stop, — hymn, ode and epic, poetry still flowing, Apollo and the Muses chanting still. Will these too separate themselves from me again, or some of them? I know not, but I fear it not; for my relation to them is so pure, that we hold by simple affinity, and the Genius of my life being thus social, the same affinity will exert its energy on whomsoever is as noble as these men and women, wherever I may be.

I confess to an extreme tenderness of nature on this point. It is almost dangerous to me to “crush the sweet poison of misused wine” of the affections. A new person is to me a great event and hinders me from sleep. I have often had fine fancies about persons which have given me delicious hours; but the joy ends in the day; it yields no fruit. Thought is not born of it; my action is very little modified. I must feel pride in my friend’s accomplishments as if they were mine,

and a property in his virtues. I feel as warmly when he is praised, as the lover when he hears applause of his engaged maiden. We over-estimate the conscience of our friend. His goodness seems better than our goodness, his nature finer, his temptations less. Every thing that is his, — his name, his form, his dress, books and instruments, — fancy enhances. Our own thought sounds new and larger from his mouth.

Yet the systole and diastole of the heart are not without their analogy in the ebb and flow of love. Friendship, like the immortality of the soul, is too good to be believed. The lover, beholding his maiden, half knows that she is not verily that which he worships; and in the golden hour of friendship we are surprised with shades of suspicion and unbelief. We doubt that we bestow on our hero the virtues in which he shines, and afterwards worship the form to which we have ascribed this divine inhabitation. In strictness, the soul does not respect men as it respects itself. In strict science all persons underlie the same condition of an infinite remoteness. Shall we fear to cool our love by mining for the metaphysical foundation of this Elysian temple? Shall I not be as real as the things I see? If I am, I shall not fear to know them for what they are. Their essence is not less beautiful than their appearance, though it needs finer organs for its apprehension. The root of the plant is not unsightly to science, though for chaplets and festoons we cut the stem short. And I must hazard the production of the bald fact amidst these pleasing reveries, though it should prove an Egyptian skull at our banquet. A man who stands united with his thought conceives magnificently of himself. He is conscious of a universal success, even though bought by uniform particular failures. No advantages, no powers, no gold or force, can be any match for him. I cannot choose but rely on my own poverty more than on your wealth. I cannot make your consciousness tantamount to mine. Only the star dazzles; the planet has a faint, moon-like ray. I hear what you say of the admirable parts and tried temper of the party you praise, but I see well that for all his purple cloaks I shall not like him, unless he is at last a poor Greek like me. I cannot deny it, O friend, that the vast shadow of the Phenomenal includes thee also in its pied and painted immensity, — thee also, compared with whom all else is shadow. Thou art not Being, as Truth is, as Justice is, — thou art not my soul, but a picture and effigy of that. Thou hast come to me lately, and already thou art seizing thy hat and cloak. Is it not that the soul puts forth friends as the tree puts forth leaves, and presently, by the germination of new buds, extrudes the old leaf? The law of nature is alternation for evermore. Each electrical state superinduces the opposite. The soul environs itself with friends that it may enter into a grander self-acquaintance or solitude; and it goes alone for a season, that it may exalt its conversation or society. This

method betrays itself along the whole history of our personal relations. The instinct of affection revives the hope of union with our mates, and the returning sense of insulation recalls us from the chase. Thus every man passes his life in the search after friendship, and if he should record his true sentiment, he might write a letter like this to each new candidate for his love: —

DEAR FRIEND,

If I was sure of thee, sure of thy capacity, sure to match my mood with thine, I should never think again of trifles in relation to thy comings and goings. I am not very wise; my moods are quite attainable, and I respect thy genius; it is to me as yet unfathomed; yet dare I not presume in thee a perfect intelligence of me, and so thou art to me a delicious torment. Thine ever, or never.

Yet these uneasy pleasures and fine pains are for curiosity and not for life. They are not to be indulged. This is to weave cobweb, and not cloth. Our friendships hurry to short and poor conclusions, because we have made them a texture of wine and dreams, instead of the tough fibre of the human heart. The laws of friendship are austere and eternal, of one web with the laws of nature and of morals. But we have aimed at a swift and petty benefit, to suck a sudden sweetness. We snatch at the slowest fruit in the whole garden of God, which many summers and many winters must ripen. We seek our friend not sacredly, but with an adulterate passion which would appropriate him to ourselves. In vain. We are armed all over with subtle antagonisms, which, as soon as we meet, begin to play, and translate all poetry into stale prose. Almost all people descend to meet. All association must be a compromise, and, what is worst, the very flower and aroma of the flower of each of the beautiful natures disappears as they approach each other. What a perpetual disappointment is actual society, even of the virtuous and gifted! After interviews have been compassed with long foresight we must be tormented presently by baffled blows, by sudden, unseasonable apathies, by epilepsies of wit and of animal spirits, in the heyday of friendship and thought. Our faculties do not play us true, and both parties are relieved by solitude.

I ought to be equal to every relation. It makes no difference how many friends I have and what content I can find in conversing with each, if there be one to whom I am not equal. If I have shrunk unequal from one contest, the joy I find in all the rest becomes mean and cowardly. I should hate myself, if then I made my other friends my asylum: —

“The valiant warrior famed for fight,
After a hundred victories, once foiled,
Is from the book of honor razed quite,
And all the rest forgot for which he toiled.”

Our impatience is thus sharply rebuked. Bashfulness and apathy are a tough husk in which a delicate organization is protected from premature ripening. It would be lost if it knew itself before any of the best souls were yet ripe enough to know and own it. Respect the *naturlangsamkeit* which hardens the ruby in a million years, and works in duration in which Alps and Andes come and go as rainbows. The good spirit of our life has no heaven which is the price of rashness. Love, which is the essence of God, is not for levity, but for the total worth of man. Let us not have this childish luxury in our regards, but the austere worth; let us approach our friend with an audacious trust in the truth of his heart, in the breadth, impossible to be overturned, of his foundations.

The attractions of this subject are not to be resisted, and I leave, for the time, all account of subordinate social benefit, to speak of that select and sacred relation which is a kind of absolute, and which even leaves the language of love suspicious and common, so much is this purer, and nothing is so much divine.

I do not wish to treat friendships daintily, but with roughest courage. When they are real, they are not glass threads or frostwork, but the solidest thing we know. For now, after so many ages of experience, what do we know of nature or of ourselves? Not one step has man taken toward the solution of the problem of his destiny. In one condemnation of folly stand the whole universe of men. But the sweet sincerity of joy and peace which I draw from this alliance with my brother's soul is the nut itself whereof all nature and all thought is but the husk and shell. Happy is the house that shelters a friend! It might well be built, like a festal bower or arch, to entertain him a single day. Happier, if he know the solemnity of that relation and honor its law! He who offers himself a candidate for that covenant comes up, like an Olympian, to the great games where the first-born of the world are the competitors. He proposes himself for contests where Time, Want, Danger, are in the lists, and he alone is victor who has truth enough in his constitution to preserve the delicacy of his beauty from the wear and tear of all these. The gifts of fortune may be present or absent, but all the speed in that contest depends on intrinsic nobleness and the contempt of trifles. There are two elements that go to the composition of friendship, each so sovereign that I can detect no superiority in either, no reason why either should be first named. One is truth. A friend is a person with whom I may be sincere. Before him I may think aloud. I am arrived at last in the presence of a man so real and equal that I may drop even those undermost garments of dissimulation, courtesy, and second thought, which men never put off, and may deal with him with the simplicity and wholeness with which one chemical atom meets another. Sincerity is the luxury allowed, like diadems and authority, only to the highest rank; that being permitted to speak truth, as having none above it to court or conform unto. Every

man alone is sincere. At the entrance of a second person, hypocrisy begins. We parry and fend the approach of our fellow-man by compliments, by gossip, by amusements, by affairs. We cover up our thought from him under a hundred folds. I knew a man who under a certain religious frenzy cast off this drapery, and omitting all compliment and commonplace, spoke to the conscience of every person he encountered, and that with great insight and beauty. At first he was resisted, and all men agreed he was mad. But persisting — as indeed he could not help doing — for some time in this course, he attained to the advantage of bringing every man of his acquaintance into true relations with him. No man would think of speaking falsely with him, or of putting him off with any chat of markets or reading-rooms. But every man was constrained by so much sincerity to the like plaindealing, and what love of nature, what poetry, what symbol of truth he had, he did certainly show him. But to most of us society shows not its face and eye, but its side and its back. To stand in true relations with men in a false age is worth a fit of insanity, is it not? We can seldom go erect. Almost every man we meet requires some civility, — requires to be humored; he has some fame, some talent, some whim of religion or philanthropy in his head that is not to be questioned, and which spoils all conversation with him. But a friend is a sane man who exercises not my ingenuity, but me. My friend gives me entertainment without requiring any stipulation on my part. A friend therefore is a sort of paradox in nature. I who alone am, I who see nothing in nature whose existence I can affirm with equal evidence to my own, behold now the semblance of my being, in all its height, variety, and curiosity, reiterated in a foreign form; so that a friend may well be reckoned the masterpiece of nature.

The other element of friendship is tenderness. We are holden to men by every sort of tie, by blood, by pride, by fear, by hope, by lucre, by lust, by hate, by admiration, by every circumstance and badge and trifle, — but we can scarce believe that so much character can subsist in another as to draw us by love. Can another be so blessed and we so pure that we can offer him tenderness? When a man becomes dear to me I have touched the goal of fortune. I find very little written directly to the heart of this matter in books. And yet I have one text which I cannot choose but remember. My author says,— “I offer myself faintly and bluntly to those whose I effectually am, and tender myself least to him to whom I am the most devoted.” I wish that friendship should have feet, as well as eyes and eloquence. It must plant itself on the ground, before it vaults over the moon. I wish it to be a little of a citizen, before it is quite a cherub. We chide the citizen because he makes love a commodity. It is an exchange of gifts, of useful loans; it is good neighborhood; it watches with the sick; it holds the pall at the funeral; and quite loses sight of the delicacies and nobility of the relation. But

though we cannot find the god under this disguise of a sutler, yet on the other hand we cannot forgive the poet if he spins his thread too fine and does not substantiate his romance by the municipal virtues of justice, punctuality, fidelity and pity. I hate the prostitution of the name of friendship to signify modish and worldly alliances. I much prefer the company of ploughboys and tin-peddlers to the silken and perfumed amity which celebrates its days of encounter by a frivolous display, by rides in a curricle and dinners at the best taverns. The end of friendship is a commerce the most strict and homely that can be joined; more strict than any of which we have experience. It is for aid and comfort through all the relations and passages of life and death. It is fit for serene days and graceful gifts and country rambles, but also for rough roads and hard fare, shipwreck, poverty, and persecution. It keeps company with the sallies of the wit and the trances of religion. We are to dignify to each other the daily needs and offices of man's life, and embellish it by courage, wisdom and unity. It should never fall into something usual and settled, but should be alert and inventive and add rhyme and reason to what was drudgery.

Friendship may be said to require natures so rare and costly, each so well tempered and so happily adapted, and withal so circumstanced (for even in that particular, a poet says, love demands that the parties be altogether paired), that its satisfaction can very seldom be assured. It cannot subsist in its perfection, say some of those who are learned in this warm lore of the heart, betwixt more than two. I am not quite so strict in my terms, perhaps because I have never known so high a fellowship as others. I please my imagination more with a circle of godlike men and women variously related to each other and between whom subsists a lofty intelligence. But I find this law of one to one peremptory for conversation, which is the practice and consummation of friendship. Do not mix waters too much. The best mix as ill as good and bad. You shall have very useful and cheering discourse at several times with two several men, but let all three of you come together and you shall not have one new and hearty word. Two may talk and one may hear, but three cannot take part in a conversation of the most sincere and searching sort. In good company there is never such discourse between two, across the table, as takes place when you leave them alone. In good company the individuals merge their egotism into a social soul exactly co-extensive with the several consciousnesses there present. No partialities of friend to friend, no fondnesses of brother to sister, of wife to husband, are there pertinent, but quite otherwise. Only he may then speak who can sail on the common thought of the party, and not poorly limited to his own. Now this convention, which good sense demands, destroys the high freedom of great conversation, which requires an absolute running of two souls into one.

No two men but being left alone with each other enter into simpler relations. Yet it is affinity that determines which two shall converse. Unrelated men give little joy to each other, will never suspect the latent powers of each. We talk sometimes of a great talent for conversation, as if it were a permanent property in some individuals. Conversation is an evanescent relation, — no more. A man is reputed to have thought and eloquence; he cannot, for all that, say a word to his cousin or his uncle. They accuse his silence with as much reason as they would blame the insignificance of a dial in the shade. In the sun it will mark the hour. Among those who enjoy his thought he will regain his tongue.

Friendship requires that rare mean betwixt likeness and unlikeness that piques each with the presence of power and of consent in the other party. Let me be alone to the end of the world, rather than that my friend should overstep, by a word or a look, his real sympathy. I am equally balked by antagonism and by compliance. Let him not cease an instant to be himself. The only joy I have in his being mine, is that the not mine is mine. I hate, where I looked for a manly furtherance, or at least a manly resistance, to find a mush of concession. Better be a nettle in the side of your friend than his echo. The condition which high friendship demands is ability to do without it. That high office requires great and sublime parts. There must be very two, before there can be very one. Let it be an alliance of two large, formidable natures, mutually beheld, mutually feared, before yet they recognize the deep identity which, beneath these disparities, unites them.

He only is fit for this society who is magnanimous; who is sure that greatness and goodness are always economy; who is not swift to intermeddle with his fortunes. Let him not intermeddle with this. Leave to the diamond its ages to grow, nor expect to accelerate the births of the eternal. Friendship demands a religious treatment. We talk of choosing our friends, but friends are self-elected. Reverence is a great part of it. Treat your friend as a spectacle. Of course he has merits that are not yours, and that you cannot honor if you must needs hold him close to your person. Stand aside; give those merits room; let them mount and expand. Are you the friend of your friend's buttons, or of his thought? To a great heart he will still be a stranger in a thousand particulars, that he may come near in the holiest ground. Leave it to girls and boys to regard a friend as property, and to suck a short and all-confounding pleasure, instead of the noblest benefit.

Let us buy our entrance to this guild by a long probation. Why should we desecrate noble and beautiful souls by intruding on them? Why insist on rash personal relations with your friend? Why go to his house, or know his mother and brother and sisters? Why be visited by him at your own? Are these things material to our covenant? Leave this touching and clawing. Let him be to me a

spirit. A message, a thought, a sincerity, a glance from him, I want, but not news, nor pottage. I can get politics and chat and neighborly conveniences from cheaper companions. Should not the society of my friend be to me poetic, pure, universal and great as nature itself? Ought I to feel that our tie is profane in comparison with yonder bar of cloud that sleeps on the horizon, or that clump of waving grass that divides the brook? Let us not vilify, but raise it to that standard. That great defying eye, that scornful beauty of his mien and action, do not pique yourself on reducing, but rather fortify and enhance. Worship his superiorities; wish him not less by a thought, but hoard and tell them all. Guard him as thy counterpart. Let him be to thee for ever a sort of beautiful enemy, untamable, devoutly revered, and not a trivial conveniency to be soon outgrown and cast aside. The hues of the opal, the light of the diamond, are not to be seen if the eye is too near. To my friend I write a letter and from him I receive a letter. That seems to you a little. It suffices me. It is a spiritual gift worthy of him to give and of me to receive. It profanes nobody. In these warm lines the heart will trust itself, as it will not to the tongue, and pour out the prophecy of a godlier existence than all the annals of heroism have yet made good.

Respect so far the holy laws of this fellowship as not to prejudice its perfect flower by your impatience for its opening. We must be our own before we can be another's. There is at least this satisfaction in crime, according to the Latin proverb; — you can speak to your accomplice on even terms. *Crimen quos inquinat, aequat.* To those whom we admire and love, at first we cannot. Yet the least defect of self-possession vitiates, in my judgment, the entire relation. There can never be deep peace between two spirits, never mutual respect, until in their dialogue each stands for the whole world.

What is so great as friendship, let us carry with what grandeur of spirit we can. Let us be silent, — so we may hear the whisper of the gods. Let us not interfere. Who set you to cast about what you should say to the select souls, or how to say any thing to such? No matter how ingenious, no matter how graceful and bland. There are innumerable degrees of folly and wisdom, and for you to say aught is to be frivolous. Wait, and thy heart shall speak. Wait until the necessary and everlasting overpowers you, until day and night avail themselves of your lips. The only reward of virtue is virtue; the only way to have a friend is to be one. You shall not come nearer a man by getting into his house. If unlike, his soul only flees the faster from you, and you shall never catch a true glance of his eye. We see the noble afar off and they repel us; why should we intrude? Late, — very late, — we perceive that no arrangements, no introductions, no consuetudes or habits of society would be of any avail to establish us in such relations with them as we desire, — but solely the uprising of nature in us to the

same degree it is in them; then shall we meet as water with water; and if we should not meet them then, we shall not want them, for we are already they. In the last analysis, love is only the reflection of a man's own worthiness from other men. Men have sometimes exchanged names with their friends, as if they would signify that in their friend each loved his own soul.

The higher the style we demand of friendship, of course the less easy to establish it with flesh and blood. We walk alone in the world. Friends such as we desire are dreams and fables. But a sublime hope cheers ever the faithful heart, that elsewhere, in other regions of the universal power, souls are now acting, enduring, and daring, which can love us and which we can love. We may congratulate ourselves that the period of nonage, of follies, of blunders and of shame, is passed in solitude, and when we are finished men we shall grasp heroic hands in heroic hands. Only be admonished by what you already see, not to strike leagues of friendship with cheap persons, where no friendship can be. Our impatience betrays us into rash and foolish alliances which no god attends. By persisting in your path, though you forfeit the little you gain the great. You demonstrate yourself, so as to put yourself out of the reach of false relations, and you draw to you the first-born of the world, — those rare pilgrims whereof only one or two wander in nature at once, and before whom the vulgar great show as spectres and shadows merely.

It is foolish to be afraid of making our ties too spiritual, as if so we could lose any genuine love. Whatever correction of our popular views we make from insight, nature will be sure to bear us out in, and though it seem to rob us of some joy, will repay us with a greater. Let us feel if we will the absolute insulation of man. We are sure that we have all in us. We go to Europe, or we pursue persons, or we read books, in the instinctive faith that these will call it out and reveal us to ourselves. Beggars all. The persons are such as we; the Europe, an old faded garment of dead persons; the books, their ghosts. Let us drop this idolatry. Let us give over this mendicancy. Let us even bid our dearest friends farewell, and defy them, saying, 'Who are you? Unhand me: I will be dependent no more.' Ah! seest thou not, O brother, that thus we part only to meet again on a higher platform, and only be more each other's because we are more our own? A friend is Janus-faced; he looks to the past and the future. He is the child of all my foregoing hours, the prophet of those to come, and the harbinger of a greater friend.

I do then with my friends as I do with my books. I would have them where I can find them, but I seldom use them. We must have society on our own terms, and admit or exclude it on the slightest cause. I cannot afford to speak much with my friend. If he is great he makes me so great that I cannot descend to converse.

In the great days, presentiments hover before me in the firmament. I ought then to dedicate myself to them. I go in that I may seize them, I go out that I may seize them. I fear only that I may lose them receding into the sky in which now they are only a patch of brighter light. Then, though I prize my friends, I cannot afford to talk with them and study their visions, lest I lose my own. It would indeed give me a certain household joy to quit this lofty seeking, this spiritual astronomy or search of stars, and come down to warm sympathies with you; but then I know well I shall mourn always the vanishing of my mighty gods. It is true, next week I shall have languid moods, when I can well afford to occupy myself with foreign objects; then I shall regret the lost literature of your mind, and wish you were by my side again. But if you come, perhaps you will fill my mind only with new visions; not with yourself but with your lustres, and I shall not be able any more than now to converse with you. So I will owe to my friends this evanescent intercourse. I will receive from them not what they have but what they are. They shall give me that which properly they cannot give, but which emanates from them. But they shall not hold me by any relations less subtile and pure. We will meet as though we met not, and part as though we parted not.

It has seemed to me lately more possible than I knew, to carry a friendship greatly, on one side, without due correspondence on the other. Why should I cumber myself with regrets that the receiver is not capacious? It never troubles the sun that some of his rays fall wide and vain into ungrateful space, and only a small part on the reflecting planet. Let your greatness educate the crude and cold companion. If he is unequal he will presently pass away; but thou art enlarged by thy own shining, and no longer a mate for frogs and worms, dost soar and burn with the gods of the empyrean. It is thought a disgrace to love unrequited. But the great will see that true love cannot be unrequited. True love transcends the unworthy object and dwells and broods on the eternal, and when the poor interposed mask crumbles, it is not sad, but feels rid of so much earth and feels its independency the surer. Yet these things may hardly be said without a sort of treachery to the relation. The essence of friendship is entireness, a total magnanimity and trust. It must not surmise or provide for infirmity. It treats its object as a god, that it may deify both.

PRUDENCE.

THEME no poet gladly sung,

Fair to old and foul to young;
Scorn not thou the love of parts,
And the articles of arts.
Grandeur of the perfect sphere
Thanks the atoms that cohere.

PRUDENCE.

What right have I to write on Prudence, whereof I have Little, and that of the negative sort? My prudence consists in avoiding and going without, not in the inventing of means and methods, not in adroit steering, not in gentle repairing. I have no skill to make money spend well, no genius in my economy, and whoever sees my garden discovers that I must have some other garden. Yet I love facts, and hate lubricity and people without perception. Then I have the same title to write on prudence that I have to write on poetry or holiness. We write from aspiration and antagonism, as well as from experience. We paint those qualities which we do not possess. The poet admires the man of energy and tactics; the merchant breeds his son for the church or the bar; and where a man is not vain and egotistic you shall find what he has not by his praise. Moreover it would be hardly honest in me not to balance these fine lyric words of Love and Friendship with words of coarser sound, and whilst my debt to my senses is real and constant, not to own it in passing.

Prudence is the virtue of the senses. It is the science of appearances. It is the outmost action of the inward life. It is God taking thought for oxen. It moves matter after the laws of matter. It is content to seek health of body by complying with physical conditions, and health of mind by the laws of the intellect.

The world of the senses is a world of shows; it does not exist for itself, but has a symbolic character; and a true prudence or law of shows recognizes the co-presence of other laws and knows that its own office is subaltern; knows that it is surface and not centre where it works. Prudence is false when detached. It is legitimate when it is the Natural History of the soul incarnate, when it unfolds the beauty of laws within the narrow scope of the senses.

There are all degrees of proficiency in knowledge of the world. It is sufficient to our present purpose to indicate three. One class live to the utility of the symbol, esteeming health and wealth a final good. Another class live above this mark to the beauty of the symbol, as the poet and artist and the naturalist and man of science. A third class live above the beauty of the symbol to the beauty of the thing signified; these are wise men. The first class have common sense; the second, taste; and the third, spiritual perception. Once in a long time, a man traverses the whole scale, and sees and enjoys the symbol solidly, then also has a clear eye for its beauty, and lastly, whilst he pitches his tent on this sacred volcanic isle of nature, does not offer to build houses and barns thereon, — reverencing the splendor of the God which he sees bursting through each chink and cranny.

The world is filled with the proverbs and acts and winkings of a base prudence, which is a devotion to matter, as if we possessed no other faculties than the palate, the nose, the touch, the eye and ear; a prudence which adores the Rule of Three, which never subscribes, which never gives, which seldom lends, and asks but one question of any project, — Will it bake bread? This is a disease like a thickening of the skin until the vital organs are destroyed. But culture, revealing the high origin of the apparent world and aiming at the perfection of the man as the end, degrades every thing else, as health and bodily life, into means. It sees prudence not to be a several faculty, but a name for wisdom and virtue conversing with the body and its wants. Cultivated men always feel and speak so, as if a great fortune, the achievement of a civil or social measure, great personal influence, a graceful and commanding address, had their value as proofs of the energy of the spirit. If a man lose his balance and immerse himself in any trades or pleasures for their own sake, he may be a good wheel or pin, but he is not a cultivated man.

The spurious prudence, making the senses final, is the god of sots and cowards, and is the subject of all comedy. It is nature's joke, and therefore literature's. The true prudence limits this sensualism by admitting the knowledge of an internal and real world. This recognition once made, the order of the world and the distribution of affairs and times, being studied with the co-perception of their subordinate place, will reward any degree of attention. For our existence, thus apparently attached in nature to the sun and the returning moon and the periods which they mark, — so susceptible to climate and to country, so alive to social good and evil, so fond of splendor and so tender to hunger and cold and debt, — reads all its primary lessons out of these books.

Prudence does not go behind nature and ask whence it is. It takes the laws of the world whereby man's being is conditioned, as they are, and keeps these laws that it may enjoy their proper good. It respects space and time, climate, want, sleep, the law of polarity, growth and death. There revolve, to give bound and period to his being on all sides, the sun and moon, the great formalists in the sky: here lies stubborn matter, and will not swerve from its chemical routine. Here is a planted globe, pierced and belted with natural laws and fenced and distributed externally with civil partitions and properties which impose new restraints on the young inhabitant.

We eat of the bread which grows in the field. We live by the air which blows around us and we are poisoned by the air that is too cold or too hot, too dry or too wet. Time, which shows so vacant, indivisible and divine in its coming, is slit and peddled into trifles and tatters. A door is to be painted, a lock to be repaired. I want wood or oil, or meal or salt; the house smokes, or I have a

headache; then the tax, and an affair to be transacted with a man without heart or brains, and the stinging recollection of an injurious or very awkward word, — these eat up the hours. Do what we can, summer will have its flies; if we walk in the woods we must feed mosquitos; if we go a-fishing we must expect a wet coat. Then climate is a great impediment to idle persons; we often resolve to give up the care of the weather, but still we regard the clouds and the rain.

We are instructed by these petty experiences which usurp the hours and years. The hard soil and four months of snow make the inhabitant of the northern temperate zone wiser and abler than his fellow who enjoys the fixed smile of the tropics. The islander may ramble all day at will. At night he may sleep on a mat under the moon, and wherever a wild date-tree grows, nature has, without a prayer even, spread a table for his morning meal. The northerner is perforce a householder. He must brew, bake, salt and preserve his food, and pile wood and coal. But as it happens that not one stroke can labor lay to without some new acquaintance with nature, and as nature is inexhaustibly significant, the inhabitants of these climates have always excelled the southerner in force. Such is the value of these matters that a man who knows other things can never know too much of these. Let him have accurate perceptions. Let him, if he have hands, handle; if eyes, measure and discriminate; let him accept and hive every fact of chemistry, natural history and economics; the more he has, the less is he willing to spare any one. Time is always bringing the occasions that disclose their value. Some wisdom comes out of every natural and innocent action. The domestic man, who loves no music so well as his kitchen clock and the airs which the logs sing to him as they burn on the hearth, has solaces which others never dream of. The application of means to ends insures victory and the songs of victory not less in a farm or a shop than in the tactics of party or of war. The good husband finds method as efficient in the packing of fire-wood in a shed or in the harvesting of fruits in the cellar, as in Peninsular campaigns or the files of the Department of State. In the rainy day he builds a work-bench, or gets his toolbox set in the corner of the barn-chamber, and stored with nails, gimlet, pincers, screwdriver and chisel. Herein he tastes an old joy of youth and childhood, the cat-like love of garrets, presses and corn-chambers, and of the conveniences of long housekeeping. His garden or his poultry-yard tells him many pleasant anecdotes. One might find argument for optimism in the abundant flow of this saccharine element of pleasure in every suburb and extremity of the good world. Let a man keep the law, — any law, — and his way will be strown with satisfactions. There is more difference in the quality of our pleasures than in the amount.

On the other hand, nature punishes any neglect of prudence. If you think the

senses final, obey their law. If you believe in the soul, do not clutch at sensual sweetness before it is ripe on the slow tree of cause and effect. It is vinegar to the eyes to deal with men of loose and imperfect perception. Dr. Johnson is reported to have said,— “If the child says he looked out of this window, when he looked out of that, — whip him.” Our American character is marked by a more than average delight in accurate perception, which is shown by the currency of the byword, “No mistake.” But the discomfort of unpunctuality, of confusion of thought about facts, of inattention to the wants of to-morrow, is of no nation. The beautiful laws of time and space, once dislocated by our inaptitude, are holes and dens. If the hive be disturbed by rash and stupid hands, instead of honey it will yield us bees. Our words and actions to be fair must be timely. A gay and pleasant sound is the whetting of the scythe in the mornings of June, yet what is more lonesome and sad than the sound of a whetstone or mower’s rifle when it is too late in the season to make hay? Scatter-brained and “afternoon” men spoil much more than their own affair in spoiling the temper of those who deal with them. I have seen a criticism on some paintings, of which I am reminded when I see the shiftless and unhappy men who are not true to their senses. The last Grand Duke of Weimar, a man of superior understanding, said, — “I have sometimes remarked in the presence of great works of art, and just now especially in Dresden, how much a certain property contributes to the effect which gives life to the figures, and to the life an irresistible truth. This property is the hitting, in all the figures we draw, the right centre of gravity. I mean the placing the figures firm upon their feet, making the hands grasp, and fastening the eyes on the spot where they should look. Even lifeless figures, as vessels and stools — let them be drawn ever so correctly — lose all effect so soon as they lack the resting upon their centre of gravity, and have a certain swimming and oscillating appearance. The Raphael in the Dresden gallery (the only greatly affecting picture which I have seen) is the quietest and most passionless piece you can imagine; a couple of saints who worship the Virgin and Child. Nevertheless, it awakens a deeper impression than the contortions of ten crucified martyrs. For beside all the resistless beauty of form, it possesses in the highest degree the property of the perpendicularity of all the figures.” This perpendicularity we demand of all the figures in this picture of life. Let them stand on their feet, and not float and swing. Let us know where to find them. Let them discriminate between what they remember and what they dreamed, call a spade a spade, give us facts, and honor their own senses with trust.

But what man shall dare tax another with imprudence? Who is prudent? The men we call greatest are least in this kingdom. There is a certain fatal dislocation in our relation to nature, distorting our modes of living and making every law

our enemy, which seems at last to have aroused all the wit and virtue in the world to ponder the question of Reform. We must call the highest prudence to counsel, and ask why health and beauty and genius should now be the exception rather than the rule of human nature? We do not know the properties of plants and animals and the laws of nature, through our sympathy with the same; but this remains the dream of poets. Poetry and prudence should be coincident. Poets should be lawgivers; that is, the boldest lyric inspiration should not chide and insult, but should announce and lead the civil code and the day's work. But now the two things seem irreconcilably parted. We have violated law upon law until we stand amidst ruins, and when by chance we espy a coincidence between reason and the phenomena, we are surprised. Beauty should be the dowry of every man and woman, as invariably as sensation; but it is rare. Health or sound organization should be universal. Genius should be the child of genius and every child should be inspired; but now it is not to be predicted of any child, and nowhere is it pure. We call partial half-lights, by courtesy, genius; talent which converts itself to money; talent which glitters to-day that it may dine and sleep well to-morrow; and society is officered by men of parts, as they are properly called, and not by divine men. These use their gifts to refine luxury, not to abolish it. Genius is always ascetic, and piety, and love. Appetite shows to the finer souls as a disease, and they find beauty in rites and bounds that resist it.

We have found out fine names to cover our sensuality withal, but no gifts can raise intemperance. The man of talent affects to call his transgressions of the laws of the senses trivial and to count them nothing considered with his devotion to his art. His art never taught him lewdness, nor the love of wine, nor the wish to reap where he had not sowed. His art is less for every deduction from his holiness, and less for every defect of common sense. On him who scorned the world as he said, the scorned world wreaks its revenge. He that despiseth small things will perish by little and little. Goethe's Tasso is very likely to be a pretty fair historical portrait, and that is true tragedy. It does not seem to me so genuine grief when some tyrannous Richard the Third oppresses and slays a score of innocent persons, as when Antonio and Tasso, both apparently right, wrong each other. One living after the maxims of this world and consistent and true to them, the other fired with all divine sentiments, yet grasping also at the pleasures of sense, without submitting to their law. That is a grief we all feel, a knot we cannot untie. Tasso's is no infrequent case in modern biography. A man of genius, of an ardent temperament, reckless of physical laws, self-indulgent, becomes presently unfortunate, querulous, a "discomfortable cousin," a thorn to himself and to others.

The scholar shames us by his bifold life. Whilst something higher than

prudence is active, he is admirable; when common sense is wanted, he is an encumbrance. Yesterday, Caesar was not so great; to-day, the felon at the gallows' foot is not more miserable. Yesterday, radiant with the light of an ideal world in which he lives, the first of men; and now oppressed by wants and by sickness, for which he must thank himself. He resembles the pitiful drivellers whom travellers describe as frequenting the bazaars of Constantinople, who skulk about all day, yellow, emaciated, ragged, sneaking; and at evening, when the bazaars are open, slink to the opium-shop, swallow their morsel and become tranquil and glorified seers. And who has not seen the tragedy of imprudent genius struggling for years with paltry pecuniary difficulties, at last sinking, chilled, exhausted and fruitless, like a giant slaughtered by pins?

Is it not better that a man should accept the first pains and mortifications of this sort, which nature is not slack in sending him, as hints that he must expect no other good than the just fruit of his own labor and self-denial? Health, bread, climate, social position, have their importance, and he will give them their due. Let him esteem Nature a perpetual counsellor, and her perfections the exact measure of our deviations. Let him make the night night, and the day day. Let him control the habit of expense. Let him see that as much wisdom may be expended on a private economy as on an empire, and as much wisdom may be drawn from it. The laws of the world are written out for him on every piece of money in his hand. There is nothing he will not be the better for knowing, were it only the wisdom of Poor Richard, or the State-Street prudence of buying by the acre to sell by the foot; or the thrift of the agriculturist, to stick a tree between whiles, because it will grow whilst he sleeps; or the prudence which consists in husbanding little strokes of the tool, little portions of time, particles of stock and small gains. The eye of prudence may never shut. Iron, if kept at the ironmonger's, will rust; beer, if not brewed in the right state of the atmosphere, will sour; timber of ships will rot at sea, or if laid up high and dry, will strain, warp and dry-rot; money, if kept by us, yields no rent and is liable to loss; if invested, is liable to depreciation of the particular kind of stock. Strike, says the smith, the iron is white; keep the rake, says the haymaker, as nigh the scythe as you can, and the cart as nigh the rake. Our Yankee trade is reputed to be very much on the extreme of this prudence. It takes bank-notes, good, bad, clean, ragged, and saves itself by the speed with which it passes them off. Iron cannot rust, nor beer sour, nor timber rot, nor calicoes go out of fashion, nor money stocks depreciate, in the few swift moments in which the Yankee suffers any one of them to remain in his possession. In skating over thin ice our safety is in our speed.

Let him learn a prudence of a higher strain. Let him learn that every thing in

nature, even motes and feathers, go by law and not by luck, and that what he sows he reaps. By diligence and self-command let him put the bread he eats at his own disposal, that he may not stand in bitter and false relations to other men; for the best good of wealth is freedom. Let him practise the minor virtues. How much of human life is lost in waiting! let him not make his fellow-creatures wait. How many words and promises are promises of conversation! Let his be words of fate. When he sees a folded and sealed scrap of paper float round the globe in a pine ship and come safe to the eye for which it was written, amidst a swarming population, let him likewise feel the admonition to integrate his being across all these distracting forces, and keep a slender human word among the storms, distances and accidents that drive us hither and thither, and, by persistency, make the paltry force of one man reappear to redeem its pledge after months and years in the most distant climates.

We must not try to write the laws of any one virtue, looking at that only. Human nature loves no contradictions, but is symmetrical. The prudence which secures an outward well-being is not to be studied by one set of men, whilst heroism and holiness are studied by another, but they are reconcilable. Prudence concerns the present time, persons, property and existing forms. But as every fact hath its roots in the soul, and if the soul were changed, would cease to be, or would become some other thing, — the proper administration of outward things will always rest on a just apprehension of their cause and origin; that is, the good man will be the wise man, and the single-hearted the politic man. Every violation of truth is not only a sort of suicide in the liar, but is a stab at the health of human society. On the most profitable lie the course of events presently lays a destructive tax; whilst frankness invites frankness, puts the parties on a convenient footing and makes their business a friendship. Trust men and they will be true to you; treat them greatly and they will show themselves great, though they make an exception in your favor to all their rules of trade.

So, in regard to disagreeable and formidable things, prudence does not consist in evasion or in flight, but in courage. He who wishes to walk in the most peaceful parts of life with any serenity must screw himself up to resolution. Let him front the object of his worst apprehension, and his stoutness will commonly make his fear groundless. The Latin proverb says, “In battles the eye is first overcome.” Entire self-possession may make a battle very little more dangerous to life than a match at foils or at football. Examples are cited by soldiers of men who have seen the cannon pointed and the fire given to it, and who have stepped aside from the path of the ball. The terrors of the storm are chiefly confined to the parlor and the cabin. The drover, the sailor, buffets it all day, and his health renews itself at as vigorous a pulse under the sleet as under the sun of June.

In the occurrence of unpleasant things among neighbors, fear comes readily to heart and magnifies the consequence of the other party; but it is a bad counsellor. Every man is actually weak and apparently strong. To himself he seems weak; to others, formidable. You are afraid of Grim; but Grim also is afraid of you. You are solicitous of the good-will of the meanest person, uneasy at his ill-will. But the sturdiest offender of your peace and of the neighborhood, if you rip up his claims, is as thin and timid as any, and the peace of society is often kept, because, as children say, one is afraid, and the other dares not. Far off, men swell, bully and threaten; bring them hand to hand, and they are a feeble folk.

It is a proverb that 'courtesy costs nothing'; but calculation might come to value love for its profit. Love is fabled to be blind, but kindness is necessary to perception; love is not a hood, but an eye-water. If you meet a sectary or a hostile partisan, never recognize the dividing lines, but meet on what common ground remains, — if only that the sun shines and the rain rains for both; the area will widen very fast, and ere you know it, the boundary mountains on which the eye had fastened have melted into air. If they set out to contend, Saint Paul will lie and Saint John will hate. What low, poor, paltry, hypocritical people an argument on religion will make of the pure and chosen souls! They will shuffle and crow, crook and hide, feign to confess here, only that they may brag and conquer there, and not a thought has enriched either party, and not an emotion of bravery, modesty, or hope. So neither should you put yourself in a false position with your contemporaries by indulging a vein of hostility and bitterness. Though your views are in straight antagonism to theirs, assume an identity of sentiment, assume that you are saying precisely that which all think, and in the flow of wit and love roll out your paradoxes in solid column, with not the infirmity of a doubt. So at least shall you get an adequate deliverance. The natural motions of the soul are so much better than the voluntary ones that you will never do yourself justice in dispute. The thought is not then taken hold of by the right handle, does not show itself proportioned and in its true bearings, but bears extorted, hoarse, and half witness. But assume a consent and it shall presently be granted, since really and underneath their external diversities, all men are of one heart and mind.

Wisdom will never let us stand with any man or men on an unfriendly footing. We refuse sympathy and intimacy with people, as if we waited for some better sympathy and intimacy to come. But whence and when? To-morrow will be like to-day. Life wastes itself whilst we are preparing to live. Our friends and fellow-workers die off from us. Scarcely can we say we see new men, new women, approaching us. We are too old to regard fashion, too old to expect

patronage of any greater or more powerful. Let us suck the sweetness of those affections and consuetudes that grow near us. These old shoes are easy to the feet. Undoubtedly we can easily pick faults in our company, can easily whisper names prouder, and that tickle the fancy more. Every man's imagination hath its friends; and life would be dearer with such companions. But if you cannot have them on good mutual terms, you cannot have them. If not the Deity but our ambition hews and shapes the new relations, their virtue escapes, as strawberries lose their flavor in garden-beds.

Thus truth, frankness, courage, love, humility and all the virtues range themselves on the side of prudence, or the art of securing a present well-being. I do not know if all matter will be found to be made of one element, as oxygen or hydrogen, at last, but the world of manners and actions is wrought of one stuff, and begin where we will we are pretty sure in a short space to be mumbling our ten commandments.

HEROISM.

“Paradise is under the shadow of swords.”

Mahomet.

RUBY wine is drunk by knaves,
Sugar spends to fatten slaves,
Rose and vine-leaf deck buffoons;
Thunderclouds are Jove's festoons,
Drooping oft in wreaths of dread
Lightning-knotted round his head;
The hero is not fed on sweets,
Daily his own heart he eats;
Chambers of the great are jails,
And head-winds right for royal sails.

HEROISM.

In the elder English dramatists, and mainly in the plays Of Beaumont and Fletcher, there is a constant recognition of gentility, as if a noble behavior were as easily marked in the society of their age as color is in our American population. When any Rodrigo, Pedro or Valerio enters, though he be a stranger, the duke or governor exclaims, 'This is a gentleman, — and proffers civilities without end; but all the rest are slag and refuse. In harmony with this delight in personal advantages there is in their plays a certain heroic cast of character and dialogue, — as in Bonduca, Sophocles, the Mad Lover, the Double Marriage, — wherein the speaker is so earnest and cordial and on such deep grounds of character, that the dialogue, on the slightest additional incident in the plot, rises naturally into poetry. Among many texts take the following. The Roman Martius has conquered Athens, — all but the invincible spirits of Sophocles, the duke of Athens, and Dorigen, his wife. The beauty of the latter inflames Martius, and he seeks to save her husband; but Sophocles will not ask his life, although assured that a word will save him, and the execution of both proceeds: — Valerius. Bid thy wife farewell.

Soph. No, I will take no leave. My Dorigen, Yonder, above, 'bout Ariadne's crown, My spirit shall hover for thee. Prithee, haste.

Dor. Stay, Sophocles, — with this tie up my sight; Let not soft nature so transformed be, And lose her gentler sexed humanity, To make me see my lord bleed. So, 'tis well; Never one object underneath the sun
Will I behold before my Sophocles:
Farewell; now teach the Romans how to die.

Mar. Dost know what 't is to die?

Soph. Thou dost not, Martius,
And, therefore, not what 'tis to live; to die Is to begin to live. It is to end
An old, stale, weary work, and to commence A newer and a better. 'Tis to
leave
Deceitful knaves for the society
Of gods and goodness. Thou thyself must part At last from all thy garlands,
pleasures, triumphs, And prove thy fortitude what then 't will do.

Val. But art not grieved nor vexed to leave thy life thus?

Soph. Why should I grieve or vex for being sent
To them I ever loved best?
Now I'll kneel, But with my back toward thee; 'tis the last duty
This trunk can do the gods.

Mar. Strike, strike, Valerius,
Or Martius' heart will leap out at his mouth.

This is a man, a woman. Kiss thy lord, And live with all the freedom you
were wont.

O love! thou doubly hast afflicted me With virtue and with beauty.
Tracherous heart, My hand shall cast thee quick into my urn, Ere thou
transgress this knot of piety.

Val. What ails my brother?

Soph. Martius, O Martius,
Thou now hast found a way to conquer me.

Dor. O star of Rome! what gratitude can speak
Fit words to follow such a deed as this?

Mar. This admirable duke, Valerius,

With his disdain of fortune and of death, Captived himself, has captivated
me, And though my arm hath ta'en his body here, His soul hath subjugated
Martius' soul.

By Romulus, he is all soul, I think; He hath no flesh, and spirit cannot be
gyved; Then we have vanquished nothing; he is free, And Martius walks now in
captivity.

I do not readily remember any poem, play, sermon, novel, or oration that our
press vents in the last few years, which goes to the same tune. We have a great
many flutes and flageolets, but not often the sound of any fife. Yet,
Wordsworth's "Laodamia," and the ode of "Dion," and some sonnets, have a
certain noble music; and Scott will sometimes draw a stroke like the portrait of
Lord Evandale given by Balfour of Burley. Thomas Carlyle, with his natural
taste for what is manly and daring in character, has suffered no heroic trait in his
favorites to drop from his biographical and historical pictures. Earlier, Robert
Burns has given us a song or two. In the Harleian Miscellanies there is an
account of the battle of Lutzen which deserves to be read. And Simon Ockley's

History of the Saracens recounts the prodigies of individual valor, with admiration all the more evident on the part of the narrator that he seems to think that his place in Christian Oxford requires of him some proper protestations of abhorrence. But if we explore the literature of Heroism we shall quickly come to Plutarch, who is its Doctor and historian. To him we owe the Brasidas, the Dion, the Epaminondas, the Scipio of old, and I must think we are more deeply indebted to him than to all the ancient writers. Each of his "Lives" is a refutation to the despondency and cowardice of our religious and political theorists. A wild courage, a Stoicism not of the schools but of the blood, shines in every anecdote, and has given that book its immense fame.

We need books of this tart cathartic virtue more than books of political science or of private economy. Life is a festival only to the wise. Seen from the nook and chimney-side of prudence, it wears a ragged and dangerous front. The violations of the laws of nature by our predecessors and our contemporaries are punished in us also. The disease and deformity around us certify the infraction of natural, intellectual, and moral laws, and often violation on violation to breed such compound misery. A lock-jaw that bends a man's head back to his heels; hydrophobia that makes him bark at his wife and babes; insanity that makes him eat grass; war, plague, cholera, famine, indicate a certain ferocity in nature, which, as it had its inlet by human crime, must have its outlet by human suffering. Unhappily no man exists who has not in his own person become to some amount a stockholder in the sin, and so made himself liable to a share in the expiation.

Our culture therefore must not omit the arming of the man. Let him hear in season that he is born into the state of war, and that the commonwealth and his own well-being require that he should not go dancing in the weeds of peace, but warned, self-collected and neither defying nor dreading the thunder, let him take both reputation and life in his hand, and, with perfect urbanity dare the gibbet and the mob by the absolute truth of his speech and the rectitude of his behavior.

Towards all this external evil the man within the breast assumes a warlike attitude, and affirms his ability to cope single-handed with the infinite army of enemies. To this military attitude of the soul we give the name of Heroism. Its rudest form is the contempt for safety and ease, which makes the attractiveness of war. It is a self-trust which slights the restraints of prudence, in the plenitude of its energy and power to repair the harms it may suffer. The hero is a mind of such balance that no disturbances can shake his will, but pleasantly and as it were merrily he advances to his own music, alike in frightful alarms and in the tipsy mirth of universal dissoluteness. There is somewhat not philosophical in heroism; there is somewhat not holy in it; it seems not to know that other souls

are of one texture with it; it has pride; it is the extreme of individual nature. Nevertheless we must profoundly revere it. There is somewhat in great actions which does not allow us to go behind them. Heroism feels and never reasons, and therefore is always right; and although a different breeding, different religion and greater intellectual activity would have modified or even reversed the particular action, yet for the hero that thing he does is the highest deed, and is not open to the censure of philosophers or divines. It is the avowal of the unschooled man that he finds a quality in him that is negligent of expense, of health, of life, of danger, of hatred, of reproach, and knows that his will is higher and more excellent than all actual and all possible antagonists.

Heroism works in contradiction to the voice of mankind and in contradiction, for a time, to the voice of the great and good. Heroism is an obedience to a secret impulse of an individual's character. Now to no other man can its wisdom appear as it does to him, for every man must be supposed to see a little farther on his own proper path than any one else. Therefore just and wise men take umbrage at his act, until after some little time be past: then they see it to be in unison with their acts. All prudent men see that the action is clean contrary to a sensual prosperity; for every heroic act measures itself by its contempt of some external good. But it finds its own success at last, and then the prudent also extol.

Self-trust is the essence of heroism. It is the state of the soul at war, and its ultimate objects are the last defiance of falsehood and wrong, and the power to bear all that can be inflicted by evil agents. It speaks the truth and it is just, generous, hospitable, temperate, scornful of petty calculations and scornful of being scorned. It persists; it is of an undaunted boldness and of a fortitude not to be wearied out. Its jest is the littleness of common life. That false prudence which dotes on health and wealth is the butt and merriment of heroism. Heroism, like Plotinus, is almost ashamed of its body. What shall it say then to the sugar-plums and cats'-cradles, to the toilet, compliments, quarrels, cards and custard, which rack the wit of all society? What joys has kind nature provided for us dear creatures! There seems to be no interval between greatness and meanness. When the spirit is not master of the world, then it is its dupe. Yet the little man takes the great hoax so innocently, works in it so headlong and believing, is born red, and dies gray, arranging his toilet, attending on his own health, laying traps for sweet food and strong wine, setting his heart on a horse or a rifle, made happy with a little gossip or a little praise, that the great soul cannot choose but laugh at such earnest nonsense. "Indeed, these humble considerations make me out of love with greatness. What a disgrace is it to me to take note how many pairs of silk stockings thou hast, namely, these and those that were the peach-colored

ones; or to bear the inventory of thy shirts, as one for superfluity, and one other for use!”

Citizens, thinking after the laws of arithmetic, consider the inconvenience of receiving strangers at their fireside, reckon narrowly the loss of time and the unusual display; the soul of a better quality thrusts back the unseasonable economy into the vaults of life, and says, I will obey the God, and the sacrifice and the fire he will provide. Ibn Hankal, the Arabian geographer, describes a heroic extreme in the hospitality of Sogd, in Bukharia. “When I was in Sogd I saw a great building, like a palace, the gates of which were open and fixed back to the wall with large nails. I asked the reason, and was told that the house had not been shut, night or day, for a hundred years. Strangers may present themselves at any hour and in whatever number; the master has amply provided for the reception of the men and their animals, and is never happier than when they tarry for some time. Nothing of the kind have I seen in any other country.” The magnanimous know very well that they who give time, or money, or shelter, to the stranger, — so it be done for love and not for ostentation, — do, as it were, put God under obligation to them, so perfect are the compensations of the universe. In some way the time they seem to lose is redeemed and the pains they seem to take remunerate themselves. These men fan the flame of human love and raise the standard of civil virtue among mankind. But hospitality must be for service and not for show, or it pulls down the host. The brave soul rates itself too high to value itself by the splendor of its table and draperies. It gives what it hath, and all it hath, but its own majesty can lend a better grace to bannocks and fair water than belong to city feasts.

The temperance of the hero proceeds from the same wish to do no dishonor to the worthiness he has. But he loves it for its elegancy, not for its austerity. It seems not worth his while to be solemn and denounce with bitterness flesh-eating or wine-drinking, the use of tobacco, or opium, or tea, or silk, or gold. A great man scarcely knows how he dines, how he dresses; but without railing or precision his living is natural and poetic. John Eliot, the Indian Apostle, drank water, and said of wine,— “It is a noble, generous liquor and we should be humbly thankful for it, but, as I remember, water was made before it.” Better still is the temperance of King David, who poured out on the ground unto the Lord the water which three of his warriors had brought him to drink, at the peril of their lives.

