Eyes are bold as lions, — roving, running, leaping, here and there, far and near. They speak all languages. They wait for no introduction; they are no Englishmen; ask no leave of age, or rank; they respect neither poverty nor riches, neither learning nor power, nor virtue, nor sex, but intrude, and come again, and go through and through you, in a moment of time. What inundation of life and thought is discharged from one soul into another, through them! The glance is natural magic. The mysterious communication established across a house between two entire strangers, moves all the springs of wonder. The communication by the glance is in the greatest part not subject to the control of the will. It is the bodily symbol of identity of nature. We look into the eyes to know if this other form is another self, and the eyes will not lie, but make a faithful confession what inhabitant is there. The revelations are sometimes terrific. The confession of a low, usurping devil is there made, and the observer shall seem to feel the stirring of owls, and bats, and horned hoofs, where he looked for innocence and simplicity. 'Tis remarkable, too, that the spirit that appears at the windows of the house does at once invest himself in a new form of his own, to the mind of the beholder.

The eyes of men converse as much as their tongues, with the advantage, that the ocular dialect needs no dictionary, but is understood all the world over. When the eyes say one thing, and the tongue another, a practised man relies on the language of the first. If the man is off his centre, the eyes show it. You can read in the eyes of your companion, whether your argument hits him, though his tongue will not confess it. There is a look by which a man shows he is going to say a good thing, and a look when he has said it. Vain and forgotten are all the fine offers and offices of hospitality, if there is no holiday in the eye. How many furtive inclinations avowed by the eye, though dissembled by the lips! One comes away from a company, in which, it may easily happen, he has said nothing, and no important remark has been addressed to him, and yet, if in sympathy with the society, he shall not have a sense of this fact, such a stream of life has been flowing into him, and out from him, through the eyes. There are eyes, to be sure, that give no more admission into the man than blueberries. Others are liquid and deep, — wells that a man might fall into; — others are aggressive and devouring, seem to call out the police, take all too much notice,

and require crowded Broadways, and the security of millions, to protect individuals against them. The military eye I meet, now darkly sparkling under clerical, now under rustic brows. 'Tis the city of Lacedæmon; 'tis a stack of bayonets. There are asking eyes, asserting eyes, prowling eyes; and eyes full of fate, — some of good, and some of sinister omen. The alleged power to charm down insanity, or ferocity in beasts, is a power behind the eye. It must be a victory achieved in the will, before it can be signified in the eye. 'Tis very certain that each man carries in his eye the exact indication of his rank in the immense scale of men, and we are always learning to read it. A complete man should need no auxiliaries to his personal presence. Whoever looked on him would consent to his will, being certified that his aims were generous and universal. The reason why men do not obey us, is because they see the mud at the bottom of our eye.

If the organ of sight is such a vehicle of power, the other features have their own. A man finds room in the few square inches of the face for the traits of all his ancestors; for the expression of all his history, and his wants. The sculptor, and Winckelmann, and Lavater, will tell you how significant a feature is the nose; how its forms express strength or weakness of will, and good or bad temper. The nose of Julius Cæsar, of Dante, and of Pitt, suggest “the terrors of the beak.” What refinement, and what limitations, the teeth betray! “Beware you don't laugh,” said the wise mother, “for then you show all your faults.”

Balzac left in manuscript a chapter, which he called “*Théorie de la démarche*” in which he says: “The look, the voice, the respiration, and the attitude or walk, are identical. But, as it has not been given to man, the power to stand guard, at once, over these four different simultaneous expressions of his thought, watch that one which speaks out the truth, and you will know the whole man.”

Palaces interest us mainly in the exhibition of manners, which, in the idle and expensive society dwelling in them, are raised to a high art. The maxim of courts is, that manner is power. A calm and resolute bearing, a polished speech, an embellishment of trifles, and the art of hiding all uncomfortable feeling, are essential to the courtier: and Saint Simon, and Cardinal de Retz, and Roederer, and an encyclopædia of Mémoires, will instruct you, if you wish, in those potent secrets. Thus, it is a point of pride with kings, to remember faces and names. It is reported of one prince, that his head had the air of leaning downwards, in order not to humble the crowd. There are people who come in ever like a child with a piece of good news. It was said of the late Lord Holland, that he always came down to breakfast with the air of a man who had just met with some signal good-fortune. In “*Notre Dame*,” the grandee took his place on the dais, with the look

of one who is thinking of something else. But we must not peep and eavesdrop at palace-doors.

Fine manners need the support of fine manners in others. A scholar may be a well-bred man, or he may not. The enthusiast is introduced to polished scholars in society, and is chilled and silenced by finding himself not in their element. They all have somewhat which he has not, and, it seems, ought to have. But if he finds the scholar apart from his companions, it is then the enthusiast's turn, and the scholar has no defence, but must deal on his terms. Now they must fight the battle out on their private strengths. What is the talent of that character so common, — the successful man of the world, — in all marts, senates, and drawing-rooms? Manners: manners of power; sense to see his advantage, and manners up to it. See him approach his man. He knows that troops behave as they are handled at first; — that is his cheap secret; just what happens to every two persons who meet on any affair, — one instantly perceives that he has the key of the situation, that his will comprehends the other's will, as the cat does the mouse; and he has only to use courtesy, and furnish good-natured reasons to his victim to cover up the chain, lest he be shamed into resistance.

The theatre in which this science of manners has a formal importance is not with us a court, but dress-circles, wherein, after the close of the day's business, men and women meet at leisure, for mutual entertainment, in ornamented drawing-rooms. Of course, it has every variety of attraction and merit; but, to earnest persons, to youths or maidens who have great objects at heart, we cannot extol it highly. A well-dressed, talkative company, where each is bent to amuse the other. — yet the high-born Turk who came hither fancied that every woman seemed to be suffering for a chair; that all the talkers were brained and exhausted by the deoxygenated air: it spoiled the best persons: it put all on stilts. Yet here are the secret biographies written and read. The aspect of that man is repulsive: I do not wish to deal with him. The other is irritable, shy, and on his guard. The youth looks humble and manly: I choose him. Look on this woman. There is not beauty, nor brilliant sayings, nor distinguished power to serve you; but all see her gladly; her whole air and impression are healthful. Here come the sentimentalists, and the invalids. Here is Elise, who caught cold in coming into the world, and has always increased it since. Here are creep-mouse manners; and thievish manners. "Look at Northcote," said Fuseli; "he looks like a rat that has seen a cat." In the shallow company, easily excited, easily tired, here is the columnar Bernard: the Alleghanies do not express more repose than his behavior. Here are the sweet following eyes of Cecile: it seemed always that she demanded the heart. Nothing can be more excellent in kind than the Corinthian grace of Gertrude's manners, and yet Blanche, who has no manners, has better

manners than she; for the movements of Blanche are the sallies of a spirit which is sufficient for the moment, and she can afford to express every thought by instant action.

Manners have been somewhat cynically defined to be a contrivance of wise men to keep fools at a distance. Fashion is shrewd to detect those who do not belong to her train, and seldom wastes her attentions. Society is very swift in its instincts, and, if you do not belong to it, resists and sneers at you; or quietly drops you. The first weapon enrages the party attacked; the second is still more effective, but is not to be resisted, as the date of the transaction is not easily found. People grow up and grow old under this infliction, and never suspect the truth, ascribing the solitude which acts on them very injuriously, to any cause but the right one.

The basis of good manners is self-reliance. Necessity is the law of all who are not self-possessed. Those who are not self-possessed, obtrude, and pain us. Some men appear to feel that they belong to a Pariah caste. They fear to offend, they bend and apologize, and walk through life with a timid step. As we sometimes dream that we are in a well-dressed company without any coat, so Godfrey acts ever as if he suffered from some mortifying circumstance. The hero should find himself at home, wherever he is; should impart comfort by his own security and good-nature to all beholders. The hero is suffered to be himself. A person of strong mind comes to perceive that for him an immunity is secured so long as he renders to society that service which is native and proper to him, — an immunity from all the observances, yea, and duties, which society so tyrannically imposes on the rank and file of its members. “Euripides,” says Aspasia, “has not the fine manners of Sophocles; but,” — she adds good-humoredly, “the movers and masters of our souls have surely a right to throw out their limbs as carelessly as they please, on the world that belongs to them, and before the creatures they have animated.”⁴

Landor: Pericles and Aspasia.

Manners require time, as nothing is more vulgar than haste. Friendship should be surrounded with ceremonies and respects, and not crushed into corners. Friendship requires more time than poor busy men can usually command. Here comes to me Roland, with a delicacy of sentiment leading and inwrapping him like a divine cloud or holy ghost. 'Tis a great destitution to both that this should not be entertained with large leisures, but contrariwise should be balked by importunate affairs.

But through this lustrous varnish, the reality is ever shining. 'Tis hard to keep the *what* from breaking through this pretty painting of the *how*. The core will

come to the surface. Strong will and keen perception overpower old manners, and create new; and the thought of the present moment has a greater value than all the past. In persons of character, we do not remark manners, because of their instantaneousness. We are surprised by the thing done, out of all power to watch the way of it. Yet nothing is more charming than to recognize the great style which runs through the actions of such. People masquerade before us in their fortunes, titles, offices, and connections, as academic or civil presidents, or senators, or professors, or great lawyers, and impose on the frivolous, and a good deal on each other, by these fames. At least, it is a point of prudent good manners to treat these reputations tenderly, as if they were merited. But the sad realist knows these fellows at a glance, and they know him; as when in Paris the chief of the police enters a ballroom, so many diamonded pretenders shrink and make themselves as inconspicuous as they can, or give him a supplicating look as they pass. "I had received," said a sibyl, "I had received at birth the fatal gift of penetration:" — and these Cassandras are always born.

Manners impress as they indicate real power. A man who is sure of his point, carries a broad and contented expression, which everybody reads. And you cannot rightly train one to an air and manner, except by making him the kind of man of whom that manner is the natural expression. Nature forever puts a premium on reality. What is done for effect, is seen to be done for effect; what is done for love, is felt to be done for love. A man inspires affection and honor, because he was not lying in wait for these. The things of a man for which we visit him, were done in the dark and the cold. A little integrity is better than any career. So deep are the sources of this surface-action, that even the size of your companion seems to vary with his freedom of thought. Not only is he larger, when at ease, and his thoughts generous, but everything around him becomes variable with expression. No carpenter's rule, no rod and chain, will measure the dimensions of any house or house-lot: go into the house: if the proprietor is constrained and deferring, 'tis of no importance how large his house, how beautiful his grounds, — you quickly come to the end of all: but if the man is self-possessed, happy, and at home, his house is deep-founded, indefinitely large and interesting, the roof and dome buoyant as the sky. Under the humblest roof, the commonest person in plain clothes sits there massive, cheerful, yet formidable like the Egyptian colossi.

Neither Aristotle, nor Leibnitz, nor Junius, nor Champollion has set down the grammar-rules of this dialect, older than Sanscrit; but they who cannot yet read English, can read this. Men take each other's measure, when they meet for the first time, — and every time they meet. How do they get this rapid knowledge, even before they speak, of each other's power and dispositions? One would say,

that the persuasion of their speech is not in what they say, — or, that men do not convince by their argument, — but by their personality, by who they are, and what they said and did heretofore. A man already strong is listened to, and everything he says is applauded. Another opposes him with sound argument, but the argument is scouted, until by and by it gets into the mind of some weighty person; then it begins to tell on the community.

Self-reliance is the basis of behavior, as it is the guaranty that the powers are not squandered in too much demonstration. In this country, where school education is universal, we have a superficial culture, and a profusion of reading and writing and expression. We parade our nobilities in poems and orations, instead of working them up into happiness. There is a whisper out of the ages to him who can understand it,— ‘whatever is known to thyself alone, has always very great value.’ There is some reason to believe, that, when a man does not write his poetry, it escapes by other vents through him, instead of the one vent of writing; clings to his form and manners, whilst poets have often nothing poetical about them except their verses. Jacobi said, that “when a man has fully expressed his thought, he has somewhat less possession of it.” One would say, the rule is, — What a man is irresistibly urged to say, helps him and us. In explaining his thought to others, he explains it to himself: but when he opens it for show, it corrupts him.

Society is the stage on which manners are shown; novels are their literature. Novels are the journal or record of manners; and the new importance of these books derives from the fact, that the novelist begins to penetrate the surface, and treat this part of life more worthily. The novels used to be all alike, and had a quite vulgar tone. The novels used to lead us on to a foolish interest in the fortunes of the boy and girl they described. The boy was to be raised from a humble to a high position. He was in want of a wife and a castle, and the object of the story was to supply him with one or both. We watched sympathetically, step by step, his climbing, until, at last, the point is gained, the wedding day is fixed, and we follow the gala procession home to the castle, when the doors are slammed in our face, and the poor reader is left outside in the cold, not enriched by so much as an idea, or a virtuous impulse.

But the victories of character are instant, and victories for all. Its greatness enlarges all. We are fortified by every heroic anecdote. The novels are as useful as Bibles, if they teach you the secret, that the best of life is conversation, and the greatest success is confidence, or perfect understanding between sincere people. ’Tis a French definition of friendship, *rien que s’entendre*, good understanding. The highest compact we can make with our fellow, is,— ‘Let there be truth between us two for evermore.’ That is the charm in all good

novels, as it is the charm in all good histories, that the heroes mutually understand, from the first, and deal loyally, and with a profound trust in each other. It is sublime to feel and say of another, I need never meet, or speak, or write to him: we need not reinforce ourselves, or send tokens of remembrance: I rely on him as on myself: if he did thus or thus, I know it was right.

In all the superior people I have met, I notice directness, truth spoken more truly, as if everything of obstruction, of malformation, had been trained away. What have they to conceal? What have they to exhibit? Between simple and noble persons, there is always a quick intelligence: they recognize at sight, and meet on a better ground than the talents and skills they may chance to possess, namely, on sincerity and uprightness. For, it is not what talents or genius a man has, but how he is to his talents, that constitutes friendship and character. The man that stands by himself, the universe stands by him also. It is related of the monk Basle, that, being excommunicated by the Pope, he was, at his death, sent in charge of an angel to find a fit place of suffering in hell; but, such was the eloquence and good-humor of the monk, that, wherever he went he was received gladly, and civilly treated, even by the most uncivil angels: and, when he came to discourse with them, instead of contradicting or forcing him, they took his part, and adopted his manners: and even good angels came from far, to see him, and take up their abode with him. The angel that was sent to find a place of torment for him, attempted to remove him to a worse pit, but with no better success; for such was the contented spirit of the monk, that he found something to praise in every place and company, though in hell, and made a kind of heaven of it. At last the escorting angel returned with his prisoner to them that sent him, saying, that no phlegethon could be found that would burn him; for that, in whatever condition, Basle remained incorrigibly Basle. The legend says, his sentence was remitted, and he was allowed to go into heaven, and was canonized as a saint.

There is a stroke of magnanimity in the correspondence of Bonaparte with his brother Joseph, when the latter was King of Spain, and complained that he missed in Napoleon's letters the affectionate tone which had marked their childish correspondence. "I am sorry," replies Napoleon, "you think you shall find your brother again only in the Elysian Fields. It is natural, that at forty, he should not feel towards you as he did at twelve. But his feelings towards you have greater truth and strength. His friendship has the features of his mind."

How much we forgive to those who yield us the rare spectacle of heroic manners! We will pardon them the want of books, of arts, and even of the gentler virtues. How tenaciously we remember them! Here is a lesson which I brought along with me in boyhood from the Latin School, and which ranks with

the best of Roman anecdotes. Marcus Scaurus was accused by Quintus Varius Hispanus, that he had excited the allies to take arms against the Republic. But he, full of firmness and gravity, defended himself in this manner: “Quintus Varius Hispanus alleges that Marcus Scaurus, President of the Senate, excited the allies to arms: Marcus Scaurus, President of the Senate, denies it. There is no witness. Which do you believe, Romans?” “*Utri creditis, Quirites?*” When he had said these words, he was absolved by the assembly of the people.

I have seen manners that make a similar impression with personal beauty; that give the like exhilaration, and refine us like that; and, in memorable experiences, they are suddenly better than beauty, and make that superfluous and ugly. But they must be marked by fine perception, the acquaintance with real beauty. They must always show self-control: you shall not be facile, apologetic, or leaky, but king over your word; and every gesture and action shall indicate power at rest. Then they must be inspired by the good heart. There is no beautifier of complexion, or form, or behavior, like the wish to scatter joy and not pain around us.

’Tis good to give a stranger a meal, or a night’s lodging. ’Tis better to be hospitable to his good meaning and thought, and give courage to a companion. We must be as courteous to a man as we are to a picture, which we are willing to give the advantage of a good light. Special precepts are not to be thought of: the talent of well-doing contains them all. Every hour will show a duty as paramount as that of my whim just now; and yet I will write it, — that there is one topic peremptorily forbidden to all well-bred, to all rational mortals, namely, their distempers. If you have not slept, or if you have slept, or if you have headache, or sciatica, or leprosy, or thunder-stroke, I beseech you, by all angels, to hold your peace, and not pollute the morning, to which all the housemates bring serene and pleasant thoughts, by corruption and groans. Come out of the azure. Love the day. Do not leave the sky out of your landscape. The oldest and the most deserving person should come very modestly into any newly awaked company, respecting the divine communications, out of which all must be presumed to have newly come. An old man who added an elevating culture to a large experience of life, said to me, “When you come into the room, I think I will study how to make humanity beautiful to you.”

As respects the delicate question of culture, I do not think that any other than negative rules can be laid down. For positive rules, for suggestion, Nature alone inspires it. Who dare assume to guide a youth, a maid, to perfect manners? — the golden mean is so delicate, difficult, — say frankly, unattainable. What finest hands would not be clumsy to sketch the genial precepts of the young girl’s demeanor? The chances seem infinite against success; and yet success is

continually attained. There must not be secondariness, and 'tis a thousand to one that her air and manner will at once betray that she is not primary, but that there is some other one or many of her class, to whom she habitually postpones herself. But Nature lifts her easily, and without knowing it, over these impossibilities, and we are continually surprised with graces and felicities not only unteachable, but undescribable.

WORSHIP.

This is he, who, felled by foes,
Sprung harmless up, refreshed by blows
He to captivity was sold,
But him no prison-bars would hold:
Though they sealed him in a rock,
Mountain chains he can unlock:
Thrown to lions for their meat,
The crouching lion kissed his feet:
Bound to the stake, no flames appalled,
But arched o'er him an honoring vault.
This is he men miscall Fate,
Threading dark ways, arriving late,
But ever coming in time to crown
The truth, and hurl wrongdoers down.
He is the oldest, and best known,
More near than aught thou call'st thy own,
Yet, greeted in another's eyes,
Disconcerts with glad surprise.
This is Jove, who, deaf to prayers,
Floods with blessings unawares.
Draw, if thou canst, the mystic line,
Severing rightly his from thine,
Which is human, which divine.

Some of my friends have complained, when the preceding papers were read, that we discussed Fate, Power, and Wealth, on too low a platform; gave too much line to the evil spirit of the times; too many cakes to Cerberus; that we ran Cudworth's risk of making, by excess of candor, the argument of atheism so strong, that he could not answer it. I have no fears of being forced in my own despite to play, as we say, the devil's attorney. I have no infirmity of faith; no belief that it is of much importance what I or any man may say: I am sure that a certain truth will be said through me, though I should be dumb, or though I should try to say the reverse. Nor do I fear skepticism for any good soul. A just thinker will allow full swing to his skepticism. I dip my pen in the blackest ink, because I am not afraid of falling into my inkpot. I have no sympathy with a poor man I knew, who, when suicides abounded, told me he dared not look at his

razor. We are of different opinions at different hours, but we always may be said to be at heart on the side of truth.

I see not why we should give ourselves such sanctified airs. If the Divine Providence has hid from men neither disease, nor deformity, nor corrupt society, but has stated itself out in passions, in war, in trade, in the love of power and pleasure, in hunger and need, in tyrannies, literatures, and arts, — let us not be so nice that we cannot write these facts down coarsely as they stand, or doubt but there is a counter-statement as ponderous, which we can arrive at, and which, being put, will make all square. The solar system has no anxiety about its reputation, and the credit of truth and honesty is as safe; nor have I any fear that a skeptical bias can be given by leaning hard on the sides of fate, of practical power, or of trade, which the doctrine of Faith cannot down-weigh. The strength of that principle is not measured in ounces and pounds: it tyrannizes at the centre of Nature. We may well give skepticism as much line as we can. The spirit will return, and fill us. It drives the drivers. It counterbalances any accumulations of power.

“Heaven kindly gave our blood a moral flow.”

We are born loyal. The whole creation is made of hooks and eyes, of bitumen, of sticking-plaster, and whether your community is made in Jerusalem or in California, of saints or of wreckers, it coheres in a perfect ball. Men as naturally make a state, or a church, as caterpillars a web. If they were more refined, it would be less formal, it would be nervous, like that of the Shakers, who, from long habit of thinking and feeling together, it is said, are affected in the same way, at the same time, to work and to play, and as they go with perfect sympathy to their tasks in the field or shop, so are they inclined for a ride or a journey at the same instant, and the horses come up with the family carriage unbespoken to the door.

We are born believing. A man bears beliefs, as a tree bears apples. A self-poise belongs to every particle; and a rectitude to every mind, and is the Nemesis and protector of every society. I and my neighbors have been bred in the notion, that, unless we came soon to some good church, — Calvinism, or Behmenism, or Romanism, or Mormonism, — there would be a universal thaw and dissolution. No Isaiah or Jeremy has arrived. Nothing can exceed the anarchy that has followed in our skies. The stern old faiths have all pulverized. 'Tis a whole population of gentlemen and ladies out in search of religions. 'Tis as flat anarchy in our ecclesiastic realms, as that which existed in Massachusetts, in the Revolution, or which prevails now on the slope of the Rocky Mountains or Pike's Peak. Yet we make shift to live. Men are loyal. Nature has self-poise in all her works; certain proportions in which oxygen and azote combine, and, not

less a harmony in faculties, a fitness in the spring and the regulator.

The decline of the influence of Calvin, or Fenelon, or Wesley, or Channing, need give us no uneasiness. The builder of heaven has not so ill constructed his creature as that the religion, that is, the public nature, should fall out: the public and the private element, like north and south, like inside and outside, like centrifugal and centripetal, adhere to every soul, and cannot be subdued, except the soul is dissipated. God builds his temple in the heart on the ruins of churches and religions.

In the last chapters, we treated some particulars of the question of culture. But the whole state of man is a state of culture; and its flowering and completion may be described as Religion, or Worship. There is always some religion, some hope and fear extended into the invisible, — from the blind boding which nails a horseshoe to the mast or the threshold, up to the song of the Elders in the Apocalypse. But the religion cannot rise above the state of the votary. Heaven always bears some proportion to earth. The god of the cannibals will be a cannibal, of the crusaders a crusader, and of the merchants a merchant. In all ages, souls out of time, extraordinary, prophetic, are born, who are rather related to the system of the world, than to their particular age and locality. These announce absolute truths, which, with whatever reverence received, are speedily dragged down into a savage interpretation. The interior tribes of our Indians, and some of the Pacific islanders, flog their gods, when things take an unfavorable turn. The Greek poets did not hesitate to let loose their petulant wit on their deities also. Laomedon, in his anger at Neptune and Apollo, who had built Troy for him, and demanded their price, does not hesitate to menace them that he will cut their ears off.⁵ Among our Norse forefathers, King Olaf's mode of converting Eyvind to Christianity was to put a pan of glowing coals on his belly, which burst asunder. "Wilt thou now, Eyvind, believe in Christ?" asks Olaf, in excellent faith. Another argument was an adder put into the mouth of the reluctant disciple Rand, who refused to believe.

Iliad, Book xxi. 1. 455.

Christianity, in the romantic ages, signified European culture, — the grafted or meliorated tree in a crab forest. And to marry a pagan wife or husband, was to marry Beast, and voluntarily to take a step backwards towards the baboon.

"Hengist had verament
A daughter both fair and gent,
But she was heathen Sarazine,

And Vortigern for love fine
Her took to fere and to wife,
And was cursed in all his life;
For he let Christian wed heathen,
And mixed our blood as flesh and mathen.”⁶

Moths or worms

What Gothic mixtures the Christian creed drew from the pagan sources, Richard of Devizes's chronicle of Richard I.'s crusade, in the twelfth century, may show. King Richard taunts God with forsaking him: "O fie! O how unwilling should I be to forsake thee, in so forlorn and dreadful a position, were I thy lord and advocate, as thou art mine. In sooth, my standards will in future be despised, not through my fault, but through thine: in sooth, not through any cowardice of my warfare, art thou thyself, my king and my God conquered, this day, and not Richard thy vassal." The religion of the early English poets is anomalous, so devout and so blasphemous, in the same breath. Such is Chaucer's extraordinary confusion of heaven and earth in the picture of Dido.

"She was so fair,
So young, so lusty, with her eyen glad,
That if that God that heaven and earthe made
Would have a love for beauty and goodness,
And womanhede, truth, and seemliness,
Whom should he loven but this lady sweet?
There n' is no woman to him half so meet."

With these grossnesses, we complacently compare our own taste and decorum. We think and speak with more temperance and gradation, — but is not indifference as bad as superstition?

We live in a transition period, when the old faiths which comforted nations, and not only so, but made nations, seem to have spent their force. I do not find the religions of men at this moment very creditable to them, but either childish and insignificant, or unmanly and effeminating. The fatal trait is the divorce between religion and morality. Here are know-nothing religions, or churches that proscribe intellect; scortatory religions; slave-holding and slave-trading religions; and, even in the decent populations, idolatries wherein the whiteness of the ritual covers scarlet indulgence. The lover of the old religion complains that our contemporaries, scholars as well as merchants, succumb to a great despair, — have corrupted into a timorous conservatism, and believe in nothing. In our large cities, the population is godless, materialized, — no bond, no fellow-feeling, no enthusiasm. These are not men, but hungers, thirsts, fevers, and appetites walking. How is it people manage to live on, — so aimless as they are? After their peppercorn aims are gained, it seems as if the lime in their bones alone held them together, and not any worthy purpose. There is no faith in the intellectual, none in the moral universe. There is faith in chemistry, in meat, and

wine, in wealth, in machinery, in the steam-engine, galvanic battery, turbine-wheels, sewing machines, and in public opinion, but not in divine causes. A silent revolution has loosed the tension of the old religious sects, and, in place of the gravity and permanence of those societies of opinion, they run into freak and extravagance. In creeds never was such levity; witness the heathenisms in Christianity, the periodic “revivals,” the Millennium mathematics, the peacock ritualism, the retrogression to Popery, the maundering of Mormons, the squalor of Mesmerism, the delirium of rappings, the rat and mouse revelation, thumps in table-drawers, and black art. The architecture, the music, the prayer, partake of the madness: the arts sink into shift and make-believe. Not knowing what to do, we ape our ancestors; the churches stagger backward to the mummeries of the dark ages. By the irresistible maturing of the general mind, the Christian traditions have lost their hold. The dogma of the mystic offices of Christ being dropped, and he standing on his genius as a moral teacher, 'tis impossible to maintain the old emphasis of his personality; and it recedes, as all persons must, before the sublimity of the moral laws. From this change, and in the momentary absence of any religious genius that could offset the immense material activity, there is a feeling that religion is gone. When Paul Leroux offered his article “*Dieu*” to the conductor of a leading French journal, he replied, “*La question de Dieu manque d’actualité.*” In Italy, Mr. Gladstone said of the late King of Naples, “it has been a proverb, that he has erected the negation of God into a system of government.” In this country, the like stupefaction was in the air, and the phrase “higher law” became a political jibe. What proof of infidelity, like the toleration and propagandism of slavery? What, like the direction of education? What, like the facility of conversion? What, like the externality of churches that once sucked the roots of right and wrong, and now have perished away till they are a speck of whitewash on the wall? What proof of skepticism like the base rate at which the highest mental and moral gifts are held? Let a man attain the highest and broadest culture that any American has possessed, then let him die by sea-storm, railroad collision, or other accident, and all America will acquiesce that the best thing has happened to him; that, after the education has gone far, such is the expensiveness of America, that the best use to put a fine person to, is, to drown him to save his board.

Another scar of this skepticism is the distrust in human virtue. It is believed by well-dressed proprietors that there is no more virtue than they possess; that the solid portion of society exist for the arts of comfort: that life is an affair to put somewhat between the upper and lower mandibles. How prompt the suggestion of a low motive! Certain patriots in England devoted themselves for years to creating a public opinion that should break down the corn-laws and

establish free trade. 'Well,' says the man in the street, 'Cobden got a stipend out of it.' Kossuth fled hither across the ocean to try if he could rouse the New World to a sympathy with European liberty. 'Aye,' says New York, 'he made a handsome thing of it, enough to make him comfortable for life.'

See what allowance vice finds in the respectable and well-conditioned class. If a pickpocket intrude into the society of gentlemen, they exert what moral force they have, and he finds himself uncomfortable, and glad to get away. But if an adventurer go through all the forms, procure himself to be elected to a post of trust, as of senator, or president, — though by the same arts as we detest in the house-thief, — the same gentlemen who agree to discountenance the private rogue, will be forward to show civilities and marks of respect to the public one: and no amount of evidence of his crimes will prevent them giving him ovations, complimentary dinners, opening their own houses to him, and priding themselves on his acquaintance. We were not deceived by the professions of the private adventurer, — the louder he talked of his honor, the faster we counted our spoons; but we appeal to the sanctified preamble of the messages and proclamations of the public sinner, as the proof of sincerity. It must be that they who pay this homage have said to themselves, On the whole, we don't know about this that you call honesty; a bird in the hand is better.

Even well-disposed, good sort of people are touched with the same infidelity, and for brave, straightforward action, use half-measures and compromises. Forgetful that a little measure is a great error, forgetful that a wise mechanic uses a sharp tool, they go on choosing the dead men of routine. But the official men can in nowise help you in any question of to-day, they deriving entirely from the old dead things. Only those can help in counsel or conduct who did not make a party pledge to defend this or that, but who were appointed by God Almighty, before they came into the world, to stand for this which they uphold.

It has been charged that a want of sincerity in the leading men is a vice general throughout American society. But the multitude of the sick shall not make us deny the existence of health. In spite of our imbecility and terrors, and "universal decay of religion," &c. &c., the moral sense reappears to-day with the same morning newness that has been from of old the fountain of beauty and strength. You say, there is no religion now. 'Tis like saying in rainy weather, there is no sun, when at that moment we are witnessing one of his superlative effects. The religion of the cultivated class now, to be sure, consists in an avoidance of acts and engagements which it was once their religion to assume. But this avoidance will yield spontaneous forms in their due hour. There is a principle which is the basis of things, which all speech aims to say, and all action to evolve, a simple, quiet, undescribed, undescrivable presence, dwelling very

peacefully in us, our rightful lord: we are not to do, but to let do; not to work, but to be worked upon; and to this homage there is a consent of all thoughtful and just men in all ages and conditions. To this sentiment belong vast and sudden enlargements of power. 'Tis remarkable that our faith in ecstasy consists with total inexperience of it. It is the order of the world to educate with accuracy the senses and the understanding; and the enginery at work to draw out these powers in priority, no doubt, has its office. But we are never without a hint that these powers are mediate and servile, and that we are one day to deal with real being, — essences with essences. Even the fury of material activity has some results friendly to moral health. The energetic action of the times develops individualism, and the religious appear isolated. I esteem this a step in the right direction. Heaven deals with us on no representative system. Souls are not saved in bundles. The Spirit saith to the man, 'How is it with thee? thee personally? is it well? is it ill?' For a great nature, it is a happiness to escape a religious training, — religion of character is so apt to be invaded. Religion must always be a crab fruit: it cannot be grafted and keep its wild beauty. "I have seen," said a traveller who had known the extremes of society, "I have seen human nature in all its forms, it is everywhere the same, but the wilder it is, the more virtuous."

We say, the old forms of religion decay, and that a skepticism devastates the community. I do not think it can be cured or stayed by any modification of theologic creeds, much less by theologic discipline. The cure for false theology is motherwit. Forget your books and traditions, and obey your moral perceptions at this hour. That which is signified by the words "moral" and "spiritual," is a lasting essence, and, with whatever illusions we have loaded them, will certainly bring back the words, age after age, to their ancient meaning. I know no words that mean so much. In our definitions, we grope after the *spiritual* by describing it as invisible. The true meaning of *spiritual* is *real*; that law which executes itself, which works without means, and which cannot be conceived as not existing. Men talk of "mere morality," — which is much as if one should say, 'poor God, with nobody to help him.' I find the omnipresence and the almightiness in the reaction of every atom in Nature. I can best indicate by examples those reactions by which every part of Nature replies to the purpose of the actor, — beneficently to the good, penally to the bad. Let us replace sentimentalism by realism, and dare to uncover those simple and terrible laws which, be they seen or unseen, pervade and govern.

Every man takes care that his neighbor shall not cheat him. But a day comes when he begins to care that he do not cheat his neighbor. Then all goes well. He has changed his market-cart into a chariot of the sun. What a day dawns, when we have taken to heart the doctrine of faith! to prefer, as a better investment,

being to doing; being to seeming; logic to rhythm and to display; the year to the day; the life to the year; character to performance; — and have come to know, that justice will be done us; and, if our genius is slow, the term will be long.

'Tis certain that worship stands in some commanding relation to the health of man, and to his highest powers, so as to be, in some manner, the source of intellect. All the great ages have been ages of belief. I mean, when there was any extraordinary power of performance, when great national movements began, when arts appeared, when heroes existed, when poems were made, the human soul was in earnest, and had fixed its thoughts on spiritual verities, with as strict a grasp as that of the hands on the sword, or the pencil, or the trowel. It is true that genius takes its rise out of the mountains of rectitude; that all beauty and power which men covet, are somehow born out of that Alpine district; that any extraordinary degree of beauty in man or woman involves a moral charm. Thus, I think, we very slowly admit in another man a higher degree of moral sentiment than our own, — a finer conscience, more impressionable, or, which marks minuter degrees; an ear to hear acuter notes of right and wrong, than we can. I think we listen suspiciously and very slowly to any evidence to that point. But, once satisfied of such superiority, we set no limit to our expectation of his genius. For such persons are nearer to the secret of God than others; are bathed by sweeter waters; they hear notices, they see visions, where others are vacant. We believe that holiness confers a certain insight, because not by our private, but by our public force, can we share and know the nature of things.

There is an intimate interdependence of intellect and morals. Given the equality of two intellects, — which will form the most reliable judgments, the good, or the bad hearted? “The heart has its arguments, with which the understanding is not acquainted.” For the heart is at once aware of the state of health or disease, which is the controlling state, that is, of sanity or of insanity, prior, of course, to all question of the ingenuity of arguments, the amount of facts, or the elegance of rhetoric. So intimate is this alliance of mind and heart, that talent uniformly sinks with character. The bias of errors of principle carries away men into perilous courses, as soon as their will does not control their passion or talent. Hence the extraordinary blunders, and final wrong head, into which men spoiled by ambition usually fall. Hence the remedy for all blunders, the cure of blindness, the cure of crime, is love. “As much love, so much mind,” said the Latin proverb. The superiority that has no superior; the redeemer and instructor of souls, as it is their primal essence, is love.

The moral must be the measure of health. If your eye is on the eternal, your intellect will grow, and your opinions and actions will have a beauty which no learning or combined advantages of other men can rival. The moment of your

loss of faith, and acceptance of the lucrative standard, will be marked in the pause, or solstice of genius, the sequent retrogression, and the inevitable loss of attraction to other minds. The vulgar are sensible of the change in you, and of your descent, though they clap you on the back, and congratulate you on your increased common sense.

Our recent culture has been in natural science. We have learned the manners of the sun and of the moon, of the rivers and the rains, of the mineral and elemental kingdoms, of plants and animals. Man has learned to weigh the sun, and its weight neither loses nor gains. The path of a star, the moment of an eclipse, can be determined to the fraction of a second. Well, to him the book of History, the book of love, the lures of passion, and the commandments of duty are opened: and the next lesson taught, is, the continuation of the inflexible law of matter into the subtle kingdom of will, and of thought; that, if, in sidereal ages, gravity and projection keep their craft, and the ball never loses its way in its wild path through space, — a secreter gravitation, a secreter projection, rule not less tyrannically in human history, and keep the balance of power from age to age unbroken. For, though the new element of freedom and an individual has been admitted, yet the primordial atoms are prefigured and predetermined to moral issues, are in search of justice, and ultimate right is done. Religion or worship is the attitude of those who see this unity, intimacy, and sincerity; who see that, against all appearances, the nature of things works for truth and right forever.

'Tis a short sight to limit our faith in laws to those of gravity, of chemistry, of botany, and so forth. Those laws do not stop where our eyes lose them, but push the same geometry and chemistry up into the invisible plane of social and rational life, so that, look where we will, in a boy's game, or in the strifes of races, a perfect reaction, a perpetual judgment keeps watch and ward. And this appears in a class of facts which concerns all men, within and above their creeds.

Shallow men believe in luck, believe in circumstances: It was somebody's name, or he happened to be there at the time, or, it was so then, and another day it would have been otherwise. Strong men believe in cause and effect. The man was born to do it, and his father was born to be the father of him and of this deed, and, by looking narrowly, you shall see there was no luck in the matter, but it was all a problem in arithmetic, or an experiment in chemistry. The curve of the flight of the moth is preordained, and all things go by number, rule, and weight.

Skepticism is unbelief in cause and effect. A man does not see, that, as he eats, so he thinks: as he deals, so he is, and so he appears; he does not see, that his son is the son of his thoughts and of his actions; that fortunes are not

exceptions but fruits; that relation and connection are not somewhere and sometimes, but everywhere and always; no miscellany, no exemption, no anomaly, — but method, and an even web; and what comes out, that was put in. As we are, so we do; and as we do, so is it done to us; we are the builders of our fortunes; cant and lying and the attempt to secure a good which does not belong to us, are, once for all, balked and vain. But, in the human mind, this tie of fate is made alive. The law is the basis of the human mind. In us, it is inspiration; out there in Nature, we see its fatal strength. We call it the moral sentiment.

We owe to the Hindoo Scriptures a definition of Law, which compares well with any in our Western books. “Law it is, which is without name, or color, or hands, or feet; which is smallest of the least, and largest of the large; all, and knowing all things; which hears without ears, sees without eyes, moves without feet, and seizes without hands.”

If any reader tax me with using vague and traditional phrases, let me suggest to him, by a few examples, what kind of a trust this is, and how real. Let me show him that the dice are loaded; that the colors are fast, because they are the native colors of the fleece; that the globe is a battery, because every atom is a magnet; and that the police and sincerity of the Universe are secured by God’s delegating his divinity to every particle; that there is no room for hypocrisy, no margin for choice.

The countryman leaving his native village, for the first time, and going abroad, finds all his habits broken up. In a new nation and language, his sect, as Quaker, or Lutheran, is lost. What! it is not then necessary to the order and existence of society? He misses this, and the commanding eye of his neighborhood, which held him to decorum. This is the peril of New York, of New Orleans, of London, of Paris, to young men. But after a little experience, he makes the discovery that there are no large cities, — none large enough to hide in; that the censors of action are as numerous and as near in Paris, as in Littleton or Portland; that the gossip is as prompt and vengeful. There is no concealment, and, for each offence, a several vengeance; that, reaction, or *nothing for nothing, or, things are as broad as they are long*, is not a rule for Littleton or Portland, but for the Universe.

We cannot spare the coarsest muniment of virtue. We are disgusted by gossip; yet it is of importance to keep the angels in their proprieties. The smallest fly will draw blood, and gossip is a weapon impossible to exclude from the privatest, highest, selectest. Nature created a police of many ranks. God has delegated himself to a million deputies. From these low external penalties, the scale ascends. Next come the resentments, the fears, which injustice calls out; then, the false relations in which the offender is put to other men; and the

reaction of his fault on himself, in the solitude and devastation of his mind.

You cannot hide any secret. If the artist succor his flagging spirits by opium or wine, his work will characterize itself as the effect of opium or wine. If you make a picture or a statue, it sets the beholder in that state of mind you had, when you made it. If you spend for show, on building, or gardening, or on pictures, or on equipages, it will so appear. We are all physiognomists and penetrators of character, and things themselves are detective. If you follow the suburban fashion in building a sumptuous-looking house for a little money, it will appear to all eyes as a cheap dear house. There is no privacy that cannot be penetrated. No secret can be kept in the civilized world. Society is a masked ball, where every one hides his real character, and reveals it by hiding. If a man wish to conceal anything he carries, those whom he meets know that he conceals somewhat, and usually know what he conceals. Is it otherwise if there be some belief or some purpose he would bury in his breast? 'Tis as hard to hide as fire. He is a strong man who can hold down his opinion. A man cannot utter two or three sentences, without disclosing to intelligent ears precisely where he stands in life and thought, namely, whether in the kingdom of the senses and the understanding, or, in that of ideas and imagination, in the realm of intuitions and duty. People seem not to see that their opinion of the world is also a confession of character. We can only see what we are, and if we misbehave we suspect others. The fame of Shakspeare or of Voltaire, of Thomas à Kempis, or of Bonaparte, characterizes those who give it. As gas-light is found to be the best nocturnal police, so the universe protects itself by pitiless publicity.

Each must be armed — not necessarily with musket and pike. Happy, if, seeing these, he can feel that he has better muskets and pikes in his energy and constancy. To every creature is his own weapon, however skilfully concealed from himself, a good while. His work is sword and shield. Let him accuse none, let him injure none. The way to mend the bad world, is to create the right world. Here is a low political economy plotting to cut the throat of foreign competition, and establish our own; — excluding others by force, or making war on them; or, by cunning tariffs, giving preference to worse wares of ours. But the real and lasting victories are those of peace, and not of war. The way to conquer the foreign artisan, is, not to kill him, but to beat his work. And the Crystal Palaces and World Fairs, with their committees and prizes on all kinds of industry, are the result of this feeling. The American workman who strikes ten blows with his hammer, whilst the foreign workman only strikes one, is as really vanquishing that foreigner, as if the blows were aimed at and told on his person. I look on that man as happy, who, when there is question of success, looks into his work for a reply, not into the market, not into opinion, not into patronage. In every

variety of human employment, in the mechanical and in the fine arts, in navigation, in farming, in legislating, there are among the numbers who do their task perfunctorily, as we say, or just to pass, and as badly as they dare, — there are the working-men, on whom the burden of the business falls, — those who love work, and love to see it rightly done, who finish their task for its own sake; and the state and the world is happy, that has the most of such finishers. The world will always do justice at last to such finishers: it cannot otherwise. He who has acquired the ability, may wait securely the occasion of making it felt and appreciated, and know that it will not loiter. Men talk as if victory were something fortunate. Work is victory. Wherever work is done, victory is obtained. There is no chance, and no blanks. You want but one verdict: if you have your own, you are secure of the rest. And yet, if witnesses are wanted, witnesses are near. There was never a man born so wise or good, but one or more companions came into the world with him, who delight in his faculty, and report it. I cannot see without awe, that no man thinks alone, and no man acts alone, but the divine assessors who came up with him into life, — now under one disguise, now under another, — like a police in citizens' clothes, walk with him, step for step, through all the kingdom of time.

This reaction, this sincerity is the property of all things. To make our word or act sublime, we must make it real. It is our system that counts, not the single word or unsupported action. Use what language you will, you can never say anything but what you are. What I am, and what I think, is conveyed to you, in spite of my efforts to hold it back. What I am has been secretly conveyed from me to another, whilst I was vainly making up my mind to tell him it. He has heard from me what I never spoke.

As men get on in life, they acquire a love for sincerity, and somewhat less solicitude to be lulled or amused. In the progress of the character, there is an increasing faith in the moral sentiment, and a decreasing faith in propositions. Young people admire talents, and particular excellences. As we grow older, we value total powers and effects, as the spirit, or quality of the man. We have another sight, and a new standard; an insight which disregards what is done *for* the eye, and pierces to the doer; an ear which hears not what men say, but hears what they do not say.

There was a wise, devout man who is called, in the Catholic Church, St. Philip Neri, of whom many anecdotes touching his discernment and benevolence are told at Naples and Rome. Among the nuns in a convent not far from Rome, one had appeared, who laid claim to certain rare gifts of inspiration and prophecy, and the abbess advised the Holy Father, at Rome, of the wonderful powers shown by her novice. The Pope did not well know what to make of these

new claims, and Philip coming in from a journey, one day, he consulted him. Philip undertook to visit the nun, and ascertain her character. He threw himself on his mule, all travel-soiled as he was, and hastened through the mud and mire to the distant convent. He told the abbess the wishes of his Holiness, and begged her to summon the nun without delay. The nun was sent for, and, as soon as she came into the apartment, Philip stretched out his leg all bespattered with mud, and desired her to draw off his boots. The young nun, who had become the object of much attention and respect, drew back with anger, and refused the office: Philip ran out of doors, mounted his mule, and returned instantly to the Pope; "Give yourself no uneasiness, Holy Father, any longer: here is no miracle, for here is no humility."

We need not much mind what people please to say, but what they must say; what their natures say, though their busy, artful, Yankee understandings try to hold back, and choke that word, and to articulate something different. If we will sit quietly, — what they ought to say is said, with their will, or against their will. We do not care for you, let us pretend what we will: — we are always looking through you to the dim dictator behind you. Whilst your habit or whim chatters, we civilly and impatiently wait until that wise superior shall speak again. Even children are not deceived by the false reasons which their parents give in answer to their questions, whether touching natural facts, or religion, or persons. When the parent, instead of thinking how it really is, puts them off with a traditional or a hypocritical answer, the children perceive that it is traditional or hypocritical. To a sound constitution the defect of another is at once manifest: and the marks of it are only concealed from us by our own dislocation. An anatomical observer remarks, that the sympathies of the chest, abdomen, and pelvis, tell at last on the face, and on all its features. Not only does our beauty waste, but it leaves word how it went to waste. Physiognomy and phrenology are not new sciences, but declarations of the soul that it is aware of certain new sources of information. And now sciences of broader scope are starting up behind these. And so for ourselves, it is really of little importance what blunders in statement we make, so only we make no wilful departures from the truth. How a man's truth comes to mind, long after we have forgotten all his words! How it comes to us in silent hours, that truth is our only armor in all passages of life and death! Wit is cheap, and anger is cheap; but if you cannot argue or explain yourself to the other party, cleave to the truth against me, against thee, and you gain a station from which you cannot be dislodged. The other party will forget the words that you spoke, but the part you took continues to plead for you.

Why should I hasten to solve every riddle which life offers me? I am well assured that the Questioner, who brings me so many problems, will bring the

answers also in due time. Very rich, very potent, very cheerful Giver that he is, he shall have it all his own way, for me. Why should I give up my thought, because I cannot answer an objection to it? Consider only, whether it remains in my life the same it was. That only which we have within, can we see without. If we meet no gods, it is because we harbor none. If there is grandeur in you, you will find grandeur in porters and sweeps. He only is rightly immortal, to whom all things are immortal. I have read somewhere, that none is accomplished, so long as any are incomplete; that the happiness of one cannot consist with the misery of any other.

The Buddhists say, "No seed will die:" every seed will grow. Where is the service which can escape its remuneration? What is vulgar, and the essence of all vulgarity, but the avarice of reward? 'Tis the difference of artisan and artist, of talent and genius, of sinner and saint. The man whose eyes are nailed not on the nature of his act, but on the wages, whether it be money, or office, or fame, — is almost equally low. He is great, whose eyes are opened to see that the reward of actions cannot be escaped, because he is transformed into his action, and taketh its nature, which bears its own fruit, like every other tree. A great man cannot be hindered of the effect of his act, because it is immediate. The genius of life is friendly to the noble, and in the dark brings them friends from far. Fear God, and where you go, men shall think they walk in hallowed cathedrals.

And so I look on those sentiments which make the glory of the human being, love, humility, faith, as being also the intimacy of Divinity in the atoms; and, that, as soon as the man is right, assurances and previsions emanate from the interior of his body and his mind; as, when flowers reach their ripeness, incense exhales from them, and, as a beautiful atmosphere is generated from the planet by the averaged emanations from all its rocks and soils.

Thus man is made equal to every event. He can face danger for the right. A poor, tender, painful body, he can run into flame or bullets or pestilence, with duty for his guide. He feels the insurance of a just employment. I am not afraid of accident, as long as I am in my place. It is strange that superior persons should not feel that they have some better resistance against cholera, than avoiding green peas and salads. Life is hardly respectable, — is it? if it has no generous, guaranteeing task, no duties or affections, that constitute a necessity of existing. Every man's task is his life-preserver. The conviction that his work is dear to God and cannot be spared, defends him. The lightning-rod that disarms the cloud of its threat is his body in its duty. A high aim reacts on the means, on the days, on the organs of the body. A high aim is curative, as well as arnica. "Napoleon," says Goethe, "visited those sick of the plague, in order to prove that the man who could vanquish fear, could vanquish the plague also; and he was right. 'Tis

incredible what force the will has in such cases: it penetrates the body, and puts it in a state of activity, which repels all hurtful influences; whilst fear invites them.”

It is related of William of Orange, that, whilst he was besieging a town on the continent, a gentleman sent to him on public business came to his camp, and, learning that the King was before the walls, he ventured to go where he was. He found him directing the operation of his gunners, and, having explained his errand, and received his answer, the King said, “Do you not know, sir, that every moment you spend here is at the risk of your life?” “I run no more risk,” replied the gentleman, “than your Majesty.” “Yes,” said the King, “but my duty brings me here, and yours does not.” In a few minutes, a cannon-ball fell on the spot, and the gentleman was killed.

Thus can the faithful student reverse all the warnings of his early instinct, under the guidance of a deeper instinct. He learns to welcome misfortune, learns that adversity is the prosperity of the great. He learns the greatness of humility. He shall work in the dark, work against failure, pain, and ill-will. If he is insulted, he can be insulted; all his affair is not to insult. Hafiz writes,

At the last day, men shall wear
On their heads the dust,

As ensign and as ornament
Of their lowly trust.

The moral equalizes all; enriches, empowers all. It is the coin which buys all, and which all find in their pocket. Under the whip of the driver, the slave shall feel his equality with saints and heroes. In the greatest destitution and calamity, it surprises man with a feeling of elasticity which makes nothing of loss.

I recall some traits of a remarkable person whose life and discourse betrayed many inspirations of this sentiment. Benedict was always great in the present time. He had hoarded nothing from the past, neither in his cabinets, neither in his memory. He had no designs on the future, neither for what he should do to men, nor for what men should do for him. He said, 'I am never beaten until I know that I am beaten. I meet powerful brutal people to whom I have no skill to reply. They think they have defeated me. It is so published in society, in the journals; I am defeated in this fashion, in all men's sight, perhaps on a dozen different lines. My ledger may show that I am in debt, cannot yet make my ends meet, and vanquish the enemy so. My race may not be prospering: we are sick, ugly, obscure, unpopular. My children may be worsted. I seem to fail in my friends and clients, too. That is to say, in all the encounters that have yet chanced, I have not been weaponed for that particular occasion, and have been historically beaten; and yet, I know, all the time, that I have never been beaten; have never yet fought, shall certainly fight, when my hour comes, and shall beat.' "A man," says the Vishnu Sarma, "who having well compared his own strength or weakness with that of others, after all doth not know the difference, is easily overcome by his enemies."

'I spent,' he said, 'ten months in the country. Thick-starred Orion was my only companion. Wherever a squirrel or a bee can go with security, I can go. I ate whatever was set before me; I touched ivy and dogwood. When I went abroad, I kept company with every man on the road, for I knew that my evil and my good did not come from these, but from the Spirit, whose servant I was. For I could not stoop to be a circumstance, as they did, who put their life into their fortune and their company. I would not degrade myself by casting about in my memory for a thought, nor by waiting for one. If the thought come, I would give it entertainment. It should, as it ought, go into my hands and feet; but if it come not spontaneously, it comes not rightly at all. If it can spare me, I am sure I can spare it. It shall be the same with my friends. I will never woo the loveliest. I will not ask any friendship or favor. When I come to my own, we shall both know it. Nothing will be to be asked or to be granted.' Benedict went out to seek his friend, and met him on the way; but he expressed no surprise at any

coincidences. On the other hand, if he called at the door of his friend, and he was not at home, he did not go again; concluding that he had misinterpreted the intimations.

He had the whim not to make an apology to the same individual whom he had wronged. For this, he said, was a piece of personal vanity; but he would correct his conduct in that respect in which he had faulted, to the next person he should meet. Thus, he said, universal justice was satisfied.

Mira came to ask what she should do with the poor Genesee woman who had hired herself to work for her, at a shilling a day, and, now sickening, was like to be bedridden on her hands. Should she keep her, or should she dismiss her? But Benedict said, 'Why ask? One thing will clear itself as the thing to be done, and not another, when the hour comes. Is it a question, whether to put her into the street? Just as much whether to thrust the little Jenny on your arm into the street. The milk and meal you give the beggar, will fatten Jenny. Thrust the woman out, and you thrust your babe out of doors, whether it so seem to you or not.'

In the Shakers, so called, I find one piece of belief, in the doctrine which they faithfully hold, that encourages them to open their doors to every wayfaring man who proposes to come among them; for, they say, the Spirit will presently manifest to the man himself, and to the society, what manner of person he is, and whether he belongs among them. They do not receive him, they do not reject him. And not in vain have they worn their clay coat, and drudged in their fields, and shuffled in their Bruin dance, from year to year, if they have truly learned thus much wisdom.

Honor him whose life is perpetual victory; him, who, by sympathy with the invisible and real, finds support in labor, instead of praise; who does not shine, and would rather not. With eyes open, he makes the choice of virtue, which outrages the virtuous; of religion, which churches stop their discords to burn and exterminate; for the highest virtue is always against the law.

Miracle comes to the miraculous, not to the arithmetician. Talent and success interest me but moderately. The great class, they who affect our imagination, the men who could not make their hands meet around their objects, the rapt, the lost, the fools of ideas, — they suggest what they cannot execute. They speak to the ages, and are heard from afar. The Spirit does not love cripples and malformations. If there ever was a good man, be certain, there was another, and will be more.

And so in relation to that future hour, that spectre clothed with beauty at our curtain by night, at our table by day, — the apprehension, the assurance of a coming change. The race of mankind have always offered at least this implied thanks for the gift of existence, — namely, the terror of its being taken away; the

insatiable curiosity and appetite for its continuation. The whole revelation that is vouchsafed us, is, the gentle trust, which, in our experience we find, will cover also with flowers the slopes of this chasm.

Of immortality, the soul, when well employed, is incurious. It is so well, that it is sure it will be well. It asks no questions of the Supreme Power. The son of Antiochus asked his father, when he would join battle? "Dost thou fear," replied the King, "that thou only in all the army wilt not hear the trumpet?" 'Tis a higher thing to confide, that, if it is best we should live, we shall live,— 'tis higher to have this conviction, than to have the lease of indefinite centuries and millenniums and æons. Higher than the question of our duration is the question of our deserving. Immortality will come to such as are fit for it, and he who would be a great soul in future, must be a great soul now. It is a doctrine too great to rest on any legend, that is, on any man's experience but our own. It must be proved, if at all, from our own activity and designs, which imply an interminable future for their play.

What is called religion effeminates and demoralizes. Such as you are, the gods themselves could not help you. Men are too often unfit to live, from their obvious inequality to their own necessities, or, they suffer from politics, or bad neighbors, or from sickness, and they would gladly know that they were to be dismissed from the duties of life. But the wise instinct asks, 'How will death help them?' These are not dismissed when they die. You shall not wish for death out of pusillanimity. The weight of the Universe is pressed down on the shoulders of each moral agent to hold him to his task. The only path of escape known in all the worlds of God is performance. You must do your work, before you shall be released. And as far as it is a question of fact respecting the government of the Universe, Marcus Antoninus summed the whole in a word, "It is pleasant to die, if there be gods; and sad to live, if there be none."

And so I think that the last lesson of life, the choral song which rises from all elements and all angels, is, a voluntary obedience, a necessitated freedom. Man is made of the same atoms as the world is, he shares the same impressions, predispositions, and destiny. When his mind is illuminated, when his heart is kind, he throws himself joyfully into the sublime order, and does, with knowledge, what the stones do by structure.

The religion which is to guide and fulfil the present and coming ages, whatever else it be, must be intellectual. The scientific mind must have a faith which is science. "There are two things," said Mahomet, "which I abhor, the learned in his infidelities, and the fool in his devotions." Our times are impatient of both, and specially of the last. Let us have nothing now which is not its own evidence. There is surely enough for the heart and imagination in the religion

itself. Let us not be pestered with assertions and half-truths, with emotions and snuffle.

There will be a new church founded on moral science, at first cold and naked, a babe in a manger again, the algebra and mathematics of ethical law, the church of men to come, without shawms, or psaltery, or sackbut; but it will have heaven and earth for its beams and rafters; science for symbol and illustration; it will fast enough gather beauty, music, picture, poetry. Was never stoicism so stern and exigent as this shall be. It shall send man home to his central solitude, shame these social, supplicating manners, and make him know that much of the time he must have himself to his friend. He shall expect no coöperation, he shall walk with no companion. The nameless Thought, the nameless Power, the superpersonal Heart, — he shall repose alone on that. He needs only his own verdict. No good fame can help, no bad fame can hurt him. The Laws are his consolers, the good Laws themselves are alive, they know if he have kept them, they animate him with the leading of great duty, and an endless horizon. Honor and fortune exist to him who always recognizes the neighborhood of the great, always feels himself in the presence of high causes.

CONSIDERATIONS BY THE WAY.

Hear what British Merlin sung,
Of keenest eye and truest tongue.
Say not, the chiefs who first arrive
Usurp the seats for which all strive;
The forefathers this land who found
Failed to plant the vantage-ground;
Ever from one who comes to-morrow
Men wait their good and truth to borrow.
But wilt thou measure all thy road,
See thou lift the lightest load.
Who has little, to him who has less, can spare,
And thou, Cyndyllan's son! beware
Ponderous gold and stuffs to bear,
To falter ere thou thy task fulfil, —
Only the light-armed climb the hill.
The richest of all lords is Use,
And ruddy Health the loftiest Muse.
Live in the sunshine, swim the sea,
Drink the wild air's salubrity:
Where the star Canope shines in May,
Shepherds are thankful, and nations gay.
The music that can deepest reach,
And cure all ill, is cordial speech:
Mask thy wisdom with delight,
Toy with the bow, yet hit the white.
Of all wit's uses, the main one
Is to live well with who has none.
Cleave to thine acre; the round year
Will fetch all fruits and virtues here:
Fool and foe may harmless roam,
Loved and lovers bide at home,
A day for toil, an hour for sport,
But for a friend is life too short.

Although this garrulity of advising is born with us, I confess that life is rather a

subject of wonder, than of didactics. So much fate, so much irresistible dictation from temperament and unknown inspiration enters into it, that we doubt we can say anything out of our own experience whereby to help each other. All the professions are timid and expectant agencies. The priest is glad if his prayers or his sermon meet the condition of any soul; if of two, if of ten, 'tis a signal success. But he walked to the church without any assurance that he knew the distemper, or could heal it. The physician prescribes hesitatingly out of his few resources, the same tonic or sedative to this new and peculiar constitution, which he has applied with various success to a hundred men before. If the patient mends, he is glad and surprised. The lawyer advises the client, and tells his story to the jury, and leaves it with them, and is as gay and as much relieved as the client, if it turns out that he has a verdict. The judge weighs the arguments, and puts a brave face on the matter, and, since there must be a decision, decides as he can, and hopes he has done justice, and given satisfaction to the community; but is only an advocate after all. And so is all life a timid and unskilful spectator. We do what we must, and call it by the best names. We like very well to be praised for our action, but our conscience says, "Not unto us." 'Tis little we can do for each other. We accompany the youth with sympathy, and manifold old sayings of the wise, to the gate of the arena, but 'tis certain that not by strength of ours, or of the old sayings, but only on strength of his own, unknown to us or to any, he must stand or fall. That by which a man conquers in any passage, is a profound secret to every other being in the world, and it is only as he turns his back on us and on all men, and draws on this most private wisdom, that any good can come to him. What we have, therefore, to say of life, is rather description, or, if you please, celebration, than available rules.

Yet vigor is contagious, and whatever makes us either think or feel strongly, adds to our power, and enlarges our field of action. We have a debt to every great heart, to every fine genius; to those who have put life and fortune on the cast of an act of justice; to those who have added new sciences; to those who have refined life by elegant pursuits. 'Tis the fine souls who serve us, and not what is called fine society. Fine society is only a self-protection against the vulgarities of the street and the tavern. Fine society, in the common acceptation, has neither ideas nor aims. It renders the service of a perfumery, or a laundry, not of a farm or factory. 'Tis an exclusion and a precinct. Sidney Smith said, "A few yards in London cement or dissolve friendship." It is an unprincipled decorum; an affair of clean linen and coaches, of gloves, cards, and elegance in trifles. There are other measures of self-respect for a man, than the number of clean shirts he puts on every day. Society wishes to be amused. I do not wish to be amused. I wish that life should not be cheap, but sacred. I wish the days to be

as centuries, loaded, fragrant. Now we reckon them as bank-days, by some debt which is to be paid us, or which we are to pay, or some pleasure we are to taste. Is all we have to do to draw the breath in, and blow it out again? Porphyry's definition is better; "Life is that which holds matter together." The babe in arms is a channel through which the energies we call fate, love, and reason, visibly stream. See what a cometary train of auxiliaries man carries with him, of animals, plants, stones, gases, and imponderable elements. Let us infer his ends from this pomp of means. Mirabeau said, "Why should we feel ourselves to be men, unless it be to succeed in everything, everywhere. You must say of nothing, *That is beneath me*, nor feel that anything can be out of your power. Nothing is impossible to the man who can will. *Is that necessary? That shall be*: — this is the only law of success." Whoever said it, this is in the right key. But this is not the tone and genius of the men in the street. In the streets, we grow cynical. The men we meet are coarse and torpid. The finest wits have their sediment. What quantities of fribbles, paupers, invalids, epicures, antiquaries, politicians, thieves, and triflers of both sexes, might be advantageously spared! Mankind divides itself into two classes, — benefactors and malefactors. The second class is vast, the first a handful. A person seldom falls sick, but the bystanders are animated with a faint hope that he will die: — quantities of poor lives; of distressing invalids; of cases for a gun. Franklin said, "Mankind are very superficial and dastardly: they begin upon a thing, but, meeting with a difficulty, they fly from it discouraged: but they have capacities, if they would employ them." Shall we then judge a country by the majority, or by the minority? By the minority, surely. 'Tis pedantry to estimate nations by the census, or by square miles of land, or other than by their importance to the mind of the time.

Leave this hypocritical prating about the masses. Masses are rude, lame, unmade, pernicious in their demands and influence, and need not to be flattered but to be schooled. I wish not to concede anything to them, but to tame, drill, divide, and break them up, and draw individuals out of them. The worst of charity is, that the lives you are asked to preserve are not worth preserving. Masses! the calamity is the masses. I do not wish any mass at all, but honest men only, lovely, sweet, accomplished women only, and no shovel-handed, narrow-brained, gin-drinking million stockingers or lazzaroni at all. If government knew how, I should like to see it check, not multiply the population. When it reaches its true law of action, every man that is born will be hailed as essential. Away with this hurrah of masses, and let us have the considerate vote of single men spoken on their honor and their conscience. In old Egypt, it was established law, that the vote of a prophet be reckoned equal to a hundred hands. I think it was

much under-estimated. "Clay and clay differ in dignity," as we discover by our preferences every day. What a vicious practice is this of our politicians at Washington pairing off! as if one man who votes wrong, going away, could excuse you, who mean to vote right, for going away; or, as if your presence did not tell in more ways than in your vote. Suppose the three hundred heroes at Thermopylæ had paired off with three hundred Persians: would it have been all the same to Greece, and to history? Napoleon was called by his men *Cent Mille*. Add honesty to him, and they might have called him Hundred Million.

Nature makes fifty poor melons for one that is good, and shakes down a tree full of gnarled, wormy, unripe crabs, before you can find a dozen dessert apples; and she scatters nations of naked Indians, and nations of clothed Christians, with two or three good heads among them. Nature works very hard, and only hits the white once in a million throws. In mankind, she is contented if she yields one master in a century. The more difficulty there is in creating good men, the more they are used when they come. I once counted in a little neighborhood, and found that every able-bodied man had, say from twelve to fifteen persons dependent on him for material aid, — to whom he is to be for spoon and jug, for backer and sponsor, for nursery and hospital, and many functions beside: nor does it seem to make much difference whether he is bachelor or patriarch; if he do not violently decline the duties that fall to him, this amount of helpfulness will in one way or another be brought home to him. This is the tax which his abilities pay. The good men are employed for private centres of use, and for larger influence. All revelations, whether of mechanical or intellectual or moral science, are made not to communities, but to single persons. All the marked events of our day, all the cities, all the colonizations, may be traced back to their origin in a private brain. All the feats which make our civility were the thoughts of a few good heads.

Meantime, this spawning productivity is not noxious or needless. You would say, this rabble of nations might be spared. But no, they are all counted and depended on. Fate keeps everything alive so long as the smallest thread of public necessity holds it on to the tree. The coxcomb and bully and thief class are allowed as proletaries, every one of their vices being the excess or acridity of a virtue. The mass are animal, in pupilage, and near chimpanzee. But the units, whereof this mass is composed are neuters, every one of which may be grown to a queen-bee. The rule is, we are used as brute atoms, until we think: then, we use all the rest. Nature turns all malfaisance to good. Nature provided for real needs. No sane man at last distrusts himself. His existence is a perfect answer to all sentimental cavils. If he is, he is wanted, and has the precise properties that are required. That we are here, is proof we ought to be here. We have as good right,

and the same sort of right to be here, as Cape Cod or Sandy Hook have to be there.

To say then, the majority are wicked, means no malice, no bad heart in the observer, but, simply, that the majority are unripe, and have not yet come to themselves, do not yet know their opinion. That, if they knew it, is an oracle for them and for all. But in the passing moment, the quadruped interest is very prone to prevail: and this beast-force, whilst it makes the discipline of the world, the school of heroes, the glory of martyrs, has provoked, in every age, the satire of wits, and the tears of good men. They find the journals, the clubs, the governments, the churches, to be in the interest, and the pay of the devil. And wise men have met this obstruction in their times, like Socrates, with his famous irony; like Bacon, with life-long dissimulation; like Erasmus, with his book “The Praise of Folly;” like Rabelais, with his satire rending the nations. “They were the fools who cried against me, you will say,” wrote the Chevalier de Boufflers to Grimm; “aye, but the fools have the advantage of numbers, and ’tis that which decides. ’Tis of no use for us to make war with them; we shall not weaken them; they will always be the masters. There will not be a practice or an usage introduced, of which they are not the authors.”

In front of these sinister facts, the first lesson of history is the good of evil. Good is a good doctor, but Bad is sometimes a better. ’Tis the oppressions of William the Norman, savage forest-laws, and crushing despotism, that made possible the inspirations of *Magna Charta* under John. Edward I. wanted money, armies, castles, and as much as he could get. It was necessary to call the people together by shorter, swifter ways, — and the House of Commons arose. To obtain subsidies, he paid in privileges. In the twenty-fourth year of his reign, he decreed, “that no tax should be levied without consent of Lords and Commons;” — which is the basis of the English Constitution. Plutarch affirms that the cruel wars which followed the march of Alexander, introduced the civility, language, and arts of Greece into the savage East; introduced marriage; built seventy cities; and united hostile nations under one government. The barbarians who broke up the Roman empire did not arrive a day too soon. Schiller says, the Thirty Years’ War made Germany a nation. Rough, selfish despots serve men immensely, as Henry VIII. in the contest with the Pope; as the infatuations no less than the wisdom of Cromwell; as the ferocity of the Russian czars; as the fanaticism of the French regicides of 1789. The frost which kills the harvest of a year, saves the harvests of a century, by destroying the weevil or the locust. Wars, fires, plagues, break up immovable routine, clear the ground of rotten races and dens of distemper, and open a fair field to new men. There is a tendency in things to right themselves, and the war or revolution or bankruptcy that shatters a rotten

system, allows things to take a new and natural order. The sharpest evils are bent into that periodicity which makes the errors of planets, and the fevers and distempers of men, self-limiting. Nature is upheld by antagonism. Passions, resistance, danger, are educators. We acquire the strength we have overcome. Without war, no soldier; without enemies, no hero. The sun were insipid, if the universe were not opaque. And the glory of character is in affronting the horrors of depravity, to draw thence new nobilities of power: as Art lives and thrills in new use and combining of contrasts, and mining into the dark evermore for blacker pits of night. What would painter do, or what would poet or saint, but for crucifixions and hells? And evermore in the world is this marvellous balance of beauty and disgust, magnificence and rats. Not Antoninus, but a poor washer-woman said, "The more trouble, the more lion; that's my principle." I do not think very respectfully of the designs or the doings of the people who went to California, in 1849. It was a rush and a scramble of needy adventurers, and, in the western country, a general jail-delivery of all the rowdies of the rivers. Some of them went with honest purposes, some with very bad ones, and all of them with the very commonplace wish to find a short way to wealth. But Nature watches over all, and turns this malfaisance to good. California gets peopled and subdued, — civilized in this immoral way, — and, on this fiction, a real prosperity is rooted and grown. 'Tis a decoy-duck; 'tis tubs thrown to amuse the whale: but real ducks, and whales that yield oil, are caught. And, out of Sabine rapes, and out of robbers' forays, real Romes and their heroisms come in fulness of time.

In America, the geography is sublime, but the men are not: the inventions are excellent, but the inventors one is sometimes ashamed of. The agencies by which events so grand as the opening of California, of Texas, of Oregon, and the junction of the two oceans, are effected, are paltry, — coarse selfishness, fraud, and conspiracy: and most of the great results of history are brought about by discreditable means.

The benefaction derived in Illinois, and the great West, from railroads is inestimable, and vastly exceeding any intentional philanthropy on record. What is the benefit done by a good King Alfred, or by a Howard, or Pestalozzi, or Elizabeth Fry, or Florence Nightingale, or any lover, less or larger, compared with the involuntary blessing wrought on nations by the selfish capitalists who built the Illinois, Michigan, and the network of the Mississippi valley roads, which have evoked not only all the wealth of the soil, but the energy of millions of men. 'Tis a sentence of ancient wisdom, "that God hangs the greatest weights on the smallest wires."

What happens thus to nations, befalls every day in private houses. When the

friends of a gentleman brought to his notice the follies of his sons with many hints of their danger, he replied, that he knew so much mischief when he was a boy, and had turned out on the whole so successfully, that he was not alarmed by the dissipation of boys; 'twas dangerous water, but, he thought, they would soon touch bottom, and then swim to the top. This is bold practice, and there are many failures to a good escape. Yet one would say, that a good understanding would suffice as well as moral sensibility to keep one erect; the gratifications of the passions are so quickly seen to be damaging, and, — what men like least, — seriously lowering them in social rank. Then all talent sinks with character.

“*Croyez moi, l’erreur aussi a son mérite,*” said Voltaire. We see those who surmount, by dint of some egotism or infatuation, obstacles from which the prudent recoil. The right partisan is a heady narrow man, who, because he does not see many things, sees some one thing with heat and exaggeration, and, if he falls among other narrow men, or on objects which have a brief importance, as some trade or politics of the hour, he prefers it to the universe, and seems inspired, and a godsend to those who wish to magnify the matter, and carry a point. Better, certainly, if we could secure the strength and fire which rude, passionate men bring into society, quite clear of their vices. But who dares draw out the linchpin from the wagon-wheel? 'Tis so manifest, that there is no moral deformity, but is a good passion out of place; that there is no man who is not indebted to his foibles; that, according to the old oracle, “the Furies are the bonds of men;” that the poisons are our principal medicines, which kill the disease, and save the life. In the high prophetic phrase, *He causes the wrath of man to praise him*, and twists and wrenches our evil to our good. Shakspeare wrote, — “'Tis said, best men are moulded of their faults;”

and great educators and lawgivers, and especially generals, and leaders of colonies, mainly rely on this stuff, and esteem men of irregular and passional force the best timber. A man of sense and energy, the late head of the Farm School in Boston harbor, said to me, “I want none of your good boys, — give me the bad ones.” And this is the reason, I suppose, why, as soon as the children are good, the mothers are scared, and think they are going to die. Mirabeau said, “There are none but men of strong passions capable of going to greatness; none but such capable of meriting the public gratitude.” Passion, though a bad regulator, is a powerful spring. Any absorbing passion has the effect to deliver from the little coils and cares of every day: 'tis the heat which sets our human atoms spinning, overcomes the friction of crossing thresholds, and first addresses in society, and gives us a good start and speed, easy to continue, when once it is begun. In short, there is no man who is not at some time indebted to his vices, as no plant that is not fed from manures. We only insist that the man meliorate, and

that the plant grow upward, and convert the base into the better nature.

The wise workman will not regret the poverty or the solitude which brought out his working talents. The youth is charmed with the fine air and accomplishments of the children of fortune. But all great men come out of the middle classes. 'Tis better for the head; 'tis better for the heart. Marcus Antoninus says, that Fronto told him, "that the so-called high-born are for the most part heartless;" whilst nothing is so indicative of deepest culture as a tender consideration of the ignorant. Charles James Fox said of England, "The history of this country proves, that we are not to expect from men in affluent circumstances the vigilance, energy, and exertion without which the House of Commons would lose its greatest force and weight. Human nature is prone to indulgence, and the most meritorious public services have always been performed by persons in a condition of life removed from opulence." And yet what we ask daily, is to be conventional. Supply, most kind gods! this defect in my address, in my form, in my fortunes, which puts me a little out of the ring: supply it, and let me be like the rest whom I admire, and on good terms with them. But the wise gods say, No, we have better things for thee. By humiliations, by defeats, by loss of sympathy, by gulfs of disparity, learn a wider truth and humanity than that of a fine gentleman. A Fifth-Avenue landlord, a West-End householder, is not the highest style of man: and, though good hearts and sound minds are of no condition, yet he who is to be wise for many, must not be protected. He must know the huts where poor men lie, and the chores which poor men do. The first-class minds, Æsop, Socrates, Cervantes, Shakspeare, Franklin, had the poor man's feeling and mortification. A rich man was never insulted in his life: but this man must be stung. A rich man was never in danger from cold, or hunger, or war, or ruffians, and you can see he was not, from the moderation of his ideas. 'Tis a fatal disadvantage to be cockered, and to eat too much cake. What tests of manhood could he stand? Take him out of his protections. He is a good book-keeper; or he is a shrewd adviser in the insurance office: perhaps he could pass a college examination, and take his degrees: perhaps he can give wise counsel in a court of law. Now plant him down among farmers, firemen, Indians, and emigrants. Set a dog on him: set a highwayman on him: try him with a course of mobs: send him to Kansas, to Pike's Peak, to Oregon: and, if he have true faculty, this may be the element he wants, and he will come out of it with broader wisdom and manly power. Æsop, Saadi, Cervantes, Regnard, have been taken by corsairs, left for dead, sold for slaves, and know the realities of human life.

Bad times have a scientific value. These are occasions a good learner would not miss. As we go gladly to Faneuil Hall, to be played upon by the stormy

winds and strong fingers of enraged patriotism, so is a fanatical persecution, civil war, national bankruptcy, or revolution, more rich in the central tones than languid years of prosperity. What had been, ever since our memory, solid continent, yawns apart, and discloses its composition and genesis. We learn geology the morning after the earthquake, on ghastly diagrams of cloven mountains, upheaved plains, and the dry bed of the sea.

In our life and culture, everything is worked up, and comes in use, — passion, war, revolt, bankruptcy, and not less, folly and blunders, insult, ennui, and bad company. Nature is a rag-merchant, who works up every shred and ort and end into new creations; like a good chemist, whom I found, the other day, in his laboratory, converting his old shirts into pure white sugar. Life is a boundless privilege, and when you pay for your ticket, and get into the car, you have no guess what good company you shall find there. You buy much that is not rendered in the bill. Men achieve a certain greatness unawares, when working to another aim.

If now in this connection of discourse, we should venture on laying down the first obvious rules of life, I will not here repeat the first rule of economy, already propounded once and again, that every man shall maintain himself, — but I will say, get health. No labor, pains, temperance, poverty, nor exercise, that can gain it, must be grudged. For sickness is a cannibal which eats up all the life and youth it can lay hold of, and absorbs its own sons and daughters. I figure it as a pale, wailing, distracted phantom, absolutely selfish, heedless of what is good and great, attentive to its sensations, losing its soul, and afflicting other souls with meanness and mopings, and with ministration to its voracity of trifles. Dr. Johnson said severely, “Every man is a rascal as soon as he is sick.” Drop the cant, and treat it sanely. In dealing with the drunken, we do not affect to be drunk. We must treat the sick with the same firmness, giving them, of course, every aid, — but withholding ourselves. I once asked a clergyman in a retired town, who were his companions? what men of ability he saw? he replied, that he spent his time with the sick and the dying. I said, he seemed to me to need quite other company, and all the more that he had this: for if people were sick and dying to any purpose, we would leave all and go to them, but, as far as I had observed, they were as frivolous as the rest, and sometimes much more frivolous. Let us engage our companions not to spare us. I knew a wise woman who said to her friends, “When I am old, rule me.” And the best part of health is fine disposition. It is more essential than talent, even in the works of talent. Nothing will supply the want of sunshine to peaches, and, to make knowledge valuable, you must have the cheerfulness of wisdom. Whenever you are sincerely pleased, you are nourished. The joy of the spirit indicates its strength.

All healthy things are sweet-tempered. Genius works in sport, and goodness smiles to the last; and, for the reason, that whoever sees the law which distributes things, does not despond, but is animated to great desires and endeavors. He who desponds betrays that he has not seen it.

'Tis a Dutch proverb, that "paint costs nothing," such are its preserving qualities in damp climates. Well, sunshine costs less, yet is finer pigment. And so of cheerfulness, or a good temper, the more it is spent, the more of it remains. The latent heat of an ounce of wood or stone is inexhaustible. You may rub the same chip of pine to the point of kindling, a hundred times; and the power of happiness of any soul is not to be computed or drained. It is observed that a depression of spirits develops the germs of a plague in individuals and nations.

It is an old commendation of right behavior, "*Aliis lætus, sapiens sibi*," which our English proverb translates, "Be merry *and* wise." I know how easy it is to men of the world to look grave and sneer at your sanguine youth, and its glittering dreams. But I find the gayest castles in the air that were ever piled, far better for comfort and for use, than the dungeons in the air that are daily dug and caverned out by grumbling, discontented people. I know those miserable fellows, and I hate them, who see a black star always riding through the light and colored clouds in the sky overhead: waves of light pass over and hide it for a moment, but the black star keeps fast in the zenith. But power dwells with cheerfulness; hope puts us in a working mood, whilst despair is no muse, and untunes the active powers. A man should make life and Nature happier to us, or he had better never been born. When the political economist reckons up the unproductive classes, he should put at the head this class of pitiers of themselves, cravers of sympathy, bewailing imaginary disasters. An old French verse runs, in my translation: — Some of your griefs you have cured,

And the sharpest you still have survived;
But what torments of pain you endured
From evils that never arrived!

There are three wants which never can be satisfied: that of the rich, who wants something more; that of the sick, who wants something different; and that of the traveller, who says, 'Anywhere but here.' The Turkish *cadi* said to Layard, "After the fashion of thy people, thou hast wandered from one place to another, until thou art happy and content in none." My countrymen are not less infatuated with the *rococo* toy of Italy. All America seems on the point of embarking for Europe. But we shall not always traverse seas and lands with light purposes, and for pleasure, as we say. One day we shall cast out the passion for Europe, by the

passion for America. Culture will give gravity and domestic rest to those who now travel only as not knowing how else to spend money. Already, who provoke pity like that excellent family party just arriving in their well-appointed carriage, as far from home and any honest end as ever? Each nation has asked successively, 'What are they here for?' until at last the party are shamefaced, and anticipate the question at the gates of each town.

Genial manners are good, and power of accommodation to any circumstance, but the high prize of life, the crowning fortune of a man is to be born with a bias to some pursuit, which finds him in employment and happiness, — whether it be to make baskets, or broadswords, or canals, or statutes, or songs. I doubt not this was the meaning of Socrates, when he pronounced artists the only truly wise, as being actually, not apparently so.

In childhood, we fancied ourselves walled in by the horizon, as by a glass bell, and doubted not, by distant travel, we should reach the baths of the descending sun and stars. On experiment, the horizon flies before us, and leaves us on an endless common, sheltered by no glass bell. Yet 'tis strange how tenaciously we cling to that bell-astronomy, of a protecting domestic horizon. I find the same illusion in the search after happiness, which I observe, every summer, recommenced in this neighborhood, soon after the pairing of the birds. The young people do not like the town, do not like the sea-shore, they will go inland; find a dear cottage deep in the mountains, secret as their hearts. They set forth on their travels in search of a home: they reach Berkshire; they reach Vermont; they look at the farms; — good farms, high mountain-sides: but where is the seclusion? The farm is near this; 'tis near that; they have got far from Boston, but 'tis near Albany, or near Burlington, or near Montreal. They explore a farm, but the house is small, old, thin; discontented people lived there, and are gone: — there's too much sky, too much out-doors; too public. The youth aches for solitude. When he comes to the house, he passes through the house. That does not make the deep recess he sought. 'Ah! now, I perceive,' he says, 'it must be deep with persons; friends only can give depth.' Yes, but there is a great dearth, this year, of friends; hard to find, and hard to have when found: they are just going away: they too are in the whirl of the flitting world, and have engagements and necessities. They are just starting for Wisconsin; have letters from Bremen: — see you again, soon. Slow, slow to learn the lesson, that there is but one depth, but one interior, and that is — his purpose. When joy or calamity or genius shall show him it, then woods, then farms, then city shopmen and cab-drivers, indifferently with prophet or friend, will mirror back to him its unfathomable heaven, its populous solitude.

The uses of travel are occasional, and short; but the best fruit it finds, when it

finds it, is conversation; and this is a main function of life. What a difference in the hospitality of minds! Inestimable is he to whom we can say what we cannot say to ourselves. Others are involuntarily hurtful to us, and bereave us of the power of thought, impound and imprison us. As, when there is sympathy, there needs but one wise man in a company, and all are wise, — so, a blockhead makes a blockhead of his companion. Wonderful power to benumb possesses this brother. When he comes into the office or public room, the society dissolves; one after another slips out, and the apartment is at his disposal. What is incurable but a frivolous habit?

A fly is as untamable as a hyena. Yet folly in the sense of fun, fooling, or dawdling can easily be borne; as Talleyrand said, “I find nonsense singularly refreshing;” but a virulent, aggressive fool taints the reason of a household. I have seen a whole family of quiet, sensible people unhinged and beside themselves, victims of such a rogue. For the steady wrongheadedness of one perverse person irritates the best: since we must withstand absurdity. But resistance only exasperates the acrid fool, who believes that Nature and gravitation are quite wrong, and he only is right. Hence all the dozen inmates are soon perverted, with whatever virtues and industries they have, into contradictors, accusers, explainers, and repairers of this one malefactor; like a boat about to be upset, or a carriage run away with, — not only the foolish pilot or driver, but everybody on board is forced to assume strange and ridiculous attitudes, to balance the vehicle and prevent the upsetting. For remedy, whilst the case is yet mild, I recommend phlegm and truth: let all the truth that is spoken or done be at the zero of indifference, or truth itself will be folly. But, when the case is seated and malignant, the only safety is in amputation; as seamen say, you shall cut and run. How to live with unfit companions? — for, with such, life is for the most part spent: and experience teaches little better than our earliest instinct of self-defence, namely, not to engage, not to mix yourself in any manner with them; but let their madness spend itself unopposed; — you are you, and I am I.

Conversation is an art in which a man has all mankind for his competitors, for it is that which all are practising every day while they live. Our habit of thought, — take men as they rise, — is not satisfying; in the common experience, I fear, it is poor and squalid. The success which will content them, is, a bargain, a lucrative employment, an advantage gained over a competitor, a marriage, a patrimony, a legacy, and the like. With these objects, their conversation deals with surfaces: politics, trade, personal defects, exaggerated bad news, and the rain. This is forlorn, and they feel sore and sensitive. Now, if one comes who can illuminate this dark house with thoughts, show them their native riches, what

gifts they have, how indispensable each is, what magical powers over nature and men; what access to poetry, religion, and the powers which constitute character; he wakes in them the feeling of worth, his suggestions require new ways of living, new books, new men, new arts and sciences, — then we come out of our egg-shell existence into the great dome, and see the zenith over and the nadir under us. Instead of the tanks and buckets of knowledge to which we are daily confined, we come down to the shore of the sea, and dip our hands in its miraculous waves. 'Tis wonderful the effect on the company. They are not the men they were. They have all been to California, and all have come back millionnaires. There is no book and no pleasure in life comparable to it. Ask what is best in our experience, and we shall say, a few pieces of plain-dealing with wise people. Our conversation once and again has apprised us that we belong to better circles than we have yet beheld; that a mental power invites us, whose generalizations are more worth for joy and for effect than anything that is now called philosophy or literature. In excited conversation, we have glimpses of the Universe, hints of power native to the soul, far-darting lights and shadows of an Andes landscape, such as we can hardly attain in lone meditation. Here are oracles sometimes profusely given, to which the memory goes back in barren hours.

Add the consent of will and temperament, and there exists the covenant of friendship. Our chief want in life, is, somebody who shall make us do what we can. This is the service of a friend. With him we are easily great. There is a sublime attraction in him to whatever virtue is in us. How he flings wide the doors of existence! What questions we ask of him! what an understanding we have! how few words are needed! It is the only real society. An Eastern poet, Ali Ben Abu Taleb, writes with sad truth, — “He who has a thousand friends has not a friend to spare, And he who has one enemy shall meet him everywhere.”

But few writers have said anything better to this point than Hafiz, who indicates this relation as the test of mental health: “Thou learnest no secret until thou knowest friendship, since to the unsound no heavenly knowledge enters.” Neither is life long enough for friendship. That is a serious and majestic affair, like a royal presence, or a religion, and not a postilion's dinner to be eaten on the run. There is a pudency about friendship, as about love, and though fine souls never lose sight of it, yet they do not name it. With the first class of men our friendship or good understanding goes quite behind all accidents of estrangement, of condition, of reputation. And yet we do not provide for the greatest good of life. We take care of our health; we lay up money; we make our roof tight, and our clothing sufficient; but who provides wisely that he shall not be wanting in the best property of all, — friends? We know that all our training

is to fit us for this, and we do not take the step towards it. How long shall we sit and wait for these benefactors?

It makes no difference, in looking back five years, how you have been dieted or dressed; whether you have been lodged on the first floor or the attic; whether you have had gardens and baths, good cattle and horses, have been carried in a neat equipage, or in a ridiculous truck: these things are forgotten so quickly, and leave no effect. But it counts much whether we have had good companions, in that time; — almost as much as what we have been doing. And see the overpowering importance of neighborhood in all association. As it is marriage, fit or unfit, that makes our home, so it is who lives near us of equal social degree, — a few people at convenient distance, no matter how bad company, — these, and these only, shall be your life's companions: and all those who are native, congenial, and by many an oath of the heart, sacramented to you, are gradually and totally lost. You cannot deal systematically with this fine element of society, and one may take a good deal of pains to bring people together, and to organize clubs and debating societies, and yet no result come of it. But it is certain that there is a great deal of good in us that does not know itself, and that a habit of union and competition brings people up and keeps them up to their highest point; that life would be twice or ten times life, if spent with wise and fruitful companions. The obvious inference is, a little useful deliberation and preconcert, when one goes to buy house and land.

But we live with people on other platforms; we live with dependents, not only with the young whom we are to teach all we know, and clothe with the advantages we have earned, but also with those who serve us directly, and for money. Yet the old rules hold good. Let not the tie be mercenary, though the service is measured by money. Make yourself necessary to somebody. Do not make life hard to any. This point is acquiring new importance in American social life. Our domestic service is usually a foolish fracas of unreasonable demand on one side, and shirking on the other. A man of wit was asked, in the train, what was his errand in the city? He replied, "I have been sent to procure an angel to do cooking." A lady complained to me, that, of her two maidens, one was absent-minded, and the other was absent-bodied. And the evil increases from the ignorance and hostility of every ship-load of the immigrant population swarming into houses and farms. Few people discern that it rests with the master or the mistress what service comes from the man or the maid; that this identical hussy was a tutelar spirit in one house, and a haridan in the other. All sensible people are selfish, and nature is tugging at every contract to make the terms of it fair. If you are proposing only your own, the other party must deal a little hardly by you. If you deal generously, the other, though selfish and unjust, will make an

exception in your favor, and deal truly with you. When I asked an iron-master about the slag and cinder in railroad iron,— “O,” he said, “there’s always good iron to be had: if there’s cinder in the iron, ’tis because there was cinder in the pay.”

But why multiply these topics, and their illustrations, which are endless? Life brings to each his task, and, whatever art you select, algebra, planting, architecture, poems, commerce, politics, — all are attainable, even to the miraculous triumphs, on the same terms, of selecting that for which you are apt; — begin at the beginning, proceed in order, step by step. ’Tis as easy to twist iron anchors, and braid cannons, as to braid straw, to boil granite as to boil water, if you take all the steps in order. Wherever there is failure, there is some giddiness, some superstition about luck, some step omitted, which Nature never pardons. The happy conditions of life may be had on the same terms. Their attraction for you is the pledge that they are within your reach. Our prayers are prophets. There must be fidelity, and there must be adherence. How respectable the life that clings to its objects! Youthful aspirations are fine things, your theories and plans of life are fair and commendable: — but will you stick? Not one, I fear, in that Common full of people, or, in a thousand, but one: and, when you tax them with treachery, and remind them of their high resolutions, they have forgotten that they made a vow. The individuals are fugitive, and in the act of becoming something else, and irresponsible. The race is great, the ideal fair, but the men whiffling and unsure. The hero is he who is immovably centred. The main difference between people seems to be, that one man can come under obligations on which you can rely, — is obligable; and another is not. As he has not a law within him, there’s nothing to tie him to.

’Tis inevitable to name particulars of virtue, and of condition, and to exaggerate them. But all rests at last on that integrity which dwarfs talent, and can spare it. Sanity consists in not being subdued by your means. Fancy prices are paid for position, and for the culture of talent, but to the grand interests, superficial success is of no account. The man, — it is his attitude, — not feats, but forces, — not on set days and public occasions, but, at all hours, and in repose alike as in energy, still formidable, and not to be disposed of. The populace says, with Horne Tooke, “If you would be powerful, pretend to be powerful.” I prefer to say, with the old prophet, “Seekest thou great things? seek them not:” — or, what was said of a Spanish prince, “The more you took from him, the greater he looked.” *Plus on lui ôte, plus il est grand.*

The secret of culture is to learn, that a few great points steadily reappear, alike in the poverty of the obscurest farm, and in the miscellany of metropolitan life, and that these few are alone to be regarded, — the escape from all false ties;

courage to be what we are; and love of what is simple and beautiful; independence, and cheerful relation, these are the essentials, — these, and the wish to serve, — to add somewhat to the well-being of men.

BEAUTY.

Was never form and never face
So sweet to SEYD as only grace
Which did not slumber like a stone
But hovered gleaming and was gone.
Beauty chased he everywhere,
In flame, in storm, in clouds of air.
He smote the lake to feed his eye
With the beryl beam of the broken wave
He flung in pebbles well to hear
The moment's music which they gave.
Oft pealed for him a lofty tone
From nodding pole and belting zone.
He heard a voice none else could hear
From centred and from errant sphere.
The quaking earth did quake in rhyme,
Seas ebbed and flowed in epic chime.
In dens of passion, and pits of wo,
He saw strong Eros struggling through,
To sun the dark and solve the curse,
And beam to the bounds of the universe.
While thus to love he gave his days
In loyal worship, scorning praise,
How spread their lures for him, in vain,
Thieving Ambition and paltering Gain!
He thought it happier to be dead,
To die for Beauty, than live for bread.

The spiral tendency of vegetation infects education also. Our books approach very slowly the things we most wish to know. What a parade we make of our science, and how far off, and at arm's length, it is from its objects! Our botany is all names, not powers: poets and romancers talk of herbs of grace and healing; but what does the botanist know of the virtues of his weeds? The geologist lays bare the strata, and can tell them all on his fingers: but does he know what effect passes into the man who builds his house in them? what effect on the race that inhabits a granite shelf? what on the inhabitants of marl and of alluvium?

We should go to the ornithologist with a new feeling, if he could teach us

what the social birds say, when they sit in the autumn council, talking together in the trees. The want of sympathy makes his record a dull dictionary. His result is a dead bird. The bird is not in its ounces and inches, but in its relations to Nature; and the skin or skeleton you show me, is no more a heron, than a heap of ashes or a bottle of gases into which his body has been reduced, is Dante or Washington. The naturalist is led *from* the road by the whole distance of his fancied advance. The boy had juster views when he gazed at the shells on the beach, or the flowers in the meadow, unable to call them by their names, than the man in the pride of his nomenclature. Astrology interested us, for it tied man to the system. Instead of an isolated beggar, the farthest star felt him, and he felt the star. However rash and however falsified by pretenders and traders in it, the hint was true and divine, the soul's avowal of its large relations, and, that climate, century, remote natures, as well as near, are part of its biography. Chemistry takes to pieces, but it does not construct. Alchemy which sought to transmute one element into another, to prolong life, to arm with power, — that was in the right direction. All our science lacks a human side. The tenant is more than the house. Bugs and stamens and spores, on which we lavish so many years, are not finalities, and man, when his powers unfold in order, will take Nature along with him, and emit light into all her recesses. The human heart concerns us more than the poring into microscopes, and is larger than can be measured by the pompous figures of the astronomer.

We are just so frivolous and skeptical. Men hold themselves cheap and vile: and yet a man is a fagot of thunderbolts. All the elements pour through his system: he is the flood of the flood, and fire of the fire; he feels the antipodes and the pole, as drops of his blood: they are the extension of his personality. His duties are measured by that instrument he is; and a right and perfect man would be felt to the centre of the Copernican system. 'Tis curious that we only believe as deep as we live. We do not think heroes can exert any more awful power than that surface-play which amuses us. A deep man believes in miracles, waits for them, believes in magic, believes that the orator will decompose his adversary; believes that the evil eye can wither, that the heart's blessing can heal; that love can exalt talent; can overcome all odds. From a great heart secret magnetisms flow incessantly to draw great events. But we prize very humble utilities, a prudent husband, a good son, a voter, a citizen, and deprecate any romance of character; and perhaps reckon only his money value, — his intellect, his affection, as a sort of bill of exchange, easily convertible into fine chambers, pictures, music, and wine.

The motive of science was the extension of man, on all sides, into Nature, till his hands should touch the stars, his eyes see through the earth, his ears

understand the language of beast and bird, and the sense of the wind; and, through his sympathy, heaven and earth should talk with him. But that is not our science. These geologies, chemistries, astronomies, seem to make wise, but they leave us where they found us. The invention is of use to the inventor, of questionable help to any other. The formulas of science are like the papers in your pocket-book, of no value to any but the owner. Science in England, in America, is jealous of theory, hates the name of love and moral purpose. There's a revenge for this inhumanity. What manner of man does science make? The boy is not attracted. He says, I do not wish to be such a kind of man as my professor is. The collector has dried all the plants in his herbal, but he has lost weight and humor. He has got all snakes and lizards in his phials, but science has done for him also, and has put the man into a bottle. Our reliance on the physician is a kind of despair of ourselves. The clergy have bronchitis, which does not seem a certificate of spiritual health. Macready thought it came of the *falsetto* of their voicing. An Indian prince, Tisso, one day riding in the forest, saw a herd of elk sporting. "See how happy," he said, "these browsing elks are! Why should not priests, lodged and fed comfortably in the temples, also amuse themselves?" Returning home, he imparted this reflection to the king. The king, on the next day, conferred the sovereignty on him, saying, "Prince, administer this empire for seven days: at the termination of that period, I shall put thee to death." At the end of the seventh day, the king inquired, "From what cause hast thou become so emaciated?" He answered, "From the horror of death." The monarch rejoined: "Live, my child, and be wise. Thou hast ceased to take recreation, saying to thyself, in seven days I shall be put to death. These priests in the temple incessantly meditate on death; how can they enter into healthful diversions?" But the men of science or the doctors or the clergy are not victims of their pursuits, more than others. The miller, the lawyer, and the merchant, dedicate themselves to their own details, and do not come out men of more force. Have they divination, grand aims, hospitality of soul, and the equality to any event, which we demand in man, or only the reactions of the mill, of the wares, of the chicane?

No object really interests us but man, and in man only his superiorities; and, though we are aware of a perfect law in Nature, it has fascination for us only through its relation to him, or, as it is rooted in the mind. At the birth of Winckelmann, more than a hundred years ago, side by side with this arid, departmental, *post mortem* science, rose an enthusiasm in the study of Beauty; and perhaps some sparks from it may yet light a conflagration in the other. Knowledge of men, knowledge of manners, the power of form, and our sensibility to personal influence, never go out of fashion. These are facts of a

science which we study without book, whose teachers and subjects are always near us.

So inveterate is our habit of criticism, that much of our knowledge in this direction belongs to the chapter of pathology. The crowd in the street oftener furnishes degradations than angels or redeemers: but they all prove the transparency. Every spirit makes its house; and we can give a shrewd guess from the house to the inhabitant. But not less does Nature furnish us with every sign of grace and goodness. The delicious faces of children, the beauty of school-girls, "the sweet seriousness of sixteen," the lofty air of well-born, well-bred boys, the passionate histories in the looks and manners of youth and early manhood, and the varied power in all that well-known company that escort us through life, — we know how these forms thrill, paralyze, provoke, inspire, and enlarge us.

Beauty is the form under which the intellect prefers to study the world. All privilege is that of beauty; for there are many beauties; as, of general nature, of the human face and form, of manners, of brain, or method, moral beauty, or beauty of the soul.

The ancients believed that a genius or demon took possession at birth of each mortal, to guide him; that these genii were sometimes seen as a flame of fire partly immersed in the bodies which they governed; — on an evil man, resting on his head; in a good man, mixed with his substance. They thought the same genius, at the death of its ward, entered a new-born child, and they pretended to guess the pilot, by the sailing of the ship. We recognize obscurely the same fact, though we give it our own names. We say, that every man is entitled to be valued by his best moment. We measure our friends so. We know, they have intervals of folly, whereof we take no heed, but wait the reappearings of the genius, which are sure and beautiful. On the other side, everybody knows people who appear beridden, and who, with all degrees of ability, never impress us with the air of free agency. They know it too, and peep with their eyes to see if you detect their sad plight. We fancy, could we pronounce the solving word, and disenchant them, the cloud would roll up, the little rider would be discovered and unseated, and they would regain their freedom. The remedy seems never to be far off, since the first step into thought lifts this mountain of necessity. Thought is the pent air-ball which can rive the planet, and the beauty which certain objects have for him, is the friendly fire which expands the thought, and acquaints the prisoner that liberty and power await him.

The question of Beauty takes us out of surfaces, to thinking of the foundations of things. Goethe said, "The beautiful is a manifestation of secret laws of Nature, which, but for this appearance, had been forever concealed from

us.” And the working of this deep instinct makes all the excitement — much of it superficial and absurd enough — about works of art, which leads armies of vain travellers every year to Italy, Greece, and Egypt. Every man values every acquisition he makes in the science of beauty, above his possessions. The most useful man in the most useful world, so long as only commodity was served, would remain unsatisfied. But, as fast as he sees beauty, life acquires a very high value.

I am warned by the ill fate of many philosophers not to attempt a definition of Beauty. I will rather enumerate a few of its qualities. We ascribe beauty to that which is simple; which has no superfluous parts; which exactly answers its end; which stands related to all things; which is the mean of many extremes. It is the most enduring quality, and the most ascending quality. We say, love is blind, and the figure of Cupid is drawn with a bandage round his eyes. Blind: — yes, because he does not see what he does not like; but the sharpest-sighted hunter in the universe is Love, for finding what he seeks, and only that; and the mythologists tell us, that Vulcan was painted lame, and Cupid blind, to call attention to the fact, that one was all limbs, and the other, all eyes. In the true mythology, Love is an immortal child, and Beauty leads him as a guide: nor can we express a deeper sense than when we say, Beauty is the pilot of the young soul.

Beyond their sensuous delight, the forms and colors of Nature have a new charm for us in our perception, that not one ornament was added for ornament, but is a sign of some better health, or more excellent action. Elegance of form in bird or beast, or in the human figure, marks some excellence of structure: or beauty is only an invitation from what belongs to us. 'Tis a law of botany, that in plants, the same virtues follow the same forms. It is a rule of largest application, true in a plant, true in a loaf of bread, that in the construction of any fabric or organism, any real increase of fitness to its end, is an increase of beauty.

The lesson taught by the study of Greek and of Gothic art, of antique and of Pre-Raphaelite painting, was worth all the research, — namely, that all beauty must be organic; that outside embellishment is deformity. It is the soundness of the bones that ultimates itself in a peach-bloom complexion: health of constitution that makes the sparkle and the power of the eye. 'Tis the adjustment of the size and of the joining of the sockets of the skeleton, that gives grace of outline and the finer grace of movement. The cat and the deer cannot move or sit inelegantly. The dancing-master can never teach a badly built man to walk well. The tint of the flower proceeds from its root, and the lustres of the sea-shell begin with its existence. Hence our taste in building rejects paint, and all shifts, and shows the original grain of the wood: refuses pilasters and columns that

support nothing, and allows the real supporters of the house honestly to show themselves. Every necessary or organic action pleases the beholder. A man leading a horse to water, a farmer sowing seed, the labors of haymakers in the field, the carpenter building a ship, the smith at his forge, or, whatever useful labor, is becoming to the wise eye. But if it is done to be seen, it is mean. How beautiful are ships on the sea! but ships in the theatre, — or ships kept for picturesque effect on Virginia Water, by George IV., and men hired to stand in fitting costumes at a penny an hour! — What a difference in effect between a battalion of troops marching to action, and one of our independent companies on a holiday! In the midst of a military show, and a festal procession gay with banners, I saw a boy seize an old tin pan that lay rusting under a wall, and poising it on the top of a stick, he set it turning, and made it describe the most elegant imaginable curves, and drew away attention from the decorated procession by this startling beauty.

Another text from the mythologists. The Greeks fabled that Venus was born of the foam of the sea. Nothing interests us which is stark or bounded, but only what streams with life, what is in act or endeavor to reach somewhat beyond. The pleasure a palace or a temple gives the eye, is, that an order and method has been communicated to stones, so that they speak and geometrize, become tender or sublime with expression. Beauty is the moment of transition, as if the form were just ready to flow into other forms. Any fixedness, heaping, or concentration on one feature, — a long nose, a sharp chin, a hump-back, — is the reverse of the flowing, and therefore deformed. Beautiful as is the symmetry of any form, if the form can move, we seek a more excellent symmetry. The interruption of equilibrium stimulates the eye to desire the restoration of symmetry, and to watch the steps through which it is attained. This is the charm of running water, sea-waves, the flight of birds, and the locomotion of animals. This is the theory of dancing, to recover continually in changes the lost equilibrium, not by abrupt and angular, but by gradual and curving movements. I have been told by persons of experience in matters of taste, that the fashions follow a law of gradation, and are never arbitrary. The new mode is always only a step onward in the same direction as the last mode; and a cultivated eye is prepared for and predicts the new fashion. This fact suggests the reason of all mistakes and offence in our own modes. It is necessary in music, when you strike a discord, to let down the ear by an intermediate note or two to the accord again: and many a good experiment, born of good sense, and destined to succeed, fails, only because it is offensively sudden. I suppose, the Parisian milliner who dresses the world from her imperious boudoir will know how to reconcile the Bloomer costume to the eye of mankind, and make it triumphant

over Punch himself, by interposing the just gradations. I need not say, how wide the same law ranges; and how much it can be hoped to effect. All that is a little harshly claimed by progressive parties, may easily come to be conceded without question, if this rule be observed. Thus the circumstances may be easily imagined, in which woman may speak, vote, argue causes, legislate, and drive a coach, and all the most naturally in the world, if only it come by degrees. To this streaming or flowing belongs the beauty that all circular movement has; as, the circulation of waters, the circulation of the blood, the periodical motion of planets, the annual wave of vegetation, the action and reaction of Nature: and, if we follow it out, this demand in our thought for an ever-onward action, is the argument for the immortality.

One more text from the mythologists is to the same purpose, — *Beauty rides on a lion*. Beauty rests on necessities. The line of beauty is the result of perfect economy. The cell of the bee is built at that angle which gives the most strength with the least wax; the bone or the quill of the bird gives the most alar strength, with the least weight. “It is the purgation of superfluities,” said Michel Angelo. There is not a particle to spare in natural structures. There is a compelling reason in the uses of the plant, for every novelty of color or form: and our art saves material, by more skilful arrangement, and reaches beauty by taking every superfluous ounce that can be spared from a wall, and keeping all its strength in the poetry of columns. In rhetoric, this art of omission is a chief secret of power, and, in general, it is proof of high culture, to say the greatest matters in the simplest way.

Veracity first of all, and forever. *Rien de beau que le vrai*. In all design, art lies in making your object prominent, but there is a prior art in choosing objects that are prominent. The fine arts have nothing casual, but spring from the instincts of the nations that created them.

Beauty is the quality which makes to endure. In a house that I know, I have noticed a block of spermaceti lying about closets and mantel-pieces, for twenty years together, simply because the tallow-man gave it the form of a rabbit; and, I suppose, it may continue to be lugged about unchanged for a century. Let an artist scrawl a few lines or figures on the back of a letter, and that scrap of paper is rescued from danger, is put in portfolio, is framed and glazed, and, in proportion to the beauty of the lines drawn, will be kept for centuries. Burns writes a copy of verses, and sends them to a newspaper, and the human race take charge of them that they shall not perish.

As the flute is heard farther than the cart, see how surely a beautiful form strikes the fancy of men, and is copied and reproduced without end. How many copies are there of the Belvedere Apollo, the Venus, the Psyche, the Warwick

Vase, the Parthenon, and the Temple of Vesta? These are objects of tenderness to all. In our cities, an ugly building is soon removed, and is never repeated, but any beautiful building is copied and improved upon, so that all masons and carpenters work to repeat and preserve the agreeable forms, whilst the ugly ones die out.

The felicities of design in art, or in works of Nature, are shadows or forerunners of that beauty which reaches its perfection in the human form. All men are its lovers. Wherever it goes, it creates joy and hilarity, and everything is permitted to it. It reaches its height in woman. "To Eve," say the Mahometans, "God gave two thirds of all beauty." A beautiful woman is a practical poet, taming her savage mate, planting tenderness, hope, and eloquence, in all whom she approaches. Some favors of condition must go with it, since a certain serenity is essential, but we love its reproofs and superiorities. Nature wishes that woman should attract man, yet she often cunningly moulds into her face a little sarcasm, which seems to say, 'Yes, I am willing to attract, but to attract a little better kind of a man than any I yet behold.' French *mémoires* of the fifteenth century celebrate the name of Pauline de Viguere, a virtuous and accomplished maiden, who so fired the enthusiasm of her contemporaries, by her enchanting form, that the citizens of her native city of Toulouse obtained the aid of the civil authorities to compel her to appear publicly on the balcony at least twice a week, and, as often as she showed herself, the crowd was dangerous to life. Not less, in England, in the last century, was the fame of the Gunnings, of whom, Elizabeth married the Duke of Hamilton; and Maria, the Earl of Coventry. Walpole says, "the concourse was so great, when the Duchess of Hamilton was presented at court, on Friday, that even the noble crowd in the drawing-room clambered on chairs and tables to look at her. There are mobs at their doors to see them get into their chairs, and people go early to get places at the theatres, when it is known they will be there." "Such crowds," he adds, elsewhere, "flock to see the Duchess of Hamilton, that seven hundred people sat up all night, in and about an inn, in Yorkshire, to see her get into her post-chaise next morning."

But why need we console ourselves with the fames of Helen of Argos, or Corinna, or Pauline of Toulouse, or the Duchess of Hamilton? We all know this magic very well, or can divine it. It does not hurt weak eyes to look into beautiful eyes never so long. Women stand related to beautiful Nature around us, and the enamored youth mixes their form with moon and stars, with woods and waters, and the pomp of summer. They heal us of awkwardness by their words and looks. We observe their intellectual influence on the most serious student. They refine and clear his mind; teach him to put a pleasing method into what is

dry and difficult. We talk to them, and wish to be listened to; we fear to fatigue them, and acquire a facility of expression which passes from conversation into habit of style.

That Beauty is the normal state, is shown by the perpetual effort of Nature to attain it. Mirabeau had an ugly face on a handsome ground; and we see faces every day which have a good type, but have been marred in the casting: a proof that we are all entitled to beauty, should have been beautiful, if our ancestors had kept the laws, — as every lily and every rose is well. But our bodies do not fit us, but caricature and satirize us. Thus, short legs, which constrain us to short, mincing steps, are a kind of personal insult and contumely to the owner; and long stilts, again, put him at perpetual disadvantage, and force him to stoop to the general level of mankind. Martial ridicules a gentleman of his day whose countenance resembled the face of a swimmer seen under water. Saadi describes a schoolmaster “so ugly and crabbed, that a sight of him would derange the ecstasies of the orthodox.” Faces are rarely true to any ideal type, but are a record in sculpture of a thousand anecdotes of whim and folly. Portrait painters say that most faces and forms are irregular and unsymmetrical; have one eye blue, and one gray; the nose not straight; and one shoulder higher than another; the hair unequally distributed, *etc.* The man is physically as well as metaphysically a thing of shreds and patches, borrowed unequally from good and bad ancestors, and a misfit from the start.

A beautiful person, among the Greeks, was thought to betray by this sign some secret favor of the immortal gods: and we can pardon pride, when a woman possesses such a figure, that wherever she stands, or moves, or leaves a shadow on the wall, or sits for a portrait to the artist, she confers a favor on the world. And yet — it is not beauty that inspires the deepest passion. Beauty without grace is the hook without the bait. Beauty, without expression, tires. Abbé Ménage said of the President Le Bailleur, “that he was fit for nothing but to sit for his portrait.” A Greek epigram intimates that the force of love is not shown by the courting of beauty, but when the like desire is inflamed for one who is ill-favored. And petulant old gentlemen, who have chanced to suffer some intolerable weariness from pretty people, or who have seen cut flowers to some profusion, or who see, after a world of pains have been successfully taken for the costume, how the least mistake in sentiment takes all the beauty out of your clothes, — affirm, that the secret of ugliness consists not in irregularity, but in being uninteresting.

We love any forms, however ugly, from which great qualities shine. If command, eloquence, art, or invention, exist in the most deformed person, all the accidents that usually displease, please, and raise esteem and wonder higher. The

great orator was an emaciated, insignificant person, but he was all brain. Cardinal De Retz says of De Bouillon, "With the physiognomy of an ox, he had the perspicacity of an eagle." It was said of Hooke, the friend of Newton, "he is the most, and promises the least, of any man in England." "Since I am so ugly," said Du Guesclin, "it behooves that I be bold." Sir Philip Sidney, the darling of mankind, Ben Jonson tells us, "was no pleasant man in countenance, his face being spoiled with pimples, and of high blood, and long." Those who have ruled human destinies, like planets, for thousands of years, were not handsome men. If a man can raise a small city to be a great kingdom, can make bread cheap, can irrigate deserts, can join oceans by canals, can subdue steam, can organize victory, can lead the opinions of mankind, can enlarge knowledge, 'tis no matter whether his nose is parallel to his spine, as it ought to be, or whether he has a nose at all: whether his legs are straight, or whether his legs are amputated; his deformities will come to be reckoned ornamental, and advantageous on the whole. This is the triumph of expression, degrading beauty, charming us with a power so fine and friendly and intoxicating, that it makes admired persons insipid, and the thought of passing our lives with them insupportable. There are faces so fluid with expression, so flushed and rippled by the play of thought, that we can hardly find what the mere features really are. When the delicious beauty of lineaments loses its power, it is because a more delicious beauty has appeared; that an interior and durable form has been disclosed. Still, Beauty rides on her lion, as before. Still, "it was for beauty that the world was made." The lives of the Italian artists, who established a despotism of genius amidst the dukes and kings and mobs of their stormy epoch, prove how loyal men in all times are to a finer brain, a finer method, than their own. If a man can cut such a head on his stone gate-post as shall draw and keep a crowd about it all day, by its beauty, good nature, and inscrutable meaning: — if a man can build a plain cottage with such symmetry, as to make all the fine palaces look cheap and vulgar; can take such advantage of Nature, that all her powers serve him; making use of geometry, instead of expense; tapping a mountain for his water-jet; causing the sun and moon to seem only the decorations of his estate; this is still the legitimate dominion of beauty.

The radiance of the human form, though sometimes astonishing, is only a burst of beauty for a few years or a few months, at the perfection of youth, and in most, rapidly declines. But we remain lovers of it, only transferring our interest to interior excellence. And it is not only admirable in singular and salient talents, but also in the world of manners.

But the sovereign attribute remains to be noted. Things are pretty, graceful, rich, elegant, handsome, but, until they speak to the imagination, not yet

beautiful. This is the reason why beauty is still escaping out of all analysis. It is not yet possessed, it cannot be handled. Proclus says, "it swims on the light of forms." It is properly not in the form, but in the mind. It instantly deserts possession, and flies to an object in the horizon. If I could put my hand on the north star, would it be as beautiful? The sea is lovely, but when we bathe in it, the beauty forsakes all the near water. For the imagination and senses cannot be gratified at the same time. Wordsworth rightly speaks of "a light that never was on sea or land," meaning, that it was supplied by the observer, and the Welsh bard warns his countrywomen, that

— "half of their charms with Cadwallon shall die."

The new virtue which constitutes a thing beautiful, is a certain cosmical quality, or, a power to suggest relation to the whole world, and so lift the object out of a pitiful individuality. Every natural feature, — sea, sky, rainbow, flowers, musical tone, — has in it somewhat which is not private, but universal, speaks of that central benefit which is the soul of Nature, and thereby is beautiful. And, in chosen men and women, I find somewhat in form, speech, and manners, which is not of their person and family, but of a humane, catholic, and spiritual character, and we love them as the sky. They have a largeness of suggestion, and their face and manners carry a certain grandeur, like time and justice.

The feat of the imagination is in showing the convertibility of every thing into every other thing. Facts which had never before left their stark common sense, suddenly figure as Eleusinian mysteries. My boots and chair and candlestick are fairies in disguise, meteors and constellations. All the facts in Nature are nouns of the intellect, and make the grammar of the eternal language. Every word has a double, treble, or centuple use and meaning, What! has my stove and pepper-pot a false bottom! I cry you mercy, good shoe-box! I did not know you were a jewel-case. Chaff and dust begin to sparkle, and are clothed about with immortality. And there is a joy in perceiving the representative or symbolic character of a fact, which no bare fact or event can ever give. There are no days in life so memorable as those which vibrated to some stroke of the imagination.

The poets are quite right in decking their mistresses with the spoils of the landscape, flower-gardens, gems, rainbows, flushes of morning, and stars of night, since all beauty points at identity, and whatsoever thing does not express to me the sea and sky, day and night, is somewhat forbidden and wrong. Into every beautiful object, there enters somewhat immeasurable and divine, and just as much into form bounded by outlines, like mountains on the horizon, as into tones of music, or depths of space. Polarized light showed the secret architecture of bodies; and when the *second-sight* of the mind is opened, now one color or form or gesture, and now another, has a pungency, as if a more interior ray had

been emitted, disclosing its deep holdings in the frame of things.

The laws of this translation we do not know, or why one feature or gesture enchants, why one word or syllable intoxicates, but the fact is familiar that the fine touch of the eye, or a grace of manners, or a phrase of poetry, plants wings at our shoulders; as if the Divinity, in his approaches, lifts away mountains of obstruction, and deigns to draw a truer line, which the mind knows and owns. This is that haughty force of beauty, "*vis superba formæ*" which the poets praise, — under calm and precise outline, the immeasurable and divine: Beauty hiding all wisdom and power in its calm sky.

All high beauty has a moral element in it, and I find the antique sculpture as ethical as Marcus Antoninus: and the beauty ever in proportion to the depth of thought. Gross and obscure natures, however decorated, seem impure shambles; but character gives splendor to youth, and awe to wrinkled skin and gray hairs. An adorer of truth we cannot choose but obey, and the woman who has shared with us the moral sentiment, — her locks must appear to us sublime. Thus there is a climbing scale of culture, from the first agreeable sensation which a sparkling gem or a scarlet stain affords the eye, up through fair outlines and details of the landscape, features of the human face and form, signs and tokens of thought and character in manners, up to the ineffable mysteries of the intellect. Wherever we begin, thither our steps tend: an ascent from the joy of a horse in his trappings, up to the perception of Newton, that the globe on which we ride is only a larger apple falling from a larger tree; up to the perception of Plato, that globe and universe are rude and early expressions of an all-dissolving Unity, — the first stair on the scale to the temple of the Mind.

ILLUSIONS.

Flow, flow the waves hated, Accursed, adored,
The waves of mutation:
No anchorage is.
Sleep is not, death is not; Who seem to die live.
House you were born in,
Friends of your spring-time, Old man and young maid,
Day's toil and its guerdon, They are all vanishing,
Fleeing to fables,
Cannot be moored.
See the stars through them, Through treacherous marbles.
Know, the stars yonder,
The stars everlasting,
Are fugitive also,
And emulate, vaulted,
The lambent heat-lightning, And fire-fly's flight.
When thou dost return
On the wave's circulation,
Beholding the shimmer,
The wild dissipation,
And, out of endeavor
To change and to flow,
The gas become solid,
And phantoms and nothings
Return to be things,
And endless imbroglio
Is law and the world, —
Then first shalt thou know, That in the wild turmoil,
Horsed on the Proteus,
Thou ridest to power,
And to endurance.

Some years ago, in company with an agreeable party, I spent a long summer day in exploring the Mammoth Cave in Kentucky. We traversed, through spacious galleries affording a solid masonry foundation for the town and county overhead, the six or eight black miles from the mouth of the cavern to the innermost recess

which tourists visit, — a niche or grotto made of one seamless stalactite, and called, I believe, Serena's Bower. I lost the light of one day. I saw high domes, and bottomless pits; heard the voice of unseen waterfalls; paddled three quarters of a mile in the deep Echo River, whose waters are peopled with the blind fish; crossed the streams "Lethe" and "Styx;" plied with music and guns the echoes in these alarming galleries; saw every form of stalagmite and stalactite in the sculptured and fretted chambers, — icicle, orange-flower, acanthus, grapes, and snowball. We shot Bengal lights into the vaults and groins of the sparry cathedrals, and examined all the masterpieces which the four combined engineers, water, limestone, gravitation, and time, could make in the dark.