It is told of Brutus, that when he fell on his sword after the battle of Philippi, he quoted a line of Euripides,— “O Virtue! I have followed thee through life, and I find thee at last but a shade.” I doubt not the hero is slandered by this report. The heroic soul does not sell its justice and its nobleness. It does not ask

to dine nicely and to sleep warm. The essence of greatness is the perception that virtue is enough. Poverty is its ornament. It does not need plenty, and can very well abide its loss.

But that which takes my fancy most in the heroic class, is the good-humor and hilarity they exhibit. It is a height to which common duty can very well attain, to suffer and to dare with solemnity. But these rare souls set opinion, success, and life at so cheap a rate that they will not soothe their enemies by petitions, or the show of sorrow, but wear their own habitual greatness. Scipio, charged with peculation, refuses to do himself so great a disgrace as to wait for justification, though he had the scroll of his accounts in his hands, but tears it to pieces before the tribunes. Socrates's condemnation of himself to be maintained in all honor in the Prytaneum, during his life, and Sir Thomas More's playfulness at the scaffold, are of the same strain. In Beaumont and Fletcher's "Sea Voyage," Juletta tells the stout captain and his company, — Jul. Why, slaves, 'tis in our power to hang ye.

Master. Very likely,

'Tis in our powers, then, to be hanged, and scorn ye.

These replies are sound and whole. Sport is the bloom and glow of a perfect health. The great will not condescend to take any thing seriously; all must be as gay as the song of a canary, though it were the building of cities or the eradication of old and foolish churches and nations which have cumbered the earth long thousands of years. Simple hearts put all the history and customs of this world behind them, and play their own game in innocent defiance of the Blue-Laws of the world; and such would appear, could we see the human race assembled in vision, like little children frolicking together, though to the eyes of mankind at large they wear a stately and solemn garb of works and influences.

The interest these fine stories have for us, the power of a romance over the boy who grasps the forbidden book under his bench at school, our delight in the hero, is the main fact to our purpose. All these great and transcendent properties are ours. If we dilate in beholding the Greek energy, the Roman pride, it is that we are already domesticating the same sentiment. Let us find room for this great guest in our small houses. The first step of worthiness will be to disabuse us of our superstitious associations with places and times, with number and size. Why should these words, Athenian, Roman, Asia and England, so tingle in the ear? Where the heart is, there the muses, there the gods sojourn, and not in any geography of fame. Massachusetts, Connecticut River and Boston Bay you think paltry places, and the ear loves names of foreign and classic topography. But here we are; and, if we will tarry a little, we may come to learn that here is best. See to it only that thyself is here, and art and nature, hope and fate, friends,

angels and the Supreme Being shall not be absent from the chamber where thou sittest. Epaminondas, brave and affectionate, does not seem to us to need Olympus to die upon, nor the Syrian sunshine. He lies very well where he is. The Jerseys were handsome ground enough for Washington to tread, and London streets for the feet of Milton. A great man makes his climate genial in the imagination of men, and its air the beloved element of all delicate spirits. That country is the fairest which is inhabited by the noblest minds. The pictures which fill the imagination in reading the actions of Pericles, Xenophon, Columbus, Bayard, Sidney, Hampden, teach us how needlessly mean our life is; that we, by the depth of our living, should deck it with more than regal or national splendor, and act on principles that should interest man and nature in the length of our days.

We have seen or heard of many extraordinary young men who never ripened, or whose performance in actual life was not extraordinary. When we see their air and mien, when we hear them speak of society, of books, of religion, we admire their superiority; they seem to throw contempt on our entire polity and social state; theirs is the tone of a youthful giant who is sent to work revolutions. But they enter an active profession and the forming Colossus shrinks to the common size of man. The magic they used was the ideal tendencies, which always make the Actual ridiculous; but the tough world had its revenge the moment they put their horses of the sun to plough in its furrow. They found no example and no companion, and their heart fainted. What then? The lesson they gave in their first aspirations is yet true; and a better valor and a purer truth shall one day organize their belief. Or why should a woman liken herself to any historical woman, and think, because Sappho, or Sevigne, or De Stael, or the cloistered souls who have had genius and cultivation do not satisfy the imagination and the serene Themis, none can, — certainly not she? Why not? She has a new and unattempted problem to solve, perchance that of the happiest nature that ever bloomed. Let the maiden, with erect soul, walk serenely on her way, accept the hint of each new experience, search in turn all the objects that solicit her eye, that she may learn the power and the charm of her new-born being, which is the kindling of a new dawn in the recesses of space. The fair girl who repels interference by a decided and proud choice of influences, so careless of pleasing, so wilful and lofty, inspires every beholder with somewhat of her own nobleness. The silent heart encourages her; O friend, never strike sail to a fear! Come into port greatly, or sail with God the seas. Not in vain you live, for every passing eye is cheered and refined by the vision.

The characteristic of heroism is its persistency. All men have wandering impulses, fits and starts of generosity. But when you have chosen your part,

abide by it, and do not weakly try to reconcile yourself with the world. The heroic cannot be the common, nor the common the heroic. Yet we have the weakness to expect the sympathy of people in those actions whose excellence is that they outrun sympathy and appeal to a tardy justice. If you would serve your brother, because it is fit for you to serve him, do not take back your words when you find that prudent people do not commend you. Adhere to your own act, and congratulate yourself if you have done something strange and extravagant and broken the monotony of a decorous age. It was a high counsel that I once heard given to a young person,— “Always do what you are afraid to do.” A simple manly character need never make an apology, but should regard its past action with the calmness of Phocion, when he admitted that the event of the battle was happy, yet did not regret his dissuasion from the battle.

There is no weakness or exposure for which we cannot find consolation in the thought — this is a part of my constitution, part of my relation and office to my fellow-creature. Has nature covenanted with me that I should never appear to disadvantage, never make a ridiculous figure? Let us be generous of our dignity as well as of our money. Greatness once and for ever has done with opinion. We tell our charities, not because we wish to be praised for them, not because we think they have great merit, but for our justification. It is a capital blunder; as you discover when another man recites his charities.

To speak the truth, even with some austerity, to live with some rigor of temperance, or some extremes of generosity, seems to be an asceticism which common good-nature would appoint to those who are at ease and in plenty, in sign that they feel a brotherhood with the great multitude of suffering men. And not only need we breathe and exercise the soul by assuming the penalties of abstinence, of debt, of solitude, of unpopularity, — but it behooves the wise man to look with a bold eye into those rarer dangers which sometimes invade men, and to familiarize himself with disgusting forms of disease, with sounds of execration, and the vision of violent death.

Times of heroism are generally times of terror, but the day never shines in which this element may not work. The circumstances of man, we say, are historically somewhat better in this country and at this hour than perhaps ever before. More freedom exists for culture. It will not now run against an axe at the first step out of the beaten track of opinion. But whoso is heroic will always find crises to try his edge. Human virtue demands her champions and martyrs, and the trial of persecution always proceeds. It is but the other day that the brave Lovejoy gave his breast to the bullets of a mob, for the rights of free speech and opinion, and died when it was better not to live.

I see not any road of perfect peace which a man can walk, but after the

counsel of his own bosom. Let him quit too much association, let him go home much, and stablish himself in those courses he approves. The unremitting retention of simple and high sentiments in obscure duties is hardening the character to that temper which will work with honor, if need be in the tumult, or on the scaffold. Whatever outrages have happened to men may befall a man again; and very easily in a republic, if there appear any signs of a decay of religion. Coarse slander, fire, tar and feathers and the gibbet, the youth may freely bring home to his mind and with what sweetness of temper he can, and inquire how fast he can fix his sense of duty, braving such penalties, whenever it may please the next newspaper and a sufficient number of his neighbors to pronounce his opinions incendiary.

It may calm the apprehension of calamity in the most susceptible heart to see how quick a bound Nature has set to the utmost infliction of malice. We rapidly approach a brink over which no enemy can follow us: — “Let them rave:

Thou art quiet in thy grave.”

In the gloom of our ignorance of what shall be, in the hour when we are deaf to the higher voices, who does not envy those who have seen safely to an end their manful endeavor? Who that sees the meanness of our politics but inly congratulates Washington that he is long already wrapped in his shroud, and for ever safe; that he was laid sweet in his grave, the hope of humanity not yet subjugated in him? Who does not sometimes envy the good and brave who are no more to suffer from the tumults of the natural world, and await with curious complacency the speedy term of his own conversation with finite nature? And yet the love that will be annihilated sooner than treacherous has already made death impossible, and affirms itself no mortal but a native of the deeps of absolute and inextinguishable being.

THE OVER-SOUL.

“BUT souls that of his own good life partake, He loves as his own self; dear as his eye They are to Him: He’ll never them forsake: When they shall die, then God himself shall die: They live, they live in blest eternity.”

Henry More.

Space is ample, east and west,
But two cannot go abreast,
Cannot travel in it two:

Yonder masterful cuckoo
Crowds every egg out of the nest,
Quick or dead, except its own;
A spell is laid on sod and stone,
Night and Day 've been tampered with, Every quality and pith
Surcharged and sultry with a power
That works its will on age and hour.

THE OVER-SOUL.

THERE is a difference between one and another hour of life in their authority and subsequent effect. Our faith comes in moments; our vice is habitual. Yet there is a depth in those brief moments which constrains us to ascribe more reality to them than to all other experiences. For this reason the argument which is always forthcoming to silence those who conceive extraordinary hopes of man, namely the appeal to experience, is for ever invalid and vain. We give up the past to the objector, and yet we hope. He must explain this hope. We grant that human life is mean, but how did we find out that it was mean? What is the ground of this uneasiness of ours; of this old discontent? What is the universal sense of want and ignorance, but the fine innuendo by which the soul makes its enormous claim? Why do men feel that the natural history of man has never been written, but he is always leaving behind what you have said of him, and it becomes old, and books of metaphysics worthless? The philosophy of six thousand years has not searched the chambers and magazines of the soul. In its experiments there has always remained, in the last analysis, a residuum it could not resolve. Man is a stream whose source is hidden. Our being is descending into us from we know not whence. The most exact calculator has no prescience that somewhat incalculable may not balk the very next moment. I am constrained every moment to acknowledge a higher origin for events than the will I call mine.

As with events, so is it with thoughts. When I watch that flowing river, which, out of regions I see not, pours for a season its streams into me, I see that I am a pensioner; not a cause, but a surprised spectator of this ethereal water; that I desire and look up and put myself in the attitude of reception, but from some alien energy the visions come.

The Supreme Critic on the errors of the past and the present, and the only prophet of that which must be, is that great nature in which we rest as the earth lies in the soft arms of the atmosphere; that Unity, that Over-soul, within which every man's particular being is contained and made one with all other; that common heart of which all sincere conversation is the worship, to which all right action is submission; that overpowering reality which confutes our tricks and talents, and constrains every one to pass for what he is, and to speak from his character and not from his tongue, and which evermore tends to pass into our thought and hand and become wisdom and virtue and power and beauty. We live in succession, in division, in parts, in particles. Meantime within man is the soul of the whole; the wise silence; the universal beauty, to which every part and

particle is equally related; the eternal ONE. And this deep power in which we exist and whose beatitude is all accessible to us, is not only self-sufficing and perfect in every hour, but the act of seeing and the thing seen, the seer and the spectacle, the subject and the object, are one. We see the world piece by piece, as the sun, the moon, the animal, the tree; but the whole, of which these are the shining parts, is the soul. Only by the vision of that Wisdom can the horoscope of the ages be read, and by falling back on our better thoughts, by yielding to the spirit of prophecy which is innate in every man, we can know what it saith. Every man's words who speaks from that life must sound vain to those who do not dwell in the same thought on their own part. I dare not speak for it. My words do not carry its august sense; they fall short and cold. Only itself can inspire whom it will, and behold! their speech shall be lyrical, and sweet, and universal as the rising of the wind. Yet I desire, even by profane words, if I may not use sacred, to indicate the heaven of this deity and to report what hints I have collected of the transcendent simplicity and energy of the Highest Law.

If we consider what happens in conversation, in reveries, in remorse, in times of passion, in surprises, in the instructions of dreams, wherein often we see ourselves in masquerade, — the droll disguises only magnifying and enhancing a real element and forcing it on our distinct notice, — we shall catch many hints that will broaden and lighten into knowledge of the secret of nature. All goes to show that the soul in man is not an organ, but animates and exercises all the organs; is not a function, like the power of memory, of calculation, of comparison, but uses these as hands and feet; is not a faculty, but a light; is not the intellect or the will, but the master of the intellect and the will; is the background of our being, in which they lie, — an immensity not possessed and that cannot be possessed. From within or from behind, a light shines through us upon things and makes us aware that we are nothing, but the light is all. A man is the facade of a temple wherein all wisdom and all good abide. What we commonly call man, the eating, drinking, planting, counting man, does not, as we know him, represent himself, but misrepresents himself. Him we do not respect, but the soul, whose organ he is, would he let it appear through his action, would make our knees bend. When it breathes through his intellect, it is genius; when it breathes through his will, it is virtue; when it flows through his affection, it is love. And the blindness of the intellect begins when it would be something of itself. The weakness of the will begins when the individual would be something of himself. All reform aims in some one particular to let the soul have its way through us; in other words, to engage us to obey.

Of this pure nature every man is at some time sensible. Language cannot paint it with his colors. It is too subtile. It is undefinable, unmeasurable; but we

know that it pervades and contains us. We know that all spiritual being is in man. A wise old proverb says, "God comes to see us without bell;" that is, as there is no screen or ceiling between our heads and the infinite heavens, so is there no bar or wall in the soul where man, the effect, ceases, and God, the cause, begins. The walls are taken away. We lie open on one side to the deeps of spiritual nature, to the attributes of God. Justice we see and know, Love, Freedom, Power. These natures no man ever got above, but they tower over us, and most in the moment when our interests tempt us to wound them.

The sovereignty of this nature whereof we speak is made known by its independency of those limitations which circumscribe us on every hand. The soul circumscribes all things. As I have said, it contradicts all experience. In like manner it abolishes time and space. The influence of the senses has in most men overpowered the mind to that degree that the walls of time and space have come to look real and insurmountable; and to speak with levity of these limits is, in the world, the sign of insanity. Yet time and space are but inverse measures of the force of the soul. The spirit sports with time, —

"Can crowd eternity into an hour,
Or stretch an hour to eternity."

We are often made to feel that there is another youth and age than that which is measured from the year of our natural birth. Some thoughts always find us young, and keep us so. Such a thought is the love of the universal and eternal beauty. Every man parts from that contemplation with the feeling that it rather belongs to ages than to mortal life. The least activity of the intellectual powers redeems us in a degree from the conditions of time. In sickness, in languor, give us a strain of poetry or a profound sentence, and we are refreshed; or produce a volume of Plato or Shakspeare, or remind us of their names, and instantly we come into a feeling of longevity. See how the deep divine thought reduces centuries and millenniums and makes itself present through all ages. Is the teaching of Christ less effective now than it was when first his mouth was opened? The emphasis of facts and persons in my thought has nothing to do with time. And so always the soul's scale is one, the scale of the senses and the understanding is another. Before the revelations of the soul, Time, Space and Nature shrink away. In common speech we refer all things to time, as we habitually refer the immensely sundered stars to one concave sphere. And so we say that the Judgment is distant or near, that the Millennium approaches, that a day of certain political, moral, social reforms is at hand, and the like, when we mean that in the nature of things one of the facts we contemplate is external and fugitive, and the other is permanent and connate with the soul. The things we now esteem fixed shall, one by one, detach themselves like ripe fruit from our

experience, and fall. The wind shall blow them none knows whither. The landscape, the figures, Boston, London, are facts as fugitive as any institution past, or any whiff of mist or smoke, and so is society, and so is the world. The soul looketh steadily forwards, creating a world before her, leaving worlds behind her. She has no dates, nor rites, nor persons, nor specialties nor men. The soul knows only the soul; the web of events is the flowing robe in which she is clothed.

After its own law and not by arithmetic is the rate of its progress to be computed. The soul's advances are not made by gradation, such as can be represented by motion in a straight line, but rather by ascension of state, such as can be represented by metamorphosis, — from the egg to the worm, from the worm to the fly. The growths of genius are of a certain total character, that does not advance the elect individual first over John, then Adam, then Richard, and give to each the pain of discovered inferiority, — but by every throe of growth the man expands there where he works, passing, at each pulsation, classes, populations, of men. With each divine impulse the mind rends the thin rinds of the visible and finite, and comes out into eternity, and inspires and expires its air. It converses with truths that have always been spoken in the world, and becomes conscious of a closer sympathy with Zeno and Arrian than with persons in the house.

This is the law of moral and of mental gain. The simple rise as by specific levity not into a particular virtue, but into the region of all the virtues. They are in the spirit which contains them all. The soul requires purity, but purity is not it; requires justice, but justice is not that; requires beneficence, but is somewhat better; so that there is a kind of descent and accommodation felt when we leave speaking of moral nature to urge a virtue which it enjoins. To the well-born child all the virtues are natural, and not painfully acquired. Speak to his heart, and the man becomes suddenly virtuous.

Within the same sentiment is the germ of intellectual growth, which obeys the same law. Those who are capable of humility, of justice, of love, of aspiration, stand already on a platform that commands the sciences and arts, speech and poetry, action and grace. For whoso dwells in this moral beatitude already anticipates those special powers which men prize so highly. The lover has no talent, no skill, which passes for quite nothing with his enamoured maiden, however little she may possess of related faculty; and the heart which abandons itself to the Supreme Mind finds itself related to all its works, and will travel a royal road to particular knowledges and powers. In ascending to this primary and aboriginal sentiment we have come from our remote station on the circumference instantaneously to the centre of the world, where, as in the closet

of God, we see causes, and anticipate the universe, which is but a slow effect.

One mode of the divine teaching is the incarnation of the spirit in a form, — in forms, like my own. I live in society, with persons who answer to thoughts in my own mind, or express a certain obedience to the great instincts to which I live. I see its presence to them. I am certified of a common nature; and these other souls, these separated selves, draw me as nothing else can. They stir in me the new emotions we call passion; of love, hatred, fear, admiration, pity; thence come conversation, competition, persuasion, cities and war. Persons are supplementary to the primary teaching of the soul. In youth we are mad for persons. Childhood and youth see all the world in them. But the larger experience of man discovers the identical nature appearing through them all. Persons themselves acquaint us with the impersonal. In all conversation between two persons tacit reference is made, as to a third party, to a common nature. That third party or common nature is not social; it is impersonal; is God. And so in groups where debate is earnest, and especially on high questions, the company become aware that the thought rises to an equal level in all bosoms, that all have a spiritual property in what was said, as well as the sayer. They all become wiser than they were. It arches over them like a temple, this unity of thought in which every heart beats with nobler sense of power and duty, and thinks and acts with unusual solemnity. All are conscious of attaining to a higher self-possession. It shines for all. There is a certain wisdom of humanity which is common to the greatest men with the lowest, and which our ordinary education often labors to silence and obstruct. The mind is one, and the best minds, who love truth for its own sake, think much less of property in truth. They accept it thankfully everywhere, and do not label or stamp it with any man's name, for it is theirs long beforehand, and from eternity. The learned and the studious of thought have no monopoly of wisdom. Their violence of direction in some degree disqualifies them to think truly. We owe many valuable observations to people who are not very acute or profound, and who say the thing without effort which we want and have long been hunting in vain. The action of the soul is oftener in that which is felt and left unsaid than in that which is said in any conversation. It broods over every society, and they unconsciously seek for it in each other. We know better than we do. We do not yet possess ourselves, and we know at the same time that we are much more. I feel the same truth how often in my trivial conversation with my neighbors, that somewhat higher in each of us overlooks this by-play, and Jove nods to Jove from behind each of us.

Men descend to meet. In their habitual and mean service to the world, for which they forsake their native nobleness, they resemble those Arabian sheiks who dwell in mean houses and affect an external poverty, to escape the rapacity

of the Pacha, and reserve all their display of wealth for their interior and guarded retirements.

As it is present in all persons, so it is in every period of life. It is adult already in the infant man. In my dealing with my child, my Latin and Greek, my accomplishments and my money stead me nothing; but as much soul as I have avails. If I am wilful, he sets his will against mine, one for one, and leaves me, if I please, the degradation of beating him by my superiority of strength. But if I renounce my will and act for the soul, setting that up as umpire between us two, out of his young eyes looks the same soul; he reveres and loves with me.

The soul is the perceiver and revealer of truth. We know truth when we see it, let skeptic and scoffer say what they choose. Foolish people ask you, when you have spoken what they do not wish to hear, ‘How do you know it is truth, and not an error of your own?’ We know truth when we see it, from opinion, as we know when we are awake that we are awake. It was a grand sentence of Emanuel Swedenborg, which would alone indicate the greatness of that man’s perception, — “It is no proof of a man’s understanding to be able to confirm whatever he pleases; but to be able to discern that what is true is true, and that what is false is false, — this is the mark and character of intelligence.” In the book I read, the good thought returns to me, as every truth will, the image of the whole soul. To the bad thought which I find in it, the same soul becomes a discerning, separating sword, and lops it away. We are wiser than we know. If we will not interfere with our thought, but will act entirely, or see how the thing stands in God, we know the particular thing, and every thing, and every man. For the Maker of all things and all persons stands behind us and casts his dread omniscience through us over things.

But beyond this recognition of its own in particular passages of the individual’s experience, it also reveals truth. And here we should seek to reinforce ourselves by its very presence, and to speak with a worthier, loftier strain of that advent. For the soul’s communication of truth is the highest event in nature, since it then does not give somewhat from itself, but it gives itself, or passes into and becomes that man whom it enlightens; or, in proportion to that truth he receives, it takes him to itself.

We distinguish the announcements of the soul, its manifestations of its own nature, by the term Revelation. These are always attended by the emotion of the sublime. For this communication is an influx of the Divine mind into our mind. It is an ebb of the individual rivulet before the flowing surges of the sea of life. Every distinct apprehension of this central commandment agitates men with awe and delight. A thrill passes through all men at the reception of new truth, or at the performance of a great action, which comes out of the heart of nature. In

these communications the power to see is not separated from the will to do, but the insight proceeds from obedience, and the obedience proceeds from a joyful perception. Every moment when the individual feels himself invaded by it is memorable. By the necessity of our constitution a certain enthusiasm attends the individual's consciousness of that divine presence. The character and duration of this enthusiasm varies with the state of the individual, from an ecstasy and trance and prophetic inspiration, — which is its rarer appearance, — to the faintest glow of virtuous emotion, in which form it warms, like our household fires, all the families and associations of men, and makes society possible. A certain tendency to insanity has always attended the opening of the religious sense in men, as if they had been “blasted with excess of light.” The trances of Socrates, the “union” of Plotinus, the vision of Porphyry, the conversion of Paul, the aurora of Behmen, the convulsions of George Fox and his Quakers, the illumination of Swedenborg, are of this kind. What was in the case of these remarkable persons a ravishment, has, in innumerable instances in common life, been exhibited in less striking manner. Everywhere the history of religion betrays a tendency to enthusiasm. The rapture of the Moravian and Quietist; the opening of the internal sense of the Word, in the language of the New Jerusalem Church; the revival of the Calvinistic churches; the experiences of the Methodists, are varying forms of that shudder of awe and delight with which the individual soul always mingles with the universal soul.

The nature of these revelations is the same; they are perceptions of the absolute law. They are solutions of the soul's own questions. They do not answer the questions which the understanding asks. The soul answers never by words, but by the thing itself that is inquired after.

Revelation is the disclosure of the soul. The popular notion of a revelation is that it is a telling of fortunes. In past oracles of the soul the understanding seeks to find answers to sensual questions, and undertakes to tell from God how long men shall exist, what their hands shall do and who shall be their company, adding names and dates and places. But we must pick no locks. We must check this low curiosity. An answer in words is delusive; it is really no answer to the questions you ask. Do not require a description of the countries towards which you sail. The description does not describe them to you, and to-morrow you arrive there and know them by inhabiting them. Men ask concerning the immortality of the soul, the employments of heaven, the state of the sinner, and so forth. They even dream that Jesus has left replies to precisely these interrogatories. Never a moment did that sublime spirit speak in their patois. To truth, justice, love, the attributes of the soul, the idea of immutableness is essentially associated. Jesus, living in these moral sentiments, heedless of

sensual fortunes, heeding only the manifestations of these, never made the separation of the idea of duration from the essence of these attributes, nor uttered a syllable concerning the duration of the soul. It was left to his disciples to sever duration from the moral elements, and to teach the immortality of the soul as a doctrine, and maintain it by evidences. The moment the doctrine of the immortality is separately taught, man is already fallen. In the flowing of love, in the adoration of humility, there is no question of continuance. No inspired man ever asks this question or condescends to these evidences. For the soul is true to itself, and the man in whom it is shed abroad cannot wander from the present, which is infinite, to a future which would be finite.

These questions which we lust to ask about the future are a confession of sin. God has no answer for them. No answer in words can reply to a question of things. It is not in an arbitrary "decree of God," but in the nature of man, that a veil shuts down on the facts of to-morrow; for the soul will not have us read any other cipher than that of cause and effect. By this veil which curtains events it instructs the children of men to live in to-day. The only mode of obtaining an answer to these questions of the senses is to forego all low curiosity, and, accepting the tide of being which floats us into the secret of nature, work and live, work and live, and all unawares the advancing soul has built and forged for itself a new condition, and the question and the answer are one.

By the same fire, vital, consecrating, celestial, which burns until it shall dissolve all things into the waves and surges of an ocean of light, we see and know each other, and what spirit each is of. Who can tell the grounds of his knowledge of the character of the several individuals in his circle of friends? No man. Yet their acts and words do not disappoint him. In that man, though he knew no ill of him, he put no trust. In that other, though they had seldom met, authentic signs had yet passed, to signify that he might be trusted as one who had an interest in his own character. We know each other very well, — which of us has been just to himself and whether that which we teach or behold is only an aspiration or is our honest effort also.

We are all discerners of spirits. That diagnosis lies aloft in our life or unconscious power. The intercourse of society, its trade, its religion, its friendships, its quarrels, is one wide, judicial investigation of character. In full court, or in small committee, or confronted face to face, accuser and accused, men offer themselves to be judged. Against their will they exhibit those decisive trifles by which character is read. But who judges? and what? Not our understanding. We do not read them by learning or craft. No; the wisdom of the wise man consists herein, that he does not judge them; he lets them judge themselves and merely reads and records their own verdict.

By virtue of this inevitable nature, private will is overpowered, and, maugre our efforts or our imperfections, your genius will speak from you, and mine from me. That which we are, we shall teach, not voluntarily but involuntarily. Thoughts come into our minds by avenues which we never left open, and thoughts go out of our minds through avenues which we never voluntarily opened. Character teaches over our head. The infallible index of true progress is found in the tone the man takes. Neither his age, nor his breeding, nor company, nor books, nor actions, nor talents, nor all together can hinder him from being deferential to a higher spirit than his own. If he have not found his home in God, his manners, his forms of speech, the turn of his sentences, the build, shall I say, of all his opinions will involuntarily confess it, let him brave it out how he will. If he have found his centre, the Deity will shine through him, through all the disguises of ignorance, of ungenial temperament, of unfavorable circumstance. The tone of seeking is one, and the tone of having is another.

The great distinction between teachers sacred or literary, — between poets like Herbert, and poets like Pope, — between philosophers like Spinoza, Kant and Coleridge, and philosophers like Locke, Paley, Mackintosh and Stewart, — between men of the world who are reckoned accomplished talkers, and here and there a fervent mystic, prophesying half insane under the infinitude of his thought, — is that one class speak from within, or from experience, as parties and possessors of the fact; and the other class from without, as spectators merely, or perhaps as acquainted with the fact on the evidence of third persons. It is of no use to preach to me from without. I can do that too easily myself. Jesus speaks always from within, and in a degree that transcends all others. In that is the miracle. I believe beforehand that it ought so to be. All men stand continually in the expectation of the appearance of such a teacher. But if a man do not speak from within the veil, where the word is one with that it tells of, let him lowly confess it.

The same Omniscience flows into the intellect, and makes what we call genius. Much of the wisdom of the world is not wisdom, and the most illuminated class of men are no doubt superior to literary fame, and are not writers. Among the multitude of scholars and authors, we feel no hallowing presence; we are sensible of a knack and skill rather than of inspiration; they have a light and know not whence it comes and call it their own; their talent is some exaggerated faculty, some overgrown member, so that their strength is a disease. In these instances the intellectual gifts do not make the impression of virtue, but almost of vice; and we feel that a man's talents stand in the way of his advancement in truth. But genius is religious. It is a larger imbibing of the common heart. It is not anomalous, but more like and not less like other men.

There is in all great poets a wisdom of humanity which is superior to any talents they exercise. The author, the wit, the partisan, the fine gentleman, does not take place of the man. Humanity shines in Homer, in Chaucer, in Spenser, in Shakspeare, in Milton. They are content with truth. They use the positive degree. They seem frigid and phlegmatic to those who have been spiced with the frantic passion and violent coloring of inferior but popular writers. For they are poets by the free course which they allow to the informing soul, which through their eyes beholds again and blesses the things which it hath made. The soul is superior to its knowledge, wiser than any of its works. The great poet makes us feel our own wealth, and then we think less of his compositions. His best communication to our mind is to teach us to despise all he has done. Shakspeare carries us to such a lofty strain of intelligent activity as to suggest a wealth which beggars his own; and we then feel that the splendid works which he has created, and which in other hours we extol as a sort of self-existent poetry, take no stronger hold of real nature than the shadow of a passing traveller on the rock. The inspiration which uttered itself in Hamlet and Lear could utter things as good from day to day for ever. Why then should I make account of Hamlet and Lear, as if we had not the soul from which they fell as syllables from the tongue?

This energy does not descend into individual life on any other condition than entire possession. It comes to the lowly and simple; it comes to whomsoever will put off what is foreign and proud; it comes as insight; it comes as serenity and grandeur. When we see those whom it inhabits, we are apprised of new degrees of greatness. From that inspiration the man comes back with a changed tone. He does not talk with men with an eye to their opinion. He tries them. It requires of us to be plain and true. The vain traveller attempts to embellish his life by quoting my lord and the prince and the countess, who thus said or did to him. The ambitious vulgar show you their spoons and brooches and rings, and preserve their cards and compliments. The more cultivated, in their account of their own experience, cull out the pleasing, poetic circumstance, — the visit to Rome, the man of genius they saw, the brilliant friend They know; still further on perhaps the gorgeous landscape, the mountain lights, the mountain thoughts they enjoyed yesterday, — and so seek to throw a romantic color over their life. But the soul that ascends to worship the great God is plain and true; has no rose-color, no fine friends, no chivalry, no adventures; does not want admiration; dwells in the hour that now is, in the earnest experience of the common day, — by reason of the present moment and the mere trifle having become porous to thought and bibulous of the sea of light.

Converse with a mind that is grandly simple, and literature looks like word-catching. The simplest utterances are worthiest to be written, yet are they so

cheap and so things of course, that in the infinite riches of the soul it is like gathering a few pebbles off the ground, or bottling a little air in a phial, when the whole earth and the whole atmosphere are ours. Nothing can pass there, or make you one of the circle, but the casting aside your trappings, and dealing man to man in naked truth, plain confession, and omniscient affirmation.

Souls such as these treat you as gods would, walk as gods in the earth, accepting without any admiration your wit, your bounty, your virtue even, — say rather your act of duty, for your virtue they own as their proper blood, royal as themselves, and over-royal, and the father of the gods. But what rebuke their plain fraternal bearing casts on the mutual flattery with which authors solace each other and wound themselves! These flatter not. I do not wonder that these men go to see Cromwell and Christina and Charles the Second and James the First and the Grand Turk. For they are, in their own elevation, the fellows of kings, and must feel the servile tone of conversation in the world. They must always be a godsend to princes, for they confront them, a king to a king, without ducking or concession, and give a high nature the refreshment and satisfaction of resistance, of plain humanity, of even companionship and of new ideas. They leave them wiser and superior men. Souls like these make us feel that sincerity is more excellent than flattery. Deal so plainly with man and woman as to constrain the utmost sincerity and destroy all hope of trifling with you. It is the highest compliment you can pay. Their “highest praising,” said Milton, “is not flattery, and their plainest advice is a kind of praising.”

Ineffable is the union of man and God in every act of the soul. The simplest person who in his integrity worships God, becomes God; yet for ever and ever the influx of this better and universal self is new and unsearchable. It inspires awe and astonishment. How dear, how soothing to man, arises the idea of God, peopling the lonely place, effacing the scars of our mistakes and disappointments! When we have broken our god of tradition and ceased from our god of rhetoric, then may God fire the heart with his presence. It is the doubling of the heart itself, nay, the infinite enlargement of the heart with a power of growth to a new infinity on every side. It inspires in man an infallible trust. He has not the conviction, but the sight, that the best is the true, and may in that thought easily dismiss all particular uncertainties and fears, and adjourn to the sure revelation of time the solution of his private riddles. He is sure that his welfare is dear to the heart of being. In the presence of law to his mind he is overflowed with a reliance so universal that it sweeps away all cherished hopes and the most stable projects of mortal condition in its flood. He believes that he cannot escape from his good. The things that are really for thee gravitate to thee. You are running to seek your friend. Let your feet run, but your mind need not.

If you do not find him, will you not acquiesce that it is best you should not find him? for there is a power, which, as it is in you, is in him also, and could therefore very well bring you together, if it were for the best. You are preparing with eagerness to go and render a service to which your talent and your taste invite you, the love of men and the hope of fame. Has it not occurred to you that you have no right to go, unless you are equally willing to be prevented from going? O, believe, as thou livest, that every sound that is spoken over the round world, which thou oughtest to hear, will vibrate on thine ear! Every proverb, every book, every byword that belongs to thee for aid or comfort, shall surely come home through open or winding passages. Every friend whom not thy fantastic will but the great and tender heart in thee craveth, shall lock thee in his embrace. And this because the heart in thee is the heart of all; not a valve, not a wall, not an intersection is there anywhere in nature, but one blood rolls uninterruptedly an endless circulation through all men, as the water of the globe is all one sea, and, truly seen, its tide is one.

Let man then learn the revelation of all nature and all thought to his heart; this, namely; that the Highest dwells with him; that the sources of nature are in his own mind, if the sentiment of duty is there. But if he would know what the great God speaketh, he must 'go into his closet and shut the door,' as Jesus said. God will not make himself manifest to cowards. He must greatly listen to himself, withdrawing himself from all the accents of other men's devotion. Even their prayers are hurtful to him, until he have made his own. Our religion vulgarly stands on numbers of believers. Whenever the appeal is made, — no matter how indirectly, — to numbers, proclamation is then and there made that religion is not. He that finds God a sweet enveloping thought to him never counts his company. When I sit in that presence, who shall dare to come in? When I rest in perfect humility, when I burn with pure love, what can Calvin or Swedenborg say?

It makes no difference whether the appeal is to numbers or to one. The faith that stands on authority is not faith. The reliance on authority measures the decline of religion, the withdrawal of the soul. The position men have given to Jesus, now for many centuries of history, is a position of authority. It characterizes themselves. It cannot alter the eternal facts. Great is the soul, and plain. It is no flatterer, it is no follower; it never appeals from itself. It believes in itself. Before the immense possibilities of man all mere experience, all past biography, however spotless and sainted, shrinks away. Before that heaven which our presentiments foreshow us, we cannot easily praise any form of life we have seen or read of. We not only affirm that we have few great men, but, absolutely speaking, that we have none; that we have no history, no record of

any character or mode of living that entirely contents us. The saints and demigods whom history worships we are constrained to accept with a grain of allowance. Though in our lonely hours we draw a new strength out of their memory, yet, pressed on our attention, as they are by the thoughtless and customary, they fatigue and invade. The soul gives itself, alone, original and pure, to the Lonely, Original and Pure, who, on that condition, gladly inhabits, leads and speaks through it. Then is it glad, young and nimble. It is not wise, but it sees through all things. It is not called religious, but it is innocent. It calls the light its own, and feels that the grass grows and the stone falls by a law inferior to, and dependent on, its nature. Behold, it saith, I am born into the great, the universal mind. I, the imperfect, adore my own Perfect. I am somehow receptive of the great soul, and thereby I do Overlook the sun and the stars and feel them to be the fair accidents and effects which change and pass. More and more the surges of everlasting nature enter into me, and I become public and human in my regards and actions. So come I to live in thoughts and act with energies which are immortal. Thus revering the soul, and learning, as the ancient said, that "its beauty is immense," man will come to see that the world is the perennial miracle which the soul worketh, and be less astonished at particular wonders; he will learn that there is no profane history; that all history is sacred; that the universe is represented in an atom, in a moment of time. He will weave no longer a spotted life of shreds and patches, but he will live with a divine unity. He will cease from what is base and frivolous in his life and be content with all places and with any service he can render. He will calmly front the morrow in the negligency of that trust which carries God with it and so hath already the whole future in the bottom of the heart.

CIRCLES.

NATURE centres into balls,
And her proud ephemerals,
Fast to surface and outside,
Scan the profile of the sphere;
Knew they what that signified,
A new genesis were here.

CIRCLES.

The eye is the first circle; the horizon which it forms is the second; and throughout nature this primary figure is repeated without end. It is the highest emblem in the cipher of the world. St. Augustine described the nature of God as a circle whose centre was everywhere and its circumference nowhere. We are all our lifetime reading the copious sense of this first of forms. One moral we have already deduced, in considering the circular or compensatory character of every human action. Another analogy we shall now trace, that every action admits of being outdone. Our life is an apprenticeship to the truth that around every circle another can be drawn; that there is no end in nature, but every end is a beginning; that there is always another dawn risen on mid-noon, and under every deep a lower deep opens.

This fact, as far as it symbolizes the moral fact of the Unattainable, the flying Perfect, around which the hands of man can never meet, at once the inspirer and the condemner of every success, may conveniently serve us to connect many illustrations of human power in every department.

There are no fixtures in nature. The universe is fluid and volatile. Permanence is but a word of degrees. Our globe seen by God is a transparent law, not a mass of facts. The law dissolves the fact and holds it fluid. Our culture is the predominance of an idea which draws after it this train of cities and institutions. Let us rise into another idea: they will disappear. The Greek sculpture is all melted away, as if it had been statues of ice; here and there a solitary figure or fragment remaining, as we see flecks and scraps of snow left in cold dells and mountain clefts in June and July. For the genius that created it creates now somewhat else. The Greek letters last a little longer, but are already passing under the same sentence and tumbling into the inevitable pit which the creation of new thought opens for all that is old. The new continents are built out of the ruins of an old planet; the new races fed out of the decomposition of the foregoing. New arts destroy the old. See the investment of capital in aqueducts made useless by hydraulics; fortifications, by gunpowder; roads and canals, by railways; sails, by steam; steam by electricity.

You admire this tower of granite, weathering the hurts of so many ages. Yet a little waving hand built this huge wall, and that which builds is better than that which is built. The hand that built can topple it down much faster. Better than the hand and nimbler was the invisible thought which wrought through it; and thus ever, behind the coarse effect, is a fine cause, which, being narrowly seen, is itself the effect of a finer cause. Every thing looks permanent until its secret is

known. A rich estate appears to women a firm and lasting fact; to a merchant, one easily created out of any materials, and easily lost. An orchard, good tillage, good grounds, seem a fixture, like a gold mine, or a river, to a citizen; but to a large farmer, not much more fixed than the state of the crop. Nature looks provokingly stable and secular, but it has a cause like all the rest; and when once I comprehend that, will these fields stretch so immovably wide, these leaves hang so individually considerable? Permanence is a word of degrees. Every thing is medial. Moons are no more bounds to spiritual power than bat-balls.

The key to every man is his thought. Sturdy and defying though he look, he has a helm which he obeys, which is the idea after which all his facts are classified. He can only be reformed by showing him a new idea which commands his own. The life of man is a self-evolving circle, which, from a ring imperceptibly small, rushes on all sides outwards to new and larger circles, and that without end. The extent to which this generation of circles, wheel without wheel, will go, depends on the force or truth of the individual soul. For it is the inert effort of each thought, having formed itself into a circular wave of circumstance, — as for instance an empire, rules of an art, a local usage, a religious rite, — to heap itself on that ridge and to solidify and hem in the life. But if the soul is quick and strong it bursts over that boundary on all sides and expands another orbit on the great deep, which also runs up into a high wave, with attempt again to stop and to bind. But the heart refuses to be imprisoned; in its first and narrowest pulses, it already tends outward with a vast force and to immense and innumerable expansions.

Every ultimate fact is only the first of a new series. Every general law only a particular fact of some more general law presently to disclose itself. There is no outside, no inclosing wall, no circumference to us. The man finishes his story, — how good! how final! how it puts a new face on all things! He fills the sky. Lo! on the other side rises also a man and draws a circle around the circle we had just pronounced the outline of the sphere. Then already is our first speaker not man, but only a first speaker. His only redress is forthwith to draw a circle outside of his antagonist. And so men do by themselves. The result of to-day, which haunts the mind and cannot be escaped, will presently be abridged into a word, and the principle that seemed to explain nature will itself be included as one example of a bolder generalization. In the thought of to-morrow there is a power to upheave all thy creed, all the creeds, all the literatures of the nations, and marshal thee to a heaven which no epic dream has yet depicted. Every man is not so much a workman in the world as he is a suggestion of that he should be. Men walk as prophecies of the next age.

Step by step we scale this mysterious ladder: the steps are actions; the new

prospect is power. Every several result is threatened and judged by that which follows. Every one seems to be contradicted by the new; it is only limited by the new. The new statement is always hated by the old, and, to those dwelling in the old, comes like an abyss of scepticism. But the eye soon gets wonted to it, for the eye and it are effects of one cause; then its innocency and benefit appear, and presently, all its energy spent, it pales and dwindles before the revelation of the new hour.

Fear not the new generalization. Does the fact look crass and material, threatening to degrade thy theory of spirit? Resist it not; it goes to refine and raise thy theory of matter just as much.

There are no fixtures to men, if we appeal to consciousness. Every man supposes himself not to be fully understood; and if there is any truth in him, if he rests at last on the divine soul, I see not how it can be otherwise. The last chamber, the last closet, he must feel was never opened; there is always a residuum unknown, unanalyzable. That is, every man believes that he has a greater possibility.

Our moods do not believe in each other. To-day I am full of thoughts and can write what I please. I see no reason why I should not have the same thought, the same power of expression, to-morrow. What I write, whilst I write it, seems the most natural thing in the world; but yesterday I saw a dreary vacuity in this direction in which now I see so much; and a month hence, I doubt not, I shall wonder who he was that wrote so many continuous pages. Alas for this infirm faith, this will not strenuous, this vast ebb of a vast flow! I am God in nature; I am a weed by the wall.

The continual effort to raise himself above himself, to work a pitch above his last height, betrays itself in a man's relations. We thirst for approbation, yet cannot forgive the approver. The sweet of nature is love; yet, if I have a friend I am tormented by my imperfections. The love of me accuses the other party. If he were high enough to slight me, then could I love him, and rise by my affection to new heights. A man's growth is seen in the successive choirs of his friends. For every friend whom he loses for truth, he gains a better. I thought as I walked in the woods and mused on my friends, why should I play with them this game of idolatry? I know and see too well, when not voluntarily blind, the speedy limits of persons called high and worthy. Rich, noble and great they are by the liberality of our speech, but truth is sad. O blessed Spirit, whom I forsake for these, they are not thou! Every personal consideration that we allow costs us heavenly state. We sell the thrones of angels for a short and turbulent pleasure.

How often must we learn this lesson? Men cease to interest us when we find their limitations. The only sin is limitation. As soon as you once come up with a

man's limitations, it is all over with him. Has he talents? has he enterprise? has he knowledge? It boots not. Infinitely alluring and attractive was he to you yesterday, a great hope, a sea to swim in; now, you have found his shores, found it a pond, and you care not if you never see it again.

Each new step we take in thought reconciles twenty seemingly discordant facts, as expressions of one law. Aristotle and Plato are reckoned the respective heads of two schools. A wise man will see that Aristotle platonizes. By going one step farther back in thought, discordant opinions are reconciled by being seen to be two extremes of one principle, and we can never go so far back as to preclude a still higher vision.

Beware when the great God lets loose a thinker on this planet. Then all things are at risk. It is as when a conflagration has broken out in a great city, and no man knows what is safe, or where it will end. There is not a piece of science but its flank may be turned to-morrow; there is not any literary reputation, not the so-called eternal names of fame, that may not be revised and condemned. The very hopes of man, the thoughts of his heart, the religion of nations, the manners and morals of mankind are all at the mercy of a new generalization. Generalization is always a new influx of the divinity into the mind. Hence the thrill that attends it.

Valor consists in the power of self-recovery, so that a man cannot have his flank turned, cannot be out-generalled, but put him where you will, he stands. This can only be by his preferring truth to his past apprehension of truth, and his alert acceptance of it from whatever quarter; the intrepid conviction that his laws, his relations to society, his Christianity, his world, may at any time be superseded and de cease.

There are degrees in idealism. We learn first to play with it academically, as the magnet was once a toy. Then we see in the heyday of youth and poetry that it may be true, that it is true in gleams and fragments. Then its countenance waxes stern and grand, and we see that it must be true. It now shows itself ethical and practical. We learn that God is; that he is in me; and that all things are shadows of him. The idealism of Berkeley is only a crude statement of the idealism of Jesus, and that again is a crude statement of the fact that all nature is the rapid efflux of goodness executing and organizing itself. Much more obviously is history and the state of the world at any one time directly dependent on the intellectual classification then existing in the minds of men. The things which are dear to men at this hour are so on account of the ideas which have emerged on their mental horizon, and which cause the present order of things, as a tree bears its apples. A new degree of culture would instantly revolutionize the entire system of human pursuits.

Conversation is a game of circles. In conversation we pluck up the termini which bound the common of silence on every side. The parties are not to be judged by the spirit they partake and even express under this Pentecost. To-morrow they will have receded from this high-water mark. To-morrow you shall find them stooping under the old pack-saddles. Yet let us enjoy the cloven flame whilst it glows on our walls. When each new speaker strikes a new light, emancipates us from the oppression of the last speaker, to oppress us with the greatness and exclusiveness of his own thought, then yields us to another redeemer, we seem to recover our rights, to become men. O, what truths profound and executable only in ages and orbs, are supposed in the announcement of every truth! In common hours, society sits cold and statuesque. We all stand waiting, empty, — knowing, possibly, that we can be full, surrounded by mighty symbols which are not symbols to us, but prose and trivial toys. Then cometh the god and converts the statues into fiery men, and by a flash of his eye burns up the veil which shrouded all things, and the meaning of the very furniture, of cup and saucer, of chair and clock and tester, is manifest. The facts which loomed so large in the fogs of yesterday, — property, climate, breeding, personal beauty and the like, have strangely changed their proportions. All that we reckoned settled shakes and rattles; and literatures, cities, climates, religions, leave their foundations and dance before our eyes. And yet here again see the swift circumspection! Good as is discourse, silence is better, and shames it. The length of the discourse indicates the distance of thought betwixt the speaker and the hearer. If they were at a perfect understanding in any part, no words would be necessary thereon. If at one in all parts, no words would be suffered.

Literature is a point outside of our hodiernal circle through which a new one may be described. The use of literature is to afford us a platform whence we may command a view of our present life, a purchase by which we may move it. We fill ourselves with ancient learning, install ourselves the best we can in Greek, in Punic, in Roman houses, only that we may wiselier see French, English and American houses and modes of living. In like manner we see literature best from the midst of wild nature, or from the din of affairs, or from a high religion. The field cannot be well seen from within the field. The astronomer must have his diameter of the earth's orbit as a base to find the parallax of any star.

Therefore we value the poet. All the argument and all the wisdom is not in the encyclopaedia, or the treatise on metaphysics, or the Body of Divinity, but in the sonnet or the play. In my daily work I incline to repeat my old steps, and do not believe in remedial force, in the power of change and reform. But some Petrarch or Ariosto, filled with the new wine of his imagination, writes me an ode or a

brisk romance, full of daring thought and action. He smites and arouses me with his shrill tones, breaks up my whole chain of habits, and I open my eye on my own possibilities. He claps wings to the sides of all the solid old lumber of the world, and I am capable once more of choosing a straight path in theory and practice.

We have the same need to command a view of the religion of the world. We can never see Christianity from the catechism: — from the pastures, from a boat in the pond, from amidst the songs of wood-birds we possibly may. Cleansed by the elemental light and wind, steeped in the sea of beautiful forms which the field offers us, we may chance to cast a right glance back upon biography. Christianity is rightly dear to the best of mankind; yet was there never a young philosopher whose breeding had fallen into the Christian church by whom that brave text of Paul's was not specially prized:— "Then shall also the Son be subject unto Him who put all things under him, that God may be all in all." Let the claims and virtues of persons be never so great and welcome, the instinct of man presses eagerly onward to the impersonal and illimitable, and gladly arms itself against the dogmatism of bigots with this generous word out of the book itself.

The natural world may be conceived of as a system of concentric circles, and we now and then detect in nature slight dislocations which apprise us that this surface on which we now stand is not fixed, but sliding. These manifold tenacious qualities, this chemistry and vegetation, these metals and animals, which seem to stand there for their own sake, are means and methods only, — are words of God, and as fugitive as other words. Has the naturalist or chemist learned his craft, who has explored the gravity of atoms and the elective affinities, who has not yet discerned the deeper law whereof this is only a partial or approximate statement, namely that like draws to like, and that the goods which belong to you gravitate to you and need not be pursued with pains and cost? Yet is that statement approximate also, and not final. Omnipresence is a higher fact. Not through subtle subterranean channels need friend and fact be drawn to their counterpart, but, rightly considered, these things proceed from the eternal generation of the soul. Cause and effect are two sides of one fact.