The mysteries and scenery of the cave had the same dignity that belongs to all natural objects, and which shames the fine things to which we foppishly compare them. I remarked, especially, the mimetic habit, with which Nature, on new instruments, hums her old tunes, making night to mimic day, and chemistry to ape vegetation. But I then took notice, and still chiefly remember, that the best thing which the cave had to offer was an illusion. On arriving at what is called the "Star-Chamber," our lamps were taken from us by the guide, and extinguished or put aside, and, on looking upwards, I saw or seemed to see the night heaven thick with stars glimmering more or less brightly over our heads, and even what seemed a comet flaming among them. All the party were touched with astonishment and pleasure. Our musical friends sung with much feeling a pretty song, "The stars are in the quiet sky," &c., and I sat down on the rocky floor to enjoy the serene picture. Some crystal specks in the black ceiling high overhead, reflecting the light of a half-hid lamp, yielded this magnificent effect.

I own, I did not like the cave so well for eking out its sublimities with this theatrical trick. But I have had many experiences like it, before and since; and we must be content to be pleased without too curiously analyzing the occasions. Our conversation with Nature is not just what it seems. The cloud-rack, the sunrise and sunset glories, rainbows, and northern lights are not quite so spherul as our childhood thought them; and the part our organization plays in them is too large. The senses interfere everywhere, and mix their own structure with all they report of. Once, we fancied the earth a plane, and stationary. In admiring the sunset, we do not yet deduct the rounding, coordinating, pictorial powers of the eye.

The same interference from our organization creates the most of our pleasure and pain. Our first mistake is the belief that the circumstance gives the joy which we give to the circumstance. Life is an ecstasy. Life is sweet as nitrous oxide; and the fisherman dripping all day over a cold pond, the switchman at the railway intersection, the farmer in the field, the negro in the rice-swamp, the fop

in the street, the hunter in the woods, the barrister with the jury, the belle at the ball, all ascribe a certain pleasure to their employment, which they themselves give it. Health and appetite impart the sweetness to sugar, bread, and meat. We fancy that our civilization has got on far, but we still come back to our primers.

We live by our imaginations, by our admirations, by our sentiments. The child walks amid heaps of illusions, which he does not like to have disturbed. The boy, how sweet to him is his fancy! how dear the story of barons and battles! What a hero he is, whilst he feeds on his heroes! What a debt is his to imaginative books! He has no better friend or influence, than Scott, Shakspeare, Plutarch, and Homer. The man lives to other objects, but who dare affirm that they are more real? Even the prose of the streets is full of refractions. In the life of the dreariest alderman, fancy enters into all details, and colors them with rosy hue. He imitates the air and actions of people whom he admires, and is raised in his own eyes. He pays a debt quicker to a rich man than to a poor man. He wishes the bow and compliment of some leader in the state, or in society; weighs what he says; perhaps he never comes nearer to him for that, but dies at last better contented for this amusement of his eyes and his fancy.

The world rolls, the din of life is never hushed. In London, in Paris, in Boston, in San Francisco, the carnival, the masquerade is at its height. Nobody drops his domino. The unities, the fictions of the piece it would be an impertinence to break. The chapter of fascinations is very long. Great is paint; nay, God is the painter; and we rightly accuse the critic who destroys too many illusions. Society does not love its unmaskers. It was wittily, if somewhat bitterly, said by D'Alembert, "*qu'un état de vapeur était un état très fâcheux, parcequ'il nous faisait voir les choses comme elles sont.*" I find men victims of illusion in all parts of life. Children, youths, adults, and old men, all are led by one bawble or another. Yoganidra, the goddess of illusion, Proteus, or Momus, or Gylfi's Mocking, — for the Power has many names, — is stronger than the Titans, stronger than Apollo. Few have overheard the gods, or surprised their secret. Life is a succession of lessons which must be lived to be understood. All is riddle, and the key to a riddle is another riddle. There are as many pillows of illusion as flakes in a snow-storm. We wake from one dream into another dream. The toys, to be sure, are various, and are graduated in refinement to the quality of the dupe. The intellectual man requires a fine bait; the sots are easily amused. But everybody is drugged with his own frenzy, and the pageant marches at all hours, with music and banner and badge.

Amid the joyous troop who give in to the charivari, comes now and then a sad-eyed boy, whose eyes lack the requisite refractions to clothe the show in due glory, and who is afflicted with a tendency to trace home the glittering

miscellany of fruits and flowers to one root. Science is a search after identity, and the scientific whim is lurking in all corners. At the State Fair, a friend of mine complained that all the varieties of fancy pears in our orchards seem to have been selected by somebody who had a whim for a particular kind of pear, and only cultivated such as had that perfume; they were all alike. And I remember the quarrel of another youth with the confectioners, that, when he racked his wit to choose the best comfits in the shops, in all the endless varieties of sweetmeat he could only find three flavors, or two. What then? Pears and cakes are good for something; and because you, unluckily, have an eye or nose too keen, why need you spoil the comfort which the rest of us find in them? I knew a humorist, who, in a good deal of rattle, had a grain or two of sense. He shocked the company by maintaining that the attributes of God were two, — power and risibility; and that it was the duty of every pious man to keep up the comedy. And I have known gentlemen of great stake in the community, but whose sympathies were cold, — presidents of colleges, and governors, and senators, — who held themselves bound to sign every temperance pledge, and act with Bible societies, and missions, and peace-makers, and cry *Hist-a-boy!* to every good dog. We must not carry comity too far, but we all have kind impulses in this direction. When the boys come into my yard for leave to gather horse-chestnuts, I own I enter into Nature's game, and affect to grant the permission reluctantly, fearing that any moment they will find out the imposture of that showy chaff. But this tenderness is quite unnecessary; the enchantments are laid on very thick. Their young life is thatched with them. Bare and grim to tears is the lot of the children in the hovel I saw yesterday; yet not the less they hung it round with frippery romance, like the children of the happiest fortune, and talked of "the dear cottage where so many joyful hours had flown." Well, this thatching of hovels is the custom of the country. Women, more than all, are the element and kingdom of illusion. Being fascinated, they fascinate. They see through Claude-Lorraines. And how dare any one, if he could, pluck away the *coulisses*, stage effects, and ceremonies, by which they live? Too pathetic, too pitiable, is the region of affection, and its atmosphere always liable to *mirage*.

We are not very much to blame for our bad marriages. We live amid hallucinations; and this especial trap is laid to trip up our feet with, and all are tripped up first or last. But the mighty Mother who had been so sly with us, as if she felt that she owed us some indemnity, insinuates into the Pandora-box of marriage some deep and serious benefits, and some great joys. We find a delight in the beauty and happiness of children, that makes the heart too big for the body. In the worst-assorted connections there is ever some mixture of true marriage. Teague and his jade get some just relations of mutual respect, kindly

observation, and fostering of each other, learn something, and would carry themselves wiselier, if they were now to begin.

'Tis fine for us to point at one or another fine madman, as if there were any exempts. The scholar in his library is none. I, who have all my life heard any number of orations and debates, read poems and miscellaneous books, conversed with many geniuses, am still the victim of any new page; and, if Marmaduke, or Hugh, or Moosehead, or any other, invent a new style or mythology, I fancy that the world will be all brave and right, if dressed in these colors, which I had not thought of. Then at once I will daub with this new paint; but it will not stick. 'Tis like the cement which the peddler sells at the door; he makes broken crockery hold with it, but you can never buy of him a bit of the cement which will make it hold when he is gone.

Men who make themselves felt in the world avail themselves of a certain fate in their constitution, which they know how to use. But they never deeply interest us, unless they lift a corner of the curtain, or betray never so slightly their penetration of what is behind it. 'Tis the charm of practical men, that outside of their practicality are a certain poetry and play, as if they led the good horse Power by the bridle, and preferred to walk, though they can ride so fiercely. Bonaparte is intellectual, as well as Cæsar; and the best soldiers, sea-captains, and railway men have a gentleness, when off duty; a good-natured admission that there are illusions, and who shall say that he is not their sport? We stigmatize the cast-iron fellows, who cannot so detach themselves, as "dragon-ridden," "thunder-stricken," and fools of fate, with whatever powers endowed.

Since our tuition is through emblems and indirections, 'tis well to know that there is method in it, a fixed scale, and rank above rank in the phantasms. We begin low with coarse masks, and rise to the most subtle and beautiful. The red men told Columbus, "they had an herb which took away fatigue;" but he found the illusion of "arriving from the east at the Indies" more composing to his lofty spirit than any tobacco. Is not our faith in the impenetrability of matter more sedative than narcotics? You play with jackstraws, balls, bowls, horse and gun, estates and politics; but there are finer games before you. Is not time a pretty toy? Life will show you masks that are worth all your carnivals. Yonder mountain must migrate into your mind. The fine star-dust and nebulous blur in Orion, "the portentous year of Mizar and Alcor," must come down and be dealt with in your household thought. What if you shall come to discern that the play and playground of all this pompous history are radiations from yourself, and that the sun borrows his beams? What terrible questions we are learning to ask! The former men believed in magic, by which temples, cities, and men were swallowed up, and all trace of them gone. We are coming on the secret of a

magic which sweeps out of men's minds all vestige of theism and beliefs which they and their fathers held and were framed upon.

There are deceptions of the senses, deceptions of the passions, and the structural, beneficent illusions of sentiment and of the intellect. There is the illusion of love, which attributes to the beloved person all which that person shares with his or her family, sex, age, or condition, nay, with the human mind itself. 'Tis these which the lover loves, and Anna Matilda gets the credit of them. As if one shut up always in a tower, with one window, through which the face of heaven and earth could be seen, should fancy that all the marvels he beheld belonged to that window. There is the illusion of time, which is very deep; who has disposed of it? or come to the conviction that what seems the succession of thought is only the distribution of wholes into causal series? The intellect sees that every atom carries the whole of Nature; that the mind opens to omnipotence; that, in the endless striving and ascents, the metamorphosis is entire, so that the soul doth not know itself in its own act, when that act is perfected. There is illusion that shall deceive even the elect. There is illusion that shall deceive even the performer of the miracle. Though he make his body, he denies that he makes it. Though the world exist from thought, thought is daunted in presence of the world. One after the other we accept the mental laws, still resisting those which follow, which however must be accepted. But all our concessions only compel us to new profusion. And what avails it that science has come to treat space and time as simply forms of thought, and the material world as hypothetical, and withal our pretension of property and even of self-hood are fading with the rest, if, at last, even our thoughts are not finalities; but the incessant flowing and ascension reach these also, and each thought which yesterday was a finality, to-day is yielding to a larger generalization?

With such volatile elements to work in, 'tis no wonder if our estimates are loose and floating. We must work and affirm, but we have no guess of the value of what we say or do. The cloud is now as big as your hand, and now it covers a county. That story of Thor, who was set to drain the drinking-horn in Asgard, and to wrestle with the old woman, and to run with the runner Lok, and presently found that he had been drinking up the sea, and wrestling with Time, and racing with Thought, describes us who are contending, amid these seeming trifles, with the supreme energies of Nature. We fancy we have fallen into bad company and squalid condition, low debts, shoe-bills, broken glass to pay for, pots to buy, butcher's meat, sugar, milk, and coal. 'Set me some great task, ye gods! and I will show my spirit.' 'Not so,' says the good Heaven; 'plod and plough, vamp your old coats and hats, weave a shoestring; great affairs and the best wine by and by.' Well, 'tis all phantasm; and if we weave a yard of tape in all humility,

and as well as we can, long hereafter we shall see it was no cotton tape at all, but some galaxy which we braided, and that the threads were Time and Nature.

We cannot write the order of the variable winds. How can we penetrate the law of our shifting moods and susceptibility? Yet they differ as all and nothing. Instead of the firmament of yesterday, which our eyes require, it is to-day an eggshell which coops us in; we cannot even see what or where our stars of destiny are. From day to day, the capital facts of human life are hidden from our eyes. Suddenly the mist rolls up, and reveals them, and we think how much good time is gone, that might have been saved, had any hint of these things been shown. A sudden rise in the road shows us the system of mountains, and all the summits, which have been just as near us all the year, but quite out of mind. But these alternations are not without their order, and we are parties to our various fortune. If life seem a succession of dreams, yet poetic justice is done in dreams also. The visions of good men are good; it is the undisciplined will that is whipped with bad thoughts and bad fortunes. When we break the laws, we lose our hold on the central reality. Like sick men in hospitals, we change only from bed to bed, from one folly to another; and it cannot signify much what becomes of such castaways, — wailing, stupid, comatose creatures, — lifted from bed to bed, from the nothing of life to the nothing of death.

In this kingdom of illusions we grope eagerly for stays and foundations. There is none but a strict and faithful dealing at home, and a severe barring out of all duplicity or illusion there. Whatever games are played with us, we must play no games with ourselves, but deal in our privacy with the last honesty and truth. I look upon the simple and childish virtues of veracity and honesty as the root of all that is sublime in character. Speak as you think, be what you are, pay your debts of all kinds. I prefer to be owned as sound and solvent, and my word as good as my bond, and to be what cannot be skipped, or dissipated, or undermined, to all the *éclat* in the universe. This reality is the foundation of friendship, religion, poetry, and art. At the top or at the bottom of all illusions, I set the cheat which still leads us to work and live for appearances, in spite of our conviction, in all sane hours, that it is what we really are that avails with friends, with strangers, and with fate or fortune.

One would think from the talk of men, that riches and poverty were a great matter; and our civilization mainly respects it. But the Indians say, that they do not think the white man with his brow of care, always toiling, afraid of heat and cold, and keeping within doors, has any advantage of them. The permanent interest of every man is, never to be in a false position, but to have the weight of Nature to back him in all that he does. Riches and poverty are a thick or thin costume; and our life — the life of all of us — identical. For we transcend the

circumstance continually, and taste the real quality of existence; as in our employments, which only differ in the manipulations, but express the same laws; or in our thoughts, which wear no silks, and taste no ice-creams. We see God face to face every hour, and know the savor of Nature.

The early Greek philosophers Heraclitus and Xenophanes measured their force on this problem of identity. Diogenes of Apollonia said, that unless the atoms were made of one stuff, they could never blend and act with one another. But the Hindoos, in their sacred writings, express the liveliest feeling, both of the essential identity, and of that illusion which they conceive variety to be “The notions, ‘*I am,*’ and ‘*This is mine,*’ which influence mankind, are but delusions of the mother of the world. Dispel, O Lord of all creatures! the conceit of knowledge which proceeds from ignorance.” And the beatitude of man they hold to lie in being freed from fascination.

The intellect is stimulated by the statement of truth in a trope, and the will by clothing the laws of life in illusions. But the unities of Truth and of Right are not broken by the disguise. There need never be any confusion in these. In a crowded life of many parts and performers, on a stage of nations, or in the obscurest hamlet in Maine or California, the same elements offer the same choices to each new comer, and, according to his election, he fixes his fortune in absolute Nature. It would be hard to put more mental and moral philosophy than the Persians have thrown into a sentence: — “Fooled thou must be, though wisest of the wise: Then be the fool of virtue, not of vice.”

There is no chance, and no anarchy, in the universe. All is system and gradation. Every god is there sitting in his sphere. The young mortal enters the hall of the firmament: there is he alone with them alone, they pouring on him benedictions and gifts, and beckoning him up to their thrones. On the instant, and incessantly, fall snow-storms of illusions. He fancies himself in a vast crowd which sways this way and that, and whose movement and doings he must obey: he fancies himself poor, orphaned, insignificant. The mad crowd drives hither and thither, now furiously commanding this thing to be done, now that. What is he that he should resist their will, and think or act for himself? Every moment, new changes, and new showers of deceptions, to baffle and distract him. And when, by and by, for an instant, the air clears, and the cloud lifts a little, there are the gods still sitting around him on their thrones, — they alone with him alone.

SUCCESS.

OLD AGE.

SOCIETY AND SOLITUDE.

I fell in with a humorist on my travels, who had in his chamber a cast of the Rondanini Me dusa, and who assured me that the name which that fine work of art bore in the catalogues was a misnomer, as he was convinced that the sculptor who carved it intended it for Memory, the mother of the Muses. In the conversation that followed, my new friend made some extraordinary confessions. "Do you not see," he said, "the penalty of learning, and that each of these scholars whom you have met at S — , though he were to be the last man, would, like the executioner in Hood's poem, guillotine the last but one?" He added many lively remarks, but his evident earnestness engaged my attention, and in the weeks that followed we became better acquainted. He had good abilities, a genial temper, and no vices; but he had one defect, — he could not speak in the tone of the people. There was some paralysis on his will, such that when he met men on common terms he spoke weakly and from the point, like a flighty girl. His consciousness of the fault made it worse. He envied every drover and lumberman in the tavern their manly speech. He coveted Mirabeau's *don terrible de la familiarité*, believing that he whose sympathy goes lowest is the man from whom kings have the most to fear. For himself he declared that he could not get enough alone to write a letter to a friend. He left the city; he hid himself in pastures. The solitary river was not solitary enough; the sun and moon put him out. When he bought a house, the first thing he did was to plant trees. He could not enough conceal himself. Set a hedge here; set oaks there, — trees behind trees; above all, set evergreens, for they will keep a secret all the year round. The most agreeable compliment you could pay him was to imply that you had not observed him in a house or a street where you had met him. Whilst he suffered at being seen where he was, he consoled himself with the delicious thought of the inconceivable number of places where he was not. An he wished of his tailor was to provide that sober mean of color and cut which would never detain the eye for a moment. He went to Vienna, to Smyrna, to London. In all the variety of costumes, a carnival, a kaleidoscope of clothes, to his horror he could never discover a man in the street who wore anything like his own dress. He would have given his soul for the ring of Gyges. His dismay at his visibility had blunted the fears of mortality. "Do you think," he said, "I am in such great terror of being shot, — I, who am only waiting to shuffle off my corporeal jacket to slip away into the back stars, and put diameters of the solar system and sidereal orbits between me and all souls, — there to wear out ages in solitude, and forget memory itself, if it be possible?" He had a remorse running to despair

of his social *gaucheries*, and walked miles and miles to get the twitchings out of his face, the starts and shrugs out of his arms and shoulders. God may forgive sins, he said, but awkwardness has no forgiveness in heaven or earth. He admired in Newton not so much his theory of the moon as his letter to Collins, in which he forbade him to insert his name with the solution of the problem in the “Philosophical Transactions”: “It would perhaps increase my acquaintance, the thing which I chiefly study to decline.”

These conversations led me somewhat later to the knowledge of similar cases, and to the discovery that they are not of very infrequent occurrence. Few substances are found pure in nature. Those constitutions which can bear in open day the rough dealing of the world must be of that mean and average structure such as iron and salt, atmospheric air, and water. But there are metals, like potassium and sodium, which, to be kept pure, must be kept under naphtha. Such are the talents determined on some specialty, which a culminating civilization fosters in the heart of great cities and in royal chambers. Nature protects her own work. To the culture of the world an Archimedes, a Newton is indispensable; so she guards them by a certain aridity. If these had been good fellows, fond of dancing, port, and clubs, we should have had no “Theory of the Sphere” and no “Principia.” They had that necessity of isolation which genius feels. Each must stand on his glass tripod if he would keep his electricity. Even Swedenborg, whose theory of the universe is based on affection, and who reprobates to weariness the danger and vice of pure intellect, is constrained to make an extraordinary exception: “There are also angels who do not live consociated, but separate, house and house; these dwell in the midst of heaven, because they are the best of angels.”

We have known many fine geniuses with that imperfection that they cannot do anything useful, not so much as write one clean sentence. 'Tis worse, and tragic, that no man is fit for society who has fine traits. At a distance he is admired, but bring him hand to hand, he is a cripple. One protects himself by solitude, and one by courtesy, and one by an acid, worldly manner, — each concealing how he can the thinness of his skin and his incapacity for strict association. But there is no remedy that can reach the heart of the disease but either habits of self-reliance that should go in practice to making the man independent of the human race, or else a religion of love. Now he hardly seems entitled to marry; for how can he protect a woman, who cannot protect himself?

We pray to be conventional. But the wary Heaven takes care you shall not be, if there is anything good in you. Dante was very bad company, and was never invited to dinner. Michel Angelo had a sad, sour time of it. The ministers of beauty are rarely beautiful in coaches and saloons. Columbus discovered no isle

or key so lonely as himself. Yet each of these potentates saw well the reason of his exclusion. Solitary was he? Why, yes; but his society was limited only by the amount of brain Nature appropriated in that age to carry on the government of the world. "If I stay," said Dante, when there was question of going to Rome, "who will go? and if I go, who will stay?"

But the necessity of solitude is deeper than we have said, and is organic. I have seen many a philosopher whose world is large enough for only one person. He affects to be a good companion; but we are still surprising his secret, that he means and needs to impose his system on all the rest. The determination of each is *from* all the others, like that of each tree up into free space. 'Tis no wonder, when each has his whole head, our societies should be so small. Like President Tyler, our party falls from us every day, and we must ride in a sulky at last. Dear heart! take it sadly home to thee, — there is no co-operation. We begin with friendships, and all our youth is a reconnoitering and recruiting of the holy fraternity they shall combine for the salvation of men. But so the remoter stars seem a nebula of united light, yet there is no group which a telescope will not resolve; and the dearest friends are separated by impassable gulfs. The co-operation is involuntary, and is put upon us by the Genius of Life, who reserves this as a part of his prerogative. 'Tis fine for us to talk; we sit and muse and are serene and complete; but the moment we meet with anybody, each becomes a fraction.

Though the stuff of tragedy and of romances is in a moral union of two superior persons whose confidence in each other for long years, out of sight and in sight, and against all appearances, is at last justified by victorious proof of probity to gods and men, causing joyful emotions, tears and glory, — though there be for heroes this *moral union*, yet they too are as far off as ever from an intellectual union, and the moral union is for comparatively low and external purposes, like the co-operation of a ship's company or of a fire-club. But how insular and pathetically solitary are all the people we know! Nor dare they tell what they think of each other when they meet in the street. We have a fine right, to be sure, to taunt men of the world with superficial and treacherous courtesies!

Such is the tragic necessity which strict science finds underneath our domestic and neighborly life, irresistibly driving each adult soul as with whips into the desert, and making our warm covenants sentimental and momentary. We must infer that the ends of thought were peremptory, if they were to be secured at such ruinous cost. They are deeper than can be told, and belong to the immensities and eternities. They reach down to that depth where society itself originates and disappears; where the question is, Which is first, man or men? where the individual is lost in his source.

But this banishment to the rocks and echoes no metaphysics can make right or tolerable. This result is so against nature, such a half-view, that it must be corrected by a common sense and experience. "A man is born by the side of his father, and there he remains." A man must be clothed with society, or we shall feel a certain bareness and poverty, as of a displaced and unfurnished member. He is to be dressed in arts and institutions, as well as in body-garments. Now and then a man exquisitely made can live alone, and must; but coop up most men and you undo them. "The king lived and ate in his hall with men, and understood men," said Selden. When a young barrister said to the late Mr. Mason, "I keep my chamber to read law,"— "Read law!" replied the veteran, "'tis in the courtroom you must read law." Nor is the rule otherwise for literature. If you would learn to write, 'tis in the street you must learn it. Both for the vehicle and for the aims of fine arts you must frequent the public square. The people, and not the college, is the writer's home. A scholar is a candle which the love and desire of all men will light. Never his lands or his rents, but the power to charm the disguised soul that sits veiled under this bearded and that rosy visage is his rent and ration. His products are as needful as those of the baker or the weaver. Society cannot do without cultivated men. As soon as the first wants are satisfied, the higher wants become imperative.

'Tis hard to mesmerize ourselves, to whip our own top; but through sympathy we are capable of energy and endurance. Concert fires people to a certain fury of performance they can rarely reach alone. Here is the use of society: it is so easy with the great to be great; so easy to come up to an existing standard; — as easy as it is to the lover to swim to his maiden though waves so grim before. The benefits of affection are immense; and the one event which never loses its romance is the encounter with superior persons on terms allowing the happiest intercourse.

It by no means follows that we are not fit for society, because *soirées* are tedious and because the *soirée* finds us tedious. A backwoodsman, who had been sent to the university, told me that when he heard the best-bred young men at the law-school talk together, he reckoned himself a boor; but whenever he caught them apart, and had one to himself alone, then they were the boors and he the better man. And if we recall the rare hours when we encountered the best persons, we then found ourselves, and then first society seemed to exist. That was society, though in the transom of a brig or on the Florida Keys.

A cold sluggish blood thinks it has not facts enough to the purpose, and must decline its turn in the conversation. But they who speak have no more, — have less. 'Tis not new facts that avail, but the heat to dissolve everybody's facts. Heat puts you in right relation with magazines of facts. The capital defect of

cold, arid natures is the want of animal spirits. They seem a power incredible, as if God should raise the dead. The recluse witnesses what others perform by their aid, with a kind of fear. It is as much out of his possibility as the prowess of Coeur-de-Lion, or an Irishman's day's-work on the railroad. 'Tis said the present and the future are always rivals. Animal spirits constitute the power of the present, and their feats are like the structure of a pyramid. Their result is a lord, a general, or a boon companion. Before these what a base mendicant is Memory with his leathern badge! But this genial heat is latent in all constitutions, and is disengaged only by the friction of society. As Bacon said of manners, "To obtain them, it only needs not to despise them," so we say of animal spirits that they are the spontaneous product of health and of a social habit. "For behavior, men learn it, as they take diseases, one of another."

But the people are to be taken in very small doses. If solitude is proud, so is society vulgar. In society, high advantages are set down to the individual as disqualifications. We sink as easily as we rise, through sympathy. So many men whom I know are degraded by their sympathies; their native aims being high enough, but their relation all too tender to the gross people about them. Men cannot afford to live together on their merits, and they adjust themselves by their demerits, — by their love of gossip, or by sheer tolerance and animal good-nature. They untune and dissipate the brave aspirant.

The remedy is to reinforce each of these moods from the other. Conversation will not corrupt us if we come to the assembly in our own garb and speech and with the energy of health to select what is ours and reject what is not. Society we must have; but let it be society, and not exchanging news or eating from the same dish. Is it society to sit in one of your chairs? I cannot go to the houses of my nearest relatives, because I do not wish to be alone. Society exists by chemical affinity, and not otherwise.

Put any company of people together with freedom for conversation, and a rapid self-distribution takes place into sets and pairs. The best are accused of exclusiveness. It would be more true to say they separate as oil from water, as children from old people, without love or hatred in the matter, each seeking his like; and any interference with the affinities would produce constraint and suffocation. All conversation is a magnetic experiment, I know that my friend can talk eloquently; you know that he cannot articulate a sentence: we have seen him in different company. Assort your party, or invite none. Put Stubbs and Coleridge, Quintilian and Aunt Miriam, into pairs, and you make them all wretched. 'Tis an extempore Sing-Sing built in a parlor. Leave them to seek their own mates, and they will be as merry as sparrows.

A higher civility will re-establish in our customs a certain reverence which

we have lost. What to do with these brisk young men who break through all fences, and make themselves at home in every house? I find out in an instant if my companion does not want me, and ropes cannot hold me when my welcome is gone. One would think that the affinities would pronounce themselves with a surer reciprocity.

Here again, as so often, Nature delights to put us between extreme antagonisms, and our safety is in the skill with which we keep the diagonal line. Solitude is impracticable, and society fatal. We must keep our head in the one and our hands in the other. The conditions are met, if we keep our independence, yet do not lose our sympathy. These wonderful horses need to be driven by fine hands. We require such a solitude as shall hold us to its revelations when we are in the street and in palaces; for most men are cowed in society, and say good things to you in private, but will not stand to them in public. But let us not be the victims of words. Society and solitude are deceptive names. It is not the circumstance of seeing more or fewer people, but the readiness of sympathy, that imports; and a sound mind will derive its principles from insight, with ever a purer ascent to the sufficient and absolute right, and will accept society as the natural element in which they are to be applied.

CIVILIZATION.

A certain degree of progress from the rudest state in which man is found, — a dweller in caves, or on trees, like an ape, — a cannibal, and eater of pounded snails, worms, and offal, — a certain degree of progress from this extreme is called Civilization. It is a vague, complex name, of many degrees. Nobody has attempted a definition. Mr. Guizot, writing a book on the subject, does not. It implies the evolution of a highly organized man, brought to supreme delicacy of sentiment, as in practical power, religion, liberty, sense of honor, and taste. In the hesitation to define what it is, we usually suggest it by negations. A nation that has no clothing, no iron, no alphabet, no marriage, no arts of peace, no abstract thought, we call barbarous. And after many arts are invented or imported, as among the Turks and Moorish nations, it is often a little complaisant to call them civilized.

Each nation grows after its own genius, and has a civilization of its own. The Chinese and Japanese, though each complete in his way, is different from the man of Madrid or the man of New York. The term imports a mysterious progress. In the brutes is none; and in mankind to-day the savage tribes are gradually extinguished rather than civilized. The Indians of this country have not learned the white man's work; and in Africa the negro of to-day is the negro of Herodotus. In other races the growth is not arrested, but the like progress that is made by a boy "when he cuts his eye-teeth," as we say, — childish illusions passing daily away and he seeing things really and comprehensively, — is made by tribes. It is the learning the secret of cumulative power, of advancing on one's self. It implies a facility of association, power to compare, the ceasing from fixed ideas. The Indian is gloomy and distressed when urged to depart from his habits and traditions. He is overpowered by the gaze of the white, and his eye sinks. The occasion of one of these starts of growth is always some novelty that astounds the mind and provokes it to dare to change. Thus there is a Cadmus, a Pytheas, a Manco Capac at the beginning of each improvement, — some superior foreigner importing new and wonderful arts, and teaching them. Of course he must not know too much, but must have the sympathy, language, and gods of those he would inform. But chiefly the sea-shore has been the point of departure, to knowledge, as to commerce. The most advanced nations are always those who navigate the most. The power which the sea requires in the sailor makes a man of him very fast, and the change of shores and population clears his head of much nonsense of his wigwam.

Where shall we begin or end the list of those feats of liberty and wit, each of

which feats made an epoch of history? Thus the effect of a framed or stone house is immense on the tranquillity, power, and refinement of the builder. A man in a cave or in a camp, a nomad, will die with no more estate than the wolf or the horse leaves. But so simple a labor as a house being achieved, his chief enemies are kept at bay. He is safe from the teeth of wild animals, from frost, sun-stroke, and weather; and fine faculties begin to yield their fine harvest. Invention and art are born, manners and social beauty and delight. 'Tis wonderful how soon a piano gets into a log-hut on the frontier. You would think they found it under a pine-stump. With it comes a Latin grammar, — and one of those tow-head boys has written a hymn on Sunday. Now let colleges, now let senates take heed! for here is one who opening these fine tastes on the basis of the pioneer's iron constitution, will gather all their laurels in his strong hands.

When the Indian trail gets widened, graded and bridged to a good road, there is a benefactor, there is a missionary, a pacificator, a wealth-bringer, a maker of markets, a vent for industry. Another step in civility is the change from war, hunting, and pasturage, to agriculture. Our Scandinavian forefathers have left us a significant legend to convey their sense of the importance of this step. "There was once a giantess who had a daughter, and the child saw a husbandman ploughing in the field. Then she ran and picked him up with her finger and thumb, and put him and his plough and his oxen into her apron, and carried them to her mother, and said, ' Mother, what sort of a beetle is this that I found wriggling in the sand?' But the mother said, ' Put it away, my child; we must begone out of this land, for these people will dwell in it.'" Another success is the post-office, with its educating energy augmented by cheapness and guarded by a certain religious sentiment in mankind; so that the power of a wafer or a drop of wax or gluten to guard a letter, as it flies over sea over land and comes to its address as if a battalion of artillery brought it, I look upon as a fine meter of civilization.

The division of labor, the multiplication of the arts of peace, which is nothing but a large allowance to each man to choose his work according to his faculty, — to live by his better hand, — fills the State with useful and happy laborers; and they, creating demand by the very temptation of their productions, are rapidly and surely rewarded by good sale: and what a police and ten commandments their work thus becomes. So true is Dr. Johnson's remark that "men are seldom more innocently employed than when they are making money."

The skilful combinations of civil government, though they usually follow natural leadings, as the lines of race, language, religion, and territory, yet require wisdom and conduct in the rullers, and in their result delight the imagination. "We see insurmountable multitudes obeying, in opposition to their strongest

passions, the restraints of a power which they scarcely perceive, and the crimes of a single individual marked and punished at the distance of half the earth.” [Dr. Thomas Brown.]

Right position of woman in the State is another index. Poverty and industry with a healthy mind read very easily the laws of humanity, and love them: place the sexes in right relations of mutual respect, and a severe morality gives that essential charm to woman which educates all that is delicate, poetic, and self-sacrificing; breeds courtesy and learning, conversation and wit, in her rough mate; so that I have thought a sufficient measure of civilization is the influence of good women.

Another measure of culture is the diffusion of knowledge, overrunning all the old barriers of caste, and, by the cheap press, bringing the university to every poor man’s door in the newsboy’s basket. Scraps of science, of thought, of poetry are in the coarsest sheet, so that in every house we hesitate to burn a newspaper until we have looked it through.

The ship, in its latest complete equipment, is an abridgment and compend of a nation’s arts: the ship steered by compass and chart, longitude reckoned by lunar observation and by chronometer, driven by steam; and in wildest sea-mountains, at vast distances from home,

“The pulses of her iron heart
Go beating through the storm.”

No use can lessen the wonder of this control by so weak a creature of forces so prodigious. I remember I watched, in crossing the sea, the beautiful skill whereby the engine in its constant working was made to produce two hundred gallons of fresh water out of salt water, every hour, — thereby supplying all the ship’s want.

The skill that pervades complex details; the man that maintains himself; the chimney taught to burn its own smoke; the farm made to produce all that is consumed on it; the very prison compelled to maintain itself and yield a revenue, and, better still, made a reform school and a manufactory of honest men out of rogues, as the steamer made fresh water out of salt, — all these are examples of that tendency to combine antagonisms and utilize evil which is the index of high civilization.

Civilization is the result of highly complex organization. In the snake, all the organs are sheathed; no hands, no feet, no fins, no wings. In bird and beast the organs are released and begin to play. In man they are all unbound and full of joyful action. With this unswaddling he receives the absolute illumination we call Reason, and thereby true liberty.

Climate has much to do with this melioration. The highest civility has never

loved the hot zones. Wherever snow falls there is usually civil freedom. Where the banana grows the animal system is indolent and pampered at the cost of higher qualities: the man is sensual and cruel. But this scale is not invariable. High degrees of moral sentiment control the unfavorable influences of climate; and some of our grandest examples of men and of races come from the equatorial regions, — as the genius of Egypt, of India, and of Arabia.

These feats are measures or traits of civility; and temperate climate is an impotent influence, though not quite indispensable, for there have been learning, philosophy and art in Iceland, and in the tropics. But one condition is essential to the social education of man, namely, morality. There can be no high civility without a deep morality, though it may not always call itself by that name, but sometimes the point of honor, as in the institution of chivalry; or patriotism, as in the Spartan and Roman republics; or the enthusiasm of some religious sect which imputes its virtue to its dogma; or the cabalism or *esprit de corps* of a masonic or other association of friends.

The evolution of a highly-destined society must be moral; it must run in the grooves of the celestial wheels. It must be catholic in aim. What is *moral*? It is the respecting in action catholic or universal ends. Hear the definition which Kant gives of moral conduct: “Act always so that the immediate motive of thy will may become a universal rule for all intelligent beings.”

Civilization depends on morality. Everything good in man leans on what is higher. This rule holds in small as in great. Thus all our strength and success in the work of our hands depend on our borrowing the aid of the elements. You have seen a carpenter on a ladder with a broad-axe chopping upward chips from a beam. How awkward! at what disadvantage he works! But see him on the ground, dressing his timber under him. Now, not his feeble muscles but the force of gravity brings down the axe; that is to say, the planet itself splits his stick. The farmer had much ill-temper, laziness and shirking to endure from his hand-sawyers, until one day he bethought him to put his saw-mill on the edge of a waterfall; and the river never tires of turning his wheel; the river is good natured, and never hints an objection.

We had letters to send: couriers could not go fast enough nor far enough; broke their wagons, foundered their horses; bad roads in spring, snowdrifts in winter, heats in summer; could not get the horses out of a walk. But we found out that the air and earth were full of Electricity, and always going our way, — just the way we wanted to send. *Would he take a message?* Just as lief as not; had nothing else to do; would carry it in no time. Only one doubt occurred, one staggering objection, — he had no carpet-bag, no visible pockets, no hands, not so much as a mouth, to carry a letter. But after much thought and many

experiments we managed to meet the conditions, and to fold up the letter in such invisible compact form as he could carry in those invisible pockets of his, never wrought by needle and thread, — and it went like a charm.

I admire still more than the saw-mill the skill which, on the sea-shore, makes the tides drive the wheels and grind corn, and which thus engages the assistance of the moon, like a hired hand, to grind, and wind, and pump, and saw, and split stone, and roll iron.

Now that is the wisdom of a man, in every instance of his labor, to hitch his wagon to a star, and see his chore done by the gods themselves. That is the way we are strong, by borrowing the might of the elements. The forces of steam, gravity, galvanism, light, magnets, wind, fire, serve us day by day and cost us nothing.

Our astronomy is full of examples of calling in the aid of these magnificent helpers. Thus, on a planet so small as ours, the want of an adequate base for astronomical measurements is early felt, as, for example, in detecting the parallax of a star. But the astronomer, having by an observation fixed the place of a star, — by so simple an expedient as waiting six months and then repeating his observation, contrived to put the diameter of the earth's orbit, say two hundred millions of miles, between his first observation and his second, and this line afforded him a respectable base for his triangle.

All our arts aim to win this vantage. We cannot bring the heavenly powers to us, but if we will only choose our jobs in directions in which they travel, they will undertake them with the greatest pleasure. It is a peremptory rule with them that *they never go out of their road*. We are dapper little busybodies and run this way and that way superserviceably; but they swerve never from their foreordained paths, — neither the sun, nor the moon, nor a bubble of air, nor a mote of dust.

And as our handiworks borrow the elements, so all our social and political action leans on principles. To accomplish anything excellent the will must work for catholic and universal ends. A puny creature, walled in on every side, as Daniel wrote, —

“ Unless above himself he can
Erect himself, how poor a thing is man!”

but when his will leans on a principle, when he is the vehicle of ideas, he borrows their omnipotence. Gibraltar may be strong, but ideas are impregnable, and bestow on the hero their invincibility. “It was a great instruction,” said a saint in Cromwell's war, “that the best courages are hut beams of the Almighty.” Hitch your wagon to a star. Let us not fag in paltry works which serve our pot and bag alone. Let us not lie and steal. No god will help. We shall find all their

teams going the other way, — Charles's Wain, Great Bear, Orion, Leo, Hercules: every god will leave us. Work rather for those interests which the divinities honor and promote, — justice, love, freedom, knowledge, utility.

If we can thus ride in Olympian chariots by putting our works in the path of the celestial circuits, we can harness also evil agents, the powers of darkness, and force them to serve against their will the ends of wisdom and virtue. Thus a wise Government puts fines and penalties on pleasant vices. What a benefit would the American government, not yet relieved of its extreme need, render to itself and to every city, village, and hamlet in the States, if it would tax whiskey and rum almost to the point of prohibition! Was it Bonaparte who said that he found vices very good patriots?— “he got five millions from the love of brandy, and he should be glad to know which of the virtues would pay him as much.” Tobacco and opium have broad backs, and will cheerfully carry the load of armies, if you choose to make them pay high for such joy as they give and such harm as they do.

These are traits and measures and modes; and the true test of civilization is, not the census, nor the size of cities, nor the crops, — no, but the kind of man the country turns out. I see the vast advantages of this country, spanning the breadth of the temperate zone. I see the immense material prosperity, — towns on towns, states on states, and wealth piled in the massive architecture of cities; California quartz-mountains dumped down in New York to be repiled architecturally along-shore from Canada to Cuba, and thence westward to California again. But it is not New York streets, built by the confluence of workmen and wealth of all nations, though stretching out towards Philadelphia until they touch it, and northward until they touch New Haven, Hartford, Springfield, Worcester, and Boston, — not these that make the real estimation. But when I look over this constellation of cities which animate and illustrate the land, and see how little the government has to do with their daily life, how self-helped and self-directed all families are, — knots of men in purely natural societies, societies of trade, of kindred blood, of habitual hospitality, house and house, man acting on man by weight of opinion, of longer or better-directed industry; the refining influence of women, the invitation which experience and permanent causes open to youth and labor: — when I see how much each virtuous and gifted person, whom all men consider, lives affectionately with scores of excellent people who are not known far from home, and perhaps with great reason reckons these people his superiors in virtue and in the symmetry and force of their qualities, — I see what cubic values America has, and in these a better certificate of civilization than great cities or enormous wealth.

In strictness, the vital refinements are the moral and intellectual steps. The

appearance of the Hebrew Moses, of the Indian Buddh; in Greece, of the Seven Wise Masters, of the acute and upright Socrates, and of the stoic Zeno; in Judaea, the advent of Jesus, and, in modern Christendom, of the realists Huss, Savonarola, and Luther, — are causal facts which carry forward races to new convictions and elevate the rule of life. In the presence of these agencies it is frivolous to insist on the invention of printing or gunpowder, of steam-power or gas-light, percussion-caps and rubber-shoes, which are toys thrown off from that security, freedom, and exhilaration which a healthy morality creates in society. These arts add a comfort and smoothness to house and street life; but a purer morality, which kindles genius, civilizes civilization, casts backward all that we held sacred into the profane, as the flame of oil throws a shadow when shined upon by the flame of the Bude-light. Not the less the popular measures of progress will ever be the arts and the laws.

But if there be a country which cannot stand any one of these tests, — a country where knowledge cannot be diffused without perils of mob-law and statute-law; where speech is not free; where the post-office is violated, mail-bags opened, and letters tampered with; where public debts and private debts outside of the State are repudiated; where liberty is attacked in the primary institution of social life; where the position of the white woman is injuriously affected by the outlawry of the black woman; where the arts, such as they have, are all imported, having no indigenious life; where the laborer is not secured in the earnings of his own hands; where suffrage is not free or equal; — that country is, in all these respects, not civil, but barbarous; and no advantages of soil, climate, or coast can resist these suicidal mischiefs.

Morality and all the incidents of morality are essential; as, justice to the citizen, and personal liberty. Montesquieu says: “Countries are well cultivated, not as they are fertile, but as they are free;” and the remark holds not less but more true of the culture of men, than of the tillage of land. And the highest proof of civility is that the whole public action of the State is directed on securing the greatest good of the greatest number.

ART.

All departments of life at the present day, — Trade, Politics, Letters, Science, or Religion, seem to feel, and to labor to express, the identity of their law. They are rays of one sun; they translate each into a new language the sense of the other. They are sublime when seen as emanations of a Necessity contradistinguished from the vulgar Fate by being instant and alive, and dissolving man as well as his works in its flowing beneficence. This influence is conspicuously visible in the principles and history of Art.

On one side in primary communication with absolute truth through thought and instinct, the human mind on the other side tends, by an equal necessity, to the publication and embodiment of its thought, modified and dwarfed by the impurity and untruth which in all our experience injure the individuality through which it passes. The child not only suffers, but cries; not only hungers, but eats. The man not only thinks, but speaks and acts. Every thought that arises in the mind, in its rising aims to pass out of the mind into act; just as every plant, in the moment of germination, struggles up to light. Thought is the seed of action; but action is as much its second form as thought is its first. It rises in thought, to the end that it may be uttered and acted. The more profound the thought, the more burdensome. Always in proportion to the depth of its sense does it knock importunately at the gates of the soul, to be spoken, to be done. What is in, will out. It struggles to the birth. Speech is a great pleasure, and action a great pleasure; they cannot be foreborne.

The utterance of thought and emotion in speech and action may be conscious or unconscious. The sucking child is an unconscious actor. The man in an ecstasy of fear or anger is an unconscious actor. A large part of our habitual actions are unconsciously done, and most of our necessary words are unconsciously said.

The conscious utterance of thought, by speech or action, to any end, is Art. From the first imitative babble of a child to the despotism of eloquence; from his first pile of toys or chip bridge to the masonry of Minor Rock Lighthouse or the Pacific Railroad; from the tattooing of the Owhyhees to the Vatican Gallery; from the simplest expedient of private prudence to the American Constitution; from its first to its last works, Art is the spirit's voluntary use and combination of things to serve its end. The Will distinguishes it as spiritual action. Relatively to themselves, the bee, the bird, the beaver, have no art; for what they do they do instinctively; but relatively to the Supreme Being, they have. And the same is true of all unconscious action: relatively to the doer, it is instinct; relatively to

the First Cause, it is Art. In this sense, recognizing the Spirit which informs Nature, Plato rightly said, "Those things which are said to be done by Nature are indeed done by Divine Art." Art, universally, is the spirit creative. It was defined by Aristotle, "The reason of the thing, without the matter."

If we follow the popular distinction of works according to their aim, we should say, the Spirit, in its creation, aims at use or at beauty, and hence Art divides itself into the Useful and the Fine Arts.

The useful arts comprehend not only those that lie next to instinct, as agriculture, building, weaving, &c., but also navigation, practical chemistry, and the construction of all the grand and delicate tools and instruments by which man serves himself; as language, the watch, the ship, the decimal cipher; and also the sciences, so far as they are made serviceable to political economy.

When we reflect on the pleasure we receive from a ship, a railroad, a dry-dock; or from a picture, a dramatic representation, a statue, a poem, — we find that these have not a quite simple, but a blended origin. We find that the question, What is Art? leads us directly to another, — Who is the Artist? And the solution of this is the key to the history of Art.

I hasten to state the principle which prescribes, through different means, its firm law to the useful and the beautiful arts. The law is this. The universal soul is the alone creator of the useful and the beautiful; therefore to make anything useful or beautiful, the individual must be submitted to the universal mind.

In the first place let us consider this in reference to the useful arts. Here the omnipotent agent is Nature; all human acts are satellites to her orb. Nature is the representative of the universal mind, and the law becomes this, — that Art must be a complement to nature, strictly subsidiary. It was said, in allusion to the great structures of the ancient Romans, the aqueducts and bridges, that "their Art was a Nature working to municipal ends." That is a true account of all just works of useful art. Smeaton built Eddystone Lighthouse on the model of an oak-tree, as being the form in nature best designed to resist a constant assailing force. Dollond formed his achromatic telescope on the model of the human eye. Duhamel built a bridge by letting in a piece of stronger timber for the middle of the under surface, getting his hint from the structure of the shin-bone.

The first and last lesson of the useful arts is that Nature tyrannizes over our works. They must be conformed to her law, or they will be ground to powder by her omnipresent activity. Nothing droll, nothing whimsical will endure. Nature is ever interfering with Art. You cannot build your house or pagoda as you will, but as you must. There is a quick bound set to your captice. The leaning tower can only lean so far. The verandah or pagoda roof can curve upward only to a certain point. The slope of your roof is determined by the weight of snow. It is

only within narrow limits that the discretion of the architect may range: gravity, wind, sun, rain, the size of men and animals, and such like, have more to say than he. It is the law of fluids that prescribes the shape of the boat, — keel, rudder, and bows, — and, in the finer fluid above, the form and tackle of the sails. Man seems to have no option about his tools, but merely the necessity to learn from Nature what will fit best, as if he were fitting a screw or a door. Beneath a necessity thus almighty, what is artificial in man's life seems insignificant. He seems to take his task so minutely from intimations of Nature, that his works become as it were hers, and he is no longer free.

But if we work within this limit, she yields us all her strength. All powerful action is performed by bringing the forces of nature to bear upon our objects. We do not grind corn or lift the loom by our own strength, but we build a mill in such position as to set the north wind to play upon our instrument, or the elastic force of steam, or the ebb and flow of the sea. So in our handiwork, we do few things by muscular force, but we place ourselves in such attitudes as to bring the force of gravity, that is, the weight of the planet, to bear upon the spade or the axe we wield. In short, in all our operations we seek not to use our own, but to bring a quite infinite force to bear.

Let us now consider this law as it affects the works that have beauty for their end, that is, the productions of the Fine Arts. Here again the prominent fact is subordination of man. His art is the least part of his work of art. A great deduction is to be made before we can know his proper contribution to it.

Music, Eloquence, Poetry, Painting, Sculpture, Architecture. This is a rough enumeration of the Fine Arts. I omit Rhetoric, which only respects the form of eloquence and poetry. Architecture and eloquence are mixed arts, whose end is some times beauty and sometimes use.

It will be seen that in each of these arts there is much which is not spiritual. Each has a material basis, and in each the creating intellect is crippled in some degree by the stuff on which it works. The basis of poetry is language, which is material only on one side. It is a demi-god. But being applied primarily to the common necessities of man, it is not new-created by the poet for his own ends.

The basis of music is the qualities of the air and the vibrations of sonorous bodies. The pulsation of a stretched string or wire gives the ear the pleasure of sweet sound, before yet the musician has enhanced this pleasure by concords and combinations.

Eloquence, as far as it is a fine art, is modified how much by the material organization of the orator, the tone of the voice, the physical strength, the play of the eye and countenance. All this is so much deduction from the purely spiritual pleasure, as so much deduction from the merit of Art, and is the attribute of

Nature.

In painting, bright colors stimulate the eye before yet they are harmonized into a landscape. In sculpture and in architecture the material, as marble or granite, and in architecture the mass, are sources of great pleasure quite independent of the artificial arrangement. The art resides in the model, in the plan; for it is on that the genius of the artist is expended, not on the statue or the temple. Just as much better as is the polished statue of dazzling marble than the clay model, or as much more impressive as is the granite cathedral or pyramid than the ground-plan or profile of them on paper, so much more beauty owe they to Nature than to Art.

There is a still larger deduction to be made from the genius of the artist in favor of Nature than I have yet specified.

A jumble of musical sounds on a viol or a flute, in which the rhythm of the tune is played without one of the notes being right, gives pleasure to the unskilful ear. A very coarse imitation of the human form on canvas, or in wax-work; a coarse sketch in colors of a landscape, in which imitation is all that is attempted, — these things give to unpractised eyes, to the uncultured, who do not ask a fine spiritual delight, almost as much pleasure as a statue of Canova or a picture of Titian. And in the statue of Canova or the picture of Titian, these give the great part of the pleasure; they are the basis on which the fine spirit rears a higher delight, but to which these are indispensable.

Another deduction from the genius of the artist is what is conventional in his art, of which there is much in every work of art. Thus how much is there that is not original in every particular building, in every statue, in every tune, painting, poem, or harangue! — whatever is national or usual; as the usage of building all Roman churches in the form of a cross, the prescribed distribution of parts of a theatre, the custom of draping a statue in classical costume. Yet who will deny that the merely conventional part of the performance contributes much to its effect?

One consideration more exhausts I believe all the deductions from the genius of the artist in any given work. This is the adventitious. Thus the pleasure that a noble temple gives us is only in part owing to the temple. It is exalted by the beauty of sunlight, the play of the clouds, the landscape around it, its grouping with the houses, trees, and towers in its vicinity. The pleasure of eloquence is in greatest part owing often to the stimulus of the occasion which produces it, — to the magic of sympathy, which exalts the feeling of each by radiating on him the feeling of all.

The effect of music belongs how much to the place, as the church, or the moonlight walk; or to the company; or, if on the stage, to what went before in

the play, or to the expectation of what shall come after.

In poetry, "It is tradition more than invention that helps the poet to a good fable." The adventitious beauty of poetry may be felt in the greater delight which a verse gives in happy quotation than in the poem.

It is a curious proof of our conviction that the artist does not feel himself to be the parent of his work, and is as much surprised at the effect as we, that we are so unwilling to impute our best sense of any work of art to the author. The highest praise we can attribute to any writer, painter, sculptor, builder, is, that he actually possessed the thought or feeling with which he has inspired us. We hesitate at doing Spenser so great an honor as to think that he intended by his allegory the sense we affix to it. We grudge to Homer the wide human circumspection his commentators ascribe to him.

Even Shakspeare, of whom we can believe every thing, we think indebted to Goethe and to Coleridge for the wisdom they detect in his Hamlet and Antony. Especially have we this infirmity of faith in contemporary genius. We fear that Allston and Greenough did not foresee and design all the effect they produce on us. Our arts are happy hits. We are like the musician on the lake, whose melody is sweeter than he knows, or like a traveller surprised by a mountain echo, whose trivial word returns to him in romantic thunders.

In view of these facts, I say that the power of Nature predominates over the human will in all works of even the fine arts, in all that respects their material and external circumstances. Nature paints the best part of the picture, carves the best part of the statue, builds the best part of the house, and speaks the best part of the oration. For all the advantages to which I have adverted are such as the artist did not consciously produce. He relied on their aid, he put himself in the way to receive aid from some of them; but he saw that his planting and his watering waited for the sunlight of Nature, or were vain.

Let us proceed to the consideration of the law stated in the beginning of this essay, as it affects the purely spiritual part of a work of art.

As, in useful art, so far as it is useful, the work must be strictly subordinated to the laws of Nature, so as to become a sort of continuation and in no wise a contradiction of Nature; so in art that aims at beauty must the parts be subordinated to Ideal Nature, and everything individual abstracted, so that it shall be the production of the universal soul. The artist who is to produce a work which is to be admired, not by his friends or his townspeople or his contemporaries but by all men, and which is to be more beautiful to the eye in proportion to its culture, must disindividualize himself, and be a man of no party and no manner and no age, but one through whom the soul of all men circulates as the common air through his lungs. He must work in the spirit in which we

conceive a prophet to speak, or an angel of the Lord to act; that is, he is not to speak his own words, or do his own works, or think his own thoughts, but he is to be an organ through which the universal mind acts.

In speaking of the useful arts, I pointed to the fact that we do not dig, or grind, or hew, by our muscular strength, but by bringing the weight of the planet to bear on the spade, axe, or bar. Precisely analogous to this, in the fine arts, is the manner of our intellectual work. We aim to hinder our individuality from acting. So much as we can shove aside our egotism, our prejudice and will, and bring the omniscience of reason upon the subject before us, so perfect is the work. The wonders of Shakspeare are things which he saw whilst he stood aside, and then returned to record them. The poet aims at getting observations without aim; to subject to thought things seen without (voluntary) thought.

In eloquence, the great triumphs of the art are when the orator is lifted above himself; when consciously he makes himself the mere tongue of the occasion and the hour, and says what cannot but be said. Hence the term *abandonment*, to describe the self-surrender of the orator. Not his will, but the principle on which he is horsed, the great connection and crisis of events, thunder in the ear of the crowd.

In poetry, where every word is free, every word is necessary. Good poetry could not have been otherwise written than it is. The first time you hear it, it sounds rather as if copied out of some invisible tablet in the Eternal mind, than as if arbitrarily composed by the poet. The feeling of all great poets has accorded with this. They found the verse, not made it. The muse brought it to them.

In sculpture, did ever anybody call the Apollo a fancy piece? Or say of the Laocoön how it might be made different? A masterpiece of art has in the mind a fixed place in the chain of being, as much as a plant or a crystal.

The whole language of men, especially of artists, in reference to this subject, points at the belief that every work of art, in proportion to its excellence, partakes of the precision of fate: no room was there for choice, no play for fancy; for in the moment or in the successive moments when that form was seen, the iron lids of Reason were unclosed, which ordinarily are heavy with slumber. The individual mind became for the moment the vent of the mind of humanity.

There is but one Reason. The mind that made the world is not one mind, but *the* mind. And every work of art is a more or less pure manifestation of the same. Therefore we arrive at this conclusion, which I offer as a conformation of the whole view, that the delight which a work of art affords, seems to arise from our recognizing in it the mind that formed Nature, again in active operation. It differs from the works of Nature in this, that they are organically reproductive. This is not, but spiritually it is prolific by its powerful action on the intellects of

men.

Hence it follows that a study of admirable works of art sharpens our perceptions of the beauty of Nature; that a certain analogy reigns throughout the wonders of both; that the contemplation of a work of great art draws us into a state of mind which may be called religious. It conspires with all exalted sentiments.

Proceeding from absolute mind, whose nature is goodness as much as truth, the great works are always attuned to moral nature. If the earth and sea conspire with virtue more than vice, — so do the masterpieces of art. The galleries of ancient sculpture in Naples and Rome strike no deeper conviction into the mind than the contrast of the purity, the severity expressed in these fine old heads, with the frivolity and grossness of the mob that exhibits and the mob that gazes at them. These are the coautenances of the first-born, — the face of man in the morning of the world. No mark is on these lofty features of sloth, or luxury, or meanness, and they surprise you with a moral admonition, as they speak of nothing around you, but remind you of the fragrant thoughts and the purest resolutions of your youth.

Herein is the explanation of the analogies which exist in all the arts. They are the reappearance of one mind, working in many materials to many temporary ends. Raphael paints wisdom, Handel sings it, Phidias carves it, Shakspeare writes it, Wren builds it, Columbus sails it, Luther preaches it, Washington arms it, Watt mechanizes it. Painting was called “silent poetry,” and poetry “speaking painting.” The laws of each art are convertible into the laws of every other.

Herein we have an explanation of the necessity that reigns in all the kingdom of Art. Arising out of eternal Reason, one and perfect, whatever is beautiful rests on the foundation of the necessary. Nothing is arbitrary, nothing is insulated in beauty. It depends forever on the necessary and the useful. The plumage of the bird, the mimic plumage of the insect, has a reason for its rich colors in the constitution of the animal. Fitness is so inseparable an accompaniment of beauty, that it has been taken for it. The most perfect form to answer an end is so far beautiful. We feel, in seeing a noble building, which rhymes well, as we do in hearing a perfect song, that it is spiritually organic; that is, had a necessity, in nature, for being; was one of the possible forms in the Divine mind, and is now only discovered and executed by the artist, not arbitrarily composed by him.

And so every genuine work of art has as much reason for being as the earth and the sun. The gayest charm of beauty has a root in the constitution of things. The Iliad of Homer, the songs of David, the odes of Pindar, the tragedies of Æschylus, the Doric temples, the Gothic cathedrals, the plays of Shakspeare, all and each were made not for sport but in grave earnest, in tears and smiles of

suffering and loving men.

Viewed from this point the history of Art becomes intelligible, and moreover one of the most agreeable studies. We see how each work of art sprang irresistibly from necessity, and, moreover, took its form from the broad hint of Nature. Beautiful in this wise is the obvious origin of all the known orders of architecture; namely, that they were the idealizing of the primitive abodes of each people. There was no wilfulness in the savages in this perpetuating of their first rude abodes. The first form in which they built a house would be the first form of their public and religious edifice also. This form becomes immediately sacred in the eyes of their children, and as more traditions cluster round it, is imitated with more splendor in each succeeding generation.

In like manner it has been remarked by Goethe that the granite breaks into parallelepipeds, which broken in two, one part would be an obelisk; that in Upper Egypt the inhabitants would naturally mark a memorable spot by setting up so conspicuous a stone. Again, he suggested, we may see in any stone wall, on a fragment of rock, the projecting veins of harder stone which have resisted the action of frost and water which has decomposed the rest. This appearance certainly gave the hint of the hieroglyphics inscribed on their obelisk. The amphitheatre of the old Romans, — any one may see its origin who looks at the crowd running together to see any fight, sickness, or odd appearance in the street. The first comers gather round in a circle, those behind stand on tiptoe, and farther back they climb on fences or window-sills, and so make a cup of which the object of attention occupies the hollow area. The architect put benches in this, and enclosed the cup with a wall, — and behold a Coliseum!

It would be easy to show of many fine things in the world, — in the customs of nations, the etiquette of courts, the constitution of governments, — the origin in quite simple local necessities. Heraldry for example, and the ceremonies of a coronation, are a dignified repetition of the occurrences that might befall a dragoon and his footboy. The College of Cardinals were originally the parish priests of Rome. The leaning towers originated from the civil discords which induced every lord to build a tower. Then it became a point of family pride, — and for more pride the novelty of a leaning tower was built.

This strict dependence of Art upon material and ideal Nature, this adamant necessity which underlies it, has made all its past and may foreshow its future history. It never was in the power of any man or any community to call the arts into being. They come to serve his actual wants, never to please his fancy. These arts have their origin always in some enthusiasm, as love, patriotism, or religion. Who carved marble? The believing man, who wished to symbolize their gods to the waiting Greeks.

The Gothic cathedrals were built when the builder and the priest and the people were overpowered by their faith. Love and fear laid every stone. The Madonnas of Raphael and Titian were made to be worshipped. Tragedy was instituted for the like purpose, and the miracles of music: all sprang out of some genuine enthusiasm, and never out of dilettanteism and holidays. Now they languish, because their purpose is merely exhibition. Who cares, who knows what works of art our government have ordered to be made for the Capitol? They are a mere flourish to please the eye of persons who have associations with books and galleries. But in Greece, the Demos of Athens divided into political factions upon the merits of Phidias.

In this country, at this time, other interests than religion and patriotism are predominant, and the arts, the daughters of enthusiasm, do not flourish. The genuine offspring of our ruling passions we behold. Popular institutions, the school, the reading-room, the telegraph, the post-office, the exchange, the insurance-company, and the immense harvest of economical inventions, are the fruit of the equality and the boundless liberty of lucrative callings. These are superficial wants; and their fruits are these superficial institutions. But, as far as they accelerate the end of political freedom and national education, they are preparing the soil of man for fairer flowers and fruits in another age. For beauty, truth, and goodness are not obsolete; they spring eternal in the breast of man; they are as indigenous in Massachusetts as in Tuscany or the Isles of Greece. And that Eternal Spirit whose triple face they are, moulds from them forever, for his mortal child, images to remind him of the Infinite and Fair.

ELOQUENCE.

It is the doctrine of the popular music-masters that whoever can speak can sing. So probably every man is eloquent once in his life. Our temperaments differ in capacity of heat, or, we boil at different degrees. One man is brought to the boiling-point by the excitement of conversation in the parlor. The waters, of course, are not very deep. He has a two-inch enthusiasm, a patty-pan ebullition. Another requires the additional caloric of a multitude and a public debate; a third needs an antagonist, or a hot indignation; a fourth needs a revolution; and a fifth, nothing less than the grandeur of absolute ideas, the splendors and shades of Heaven and Hell.

But, because every man is an orator, how long soever he may have been a mute, an assembly of men is so much more susceptible. The eloquence of one stimulates all the rest, some up to the speaking-point and all others to a degree that makes them good receivers and conductors, and they avenge themselves for their enforced silence by increased loquacity on their return to the fireside.

The plight of these phlegmatic brains is better than that of those who prematurely boil, and who impatiently break silence before their time. Our county conventions often exhibit a small-pot-soon-hot style of eloquence. We are too much reminded of a medical experiment where a series of patients are taking nitrous-oxide gas. Each patient in turn exhibits similar symptoms, — redness in the face, volubility, violent gesticulation, delirious attitudes, occasional stamping, an alarming loss of perception of the passage of time, a selfish enjoyment of his sensations, and loss of perception of the sufferings of the audience.

Plato says that the punishment which the wise suffer who refuse to take part in the government, is, to live under the government of worse men; and the like regret is suggested to all the auditors, as the penalty of abstaining to speak, — that they shall hear worse orators than themselves.

But this lust to speak marks the universal feeling of the energy of the engine, and the curiosity men feel to touch the springs. Of all the musical instruments on which men play, a popular assembly is that which has the largest compass and variety, and out of which, by genius and study, the most wonderful effects can be drawn. An audience is not a simple addition of the individuals that compose it. Their sympathy gives them a certain social organism, which fills each member, in his own degree, and most of all the orator, as a jar in a battery is charged with the whole electricity of the battery. No one can survey the face of an excited assembly, without being apprised of new opportunity for painting in

fire human thought, and being agitated to agitate. How many orators sit mute there below! They come to get justice done to that ear and intuition which no Chatham and no Demosthenes has begun to satisfy.

The Welsh Triads say, “Many are the friends of the golden tongue.” Who can wonder at the attractiveness of Parliament, or of Congress, or the bar, for our ambitions young men, when the highest bribes of society are at the feet of the successful orator? He has his audience at his devotion. All other fames must hush before his. He is the true potentate; for they are not kings who sit on thrones, but they who know how to govern. The definitions of eloquence describe its attraction for young men. Antiphon the Rhamnusian, one of Plutarch’s ten orators, advertised in Athens “that he would cure distempers of the mind with words.” No man has a prosperity so high or firm but two or three words can dishearten it. There is no calamity which right words will not begin to redress. Isocrates described his art as “the power of magnifying what was small and diminishing what was great,” — an acute but partial definition. Among the Spartans, the art assumed a Spartan shape, namely, of the sharpest weapon. Socrates says: “If any one wishes to converse with the meanest of the Lacedæmonians, he will at first find him despicable in conversation, but when a proper opportunity offers, this same person, like a skilful jaculator, will hurl a sentence worthy of attention, short and contorted, so that he who converses with him will appear to be in no respect superior to a boy.” Plato’s definition of rhetoric is, “the art of ruling the minds of men.” The Koran says, “A mountain may change its place, but a man will not change his disposition;” yet the end of eloquence is, — is it not? — to alter in a pair of hours, perhaps in a half-hour’s discourse, the convictions and habits of years. Young men, too, are eager to enjoy this sense of added power and enlarged sympathetic existence. The orator sees himself the organ of a multitude, and concentrating their valors and powers:

—
“But now the blood of twenty thousand men
Blushed in my face.”

That which he wishes, that which eloquence ought to reach, is not a particular skill in telling a story, or neatly summing up evidence, or arguing logically, or dexterously addressing the prejudice of the company, — no, but a taking sovereign possession of the audience. Him we call an artist who shall play on an assembly of men as a master on the keys of the piano, — who, seeing the people furious, shall soften and compose them, shall draw them, when he will, to laughter and to tears. Bring him to his audience, and, be they who they may, — coarse or refined, pleased or displeased, sulky or savage, with their opinions in the keeping of a confessor, or with their opinions in their bank-safes, — he will

have them pleased and humored as he chooses; and they shall carry and execute that which he bids them.

This is that despotism which poets have celebrated in the “Pied Piper of Hamelin,” whose music drew like the power of gravitation, — drew soldiers and priests, traders and feasters, women and boys, rats and mice; or that of the minstrel of Meudon, who made the pall-bearers dance around the bier. This is a power of many degrees and requiring in the orator a great range of faculty and experience, requiring a large composite man, such as Nature rarely organizes; so that in our experience we are forced to gather up the figure in fragments, here one talent and there another.

The audience is a constant meter of the orator. There are many audiences in every public assembly, each one of which rules in turn. If anything comic and coarse is spoken, you shall see the emergence of the boys and rowdies, so loud and vivacious that you might think the house was filled with them. If new topics are started, graver and higher, these roisters recede; a more chaste and wise attention takes place. You would think the boys slept, and that the men have any degree of profoundness. If the speaker utter a noble sentiment, the attention deepens, a new and highest audience now listens, and the audiences of the fun and of facts and of the understanding are all silenced and awed. There is also something excellent in every audience, — the capacity of virtue. They are ready to be beatified. They know so much more than the orator, — and are so just! There is a tablet there for every line he can inscribe, though he should mount to the highest levels. Humble persons are conscious of new illumination; narrow brows expand with enlarged affections; — delicate spirits, long unknown to themselves, masked and muffled in coarsest fortunes, who now hear their own native language for the first time, and leap to hear it. But all these several audiences, each above each, which successively appear to greet the variety of style and topic, are really composed out of the same persons; nay, sometimes the same individual will take active part in them all, in turn.

This range of many powers in the consummate speaker, and of many audiences in one assembly, leads us to consider the successive stages of oratory.

Perhaps it is the lowest of the qualities of an orator, but it is, on so many occasions, of chief importance, — a certain robust and radiant physical health; or, — shall I say? — great volumes of animal heat. When each auditor feels himself to make too large a part of the assembly, and shudders with cold at the thinness of the morning audience, and with fear lest all will heavily fail through one bad speech, mere energy and mellowness are then inestimable. Wisdom and learning would be harsh and unwelcome, compared with a substantial cordial man, made of milk as we say, who is a house-warmer, with his obvious honesty

and good meaning, and a hue-and-cry style of harangue, which inundates the assembly with a flood of animal spirits, and makes all safe and secure, so that any and every sort of good speaking becomes at once practicable. I do not rate this animal eloquence very highly; and yet, as we must be fed and warmed before we can do any work well, — even the best, — so is this semi-animal exuberance, like a good stove, of the first necessity in a cold house.

Climate has much to do with it, — climate and race. Set a New-Englander to describe any accident which happened in his presence. What hesitation and reserve in his narrative! He tells with difficulty some particulars, and gets as fast as he can to the result, and, though he cannot describe, hopes to suggest the whole scene. Now listen to a poor Irishwoman recounting some experience of hers. Her speech flows like a river, — so unconsidered, so humorous, so pathetic, such justice done to all the parts! It is a true transubstantiation, — the fact converted into speech, all warm and colored and alive, as it fell out. Our Southern people are almost all speakers, and have every advantage over the New England people, whose climate is so cold that 't is said we do not like to open our mouths very wide. But neither can the Southerner in the United States, nor the Irish, compare with the lively inhabitant of the south of Europe. The traveller in Sicily needs no gayer melodramatic exhibition than the *table d'hôte* of his inn will afford him in the conversation of the joyous guests. They mimic the voice and manner of the person they describe; they crow, squeal, hiss, cackle, bark, and scream like mad, and, were it only by the physical strength exerted in telling the story, keep the table in unbounded excitement. But in every constitution some large degree of animal vigor is necessary as material foundation for the higher qualities of the art.

But eloquence must be attractive, or it is none. The virtue of books is to be readable, and of orators to be interesting; and this is a gift of Nature; as Demosthenes, the most laborious student in that kind, signified his sense of this necessity when he wrote, "Good Fortune," as his motto on his shield. As we know, the power of discourse of certain individuals amounts to fascination, though it may have no lasting effect. Some portion of this sugar must intermingle. The right eloquence needs no bell to call the people together, and no constable to keep them. It draws the children from their play, the old from their arm-chairs, the invalid from his warm chamber: it holds the hearer fast; steals away his feet, that he shall not depart; his memory, that he shall not remember the most pressing affairs; his belief, that he shall not admit any opposing considerations. The pictures we have of it in semi-barbarous ages, when it has some advantages in the simpler habit of the people, show what it aims at. It is said that the Khans or story-tellers in Ispahan and other cities of the East, attain a

controlling Power over their audience, keeping them for many hours attentive to the most fanciful and extravagant adventures. The whole world knows pretty well the style of these improvisators, and how fascinating they are, in our translations of the “Arabian Nights.” Scheherezade tells these stories to save her life, and the delight of young Europe and young America in them proves that she fairly earned it. And who does not remember in childhood some white or black or yellow Scheherezade, who, by that talent of telling endless feats of fairies and magicians and kings and queens, was more dear and wonderful to a circle of children than any orator in England or America is now? The more indolent and imaginative complexion of the Eastern nations makes them much more impressible by these appeals to the fancy.

These legends are only exaggerations of real occurrences, and every literature contains these high compliments to the art of the orator and the bard, from the Hebrew and the Greek down to the Scottish Glenkindie, who

“harpit a fish out o’ saut-water,
Or water out of a stone,
Or milk out of a maiden’s breast
Who bairn had never none.”

Homer specially delighted in drawing the same figure. For what is the Odyssey but a history of the orator, in the largest style, carried through a series of adventures furnishing brilliant opportunities to his talent? See with what care and pleasure the poet brings him on the stage. Helen is pointing out to Priam, from a tower, the different Grecian chiefs. “The old man asked: ‘Tell me, dear child, who is that man, shorter by a head than Agamemnon, yet he looks broader in his shoulders and breast. His arms lie on the ground, but he, like a leader, walks about the bands of the men. He seems to me like a stately ram, who goes as a master of the flock.’ Him answered Helen, daughter of Jove, ‘this is the wise Ulysses, son of Laertes, who was reared in the state of craggy Ithaca, knowing all wiles and wise counsels.’ To her the prudent Antenor replied again: ‘O woman, you have spoken truly. For once the wise Ulysses came hither on an embassy, with Menelaus, beloved by Mars. I received them and entertained them at my house. I became acquainted with the genius and the prudent judgments of both. When they mixed with the assembled Trojans, and stood, the broad shoulders of Menelaus rose above the other; but, both sitting, Ulysses was more majestic. When they conversed, and interweaved stories and opinions with all, Menelaus spoke succinctly, — few but very sweet words, since he was not talkative nor superfluous in speech, and was the younger. But when the wise Ulysses arose and stood and looked down, fixing his eyes on the ground, and neither moved his sceptre backward nor forward, but held it still, like an

awkward person, you would say it was some angry or foolish man; but when he sent his great voice forth out of his breast, and his words fell like the winter snows, not then would any mortal contend with Ulysses; and we, beholding, wondered not afterwards so much at his aspect.” [Iliad, III. 191.] Thus he does not fail to arm Ulysses at first with this power of overcoming all opposition by the blandishments of speech. Plutarch tells us that Thucydides, when Archidamus, king of Sparta, asked him which was the best wrestler, Pericles or he, replied, “When I throw him, he says he was never down, and he persuades the very spectators to believe him.” Philip of Macedon said of Demosthenes, on hearing the report of one of his orations, “Had I been there, he would have persuaded me to take up arms against myself;” and Warren Hastings said of Burke’s speech on his impeachment, “As I listened to the orator, I felt for more than half an hour as if I were the most culpable being on earth.”

In these examples, higher qualities have already entered, but the power of detaining the ear by pleasing speech, and addressing the fancy and imagination, often exists without higher merits. Thus separated, as this fascination of discourse aims only at amusement, though it be decisive in its momentary effect, it is yet a juggle, and of no lasting power. It is heard like a band of music passing through the streets, which converts all the passengers into poets, but is forgotten as soon as it has turned the next corner; and unless this oiled tongue could, in Oriental phrase, lick the sun and moon away, it must take its place with opium and brandy. I know no remedy against it but cotton wool, or the wax which Ulysses stuffed into the ears of his sailors to pass the Sirens safely.

There are all degrees of power, and the least are interesting, but they must not be confounded. There is the glib tongue and cool self-possession of the salesman in a large shop, which, as is well known, overpower the prudence and resolution of housekeepers of both sexes. There is a petty lawyer’s fluency, which is sufficiently impressive to him who is devoid of that talent, though it be, in so many cases, nothing more than a facility of expressing with accuracy and speed what everybody thinks and says more slowly; without new information, or precision of thought, but the same thing, neither less nor more. It requires no special insight to edit one of our country newspapers. Yet whoever can say off currently, sentence by sentence, matter neither better nor worse than what is there printed, will be very impressive to our easily pleased population. These talkers are of that class who prosper, like the celebrated schoolmaster, by being only one lesson ahead of the pupil. Add a little sarcasm and prompt allusion to passing occurrences, and you have the mischievous member of Congress. A spice of malice, a ruffian touch in his rhetoric, will do him no harm with his audience. These accomplishments are of the same kind, and only a degree higher

than the coaxing of the auctioneer, or the vituperative style well described in the street-word “jawing.” These kinds of public and private speaking have their use and convenience to the practitioners; but we may say of such collectively that the habit of oratory is apt to disqualify them for eloquence.

One of our statesmen said, “The curse of this country is eloquent men.” And one cannot wonder at the uneasiness sometimes manifested by trained statesmen, with large experience of public affairs, when they observe the disproportionate advantage suddenly given to oratory over the most solid and accumulated public service. In a Senate or other business committee, the solid result depends on a few men with working-talent. They know how to deal with the facts before them, to put things into a practical shape, and they value men only as they can forward the work. But a new man comes there who has no capacity for helping them at all, is insignificant, and nobody in the committee, but has a talent for speaking. In the debate with open doors, this precious person makes a speech which is printed and read all over the Union, and he at once becomes famous, and takes the lead in the public mind over all these executive men, who, of course, are full of indignation to find one who has no tact or skill and knows he has none, put over them by means of this talking-power which they despise.

Leaving behind us these pretensions, better or worse, to come a little nearer to the verity, — eloquence is attractive as an example of the magic of personal ascendancy, — a total and resultant power, rare, because it requires a rich coincidence of powers, intellect, will, sympathy, organs, and, over all, good fortune in the cause. We have a half-belief that the person is possible who can counterpoise all other persons. We believe that there may be a man who is a match for events, one who never found his match, against whom other men being dashed are broken, — one of inexhaustible personal resources, who can give you any odds and beat you. What we really wish for is a mind equal to any exigency. You are safe in your rural district, or in the city, in broad daylight, amidst the police, and under the eyes of a hundred thousand people. But how is it on the Atlantic, in a storm, — do you understand how to infuse your reason into men disabled by terror, and to bring yourself off safe then? — how among thieves, or among an infuriated populace, or among cannibals? Face to face with a highwayman who has every temptation and opportunity for violence and plunder, can you bring yourself off safe by your wit exercised through speech? — a problem easy enough to Cæsar or Napoleon. Whenever a man of that stamp arrives, the highwayman has found a master. What a difference between men in power of face! A man succeeds because he has more power of eye than another, and so coaxes or confounds him. The newspapers, every week, report the adventures of some impudent swindler, who, by steadiness of carriage, duped

those who should have known better. Yet any swindlers we have known are novices and bunglers, as is attested by their ill name. A greater power of face would accomplish anything, and, with the rest of their takings, take away the bad name. A greater power of carrying the thing loftily and with perfect assurance, would confound merchant, banker, judge, men of influence and power, poet and president, and might head any party, unseat any sovereign, and abrogate any constitution in Europe and America. It was said that a man has at one step attained vast power, who has renounced his moral sentiment, and settled it with himself that he will no longer stick at anything. It was said of Sir William Pepperel, one of the worthies of New England, that, "put him where you might, he commanded, and saw what he willed come to pass." Julius Cæsar said to Metellus, when that tribune interfered to hinder him from entering the Roman treasury, "Young man, it is easier for me to put you to death than to say that I will; "and the youth yielded. In earlier days, he was taken by pirates. What then? He threw himself into their ship, established the most extraordinary intimacies, told them stories, declaimed to them; if they did not applaud his speeches, he threatened them with hanging, — which he performed afterwards, — and, in a short time, was master of all on board. A man this is who cannot be disconcerted, and so can never play his last card, but has a reserve of power when he has hit his mark. With a serene face, he subverts a kingdom. What is told of him is miraculous; it affects men so. The confidence of men in him is lavish, and he changes the face of the world, and histories, poems, and new philosophies arise to account for him. A supreme commander over all his passions and affections; but the secret of his ruling is higher than that. It is the power of Nature running without impediment from the brain and will into the hands. Men and women are his game. Where they are, he cannot be without resource. "Whoso can speak well," said Luther, "is a man." It was men of this stamp that the Grecian States used to ask of Sparta for generals. They did not send to Lacedæmon for troops, but they said, "Send us a commander;" and Pausanias, or Gylippus, or Brasidas, or Agis, was despatched by the Ephors.

It is easy to illustrate this overpowering personality by these examples of soldiers and kings; but there are men of the most peaceful way of life and peaceful principle, who are felt wherever they go, as sensibly as a July sun or a December frost, — men who, if they speak, are heard, though they speak in a whisper, — who, when they act, act effectually, and what they do is imitated; and these examples may be found on very humble platforms as well as on high ones.

In old countries a high money-value is set on the services of men who have achieved a personal distinction. He who has points to carry must hire, not a

skilful attorney, but a commanding person. A barrister in England is reputed to have made thirty or forty thousand pounds *per annum* in representing the claims of railroad companies before committees of the House of Commons. His clients pay not so much for legal as for manly accomplishments, — for courage, conduct, and a commanding social position, which enable him to make their claims heard and respected.

I know very well that among our cool and calculating people, where every man mounts guard over himself, where heats and panics and abandonments are quite out of the system, there is a good deal of skepticism as to extraordinary influence. To talk of an overpowering mind rouses the same jealousy and defiance which one may observe round a table where anybody is recounting the marvellous anecdotes of mesmerism. Each auditor puts a final stroke to the discourse by exclaiming, “Can he mesmerize *me*?” So each man inquires if any orator can change *his* convictions.

But does any one suppose himself to be quite impregnable? Does he think that not possibly a man may come to him who shall persuade him out of his most settled determination? — for example, good sedate citizen as he is, to make a fanatic of him, — or, if he is penurious, to squander money for some purpose he now least thinks of, — or, if he is a prudent, industrious person, to forsake his work, and give days and weeks to a new interest? No, he defies any one, every one. Ah! he is thinking of resistance, and of a different turn from his own. But what if one should come of the same turn of mind as his own, and who sees much farther on his own way than he? A man who has tastes like mine, but in greater power, will rule me any day, and make me love my ruler.

Thus it is not powers of speech that we primarily consider under this word *eloquence*, but the power that being present, gives them their perfection, and being absent, leaves them a merely superficial value. Eloquence is the appropriate organ of the highest personal energy. Personal ascendancy may exist with or without adequate talent for its expression. It is as surely felt as a mountain or a planet; but when it is weaponed with a power of speech, it seems first to become truly human, works actively in all directions, and supplies the imagination with fine materials.

This circumstance enters into every consideration of the power of orators, and is the key to all their effects. In the assembly, you shall find the orator and the audience in perpetual balance; and the predominance of either is indicated by the choice of topic. If the talents for speaking exist, but not the strong personality, then there are good speakers who perfectly receive and express the will of the audience, and the commonest populace is flattered by hearing its low mind

returned to it with every ornament which happy talent can add. But if there be personality in the orator, the face of things changes. The audience is thrown into the attitude of pupil, follows like a child its preceptor, and hears what he has to say. It is as if, amidst the king's council at Madrid, Ximenes urged that an advantage might be gained of France, and Mendoza that Flanders might be kept down, and Columbus, being introduced, was interrogated whether his geographical knowledge could aid the cabinet; and he can say nothing to one party or to the other, but he can show how all Europe can be diminished and reduced under the king, by annexing to Spain a continent as large as six or seven Europes.

This balance between the orator and the audience is expressed in what is called the pertinence of the speaker. There is always a rivalry between the orator and the occasion, between the demands of the hour and the prepossession of the individual. The emergency which has convened the meeting is usually of more importance than anything the debaters have in their minds, and therefore becomes imperative to them. But if one of them have anything of commanding necessity in his heart, how speedily he will find vent for it, and with the applause of the assembly! This balance is observed in the privatest intercourse. Poor Tom never knew the time when the present occurrence was so trivial that he could tell what was passing in his mind without being checked for unseasonable speech; but let Bacon speak and wise men would rather listen though the revolution of kingdoms was on foot. I have heard it reported of an eloquent preacher, whose voice is not yet forgotten in this city, that, on occasions of death or tragic disaster which overspread the congregation with gloom, he ascended the pulpit with more than his usual alacrity, and turning to his favorite lessons of devout and jubilant thankfulness,— “Let us praise the Lord,” — carried audience, mourners, and mourning along with him, and swept away all the impertinence of private sorrow with his hosannas and songs of praise. Pepys says of Lord Clarendon (with whom “he is mad in love”) on his return from a conference, “I did never observe how much easier a man do speak when he knows all the company to be below him, than in him; for, though he spoke indeed excellent well, yet his manner and freedom of doing it, as if he played with it, and was informing only all the rest of the company, was mighty pretty.” [Diary, I. 169.]

This rivalry between the orator and the occasion is inevitable, and the occasion always yields to the eminence of the speaker; for a great man is the greatest of occasions. Of course the interest of the audience and of the orator conspire. It is well with them only when his influence is complete; then only they are well pleased. Especially he consults his power by making instead of taking his theme. If he should attempt to instruct the people in that which they

already know, he would fail; but by making them wise in that which he knows, he has the advantage of the assembly every moment. Napoleon's tactics of marching on the angle of an army, and always presenting a superiority of numbers, is the orator's secret also.

The several talents which the orator employs, the splendid weapons which went to the equipment of Demosthenes, of Æschines, of Demades the natural orator, of Fox, of Pitt, of Patrick Henry, of Adams, of Mirabeau, deserve a special enumeration. We must not quite omit to name the principal pieces.

The orator, as we have seen, must be a substantial personality. Then, first, he must have power of statement, — must have the fact, and know how to tell it. In any knot of men conversing on any subject, the person who knows most about it will have the ear of the company if he wishes it, and lead the conversation, no matter what genius or distinction other men there present may have; and in any public assembly, him who has the facts and can and will state them, people will listen to, though he is otherwise ignorant, though he is hoarse and ungraceful, though he stutters and screams.

In a court of justice the audience are impartial; they really wish to sift the statements and know what the truth is. And in the examination of witnesses there usually leap out, quite unexpectedly, three or four stubborn words or phrases which are the pith and fate of the business, which sink into the ear of all parties, and stick there, and determine the cause. All the rest is repetition and qualifying; and the court and the county have really come together to arrive at these three or four memorable expressions which betrayed the mind and meaning of somebody.

In every company the man with the fact is like the guide you hire to lead your party up a mountain, or through a difficult country. He may not compare with any of the party in mind, or breeding, or courage, or possessions, but he is much more important to the present need than any of them. That is what we go to the court-house for, — the statement of the fact, and of a general fact, the real relation of all the parties; and it is the certainty with which, indifferently in any affair that is well handled, the truth stares us in the face through all the disguises that are put upon it, — a piece of the well-known human life, — that makes the interest of a court-room to the intelligent spectator.

I remember long ago being attracted, by the distinction of the counsel and the local importance of the cause, into the court-room. The prisoner's counsel were the strongest and cunningest lawyers in the Commonwealth. They drove the attorney for the State from corner to corner, taking his reasons from under him, and reducing him to silence, but not to submission. When hard pressed, he revenged himself, in his turn, on the judge, by requiring the court to define what

salvage was. The court, thus pushed, tried words, and said every thing it could think of to fill the time, supposing cases, and describing duties of insurers, captains, pilots, and miscellaneous sea-officers that are or might be, — like a schoolmaster puzzled by a hard sum, who reads the context with emphasis. But all this flood not serving the cuttle-fish to get away in, the horrible shark of the district-attorney being still there, grimly awaiting with his “The court must define,” — the poor court pleaded its inferiority. The superior court must establish the law for this, and it read away piteously the decisions of the Supreme Court, but read to those who had no pity. The judge was forced at last to rule something, and the lawyers saved their rogue under the fog of a definition. The parts were so well cast and discriminated that it was an interesting game to watch. The government was well enough represented. It was stupid, but it had a strong will and possession, and stood on that to the last. The judge had a task beyond his preparation, yet his position remained real: he was there to represent a great reality, — the justice of states, which we could well enough see beetling over his head, and which his trifling talk nowise affected, and did not impede, since he was entirely well-meaning.

The statement of the fact, however, sinks before the statement of the law, which requires immeasurably higher powers, and is a rarest gift, being in all great masters one and the same thing, — in lawyers nothing technical, but always some piece of common-sense, alike interesting to laymen as to clerks. Lord Mansfield’s merit is the merit of common-sense. It is the same quality we admire in Aristotle, Montaigne, Cervantes, or in Samuel Johnson, or Franklin. Its application to law seems quite accidental. Each of Mansfield’s famous decisions contains a level sentence or two which hit the mark. His sentences are not always finished to the eye, but are finished to the mind. The sentences are involved, but a solid proposition is set forth, a true distinction is drawn. They come from and they go to the sound human understanding; and I read without surprise that the black-letter lawyers of the day sneered at his “equitable decisions,” as if they were not also learned. This, indeed, is what speech is for, — to make the statement; and all that is called eloquence seems to me of little use for the most part to those who have it, but inestimable to such as have something to say.

Next to the knowledge of the fact and its law is method, which constitutes the genius and efficiency of all remarkable men. A crowd of men go up to Faneuil Hall; they are all pretty well acquainted with the object of the meeting; they have all read the facts in the same newspapers. The orator possesses no information which his hearers have not, yet he teaches them to see the thing with his eyes. By the new placing, the circumstances acquire new solidity and worth. Every fact

gains consequence by his naming it, and trifles become important. His expressions fix themselves in men's memories, and fly from mouth to mouth. His mind has some new principle of order. Where he looks, all things fly into their places. What will he say next? Let this man speak, and this man only. By applying the habits of a higher style of thought to the common affairs of this world, he introduces beauty and magnificence wherever he goes. Such a power was Burke's, and of this genius we have had some brilliant examples in our own political and legal men.

Imagery. The orator must be, to a certain extent, a poet. We are such imaginative creatures that nothing so works on the human mind, barbarous or civil, as a trope. Condense some daily experience into a glowing symbol, and an audience is electrified. They feel as if they already possessed some new right and power over a fact which they can detach, and so completely master in thought. It is a wonderful aid to the memory, which carries away the image and never loses it. A popular assembly, like the House of Commons, or the French Chamber, or the American Congress, is commanded by these two powers, — first by a fact, then by skill of statement. Put the argument into a concrete shape, into an image, — some hard phrase, round and solid as a ball, which they can see and handle and carry home with them, — and the cause is half won.

Statement, method, imagery, selection, tenacity of memory, power of dealing with facts, of illuminating them, of sinking them by ridicule or by diversion of the mind, rapid generalization, humor, pathos, are keys which the orator holds; and yet these fine gifts are not eloquence, and do often hinder a man's attainment of it. And if we come to the heart of the mystery, perhaps we should say that the truly eloquent man is a sane man with power to communicate his sanity. If you arm the man with the extraordinary weapons of this art, give him a grasp of facts, learning, quick fancy, sarcasm, splendid allusion, interminable illustration, — all these talents, so potent and charming, have an equal power to insnare and mislead the audience and the orator. His talents are too much for him, his horses run away with him; and people always Perceive whether you drive or whether the horses take the bits in their teeth and run. But these talents are quite something else when they are subordinated and serve him; and we go to Washington, or to Westminster Hall, or might well go round the world, to see a man who drives, and is not run away with, — a man who, in prosecuting great designs, has an absolute command of the means of representing his ideas, and uses them only to express these; placing facts, placing men; amid the inconceivable levity of human beings, never for an instant warped from his crectness. There is for every man a statement possible of that truth which he is most unwilling to receive, — a statement possible, so broad and so pungent that

he cannot get away from it, but must either bend to it or die of it. Else there would be no such word as eloquence, which means this. The listener cannot hide from himself that something has been shown him and the whole world which he did not wish to see; and as he cannot dispose of it, it disposes of him. The history of public men and affairs in America will readily furnish tragic examples of this fatal force.

For the triumphs of the art somewhat more must still be required, namely a reinforcing of man from events, so as to give the double force of reason and destiny. In transcendent eloquence, there was ever some crisis in affairs, such as could deeply engage the man to the cause he pleads, and draw all this wide power to a point. For the explosions and eruptions, there must be accumulations of heat somewhere, beds of ignited anthracite at the centre. And in cases where profound conviction has been wrought, the eloquent man is he who is no beautiful speaker, but who is inwardly drunk with a certain belief. It agitates and tears him, and perhaps almost bereaves him of the power of articulation. Then it rushes from him as in short, abrupt screams, in torrents of meaning. The possession the subject has of his mind is so entire that it insures an order of expression which is the order of Nature itself, and so the order of greatest force, and inimitable by any art. And the main distinction between him and other well-graced actors is the conviction, communicated by every word, that his mind is contemplating a whole, and inflamed by the contemplation of the whole, and that the words and sentences uttered by him, however admirable, fall from him as unregarded parts of that terrible whole which he sees and which he means that you shall see. Add to this concentration a certain regnant calmness, which, in all the tumult, never utters a premature syllable, but keeps the secret of its means and method; and the orator stands before the people as a demoniacal power to whose miracles they have no key. This terrible earnestness makes good the ancient superstition of the hunter, that the bullet will hit its mark, which is first dipped in the marksman's blood.

Eloquence must be grounded on the plainest narrative. Afterwards, it may warm itself until it exhales symbols of every kind and color, speaks only through the most poetic forms; but, first and last, it must still be at bottom a biblical statement of fact. The orator is thereby an orator, that he keeps his feet ever on a fact. Thus only is he invincible. No gifts, no graces, no power of wit or learning or illustration will make any amends for want of this. All audiences are just to this point. Fame of voice or of rhetoric will carry people a few times to hear a speaker; but they soon begin to ask, "What is he driving at?" "and if this man does not stand for anything, he will be deserted. A good upholder of anything which they believe, a fact-speaker of any kind, they will long follow; but a pause

in the speaker's own character is very properly a loss of attraction. The preacher enumerates his classes of men and I do not find my place therein; I suspect then that no man does. Everything is my cousin; and whilst he speaks things, I feel that he is touching some of my relations, and I am uneasy; but whilst he deals in words we are released from attention. If you would lift me you must be on higher ground. If you would liberate me you must be free. If you would correct my false view of facts, — hold up to me the same facts in the true order of thought, and I cannot go back from the new conviction.

The power of Chatham, of Pericles, of Luther, rested on this strength of character, which, because it did not and could not fear anybody, made nothing of their antagonists, and became sometimes exquisitely provoking and sometimes terrific to these.

We are slenderly furnished with anecdotes of these men, nor can we help ourselves by those heavy books in which their discourses are reported. Some of them were writers, like Burke; but most of them were not, and no record at all adequate to their fame remains. Besides, what is best is lost, — the fiery life of the moment. But the conditions for eloquence always exist. It is always dying out of famous places and appearing in corners. Wherever the polarities meet, wherever the fresh moral sentiment, the instinct of freedom and duty, come in direct opposition to fossil conservatism and the thirst of gain, the spark will pass. The resistance to slavery in this country has been a fruitful nursery of orators. The natural connection by which it drew to itself a train of moral reforms, and the slight yet sufficient party organization it offered, reinforced the city with new blood from the woods and mountains. Wild men, John Baptists, Hermit Peters, John Knoxes, utter the savage sentiment of Nature in the heart of commercial capitals. They send us every year some piece of aboriginal strength, some tough oak-stick of a man who is not to be silenced or insulted or intimidated by a mob, because he is more mob than they, — one who mobs the mob, — some sturdy countryman, on whom neither money, nor politeness, nor hard words, nor eggs, nor blows, nor brickbats, make any impression. He is fit to meet the bar-room wits and bullies; he is a wit and a bully himself, and something more: he is a graduate of the plough, and the stub-hoe, and the bushwhacker; knows all the secrets of swamp and snow-bank, and has nothing to learn of labor or poverty or the rough of farming. His hard head went through, in childhood, the drill of Calvinism, with text and mortification, so that he stands in the New England assembly a purer bit of New England than any, and flings his sarcasms right and left. He has not only the documents in his pocket to answer all cavils and to prove all his positions, but he has the eternal reason in his head. This man scornfully renounces your civil organizations, — county, or city, or governor, or

army; — is his own navy and artillery, judge and jury, legislature and executive. He has learned his lessons in a bitter school. Yet, if the pupil be of a texture to bear it, the best university that can be recommended to a man of ideas is the gauntlet of the mobs.

He who will train himself to mastery in this science of persuasion must lay the emphasis of education, not on popular arts, but on character and insight. Let him see that his speech is not differenced from action; that when he has spoken he has not done nothing, nor done wrong, but has cleared his own skirts, has engaged himself to wholesome exertion. Let him look on opposition as opportunity. He cannot be defeated or put down. There is a principle of resurrection in him, an immortality of purpose. Men are averse and hostile, to give value to their suffrages. It is not the people that are in fault for not being convinced, but he that cannot convince them. He should mould them, armed as he is with the reason and love which are also the core of their nature. He is not to neutralize their opposition, but he is to convert them into fiery apostles and publishers of the same wisdom.

The highest platform of eloquence is the moral sentiment. It is what is called affirmative truth, and has the property of invigorating the hearer; and it conveys a hint of our eternity, when he feels himself addressed on grounds which will remain when everything else is taken, and which have no trace of time or place or party. Everything hostile is stricken down in the presence of the sentiments; their majesty is felt by the most obdurate. It is observable that as soon as one acts for large masses, the moral element will and must be allowed for, will and must work; and the men least accustomed to appeal to these sentiments invariably recall them when they address nations. Napoleon, even, must accept and use it as he can.

It is only to these simple strokes that the highest power belongs, — when a weak human hand touches, point by point, the eternal beams and rafters on which the whole structure of Nature and society is laid. In this tossing sea of delusion we feel with our feet the adamant; in this dominion of chance we find a principle of permanence. For I do not accept that definition of Isocrates, that the office of his art is to make the great small and the small great; but I esteem this to be its perfection, — when the orator sees through all masks to the eternal scale of truth, in such sort that he can hold up before the eyes of men the fact of to-day steadily to that standard, thereby making the great great, and the small small, which is the true way to astonish and to reform mankind.

All the chief orators of the world have been grave men, relying on this reality. One thought the philosophers of Demosthenes's own time found running through all his orations, — this namely, that "virtue secures its own success."

“To stand on one’s own feet” Heeren finds the key-note to the discourses of Demosthenes, as of Chatham.

Eloquence, like every other art, rests on laws the most exact and determinate. It is the best speech of the best soul. It may well stand as the exponent of all that is grand and immortal in the mind. If it do not so become an instrument, but aspires to be somewhat of itself, and to glitter for show, it is false and weak. In its right exercise, it is an elastic, unexhausted power, — who has sounded, who has estimated it? — expanding with the expansion of our interests and affections. Its great masters, whilst they valued every help to its attainment, and thought no pains too great which contributed in any manner to further it, — resembling the Arabian warrior of fame, who wore seventeen weapons in his belt, and in personal combat used them all occasionally, — yet subordinated all means; never permitted any talent — neither voice, rhythm, poetie power, anecdote, sarcasm — to appear for show; but were grave men, who preferred their integrity to their talent, and esteemed that object for which they toiled, whether the prosperity of their country, or the laws, or a reformation, or liberty of speech or of the press, or letters, or morals, as above the whole world, and themselves also.

DOMESTIC LIFE.

The perfection of the providence for childhood is easily acknowledged. The care which covers the seed of the tree under tough husks and stony cases provides for the human plant the mother's breast and the father's house. The size of the nestler is comic, and its tiny beseeching weakness is compensated perfectly by the happy patronizing look of the mother, who is a sort of high reposing Providence toward it. Welcome to the parents the puny struggler, strong in his weakness, his little arms more irresistible than the soldier's, his lips touched with persuasion which Chatham and Pericles in manhood had not. His unaffected lamentations when he lifts up his voice on high, or, more beautiful, the sobbing child, — the face all liquid grief, as he tries to swallow his vexation, — soften all hearts to pity, and to mirthful and clamorous compassion. The small despot asks so little that all reason and all nature are on his side. His ignorance is more charming than all knowledge, and his little sins more bewitching than any virtue. His flesh is angels' flesh, all alive. "Infancy," said Coleridge, "presents body and spirit in unity: the body is all animated." All day, between his three or four sleeps, he coos like a pigeon-house, sputters and spurs and puts on his faces of importance; and when he fasts, the little Pharisee fails not to sound his trumpet before him. By lamplight he delights in shadows on the wall; by daylight, in yellow and scarlet. Carry him out of doors, — he is overpowered by the light and by the extent of natural objects, and is silent. Then presently begins his use of his fingers, and he studies power, the lesson of his race. First it appears in no great harm, in architectural tastes. Out of blocks, thread-spools, cards, and checkers, he will build his pyramid with the gravity of Palladio. With an acoustic apparatus of whistle and rattle he explores the laws of sound. But chiefly, like his senior countrymen, the young American studies new and speedier modes of transportation. Mistrusting the cunning of his small legs, he wishes to ride on the necks and shoulders of all flesh. The small enchanter nothing can withstand, — no seniority of age, no gravity of character; uncles, aunts, grandsires, grandams, fall an easy prey: he conforms to nobody, all conform to him; all caper and make mouths and babble and chirrup to him. On the strongest shoulders he rides, and pulls the hair of laurelled heads.

"The childhood," said Milton, "shows the man, as morning shows the day." The child realizes to every man his own earliest remembrance, and so supplies a defect in our education, or enables us to live over the unconscious history with a sympathy so tender as to be almost personal experience.

Fast — almost too fast for the wistful curiosity of the parents, studious of the

witchcraft of curls and dimples and broken words — the little talker grows to a boy. He walks daily among wonders: fire, light, darkness, the moon, the stars, the furniture of the house, the red tin horse, the domestics, who like rude foster-mothers befriend and feed him, the faces that claim his kisses, are all in turn absorbing; yet warm, cheerful, and with good appetite the little sovereign subdues them without knowing it; the new knowledge is taken up into the life of to-day and becomes the means of more. The blowing rose is a new event; the garden full of flowers is Eden over again to the small Adam; the rain, the ice, the frost, make epochs in his life. What a holiday is the first snow in which Twoshoes can be trusted abroad!

What art can paint or gild any object in afterlife with the glow which Nature gives to the first baubles of childhood! St. Peter's can not have the magical power over us that the red and gold covers of our first picture-book possessed. How the imagination cleaves to the warm glories of that tinsel even now! What entertainments make every day bright and short for the fine freshman! The street is old as Nature; the persons all have their sacredness. His imaginative life dresses all things in their best. His fears adorn the dark parts with poetry. He has heard of wild horses and of bad boys, and with a pleasing terror he watches at his gate for the passing of those varieties of each species. The first ride into the country, the first bath in running water, the first time the skates are put on, the first game out of doors in moonlight, the books of the nursery, are new chapters of joy. The "Arabian Nights' Entertainments," the "Seven Champions of Christendom," "Robinson Crusoe," and the "Pilgrim's Progress," — what mines of thought and emotion, what a wardrobe to dress the whole world withal, are in this encyclopædia of young thinking! And so by beautiful traits, which without art yet seem the masterpiece of wisdom, provoking the love that watches and educates him, the little pilgrim prosecutes the journey through nature which he has thus gaily begun. He grows up the ornament and joy of the house, which rings to his glee, to rosy boyhood.

The household is the home of the man, as well as of the child. The events that occur therein are more near and affecting to us than those which are sought in senates and academies. Domestic events are certainly our affair. What are called public events may or may not be ours. If a man wishes to acquaint himself with the real history of the world, with the spirit of the age, he must not go first to the state-house or the court-room. The subtle spirit of life must be sought in facts nearer. It is what is done and suffered in the house, in the constitution, in the temperament, in the personal history, that has the profoundest interest for us. Fact is better than fiction, if only we could get pure fact. Do you think any rhetoric or any romance would get your ear from the wise gypsy who could tell

straight on the real fortunes of the man; who could reconcile your moral character and your natural history; who could explain your misfortunes, your fevers, your debts, your temperament, your habits of thought, your tastes, and, in every explanation, not sever you from the whole, but unite you to it? Is it not plain that not in senates, or courts, or chambers of commerce, but in the dwelling-house must the true character and hope of the time be consulted? These facts are, to be sure, harder to read. It is easier to count the census, or compute the square extent of a territory, to criticise its polity, books, art, than to come to the persons and dwellings of men and read their character and hope in their way of life. Yet we are always hovering round this better divination. In one form on another we are always returning to it. The physiognomy and phrenology of today are rash and mechanical systems enough, but they rest on everlasting foundations. We are sure that the sacred form of man is not seen in these whimsical, pitiful, and sinister masks (masks which we wear and which we meet), these bloated and shrivelled bodies, bald heads, bead eyes, short winds, puny and precarious healths, and early deaths. We live ruins amidst ruins. The great facts are the near ones. The account of the body is to be sought in the mind. The history of your fortunes is written first in your life.

Let us come then out of the public square and enter the domestic precinct. Let us go to the sitting-room, the table-talk and the expenditure of our contemporaries. An increased consciousness of the soul, you say, characterizes the period. Let us see if it has not only arranged the atoms at the circumference, but the atoms at the core. Does the household obey an idea? Do you see the man, — his form, genius, and aspiration, — in his economy? Is that translucent, thorough-lighted? There should be nothing confounding and conventional in economy, but the genius and love of the man so conspicuously marked in all his estate that the eye that knew him should read his character in his property, in his grounds, in his ornaments, in every expense. A man's money should not follow the direction of his neighbor's money, but should represent to him the things he would willingly do with it. I am not one thing and my expenditure another. My expenditure is me. That our expenditure and our character are twain, is the vice of society.

We ask the price of many things in shops and stalls, but some things each man buys without hesitation; if it were only letters at the post-office, conveyance in carriages and boats, tools for his work, books that are written to his condition, *etc.* Let him never buy anything else than what he wants, never subscribe at others' instance, never give unwillingly. Thus, a scholar is a literary foundation. All his expense is for Aristotle, Fabricius, Erasmus, and Petrarch. Do not ask him to help with his savings young drapers or grocers to stock their shops, or

eager agents to lobby in legislatures, or join a company to build a factory or a fishing-craft. These things are also to be done, but not by such as he. How could such a book as Plato's Dialogues have come down, but for the sacred savings of scholars and their fantastic appropriation of them?

Another man is a mechanical genius, an inventor of looms, a builder of ships, — a ship-building foundation, and could achieve nothing if he should dissipate himself on books or on horses. Another is a farmer, an agricultural foundation; another is a chemist, and the same rule holds for all. We must not make believe with our money, but spend heartily, and buy *up* and not *down*.

I am afraid that, so considered, our houses will not be found to have unity and to express the best thought. The household, the calling, the friendships, of the citizen are not homogeneous. His house ought to show us his honest opinion of what makes his well-being when he rests among his kindred, and forgets all affectation, compliance, and even exertion of will. He brings home whatever commodities and ornaments have for years allured his pursuit, and his character must be seen in them. But what idea predominates in our houses? Thrift first, then convenience and pleasure. Take off all the roofs, from street to street, and we shall seldom find the temple of any higher god than Prudence. The progress of domestic living has been in cleanliness, in ventilation, in health, in decorum, in countless means and arts of comfort, in the concentration of all the utilities of every clime in each house. They are arranged for low benefits. The houses of the rich are confectioners' shops, where we get sweetmeats and wine; the houses of the poor are imitations of these to the extent of their ability. With these ends housekeeping is not beautiful; it cheers and raises neither the husband, the wife, nor the child; neither the host nor the guest; it oppresses women. A house kept to the end of prudence is laborious without joy; a house kept to the end of display is impossible to all but a few women, and their success is dearly bought.

If we look at this matter curiously, it becomes dangerous. We need all the force of an idea to lift this load, for the wealth and multiplication of conveniences embarrass us, especially in northern climates. The shortest enumeration of our wants in this rugged climate appalls us by the multitude of things not easy to be done. And if you look at the multitude of particulars, one would say: Good housekeeping is impossible; order is too precious a thing to dwell with men and women. See, in families where there is both substance and taste, at what expense any favorite punctuality is maintained. If the children, for example, are considered, dressed, dieted, attended, kept in proper company, schooled, and at home fostered by the parents, — then does the hospitality of the house suffer; friends are less carefully bestowed, the daily table less catered. If the hours of meals are punctual, the apartments are slovenly. If the linens and

hangings are clean and fine and the furniture good, the yard, the garden, the fences are neglected. If all are well attended, then must the master and mistress be studious of particulars at the cost of their own accomplishments and growth; or persons are treated as things.

The difficulties to be overcome must be freely admitted; they are many and great. Nor are they to be disposed of by any criticism or amendment of particulars taken one at a time, but only by the arrangement of the household to a higher end than those to which our dwellings are usually built and furnished. And is there any calamity more grave, or that more invokes the best good-will to remove it, than this? — to go from chamber to chamber and see no beauty; to find in the housemates no aim; to hear an endless chatter and blast; to be compelled to criticise; to hear only to dissent and to be disgusted; to find no invitation to what is good in us, and no receptacle for what is wise: — this is a great price to pay for sweet bread and warm lodging, — being defrauded of affinity, of repose, of genial culture, and the inmost presence of beauty.

It is a sufficient accusation of our ways of living, and certainly ought to open our ear to every good-minded reformer, that our idea of domestic well-being now needs wealth to execute it. Give me the means, says the wife, and your house shall not annoy your taste nor waste your time. On hearing this we understand how these Means have come to be so omnipotent on earth. And indeed the love of wealth seems to grow chiefly out of the root of the love of the Beautiful. The desire of gold is not for gold. It is not the love of much wheat and wool and household-stuff. It is the means of freedom and benefit. We scorn shifts; we desire the elegance of munificence; we desire at least to put no stint or limit on our parents, relatives guests or dependents; we desire to play the benefactor and the prince with our townsmen, with the stranger at the gate, with the bard or the beauty, with the man or woman of worth who alights at our door. How can we do this, if the wants of each day imprison us in lucrative labors, and constrain us to a continual vigilance lest we be betrayed into expense?

Give us wealth, and the home shall exist. But that is a very imperfect and inglorious solution of the problem, and therefore no solution. “*Give us wealth.*” You ask too much. Few have wealth, but all must have a home. Men are not born rich; and in getting wealth the man is generally sacrificed, and often is sacrificed without acquiring wealth at last. Besides, that cannot be the right answer; — there are objections to wealth. Wealth is a shift. The wise man angles with himself only, and with no meaner bait. Our whole use of wealth needs revision and reform. Generosity does not consist in giving money or money’s worth. These so-called *goods* are only the shadow of good. To give money to a sufferer is only a come-off. It is only a postponement of the real payment, a

bribe paid for silence, a credit-system in which a paper promise to pay answers for the time instead of liquidation. We owe to man higher succors than food and fire. We owe to man man. If he is sick, is unable, is mean-spirited and odious, it is because there is so much of his nature which is unlawfully withholden from him. He should be visited in this his prison with rebuke to the evil demons, with manly encouragement, with no mean-spirited offer of condolence because you have not money, or mean offer of money as the utmost benefit, but by your heroism, your purity, and your faith. You are to bring with you that spirit which is understanding, health and self-help. To offer him money in lieu of these is to do him the same wrong as when the bridegroom offers his betrothed virgin a sum of money to release him from his engagements. The great depend on their heart, not on their purse. Genius and virtue, like diamonds, are best plain-set, — set in lead, set in poverty. The greatest man in history was the poorest. How was it with the captains and sages of Greece and Rome, with Socrates, with Epaminondas? Aristides was made general receiver of Greece, to collect the tribute which each state was to furnish against the barbarian. “Poor,” says Plutarch, “when he set about it, poorer when he had finished it.” How was it with Æmilius and Cato? What kind of a house was kept by Paul and John, by Milton and Marvell, by Samuel Johnson, by Samuel Adams in Boston, and Jean Paul Richter at Baireuth?

I think it plain that this voice of communities and ages, ‘Give us wealth, and the good household shall exist,’ is vicious, and leaves the whole difficulty untouched. It is better, certainly, in this form, ‘Give us your labor, and the household begins.’ I see not how serious labor, the labor of all and every day, is to be avoided; and many things betoken a revolution of opinion and practice in regard to manual labor that may go far to aid our practical inquiry. Another age may divide the manual labor of the world more equally on all the members of society, and so make the labors of a few hours avail to the wants and add to the vigor of the man. But the reform that applies itself to the household must not be partial. It must correct the whole system of our social living. It must come with plain living and high thinking; it must break up caste, and put domestic service on another foundation. It must come in connection with a true acceptance by each man of his vocation, — not chosen by his parents or friends, but by his genius, with earnestness and love

Nor is this redress so hopeless as it seems. Certainly, if we begin by reforming particulars of our present system, correcting a few evils and letting the rest stand, we shall soon give up in despair. For our social forms are very far from truth and equity. But the way to set the axe at the root of the tree is to raise our aim. Let us understand then that a house should bear witness in all its

economy that human culture is the end to which it is built and garnished. It stands there under the sun and moon to ends analogous, and not less noble than theirs. It is not for festivity, it is not for sleep: but the pine and the oak shall gladly descend from the mountains to uphold the roof of men as faithful and necessary as themselves; to be the shelter always open to good and true persons; — a hall which shines with sincerity, brows ever tranquil, and a demeanor impossible to disconcert; whose inmates know what they want; who do not ask your house how theirs should be kept. They have aims; they cannot pause for trifles. The diet of the house does not create its order, but knowledge, character, action, absorb so much life and yield so much entertainment that the refectory has ceased to be so curiously studied. With a change of aim has followed a change of the whole scale by which men and things were wont to be measured. Wealth and poverty are seen for what they are. It begins to be seen that the poor are only they who feel poor, and poverty consists in feeling poor. The rich, as we reckon them, and among them the very rich, — in a true scale would be found very indigent and ragged. The great make us feel, first of all, the indifference of circumstances. They call into activity the higher perceptions and subdue the low habits of comfort and luxury; but the higher perceptions find their objects everywhere; only the low habits need palaces and banquets.

Let a man, then, say, My house is here in the county, for the culture of the county; — an eating-house and sleeping-house for travellers it shall be, but it shall be much more. I pray you, O excellent wife, not to cumber yourself and me to get a rich dinner for this man or this woman who has alighted at our gate, nor a bedchamber made ready at too great a cost. These things, if they are curious in them, they can get for a dollar at any village. But let this stranger, if he will, in your looks, in your accent and behavior, read your heart and earnestness, your thought and will, which he cannot buy at any price, in any village or city; and which he may well travel fifty miles, and dine sparsely and sleep hard in order to behold. Certainly, let the board be spread and let the bed be dressed for the traveller; but let not the emphasis of hospitality lie in these things. Honor to the house where they are simple to the verge of hardship, so that there the intellect is awake and reads the laws of the universe, the soul worships truth and love, honor and courtesy flow into all deeds.

There was never a country in the world which could so easily exhibit this heroism as ours; never any where the State has made such efficient provision for popular education, where intellectual entertainment is so within reach of youthful ambition. The poor man's son is educated. There is many a humble house in every city, in every town, where talent and taste and sometimes genius dwell with poverty and labor. Who has not seen, and who can see unmoved,

under a low roof, the eager, blushing boys discharging as they can their household chores, and hastening into the sitting-room to the study of to-morrow's merciless lesson, yet stealing time to read one chapter more of the novel hardly smuggled into the tolerance of father and mother, — atoning for the same by some pages of Plutarch or Goldsmith; the warm sympathy with which they kindle each other in school-yard or in barn or wood-shed with scraps of poetry or song, with phrases of the last oration, or mimicry of the orator; the youthful criticism, on Sunday, of the sermons; the school declamation faithfully rehearsed at home, sometimes to the fatigue, sometimes to the admiration of sisters; the first solitary joys of literary vanity, when the translation or the theme has been completed, sitting alone near the top of the house; the cautious comparison of the attractive advertisement of the arrival of Macready, Booth, or Kemble, or of the discourse of a well-known speaker, with the expense of the entertainment; the affectionate delight with which they greet the return of each one after the early separations which school or business require; the foresight with which, during such absences, they hive the honey which opportunity offers, for the ear and imagination of the others; and the unrestrained glee with which they disburden themselves of their early mental treasures when the holidays bring them again together? What is the hoop that holds them stanch? It is the iron band of poverty, of necessity, of austerity, which, excluding them from the sensual enjoyments which make other boys too early old, has directed their activity in safe and right channels, and made them, despite themselves, reverers of the grand, the beautiful, and the good. Ah! short-sighted students of books, of Nature, and of man! too happy, could they know their advantages. They pine for freedom from that mild parental yoke; they sigh for fine clothes, for rides, for the theatre, and premature freedom and dissipation, which others possess. Woe to them if their wishes were crowned! The angels that dwell with them and are weaving laurels of life for their youthful brows, are Toil and Want, and Truth, and Mutual Faith.

In many parts of true economy a cheering lesson may be learned from the mode of life and manners of the later Romans, as described to us in the letters of the younger Pliny. Nor can I resist the temptation of quoting so trite an instance as the noble housekeeping of Lord Falkland in Clarendon: "His house being within little more than ten miles from Oxford, he contracted familiarity and friendship with the most polite and accurate men of that University, who found such an immenseness of wit and such a solidity of judgment in him, so infinite a fancy, bound in by a most logical ratiocination, such a vast knowledge that he was not ignorant in anything, yet such an excessive humility, as if he had known nothing, that they frequently resorted and dwelt with him, as in a college situated

in a purer air; so that his house was a university in a less volume, whither they came, not so much for repose as study, and to examine and refine those grosser propositions which laziness and consent made current in vulgar conversation.”

I honor that man whose ambition it is, not to win laurels in the state or the army, not to be a jurist or a naturalist, not to be a poet or a commander, but to be a master of living well, and to administer the offices of master or servant, of husband, father, and friend. But it requires as much breadth of power for this as for those other functions, — as much, or more, — and the reason for the failure is the same. I think the vice of our housekeeping is that it does not hold man sacred. The vice of government, the vice of education, the vice of religion, is one with that of private life.

In the old fables we used to read of a cloak brought from fairy-land as a gift for the fairest and purest in Prince Arthur’s court. It was to be her prize whom it would fit. Every one was eager to try it on, but it would fit nobody: for one it was a world too wide, for the next it dragged on the ground, and for the third it shrunk to a scarf. They, of course, said that the devil was in the mantle, for really the truth was in the mantle, and was exposing the ugliness which each would fain conceal. All drew back with terror from the garment. The innocent Genelas alone could wear it. In like manner, every man is provided in his thought with a measure of man which he applies to every passenger. Unhappily, not one in many thousands comes up to the stature and proportions of the model. Neither does the measurer himself; neither do the people in the street; neither do the select individuals whom he admires, — the heroes of the race. When he inspects them critically, he discovers that their aims are low, that they are too quickly satisfied. He observes the swiftness with which life culminates, and the huminity of the expectations of the greatest part of men. To each occurs, soon after the age of puberty, some event or society or way of living, which becomes the crisis of life and the chief fact in their history. In woman, it is love and marriage (which is more reasonable); and yet it is pitiful to date and measure all the facts and sequel of an unfolding life from such a youthful and generally inconsiderate period as the age of courtship and marriage. In men, it is their place of education, choice of an employment, settlement in a town, or removal to the East or to the West, or some other magnified trifle which makes the meridian moment, and all the after years and actions only derive interest from their relation to that. Hence it comes that we soon catch the trick of each man’s conversation, and knowing his two or three main facts, anticipate what he thinks of each new topic that rises. It is scarcely less perceivable in educated men, so called, than in the uneducated. I have seen finely endowed men at college festivals, ten, twenty years after they had left the halls, returning, as it seemed, the same boys who

went away. The same jokes pleased, the same straws tickled; the manhood and offices they brought thither at this return seemed mere ornamental masks; underneath they were boys yet. We never come to be citizens of the world, but are still villagers, who think that every thing in their petty town is a little superior to the same thing anywhere else. In each the circumstance signalized differs, but in each it is made the coals of an ever-burning egotism. In one, it was his going to sea; in a second, the difficulties he combated in going to college; in a third, his journey to the West, or his voyage to Canton; in a fourth, his coming out of the Quaker Society; in a fifth, his new diet and regimen; in a sixth, his coming forth from the abolition organizations; and in a seventh, his going into them. It is a life of toys and trinkets. We are too easily pleased.

I think this sad result appears in the manners. The men we see in each other do not give us the image and likeness of man. The men we see are whipped through the world; they are harried, wrinkled, anxious; they all seem the hacks of some invisible riders. How seldom do we behold tranquillity! We have never yet seen a man. We do not know the majestic manners that belong to him, which appease and exalt the beholder. There are no divine persons with us, and the multitude do not hasten to be divine. And yet we hold fast, all our lives long, a faith in a better life, in better men, in clean and noble relations, notwithstanding our total inexperience of a true society. Certainly this was not the intention of nature, to produce, with all this immense expenditure of means and power, so cheap and humble a result. The aspirations in the heart after the good and true teach us better, — nay, the men themselves suggest a better life.