The same law of eternal procession ranges all that we call the virtues, and extinguishes each in the light of a better. The great man will not be prudent in the popular sense; all his prudence will be so much deduction from his grandeur. But it behooves each to see, when he sacrifices prudence, to what god he devotes it; if to ease and pleasure, he had better be prudent still; if to a great trust, he can well spare his mule and panniers who has a winged chariot instead. Geoffrey draws on his boots to go through the woods, that his feet may be safer from the

bite of snakes; Aaron never thinks of such a peril. In many years neither is harmed by such an accident. Yet it seems to me that with every precaution you take against such an evil you put yourself into the power of the evil. I suppose that the highest prudence is the lowest prudence. Is this too sudden a rushing from the centre to the verge of our orbit? Think how many times we shall fall back into pitiful calculations before we take up our rest in the great sentiment, or make the verge of to-day the new centre. Besides, your bravest sentiment is familiar to the humblest men. The poor and the low have their way of expressing the last facts of philosophy as well as you. "Blessed be nothing" and "The worse things are, the better they are" are proverbs which express the transcendentalism of common life.

One man's justice is another's injustice; one man's beauty another's ugliness; one man's wisdom another's folly; as one beholds the same objects from a higher point. One man thinks justice consists in paying debts, and has no measure in his abhorrence of another who is very remiss in this duty and makes the creditor wait tediously. But that second man has his own way of looking at things; asks himself Which debt must I pay first, the debt to the rich, or the debt to the poor? the debt of money, or the debt of thought to mankind, of genius to nature? For you, O broker, there is no other principle but arithmetic. For me, commerce is of trivial import; love, faith, truth of character, the aspiration of man, these are sacred; nor can I detach one duty, like you, from all other duties, and concentrate my forces mechanically on the payment of moneys. Let me live onward; you shall find that, though slower, the progress of my character will liquidate all these debts without injustice to higher claims. If a man should dedicate himself to the payment of notes, would not this be injustice? Does he owe no debt but money? And are all claims on him to be postponed to a landlord's or a banker's?

There is no virtue which is final; all are initial. The virtues of society are vices of the saint. The terror of reform is the discovery that we must cast away our virtues, or what we have always esteemed such, into the same pit that has consumed our grosser vices: —

"Forgive his crimes, forgive his virtues too,
Those smaller faults, half converts to the right."

It is the highest power of divine moments that they abolish our contritions also. I accuse myself of sloth and unprofitableness day by day; but when these waves of God flow into me I no longer reckon lost time. I no longer poorly compute my possible achievement by what remains to me of the month or the year; for these moments confer a sort of omnipresence and omnipotence which asks nothing of duration, but sees that the energy of the mind is commensurate

with the work to be done, without time.

And thus, O circular philosopher, I hear some reader exclaim, you have arrived at a fine Pyrrhonism, at an equivalence and indifferency of all actions, and would fain teach us that if we are true, forsooth, our crimes may be lively stones out of which we shall construct the temple of the true God!

I am not careful to justify myself. I own I am gladdened by seeing the predominance of the saccharine principle throughout vegetable nature, and not less by beholding in morals that unrestrained inundation of the principle of good into every chink and hole that selfishness has left open, yea into selfishness and sin itself; so that no evil is pure, nor hell itself without its extreme satisfactions. But lest I should mislead any when I have my own head and obey my whims, let me remind the reader that I am only an experimenter. Do not set the least value on what I do, or the least discredit on what I do not, as if I pretended to settle any thing as true or false. I unsettle all things. No facts are to me sacred; none are profane; I simply experiment, an endless seeker with no Past at my back.

Yet this incessant movement and progression which all things partake could never become sensible to us but by contrast to some principle of fixture or stability in the soul. Whilst the eternal generation of circles proceeds, the eternal generator abides. That central life is somewhat superior to creation, superior to knowledge and thought, and contains all its circles. For ever it labors to create a life and thought as Large and excellent as itself, but in vain, for that which is made instructs how to make a better.

Thus there is no sleep, no pause, no preservation, but all things renew, germinate and spring. Why should we import rags and relics into the new hour? Nature abhors the old, and old age seems the only disease; all others run into this one. We call it by many names, — fever, intemperance, insanity, stupidity and crime; they are all forms of old age; they are rest, conservatism, appropriation, inertia; not newness, not the way onward. We grizzle every day. I see no need of it. Whilst we converse with what is above us, we do not grow old, but grow young. Infancy, youth, receptive, aspiring, with religious eye looking upward, counts itself nothing and abandons itself to the instruction flowing from all sides. But the man and woman of seventy assume to know all, they have outlived their hope, they renounce aspiration, accept the actual for the necessary and talk down to the young. Let them, then, become organs of the Holy Ghost; let them be lovers; let them behold truth; and their eyes are uplifted, their wrinkles smoothed, they are perfumed again with hope and power. This old age ought not to creep on a human mind. In nature every moment is new; the past is always swallowed and forgotten; the coming only is sacred. Nothing is secure but life, transition, the energizing spirit. No love can be bound by oath or covenant to

secure it against a higher love. No truth so sublime but it may be trivial to-morrow in the light of new thoughts. People wish to be settled; only as far as they are unsettled is there any hope for them.

Life is a series of surprises. We do not guess to-day the mood, the pleasure, the power of to-morrow, when we are building up our being. Of lower states, of acts of routine and sense, we can tell somewhat; but the masterpieces of God, the total growths and universal movements of the soul, he hideth; they are incalculable. I can know that truth is divine and helpful; but how it shall help me I can have no guess, for so to be is the sole inlet of so to know. The new position of the advancing man has all the powers of the old, yet has them all new. It carries in its bosom all the energies of the past, yet is itself an exhalation of the morning. I cast away in this new moment all my once hoarded knowledge, as vacant and vain. Now, for the first time seem I to know any thing rightly. The simplest words, — we do not know what they mean except when we love and aspire.

The difference between talents and character is adroitness to keep the old and trodden round, and power and courage to make a new road to new and better goals. Character makes an overpowering present; a cheerful, determined hour, which fortifies all the company by making them see that much is possible and excellent that was not thought of. Character dulls the impression of particular events. When we see the conqueror we do not think much of any one battle or success. We see that we had exaggerated the difficulty. It was easy to him. The great man is not convulsible or tormentable; events pass over him without much impression. People say sometimes, ‘See what I have overcome; see how cheerful I am; see how completely I have triumphed over these black events.’ Not if they still remind me of the black event. True conquest is the causing the calamity to fade and disappear as an early cloud of insignificant result in a history so large and advancing.

The one thing which we seek with insatiable desire is to forget ourselves, to be surprised out of our propriety, to lose our sempiternal memory and to do something without knowing how or why; in short to draw a new circle. Nothing great was ever achieved without enthusiasm. The way of life is wonderful; it is by abandonment. The great moments of history are the facilities of performance through the strength of ideas, as the works of genius and religion. “A man,” said Oliver Cromwell, “never rises so high as when he knows not whither he is going.” Dreams and drunkenness, the use of opium and alcohol are the semblance and counterfeit of this oracular genius, and hence their dangerous attraction for men. For the like reason they ask the aid of wild passions, as in gaming and war, to ape in some manner these flames and generousities of the

heart.

INTELLECT.

GO, speed the stars of Thought
On to their shining goals; —
The sower scatters broad his seed,
The wheat thou strew'st be souls.

INTELLECT.

Every substance is negatively electric to that which stands above it in the chemical tables, positively to that which stands below it. Water dissolves wood and iron and salt; air dissolves water; electric fire dissolves air, but the intellect dissolves fire, gravity, laws, method, and the subtlest unnamed relations of nature in its resistless menstruum. Intellect lies behind genius, which is intellect constructive. Intellect is the simple power anterior to all action or construction. Gladly would I unfold in calm degrees a natural history of the intellect, but what man has yet been able to mark the steps and boundaries of that transparent essence? The first questions are always to be asked, and the wisest doctor is gravelled by the inquisitiveness of a child. How can we speak of the action of the mind under any divisions, as of its knowledge, of its ethics, of its works, and so forth, since it melts will into perception, knowledge into act? Each becomes the other. Itself alone is. Its vision is not like the vision of the eye, but is union with the things known.

Intellect and intellection signify to the common ear consideration of abstract truth. The considerations of time and place, of you and me, of profit and hurt tyrannize over most men's minds. Intellect separates the fact considered, from you, from all local and personal reference, and discerns it as if it existed for its own sake. Heraclitus looked upon the affections as dense and colored mists. In the fog of good and evil affections it is hard for man to walk forward in a straight line. Intellect is void of affection and sees an object as it stands in the light of science, cool and disengaged. The intellect goes out of the individual, floats over its own personality, and regards it as a fact, and not as I and mine. He who is immersed in what concerns person or place cannot see the problem of existence. This the intellect always ponders. Nature shows all things formed and bound. The intellect pierces the form, overleaps the wall, detects intrinsic likeness between remote things and reduces all things into a few principles.

The making a fact the subject of thought raises it. All that mass of mental and moral phenomena which we do not make objects of voluntary thought, come within the power of fortune; they constitute the circumstance of daily life; they are subject to change, to fear, and hope. Every man beholds his human condition with a degree of melancholy. As a ship aground is battered by the waves, so man, imprisoned in mortal life, lies open to the mercy of coming events. But a truth, separated by the intellect, is no longer a subject of destiny. We behold it as a god upraised above care and fear. And so any fact in our life, or any record of our fancies or reflections, disentangled from the web of our unconsciousness,

becomes an object impersonal and immortal. It is the past restored, but embalmed. A better art than that of Egypt has taken fear and corruption out of it. It is eviscerated of care. It is offered for science. What is addressed to us for contemplation does not threaten us but makes us intellectual beings.

The growth of the intellect is spontaneous in every expansion. The mind that grows could not predict the times, the means, the mode of that spontaneity. God enters by a private door into every individual. Long prior to the age of reflection is the thinking of the mind. Out of darkness it came insensibly into the marvellous light of to-day. In the period of infancy it accepted and disposed of all impressions from the surrounding creation after its own way. Whatever any mind doth or saith is after a law; and this native law remains over it after it has come to reflection or conscious thought. In the most worn, pedantic, introverted self-tormenter's life, the greatest part is incalculable by him, unforeseen, unimaginable, and must be, until he can take himself up by his own ears. What am I? What has my will done to make me that I am? Nothing. I have been floated into this thought, this hour, this connection of events, by secret currents of might and mind, and my ingenuity and wilfulness have not thwarted, have not aided to an appreciable degree.

Our spontaneous action is always the best. You cannot with your best deliberation and heed come so close to any question as your spontaneous glance shall bring you, whilst you rise from your bed, or walk abroad in the morning after meditating the matter before sleep on the previous night. Our thinking is a pious reception. Our truth of thought is therefore vitiated as much by too violent direction given by our will, as by too great negligence. We do not determine what we will think. We only open our senses, clear away as we can all obstruction from the fact, and suffer the intellect to see. We have little control over our thoughts. We are the prisoners of ideas. They catch us up for moments into their heaven and so fully engage us that we take no thought for the morrow, gaze like children, without an effort to make them our own. By and by we fall out of that rapture, bethink us where we have been, what we have seen, and repeat as truly as we can what we have beheld. As far as we can recall these ecstasies we carry away in the ineffaceable memory the result, and all men and all the ages confirm it. It is called Truth. But the moment we cease to report and attempt to correct and contrive, it is not truth.

If we consider what persons have stimulated and profited us, we shall perceive the superiority of the spontaneous or intuitive principle over the arithmetical or logical. The first contains the second, but virtual and latent. We want in every man a long logic; we cannot pardon the absence of it, but it must not be spoken. Logic is the procession or proportionate unfolding of the

intuition; but its virtue is as silent method; the moment it would appear as propositions and have a separate value it is worthless.

In every man's mind, some images, words and facts remain, without effort on his part to imprint them, which others forget, and afterwards these illustrate to him important laws. All our progress is an unfolding, like the vegetable bud. You have first an instinct, then an opinion, then a knowledge, as the plant has root, bud and fruit. Trust the instinct to the end, though you can render no reason. It is vain to hurry it. By trusting it to the end, it shall ripen into truth and you shall know why you believe.

Each mind has its own method. A true man never acquires after college rules. What you have aggregated in a natural manner surprises and delights when it is produced. For we cannot oversee each other's secret. And hence the differences between men in natural endowment are insignificant in comparison with their common wealth. Do you think the porter and the cook have no anecdotes, no experiences, no wonders for you? Every body knows as much as the savant. The walls of rude minds are scrawled all over with facts, with thoughts. They shall one day bring a lantern and read the inscriptions. Every man, in the degree in which he has wit and culture, finds his curiosity inflamed concerning the modes of living and thinking of other men, and especially of those classes whose minds have not been subdued by the drill of school education.

This instinctive action never ceases in a healthy mind, but becomes richer and more frequent in its informations through all states of culture. At last comes the era of reflection, when we not only observe, but take pains to observe; when we of set purpose sit down to consider an abstract truth; when we keep the mind's eye open whilst we converse, whilst we read, whilst we act, intent to learn the secret law of some class of facts.

What is the hardest task in the world? To think. I would put myself in the attitude to look in the eye an abstract truth, and I cannot. I blench and withdraw on this side and on that. I seem to know what he meant who said, No man can see God face to face and live. For example, a man explores the basis of civil government. Let him intend his mind without respite, without rest, in one direction. His best heed long time avails him nothing. Yet thoughts are flitting before him. We all but apprehend, we dimly forebode the truth. We say I will walk abroad, and the truth will take form and clearness to me. We go forth, but cannot find it. It seems as if we needed only the stillness and composed attitude of the library to seize the thought. But we come in, and are as far from it as at first. Then, in a moment, and unannounced, the truth appears. A certain wandering light appears, and is the distinction, the principle, we wanted. But the oracle comes because we had previously laid siege to the shrine. It seems as if

the law of the intellect resembled that law of nature by which we now inspire, now expire the breath; by which the heart now draws in, then hurls out the blood, — the law of undulation. So now you must labor with your brains, and now you must forbear your activity and see what the great Soul showeth.

The immortality of man is as legitimately preached from the intellections as from the moral volitions. Every intellection is mainly prospective. Its present value is its least. Inspect what delights you in Plutarch, in Shakspeare, in Cervantes. Each truth that a writer acquires is a lantern, which he turns full on what facts and thoughts lay already in his mind, and behold, all the mats and rubbish which had littered his garret become precious. Every trivial fact in his private biography becomes an illustration of this new principle, revisits the day, and delights all men by its piquancy and new charm. Men say, Where did he get this? and think there was something divine in his life. But no; they have myriads of facts just as good, would they only get a lamp to ransack their attics withal.

We are all wise. The difference between persons is not in wisdom but in art. I knew, in an academical club, a person who always deferred to me; who, seeing my whim for writing, fancied that my experiences had somewhat superior; whilst I saw that his experiences were as good as mine. Give them to me and I would make the same use of them. He held the old; he holds the new; I had the habit of tacking together the old and the new which he did not use to exercise. This may hold in the great examples. Perhaps if we should meet Shakspeare we should not be conscious of any steep inferiority; no, but of a great equality, — only that he possessed a strange skill of using, of classifying, his facts, which we lacked. For notwithstanding our utter incapacity to produce anything like Hamlet and Othello, see the perfect reception this wit and immense knowledge of life and liquid eloquence find in us all.

If you gather apples in the sunshine, or make hay, or hoe corn, and then retire within doors and shut your eyes and press them with your hand, you shall still see apples hanging in the bright light with boughs and leaves thereto, or the tasselled grass, or the corn-flags, and this for five or six hours afterwards. There lie the impressions on the retentive organ, though you knew it not. So lies the whole series of natural images with which your life has made you acquainted, in your memory, though you know it not; and a thrill of passion flashes light on their dark chamber, and the active power seizes instantly the fit image, as the word of its momentary thought.

It is long ere we discover how rich we are. Our history, we are sure, is quite tame: we have nothing to write, nothing to infer. But our wiser years still run back to the despised recollections of childhood, and always we are fishing up some wonderful article out of that pond; until by and by we begin to suspect that

the biography of the one foolish person we know is, in reality, nothing less than the miniature paraphrase of the hundred volumes of the Universal History.

In the intellect constructive, which we popularly designate by the word Genius, we observe the same balance of two elements as in intellect receptive. The constructive intellect produces thoughts, sentences, poems, plans, designs, systems. It is the generation of the mind, the marriage of thought with nature. To genius must always go two gifts, the thought and the publication. The first is revelation, always a miracle, which no frequency of occurrence or incessant study can ever familiarize, but which must always leave the inquirer stupid with wonder. It is the advent of truth into the world, a form of thought now for the first time bursting into the universe, a child of the old eternal soul, a piece of genuine and immeasurable greatness. It seems, for the time, to inherit all that has yet existed and to dictate to the unborn. It affects every thought of man and goes to fashion every institution. But to make it available it needs a vehicle or art by which it is conveyed to men. To be communicable it must become picture or sensible object. We must learn the language of facts. The most wonderful inspirations die with their subject if he has no hand to paint them to the senses. The ray of light passes invisible through space and only when it falls on an object is it seen. When the spiritual energy is directed on something outward, then it is a thought. The relation between it and you first makes you, the value of you, apparent to me. The rich inventive genius of the painter must be smothered and lost for want of the power of drawing, and in our happy hours we should be inexhaustible poets if once we could break through the silence into adequate rhyme. As all men have some access to primary truth, so all have some art or power of communication in their head, but only in the artist does it descend into the hand. There is an inequality, whose laws we do not yet know, between two men and between two moments of the same man, in respect to this faculty. In common hours we have the same facts as in the uncommon or inspired, but they do not sit for their portraits; they are not detached, but lie in a web. The thought of genius is spontaneous; but the power of picture or expression, in the most enriched and flowing nature, implies a mixture of will, a certain control over the spontaneous states, without which no production is possible. It is a conversion of all nature into the rhetoric of thought, under the eye of judgment, with a strenuous exercise of choice. And yet the imaginative vocabulary seems to be spontaneous also. It does not flow from experience only or mainly, but from a richer source. Not by any conscious imitation of particular forms are the grand strokes of the painter executed, but by repairing to the fountain-head of all forms in his mind. Who is the first drawing-master? Without instruction we know very well the ideal of the human form. A child knows if an arm or a leg be distorted

in a picture; if the attitude be natural or grand or mean; though he has never received any instruction in drawing or heard any conversation on the subject, nor can himself draw with correctness a single feature. A good form strikes all eyes pleasantly, long before they have any science on the subject, and a beautiful face sets twenty hearts in palpitation, prior to all consideration of the mechanical proportions of the features and head. We may owe to dreams some light on the fountain of this skill; for as soon as we let our will go and let the unconscious states ensue, see what cunning draughtsmen we are! We entertain ourselves with wonderful forms of men, of women, of animals, of gardens, of woods and of monsters, and the mystic pencil wherewith we then draw has no awkwardness or inexperience, no meagreness or poverty; it can design well and group well; its composition is full of art, its colors are well laid on and the whole canvas which it paints is lifelike and apt to touch us with terror, with tenderness, with desire and with grief. Neither are the artist's copies from experience ever mere copies, but always touched and softened by tints from this ideal domain.

The conditions essential to a constructive mind do not appear to be so often combined but that a good sentence or verse remains fresh and memorable for a long time. Yet when we write with ease and come out into the free air of thought, we seem to be assured that nothing is easier than to continue this communication at pleasure. Up, down, around, the kingdom of thought has no inclosures, but the Muse makes us free of her city. Well, the world has a million writers. One would think then that good thought would be as familiar as air and water, and the gifts of each new hour would exclude the last. Yet we can count all our good books; nay, I remember any beautiful verse for twenty years. It is true that the discerning intellect of the world is always much in advance of the creative, so that there are many competent judges of the best book, and few writers of the best books. But some of the conditions of intellectual construction are of rare occurrence. The intellect is a whole and demands integrity in every work. This is resisted equally by a man's devotion to a single thought and by his ambition to combine too many.

Truth is our element of life, yet if a man fasten his attention on a single aspect of truth and apply himself to that alone for a long time, the truth becomes distorted and not itself but falsehood; herein resembling the air, which is our natural element, and the breath of our nostrils, but if a stream of the same be directed on the body for a time, it causes cold, fever, and even death. How wearisome the grammarian, the phrenologist, the political or religious fanatic, or indeed any possessed mortal whose balance is lost by the exaggeration of a single topic. It is incipient insanity. Every thought is a prison also. I cannot see what you see, because I am caught up by a strong wind and blown so far in one

direction that I am out of the hoop of your horizon.

Is it any better if the student, to avoid this offence, and to liberalize himself, aims to make a mechanical whole of history, or science, or philosophy, by a numerical addition of all the facts that fall within his vision? The world refuses to be analyzed by addition and subtraction. When we are young we spend much time and pains in filling our note-books with all definitions of Religion, Love, Poetry, Politics, Art, in the hope that in the course of a few years we shall have condensed into our encyclopaedia the net value of all the theories at which the world has yet arrived. But year after year our tables get no completeness, and at last we discover that our curve is a parabola, whose arcs will never meet.

Neither by detachment neither by aggregation is the integrity of the intellect transmitted to its works, but by a vigilance which brings the intellect in its greatness and best state to operate every moment. It must have the same wholeness which nature has. Although no diligence can rebuild the universe in a model by the best accumulation or disposition of details, yet does the world reappear in miniature in every event, so that all the laws of nature may be read in the smallest fact. The intellect must have the like perfection in its apprehension and in its works. For this reason, an index or mercury of intellectual proficiency is the perception of identity. We talk with accomplished persons who appear to be strangers in nature. The cloud, the tree, the turf, the bird are not theirs, have nothing of them; the world is only their lodging and table. But the poet, whose verses are to be spheral and complete, is one whom Nature cannot deceive, whatsoever face of strangeness she may put on. He feels a strict consanguinity, and detects more likeness than variety in all her changes. We are stung by the desire for new thought; but when we receive a new thought it is only the old thought with a new face, and though we make it our own we instantly crave another; we are not really enriched. For the truth was in us before it was reflected to us from natural objects; and the profound genius will cast the likeness of all creatures into every product of his wit.

But if the constructive powers are rare and it is given to few men to be poets, yet every man is a receiver of this descending holy ghost, and may well study the laws of its influx. Exactly parallel is the whole rule of intellectual duty to the rule of moral duty. A self-denial no less austere than the saint's is demanded of the scholar. He must worship truth, and forego all things for that, and choose defeat and pain, so that his treasure in thought is thereby augmented.

God offers to every mind its choice between truth and repose. Take which you please, — you can never have both. Between these, as a pendulum, man oscillates. He in whom the love of repose predominates will accept the first creed, the first philosophy, the first political party he meets, — most likely his

father's. He gets rest, commodity, and reputation; but he shuts the door of truth. He in whom the love of truth predominates will keep himself aloof from all moorings, and afloat. He will abstain from dogmatism, and recognize all the opposite negations between which, as walls, his being is swung. He submits to the inconvenience of suspense and imperfect opinion, but he is a candidate for truth, as the other is not, and respects the highest law of his being.

The circle of the green earth he must measure with his shoes to find the man who can yield him truth. He shall then know that there is somewhat more blessed and great in hearing than in speaking. Happy is the hearing man; unhappy the speaking man. As long as I hear truth I am bathed by a beautiful element and am not conscious of any limits to my nature. The suggestions are thousandfold that I hear and see. The waters of the great deep have ingress and egress to the soul. But if I speak, I define, I confine and am less. When Socrates speaks, Lysis and Menexenus are afflicted by no shame that they do not speak. They also are good. He likewise defers to them, loves them, whilst he speaks. Because a true and natural man contains and is the same truth which an eloquent man articulates; but in the eloquent man, because he can articulate it, it seems something the less to reside, and he turns to these silent beautiful with the more inclination and respect. The ancient sentence said, Let us be silent, for so are the gods. Silence is a solvent that destroys personality, and gives us leave to be great and universal. Every man's progress is through a succession of teachers, each of whom seems at the time to have a superlative influence, but it at last gives place to a new. Frankly let him accept it all. Jesus says, Leave father, mother, house and lands, and follow me. Who leaves all, receives more. This is as true intellectually as morally. Each new mind we approach seems to require an abdication of all our past and present possessions. A new doctrine seems at first a subversion of all our opinions, tastes, and manner of living. Such has Swedenborg, such has Kant, such has Coleridge, such has Hegel or his interpreter Cousin seemed to many young men in this country. Take thankfully and heartily all they can give. Exhaust them, wrestle with them, let them not go until their blessing be won, and after a short season the dismay will be overpast, the excess of influence withdrawn, and they will be no longer an alarming meteor, but one more bright star shining serenely in your heaven and blending its light with all your day.

But whilst he gives himself up unreservedly to that which draws him, because that is his own, he is to refuse himself to that which draws him not, whatsoever fame and authority may attend it, because it is not his own. Entire self-reliance belongs to the intellect. One soul is a counterpoise of all souls, as a capillary column of water is a balance for the sea. It must treat things and books and

sovereign genius as itself also a sovereign. If Aeschylus be that man he is taken for, he has not yet done his office when he has educated the learned of Europe for a thousand years. He is now to approve himself a master of delight to me also. If he cannot do that, all his fame shall avail him nothing with me. I were a fool not to sacrifice a thousand Aeschyluses to my intellectual integrity. Especially take the same ground in regard to abstract truth, the science of the mind. The Bacon, the Spinoza, the Hume, Schelling, Kant, or whosoever propounds to you a philosophy of the mind, is only a more or less awkward translator of things in your consciousness which you have also your way of seeing, perhaps of denominating. Say then, instead of too timidly poring into his obscure sense, that he has not succeeded in rendering back to you your consciousness. He has not succeeded; now let another try. If Plato cannot, perhaps Spinoza will. If Spinoza cannot, then perhaps Kant. Anyhow, when at last it is done, you will find it is no recondite, but a simple, natural, common state which the writer restores to you.

But let us end these didactics. I will not, though the subject might provoke it, speak to the open question between Truth and Love. I shall not presume to interfere in the old politics of the skies;— “The cherubim know most; the seraphim love most.” The gods shall settle their own quarrels. But I cannot recite, even thus rudely, laws of the intellect, without remembering that lofty and sequestered class of men who have been its prophets and oracles, the high-priesthood of the pure reason, the Trismegisti, the expounders of the principles of thought from age to age. When at long intervals we turn over their abstruse pages, wonderful seems the calm and grand air of these few, these great spiritual lords who have walked in the world, — these of the old religion, — dwelling in a worship which makes the sanctities of Christianity look parvenues and popular; for “persuasion is in soul, but necessity is in intellect.” This band of grandees, Hermes, Heraclitus, Empedocles, Plato, Plotinus, Olympiodorus, Proclus, Synesius and the rest, have somewhat so vast in their logic, so primary in their thinking, that it seems antecedent to all the ordinary distinctions of rhetoric and literature, and to be at once poetry and music and dancing and astronomy and mathematics. I am present at the sowing of the seed of the world. With a geometry of sunbeams the soul lays the foundations of nature. The truth and grandeur of their thought is proved by its scope and applicability, for it commands the entire schedule and inventory of things for its illustration. But what marks its elevation and has even a comic look to us, is the innocent serenity with which these babe-like Jupiters sit in their clouds, and from age to age prattle to each other and to no contemporary. Well assured that their speech is intelligible and the most natural thing in the world, they add thesis to thesis,

without a moment's heed of the universal astonishment of the human race below, who do not comprehend their plainest argument; nor do they ever relent so much as to insert a popular or explaining sentence, nor testify the least displeasure or petulance at the dulness of their amazed auditory. The angels are so enamored of the language that is spoken in heaven that they will not distort their lips with the hissing and unmusical dialects of men, but speak their own, whether there be any who understand it or not.

ART.

GIVE to barrows trays and pans
Grace and glimmer of romance,
Bring the moonlight into noon
Hid in gleaming piles of stone;
On the city's paved street
Plant gardens lined with lilac sweet,
Let spouting fountains cool the air,
Singing in the sun-baked square.
Let statue, picture, park and hall,
Ballad, flag and festival,
The past restore, the day adorn
And make each morrow a new morn
So shall the drudge in dusty frock
Spy behind the city clock
Retinues of airy kings,
Skirts of angels, starry wings,
His fathers shining in bright fables,
His children fed at heavenly tables.
'Tis the privilege of Art
Thus to play its cheerful part,
Man in Earth to acclimate
And bend the exile to his fate,
And, moulded of one element
With the days and firmament,
Teach him on these as stairs to climb
And live on even terms with Time;
Whilst upper life the slender rill

Of human sense doth overfill.

ART.

Because the soul is progressive, it never quite repeats itself, but in every act attempts the production of a new and fairer whole. This appears in works both of the useful and the fine arts, if we employ the popular distinction of works according to their aim either at use or beauty. Thus in our fine arts, not imitation but creation is the aim. In landscapes the painter should give the suggestion of a fairer creation than we know. The details, the prose of nature he should omit and give us only the spirit and splendor. He should know that the landscape has beauty for his eye because it expresses a thought which is to him good; and this because the same power which sees through his eyes is seen in that spectacle; and he will come to value the expression of nature and not nature itself, and so exalt in his copy the features that please him. He will give the gloom of gloom and the sunshine of sunshine. In a portrait he must inscribe the character and not the features, and must esteem the man who sits to him as himself only an imperfect picture or likeness of the aspiring original within.

What is that abridgment and selection we observe in all spiritual activity, but itself the creative impulse? for it is the inlet of that higher illumination which teaches to convey a larger sense by simpler symbols. What is a man but nature's finer success in self-explication? What is a man but a finer and compacter landscape than the horizon figures, — nature's eclecticism? and what is his speech, his love of painting, love of nature, but a still finer success, — all the weary miles and tons of space and bulk left out, and the spirit or moral of it contracted into a musical word, or the most cunning stroke of the pencil?

But the artist must employ the symbols in use in his day and nation to convey his enlarged sense to his fellow-men. Thus the new in art is always formed out of the old. The Genius of the Hour sets his ineffaceable seal on the work and gives it an inexpressible charm for the imagination. As far as the spiritual character of the period overpowers the artist and finds expression in his work, so far it will retain a certain grandeur, and will represent to future beholders the Unknown, the Inevitable, the Divine. No man can quite exclude this element of Necessity from his labor. No man can quite emancipate himself from his age and country, or produce a model in which the education, the religion, the politics, usages and arts of his times shall have no share. Though he were never so original, never so wilful and fantastic, he cannot wipe out of his work every trace of the thoughts amidst which it grew. The very avoidance betrays the usage he avoids. Above his will and out of his sight he is necessitated by the air he breathes and the idea on which he and his contemporaries live and toil, to share the manner of his

times, without knowing what that manner is. Now that which is inevitable in the work has a higher charm than individual talent can ever give, inasmuch as the artist's pen or chisel seems to have been held and guided by a gigantic hand to inscribe a line in the history of the human race. This circumstance gives a value to the Egyptian hieroglyphics, to the Indian, Chinese and Mexican idols, however gross and shapeless. They denote the height of the human soul in that hour, and were not fantastic, but sprung from a necessity as deep as the world. Shall I now add that the whole extant product of the plastic arts has herein its highest value, as history; as a stroke drawn in the portrait of that fate, perfect and beautiful, according to whose ordinations all beings advance to their beatitude?

Thus, historically viewed, it has been the office of art to educate the perception of beauty. We are immersed in beauty, but our eyes have no clear vision. It needs, by the exhibition of single traits, to assist and lead the dormant taste. We carve and paint, or we behold what is carved and painted, as students of the mystery of Form. The virtue of art lies in detachment, in sequestering one object from the embarrassing variety. Until one thing comes out from the connection of things, there can be enjoyment, contemplation, but no thought. Our happiness and unhappiness are unproductive. The infant lies in a pleasing trance, but his individual character and his practical power depend on his daily progress in the separation of things, and dealing with one at a time. Love and all the passions concentrate all existence around a single form. It is the habit of certain minds to give an all-excluding fulness to the object, the thought, the word, they alight upon, and to make that for the time the deputy of the world. These are the artists, the orators, the leaders of society. The power to detach and to magnify by detaching is the essence of rhetoric in the hands of the orator and the poet. This rhetoric, or power to fix the momentary eminency of an object, — so remarkable in Burke, in Byron, in Carlyle, — the painter and sculptor exhibit in color and in stone. The power depends on the depth of the artist's insight of that object he contemplates. For every object has its roots in central nature, and may of course be so exhibited to us as to represent the world. Therefore each work of genius is the tyrant of the hour And concentrates attention on itself. For the time, it is the only thing worth naming to do that, — be it a sonnet, an opera, a landscape, a statue, an oration, the plan of a temple, of a campaign, or of a voyage of discovery. Presently we pass to some other object, which rounds itself into a whole as did the first; for example a well-laid garden; and nothing seems worth doing but the laying out of gardens. I should think fire the best thing in the world, if I were not acquainted with air, and water, and earth. For it is the right and property of all natural objects, of all genuine talents, of all native properties whatsoever, to be for their moment the top of the world. A squirrel leaping from

bough to bough and making the Wood but one wide tree for his pleasure, fills the eye not less than a lion, — is beautiful, self-sufficing, and stands then and there for nature. A good ballad draws my ear and heart whilst I listen, as much as an epic has done before. A dog, drawn by a master, or a litter of pigs, satisfies and is a reality not less than the frescoes of Angelo. From this succession of excellent objects we learn at last the immensity of the world, the opulence of human nature, which can run out to infinitude in any direction. But I also learn that what astonished and fascinated me in the first work astonished me in the second work also; that excellence of all things is one.

The office of painting and sculpture seems to be merely initial. The best pictures can easily tell us their last secret. The best pictures are rude draughts of a few of the miraculous dots and lines and dyes which make up the ever-changing “landscape with figures” amidst which we dwell. Painting seems to be to the eye what dancing is to the limbs. When that has educated the frame to self-possession, to nimbleness, to grace, the steps of the dancing-master are better forgotten; so painting teaches me the splendor of color and the expression of form, and as I see many pictures and higher genius in the art, I see the boundless opulence of the pencil, the indifference in which the artist stands free to choose out of the possible forms. If he can draw every thing, why draw any thing? and then is my eye opened to the eternal picture which nature paints in the street, with moving men and children, beggars and fine ladies, draped in red and green and blue and gray; long-haired, grizzled, white-faced, black-faced, wrinkled, giant, dwarf, expanded, elfish, — capped and based by heaven, earth and sea.

A gallery of sculpture teaches more austere the same lesson. As picture teaches the coloring, so sculpture the anatomy of form. When I have seen fine statues and afterwards enter a public assembly, I understand well what he meant who said, “When I have been reading Homer, all men look like giants.” I too see that painting and sculpture are gymnastics of the eye, its training to the niceties and curiosities of its function. There is no statue like this living man, with his infinite advantage over all ideal sculpture, of perpetual variety. What a gallery of art have I here! No mannerist made these varied groups and diverse original single figures. Here is the artist himself improvising, grim and glad, at his block. Now one thought strikes him, now another, and with each moment he alters the whole air, attitude and expression of his clay. Away with your nonsense of oil and easels, of marble and chisels; except to open your eyes to the masteries of eternal art, they are hypocritical rubbish.

The reference of all production at last to an aboriginal Power explains the traits common to all works of the highest art, — that they are universally

intelligible; that they restore to us the simplest states of mind, and are religious. Since what skill is therein shown is the reappearance of the original soul, a jet of pure light, it should produce a similar impression to that made by natural objects. In happy hours, nature appears to us one with art; art perfected, — the work of genius. And the individual, in whom simple tastes and susceptibility to all the great human influences overpower the accidents of a local and special culture, is the best critic of art. Though we travel the world over to find the beautiful, we must carry it with us, or we find it not. The best of beauty is a finer charm than skill in surfaces, in outlines, or rules of art can ever teach, namely a radiation from the work of art of human character, — a wonderful expression through stone, or canvas, or musical sound, of the deepest and simplest attributes of our nature, and therefore most intelligible at last to those souls which have these attributes. In the sculptures of the Greeks, in the masonry of the Romans, and in the pictures of the Tuscan and Venetian masters, the highest charm is the universal language they speak. A confession of moral nature, of purity, love, and hope, breathes from them all. That which we carry to them, the same we bring back more fairly illustrated in the memory. The traveller who visits the Vatican, and passes from chamber to chamber through galleries of statues, vases, sarcophagi and candelabra, through all forms of beauty cut in the richest materials, is in danger of forgetting the simplicity of the principles out of which they all sprung, and that they had their origin from thoughts and laws in his own breast. He studies the technical rules on these wonderful remains, but forgets that these works were not always thus constellated; that they are the contributions of many ages and many countries; that each came out of the solitary workshop of one artist, who toiled perhaps in ignorance of the existence of other sculpture, created his work without other model save life, household life, and the sweet and smart of personal relations, of beating hearts, and meeting eyes; of poverty and necessity and hope and fear. These were his inspirations, and these are the effects he carries home to your heart and mind. In proportion to his force, the artist will find in his work an outlet for his proper character. He must not be in any manner pinched or hindered by his material, but through his necessity of imparting himself the adamant will be wax in his hands, and will allow an adequate communication of himself, in his full stature and proportion. He need not cumber himself with a conventional nature and culture, nor ask what is the mode in Rome or in Paris, but that house and weather and manner of living which poverty and the fate of birth have made at once so odious and so dear, in the gray unpainted wood cabin, on the corner of a New Hampshire farm, or in the log-hut of the backwoods, or in the narrow lodging where he has endured the constraints and seeming of a city poverty, will serve as well as any other

condition as the symbol of a thought which pours itself indifferently through all.

I remember when in my younger days I had heard of the wonders of Italian painting, I fancied the great pictures would be great strangers; some surprising combination of color and form; a foreign wonder, barbaric pearl and gold, like the spontoons and standards of the militia, which play such pranks in the eyes and imaginations of school-boys. I was to see and acquire I knew not what. When I came at last to Rome and saw with eyes the pictures, I found that genius left to novices the gay and fantastic and ostentatious, and itself pierced directly to the simple and true; that it was familiar and sincere; that it was the old, eternal fact I had met already in so many forms, — unto which I lived; that it was the plain you and me I knew so well, — had left at home in so many conversations. I had the same experience already in a church at Naples. There I saw that nothing was changed with me but the place, and said to myself— ‘Thou foolish child, hast thou come out hither, over four thousand miles of salt water, to find that which was perfect to thee there at home?’ That fact I saw again in the *Academmia* at Naples, in the chambers of sculpture, and yet again when I came to Rome and to the paintings of Raphael, Angelo, Sacchi, Titian, and Leonardo da Vinci. “What, old mole! workest thou in the earth so fast?” It had travelled by my side; that which I fancied I had left in Boston was here in the Vatican, and again at Milan and at Paris, and made all travelling ridiculous as a treadmill. I now require this of all pictures, that they domesticate me, not that they dazzle me. Pictures must not be too picturesque. Nothing astonishes men so much as common-sense and plain dealing. All great actions have been simple, and all great pictures are.

The Transfiguration, by Raphael, is an eminent example of this peculiar merit. A calm benignant beauty shines over all this picture, and goes directly to the heart. It seems almost to call you by name. The sweet and sublime face of Jesus is beyond praise, yet how it disappoints all florid expectations! This familiar, simple, home-speaking countenance is as if one should meet a friend. The knowledge of picture-dealers has its value, but listen not to their criticism when your heart is touched by genius. It was not painted for them, it was painted for you; for such as had eyes capable of being touched by simplicity and lofty emotions.

Yet when we have said all our fine things about the arts, we must end with a frank confession, that the arts, as we know them, are but initial. Our best praise is given to what they aimed and promised, not to the actual result. He has conceived meanly of the resources of man, who believes that the best age of production is past. The real value of the *Iliad* or the Transfiguration is as signs of power; billows or ripples they are of the stream of tendency; tokens of the

everlasting effort to produce, which even in its worst estate the soul betrays. Art has not yet come to its maturity if it do not put itself abreast with the most potent influences of the world, if it is not practical and moral, if it do not stand in connection with the conscience, if it do not make the poor and uncultivated feel that it addresses them with a voice of lofty cheer. There is higher work for Art than the arts. They are abortive births of an imperfect or vitiated instinct. Art is the need to create; but in its essence, immense and universal, it is impatient of working with lame or tied hands, and of making cripples and monsters, such as all pictures and statues are. Nothing less than the creation of man and nature is its end. A man should find in it an outlet for his whole energy. He may paint and carve only as long as he can do that. Art should exhilarate, and throw down the walls of circumstance on every side, awakening in the beholder the same sense of universal relation and power which the work evinced in the artist, and its highest effect is to make new artists.

Already History is old enough to witness the old age and disappearance of particular arts. The art of sculpture is long ago perished to any real effect. It was originally a useful art, a mode of writing, a savage's record of gratitude or devotion, and among a people possessed of a wonderful perception of form this childish carving was refined to the utmost splendor of effect. But it is the game of a rude and youthful people, and not the manly labor of a wise and spiritual nation. Under an oak-tree loaded with leaves and nuts, under a sky full of eternal eyes, I stand in a thoroughfare; but in the works of our plastic arts and especially of sculpture, creation is driven into a corner. I cannot hide from myself that there is a certain appearance of paltriness, as of toys and the trumpery of a theatre, in sculpture. Nature transcends all our moods of thought, and its secret we do not yet find. But the gallery stands at the mercy of our moods, and there is a moment when it becomes frivolous. I do not wonder that Newton, with an attention habitually engaged on the paths of planets and suns, should have wondered what the Earl of Pembroke found to admire in "stone dolls." Sculpture may serve to teach the pupil how deep is the secret of form, how purely the spirit can translate its meanings into that eloquent dialect. But the statue will look cold and false before that new activity which needs to roll through all things, and is impatient of counterfeits and things not alive. Picture and sculpture are the celebrations and festivities of form. But true art is never fixed, but always flowing. The sweetest music is not in the oratorio, but in the human voice when it speaks from its instant life tones of tenderness, truth, or courage. The oratorio has already lost its relation to the morning, to the sun, and the earth, but that persuading voice is in tune with these. All works of art should not be detached, but extempore performances. A great man is a new statue in every attitude and action. A

beautiful woman is a picture which drives all beholders nobly mad. Life may be lyric or epic, as well as a poem or a romance.

A true announcement of the law of creation, if a man were found worthy to declare it, would carry art up into the kingdom of nature, and destroy its separate and contrasted existence. The fountains of invention and beauty in modern society are all but dried up. A popular novel, a theatre, or a ball-room makes us feel that we are all paupers in the alms-house of this world, without dignity, without skill or industry. Art is as poor and low. The old tragic Necessity, which lowers on the brows even of the Venuses and the Cupids of the antique, and furnishes the sole apology for the intrusion of such anomalous figures into nature, — namely, that they were inevitable; that the artist was drunk with a passion for form which he could not resist, and which vented itself in these fine extravagances, — no longer dignifies the chisel or the pencil. But the artist and the connoisseur now seek in art the exhibition of their talent, or an asylum from the evils of life. Men are not well pleased with the figure they make in their own imaginations, and they flee to art, and convey their better sense in an oratorio, a statue, or a picture. Art makes the same effort which a sensual prosperity makes; namely to detach the beautiful from the useful, to do up the work as unavoidable, and, hating it, pass on to enjoyment. These solaces and compensations, this division of beauty from use, the laws of nature do not permit. As soon as beauty is sought, not from religion and love but for pleasure, it degrades the seeker. High beauty is no longer attainable by him in canvas or in stone, in sound, or in lyrical construction; an effeminate, prudent, sickly beauty, which is not beauty, is all that can be formed; for the hand can never execute any thing higher than the character can inspire.

The art that thus separates is itself first separated. Art must not be a superficial talent, but must begin farther back in man. Now men do not see nature to be beautiful, and they go to make a statue which shall be. They abhor men as tasteless, dull, and inconvertible, and console themselves with color-bags and blocks of marble. They reject life as prosaic, and create a death which they call poetic. They despatch the day's weary chores, and fly to voluptuous reveries. They eat and drink, that they may afterwards execute the ideal. Thus is art vilified; the name conveys to the mind its secondary and bad senses; it stands in the imagination as somewhat contrary to nature, and struck with death from the first. Would it not be better to begin higher up, — to serve the ideal before they eat and drink; to serve the ideal in eating and drinking, in drawing the breath, and in the functions of life? Beauty must come back to the useful arts, and the distinction between the fine and the useful arts be forgotten. If history were truly told, if life were nobly spent, it would be no longer easy or possible to

distinguish the one from the other. In nature, all is useful, all is beautiful. It is therefore beautiful because it is alive, moving, reproductive; it is therefore useful because it is symmetrical and fair. Beauty will not come at the call of a legislature, nor will it repeat in England or America its history in Greece. It will come, as always, unannounced, and spring up between the feet of brave and earnest men. It is in vain that we look for genius to reiterate its miracles in the old arts; it is its instinct to find beauty and holiness in new and necessary facts, in the field and road-side, in the shop and mill. Proceeding from a religious heart it will raise to a divine use the railroad, the insurance office, the joint-stock company; our law, our primary assemblies, our commerce, the galvanic battery, the electric jar, the prism, and the chemist's retort; in which we seek now only an economical use. Is not the selfish and even cruel aspect which belongs to our great mechanical works, to mills, railways, and machinery, the effect of the mercenary impulses which these works obey? When its errands are noble and adequate, a steamboat bridging the Atlantic between Old and New England and arriving at its ports with the punctuality of a planet, is a step of man into harmony with nature. The boat at St. Petersburg, which plies along the Lena by magnetism, needs little to make it sublime. When science is learned in love, and its powers are wielded by love, they will appear the supplements and continuations of the material creation.

THE POET.

A moody child and wildly wise Pursued the game with joyful eyes, Which chose, like meteors, their way, And rived the dark with private ray: They overleapt the horizon's edge, Searched with Apollo's privilege; Through man, and woman, and sea, and star Saw the dance of nature forward far; Through worlds, and races, and terms, and times Saw musical order, and pairing rhymes.

Olympian bards who sung Divine ideas below,
Which always find us young, And always keep us so.

THE POET.

Those who are esteemed umpires of taste are often persons who have acquired some knowledge of admired pictures or sculptures, and have an inclination for whatever is elegant; but if you inquire whether they are beautiful souls, and whether their own acts are like fair pictures, you learn that they are selfish and sensual. Their cultivation is local, as if you should rub a log of dry wood in one spot to produce fire, all the rest remaining cold. Their knowledge of the fine arts is some study of rules and particulars, or some limited judgment of color or form, which is exercised for amusement or for show. It is a proof of the shallowness of the doctrine of beauty as it lies in the minds of our amateurs, that men seem to have lost the perception of the instant dependence of form upon soul. There is no doctrine of forms in our philosophy. We were put into our bodies, as fire is put into a pan to be carried about; but there is no accurate adjustment between the spirit and the organ, much less is the latter the germination of the former. So in regard to other forms, the intellectual men do not believe in any essential dependence of the material world on thought and volition. Theologians think it a pretty air-castle to talk of the Spiritual meaning of a ship or a cloud, of a city or a contract, but they prefer to come again to the solid ground of historical evidence; and even the poets are contented with a civil and conformed manner of living, and to write poems from the fancy, at a safe distance from their own experience. But the highest minds of the world have never ceased to explore the double meaning, or shall I say the quadruple or the centuple or much more manifold meaning, of every sensuous fact; Orpheus, Empedocles, Heraclitus, Plato, Plutarch, Dante, Swedenborg, and the masters of sculpture, picture, and poetry. For we are not pans and barrows, nor even porters of the fire and torch-bearers, but children of the fire, made of it, and only the same divinity transmuted and at two or three removes, when we know least about it. And this hidden truth, that the fountains whence all this river of Time and its creatures floweth are intrinsically ideal and beautiful, draws us to the consideration of the nature and functions of the Poet, or the man of Beauty; to the means and materials he uses, and to the general aspect of the art in the present time.

The breadth of the problem is great, for the poet is representative. He stands among partial men for the complete man, and apprises us not of his wealth, but of the common wealth. The young man reveres men of genius, because, to speak truly, they are more himself than he is. They receive of the soul as he also receives, but they more. Nature enhances her beauty, to the eye of loving men,

from their belief that the poet is beholding her shows at the same time. He is isolated among his contemporaries by truth and by his art, but with this consolation in his pursuits, that they will draw all men sooner or later. For all men live by truth and stand in need of expression. In love, in art, in avarice, in politics, in labor, in games, we study to utter our painful secret. The man is only half himself, the other half is his expression.

Notwithstanding this necessity to be published, adequate expression is rare. I know not how it is that we need an interpreter, but the great majority of men seem to be minors, who have not yet come into possession of their own, or mutes, who cannot report the conversation they have had with nature. There is no man who does not anticipate a supersensual utility in the sun and stars, earth and water. These stand and wait to render him a peculiar service. But there is some obstruction or some excess of phlegm in our constitution, which does not suffer them to yield the due effect. Too feeble fall the impressions of nature on us to make us artists. Every touch should thrill. Every man should be so much an artist that he could report in conversation what had befallen him. Yet, in our experience, the rays or appulses have sufficient force to arrive at the senses, but not enough to reach the quick and compel the reproduction of themselves in speech. The poet is the person in whom these powers are in balance, the man without impediment, who sees and handles that which others dream of, traverses the whole scale of experience, and is representative of man, in virtue of being the largest power to receive and to impart.

For the Universe has three children, born at one time, which reappear under different names in every system of thought, whether they be called cause, operation, and effect; or, more poetically, Jove, Pluto, Neptune; or, theologically, the Father, the Spirit, and the Son; but which we will call here the Knower, the Doer, and the Sayer. These stand respectively for the love of truth, for the love of good, and for the love of beauty. These three are equal. Each is that which he is essentially, so that he cannot be surmounted or analyzed, and each of these three has the power of the others latent in him, and his own, patent.

The poet is the sayer, the namer, and represents beauty. He is a sovereign, and stands on the centre. For the world is not painted or adorned, but is from the beginning beautiful; and God has not made some beautiful things, but Beauty is the creator of the universe. Therefore the poet is not any permissive potentate, but is emperor in his own right. Criticism is infested with a cant of materialism, which assumes that manual skill and activity is the first merit of all men, and disparages such as say and do not, overlooking the fact that some men, namely poets, are natural sayers, sent into the world to the end of expression, and confounds them with those whose province is action but who quit it to imitate

the sayers. But Homer's words are as costly and admirable to Homer as Agamemnon's victories are to Agamemnon. The poet does not wait for the hero or the sage, but, as they act and think primarily, so he writes primarily what will and must be spoken, reckoning the others, though primaries also, yet, in respect to him, secondaries and servants; as sitters or models in the studio of a painter, or as assistants who bring building materials to an architect.

For poetry was all written before time was, and whenever we are so finely organized that we can penetrate into that region where the air is music, we hear those primal warblings and attempt to write them down, but we lose ever and anon a word or a verse and substitute something of our own, and thus miswrite the poem. The men of more delicate ear write down these cadences more faithfully, and these transcripts, though imperfect, become the songs of the nations. For nature is as truly beautiful as it is good, or as it is reasonable, and must as much appear as it must be done, or be known. Words and deeds are quite indifferent modes of the divine energy. Words are also actions, and actions are a kind of words.

The sign and credentials of the poet are that he announces that which no man foretold. He is the true and only doctor; he knows and tells; he is the only teller of news, for he was present and privy to the appearance which he describes. He is a beholder of ideas and an utterer of the necessary and causal. For we do not speak now of men of poetical talents, or of industry and skill in metre, but of the true poet. I took part in a conversation the other day concerning a recent writer of lyrics, a man of subtle mind, whose head appeared to be a music-box of delicate tunes and rhythms, and whose skill and command of language, we could not sufficiently praise. But when the question arose whether he was not only a lyrist but a poet, we were obliged to confess that he is plainly a contemporary, not an eternal man. He does not stand out of our low limitations, like a Chimborazo under the line, running up from the torrid Base through all the climates of the globe, with belts of the herbage of every latitude on its high and mottled sides; but this genius is the landscape-garden of a modern house, adorned with fountains and statues, with well-bred men and women standing and sitting in the walks and terraces. We hear, through all the varied music, the ground-tone of conventional life. Our poets are men of talents who sing, and not the children of music. The argument is secondary, the finish of the verses is primary.

For it is not metres, but a metre-making argument that makes a poem, — a thought so passionate and alive that like the spirit of a plant or an animal it has an architecture of its own, and adorns nature with a new thing. The thought and the form are equal in the order of time, but in the order of genesis the thought is

prior to the form. The poet has a new thought; he has a whole new experience to unfold; he will tell us how it was with him, and all men will be the richer in his fortune. For the experience of each new age requires a new confession, and the world seems always waiting for its poet. I remember when I was young how much I was moved one morning by tidings that genius had appeared in a youth who sat near me at table. He had left his work and gone rambling none knew whither, and had written hundreds of lines, but could not tell whether that which was in him was therein told; he could tell nothing but that all was changed, — man, beast, heaven, earth and sea. How gladly we listened! how credulous! Society seemed to be compromised. We sat in the aurora of a sunrise which was to put out all the stars. Boston seemed to be at twice the distance it had the night before, or was much farther than that. Rome, — what was Rome? Plutarch and Shakspeare were in the yellow leaf, and Homer no more should be heard of. It is much to know that poetry has been written this very day, under this very roof, by your side. What! that wonderful spirit has not expired! These stony moments are still sparkling and animated! I had fancied that the oracles were all silent, and nature had spent her fires; and behold! all night, from every pore, these fine auroras have been streaming. Every one has some interest in the advent of the poet, and no one knows how much it may concern him. We know that the secret of the world is profound, but who or what shall be our interpreter, we know not. A mountain ramble, a new style of face, a new person, may put the key into our hands. Of course the value of genius to us is in the veracity of its report. Talent may frolic and juggle; genius realizes and adds. Mankind in good earnest have availed so far in understanding themselves and their work, that the foremost watchman on the peak announces his news. It is the truest word ever spoken, and the phrase will be the fittest, most musical, and the unerring voice of the world for that time.

All that we call sacred history attests that the birth of a poet is the principal event in chronology. Man, never so often deceived, still watches for the arrival of a brother who can hold him steady to a truth until he has made it his own. With what joy I begin to read a poem which I confide in as an inspiration! And now my chains are to be broken; I shall mount above these clouds and opaque airs in which I live, — opaque, though they seem transparent, — and from the heaven of truth I shall see and comprehend my relations. That will reconcile me to life and renovate nature, to see trifles animated by a tendency, and to know what I am doing. Life will no more be a noise; now I shall see men and women, and know the signs by which they may be discerned from fools and satans. This day shall be better than my birthday: then I became an animal; now I am invited into the science of the real. Such is the hope, but the fruition is postponed.

Oftener it falls that this winged man, who will carry me into the heaven, whirls me into mists, then leaps and frisks about with me as it were from cloud to cloud, still affirming that he is bound heavenward; and I, being myself a novice, am slow in perceiving that he does not know the way into the heavens, and is merely bent that I should admire his skill to rise like a fowl or a flying fish, a little way from the ground or the water; but the all-piercing, all-feeding, and ocular air of heaven that man shall never inhabit. I tumble down again soon into my old nooks, and lead the life of exaggerations as before, and have lost my faith in the possibility of any guide who can lead me thither where I would be.

But, leaving these victims of vanity, let us, with new hope, observe how nature, by worthier impulses, has ensured the poet's fidelity to his office of announcement and affirming, namely by the beauty of things, which becomes a new and higher beauty when expressed. Nature offers all her creatures to him as a picture-language. Being used as a type, a second wonderful value appears in the object, far better than its old value; as the carpenter's stretched cord, if you hold your ear close enough, is musical in the breeze. "Things more excellent than every image," says Jamblichus, "are expressed through images." Things admit of being used as symbols because nature is a symbol, in the whole, and in every part. Every line we can draw in the sand has expression; and there is no body without its spirit or genius. All form is an effect of character; all condition, of the quality of the life; all harmony, of health; and for this reason a perception of beauty should be sympathetic, or proper only to the good. The beautiful rests on the foundations of the necessary. The soul makes the body, as the wise Spenser teaches: —

“So every spirit, as it is most pure,
And hath in it the more of heavenly light,
So it the fairer body doth procure
To habit in, and it more fairly dight,
With cheerful grace and amiable sight.
For, of the soul, the body form doth take,
For soul is form, and doth the body make.”

Here we find ourselves suddenly not in a critical speculation but in a holy place, and should go very warily and reverently. We stand before the secret of the world, there where Being passes into Appearance and Unity into Variety.

The Universe is the externization of the soul. Wherever the life is, that bursts into appearance around it. Our science is sensual, and therefore superficial. The earth and the heavenly bodies, physics, and chemistry, we sensually treat, as if they were self-existent; but these are the retinue of that Being we have. "The mighty heaven," said Proclus, "exhibits, in its transfigurations, clear images of

the splendor of intellectual perceptions; being moved in conjunction with the unapparent periods of intellectual natures.” Therefore science always goes abreast with the just elevation of the man, keeping step with religion and metaphysics; or the state of science is an index of our self-knowledge. Since everything in nature answers to a moral power, if any phenomenon remains brute and dark it is that the corresponding faculty in the observer is not yet active.

No wonder then, if these waters be so deep, that we hover over them with a religious regard. The beauty of the fable proves the importance of the sense; to the poet, and to all others; or, if you please, every man is so far a poet as to be susceptible of these enchantments of nature; for all men have the thoughts whereof the universe is the celebration. I find that the fascination resides in the symbol. Who loves nature? Who does not? Is it only poets, and men of leisure and cultivation, who live with her? No; but also hunters, farmers, grooms, and butchers, though they express their affection in their choice of life and not in their choice of words. The writer wonders what the coachman or the hunter values in riding, in horses and dogs. It is not superficial qualities. When you talk with him he holds these at as slight a rate as you. His worship is sympathetic; he has no definitions, but he is commanded in nature, by the living power which he feels to be there present. No imitation or playing of these things would content him; he loves the earnest of the north wind, of rain, of stone, and wood, and iron. A beauty not explicable is dearer than a beauty which we can see to the end of. It is nature the symbol, nature certifying the supernatural, body overflowed by life which he worships with coarse but sincere rites.

The inwardness and mystery of this attachment drives men of every class to the use of emblems. The schools of poets and philosophers are not more intoxicated with their symbols than the populace with theirs. In our political parties, compute the power of badges and emblems. See the great ball which they roll from Baltimore to Bunker hill! In the political processions, Lowell goes in a loom, and Lynn in a shoe, and Salem in a ship. Witness the cider-barrel, the log-cabin, the hickory-stick, the palmetto, and all the cognizances of party. See the power of national emblems. Some stars, lilies, leopards, a crescent, a lion, an eagle, or other figure which came into credit God knows how, on an old rag of bunting, blowing in the wind on a fort at the ends of the earth, shall make the blood tingle under the rudest or the most conventional exterior. The people fancy they hate poetry, and they are all poets and mystics!

Beyond this universality of the symbolic language, we are apprised of the divineness of this superior use of things, whereby the world is a temple whose walls are covered with emblems, pictures, and commandments of the Deity, —

in this, that there is no fact in nature which does not carry the whole sense of nature; and the distinctions which we make in events and in affairs, of low and high, honest and base, disappear when nature is used as a symbol. Thought makes everything fit for use. The vocabulary of an omniscient man would embrace words and images excluded from polite conversation. What would be base, or even obscene, to the obscene, becomes illustrious, spoken in a new connexion of thought. The piety of the Hebrew prophets purges their grossness. The circumcision is an example of the power of poetry to raise the low and offensive. Small and mean things serve as well as great symbols. The meaner the type by which a law is expressed, the more pungent it is, and the more lasting in the memories of men: just as we choose the smallest box or case in which any needful utensil can be carried. Bare lists of words are found suggestive to an imaginative and excited mind; as it is related of Lord Chatham that he was accustomed to read in Bailey's Dictionary when he was preparing to speak in Parliament. The poorest experience is rich enough for all the purposes of expressing thought. Why covet a knowledge of new facts? Day and night, house and garden, a few books, a few actions, serve us as well as would all trades and all spectacles. We are far from having exhausted the significance of the few symbols we use. We can come to use them yet with a terrible simplicity. It does not need that a poem should be long. Every word was once a poem. Every new relation is a new word. Also we use defects and deformities to a sacred purpose, so expressing our sense that the evils of the world are such only to the evil eye. In the old mythology, mythologists observe, defects are ascribed to divine natures, as lameness to Vulcan, blindness to Cupid, and the like, — to signify exuberances.

For as it is dislocation and detachment from the life of God that makes things ugly, the poet, who re-attaches things to nature and the Whole, — re-attaching even artificial things and violations of nature, to nature, by a deeper insight, — disposes very easily of the most disagreeable facts. Readers of poetry see the factory-village and the railway, and fancy that the poetry of the landscape is broken up by these; for these works of art are not yet consecrated in their reading; but the poet sees them fall within the great Order not less than the beehive or the spider's geometrical web. Nature adopts them very fast into her vital circles, and the gliding train of cars she loves like her own. Besides, in a centred mind, it signifies nothing how many mechanical inventions you exhibit. Though you add millions, and never so surprising, the fact of mechanics has not gained a grain's weight. The spiritual fact remains unalterable, by many or by few particulars; as no mountain is of any appreciable height to break the curve of the sphere. A shrewd country-boy goes to the city for the first time, and the

complacent citizen is not satisfied with his little wonder. It is not that he does not see all the fine houses and know that he never saw such before, but he disposes of them as easily as the poet finds place for the railway. The chief value of the new fact is to enhance the great and constant fact of Life, which can dwarf any and every circumstance, and to which the belt of wampum and the commerce of America are alike.

The world being thus put under the mind for verb and noun, the poet is he who can articulate it. For though life is great, and fascinates, and absorbs; and though all men are intelligent of the symbols through which it is named; yet they cannot originally use them. We are symbols and inhabit symbols; workmen, work, and tools, words and things, birth and death, all are emblems; but we sympathize with the symbols, and being infatuated with the economical uses of things, we do not know that they are thoughts. The poet, by an ulterior intellectual perception, gives them a power which makes their old use forgotten, and puts eyes and a tongue into every dumb and inanimate object. He perceives the independence of the thought on the symbol, the stability of the thought, the accidentality and fugacity of the symbol. As the eyes of Lyncaeus were said to see through the earth, so the poet turns the world to glass, and shows us all things in their right series and procession. For through that better perception he stands one step nearer to things, and sees the flowing or metamorphosis; perceives that thought is multiform; that within the form of every creature is a force impelling it to ascend into a higher form; and following with his eyes the life, uses the forms which express that life, and so his speech flows with the flowing of nature. All the facts of the animal economy, sex, nutriment, gestation, birth, growth, are symbols of the passage of the world into the soul of man, to suffer there a change and reappear a new and higher fact. He uses forms according to the life, and not according to the form. This is true science. The poet alone knows astronomy, chemistry, vegetation and animation, for he does not stop at these facts, but employs them as signs. He knows why the plain or meadow of space was strewn with these flowers we call suns and moons and stars; why the great deep is adorned with animals, with men, and gods; for in every word he speaks he rides on them as the horses of thought.

By virtue of this science the poet is the Namer or Language-maker, naming things sometimes after their appearance, sometimes after their essence, and giving to every one its own name and not another's, thereby rejoicing the intellect, which delights in detachment or boundary. The poets made all the words, and therefore language is the archives of history, and, if we must say it, a sort of tomb of the muses. For though the origin of most of our words is forgotten, each word was at first a stroke of genius, and obtained currency

because for the moment it symbolized the world to the first speaker and to the hearer. The etymologist finds the dearest word to have been once a brilliant picture. Language is fossil poetry. As the limestone of the continent consists of infinite masses of the shells of animalcules, so language is made up of images or tropes, which now, in their secondary use, have long ceased to remind us of their poetic origin. But the poet names the thing because he sees it, or comes one step nearer to it than any other. This expression or naming is not art, but a second nature, grown out of the first, as a leaf out of a tree. What we call nature is a certain self-regulated motion or change; and nature does all things by her own hands, and does not leave another to baptize her but baptizes herself; and this through the metamorphosis again. I remember that a certain poet described it to me thus:

Genius is the activity which repairs the decays of things, whether wholly or partly of a material and finite kind. Nature, through all her kingdoms, insures herself. Nobody cares for planting the poor fungus; so she shakes down from the gills of one agaric countless spores, any one of which, being preserved, transmits new billions of spores to-morrow or next day. The new agaric of this hour has a chance which the old one had not. This atom of seed is thrown into a new place, not subject to the accidents which destroyed its parent two rods off. She makes a man; and having brought him to ripe age, she will no longer run the risk of losing this wonder at a blow, but she detaches from him a new self, that the kind may be safe from accidents to which the individual is exposed. So when the soul of the poet has come to ripeness of thought, she detaches and sends away from it its poems or songs, — a fearless, sleepless, deathless progeny, which is not exposed to the accidents of the weary kingdom of time; a fearless, vivacious offspring, clad with wings (such was the virtue of the soul out of which they came) which carry them fast and far, and infix them irrecoverably into the hearts of men. These wings are the beauty of the poet's soul. The songs, thus flying immortal from their mortal parent, are pursued by clamorous flights of censures, which swarm in far greater numbers and threaten to devour them; but these last are not winged. At the end of a very short leap they fall plump down and rot, having received from the souls out of which they came no beautiful wings. But the melodies of the poet ascend and leap and pierce into the deeps of infinite time.

So far the bard taught me, using his freer speech. But nature has a higher end, in the production of New individuals, than security, namely ascension, or the passage of the soul into higher forms. I knew in my younger days the sculptor who made the statue of the youth which stands in the public garden. He was, as I remember, unable to tell directly, what made him happy or unhappy, but by

wonderful indirections he could tell. He rose one day, according to his habit, before the dawn, and saw the morning break, grand as the eternity out of which it came, and for many days after, he strove to express this tranquillity, and lo! his chisel had fashioned out of marble the form of a beautiful youth, Phosphorus, whose aspect is such that it is said all persons who look on it become silent. The poet also resigns himself to his mood, and that thought which agitated him is expressed, but alter idem, in a manner totally new. The expression is organic, or the new type which things themselves take when liberated. As, in the sun, objects paint their images on the retina of the eye, so they, sharing the aspiration of the whole universe, tend to paint a far more delicate copy of their essence in his mind. Like the metamorphosis of things into higher organic forms is their change into melodies. Over everything stands its daemon or soul, and, as the form of the thing is reflected by the eye, so the soul of the thing is reflected by a melody. The sea, the mountain-ridge, Niagara, and every flower-bed, pre-exist, or super-exist, in pre-cantations, which sail like odors in the air, and when any man goes by with an ear sufficiently fine, he overhears them and endeavors to write down the notes without diluting or depraving them. And herein is the legitimation of criticism, in the mind's faith that the poems are a corrupt version of some text in nature with which they ought to be made to tally. A rhyme in one of our sonnets should not be less pleasing than the iterated nodes of a sea-shell, or the resembling difference of a group of flowers. The pairing of the birds is an idyl, not tedious as our idyls are; a tempest is a rough ode, without falsehood or rant; a summer, with its harvest sown, reaped, and stored, is an epic song, subordinating how many admirably executed parts. Why should not the symmetry and truth that modulate these, glide into our spirits, and we participate the invention of nature?

This insight, which expresses itself by what is called Imagination, is a very high sort of seeing, which does not come by study, but by the intellect being where and what it sees; by sharing the path or circuit of things through forms, and so making them translucent to others. The path of things is silent. Will they suffer a speaker to go with them? A spy they will not suffer; a lover, a poet, is the transcendency of their own nature, — him they will suffer. The condition of true naming, on the poet's part, is his resigning himself to the divine aura which breathes through forms, and accompanying that.

It is a secret which every intellectual man quickly learns, that, beyond the energy of his possessed and conscious intellect he is capable of a new energy (as of an intellect doubled on itself), by abandonment to the nature of things; that beside his privacy of power as an individual man, there is a great public power on which he can draw, by unlocking, at all risks, his human doors, and suffering

the ethereal tides to roll and circulate through him; then he is caught up into the life of the Universe, his speech is thunder, his thought is law, and his words are universally intelligible as the plants and animals. The poet knows that he speaks adequately then only when he speaks somewhat wildly, or, “with the flower of the mind;” not with the intellect used as an organ, but with the intellect released from all service and suffered to take its direction from its celestial life; or as the ancients were wont to express themselves, not with intellect alone but with the intellect inebriated by nectar. As the traveller who has lost his way throws his reins on his horse’s neck and trusts to the instinct of the animal to find his road, so must we do with the divine animal who carries us through this world. For if in any manner we can stimulate this instinct, new passages are opened for us into nature; the mind flows into and through things hardest and highest, and the metamorphosis is possible.

This is the reason why bards love wine, mead, narcotics, coffee, tea, opium, the fumes of sandal-wood and tobacco, or whatever other procurers of animal exhilaration. All men avail themselves of such means as they can, to add this extraordinary power to their normal powers; and to this end they prize conversation, music, pictures, sculpture, dancing, theatres, travelling, war, mobs, fires, gaming, politics, or love, or science, or animal intoxication, — which are several coarser or finer quasi-mechanical substitutes for the true nectar, which is the ravishment of the intellect by coming nearer to the fact. These are auxiliaries to the centrifugal tendency of a man, to his passage out into free space, and they help him to escape the custody of that body in which he is pent up, and of that jail-yard of individual relations in which he is enclosed. Hence a great number of such as were professionally expressers of Beauty, as painters, poets, musicians, and actors, have been more than others wont to lead a life of pleasure and indulgence; all but the few who received the true nectar; and, as it was a spurious mode of attaining freedom, as it was an emancipation not into the heavens but into the freedom of baser places, they were punished for that advantage they won, by a dissipation and deterioration. But never can any advantage be taken of nature by a trick. The spirit of the world, the great calm presence of the Creator, comes not forth to the sorceries of opium or of wine. The sublime vision comes to the pure and simple soul in a clean and chaste body. That is not an inspiration, which we owe to narcotics, but some counterfeit excitement and fury. Milton says that the lyric poet may drink wine and live generously, but the epic poet, he who shall sing of the gods and their descent unto men, must drink water out of a wooden bowl. For poetry is not ‘Devil’s wine,’ but God’s wine. It is with this as it is with toys. We fill the hands and nurseries of our children with all manner of dolls, drums, and horses; withdrawing their eyes from the plain face and

sufficing objects of nature, the sun, and moon, the animals, the water, and stones, which should be their toys. So the poet's habit of living should be set on a key so low that the common influences should delight him. His cheerfulness should be the gift of the sunlight; the air should suffice for his inspiration, and he should be tipsy with water. That spirit which suffices quiet hearts, which seems to come forth to such from every dry knoll of sere grass, from every pine-stump and half-imbedded stone on which the dull March sun shines, comes forth to the poor and hungry, and such as are of simple taste. If thou fill thy brain with Boston and New York, with fashion and covetousness, and wilt stimulate thy jaded senses with wine and French coffee, thou shalt find no radiance of wisdom in the lonely waste of the pinewoods.

If the imagination intoxicates the poet, it is not inactive in other men. The metamorphosis excites in the beholder an emotion of joy. The use of symbols has a certain power of emancipation and exhilaration for all men. We seem to be touched by a wand which makes us dance and run about happily, like children. We are like persons who come out of a cave or cellar into the open air. This is the effect on us of tropes, fables, oracles, and all poetic forms. Poets are thus liberating gods. Men have really got a new sense, and found within their world another world, or nest of worlds; for, the metamorphosis once seen, we divine that it does not stop. I will not now consider how much this makes the charm of algebra and the mathematics, which also have their tropes, but it is felt in every definition; as when Aristotle defines space to be an immovable vessel in which things are contained; — or when Plato defines a line to be a flowing point; or figure to be a bound of solid; and many the like. What a joyful sense of freedom we have when Vitruvius announces the old opinion of artists that no architect can build any house well who does not know something of anatomy. When Socrates, in Charmides, tells us that the soul is cured of its maladies by certain incantations, and that these incantations are beautiful reasons, from which temperance is generated in souls; when Plato calls the world an animal; and Timaeus affirms that the plants also are animals; or affirms a man to be a heavenly tree, growing with his root, which is his head, upward; and, as George Chapman, following him, writes, —

“So in our tree of man, whose nerve root
Ssprings in his top;” —

when Orpheus speaks of hoariness as “that white flower which marks extreme old age;” when Proclus calls the universe the statue of the intellect; when Chaucer, in his praise of ‘Gentillesse,’ compares good blood in mean condition to fire, which, though carried to the darkest house betwixt this and the mount of Caucasus, will yet hold its natural office and burn as bright as if twenty thousand

men did it behold; when John saw, in the Apocalypse, the ruin of the world through evil, and the stars fall from heaven as the figtree casteth her untimely fruit; when Aesop reports the whole catalogue of common daily relations through the masquerade of birds and beasts; — we take the cheerful hint of the immortality of our essence and its versatile habit and escapes, as when the gypsies say “it is in vain to hang them, they cannot die.”

The poets are thus liberating gods. The ancient British bards had for the title of their order, “Those Who are free throughout the world.” They are free, and they make free. An imaginative book renders us much more service at first, by stimulating us through its tropes, than afterward when we arrive at the precise sense of the author. I think nothing is of any value in books excepting the transcendental and extraordinary. If a man is inflamed and carried away by his thought, to that degree that he forgets the authors and the public and heeds only this one dream which holds him like an insanity, let me read his paper, and you may have all the arguments and histories and criticism. All the value which attaches to Pythagoras, Paracelsus, Cornelius Agrippa, Cardan, Kepler, Swedenborg, Schelling, Oken, or any other who introduces questionable facts into his cosmogony, as angels, devils, magic, astrology, palmistry, mesmerism, and so on, is the certificate we have of departure from routine, and that here is a new witness. That also is the best success in conversation, the magic of liberty, which puts the world like a ball in our hands. How cheap even the liberty then seems; how mean to study, when an emotion communicates to the intellect the power to sap and upheave nature; how great the perspective! nations, times, systems, enter and disappear like threads in tapestry of large figure and many colors; dream delivers us to dream, and while the drunkenness lasts we will sell our bed, our philosophy, our religion, in our opulence.

There is good reason why we should prize this liberation. The fate of the poor shepherd, who, blinded and lost in the snow-storm, perishes in a drift within a few feet of his cottage door, is an emblem of the state of man. On the brink of the waters of life and truth, we are miserably dying. The inaccessibleness of every thought but that we are in, is wonderful. What if you come near to it; you are as remote when you are nearest as when you are farthest. Every thought is also a prison; every heaven is also a prison. Therefore we love the poet, the inventor, who in any form, whether in an ode or in an action or in looks and behavior has yielded us a new thought. He unlocks our chains and admits us to a new scene.

This emancipation is dear to all men, and the power to impart it, as it must come from greater depth and scope of thought, is a measure of intellect. Therefore all books of the imagination endure, all which ascend to that truth that

the writer sees nature beneath him, and uses it as his exponent. Every verse or sentence possessing this virtue will take care of its own immortality. The religions of the world are the ejaculations of a few imaginative men.

But the quality of the imagination is to flow, and not to freeze. The poet did not stop at the color or the form, but read their meaning; neither may he rest in this meaning, but he makes the same objects exponents of his new thought. Here is the difference betwixt the poet and the mystic, that the last nails a symbol to one sense, which was a true sense for a moment, but soon becomes old and false. For all symbols are fluxional; all language is vehicular and transitive, and is good, as ferries and horses are, for conveyance, not as farms and houses are, for homestead. Mysticism consists in the mistake of an accidental and individual symbol for an universal one. The morning-redness happens to be the favorite meteor to the eyes of Jacob Behmen, and comes to stand to him for truth and faith; and, he believes, should stand for the same realities to every reader. But the first reader prefers as naturally the symbol of a mother and child, or a gardener and his bulb, or a jeweller polishing a gem. Either of these, or of a myriad more, are equally good to the person to whom they are significant. Only they must be held lightly, and be very willingly translated into the equivalent terms which others use. And the mystic must be steadily told, — All that you say is just as true without the tedious use of that symbol as with it. Let us have a little algebra, instead of this trite rhetoric, — universal signs, instead of these village symbols, — and we shall both be gainers. The history of hierarchies seems to show that all religious error consisted in making the symbol too stark and solid, and was at last nothing but an excess of the organ of language.

Swedenborg, of all men in the recent ages, stands eminently for the translator of nature into thought. I do not know the man in history to whom things stood so uniformly for words. Before him the metamorphosis continually plays. Everything on which his eye rests, obeys the impulses of moral nature. The figs become grapes whilst he eats them. When some of his angels affirmed a truth, the laurel twig which they held blossomed in their hands. The noise which at a distance appeared like gnashing and thumping, on coming nearer was found to be the voice of disputants. The men in one of his visions, seen in heavenly light, appeared like dragons, and seemed in darkness; but to each other they appeared as men, and when the light from heaven shone into their cabin, they complained of the darkness, and were compelled to shut the window that they might see.

There was this perception in him which makes the poet or seer an object of awe and terror, namely that the same man or society of men may wear one aspect to themselves and their companions, and a different aspect to higher intelligences. Certain priests, whom he describes as conversing very learnedly

together, appeared to the children who were at some distance, like dead horses; and many the like misappearances. And instantly the mind inquires whether these fishes under the bridge, yonder oxen in the pasture, those dogs in the yard, are immutably fishes, oxen, and dogs, or only so appear to me, and perchance to themselves appear upright men; and whether I appear as a man to all eyes. The Bramins and Pythagoras propounded the same question, and if any poet has witnessed the transformation he doubtless found it in harmony with various experiences. We have all seen changes as considerable in wheat and caterpillars. He is the poet and shall draw us with love and terror, who sees through the flowing vest the firm nature, and can declare it.

I look in vain for the poet whom I describe. We do not with sufficient plainness or sufficient profoundness address ourselves to life, nor dare we chaunt our own times and social circumstance. If we filled the day with bravery, we should not shrink from celebrating it. Time and nature yield us many gifts, but not yet the timely man, the new religion, the reconciler, whom all things await. Dante's praise is that he dared to write his autobiography in colossal cipher, or into universality. We have yet had no genius in America, with tyrannous eye, which knew the value of our incomparable materials, and saw, in the barbarism and materialism of the times, another carnival of the same gods whose picture he so much admires in Homer; then in the Middle Age; then in Calvinism. Banks and tariffs, the newspaper and caucus, Methodism and Unitarianism, are flat and dull to dull people, but rest on the same foundations of wonder as the town of Troy and the temple of Delphi, and are as swiftly passing away. Our logrolling, our stumps and their politics, our fisheries, our Negroes and Indians, our boats and our repudiations, the wrath of rogues and the pusillanimity of honest men, the northern trade, the southern planting, the western clearing, Oregon and Texas, are yet unsung. Yet America is a poem in our eyes; its ample geography dazzles the imagination, and it will not wait long for metres. If I have not found that excellent combination of gifts in my countrymen which I seek, neither could I aid myself to fix the idea of the poet by reading now and then in Chalmers's collection of five centuries of English poets. These are wits more than poets, though there have been poets among them. But when we adhere to the ideal of the poet, we have our difficulties even with Milton and Homer. Milton is too literary, and Homer too literal and historical.

But I am not wise enough for a national criticism, and must use the old largeness a little longer, to discharge my errand from the muse to the poet concerning his art.

Art is the path of the creator to his work. The paths or methods are ideal and eternal, though few men ever see them; not the artist himself for years, or for a

lifetime, unless he come into the conditions. The painter, the sculptor, the composer, the epic rhapsodist, the orator, all partake one desire, namely to express themselves symmetrically and abundantly, not dwarfishly and fragmentarily. They found or put themselves in certain conditions, as, the painter and sculptor before some impressive human figures; the orator, into the assembly of the people; and the others in such scenes as each has found exciting to his intellect; and each presently feels the new desire. He hears a voice, he sees a beckoning. Then he is apprised, with wonder, what herds of daemons hem him in. He can no more rest; he says, with the old painter, "By God, it is in me and must go forth of me." He pursues a beauty, half seen, which flies before him. The poet pours out verses in every solitude. Most of the things he says are conventional, no doubt; but by and by he says something which is original and beautiful. That charms him. He would say nothing else but such things. In our way of talking we say 'That is yours, this is mine;' but the poet knows well that it is not his; that it is as strange and beautiful to him as to you; he would fain hear the like eloquence at length. Once having tasted this immortal ichor, he cannot have enough of it, and as an admirable creative power exists in these intellections, it is of the last importance that these things get spoken. What a little of all we know is said! What drops of all the sea of our science are baled up! and by what accident it is that these are exposed, when so many secrets sleep in nature! Hence the necessity of speech and song; hence these throbs and heart-beatings in the orator, at the door of the assembly, to the end namely that thought may be ejaculated as Logos, or Word.

Doubt not, O poet, but persist. Say 'It is in me, and shall out.' Stand there, balked and dumb, stuttering and stammering, hissed and hooted, stand and strive, until at last rage draw out of thee that dream-power which every night shows thee is thine own; a power transcending all limit and privacy, and by virtue of which a man is the conductor of the whole river of electricity. Nothing walks, or creeps, or grows, or exists, which must not in turn arise and walk before him as exponent of his meaning. Comes he to that power, his genius is no longer exhaustible. All the creatures by pairs and by tribes pour into his mind as into a Noah's ark, to come forth again to people a new world. This is like the stock of air for our respiration or for the combustion of our fireplace; not a measure of gallons, but the entire atmosphere if wanted. And therefore the rich poets, as Homer, Chaucer, Shakspeare, and Raphael, have obviously no limits to their works except the limits of their lifetime, and resemble a mirror carried through the street, ready to render an image of every created thing.

O poet! a new nobility is conferred in groves and pastures, and not in castles or by the sword-blade any longer. The conditions are hard, but equal. Thou shalt

leave the world, and know the muse only. Thou shalt not know any longer the times, customs, graces, politics, or opinions of men, but shalt take all from the muse. For the time of towns is tolled from the world by funereal chimes, but in nature the universal hours are counted by succeeding tribes of animals and plants, and by growth of joy on joy. God wills also that thou abdicate a manifold and duplex life, and that thou be content that others speak for thee. Others shall be thy gentlemen and shall represent all courtesy and worldly life for thee; others shall do the great and resounding actions also. Thou shalt lie close hid with nature, and canst not be afforded to the Capitol or the Exchange. The world is full of renunciations and apprenticeships, and this is thine: thou must pass for a fool and a churl for a long season. This is the screen and sheath in which Pan has protected his well-beloved flower, and thou shalt be known only to thine own, and they shall console thee with tenderest love. And thou shalt not be able to rehearse the names of thy friends in thy verse, for an old shame before the holy ideal. And this is the reward; that the ideal shall be real to thee, and the impressions of the actual world shall fall like summer rain, copious, but not troublesome, to thy invulnerable essence. Thou shalt have the whole land for thy park and manor, the sea for thy bath and navigation, without tax and without envy; the woods and the rivers thou shalt own; and thou shalt possess that wherein others are only tenants and boarders. Thou true land-lord! sea-lord! air-lord! Wherever snow falls or water flows or birds fly, wherever day and night meet in twilight, wherever the blue heaven is hung by clouds or sown with stars, wherever are forms with transparent boundaries, wherever are outlets into celestial space, wherever is danger, and awe, and love, — there is Beauty, plenteous as rain, shed for thee, and though thou shouldst walk the world over, thou shalt not be able to find a condition inopportune or ignoble.

EXPERIENCE.

THE lords of life, the lords of life, —
I saw them pass,
In their own guise,
Like and unlike,
Portly and grim,
Use and Surprise,

Surface and Dream,
Succession swift, and spectral Wrong,
Temperament without a tongue,
And the inventor of the game
Omnipresent without name; —
Some to see, some to be guessed,
They marched from east to west:
Little man, least of all,
Among the legs of his guardians tall,
Walked about with puzzled look: —
Him by the hand dear Nature took;
Dearest Nature, strong and kind,
Whispered, 'Darling, never mind!
Tomorrow they will wear another face,
The founder thou! these are thy race!'

EXPERIENCE.

WHERE do we find ourselves? In a series of which we do not know the extremes, and believe that it has none. We wake and find ourselves on a stair; there are stairs below us, which we seem to have ascended; there are stairs above us, many a one, which go upward and out of sight. But the Genius which according to the old belief stands at the door by which we enter, and gives us the lethe to drink, that we may tell no tales, mixed the cup too strongly, and we cannot shake off the lethargy now at noonday. Sleep lingers all our lifetime about our eyes, as night hovers all day in the boughs of the fir-tree. All things swim and glitter. Our life is not so much threatened as our perception. Ghostlike we glide through nature, and should not know our place again. Did our birth fall in some fit of indigence and frugality in nature, that she was so sparing of her fire and so liberal of her earth that it appears to us that we lack the affirmative principle, and though we have health and reason, yet we have no superfluity of spirit for new creation? We have enough to live and bring the year about, but not an ounce to impart or to invest. Ah that our Genius were a little more of a genius! We are like millers on the lower levels of a stream, when the factories above them have exhausted the water. We too fancy that the upper people must have raised their dams.

If any of us knew what we were doing, or where we are going, then when we think we best know! We do not know to-day whether we are busy or idle. In times when we thought ourselves indolent, we have afterwards discovered that much was accomplished, and much was begun in us. All our days are so unprofitable while they pass, that 'tis wonderful where or when we ever got anything of this which we call wisdom, poetry, virtue. We never got it on any dated calendar day. Some heavenly days must have been intercalated somewhere, like those that Hermes won with dice of the Moon, that Osiris might be born. It is said all martyrdoms looked mean when they were suffered. Every ship is a romantic object, except that we sail in. Embark, and the romance quits our vessel and hangs on every other sail in the horizon. Our life looks trivial, and we shun to record it. Men seem to have learned of the horizon the art of perpetual retreating and reference. 'Yonder uplands are rich pasturage, and my neighbor has fertile meadow, but my field,' says the querulous farmer, 'only holds the world together.' I quote another man's saying; unluckily that other withdraws himself in the same way, and quotes me. 'Tis the trick of nature thus to degrade to-day; a good deal of buzz, and somewhere a result slipped magically in. Every roof is agreeable to the eye until it is lifted; then we find

tragedy and moaning women and hard-eyed husbands and deluges of lethe, and the men ask, 'What's the news?' as if the old were so bad. How many individuals can we count in society? how many actions? how many opinions? So much of our time is preparation, so much is routine, and so much retrospect, that the pith of each man's genius contracts itself to a very few hours. The history of literature — take the net result of Tiraboschi, Warton, or Schlegel, — is a sum of very few ideas and of very few original tales; all the rest being variation of these. So in this great society wide lying around us, a critical analysis would find very few spontaneous actions. It is almost all custom and gross sense. There are even few opinions, and these seem organic in the speakers, and do not disturb the universal necessity.

What opium is instilled into all disaster! It shows formidable as we approach it, but there is at last no rough rasping friction, but the most slippery sliding surfaces. We fall soft on a thought; Ate Dea is gentle, —

“Over men's heads walking aloft,
With tender feet treading so soft.”

People grieve and bemoan themselves, but it is not half so bad with them as they say. There are moods in which we court suffering, in the hope that here at least we shall find reality, sharp peaks and edges of truth. But it turns out to be scene-painting and counterfeit. The only thing grief has taught me is to know how shallow it is. That, like all the rest, plays about the surface, and never introduces me into the reality, for contact with which we would even pay the costly price of sons and lovers. Was it Boscovich who found out that bodies never come in contact? Well, souls never touch their objects. An innavigable sea washes with silent waves between us and the things we aim at and converse with. Grief too will make us idealists. In the death of my son, now more than two years ago, I seem to have lost a beautiful estate, — no more. I cannot get it nearer to me. If to-morrow I should be informed of the bankruptcy of my principal debtors, the loss of my property would be a great inconvenience to me, perhaps, for many years; but it would leave me as it found me, — neither better nor worse. So is it with this calamity: it does not touch me; something which I fancied was a part of me, which could not be torn away without tearing me nor enlarged without enriching me, falls off from me and leaves no scar. It was caducous. I grieve that grief can teach me nothing, nor carry me one step into real nature. The Indian who was laid under a curse that the wind should not blow on him, nor water flow to him, nor fire burn him, is a type of us all. The dearest events are summer-rain, and we the Para coats that shed every drop. Nothing is left us now but death. We look to that with a grim satisfaction, saying There at least is reality that will not dodge us.

I take this evanescence and lubricity of all objects, which lets them slip through our fingers then when we clutch hardest, to be the most unhandsome part of our condition. Nature does not like to be observed, and likes that we should be her fools and playmates. We may have the sphere for our cricket-ball, but not a berry for our philosophy. Direct strokes she never gave us power to make; all our blows glance, all our hits are accidents. Our relations to each other are oblique and casual.

Dream delivers us to dream, and there is no end to illusion. Life is a train of moods like a string of beads, and as we pass through them they prove to be many-colored lenses which paint the world their own hue, and each shows only what lies in its focus. From the mountain you see the mountain. We animate what we can, and we see only what we animate. Nature and books belong to the eyes that see them. It depends on the mood of the man whether he shall see the sunset or the fine poem. There are always sunsets, and there is always genius; but only a few hours so serene that we can relish nature or criticism. The more or less depends on structure or temperament. Temperament is the iron wire on which the beads are strung. Of what use is fortune or talent to a cold and defective nature? Who cares what sensibility or discrimination a man has at some time shown, if he falls asleep in his chair? or if he laugh and giggle? or if he apologize? or is infected with egotism? or thinks of his dollar? or cannot go by food? or has gotten a child in his boyhood? Of what use is genius, if the organ is too convex or too concave and cannot find a focal distance within the actual horizon of human life? Of what use, if the brain is too cold or too hot, and the man does not care enough for results to stimulate him to experiment, and hold him up in it? or if the web is too finely woven, too irritable by pleasure and pain, so that life stagnates from too much reception without due outlet? Of what use to make heroic vows of amendment, if the same old law-breaker is to keep them? What cheer can the religious sentiment yield, when that is suspected to be secretly dependent on the seasons of the year and the state of the blood? I knew a witty physician who found the creed in the biliary duct, and used to affirm that if there was disease in the liver, the man became a Calvinist, and if that organ was sound, he became a Unitarian. Very mortifying is the reluctant experience that some unfriendly excess or imbecility neutralizes the promise of genius. We see young men who owe us a new world, so readily and lavishly they promise, but they never acquit the debt; they die young and dodge the account; or if they live they lose themselves in the crowd.

Temperament also enters fully into the system of illusions and shuts us in a prison of glass which we cannot see. There is an optical illusion about every person we meet. In truth they are all creatures of given temperament, which will

appear in a given character, whose boundaries they will never pass: but we look at them, they seem alive, and we presume there is impulse in them. In the moment it seems impulse; in the year, in the lifetime, it turns out to be a certain uniform tune which the revolving barrel of the music-box must play. Men resist the conclusion in the morning, but adopt it as the evening wears on, that temper prevails over everything of time, place, and condition, and is inconsumable in the flames of religion. Some modifications the moral sentiment avails to impose, but the individual texture holds its dominion, if not to bias the moral judgments, yet to fix the measure of activity and of enjoyment.

I thus express the law as it is read from the platform of ordinary life, but must not leave it without noticing the capital exception. For temperament is a power which no man willingly hears any one praise but himself. On the platform of physics we cannot resist the contracting influences of so-called science. Temperament puts all divinity to rout. I know the mental proclivity of physicians. I hear the chuckle of the phrenologists. Theoretic kidnappers and slave-drivers, they esteem each man the victim of another, who winds him round his finger by knowing the law of his being; and by such cheap signboards as the color of his beard or the slope of his occiput, reads the inventory of his fortunes and character. The grossest ignorance does not disgust like this impudent knowingness. The physicians say they are not materialists; but they are: — Spirit is matter reduced to an extreme thinness: O so thin! — But the definition of spiritual should be, that which is its own evidence. What notions do they attach to love! what to religion! One would not willingly pronounce these words in their hearing, and give them the occasion to profane them. I saw a gracious gentleman who adapts his conversation to the form of the head of the man he talks with! I had fancied that the value of life lay in its inscrutable possibilities; in the fact that I never know, in addressing myself to a new individual, what may befall me. I carry the keys of my castle in my hand, ready to throw them at the feet of my lord, whenever and in what disguise soever he shall appear. I know he is in the neighborhood hidden among vagabonds. Shall I preclude my future by taking a high seat and kindly adapting my conversation to the shape of heads? When I come to that, the doctors shall buy me for a cent.— ‘But, sir, medical history; the report to the Institute; the proven facts!’ — I distrust the facts and the inferences. Temperament is the veto or limitation-power in the constitution, very justly applied to restrain an opposite excess in the constitution, but absurdly offered as a bar to original equity. When virtue is in presence, all subordinate powers sleep. On its own level, or in view of nature, temperament is final. I see not, if one be once caught in this trap of so-called sciences, any escape for the man from the links of the chain of physical necessity. Given such an embryo,

such a history must follow. On this platform one lives in a sty of sensualism, and would soon come to suicide. But it is impossible that the creative power should exclude itself. Into every intelligence there is a door which is never closed, through which the creator passes. The intellect, seeker of absolute truth, or the heart, lover of absolute good, intervenes for our succor, and at one whisper of these high powers we awake from ineffectual struggles with this nightmare. We hurl it into its own hell, and cannot again contract ourselves to so base a state.

The secret of the illusoriness is in the necessity of a succession of moods or objects. Gladly we would anchor, but the anchorage is quicksand. This onward trick of nature is too strong for us: *Pero si muove*. When at night I look at the moon and stars, I seem stationary, and they to hurry. Our love of the real draws us to permanence, but health of body consists in circulation, and sanity of mind in variety or facility of association. We need change of objects. Dedication to one thought is quickly odious. We house with the insane, and must humor them; then conversation dies out. Once I took such delight in Montaigne, that I thought I should not need any other book; before that, in Shakspeare; then in Plutarch; then in Plotinus; at one time in Bacon; afterwards in Goethe; even in Bettine; but now I turn the pages of either of them languidly, whilst I still cherish their genius. So with pictures; each will bear an emphasis of attention once, which it cannot retain, though we fain would continue to be pleased in that manner. How strongly I have felt of pictures that when you have seen one well, you must take your leave of it; you shall never see it again. I have had good lessons from pictures which I have since seen without emotion or remark. A deduction must be made from the opinion which even the wise express of a new book or occurrence. Their opinion gives me tidings of their mood, and some vague guess at the new fact, but is nowise to be trusted as the lasting relation between that intellect and that thing. The child asks, 'Mamma, why don't I like the story as well as when you told it me yesterday?' Alas! child it is even so with the oldest cherubim of knowledge. But will it answer thy question to say, Because thou wert born to a whole and this story is a particular? The reason of the pain this discovery causes us (and we make it late in respect to works of art and intellect), is the plaint of tragedy which murmurs from it in regard to persons, to friendship and love.

That immobility and absence of elasticity which we find in the arts, we find with more pain in the artist. There is no power of expansion in men. Our friends early appear to us as representatives of certain ideas which they never pass or exceed. They stand on the brink of the ocean of thought and power, but they never take the single step that would bring them there. A man is like a bit of Labrador spar, which has no lustre as you turn it in your hand until you come to

a particular angle; then it shows deep and beautiful colors. There is no adaptation or universal applicability in men, but each has his special talent, and the mastery of successful men consists in adroitly keeping themselves where and when that turn shall be oftenest to be practised. We do what we must, and call it by the best names we can, and would fain have the praise of having intended the result which ensues. I cannot recall any form of man who is not superfluous sometimes. But is not this pitiful? Life is not worth the taking, to do tricks in.

Of course it needs the whole society to give the symmetry we seek. The party-colored wheel must revolve very fast to appear white. Something is earned too by conversing with so much folly and defect. In fine, whoever loses, we are always of the gaining party. Divinity is behind our failures and follies also. The plays of children are nonsense, but very educative nonsense. So it is with the largest and solemnest things, with commerce, government, church, marriage, and so with the history of every man's bread, and the ways by which he is to come by it. Like a bird which alights nowhere, but hops perpetually from bough to bough, is the Power which abides in no man and in no woman, but for a moment speaks from this one, and for another moment from that one.

But what help from these fineries or pedantries? What help from thought? Life is not dialectics. We, I think, in these times, have had lessons enough of the futility of criticism. Our young people have thought and written much on labor and reform, and for all that they have written, neither the world nor themselves have got on a step. Intellectual tasting of life will not supersede muscular activity. If a man should consider the nicety of the passage of a piece of bread down his throat, he would starve. At Education-Farm, the noblest theory of life sat on the noblest figures of young men and maidens, quite powerless and melancholy. It would not rake or pitch a ton of hay; it would not rub down a horse; and the men and maidens it left pale and hungry. A political orator wittily compared our party promises to western roads, which opened stately enough, with planted trees on either side to tempt the traveller, but soon became narrow and narrower and ended in a squirrel-track and ran up a tree. So does culture with us; it ends in headache. Unspeakably sad and barren does life look to those who a few months ago were dazzled with the splendor of the promise of the times. "There is now no longer any right course of action nor any self-devotion left among the Iranis." Objections and criticism we have had our fill of. There are objections to every course of life and action, and the practical wisdom infers an indifferency, from the omnipresence of objection. The whole frame of things preaches indifferency. Do not craze yourself with thinking, but go about your business anywhere. Life is not intellectual or critical, but sturdy. Its chief good is for well-mixed people who can enjoy what they find, without question. Nature

hates peeping, and our mothers speak her very sense when they say, “Children, eat your victuals, and say no more of it.” To fill the hour, — that is happiness; to fill the hour and leave no crevice for a repentance or an approval. We live amid surfaces, and the true art of life is to skate well on them. Under the oldest mouldiest conventions a man of native force prospers just as well as in the newest world, and that by skill of handling and treatment. He can take hold anywhere. Life itself is a mixture of power and form, and will not bear the least excess of either. To finish the moment, to find the journey’s end in every step of the road, to live the greatest number of good hours, is wisdom. It is not the part of men, but of fanatics, or of mathematicians if you will, to say that the shortness of life considered, it is not worth caring whether for so short a duration we were sprawling in want or sitting high. Since our office is with moments, let us husband them. Five minutes of today are worth as much to me as five minutes in the next millennium. Let us be poised, and wise, and our own, today. Let us treat the men and women well; treat them as if they were real; perhaps they are. Men live in their fancy, like drunkards whose hands are too soft and tremulous for successful labor. It is a tempest of fancies, and the only ballast I know is a respect to the present hour. Without any shadow of doubt, amidst this vertigo of shows and politics, I settle myself ever the firmer in the creed that we should not postpone and refer and wish, but do broad justice where we are, by whomsoever we deal with, accepting our actual companions and circumstances, however humble or odious as the mystic officials to whom the universe has delegated its whole pleasure for us. If these are mean and malignant, their contentment, which is the last victory of justice, is a more satisfying echo to the heart than the voice of poets and the casual sympathy of admirable persons. I think that however a thoughtful man may suffer from the defects and absurdities of his company, he cannot without affectation deny to any set of men and women a sensibility to extraordinary merit. The coarse and frivolous have an instinct of superiority, if they have not a sympathy, and honor it in their blind capricious way with sincere homage.

The fine young people despise life, but in me, and in such as with me are free from dyspepsia, and to whom a day is a sound and solid good, it is a great excess of politeness to look scornful and to cry for company. I am grown by sympathy a little eager and sentimental, but leave me alone and I should relish every hour and what it brought me, the potluck of the day, as heartily as the oldest gossip in the bar-room. I am thankful for small mercies. I compared notes with one of my friends who expects everything of the universe and is disappointed when anything is less than the best, and I found that I begin at the other extreme, expecting nothing, and am always full of thanks for moderate goods. I accept the

clangor and jangle of contrary tendencies. I find my account in sots and bores also. They give a reality to the circumjacent picture which such a vanishing meteorous appearance can ill spare. In the morning I awake and find the old world, wife, babes, and mother, Concord and Boston, the dear old spiritual world and even the dear old devil not far off. If we will take the good we find, asking no questions, we shall have heaping measures. The great gifts are not got by analysis. Everything good is on the highway. The middle region of our being is the temperate zone. We may climb into the thin and cold realm of pure geometry and lifeless science, or sink into that of sensation. Between these extremes is the equator of life, of thought, of spirit, of poetry, — a narrow belt. Moreover, in popular experience everything good is on the highway. A collector peeps into all the picture-shops of Europe for a landscape of Poussin, a crayon-sketch of Salvator; but the Transfiguration, the Last Judgment, the Communion of St. Jerome, and what are as transcendent as these, are on the walls of the Vatican, the Uffizii, or the Louvre, where every footman may see them; to say nothing of Nature's pictures in every street, of sunsets and sunrises every day, and the sculpture of the human body never absent. A collector recently bought at public auction, in London, for one hundred and fifty-seven guineas, an autograph of Shakspeare; but for nothing a school-boy can read Hamlet and can detect secrets of highest concernment yet unpublished therein. I think I will never read any but the commonest books, — the Bible, Homer, Dante, Shakspeare, and Milton. Then we are impatient of so public a life and planet, and run hither and thither for nooks and secrets. The imagination delights in the woodcraft of Indians, trappers, and bee-hunters. We fancy that we are strangers, and not so intimately domesticated in the planet as the wild man and the wild beast and bird. But the exclusion reaches them also; reaches the climbing, flying, gliding, feathered and four-footed man. Fox and woodchuck, hawk and snipe and bittern, when nearly seen, have no more root in the deep world than man, and are just such superficial tenants of the globe. Then the new molecular philosophy shows astronomical interspaces betwixt atom and atom, shows that the world is all outside; it has no inside.