Every individual nature has its own beauty. One is struck in every company, at every fireside, with the riches of nature, when he hears so many new tones, all musical, sees in each person original manners, which have a proper and peculiar charm, and reads new expressions of face. He perceives that nature has laid for each the foundations of a divine building, if the soul will build thereon. There is no face, no form, which one cannot in fancy associate with great power of intellect or with generosity of soul. In our experience, to be sure, beauty is not, as it ought to be, the dower of man and of woman as invariably as sensation. Beauty is, even in the beautiful, occasional, — or, as one has said, culminating and perfect only a single moment, before which it is unripe, and after which it is on the wane. But beauty is never quite absent from our eyes. Every face, every figure, suggests its own right and sound estate. Our friends are not their own highest form. But let the hearts they have agitated witness what power has lurked in the traits of these structures of clay that pass and repass us! The secret power of form over the imagination and affections transcends all our philosophy. The first glance we meet may satisfy us that matter is the vehicle of higher powers

than its own, and that no laws of line or surface can ever account for the inexhaustible expressiveness of form. We see heads that turn on the pivot of the spine, — no more; and we see heads that seem to turn on a pivot as deep as the axle of the world, — so slow, and lazily, and great, they move. We see on the lip of our companion the presence or absence of the great masters of thought and poetry to his mind. We read in his brow, on meeting him after many years, that he is where we left him, or that he has made great strides.

Whilst thus nature and the hints we draw from man suggest a true and lofty life, a household equal to the beauty and grandeur of this world, especially we learn the same lesson from those best relations to individual men which the heart is always prompting us to form. Happy will that house be in which the relations are formed from character; after the highest, and not after the lowest order; the house in which character marries, and not confusion and a miscellany of unavowable motives. Then shall marriage be a covenant to secure to either party the sweetness and honor of being a calm, continuing, inevitable benefactor to the other. Yes, and the sufficient reply to the skeptic who doubts the competence of man to elevate and to be elevated is in that desire and power to stand in joyful and ennobling intercourse with individuals, which makes the faith and the practice of all reasonable men.

The ornament of a house is the friends who frequent it. There is no event greater in life than the appearance of new persons about our hearth, except it be the progress of the character which draws them. It has been finely added by Landor to his definition of the *great man*, “It is he who can call together the most select company when it pleases him.” A verse of the old Greek Menander remains, which runs in translation: —

“Not on the store of sprightly wine,
Nor plenty of delicious meats,

Though generous Nature did design
To court us with perpetual treats, —
'T is not on these we for content depend,
So much as on the shadow of a Friend.”

It is the happiness which, where it is truly known, postpones all other satisfactions, and makes politics and commerce and churches cheap. For we figure to ourselves, — do we not? — that when men shall meet as they should, as states meet, — each a benefactor, a shower of falling stars, so rich with deeds, with thoughts, with so much accomplishment, — it shall be the festival of nature, which all things symbolize; and perhaps Love is only the highest symbol of Friendship, as all other things seem symbols of love. In the progress of each man's character, his relations to the best men, which at first seem only the romances of youth, acquire a graver importance; and he will have learned the lesson of life who is skilful in the ethics of friendship.

Beyond its primary ends of the conjugal, parental, and amicable relations, the household should cherish the beautiful arts and the sentiment of veneration.

1. Whatever brings the dweller into a finer life, what educates his eye, or ear, or hand, whatever purifies and enlarges him, may well find place there. And yet let him not think that a property in beautiful objects is necessary to his apprehension of them, and seek to turn his house into a museum. Rather let the noble practice of the Greeks find place in our society, and let the creations of the plastic arts be collected with care in galleries by the piety and taste of the people, and yielded as freely as the sunlight to all. Meantime, be it remembered, we are artists ourselves, and competitors, each one, with Phidias and Raphael in the production of what is graceful or grand. The fountain of beauty is the heart, and every generous thought illustrates the walls of your chamber. Why should we owe our power of attracting our friends to pictures and vases, to cameos and architecture? Why should we convert ourselves into showmen and appendages to our fine houses and our works of art? If by love and nobleness we take up into ourselves the beauty we admire, we shall spend it again on all around us. The man, the woman, needs not the embellishment of canvas and marble, whose every act is a subject for the sculptor, and to whose eye the gods and nymphs never appear ancient, for they know by heart the whole instinct of majesty.

I do not undervalue the fine instruction which statues and pictures give. But I think the public museum in each town will one day relieve the private house of this charge of owning and exhibiting them. I go to Rome and see on the walls of the Vatican the Transfiguration, painted by Raphael, reckoned the first picture in

the world; or in the Sistine Chapel I see the grand sibyls and prophets, painted in fresco by Michel Angelo, — which have every day now for three hundred years inflamed the imagination and exalted the piety of what vast multitudes of men of all nations! I wish to bring home to my children and my friends copies of these admirable forms, which I can find in the shops of the engravers; but I do not wish the vexation of owning them. I wish to find in my own town a library and museum which is the property of the town, where I can deposit this precious treasure, where I and my children can see it from time to time, and where it has its proper place among hundreds of such donations from other citizens who have brought thither whatever articles they have judged to be in their nature rather a public than a private property.

A collection of this kind, the property of each town, would dignify the town, and we should love and respect our neighbors more. Obviously, it would be easy for every town to discharge this truly municipal duty. Every one of us would gladly contribute his share; and the more gladly, the more considerable the institution had become.

2. Certainly, not aloof from this homage to beauty, but in strict connection therewith, the house will come to be esteemed a Sanctuary. The language of a ruder age has given to common law the maxim that every man's house is his castle: the progress of truth will make every house a shrine. Will not man one day open his eyes and see how dear he is to the soul of Nature, — how near it is to him? Will he not see, through all he miscalls accident, that Law prevails for ever and ever; that his private being is a part of it; that its home is in his own unsounded heart; that his economy, his labor, his good and bad fortune, his health and manners are all a curious and exact demonstration in miniature of the Genius of the Eternal Providence? When he perceives the Law, he ceases to despond. Whilst he sees it, every thought and act is raised, and becomes an act of religion. Does the consecration of Sunday confess the desecration of the entire week? Does the consecration of the church confess the profanation of the house? Let us read the incantation backward. Let the man stand on his feet. Let religion cease to be occasional; and the pulses of thought that go to the borders of the universe, let them proceed from the bosom of the Household.

These are the consolations, — these are the ends to which the household is instituted and the roof-tree stands. If these are sought and in any good degree attained, can the State, can commerce, can climate, can the labor of many for one, yield anything better, or half as good? Beside these aims, Society is weak and the State an intrusion. I think that the heroism which at this day would make on us the impression of Epaminondas and Phocion must be that of a domestic conqueror. He who shall bravely and gracefully subdue this Gorgon of

Convention and Fashion, and show men how to lead a clean, handsome, and heroic life amid the beggarly elements of our cities and villages; whoso shall teach me how to eat my meat and take my repose and deal with men, without any shame following, will restore the life of man to splendor, and make his own name dear to all history.

FARMING

The glory of the farmer is that, in the division of labors, it is his part to create. All trade rests at last on his primitive activity. He stands close to nature; he obtains from the earth the bread and the meat. The food which was not, he causes to be. The first farmer was the first man, and all historic nobility rests on possession and use of land. Men do not like hard work, but every man has an exceptional respect for tillage, and a feeling that this is the original calling of his race, that he himself is only excused from it by some circumstance which made him delegate it for a time to other hands. If he have not some skill which recommends him to the farmer, some product for which the farmer will give him corn, he must himself return into his due place among the planters. And the profession has in all eyes its ancient charm, as standing nearest to God, the first cause.

Then the beauty of nature, the tranquillity and innocence of the countryman, his independence, and his pleasing arts, — the care of bees, of poultry, of sheep, of cows, the dairy, the care of hay, of fruits, of orchards and forests, and the reaction of these on the workman, in giving him a strength and plain dignity like the face and manners of nature, — all men acknowledge. All men keep the farm in reserve as an asylum where, in ease of mischance, to hide their poverty, — or a solitude, if they do not succeed in society. And who knows how many glances of remorse are turned this way from the bankrupts of trade, from mortified pleaders in courts and senates, or from the victims of idleness and pleasure? Poisoned by town life and town vices, the sufferer resolves: ‘ Well, my children, whom I have injured, shall go back to the land, to be recruited and cured by that which should have been my nursery, and now shall be their hospital.’

The farmer’s office is precise and important, but you must not try to paint him in rose-color; you cannot make pretty compliments to fate and gravitation, whose minister he is. He represents the necessities. It is the beauty of the great economy of the world that makes his comeliness. He bends to the order of the seasons, the weather, the soils and crops, as the sails of a ship bend to the wind. He represents continuous hard labor, year in, year out, and small gains. He is a slow person, timed to nature, and not to city watches. He takes the pace of seasons, plants, and chemistry. Nature never hurries: atom by atom, little by little, she achieves her work. The lesson one learns in fishing, yachting, hunting, or planting, is the manners of Nature; patience with the delays of wind and sun, delays of the seasons, bad weather, excess or lack of water, — patience with the slowness of our feet, with the parsimony of our strength, with the largeness of

sea and land we must traverse, *etc.* The farmer times himself to Nature, and acquires that livelong patience which belongs to her. Slow, narrow man, his rule is that the earth shall feed and clothe him; and he must wait for his crop to grow. His entertainments, his liberties and his spending must be on a farmer's scale, and not on a merchant's. It were as false for farmers to use a wholesale and massy expense, as for states to use a minute economy. But if thus pinched on one side, he has compensatory advantages. He is permanent, clings to his land as the rocks do. In the town where I live, farms remain in the same families for seven and eight generations; and most of the first settlers (in 1635), should they reappear on the farms to-day, would find their own blood and names still in possession. And the like fact holds in the surrounding towns.

This hard work will always be done by one kind of man; not by scheming speculators, nor by soldiers, nor professors, nor readers of Tennyson; but by men of endurance — deep-chested, long-winded, tough, slow and sure, and timely. The farmer has a great health, and the appetite of health, and means to his end; he has broad lands for his home, wood to burn great fires, plenty of plain food; his milk at least is unwatered; and for sleep, he has cheaper and better and more of it than citizens.

He has grave trusts confided to him. In the great household of Nature, the farmer stands at the door of the bread-room, and weighs to each his loaf. It is for him to say whether men shall marry or not. Early marriages and the number of births are indissolubly connected with abundance of food; or, as Burke said, "Man breeds at the mouth." Then he is the Board of Quarantine. The farmer is a hoarded capital of health, as the farm is the capital of wealth; and it is from him that the health and power, moral and intellectual, of the cities came. The city is always recruited from the country. The men in cities who are the centres of energy, the driving-wheels of trade, politics, or practical arts, and the women of beauty and genius, are the children or grandchildren of farmers, and are spending the energies which their fathers' hardy, silent life accumulated in frosty furrows, in poverty, necessity, and darkness.

He is the continuous benefactor. He who digs a well, constructs a stone fountain, plants a grove of trees by the roadside, plants an orchard, builds a durable house, reclaims a swamp, or so much as puts a stone seat by the wayside, makes the land so far lovely and desirable, makes a fortune which he cannot carry away with him, but which is useful to his country long afterwards. The man that works at home helps society at large with somewhat more of certainty than he who devotes himself to charities. If it be true that, not by votes of political parties but by the eternal laws of political economy, slaves are driven out of a slave State as fast as it is surrounded by free States, then the true

abolitionist is the farmer, who, heedless of laws and constitutions, stands all day in the field, investing his labor in the land, and making a product with which no forced labor can compete.

We commonly say that the rich man can speak the truth, can afford honesty, can afford independence of opinion and action; — and that is the theory of nobility. But it is the rich man in a true sense, that is to say, not the man of large income and large expenditure, but solely the man whose outlay is less than his income and is steadily kept so.

In English factories, the boy that watches the loom, to tie the thread when the wheel stops to indicate that a thread is broken, is called a *minder*. And in this great factory of our Copernican globe, shifting its slides, rotating its constellations, times, and tides, bringing now the day of planting, then of watering, then of weeding, then of reaping, then of curing and storing, — the farmer is the *minder*. His machine is of colossal proportions; the diameter of the water-wheel, the arms of the levers, the power of the battery, are out of all mechanic measure; and it takes him long to understand its parts and its working. This pump never “sucks;” these screws are never loose; this machine is never out of gear; the vat and piston, wheels and tires, never wear out, but are self-repairing.

Who are the farmer’s servants? Not the Irish, nor the coolies, but Geology and Chemistry, the quarry of the air, the water of the brook, the lightning of the cloud, the castings of the worm, the plough of the frost. Long before he was born, the sun of ages decomposed the rocks, mellowed his land, soaked it with light and heat, covered it with vegetable film, then with forests, and accumulated the sphagnum whose decays made the peat of his meadow.

Science has shown the great circles in which nature works; the manner in which marine plants balance the marine animals, as the land plants supply the oxygen which the animals consume, and the animals the carbon which the plants absorb. These activities are incessant. Nature works on a method of *all for each and each for all*. The strain that is made on one point bears on every arch and foundation of the structure. There is a perfect solidarity. You cannot detach an atom from its holdings, or strip off from it the electricity, gravitation, chemic affinity, or the relation to light and heat, and leave the atom bare. No, it brings with it its universal ties.

Nature, like a cautious testator, ties up her estate so as not to bestow it all on one generation, but has a forelooking tenderness and equal regard to the next and the next, and the fourth and the fortieth age. There lie the inexhaustible magazines. The eternal rocks, as we call them, have held their oxygen or lime

undiminished, entire, as it was. No particle of oxygen can rust or wear, but has the same energy as on the first morning. The good rocks, those patient waiters, say to him: ' We have the sacred power as we received it. We have not failed of our trust, and now, — when in our immense day the hour is at last struck — take the gas we have hoarded, mingle it with water, and let it be free to grow in plants and animals and obey the thought of man.'

The earth works for him; the earth is a machine which yields almost gratuitous service to every application of intellect. Every plant is a manufacturer of soil. In the stomach of the plant development begins. The tree can draw on the whole air, the whole earth, on all the rolling main. The plant is all suction-pipe, — imbibing from the ground by its root, from the air by its leaves, with all its might.

The air works for him. The atmosphere, a sharp solvent, drinks the essence and spirit of every solid on the globe, — a menstruum which melts the mountains into it. Air is matter subdued by heat. As the sea is the grand receptacle of all rivers, so the air is the receptacle from which all things spring, and into which they all return. The invisible and creeping air takes form and solid mass. Our senses are skeptics, and believe only the impression of the moment, and do not believe the chemical fact that these huge mountain-chains are made up of gases and rolling wind. But Nature is as subtle as she is strong. She turns her capital day by day; deals never with dead, but ever with quick subjects. All things are flowing, even those that seem immovable. The adamant is always passing into smoke. The plants imbibe the materials which they want from the air and the ground. They burn, that is, exhale and decompose their own bodies into the air and earth again. The animal burns, or undergoes the like perpetual consumption. The earth burns, the mountains burn and decompose, slower, but incessantly. It is almost inevitable to push the generalization up into higher parts of nature, rank over rank into sentient beings. Nations burn with internal fire of thought and affection, which wastes while it works. We shall find finer combustion and finer fuel. Intellect is a fire: rash and pitiless it melts this wonderful bone-house which is called man. Genius even, as it is the greatest good, is the greatest harm. Whilst all thus burns, — the universe in a blaze kindled from the torch of the sun, — it needs a perpetual tempering, a phlegm, a sleep, atmospheres of azote, deluges of water, to check the fury of the conflagration; a hoarding to check the spending, a centripetence equal to the centrifugence; and this is invariably supplied.

The railroad dirt-ears are good excavators, but there is no porter like Gravitation, who will bring down any weights which man cannot carry, and if he wants aid, knows where to find his fellow laborers. Water works in masses, and

sets its irresistible shoulder to your mills or your ships, or transports vast boulders of rock in its iceberg a thousand miles. But its far greater power depends on its talent of becoming little, and entering the smallest holes and pores. By this agency, carrying in solution elements needful to every plant, the vegetable world exists.

But as I said, we must not paint the farmer in rose-color. Whilst these grand energies have wrought for him and made his task possible, he is habitually engaged in small economies, and is taught the power that lurks in petty things. Great is the force of a few simple arrangements; for instance, the powers of a fence. On the prairie you wander a hundred miles and hardly find a stick or a stone. At rare intervals a thin oak-opening has been spared, and every such section has been long occupied. But the farmer manages to procure wood from far, puts up a rail-fence, and at once the seeds sprout and the oaks rise. It was only browsing and fire which had kept them down. Plant fruit-trees by the roadside, and their fruit will never be allowed to ripen. Draw a pine fence about them, and for fifty years they mature for the owner their delicate fruit. There is a great deal of enchantment in a chestnut rail or picketed pine boards.

Nature suggests every economical expedient somewhere on a great scale. Set out a pine-tree, and it dies in the first year, or lives a poor spindle. But Nature drops a pine-cone in Mariposa, and it lives fifteen centuries, grows three or four hundred feet high, and thirty in diameter, — grows in a grove of giants, like a colonnade of Thebes. Ask the tree how it was done. It did not grow on a ridge, but in a basin, where it found deep soil, cold enough and dry enough for the pine; defended itself from the sun by growing in groves, and from the wind by the walls of the mountain. The roots that shot deepest, and the stems of happiest exposure, drew the nourishment from the rest, until the less thrifty perished and manured the soil for the stronger, and the mammoth Sequoias rose to their enormous proportions. The traveller who saw them remembered his orchard at home, where every year, in the destroying wind, his forlorn trees pined like suffering virtue. In September, when the pears hang heaviest and are taking from the sun their gay colors, comes usually a gusty day which shakes the whole garden and throws down the heaviest fruit in bruised heaps. The planter took the hint of the Sequoias, built a high wall, or — better — surrounded the orchard with a nursery of birches and evergreens. Thus he had the mountain basin in miniature; and his pears grew to the size of melons, and the vines beneath them ran an eighth of a mile. But this shelter creates a new climate. The wall that keeps off the strong wind keeps off the cold wind. The high wall reflecting the heat back on the soil gives that acre a quadruple share of sunshine, —

“Enclosing in the garden square

A dead and standing pool of air,”

and makes a little Cuba within it, whilst all without is Labrador.

The chemist comes to his aid every year by following out some new hint drawn from nature, and now affirms that this dreary space occupied by the farmer is needless; he will concentrate his kitchen-garden into a box of one or two rods square, will take the roots into his laboratory; the vines and stalks and stems may go sprawling about in the fields outside, he will attend to the roots in his tub, gorge them with food that is good for them. The smaller his garden, the better he can feed it, and the larger the crop. As he nursed his Thanksgiving turkeys on bread and milk, so he will pamper his peaches and grapes on the viands they like best. If they have an appetite for potash, or salt, or iron, or ground bones, or even now and then for a dead hog, he will indulge them. They keep the secret well, and never tell on your table whence they drew their sunset complexion or their delicate flavors.

See what the farmer accomplishes by a cartload of tiles: he alters the climate by letting off water which kept the land cold through constant evaporation, and allows the warm rain to bring down into the roots the temperature of the air and of the surface-soil; and he deepens the soil, since the discharge of this standing water allows the roots of his plants to penetrate below the surface to the subsoil, and accelerates the ripening of the crop. The town of Concord is one of the oldest towns in this country, far on now in its third century. The selectmen have once in every five years perambulated the boundaries, and yet, in this very year, a large quantity of land has been discovered and added to the town without a murmur of complaint from any quarter. By drainage we went down to a subsoil we did not know, and have found there is a Concord under old Concord, which we are now getting the best crops from; a Middlesex under Middlesex; and, in fine, that Massachusetts has a basement story more valuable and that promises to pay a better rent than all the superstructure. But these tiles have acquired by association a new interest. These tiles are political economists confuters of Malthus and Ricardo; they are so many Young Americans announcing a better era, — more bread. They drain the land, make it sweet and friable; have made English Chat Moss a garden, and will now do as much for the Dismal Swamp. But beyond this benefit they are the text of better opinions and better auguries for mankind.

There has been a nightmare bred in England of indigestion and spleen among landlords and loomlords, namely, the dogma that men breed too fast for the powers of the soil; that men multiply in a geometrical ratio, whilst corn multiplies only in an arithmetical; and hence that, the more prosperous we are, the faster we approach these frightful limits: nay, the plight of every new

generation is worse than of the foregoing, because the first comers take up the best lands; the next, the second best; and each succeeding wave of population is driven to poorer, so that the land is ever yielding less returns to enlarging hosts of eaters. Henry Carey of Philadelphia replied: "Not so, Mr. Malthus, but just the opposite of so is the fact."

The first planter, the savage, without helpers, without tools, looking chiefly to safety from his enemy, — man or beast, — takes poor land. The better lands are loaded with timber, which he cannot clear; they need drainage, which he cannot attempt. He cannot plough, or fell trees, or drain the rich swamp. He is a poor creature; he scratches with a sharp stick, lives in a cave or a hutch, has no road but the trail of the moose or bear; he lives on their flesh when he can kill one, on roots and fruits when he cannot. He falls, and is lame; he coughs, he has a stitch in his side, he has a fever and chills; when he is hungry, he cannot always kill and eat a bear, — chances of war, — sometimes the bear eats him. 'Tis long before he digs or plants at all, and then only a patch. Later he learns that his planting is better than hunting; that the earth works faster for him than he can work for himself, — works for him when he is asleep, when it rains, when heat overcomes him. The sunstroke which knocks him down brings his corn up. As his family thrive, and other planters come up around him, he begins to fell trees and clear good land; "and when, by and by, there is more skill, and tools and roads, the new generations are strong enough to open the lowlands, where the wash of mountains has accumulated the best soil, which yield a hundred-fold the former crops. The last lands are the best lands. It needs science and great numbers to cultivate the best lands, and in the best manner. Thus true political economy is not mean, but liberal, and on the pattern of the sun and sky. Population increases in the ratio of morality; credit exists in the ratio of morality.

Meantime we cannot enumerate the incidents and agents of the farm without reverting to their influence on the farmer. He carries out this cumulative preparation of means to their last effect. This crust of soil which ages have refined he refines again for the feeding of a civil and instructed people. The great elements with which he deals cannot leave him unaffected, or unconscious of his ministry; but their influence somewhat resembles that which the same Nature has on the child, — of subduing and silencing him. We see the farmer with pleasure and respect when we think what powers and utilities are so meekly worn. He knows every secret of labor; he changes the face of the landscape. Put him on a new planet and he would know where to begin; yet there is no arrogance in his bearing, but a perfect gentleness. The farmer stands well on the world. Plain in manners as in dress, he would not shine in palaces; he is absolutely unknown and inadmissible therein; living or dying, he never shall be

heard of in them; yet the drawing-room heroes put down beside him would shrivel in his presence; he solid and unexpressive, they expressed to gold-leaf. But he stands well on the world, — as Adam did, as an Indian does, as Homer's heroes, Agamemnon or Achilles, do. He is a person whom a poet of any clime — Milton, Firdusi, or Cervantes — would appreciate as being really a piece of the old Nature, comparable to sun and moon, rainbow and flood; because he is, as all natural persons are, representative of Nature as much as these.

That uncorrupted behavior which we admire in animals and in young children belongs to him, to the hunter, the sailor, — the man who lives in the presence of Nature. Cities force growth and make men talkative and entertaining, but they make them artificial. What possesses interest for us is the *naturel* of each, his constitutional excellence. This is forever a surprise, engaging and lovely; we cannot be satiated with knowing it, and about it; and it is this which the conversation with Nature cherishes and guards.

WORKS AND DAYS.

Our nineteenth century is the age of tools. They grow out of our structure. "Man is the meter of all things," said Aristotle; "the hand is the instrument of instruments, and the mind is the form of forms." The human body is the magazine of inventions, the patent office, where are the models from which every hint was taken. All the tools and engines on earth are only extensions of its limbs and senses. One definition of man is "an intelligence served by organs." Machines can only second, not supply, his unaided senses. The body is a meter. The eye appreciates finer differences than art can expose. The apprentice clings to his foot-rule; a practised mechanic will measure by his thumb and his arm with equal precision; and a good surveyor will pace sixteen rods more accurately than another man can measure them by tape. The sympathy of eye and hand by which an Indian or a practised slinger hits his mark with a stone, or a wood-chopper or a carpenter swings his axe to a hair-line on his log, are examples; and there is no sense or organ which is not capable of exquisite performance.

Men love to wonder, and that is the seed of our science; and such is the mechanical determination of our age, and so recent are our best contrivances, that use has not dulled our joy and pride in them; and we pity our fathers for dying before steam and galvanism, sulphuric ether and ocean telegraphs, photograph and spectroscope arrived, as cheated out of half their human estate. These arts open great gates of a future, promising to make the world plastic and to lift human life out of its beggary to a god-like ease and power.

Our century to be sure had inherited a tolerable apparatus. We had the compass, the printing-press, watches, the spiral spring, the barometer, the telescope. Yet so many inventions have been added that life seems almost made over new; and as Leibnitz said of Newton, that "if he reckoned all that had been done by mathematicians from the beginning of the world down to Newton, and what had been done by him, his would be the better half," so one might say that the inventions of the last fifty years counterpoise those of the fifty centuries before them. For the vast production and manifold application of iron is new; and our common and indispensable utensils of house and farm are new; the sewing-machine, the power-loom, the McCormick reaper, the mowing-machines, gas-light, lucifer matches, and the immense productions of the laboratory, are new in this century, and one frane's worth of coal does the work of a laborer for twenty days.

Why need I speak of steam, the enemy of space and time, with its enormous strength and delicate applicability, which is made in hospitals to bring a bowl of

gruel to a sick man's bed, and can twist beams of iron like candy-braids, and vies with the forces which upheaved and doubled over the geologic strata? Steam is an apt scholar and a strong-shouldered fellow, but it has not yet done all its work. It already walks about the field like a man, and will do anything required of it. It irrigates crops, and drags away a mountain. It must sew our shirts, it must drive our gigs; taught by Mr. Babbage, it must calculate interest and logarithms. Lord Chancellor Thurlow thought it might be made to draw bills and answers in chancery. If that were satire, it is yet coming to render many higher services of a mechanico-intellectual kind, and will leave the satire short of the fact.

How excellent are the mechanical aids we have applied to the human body, as in dentistry, in vaccination, in the rhinoplastic treatment; in the beautiful aid of ether, like a finer sleep; and in the boldest promiser of all, — the transfusion of the blood, — which, in Paris, it was claimed, enables a man to change his blood as often as his linen!

What of this dapper caoutchouc and gutta-percha, which make water-pipes and stomach-pumps, belting for mill-wheels, and diving bells, and rainproof coats for all climates, which teach us to defy the wet, and put every man on a footing with the beaver and the crocodile? What of the grand tools with which we engineer, like kobolds and enchanters, tunnelling Alps, canalling the American Isthmus, piercing the Arabian desert? In Massachusetts we fight the sea successfully with beach-grass and broom, and the blowing sand-barrens with pine plantations. The soil of Holland, once the most populous in Europe, is below the level of the sea. Egypt, where no rain fell for three thousand years, now, it is said, thanks Mehemet Ali's irrigations and planted forests for late-returning showers. The old Hebrew king said, "He makes the wrath of man to praise him." And there is no argument of theism better than the grandeur of ends brought about by paltry means. The chain of Western railroads from Chicago to the Pacific has planted cities and civilization in less time than it costs to bring an orchard into bearing.

What shall we say of the ocean telegraph, that extension of the eye and ear, whose sudden performance astonished mankind as if the intellect were taking the brute earth itself into training, and shooting the first thrills of life and thought through the unwilling brain?

There does not seem any limit to these new informations of the same Spirit that made the elements at first, and now, through man, works them. Art and power will go on as they have done, — will make day out of night, time out of space, and space out of time.

Invention breeds invention. No sooner is the electric telegraph devised than

gutta-percha, the very material it requires, is found. The aeronaut is provided with gun-cotton, the very fuel he wants for his balloon. When commerce is vastly enlarged, California and Australia expose the gold it needs. When Europe is over-populated, America and Australia crave to be peopled; and so throughout, every chance is timed, as if Nature, who made the lock, knew where to find the key.

Another result of our arts is the new intercourse which is surprising us with new solutions of the embarrassing political problems. The intercourse is not new, but the scale is new. Our selfishness would have held slaves or would have excluded from a quarter of the planet all that are not born on the soil of that quarter. Our politics are disgusting; but what can they help or hinder when from time to time the primal instincts are impressed on masses of mankind, when the nations are in exodus and flux? Nature loves to cross her stocks, — and German, Chinese, Turk, Russ, and Kanaka were putting out to sea, and intermarrying race with race; and commerce took the hint, and ships were built capacious enough to carry the people of a county.

This thousand-handed art has introduced a new element into the state. The science of power is forced to remember the power of science. Civilization mounts and climbs. Malthus, when he stated that the mouths went on multiplying geometrically and the food only arithmetically, forgot to say that the human mind was also a factor in political economy, and that the augmenting wants of society would be met by an augmenting power of invention.

Yes, we have a pretty artillery of tools now in our social arrangements: we ride four times as fast as our fathers did; travel, grind, weave, forge, plant, till, and excavate better. We have new shoes, gloves, glasses, and gimlets; we have the calculus; we have the newspaper, which does its best to make every square acre of land and sea give an account of itself at your breakfast-table; we have money, and paper money; we have language, — the finest tool of all, and nearest to the mind. Much will have more. Man flatters himself that his command over nature must increase. Things begin to obey him. We are to have the balloon yet, and the next war will be fought in the air. We may yet find a rose-water that will wash the negro white. He sees the skull of the English race changing from its Saxon type under the exigencies of American life.

Tantalus, who in old times was seen vainly trying to quench his thirst with a flowing stream which ebbed whenever he approached it, has been seen again lately. He is in Paris, in New York, in Boston. He is now in great spirits; thinks he shall reach it yet; thinks he shall bottle the wave. It is however getting a little doubtful. Things have an ugly look still. No matter how many centuries of culture have preceded, the new man always finds himself standing on the brink

of chaos, always in a crisis. Can anybody remember when the times were not hard, and money not scarce? Can anybody remember when sensible men, and the right sort of men, and the right sort of women, were plentiful? Tantalus begins to think steam a delusion, and galvanism no better than it should be.

Many facts concur to show that we must look deeper for our salvation than to steam, photographs, balloons or astronomy. These tools have some questionable properties. They are reagents. Machinery is aggressive. The weaver becomes a web, the machinist a machine. If you do not use the tools, they use you. All tools are in one sense edge-tools, and dangerous. A man builds a fine house; and now he has a master, and a task for life: he is to furnish, watch, show it, and keep it in repair, the rest of his days. A man has a reputation, and is no longer free, but must respect that. A man makes a picture or a book, and, if it succeeds, 'Tis often the worse for him. I saw a brave man the other day, hitherto as free as the hawk or the fox of the wilderness, constructing his cabinet of drawers for shells, eggs, minerals, and mounted birds. It was easy to see that he was amusing himself with making pretty links for his own limbs.

Then the political economist thinks "'Tis doubtful if all the mechanical inventions that ever existed have lightened the day's toil of one human being." The machine unmakes the man. Now that the machine is so perfect, the engineer is nobody. Every new step in improving the engine restricts one more act of the engineer, — unteaches him. Once it took Archimedes; now it only needs a fireman, and a boy to know the coppers, to pull up the handles or mind the water-tank. But when the engine breaks, they can do nothing.

What sickening details in the daily journals! I believe they have ceased to publish the "Newgate Calendar" and the "Pirate's Own Book" since the family newspapers, namely the "New York Tribune" and the "London Times" have quite superseded them in the freshness as well as the horror of their records of crime. Politics were never more corrupt and brutal; and Trade, that pride and darling of our ocean, that educator of nations, that benefactor in spite of itself, ends in shameful defaulting, bubble, and bankruptcy, all over the world.

Of course we resort to the enumeration of his arts and inventions as a measure of the worth of man. But if, with all his arts, he is a felon, we cannot assume the mechanical skill or chemical resources as the measure of worth. Let us try another gauge.

What have these arts done for the character, for the worth of mankind? Are men better? 'Tis sometimes questioned whether morals have not declined as the arts have ascended. Here are great arts and little men. Here is greatness begotten of paltriness. We cannot trace the triumphs of civilization to such benefactors as we wish. The greatest meliorator of the world is selfish, huckstering Trade.

Every victory over matter ought to recommend to man the worth of his nature. But now one wonders who did all this good. Look up the inventors. Each has his own knack; his genius is in veins and spots. But the great, equal, symmetrical brain, fed from a great heart, you shall not find. Every one has more to hide than he has to show, or is lamed by his excellence. 'Tis too plain that with the material power the moral progress has not kept pace. It appears that we have not made a judicious investment. Works and days were offered us, and we took works.

The new study of the Sanskrit has shown us the origin of the old names of God, — Dyaus, Deus, Zeus, Zeu pater, Jupiter, — names of the sun, still recognizable through the modifications of our vernacular words, importing that the Day is the Divine Power and Manifestation, and indicating that those ancient men, in their attempts to express the Supreme Power of the universe, called him the Day, and that this name was accepted by all the tribes.

Hesiod wrote a poem which he called "Works and Days," in which he marked the changes of the Greek year, instructing the husbandman at the rising of what constellation he might safely sow, when to reap, when to gather wood, when the sailor might launch his boat in security from storms, and what admonitions of the planets he must heed. It is full of economies for Grecian life, noting the proper age for marriage, the rules of household thrift, and of hospitality. The poem is full of piety as well as prudence, and is adapted to all meridians by adding the ethics of works and of days. But he has not pushed his study of days into such inquiry and analysis as they invite.

A farmer said "he should like to have all the laud that joined his own." Bonaparte, who had the same appetite, endeavored to make the Mediterranean a French lake. Czar Alexander was more expansive, and wished to call the Pacific *my ocean*; and the Americans were obliged to resist his attempts to make it a close sea. But if he had the earth for his pasture and the sea for his pond he would be a pauper still. He only is rich who owns the day. There is no king, rich man, fairy, or demon who possesses such power as that. The days are ever divine as to the first Aryans. They are of the least pretension and of the greatest capacity of anything that exists. They come and go like muffled and veiled figures, sent from a distant friendly party; but they say nothing, and if we do not use the gifts they bring, they carry them as silently away.

How the day fits itself to the mind, winds itself round it like a fine drapery, clothing all its fancies! Any holiday communicates to us its color. We wear its cockade and favors in our humor. Remember what boys think in the morning of "Election day," of the Fourth of July, of Thanksgiving or Christmas. The very stars in their courses wink to them of nuts and cakes, bonbons, presents, and fire-

works. Cannot memory still descry the old school-house and its porch, somewhat hacked by jack-knives, where you spun tops and snapped marbles; and do you not recall that life was then calendared by moments, threw itself into nervous knots of glittering hours, even as now, and not spread itself abroad an equable felicity? In college terms, and in years that followed, the young graduate, when the Commencement anniversary returned, though he were in a swamp, would see a festive light and find the air faintly echoing with plausible academic thunders. In solitude and in the country, what dignity distinguishes the holy time! The old Sabbath, or Seventh Day, white with the religions of unknown thousands of years, when this hallowed hour dawns out of the deep, — a clean page, which the wise may inscribe with truth, whilst the savage scrawls it with fetishes, — the cathedral music of history breathes through it a psalm to our solitude.

So, in the common experience of the scholar, the weathers fit his moods. A thousand tunes the variable wind plays, a thousand spectacles it brings, and each is the frame or dwelling of a new spirit. I used formerly to choose my time with some nicety for each favorite book. One author is good for winter, and one for the dog-days. The scholar must look long for the right hour for Plato's *Timæus*. At last the elect morning arrives, the early dawn, — a few lights conspicuous in the heaven, as of a world just created and still becoming, — and in its wide leisures we dare open that book.

There are days when the great are near us, when there is no frown on their brow, no condescension even; when they take us by the hand, and we share their thought. There are days which are the carnival of the year. The angels assume flesh, and repeatedly become visible. The imagination of the gods is excited and rushes on every side into forms. Yesterday not a bird peeped; the world was barren, peaked, and pining: to-day 'tis inconceivably populous; creation swarms and meliorates.

The days are made on a loom whereof the warp and woof are past and future time. They are majestically dressed, as if every god brought a thread to the skyey web. 'T is pitiful the things by which we are rich or poor, — a matter of coins, coats, and carpets, a little more or less stone, or wood, or paint, the fashion of a cloak or hat; like the luck of naked Indians, of whom one is proud in the possession of a glass bead or a red feather, and the rest miserable in the want of it. But the treasures which Nature spent itself to amass, — the secular, refined, composite anatomy of man, which all strata go to form, which the prior races, from infusory and saurian, existed to ripen; the surrounding plastic natures; the earth with its foods; the intellectual, temperamenting air; the sea with its invitations; the heaven deep with worlds; and the answering brain and nervous

structure replying to these; the eye that looketh into the deeps, which again look back to the eye, abyss to abyss; — these, not like a glass bead, or the coins or carpets, are given immeasurably to all.

This miracle is hurled into every beggar's hands. The blue sky is a covering for a market and for the cherubim and seraphim. The sky is the varnish or glory with which the Artist has washed the whole work, — the verge or confines of matter and spirit. Nature could no farther go. Could our happiest dream come to pass in solid fact, — could a power open our eyes to behold “millions of spiritual creatures walk the earth,” — I believe I should find that mid-plain on which they moved floored beneath and arched above with the same web of blue depth which weaves itself over me now, as I trudge the streets on my affairs.

It is singular that our rich English language should have no word to denote the face of the world. *Kinde* was the old English term, which, however, filled only half the range of our fine Latin word, with its delicate future tense, — *natura, about to be born*, or what German philosophy denotes as a *becoming*. But nothing expresses that power which seems to work for beauty alone. The Greek *Kosmos* did; and therefore, with great propriety, Humboldt entitles his book, which recounts the last results of science, *Cosmos*.

Such are the days, — the earth is the cup, the sky is the cover, of the immense bounty of nature which is offered us for our daily aliment; but what a force of *illusion* begins life with us and attends us to the end! We are coaxed, flattered, and duped, from morn to eve, from birth to death; and where is the old eye that ever saw through the deception? The Hindoos represent Maia, the illusory energy of Vishnu, as one of his principal attributes. As if, in this gale of warring elements which life is, it was necessary to bind souls to human life as mariners in a tempest lash themselves to the mast and bulwarks of a ship, and Nature employed certain illusions as her ties and straps, — a rattle, a doll, an apple, for a child; skates, a river, a boat, a horse, a gun, for the growing boy; and I will not begin to name those of the youth and adult, for they are numberless. Seldom and slowly the mask falls and the pupil is permitted to see that all is one stuff, cooked and painted under many counterfeit appearances. Hume's doctrine was that the circumstances vary, the amount of happiness does not; that the beggar cracking fleas in the sunshine under a hedge, and the duke rolling by in his chariot; the girl equipped for her first ball, and the orator returning triumphant from the debate, had different means, but the same quantity of pleasant excitement.

This element of illusion lends all its force to hide the values of present time. Who is he that does not always find himself doing something less than his best

task? "What are you doing?" "O, nothing; I have been doing thus, or I shall do so or so, but now I am only—" "Ah! poor dupe, will you never slip out of the web of the master juggler, — never learn that as soon as the irrecoverable years have woven their blue glory between to-day and us these passing hours shall glitter and draw us as the wildest romance and the homes of beauty and poetry? How difficult to deal erect with them! The events they bring, their trade, entertainments, and gossip, their urgent work, all throw dust in the eyes and distract attention. He is a strong man who can look them in the eye, see through this juggle, feel their identity, and keep his own; who can know surely that one will be like another to the end of the world, nor permit love, or death, or politics, or money, war, or pleasure, to draw him from his task.

The world is always equal to itself, and every man in moments of deeper thought is apprised that he is repeating the experiences of the people in the streets of Thebes or Byzantium. An everlasting Now reigns in nature, which hangs the same roses on our bushes which charmed the Roman and the Chaldæan in their hanging gardens. 'To what end, then,' he asks, 'should I study languages, and traverse countries, to learn so simple truths?'

History of ancient art, excavated cities, recovery of books and inscriptions, — yes, the works were beautiful, and the history worth knowing; and academies convene to settle the claims of the old schools. What journeys and measurements, — Niebuhr and Müller and Layard, — to identify the plain of Troy and Nimroud town! And your homage to Dante costs you so much sailing; and to ascertain the discoverers of America needs as much voyaging as the discovery cost. Poor child! that flexile clay of which these old brothers moulded their admirable symbols was not Persian, nor Memphian, nor Teutonic, nor local at all, but was common lime and silex and water and sunlight, the heat of the blood and the heaving of the lungs; it was that clay which thou heldest but now in thy foolish hands, and threwest away to go and seek in vain in sepulchres, mummy-pits, and old book-shops of Asia Minor, Egypt, and England. It was the deep to-day which all men scorn; the rich poverty which men hate; the populous, all-loving solitude which men quit for the tattle of towns. He lurks, *he* hides, — *he* who is success, reality, joy, and power. One of the illusions is that the present hour is not the critical, decisive hour. Write it on your heart that every day is the best day in the year. No man has learned anything rightly until he knows that every day is Doomsday. 'T is the old secret of the gods that they come in low disguises. 'Tis the vulgar great who come dizened with gold and jewels. Real kings hide away their crowns in their wardrobes, and affect a plain and poor exterior. In the Norse legend of our ancestors, Odin dwells in a fisher's hut and patches a boat. In the Hindoo legends, Hari dwells a peasant among peasants. In

the Greek legend, Apollo lodges with the shepherds of Admetus, and Jove liked to rusticate among the poor Ethiopians. So, in our history, Jesus is born in a barn, and his twelve peers are fishermen. 'Tis the very principle of science that Nature shows herself best in least; it was the maxim of Aristotle and Lucretius; and, in modern times, of Swedenborg and of Hahnemann. The order of changes in the egg determines the age of fossil strata. So it was the rule of our poets, in the legends of fairy lore, that the fairies largest in power were the least in size. In the Christian graces, humility stands highest of all, in the form of the Madonna; and in life, this is the secret of the wise. We owe to genius always the same debt, of lifting the curtain from the common, and showing us that divinities are sitting disguised in the seeming gang of gypsies and pedlers. In daily life, what distinguishes the master is the using those materials he has, instead of looking about for what are more renowned, or what others have used well. "A general," said Bonaparte, "always has troops enough, if he only knows how to employ those he has, and bivouacs with them." Do not refuse the employment which the hour brings you, for one more ambitious. The highest heaven of wisdom is alike near from every point, and thou must find it, if at all, by methods native to thyself alone.

That work is ever the more pleasant to the imagination which is not now required. How wistfully, when we have promised to attend the working committee, we look at the distant hills and their seductions!

The use of history is to give value to the present hour and its duty. That is good which commends to me my country, my climate, my means and materials, my associates. I knew a man in a certain religious exaltation who "thought it an honor to wash his own face." He seemed to me more sane than those who hold themselves cheap.

Zoölogists may deny that horse-hairs in the water change to worms, but I find that whatever is old corrupts, and the past turns to snakes. The reverence for the deeds of our ancestors is a treacherous sentiment. Their merit was not to reverence the old, but to honor the present moment; and we falsely make them excuses of the very habit which they hated and defied.

Another illusion is that there is not time enough for our work. Yet we might reflect that though many creatures eat from one dish, each, according to its constitution, assimilates from the elements what belongs to it, whether time, or space, or light, or water, or food. A snake converts whatever prey the meadow yields him into snake; a fox, into fox; and Peter and John are working up all existence into Peter and John. A poor Indian chief of the Six Nations of New York made a wiser reply than any philosopher, to some one complaining that he

had not enough time. "Well," said Red Jacket, "I suppose you have all there is."

A third illusion haunts us, that a long duration, as a year, a decade, a century, is valuable. But an old French sentence says, "God works in moments,"— "*En peu d'heure Dieu labeure.*" We ask for long life, but 'tis deep life, or grand moments, that signify. Let the measure of time be spiritual, not mechanical. Life is unnecessarily long. Moments of insight, of fine personal relation, a smile, a glance, — what ample borrowers of eternity they are! Life culminates and concentrates; and Homer said, "The gods ever give to mortals their apportioned share of reason only on one day."

I am of the opinion of the poet Wordsworth, that "there is no real happiness in this life but in intellect and virtue." I am of the opinion of Pliny, that "whilst we are musing on these things, we are adding to the length of our lives." I am of the opinion of Glauco, who said, "The measure of life, O Socrates, is, with the wise, the speaking and hearing such discourses as yours."

He only can enrich me who can recommend to me the space between sun and sun. 'Tis the measure of a man, — his apprehension of a day. For we do not listen with the best regard to the verses of a man who is only a poet, nor to his problems if he is only an algebraist; but if a man is at once acquainted with the geometric foundations of things and with their festal splendor, his poetry is exact and his arithmetic musical. And him I reckon the most learned scholar, not who can unearth for me the buried dynasties of Sesostris and Ptolemy, the Sothiac era, the Olympiads and consulships, but who can unfold the theory of this particular Wednesday. Can he uncover the ligaments concealed from all but piety, which attach the dull men and things we know to the First Cause? These passing fifteen minutes, men think, are time, not eternity; are low and subaltern, are but hope or memory; that is, the way *to* or the way *from* welfare, but not welfare. Can he show their tie? That interpreter shall guide us from a menial and eleemosynary existence into riches and stability. He dignifies the place where he is. This mendicant America, this curious, peering, itinerant, imitative America, studious of Greece and Rome, of England and Germany, will take off its dusty shoes, will take off its glazed traveller's-cap and sit at home with repose and deep joy on its face. The world has no such landscape, the æons of history no such hour, the future no equal second opportunity. Now let poets sing! now let arts unfold!

One more view remains. But life is good only when it is magical and musical, a perfect timing and consent, and when we do not anatomize it. You must treat the days respectfully, you must be a day yourself, and not interrogate it like a college professor. The world is enigmatical, — everything said, and everything known or done, — and must not be taken literally, but genially. We must be at

the top of our condition to understand anything rightly. You must hear the bird's song without attempting to render it into nouns and verbs. Cannot we be a little abstemious and obedient? Cannot we let the morning be?

Everything in the universe goes by indirection. There are no straight lines. I remember well the foreign scholar who made a week of my youth happy by his visit. "The savages in the islands," he said, "delight to play with the surf, coming in on the top of the rollers, then swimming out again, and repeat the delicious manœuvre for hours. Well, human life is made up of such transits. There can be no greatness without abandonment. But here your very astronomy is an espionage. I dare not go out of doors and see the moon and stars, but they seem to measure my tasks, to ask how many lines or pages are finished since I saw them last. Not so, as I told you, was it in Belleisle. The days at Belleisle were all different, and only joined by a perfect love of the same object. Just to fill the hour, — that is happiness. Fill my hour, ye gods, so that I shall not say, whilst I have done this, 'Behold, also, an hour of my life is gone,' — but rather, 'I have lived an hour.'"

We do not want factitious men, who can do any literary or professional feat, as, to write poems, or advocate a cause, or carry a measure, for money; or turn their ability indifferently in any particular direction by the strong effort of will. No, what has been best done in the world, — the works of genius, — cost nothing. There is no painful effort, but it is the spontaneous flowing of the thought. Shakspeare made his Hamlet as a bird weaves its nest. Poems have been written between sleeping and waking, irresponsibly. Fancy defines herself:

"Forms that men spy
With the half-shut eye
In the beams of the setting sun, am I."

The masters painted for joy, and knew not that virtue had gone out of them. They could not paint the like in cold blood. The masters of English lyric wrote their songs so. It was a fine efflorescence of fine powers; as was said of the letters of the Frenchwoman,— "the charming accident of their more charming existence." Then the poet is never the poorer for his song. A song is no song unless the circumstance is free and fine. If the singer sing from a sense of duty or from seeing no way of escape, I had rather have none. Those only can sleep who do not care to sleep; and those only write or speak best who do not too much respect the writing or the speaking.

The same rule holds in science. The savant is often an amateur. His performance is a memoir to the Academy on fish-worms, tadpoles, or spiders' legs; he observes as other academicians observe; he is on stilts at a microscope, and his memoir finished and read and printed, he retreats into his routinary

existence, which is quite separate from his scientific. But in Newton, science was as easy as breathing; he used the same wit to weigh the moon that he used to buckle his shoes; and all his life was simple, wise, and majestic. So was it in Archimedes, — always self-same, like the sky. In Linnæus, in Franklin, the like sweetness and equality, — no stilts, no tiptoe; and their results are wholesome and memorable to all men.

In stripping time of its illusions, in seeking to find what is the heart of the day, we come to the quality of the moment, and drop the duration altogether. It is the depth at which we live and not at all the surface extension that imports. We pierce to the eternity, of which time is the flitting surface; and, really, the least acceleration of thought and the least increase of power of thought, make life to seem and to be of vast duration. We call it time; but when that acceleration and that deepening take effect, it acquires another and a higher name.

There are people who do not need much experimenting; who, after years of activity, say, We knew all this before; who love at first sight and hate at first sight; discern the affinities and repulsions who do not care so much for conditions as others, for they are always in one condition and enjoy themselves; who dictate to others and are not dictated to; who in their consciousness of deserving success constantly slight the ordinary means of attaining it; who have self-existence and self-help; who are suffered to be themselves in society; who are great in the present; who have no talents, or care not to have them, — being that which was before talent, and shall be after it, and of which talent seems only a tool: this is character, the highest name at which philosophy has arrived.

'Tis not important how the hero does this or this, but what he is. What he is will appear in every gesture and syllable. In this way the moment and the character are one.

It is a fine fable for the advantage of character over talent, the Greek legend of the strife of Jove and Phœbus. Phœbus challenged the gods, and said, "Who will outshoot the far-darting Apollo?" Zeus said, "I will." Mars shook the lots in his helmet, and that of Apollo leaped out first. Apollo stretched his bow and shot his arrow into the extreme west. Then Zeus arose, and with one stride cleared the whole distance, and said, "Where shall I shoot? there is no space left." So the bowman's prize was adjudged to him who drew no bow.

And this is the progress of every earnest mind; from the works of man and the activity of the hands to a delight in the faculties which rule them; from a respect to the works to a wise wonder at this mystic element of time in which he is conditioned; from local skills and the economy which reckons the amount of production *per* hour to the finer economy which respects the quality of what is done, and the right we have to the work, or the fidelity with which it flows from

ourselves; then to the depth of thought it betrays, looking to its universality, or that its roots axe in eternity, not in time. Then it flows from character, that sublime health which values one moment as another, and makes us great in all conditions, and as the only definition we have of freedom and power.

BOOKS.

It is easy to accuse books, and bad ones are easily found; and the best are but records, and not the things recorded; and certainly there is dilettanteism enough, and books that are merely neutral and do nothing for us. In Plato's *Gorgias*, Socrates says: "The shipmaster walks in a modest garb near the sea, after bringing his passengers from Ægina or from Pontus; not thinking he has done anything extraordinary, and certainly knowing that his passengers are the same and in no respect better than when he took them on board." So is it with books, for the most part: they work no redemption in us. The bookseller might certainly know that his customers are in no respect better for the purchase and consumption of his wares. The volume is dear at a dollar, and after reading to weariness the lettered backs, we leave the shop with a sigh, and learn, as I did without surprise of a surly bank director, that in bank parlors they estimate all stocks of this kind as rubbish.

But it is not less true that there are books which are of that importance in a man's private experience as to verify for him the fables of Cornelius Agrippa, of Michael Scott, or of the old Orpheus of Thrace, — books which take rank in our life with parents and lovers and passionate experiences, so medicinal, so stringent, so revolutionary, so authoritative, — books which are the work and the proof of faculties so comprehensive, so nearly equal to the world which they paint, that though one shuts them with meaner ones, he feels his exclusion from them to accuse his way of living.

Consider what you have in the smallest chosen library. A company of the wisest and wittiest men that could be picked out of all civil countries in a thousand years have set in best order the results of their learning and wisdom. The men themselves were hid and inaccessible, solitary, impatient of interruption, fenced by etiquette; but the thought which they did not uncover to their bosom friend is here written out in transparent words to us, the strangers of another age.

We owe to books those general benefits which come from high intellectual action. Thus, I think, we often owe to them the perception of immortality. They impart sympathetic activity to the moral power. Go with mean people and you think life is mean. Then read Plutarch, and the world is a proud place, peopled with men of positive quality, with heroes and demigods standing around us, who will not let us sleep. Then, they address the imagination: only poetry inspires poetry. They become the organic culture of the time. College education is the reading of certain books which the common sense of all scholars agrees will

represent the science already accumulated. If you know that, — for instance in geometry, if you have read Euclid and Laplace, — your opinion has some value; if you do not know these, you are not entitled to give any opinion on the subject. Whenever any skeptic or bigot claims to be heard on the questions of intellect and morals, we ask if he is familiar with the books of Plato, where all his port objections have once for all been disposed of. If not, he has no right to our time. Let him go and find himself answered there.

Meantime the colleges, whilst they provide us with libraries, furnish no professor of books; and I think no chair is so much wanted. In a library we are surrounded by many hundreds of dear friends, but they are imprisoned by an enchanter in these paper and leathern boxes; and though they know us, and have been waiting two, ten, or twenty centuries for us, — some of them, — and are eager to give us a sign and unbosom themselves, it is the law of their limbo that they must not speak until spoken to; and as the enchanter has dressed them, like battalions of infantry, in coat and jacket of one cut, by the thousand and ten thousand, your chance of hitting on the right one is to be computed by the arithmetical rule of Permutation and Combination, — not a choice out of three caskets, but out of half a million caskets, all alike. But it happens in our experience that in this lottery there are at least fifty or a hundred blanks to a prize. It seems then as if some charitable soul, after losing a great deal of time among the false books and alighting upon a few true ones which made him happy and wise, would do a right act in naming those which have been bridges or ships to carry him safely over dark morasses and barren oceans, into the heart of sacred cities, into palaces and temples. This would be best done by those great masters of books who from time to time appear, — the Fabricii, the Seldens, Magliabecchis, Scaligers, Mirandolas, Bayles, Johnsons, whose eyes sweep the whole horizon of learning. But private readers, reading purely for love of the book, would serve us by leaving each the shortest note of what he found.

There are books; and it is practicable to read them, because they are so few. We look over with a sigh the monumental libraries of Paris, of the Vatican, and the British Museum. In 1858, the number of printed books in the Imperial Library at Paris was estimated at eight hundred thousand volumes, with an annual increase of twelve thousand volumes; so that the number of printed books extant to-day may easily exceed a million. It is easy to count the number of pages which a diligent man can read in a day, and the number of years which human life in favorable circumstances allows to reading; and to demonstrate that though he should read from dawn till dark, for sixty years, he must die in the first alcoves. But nothing can be more deceptive than this arithmetic, where none but a natural method is really pertinent. I visit occasionally the Cambridge

Library, and I can seldom go there without renewing the conviction that the best of it all is already within the four walls of my study at home. The inspection of the catalogue brings me continually back to the few standard writers who are on every private shelf; and to these it can afford only the most slight and casual additions. The crowds and centuries of books are only commentary and elucidation, echoes and weakeners of these few great voices of time.

The best rule of reading will be a method from nature, and not a mechanical one of hours and pages. It holds each student to a pursuit of his native aim, instead of a desultory miscellany. Let him read what is proper to him, and not waste his memory on a crowd of mediocrities. As whole nations have derived their culture from a single book, — as the Bible has been the literature as well as the religion of large portions of Europe; as Hafiz was the eminent genius of the Persians, Confucius of the Chinese, Cervantes of the Spaniards; so, perhaps, the human mind would be a gainer if all the secondary writers were lost, — say, in England, all but Shakspeare, Milton, and Bacon, — through the profounder study so drawn to those wonderful minds. With this pilot of his own genius, let the student read one, or let him read many, he will read advantageously. Dr. Johnson said: “Whilst you stand deliberating which book your son shall read first, another boy has read both: read anything five hours a day, and you will soon be learned.”

Nature is much our friend in this matter. Nature is always clarifying her water and her wine. No filtration can be so perfect. She does the same thing by books as by her gases and plants. There is always a selection in writers, and then a selection from the selection. In the first place, all books that get fairly into the vital air of the world were written by the successful class, by the affirming and advancing class, who utter what tens of thousands feel though they cannot say. There has already been a scrutiny and choice from many hundreds of young pens before the pamphlet or political chapter which you read in a fugitive journal comes to your eye. All these are young adventurers, who produce their performance to the wise ear of Time, who sits and weighs, and, ten years hence, out of a million of pages reprints one. Again it is judged, it is winnowed by all the winds of opinion, and what terrific selection has not passed on it before it can be reprinted after twenty years; — and reprinted after a century! — it is as if Minos and Rhadamanthus had indorsed the writing. 'Tis therefore an economy of time to read old and famed books. Nothing can be preserved which is not good; and I know beforehand that Pindar, Martial, Terence, Galen, Kepler, Galileo, Bacon, Erasmus, More, will be superior to the average intellect. In contemporaries, it is not so easy to distinguish betwixt notoriety and fame.

Be sure then to read no mean books. Shun the spawn of the press on the

gossip of the hour. Do not read what you shall learn, without asking, in the street and the train. Dr. Johnson said “he always went into stately shops;” and good travellers stop at the best hotels; for though they cost more, they do not cost much more, and there is the good company and the best information. In like manner the scholar knows that the famed books contain, first and last, the best thoughts and facts. Now and then, by rarest luck, in some foolish Grub Street is the gem we want. But in the best circles is the best information. If you should transfer the amount of your reading day by day from the newspaper to the standard authors —— — But who dare speak of such a thing?

The three practical rules, then, which I have to offer, are, — 1. Never read any book that is not a year old. 2. Never read any but famed books. 3. Never read any but what you like; or, in Shakspeare’s phrase, —

“No profit goes where is no pleasure ta’en:

In brief, sir, study what you most affect.”

Montaigne says, “Books are a languid pleasure;” but I find certain books vital and spermatic, not leaving the reader what he was: he shuts the book a richer man. I would never willingly read any others than such. And I will venture, at the risk of inditing a list of old primers and grammars, to count the few books which a superficial reader must thankfully use.