The mid-world is best. Nature, as we know her, is no saint. The lights of the church, the ascetics, Gentoos, and corn-eaters, she does not distinguish by any favor. She comes eating and drinking and sinning. Her darlings, the great, the strong, the beautiful, are not children of our law; do not come out of the Sunday School, nor weigh their food, nor punctually keep the commandments. If we will be strong with her strength we must not harbor such disconsolate consciences, borrowed too from the consciences of other nations. We must set up the strong present tense against all the rumors of wrath, past or to come. So many things

are unsettled which it is of the first importance to settle; — and, pending their settlement, we will do as we do. Whilst the debate goes forward on the equity of commerce, and will not be closed for a century or two, New and Old England may keep shop. Law of copyright and international copyright is to be discussed, and in the interim we will sell our books for the most we can. Expediency of literature, reason of literature, lawfulness of writing down a thought, is questioned; much is to say on both sides, and, while the fight waxes hot, thou, dearest scholar, stick to thy foolish task, add a line every hour, and between whiles add a line. Right to hold land, right of property, is disputed, and the conventions convene, and before the vote is taken, dig away in your garden, and spend your earnings as a waif or godsend to all serene and beautiful purposes. Life itself is a bubble and a skepticism, and a sleep within a sleep. Grant it, and as much more as they will, — but thou, God's darling! heed thy private dream; thou wilt not be missed in the scorning and skepticism; there are enough of them; stay there in thy closet and toil until the rest are agreed what to do about it. Thy sickness, they say, and thy puny habit require that thou do this or avoid that, but know that thy life is a flitting state, a tent for a night, and do thou, sick or well, finish that stint. Thou art sick, but shalt not be worse, and the universe, which holds thee dear, shall be the better.

Human life is made up of the two elements, power and form, and the proportion must be invariably kept if we would have it sweet and sound. Each of these elements in excess makes a mischief as hurtful as its defect. Everything runs to excess; every good quality is noxious if unmixed, and, to carry the danger to the edge of ruin, nature causes each man's peculiarity to superabound. Here, among the farms, we adduce the scholars as examples of this treachery. They are nature's victims of expression. You who see the artist, the orator, the poet, too near, and find their life no more excellent than that of mechanics or farmers, and themselves victims of partiality, very hollow and haggard, and pronounce them failures, not heroes, but quacks, — conclude very reasonably that these arts are not for man, but are disease. Yet nature will not bear you out. Irresistible nature made men such, and makes legions more of such, every day. You love the boy reading in a book, gazing at a drawing, or a cast; yet what are these millions who read and behold, but incipient writers and sculptors? Add a little more of that quality which now reads and sees, and they will seize the pen and chisel. And if one remembers how innocently he began to be an artist, he perceives that nature joined with his enemy. A man is a golden impossibility. The line he must walk is a hair's breadth. The wise through excess of wisdom is made a fool.

How easily, if fate would suffer it, we might keep forever these beautiful

limits, and adjust ourselves, once for all, to the perfect calculation of the kingdom of known cause and effect. In the street and in the newspapers, life appears so plain a business that manly resolution and adherence to the multiplication-table through all weathers will insure success. But ah! presently comes a day, or is it only a half-hour, with its angel-whispering, — which discomfits the conclusions of nations and of years! Tomorrow again everything looks real and angular, the habitual standards are reinstated, common sense is as rare as genius, — is the basis of genius, and experience is hands and feet to every enterprise; — and yet, he who should do his business on this understanding would be quickly bankrupt. Power keeps quite another road than the turnpikes of choice and will; namely the subterranean and invisible tunnels and channels of life. It is ridiculous that we are diplomatists, and doctors, and considerate people: there are no dupes like these. Life is a series of surprises, and would not be worth taking or keeping if it were not. God delights to isolate us every day, and hide from us the past and the future. We would look about us, but with grand politeness he draws down before us an impenetrable screen of purest sky, and another behind us of purest sky. ‘You will not remember,’ he seems to say, ‘and you will not expect.’ All good conversation, manners, and action, come from a spontaneity which forgets usages and makes the moment great. Nature hates calculators; her methods are saltatory and impulsive. Man lives by pulses; our organic movements are such; and the chemical and ethereal agents are undulatory and alternate; and the mind goes antagonizing on, and never prospers but by fits. We thrive by casualties. Our chief experiences have been casual. The most attractive class of people are those who are powerful obliquely and not by the direct stroke; men of genius, but not yet accredited; one gets the cheer of their light without paying too great a tax. Theirs is the beauty of the bird or the morning light, and not of art. In the thought of genius there is always a surprise; and the moral sentiment is well called “the newness,” for it is never other; as new to the oldest intelligence as to the young child;— “the kingdom that cometh without observation.” In like manner, for practical success, there must not be too much design. A man will not be observed in doing that which he can do best. There is a certain magic about his properest action which stupefies your powers of observation, so that though it is done before you, you wist not of it. The art of life has a pudency, and will not be exposed. Every man is an impossibility until he is born; every thing impossible until we see a success. The ardors of piety agree at last with the coldest skepticism, — that nothing is of us or our works, — that all is of God. Nature will not spare us the smallest leaf of laurel. All writing comes by the grace of God, and all doing and having. I would gladly be moral and keep due metes and bounds, which I dearly love, and allow the most to the

will of man; but I have set my heart on honesty in this chapter, and I can see nothing at last, in success or failure, than more or less of vital force supplied from the Eternal. The results of life are uncalculated and uncalculable. The years teach much which the days never know. The persons who compose our company, converse, and come and go, and design and execute many things, and somewhat comes of it all, but an unlooked-for result. The individual is always mistaken. He designed many things, and drew in other persons as coadjutors, quarrelled with some or all, blundered much, and something is done; all are a little advanced, but the individual is always mistaken. It turns out somewhat new and very unlike what he promised himself.

The ancients, struck with this irreducibleness of the elements of human life to calculation, exalted Chance into a divinity; but that is to stay too long at the spark, which glitters truly at one point, but the universe is warm with the latency of the same fire. The miracle of life which will not be expounded but will remain a miracle, introduces a new element. In the growth of the embryo, Sir Everard Home I think noticed that the evolution was not from one central point, but coactive from three or more points. Life has no memory. That which proceeds in succession might be remembered, but that which is coexistent, or ejaculated from a deeper cause, as yet far from being conscious, knows not its own tendency. So is it with us, now skeptical or without unity, because immersed in forms and effects all seeming to be of equal yet hostile value, and now religious, whilst in the reception of spiritual law. Bear with these distractions, with this coetaneous growth of the parts; they will one day be members, and obey one will. On that one will, on that secret cause, they nail our attention and hope. Life is hereby melted into an expectation or a religion. Underneath the inharmonious and trivial particulars, is a musical perfection; the Ideal journeying always with us, the heaven without rent or seam. Do but observe the mode of our illumination. When I converse with a profound mind, or if at any time being alone I have good thoughts, I do not at once arrive at satisfactions, as when, being thirsty, I drink water; or go to the fire, being cold; no! but I am at first apprised of my vicinity to a new and excellent region of life. By persisting to read or to think, this region gives further sign of itself, as it were in flashes of light, in sudden discoveries of its profound beauty and repose, as if the clouds that covered it parted at intervals and showed the approaching traveller the inland mountains, with the tranquil eternal meadows spread at their base, whereon flocks graze and shepherds pipe and dance. But every insight from this realm of thought is felt as initial, and promises a sequel. I do not make it; I arrive there, and behold what was there already. I make! O no! I clap my hands in infantine joy and amazement before the first opening to me of this august

magnificence, old with the love and homage of innumerable ages, young with the life of life, the sunbright Mecca of the desert. And what a future it opens! I feel a new heart beating with the love of the new beauty. I am ready to die out of nature and be born again into this new yet unapproachable America I have found in the West: —

“Since neither now nor yesterday began
These thoughts, which have been ever, nor yet can
A man be found who their first entrance knew.”

If I have described life as a flux of moods, I must now add that there is that in us which changes not and which ranks all sensations and states of mind. The consciousness in each man is a sliding scale, which identifies him now with the First Cause, and now with the flesh of his body; life above life, in infinite degrees. The sentiment from which it sprung determines the dignity of any deed, and the question ever is, not what you have done or forborne, but at whose command you have done or forborne it.

Fortune, Minerva, Muse, Holy Ghost, — these are quaint names, too narrow to cover this unbounded substance. The baffled intellect must still kneel before this cause, which refuses to be named, — ineffable cause, which every fine genius has essayed to represent by some emphatic symbol, as, Thales by water, Anaximenes by air, Anaxagoras by (Nous) thought, Zoroaster by fire, Jesus and the moderns by love; and the metaphor of each has become a national religion. The Chinese Mencius has not been the least successful in his generalization. “I fully understand language,” he said, “and nourish well my vast-flowing vigor.”— “I beg to ask what you call vast-flowing vigor?” — said his companion. “The explanation,” replied Mencius, “is difficult. This vigor is supremely great, and in the highest degree unbending. Nourish it correctly and do it no injury, and it will fill up the vacancy between heaven and earth. This vigor accords with and assists justice and reason, and leaves no hunger.” — In our more correct writing we give to this generalization the name of Being, and thereby confess that we have arrived as far as we can go. Suffice it for the joy of the universe that we have not arrived at a wall, but at interminable oceans. Our life seems not present so much as prospective; not for the affairs on which it is wasted, but as a hint of this vast-flowing vigor. Most of life seems to be mere advertisement of faculty; information is given us not to sell ourselves cheap; that we are very great. So, in particulars, our greatness is always in a tendency or direction, not in an action. It is for us to believe in the rule, not in the exception. The noble are thus known from the ignoble. So in accepting the leading of the sentiments, it is not what we believe concerning the immortality of the soul or the like, but the universal impulse to believe, that is the material circumstance

and is the principal fact in the history of the globe. Shall we describe this cause as that which works directly? The spirit is not helpless or needful of mediate organs. It has plentiful powers and direct effects. I am explained without explaining, I am felt without acting, and where I am not. Therefore all just persons are satisfied with their own praise. They refuse to explain themselves, and are content that new actions should do them that office. They believe that we communicate without speech and above speech, and that no right action of ours is quite unaffecting to our friends, at whatever distance; for the influence of action is not to be measured by miles. Why should I fret myself because a circumstance has occurred which hinders my presence where I was expected? If I am not at the meeting, my presence where I am should be as useful to the commonwealth of friendship and wisdom, as would be my presence in that place. I exert the same quality of power in all places. Thus journeys the mighty Ideal before us; it never was known to fall into the rear. No man ever came to an experience which was satiating, but his good is tidings of a better. Onward and onward! In liberated moments we know that a new picture of life and duty is already possible; the elements already exist in many minds around you of a doctrine of life which shall transcend any written record we have. The new statement will comprise the skepticisms as well as the faiths of society, and out of unbeliefs a creed shall be formed. For skepticisms are not gratuitous or lawless, but are limitations of the affirmative statement, and the new philosophy must take them in and make affirmations outside of them, just as much as it must include the oldest beliefs.

It is very unhappy, but too late to be helped, the discovery we have made that we exist. That discovery is called the Fall of Man. Ever afterwards we suspect our instruments. We have learned that we do not see directly, but mediately, and that we have no means of correcting these colored and distorting lenses which we are, or of computing the amount of their errors. Perhaps these subject-lenses have a creative power; perhaps there are no objects. Once we lived in what we saw; now, the rapaciousness of this new power, which threatens to absorb all things, engages us. Nature, art, persons, letters, religions, objects, successively tumble in, and God is but one of its ideas. Nature and literature are subjective phenomena; every evil and every good thing is a shadow which we cast. The street is full of humiliations to the proud. As the fop contrived to dress his bailiffs in his livery and make them wait on his guests at table, so the chagrins which the bad heart gives off as bubbles, at once take form as ladies and gentlemen in the street, shopmen or bar-keepers in hotels, and threaten or insult whatever is threatenable and insultable in us. 'Tis the same with our idolatries. People forget that it is the eye which makes the horizon, and the rounding

mind's eye which makes this or that man a type or representative of humanity, with the name of hero or saint. Jesus, the "providential man," is a good man on whom many people are agreed that these optical laws shall take effect. By love on one part and by forbearance to press objection on the other part, it is for a time settled, that we will look at him in the centre of the horizon, and ascribe to him the properties that will attach to any man so seen. But the longest love or aversion has a speedy term. The great and creative self, rooted in absolute nature, supplants all relative existence and ruins the kingdom of mortal friendship and love. Marriage (in what is called the spiritual world) is impossible, because of the inequality between every subject and every object. The subject is the receiver of Godhead, and at every comparison must feel his being enhanced by that cryptic might. Though not in energy, yet by presence, this magazine of substance cannot be otherwise than felt; nor can any force of intellect attribute to the object the proper deity which sleeps or wakes forever in every subject. Never can love make consciousness and ascription equal in force. There will be the same gulf between every me and thee as between the original and the picture. The universe is the bride of the soul. All private sympathy is partial. Two human beings are like globes, which can touch only in a point, and whilst they remain in contact, all other points of each of the spheres are inert; their turn must also come, and the longer a particular union lasts the more energy of appetency the parts not in union acquire.

Life will be imaged, but cannot be divided nor doubled. Any invasion of its unity would be chaos. The soul is not twin-born but the only begotten, and though revealing itself as child in time, child in appearance, is of a fatal and universal power, admitting no co-life. Every day, every act betrays the ill-concealed deity. We believe in ourselves as we do not believe in others. We permit all things to ourselves, and that which we call sin in others is experiment for us. It is an instance of our faith in ourselves that men never speak of crime as lightly as they think; or every man thinks a latitude safe for himself which is nowise to be indulged to another. The act looks very differently on the inside and on the outside; in its quality and in its consequences. Murder in the murderer is no such ruinous thought as poets and romancers will have it; it does not unsettle him or fright him from his ordinary notice of trifles; it is an act quite easy to be contemplated; but in its sequel it turns out to be a horrible jangle and confounding of all relations. Especially the crimes that spring from love seem right and fair from the actor's point of view, but when acted are found destructive of society. No man at last believes that he can be lost, nor that the crime in him is as black as in the felon. Because the intellect qualifies in our own case the moral judgments. For there is no crime to the intellect. That is

antinomian or hypernomian, and judges law as well as fact. "It is worse than a crime, it is a blunder," said Napoleon, speaking the language of the intellect. To it, the world is a problem in mathematics or the science of quantity, and it leaves out praise and blame and all weak emotions. All stealing is comparative. If you come to absolutes, pray who does not steal? Saints are sad, because they behold sin (even when they speculate), from the point of view of the conscience, and not of the intellect; a confusion of thought. Sin, seen from the thought, is a diminution, or less: seen from the conscience or will, it is pravity or bad. The intellect names it shade, absence of light, and no essence. The conscience must feel it as essence, essential evil. This it is not; it has an objective existence, but no subjective.

Thus inevitably does the universe wear our color, and every object fall successively into the subject itself. The subject exists, the subject enlarges; all things sooner or later fall into place. As I am, so I see; use what language we will, we can never say anything but what we are; Hermes, Cadmus, Columbus, Newton, Bonaparte, are the mind's ministers. Instead of feeling a poverty when we encounter a great man, let us treat the new comer like a travelling geologist who passes through our estate and shows us good slate, or limestone, or anthracite, in our brush pasture. The partial action of each strong mind in one direction is a telescope for the objects on which it is pointed. But every other part of knowledge is to be pushed to the same extravagance, ere the soul attains her due sphericity. Do you see that kitten chasing so prettily her own tail? If you could look with her eyes you might see her surrounded with hundreds of figures performing complex dramas, with tragic and comic issues, long conversations, many characters, many ups and downs of fate, — and meantime it is only puss and her tail. How long before our masquerade will end its noise of tambourines, laughter, and shouting, and we shall find it was a solitary performance? A subject and an object, — it takes so much to make the galvanic circuit complete, but magnitude adds nothing. What imports it whether it is Kepler and the sphere, Columbus and America, a reader and his book, or puss with her tail?

It is true that all the muses and love and religion hate these developments, and will find a way to punish the chemist who publishes in the parlor the secrets of the laboratory. And we cannot say too little of our constitutional necessity of seeing things under private aspects, or saturated with our humors. And yet is the God the native of these bleak rocks. That need makes in morals the capital virtue of self-trust. We must hold hard to this poverty, however scandalous, and by more vigorous self-recoveries, after the sallies of action, possess our axis more firmly. The life of truth is cold and so far mournful; but it is not the slave of tears, contritions and perturbations. It does not attempt another's work, nor adopt

another's facts. It is a main lesson of wisdom to know your own from another's. I have learned that I cannot dispose of other people's facts; but I possess such a key to my own as persuades me, against all their denials, that they also have a key to theirs. A sympathetic person is placed in the dilemma of a swimmer among drowning men, who all catch at him, and if he give so much as a leg or a finger they will drown him. They wish to be saved from the mischiefs of their vices, but not from their vices. Charity would be wasted on this poor waiting on the symptoms. A wise and hardy physician will say, Come out of that, as the first condition of advice.

In this our talking America we are ruined by our good nature and listening on all sides. This compliance takes away the power of being greatly useful. A man should not be able to look other than directly and forthright. A preoccupied attention is the only answer to the importunate frivolity of other people; an attention, and to an aim which makes their wants frivolous. This is a divine answer, and leaves no appeal and no hard thoughts. In Flaxman's drawing of the Eumenides of Aeschylus, Orestes supplicates Apollo, whilst the Furies sleep on the threshold. The face of the god expresses a shade of regret and compassion, but is calm with the conviction of the irreconcilableness of the two spheres. He is born into other politics, into the eternal and beautiful. The man at his feet asks for his interest in turmoils of the earth, into which his nature cannot enter. And the Eumenides there lying express pictorially this disparity. The god is surcharged with his divine destiny.

Illusion, Temperament, Succession, Surface, Surprise, Reality, Subjectiveness, — these are threads on the loom of time, these are the lords of life. I dare not assume to give their order, but I name them as I find them in my way. I know better than to claim any completeness for my picture. I am a fragment, and this is a fragment of me. I can very confidently announce one or another law, which throws itself into relief and form, but I am too young yet by some ages to compile a code. I gossip for my hour concerning the eternal politics. I have seen many fair pictures not in vain. A wonderful time I have lived in. I am not the novice I was fourteen, nor yet seven years ago. Let who will ask Where is the fruit? I find a private fruit sufficient. This is a fruit, — that I should not ask for a rash effect from meditations, counsels and the hiving of truths. I should feel it pitiful to demand a result on this town and county, an overt effect on the instant month and year. The effect is deep and secular as the cause. It works on periods in which mortal lifetime is lost. All I know is reception; I am and I have: but I do not get, and when I have fancied I had gotten anything, I found I did not. I worship with wonder the great Fortune. My reception has been so large, that I am not annoyed by receiving this or that superabundantly. I say to

the Genius, if he will pardon the proverb, In for a mill, in for a million. When I receive a new gift, I do not macerate my body to make the account square, for if I should die I could not make the account square. The benefit overran the merit the first day, and has overrun the merit ever since. The merit itself, so-called, I reckon part of the receiving.

Also that hankering after an overt or practical effect seems to me an apostasy. In good earnest I am willing to spare this most unnecessary deal of doing. Life wears to me a visionary face. Hardest roughest action is visionary also. It is but a choice between soft and turbulent dreams. People disparage knowing and the intellectual life, and urge doing. I am very content with knowing, if only I could know. That is an august entertainment, and would suffice me a great while. To know a little would be worth the expense of this world. I hear always the law of Adrastia, "that every soul which had acquired any truth, should be safe from harm until another period."

I know that the world I converse with in the city and in the farms, is not the world I think. I observe that difference, and shall observe it. One day I shall know the value and law of this discrepance. But I have not found that much was gained by manipular attempts to realize the world of thought. Many eager persons successively make an experiment in this way, and make themselves ridiculous. They acquire democratic manners, they foam at the mouth, they hate and deny. Worse, I observe that in the history of mankind there is never a solitary example of success, — taking their own tests of success. I say this polemically, or in reply to the inquiry, Why not realize your world? But far be from me the despair which prejudices the law by a paltry empiricism; — since there never was a right endeavor but it succeeded. Patience and patience, we shall win at the last. We must be very suspicious of the deceptions of the element of time. It takes a good deal of time to eat or to sleep, or to earn a hundred dollars, and a very little time to entertain a hope and an insight which becomes the light of our life. We dress our garden, eat our dinners, discuss the household with our wives, and these things make no impression, are forgotten next week; but, in the solitude to which every man is always returning, he has a sanity and revelations which in his passage into new worlds he will carry with him. Never mind the ridicule, never mind the defeat; up again, old heart! — it seems to say, — there is victory yet for all justice; and the true romance which the world exists to realize will be the transformation of genius into practical power.

CHARACTER.

The sun set; but set not his hope:
Stars rose; his faith was earlier up:
Fixed on the enormous galaxy,
Deeper and older seemed his eye:
And matched his sufferance sublime
The taciturnity of time.
He spoke, and words more soft than rain
Brought the Age of Gold again:
His action won such reverence sweet,
As hid all measure of the feat.

Work of his hand
He nor commends nor grieves
Pleads for itself the fact;
As unrepenting Nature leaves
Her every act.

CHARACTER.

I HAVE read that those who listened to Lord Chatham felt that there was something finer in the man than any thing which he said. It has been complained of our brilliant English historian of the French Revolution that when he has told all his facts about Mirabeau, they do not justify his estimate of his genius. The Gracchi, Agis, Cleomenes, and others of Plutarch's heroes, do not in the record of facts equal their own fame. Sir Philip Sidney, the Earl of Essex, Sir Walter Raleigh, are men of great figure and of few deeds. We cannot find the smallest part of the personal weight of Washington in the narrative of his exploits. The authority of the name of Schiller is too great for his books. This inequality of the reputation to the works or the anecdotes is not accounted for by saying that the reverberation is longer than the thunder-clap, but somewhat resided in these men which begot an expectation that outran all their performance. The largest part of their power was latent. This is that which we call Character, — a reserved force which acts directly by presence, and without means. It is conceived of as a certain undemonstrable force, a Familiar or Genius, by whose impulses the man is guided but whose counsels he cannot impart; which is company for him, so that such men are often solitary, or if they chance to be social, do not need society but can entertain themselves very well alone. The purest literary talent appears at one time great, at another time small, but character is of a stellar and undiminishable greatness. What others effect by talent or by eloquence, this man accomplishes by some magnetism. "Half his strength he put not forth." His victories are by demonstration of superiority, and not by crossing of bayonets. He conquers because his arrival alters the face of affairs. "O Iole! how did you know that Hercules was a god?" "Because," answered Iole, "I was content the moment my eyes fell on him. When I beheld Theseus, I desired that I might see him offer battle, or at least guide his horses in the chariot-race; but Hercules did not wait for a contest; he conquered whether he stood, or walked, or sat, or whatever thing he did." Man, ordinarily a pendant to events, only half attached, and that awkwardly, to the world he lives in, in these examples appears to share the life of things, and to be an expression of the same laws which control the tides and the sun, numbers and quantities.

But to use a more modest illustration and nearer home, I observe that in our political elections, where this element, if it appears at all, can only occur in its coarsest form, we sufficiently understand its incomparable rate. The people know that they need in their representative much more than talent, namely the power to make his talent trusted. They cannot come at their ends by sending to

Congress a learned, acute, and fluent speaker, if he be not one who, before he was appointed by the people to represent them, was appointed by Almighty God to stand for a fact, — invincibly persuaded of that fact in himself, — so that the most confident and the most violent persons learn that here is resistance on which both impudence and terror are wasted, namely faith in a fact. The men who carry their points do not need to inquire of their constituents what they should say, but are themselves the country which they represent; nowhere are its emotions or opinions so instant and true as in them; nowhere so pure from a selfish infusion. The constituency at home hearkens to their words, watches the color of their cheek, and therein, as in a glass, dresses its own. Our public assemblies are pretty good tests of manly force. Our frank countrymen of the west and south have a taste for character, and like to know whether the New Englander is a substantial man, or whether the hand can pass through him.

The same motive force appears in trade. There are geniuses in trade, as well as in war, or the State, or letters; and the reason why this or that man is fortunate is not to be told. It lies in the man; that is all anybody can tell you about it. See him and you will know as easily why he succeeds, as, if you see Napoleon, you would comprehend his fortune. In the new objects we recognize the old game, the Habit of fronting the fact, and not dealing with it at second hand, through the perceptions of somebody else. Nature seems to authorize trade, as soon as you see the natural merchant, who appears not so much a private agent as her factor and Minister of Commerce. His natural probity combines with his insight into the fabric of society to put him above tricks, and he communicates to all his own faith that contracts are of no private interpretation. The habit of his mind is a reference to standards of natural equity and public advantage; and he inspires respect and the wish to deal with him, both for the quiet spirit of honor which attends him, and for the intellectual pastime which the spectacle of so much ability affords. This immensely stretched trade, which makes the capes of the Southern Ocean his wharves, and the Atlantic Sea his familiar port, centres in his brain only; and nobody in the universe can make his place good. In his parlor I see very well that he has been at hard work this morning, with that knitted brow and that settled humor, which all his desire to be courteous cannot shake off. I see plainly how many firm acts have been done; how many valiant noes have this day been spoken, when others would have uttered ruinous yeas. I see, with the pride of art and skill of masterly arithmetic and power of remote combination, the consciousness of being an agent and playfellow of the original laws of the world. He too believes that none can supply him, and that a man must be born to trade or he cannot learn it.

This virtue draws the mind more when it appears in action to ends not so

mixed. It works with most energy in the smallest companies and in private relations. In all cases it is an extraordinary and incomputable agent. The excess of physical strength is paralyzed by it. Higher natures overpower lower ones by affecting them with a certain sleep. The faculties are locked up, and offer no resistance. Perhaps that is the universal law. When the high cannot bring up the low to itself, it benumbs it, as man charms down the resistance of the lower animals. Men exert on each other a similar occult power. How often has the influence of a true master realized all the tales of magic! A river of command seemed to run down from his eyes into all those who beheld him, a torrent of strong sad light, like an Ohio or Danube, which pervaded them with his thoughts and colored all events with the hue of his mind. "What means did you employ?" was the question asked of the wife of Concini, in regard to her treatment of Mary of Medici; and the answer was, "Only that influence which every strong mind has over a weak one." Cannot Caesar in irons shuffle off the irons and transfer them to the person of Hippo or Thraso the turnkey? Is an iron handcuff so immutable a bond? Suppose a slaver on the coast of Guinea should take on board a gang of negroes which should contain persons of the stamp of Toussaint L'Ouverture: or, let us fancy, under these swarthy masks he has a gang of Washingtons in chains. When they arrive at Cuba, will the relative order of the ship's company be the same? Is there nothing but rope and iron? Is there no love, no reverence? Is there never a glimpse of right in a poor slave-captain's mind; and cannot these be supposed available to break or elude or in any manner overmatch the tension of an inch or two of iron ring?

This is a natural power, like light and heat, and all nature cooperates with it. The reason why we feel one man's presence and do not feel another's is as simple as gravity. Truth is the summit of being; justice is the application of it to affairs. All individual natures stand in a scale, according to the purity of this element in them. The will of the pure runs down from them into other natures as water runs down from a higher into a lower vessel. This natural force is no more to be withstood than any other natural force. We can drive a stone upward for a moment into the air, but it is yet true that all stones will forever fall; and whatever instances can be quoted of unpunished theft, or of a lie which somebody credited, justice must prevail, and it is the privilege of truth to make itself believed. Character is this moral order seen through the medium of an individual nature. An individual is an encloser. Time and space, liberty and necessity, truth and thought, are left at large no longer. Now, the universe is a close or pound. All things exist in the man tinged with the manners of his soul. With what quality is in him he infuses all nature that he can reach; nor does he tend to lose himself in vastness, but, at how long a curve soever, all his regards

return into his own good at last. He animates all he can, and he sees only what he animates. He encloses the world, as the patriot does his country, as a material basis for his character, and a theatre for action. A healthy soul stands united with the Just and the True, as the magnet arranges itself with the pole; so that he stands to all beholders like a transparent object betwixt them and the sun, and whoso journeys towards the sun, journeys towards that person. He is thus the medium of the highest influence to all who are not on the same level. Thus, men of character are the conscience of the society to which they belong.

The natural measure of this power is the resistance of circumstances. Impure men consider life as it is reflected in opinions, events, and persons. They cannot see the action until it is done. Yet its moral element preexisted in the actor, and its quality as right or wrong it was easy to predict. Everything in nature is bipolar, or has a positive and negative pole. There is a male and a female, a spirit and a fact, a north and a south. Spirit is the positive, the event is the negative. Will is the north, action the south pole. Character may be ranked as having its natural place in the north. It shares the magnetic currents of the system. The feeble souls are drawn to the south or negative pole. They look at the profit or hurt of the action. They never behold a principle until it is lodged in a person. They do not wish to be lovely, but to be loved. Men of character like to hear of their faults; the other class do not like to hear of faults; they worship events; secure to them a fact, a connection, a certain chain of circumstances, and they will ask no more. The hero sees that the event is ancillary; it must follow him. A given order of events has no power to secure to him the satisfaction which the imagination attaches to it; the soul of goodness escapes from any set of circumstances; whilst prosperity belongs to a certain mind, and will introduce that power and victory which is its natural fruit, into any order of events. No change of circumstances can repair a defect of character. We boast our emancipation from many superstitions; but if we have broken any idols it is through a transfer of the idolatry. What have I gained, that I no longer immolate a bull to Jove or to Neptune, or a mouse to Hecate; that I do not tremble before the Eumenides, or the Catholic Purgatory, or the Calvinistic Judgment-day, — if I quake at opinion, the public opinion, as we call it; or at the threat of assault, or contumely, or bad neighbors, or poverty, or mutilation, or at the rumor of revolution, or of murder? If I quake, what matters it what I quake at? Our proper vice takes form in one or another shape, according to the sex, age, or temperament of the person, and, if we are capable of fear, will readily find terrors. The covetousness or the malignity which saddens me when I ascribe it to society, is my own. I am always environed by myself. On the other part, rectitude is a perpetual victory, celebrated not by cries of joy but by serenity,

which is joy fixed or habitual. It is disgraceful to fly to events for confirmation of our truth and worth. The capitalist does not run every hour to the broker to coin his advantages into current money of the realm; he is satisfied to read in the quotations of the market that his stocks have risen. The same transport which the occurrence of the best events in the best order would occasion me, I must learn to taste purer in the perception that my position is every hour meliorated, and does already command those events I desire. That exultation is only to be checked by the foresight of an order of things so excellent as to throw all our prosperities into the deepest shade.

The face which character wears to me is self-sufficingness. I revere the person who is rich; so that I cannot think of him as alone, or poor, or exiled, or unhappy, or a client, but as perpetual patron, benefactor, and beatified man. Character is centrality, the impossibility of being displaced or overset. A man should give us a sense of mass. Society is frivolous, and shreds its day into scraps, its conversation into ceremonies and escapes. But if I go to see an ingenious man I shall think myself poorly entertained if he give me nimble pieces of benevolence and etiquette; rather he shall stand stoutly in his place and let me apprehend if it were only his resistance; know that I have encountered a new and positive quality; — great refreshment for both of us. It is much that he does not accept the conventional opinions and practices. That nonconformity will remain a goad and remembrancer, and every inquirer will have to dispose of him, in the first place. There is nothing real or useful that is not a seat of war. Our houses ring with laughter and personal and critical gossip, but it helps little. But the uncivil, unavailable man, who is a problem and a threat to society, whom it cannot let pass in silence but must either worship or hate, — and to whom all parties feel related, both the leaders of opinion and the obscure and eccentric, — he helps; he puts America and Europe in the wrong, and destroys the skepticism which says, 'man is a doll, let us eat and drink, 'tis the best we can do,' by illuminating the untried and unknown. Acquiescence in the establishment and appeal to the public, indicate infirm faith, heads which are not clear, and which must see a house built, before they can comprehend the plan of it. The wise man not only leaves out of his thought the many, but leaves out the few. Fountains, the self-moved, the absorbed, the commander because he is commanded, the assured, the primary, — they are good; for these announce the instant presence of supreme power.

Our action should rest mathematically on our substance. In nature, there are no false valuations. A pound of water in the ocean-tempest has no more gravity than in a midsummer pond. All things work exactly according to their quality and according to their quantity; attempt nothing they cannot do, except man

only. He has pretension; he wishes and attempts things beyond his force. I read in a book of English memoirs, "Mr. Fox (afterwards Lord Holland) said, he must have the Treasury; he had served up to it, and would have it." Xenophon and his Ten Thousand were quite equal to what they attempted, and did it; so equal, that it was not suspected to be a grand and inimitable exploit. Yet there stands that fact unrepeated, a high-water mark in military history. Many have attempted it since, and not been equal to it. It is only on reality that any power of action can be based. No institution will be better than the institutor. I knew an amiable and accomplished person who undertook a practical reform, yet I was never able to find in him the enterprise of love he took in hand. He adopted it by ear and by the understanding from the books he had been reading. All his action was tentative, a piece of the city carried out into the fields, and was the city still, and no new fact, and could not inspire enthusiasm. Had there been something latent in the man, a terrible undemonstrated genius agitating and embarrassing his demeanor, we had watched for its advent. It is not enough that the intellect should see the evils and their remedy. We shall still postpone our existence, nor take the ground to which we are entitled, whilst it is only a thought and not a spirit that incites us. We have not yet served up to it.

These are properties of life, and another trait is the notice of incessant growth. Men should be intelligent and earnest. They must also make us feel that they have a controlling happy future opening before them, whose early twilights already kindle in the passing hour. The hero is misconceived and misreported; he cannot therefore wait to unravel any man's blunders; he is again on his road, adding new powers and honors to his domain and new claims on your heart, which will bankrupt you if you have loitered about the old things and have not kept your relation to him by adding to your wealth. New actions are the only apologies and explanations of old ones which the noble can bear to offer or to receive. If your friend has displeased you, you shall not sit down to consider it, for he has already lost all memory of the passage, and has doubled his power to serve you, and ere you can rise up again will burden you with blessings.

We have no pleasure in thinking of a benevolence that is only measured by its works. Love is inexhaustible, and if its estate is wasted, its granary emptied, still cheers and enriches, and the man, though he sleep, seems to purify the air and his house to adorn the landscape and strengthen the laws. People always recognize this difference. We know who is benevolent, by quite other means than the amount of subscription to soup-societies. It is only low merits that can be enumerated. Fear, when your friends say to you what you have done well, and say it through; but when they stand with uncertain timid looks of respect and half-dislike, and must suspend their judgment for years to come, you may begin

to hope. Those who live to the future must always appear selfish to those who live to the present. Therefore it was droll in the good Riemer, who has written memoirs of Goethe, to make out a list of his donations and good deeds, as, so many hundred thalers given to Stilling, to Hegel, to Tischbein; a lucrative place found for Professor Voss, a post under the Grand Duke for Herder, a pension for Meyer, two professors recommended to foreign universities; &c., &c. The longest list of specifications of benefit would look very short. A man is a poor creature if he is to be measured so. For all these of course are exceptions, and the rule and hodiernal life of a good man is benefaction. The true charity of Goethe is to be inferred from the account he gave Dr. Eckermann of the way in which he had spent his fortune. "Each bon-mot of mine has cost a purse of gold. Half a million of my own money, the fortune I inherited, my salary and the large income derived from my writings for fifty years back, have been expended to instruct me in what I now know. I have besides seen," &c.

I own it is but poor chat and gossip to go to enumerate traits of this simple and rapid power, and we are painting the lightning with charcoal; but in these long nights and vacations I like to console myself so. Nothing but itself can copy it. A word warm from the heart enriches me. I surrender at discretion. How death-cold is literary genius before this fire of life! These are the touches that reanimate my heavy soul and give it eyes to pierce the dark of nature. I find, where I thought myself poor, there was I most rich. Thence comes a new intellectual exaltation, to be again rebuked by some new exhibition of character. Strange alternation of attraction and repulsion! Character repudiates intellect, yet excites it; and character passes into thought, is published so, and then is ashamed before new flashes of moral worth.

Character is nature in the highest form. It is of no use to ape it or to contend with it. Somewhat is possible of resistance, and of persistence, and of creation, to this power, which will foil all emulation.

This masterpiece is best where no hands but nature's have been laid on it. Care is taken that the greatly-destined shall slip up into life in the shade, with no thousand-eyed Athens to watch and blazon every new thought, every blushing emotion of young genius. Two persons lately, very young children of the most high God, have given me occasion for thought. When I explored the source of their sanctity and charm for the imagination, it seemed as if each answered, 'From my nonconformity; I never listened to your people's law, or to what they call their gospel, and wasted my time. I was content with the simple rural poverty of my own; hence this sweetness; my work never reminds you of that; — is pure of that.' And nature advertises me in such persons that in democratic America she will not be democratized. How cloistered and constitutionally

sequestered from the market and from scandal! It was only this morning that I sent away some wild flowers of these wood-gods. They are a relief from literature, — these fresh draughts from the sources of thought and sentiment; as we read, in an age of polish and criticism, the first lines of written prose and verse of a nation. How captivating is their devotion to their favorite books, whether Aeschylus, Dante, Shakspeare, or Scott, as feeling that they have a stake in that book; who touches that, touches them; — and especially the total solitude of the critic, the Patmos of thought from which he writes, in unconsciousness of any eyes that shall ever read this writing. Could they dream on still, as angels, and not wake to comparisons, and to be flattered! Yet some natures are too good to be spoiled by praise, and wherever the vein of thought reaches down into the profound, there is no danger from vanity. Solemn friends will warn them of the danger of the head's being turned by the flourish of trumpets, but they can afford to smile. I remember the indignation of an eloquent Methodist at the kind admonitions of a Doctor of Divinity, — 'My friend, a man can neither be praised nor insulted.' But forgive the counsels; they are very natural. I remember the thought which occurred to me when some ingenious and spiritual foreigners came to America, was, Have you been victimized in being brought hither? — or, prior to that, answer me this, 'Are you victimizable?'

As I have said, Nature keeps these sovereignties in her own hands, and however pertly our sermons and disciplines would divide some share of credit, and teach that the laws fashion the citizen, she goes her own gait and puts the wisest in the wrong. She makes very light of gospels and prophets, as one who has a great many more to produce and no excess of time to spare on any one. There is a class of men, individuals of which appear at long intervals, so eminently endowed with insight and virtue that they have been unanimously saluted as divine, and who seem to be an accumulation of that power we consider. Divine persons are character born, or, to borrow a phrase from Napoleon, they are victory organized. They are usually received with ill-will, because they are new and because they set a bound to the exaggeration that has been made of the personality of the last divine person. Nature never rhymes her children, nor makes two men alike. When we see a great man we fancy a resemblance to some historical person, and predict the sequel of his character and fortune; a result which he is sure to disappoint. None will ever solve the problem of his character according to our prejudice, but only in his own high unprecedented way. Character wants room; must not be crowded on by persons nor be judged from glimpses got in the press of affairs or on few occasions. It needs perspective, as a great building. It may not, probably does not, form relations rapidly; and we should not require rash explanation, either on the

popular ethics, or on our own, of its action.

I look on Sculpture as history. I do not think the Apollo and the Jove impossible in flesh and blood. Every trait which the artist recorded in stone he had seen in life, and better than his copy. We have seen many counterfeits, but we are born believers in great men. How easily we read in old books, when men were few, of the smallest action of the patriarchs. We require that a man should be so large and columnar in the landscape, that it should deserve to be recorded that he arose, and girded up his loins, and departed to such a place. The most credible pictures are those of majestic men who prevailed at their entrance, and convinced the senses; as happened to the eastern magian who was sent to test the merits of Zertusht or Zoroaster. When the Yunani sage arrived at Balkh, the Persians tell us, Gushtasp appointed a day on which the Mobeds of every country should assemble, and a golden chair was placed for the Yunani sage. Then the beloved of Yezdam, the prophet Zertusht, advanced into the midst of the assembly. The Yunani sage, on seeing that chief, said, "This form and this gait cannot lie, and nothing but truth can proceed from them." Plato said it was impossible not to believe in the children of the gods, "though they should speak without probable or necessary arguments." I should think myself very unhappy in my associates if I could not credit the best things in history. "John Bradshaw," says Milton, "appears like a consul, from whom the fasces are not to depart with the year; so that not on the tribunal only, but throughout his life, you would regard him as sitting in judgment upon kings." I find it more credible, since it is anterior information, that one man should know heaven, as the Chinese say, than that so many men should know the world. "The virtuous prince confronts the gods, without any misgiving. He waits a hundred ages till a sage comes, and does not doubt. He who confronts the gods, without any misgiving, knows heaven; he who waits a hundred ages until a sage comes, without doubting, knows men. Hence the virtuous prince moves, and for ages shows empire the way." But there is no need to seek remote examples. He is a dull observer whose experience has not taught him the reality and force of magic, as well as of chemistry. The coldest precisian cannot go abroad without encountering inexplicable influences. One man fastens an eye on him and the graves of the memory render up their dead; the secrets that make him wretched either to keep or to betray must be yielded; — another, and he cannot speak, and the bones of his body seem to lose their cartilages; the entrance of a friend adds grace, boldness, and eloquence to him; and there are persons he cannot choose but remember, who gave a transcendent expansion to his thought, and kindled another life in his bosom.

What is so excellent as strict relations of amity, when they spring from this

deep root? The sufficient reply to the skeptic who doubts the power and the furniture of man, is in that possibility of joyful intercourse with persons, which makes the faith and practice of all reasonable men. I know nothing which life has to offer so satisfying as the profound good understanding which can subsist after much exchange of good offices, between two virtuous men, each of whom is sure of himself and sure of his friend. It is a happiness which postpones all other gratifications, and makes politics, and commerce, and churches, cheap. For when men shall meet as they ought, each a benefactor, a shower of stars, clothed with thoughts, with deeds, with accomplishments, it should be the festival of nature which all things announce. Of such friendship, love in the sexes is the first symbol, as all other things are symbols of love. Those relations to the best men, which, at one time, we reckoned the romances of youth, become, in the progress of the character, the most solid enjoyment.

If it were possible to live in right relations with men! — if we could abstain from asking anything of them, from asking their praise, or help, or pity, and content us with compelling them through the virtue of the eldest laws! Could we not deal with a few persons, — with one person, — after the unwritten statutes, and make an experiment of their efficacy? Could we not pay our friend the compliment of truth, of silence, of forbearing? Need we be so eager to seek him? If we are related, we shall meet. It was a tradition of the ancient world that no metamorphosis could hide a god from a god; and there is a Greek verse which runs, —

“The Gods are to each other not unknown.”

Friends also follow the laws of divine necessity; they gravitate to each other, and cannot otherwise: —

When each the other shall avoid,
Shall each by each be most enjoyed.

Their relation is not made, but allowed. The gods must seat themselves without seneschal in our Olympus, and as they can instal themselves by seniority divine. Society is spoiled if pains are taken, if the associates are brought a mile to meet. And if it be not society, it is a mischievous, low, degrading jangle, though made up of the best. All the greatness of each is kept back and every foible in painful activity, as if the Olympians should meet to exchange snuff-boxes.

Life goes headlong. We chase some flying scheme, or we are hunted by some fear or command behind us. But if suddenly we encounter a friend, we pause; our heat and hurry look foolish enough; now pause, now possession is required, and the power to swell the moment from the resources of the heart. The moment is all, in all noble relations.

A divine person is the prophecy of the mind; a friend is the hope of the heart. Our beatitude waits for the fulfilment of these two in one. The ages are opening this moral force. All force is the shadow or symbol of that. Poetry is joyful and strong as it draws its inspiration thence. Men write their names on the world as they are filled with this. History has been mean; our nations have been mobs; we have never seen a man: that divine form we do not yet know, but only the dream and prophecy of such: we do not know the majestic manners which belong to him, which appease and exalt the beholder. We shall one day see that the most private is the most public energy, that quality atones for quantity, and grandeur of character acts in the dark, and succors them who never saw it. What greatness has yet appeared is beginnings and encouragements to us in this direction. The history of those gods and saints which the world has written and then worshipped, are documents of character. The ages have exulted in the manners of a youth who owed nothing to fortune, and who was hanged at the Tyburn of his nation, who, by the pure quality of his nature, shed an epic splendor around the facts of his death which has transfigured every particular into an universal symbol for the eyes of mankind. This great defeat is hitherto our highest fact. But the mind requires a victory to the senses; a force of character which will convert judge, jury, soldier, and king; which will rule animal and mineral virtues, and blend with the courses of sap, of rivers, of winds, of stars, and of moral agents.

If we cannot attain at a bound to these grandeurs, at least let us do them homage. In society, high advantages are set down to the possessor as disadvantages. It requires the more wariness in our private estimates. I do not forgive in my friends the failure to know a fine character and to entertain it with thankful hospitality. When at last that which we have always longed for is arrived and shines on us with glad rays out of that far celestial land, then to be coarse, then to be critical and treat such a visitant with the jabber and suspicion of the streets, argues a vulgarity that seems to shut the doors of heaven. This is confusion, this the right insanity, when the soul no longer knows its own, nor where its allegiance, its religion, are due. Is there any religion but this, to know that wherever in the wide desert of being the holy sentiment we cherish has opened into a flower, it blooms for me? if none sees it, I see it; I am aware, if I alone, of the greatness of the fact. Whilst it blooms, I will keep sabbath or holy time, and suspend my gloom and my folly and jokes. Nature is indulged by the presence of this guest. There are many eyes that can detect and honor the prudent and household virtues; there are many that can discern Genius on his starry track, though the mob is incapable; but when that love which is all-suffering, all-abstaining, all-aspiring, which has vowed to itself that it will be a

wretch and also a fool in this world sooner than soil its white hands by any compliances, comes into our streets and houses, — only the pure and aspiring can know its face, and the only compliment they can pay it is to own it.

MANNERS.

“HOW near to good is what is fair!
Which we no sooner see,
But with the lines and outward air
Our senses taken be.

Again yourselves compose,
And now put all the aptness on
Of Figure, that Proportion
Or Color can disclose;
That if those silent arts were lost,
Design and Picture, they might boast
From you a newer ground,
Instructed by the heightening sense
Of dignity and reverence
In their true motions found.”

BEN JONSON

MANNERS.

HALF the world, it is said, knows not how the other half live. Our Exploring Expedition saw the Feejee islanders getting their dinner off human bones; and they are said to eat their own wives and children. The husbandry of the modern inhabitants of Gournou (west of old Thebes) is philosophical to a fault. To set up their housekeeping nothing is requisite but two or three earthen pots, a stone to grind meal, and a mat which is the bed. The house, namely a tomb, is ready without rent or taxes. No rain can pass through the roof, and there is no door, for there is no want of one, as there is nothing to lose. If the house do not please them, they walk out and enter another, as there are several hundreds at their command. "It is somewhat singular," adds Belzoni, to whom we owe this account, "to talk of happiness among people who live in sepulchres, among the corpses and rags of an ancient nation which they know nothing of." In the deserts of Borgoo the rock-Tibboos still dwell in caves, like cliff-swallows, and the language of these negroes is compared by their neighbors to the shrieking of bats and to the whistling of birds. Again, the Bornoos have no proper names; individuals are called after their height, thickness, or other accidental quality, and have nicknames merely. But the salt, the dates, the ivory, and the gold, for which these horrible regions are visited, find their way into countries where the purchaser and consumer can hardly be ranked in one race with these cannibals and man-stealers; countries where man serves himself with metals, wood, stone, glass, gum, cotton, silk, and wool; honors himself with architecture; writes laws, and contrives to execute his will through the hands of many nations; and, especially, establishes a select society, running through all the countries of intelligent men, a self-constituted aristocracy, or fraternity of the best, which, without written law or exact usage of any kind, perpetuates itself, colonizes every new-planted island and adopts and makes its own whatever personal beauty or extraordinary native endowment anywhere appears.

What fact more conspicuous in modern history than the creation of the gentleman? Chivalry is that, and loyalty is that, and, in English literature, half the drama, and all the novels, from Sir Philip Sidney to Sir Walter Scott, paint this figure. The word gentleman, which, like the word Christian, must hereafter characterize the present and the few preceding centuries by the importance attached to it, is a homage to personal and incommunicable properties. Frivolous and fantastic additions have got associated with the name, but the steady interest of mankind in it must be attributed to the valuable properties which it designates. An element which unites all the most forcible persons of every country; makes

them intelligible and agreeable to each other, and is somewhat so precise that it is at once felt if an individual lack the masonic sign, — cannot be any casual product, but must be an average result of the character and faculties universally found in men. It seems a certain permanent average; as the atmosphere is a permanent composition, whilst so many gases are combined only to be decomposed. Comme il faut, is the Frenchman's description of good Society: as we must be. It is a spontaneous fruit of talents and feelings of precisely that class who have most vigor, who take the lead in the world of this hour, and though far from pure, far from constituting the gladdest and highest tone of human feeling, is as good as the whole society permits it to be. It is made of the spirit, more than of the talent of men, and is a compound result into which every great force enters as an ingredient, namely virtue, wit, beauty, wealth, and power.

There is something equivocal in all the words in use to express the excellence of manners and social cultivation, because the quantities are fluxional, and the last effect is assumed by the senses as the cause. The word gentleman has not any correlative abstract to express the quality. Gentility is mean, and gentillesse is obsolete. But we must keep alive in the vernacular the distinction between fashion, a word of narrow and often sinister meaning, and the heroic character which the gentleman imports. The usual words, however, must be respected; they will be found to contain the root of the matter. The point of distinction in all this class of names, as courtesy, chivalry, fashion, and the like, is that the flower and fruit, not the grain of the tree, are contemplated. It is beauty which is the aim this time, and not worth. The result is now in question, although our words intimate well enough the popular feeling that the appearance supposes a substance. The gentleman is a man of truth, lord of his own actions, and expressing that lordship in his behavior, not in any manner dependent and servile, either on persons, or opinions, or possessions. Beyond this fact of truth and real force, the word denotes good-nature or benevolence: manhood first, and then gentleness. The popular notion certainly adds a condition of ease and fortune; but that is a natural result of personal force and love, that they should possess and dispense the goods of the world. In times of violence, every eminent person must fall in with many opportunities to approve his stoutness and worth; therefore every man's name that emerged at all from the mass in the feudal ages, rattles in our ear like a flourish of trumpets. But personal force never goes out of fashion. That is still paramount to-day, and in the moving crowd of good society the men of valor and reality are known and rise to their natural place. The competition is transferred from war to politics and trade, but the personal force appears readily enough in these new arenas.

Power first, or no leading class. In politics and in trade, bruisers and pirates are of better promise than talkers and clerks. God knows that all sorts of gentlemen knock at the door; but whenever used in strictness and with any emphasis, the name will be found to point at original energy. It describes a man standing in his own right and working after untaught methods. In a good lord there must first be a good animal, at least to the extent of yielding the incomparable advantage of animal spirits. The ruling class must have more, but they must have these, giving in every company the sense of power, which makes things easy to be done which daunt the wise. The society of the energetic class, in their friendly and festive meetings, is full of courage and of attempts which intimidate the pale scholar. The courage which girls exhibit is like a battle of Lundy's Lane, or a sea-fight. The intellect relies on memory to make some supplies to face these extemporaneous squadrons. But memory is a base mendicant with basket and badge, in the presence of these sudden masters. The rulers of society must be up to the work of the world, and equal to their versatile office: men of the right Caesarian pattern, who have great range of affinity. I am far from believing the timid maxim of Lord Falkland ("that for ceremony there must go two to it; since a bold fellow will go through the cunningest forms"), and am of opinion that the gentleman is the bold fellow whose forms are not to be broken through; and only that plenteous nature is rightful master which is the complement of whatever person it converses with. My gentleman gives the law where he is; he will outpray saints in chapel, outgeneral veterans in the field, and outshine all courtesy in the hall. He is good company for pirates and good with academicians; so that it is useless to fortify yourself against him; he has the private entrance to all minds, and I could as easily exclude myself, as him. The famous gentlemen of Asia and Europe have been of this strong type; Saladin, Sapor, the Cid, Julius Caesar, Scipio, Alexander, Pericles, and the lordliest personages. They sat very carelessly in their chairs, and were too excellent themselves, to value any condition at a high rate.

A plentiful fortune is reckoned necessary, in the popular judgment, to the completion of this man of the world; and it is a material deputy which walks through the dance which the first has led. Money is not essential, but this wide affinity is, which transcends the habits of clique and caste and makes itself felt by men of all classes. If the aristocrat is only valid in fashionable circles and not with truckmen, he will never be a leader in fashion; and if the man of the people cannot speak on equal terms with the gentleman, so that the gentleman shall perceive that he is already really of his own order, he is not to be feared. Diogenes, Socrates, and Epaminondas, are gentlemen of the best blood who have chosen the condition of poverty when that of wealth was equally open to them. I

use these old names, but the men I speak of are my contemporaries. Fortune will not supply to every generation one of these well-appointed knights, but every collection of men furnishes some example of the class; and the politics of this country, and the trade of every town, are controlled by these hardy and irresponsible doers, who have invention to take the lead, and a broad sympathy which puts them in fellowship with crowds, and makes their action popular.

The manners of this class are observed and caught with devotion by men of taste. The association of these masters with each other and with men intelligent of their merits, is mutually agreeable and stimulating. The good forms, the happiest expressions of each, are repeated and adopted. By swift consent everything superfluous is dropped, everything graceful is renewed. Fine manners show themselves formidable to the uncultivated man. They are a subtler science of defence to parry and intimidate; but once matched by the skill of the other party, they drop the point of the sword, — points and fences disappear, and the youth finds himself in a more transparent atmosphere, wherein life is a less troublesome game, and not a misunderstanding rises between the players. Manners aim to facilitate life, to get rid of impediments and bring the man pure to energize. They aid our dealing and conversation as a railway aids travelling, by getting rid of all avoidable obstructions of the road and leaving nothing to be conquered but pure space. These forms very soon become fixed, and a fine sense of propriety is cultivated with the more heed that it becomes a badge of social and civil distinctions. Thus grows up Fashion, an equivocal semblance, the most puissant, the most fantastic and frivolous, the most feared and followed, and which morals and violence assault in vain.

There exists a strict relation between the class of power and the exclusive and polished circles. The last are always filled or filling from the first. The strong men usually give some allowance even to the petulances of fashion, for that affinity they find in it. Napoleon, child of the revolution, destroyer of the old noblesse, never ceased to court the Faubourg St. Germain; doubtless with the feeling that fashion is a homage to men of his stamp. Fashion, though in a strange way, represents all manly virtue. It is virtue gone to seed: it is a kind of posthumous honor. It does not often caress the great, but the children of the great: it is a hall of the Past. It usually sets its face against the great of this hour. Great men are not commonly in its halls; they are absent in the field: they are working, not triumphing. Fashion is made up of their children; of those who through the value and virtue of somebody, have acquired lustre to their name, marks of distinction, means of cultivation and generosity, and, in their physical organization a certain health and excellence which secures to them, if not the highest power to work, yet high power to enjoy. The class of power, the working

heroes, the Cortez, the Nelson, the Napoleon, see that this is the festivity and permanent celebration of such as they; that fashion is funded talent; is Mexico, Marengo, and Trafalgar beaten out thin; that the brilliant names of fashion run back to just such busy names as their own, fifty or sixty years ago. They are the sowers, their sons shall be the reapers, and their sons, in the ordinary course of things, must yield the possession of the harvest to new competitors with keener eyes and stronger frames. The city is recruited from the country. In the year 1805, it is said, every legitimate monarch in Europe was imbecile. The city would have died out, rotted, and exploded, long ago, but that it was reinforced from the fields. It is only country which came to town day before yesterday that is city and court today.

Aristocracy and fashion are certain inevitable results. These mutual selections are indestructible. If they provoke anger in the least favored class, and the excluded majority revenge themselves on the excluding minority by the strong hand and kill them, at once a new class finds itself at the top, as certainly as cream rises in a bowl of milk: and if the people should destroy class after class, until two men only were left, one of these would be the leader and would be involuntarily served and copied by the other. You may keep this minority out of sight and out of mind, but it is tenacious of life, and is one of the estates of the realm. I am the more struck with this tenacity, when I see its work. It respects the administration of such unimportant matters, that we should not look for any durability in its rule. We sometimes meet men under some strong moral influence, as a patriotic, a literary, a religious movement, and feel that the moral sentiment rules man and nature. We think all other distinctions and ties will be slight and fugitive, this of caste or fashion for example; yet come from year to year and see how permanent that is, in this Boston or New York life of man, where too it has not the least countenance from the law of the land. Not in Egypt or in India a firmer or more impassable line. Here are associations whose ties go over and under and through it, a meeting of merchants, a military corps, a college class, a fire-club, a professional association, a political, a religious convention; — the persons seem to draw inseparably near; yet, that assembly once dispersed, its members will not in the year meet again. Each returns to his degree in the scale of good society, porcelain remains porcelain, and earthen earthen. The objects of fashion may be frivolous, or fashion may be objectless, but the nature of this union and selection can be neither frivolous nor accidental. Each man's rank in that perfect graduation depends on some symmetry in his structure or some agreement in his structure to the symmetry of society. Its doors unbar instantaneously to a natural claim of their own kind. A natural gentleman finds his way in, and will keep the oldest patrician out who has lost his intrinsic

rank. Fashion understands itself; good-breeding and personal superiority of whatever country readily fraternize with those of every other. The chiefs of savage tribes have distinguished themselves in London and Paris, by the purity of their tournure.

To say what good of fashion we can, it rests on reality, and hates nothing so much as pretenders; to exclude and mystify pretenders and send them into everlasting 'Coventry,' is its delight. We condemn in turn every other gift of men of the world; but the habit even in little and the least matters of not appealing to any but our own sense of propriety, constitutes the foundation of all chivalry. There is almost no kind of self-reliance, so it be sane and proportioned, which fashion does not occasionally adopt and give it the freedom of its saloons. A sainted soul is always elegant, and, if it will, passes unchallenged into the most guarded ring. But so will Jock the teamster pass, in some crisis that brings him thither, and find favor, as long as his head is not giddy with the new circumstance, and the iron shoes do not wish to dance in waltzes and cotillons. For there is nothing settled in manners, but the laws of behavior yield to the energy of the individual. The maiden at her first ball, the country-man at a city dinner, believes that there is a ritual according to which every act and compliment must be performed, or the failing party must be cast out of this presence. Later they learn that good sense and character make their own forms every moment, and speak or abstain, take wine or refuse it, stay or go, sit in a chair or sprawl with children on the floor, or stand on their head, or what else soever, in a new and aboriginal way; and that strong will is always in fashion, let who will be unfashionable. All that fashion demands is composure and self-content. A circle of men perfectly well-bred would be a company of sensible persons in which every man's native manners and character appeared. If the fashionist have not this quality, he is nothing. We are such lovers of self-reliance that we excuse in a man many sins if he will show us a complete satisfaction in his position, which asks no leave to be, of mine, or any man's good opinion. But any deference to some eminent man or woman of the world, forfeits all privilege of nobility. He is an underling: I have nothing to do with him; I will speak with his master. A man should not go where he cannot carry his whole sphere or society with him, — not bodily, the whole circle of his friends, but atmospherically. He should preserve in a new company the same attitude of mind and reality of relation which his daily associates draw him to, else he is shorn of his best beams, and will be an orphan in the merriest club. "If you could see Vich Ian Vohr with his tail on!— " But Vich Ian Vohr must always carry his belongings in some fashion, if not added as honor, then severed as disgrace.

There will always be in society certain persons who are mercuries of its

approbation, and whose glance will at any time determine for the curious their standing in the world. These are the chamberlains of the lesser gods. Accept their coldness as an omen of grace with the loftier deities, and allow them all their privilege. They are clear in their office, nor could they be thus formidable without their own merits. But do not measure the importance of this class by their pretension, or imagine that a fop can be the dispenser of honor and shame. They pass also at their just rate; for how can they otherwise, in circles which exist as a sort of herald's office for the sifting of character?

As the first thing man requires of man is reality, so that appears in all the forms of society. We pointedly, and by name, introduce the parties to each other. Know you before all heaven and earth, that this is Andrew, and this is Gregory, — they look each other in the eye; they grasp each other's hand, to identify and signalize each other. It is a great satisfaction. A gentleman never dodges; his eyes look straight forward, and he assures the other party, first of all, that he has been met. For what is it that we seek, in so many visits and hospitalities? Is it your draperies, pictures, and decorations? Or do we not insatiably ask, Was a man in the house? I may easily go into a great household where there is much substance, excellent provision for comfort, luxury, and taste, and yet not encounter there any Amphitryon who shall subordinate these appendages. I may go into a cottage, and find a farmer who feels that he is the man I have come to see, and fronts me accordingly. It was therefore a very natural point of old feudal etiquette that a gentleman who received a visit, though it were of his sovereign, should not leave his roof, but should wait his arrival at the door of his house. No house, though it were the Tuileries or the Escorial, is good for anything without a master. And yet we are not often gratified by this hospitality. Every body we know surrounds himself with a fine house, fine books, conservatory, gardens, equipage and all manner of toys, as screens to interpose between himself and his guest. Does it not seem as if man was of a very sly, elusive nature, and dreaded nothing so much as a full rencontre front to front with his fellow? It were unmerciful, I know, quite to abolish the use of these screens, which are of eminent convenience, whether the guest is too great or too little. We call together many friends who keep each other in play, or by luxuries and ornaments we amuse the young people, and guard our retirement. Or if perchance a searching realist comes to our gate, before whose eye we have no care to stand, then again we run to our curtain, and hide ourselves as Adam at the voice of the Lord God in the garden. Cardinal Caprara, the Pope's legate at Paris, defended himself from the glances of Napoleon by an immense pair of green spectacles. Napoleon remarked them, and speedily managed to rally them off: and yet Napoleon, in his turn, was not great enough with eight hundred thousand troops

at his back, to face a pair of freeborn eyes, but fenced himself with etiquette and within triple barriers of reserve; and, as all the world knows from Madame de Stael, was wont, when he found himself observed, to discharge his face of all expression. But emperors and rich men are by no means the most skilful masters of good manners. No rentroll nor army-list can dignify skulking and dissimulation; and the first point of courtesy must always be truth, as really all the forms of good-breeding point that way.

I have just been reading, in Mr. Hazlitt's translation, Montaigne's account of his journey into Italy, and am struck with nothing more agreeably than the self-respecting fashions of the time. His arrival in each place, the arrival of a gentleman of France, is an event of some consequence. Wherever he goes he pays a visit to whatever prince or gentleman of note resides upon his road, as a duty to himself and to civilization. When he leaves any house in which he has lodged for a few weeks, he causes his arms to be painted and hung up as a perpetual sign to the house, as was the custom of gentlemen.

The complement of this graceful self-respect, and that of all the points of good breeding I most require and insist upon, is deference. I like that every chair should be a throne, and hold a king. I prefer a tendency to stateliness to an excess of fellowship. Let the incommunicable objects of nature and the metaphysical isolation of man teach us independence. Let us not be too much acquainted. I would have a man enter his house through a hall filled with heroic and sacred sculptures, that he might not want the hint of tranquillity and self-poise. We should meet each morning as from foreign countries, and, spending the day together, should depart at night, as into foreign countries. In all things I would have the island of a man inviolate. Let us sit apart as the gods, talking from peak to peak all round Olympus. No degree of affection need invade this religion. This is myrrh and rosemary to keep the other sweet. Lovers Should guard their strangeness. If they forgive too much, all slides into confusion and meanness. It is easy to push this deference to a Chinese etiquette; but coolness and absence of heat and haste indicate fine qualities. A gentleman makes no noise; a lady is serene. Proportionate is our disgust at those invaders who fill a studious house with blast and running, to secure some paltry convenience. Not less I dislike a low sympathy of each with his neighbor's needs. Must we have a good understanding with one another's palates? as foolish people who have lived long together know when each wants salt or sugar. I pray my companion, if he wishes for bread, to ask me for bread, and if he wishes for sassafras or arsenic, to ask me for them, and not to hold out his plate as if I knew already. Every natural function can be dignified by deliberation and privacy. Let us leave hurry to slaves. The compliments and ceremonies of our breeding should signify,

however remotely, the recollection of the grandeur of our destiny.

The flower of courtesy does not very well bide handling, but if we dare to open another leaf and explore what parts go to its conformation, we shall find also an intellectual quality. To the leaders of men, the brain as well as the flesh and the heart must furnish a proportion. Defect in manners is usually the defect of fine perceptions. Men are too coarsely made for the delicacy of beautiful carriage and customs. It is not quite sufficient to good-breeding, a union of kindness and independence. We imperatively require a perception of, and a homage to beauty in our companions. Other virtues are in request in the field and workyard, but a certain degree of taste is not to be spared in those we sit with. I could better eat with one who did not respect the truth or the laws than with a sloven and unpresentable person. Moral qualities rule the world, but at short distances the senses are despotic. The same discrimination of fit and fair runs out, if with less rigor, into all parts of life. The average spirit of the energetic class is good sense, acting under certain limitations and to certain ends. It entertains every natural gift. Social in its nature, it respects everything which tends to unite men. It delights in measure. The love of beauty is mainly the love of measure or proportion. The person who screams, or uses the superlative degree, or converses with heat, puts whole drawing-rooms to flight. If you wish to be loved, love measure. You must have genius or a prodigious usefulness if you will hide the want of measure. This perception comes in to polish and perfect the parts of the social instrument. Society will pardon much to genius and special gifts, but, being in its nature a convention, it loves what is conventional, or what belongs to coming together. That makes the good and bad of manners, namely what helps or hinders fellowship. For fashion is not good sense absolute, but relative; not good sense private, but good sense entertaining company. It hates corners and sharp points of character, hates quarrelsome, egotistical, solitary, and gloomy people; hates whatever can interfere with total blending of parties; whilst it values all peculiarities as in the highest degree refreshing, which can consist with good fellowship. And besides the general infusion of wit to heighten civility, the direct splendor of intellectual power is ever welcome in fine society as the costliest addition to its rule and its credit.

The dry light must shine in to adorn our festival, but it must be tempered and shaded, or that will also offend. Accuracy is essential to beauty, and quick perceptions to politeness, but not too quick perceptions. One may be too punctual and too precise. He must leave the omniscience of business at the door, when he comes into the palace of beauty. Society loves creole natures, and sleepy languishing manners, so that they cover sense, grace and good-will: the air of drowsy strength, which disarms criticism; perhaps because such a person

seems to reserve himself for the best of the game, and not spend himself on surfaces; an ignoring eye, which does not see the annoyances, shifts, and inconveniences that cloud the brow and smother the voice of the sensitive.

Therefore besides personal force and so much perception as constitutes unerring taste, society demands in its patrician class another element already intimated, which it significantly terms good-nature, — expressing all degrees of generosity, from the lowest willingness and faculty to oblige, up to the heights of magnanimity and love. Insight we must have, or we shall run against one another and miss the way to our food; but intellect is selfish and barren. The secret of success in society is a certain heartiness and sympathy. A man who is not happy in the company cannot find any word in his memory that will fit the occasion. All his information is a little impertinent. A man who is happy there, finds in every turn of the conversation equally lucky occasions for the introduction of that which he has to say. The favorites of society, and what it calls whole souls, are able men and of more spirit than wit, who have no uncomfortable egotism, but who exactly fill the hour and the company; contented and contenting, at a marriage or a funeral, a ball or a jury, a water-party or a shooting-match. England, which is rich in gentlemen, furnished, in the beginning of the present century, a good model of that genius which the world loves, in Mr. Fox, who added to his great abilities the most social disposition and real love of men. Parliamentary history has few better passages than the debate in which Burke and Fox separated in the House of Commons; when Fox urged on his old friend the claims of old friendship with such tenderness that the house was moved to tears. Another anecdote is so close to my matter, that I must hazard the story. A tradesman who had long dunned him for a note of three hundred guineas, found him one day counting gold, and demanded payment:— “No,” said Fox, “I owe this money to Sheridan; it is a debt of honor; if an accident should happen to me, he has nothing to show.” “Then,” said the creditor, “I change my debt into a debt of honor,” and tore the note in pieces. Fox thanked the man for his confidence and paid him, saying, “his debt was of older standing, and Sheridan must wait.” Lover of liberty, friend of the Hindoo, friend of the African slave, he possessed a great personal popularity; and Napoleon said of him on the occasion of his visit to Paris, in 1805, “Mr. Fox will always hold the first place in an assembly at the Tuileries.”

We may easily seem ridiculous in our eulogy of courtesy, whenever we insist on benevolence as its foundation. The painted phantasm Fashion rises to cast a species of derision on what we say. But I will neither be driven from some allowance to Fashion as a symbolic institution, nor from the belief that love is the basis of courtesy. We must obtain that, if we can; but by all means we must

affirm this. Life owes much of its spirit to these sharp contrasts. Fashion, which affects to be honor, is often, in all men's experience, only a ballroom-code. Yet so long as it is the highest circle in the imagination of the best heads on the planet, there is something necessary and excellent in it; for it is not to be supposed that men have agreed to be the dupes of anything preposterous; and the respect which these mysteries inspire in the most rude and sylvan characters, and the curiosity with which details of high life are read, betray the universality of the love of cultivated manners. I know that a comic disparity would be felt, if we should enter the acknowledged 'first circles' and apply these terrific standards of justice, beauty, and benefit to the individuals actually found there. Monarchs and heroes, sages and lovers, these gallants are not. Fashion has many classes and many rules of probation and admission, and not the best alone. There is not only the right of conquest, which genius pretends, — the individual demonstrating his natural aristocracy best of the best; — but less claims will pass for the time; for Fashion loves lions, and points like Circe to her horned company. This gentleman is this afternoon arrived from Denmark; and that is my Lord Ride, who came yesterday from Bagdat; here is Captain Friese, from Cape Turnagain; and Captain Symmes, from the interior of the earth; and Monsieur Jovaire, who came down this morning in a balloon; Mr. Hobnail, the reformer; and Reverend Jul Bat, who has converted the whole torrid zone in his Sunday school; and Signor Torre del Greco, who extinguished Vesuvius by pouring into it the Bay of Naples; Spahi, the Persian ambassador; and Tul Wil Shan, the exiled nabob of Nepaul, whose saddle is the new moon. — But these are monsters of one day, and to-morrow will be dismissed to their holes and dens; for in these rooms every chair is waited for. The artist, the scholar, and, in general, the clerisy, wins their way up into these places and get represented here, somewhat on this footing of conquest. Another mode is to pass through all the degrees, spending a year and a day in St. Michael's Square, being steeped in Cologne water, and perfumed, and dined, and introduced, and properly grounded in all the biography and politics and anecdotes of the boudoirs.

Yet these fineries may have grace and wit. Let there be grotesque sculpture about the gates and offices of temples. Let the creed and commandments even have the saucy homage of parody. The forms of politeness universally express benevolence in superlative degrees. What if they are in the mouths of selfish men, and used as means of selfishness? What if the false gentleman almost bows the true out Of the world? What if the false gentleman contrives so to address his companion as civilly to exclude all others from his discourse, and also to make them feel excluded? Real service will not lose its nobleness. All generosity is not merely French and sentimental; nor is it to be concealed that living blood and a

passion of kindness does at last distinguish God's gentleman from Fashion's. The epitaph of Sir Jenkin Grout is not wholly unintelligible to the present age: "Here lies Sir Jenkin Grout, who loved his friend and persuaded his enemy: what his mouth ate, his hand paid for: what his servants robbed, he restored: if a woman gave him pleasure, he supported her in pain: he never forgot his children; and whoso touched his finger, drew after it his whole body." Even the line of heroes is not utterly extinct. There is still ever some admirable person in plain clothes, standing on the wharf, who jumps in to rescue a drowning man; there is still some absurd inventor of charities; some guide and comforter of runaway slaves; some friend of Poland; some Philhellene; some fanatic who plants shade-trees for the second and third generation, and orchards when he is grown old; some well-concealed piety; some just man happy in an ill fame; some youth ashamed of the favors of fortune and impatiently casting them on other shoulders. And these are the centres of society, on which it returns for fresh impulses. These are the creators of Fashion, which is an attempt to organize beauty of behavior. The beautiful and the generous are, in the theory, the doctors and apostles of this church: Scipio, and the Cid, and Sir Philip Sidney, and Washington, and every pure and valiant heart who worshipped Beauty by word and by deed. The persons who constitute the natural aristocracy are not found in the actual aristocracy, or only on its edge; as the chemical energy of the spectrum is found to be greatest just outside of the spectrum. Yet that is the infirmity of the seneschals, who do not know their sovereign when he appears. The theory of society supposes the existence and sovereignty of these. It divines afar off their coming. It says with the elder gods, —

“As Heaven and Earth are fairer far
Than Chaos and blank Darkness, though once chiefs;
And as we show beyond that Heaven and Earth,
In form and shape compact and beautiful;
So, on our heels a fresh perfection treads;
A power, more strong in beauty, born of us,
And fated to excel us, as we pass
In glory that old Darkness:

—— ——— for, 'tis the eternal law,
That first in beauty shall be first in might.”

Therefore, within the ethnical circle of good society there is a narrower and higher circle, concentration of its light, and flower of courtesy, to which there is always a tacit appeal of pride and reference, as to its inner and imperial court; the parliament of love and chivalry. And this is constituted of those persons in whom heroic dispositions are native; with the love of beauty, the delight in

society, and the power to embellish the passing day. If the individuals who compose the purest circles of aristocracy in Europe, the guarded blood of centuries, should pass in review, in such manner as that we could at leisure and critically inspect their behavior, we might find no gentleman and no lady; for although excellent specimens of courtesy and high-breeding would gratify us in the assemblage, in the particulars we should detect offence. Because elegance comes of no breeding, but of birth. There must be romance of character, or the most fastidious exclusion of impertinencies will not avail. It must be genius which takes that direction: it must be not courteous, but courtesy. High behavior is as rare in fiction as it is in fact. Scott is praised for the fidelity with which he painted the demeanor and conversation of the superior classes. Certainly, kings and queens, nobles and great ladies, had some right to complain of the absurdity that had been put in their mouths before the days of Waverley; but neither does Scott's dialogue bear criticism. His lords brave each other in smart epigrammatic speeches, but the dialogue is in costume, and does not please on the second reading: it is not warm with life. In Shakspeare alone the speakers do not strut and bridle, the dialogue is easily great, and he adds to so many titles that of being the best-bred man in England and in Christendom. Once or twice in a lifetime we are permitted to enjoy the charm of noble manners, in the presence of a man or woman who have no bar in their nature, but whose character emanates freely in their word and gesture. A beautiful form is better than a beautiful face; a beautiful behavior is better than a beautiful form: it gives a higher pleasure than statues or pictures; it is the finest of the fine arts. A man is but a little thing in the midst of the objects of nature, yet, by the moral quality radiating from his countenance he may abolish all considerations of magnitude, and in his manners equal the majesty of the world. I have seen an individual whose manners, though wholly within the conventions of elegant society, were never learned there, but were original and commanding and held out protection and prosperity; one who did not need the aid of a court-suit, but carried the holiday in his eye; who exhilarated the fancy by flinging wide the doors of new modes of existence; who shook off the captivity of etiquette, with happy, spirited bearing, good-natured and free as Robin Hood; yet with the port of an emperor, if need be, — calm, serious, and fit to stand the gaze of millions.

The open air and the fields, the street and public chambers are the places where Man executes his will; let him yield or divide the sceptre at the door of the house. Woman, with her instinct of behavior, instantly detects in man a love of trifles, any coldness or imbecility, or, in short, any want of that large, flowing, and magnanimous deportment which is indispensable as an exterior in the hall. Our American institutions have been friendly to her, and at this moment I esteem

it a chief felicity of this country, that it excels in women. A certain awkward consciousness of inferiority in the men may give rise to the new chivalry in behalf of Woman's Rights. Certainly let her be as much better placed in the laws and in social forms as the most zealous reformer can ask, but I confide so entirely in her inspiring and musical nature, that I believe only herself can show us how she shall be served. The wonderful generosity of her sentiments raises her at times into heroical and godlike regions, and verifies the pictures of Minerva, Juno, or Polymnia; and by the firmness with which she treads her upward path, she convinces the coarsest calculators that another road exists than that which their feet know. But besides those who make good in our imagination the place of muses and of Delphic Sibyls, are there not women who fill our vase with wine and roses to the brim, so that the wine runs over and fills the house with perfume; who inspire us with courtesy; who unloose our tongues and we speak; who anoint our eyes and we see? We say things we never thought to have said; for once, our walls of habitual reserve vanished and left us at large; we were children playing with children in a wide field of flowers. Steep us, we cried, in these influences, for days, for weeks, and we shall be sunny poets and will write out in many-colored words the romance that you are. Was it Hafiz or Firdousi that said of his Persian Lilla, She was an elemental force, and astonished me by her amount of life, when I saw her day after day radiating, every instant, redundant joy and grace on all around her. She was a solvent powerful to reconcile all heterogeneous persons into one society: like air or water, an element of such a great range of affinities that it combines readily with a thousand substances. Where she is present all others will be more than they are wont. She was a unit and whole, so that whatsoever she did, became her. She had too much sympathy and desire to please, than that you could say her manners were marked with dignity, yet no princess could surpass her clear and erect demeanor on each occasion. She did not study the Persian grammar, nor the books of the seven poets, but all the poems of the seven seemed to be written upon her. For though the bias of her nature was not to thought, but to sympathy, yet was she so perfect in her own nature as to meet intellectual persons by the fulness of her heart, warming them by her sentiments; believing, as she did, that by dealing nobly with all, all would show themselves noble.

I know that this Byzantine pile of chivalry or Fashion, which seems so fair and picturesque to those who look at the contemporary facts for science or for entertainment, is not equally pleasant to all spectators. The constitution of our society makes it a giant's castle to the ambitious youth who have not found their names enrolled in its Golden Book, and whom it has excluded from its coveted honors and privileges. They have yet to learn that its seeming grandeur is

shadowy and relative: it is great by their allowance; its proudest gates will fly open at the approach of their courage and virtue. For the present distress, however, of those who are predisposed to suffer from the tyrannies of this caprice, there are easy remedies. To remove your residence a couple of miles, or at most four, will commonly relieve the most extreme susceptibility. For the advantages which fashion values are plants which thrive in very confined localities, in a few streets namely. Out of this precinct they go for nothing; are of no use in the farm, in the forest, in the market, in war, in the nuptial society, in the literary or scientific circle, at sea, in friendship, in the heaven of thought or virtue.

But we have lingered long enough in these painted courts. The worth of the thing signified must vindicate our taste for the emblem. Everything that is called fashion and courtesy humbles itself before the cause and fountain of honor, creator of titles and dignities, namely the heart of love. This is the royal blood, this the fire, which, in all countries and contingencies, will work after its kind and conquer and expand all that approaches it. This gives new meanings to every fact. This impoverishes the rich, suffering no grandeur but its own. What is rich? Are you rich enough to help anybody? to succor the unfashionable and the eccentric? rich enough to make the Canadian in his wagon, the itinerant with his consul's paper which commends him "To the charitable," the swarthy Italian with his few broken words of English, the lame pauper hunted by overseers from town to town, even the poor insane or besotted wreck of man or woman, feel the noble exception of your presence and your house from the general bleakness and stoniness; to make such feel that they were greeted with a voice which made them both remember and hope? What is vulgar but to refuse the claim on acute and conclusive reasons? What is gentle, but to allow it, and give their heart and yours one holiday from the national caution? Without the rich heart, wealth is an ugly beggar. The king of Schiraz could not afford to be so bountiful as the poor Osman who dwelt at his gate. Osman had a humanity so broad and deep that although his speech was so bold and free with the Koran as to disgust all the dervishes, yet was there never a poor outcast, eccentric, or insane man, some fool who had cut off his beard, or who had been mutilated under a vow, or had a pet madness in his brain, but fled at once to him; that great heart lay there so sunny and hospitable in the centre of the country, that it seemed as if the instinct of all sufferers drew them to his side. And the madness which he harbored he did not share. Is not this to be rich? this only to be rightly rich?

But I shall hear without pain that I play the courtier very ill, and talk of that which I do not well understand. It is easy to see, that what is called by distinction society and fashion has good laws as well as bad, has much that is necessary,

and much that is absurd. Too good for banning, and too bad for blessing, it reminds us of a tradition of the pagan mythology, in any attempt to settle its character. 'I overheard Jove, one day,' said Silenus, 'talking of destroying the earth; he said it had failed; they were all rogues and vixens, who went from bad to worse, as fast as the days succeeded each other. Minerva said she hoped not; they were only ridiculous little creatures, with this odd circumstance, that they had a blur, or indeterminate aspect, seen far or seen near; if you called them bad, they would appear so; if you called them good, they would appear so; and there was no one person or action among them, which would not puzzle her owl, much more all Olympus, to know whether it was fundamentally bad or good.'

GIFTS.

Gifts of one who loved me, —
'T was high time they came;
When he ceased to love me,
Time they stopped for shame.

GIFTS.

IT is said that the world is in a state of bankruptcy; that the world owes the world more than the world can pay, and ought to go into chancery and be sold. I do not think this general insolvency, which involves in some sort all the population, to be the reason of the difficulty experienced at Christmas and New Year and other times, in bestowing gifts; since it is always so pleasant to be generous, though very vexatious to pay debts. But the impediment lies in the choosing. If at any time it comes into my head that a present is due from me to somebody, I am puzzled what to give, until the opportunity is gone. Flowers and fruits are always fit presents; flowers, because they are a proud assertion that a ray of beauty outvalues all the utilities of the world. These gay natures contrast with the somewhat stern countenance of ordinary nature: they are like music heard out of a work-house. Nature does not cocker us; we are children, not pets; she is not fond; everything is dealt to us without fear or favor, after severe universal laws. Yet these delicate flowers look like the frolic and interference of love and beauty. Men use to tell us that we love flattery even though we are not deceived by it, because it shows that we are of importance enough to be courted. Something like that pleasure, the flowers give us: what am I to whom these sweet hints are addressed? Fruits are acceptable gifts, because they are the flower of commodities, and admit of fantastic values being attached to them. If a man should send to me to come a hundred miles to visit him and should set before me a basket of fine summer-fruit, I should think there was some proportion between the labor and the reward.

For common gifts, necessity makes pertinences and beauty every day, and one is glad when an imperative leaves him no option; since if the man at the door have no shoes, you have not to consider whether you could procure him a paint-box. And as it is always pleasing to see a man eat bread, or drink water, in the house or out of doors, so it is always a great satisfaction to supply these first wants. Necessity does everything well. In our condition of universal dependence it seems heroic to let the petitioner be the judge of his necessity, and to give all that is asked, though at great inconvenience. If it be a fantastic desire, it is better to leave to others the office of punishing him. I can think of many parts I should prefer playing to that of the Furies. Next to things of necessity, the rule for a gift, which one of my friends prescribed, is that we might convey to some person that which properly belonged to his character, and was easily associated with him in thought. But our tokens of compliment and love are for the most part barbarous. Rings and other jewels are not gifts, but apologies for gifts. The only gift is a

portion of thyself. Thou must bleed for me. Therefore the poet brings his poem; the shepherd, his lamb; the farmer, corn; the miner, a gem; the sailor, coral and shells; the painter, his picture; the girl, a handkerchief of her own sewing. This is right and pleasing, for it restores society in so far to its primary basis, when a man's biography is conveyed in his gift, and every man's wealth is an index of his merit. But it is a cold lifeless business when you go to the shops to buy me something which does not represent your life and talent, but a goldsmith's. This is fit for kings, and rich men who represent kings, and a false state of property, to make presents of gold and silver stuffs, as a kind of symbolical sin-offering, or payment of black-mail.

The law of benefits is a difficult channel, which requires careful sailing, or rude boats. It is not the office of a man to receive gifts. How dare you give them? We wish to be self-sustained. We do not quite forgive a giver. The hand that feeds us is in some danger of being bitten. We can receive anything from love, for that is a way of receiving it from ourselves; but not from any one who assumes to bestow. We sometimes hate the meat which we eat, because there seems something of degrading dependence in living by it: — "Brother, if Jove to thee a present make, Take heed that from his hands thou nothing take."

We ask the whole. Nothing less will content us. We arraign society if it do not give us, besides earth and fire and water, opportunity, love, reverence, and objects of veneration.

He is a good man who can receive a gift well. We are either glad or sorry at a gift, and both emotions are unbecoming. Some violence I think is done, some degradation borne, when I rejoice or grieve at a gift. I am sorry when my independence is invaded, or when a gift comes from such as do not know my spirit, and so the act is not supported; and if the gift pleases me overmuch, then I should be ashamed that the donor should read my heart, and see that I love his commodity, and not him. The gift, to be true, must be the flowing of the giver unto me, correspondent to my flowing unto him. When the waters are at level, then my goods pass to him, and his to me. All his are mine, all mine his. I say to him, How can you give me this pot of oil or this flagon of wine when all your oil and wine is mine, which belief of mine this gift seems to deny? Hence the fitness of beautiful, not useful things, for gifts. This giving is flat usurpation, and therefore when the beneficiary is ungrateful, as all beneficiaries hate all Timons, not at all considering the value of the gift but looking back to the greater store it was taken from, — I rather sympathize with the beneficiary than with the anger of my lord Timon. For the expectation of gratitude is mean, and is continually punished by the total insensibility of the obliged person. It is a great happiness to get off without injury and heart-burning from one who has had the ill-luck to be

served by you. It is a very onerous business, this of being served, and the debtor naturally wishes to give you a slap. A golden text for these gentlemen is that which I so admire in the Buddhist, who never thanks, and who says, "Do not flatter your benefactors."

The reason of these discords I conceive to be that there is no commensurability between a man and any gift. You cannot give anything to a magnanimous person. After you have served him he at once puts you in debt by his magnanimity. The service a man renders his friend is trivial and selfish compared with the service he knows his friend stood in readiness to yield him, alike before he had begun to serve his friend, and now also. Compared with that good-will I bear my friend, the benefit it is in my power to render him seems small. Besides, our action on each other, good as well as evil, is so incidental and at random that we can seldom hear the acknowledgments of any person who would thank us for a benefit, without some shame and humiliation. We can rarely strike a direct stroke, but must be content with an oblique one; we seldom have the satisfaction of yielding a direct benefit which is directly received. But rectitude scatters favors on every side without knowing it, and receives with wonder the thanks of all people.

I fear to breathe any treason against the majesty of love, which is the genius and god of gifts, and to whom we must not affect to prescribe. Let him give kingdoms or flower-leaves indifferently. There are persons from whom we always expect fairy-tokens; let us not cease to expect them. This is prerogative, and not to be limited by our municipal rules. For the rest, I like to see that we cannot be bought and sold. The best of hospitality and of generosity is also not in the will, but in fate. I find that I am not much to you; you do not need me; you do not feel me; then am I thrust out of doors, though you proffer me house and lands. No services are of any value, but only likeness. When I have attempted to join myself to others by services, it proved an intellectual trick, — no more. They eat your service like apples, and leave you out. But love them, and they feel you and delight in you all the time.

NATURE.

The rounded world is fair to see, Nine times folded in mystery:

Though baffled seers cannot impart The secret of its laboring heart, Throb

thine with Nature's throbbing breast, And all is clear from east to west.
Spirit that lurks each form within Beckons to spirit of its kin;
Self-kindled every atom glows,
And hints the future which it owes.

NATURE.

THERE are days which occur in this climate, at almost any season of the year, wherein the world reaches its perfection; when the air, the heavenly bodies and the earth, make a harmony, as if nature would indulge her offspring; when, in these bleak upper sides of the planet, nothing is to desire that we have heard of the happiest latitudes, and we bask in the shining hours of Florida and Cuba; when everything that has life gives sign of satisfaction, and the cattle that lie on the ground seem to have great and tranquil thoughts. These halcyons may be looked for with a little more assurance in that pure October weather which we distinguish by the name of the Indian summer. The day, immeasurably long, sleeps over the broad hills and warm wide fields. To have lived through all its sunny hours, seems longevity enough. The solitary places do not seem quite lonely. At the gates of the forest, the surprised man of the world is forced to leave his city estimates of great and small, wise and foolish. The knapsack of custom falls off his back with the first step he makes into these precincts. Here is sanctity which shames our religions, and reality which discredits our heroes. Here we find Nature to be the circumstance which dwarfs every other circumstance, and judges like a god all men that come to her. We have crept out of our close and crowded houses into the night and morning, and we see what majestic beauties daily wrap us in their bosom. How willingly we would escape the barriers which render them comparatively impotent, escape the sophistication and second thought, and suffer nature to intrance us. The tempered light of the woods is like a perpetual morning, and is stimulating and heroic. The anciently reported spells of these places creep on us. The stems of pines, hemlocks, and oaks almost gleam like iron on the excited eye. The incommunicable trees begin to persuade us to live with them, and quit our life of solemn trifles. Here no history, or church, or state, is interpolated on the divine sky and the immortal year. How easily we might walk onward into the opening landscape, absorbed by new pictures and by thoughts fast succeeding each other, until by degrees the recollection of home was crowded out of the mind, all memory obliterated by the tyranny of the present, and we were led in triumph by nature.

These enchantments are medicinal, they sober and heal us. These are plain pleasures, kindly and native to us. We come to our own, and make friends with matter, which the ambitious chatter of the schools would persuade us to despise. We never can part with it; the mind loves its old home: as water to our thirst, so is the rock, the ground, to our eyes and hands and feet. It is firm water; it is cold flame; what health, what affinity! Ever an old friend, ever like a dear friend and

brother when we chat affectedly with strangers, comes in this honest face, and takes a grave liberty with us, and shames us out of our nonsense. Cities give not the human senses room enough. We go out daily and nightly to feed the eyes on the horizon, and require so much scope, just as we need water for our bath. There are all degrees of natural influence, from these quarantine powers of nature, up to her dearest and gravest ministrations to the imagination and the soul. There is the bucket of cold water from the spring, the wood-fire to which the chilled traveller rushes for safety, — and there is the sublime moral of autumn and of noon. We nestle in nature, and draw our living as parasites from her roots and grains, and we receive glances from the heavenly bodies, which call us to solitude and foretell the remotest future. The blue zenith is the point in which romance and reality meet. I think if we should be rapt away into all that we dream of heaven, and should converse with Gabriel and Uriel, the upper sky would be all that would remain of our furniture.

It seems as if the day was not wholly profane in which we have given heed to some natural object. The fall of snowflakes in a still air, preserving to each crystal its perfect form; the blowing of sleet over a wide sheet of water, and over plains; the waving ryefield; the mimic waving of acres of houstonia, whose innumerable florets whiten and ripple before the eye; the reflections of trees and flowers in glassy lakes; the musical steaming odorous south wind, which converts all trees to windharps; the crackling and spurting of hemlock in the flames, or of pine logs, which yield glory to the walls and faces in the sittingroom, — these are the music and pictures of the most ancient religion. My house stands in low land, with limited outlook, and on the skirt of the village. But I go with my friend to the shore of our little river, and with one stroke of the paddle I leave the village politics and personalities, yes, and the world of villages and personalities behind, and pass into a delicate realm of sunset and moonlight, too bright almost for spotted man to enter without novitiate and probation. We penetrate bodily this incredible beauty; we dip our hands in this painted element; our eyes are bathed in these lights and forms. A holiday, a villeggiatura, a royal revel, the proudest, most heart-rejoicing festival that valor and beauty, power and taste, ever decked and enjoyed, establishes itself on the instant. These sunset clouds, these delicately emerging stars, with their private and ineffable glances, signify it and proffer it. I am taught the poorness of our invention, the ugliness of towns and palaces. Art and luxury have early learned that they must work as enhancement and sequel to this original beauty. I am overinstructed for my return. Henceforth I shall be hard to please. I cannot go back to toys. I am grown expensive and sophisticated. I can no longer live without elegance, but a countryman shall be my master of revels. He who knows

the most; he who knows what sweets and virtues are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, — is the rich and royal man. Only as far as the masters of the world have called in nature to their aid, can they reach the height of magnificence. This is the meaning of their hanging-gardens, villas, garden-houses, islands, parks and preserves, to back their faulty personality with these strong accessories. I do not wonder that the landed interest should be invincible in the State with these dangerous auxiliaries. These bribe and invite; not kings, not palaces, not men, not women, but these tender and poetic stars, eloquent of secret promises. We heard what the rich man said, we knew of his villa, his grove, his wine and his company, but the provocation and point of the invitation came out of these beguiling stars. In their soft glances I see what men strove to realize in some Versailles, or Paphos, or Ctesiphon. Indeed, it is the magical lights of the horizon and the blue sky for the background which save all our works of art, which were otherwise bawbles. When the rich tax the poor with servility and obsequiousness, they should consider the effect of men reputed to be the possessors of nature, on imaginative minds. Ah! if the rich were rich as the poor fancy riches! A boy hears a military band play on the field at night, and he has kings and queens and famous chivalry palpably before him. He hears the echoes of a horn in a hill country, in the Notch Mountains, for example, which converts the mountains into an Aeolian harp, — and this supernatural tiralira restores to him the Dorian mythology, Apollo, Diana, and all divine hunters and huntresses. Can a musical note be so lofty, so haughtily beautiful! To the poor young poet, thus fabulous is his picture of society; he is loyal; he respects the rich; they are rich for the sake of his imagination; how poor his fancy would be, if they were not rich! That they have some high-fenced grove which they call a park; that they live in larger and better-garnished saloons than he has visited, and go in coaches, keeping only the society of the elegant, to watering-places and to distant cities, — these make the groundwork from which he has delineated estates of romance, compared with which their actual possessions are shanties and paddocks. The muse herself betrays her son, and enhances the gifts of wealth and well-born beauty by a radiation out of the air, and clouds, and forests that skirt the road, — a certain haughty favor, as if from patrician genii to patricians, a kind of aristocracy in nature, a prince of the power of the air.

The moral sensibility which makes Edens and Tempes so easily, may not be always found, but the material landscape is never far off. We can find these enchantments without visiting the Como Lake, or the Madeira Islands. We exaggerate the praises of local scenery. In every landscape the point of astonishment is the meeting of the sky and the earth, and that is seen from the

first hillock as well as from the top of the Alleghanies. The stars at night stoop down over the brownest, homeliest common with all the spiritual magnificence which they shed on the Campagna, or on the marble deserts of Egypt. The uprolled clouds and the colors of morning and evening will transfigure maples and alders. The difference between landscape and landscape is small, but there is great difference in the beholders. There is nothing so wonderful in any particular landscape as the necessity of being beautiful under which every landscape lies. Nature cannot be surprised in undress. Beauty breaks in everywhere.

But it is very easy to outrun the sympathy of readers on this topic, which schoolmen called *natura naturata*, or nature passive. One can hardly speak directly of it without excess. It is as easy to broach in mixed companies what is called "the subject of religion." A susceptible person does not like to indulge his tastes in this kind without the apology of some trivial necessity: he goes to see a wood-lot, or to look at the crops, or to fetch a plant or a mineral from a remote locality, or he carries a fowling-piece or a fishing-rod. I suppose this shame must have a good reason. A dilettantism in nature is barren and unworthy. The fop of fields is no better than his brother of Broadway. Men are naturally hunters and inquisitive of wood-craft, and I suppose that such a gazetteer as wood-cutters and Indians should furnish facts for, would take place in the most sumptuous drawing-rooms of all the "Wreaths" and "Flora's chaplets" of the bookshops; yet ordinarily, whether we are too clumsy for so subtle a topic, or from whatever cause, as soon as men begin to write on nature, they fall into euphuism. Frivolity is a most unfit tribute to Pan, who ought to be represented in the mythology as the most continent of gods. I would not be frivolous before the admirable reserve and prudence of time, yet I cannot renounce the right of returning often to this old topic. The multitude of false churches accredits the true religion. Literature, poetry, science are the homage of man to this unfathomed secret, concerning which no sane man can affect an indifference or incuriosity. Nature is loved by what is best in us. It is loved as the city of God, although, or rather because there is no citizen. The sunset is unlike anything that is underneath it: it wants men. And the beauty of nature must always seem unreal and mocking, until the landscape has human figures that are as good as itself. If there were good men, there would never be this rapture in nature. If the king is in the palace, nobody looks at the walls. It is when he is gone, and the house is filled with grooms and gazers, that we turn from the people to find relief in the majestic men that are suggested by the pictures and the architecture. The critics who complain of the sickly separation of the beauty of nature from the thing to be done, must consider that our hunting of the picturesque is inseparable from our protest against false society. Man is fallen; nature is erect, and serves as a differential

thermometer, detecting the presence or absence of the divine sentiment in man. By fault of our dulness and selfishness we are looking up to nature, but when we are convalescent, nature will look up to us. We see the foaming brook with compunction: if our own life flowed with the right energy, we should shame the brook. The stream of zeal sparkles with real fire, and not with reflex rays of sun and moon. Nature may be as selfishly studied as trade. Astronomy to the selfish becomes astrology; psychology, mesmerism (with intent to show where our spoons are gone); and anatomy and physiology become phrenology and palmistry.

But taking timely warning, and leaving many things unsaid on this topic, let us not longer omit our homage to the Efficient Nature, *natura naturans*, the quick cause before which all forms flee as the driven snows; itself secret, its works driven before it in flocks and multitudes, (as the ancient represented nature by Proteus, a shepherd,) and in undescrivable variety. It publishes itself in creatures, reaching from particles and spiculae through transformation on transformation to the highest symmetries, arriving at consummate results without a shock or a leap. A little heat, that is a little motion, is all that differences the bald, dazzling white and deadly cold poles of the earth from the prolific tropical climates. All changes pass without violence, by reason of the two cardinal conditions of boundless space and boundless time. Geology has initiated us into the secularity of nature, and taught us to disuse our dame-school measures, and exchange our Mosaic and Ptolemaic schemes for her large style. We knew nothing rightly, for want of perspective. Now we learn what patient periods must round themselves before the rock is formed; then before the rock is broken, and the first lichen race has disintegrated the thinnest external plate into soil, and opened the door for the remote Flora, Fauna, Ceres, and Pomona to come in. How far off yet is the trilobite! how far the quadruped! how inconceivably remote is man! All duly arrive, and then race after race of men. It is a long way from granite to the oyster; farther yet to Plato and the preaching of the immortality of the soul. Yet all must come, as surely as the first atom has two sides.

Motion or change and identity or rest are the first and second secrets of nature: — Motion and Rest. The whole code of her laws may be written on the thumbnail, or the signet of a ring. The whirling bubble on the surface of a brook admits us to the secret of the mechanics of the sky. Every shell on the beach is a key to it. A little water made to rotate in a cup explains the formation of the simpler shells; the addition of matter from year to year, arrives at last at the most complex forms; and yet so poor is nature with all her craft, that from the beginning to the end of the universe she has but one stuff, — but one stuff with its two ends, to serve up all her dream-like variety. Compound it how she will,

star, sand, fire, water, tree, man, it is still one stuff, and betrays the same properties.

Nature is always consistent, though she feigns to contravene her own laws. She keeps her laws, and seems to transcend them. She arms and equips an animal to find its place and living in the earth, and at the same time she arms and equips another animal to destroy it. Space exists to divide creatures; but by clothing the sides of a bird with a few feathers she gives him a petty omnipresence. The direction is forever onward, but the artist still goes back for materials and begins again with the first elements on the most advanced stage: otherwise all goes to ruin. If we look at her work, we seem to catch a glance of a system in transition. Plants are the young of the world, vessels of health and vigor; but they grope ever upward towards consciousness; the trees are imperfect men, and seem to bemoan their imprisonment, rooted in the ground. The animal is the novice and probationer of a more advanced order. The men, though young, having tasted the first drop from the cup of thought, are already dissipated: the maples and ferns are still uncorrupt; yet no doubt when they come to consciousness they too will curse and swear. Flowers so strictly belong to youth that we adult men soon come to feel that their beautiful generations concern not us: we have had our day; now let the children have theirs. The flowers jilt us, and we are old bachelors with our ridiculous tenderness.