Of the old Greek books, I think there are five which we cannot spare: 1. Homer, who in spite of Pope and all the learned uproar of centuries, has really the true fire and is good for simple minds, is the true and adequate germ of Greece, and occupies that place as history which nothing can supply. It holds through all literature that our best history is still poetry. It is so in Hebrew, in Sanskrit, and in Greek. English history is best known through Shakspeare; how much through Merlin, Robin Hood, and the Scottish ballads! — the German, through the Nibelungenlied; — the Spanish, through the Cid. Of Homer, George Chapman’s is the heroic translation, though the most literal prose version is the best of all. 2. Herodotus, whose history contains inestimable anecdotes, which brought it with the learned into a sort of disesteem; but in these days, when it is found that what is most memorable of history is a few anecdotes, and that we need not be alarmed though we should find it not dull, it is regaining credit. 3. Æschylus, the grandest of the three tragedians, who has given us under a thin veil the first plantation of Europe. The “Prometheus” is a poem of the like dignity and scope as the Book of Job, or the Norse Edda. 4. Of Plato I hesitate to speak, lest there should be no end. You find in him that which you have already found in Homer, now ripened to thought, — the poet converted to a philosopher, with loftier strains of musical wisdom than Homer reached; as if Homer were the youth and Plato the finished man; yet with no less security of bold and perfect

song, when he cares to use it, and with some harpstrings fetched from a higher heaven. He contains the future, as he came out of the past. In Plato you explore modern Europe in its causes and seed, — all that in thought, which the history of Europe embodies or has yet to embody. The well-informed man finds himself anticipated. Plato is up with him too. Nothing has escaped him. Every new crop in the fertile harvest of reform, every fresh suggestion of modern humanity, is there. If the student wish to see both sides, and justice done to the man of the world, pitiless exposure of pedants, and the supremacy of truth and the religious sentiment, he shall be contented also. Why should not young men be educated on this book? It would suffice for the tuition of the race; to test their understanding, and to express their reason. Here is that which is so attractive to all men, — the literature of aristocracy shall I call it? — the picture of the best persons, sentiments, and manners, by the first master, in the best times; portraits of Pericles, Alcibiades, Crito, Prodicus, Protagoras, Anaxagoras, and Socrates, with the lovely background of the Athenian and suburban landscape. Or who can overestimate the images with which Plato has enriched the minds of men, and which pass like bullion in the currency of all nations? Read the “Phædo,” the “Protagoras,” the “Phædrus,” the “Timæus,” the “Republic,” and the “Apology of Socrates.” 5. Plutarch cannot be spared from the smallest library; first because he is so readable, which is much; then that he is medicinal and invigorating. The lives of Cimon, Lycurgus, Alexander, Demosthenes, Phocion, Marcellus, and the rest, are what history has of best. But this book has taken care of itself, and the opinion of the world is expressed in the innumerable cheap editions, which make it as accessible as a newspaper. But Plutarch’s “Morals” is less known, and seldom reprinted. Yet such a reader as I am writing to can as ill spare it as the “Lives.” He will read in it the essays “On the Dæmon of Socrates,” “On Isis and Osiris,” “On Progress in Virtue,” “On Garrulity,” “On Love;” and thank anew the art of printing and the cheerful domain of ancient thinking. Plutarch charms by the facility of his associations; so that it signifies little where you open his book, you find yourself at the Olympian tables. His memory is like the Isthmian Games, where all that was excellent in Greece was assembled; and you are stimulated and recruited by lyric verses, by philosophic sentiments, by the forms and behavior of heroes, by the worship of the gods, and by the passing of fillets, parsley and laurel wreaths, chariots, armor, sacred cups, and utensils of sacrifice. An inestimable trilogy of ancient social pictures are the three “Banquets” respectively of Plato, Xenophon, and Plutarch. Plutarch’s has the least approach to historical accuracy; but the meeting of the Seven Wise Masters is a charming portraiture of ancient manners and discourse, and is as clear as the voice of a fife, and entertaining as a French novel. Xenophon’s delineation of Athenian

manners is an accessory to Plato, and supplies traits of Socrates; whilst Plato's has merits of every kind, — being a repertory of the wisdom of the ancients on the subject of love; a picture of a feast of wits, not less descriptive than Aristophanes; and, lastly, containing that ironical eulogy of Socrates which is the source from which all the portraits of that philosopher current in Europe have been drawn.

Of course a certain outline should be obtained of Greek history, in which the important moments and persons can be rightly set down; but the shortest is the best, and if one lacks stomach for Mr. Grote's voluminous annals, the old slight and popular summary of Goldsmith or of Gillies will serve. The valuable part is the age of Pericles and the next generation. And here we must read the "Clouds" of Aristophanes, and what more of that master we gain appetite for, to learn our way in the streets of Athens, and to know the tyranny of Aristophanes, requiring more genius and sometimes not less cruelty than belonged to the official commanders. Aristophanes is now very accessible, with much valuable commentary, through the labors of Mitchell and Cartwright. An excellent popular book is J. A. St. John's "Ancient Greece;" the "Life and Letters" of Niebuhr, even more than his Lectures, furnish leading views; and Winckelmann, a Greek born out of due time, has become essential to an intimate knowledge of the Attic genius. The secret of the recent histories in German and in English is the discovery, owed first to Wolff and later to Boeckh, that the sincere Greek history of that period must be drawn from Demosthenes, especially from the business orations; and from the comic poets.

If we come down a little by natural steps from the master to the disciples, we have, six or seven centuries later, the Platonists, who also cannot be skipped, — Plotinus, Porphyry, Proclus, Synesius, Jamblichus. Of Jamblichus the Emperor Julian said that "he was posterior to Plato in time, not in genius." Of Plotinus, we have eulogies by Porphyry and Longinus, and the favor of the Emperor Gallienus, indicating the respect he inspired among his contemporaries. If any one who had read with interest the "Isis and Osiris" of Plutarch should then read a chapter called "Providence," by Synesius, translated into English by Thomas Taylor, he will find it one of the majestic remains of literature, and, like one walking in the noblest of temples, will conceive new gratitude to his fellow-men, and a new estimate of their nobility. The imaginative scholar will find few stimulants to his brain like these writers. He has entered the Elysian Fields; and the grand and pleasing figures of gods and dæmons and dæmoniacal men, of the "azonic" and the "aquatic gods," dæmons with fulgid eyes, and all the rest of the Platonic rhetoric, exalted a little under the African sun, sail before his eyes. The acolyte has mounted the tripod over the cave at Delphi; his heart dances, his

sight is quickened. These guides speak of the gods with such depth and with such pictorial details, as if they had been bodily present at the Olympian feasts. The reader of these books makes new acquaintance with his own mind; new regions of thought are opened. Jamblichus's "Life of Pythagoras" works more directly on the will than the others; since Pythagoras was eminently a practical person, the founder of a school of ascetics and socialists, a planter of colonies, and nowise a man of abstract studies alone.

The respectable and sometimes excellent translations of Bohn's Library have done for literature what railroads have done for internal intercourse. I do not hesitate to read all the books I have named, and all good books, in translations. What is really best in any book is translatable, — any real insight or broad human sentiment. Nay, I observe that, in our Bible, and other books of lofty moral tone, it seems easy and inevitable to render the rhythm and music of the original into phrases of equal melody. The Italians have a fling at translators, — *i traditori traduttori*; but I thank them. I rarely read any Latin, Greek, German, Italian, sometimes not a French book, in the original, which I can procure in a good version. I like to be beholden to the great metropolitan English speech, the sea which receives tributaries from every region under heaven. I should as soon think of swimming across Charles River when I wish to go to Boston, as of reading all my books in originals when I have them rendered for me in my mother-tongue.

For history there is great choice of ways to bring the student through early Rome. If he can read Livy, he has a good book; but one of the short English compends, some Goldsmith or Ferguson, should be used, that will place in the cycle the bright stars of Plutarch. The poet Horace is the eye of the Augustan age; Tacitus, the wisest of historians; and Martial will give him Roman manners, — and some very bad ones, — in the early days of the Empire: but Martial must be read, if read at all, in his own tongue. These will bring him to Gibbon, who will take him in charge and convey him with abundant entertainment down — with notice of all remarkable objects on the way — through fourteen hundred years of time. He cannot spare Gibbon, with his vast reading, with such wit and continuity of mind, that, though never profound, his book is one of the conveniences of civilization, like the new railroad from ocean to ocean, — and, I think, will be sure to send the reader to his "Memoirs of Himself," and the "Extracts from my Journal," and "Abstracts of my Readings," which will spur the laziest scholar to emulation of his prodigious performance.

Now having our idler safe down as far as the fall of Constantinople in 1453, he is in very good courses; for here are trusty hands waiting for him. The cardinal facts of European history are soon learned. There is Dante's poem, to

open the Italian Republics of the Middle Age; Dante's "Vita Nuova," to explain Dante and Beatrice; and Boccaccio's "Life of Dante," a great man to describe a greater. To help us, perhaps a volume or two of M. Sismondi's "Italian Republics" will be as good as the entire sixteen. When we come to Michael Angelo, his Sonnets and Letters must be read, with his Life by Vasari, or, in our day, by Herman Grimm. For the Church and the Feudal Institution, Mr. Hallam's "Middle Ages" will furnish, if superficial, yet readable and conceivable outlines.

The "Life of the Emperor Charles V.," by the useful Robertson, is still the key of the following age. Ximenes, Columbus, Loyola, Luther, Erasmus, Melanchthon, Francis I., Henry VIII., Elizabeth, and Henry IV. of France, are his contemporaries. It is a time of seeds and expansions, whereof our recent civilization is the fruit.

If now the relations of England to European affairs bring him to British ground, he is arrived at the very moment when modern history takes new proportions. He can look back for the legends and mythology to the "Younger Edda" and the "Heimskringla" of Snorro Sturleson, to Mallet's "Northern Antiquities," to Ellis's "Metrical Romances," to Asser's "Life of Alfred" and Venerable Bede, and to the researches of Sharon Turner and Palgrave. Hume will serve him for an intelligent guide, and in the Elizabethan era he is at the richest period of the English mind, with the chief men of action and of thought which that nation has produced, and with a pregnant future before him. Here he has Shakspeare, Spenser, Sidney, Raleigh, Bacon, Chapman, Jonson, Ford, Beaumont and Fletcher, Herbert, Donne, Herrick; and Milton, Marvell, and Dryden, not long after.

In reading history, he is to prefer the history of individuals. He will not repent the time he gives to Bacon, — not if he read the "Advancement of Learning," the "Essays," the "Novum Organum," the "History of Henry VII.," and then all the "Letters" (especially those to the Earl of Devonshire, explaining the Essex business), and all but his "Apophthegms."

The task is aided by the strong mutual light which these men shed on each other. Thus, the works of Ben Jonson are a sort of hoop to bind all these fine persons together, and to the land to which they belong. He has written verses to or on all his notable contemporaries; and what with so many occasional poems, and the portrait sketches in his "Discoveries," and the gossiping record of his opinions in his conversations with Drummond of Hawthornden, he has really illustrated the England of his time, if not to the same extent yet much in the same way, as Walter Scott has celebrated the persons and places of Scotland. Walton, Chapman, Herrick, and Sir Henry Wotton write also to the times.

Among the best books are certain *Autobiographies*; as, St. Augustine's

Confessions; Benvenuto Cellini's Life; Montaigne's Essays; Lord Herbert of Cherbury's Memoirs; Memoirs of the Cardinal de Retz; Rousseau's Confessions; Linnæus's Diary; Gibbon's, Hume's, Franklin's, Burns's, Alfieri's, Goethe's, and Haydon's Autobiographies.

Another class of books closely allied to these, and of like interest, are those which may be called *Table-Talks*: of which the best are Saadi's Gulistan; Luther's Table - Talk; Aubrey's Lives; Spence's anecdotes; Selden's Table-Talk; Boswell's Life of Johnson; Eckermann's Conversations with Goethe; Coleridge's Table - Talk; and Hazlitt's Life of Northcote.

There is a class whose value I should designate as *Favorites*: such as Froissart's Chronicles; Southey's Chronicle of the Cid; Cervantes; Sully's Memoirs; Rabelais; Montaigne; Izaak Walton; Evelyn; Sir Thomas Browne; Aubrey; Sterne; Horace Walpole; Lord Clarendon; Doctor Johnson; Burke, shedding floods of light on his times; Lamb; Landor; and De Quincey; — a list, of course, that may easily be swelled, as dependent on individual caprice. Many men are as tender and irritable as lovers in reference to these predilections. Indeed, a man's library is a sort of harem, and I observe that tender readers have a great pudency in showing their books to a stranger.

The annals of bibliography afford many examples of the delirious extent to which book-fancying can go, when the legitimate delight in a book is transferred to a rare edition or to a manuscript. This mania reached its height about the beginning of the present century. For an autograph of Shakspeare one hundred and fifty-five guineas were given. In May, 1812, the library of the Duke of Roxburgh was sold. The sale lasted forty-two days, — we abridge the story from Dibdin, — and among the many curiosities was a copy of Boccaccio published by Valdarfer, at Venice, in 1471; the only perfect copy of this edition. Among the distinguished company which attended the sale were the Duke of Devonshire, Earl Spencer, and the Duke of Marlborough, then Marquis of Blandford. The bid stood at five hundred guineas. "A thousand guineas," said Earl Spencer: "And ten," added the Marquis. You might near a pin drop. All eyes were bent on the bidders. Now they talked apart, now ate a biscuit, now made a bet, but without the least thought of yielding one to the other. But to pass over some details, — the contest proceeded until the Marquis said, "Two thousand pounds." Earl Spencer bethought him like a prudent general of useless bloodshed and waste of powder, and had paused a quarter of a minute, when Lord Althorp with long steps came to his side, as if to bring his father a fresh lance to renew the fight. Father and son whispered together, and Earl Spencer exclaimed, "Two thousand two hundred and fifty pounds!" An electric shock went through the assembly. "And ten," quietly added the Marquis. There ended

the strife. Ere Evans let the hammer fall, he paused; the ivory instrument swept the air; the spectators stood dumb, when the hammer fell. The stroke of its fall sounded on the farthest shores of Italy. The tap of that hammer was heard in the libraries of Rome, Milan, and Venice. Boccaccio stirred in his sleep of five hundred years, mad M. Van Praet groped in vain among the royal alcoves in Paris, to detect a copy of the famed Valdarfer Boccaccio.

Another class I distinguish by the term *Vocabularies*. Burton's "Anatomy of Melancholy" is a book of great learning. To read it is like reading in a dictionary. 'Tis an inventory to remind us how many classes and species of facts exist, and, in observing into what strange and multiplex byways learning has strayed, to infer our opulence. Neither is a dictionary a bad book to read. There is no cant in it, no excess of explanation, and it is full of suggestion, — the raw material of possible poems and histories. Nothing is wanting but a little shuffling, sorting, ligature, and cartilage. Out of a hundred examples, Cornelius Agrippa "On the Vanity of Arts and Sciences" is a specimen of that scribatiuousness which grew to be the habit of the gluttonous readers of his time. Like the modern Germans, they read a literature while other mortals read a few books. They read voraciously, and must disburden themselves; so they take any general topic, as Melancholy, or Praise of Science, or Praise of Folly, and write and quote without method or end. Now and then out of that affluence of their learning comes a fine sentence from Theophrastus, or Seneca, or Boëthius, but no high method, no inspiring efflux. But one cannot afford to read for a few sentences; they are good only as strings of suggestive words.

There is another class, more needful to the present age, because the currents of custom run now in another direction and leave us dry on this side; — I mean the *Imaginative*. A right metaphysics should do justice to the co-ordinate powers of Imagination, Insight, Understanding, and Will. Poetry, with its aids of Mythology and Romance, must be well allowed for an imaginative creature. Men are ever lapsing into a beggarly habit, wherein everything that is not ciphering, that is, which does not serve the tyrannical animal, is hustled out of sight. Our orators and writers are of the same poverty, and in this rag-fair neither the Imagination, the great awakening power, nor the Morals, creative of genius and of men, are addressed. But though orator and poet be of this hunger party, the capacities remain. We must have symbols. The child asks you for a story, and is thankful for the poorest. It is not poor to him, but radiant with meaning. The man asks for a novel, — that is, asks leave for a few hours to be a poet, and to paint things as they ought to be. The youth asks for a poem. The very dunces wish to go to the theatre. What private heavens can we not open, by yielding to all the suggestion of rich music! We must have idolatries, mythologies, — some

swing and verge for the creative power lying coiled and cramped here, driving ardent natures to insanity and crime if it do not find vent. Without the great arts which speak to the sense of beauty, a man seems to me a poor, naked, shivering creature. These are his becoming draperies, which warm and adorn him. Whilst the prudential and economical tone of society starves the imagination, affronted Nature gets such indemnity as she may. The novel is that allowance and frolic the imagination finds. Everything else pins it down, and men flee for redress to Byron, Scott, Disraeli, Dumas, Sand, Balzac, Dickens, Thackeray, and Reade. Their education is neglected; but the circulating-library and the theatre, as well as the trout-fishing, the Notch Mountains, the Adirondack country, the tour to Mont Blanc, to the White Hills and the Ghauts, make such amends as they can.

The imagination infuses a certain volatility and intoxication. It has a flute which sets the atoms of our frame in a dance, like planets; and once so liberated, the whole man reeling drunk to the music, they never quite subside to their old stony state. But what is the imagination? Only an arm or weapon of the interior energy; only the precursor of the reason. And books that treat the old pedantries of the world, our times, places, professions, customs, opinions, histories, with a certain freedom, and distribute things, not after the usages of America and Europe but after the laws of right reason, and with as daring a freedom as we use in dreams, put us on our feet again, enable us to form an original judgment of our duties, and suggest new thoughts for to-morrow.

“Lucrezia Floriani,” “Le Péché de M. Antoine,” “Jeanne,” and “Consuelo,” of George Sand, are great steps from the novel of one termination, which we all read twenty years ago. Yet how far off from life and manners and motives the novel still is! Life lies about us dumb; the day, as we know it, has not yet found a tongue. These stories are to the plots of real life what the figures in “La Belle Assemblée,” which represent the fashion of the month, are to portraits. But the novel will find the way to our interiors one day, and will not always be the novel of costume merely. I do not think it inoperative now. So much novel-reading cannot leave the young men and maidens untouched; and doubtless it gives some ideal dignity to the day. The young study noble behavior; and as the player in “Consuelo” insists that he and his colleagues on the boards have taught princes the fine etiquette and strokes of grace and dignity which they practise with so much effect in their villas and among their dependents, so I often see traces of the Scotch or the French novel in the courtesy and brilliancy of young midshipmen, collegians, and clerks. Indeed, when one observes how ill and ugly people make their loves and quarrels, 'tis pity they should not read novels a little more, to import the fine generousities and the clear, firm conduct, which are as becoming in the unions and separations which love effects under shingle roofs as

in palaces and among illustrious personages.

In novels the most serious questions are beginning to be discussed. What made the popularity of "Jane Eyre," but that a central question was answered in some sort? The question there answered in regard to a vicious marriage will always be treated according to the habit of the party. A person of commanding individualism will answer it as Rochester does, — as Cleopatra, as Milton, as George Sand do, — magnifying the exception into a rule, dwarfing the world into an exception. A person of less courage, that is of less constitution, will answer as the heroine does, — giving way to fate, to conventionalism, to the actual state and doings of men and women.

For the most part, our novel-reading is a passion for results. We admire parks, and high-born beauties, and the homage of drawing-rooms and parliaments. They make us skeptical, by giving prominence to wealth and social position.

I remember when some peering eyes of boys discovered that the oranges hanging on the boughs of an orange-tree in a gay piazza were tied to the twigs by thread. I fear 'tis so with the novelist's prosperities. Nature has a magic by which she fits the man to his fortunes, by making them the fruit of his character. But the novelist plucks this event here and that fortune there, and ties them rashly to his figures, to tickle the fancy of his readers with a cloying success or scare them with shocks of tragedy. And so, on the whole, 'tis a juggle. We are cheated into laughter or wonder by feats which only oddly combine acts that we do every day. There is no new element, no power, no furtherance. 'Tis only confectionery, not the raising of new corn. Great is the poverty of their inventions. *She was beautiful and he fell in love*. Money, and killing, and the Wandering Jew, and persuading the lover that his mistress is betrothed to another, these are the main-springs; new names, but no new qualities in the men and women. Hence the vain endeavor to keep any bit of this fairy gold which has rolled like a brook through our hands. A thousand thoughts awoke; great rainbows seemed to span the sky, a morning among the mountains; but we close the book and not a ray remains in the memory of evening. But this passion for romance, and this disappointment, show how much we need real elevations and pure poetry: that which shall show us, in morning and night, in stars and mountains and in all the plight and circumstance of men, the analogons of our own thoughts, and a like impression made by a just book and by the face of Nature.

If our times are sterile in genius, we must cheer us with books of rich and believing men who had atmosphere and amplitude about them. Every good fable, every mythology, every biography from a religious age, every passage of love, and even philosophy and science, when they proceed from an intellectual integrity and are not detached and critical, have the imaginative element. The

Greek fables, the Persian history (Firdusi), the “Younger Edda” of the Scandinavians, the “Chronicle of the Cid,” the poem of Dante, the Sonnets of Michel Angelo, the English drama of Shakspeare, Beaumont and Fletcher, and Ford, and even the prose of Bacon and Milton, — in our time the Ode of Wordsworth, and the poems and the prose of Goethe, have this enlargement, and inspire hope and generous attempts.

There is no room left, — and yet I might as well not have begun as to leave out a class of books which are the best: I mean the Bibles of the world, or the sacred books of each nation, which express for each the supreme result of their experience. After the Hebrew and Greek Scriptures, which constitute the sacred books of Christendom, these are, the Desatir of the Persians, and the Zoroastrian Oracles; the Vedas and Laws of Menu; the Upanishads, the Vishnu Purana, the Bhagvat Geeta, of the Hindoos; the books of the Buddhists; the “Chinese Classic,” of four books, containing the wisdom of Confucius and Mencius. Also such other books as have acquired a semi-canonical authority in the world, as expressing the highest sentiment and hope of nations. Such are the “Hermes Trismegistus,” pretending to be Egyptian remains; the “Sentences” of Epictetus; of Marcus Antoninus; the “Vishnu Sarma “of the Hindoos; the “Gulistan” of Saadi; the “Imitation of Christ,” of Thomas à Kempis; and the “Thoughts” of Pascal.

All these books are the majestic expressions of the universal conscience, and are more to our daily purpose than this year’s almanac or this day’s newspaper. But they are for the closet, and to be read on the bended knee. Their communications are not to be given or taken with the lips and the end of the tongue, but out of the glow of the cheek, and with the throbbing heart. Friendship should give and take, solitude and time brood and ripen, heroes absorb and enact them. They are not to be held by letters printed on a page, but are living characters translatable into every tongue and form of life. I read them on lichens and bark; I watch them on waves on the beach; they fly in birds, they creep in worms; I detect them in laughter and blushes and eye-sparkles of men and women. These are Scriptures which the missionary might wren carry over prairie, desert, and ocean, to Siberia, Japan, Timbuctoo. Yet he will find that the spirit which is in them journeys faster than he, and greets him on his arrival, — was there already long before him. The missionary must be carried by it, and find it there, or he goes in vain. Is there any geography in these things? We call them Asiatic, we call them primeval; but perhaps that is only optical, for Nature is always equal to herself, and there are as good eyes and ears now in the planet as ever were. Only these ejaculations of the soul are uttered one or a few at a time, at long intervals, and it takes millenniums to make a Bible.

These are a few of the books which the old and the later times have yielded us, which will reward the time spent on them. In comparing the number of good books with the shortness of life, many might well be read by proxy, if we had good proxies; and it would be well for sincere young men to borrow a hint from the French Institute and the British Association, and as they divide the whole body into sections, each of which sits upon and reports of certain matters confided to it, so let each scholar associate himself to such persons as he can rely on, in a literary club, in which each shall undertake a single work or series for which he is qualified. For example, how attractive is the whole literature of the “Roman de la Rose,” the “Fabliaux,” and the *gaie science* of the French Troubadours! Yet who in Boston has time for that? But one of our company shall undertake it, shall study and master it, and shall report on it as under oath; shall give us the sincere result as it lies in his mind, adding nothing, keeping nothing back. Another member meantime shall as honestly search, sift, and as truly report, on British mythology, the Round Table, the histories of Brut, Merlin, and Welsh poetry; a third on the Saxon Chronicles, Robert of Gloucester, and William of Malmesbury; a fourth, on Mysteries, Early Drama, “Gesta Romanorum,” Collier, and Dyce, and the Camden Society. Each shall give us his grains of gold, after the washing; and every other shall then decide whether this is a book indispensable to him also.

CLUBS.

We are delicate machines, and require nice treatment to get from us the maximum of power and pleasure. We need tonics, but must have those that cost little or no reaction. The flame of life burns too fast in pure oxygen, and nature has tempered the air with nitrogen. So thought is the native air of the mind, yet pure it is a poison to our mixed constitution, and soon burns up the bone-house of man, unless tempered with affection and coarse practice in the material world. Varied foods, climates, beautiful objects, — and especially the alternation of a large variety of objects, — are the necessity of this exigent system of ours. But our tonics, our luxuries, are force-pumps which exhaust the strength they pretend to supply; and of all the cordials known to us, the best, safest, and most exhilarating, with the least harm, is society; and every healthy and efficient mind passes a large part of life in the company most easy to him.

We seek society with very different aims, and the staple of conversation is widely unlike in its circles. Sometimes it is facts, — running from those of daily necessity, to the last results of science, — and has all degrees of importance; sometimes it is love, and makes the balm of our early and of our latest days; sometimes it is thought, as from a person who is a mind only; sometimes a singing, as if the heart poured out all like a bird; sometimes experience. With some men it is a debate; at the approach of a dispute they neigh like horses. Unless there be an argument, they think nothing is doing. Some talkers excel in the precision with which they formulate their thoughts, so that you get from them somewhat to remember; others lay criticism asleep by a charm. Especially women use words that are not words, — as steps in a dance are not steps, — but reproduce the genius of that they speak of; as the sound of some bells makes us think of the bell merely, whilst the church-chimes in the distance bring the church and its serious memories before us. Opinions are accidental in people, — have a poverty-stricken air. A man valuing himself as the organ of this or that dogma is a dull companion enough; but opinion native to the speaker is sweet and refreshing, and inseparable from his image. Neither do we by any means always go to people for conversation. How often to say nothing, — and yet must go; as a child will long for his companions, but among them plays by himself. 'Tis only presence which we want. But one thing is certain, — at some rate, intercourse we must have. The experience of retired men is positive, — that we lose our days and are barren of thought for want of some person to talk with. The understanding can no more empty itself by its own action than can a deal box.

The clergyman walks from house to house all day all the year to give people

the comfort of good talk. The physician helps them mainly in the same way, by healthy talk giving a right tone to the patient's mind. The dinner, the walk, the fireside, all have that for their main end.

See how Nature has secured the communication of knowledge. 'Tis certain that money does not more burn in a boy's pocket than a piece of news burns in our memory until we can tell it. And in higher activity of mind, every new perception is attended with a thrill of pleasure, and the imparting of it to others is also attended with pleasure. Thought is the child of the intellect, and this child is conceived with joy and born with joy.

Conversation is the laboratory and workshop of the student. The affection or sympathy helps. The wish to speak to the want of another mind assists to clear your own. A certain truth possesses us which we in all ways strive to utter. Every time we say a thing in conversation, we get a mechanical advantage in detaching it well and deliverly. I prize the mechanics of conversation. 'Tis pulley and lever and screw. To fairly disengage the mass, and send it jingling down, a good boulder, — a block of quartz and gold, to be worked up at leisure in the useful arts of life, — is a wonderful relief.

What are the best days in memory? Those in which we met a companion who was truly such. How sweet those hours when the day was not long enough to communicate and compare our intellectual jewels, — the favorite passages of each book, the proud anecdotes of our heroes, the delicious verses we had hoarded! What a motive had then our solitary days! How the countenance of our friend still left some light after he had gone! We remember the time when the best gift we could ask of fortune was to fall in with a valuable companion in a ship's cabin, or on a long journey in the old stage-coach, where, each passenger being forced to know every other, and other employments being out of question, conversation naturally flowed, people became rapidly acquainted, and, if well adapted, more intimate in a day than if they had been neighbors for years.

In youth, in the fury of curiosity and acquisition, the day is too short for books and the crowd of thoughts, and we are impatient of interruption. Later, when books tire, thought has a more languid flow; and the days come when we are alarmed, and say there are no thoughts. 'What a barren-witted pate is mine!' the student says; 'I will go and learn whether I have lost my reason.' He seeks intelligent persons, whether more wise or less wise than he, who give him provocation, and at once and easily the old motion begins in his brain: thoughts, fancies, humors flow; the cloud lifts; the horizon broadens; and the infinite opulence of things is again shown him. But the right conditions must be observed. Mainly he must have leave to be himself. Sancho Panza blessed the man who invented sleep. So I prize the good invention whereby everybody is

provided with somebody who is glad to see him.

If men are less when together than they are alone, they are also in some respects enlarged. They kindle each other; and such is the power of suggestion that each sprightly story calls out more; and sometimes a fact that had long slept in the recesses of memory hears the voice, is welcomed to daylight, and proves of rare value. Every metaphysician must have observed, not only that no thought is alone, but that thoughts commonly go in pairs; though the related thoughts first appeared in his mind at long distances of time. Things are in pairs: a natural fact has only half its value until a fact in moral nature, its counterpart, is stated. Then they confirm and adorn each other; a story is matched by another story. And that may be the reason why, when a gentleman has told a good thing, he immediately tells it again.

Nothing seems so cheap as the benefit of conversation; nothing is more rare. 'Tis wonderful how you are balked and baffled. There is plenty of intelligence, reading, curiosity; but serious, happy discourse, avoiding personalities, dealing with results, is rare: and I seldom meet with a reading and thoughtful person but he tells me, as if it were his exceptional mishap, that he has no companion.

Suppose such a one to go out exploring different circles in search of this wise and genial counterpart, — he might inquire far and wide. Conversation in society is found to be on a platform so low as to exclude science, the saint, and the poet. Amidst all the gay banter, sentiment cannot profane itself and venture out. The reply of old Isocrates comes so often to mind,— “The things which are now seasonable I cannot say; and for the things which I can say it is not now the time.” Besides, who can resist the charm of talent? The lover of letters loves power too. Among the men of wit and learning, he could not withhold his homage from the gayety, grasp of memory, luck, splendor, and speed; such exploits of discourse, such feats of society! What new powers, what mines of wealth! But when he came home, his brave sequins were dry leave. He found either that the fact they had thus dized and adorned was of no value, or that he already knew all and more than all they had told him. He could not find that he was helped by so much as one thought or principle, one solid fact, one commanding impulse: great was the dazzle, but the gain was small. He uses his occasions; he seeks the company of those who have convivial talent. But the moment they meet, to be sure they begin to be something else than they were; they play pranks, dance jigs, run on each other, pun, tell stories, try many fantastic tricks, under some superstition that there must be excitement and elevation; — and they kill conversation at once. I know well the rusticity of the shy hermit. No doubt he does not make allowance enough for men of more active blood and habit. But it is only on natural ground that conversation can be

rich. It must not begin with uproar and violence. Let it keep the ground, let it feel the connection with the battery. Men must not be off their centres.

Some men love only to talk where they are masters. They like to go to school-girls, or to boys, or into the shops where the sauntering people gladly lend an ear to any one. On these terms they give information and please themselves by sallies and chat which are admired by the idlers; and the talker is at his ease and jolly, for he can walk out without ceremony when he pleases. They go rarely to their equals, and then as for their own convenience simply, making too much haste to introduce and impart their new whim or discovery; listen badly or do not listen to the comment or to the thought by which the company strive to repay them; rather, as soon as their own speech is done, they take their hats. Then there are the gladiators, to whom it is always a battle; 'tis no matter on which side, they fight for victory; then the heady men, the egotists, the monotones, the steriles, and the impracticables.

It does not help that you find as good or a better man than yourself, if he is not timed and fitted to you. The greatest sufferers are often those who have the most to say, — men of a delicate sympathy, who are dumb in mixed company. Able people, if they do not know how to make allowance for them, paralyze them. One of those conceited prigs who value nature only as it feeds and exhibits them is equally a pest with the roysterers. There must be large reception as well as giving. How delightful after these disturbers is the radiant, playful wit of — one whom I need not name, — for in every society there is his representative. Good-nature is stronger than tomahawks. His conversation is all pictures: he can reproduce whatever he has seen; he tells the best story in the county, and is of such genial temper that he disposes all others irresistibly to good-humor and discourse. Diderot said of the Abbé Galiani: “He was a treasure in rainy days; and if the cabinet-makers made such things, everybody would have one in the country.”

One lesson we learn early, — that in spite of seeming difference, men are all of one pattern. We readily assume this with our mates, and are disappointed and angry if we find that we are premature, and that their watches are slower than ours. In fact the only sin which we never forgive in each other is difference of opinion. We know beforehand that yonder man must think as we do. Has he not two hands, — two feet, — hair and nails? Does he not eat, — bleed, — laugh, — cry? His dissent from me is the veriest affectation. This conclusion is at once the logic of persecution and of love. And the ground of our indignation is our conviction that his dissent is some wilfulness he practises on himself. He checks the flow of his opinion, as the cross cow holds up her milk. Yes, and we look into his eye, and see that he knows it and hides his eye from ours.

But to come a little nearer to my mark, I am to say that there may easily be obstacles in the way of finding the pure article we are in search of, but when we find it it is worth the pursuit, for beside its comfort as medicine and cordial, once in the right company, new and vast values do not fail to appear. All that man can do for man is to be found in that market. There are great prizes in this game. Our fortunes in the world are as our mental equipment for this competition is. Yonder is a man who can answer the questions which I cannot. Is it so? Hence comes to me boundless curiosity to know his experiences and his wit. Hence competition for the stakes dearest to man. What is a match at whist, or draughts, or billiards, or chess, to a match of mother-wit, of knowledge, and of resources? However courteously we conceal it, it is social rank and spiritual power that are compared; whether in the parlor, the courts, the caucus, the senate, or the chamber of science, — which are only less or larger theatres for this competition.

He that can define, he that can answer a question so as to admit of no further answer, is the best man. This was the meaning of the story of the Sphinx. In the old time conundrums were sent from king to king by ambassadors. The seven wise masters at Periander's banquet spent their time in answering them. The life of Socrates is a propounding and a solution of these. So, in the hagiology of each nation, the lawgiver was in each case some man of eloquent tongue, whose sympathy brought him face to face with the extremes of society. Jesus, Menu, the first Buddhist, Mahomet, Zertusht, Pythagoras, are examples.

Jesus spent his life in discoursing with humble people on life and duty, in giving wise answers, showing that he saw at a larger angle of vision, and at least silencing those who were not generous enough to accept his thoughts. Luther spent his life so; and it is not his theologic works, — his "Commentary on the Galatians," and the rest, but his "Table-Talk," which is still read by men. Dr. Johnson was a man of no profound mind, — full of English limitations, English politics, English Church, Oxford philosophy; yet, having a large heart, mother-wit, and good sense which impatiently overleaped his customary bounds, his conversation as reported by Boswell has a lasting charm. Conversation is the vent of character as well as of thought; and Dr. Johnson impresses his company, not only by the point of the remark, but also, when the point fails, because *he* makes it. His obvious religion or superstition, his deep wish that they should think so or so, weighs with them, — so rare is depth of feeling, or a constitutional value for a thought or opinion, among the light-minded men and women who make up society; and though they know that there is in the speaker a degree of shortcoming, of insincerity, and of talking for victory, yet the existence of character, and habitual reverence for principles over talent or learning, is felt by the frivolous.

One of the best records of the great German master who towered over all his contemporaries in the first thirty years of this century, is his conversations as recorded by Eckermann; and the "Table-Talk" of Coleridge is one of the best remains of his genius.

In the Norse legends, the gods of Valhalla, when they meet the Jotuns, converse on the perilous terms that he who cannot answer the other's questions forfeits his own life. Odin comes to the threshold of the Jotun Waftrhudnir in disguise, calling himself Gangrader; is invited into the hall, and told that he cannot go out thence unless he can answer every question Wafthrudnir shall put. Wafthrudnir asks him the name of the god of the sun, and of the god who brings the night; what river separates the dwellings of the sons of the giants from those of the gods; what plain lies between the gods and Surtur, their adversary, etc.; all which the disguised Odin answers satisfactorily. Then it is his turn to interrogate, and he is answered well for a time by the Jotun. At last he puts a question which none but himself could answer: "What did Odin whisper in the ear of his son Balder, when Balder mounted the funeral pile?" The startled giant replies: "None of the gods knows what in the old time THOU saidst in the ear of thy son: with death on my mouth have I spoken the fate-words of the generation of the Æsir; with Odin contended I in wise words. Thou must ever the wisest be."

And still the gods and giants are so known, and still they play the same game in all the million mansions of heaven and of earth; at all tables, clubs, and *tête-à-têtes*, the lawyers in the court-house, the senators in the capitol, the doctors in the academy, the wits in the hotel. Best is he who gives an answer that cannot be answered again. *Omnis definitio periculosa est*, and only wit has the secret. The same thing took place when Leibnitz came to visit Newton; when Schiller came to Goethe; when France, in the person of Madame de Staël visited Goethe and Schiller; when Hegel was the guest of Victor Cousin in Paris; when Linnæus was the guest of Jussieu. It happened many years ago that an American chemist carried a letter of introduction to Dr. Dalton of Manchester, England, the author of the theory of atomic proportions, and was coolly enough received by the Doctor in the laboratory where he was engaged. Only Dr. Dalton scratched a formula on a scrap of paper and pushed it towards the guest,— "Had he seen that?" The visitor scratched on another paper a formula describing some results of his own with sulphuric acid, and pushed it across the table,— "Had he seen that?" The attention of the English chemist was instantly arrested, and they became rapidly acquainted.

To answer a question so as to admit of no reply, is the test of a man, — to touch bottom every time. Hyde, Earl of Rochester, asked Lord-Keeper Guilford, "Do you not think I could understand any business in England in a month?"

“Yes, my lord,” replied the other, “but I think you would understand it better in two months.” When Edward I. claimed to be acknowledged by the Scotch (1292) as lord paramount, the nobles of Scotland replied, “No answer can be made while the throne is vacant.” When Henry III. (1217) plead duress against his people demanding confirmation and execution of the Charter, the reply was: “If this were admitted, civil wars could never close but by the extirpation of one of the contending parties.”

What can you do with one of these sharp respondents? What can you do with an eloquent man? No rules of debate, no contempt of court, no exclusions, no gag-laws can be contrived that his first syllable will not set aside or overstep and annul. You can shut out the light, it may be, but can you shut out gravitation? You may condemn his book, but can you fight against his thought? That is always too nimble for you, anticipates you, and breaks out victorious in some other quarter. Can you stop the motions of good sense? What can you do with Beaumarchais, who converts the censor whom the court has appointed to stifle his play into an ardent advocate? The court appoints another censor, who shall crush it this time. Beaumarchais persuades him to defend it. The court successively appoints three more severe inquisitors; Beaumarchais converts them all into triumphant vindicators of the play which is to bring in the Revolution. Who can stop the mouth of Luther, — of Newton? — of Franklin, — of Mirabeau, — of Talleyrand?

These masters can make good their own place, and need no patron. Every variety of gift — science, religion, politics, letters, art, prudence, war, or love — has its vent and exchange in conversation. Conversation is the Olympic games whither every superior gift resorts to assert and approve itself, — and, of course, the inspirations of powerful and public men, with the rest. But it is not this class, whom the splendor of their accomplishment almost inevitably guides into the vortex of ambition, makes them chancellors and commanders of council and of action, and makes them at last fatalists, — not these whom we now consider. We consider those who are interested in thoughts, their own and other men’s, and who delight in comparing them; who think it the highest compliment they can pay a man to deal with him as an intellect, to expose to him the grand and cheerful secrets perhaps never opened to their daily companions, to share with him the sphere of freedom and the simplicity of truth.

But the best conversation is rare. Society seems to have agreed to treat fictions as realities, and realities as fictions; and the simple lover of truth, especially if on very high grounds, as a religious or intellectual seeker, finds himself a stranger and alien.

It is possible that the best conversation is between two persons who can talk

only to each other. Even Montesquieu confessed that in conversation, if he perceived he was listened to by a third person, it seemed to him from that moment the whole question vanished from his mind. I have known persons of rare ability who were heavy company to good social men who knew well enough how to draw out others of retiring habit; and, moreover, were heavy to intellectual men who ought to have known them. And does it never occur that we perhaps live with people too superior to be seen, — as there are musical notes too high for the scale of most ears? There are men who are great only to one or two companions of more opportunity, or more adapted.

It was to meet these wants that in all civil nations attempts have been made to organize conversation by bringing together cultivated people under the most favorable conditions. 'Tis certain there was liberal and refined conversation in the Greek, in the Roman, and in the Middle Age. There was a time when in France a revolution occurred in domestic architecture; when the houses of the nobility, which, up to that time, had been constructed on feudal necessities, in a hollow square, — the ground-floor being resigned to offices and stables, and the floors above to rooms of state and to lodging-rooms, — were rebuilt with new purpose. It was the Marchioness of Rambouillet who first got the horses out of and the scholars into the palaces, having constructed her *hôtel* with a view to society, with superb suites of drawing-rooms on the same floor, and broke through the *morgue* of etiquette by inviting to her house men of wit and learning as well as men of rank, and piqued the emulation of Cardinal Richelieu to rival assemblies, and so to the founding of the French Academy. The history of the Hôtel Rambouillet and its brilliant circles makes an important date in French civilization. And a history of clubs from early antiquity, tracing the efforts to secure liberal and refined conversation, through the Greek and Roman to the Middle Age, and thence down through French, English, and German memoirs, tracing the clubs and coteries in each country, would be an important chapter in history. We know well the Mermaid Club, in London, of Shakspeare, Ben Jonson, Chapman, Herrick, Selden, Beaumont and Fletcher; its "Rules" are preserved, and many allusions to their suppers are found in Jonson, Herrick, and in Aubrey. Anthony Wood has many details of Harrington's Club. Dr. Bentley's Club held Newton, Wren, Evelyn, and Locke; and we owe to Boswell our knowledge of the club of Dr. Johnson, Goldsmith, Burke, Gibbon, Reynolds, Garrick, Beauclerk and Percy. And we have records of the brilliant society that Edinburgh boasted in the first decade of this century. Such societies are possible only in great cities, and are the compensation which these can make to their dwellers for depriving them of the free intercourse with Nature. Every scholar is surrounded by wiser men than he — if they cannot write as well. Cannot they

meet and exchange results to their mutual benefit and delight? It was a pathetic experience when a genial and accomplished person said to me, looking from his country home to the capital of New England, "There is a town of two hundred thousand people, and not a chair in it for me." If he were sure to find at No. 2000 Tremont Street what scholars were abroad after the morning studies were ended, Boston would shine as the New Jerusalem to his eyes.

Now this want of adapted society is mutual. The man of thought, the man of letters, the man of science, the administrator skilful in affairs, the man of manners and culture, whom you so much wish to find, — each of these is wishing to be found. Each wishes to open his thought, his knowledge, his social skill to the daylight in your company and affection, and to exchange his gifts for yours; and the first hint of a select and intelligent company is welcome.

But the club must be self-protecting, and obstacles arise at the outset. There are people who cannot well be cultivated; whom you must keep down and quiet if you can. There are those who have the instinct of a bat to fly against any lighted candle and put it out, — marplots and contradictors. There are those who go only to talk, and those who go only to hear: both are bad. A right rule for a club would be, — Admit no man whose presence excludes any one topic. It requires people who are not surprised and shocked, who do and let do and let be, who sink trifles and know solid values, and who take a great deal for granted.

It is always a practical difficulty with clubs to regulate the laws of election so as to exclude peremptorily every social nuisance. Nobody wishes bad manners. We must have loyalty and character. The poet Marvell was wont to say that he "would not drink wine with any one with whom he could not trust his life." But neither can we afford to be superfine. A man of irreproachable behavior and excellent sense preferred on his travels taking his chance at a hotel for company, to the charging himself with too many select letters of introduction. He confessed he liked low company. He said the fact was incontestable that the society of gypsies was more attractive than that of bishops. The girl deserts the parlor for the kitchen; the boy, for the wharf. Tutors and parents cannot interest him like the uproarious conversation he finds in the market or the dock. I knew a scholar, of some experience in camps, who said that he liked, in a bar-room, to tell a few coon stories and put himself on a good footing with the company; then he could be as silent as he chose. A scholar does not wish to be always pumping his brains; he wants gossips. The black-coats are good company only for black-coats; but when the manufacturers, merchants, and shipmasters meet, see how much they have to say, and how long the conversation lasts! They have come from many zones; they have traversed wide countries; they know each his own arts, and the cunning artisans of his craft; they have seen the best and the worst

of men. Their knowledge contradicts the popular opinion and your own on many points. Things which you fancy wrong they know to be right and profitable; things which you reckon superstitious they know to be true. They have found virtue in the strangest homes; and in the rich store of their adventures are instances and examples which you have been seeking in vain for years, and which they suddenly and unwittingly offer you.

I remember a social experiment in this direction, wherein it appeared that each of the members fancied he was in need of society, but himself unpresentable. On trial they all found that they could be tolerated by, and could tolerate, each other. Nay, the tendency to extreme self-respect which hesitated to join in a club was running rapidly down to abject admiration of each other, when the club was broken up by new combinations.

The use of the hospitality of the club hardly needs explanation. Men are unbent and social at table; and I remember it was explained to me, in a Southern city, that it was impossible to set any public charity on foot unless through a tavern dinner. I do not think our metropolitan charities would plead the same necessity; but to a club met for conversation a supper is a good basis, as it disarms all parties and puts pedantry and business to the door. All are in good humor and at leisure, which are the first conditions of discourse; the ordinary reserves are thrown off, experienced men meet with the freedom of boys, and, sooner or later, impart all that is singular in their experience.

The hospitalities of clubs are easily exaggerated. No doubt the suppers of wits and philosophers acquire much lustre by time and renown. Plutarch, Xenophon, and Plato, who have celebrated each a banquet of their set, have given us next to no data of the viands; and it is to be believed that an indifferent tavern dinner in such society was more relished by the *convives* than a much better one in worse company. Herrick's verses to Ben Jonson no doubt paint the fact: —

“When we such clusters had
As made us nobly wild, not mad;
And yet, each verse of thine
Outdid the meat, outdid the frolic wine.”

Such friends make the feast satisfying; and I notice that it was when things went prosperously, and the company was full of honor, at the banquet of the Cid, that “the guests all were joyful, and agreed in one thing, — that they had not eaten better for three years.”

I need only hint the value of the club for bringing masters in their several arts to compare and expand their views, to come to an understanding on these points, and so that their united opinion shall have its just influence on public questions of education and politics. It is agreed that in the sections of the British

Association more information is mutually and effectually communicated, in a few hours, than in many months of ordinary correspondence and the printing and transmission of ponderous reports. We know that *l'homme de lettres* is a little wary, and not fond of giving away his seed-corn; but there is an infallible way to draw him out, namely, by having as good as he. If you have Tuscaroora and he Canada, he may exchange kernel for kernel. If his discretion is incurable, and he dare not speak of fairy gold, he will yet tell what new books he has found, what old ones recovered, what men write and read abroad. A principal purpose also is the hospitality of the club, as a means of receiving a worthy foreigner with mutual advantage.

Every man brings into society some partial thought and local culture. We need range and alternation of topics and variety of minds. One likes in a companion a phlegm which it is a triumph to disturb, and, not less, to make in an old acquaintance unexpected discoveries of scope and power through the advantage of an inspiring subject. Wisdom is like electricity. There is no permanently wise man, but men capable of wisdom, who, being put into certain company, or other favorable conditions, become wise for a short time, as glasses rubbed acquire electric power for a while. But while we look complacently at these obvious pleasures and values of good companions, I do not forget that Nature is always very much in earnest, and that her great gifts have something serious and stern. When we look for the highest benefits of conversation, the Spartan rule of one to one is usually enforced. Discourse, when it rises highest and searches deepest, when it lifts us into that mood out of which thoughts come that remain as stars in our firmament, is between two.

COURAGE.

I observe that there are three qualities which conspicuously attract the wonder and reverence of mankind: —

1. Disinterestedness, as shown in indifference to the ordinary bribes and influences of conduct, — a purpose so sincere and generous that it cannot be tempted aside by any prospects of wealth or other private advantage. Self-love is, in almost all men, such an over-weight, that they are incredulous of a man's habitual preference of the general good to his own; but when they see it proved by sacrifices of ease, wealth, rank, and of life itself, there is no limit to their admiration. This has made the power of the saints of the East and West, who have led the religion of great nations. Self-sacrifice is the real miracle out of which all the reported miracles grew. This makes the renown of the heroes of Greece and Rome, — of Socrates, Aristides, and Phocion; of Quintus Curtius, Cato, and Regulus; of Hatem Tai's hospitality; of Chatham, whose scornful magnanimity gave him immense popularity; of Washington, giving his service to the public without salary or reward.

2. Practical power. Men admire the man who can organize their wishes and thoughts in stone and wood and steel and brass, — the man who can build the boat, who has the impiety to make the rivers run the way he wants them; who can lead his telegraph through the ocean from shore to shore; who, sitting in his closet, can lay out the plans of a campaign, sea-war and land-war, such that the best generals and admirals, when all is done, see that they must thank him for success; the power of better combination and foresight, however exhibited, whether it only plays a game of chess, or whether, more loftily, a cunning mathematician, penetrating the cubic weights of stars, predicts the planet which eyes had never seen; or whether, exploring the chemical elements whereof we and the world are made, and seeing their secret, Franklin draws off the lightning in his hand; suggesting that one day a wiser geology shall make the earthquake harmless and the volcano an agricultural resource. Or here is one who, seeing the wishes of men, knows how to come at their end; whispers to this friend, argues down that adversary, moulds society to his purpose, and looks at all men as wax for his hands; takes command of them as the wind does of clouds, as the mother does of the child, or the man that knows more does of the man that knows less, and leads them in glad surprise to the very point where they would be: this man is followed with acclamation.

3. The third excellence is courage, the perfect will, which no terrors can shake, which is attracted by frowns or threats or hostile armies, nay, needs these

to awake and fan its reserved energies into a pure flame, and is never quite itself until the hazard is extreme; then it is serene and fertile, and all its powers play well. There is a Hercules, an Achilles, a Rustem, an Arthur or a Cid in the mythology of every nation; and in authentic history, a Leonidas, a Scipio, a Cæsar, a Richard Cœur de Lion, a Cromwell, a Nelson, a Great Condé, a Bertrand du Guesclin, a Doge Dandolo, a Napoleon, a Massena, and Ney. 'Tis said courage is common, but the immense esteem in which it is held proves it to be rare. Animal resistance, the instinct of the male animal when cornered, is no doubt common; but the pure article, courage with eyes, courage with conduct, self-possession at the cannon's mouth, cheerfulness in lonely adherence to the right, is the endowment of elevated characters. I need not show how much it is esteemed, for the people give it the first rank. They forgive everything to it. What an ado we make through two thousand years about Thermopylæ and Salamis! What a memory of Poitiers and Crecy, and Bunker Hill, and Washington's endurance! And any man who puts his life in peril in a cause which is esteemed becomes the darling of all men. The very nursery-books, the ballads which delight boys, the romances which delight men, the favorite topics of eloquence, the thunderous emphasis which orators give to every martial defiance and passage of arms, and which the people greet, may testify. How short a time since this whole nation rose every morning to read or to hear the traits of courage of its sons and brothers in the field, and was never weary of the theme! We have had examples of men who, for showing effective courage on a single occasion, have become a favorite spectacle to nations, and must be brought in chariots to every mass meeting.

Men are so charmed with valor that they have pleased themselves with being called lions, leopards, eagles, and dragons, from the animals contemporary with us in the geologic formations. But the animals have great advantage of us in precocity. Touch the snapping-turtle with a stick, and he seizes it with his teeth. Cut off his head, and the teeth will not let go the stick. Break the egg of the young, and the little embryo, before yet the eyes are open, bites fiercely; these vivacious creatures contriving, — shall we say? — not only to bite after they are dead, but also to bite before they are born.

But man begins life helpless. The babe is in paroxysms of fear the moment its nurse leaves it alone, and it comes so slowly to any power of self-protection that mothers say the salvation of the life and health of a young child is a perpetual miracle. The terrors of the child are quite reasonable, and add to his loveliness; for his utter ignorance and weakness, and his enchanting indignation on such a small basis of capital compel every by-stander to take his part. Every moment as long as he is awake he studies the use of his eyes, ears, hands, and feet, learning

how to meet and avoid his dangers, and thus every hour loses one terror more. But this education stops too soon. A large majority of men being bred in families and beginning early to be occupied day by day with some routine of safe industry, never come to the rough experiences that make the Indian, the soldier, or the frontiersman self-subsistent and fearless. Hence the high price of courage indicates the general timidity. "Mankind," said Franklin, "are dastardly when they meet with opposition." In war even generals are seldom found eager to give battle. Lord Wellington said, "Uniforms were often masks;" and again, "When my journal appears, many statues must come down." The Norse Sagas relate that when Bishop Magne reproved King Sigurd for his wicked divorce, the priest who attended the bishop, expecting every moment when the savage king would burst with rage and slay his superior, said that he "saw the sky no bigger than a calf-skin." And I remember when a pair of Irish girls who had been run away with in a wagon by a skittish horse, said that when he began to rear, they were so frightened that they could not see the horse.

Cowardice shuts the eyes till the sky is not larger than a calf-skin; shuts the eyes so that we cannot see the horse that is running away with us; worse, shuts the eyes of the mind and chills the heart. Fear is cruel and mean. The political reigns of terror have been reigns of madness and malignity, — a total perversion of opinion; society is upside down, and its best men are thought too bad to live. Then the protection which a house, a family, neighborhood and property, even the first accumulation of savings gives, go in all times to generate this taint of the respectable classes. Those political parties which gather-in the well-disposed portion of the community, — how infirm and ignoble! what white lips they have! always on the defensive, as if the lead were intrusted to the journals, often written in great part by women and boys, who, without strength, wish to keep up the appearance of strength. They can do the hurras, the placarding, the flags, — and the voting, if it is a fair day; but the aggressive attitude of men who will have right done, will no longer be bothered with burglars and ruffians in the streets, counterfeiterers in public offices, and thieves on the bench; that part, the part of the leader and soul of the vigilance committee, must be taken by stout and sincere men who are really angry and determined. In ordinary, we have a snappish criticism which watches and contradicts the opposite party. We want the will which advances and dictates. When we get an advantage, as in Congress the other day, it is because our adversary has committed a fault, not that we have taken the initiative and given the law. Nature has made up her mind that what cannot defend itself shall not be defended. Complaining never so loud and with never so much reason is of no use. One heard much cant of peace-parties long ago in Kansas and elsewhere, that their strength lay in the greatness of their

wrongs, and dissuading all resistance, as if to make this strength greater. But were their wrongs greater than the negro's? And what kind of strength did they ever give him? It was always invitation to the tyrant, and bred disgust in those who would protect the victim. What cannot stand must fall; and the measure of our sincerity and therefore of the respect of men, is the amount of health and wealth we will hazard in the defence of our right. An old farmer, my neighbor across the fence, when I ask him if he is not going to town-meeting, says: "No; 'tis no use balloting, for it will not stay; but what you do with the gun will stay so." Nature has charged every one with his own defence as with his own support, and the only title I can have to your help is when I have manfully put forth all the means I possess to keep me, and being overborne by odds, the by-standers have a natural wish to interfere and see fair play.

But with this pacific education we have no readiness for bad times. I am much mistaken if every man who went to the army in the late war had not a lively curiosity to know how he should behave in action. Tender, amiable boys, who had never encountered any rougher play than a base-ball match or a fishing excursion, were suddenly drawn up to face a bayonet charge or capture a battery. Of course they must each go into that action with a certain despair. Each whispers to himself: "My exertions must be of small account to the result; only will the benignant Heaven save me from disgracing myself and my friends and my State. Die! O yes, I can well die; but I cannot afford to misbehave; and I do not know how I shall feel." So great a soldier as the old French Marshal Montlue acknowledges that he has often trembled with fear, and recovered courage when he had said a prayer for the occasion. I knew a young soldier who died in the early campaign, who confided to his sister that he had made up his mind to volunteer for the war. "I have not," he said, "any proper courage, but I shall never let any one find it out." And he had accustomed himself always to go into whatever place of danger, and do whatever he was afraid to do, setting a dogged resolution to resist this natural infirmity. Coleridge has preserved an anecdote of an officer in the British Navy who told him that when he, in his first boat expedition, a midshipman in his fourteenth year, accompanied Sir Alexander Ball, "as we were rowing up to the vessel we were to attack, amid a discharge of musketry, I was overpowered with fear, my knees shook and I was ready to faint away. Lieutenant Ball seeing me, placed himself close beside me, took hold of my hand and whispered, 'Courage, my dear boy! you will recover in a minute or so; I was just the same when I first went out in this way.' It was as if an angel spoke to me. From that moment I was as fearless and as forward as the oldest of the boat's crew. But I dare not think what would have become of me, if, at that moment, he had scoffed and exposed me."

Knowledge is the antidote to fear, — Knowledge, Use, and Reason, with its higher aids. The child is as much in danger from a staircase, or the firegrate, or a bath-tub, or a cat, as the soldier from a cannon or an ambush. Each surmounts the fear as fast as he precisely understands the peril and learns the means of resistance. Each is liable to panic, which is, exactly, the terror of ignorance surrendered to the imagination. Knowledge is the encourager, knowledge that takes fear out of the heart, knowledge and use, which is knowledge in practice. They can conquer who believe they can. It is he who has done the deed once who does not shrink from attempting it again. It is the groom who knows the jumping horse well who can safely ride him. It is the veteran soldier, who, seeing the flash of the cannon, can step aside from the path of the ball. Use makes a better soldier than the most urgent considerations of duty, — familiarity with danger enabling him to estimate the danger. He sees how much is the risk, and is not afflicted with imagination; knows practically Marshal Saxe's rule, that every soldier killed costs the enemy his weight in lead.

The sailor loses fear as fast as he acquires command of sails and spars and steam; the frontiersman, when he has a perfect rifle and has acquired a sure aim. To the sailor's experience every new circumstance suggests what he must do. The terrific chances which make the hours and the minutes long to the passenger, he whiles away by incessant application of expedients and repairs. To him a leak, a hurricane, or a water-spout is so much work, — no more. The hunter is not alarmed by bears, catamounts, or wolves, nor the grazier by his bull, nor the dog-breeder by his bloodhound, nor an Arab by the simoon, nor a farmer by a fire in the woods. The forest on fire looks discouraging enough to a citizen: the farmer is skilful to fight it. The neighbors run together; with pine boughs they can mop out the flame, and by raking with the hoe a long but little trench, confine to a patch the fire which would easily spread over a hundred acres.

In short, courage consists in equality to the problem before us. The school-boy is daunted before his tutor by a question of arithmetic, because he does not yet command the simple steps of the solution which the boy beside him has mastered. These once seen, he is as cool as Archimedes, and cheerily proceeds a step farther. Courage is equality to the problem, in affairs, in science, in trade, in council, or in action; consists in the conviction that the agents with whom you contend are not superior in strength of resources or spirit to you. The general must stimulate the mind of his soldiers to the perception that they are men, and the enemy is no more. Knowledge, yes; for the danger of dangers is illusion. The eye is easily daunted; and the drums, flags, shining helmets, beard, and moustache of the soldier have conquered you long before his sword or bayonet

reaches you.

But we do not exhaust the subject in the slight analysis; we must not forget the variety of temperaments, each of which qualifies this power of resistance. It is observed that men with little imagination are less fearful; they wait till they feel pain, whilst others of more sensibility anticipate it, and suffer in the fear of the pang more acutely than in the pang. 'Tis certain that the threat is sometimes more formidable than the stroke, and 't is possible that the beholders suffer more keenly than the victims. Bodily pain is superficial, seated usually in the skin and the extremities, for the sake of giving us warning to put us on our guard; not in the vitals, where the rupture that produces death is perhaps not felt, and the victim never knew what hurt him. Pain is superficial, and therefore fear is. The torments of martyrdoms are probably most keenly felt by the by-standers. The torments are illusory. The first suffering is the last suffering the later hurts being lost on insensibility. Our affections and wishes for the external welfare of the hero tumultuously rush to expression in tears and outcries; but we, like him, subside into indifferency and defiance when we perceive how short is the longest arm of malice, how serene is the sufferer.