Things are so strictly related, that according to the skill of the eye, from any one object the parts and properties of any other may be predicted. If we had eyes to see it, a bit of stone from the city wall would certify us of the necessity that man must exist, as readily as the city. That identity makes us all one, and reduces to nothing great intervals on our customary scale. We talk of deviations from natural life, as if artificial life were not also natural. The smoothest curled courtier in the boudoirs of a palace has an animal nature, rude and aboriginal as a white bear, omnipotent to its own ends, and is directly related, there amid essences and billetsdoux, to Himmaleh mountain-chains and the axis of the globe. If we consider how much we are nature's, we need not be superstitious about towns, as if that terrific or benefic force did not find us there also, and fashion cities. Nature, who made the mason, made the house. We may easily hear too much of rural influences. The cool disengaged air of natural objects makes them enviable to us, chafed and irritable creatures with red faces, and we think we shall be as grand as they if we camp out and eat roots; but let us be men instead of woodchucks and the oak and the elm shall gladly serve us, though we sit in chairs of ivory on carpets of silk.

This guiding identity runs through all the surprises and contrasts of the piece, and characterizes every law. Man carries the world in his head, the whole

astronomy and chemistry suspended in a thought. Because the history of nature is characterized in his brain, therefore is he the prophet and discoverer of her secrets. Every known fact in natural science was divined by the presentiment of somebody, before it was actually verified. A man does not tie his shoe without recognizing laws which bind the farthest regions of nature: moon, plant, gas, crystal, are concrete geometry and numbers. Common sense knows its own, and recognizes the fact at first sight in chemical experiment. The common sense of Franklin, Dalton, Davy and Black, is the same common sense which made the arrangements which now it discovers.

If the identity expresses organized rest, the counter action runs also into organization. The astronomers said, 'Give us matter and a little motion and we will construct the universe. It is not enough that we should have matter, we must also have a single impulse, one shove to launch the mass and generate the harmony of the centrifugal and centripetal forces. Once heave the ball from the hand, and we can show how all this mighty order grew.'— 'A very unreasonable postulate,' said the metaphysicians, 'and a plain begging of the question. Could you not prevail to know the genesis of projection, as well as the continuation of it?' Nature, meanwhile, had not waited for the discussion, but, right or wrong, bestowed the impulse, and the balls rolled. It was no great affair, a mere push, but the astronomers were right in making much of it, for there is no end to the consequences of the act. That famous aboriginal push propagates itself through all the balls of the system, and through every atom of every ball; through all the races of creatures, and through the history and performances of every individual. Exaggeration is in the course of things. Nature sends no creature, no man into the world without adding a small excess of his proper quality. Given the planet, it is still necessary to add the impulse; so to every creature nature added a little violence of direction in its proper path, a shove to put it on its way; in every instance a slight generosity, a drop too much. Without electricity the air would rot, and without this violence of direction which men and women have, without a spice of bigot and fanatic, no excitement, no efficiency. We aim above the mark to hit the mark. Every act hath some falsehood of exaggeration in it. And when now and then comes along some sad, sharp-eyed man, who sees how paltry a game is played, and refuses to play, but blabs the secret; — how then? Is the bird flown? O no, the wary Nature sends a new troop of fairer forms, of lordlier youths, with a little more excess of direction to hold them fast to their several aim; makes them a little wrongheaded in that direction in which they are rightest, and on goes the game again with new whirl, for a generation or two more. The child with his sweet pranks, the fool of his senses, commanded by every sight and sound, without any power to compare and rank his sensations,

abandoned to a whistle or a painted chip, to a lead dragoon or a gingerbread-dog, individualizing everything, generalizing nothing, delighted with every new thing, lies down at night overpowered by the fatigue which this day of continual pretty madness has incurred. But Nature has answered her purpose with the curly, dimpled lunatic. She has tasked every faculty, and has secured the symmetrical growth of the bodily frame by all these attitudes and exertions, — an end of the first importance, which could not be trusted to any care less perfect than her own. This glitter, this opaline lustre plays round the top of every toy to his eye to insure his fidelity, and he is deceived to his good. We are made alive and kept alive by the same arts. Let the stoics say what they please, we do not eat for the good of living, but because the meat is savory and the appetite is keen. The vegetable life does not content itself with casting from the flower or the tree a single seed, but it fills the air and earth with a prodigality of seeds, that, if thousands perish, thousands may plant themselves; that hundreds may come up, that tens may live to maturity; that at least one may replace the parent. All things betray the same calculated profusion. The excess of fear with which the animal frame is hedged round, shrinking from cold, starting at sight of a snake, or at a sudden noise, protects us, through a multitude of groundless alarms, from some one real danger at last. The lover seeks in marriage his private felicity and perfection, with no prospective end; and nature hides in his happiness her own end, namely, progeny, or the perpetuity of the race.

But the craft with which the world is made, runs also into the mind and character of men. No man is quite sane; each has a vein of folly in his composition, a slight determination of blood to the head, to make sure of holding him hard to some one point which nature had taken to heart. Great causes are never tried on their merits; but the cause is reduced to particulars to suit the size of the partisans, and the contention is ever hottest on minor matters. Not less remarkable is the overfaith of each man in the importance of what he has to do or say. The poet, the prophet, has a higher value for what he utters than any hearer, and therefore it gets spoken. The strong, self-complacent Luther declares with an emphasis not to be mistaken, that “God himself cannot do without wise men.” Jacob Behmen and George Fox betray their egotism in the pertinacity of their controversial tracts, and James Naylor once suffered himself to be worshipped as the Christ. Each prophet comes presently to identify himself with his thought, and to esteem his hat and shoes sacred. However this may discredit such persons with the judicious, it helps them with the people, as it gives heat, pungency, and publicity to their words. A similar experience is not infrequent in private life. Each young and ardent person writes a diary, in which, when the hours of prayer and penitence arrive, he inscribes his soul. The pages thus

written are to him burning and fragrant; he reads them on his knees by midnight and by the morning star; he wets them with his tears; they are sacred; too good for the world, and hardly yet to be shown to the dearest friend. This is the man-child that is born to the soul, and her life still circulates in the babe. The umbilical cord has not yet been cut. After some time has elapsed, he begins to wish to admit his friend to this hallowed experience, and with hesitation, yet with firmness, exposes the pages to his eye. Will they not burn his eyes? The friend coldly turns them over, and passes from the writing to conversation, with easy transition, which strikes the other party with astonishment and vexation. He cannot suspect the writing itself. Days and nights of fervid life, of communion with angels of darkness and of light have engraved their shadowy characters on that tear-stained book. He suspects the intelligence or the heart of his friend. Is there then no friend? He cannot yet credit that one may have impressive experience and yet may not know how to put his private fact into literature; and perhaps the discovery that wisdom has other tongues and ministers than we, that though we should hold our peace the truth would not the less be spoken, might check injuriously the flames of our zeal. A man can only speak so long as he does not feel his speech to be partial and inadequate. It is partial, but he does not see it to be so whilst he utters it. As soon as he is released from the instinctive and particular and sees its partiality, he shuts his mouth in disgust. For no man can write anything who does not think that what he writes is for the time the history of the world; or do anything well who does not esteem his work to be of importance. My work may be of none, but I must not think it of none, or I shall not do it with impunity.

In like manner, there is throughout nature something mocking, something that leads us on and on, but arrives nowhere; keeps no faith with us. All promise outruns the performance. We live in a system of approximations. Every end is prospective of some other end, which is also temporary; a round and final success nowhere. We are encamped in nature, not domesticated. Hunger and thirst lead us on to eat and to drink; but bread and wine, mix and cook them how you will, leave us hungry and thirsty, after the stomach is full. It is the same with all our arts and performances. Our music, our poetry, our language itself are not satisfactions, but suggestions. The hunger for wealth, which reduces the planet to a garden, fools the eager pursuer. What is the end sought? Plainly to secure the ends of good sense and beauty, from the intrusion of deformity or vulgarity of any kind. But what an operose method! What a train of means to secure a little conversation! This palace of brick and stone, these servants, this kitchen, these stables, horses and equipage, this bank-stock and file of mortgages; trade to all the world, country-house and cottage by the waterside, all for a little

conversation, high, clear, and spiritual! Could it not be had as well by beggars on the highway? No, all these things came from successive efforts of these beggars to remove friction from the wheels of life, and give opportunity. Conversation, character, were the avowed ends; wealth was good as it appeased the animal cravings, cured the smoky chimney, silenced the creaking door, brought friends together in a warm and quiet room, and kept the children and the dinner-table in a different apartment. Thought, virtue, beauty, were the ends; but it was known that men of thought and virtue sometimes had the headache, or wet feet, or could lose good time whilst the room was getting warm in winter days. Unluckily, in the exertions necessary to remove these inconveniences, the main attention has been diverted to this object; the old aims have been lost sight of, and to remove friction has come to be the end. That is the ridicule of rich men, and Boston, London, Vienna, and now the governments generally of the world are cities and governments of the rich; and the masses are not men, but poor men, that is, men who would be rich; this is the ridicule of the class, that they arrive with pains and sweat and fury nowhere; when all is done, it is for nothing. They are like one who has interrupted the conversation of a company to make his speech, and now has forgotten what he went to say. The appearance strikes the eye everywhere of an aimless society, of aimless nations. Were the ends of nature so great and cogent as to exact this immense sacrifice of men?

Quite analogous to the deceits in life, there is, as might be expected, a similar effect on the eye from the face of external nature. There is in woods and waters a certain enticement and flattery, together with a failure to yield a present satisfaction. This disappointment is felt in every landscape. I have seen the softness and beauty of the summer clouds floating feathery overhead, enjoying, as it seemed, their height and privilege of motion, whilst yet they appeared not so much the drapery of this place and hour, as forelooking to some pavilions and gardens of festivity beyond. It is an odd jealousy, but the poet finds himself not near enough to his object. The pine-tree, the river, the bank of flowers before him, does not seem to be nature. Nature is still elsewhere. This or this is but outskirts and far-off reflection and echo of the triumph that has passed by and is now at its glancing splendor and heyday, perchance in the neighboring fields, or, if you stand in the field, then in the adjacent woods. The present object shall give you this sense of stillness that follows a pageant which has just gone by. What splendid distance, what recesses of ineffable pomp and loveliness in the sunset! But who can go where they are, or lay his hand or plant his foot thereon? Off they fall from the round world forever and ever. It is the same among the men and women as among the silent trees; always a referred existence, an absence, never a presence and satisfaction. Is it that beauty can never be grasped? in

persons and in landscape is equally inaccessible? The accepted and betrothed lover has lost the wildest charm of his maiden in her acceptance of him. She was heaven whilst he pursued her as a star: she cannot be heaven if she stoops to such a one as he.

What shall we say of this omnipresent appearance of that first projectile impulse, of this flattery and balking of so many well-meaning creatures? Must we not suppose somewhere in the universe a slight treachery and derision? Are we not engaged to a serious resentment of this use that is made of us? Are we tickled trout, and fools of nature? One look at the face of heaven and earth lays all petulance at rest, and soothes us to wiser convictions. To the intelligent, nature converts itself into a vast promise, and will not be rashly explained. Her secret is untold. Many and many an Oedipus arrives; he has the whole mystery teeming in his brain. Alas! the same sorcery has spoiled his skill; no syllable can he shape on his lips. Her mighty orbit vaults like the fresh rainbow into the deep, but no archangel's wing was yet strong enough to follow it and report of the return of the curve. But it also appears that our actions are seconded and disposed to greater conclusions than we designed. We are escorted on every hand through life by spiritual agents, and a beneficent purpose lies in wait for us. We cannot bandy words with Nature, or deal with her as we deal with persons. If we measure our individual forces against hers we may easily feel as if we were the sport of an insuperable destiny. But if, instead of identifying ourselves with the work, we feel that the soul of the workman streams through us, we shall find the peace of the morning dwelling first in our hearts, and the fathomless powers of gravity and chemistry, and, over them, of life, preexisting within us in their highest form.

The uneasiness which the thought of our helplessness in the chain of causes occasions us, results from looking too much at one condition of nature, namely, Motion. But the drag is never taken from the wheel. Wherever the impulse exceeds, the Rest or Identity insinuates its compensation. All over the wide fields of earth grows the prunella or self-heal. After every foolish day we sleep off the fumes and furies of its hours; and though we are always engaged with particulars, and often enslaved to them, we bring with us to every experiment the innate universal laws. These, while they exist in the mind as ideas, stand around us in nature forever embodied, a present sanity to expose and cure the insanity of men. Our servitude to particulars betrays into a hundred foolish expectations. We anticipate a new era from the invention of a locomotive, or a balloon; the new engine brings with it the old checks. They say that by electro-magnetism your salad shall be grown from the seed whilst your fowl is roasting for dinner; it is a symbol of our modern aims and endeavors, of our condensation and

acceleration of objects; — but nothing is gained; nature cannot be cheated; man's life is but seventy salads long, grow they swift or grow they slow. In these checks and impossibilities however we find our advantage, not less than in the impulses. Let the victory fall where it will, we are on that side. And the knowledge that we traverse the whole scale of being, from the centre to the poles of nature, and have some stake in every possibility, lends that sublime lustre to death, which philosophy and religion have too outwardly and literally striven to express in the popular doctrine of the immortality of the soul. The reality is more excellent than the report. Here is no ruin, no discontinuity, no spent ball. The divine circulations never rest nor linger. Nature is the incarnation of a thought, and turns to a thought again, as ice becomes water and gas. The world is mind precipitated, and the volatile essence is forever escaping again into the state of free thought. Hence the virtue and pungency of the influence on the mind of natural objects, whether inorganic or organized. Man imprisoned, man crystallized, man vegetative, speaks to man impersonated. That power which does not respect quantity, which makes the whole and the particle its equal channel, delegates its smile to the morning, and distils its essence into every drop of rain. Every moment instructs, and every object: for wisdom is infused into every form. It has been poured into us as blood; it convulsed us as pain; it slid into us as pleasure; it enveloped us in dull, melancholy days, or in days of cheerful labor; we did not guess its essence until after a long time.

POLITICS.

Gold and iron are good
To buy iron and gold;
All earth's fleece and food For their like are sold.
Boded Merlin wise,
Proved Napoleon great, — Nor kind nor coinage buys Aught above its rate.
Fear, Craft, and Avarice Cannot rear a State.
Out of dust to build
What is more than dust, — Walls Amphion piled
Phoebus stablish must.
When the Muses nine
With the Virtues meet,

Find to their design
An Atlantic seat,
By green orchard boughs Fended from the heat,
Where the statesman ploughs Furrow for the wheat;
When the Church is social worth, When the state-house is the hearth, Then
the perfect State is come, The republican at home.

POLITICS.

In dealing with the State we ought to remember that its institutions are not aboriginal, though they existed before we were born; that they are not superior to the citizen; that every one of them was once the act of a single man; every law and usage was a man's expedient to meet a particular case; that they all are imitable, all alterable; we may make as good, we may make better. Society is an illusion to the young citizen. It lies before him in rigid repose, with certain names, men and institutions rooted like oak-trees to the centre, round which all arrange themselves the best they can. But the old statesman knows that society is fluid; there are no such roots and centres, but any particle may suddenly become the centre of the movement and compel the system to gyrate round it; as every man of strong will, like Pisistratus, or Cromwell, does for a time, and every man of truth, like Plato or Paul, does forever. But politics rest on necessary foundations, and cannot be treated with levity. Republics abound in young civilians, who believe that the laws make the city, that grave modifications of the policy and modes of living and employments of the population, that commerce, education, and religion, may be voted in or out; and that any measure, though it were absurd, may be imposed on a people if only you can get sufficient voices to make it a law. But the wise know that foolish legislation is a rope of sand which perishes in the twisting; that the State must follow and not lead the character and progress of the citizen; the strongest usurper is quickly got rid of; and they only who build on Ideas, build for eternity; and that the form of government which prevails is the expression of what cultivation exists in the population which permits it. The law is only a memorandum. We are superstitious, and esteem the statute somewhat: so much life as it has in the character of living men is its force. The statute stands there to say, Yesterday we agreed so and so, but how feel ye this article to-day? Our statute is a currency which we stamp with our own portrait: it soon becomes unrecognizable, and in process of time will return to the mint. Nature is not democratic, nor limited-monarchical, but despotic, and will not be fooled or abated of any jot of her authority by the pertest of her sons; and as fast as the public mind is opened to more intelligence, the code is seen to be brute and stammering. It speaks not articulately, and must be made to. Meantime the education of the general mind never stops. The reveries of the true and simple are prophetic. What the tender poetic youth dreams, and prays, and paints to-day, but shuns the ridicule of saying aloud, shall presently be the resolutions of public bodies; then shall be carried as grievance and bill of rights through conflict and war, and then shall be triumphant law and establishment for

a hundred years, until it gives place in turn to new prayers and pictures. The history of the State sketches in coarse outline the progress of thought, and follows at a distance the delicacy of culture and of aspiration.

The theory of politics which has possessed the mind of men, and which they have expressed the best they could in their laws and in their revolutions, considers persons and property as the two objects for whose protection government exists. Of persons, all have equal rights, in virtue of being identical in nature. This interest of course with its whole power demands a democracy. Whilst the rights of all as persons are equal, in virtue of their access to reason, their rights in property are very unequal. One man owns his clothes, and another owns a county. This accident, depending primarily on the skill and virtue of the parties, of which there is every degree, and secondarily on patrimony, falls unequally, and its rights of course are unequal. Personal rights, universally the same, demand a government framed on the ratio of the census; property demands a government framed on the ratio of owners and of owning. Laban, who has flocks and herds, wishes them looked after by an officer on the frontiers, lest the Midianites shall drive them off; and pays a tax to that end. Jacob has no flocks or herds and no fear of the Midianites, and pays no tax to the officer. It seemed fit that Laban and Jacob should have equal rights to elect the officer who is to defend their persons, but that Laban and not Jacob should elect the officer who is to guard the sheep and cattle. And if question arise whether additional officers or watch-towers should be provided, must not Laban and Isaac, and those who must sell part of their herds to buy protection for the rest, judge better of this, and with more right, than Jacob, who, because he is a youth and a traveller, eats their bread and not his own?

In the earliest society the proprietors made their own wealth, and so long as it comes to the owners in the direct way, no other opinion would arise in any equitable community than that property should make the law for property, and persons the law for persons.

But property passes through donation or inheritance to those who do not create it. Gift, in one case, makes it as really the new owner's, as labor made it the first owner's: in the other case, of patrimony, the law makes an ownership which will be valid in each man's view according to the estimate which he sets on the public tranquillity.

It was not however found easy to embody the readily admitted principle that property should make law for property, and persons for persons; since persons and property mixed themselves in every transaction. At last it seemed settled that the rightful distinction was that the proprietors should have more elective franchise than non-proprietors, on the Spartan principle of "calling that which is

just, equal; not that which is equal, just.”

That principle no longer looks so self-evident as it appeared in former times, partly, because doubts have arisen whether too much weight had not been allowed in the laws to property, and such a structure given to our usages as allowed the rich to encroach on the poor, and to keep them poor; but mainly because there is an instinctive sense, however obscure and yet inarticulate, that the whole constitution of property, on its present tenures, is injurious, and its influence on persons deteriorating and degrading; that truly the only interest for the consideration of the State is persons; that property will always follow persons; that the highest end of government is the culture of men; and if men can be educated, the institutions will share their improvement and the moral sentiment will write the law of the land.

If it be not easy to settle the equity of this question, the peril is less when we take note of our natural defences. We are kept by better guards than the vigilance of such magistrates as we commonly elect. Society always consists in greatest part of young and foolish persons. The old, who have seen through the hypocrisy of courts and statesmen, die and leave no wisdom to their sons. They believe their own newspaper, as their fathers did at their age. With such an ignorant and deceivable majority, States would soon run to ruin, but that there are limitations beyond which the folly and ambition of governors cannot go. Things have their laws, as well as men; and things refuse to be trifled with. Property will be protected. Corn will not grow unless it is planted and manured; but the farmer will not plant or hoe it unless the chances are a hundred to one that he will cut and harvest it. Under any forms, persons and property must and will have their just sway. They exert their power, as steadily as matter its attraction. Cover up a pound of earth never so cunningly, divide and subdivide it; melt it to liquid, convert it to gas; it will always weigh a pound; it will always attract and resist other matter by the full virtue of one pound weight: — and the attributes of a person, his wit and his moral energy, will exercise, under any law or extinguishing tyranny, their proper force, — if not overtly, then covertly; if not for the law, then against it; if not wholesomely, then poisonously; with right, or by might.

The boundaries of personal influence it is impossible to fix, as persons are organs of moral or supernatural force. Under the dominion of an idea which possesses the minds of multitudes, as civil freedom, or the religious sentiment, the powers of persons are no longer subjects of calculation. A nation of men unanimously bent on freedom or conquest can easily confound the arithmetic of statisticians, and achieve extravagant actions, out of all proportion to their means; as the Greeks, the Saracens, the Swiss, the Americans, and the French have done.

In like manner to every particle of property belongs its own attraction. A cent is the representative of a certain quantity of corn or other commodity. Its value is in the necessities of the animal man. It is so much warmth, so much bread, so much water, so much land. The law may do what it will with the owner of property; its just power will still attach to the cent. The law may in a mad freak say that all shall have power except the owners of property; they shall have no vote. Nevertheless, by a higher law, the property will, year after year, write every statute that respects property. The non-proprietor will be the scribe of the proprietor. What the owners wish to do, the whole power of property will do, either through the law or else in defiance of it. Of course I speak of all the property, not merely of the great estates. When the rich are outvoted, as frequently happens, it is the joint treasury of the poor which exceeds their accumulations. Every man owns something, if it is only a cow, or a wheelbarrow, or his arms, and so has that property to dispose of.

The same necessity which secures the rights of person and property against the malignity or folly of the magistrate, determines the form and methods of governing, which are proper to each nation and to its habit of thought, and nowise transferable to other states of society. In this country we are very vain of our political institutions, which are singular in this, that they sprung, within the memory of living men, from the character and condition of the people, which they still express with sufficient fidelity, — and we ostentatiously prefer them to any other in history. They are not better, but only fitter for us. We may be wise in asserting the advantage in modern times of the democratic form, but to other states of society, in which religion consecrated the monarchical, that and not this was expedient. Democracy is better for us, because the religious sentiment of the present time accords better with it. Born democrats, we are nowise qualified to judge of monarchy, which, to our fathers living in the monarchical idea, was also relatively right. But our institutions, though in coincidence with the spirit of the age, have not any exemption from the practical defects which have discredited other forms. Every actual State is corrupt. Good men must not obey the laws too well. What satire on government can equal the severity of censure conveyed in the word politic, which now for ages has signified cunning, intimating that the State is a trick?

The same benign necessity and the same practical abuse appear in the parties, into which each State divides itself, of opponents and defenders of the administration of the government. Parties are also founded on instincts, and have better guides to their own humble aims than the sagacity of their leaders. They have nothing perverse in their origin, but rudely mark some real and lasting relation. We might as wisely reprove the east wind or the frost, as a political

party, whose members, for the most part, could give no account of their position, but stand for the defence of those interests in which they find themselves. Our quarrel with them begins when they quit this deep natural ground at the bidding of some leader, and obeying personal considerations, throw themselves into the maintenance and defence of points nowise belonging to their system. A party is perpetually corrupted by personality. Whilst we absolve the association from dishonesty, we cannot extend the same charity to their leaders. They reap the rewards of the docility and zeal of the masses which they direct. Ordinarily our parties are parties of circumstance, and not of principle; as the planting interest in conflict with the commercial; the party of capitalists and that of operatives; parties which are identical in their moral character, and which can easily change ground with each other in the support of many of their measures. Parties of principle, as, religious sects, or the party of free-trade, of universal suffrage, of abolition of slavery, of abolition of capital punishment, — degenerate into personalities, or would inspire enthusiasm. The vice of our leading parties in this country (which may be cited as a fair specimen of these societies of opinion) is that they do not plant themselves on the deep and necessary grounds to which they are respectively entitled, but lash themselves to fury in the carrying of some local and momentary measure, nowise useful to the commonwealth. Of the two great parties which at this hour almost share the nation between them, I should say that one has the best cause, and the other contains the best men. The philosopher, the poet, or the religious man will of course wish to cast his vote with the democrat, for free-trade, for wide suffrage, for the abolition of legal cruelties in the penal code, and for facilitating in every manner the access of the young and the poor to the sources of wealth and power. But he can rarely accept the persons whom the so-called popular party propose to him as representatives of these liberalities. They have not at heart the ends which give to the name of democracy what hope and virtue are in it. The spirit of our American radicalism is destructive and aimless: it is not loving; it has no ulterior and divine ends, but is destructive only out of hatred and selfishness. On the other side, the conservative party, composed of the most moderate, able, and cultivated part of the population, is timid, and merely defensive of property. It vindicates no right, it aspires to no real good, it brands no crime, it proposes no generous policy; it does not build, nor write, nor cherish the arts, nor foster religion, nor establish schools, nor encourage science, nor emancipate the slave, nor befriend the poor, or the Indian, or the immigrant. From neither party, when in power, has the world any benefit to expect in science, art, or humanity, at all commensurate with the resources of the nation.

I do not for these defects despair of our republic. We are not at the mercy of

any waves of chance. In the strife of ferocious parties, human nature always finds itself cherished; as the children of the convicts at Botany Bay are found to have as healthy a moral sentiment as other children. Citizens of feudal states are alarmed at our democratic institutions lapsing into anarchy, and the older and more cautious among ourselves are learning from Europeans to look with some terror at our turbulent freedom. It is said that in our license of construing the Constitution, and in the despotism of public opinion, we have no anchor; and one foreign observer thinks he has found the safeguard in the sanctity of Marriage among us; and another thinks he has found it in our Calvinism. Fisher Ames expressed the popular security more wisely, when he compared a monarchy and a republic, saying that a monarchy is a merchantman, which sails well, but will sometimes strike on a rock and go to the bottom; whilst a republic is a raft, which would never sink, but then your feet are always in water. No forms can have any dangerous importance whilst we are befriended by the laws of things. It makes no difference how many tons weight of atmosphere presses on our heads, so long as the same pressure resists it within the lungs. Augment the mass a thousand fold, it cannot begin to crush us, as long as reaction is equal to action. The fact of two poles, of two forces, centripetal and centrifugal, is universal, and each force by its own activity develops the other. Wild liberty develops iron conscience. Want of liberty, by strengthening law and decorum, stupefies conscience. 'Lynch-law' prevails only where there is greater hardihood and self-subsistency in the leaders. A mob cannot be a permanency; everybody's interest requires that it should not exist, and only justice satisfies all.

We must trust infinitely to the beneficent necessity which shines through all laws. Human nature expresses itself in them as characteristically as in statues, or songs, or railroads; and an abstract of the codes of nations would be a transcript of the common conscience. Governments have their origin in the moral identity of men. Reason for one is seen to be reason for another, and for every other. There is a middle measure which satisfies all parties, be they never so many or so resolute for their own. Every man finds a sanction for his simplest claims and deeds in decisions of his own mind, which he calls Truth and Holiness. In these decisions all the citizens find a perfect agreement, and only in these; not in what is good to eat, good to wear, good use of time, or what amount of land or of public aid, each is entitled to claim. This truth and justice men presently endeavor to make application of to the measuring of land, the apportionment of service, the protection of life and property. Their first endeavors, no doubt, are very awkward. Yet absolute right is the first governor; or, every government is an impure theocracy. The idea after which each community is aiming to make and mend its law, is the will of the wise man. The wise man it cannot find in

nature, and it makes awkward but earnest efforts to secure his government by contrivance; as by causing the entire people to give their voices on every measure; or by a double choice to get the representation of the whole; or, by a selection of the best citizens; or to secure the advantages of efficiency and internal peace by confiding the government to one, who may himself select his agents. All forms of government symbolize an immortal government, common to all dynasties and independent of numbers, perfect where two men exist, perfect where there is only one man.

Every man's nature is a sufficient advertisement to him of the character of his fellows. My right and my wrong is their right and their wrong. Whilst I do what is fit for me, and abstain from what is unfit, my neighbor and I shall often agree in our means, and work together for a time to one end. But whenever I find my dominion over myself not sufficient for me, and undertake the direction of him also, I overstep the truth, and come into false relations to him. I may have so much more skill or strength than he that he cannot express adequately his sense of wrong, but it is a lie, and hurts like a lie both him and me. Love and nature cannot maintain the assumption; it must be executed by a practical lie, namely by force. This undertaking for another is the blunder which stands in colossal ugliness in the governments of the world. It is the same thing in numbers, as in a pair, only not quite so intelligible. I can see well enough a great difference between my setting myself down to a self-control, and my going to make somebody else act after my views; but when a quarter of the human race assume to tell me what I must do, I may be too much disturbed by the circumstances to see so clearly the absurdity of their command. Therefore all public ends look vague and quixotic beside private ones. For any laws but those which men make for themselves, are laughable. If I put myself in the place of my child, and we stand in one thought and see that things are thus or thus, that perception is law for him and me. We are both there, both act. But if, without carrying him into the thought, I look over into his plot, and, guessing how it is with him, ordain this or that, he will never obey me. This is the history of governments, — one man does something which is to bind another. A man who cannot be acquainted with me, taxes me; looking from afar at me ordains that a part of my labor shall go to this or that whimsical end, — not as I, but as he happens to fancy. Behold the consequence. Of all debts men are least willing to pay the taxes. What a satire is this on government! Everywhere they think they get their money's worth, except for these.

Hence the less government we have the better, — the fewer laws, and the less confided power. The antidote to this abuse of formal Government is the influence of private character, the growth of the Individual; the appearance of

the principal to supersede the proxy; the appearance of the wise man; of whom the existing government is, it must be owned, but a shabby imitation. That which all things tend to educe; which freedom, cultivation, intercourse, revolutions, go to form and deliver, is character; that is the end of Nature, to reach unto this coronation of her king. To educate the wise man the State exists, and with the appearance of the wise man the State expires. The appearance of character makes the State unnecessary. The wise man is the State. He needs no army, fort, or navy, — he loves men too well; no bribe, or feast, or palace, to draw friends to him; no vantage ground, no favorable circumstance. He needs no library, for he has not done thinking; no church, for he is a prophet; no statute book, for he has the lawgiver; no money, for he is value; no road, for he is at home where he is; no experience, for the life of the creator shoots through him, and looks from his eyes. He has no personal friends, for he who has the spell to draw the prayer and piety of all men unto him needs not husband and educate a few to share with him a select and poetic life. His relation to men is angelic; his memory is myrrh to them; his presence, frankincense and flowers.

We think our civilization near its meridian, but we are yet only at the cock-crowing and the morning star. In our barbarous society the influence of character is in its infancy. As a political power, as the rightful lord who is to tumble all rulers from their chairs, its presence is hardly yet suspected. Malthus and Ricardo quite omit it; the Annual Register is silent; in the Conversations' Lexicon it is not set down; the President's Message, the Queen's Speech, have not mentioned it; and yet it is never nothing. Every thought which genius and piety throw into the world, alters the world. The gladiators in the lists of power feel, through all their frocks of force and simulation, the presence of worth. I think the very strife of trade and ambition are confession of this divinity; and successes in those fields are the poor amends, the fig-leaf with which the shamed soul attempts to hide its nakedness. I find the like unwilling homage in all quarters. It is because we know how much is due from us that we are impatient to show some petty talent as a substitute for worth. We are haunted by a conscience of this right to grandeur of character, and are false to it. But each of us has some talent, can do somewhat useful, or graceful, or formidable, or amusing, or lucrative. That we do, as an apology to others and to ourselves for not reaching the mark of a good and equal life. But it does not satisfy us, whilst we thrust it on the notice of our companions. It may throw dust in their eyes, but does not smooth our own brow, or give us the tranquillity of the strong when we walk abroad. We do penance as we go. Our talent is a sort of expiation, and we are constrained to reflect on our splendid moment with a certain humiliation, as somewhat too fine, and not as one act of many acts, a fair expression of our

permanent energy. Most persons of ability meet in society with a kind of tacit appeal. Each seems to say, 'I am not all here.' Senators and presidents have climbed so high with pain enough, not because they think the place specially agreeable, but as an apology for real worth, and to vindicate their manhood in our eyes. This conspicuous chair is their compensation to themselves for being of a poor, cold, hard nature. They must do what they can. Like one class of forest animals, they have nothing but a prehensile tail; climb they must, or crawl. If a man found himself so rich-natured that he could enter into strict relations with the best persons and make life serene around him by the dignity and sweetness of his behavior, could he afford to circumvent the favor of the caucus and the press, and covet relations so hollow and pompous as those of a politician? Surely nobody would be a charlatan who could afford to be sincere.

The tendencies of the times favor the idea of self-government, and leave the individual, for all code, to the rewards and penalties of his own constitution; which work with more energy than we believe whilst we depend on artificial restraints. The movement in this direction has been very marked in modern history. Much has been blind and discreditable, but the nature of the revolution is not affected by the vices of the revolters; for this is a purely moral force. It was never adopted by any party in history, neither can be. It separates the individual from all party, and unites him at the same time to the race. It promises a recognition of higher rights than those of personal freedom, or the security of property. A man has a right to be employed, to be trusted, to be loved, to be revered. The power of love, as the basis of a State, has never been tried. We must not imagine that all things are lapsing into confusion if every tender protestant be not compelled to bear his part in certain social conventions; nor doubt that roads can be built, letters carried, and the fruit of labor secured, when the government of force is at an end. Are our methods now so excellent that all competition is hopeless? could not a nation of friends even devise better ways? On the other hand, let not the most conservative and timid fear anything from a premature surrender of the bayonet and the system of force. For, according to the order of nature, which is quite superior to our will, it stands thus; there will always be a government of force where men are selfish; and when they are pure enough to abjure the code of force they will be wise enough to see how these public ends of the post-office, of the highway, of commerce and the exchange of property, of museums and libraries, of institutions of art and science can be answered.

We live in a very low state of the world, and pay unwilling tribute to governments founded on force. There is not, among the most religious and instructed men of the most religious and civil nations, a reliance on the moral

sentiment and a sufficient belief in the unity of things, to persuade them that society can be maintained without artificial restraints, as well as the solar system; or that the private citizen might be reasonable and a good neighbor, without the hint of a jail or a confiscation. What is strange too, there never was in any man sufficient faith in the power of rectitude to inspire him with the broad design of renovating the State on the principle of right and love. All those who have pretended this design have been partial reformers, and have admitted in some manner the supremacy of the bad State. I do not call to mind a single human being who has steadily denied the authority of the laws, on the simple ground of his own moral nature. Such designs, full of genius and full of fate as they are, are not entertained except avowedly as air-pictures. If the individual who exhibits them dare to think them practicable, he disgusts scholars and churchmen; and men of talent and women of superior sentiments cannot hide their contempt. Not the less does nature continue to fill the heart of youth with suggestions of this enthusiasm, and there are now men, — if indeed I can speak in the plural number, — more exactly, I will say, I have just been conversing with one man, to whom no weight of adverse experience will make it for a moment appear impossible that thousands of human beings might exercise towards each other the grandest and simplest sentiments, as well as a knot of friends, or a pair of lovers.

NOMINALIST AND REALIST.

In countless upward-striving waves
The moon-drawn tide-wave strives:
In thousand far-transplanted grafts
The parent fruit survives;
So, in the new-born millions,
The perfect Adam lives.
Not less are summer-mornings dear
To every child they wake,
And each with novel life his sphere
Fills for his proper sake.

NONIMALIST AND REALIST.

I CANNOT often enough say that a man is only a relative and representative nature. Each is a hint of the truth, but far enough from being that truth which yet he quite newly and inevitably suggests to us. If I seek it in him I shall not find it. Could any man conduct into me the pure stream of that which he pretends to be! Long afterwards I find that quality elsewhere which he promised me. The genius of the Platonists is intoxicating to the student, yet how few particulars of it can I detach from all their books. The man momentarily stands for the thought, but will not bear examination; and a society of men will cursorily represent well enough a certain quality and culture, for example, chivalry or beauty of manners; but separate them and there is no gentleman and no lady in the group. The least hint sets us on the pursuit of a character which no man realizes. We have such exorbitant eyes that on seeing the smallest arc we complete the curve, and when the curtain is lifted from the diagram which it seemed to veil, we are vexed to find that no more was drawn than just that fragment of an arc which we first beheld. We are greatly too liberal in our construction of each other's faculty and promise. Exactly what the parties have already done they shall do again; but that which we inferred from their nature and inception, they will not do. That is in nature, but not in them. That happens in the world, which we often witness in a public debate. Each of the speakers expresses himself imperfectly; no one of them hears much that another says, such is the preoccupation of mind of each; and the audience, who have only to hear and not to speak, judge very wisely and superiorly how wrongheaded and unskilful is each of the debaters to his own affair. Great men or men of great gifts you shall easily find, but symmetrical men never. When I meet a pure intellectual force or a generosity of affection, I believe here then is man; and am presently mortified by the discovery that this individual is no more available to his own or to the general ends than his companions; because the power which drew my respect is not supported by the total symphony of his talents. All persons exist to society by some shining trait of beauty or utility which they have. We borrow the proportions of the man from that one fine feature, and finish the portrait symmetrically; which is false, for the rest of his body is small or deformed. I observe a person who makes a good public appearance, and conclude thence the perfection of his private character, on which this is based; but he has no private character. He is a graceful cloak or lay-figure for holidays. All our poets, heroes, and saints, fail utterly in some one or in many parts to satisfy our idea, fail to draw our spontaneous interest, and so leave us without any hope of realization but in our own future. Our exaggeration

of all fine characters arises from the fact that we identify each in turn with the soul. But there are no such men as we fable; no Jesus, nor Pericles, nor Caesar, nor Angelo, nor Washington, such as we have made. We consecrate a great deal of nonsense because it was allowed by great men. There is none without his foible. I verily believe if an angel should come to chant the chorus of the moral law, he would eat too much gingerbread, or take liberties with private letters, or do some precious atrocity. It is bad enough that our geniuses cannot do anything useful, but it is worse that no man is fit for society who has fine traits. He is admired at a distance, but he cannot come near without appearing a cripple. The men of fine parts protect themselves by solitude, or by courtesy, or by satire, or by an acid worldly manner, each concealing as he best can his incapacity for useful association, but they want either love or self-reliance.

Our native love of reality joins with this experience to teach us a little reserve, and to dissuade a too sudden surrender to the brilliant qualities of persons. Young people admire talents or particular excellences; as we grow older we value total powers and effects, as the impression, the quality, the spirit of men and things. The genius is all. The man, — it is his system: we do not try a solitary word or act, but his habit. The acts which you praise, I praise not, since they are departures from his faith, and are mere compliances. The magnetism which arranges tribes and races in one polarity is alone to be respected; the men are steel-filings. Yet we unjustly select a particle, and say, ‘O steel-filing number one! what heart-drawings I feel to thee! what prodigious virtues are these of thine! how constitutional to thee, and incommunicable.’ Whilst we speak the loadstone is withdrawn; down falls our filing in a heap with the rest, and we continue our mummery to the wretched shaving. Let us go for universals; for the magnetism, not for the needles. Human life and its persons are poor empirical pretensions. A personal influence is an ignis fatuus. If they say it is great, it is great; if they say it is small, it is small; you see it, and you see it not, by turns; it borrows all its size from the momentary estimation of the speakers: the Will-of-the-wisp vanishes if you go too near, vanishes if you go too far, and only blazes at one angle. Who can tell if Washington be a great man or no? Who can tell if Franklin be? Yes, or any but the twelve, or six, or three great gods of fame? And they too loom and fade before the eternal.

We are amphibious creatures, weaponed for two elements, having two sets of faculties, the particular and the catholic. We adjust our instrument for general observation, and sweep the heavens as easily as we pick out a single figure in the terrestrial landscape. We are practically skilful in detecting elements for which we have no place in our theory, and no name. Thus we are very sensible of an atmospheric influence in men and in bodies of men, not accounted for in an

arithmetical addition of all their measurable properties. There is a genius of a nation, which is not to be found in the numerical citizens, but which characterizes the society. England, strong, punctual, practical, well-spoken England I should not find if I should go to the island to seek it. In the parliament, in the play-house, at dinner-tables, I might see a great number of rich, ignorant, book-read, conventional, proud men, — many old women, — and not anywhere the Englishman who made the good speeches, combined the accurate engines, and did the bold and nervous deeds. It is even worse in America, where, from the intellectual quickness of the race, the genius of the country is more splendid in its promise and more slight in its performance. Webster cannot do the work of Webster. We conceive distinctly enough the French, the Spanish, the German genius, and it is not the less real that perhaps we should not meet in either of those nations a single individual who corresponded with the type. We infer the spirit of the nation in great measure from the language, which is a sort of monument to which each forcible individual in a course of many hundred years has contributed a stone. And, universally, a good example of this social force is the veracity of language, which cannot be debauched. In any controversy concerning morals, an appeal may be made with safety to the sentiments which the language of the people expresses. Proverbs, words, and grammar-inflections convey the public sense with more purity and precision than the wisest individual.

In the famous dispute with the Nominalists, the Realists had a good deal of reason. General ideas are essences. They are our gods: they round and ennoble the most partial and sordid way of living. Our proclivity to details cannot quite degrade our life and divest it of poetry. The day-laborer is reckoned as standing at the foot of the social scale, yet he is saturated with the laws of the world. His measures are the hours; morning and night, solstice and equinox, geometry, astronomy and all the lovely accidents of nature play through his mind. Money, which represents the prose of life, and which is hardly spoken of in parlors without an apology, is, in its effects and laws, as beautiful as roses. Property keeps the accounts of the world, and is always moral. The property will be found where the labor, the wisdom, and the virtue have been in nations, in classes, and (the whole life-time considered, with the compensations) in the individual also. How wise the world appears, when the laws and usages of nations are largely detailed, and the completeness of the municipal system is considered! Nothing is left out. If you go into the markets and the custom-houses, the insurers' and notaries' offices, the offices of sealers of weights and measures, of inspection of provisions, — it will appear as if one man had made it all. Wherever you go, a wit like your own has been before you, and has realized its thought. The

Eleusinian mysteries, the Egyptian architecture, the Indian astronomy, the Greek sculpture, show that there always were seeing and knowing men in the planet. The world is full of masonic ties, of guilds, of secret and public legions of honor; that of scholars, for example; and that of gentlemen, fraternizing with the upper class of every country and every culture.

I am very much struck in literature by the appearance that one person wrote all the books; as if the editor of a journal planted his body of reporters in different parts of the field of action, and relieved some by others from time to time; but there is such equality and identity both of judgment and point of view in the narrative that it is plainly the work of one all-seeing, all-hearing gentleman. I looked into Pope's *Odyssey* yesterday: it is as correct and elegant after our canon of to-day as if it were newly written. The modernness of all good books seems to give me an existence as wide as man. What is well done I feel as if I did; what is ill done I reckon not of. Shakspeare's passages of passion (for example, in *Lear* and *Hamlet*) are in the very dialect of the present year. I am faithful again to the whole over the members in my use of books. I find the most pleasure in reading a book in a manner least flattering to the author. I read Proclus, and sometimes Plato, as I might read a dictionary, for a mechanical help to the fancy and the imagination. I read for the lustres, as if one should use a fine picture in a chromatic experiment, for its rich colors. 'Tis not Proclus, but a piece of nature and fate that I explore. It is a greater joy to see the author's author, than himself. A higher pleasure of the same kind I found lately at a concert, where I went to hear Handel's *Messiah*. As the master overpowered the littleness and incapableness of the performers and made them conductors of his electricity, so it was easy to observe what efforts nature was making, through so many hoarse, wooden, and imperfect persons, to produce beautiful voices, fluid and soul-guided men and women. The genius of nature was paramount at the oratorio.

This preference of the genius to the parts is the secret of that deification of art, which is found in all superior minds. Art, in the artist, is proportion, or a habitual respect to the whole by an eye loving beauty in details. And the wonder and charm of it is the sanity in insanity which it denotes. Proportion is almost impossible to human beings. There is no one who does not exaggerate. In conversation, men are encumbered with personality, and talk too much. In modern sculpture, picture, and poetry, the beauty is miscellaneous; the artist works here and there and at all points, adding and adding, instead of unfolding the unit of his thought. Beautiful details we must have, or no artist; but they must be means and never other. The eye must not lose sight for a moment of the purpose. Lively boys write to their ear and eye, and the cool reader finds nothing

but sweet jingles in it. When they grow older, they respect the argument.

We obey the same intellectual integrity when we study in exceptions the law of the world. Anomalous facts, as the never quite obsolete rumors of magic and demonology, and the new allegations of phrenologists and neurologists, are of ideal use. They are good indications. Homoeopathy is insignificant as an art of healing, but of great value as criticism on the hygiene or medical practice of the time. So with Mesmerism, Swedenborgism, Fourierism, and the Millennial Church; they are poor pretensions enough, but good criticism on the science, philosophy, and preaching of the day. For these abnormal insights of the adepts ought to be normal, and things of course.

All things show us that on every side we are very near to the best. It seems not worth while to execute with too much pains some one intellectual, or aesthetical, or civil feat, when presently the dream will scatter, and we shall burst into universal power. The reason of idleness and of crime is the deferring of our hopes. Whilst we are waiting we beguile the time with jokes, with sleep, with eating, and with crimes.

Thus we settle it in our cool libraries, that all the agents with which we deal are subalterns, which we can well afford to let pass, and life will be simpler when we live at the centre and flout the surfaces. I wish to speak with all respect of persons, but sometimes I must pinch myself to keep awake and preserve the due decorum. They melt so fast into each other that they are like grass and trees, and it needs an effort to treat them as individuals. Though the uninspired man certainly finds persons a conveniency in household matters, the divine man does not respect them; he sees them as a rack of clouds, or a fleet of ripples which the wind drives over the surface of the water. But this is flat rebellion. Nature will not be Buddhist: she resents generalizing, and insults the philosopher in every moment with a million of fresh particulars. It is all idle talking: as much as a man is a whole, so is he also a part; and it were partial not to see it. What you say in your pompous distribution only distributes you into your class and section. You have not got rid of parts by denying them, but are the more partial. You are one thing, but Nature is one thing and the other thing, in the same moment. She will not remain orb'd in a thought, but rushes into persons; and when each person, inflamed to a fury of personality, would conquer all things to his poor crotchet, she raises up against him another person, and by many persons incarnates again a sort of whole. She will have all. Nick Bottom cannot play all the parts, work it how he may; there will be somebody else, and the world will be round. Everything must have its flower or effort at the beautiful, coarser or finer according to its stuff. They relieve and recommend each other, and the sanity of society is a balance of a thousand insanities. She punishes

abstractionists, and will only forgive an induction which is rare and casual. We like to come to a height of land and see the landscape, just as we value a general remark in conversation. But it is not the intention of Nature that we should live by general views. We fetch fire and water, run about all day among the shops and markets, and get our clothes and shoes made and mended, and are the victims of these details; and once in a fortnight we arrive perhaps at a rational moment. If we were not thus infatuated, if we saw the real from hour to hour, we should not be here to write and to read, but should have been burned or frozen long ago. She would never get anything done, if she suffered admirable Crichtons and universal geniuses. She loves better a wheelwright who dreams all night of wheels, and a groom who is part of his horse; for she is full of work, and these are her hands. As the frugal farmer takes care that his cattle shall eat down the rowen, and swine shall eat the waste of his house, and poultry shall pick the crumbs, — so our economical mother dispatches a new genius and habit of mind into every district and condition of existence, plants an eye wherever a new ray of light can fall, and gathering up into some man every property in the universe, establishes thousandfold occult mutual attractions among her offspring, that all this wash and waste of power may be imparted and exchanged.

Great dangers undoubtedly accrue from this incarnation and distribution of the godhead, and hence Nature has her maligners, as if she were Circe; and Alphonso of Castille fancied he could have given useful advice. But she does not go unprovided; she has hellebore at the bottom of the cup. Solitude would ripen a plentiful crop of despots. The recluse thinks of men as having his manner, or as not having his manner; and as having degrees of it, more and less. But when he comes into a public assembly he sees that men have very different manners from his own, and in their way admirable. In his childhood and youth he has had many checks and censures, and thinks modestly enough of his own endowment. When afterwards he comes to unfold it in propitious circumstance, it seems the only talent; he is delighted with his success, and accounts himself already the fellow of the great. But he goes into a mob, into a banking house, into a mechanic's shop, into a mill, into a laboratory, into a ship, into a camp, and in each new place he is no better than an idiot; other talents take place, and rule the hour. The rotation which whirls every leaf and pebble to the meridian, reaches to every gift of man, and we all take turns at the top.

For Nature, who abhors mannerism, has set her heart on breaking up all styles and tricks, and it is so much easier to do what one has done before than to do a new thing, that there is a perpetual tendency to a set mode. In every conversation, even the highest, there is a certain trick, which may be soon learned by an acute person and then that particular style continued indefinitely.

Each man too is a tyrant in tendency, because he would impose his idea on others; and their trick is their natural defence. Jesus would absorb the race; but Tom Paine or the coarsest blasphemer helps humanity by resisting this exuberance of power. Hence the immense benefit of party in politics, as it reveals faults of character in a chief, which the intellectual force of the persons, with ordinary opportunity and not hurled into aphelion by hatred, could not have seen. Since we are all so stupid, what benefit that there should be two stupidities! It is like that brute advantage so essential to astronomy, of having the diameter of the earth's orbit for a base of its triangles. Democracy is morose, and runs to anarchy, but in the State and in the schools it is indispensable to resist the consolidation of all men into a few men. If John was perfect, why are you and I alive? As long as any man exists, there is some need of him; let him fight for his own. A new poet has appeared; a new character approached us; why should we refuse to eat bread until we have found his regiment and section in our old army-files? Why not a new man? Here is a new enterprise of Brook Farm, of Skeneateles, of Northampton: why so impatient to baptize them Essenes, or Port-Royalists, or Shakers, or by any known and effete name? Let it be a new way of living. Why have only two or three ways of life, and not thousands? Every man is wanted, and no man is wanted much. We came this time for condiments, not for corn. We want the great genius only for joy; for one star more in our constellation, for one tree more in our grove. But he thinks we wish to belong to him, as he wishes to occupy us. He greatly mistakes us. I think I have done well if I have acquired a new word from a good author; and my business with him is to find my own, though it were only to melt him down into an epithet or an image for daily use: —

“Into paint will I grind thee, my bride!”