It is plain that there is no separate essence called courage, no cup or cell in the brain, no vessel in the heart containing drops or atoms that make or give this virtue; but it is the right or healthy state of every man, when he is free to do that which is constitutional to him to do. It is directness, — the instant performing of that which he ought. The thoughtful man says, You differ from me in opinion and methods, but do you not see that I cannot think or act otherwise than I do? that my way of living is organic? And to be really strong we must adhere to our own means. On organic action all strength depends. Hear what women say of doing a task by sheer force of will : it costs them a fit of sickness. Plutarch relates that the Pythoness who tried to prophesy without command in the Temple at Delphi, though she performed the usual rites, and inhaled the air of the cavern standing on the tripod, fell into convulsions and died. Undoubtedly there is a temperamental courage, a warlike blood, which loves a fight, does not feel itself except in a quarrel, as one sees in wasps, or ants, or cocks, or cats. The like vein appears in certain races of men and in individuals of every race. In every school there are certain fighting boys; in every society, the contradicting men; in every town, bravoes and bullies, better or worse dressed, fancy-men, patrons of the cock-pit and the ring. Courage is temperamental, scientific, ideal. Swedenborg has left this record of his king: "Charles XII. of Sweden did not know what that was which others called fear, nor what that spurious valor and daring that is excited by inebriating draughts, for he never tasted any liquid but pure water. Of him we may say that he led a life more remote from death, and in fact lived

more, than any other man.” It was told of the Prince of Condé that “there not being a more furious man in the world, danger in fight never disturbs him more than just to make him civil, and to command in words of great obligation to his officers and men, and without any the least disturbance to his judgment or spirit.” Each has his own courage, as his own talent; but the courage of the tiger is one, and of the horse another. The dog that scorns to fight, will fight for his master: The llama that will carry a load if you caress him, will refuse food and die if he is scourged. The fury of onset is one, and of calm endurance another. There is a courage of the cabinet as well as a courage of the field; a courage of manners in private assemblies, and another in public assemblies; a courage which enables one man to speak masterly to a hostile company, whilst another man who can easily face a cannon’s mouth dares not open his own.

There is a courage of a merchant in dealing with his trade, by which dangerous turns of affairs are met and prevailed over. Merchants recognize as much gallantry, well judged too, in the conduct of a wise and upright man of business in difficult times, as soldiers in a soldier.

There is a courage in the treatment of every art by a master in architecture, in sculpture, in painting, or in poetry, each cheering the mind of the spectator or receiver as by true strokes of genius, which yet nowise implies the presence of physical valor in the artist. This is the courage of genius, in every kind. A certain quantity of power belongs to a certain quantity of faculty. The beautiful voice at church goes sounding on, and covers up in its volume, as in a cloak, all the defects of the choir. The singers, I observe, all yield to it, and so the fair singer indulges her instinct, and dares, and dares, because she knows she can.

It gives the cutting edge to every profession. The judge puts his mind to the tangle of contradictions in the case, squarely accosts the question, and by not being afraid of it, by dealing with it as business which must be disposed of, he sees presently that common arithmetic and common methods apply to this affair. Perseverance strips it of all peculiarity, and ranges it on the same ground as other business. Morphy played a daring game in chess: the daring was only an illusion of the spectator, for the player sees his move to be well fortified and safe. You may see the same dealing in criticism; a new book astonishes for a few days, takes itself out of common jurisdiction, and nobody knows what to say of it: but the scholar is not deceived. The old principles which books exist to express are more beautiful than any book; and out of love of the reality he is an expert judge how far the book has approached it and where it has come short. In all applications it is the same power, — the habit of reference to one’s own mind, as the home of all truth and counsel, and which can easily dispose of any book because it can very well do without all books. When a confident man comes into

a company magnifying this or that author he has freshly read, the company grow silent and ashamed of their ignorance. But I remember the old professor, whose searching mind engraved every word he spoke on the memory of the class, when we asked if he had read this or that shining novelty, "No, I have never read that book;" instantly the book lost credit, and was not to be heard of again.

Every creature has a courage of his constitution fit for his duties: — Archimedes, the courage of a geometer to stick to his diagram, heedless of the siege and sack of the city; and the Roman soldier his faculty to strike at Archimedes. Each is strong, relying on his own, and each is betrayed when he seeks in himself the courage of others.

Captain John Brown, the hero of Kansas, said to me in conversation, that "for a settler in a new country, one good, believing, strong-minded man is worth a hundred, nay, a thousand men without character; and that the right men will give a permanent direction to the fortunes of a state. As for the bullying drunkards of which armies are usually made up, he thought cholera, small-pox, and consumption as valuable recruits." He held the belief that courage and chastity are silent concerning themselves. He said, "As soon as I hear one of my men say, ' Ah, let me only get my eye on such a man, I 'll bring him down,' I don't expect much aid in the fight from that talker. 'Tis the quiet, peaceable men, the men of principle, that make the best soldiers."

"'Tis still observed those men most valiant are
Who are most modest ere they came to war."

True courage is not ostentatious; men who wish to inspire terror seem thereby to confess themselves cowards. Why do they rely on it, but because they know how potent it is with themselves?

The true temper has genial influences. It makes a bond of union between enemies. Governor Wise of Virginia, in the record of his first interviews with his prisoner, appeared to great advantage. If Governor Wise is a superior man, or inasmuch as he is a superior man, he distinguishes John Brown. As they confer, they understand each other swiftly; each respects the other. If opportunity allowed, they would prefer each other's society and desert their former companions. Enemies would become affectionate. Hector and Achilles, Richard and Saladin, Wellington and Soult, General Daumas and Abdel Kader, become aware that they are nearer and more alike than any other two, and, if their nation and circumstance did not keep them apart, would run into each other's arms.

See too what good contagion belongs to it. Everywhere it finds its own with magnetic affinity. Courage of the soldier awakes the courage of woman. Florence Nightingale brings lint and the blessing of her shadow. Heroic women

offer themselves as nurses of the brave veteran. The troop of Virginian infantry that had marched to guard the prison of John Brown ask leave to pay their respects to the prisoner. Poetry and eloquence catch the hint, and soar to a pitch unknown before. Everything feels the new breath except the old dotting nigh-dead politicians, whose heart the trumpet of resurrection could not wake.

The charm of the best courages is that they are inventions, inspirations, flashes of genius. The hero could not have done the feat at another hour, in a lower mood. The best act of the marvellous genius of Greece was its first act; not in the statue or the Parthenon, but in the instinct which, at Thermopylæ, held Asia at bay, kept Asia out of Europe, — Asia with its antiquities and organic slavery, — from corrupting the hope and new morning of the West. The statue, the architecture, were the later and inferior creation of the same genius. In view of this moment of history, we recognize a certain prophetic instinct, better than wisdom. Napoleon said well, “My hand is immediately connected with my head;” but the *sacred* courage is connected with the heart. The head is a half, a fraction, until it is enlarged and inspired by the moral sentiment. For it is not the means on which we draw, as health or wealth, practical skill or dexterous talent, or multitudes of followers, that count, but the aims only. The aim reacts back on the means. A great aim aggrandizes the means. The meal and water that are the commissariat of the *forlorn hope* that stake their lives to defend the pass are sacred as the Holy Grail, or as if one had eyes to see in chemistry the fuel that is rushing to feed the sun.

There is a persuasion in the soul of man that he is here for cause, that he was put down in this place by the Creator to do the work for which he inspires him, that thus he is an overmatch for all antagonists that could combine against him. The pious Mrs. Hutchinson says of some passages in the defence of Nottingham against the Cavaliers, “It was a great instruction that the best and highest courages are beams of the Almighty.” And whenever the religious sentiment is adequately affirmed, it must be with dazzling courage. As long as it is cowardly insinuated, as with the wish to succor some partial and temporary interest, or to make it affirm some pragmatistical tenet which our parish church receives to-day, it is not imparted, and cannot inspire or create. For it is always new, leads and surprises, and practice never comes up with it. There are ever appearing in the world men who, almost as soon as they are born, take a bee-line to the rack of the inquisitor, the axe of the tyrant, like Giordano Bruno, Vanini, Huss, Paul, Jesus, and Socrates. Look at Fox’s *Lives of the Martyrs*, Sewel’s *History of the Quakers*, Southey’s *Book of the Church*, at the folios of the Brothers Bollandi, who collected the lives of twenty-five thousand martyrs, confessors, ascetics, and self-tormentors. There is much of fable, but a broad basis of fact. The tender

skin does not shrink from bayonets, the timid woman is not scared by fagots; the rack is not frightful, nor the rope ignominious. The poor Puritan, Antony Parsons, at the stake, tied straw on his head when the fire approached him, and said, "This is God's hat." Sacred courage indicates that a man loves an idea better than all things in the world; that he is aiming neither at pelf or comfort, but will venture all to put in act the invisible thought in his mind. He is everywhere a liberator, but of a freedom that is ideal; not seeking to have land or money or conveniences, but to have no other limitation than that which his own constitution imposes. He is free to speak truth; he is not free to lie. He wishes to break every yoke all over the world which hinders his brother from acting after his thought.

There are degrees of courage, and each step upward makes us acquainted with a higher virtue. Let us say then frankly that the education of the will is the object of our existence. Poverty, the prison, the rack, the fire, the hatred and execrations of our fellow-men, appear trials beyond the endurance of common humanity; but to the hero whose intellect is aggrandized by the soul, and so measures these penalties against the good which his thought surveys, these terrors vanish as darkness at sunrise.

We have little right in piping times of peace to pronounce on these rare heights of character; but there is no assurance of security. In the most private life, difficult duty is never far off. Therefore we must think with courage. Scholars and thinkers are prone to an effeminate habit, and shrink if a coarser shout comes up from the street, or a brutal act is recorded in the journals. The Medical College piles up in its museum its grim monsters of morbid anatomy, and there are melancholy skeptics with a taste for carrion who batten on the hideous facts in history, — persecutions, inquisitions, St. Bartholomew massacres, devilish lives, Nero, Cæsar Borgia, Marat, Lopez; men in whom every ray of humanity was extinguished, parricides, matricides, and whatever moral monsters. These are not cheerful facts, but they do not disturb a healthy mind; they require of us a patience as robust as the energy that attacks us, and an unresting exploration of final causes. Wolf, snake, and crocodile are not inharmonious in nature, but are made useful as checks, scavengers, and pioneers; and we must have a scope as large as Nature's to deal with beast-like men, detect what scullion function is assigned them, and foresee in the secular melioration of the planet how these will become unnecessary and will die out.

He has not learned the lesson of life who does not every day surmount a fear. I do not wish to put myself or any man into a theatrical position, or urge him to ape the courage of his comrade. Have the courage not to adopt another's courage. There is scope and cause and resistance enough for us in our proper

work and circumstance. And there is no creed of an honest man, be he Christian, Turk, or Gentoo, which does not equally preach it. If you have no faith in beneficent power above you, but see only an adamant fate coiling its folds about nature and man, then reflect that the best use of fate is to teach us courage, if only because baseness cannot change the appointed event. If you accept your thoughts as inspirations from the Supreme Intelligence, obey them when they prescribe difficult duties, because they come only so long as they are used; or, if your skepticism reaches to the last verge, and you have no confidence in any foreign mind, then be brave, because there is one good opinion which must always be of consequence to you, namely, your own.

I am permitted to enrich my chapter by adding an anecdote of pure courage from real life, as narrated in a ballad by a lady to whom all the particulars of the fact are exactly known.

GEORGE NIDIVER.

Men have done brave deeds, And bards have sung them well: I of good George Nidiver Now the tale will tell.

In Californian mountains A hunter bold was he : Keen his eye and sure his aim As any you should see.

A little Indian boy Followed him everywhere, Eager to share the hunter's joy, The hunter's meal to share.

And when the bird or deer Fell by the hunter's skill, The boy was always near To help with right good-will.

One day as through the cleft Between two mountains steep, Shut in both right and left, Their questing way they keep,

They see two grizzly bears With hunger fierce and fell Rush at them unawares Right down the narrow dell.

The boy turned round with screams, And ran with terror wild; One of the pair of savage beasts Pursued the shrieking child.

The hunter raised his gun, — He knew *one* charge was all, — And through the boy's pursuing foe He sent his only ball.

The other on George Nidiver Came on with dreadful pace: The hunter stood unarmed, And met him face to face.

I say *unarmed* he stood. Against those frightful paws The rifle butt, or club of wood, Could stand no more than Straws.

George Nidiver stood still And looked him in the face; The wild beast stopped amazed, Then came with slackening pace.

Still firm the hunter stood, Although his heart beat high; Again the creature

stopped, And gazed with wondering eye.

The hunter met his gaze, Nor yet an inch gave way; The bear turned slowly round, And slowly moved away.

What thoughts were in his mind It would be hard to spell: What thoughts were in George Nidiver I rather guess than tell.

But sure that rifle's aim, Swift choice of generous part, Showed in its passing gleam The depths of a brave heart.

SUCCESS.

Our American people cannot be taxed with slowness in performance or in praising their performance. The earth is shaken by our engineering. We are feeling our youth and nerve and bone. We have the power of territory and of sea-coast, and know the use of these. We count our census, we read our growing valuations, we survey our map, which becomes old in a year or two. Our eyes run approvingly along the lengthened lines of railroad and telegraph. We have gone nearest to the Pole. We have discovered the Antarctic continent. We interfere in Central and South America, at Canton, and in Japan; we are adding to an already enormous territory. Our political constitution is the hope of the world, and we value ourselves on all these feats.

'Tis the way of the world; 'tis the law of youth, and of unfolding strength. Men are made each with some triumphant superiority, which, through some adaptation of fingers or ear or eye or ciphering or pugilistic or musical or literary craft, enriches the community with a new art; and not only we, but all men of European stock, value these certificates. Giotto could draw a perfect circle; Erwin of Steinbach could build a minster; Olaf, king of Norway, could run round his galley on the blades of the oars of the rowers when the ship was in motion; Ojeda could run out swiftly on a plank projected from the top of a tower, turn round swiftly and come back; Evelyn writes from Rome: "Bernini, the Florentine sculptor, architect, painter and poet, a little before my coming to Rome, gave a public opera, wherein he painted the scenes, cut the statues, invented the engines, composed the music, writ the comedy and built the theatre."

"There is nothing in war," said Napoleon, "which I cannot do by my own hands. If there is nobody to make gunpowder, I can manufacture it. The gun-carriages I know how to construct. If it is necessary to make cannons at the forge, I can make them. The details of working them in battle, if it is necessary to teach, I shall teach them. In administration, it is I alone who have arranged the finances, as you know."

It is recorded of Linnæus, among many proofs of his beneficent skill, that when the timber in the ship-yards of Sweden was ruined by rot, Linnæus was desired by the government to find a remedy. He studied the insects that infested the timber, and found that they laid their eggs in the logs within certain days in April, and he directed that during ten days at that season the logs should be immersed under water in the docks; which being done, the timber was found to be uninjured.

Columbus at Veragua found plenty of gold; but leaving the coast, the ship full of one hundred and fifty skilful seamen, — some of them old pilots, and with too much experience of their craft and treachery to him, — the wise admiral kept his private record of his homeward path. And when he reached Spain he told the King and Queen that “they may ask all the pilots who came with him where is Veragua. Let them answer and say if they know where Veragua lies. I assert that they can give no other account than that they went to lands where there was abundance of gold, but they do not know the way to return thither, but would be obliged to go on a voyage of discovery as much as if they had never been there before. There is a mode of reckoning,” he proudly adds, “derived from astronomy, which is sure and safe to any one who understands it.”

Hippocrates in Greece knew how to stay the devouring plague which ravaged Athens in his time, and his skill died with him. Dr. Benjamin Rush, in Philadelphia, carried that city heroically through the yellow fever of the year 1793. Leverrier carried the Copernican system in his head, and knew where to look for the new planet. We have seen an American woman write a novel of which a million copies were sold, in all languages, and which had one merit, of speaking to the universal heart, and was read with equal interest to three audiences, namely, in the parlor, in the kitchen, and in the nursery of every house. We have seen women who could institute hospitals and schools in armies. We have seen a woman who by pure song could melt the souls of whole populations. And there is no limit to these varieties of talent.

These are arts to be thankful for, — each one as it is a new direction of human power. We cannot choose but respect them. Our civilization is made up of a million contributions of this kind. For success, to be sure we esteem it a test in other people, since we do first in ourselves. We respect ourselves more if we have succeeded. Neither do we grudge to each of these benefactors the praise or the profit which accrues from his industry.

Here are already quite different degrees of moral merit in these examples. I don't know but we and our race elsewhere set a higher value on wealth, victory, and coarse superiority of all kinds, than other men, — have less tranquillity of mind, are less easily contented. The Saxon is taught from his infancy to wish to be first. The Norseman was a restless rider, fighter, freebooter. The ancient Norse ballads describe him as afflicted with this inextinguishable thirst of victory. The mother says to her son: —

“Success shall be in thy courser tall,
Success in thyself, which is best of all,
Success in thy hand, success in thy foot,

In struggle with man, in battle with brute: —
The holy God and Saint Drothin dear
Shall never shut eyes on thy career;
Look out, look out, Svend Vonved!”

These feats that we extol do not signify so much as we say. These boasted arts are of very recent origin. They are local conveniences, but do not really add to our stature. The greatest men of the world have managed not to want them. Newton was a great man, without telegraph, or gas, or steam-coach, or rubber shoes, or lucifer-matches, or ether for his pain; so was Shakspeare, and Alfred, and Scipio, and Socrates. These are local conveniences, but how easy to go now to parts of the world where not only all these arts are wanting, but where they are despised. The Arabian sheiks, the most dignified people in the planet, do not want them; yet have as much self-respect as the English, and are easily able to impress the Frenchman or the American who visits them with the respect due to a brave and sufficient man.

These feats have to be sure great difference of merit, and some of them involve power of a high kind. But the public values the invention more than the inventor does. The inventor knows there is much more and better where this came from. The public sees in it a lucrative secret. Men see the reward which the inventor enjoys, and they think, ‘How shall we win that?’ Cause and effect are a little tedious; how to leap to the result by short or by false means? We are not scrupulous. What we ask is victory, without regard to the cause; after the Rob Roy rule, after the Napoleon rule, to be the strongest to-day, — the way of the Talleyrands, prudent people, whose watches go faster than their neighbors’, and who detect the first moment of decline and throw themselves on the instant on the winning side. I have heard that Nelson used to say, “Never mind the justice or the impudence, only let me succeed.” Lord Brougham’s single duty of counsel is, “to get the prisoner clear.” Fuller says ’tis a maxim of lawyers that “a crown once worn cleareth all defects of the wearer thereof.” *Rien ne réussit mieux que le succès*. And we Americans are tainted with this insanity, as our bankruptcies and our reckless politics may show. We are great by exclusion, grasping, and egotism. Our success takes from all what it gives to one. ’Tis a haggard, malignant, careworn running for luck.

Egotism is a kind of buckram that gives momentary strength and concentration to men, and seems to be much used in nature for fabrics in which local and spasmodic energy is required. I could point to men in this country, of indispensable importance to the carrying on of American life, of this humor, whom we could ill spare; any one of them would be a national loss. But it spoils

conversation. They will not try conclusions with you. They are ever thrusting this pampered self between you and them. It is plain they have a long education to undergo to reach simplicity and plain-dealing, which are what a wise man mainly cares for in his companion. Nature knows how to convert evil to good; Nature utilizes misers, fanatics, show-men, egotists, to accomplish her ends; but we must not think better of the foible for that. The passion for sudden success is rude and puerile, just as war, cannons, and executions are used to clear the ground of bad, lumpish, irreclaimable savages, but always to the damage of the conquerors.

I hate this shallow Americanism which hopes to get rich by credit, to get knowledge by raps on midnight tables, to learn the economy of the mind by phrenology, or skill without study, or mastery, without apprenticeship, or the sale of goods through pretending that they sell, or power through making believe you are powerful, or through a packed jury or caucus, bribery and “repeating” votes, or wealth by fraud. They think they have got it, but they have got something else, — a crime which calls for another crime, and another devil behind that; these are steps to suicide, infamy, and the harming of mankind. We countenance each other in this life of show, puffing, advertisement, and manufacture of public opinion; and excellence is lost sight of in the hunger for sudden performance and praise.

There was a wise man, an Italian artist, Michel Angelo, who writes thus of himself: “Meanwhile the Cardinal Ippolito, in whom all my best hopes were placed, being dead, I began to understand that the promises of this world are for the most part vain phantoms, and that to confide in one’s self, and become something of worth and value, is the best and safest course.” Now, though I am by no means sure that the reader will assent to all my propositions, yet I think we shall agree in my first rule for success, — that we shall drop the brag and the advertisement, and take Michel Angelo’s course, “to confide in one’s self, and be something of worth and value.”

Each man has an aptitude born with him. Do your work. I have to say this often, but nature says it oftener. ’Tis clownish to insist on doing all with one’s own hands, as if every man should build his own clumsy house, forge his hammer, and bake his dough; but he is to dare to do what he can do best; not help others as they would direct him, but as he knows his helpful power to be. To do otherwise is to neutralize all those extraordinary special talents distributed among men. Yet whilst this self-truth is essential to the exhibition of the world and to the growth and glory of each mind, it is rare to find a man who believes his own thought or who speaks that which he was created to say. As nothing astonishes men so much as common-sense and plain dealing, so nothing is more

rare in any man than an act of his own. Any work looks wonderful to him, except that which he can do. We do not believe our own thought; we must serve somebody; we must quote somebody; we dote on the old and the distant; we are tickled by great names; we import the religion of other nations; we quote their opinions; we cite their laws. The gravest and learnedest courts in this country shudder to face a new question, and will wait months and years for a case to occur that can be tortured into a precedent, and thus throw on a bolder party the *onus* of an initiative. Thus we do not carry a counsel in our breasts, or do not know it; and because we cannot shake off from our shoes this dust of Europe and Asia, the world seems to be born old, society is under a spell, every man is a borrower and a mimic, life is theatrical and literature a quotation; and hence that depression of spirits, that furrow of care, said to mark every American brow.

Self-trust is the first secret of success, the belief that if you are here the authorities of the universe put you here, and for cause, or with some task strictly appointed you in your constitution, and so long as you work at that you are well and successful. It by no means consists in rushing prematurely to a showy feat that shall catch the eye and satisfy spectators. It is enough if you work in the right direction. So far from the performance being the real success, it is clear that the success was much earlier than that, namely, when all the feats that make our civility were the thoughts of good heads. The fame of each discovery rightly attaches to the mind that made the formula which contains all the details, and not to the manufacturers who now make their gain by it; although the mob uniformly cheers the publisher, and not the inventor. It is the dulness of the multitude that they cannot see the house in the ground-plan; the working, in the model of the projector. Whilst it is a thought, though it were a new fuel, or a new food, or the creation of agriculture, it is cried down, it is a chimera; but when it is a fact, and comes in the shape of eight per cent, ten per cent, a hundred per cent, they cry, ‘It is the voice of God.’ Horatio Greenough the sculptor said to me of Robert Fulton’s visit to Paris: “Fulton knocked at the door of Napoleon with steam, and was rejected; and Napoleon lived long enough to know that he had excluded a greater power than his own.”

Is there no loving of knowledge, and of art, and of our design, for itself alone? Cannot we please ourselves with performing our work, or gaining truth and power, without being praised for it? I gain my point, I gain all points, if I can reach my companion with any statement which teaches him his own worth. The sum of wisdom is, that the time is never lost that is devoted to work. The good workman never says, ‘There, that will do;’ but, ‘There, that is it: try it, and come again, it will last always.’ If the artist, in whatever art, is well at work on his own design, it signifies little that he does not yet find orders or customers. I

pronounce that young man happy who is content with having acquired the skill which he had aimed at, and waits willingly when the occasion of making it appreciated shall arrive, knowing well that it will not loiter. The time your rival spends in dressing up his work for effect, hastily, and for the market, you spend in study and experiments towards real knowledge and efficiency. He has thereby sold his picture or machine, or won the prize, or got the appointment; but you have raised yourself into a higher school of art, and a few years will show the advantage of the real master over the short popularity of the showman. I know it is a nice point to discriminate this self-trust, which is the pledge of all mental vigor and performance, from the disease to which it is allied, — the exaggeration of the part which we can play; — yet they are two things. But it is sanity to know that, over my talent or knack, and a million times better than any talent, is the central intelligence which subordinates and uses all talents; and it is only as a door into this, that any talent or the knowledge it gives is of value. He only who comes into this central intelligence, in which no egotism or exaggeration can be, comes into self-possession.

My next point is that in the scale of powers it is not talent but sensibility which is best: talent confines, but the central life puts us in relation to all. How often it seems the chief good to be born with a cheerful temper and well adjusted to the tone of the human race. Such a man feels himself in harmony, and conscious by his receptivity of an infinite strength. Like Alfred, “good fortune accompanies him like a gift of God.” Feel yourself, and be not daunted by things. ’Tis the fulness of man that runs over into objects, and makes his Bibles and Shakspeares and Homers so great. The joyful reader borrows of his own ideas to fill their faulty outline, and knows not that he borrows and gives.

There is something of poverty in our criticism. We assume that there are few great men, all the rest are little; that there is but one Homer, but one Shakspeare, one Newton, one Socrates. But the soul in her beaming hour does not acknowledge these usurpations. We should know how to praise Socrates, or Plato, or Saint John, without impoverishing us. In good hours we do not find Shakspeare or Homer over-great, only to have been translators of the happy present, and every man and woman divine possibilities. ’Tis the good reader that makes the good book; a good head cannot read amiss, in every book he finds passages which seem confidences or asides hidden from all else and unmistakably meant for his ear.

The light by which we see in this world comes out from the soul of the observer. Wherever any noble sentiment dwelt, it made the faces and houses around to shine. Nay, the powers of this busy brain are miraculous and illimitable. Therein are the rules and formulas by which the whole empire of

matter is worked. There is no prosperity, trade, art, city, or great material wealth of any kind, but if you trace it home you will find it rooted in a thought of some individual man.

Is all life a surface affair? 'Tis curious, but our difference of wit appears to be only a difference of impressionability, or power to appreciate faint, fainter, and infinitely faintest voices and visions. When the scholar or the writer has pumped his brain for thoughts and verses, and then comes abroad into Nature, has he never found that there is a better poetry hinted in a boy's whistle of a tune, or in the piping of a sparrow, than in all his literary results? We call it health. What is so admirable as the health of youth? — with his long days because his eyes are good, and brisk circulations keep him warm in cold rooms, and he loves books that speak to the imagination; and he can read Plato, covered to his chin with a cloak in a cold upper chamber, though he should associate the Dialogues ever after with a woollen smell. 'Tis the bane of life that natural effects are continually crowded out, and artificial arrangements substituted. We remember when in early youth the earth spoke and the heavens glowed; when an evening, any evening, grim and wintry, sleet and snow, was enough for us; the houses were in the air. Now it costs a rare combination of clouds and lights to overcome the common and mean. What is it we look for in the landscape, in sunsets and sunrises, in the sea and the firmament? what but a compensation for the cramp and pettiness of human performances? We bask in the day, and the mind finds somewhat as great as itself. In Nature all is large massive repose. Remember what befalls a city boy who goes for the first time into the October woods. He is suddenly initiated into a pomp and glory that brings to pass for him the dreams of romance. He is the king he dreamed he was; he walks through tents of gold, through bowers of crimson, porphyry and topaz, pavilion on pavilion, garlanded with vines, flowers and sunbeams, with incense and music, with so many hints to his astonished senses; the leaves twinkle and pique and flatter him, and his eye and step are tempted on by what hazy distances to happier solitudes. All this happiness he owes only to his finer perception. The owner of the wood-lot finds only a number of discolored trees, and says, ' They ought to come down; they are n't growing any better; they should be cut and corded before spring.'

Wordsworth writes of the delights of the boy in Nature: —

“For never will come back the hour

Of splendor in the grass, of glory in the flower.”

But I have just seen a man, well knowing what he spoke of, who told me that the verse was not true for him; that his eyes opened as he grew older, and that every spring was more beautiful to him than the last.

We live among gods of our own creation. Does that deep-toned bell, which

has shortened many a night of ill nerves, render to you nothing but acoustic vibrations? Is the old church which gave you the first lessons of religious life, or the village school, or the college where you first knew the dreams of fancy and joys of thought, only boards or brick and mortar? Is the house in which you were born, or the house in which your dearest friend lived, only a piece of real estate whose value is covered by the Hartford insurance? You walk on the beach and enjoy the animation of the picture. Scoop up a little water in the hollow of your palm, take up a handful of shore sand; well, these are the elements. What is the beach but acres of sand? what is the ocean but cubic miles of water? a little more or less signifies nothing. No, it is that this brute matter is part of somewhat not brute. It is that the sand floor is held by spherul gravity, and bent to be a part of the round globe, under the optical sky, — part of the astonishing astronomy, and existing at last to moral ends and from moral causes.

The world is not made up to the eye of figures, that is, only half; it is also made of color. How that element washes the universe with its enchanting waves! The sculptor had ended his work, and behold a new world of dream-like glory. 'T is the last stroke of Nature; beyond color she cannot go. In like manner, life is made up, not of knowledge only, but of love also. If thought is form, sentiment is color. It clothes the skeleton world with space, variety, and glow. The hues of sunset make life great; so the affections make some little web of cottage and fireside populous, important, and filling the main space in our history.

The fundamental fact in our metaphysic constitution is the correspondence of man to the world, so that every change in that writes a record in the mind. The mind yields sympathetically to the tendencies or law which stream through things and make the order of nature; and in the perfection of this correspondence or expressiveness, the health and force of man consist. If we follow this hint into our intellectual education, we shall find that it is not propositions, not new dogmas and a logical exposition of the world that are our first need; but to watch and tenderly cherish the intellectual and moral sensibilities, those fountains of right thought, and woo them to stay and make their home with us. Whilst they abide with us we shall not think amiss. Our perception far outruns our talent. We bring a welcome to the highest lessons of religion and of poetry out of all proportion beyond our skill to teach. And, further, the great hearing and sympathy of men is more true and wise than their speaking is wont to be. A deep sympathy is what we require for any student of the mind; for the difference between man and man is a difference of impressionability. Aristotle or Bacon or Kant propound some maxim which is the key-note of philosophy thenceforward. But I am more interested to know that when at last they have hurled out their grand word, it is only some familiar experience of every man in the street. If it

be not, it will never be heard of again.

Ah! if one could keep this sensibility, and live in the happy sufficing present, and find the day and its cheap means contenting, which only ask receptivity in you, and no strained exertion and cankering ambition, overstimulating to be at the head of your class and the head of society, and to have distinction and laurels and consumption! We are not strong by our power to penetrate, but by our relatedness. The world is enlarged for us, not by new objects, but by finding more affinities and potencies in those we have.

This sensibility appears in the homage to beauty which exalts the faculties of youth; in the power which form and color exert upon the soul; when we see eyes that are a compliment to the human race, features that explain the Phidian sculpture. Fontenelle said: "There are three things about which I have curiosity, though I know nothing of them, — music, poetry, and love." The great doctors of this science are the greatest men, — Dante, Petrarch, Michel Angelo and Shakspeare. The wise Socrates treats this matter with a certain archness, yet with very marked expressions. "I am always," he says, "asserting that I happen to know, I may say, nothing but a mere trifle relating to matters of love; yet in that kind of learning I lay claim to being more skilled than any one man of the past or present time." They may well speak in this uncertain manner of their knowledge, and in this confident manner of their will, for the secret of it is hard to detect, so deep it is; and yet genius is measured by its skill in this science.

Who is he in youth or in maturity or even in old age, who does not like to hear of those sensibilities which turn curled heads round at church, and send wonderful eye-beams across assemblies, from one to one, never missing in the thickest crowd? The keen statist reckons by tens and hundreds; the genial man is interested in every slipper that comes into the assembly. The passion, alike everywhere, creeps under the snows of Scandinavia, under the fires of the equator, and swims in the seas of Polynesia. Lofn is as puissant a divinity in the Norse Edda as Camadeva in the red vault of India, Eros in the Greek, or Cupid in the Latin heaven. And what is specially true of love is that it is a state of extreme impressionability; the lover has more senses and finer senses than others; his eye and ear are telegraphs; he reads omens on the flower, and cloud, and face, and form, and gesture, and reads them aright. In his surprise at the sudden and entire understanding that is between him and the beloved person, it occurs to him that they might somehow meet independently of time and place. How delicious the belief that he could elude all guards, precautions, ceremonies, means, and delays, and hold instant and sempiternal communication! In solitude, in banishment, the hope returned, and the experiment was eagerly tried. The supernal powers seem to take his part. What was on his lips to say is uttered by his friend. When he

went abroad, he met, by wonderful casualties, the one person he sought. If in his walk he chanced to look back, his friend was walking behind him. And it has happened that the artist has often drawn in his pictures the face of the future wife whom he had not yet seen.

But also in complacencies nowise so strict as this of the passion, the man of sensibility counts it a delight only to hear a child's voice fully addressed to him, or to see the beautiful manners of the youth of either sex. When the event is past and remote, how insignificant the greatest compared with the piquancy of the present! To-day at the school examination the professor interrogates Sylvina in the history class about Odoacer and Alaric. Sylvina can't remember, but suggests that Odoacer was defeated; and the professor tartly replies, "No, he defeated the Romans." But 't is plain to the visitor that 'tis of no importance at all about Odoacer and 'tis a great deal of importance about Sylvina, and if she says he was defeated, why he had better a great deal have been defeated than give her a moment's annoy. Odoacer, if there was a particle of the gentleman in him, would have said, Let me be defeated a thousand times.

And as our tenderness for youth and beauty gives a new and just importance to their fresh and manifold claims, so the like sensibility gives welcome to all excellence, has eyes and hospitality for merit in corners. An Englishman of marked character and talent, who had brought with him hither one or two friends and a library of mystics, assured me that nobody and nothing of possible interest was left in England, — he had brought all that was alive away. I was forced to reply: "No, next door to you probably, on the other side of the partition in the same house, was a greater man than any you had seen." Every man has a history worth knowing, if he could tell it, or if we could draw it from him. Character and wit have their own magnetism. Send a deep man into any town, and he will find another deep man there, unknown hitherto to his neighbors. That is the great happiness of life, — to add to our high acquaintances. The very law of averages might have assured you that there will be in every hundred heads, say ten or five good heads. Morals are generated as the atmosphere is. 'Tis a secret, the genesis of either; but the springs of justice and courage do not fail any more than salt or sulphur springs.

The world is always opulent, the oracles are never silent; but the receiver must by a happy temperance be brought to that top of condition, that frolic health, that he can easily take and give these fine communications. Health is the condition of wisdom, and the sign is cheerfulness, — an open and noble temper. There was never poet who had not the heart in the right place. The old *trouveur*, Pons Capdueil, wrote, —

“Oft have I heard, and deem the witness true,
Whom man delights in, God delights in too.”

All beauty warms the heart, is a sign of health, prosperity, and the favor of God. Everything lasting and fit for men the Divine Power has marked with this stamp. What delights, what emancipates, not what scares and pains us is wise and good in speech and in the arts. For, truly, the heart at the centre of the universe with every throb hurls the flood of happiness into every artery, vein, and veinlet, so that the whole system is inundated with the tides of joy. The plenty of the poorest place is too great: the harvest cannot be gathered. Every sound ends in music. The edge of every surface is tinged with prismatic rays.

One more trait of true success. The good mind chooses what is positive, what is advancing, — embraces the affirmative. Our system is one of poverty. 'Tis presumed, as I said, there is but one Shakspeare, one Homer, one Jesus, — not that all are or shall be inspired. But we must begin by affirming. Truth and goodness subsist forevermore. It is true there is evil and good, night and day: but these are not equal. The day is great and final. The night is for the day, but the day is not for the night. What is this immortal demand for more, which belongs to our constitution? this enormous ideal? There is no such critic and beggar as this terrible Soul. No historical person begins to content us. We know the satisfactoriness of justice, the sufficiency of truth. We know the answer that leaves nothing to ask. We know the Spirit by its victorious tone. The searching tests to apply to every new pretender are amount and quality, — what does he add? and what is the state of mind he leaves me in? Your theory is unimportant; but what new stock you can add to humanity, or how high you can carry life? A man is a man only as he makes life and nature happier to us.

I fear the popular notion of success stands in direct opposition in all points to the real and wholesome success. One adores public opinion, the other private opinion; one fame, the other desert; one feats, the other humility; one lucre, the other love; one monopoly, and the other hospitality of mind.

We may apply this affirmative law to letters, to manners, to art, to the decorations of our houses, *etc.* I do not find executions or tortures or lazarettos, or grisly photographs of the field on the day after the battle, fit subjects for cabinet pictures. I think that some so-called “sacred subjects” must be treated with more genius than I have seen in the masters of Italian or Spanish art to be right pictures for houses and churches. Nature does not invite such exhibition. Nature lays the ground-plan of each creature accurately, sternly fit for all his functions; then veils it scrupulously. See how carefully she covers up the skeleton. The eye shall not see it; the sun shall not shine on it. She weaves her

tissues and integuments of flesh and skin and hair and beautiful colors of the day over it, and forces death down underground, and makes haste to cover it up with leaves and vines, and wipes carefully out every trace by new creation. Who and what are you that would lay the ghastly anatomy bare?

Don't hang a dismal picture on the wall, and do not daub with sables and glooms in your conversation. Don't be a cynic and disconsolate preacher. Don't bewail and bemoan. Omit the negative propositions. Nerve us with incessant affirmatives. Don't waste yourself in rejection, nor bark against the bad, but chant the beauty of the good. When that is spoken which has a right to be spoken, the chatter and the criticism will stop. Set down nothing that will not help somebody; —

“For every gift of noble origin

Is breathed upon by Hope's perpetual breath.”

The affirmative of affirmatives is love. As much love, so much perception. As caloric to matter, so is love to mind; so it enlarges, and so it empowers it. Goodwill makes insight, as one finds his way to the sea by embarking on a river. I have seen scores of people who can silence me, but I seek one who shall make me forget or overcome the frigidities and imbecilities into which I fall. The painter Giotto, Vasari tells us, renewed art because he put more goodness into his heads. To awake in man and to raise the sense of worth, to educate his feeling and judgment so that he shall scorn himself for a bad action, that is the only aim.

'Tis cheap and easy to destroy. There is not a joyful boy or an innocent girl buoyant with fine purposes of duty, in all the street full of eager and rosy faces, but a cynic can chill and dishearten with a single word. Despondency comes readily enough to the most sanguine. The cynic has only to follow their hint with his bitter confirmation, and they check that eager courageous pace and go home with heavier step and premature age. They will themselves quickly enough give the hint he wants to the cold wretch. Which of them has not failed to please where they most wished it? or blundered where they were most ambitious of success? or found themselves awkward or tedious or incapable of study, thought, or heroism, and only hoped by good sense and fidelity to do what they could and pass unblamed? And this witty malefactor makes their little hope less with satire and skepticism, and slackens the springs of endeavor. Yes, this is easy; but to help the young soul, add energy, inspire hope and blow the coals into a useful flame; to redeem defeat by new thought, by firm action, that is not easy, that is the work of divine men.

We live on different planes or platforms. There is an external life, which is educated at school, taught to read, write, cipher, and trade; taught to grasp all the

boy can get, urging him to put himself forward, to make himself useful and agreeable in the world, to ride, run, argue and contend, unfold his talents, shine, conquer and possess.

But the inner life sits at home, and does not learn to do things, nor value these feats at all. 'Tis a quiet, wise perception. It loves truth, because it is itself real; it loves right, it knows nothing else; but it makes no progress; was as wise in our first memory of it as now; is just the same now in maturity and hereafter in age, it was in youth. We have grown to manhood and womanhood; we have powers, connection, children, reputations, professions: this makes no account of them all. It lives in the great present; it makes the present great. This tranquil, well-founded, wide-seeing soul is no express-rider, no attorney, no magistrate: it lies in the sun and broods on the world. A person of this temper once said to a man of much activity, "I will pardon you that you do so much, and you me that I do nothing." And Euripides says that "Zeus hates busybodies and those who do too much."

OLD AGE.

On the anniversary of the Phi Beta Kappa Society at Cambridge in 1861, the venerable President Quincy, senior member of the Society, as well as senior alumnus of the University, was received at the dinner with peculiar demonstrations of respect. He replied to these compliments in a speech, and, gracefully claiming the privileges of a literary society, entered at some length into an Apology for Old Age, and, aiding himself by notes in his hand, made a sort of running commentary on Cicero's chapter "De Senectute." The character of the speaker, the transparent good faith of his praise and blame, and the *naïveté* of his eager preference of Cicero's opinions to King David's, gave unusual interest to the College festival. It was a discourse full of dignity, honoring him who spoke and those who heard.

The speech led me to look over at home — an easy task — Cicero's famous easy, charming by its, uniform rhetorical merit; heroic with Stoical precepts, with a Roman eye to the claims of the State; happiest perhaps in his praise of life on the farm; and rising at the conclusion to a lofty strain. But he does not exhaust the subject; rather invites the attempt to add traits to the picture from our broader modern life.

Cicero makes no reference to the illusions which cling to the element of time, and in which Nature delights. Wellington, in speaking of military men, said, "What masks are these uniforms to hide cowards!" I have often detected the like deception in the cloth shoe, wadded pelisse, wig, spectacles and padded chair of Age. Nature lends herself to these illusions, and adds dim sight, deafness, cracked voice, snowy hair, short memory and sleep. These also are masks, and all is not Age that wears them. Whilst we yet call ourselves young and our mates are yet youths with even boyish remains, one good fellow in the set prematurely sports a gray or a bald head, which does not impose on us who know how innocent of sanctity or of Platonism he is, but does deceive his juniors and the public, who presently distinguish him with a most amusing respect: and this lets us into the secret that the venerable forms that so awed our childhood were just such imposters. Nature is full of freaks, and now puts an old head on young shoulders, and then a young heart beating under fourscore winters.

For if the essence of age is not present, these signs, whether of Art or Nature, are counterfeit and ridiculous: and the essence of age is intellect. Wherever that appears, we call it old. If we look into the eyes of the youngest person we sometimes discover that here is one who knows already what you would go about with much pains to teach him; there is that in him which is the ancestor of

all around him: which fact the Indian Vedas express when they say, “He that can discriminate is the father of his father.” And in our old British legends of Arthur and the Bound Table, his friend and counsellor, Merlin the Wise, is a babe found exposed in a basket by the river-side, and, though an infant of only a few days, speaks articulately to those who discover him, tells his name and history, and presently foretells the fate of the by-standers. Wherever there is power, there is age. Don’t be deceived by dimples and curls. I tell you that babe is a thousand years old.

Time is indeed the theatre and seat of illusion: nothing is so ductile and elastic. The mind stretches an hour to a century and dwarfs an age to an hour. Saadi found in a mosque at Damascus an old Persian of a hundred and fifty years, who was dying, and was saying to himself, “I said, coming into the world by birth, ‘ I will enjoy myself for a few moments.’ Alas! at the variegated table of life I partook of a few mouthfuls, and the Fates said, ‘ *Enough!* ‘“ That which does not decay is so central and controlling in us, that, as long as one is alone by himself, he is not sensible of the inroads of time, which always begin at the surface-edges. If, on a winter day, you should stand within a bell-glass, the face and color of the afternoon clouds would not indicate whether it were June or January; and if we did not find the reflection of ourselves in the eyes of the young people, we could not know that the century-clock had struck seventy instead of twenty. How many men habitually believe that each chance passenger with whom they converse is of their own age, and presently find it was his father and not his brother whom they knew!

But not to press too hard on these deceits and illusions of Nature, which are inseparable from our condition, and looking at age under an aspect more conformed to the common-sense, if the question be the felicity of age, I fear the first popular judgments will be unfavorable. From the point of sensuous experience, seen from the streets, and markets and the haunts of pleasure and gain, the estimate of age is low, melancholy and skeptical. Frankly face the facts, and see the result. Tobacco, coffee, alcohol, hashish, prussic acid, strychnine, are weak dilutions: the surest poison is time. This cup which Nature puts to our lips, has a wonderful virtue, surpassing that of any other draught. It opens the senses, adds power, fills us with exalted dreams, which we call hope, love, ambition, science: especially, it creates a craving for larger draughts of itself. But they who take the larger draughts are drunk with it, lose their stature, strength, beauty, and senses, and end in folly and delirium. We postpone our literary work until we have more ripeness and skill to write, and we one day discover that our literary talent was a youthful effervescence which we have now lost. We had a judge in Massachusetts who at sixty proposed to resign, alleging that he perceived a

certain decay in his faculties; he was dissuaded by his friends, on account of the public convenience at that time. At seventy it was hinted to him that it was time to retire; but he now replied that he thought his judgment as robust and all his faculties as good as ever they were. But besides the self-deception, the strong and hasty laborers of the street do not work well with the chronic valetudinarian. Youth is everywhere in place. Age, like woman, requires fit surroundings. Age is comely in coaches, in churches, in chairs of state and ceremony, in council-chambers, in courts of justice and historical societies. Age is becoming in the country. But in the rush and uproar of Broadway, if you look into the faces of the passengers there is dejection or indignation in the seniors, a certain concealed sense of injury, and the lip made up with a heroic determination not to mind it. Few envy the consideration enjoyed by the oldest inhabitant. We do not count a man's years, until he has nothing else to count. The vast inconvenience of animal immortality was told in the fable of Tithonus. In short, the creed of the street is, Old Age is not disgraceful, but immensely disadvantageous. Life is well enough, but we shall all be glad to get out of it, and they will all be glad to have us.

This is odious on the face of it. Universal convictions are not to be shaken by the whimsies of overfed butchers and firemen, or by the sentimental fears of girls who would keep the infantile bloom on their cheeks. We know the value of experience. Life and art are cumulative; and he who has accomplished something in any department alone deserves to be heard on that subject. A man of great employments and excellent performance used to assure me that he did not think a man worth anything until he was sixty; although this smacks a little of the resolution of a certain "Young Men's Republican Club," that all men should be held eligible who were under seventy. But in all governments, the councils of power were held by the old; and patricians or *patres*, senate or *senes*, *seigneurs* or seniors, *gerousia*, the senate of Sparta, the presbytery of the Church, and the like, all signify simply old men.

The cynical creed or lampoon of the market is refuted by the universal prayer for long life, which is the verdict of Nature and justified by all history. We have, it is true, examples of an accelerated pace by which young men achieved grand works; as in the Macedonian Alexander, in Raffaele, Shakspeare, Pascal, Burns, and Byron; but these are rare exceptions. Nature, in the main, vindicates her law. Skill to do comes of doing; knowledge comes by eyes always open, and working hands; and there is no knowledge that is not power. Béranger said, "Almost all the good workmen live long." And if the life be true and noble, we have quite another sort of seniors than the frowzy, timorous, peevish dotards who are falsely old, — namely, the men who fear no city, but by whom cities stand; who

appearing in any street, the people empty their houses to gaze at and obey them: as at “My Cid, with the fleecy beard,” in Toledo; or Bruce, as Barbour reports him; as blind old Dandolo, elected Doge at eighty-four years, storming Constantinople at ninety-four, and after the revolt again victorious and elected at the age of ninety-six to the throne of the Eastern Empire, which he declined, and died Doge at ninety-seven. We still feel the force of Socrates, “whom well-advised the oracle pronounced wisest of men;” of Archimedes, holding Syracuse against the Romans by his wit, and himself better than all their nation; of Michel Angelo, wearing the four crowns of architecture, sculpture, painting, and poetry; of Galileo, of whose blindness Castelli said, “The noblest eye is darkened that Nature ever made, — an eye that hath seen more than all that went before him, and hath opened the eyes of all that shall come after him;” of Newton, who made an important discovery for every one of his eighty-five years; of Bacon, who “took all knowledge to be his province;” of Fontenelle, “that precious porcelain vase laid up in the centre of France to be guarded with the utmost care for a hundred years;” of Franklin, Jefferson, and Adams, the wise and heroic statesmen; of Washington, the perfect citizen; of Wellington, the perfect soldier; of Goethe, the all-knowing poet; of Humboldt, the encyclopædia of science.

Under the general assertion of the well-being of age, we can easily count particular benefits of that condition. It has weathered the perilous capes and shoals in the sea whereon we sail, and the chief evil of life is taken away in removing the grounds of fear. The insurance of a ship expires as she enters the harbor at home. It were strange if a man should turn his sixtieth year without a feeling of immense relief from the number of dangers he has escaped. When the old wife says, ‘Take care of that tumor in your shoulder, perhaps it is cancerous,’ — he replies, ‘I am yielding to a surer decomposition.’ The humorous thief who drank a pot of beer at the gallows blew off the froth because he had heard it was unhealthy; but it will not add a pang to the prisoner marched out to be shot, to assure him that the pain in his knee threatens mortification. When the pleuro-pneumonia of the cows raged, the butchers said that though the acute degree was novel, there never was a time when this disease did not occur among cattle. All men carry seeds of all distempers through life latent, and we die without developing them; such is the affirmative force of the constitution; but if you are enfeebled by any cause, some of these sleeping seeds start and open. Meantime, at every stage we lose a foe. At fifty years, ’tis said, afflicted citizens lose their sick-headaches. I hope this *hegira* is not as movable a feast as that one I annually look for, when the horticulturists assure me that the rose-bugs in our gardens disappear on the tenth of July; they stay a fortnight later in mine. But be it as it may with the sick-headache,— ’tis certain that graver headaches and heart-aches

are lulled once for all as we come up with certain goals of time. The passions have answered their purpose: that slight but dread overweight with which in each instance Nature secures the execution of her aim, drops off. To keep man in the planet, she impresses the terror of death. To perfect the commissariat, she implants in each a certain rapacity to get the supply, and a little oversupply, of his wants. To insure the existence of the race, she reinforces the sexual instinct, at the risk of disorder, grief, and pain. To secure strength, she plants cruel hunger and thirst, which so easily overdo their office, and invite disease. But these temporary stays and shifts for the protection of the young animal are shed as fast as they can be replaced by nobler resources. We live in youth amidst this rabble of passions, quite too tender, quite too hungry and irritable. Later, the interiors of mind and heart open, and supply grander motives. We learn the fatal compensations that wait on every act. Then, one after another, this riotous time-destroying crew disappear.

I count it another capital advantage of age, this, that a success more or less signifies nothing. Little by little it has amassed such a fund of merit that it can very well afford to go on its credit when it will. When I chanced to meet the poet Wordsworth, then sixty-three years old, he told me that "he had just had a fall and lost a tooth, and when his companions were much concerned for the mischance, he had replied that he was glad it had not happened forty years before." Well, Nature takes care that we shall not lose our organs forty years too soon. A lawyer argued a cause yesterday in the Supreme Court, and I was struck with a certain air of levity and defiance which vastly became him. Thirty years ago it was a serious concern to him whether his pleading was good and effective. Now it is of importance to his client, but of none to himself. It has been long already fixed what he can do and cannot do, and his reputation does not gain or suffer from one or a dozen new performances. If he should on a new occasion rise quite beyond his mark and achieve somewhat great and extraordinary, that, of course, would instantly tell; but he may go below his mark with impunity, and people will say, 'O, he had headache,' or 'He lost his sleep for two nights.' What a lust of appearance, what a load of anxieties that once degraded him he is thus rid of! Every one is sensible of this cumulative advantage in living. All the good days behind him are sponsors, who speak for him when he is silent, pay for him when he has no money, introduce him where he has no letters, and work for him when he sleeps.

A third felicity of age is that it has found expression. The youth suffers not only from ungratified desires, but from powers untried, and from a picture in his mind of a career which has as yet no outward reality. He is tormented with the want of correspondence between things and thoughts. Michel Angelo's head is

full of masculine and gigantic figures as gods walking, which make him savage until his furious chisel can render them into marble; and of architectural dreams, until a hundred stone-masons can lay them in courses of travertine. There is the like tempest in every good head in which some great benefit for the world is planted. The throes continue until the child is born. Every faculty new to each man thus goads him and drives him out into doleful deserts until it finds proper vent. All the functions of human duty irritate and lash him forward, bemoaning and chiding, until they are performed. He wants friends, employment, knowledge, power, house and land, wife and children, honor and fame; he has religious wants, æsthetic wants, domestic, civil, humane wants. One by one, day after day, he learns to coin his wishes into facts. He has his calling, homestead, social connection and personal power, and thus, at the end of fifty years, his soul is appeased by seeing some sort of correspondence between his wish and his possession. This makes the value of age, the satisfaction it slowly offers to every craving. He is serene who does not feel himself pinched and wronged, but whose condition, in particular and in general, allows the utterance of his mind. In old persons, when thus fully expressed, we often observe a fair, plump, perennial, waxen complexion, which indicates that all the ferment of earlier days has subsided into serenity of thought and behavior.

The compensations of Nature play in age as in youth. In a world so charged and sparkling with power, a man does not live long and actively without costly additions of experience, which, though not spoken, are recorded in his mind. What to the youth is only a guess or a hope, is in the veteran a digested statute. He beholds the feats of the juniors with complacency, but as one who having long ago known these games, has refined them into results and morals. The Indian Red Jacket, when the young braves were boasting their deeds, said, "But the sixties have all the twenties and forties in them."

For a fourth benefit, age sets its house in order, and finishes its works, which to every artist is a supreme pleasure. Youth has an excess of sensibility, before which every object glitters and attracts. We leave one pursuit for another, and the young man's year is a heap of beginnings. At the end of a twelvemonth, he has nothing to show for it, — not one completed work. But the time is not lost. Our instincts drove us to have innumerable experiences, that are yet of no visible value, and which we may keep for twice seven years before they shall be wanted. The best things are of secular growth. The instinct of classifying marks the wise and healthy mind. Linnæus projects his system, and lays out his twenty-four classes of plants, before yet he has found in Nature a single plant to justify certain of his classes. His seventh class has not one. In process of time, he finds with delight the little white *Trientalis*, the only plant with seven petals and

sometimes seven stamens, which constitutes a seventh class in conformity with his system. The conchologist builds his cabinet whilst as yet he has few shells. He labels shelves for classes, cells for species: all but a few are empty. But every year fills some blanks, and with accelerating speed as he becomes knowing and known. An old scholar finds keen delight in verifying the impressive anecdotes and citations he has met with in miscellaneous reading and hearing, in all the years of youth. We carry in memory important anecdotes, and have lost all clew to the author from whom we had them. We have a heroic speech from Rome or Greece, but cannot fix it on the man who said it. We have an admirable line worthy of Horace, ever and anon resounding in our mind's ear, but have searched all probable and improbable books for it in vain. We consult the reading men: but, strangely enough, they who know everything know not this. But especially we have a certain insulated thought, which haunts us, but remains insulated and barren. Well, there is nothing for all this but patience and time. Time, yes, that is the finder, the unweariable explorer, not subject to casualties, omniscient at last. The day comes when the hidden author of our story is found; when the brave speech returns straight to the hero who said it; when the admirable verse finds the poet to whom it belongs; and best of all, when the lonely thought, which seemed so wise, yet half-wise, half-thought, because it cast no light abroad, is suddenly matched in our mind by its twin, by its sequence, or next related analogy, which gives it instantly radiating power, and justifies the superstitious instinct with which we have hoarded it. We remember our old Greek Professor at Cambridge, an ancient bachelor, amid his folios, possessed by this hope of completing a task, with nothing to break his leisure after the three hours of his daily classes, yet ever restlessly stroking his leg and assuring himself "he should retire from the University and read the authors." In Goethe's Romance, Makaria, the central figure for wisdom and influence, pleases herself with withdrawing into solitude to astronomy and epistolary correspondence. Goethe himself carried this completion of studies to the highest point. Many of his works hung on the easel from youth to age, and received a stroke in every month or year. A literary astrologer, he never applied himself to any task but at the happy moment when all the stars consented. Bentley thought himself likely to live till fourscore, — long enough to read everything that was worth reading,— "*Et tunc magna mei sub terris ibit imago.*" Much wider is spread the pleasure which old men take in completing their secular affairs, the inventor his inventions, the agriculturist his experiments, and all old men in finishing their houses, rounding their estates, clearing their titles, reducing tangled interests to order, reconciling enmities, and leaving all in the best posture for the future. It must be believed that there is a proportion between the designs

of a man and the length of his life: there is a calendar of his years, so of his performances.

America is the country of young men, and too full of work hitherto for leisure and tranquillity; yet we have had robust centenarians, and examples of dignity and wisdom. I have lately found in an old note-book a record of a visit to ex-President John Adams, in 1825, soon after the election of his son to the Presidency. It is but a sketch, and nothing important passed in the conversation; but it reports a moment in the life of a heroic person, who, in extreme old age, appeared still erect and worthy of his fame.

— , *Feb.*, 1825. To-day at Quincy, with my brother, by invitation of Mr. Adams's family. The old President sat in a large stuffed arm-chair, dressed in a blue coat, black small-clothes, white stockings; a cotton cap covered his bald head. We made our compliment, told him he must let us join our congratulations to those of the nation on the happiness of his house. He thanked us, and said: "I am rejoiced, because the nation is happy. The time of gratulation and congratulations is nearly over with me; I am astonished that I have lived to see and know of this event. I have lived now nearly a century; [he was ninety in the following October;] a long, harassed, and distracted life." I said, "The world thinks a good deal of joy has been mixed with it."— "The world does not know," he replied, "how much toil, anxiety, and sorrow I have suffered." — I asked if Mr. Adams's letter of acceptance had been read to him.— "Yes," he said, and added, "My son has more political prudence than any man that I know who has existed in my time; he never was put off his guard; and I hope he will continue such: but what effect age may work in diminishing the power of his mind, I do not know; it has been very much on the stretch, ever since he was born. He has always been laborious, child and man, from infancy." — When Mr. J. Q. Adams's age was mentioned, he said, "He is now fifty-eight, or will be in July;" and remarked that "all the Presidents were of the same age: General Washington was about fifty-eight, and I was about fifty-eight, and Mr. Jefferson, and Mr. Madison, and Mr. Monroe." — We inquired when he expected to see Mr. Adams — He said: "Never: Mr. Adams will not come to Quincy but to my funeral. It would be a great satisfaction to me to see him, but I don't wish him to come on my account." He spoke of Mr. Lechmere, whom he "well remembered to have seen come down daily, at a great age, to walk in the old town-house," adding, "And I wish I could walk as well as he did. He was Collector of the Customs for many years under the Royal Government." — E. said: "I suppose, sir, you would not have taken his place, even to walk as well as he."— "No," he replied, "that was not what I wanted." — He talked of Whitefield, and remembered when he was a Freshman in College to have come into town to the

Old South church, [I think,] to hear him, but could not get into the house;— “I however, saw him,” he said, “through a window, and distinctly heard all. He had a voice such as I never heard before or since. He cast it out so that you might hear it at the meeting-house,” [pointing towards the Quincy meeting-house,] “and he had the grace of a dancing-master, of an actor of plays. His voice and manner helped him more than his sermons. I went with Jonathan Sewall.”— “And you were pleased with him, sir?”— “Pleased! I was delighted beyond measure.” — We asked if at whitefield’s return the same popularity continued. — “Not the same fury,” he said, “not the same wild enthusiasm as before, but a greater esteem, as he became more known. He did not terrify, but was admired.”

We spent about an hour in his room. He speaks very distinctly for so old a man, enters bravely into long sentences, which are interrupted by want of breath, but carries them invariably to a conclusion, without correcting a word.

He spoke of the new novels of Cooper, and “Peep at the Pilgrims,” and “Saratoga,” with praise, and named with accuracy the characters in them. He likes to have a person always reading to him, or company talking in his room, and is better the next day after having visitors in his chamber from morning to night.

He received a premature report of his son’s election, on Sunday afternoon, without any excitement, and told the reporter he had been hoaxed, for it was not yet time for any news to arrive. The informer, something damped in his heart, insisted on repairing to the meeting-house, and proclaimed it aloud to the congregation, who were so overjoyed that they rose in their seats and cheered thrice. The Reverend Mr. Whitney dismissed them immediately.

When life has been well spent, age is a loss of what it can well spare, — muscular strength, organic instincts, gross bulk, and works that belong to these. But the central wisdom, which was old in infancy, is young in fourscore years, and, dropping off obstructions, leaves in happy subjects the mind purified and wise. I have heard that whoever loves is in no condition old. I have heard that whenever the name of man is spoken, the doctrine of immortality is announced; it cleaves to his constitution. The mode of it baffles our wit, and no whisper comes to us from the other side. But the inference from the working of intellect, hiving knowledge, hiving skill — at the end of life just ready to be born, affirms the inspirations of affection and of the moral sentiment.