To embroil the confusion, and make it impossible to arrive at any general statement, — when we have insisted on the imperfection of individuals, our affections and our experience urge that every individual is entitled to honor, and a very generous treatment is sure to be repaid. A recluse sees only two or three persons, and allows them all their room; they spread themselves at large. The statesman looks at many, and compares the few habitually with others, and these look less. Yet are they not entitled to this generosity of reception? and is not munificence the means of insight? For though gamblers say that the cards beat all the players, though they were never so skilful, yet in the contest we are now considering, the players are also the game, and share the power of the cards. If you criticise a fine genius, the odds are that you are out of your reckoning, and instead of the poet, are censuring your own caricature of him. For there is somewhat spherul and infinite in every man, especially in every genius, which, if

you can come very near him, sports with all your limitations. For rightly every man is a channel through which heaven floweth, and whilst I fancied I was criticising him, I was censuring or rather terminating my own soul. After taxing Goethe as a courtier, artificial, unbelieving, worldly, — I took up this book of Helena, and found him an Indian of the wilderness, a piece of pure nature like an apple or an oak, large as morning or night, and virtuous as a brier-rose.

But care is taken that the whole tune shall be played. If we were not kept among surfaces, every thing would be large and universal; now the excluded attributes burst in on us with the more brightness that they have been excluded. “Your turn now, my turn next,” is the rule of the game. The universality being hindered in its primary form, comes in the secondary form of all sides; the points come in succession to the meridian, and by the speed of rotation a new whole is formed. Nature keeps herself whole and her representation complete in the experience of each mind. She suffers no seat to be vacant in her college. It is the secret of the world that all things subsist and do not die but only retire a little from sight and afterwards return again. Whatever does not concern us is concealed from us. As soon as a person is no longer related to our present well-being, he is concealed, or dies, as we say. Really, all things and persons are related to us, but according to our nature they act on us not at once but in succession, and we are made aware of their presence one at a time. All persons, all things which we have known, are here present, and many more than we see; the world is full. As the ancient said, the world is a plenum or solid; and if we saw all things that really surround us we should be imprisoned and unable to move. For though nothing is impassable to the soul, but all things are pervious to it and like highways, yet this is only whilst the soul does not see them. As soon as the soul sees any object, it stops before that object. Therefore, the divine Providence which keeps the universe open in every direction to the soul, conceals all the furniture and all the persons that do not concern a particular soul, from the senses of that individual. Through solidest eternal things the man finds his road as if they did not subsist, and does not once suspect their being. As soon as he needs a new object, suddenly he beholds it, and no longer attempts to pass through it, but takes another way. When he has exhausted for the time the nourishment to be drawn from any one person or thing, that object is withdrawn from his observation, and though still in his immediate neighborhood, he does not suspect its presence. Nothing is dead: men feign themselves dead, and endure mock funerals and mournful obituaries, and there they stand looking out of the window, sound and well, in some new and strange disguise. Jesus is not dead; he is very well alive: nor John, nor Paul, nor Mahomet, nor Aristotle; at times we believe we have seen them all, and could easily tell the names under

which they go.

If we cannot make voluntary and conscious steps in the admirable science of universals, let us see the parts wisely, and infer the genius of nature from the best particulars with a becoming charity. What is best in each kind is an index of what should be the average of that thing. Love shows me the opulence of nature, by disclosing to me in my friend a hidden wealth, and I infer an equal depth of good in every other direction. It is commonly said by farmers that a good pear or apple costs no more time or pains to rear than a poor one; so I would have no work of art, no speech, or action, or thought, or friend, but the best.

The end and the means, the gamester and the game, — life is made up of the intermixture and reaction of these two amicable powers, whose marriage appears beforehand monstrous, as each denies and tends to abolish the other. We must reconcile the contradictions as we can, but their discord and their concord introduce wild absurdities into our thinking and speech. No sentence will hold the whole truth, and the only way in which we can be just, is by giving ourselves the lie; Speech is better than silence; silence is better than speech; — All things are in contact; every atom has a sphere of repulsion; — Things are, and are not, at the same time; — and the like. All the universe over, there is but one thing, this old Two-Face, creator-creature, mind-matter, right-wrong, of which any proposition may be affirmed or denied. Very fitly therefore I assert that every man is a partialist, that nature secures him as an instrument by self-conceit, preventing the tendencies to religion and science; and now further assert, that, each man's genius being nearly and affectionately explored, he is justified in his individuality, as his nature is found to be immense; and now I add that every man is a universalist also, and, as our earth, whilst it spins on its own axis, spins all the time around the sun through the celestial spaces, so the least of its rational children, the most dedicated to his private affair, works out, though as it were under a disguise, the universal problem. We fancy men are individuals; so are pumpkins; but every pumpkin in the field goes through every point of pumpkin history. The rabid democrat, as soon as he is senator and rich man, has ripened beyond possibility of sincere radicalism, and unless he can resist the sun, he must be conservative the remainder of his days. Lord Eldon said in his old age that "if he were to begin life again, he would be damned but he would begin as agitator."

We hide this universality if we can, but it appears at all points. We are as ungrateful as children. There is nothing we cherish and strive to draw to us but in some hour we turn and rend it. We keep a running fire of sarcasm at ignorance and the life of the senses; then goes by, perchance, a fair girl, a piece of life, gay and happy, and making the commonest offices beautiful by the energy and heart

with which she does them; and seeing this we admire and love her and them, and say, 'Lo! a genuine creature of the fair earth, not dissipated or too early ripened by books, philosophy, religion, society, or care!' insinuating a treachery and contempt for all we had so long loved and wrought in ourselves and others.

If we could have any security against moods! If the profoundest prophet could be holden to his words, and the hearer who is ready to sell all and join the crusade could have any certificate that tomorrow his prophet shall not unsay his testimony! But the Truth sits veiled there on the Bench, and never interposes an adamant syllable; and the most sincere and revolutionary doctrine, put as if the ark of God were carried forward some furlongs, and planted there for the succor of the world, shall in a few weeks be coldly set aside by the same speaker, as morbid; "I thought I was right, but I was not," — and the same immeasurable credulity demanded for new audacities. If we were not of all opinions! if we did not in any moment shift the platform on which we stand, and look and speak from another! if there could be any regulation, any 'one-hour-rule,' that a man should never leave his point of view without sound of trumpet. I am always insincere, as always knowing there are other moods.

How sincere and confidential we can be, saying all that lies in the mind, and yet go away feeling that all is yet unsaid, from the incapacity of the parties to know each other, although they use the same words! My companion assumes to know my mood and habit of thought, and we go on from explanation to explanation until all is said which words can, and we leave matters just as they were at first, because of that vicious assumption. Is it that every man believes every other to be an incurable partialist, and himself a universalist? I talked yesterday with a pair of philosophers; I endeavored to show my good men that I love everything by turns and nothing long; that I loved the centre, but doated on the superficies; that I loved man, if men seemed to me mice and rats; that I revered saints, but woke up glad that the old pagan world stood its ground and died hard; that I was glad of men of every gift and nobility, but would not live in their arms. Could they but once understand that I loved to know that they existed, and heartily wished them God-speed, yet, out of my poverty of life and thought, had no word or welcome for them when they came to see me, and could well consent to their living in Oregon, for any claim I felt on them, — it would be a great satisfaction.

NEW ENGLAND REFORMERS.

In the suburb, in the town,
On the railway, in the square,

Came a beam of goodness down
Doubling daylight everywhere:
Peace now each for malice takes,
Beauty for his sinful weeks,
For the angel Hope aye makes
Him an angel whom she leads.

NEW ENGLAND REFORMERS.

A LECTURE READ BEFORE THE SOCIETY IN AMORY HALL, ON
SUNDAY, MARCH 3, 1844.

WHOEVER has had opportunity of acquaintance with society in New England during the last twenty-five years, with those middle and with those leading sections that may constitute any just representation of the character and aim of the community, will have been struck with the great activity of thought and experimenting. His attention must be commanded by the signs that the Church, or religious party, is falling from the Church nominal, and is appearing in temperance and non-resistance societies; in movements of abolitionists and of socialists; and in very significant assemblies called Sabbath and Bible Conventions; composed of ultraists, of seekers, of all the soul of the soldiery of dissent, and meeting to call in question the authority of the Sabbath, of the priesthood, and of the Church. In these movements nothing was more remarkable than the discontent they begot in the movers. The spirit of protest and of detachment drove the members of these Conventions to bear testimony against the Church, and immediately afterward, to declare their discontent with these Conventions, their independence of their colleagues, and their impatience of the methods whereby they were working. They defied each other, like a congress of kings, each of whom had a realm to rule, and a way of his own that made concert unprofitable. What a fertility of projects for the salvation of the world! One apostle thought all men should go to farming, and another that no man should buy or sell, that the use of money was the cardinal evil; another that the mischief was in our diet, that we eat and drink damnation. These made unleavened bread, and were foes to the death to fermentation. It was in vain urged by the housewife that God made yeast, as well as dough, and loves fermentation just as dearly as he loves vegetation; that fermentation develops the saccharine element in the grain, and makes it more palatable and more digestible. No; they wish the pure wheat, and will die but it shall not ferment. Stop, dear nature, these incessant advances of thine; let us scotch these ever-rolling wheels! Others attacked the system of agriculture, the use of animal manures in farming, and the tyranny of man over brute nature; these abuses polluted his food. The ox must be taken from the plough and the horse from the cart, the hundred acres of the farm must be spaded, and the man must walk, wherever boats and locomotives will not carry him. Even the insect world was to be defended, — that had been too long neglected, and a society for the protection

of ground-worms, slugs, and mosquitos was to be incorporated without delay. With these appeared the adepts of homoeopathy, of hydropathy, of mesmerism, of phrenology, and their wonderful theories of the Christian miracles! Others assailed particular vocations, as that of the lawyer, that of the merchant, of the manufacturer, of the clergyman, of the scholar. Others attacked the institution of marriage as the fountain of social evils. Others devoted themselves to the worrying of churches and meetings for public worship; and the fertile forms of antinomianism among the elder puritans seemed to have their match in the plenty of the new harvest of reform.

With this din of opinion and debate there was a keener scrutiny of institutions and domestic life than any we had known; there was sincere protesting against existing evils, and there were changes of employment dictated by conscience. No doubt there was plentiful vapping, and cases of backsliding might occur. But in each of these movements emerged a good result, a tendency to the adoption of simpler methods, and an assertion of the sufficiency of the private man. Thus it was directly in the spirit and genius of the age, what happened in one instance when a church censured and threatened to excommunicate one of its members on account of the somewhat hostile part to the church which his conscience led him to take in the anti-slavery business; the threatened individual immediately excommunicated the church in a public and formal process. This has been several times repeated: it was excellent when it was done the first time, but of course loses all value when it is copied. Every project in the history of reform, no matter how violent and surprising, is good when it is the dictate of a man's genius and constitution, but very dull and suspicious when adopted from another. It is right and beautiful in any man to say, 'I will take this coat, or this book, or this measure of corn of yours,' — in whom we see the act to be original, and to flow from the whole spirit and faith of him; for then that taking will have a giving as free and divine; but we are very easily disposed to resist the same generosity of speech when we miss originality and truth to character in it.

There was in all the practical activities of New England for the last quarter of a century, a gradual withdrawal of tender consciences from the social organizations. There is observable throughout, the contest between mechanical and spiritual methods, but with a steady tendency of the thoughtful and virtuous to a deeper belief and reliance on spiritual facts.

In politics for example it is easy to see the progress of dissent. The country is full of rebellion; the country is full of kings. Hands off! let there be no control and no interference in the administration of the affairs of this kingdom of me. Hence the growth of the doctrine and of the party of Free Trade, and the willingness to try that experiment, in the face of what appear incontestable facts.

I confess, the motto of the Globe newspaper is so attractive to me that I can seldom find much appetite to read what is below it in its columns: "The world is governed too much." So the country is frequently affording solitary examples of resistance to the government, solitary nullifiers, who throw themselves on their reserved rights; nay, who have reserved all their rights; who reply to the assessor and to the clerk of court that they do not know the State, and embarrass the courts of law by non-juring and the commander-in-chief of the militia by non-resistance.

The same disposition to scrutiny and dissent appeared in civil, festive, neighborly, and domestic society. A restless, prying, conscientious criticism broke out in unexpected quarters. Who gave me the money with which I bought my coat? Why should professional labor and that of the counting-house be paid so disproportionately to the labor of the porter and woodsawyer? This whole business of Trade gives me to pause and think, as it constitutes false relations between men; inasmuch as I am prone to count myself relieved of any responsibility to behave well and nobly to that person whom I pay with money; whereas if I had not that commodity, I should be put on my good behavior in all companies, and man would be a benefactor to man, as being himself his only certificate that he had a right to those aids and services which each asked of the other. Am I not too protected a person? is there not a wide disparity between the lot of me and the lot of thee, my poor brother, my poor sister? Am I not defrauded of my best culture in the loss of those gymnastics which manual labor and the emergencies of poverty constitute? I find nothing healthful or exalting in the smooth conventions of society; I do not like the close air of saloons. I begin to suspect myself to be a prisoner, though treated with all this courtesy and luxury. I pay a destructive tax in my conformity.

The same insatiable criticism may be traced in the efforts for the reform of Education. The popular education has been taxed with a want of truth and nature. It was complained that an education to things was not given. We are students of words: we are shut up in schools, and colleges, and recitation-rooms, for ten or fifteen years, and come out at last with a bag of wind, a memory of words, and do not know a thing. We cannot use our hands, or our legs, or our eyes, or our arms. We do not know an edible root in the woods, we cannot tell our course by the stars, nor the hour of the day by the sun. It is well if we can swim and skate. We are afraid of a horse, of a cow, of a dog, of a snake, of a spider. The Roman rule was to teach a boy nothing that he could not learn standing. The old English rule was, 'All summer in the field, and all winter in the study.' And it seems as if a man should learn to plant, or to fish, or to hunt, that he might secure his subsistence at all events, and not be painful to his

friends and fellow-men. The lessons of science should be experimental also. The sight of the planet through a telescope is worth all the course on astronomy; the shock of the electric spark in the elbow, outvalues all the theories; the taste of the nitrous oxide, the firing of an artificial volcano, are better than volumes of chemistry.

One of the traits of the new spirit is the inquisition it fixed on our scholastic devotion to the dead languages. The ancient languages, with great beauty of structure, contain wonderful remains of genius, which draw, and always will draw, certain likeminded men, — Greek men, and Roman men, — in all countries, to their study; but by a wonderful drowsiness of usage they had exacted the study of all men. Once (say two centuries ago), Latin and Greek had a strict relation to all the science and culture there was in Europe, and the Mathematics had a momentary importance at some era of activity in physical science. These things became stereotyped as education, as the manner of men is. But the Good Spirit never cared for the colleges, and though all men and boys were now drilled in Latin, Greek, and Mathematics, it had quite left these shells high and dry on the beach, and was now creating and feeding other matters at other ends of the world. But in a hundred high schools and colleges this warfare against common sense still goes on. Four, or six, or ten years, the pupil is parsing Greek and Latin, and as soon as he leaves the University, as it is ludicrously called, he shuts those books for the last time. Some thousands of young men are graduated at our colleges in this country every year, and the persons who, at forty years, still read Greek, can all be counted on your hand. I never met with ten. Four or five persons I have seen who read Plato.

But is not this absurd, that the whole liberal talent of this country should be directed in its best years on studies which lead to nothing? What was the consequence? Some intelligent persons said or thought, 'Is that Greek and Latin some spell to conjure with, and not words of reason? If the physician, the lawyer, the divine, never use it to come at their ends, I need never learn it to come at mine. Conjuring is gone out of fashion, and I will omit this conjugating, and go straight to affairs.' So they jumped the Greek and Latin, and read law, medicine, or sermons, without it. To the astonishment of all, the self-made men took even ground at once with the oldest of the regular graduates, and in a few months the most conservative circles of Boston and New York had quite forgotten who of their gownsmen was college-bred, and who was not.

One tendency appears alike in the philosophical speculation and in the rudest democratical movements, through all the petulance and all the puerility, the wish, namely, to cast aside the superfluous and arrive at short methods; urged, as I suppose, by an intuition that the human spirit is equal to all emergencies, alone,

and that man is more often injured than helped by the means he uses.

I conceive this gradual casting off of material aids, and the indication of growing trust in the private self-supplied powers of the individual, to be the affirmative principle of the recent philosophy, and that it is feeling its own profound truth and is reaching forward at this very hour to the happiest conclusions. I readily concede that in this, as in every period of intellectual activity, there has been a noise of denial and protest; much was to be resisted, much was to be got rid of by those who were reared in the old, before they could begin to affirm and to construct. Many a reformer perishes in his removal of rubbish; and that makes the offensiveness of the class. They are partial; they are not equal to the work they pretend. They lose their way; in the assault on the kingdom of darkness they expend all their energy on some accidental evil, and lose their sanity and power of benefit. It is of little moment that one or two or twenty errors of our social system be corrected, but of much that the man be in his senses.

The criticism and attack on institutions, which we have witnessed, has made one thing plain, that society gains nothing whilst a man, not himself renovated, attempts to renovate things around him: he has become tediously good in some particular but negligent or narrow in the rest; and hypocrisy and vanity are often the disgusting result.

It is handsomer to remain in the establishment better than the establishment, and conduct that in the best manner, than to make a sally against evil by some single improvement, without supporting it by a total regeneration. Do not be so vain of your one objection. Do you think there is only one? Alas! my good friend, there is no part of society or of life better than any other part. All our things are right and wrong together. The wave of evil washes all our institutions alike. Do you complain of our Marriage? Our marriage is no worse than our education, our diet, our trade, our social customs. Do you complain of the laws of Property? It is a pedantry to give such importance to them. Can we not play the game of life with these counters, as well as with those? in the institution of property, as well as out of it? Let into it the new and renewing principle of love, and property will be universality. No one gives the impression of superiority to the institution, which he must give who will reform it. It makes no difference what you say, you must make me feel that you are aloof from it; by your natural and supernatural advantages do easily see to the end of it, — do see how man can do without it. Now all men are on one side. No man deserves to be heard against property. Only Love, only an Idea, is against property as we hold it.

I cannot afford to be irritable and captious, nor to waste all my time in attacks. If I should go out of church whenever I hear a false sentiment I could

never stay there five minutes. But why come out? the street is as false as the church, and when I get to my house, or to my manners, or to my speech, I have not got away from the lie. When we see an eager assailant of one of these wrongs, a special reformer, we feel like asking him, What right have you, sir, to your one virtue? Is virtue piecemeal? This is a jewel amidst the rags of a beggar.

In another way the right will be vindicated. In the midst of abuses, in the heart of cities, in the aisles of false churches, alike in one place and in another, — wherever, namely, a just and heroic soul finds itself, there it will do what is next at hand, and by the new quality of character it shall put forth it shall abrogate that old condition, law or school in which it stands, before the law of its own mind.

If partiality was one fault of the movement party, the other defect was their reliance on Association. Doubts such as those I have intimated drove many good persons to agitate the questions of social reform. But the revolt against the spirit of commerce, the spirit of aristocracy, and the inveterate abuses of cities, did not appear possible to individuals; and to do battle against numbers they armed themselves with numbers, and against concert they relied on new concert.

Following or advancing beyond the ideas of St. Simon, of Fourier, and of Owen, three communities have already been formed in Massachusetts on kindred plans, and many more in the country at large. They aim to give every member a share in the manual labor, to give an equal reward to labor and to talent, and to unite a liberal culture with an education to labor. The scheme offers, by the economies of associated labor and expense, to make every member rich, on the same amount of property, that, in separate families, would leave every member poor. These new associations are composed of men and women of superior talents and sentiments; yet it may easily be questioned whether such a community will draw, except in its beginnings, the able and the good; whether those who have energy will not prefer their chance of superiority and power in the world, to the humble certainties of the association; whether such a retreat does not promise to become an asylum to those who have tried and failed, rather than a field to the strong; and whether the members will not necessarily be fractions of men, because each finds that he cannot enter it, without some compromise. Friendship and association are very fine things, and a grand phalanx of the best of the human race, banded for some catholic object; yes, excellent; but remember that no society can ever be so large as one man. He, in his friendship, in his natural and momentary associations, doubles or multiplies himself; but in the hour in which he mortgages himself to two or ten or twenty, he dwarfs himself below the stature of one.

But the men of less faith could not thus believe, and to such, concert appears

the sole specific of strength. I have failed, and you have failed, but perhaps together we shall not fail. Our housekeeping is not satisfactory to us, but perhaps a phalanx, a community, might be. Many of us have differed in opinion, and we could find no man who could make the truth plain, but possibly a college, or an ecclesiastical council might. I have not been able either to persuade my brother or to prevail on myself, to disuse the traffic or the potation of brandy, but perhaps a pledge of total abstinence might effectually restrain us. The candidate my party votes for is not to be trusted with a dollar, but he will be honest in the Senate, for we can bring public opinion to bear on him. Thus concert was the specific in all cases. But concert is neither better nor worse, neither more nor less potent than individual force. All the men in the world cannot make a statue walk and speak, cannot make a drop of blood, or a blade of grass, any more than one man can. But let there be one man, let there be truth in two men, in ten men, then is concert for the first time possible; because the force which moves the world is a new quality, and can never be furnished by adding whatever quantities of a different kind. What is the use of the concert of the false and the disunited? There can be no concert in two, where there is no concert in one. When the individual is not individual, but is dual; when his thoughts look one way and his actions another; when his faith is traversed by his habits; when his will, enlightened by reason, is warped by his sense; when with one hand he rows and with the other backs water, what concert can be?

I do not wonder at the interest these projects inspire. The world is awaking to the idea of union, and these experiments show what it is thinking of. It is and will be magic. Men will live and communicate, and plough, and reap, and govern, as by added ethereal power, when once they are united; as in a celebrated experiment, by expiration and respiration exactly together, four persons lift a heavy man from the ground by the little finger only, and without sense of weight. But this union must be inward, and not one of covenants, and is to be reached by a reverse of the methods they use. The union is only perfect when all the uniters are isolated. It is the union of friends who live in different streets or towns. Each man, if he attempts to join himself to others, is on all sides cramped and diminished of his proportion; and the stricter the union the smaller and the more pitiful he is. But leave him alone, to recognize in every hour and place the secret soul; he will go up and down doing the works of a true member, and, to the astonishment of all, the work will be done with concert, though no man spoke. Government will be adamant without any governor. The union must be ideal in actual individualism.

I pass to the indication in some particulars of that faith in man, which the heart is preaching to us in these days, and which engages the more regard, from

the consideration that the speculations of one generation are the history of the next following.

In alluding just now to our system of education, I spoke of the deadness of its details. But it is open to graver criticism than the palsy of its members: it is a system of despair. The disease with which the human mind now labors is want of faith. Men do not believe in a power of education. We do not think we can speak to divine sentiments in man, and we do not try. We renounce all high aims. We believe that the defects of so many perverse and so many frivolous people who make up society, are organic, and society is a hospital of incurables. A man of good sense but of little faith, whose compassion seemed to lead him to church as often as he went there, said to me that "he liked to have concerts, and fairs, and churches, and other public amusements go on." I am afraid the remark is too honest, and comes from the same origin as the maxim of the tyrant, "If you would rule the world quietly, you must keep it amused." I notice too that the ground on which eminent public servants urge the claims of popular education is fear; 'This country is filling up with thousands and millions of voters, and you must educate them to keep them from our throats.' We do not believe that any education, any system of philosophy, any influence of genius, will ever give depth of insight to a superficial mind. Having settled ourselves into this infidelity, our skill is expended to procure alleviations, diversion, opiates. We adorn the victim with manual skill, his tongue with languages, his body with inoffensive and comely manners. So have we cunningly hid the tragedy of limitation and inner death we cannot avert. Is it strange that society should be devoured by a secret melancholy which breaks through all its smiles and all its gayety and games?

But even one step farther our infidelity has gone. It appears that some doubt is felt by good and wise men whether really the happiness and probity of men is increased by the culture of the mind in those disciplines to which we give the name of education. Unhappily too the doubt comes from scholars, from persons who have tried these methods. In their experience the scholar was not raised by the sacred thoughts amongst which he dwelt, but used them to selfish ends. He was a profane person, and became a showman, turning his gifts to a marketable use, and not to his own sustenance and growth. It was found that the intellect could be independently developed, that is, in separation from the man, as any single organ can be invigorated, and the result was monstrous. A canine appetite for knowledge was generated, which must still be fed but was never satisfied, and this knowledge, not being directed on action, never took the character of substantial, humane truth, blessing those whom it entered. It gave the scholar certain powers of expression, the power of speech, the power of poetry, of

literary art, but it did not bring him to peace or to beneficence.

When the literary class betray a destitution of faith, it is not strange that society should be disheartened and sensualized by unbelief. What remedy? Life must be lived on a higher plane. We must go up to a higher platform, to which we are always invited to ascend; there, the whole aspect of things changes. I resist the skepticism of our education and of our educated men. I do not believe that the differences of opinion and character in men are organic. I do not recognize, beside the class of the good and the wise, a permanent class of skeptics, or a class of conservatives, or of malignants, or of materialists. I do not believe in two classes. You remember the story of the poor woman who importuned King Philip of Macedon to grant her justice, which Philip refused: the woman exclaimed, "I appeal:" the king, astonished, asked to whom she appealed: the woman replied, "From Philip drunk to Philip sober." The text will suit me very well. I believe not in two classes of men, but in man in two moods, in Philip drunk and Philip sober. I think, according to the good-hearted word of Plato, "Unwillingly the soul is deprived of truth." Iron conservative, miser, or thief, no man is but by a supposed necessity which he tolerates by shortness or torpidity of sight. The soul lets no man go without some visitations and holydays of a diviner presence. It would be easy to show, by a narrow scanning of any man's biography, that we are not so wedded to our paltry performances of every kind but that every man has at intervals the grace to scorn his performances, in comparing them with his belief of what he should do; — that he puts himself on the side of his enemies, listening gladly to what they say of him, and accusing himself of the same things.

What is it men love in Genius, but its infinite hope, which degrades all it has done? Genius counts all its miracles poor and short. Its own idea it never executed. The Iliad, the Hamlet, the Doric column, the Roman arch, the Gothic minster, the German anthem, when they are ended, the master casts behind him. How sinks the song in the waves of melody which the universe pours over his soul! Before that gracious Infinite out of which he drew these few strokes, how mean they look, though the praises of the world attend them. From the triumphs of his art he turns with desire to this greater defeat. Let those admire who will. With silent joy he sees himself to be capable of a beauty that eclipses all which his hands have done; all which human hands have ever done.

Well, we are all the children of genius, the children of virtue, — and feel their inspirations in our happier hours. Is not every man sometimes a radical in politics? Men are conservatives when they are least vigorous, or when they are most luxurious. They are conservatives after dinner, or before taking their rest; when they are sick, or aged: in the morning, or when their intellect or their

conscience has been aroused; when they hear music, or when they read poetry, they are radicals. In the circle of the rankest Tories that could be collected in England, Old or New, let a powerful and stimulating intellect, a man of great heart and mind, act on them, and very quickly these frozen conservators will yield to the friendly influence, these hopeless will begin to hope, these haters will begin to love, these immovable statues will begin to spin and revolve. I cannot help recalling the fine anecdote which Warton relates of Bishop Berkeley, when he was preparing to leave England with his plan of planting the gospel among the American savages. "Lord Bathurst told me that the members of the Scriblerus club being met at his house at dinner, they agreed to rally Berkeley, who was also his guest, on his scheme at Bermudas. Berkeley, having listened to the many lively things they had to say, begged to be heard in his turn, and displayed his plan with such an astonishing and animating force of eloquence and enthusiasm, that they were struck dumb, and, after some pause, rose up all together with earnestness, exclaiming, 'Let us set out with him immediately.'" Men in all ways are better than they seem. They like flattery for the moment, but they know the truth for their own. It is a foolish cowardice which keeps us from trusting them and speaking to them rude truth. They resent your honesty for an instant, they will thank you for it always. What is it we heartily wish of each other? Is it to be pleased and flattered? No, but to be convicted and exposed, to be shamed out of our nonsense of all kinds, and made men of, instead of ghosts and phantoms. We are weary of gliding ghostlike through the world, which is itself so slight and unreal. We crave a sense of reality, though it come in strokes of pain. I explain so, — by this manlike love of truth, — those excesses and errors into which souls of great vigor, but not equal insight, often fall. They feel the poverty at the bottom of all the seeming affluence of the world. They know the speed with which they come straight through the thin masquerade, and conceive a disgust at the indigence of nature: Rousseau, Mirabeau, Charles Fox, Napoleon, Byron, — and I could easily add names nearer home, of raging riders, who drive their steeds so hard, in the violence of living to forget its illusion: they would know the worst, and tread the floors of hell. The heroes of ancient and modern fame, Cimon, Themistocles, Alcibiades, Alexander, Caesar, have treated life and fortune as a game to be well and skilfully played, but the stake not to be so valued but that any time it could be held as a trifle light as air, and thrown up. Caesar, just before the battle of Pharsalia, discourses with the Egyptian priest concerning the fountains of the Nile, and offers to quit the army, the empire, and Cleopatra, if he will show him those mysterious sources.

The same magnanimity shows itself in our social relations, in the preference,

namely, which each man gives to the society of superiors over that of his equals. All that a man has will he give for right relations with his mates. All that he has will he give for an erect demeanor in every company and on each occasion. He aims at such things as his neighbors prize, and gives his days and nights, his talents and his heart, to strike a good stroke, to acquit himself in all men's sight as a man. The consideration of an eminent citizen, of a noted merchant, of a man of mark in his profession; a naval and military honor, a general's commission, a marshal's baton, a ducal coronet, the laurel of poets, and, anyhow procured, the acknowledgment of eminent merit, — have this lustre for each candidate that they enable him to walk erect and unashamed in the presence of some persons before whom he felt himself inferior. Having raised himself to this rank, having established his equality with class after class of those with whom he would live well, he still finds certain others before whom he cannot possess himself, because they have somewhat fairer, somewhat grander, somewhat purer, which extorts homage of him. Is his ambition pure? then will his laurels and his possessions seem worthless: instead of avoiding these men who make his fine gold dim, he will cast all behind him and seek their society only, woo and embrace this his humiliation and mortification, until he shall know why his eye sinks, his voice is husky, and his brilliant talents are paralyzed in this presence. He is sure that the soul which gives the lie to all things will tell none. His constitution will not mislead him. If it cannot carry itself as it ought, high and unmatchable in the presence of any man; if the secret oracles whose whisper makes the sweetness and dignity of his life do here withdraw and accompany him no longer, — it is time to undervalue what he has valued, to dispossess himself of what he has acquired, and with Caesar to take in his hand the army, the empire, and Cleopatra, and say, "All these will I relinquish, if you will show me the fountains of the Nile." Dear to us are those who love us; the swift moments we spend with them are a compensation for a great deal of misery; they enlarge our life; — but dearer are those who reject us as unworthy, for they add another life: they build a heaven before us whereof we had not dreamed, and thereby supply to us new powers out of the recesses of the spirit, and urge us to new and unattempted performances.

As every man at heart wishes the best and not inferior society, wishes to be convicted of his error and to come to himself, — so he wishes that the same healing should not stop in his thought, but should penetrate his will or active power. The selfish man suffers more from his selfishness than he from whom that selfishness withholds some important benefit. What he most wishes is to be lifted to some higher platform, that he may see beyond his present fear the transalpine good, so that his fear, his coldness, his custom may be broken up like

fragments of ice, melted and carried away in the great stream of good will. Do you ask my aid? I also wish to be a benefactor. I wish more to be a benefactor and servant than you wish to be served by me; and surely the greatest good fortune that could befall me is precisely to be so moved by you that I should say, 'Take me and all mine, and use me and mine freely to your ends'! for I could not say it otherwise than because a great enlargement had come to my heart and mind, which made me superior to my fortunes. Here we are paralyzed with fear; we hold on to our little properties, house and land, office and money, for the bread which they have in our experience yielded us, although we confess that our being does not flow through them. We desire to be made great; we desire to be touched with that fire which shall command this ice to stream, and make our existence a benefit. If therefore we start objections to your project, O friend of the slave, or friend of the poor, or of the race, understand well that it is because we wish to drive you to drive us into your measures. We wish to hear ourselves confuted. We are haunted with a belief that you have a secret which it would highest advantage us to learn, and we would force you to impart it to us, though it should bring us to prison, or to worse extremity.

Nothing shall warp me from the belief that every man is a lover of truth. There is no pure lie, no pure malignity in nature. The entertainment of the proposition of depravity is the last profligacy and profanation. There is no skepticism, no atheism but that. Could it be received into common belief, suicide would unpeopled the planet. It has had a name to live in some dogmatic theology, but each man's innocence and his real liking of his neighbor have kept it a dead letter. I remember standing at the polls one day when the anger of the political contest gave a certain grimness to the faces of the independent electors, and a good man at my side, looking on the people, remarked, "I am satisfied that the largest part of these men, on either side, mean to vote right." I suppose considerate observers, looking at the masses of men in their blameless and in their equivocal actions, will assent, that in spite of selfishness and frivolity, the general purpose in the great number of persons is fidelity. The reason why any one refuses his assent to your opinion, or his aid to your benevolent design, is in you: he refuses to accept you as a bringer of truth, because, though you think you have it, he feels that you have it not. You have not given him the authentic sign.

If it were worth while to run into details this general doctrine of the latent but ever soliciting Spirit, it would be easy to adduce illustration in particulars of a man's equality to the Church, of his equality to the State, and of his equality to every other man. It is yet in all men's memory that, a few years ago, the liberal churches complained that the Calvinistic church denied to them the name of

Christian. I think the complaint was confession: a religious church would not complain. A religious man like Behmen, Fox, or Swedenborg is not irritated by wanting the sanction of the Church, but the Church feels the accusation of his presence and belief.

It only needs that a just man should walk in our streets to make it appear how pitiful and inartificial a contrivance is our legislation. The man whose part is taken and who does not wait for society in anything, has a power which society cannot choose but feel. The familiar experiment called the hydrostatic paradox, in which a capillary column of water balances the ocean, is a symbol of the relation of one man to the whole family of men. The wise Dandamis, on hearing the lives of Socrates, Pythagoras and Diogenes read, “judged them to be great men every way, excepting, that they were too much subjected to the reverence of the laws, which to second and authorize, true virtue must abate very much of its original vigor.”

And as a man is equal to the Church and equal to the State, so he is equal to every other man. The disparities of power in men are superficial; and all frank and searching conversation, in which a man lays himself open to his brother, apprises each of their radical unity. When two persons sit and converse in a thoroughly good understanding, the remark is sure to be made, See how we have disputed about words! Let a clear, apprehensive mind, such as every man knows among his friends, converse with the most commanding poetic genius, I think it would appear that there was no inequality such as men fancy, between them; that a perfect understanding, a like receiving, a like perceiving, abolished differences; and the poet would confess that his creative imagination gave him no deep advantage, but only the superficial one that he could express himself and the other could not; that his advantage was a knack, which might impose on indolent men but could not impose on lovers of truth; for they know the tax of talent, or what a price of greatness the power of expression too often pays. I believe it is the conviction of the purest men, that the net amount of man and man does not much vary. Each is incomparably superior to his companion in some faculty. His want of skill in other directions has added to his fitness for his own work. Each seems to have some compensation yielded to him by his infirmity, and every hindrance operates as a concentration of his force.

These and the like experiences intimate that man stands in strict connection with a higher fact never yet manifested. There is power over and behind us, and we are the channels of its communications. We seek to say thus and so, and over our head some spirit sits which contradicts what we say. We would persuade our fellow to this or that; another self within our eyes dissuades him. That which we keep back, this reveals. In vain we compose our faces and our words; it holds

uncontrollable communication with the enemy, and he answers civilly to us, but believes the spirit. We exclaim, 'There's a traitor in the house!' but at last it appears that he is the true man, and I am the traitor. This open channel to the highest life is the first and last reality, so subtle, so quiet, yet so tenacious, that although I have never expressed the truth, and although I have never heard the expression of it from any other, I know that the whole truth is here for me. What if I cannot answer your questions? I am not pained that I cannot frame a reply to the question, What is the operation we call Providence? There lies the unspoken thing, present, omnipresent. Every time we converse we seek to translate it into speech, but whether we hit or whether we miss, we have the fact. Every discourse is an approximate answer: but it is of small consequence that we do not get it into verbs and nouns, whilst it abides for contemplation forever.

If the auguries of the prophesying heart shall make themselves good in time, the man who shall be born, whose advent men and events prepare and foreshow, is one who shall enjoy his connection with a higher life, with the man within man; shall destroy distrust by his trust, shall use his native but forgotten methods, shall not take counsel of flesh and blood, but shall rely on the Law alive and beautiful which works over our heads and under our feet. Pitiless, it avails itself of our success when we obey it, and of our ruin when we contravene it. Men are all secret believers in it, else the word justice would have no meaning: they believe that the best is the true; that right is done at last; or chaos would come. It rewards actions after their nature, and not after the design of the agent. 'Work,' it saith to man, 'in every hour, paid or unpaid, see only that thou work, and thou canst not escape the reward: whether thy work be fine or coarse, planting corn or writing epics, so only it be honest work, done to thine own approbation, it shall earn a reward to the senses as well as to the thought: no matter how often defeated, you are born to victory. The reward of a thing well done, is to have done it.'

As soon as a man is wonted to look beyond surfaces, and to see how this high will prevails without an exception or an interval, he settles himself into serenity. He can already rely on the laws of gravity, that every stone will fall where it is due; the good globe is faithful, and carries us securely through the celestial spaces, anxious or resigned, we need not interfere to help it on: and he will learn one day the mild lesson they teach, that our own orbit is all our task, and we need not assist the administration of the universe. Do not be so impatient to set the town right concerning the unfounded pretensions and the false reputation of certain men of standing. They are laboring harder to set the town right concerning themselves, and will certainly succeed. Suppress for a few days your criticism on the insufficiency of this or that teacher or experimenter, and he will

have demonstrated his insufficiency to all men's eyes. In like manner, let a man fall into the divine circuits, and he is enlarged. Obedience to his genius is the only liberating influence. We wish to escape from subjection and a sense of inferiority, and we make self-denying ordinances, we drink water, we eat grass, we refuse the laws, we go to jail: it is all in vain; only by obedience to his genius, only by the freest activity in the way constitutional to him, does an angel seem to arise before a man and lead him by the hand out of all the wards of the prison.

That which befits us, embosomed in beauty and wonder as we are, is cheerfulness and courage, and the endeavor to realize our aspirations. The life of man is the true romance, which when it is valiantly conducted will yield the imagination a higher joy than any fiction. All around us what powers are wrapped up under the coarse mattings of custom, and all wonder prevented. It is so wonderful to our neurologists that a man can see without his eyes, that it does not occur to them that it is just as wonderful that he should see with them; and that is ever the difference between the wise and the unwise: the latter wonders at what is unusual, the wise man wonders at the usual. Shall not the heart which has received so much, trust the Power by which it lives? May it not quit other leadings, and listen to the Soul that has guided it so gently and taught it so much, secure that the future will be worthy of the past?

REPRESENTATIVE MEN

This book is a collection of seven essays, published initially in 1850. The first essay discusses the role played by “great men” in society, and the remaining six essays explore the various virtues of six men deemed by Emerson to be great: Plato (“the Philosopher”), Emanuel Swedenborg (“the Mystic”), Michel de Montaigne (“the Skeptic”), William Shakespeare (“the Poet”), Napoleon (“the Man of the World”), and Johann Wolfgang von Goethe (“the Writer”).

CONTENTS

USES OF GREAT MEN.

PLATO; OR, THE PHILOSOPHER.

PLATO: NEW READINGS

SWEDENBORG; OR, THE MYSTIC.

MONTAIGNE; OR, THE SKEPTIC.

SHAKSPEARE; OR, THE POET.

NAPOLEON; OR, THE MAN OF THE WORLD.

GOETHE; OR, THE WRITER

USES OF GREAT MEN.

It is natural to believe in great men. If the companions of our childhood should turn out to be heroes, and their condition regal, it would not surprise us. All mythology opens with demigods, and the circumstance is high and poetic; that is, their genius is paramount. In the legends of the Gautama, the first men ate the earth, and found it deliciously sweet.

Nature seems to exist for the excellent. The world is upheld by the veracity of good men: they make the earth wholesome. They who lived with them found life glad and nutritious. Life is sweet and tolerable only in our belief in such society; and actually, or ideally, we manage to live with superiors. We call our children and our lands by their names. Their names are wrought into the verbs of language, their works and effigies are in our houses, and every circumstance of the day recalls an anecdote of them.

The search after the great is the dream of youth, and the most serious occupation of manhood. We travel into foreign parts to find his works, — if possible, to get a glimpse of him. But we are put off with fortune instead. You say, the English are practical; the Germans are hospitable; in Valencia, the climate is delicious; and in the hills of Sacramento there is gold for the gathering. Yes, but I do not travel to find comfortable, rich, and hospitable people, or clear sky, or ingots that cost too much. But if there were any magnet that would point to the countries and houses where are the persons who are intrinsically rich and powerful, I would sell all, and buy it, and put myself on the road to-day.

The race goes with us on their credit. The knowledge, that in the city is a man who invented the railroad, raises the credit of all the citizens. But enormous populations, if they be beggars, are disgusting, like moving cheese, like hills of ants, or of fleas — the more, the worse.

Our religion is the love and cherishing of these patrons. The gods of fable are the shining moments of great men. We run all our vessels into one mould. Our colossal theologies of Judaism, Christism, Buddhism, Mahometism, are the necessary and structural action of the human mind. The student of history is like a man going into a warehouse to buy cloths or carpets. He fancies he has a new article. If he go to the factory, he shall find that his new stuff still repeats the scrolls and rosettes which are found on the interior walls of the pyramids of Thebes. Our theism is the purification of the human mind. Man can paint, or make, or think nothing but man. He believes that the great material elements had their origin from his thought. And our philosophy finds one essence collected or

distributed.

If now we proceed to inquire into the kinds of service we derive from others, let us be warned of the danger of modern studies, and begin low enough. We must not contend against love, or deny the substantial existence of other people. I know not what would happen to us. We have social strengths. Our affection toward others creates a sort of vantage or purchase which nothing will supply. I can do that by another which I cannot do alone. I can say to you what I cannot first say to myself. Other men are lenses through which we read our own minds. Each man seeks those of different quality from his own, and such as are good of their kind; that is, he seeks other men, and the otherest. The stronger the nature, the more it is reactive. Let us have the quality pure. A little genius let us leave alone. A main difference betwixt men is, whether they attend their own affair or not. Man is that noble endogenous plant which grows, like the palm, from within, outward. His own affair, though impossible to others, he can open with celerity and in sport. It is easy to sugar to be sweet, and to nitre to be salt. We take a great deal of pains to waylay and entrap that which of itself will fall into our hands. I count him a great man who inhabits a higher sphere of thought, into which other men rise with labor and difficulty; he has but to open his eyes to see things in a true light, and in large relations; whilst they must make painful corrections, and keep a vigilant eye on many sources of error. His service to us is of like sort. It costs a beautiful person no exertion to paint her image on our eyes; yet how splendid is that benefit! It costs no more for a wise soul to convey his quality to other men. And every one can do his best thing easiest— *“Peu de moyens, beaucoup d’effet.”* He is great who is what he is from nature, and who never reminds us of others.

But he must be related to us, and our life receive from him some promise of explanation. I cannot tell what I would know; but I have observed there are persons, who, in their character and actions, answer questions which I have not skill to put. One man answers some questions which none of his contemporaries put, and is isolated. The past and passing religions and philosophies answer some other question. Certain men affect us as rich possibilities, but helpless to themselves and to their times, — the sport, perhaps, of some instinct that rules in the air; — they do not speak to our want. But the great are near: we know them at sight. They satisfy expectation, and fall into place. What is good is effective, generative; makes for itself room, food, and allies. A sound apple produces seed, — a hybrid does not. Is a man in his place, he is constructive, fertile, magnetic, inundating armies with his purpose, which is thus executed. The river makes its own shores, and each legitimate idea makes its own channels and welcome, — harvest for food, institutions for expression, weapons to fight with, and disciples

to explain it. The true artist has the planet for his pedestal; the adventurer, after years of strife, has nothing broader than his own shoes.

Our common discourse respects two kinds of use of service from superior men. Direct giving is agreeable to the early belief of men; direct giving of material or metaphysical aid, as of health, eternal youth, fine senses, arts of healing, magical power, and prophecy. The boy believes there is a teacher who can sell him wisdom. Churches believe in imputed merit. But, in strictness, we are not much cognizant of direct serving. Man is endogenous, and education is his unfolding. The aid we have from others is mechanical, compared with the discoveries of nature in us. What is thus learned is delightful in the doing, and the effect remains. Right ethics are central, and go from the soul outward. Gift is contrary to the law of the universe. Serving others is serving us. I must absolve me to myself. "Mind thy affair," says the spirit:— "coxcomb, would you meddle with the skies, or with other people?" Indirect service is left. Men have a pictorial or representative quality, and serve us in the intellect. Behmen and Swedenborg saw that things were representative. Men are also representative; first, of things, and secondly, of ideas.

As plants convert the minerals into food for animals, so each man converts some raw material in nature to human use. The inventors of fire, electricity, magnetism, iron; lead, glass, linen, silk, cotton; the makers of tools; the inventor of decimal notation; the geometer; the engineer; musician, — severally make an easy way for all, through unknown and impossible confusions. Each man is, by secret liking, connected with some district of nature, whose agent and interpreter he is, as Linnaeus, of plants; Huber, of bees; Fries, of lichens; Van Mons, of pears; Dalton, of atomic forms; Euclid, of lines; Newton, of fluxions.

A man is a center for nature, running out threads of relation through everything, fluid and solid, material and elemental. The earth rolls; every clod and stone comes to the meridian; so every organ, function, acid, crystal, grain of dust, has its relation to the brain. It waits long, but its turn comes. Each plant has its parasite, and each created thing its lover and poet. Justice has already been done to steam, to iron, to wood, to coal, to loadstone, to iodine, to corn, and cotton; but how few materials are yet used by our arts! The mass of creatures and of qualities are still hid and expectant. It would seem as if each waited, like the enchanted princess in fairy tales, for a destined human deliverer. Each must be disenchanting, and walk forth to the day in human shape. In the history of discovery, the ripe and latent truth seems to have fashioned a brain for itself. A magnet must be made man, in some Gilbert, or Swedenborg, or Oersted, before the general mind can come to entertain its powers.

If we limit ourselves to the first advantages; — a sober grace adheres to the

mineral and botanic kingdoms, which, in the highest moments, comes up as the charm of nature, — the glitter of the spar, the sureness of affinity, the veracity of angles. Light and darkness, heat and cold, hunger and food, sweet and sour, solid, liquid, and gas, circle us round in a wreath of pleasures, and, by their agreeable quarrel, beguile the day of life. The eye repeats every day the finest eulogy on things— “He saw that they were good.” We know where to find them; and these performers are relished all the more, after a little experience of the pretending races. We are entitled, also, to higher advantages. Something is wanting to science, until it has been humanized. The table of logarithms is one thing, and its vital play, in botany, music, optics, and architecture, another. There are advancements to numbers, anatomy, architecture, astronomy, little suspected at first, when, by union with intellect and will, they ascend into the life, and re-appear in conversation, character and politics.

But this comes later. We speak now only of our acquaintance with them in their own sphere, and the way in which they seem to fascinate and draw to them some genius who occupies himself with one thing, all his life long. The possibility of interpretation lies in the identity of the observer with the observed. Each material thing has its celestial side; has its translation, through humanity, into the spiritual and necessary sphere, where it plays a part as indestructible as any other. And to these, their ends, all things continually ascend. The gases gather to the solid firmament; the chemic lump arrives at the plant, and grows; arrives at the quadruped, and walks; arrives at the man, and thinks. But also the constituency determines the vote of the representative. He is not only representative, but participant. Like can only be known by like. The reason why he knows about them is, that he is of them; he has just come out of nature, or from being a part of that thing. Animated chlorine knows of chlorine, and incarnate zinc, of zinc. Their quality makes this career; and he can variously publish their virtues, because they compose him. Man, made of the dust of the world, does not forget his origin; and all that is yet inanimate will one day speak and reason. Unpublished nature will have its whole secret told. Shall we say that quartz mountains will pulverize into innumerable Werners, Von Buchs, and Beaumonts; and the laboratory of the atmosphere holds in solution I know not what Berzeliuses and Davys?

Thus, we sit by the fire, and take hold on the poles of the earth. This quasi omnipresence supplies the imbecility of our condition. In one of those celestial days, when heaven and earth meet and adorn each other, it seems a poverty that we can only spend it once; we wish for a thousand heads, a thousand bodies, that we might celebrate its immense beauty in many ways and places. Is this fancy? Well, in good faith, we are multiplied by our proxies. How easily we adopt their

labors! Every ship that comes to America got its chart from Columbus. Every novel is debtor to Homer. Every carpenter who shaves with a foreplane borrows the genius of a forgotten inventor. Life is girt all around with a zodiac of sciences, the contributions of men who have perished to add their point of light to our sky. Engineer, broker, jurist, physician, moralist, theologian, and every man, inasmuch as he has any science, is a definer and map-maker of the latitudes and longitudes of our condition. These road-makers on every hand enrich us. We must extend the area of life, and multiply our relations. We are as much gainers by finding a new property in the old earth, as by acquiring a new planet.

We are too passive in the reception of these material or semi-material aids. We must not be sacks and stomachs. To ascend one step, — we are better served through our sympathy. Activity is contagious. Looking where others look, and conversing with the same things, we catch the charm which lured them. Napoleon said, “you must not fight too often with one enemy, or you will teach him all your art of war.” Talk much with any man of vigorous mind, and we acquire very fast the habit of looking at things in the same light, and, on each occurrence, we anticipate his thought.