Emerson, 1868

POETRY AND IMAGINATION.

The perception of matter is made the common sense, and for cause. This was the cradle, this the go-cart, of the human child. We must learn the homely laws of fire and water; we must feed, wash, plant, build. These are ends of necessity, and first in the order of nature. Poverty, frost, famine, disease, debt, are the beaules and guardsmen that hold us to common-sense. The intellect, yielded up to itself, cannot supersede this tyrannic necessity. The restraining grace of common-sense is the mark of all the valid minds, — of Æsop, Aristotle, Alfred, Luther, Shakspeare, Cervantes, Franklin, Napoleon. The common-sense which does not meddle with the absolute, but takes things at their word, — things as they appear, — believes in the existence of matter, not because we can touch it or conceive of it, but because it agrees with ourselves, and the universe does not jest with us, but is in earnest, is the house of health and life. In spite of all the joys of poets and the joys of saints, the most imaginative and abstracted person never makes with impunity the least mistake in this particular, — never tries to kindle his oven with water, nor carries a torch into a powder-mill, nor seizes his wild charger by the tail. We should not pardon the blunder in another, nor endure it in ourselves.

But whilst we deal with this as finality, early hints are given that we are not to stay here; that we must be making ready to go; — a warning that this magnificent hotel and conveniency we call Nature is not final. First innuendoes, then broad hints, then smart taps are given, suggesting that nothing stands still in nature but death; that the creation is on wheels, in transit, always passing into something else, streaming into something higher; that matter is not what it appears; — that chemistry can blow it all into gas. Faraday, the most exact of natural philosophers, taught that when we should arrive at the monads, or primordial elements (the supposed little cubes or prisms of which all matter was built up), we should not find cubes, or prisms, or atoms, at all, but spherules of force. It was whispered that the globes of the universe were precipitates of something more subtle; nay, somewhat was murmured in our ear that dwindled astronomy into a toy; — that too was no finality; only provisional, a makeshift; that under chemistry was power and purpose: power and purpose ride on matter to the last atom. It was steeped in thought, did everywhere express thought; that, as great conquerors have burned their ships when once they were landed on the wished-for shore, so the noble house of Nature we inhabit has temporary uses, and we can afford to leave it one day. The ends of all are moral, and therefore the beginnings are such. Thin or solid, everything is in flight. I believe this

conviction makes the charm of chemistry, — that we have the same avoirdupois matter in an alembic, without a vestige of the old form; and in animal transformation not less, as in grub and fly, in egg and bird, in embryo and man; everything undressing and stealing away from its old into new form, and nothing fast but those invisible cords which we call laws, on which all is strung. Then we see that things wear different names and faces, but belong to one family; that the secret cords or laws show their well-known virtue through every variety, be it animal, or plant, or planet, and the interest is gradually transferred from the forms to the lurking method.

This hint, however conveyed, upsets our politics, trade, customs, marriages, nay, the common-sense side of religion and literature, which are all founded on low nature, — on the clearest and most economical mode of administering the material world, considered as final. The admission, never so covertly, that this is a makeshift, sets the dullest brain in ferment: our little sir, from his first tottering steps, as soon as he can crow, does not like to be practised upon, suspects that some one is “doing” him, and at this alarm everything is compromised; gunpowder is laid under every man’s breakfast-table.

But whilst the man is startled by this closer inspection of the laws of matter, his attention is called to the independent action of the mind; its strange suggestions and laws; a certain tyranny which springs up in his own thoughts, which have an order, method, and beliefs of their own, very different from the order which this common-sense uses.

Suppose there were in the ocean certain strong currents which drove a ship, caught in them, with a force that no skill of sailing with the best wind, and no strength of oars, or sails, or steam, could make any head against, any more than against the current of Niagara. Such currents, so tyrannical, exist in thoughts, those finest and subtlest of all waters, that as soon as once thought begins, it refuses to remember whose brain it belongs to; what country, tradition, or religion; and goes whirling off — swim we merrily — in a direction self-chosen, by law of thought and not by law of kitchen clock or county committee. It has its own polarity. One of these vortices or self-directions of thought is the impulse to search resemblance, affinity, identity, in all its objects, and hence our science, from its rudest to its most refined theories.

The electric word pronounced by John Hunter a hundred years ago, *arrested and progressive development*, indicating the way upward from the invisible protoplasm to the highest organisms, gave the poetic key to Natural Science, of which the theories of Geoffroy St. Hilaire, of Oken, of Goethe, of Agassiz and Owen and Darwin in zoölogy and botany, are the fruits, — a hint whose power is not yet exhausted, showing unity and perfect order in physics.

The hardest chemist, the severest analyzer, scornful of all but dryest fact, is forced to keep the poetic curve of nature, and his result is like a myth of Theocritus. All multiplicity rushes to be resolved into unity. Anatomy, osteology, exhibit arrested or progressive ascent in each kind; the lower pointing to the higher forms, the higher to the highest, from the fluid in an elastic sack, from radiate, mollusk, articulate, vertebrate, up to man; as if the whole animal world were only a Hunterian museum to exhibit the genesis of mankind.

Identity of law, perfect order in physics, perfect parallelism between the laws of Nature and the laws of thought exist. In botany we have the like, the poetic perception of metamorphosis, — that the same vegetable point or eye which is the unit of the plant can be transformed at pleasure into every part, as bract, leaf, petal, stamen, pistil, or seed.

In geology, what a useful hint was given to the early inquirers on seeing in the possession of Professor Playfair a bough of a fossil tree which was perfect wood at one end and perfect mineral coal at the other. Natural objects, if individually described and out of connection, are not yet known, since they are really parts of a symmetrical universe, like words of a sentence; and if their true order is found, the poet can read their divine significance orderly as in a Bible. Each animal or vegetable form remembers the next inferior and predicts the next higher.

There is one animal, one plant, one matter, and one force. The laws of light and of heat translate each other; — so do the laws of sound and of color; and so galvanism, electricity, and magnetism are varied forms of the selfsame energy. While the student ponders this immense unity, he observes that all things in Nature, the animals, the mountain, the river, the seasons, wood, iron, stone, vapor, have a mysterious relation to his thoughts and his life; their growths, decays, quality and use so curiously resemble himself, in parts and in wholes, that he is compelled to speak by means of them. His words and his thoughts are framed by their help. Every noun is an image. Nature gives him, sometimes in a flattered likeness, sometimes in caricature, a copy of every humor and shade in his character and mind. The world is an immense picture-book of every passage in human life. Every object he beholds is the mask of a man.

“The privates of man’s heart
They speken and sound in his ear
As tho’ they loud winds were;”
for the universe is full of their echoes.

Every correspondence we observe in mind and matter suggests a substance

older and deeper than either of these old nobilities. We see the law gleaming through, like the sense of a half-translated ode of Hafiz. The poet who plays with it with most boldness best justifies himself; is most profound and most devout. Passion adds eyes; is a magnifying-glass. Sonnets of lovers are mad enough, but are valuable to the philosopher, as are prayers of saints, for their potent symbolism.

Science was false by being unpoetical. It assumed to explain a reptile or mollusk, and isolated it, — which is hunting for life in graveyards. Reptile or mollusk or man or angel only exists in system, in relation. The metaphysician, the poet, only sees each animal form as an inevitable step in the path of the creating mind. The Indian, the hunter, the boy with his pets, have sweeter knowledge of these than the savant. We use semblances of logic until experience puts us in possession of real logic. The poet knows the missing link by the joy it gives. The poet gives us the eminent experiences only, — a god stepping from peak to peak, nor planting his foot but on a mountain.

Science does not know its debt to imagination. Goethe did not believe that a great naturalist could exist without this faculty. He was himself conscious of its help, which made him a prophet among the doctors. From this vision he gave brave hints to the zoölogist, the botanist, and the optician.

Poetry. — The primary use of a fact is low; the secondary use, as it is a figure or illustration of my thought, is the real worth. First the fact; second its impression, or what I think of it. Hence Nature was called “a kind of adulterated reason.” Seas, forests, metals, diamonds and fossils interest the eye, but ‘t is only with some preparatory or predicting charm. Their value to the intellect appears only when I hear their meaning made plain in the spiritual truth they cover. The mind, penetrated with its sentiment or its thought, projects it outward on whatever it beholds. The lover sees re-minders of his mistress in every beautiful object; the saint, an argument for devotion in every natural process; and the facility with which Nature lends itself to the thoughts of man, the aptness with which a river, a flower, a bird, fire, day or night, can express his fortunes, is as if the world were only a disguised man, and, with a change of form, rendered to him all his experience. We cannot utter a sentence in sprightly conversation without a similitude. Note our incessant use of the word *like*, — like fire, like a rock, like thunder, like a bee, “like a year without a spring.” Conversation is not permitted without tropes; nothing but great weight in things can afford a quite literal speech. It is ever enlivened by inversion and trope. God himself does not speak prose, but communicates with us by hints, omens, inference, and dark resemblances in objects lying all around us.

Nothing so marks a man as imaginative expressions. A figurative statement

arrests attention, and is remembered and repeated. How often has a phrase of this kind made a reputation. Pythagoras's Golden Sayings were such, and Socrates's, and Mirabeau's, and Burke's, and Bonaparte's. Genius thus makes the transfer from one part of Nature to a remote part, and betrays the rhymes and echoes that pole makes with pole. Imaginative minds cling to their images, and do not wish them rashly rendered into prose reality, as children resent your showing them that their doll Cinderella is nothing but pine wood and rags; and my young scholar does not wish to know what the leopard, the wolf, or Lucia, signify in Dante's *Inferno*, but prefers to keep their veils on. Mark the delight of an audience in an image. When some familiar truth or fact appears in a new dress, mounted as on a fine horse, equipped with a grand pair of ballooning wings, we cannot enough testify our surprise and pleasure. It is like the new virtue shown in some unprized old property, as when a boy finds that his pocket-knife will attract steel filings and take up a needle; or when the old horse-block in the yard is found to be a Torso Hercules of the Phidian age. Vivacity of expression may indicate this high gift, even when the thought is of no great scope, as when Michel Angelo, praising the *terra cottas*, said, "If this earth were to become marble, woe to the antiques!". A happy symbol is a sort of evidence that your thought is just. I had rather have a good symbol of my thought, or a good analogy, than the suffrage of Kant or Plato. If you agree with me, or if Locke or Montesquieu agree, I may yet be wrong; but if the elm-tree thinks the same thing, if running water, if burning coal, if crystals, if alkalies, in their several fashions say what I say, it must be true. Thus a good symbol is the best argument, and is a missionary to persuade thousands. The Vedas, the Edda, the Koran, are each remembered by their happiest figure. There is no more welcome gift to men than a new symbol. That satiates, transports, converts them. They assimilate themselves to it, deal with it in all ways, and it will last a hundred years. Then comes a new genius, and brings another. Thus the Greek mythology called the sea "the tear of Saturn." The return of the soul to God was described as "a flask of water broken in the sea." Saint John gave us the Christian figure of "souls washed in the blood of Christ." The aged Michel Angelo indicates his perpetual study as in boyhood,— "I carry my satchel still." Machiavel described the papacy as "a stone inserted in the body of Italy to keep the wound open." To the Parliament debating how to tax America, Burke exclaimed, "Shear the wolf." Our Kentuckian orator said of his dissent from his companion, "I showed him the back of my hand." And our proverb of the courteous soldier reads: "An iron hand in a velvet glove."

This belief that the higher use of the material world is to furnish us types or pictures to express the thoughts of the mind, is carried to its logical extreme by

the Hindoos, who, following Buddha, have made it the central doctrine of their religion that what we call Nature, the external world, has no real existence, — is only phenomenal. Youth, age, property, condition, events, persons, — self, even, — are successive *maias* (deceptions) through which Vishnu mocks and instructs the soul. I think Hindoo books the best gymnastics for the mind, as showing treatment. All European libraries might almost be read without the swing of this gigantic arm being suspected. But these Orientals deal with worlds and pebbles freely.

For the value of a trope is that the hearer is one: and indeed Nature itself is a vast trope, and all particular natures are tropes. As the bird alights on the bough, then plunges into the air again, so the thoughts of God pause but for a moment in any form. All thinking is analogizing, and it is the use of life to learn metonymy. The endless passing of one element into new forms, the incessant metamorphosis, explains the rank which the imagination holds in our catalogue of mental powers. The imagination is the reader of these forms. The poet accounts all productions and changes of Nature as the nouns of language, uses them representatively, too well pleased with their ulterior to value much their primary meaning. Every new object so seen gives a shock of agreeable surprise. The impressions on the imagination make the great days of life: the book, the landscape, or the personality which did not stay on the surface of the eye or ear but penetrated to the inward sense, agitates us, and is not forgotten. Walking, working, or talking, the sole question is how many strokes vibrate on this mystic string, — how many diameters are drawn quite through from matter to spirit; for whenever you enunciate a natural law you discover that you have enunciated a law of the mind. Chemistry, geology, hydraulics, are secondary science. The atomic theory is only an interior process *produced*, as geometers say, or the effect of a foregone metaphysical theory. Swedenborg saw gravity to be only an external of the irresistible attractions of affection and faith. Mountains and oceans we think we understand; — yes, so long as they are contented to be such, and are safe with the geologist, — but when they are melted in Promethean alembics and come out men, and then, melted again, come out words, without any abatement, but with an exaltation of power!

In poetry we say we require the miracle. The bee flies among the flowers, and gets mint and marjoram, and generates a new product, which is not mint and marjoram, but honey; the chemist mixes hydrogen and oxygen to yield a new product, which is not these, but water; and the poet listens to conversation and beholds all objects in nature, to give back, not them, but a new and transcendent whole.

Poetry is the perpetual endeavor to express the spirit of the thing, to pass the

brute body and search the life and reason which causes it to exist; — to see that the object is always flowing away, whilst the spirit or necessity which causes it subsists. Its essential mark is that it betrays in every word instant activity of mind, shown in new uses of every fact and image, in preternatural quickness or perception of relations. All its words are poems. It is a presence of mind that gives a miraculous command of all means of uttering the thought and feeling of the moment. The poet squanders on the hour an amount of life that would more than furnish the seventy years of the man that stands next him.

The term “genius,” when used with emphasis, implies imagination; use of symbols, figurative speech. A deep insight will always, like Nature, ultimate its thought in a thing. As soon as a man masters a principle and sees his facts in relation to it, fields, waters, skies, offer to clothe his thoughts in images. Then all men understand him; Parthian, Mede, Chinese, Spaniard, and Indian hear their own tongue. For he can now find symbols of universal significance, which are readily rendered into any dialect; as a painter, a sculptor, a musician, can in their several ways express the same sentiment of anger, or love, or religion.

The thoughts are few, the forms many; the large vocabulary or many-colored coat of the indigent unity. The *savans* are chatty and vain, but hold them hard to principle and definition, and they become mute and near-sighted. What is motion? what is beauty? what is matter? what is life? what is force? Push them hard and they will not be loquacious. They will come to Plato, Proclus, and Swedenborg. The invisible and imponderable is the sole fact. “Why changes not the violet earth into musk?” What is the term of the everflowing metamorphosis? I do not know what are the stoppages, but I see that a devouring unity changes all into that which changes not.

The act of imagination is ever attended by pure delight. It infuses a certain volatility and intoxication into all nature. It has a flute which sets the atoms of our frame in a dance. Our indeterminate size is a delicious secret which it reveals to us. The mountains begin to dislimn, and float in the air. In the presence and conversation of a true poet, teeming with images to express his enlarging thought, his person, his form, grows larger to our fascinated eyes. And thus begins that deification which all nations have made of their heroes in every kind, — saints, poets, lawgivers, and warriors.

Imagination , — Whilst common-sense looks at things or visible nature as real and final facts, poetry, or the imagination which dictates it, is a second sight, looking through these, and using them as types or words for thoughts which they signify. Or is this belief a metaphysical whim of modern times, and quite too refined? On the contrary, it is as old as the human mind. Our best definition of poetry is one of the oldest sentences, and claims to come down to us from the

Chaldáan Zoroaster, who wrote it thus: “Poets are standing transporters, whose employment consists in speaking to the Father and to matter; in producing apparent imitations of unapparent natures, and inscribing things unapparent in the apparent fabrication of the world;” in other words, the world exists for thought: it is to make appear things which hide: mountains, crystals, plants, animals, are seen; that which makes them is not seen: these, then, are “apparent copies of unapparent natures.” Bacon expressed the same sense in his definition, “Poetry accommodates the shows of things to the desires of the mind;” and Swedenborg, when he said, “There is nothing existing in human thought, even though relating to the most mysterious tenet of faith, but has combined with it a natural and sensuous image.” And again: “Names, countries, nations, and the like are not at all known to those who are in heaven; they have no idea of such things, but of the realities signified thereby.” A symbol always stimulates the intellect; therefore is poetry ever the best reading. The very design of imagination is to domesticate us in another, in a celestial nature.

This power is in the image because this power is in nature. It so affects, because it so is. All that is wondrous in Swedenborg is not his invention, but his extraordinary perception; — that he was necessitated so to see. The world realizes the mind. Better than images is seen through them. The selection of the image is no more arbitrary than the power and significance of the image. The selection must follow fate. Poetry, if perfected, is the only verity; is the speech of man after the real, and not after the apparent.

Or shall we say that the imagination exists by sharing the ethereal currents? The poet contemplates the central identity, sees it undulate and roll this way and that, with divine Flowings, through remotest things; and, following it, can detect essential resemblances in natures never before compared. He can class them so audaciously because he is sensible of the sweep of the celestial stream, from which nothing is exempt. His own body is a fleeing apparition, — his personality as fugitive as the trope he employs. In certain hours we can almost pass our hand through our own body. I think the use or value of poetry to be the suggestion it affords of the flux or fugaciousness of the poet. The mind delights in measuring itself thus with matter, with history, and flouting both. A thought, any thought, pressed, followed, opened, dwarfs matter, custom, and all but itself. But this second sight does not necessarily impair the primary or common sense. Pindar, and Dante, yes, and the gray and timeworn sentences of Zoroaster, may all be parsed, though we do not parse them. The poet has a logic, though it be subtle. He observes higher laws than he transgresses. “Poetry must first be good sense, though it is something better.”

This union of first and second sight reads nature to the end of delight and of

moral use. Men are imaginative, but not overpowered by it to the extent of confounding its suggestions with external facts. We live in both spheres, and must not mix them. Genius certifies its entire possession of its thought, by translating it into a fact which perfectly represents it, and is hereby education. Charles James Fox thought “Poetry the great refreshment of the human mind, — the only thing, after all; that men first found out they had minds, by making and tasting poetry.”

Man runs about restless and in pain when his condition or the objects about him do not fully match his thought. He wishes to be rich, to be old, to be young, that things may obey him. In the ocean, in fire, in the sky, in the forest, he finds facts adequate and as large as he. As his thoughts are deeper than he can fathom, so also are these. It is easier to read Sanscrit, to decipher the arrowhead character, than to interpret these familiar sights. It is even much to name them. Thus Thomson’s “Seasons” and the best parts of many old and many new poets are simply enumerations by a person who felt the beauty of the common sights and sounds, without any attempt to draw a moral or affix a meaning.

The poet discovers that what men value as substances have a higher value as symbols; that Nature is the immense shadow of man. A man’s action is only a picture-book of his creed. He does after what he believes. Your condition, your employment, is the fable of *you*. The world is thoroughly anthropomorphized, as if it had passed through the body and mind of man, and taken his mould and form. Indeed, good poetry is always personification, and heightens every species of force in nature by giving it a human volition. We are advertised that there is nothing to which man is not related; that everything is convertible into every other. The staff in his hand is the *radius vector* of the sun. The chemistry of this is the chemistry of that. Whatever one act we do, whatever one thing we learn, we are doing and learning all things, — marching in the direction of universal power. Every healthy mind is a true Alexander or Sesostris, building a universal monarchy.

The senses imprison us, and we help them with metres as liminary, — with a pair of scales and a foot-rule and a clock. How long it took to find out what a day was, or what this sun, that makes days! It cost thousands of years only to make the motion of the earth suspected. Slowly, by comparing thousands of observations, there dawned on some mind a theory of the sun, — and we found the astronomical fact. But the astronomy is in the mind: the senses affirm that the earth stands still and the sun moves. The senses collect the surface facts of matter. The intellect acts on these brute reports, and obtains from them results which are the essence or intellectual form of the experiences. It compares, distributes, generalizes and uplifts them into its own sphere. It knows that these

transfigured results are not the brute experiences, just as souls in heaven are not the red bodies they once animated. Many transfigurations have befallen them. The atoms of the body were once nebulá, then rock, then loam, then corn, then chyme, then chyle, then blood; and now the beholding and co-energizing mind sees the same refining and ascent to the third, the seventh, or the tenth power of the daily accidents which the senses report, and which make the raw material of knowledge. It was sensation; when memory came, it was experience; when mind acted, it was knowledge; when mind acted on it as knowledge, it was thought.

This metonymy, or seeing the same sense in things so diverse, gives a pure pleasure. Every one of a million times we find a charm in the metamorphosis. It makes us dance and sing. All men are so far poets. When people tell me they do not relish poetry, and bring me Shelley, or Aikin's Poets, or I know not what volumes of rhymed English, to show that it has no charm, I am quite of their mind. But this dislike of the books only proves their liking of poetry. For they relish Æsop, — cannot forget him, or not use him; bring them Homer's Iliad, and they like that; or the Cid, and that rings well; read to them from Chaucer, and they reckon him an honest fellow. Lear and Macbeth and Richard III. they know pretty well without guide. Give them Robin Hood's ballads or Griselda, or Sir Andrew Barton, or Sir Patrick Spense, or Chevy Chase, or Tam O'Shanter, and they like these well enough. They like to see statues; they like to name the stars; they like to talk and hear of Jove, Apollo, Minerva, Venus, and the Nine. See how tenacious we are of the old names. They like poetry without knowing it as such. They like to go to the theatre and be made to weep; to Faneuil Hall, and be taught by Otis, Webster, or Kossuth, or Phillips, what great hearts they have, what tears, what new possible enlargements to their narrow horizons. They like to see sunsets on the hills or on a lake shore. Now a cow does not gaze at the rainbow, or show or affect any interest in the landscape, or a peacock, or the song of thrushes.

Nature is the true idealist. When she serves us best, when, on rare days, she speaks to the imagination, we feel that the huge heaven and earth are but a web drawn around us, that the light, skies, and mountains are but the painted vicissitudes of the soul. Who has heard our hymn in the churches without accepting the truth, —

“As o'er our heads the seasons roll,
And soothe with *change of bliss* the soul”?

Of course, when we describe man as poet, and credit him with the triumphs of the art, we speak of the potential or ideal man, — not found now in any one person. You must go through a city or a nation, and find one faculty here, one there, to build the true poet withal. Yet all men know the portrait when it is

drawn, and it is part of religion to believe its possible incarnation.

He is the healthy, the wise, the fundamental, the manly man, seer of the secret; against all the appearance he sees and reports the truth, namely that the soul generates matter. And poetry is the only verity, — the expression of a sound mind speaking after the ideal, and not after the apparent. As a power it is the perception of the symbolic character of things, and the treating them as representative: as a talent it is a magnetic tenaciousness of an image, and by the treatment demonstrating that this pigment of thought is as palpable and objective to the poet as is the ground on which he stands, or the walls of houses about him. And this power appears in Dante and Shakspeare. In some individuals this insight or second sight has an extraordinary reach which compels our wonder, as in Behmen, Swedenborg, and William Blake the painter.

William Blake, whose abnormal genius, Wordsworth said, interested him more than the conversation of Scott or of Byron, writes thus: “He who does not imagine in stronger and better lineaments and in stronger and better light than his perishing mortal eye can see, does not imagine at all. The painter of this work asserts that all his imaginations appear to him infinitely more perfect and more minutely organized than anything seen by his mortal eye. ... I assert for myself that I do not behold the outward creation, and that to me it would be a hindrance, and not action. I question not my corporeal eye any more than I would question a window concerning a sight. I look through it, and not with it.”

It is a problem of metaphysics to define the province of Fancy and Imagination. The words are often used, and the things confounded. Imagination respects the cause. It is the vision of an inspired soul reading arguments and affirmations in all nature of that which it is driven to say. But as soon as this soul is released a little from its passion, and at leisure plays with the resemblances and types, for amusement, and not for its moral end, we call its action Fancy. Lear, mad with his affliction, thinks every man who suffers must have the like cause with his own. “What, have his daughters brought him to this pass? “But when, his attention being diverted, his mind rests from this thought, he becomes fanciful with Tom, playing with the superficial resemblances of objects. Bunyan, in pain for his soul, wrote “Pilgrim’s Progress;” Quarles, after he was quite cool, wrote “Emblems.”

Imagination is central; fancy, superficial. Fancy relates to surface, in which a great part of life lies. The lover is rightly said to fancy the hair, eyes complexion of the maid. Fancy is a wilful, imagination a spontaneous act; fancy, a play as with dolls and puppets which we choose to call men and women; imagination, a perception and affirming of a real relation between a thought and some material fact. Fancy amuses; imagination expands and exalts us. Imagination uses an

organic classification. Fancy joins by accidental resemblance, surprises and amuses the idle, but is silent in the presence of great passion and action. Fancy aggregates; imagination animates. Fancy is related to color; imagination, to form. Fancy paints; imagination sculptures.

Veracity. — I do not wish, therefore, to find that my poet is not partaker of the feast he spreads, or that he would kindle or amuse me with that which does not kindle or amuse him. He must believe in his poetry. Homer, Milton, Hafiz, Herbert, Swedenborg, Wordsworth, are heartily enamored of their sweet thoughts. Moreover, they know that this correspondence of things to thoughts is far deeper than they can penetrate, — defying adequate expression; that it is elemental, or in the core of things. Veracity therefore is that which we require in poets, — that they shall say how it was with them, and not what might be said. And the fault of our popular poetry is that it is not sincere.

“What news?” asks man of man everywhere. The only teller of news is the poet. When he sings, the world listens with the assurance that now a secret of God is to be spoken. The right poetic mood is or makes a more complete sensibility, piercing the outward fact to the meaning of the fact; shows a sharper insight: and the perception creates the strong expression of it, as the man who sees his way walks in it.

It is a rule in eloquence, that the moment the orator loses command of his audience, the audience commands him. So in poetry, the master rushes to deliver his thought, and the words and images fly to him to express it; whilst colder moods are forced to respect the ways of saying it, and insinuate, or, as it were, muffle the fact to suit the poverty or caprice of their expression, so that they only hint the matter, or allude to it, being unable to fuse and mould their words and images to fluid obedience. See how Shakspeare grapples at once with the main problem of the tragedy, as in *Lear* and *Macbeth*, and the opening of the *Merchant of Venice*.

All writings must be in a degree exoteric, written to a human *should* or *would*, instead of to the fatal *is*: this holds even of the bravest and sincerest writers. Every writer is a skater, and must go partly where he would, and partly where the skates carry him; or a sailor, who can only land where sails can be blown. And yet it is to be added that high poetry exceeds the fact, or nature itself, just as skates allow the good skater far more grace than his best walking would show, or sails more than riding. The poet writes from a real experience, the amateur feigns one. Of course one draws the bow with his fingers and the other with the strength of his body; one speaks with his lips and the other with a chest voice. Talent amuses, but if your verse has not a necessary and autobiographic basis, though under whatever gay poetic veils, it shall not waste my time.

For poetry is faith. To the poet the world is virgin soil; all is practicable; the men are ready for virtue; it is always time to do right. He is a true re-commencer, or Adam in the garden again. He affirms the applicability of the ideal law to this moment and the present knot of affairs. Parties, lawyers and men of the world will invariably dispute such an application, as romantic and dangerous: they admit the general truth, but they and their affair always constitute a case in bar of the statute. Free-trade, they concede, is very well as a principle, but it is never quite the time for its adoption without prejudicing actual interests. Chastity, they admit, is very well, — but then think of Mirabeau's passion and temperament! Eternal laws are very well, which admit no violation, — but so extreme were the times and manners of mankind, that you must admit miracles, for the times constituted a case. Of course, we know what you say, that legends are found in all tribes, — but this legend is different. And so throughout; the poet affirms the laws, prose busies itself with exceptions, — with the local and individual.

I require that the poem should impress me so that after I have shut the book it shall recall me to itself, or that passages should. And inestimable is the criticism of memory as a corrective to first impressions. We are dazzled at first by new words and brilliancy of color, which occupy the fancy and deceive the judgment. But all this is easily forgotten. Later, the thought, the happy image which expressed it and which was a true experience of the poet, recurs to mind, and sends me back in search of the book. And I wish that the poet should foresee this habit of readers, and omit all but the important passages. Shakspeare is made up of important passages, like Damascus steel made up of old nails. Homer has his own, —

“One omen is best, to fight for one's country;”

and again, —

“They heal their griefs, for curable are the hearts of the noble.”

Write, that I may know you. Style betrays you, as your eyes do. We detect at once by it whether the writer has a firm grasp on his fact or thought, — exists at the moment for that alone, or whether he has one eye apologizing, deprecatory, turned on his reader. In proportion always to his possession of his thought is his defiance of his readers. There is no choice of words for him who clearly sees the truth. That provides him with the best word.

Great design belongs to a poem, and is better than any skill of execution, — but how rare! I find it in the poems of Wordsworth, — Laodamia, and the Ode to

Dion, and the plan of The Recluse. We want design, and do not forgive the bards if they have only the art of enamelling. We want an architect, and they bring us an upholsterer.

If your subject do not appear to you the flower of the world at this moment, you have not rightly chosen it. No matter what it is, grand or gay, national or private, if it has a natural prominence to you, work away until you come to the heart of it: then it will, though it were a sparrow or a spider-web, as fully represent the central law and draw all tragic or joyful illustration, as if it were the book of Genesis or the book of Doom. The subject — we must so often say it — is indifferent. Any word, every word in language, every circumstance, becomes poetic in the hands of a higher thought.

The test or measure of poetic genius is the power to read the poetry of affairs, — to fuse the circumstance of to-day; not to use Scott's antique superstitions, or Shakspeare's, but to convert those of the nineteenth century and of the existing nations into universal symbols. 'T is easy to repaint the mythology of the Greeks, or of the Catholic Church, the feudal castle, the crusade, the martyrdoms of mediával Europe; but to point out where the same creative force is now working in our own houses and public assemblies; to convert the vivid energies acting at this hour in New York and Chicago and San Francisco, into universal symbols, requires a subtile and commanding thought. 'T is boyish in Swedenborg to cumber himself with the dead scurf of Hebrew antiquity, as if the Divine creative energy had fainted in his own century. American life storms about us daily, and is slow to find a tongue. This contemporary insight is transubstantiation, the conversion of daily bread into the holiest symbols; and every man would be a poet if his intellectual digestion were perfect. The test of the poet is the power to take the passing day, with its news, its cares, its fears, as he shares them, and hold it up to a divine reason, till he sees it to have a purpose and beauty, and to be related to astronomy and history and the eternal order of the world. Then the dry twig blossoms in his hand. He is calmed and elevated.

The use of "occasional poems" is to give leave to originality. Every one delights in the felicity frequently shown in our drawing-rooms. In a game-party or picnic poem each writer is released from the solemn rhythmic traditions which alarm and suffocate his fancy, and the result is that one of the partners offers a poem in a new style that hints at a new literature. Yet the writer holds it cheap, and could do the like all day. On the stage, the farce is commonly far better given than the tragedy, as the stock actors understand the farce, and do not understand the tragedy. The writer in the parlor has more presence of mind, more wit and fancy, more play of thought, on the incidents that occur at table or about the house, than in the politics of Germany or Rome. Many of the fine

poems of Herrick, Jonson, and their contemporaries had this casual origin.

I know there is entertainment and room for talent in the artist's selection of ancient or remote subjects; as when the poet goes to India, or to Rome, or Persia, for his fable. But I believe nobody knows better than he that herein he consults his ease rather than his strength or his desire. He is very well convinced that the great moments of life are those in which his own house, his own body, the tritest and nearest ways and words and things have been illuminated into prophets and teachers. What else is it to be a poet? What are his garland and singing-ropes? What but a sensibility so keen that the scent of an elder-blow, or the timber-yard and corporation-works of a nest of pismires is event enough for him, — all emblems and personal appeals to him. His wreath and robe is to do what he enjoys; emancipation from other men's questions, and glad study of his own; escape from the gossip and routine of society, and the allowed right and practice of making better. He does not give his hand, but in sign of giving his heart; he is not affable with all, but silent, uncommitted, or in love, as his heart leads him. There is no subject that does not belong to him, — politics, economy, manufactures and stock-brokerage, as much as sunsets and souls; only, these things, placed in their true order, are poetry; displaced, or put in kitchen order, they are unpoetic. Malthus is the right organ of the English proprietors; but we shall never understand political economy until Burns or Béranger or some poet shall teach it in songs, and he will not teach Malthusianism.

Poetry is the *gai science*. The trait and test of the poet is that he builds, adds, and affirms. The critic destroys: the poet says nothing but what helps somebody; let others be distracted with cares, he is exempt. All their pleasures are tinged with pain. All his pains are edged with pleasure. The gladness he imparts he shares. As one of the old Minnesingers sung, —

“Oft have I heard, and now believe it true,
Whom man delights in, God delights in too.”

Poetry is the consolation of mortal men. They live cabined, cribbed, confined in a narrow and trivial lot, — in wants, pains, anxieties and superstitions, in profligate politics, in personal animosities, in mean employments, — and victims of these; and the nobler powers untried, unknown. A poet comes who lifts the veil; gives them glimpses of the laws of the universe; shows them the circumstance as illusion; shows that nature is only a language to express the laws, which are grand and beautiful; — and lets them, by his songs, into some of the realities. Socrates, the Indian teachers of the Maia, the Bibles of the nations, Shakspeare, Milton, Hafiz, Ossian, the Welsh Bards; — these all deal with

nature and history as means and symbols, and not as ends. With such guides they begin to see that what they had called pictures are realities, and the mean life is pictures. And this is achieved by words; for it is a few oracles spoken by perceiving men that are the texts on which religions and states are founded. And this perception has at once its moral sequence. Ben Jonson said, "The principal end of poetry is to inform men in the just reason of living."

Creation. — But there is a third step which poetry takes, and which seems higher than the others, namely, creation, or ideas taking forms of their own, — when the poet invents the fable, and invents the language which his heroes speak. He reads in the word or action of the man its yet untold results. His inspiration is power to carry out and complete the metamorphosis, which, in the imperfect kinds arrested for ages, in the perfecter proceeds rapidly in the same individual. For poetry is science, and the poet a truer logician. Men in the courts or in the street think themselves logical and the poet whimsical. Do they think there is chance or wilfulness in what he sees and tells? To be sure, we demand of him what he demands of himself, — veracity, first of all. But with that, he is the lawgiver, as being an exact reporter of the essential law. He knows that he did not make his thought, — no, his thought made him, and made the sun and the stars. Is the solar system good art and architecture? the same wise achievement is in the human brain also, can you only wile it from interference and marring. We cannot look at works of art but they teach us how near man is to creating. Michel Angelo is largely filled with the Creator that made and makes men. How much of the original craft remains in him, and he a mortal man! In him and the like perfecter brains the instruct is resistless, knows the right way, is melodious, and at all points divine. The reason we set so high a value on any poetry, — as often on a line or a phrase as on a poem, — is that it is a new work of Nature, as a man is. It must be as new as foam and as old as the rock. But a new verse comes once in a hundred years; therefore Pindar, Hafiz, Dante, speak so proudly of what seems to the clown a jingle.

The writer, like the priest, must be exempted from secular labor. His work needs a frolic health; he must be at the top of his condition. In that prosperity he is sometimes caught up into a perception of means and materials, of feats and fine arts, of fairy machineries and funds of power hitherto utterly unknown to him, whereby he can transfer his visions to mortal canvas, or reduce them into iambic or trochaic, into lyric or heroic rhyme. These successes are not less admirable and astonishing to the poet than they are to his audience. He has seen something which all the mathematics and the best industry could never bring him unto. Now at this rare elevation above his usual sphere, he has come into new circulations, the marrow of the world is in his bones, the opulence of forms

begins to pour into his intellect, and he is permitted to dip his brush into the old paint-pot with which birds, flowers, the human cheek, the living rock, the broad landscape, the ocean and the eternal sky were painted.

These fine fruits of judgment, poesy, and sentiment, when once their hour is struck, and the world is ripe for them, know as well as coarser how to feed and replenish themselves, and maintain their stock alive, and multiply; for roses and violets renew their race like oaks, and flights of painted moths are as old as the Alleghanies. The balance of the world is kept, and dewdrop and haze and the pencil of light are as long-lived as chaos and darkness.

Our science is always abreast of our self-knowledge. Poetry begins, or all becomes poetry, when we look from the centre outward, and are using all as if the mind made it. That only can we see which we are, and which we make. The weaver sees gingham; the broker sees the stock-list; the politician, the ward and county votes; the poet sees the horizon, and the shores of matter lying on the sky, the interaction of the elements, — the large effect of laws which correspond to the inward laws which he knows, and so are but a kind of extension of himself. “The attractions are proportional to the destinies.” Events or things are only the fulfilment of the prediction of the faculties. Better men saw heavens and earths; saw noble instruments of noble souls. We see railroads, mills, and banks, and we pity the poverty of these dreaming Buddhists. There was as much creative force then as now, but it made globes and astronomic heavens, instead of broadcloth and wine-glasses.

The poet is enamored of thoughts and laws. These know their way, and, guided by them, he is ascending from an interest in invisible things to an interest in that which they signify, and from the part of a spectator to the part of a maker. And as everything streams and advances, as every faculty and every desire is procreant, and every perception is a destiny, there is no limit to his hope. “Anything, child, that the mind covets, from the milk of a cocoa to the throne of the three worlds, thou mayest obtain, by keeping the law of thy members and the law of thy mind.” It suggests that there is higher poetry than we write or read.

Rightly, poetry is organic. We cannot know things by words and writing, but only by taking a central position in the universe and living in its forms. We sink to rise: —

“None any work can frame,
Unless himself become the same.”

All the parts and forms of nature are the expression or production of divine faculties, and the same are in us. And the fascination of genius for us is this

awful nearness to Nature's creations.

I have heard that the Germans think the creator of *Trim* and *Uncle Toby*, though he never wrote a verse, a greater poet than Cowper, and that Goldsmith's title to the name is not from his *Deserted Village*, but derived from the Vicar of Wakefield. Better examples are Shakspeare's Ariel, his Caliban, and his fairies in the *Midsummer Night's Dream*. Barthold Niebuhr said well, "There is little merit in inventing a happy idea or attractive situation, so long as it is only the author's voice which we hear. As a being whom we have called into life by magic arts, as soon as it has received existence acts independently of the master's impulse, so the poet creates his persons, and then watches and relates what they do and say. Such creation is poetry, in the literal sense of the term, and its possibility is an unfathomable enigma. The gushing fulness of speech belongs to the poet, and it flows from the lips of each of his magic beings in the thoughts and words peculiar to its nature." [Niebuhr, *Letters*, etc., vol. iii. p. 196.]

This force of representation so plants his figures before him that he treats them as real; talks to them as if they were bodily there; puts words in their mouth such as they should have spoken, and is affected by them as by persons. Vast is the difference between writing clean verses for magazines, and creating these new persons and situations, — new language with emphasis and reality. The humor of Falstaff, the terror of Macbeth, have each their swarm of fit thoughts and images, as if Shakspeare had known and reported the men, instead of inventing them at his desk. This power appears not only in the outline or portrait of his actors, but also in the bearing and behavior and style of each individual. Ben Jooi-son told Drummond that "Sidney did not keep a decorum in making every one speak as well as himself."

We all have one key to this miracle of the poet, and the dunce has experiences that may explain Shakspeare to him, — one key, namely, dreams. In dreams we are true poets; we create the persons of the drama; we give them appropriate figures, faces, costume; they are perfect in their organs, attitude, manners: moreover they speak after their own characters, ours; — they speak to us, and we listen with surprise to what they say. Indeed, I doubt if the best poet has yet written any five-act play that can compare in thoroughness of invention with this unwritten play in fifty acts, composed by the dullest snorer on the floor of the watch-house.

Melody, Rhyme, Fory — Music and rhyme are among the earliest pleasures of the child, and, in the history of literature, poetry precedes prose. Every one may see, as he rides on the highway through an uninteresting landscape, how a little water instantly relieves the monotony: no matter what objects are near it, — a gray rock, a grass-patch, an alder-bush, or a stake, — they become beautiful by

being reflected. It is rhyme to the eye, and explains the charm of rhyme to the ear. Shadows please us as still finer rhymes. Architecture gives the like pleasure by the repetition of equal parts in a colonnade, in a row of windows, or in wings; gardens by the symmetric contrasts of the beds and walks. In society you have this figure in a bridal company, where a choir of white-robed maidens give the charm of living statues; in a funeral procession, where all wear black; in a regiment of soldiers in uniform.

The universality of this taste is proved by our habit of casting our facts into rhyme to remember them better, as so many proverbs may show. Who would hold the order of the almanac so fast but *foi the ding-dong*,

“Thirty days hath September,” etc.;

or of the Zodiac, but for

“The Ram, the Bull, the heavenly Twins,” etc.?

We are lovers of rhyme and return, period and musical reflection. The babe is lulled to sleep by the nurse’s song. Sailors can work better for their *yo-heave-o*. Soldiers can march better and fight better for the drum and trumpet. Metre begins with pulse-beat, and the length of lines in songs and poems is determined by the inhalation and exhalation of the lungs. If you hum or whistle the rhythm of the common English metres, — of the decasyllabic quatrain, or the octosyllabic with alternate sexisyllabic, or other rhythms, — you can easily believe these metres to be organic, derived from the human pulse, and to be therefore not proper to one nation, but to mankind. I think you will also find a charm heroic, plaintive, pathetic, in these cadences, and be at once set on searching for the words that can rightly fill these vacant beats. Young people like rhyme, drum-beat, tune, things in pairs and alternatives; and, in higher degrees, we know the instant power of music upon our temperaments to change our mood, and give us its own; and human passion, seizing these constitutional tunes, aims to fill them with appropriate words, or marry music to thought, believing, as we believe of all marriage, that matches are made in heaven, and that for every thought its proper melody or rhyme exists, though the odds are immense against our finding it, and only genius can rightly say the banns.

Another form of rhyme is iterations of phrase, as the record of the death of Sisera: —

“At her feet he bowed, he fell, he lay down: at her feet he bowed, he fell: where he bowed, there he fell down dead.”

The fact is made conspicuous, nay, colossal, by this simple rhetoric: —

“They shall perish, but thou shalt endure: yea, all of them shall wax old like a garment; as a vesture shalt thou change them, and they shall be changed: but thou art the same, and thy years shall have no end.”

Milton delights in these iterations: —

“Though fallen on evil days, On evil days though fallen, and evil tongues.”

“Was I deceived, or did a sable cloud Turn forth its silver lining on the night? I did not err, there does a sable cloud Turn forth its silver lining on the night.”
Comus.

“A little onward lend thy guiding hand, To these dark steps a little farther on.” *Samson.*

So in our songs and ballads the refrain skilfully used, and deriving some novelty or better sense in each of many verses: —

*“Busk thee, busk thee, my bonny bonny bride,
Busk thee, busk thee, my winsome marrow.”* Hamilton.

Of course rhyme soars and refines with the growth of the mind. The boy liked the drum, the people liked an overpowering jewsharp tune. Later they like to transfer that rhyme to life, and to detect a melody as prompt and perfect in their daily affairs. Omen and coincidence show the rhythmical structure of man; hence the taste for signs, sortilege, prophecy and fulfilment, anniversaries, etc. By and by, when they apprehend real rhymes, namely, the correspondence of parts in nature, — acid and alkali, body and mind, man and maid, character and history, action and reaction, — they do not longer value rattles and ding-dongs, or barbaric word-jingle. Astronomy, Botany, Chemistry, Hydraulics and the elemental forces have their own periods and returns, their own grand strains of harmony not less exact, up to the primeval apothegm that “there is nothing on earth which is not in the heavens in a heavenly form, and nothing in the heavens which is not on the earth in an earthly form.” They furnish the poet with grander pairs and alternations, and will require an equal expansion in his metres.

There is under the seeming poverty of metres an infinite variety, as every artist knows. A right ode (however nearly it may adopt conventional metre, as the Spenserian, or the heroic blank-verse, or one of the fixed lyric metres) will by any sprightliness be at once lifted out of conventionality, and will modify the metre. Every good poem that I know I recall by its rhythm also. Rhyme is a pretty good measure of the latitude and opulence of a writer. If unskilful, he is at once detected by the poverty of his chimes. A small, well-worn, sprucely

brushed vocabulary serves him. Now try Spenser, Marlow, Chapman, and see how wide they fly for weapons, and how rich and lavish their profusion. In their rhythm is no manufacture, but a vortex, or musical tornado, which falling on words and the experience of a learned mind, whirls these materials into the same grand order as planets and moons obey, and seasons, and monsoons.

There are also prose poets. Thomas Taylor, the Platonist, for instance, is really a better man of imagination, a better poet, or perhaps I should say a better feeder to a poet, than any man between Milton and Wordsworth. Thomas Moore had the magnanimity to say, "If Burke and Bacon were not poets (measured lines not being necessary to constitute one), he did not know what poetry meant." And every good reader will easily recall expressions or passages in works of pure science which have given him the same pleasure which he seeks in professed poets. Richard Owen, the eminent paleontologist, said: —

"All hitherto observed causes of extirpation point either to continuous slowly operating geologic changes, or to no greater sudden cause than the. so to speak, spectral appearance of mankind on a limited tract of land not before inhabited."

St. Augustine complains to God of his friends offering him. the books of the philosophers: —

"And these were the dishes in which they brought to me, being hungry, the Sun and the Moon instead of Thee."

It would not be easy to refuse to Sir Thomas Browne's "Fragment on Mummies" the claim of poetry: —

"Of their living habitations they made little account, conceiving of them but as hospitia, or inns, while they adorned the sepulchres of the dead, and. planting thereon lasting bases, defied the crumbling touches of time, and the misty vapoiousness of oblivion. Yet all were but Babel vanities. Time sadly overcometh all things, and is now dominant and sitteth upon a Sphinx, and looketh unto Memphis and old Thebes, while his sister Oblivion reclineth semi-somnous on a pyramid, gloriously triumphing, making puzzles of Titanian erections, and turning old glories into dreams. History sinketh beneath her cloud. The traveller as he paceth through those deserts asketh of her, Who builded them? and she mumbleth something, but what it is he heareth not."

Bhyme, being a kind of music, shares this advantage with music, that it has a privilege of speaking truth which all Philistia is unable to challenge. Music is the poor man's Parnassus. With the first note of the flute or horn, or the first strain

of a song, we quit the world of common-sense and launch on the sea of ideas and emotions: we pour contempt on the prose you so magnify; yet the sturdiest Philistine is silent. The like allowance is the prescriptive right of poetry. You shall not speak ideal truth in prose uncontradicted: you may in verse. The best thoughts run into the best words; imaginative and affectionate thoughts into music and metre. We ask for food and fire, we talk of our work, our tools and material necessities, in prose; that is, without any elevation or aim at beauty; but when we rise into the world of thought, and think of these things only for what they signify, speech refines into order and harmony. I know what you say of mediaeval barbarism and sleighbell-rhyme, but we have not done with music, no, nor with rhyme, nor must console ourselves with prose poets so long as boys whistle and girls sing.

Let Poetry then pass, if it will, into music and rhyme. That is the form which itself puts on. We do not enclose watches in wooden, but in crystal cases, and rhyme is the transparent frame that allows almost the pure architecture of thought to become visible to the mental eye. Substance is much, but so are mode and form much. The poet, like a delighted boy, brings you heaps of rainbow bubbles, opaline, air-borne, spherical as the world, instead of a few drops of soap and water. Victor Hugo says well, "An idea steeped in verse becomes suddenly more incisive and more brilliant: the iron becomes steel." Lord Bacon, we are told, "loved not to see poesy go on other feet than poetical dactyls and spondees; "and Ben Jonson said that "Donne, for not keeping of accent, deserved hanging."

Poetry being an attempt to express, not the common-sense, — as the avoirdupois of the hero, or his structure in feet and inches, — but the beauty and soul in his aspect as it shines to fancy and feeling; and so of all other objects in nature; runs into fable, personifies every fact:— "the clouds clapped their hands,"— "the hills skipped,"— "the sky spoke." This is the substance, and this treatment always attempts a metrical grace. Outside of the nursery the beginning of literature is the prayers of a people, and they are always hymns, poetic, — the mind allowing itself range, and therewith is ever a corresponding freedom in the style, which becomes lyrical. The prayers of nations are rhythmic, have iterations and alliterations like the marriage-service and burial-service in our liturgies.

Poetry will never be a simple means, as when history or philosophy is rhymed, or laureate odes on state occasions are written. Itself must be its own end, or it is nothing. The difference between poetry and stock poetry is this, that in the latter the rhythm is given and the sense adapted to it; while in the former the sense dictates the rhythm. I might even say that the rhyme is there in the theme, thought, and image themselves. Ask the fact for the form. For a verse is

not a vehicle to carry a sentence as a jewel is carried in a case: the verse must be alive, and inseparable from its contents, as the soul of man inspires and directs the body, and we measure the inspiration by the music. In reading prose, I am sensitive as soon as a sentence drags; but in poetry, as soon as one word drags. Ever as the thought mounts, the expression mounts. It is cumulative also; the poem is made up of lines each of which fill the ear of the poet in its turn, so that mere synthesis produces a work quite superhuman.

Indeed, the masters sometimes rise above themselves to strains which charm their readers, and which neither any competitor could outdo, nor the bard himself again equal. Try this strain of Beaumont and Fletcher: —

“Hence, all ye vain delights,
As short as are the nights
In which you spend your folly?
There’s naught in this life sweet,
If men were wise to see ‘t,
But only melancholy.
Oh! sweetest melancholy!
Welcome, folded arms and fixed eyes,
A sigh that piercing mortifies,
A look that’s fastened to the ground,
A tongue chained up without a sound;
Fountain-heads and pathless groves,
Places which pale Passion loves,
Midnight walks, when all the fowls
Are warmly housed, save bats and owls;
A midnight bell, a passing groan,
These are the sounds we feed upon,
Then stretch our bones in a still, gloomy valley.
Nothing’s so dainty sweet as lovely melancholy.”

Keats disclosed by certain lines in his “Hyperion” this inward skill; and Coleridge showed at least his love and competency for it. It appears in Ben Jonson’s songs, including certainly “The faery beam upon you,” etc., Waller’s “Go, lovely rose!” Herbert’s “Virtue” and “Easter,” and Lovelace’s lines “To Althea” and “To Lucasta,” and Collins’s “Ode to Evening,” all but the last verse, which is academical. Perhaps this dainty style of poetry is not producible to-day, any more than a right Gothic cathedral. It belonged to a time and taste which is not in the world.

As the imagination is not a talent of some men but is the health of every man, so also is this joy of musical expression. I know the pride of mathematicians and materialists, but they cannot conceal from me their capital want. The critic, the philosopher, is a failed poet. Gray avows that “he thinks even a bad verse as good a thing or better than the best observation that was ever made on it.” I honor the naturalist; I honor the geometer, but he has before him higher power and happiness than he knows. Yet we will leave to the masters their own forms. Newton may be permitted to call Terence a play-book, and to wonder at the frivolous taste for rhymers; he only predicts, one would say, a grander poetry: he only shows that he is not yet reached; that the poetry which satisfies more youthful souls is not such to a mind like his, accustomed to grander harmonies; — this being a child’s whistle to his ear; that the music must rise to a loftier strain, up to Handel, up to Beethoven, up to the thorough-base of the sea-shore, up to the largeness of astronomy: at last that great heart will hear in the music beats like its own; the waves of melody will wash and float him also, and set him into concert and harmony.

Bards and Trouveurs. — The metallic force of primitive words makes the superiority of the remains of the rude ages. It costs the early bard little talent to chant more impressively than the later, more cultivated poets. His advantage is that his words are things, each the lucky sound which described the fact, and we listen to him as we do to the Indian, or the hunter, or miner, each of whom represents his facts as accurately as the cry of the wolf or the eagle tells of the forest or the air they inhabit. The original force, the direct smell of the earth or the sea, is in these ancient poems, the Sagas of the North, the Nibelungen Lied, the songs and ballads of the English and Scotch.

I find or fancy more true poetry, the love of the vast and the ideal, in the Welsh and bardic fragments of Taliessin and his successors, than in many volumes of British Classics. An intrepid magniloquence appears in all the bards, as: —

“The whole ocean flamed as one wound.” *King Regnar Lodbrok.*

“God himself cannot procure good for the wicked.” *Welsh Triad.*

A favorable specimen is Taliessin’s “Invocation of the Wind” at the door of Castle Teganwy: —

“Discover thou what it is, —

The strong creature from before the flood,

Without flesh, without bone, without head, without feet,

It will neither be younger nor older than at the beginning;

It has no fear, nor the rude wants of created things.

Great God! how the sea whitens when it comes!
It is in the field, it is in the wood,
Without hand, without foot,
Without age, without season,
It is always of the same age with the ages of ages,
And of equal breadth with the surface of the earth.
It was not born, it sees not,
And is not seen; it does not come when desired;
It has no form, it bears no burden,
For it is void of sin.
It makes no perturbation in the place where God wills it,
On the sea, on the land.”
In one of his poems he asks: —
“Is there but one course to the wind?
But one to the water of the sea?
Is there but one spark in the fire of boundless energy?”
He says of his hero, Cunedda, —
“He will assimilate, he will agree with the deep and the shallow.”
To another, —
“When I lapse to a sinful word,
May neither you, nor others hear.”
Of an enemy, —

“The cauldron of the sea was bordered round by his land, but it would not boil the food of a coward.”

To an exile on an island he says, —
“The heavy blue chain of the sea didst thou, O just man, endure.”

Another bard in like tone says, —
“I am possessed of songs such as no son of man can repeat; one of them is called the ‘Helper;’ it will help thee at thy need in sickness, grief, and all adversities. I know a song which I need only to sing when men have loaded me with bonds: when I sing it, my chains fall in pieces and I walk forth at liberty.”

The Norsemen have no less faith in poetry and its power, when they describe it thus: —

“Odin spoke everything in rhyme. He and his temple-gods were called song-

smiths. He could make his enemies in battle blind or deaf, and their weapons so blunt that they could no more cut than a willow-twig. Odin taught these arts in runes or songs, which are called incantations.” [Heimskringla, Vol. I. p. 221.]

The Crusades brought out the genius of France, in the twelfth century, when Pierre d’Auvergne said, —

“I will sing a new song which resounds in my breast: never was a song good or beautiful which resembled any other.”

And Pons de Capdeuil declares, —

“Since the air renews itself and softens, so must my heart renew itself, and what buds in it buds and grows outside of it.”

There is in every poem a height which attracts more than other parts, and is best remembered. Thus, in “Morte d’Arthur,” I remember nothing so well as Sir Gawain’s parley with Merlin in his Wonderful prison: —

“After the disappearance of Merlin from King Athur’s court he was seriously missed, and many knighta set out in search of him. Among others was Sir Gawain, who pursued his search till it was time to return to the court. He came into the forest of Broceliande, lamenting as he went along. Presently he heard the voice of one groaning on his right hand; looking that way, he could see nothing save a kind of smoke which seemed like air, and through which he could not pass; and this impediment made him so wrathful that it deprived him of speech. Presently he heard a voice which said, ‘Gawain, Gawain, be not out of heart, for everything which must happen will come to pass.’ And when he heard the voice which thus called him by his right name, he replied, ‘Who can this be who hath spoken to me?’ ‘How,’ said the voice, ‘Sir Gawain, know you me not? You were wont to know me well, but thus things are interwoven and thus the proverb says true, “Leave the court and the court will leave you.” So is it with me. Whilst I served King Arthur, I was well known by you and by other barons, but because I have left the court, I am known no longer, and put in forgetfulness, which I ought not to be if faith reigned in the world. When Sir Gawain heard the voice which spoke to him thus, he thought it was Merlin, and he answered, ‘Sir, certes I ought to know you well, for many times I have heard your words. I pray you appear before me so that I may be able to recognize you.’; ‘Ah, sir,’ said Merlin, ‘you will never see me more, and that grieves me, but I cannot remedy it, and when you shall have departed from this place, I shall nevermore speak to

you nor to any other person, save only my mistress; for never other person will be able to discover this place for anything which may befall; neither shall I ever go out from hence, for in the world there is no such strong tower as this wherein I am confined; and it is neither of wood, nor of iron, nor of stone, but of air, without anything else; and made by enchantment so strong that it can never be demolished while the world lasts; neither can I go out, nor can any one come in, save she who hath enclosed me here and who keeps me company when it pleaseth her: she cometh when she listeth, for her will is here.’ ‘How, Merlin, my good friend,’ said Sir Gawain, ‘are you restrained so strongly that you cannot deliver yourself nor make yourself visible unto me; how can this happen, seeing that you are the wisest man in the world?’ Rather,’ said Merlin, ‘the greatest fool; for I well knew that all this would befall me, and I have been fool enough to love another more than myself, for I taught my mistress that whereby she hath imprisoned me in such a manner that none can set me free.’ ‘Certes, Merlin,’ replied Sir Gawain, ‘of that I am right sorrowful, and so will King Arthur, my uncle, be, when he shall know it, as one who is making search after you throughout all countries.’ ‘Well,’ said Merlin, ‘it must be borne, for never will he see me, nor I him; neither will any one speak with me again after you, it would be vain to attempt it; for you yourself, when you have turned away, will never be able to find the place: but salute for me the king and the queen and all the barons, and tell them of my condition, You will find the king at Carduel in Wales; and when you arrive there you will find there all the companions who departed with you, and who at this day will return. Now then go in the name of God, who will protect and save the King Arthur, and the realm of Logres, and you also, as the best knights who are in the world.’ With that Sir Gawain departed joyful and sorrowful; joyful because of what Merlin had assured him should happen to him, and sorrowful that Merlin had thus been lost.”

Morals. — We are sometimes apprised that there is a mental power and creation more excellent than anything which is commonly called philosophy and literature; that the high poets, that Homer, Milton, Shakspeare, do not fully content us. How rarely they offer us the heavenly bread! The most they have done is to intoxicate us once and again with its taste. They have touched this heaven and retain afterwards some sparkle of it: they betray their belief that such discourse is possible. There is something — our brothers on this or that side of the sea do not know it or own it; the eminent scholars of England, historians and reviewers, romancers and poets included, might deny and blaspheme it, —

which is setting us and them aside and the whole world also, and planting itself. To true poetry we shall sit down as the result and justification of the age in which it appears, and think lightly of histories and statutes. None of your parlor or piano verse, none of your carpet poets, who are content to amuse, will satisfy us. Power, new power, is the good which the soul seeks. The poetic gift we want, as the health and supremacy of man, — not rhymes and sonneteering, not book-making and bookselling; surely not cold spying and authorship.

Is not poetry the little chamber in the brain where is generated the explosive force which, by gentle shocks, sets in action the intellectual world? Bring us the bards who shall sing all our old ideas out of our heads, and new ones in; men-making poets; poetry which, like the verses inscribed on Balder's columns in Breidablik, is capable of restoring the dead to life; — poetry like that verse of Saadi, which the angels testified "met the approbation of Allah in Heaven;" — poetry which finds its rhymes and cadences in the rhymes and iterations of nature, and is the gift to men of new images and symbols, each the ensign and oracle of an age; that shall assimilate men to it, mould itself into religions and mythologies, and impart its quality to centuries; — poetry which tastes the world and reports of it, upbuilding the world again in the thought; —

"Not with tickling rhymes,
But high and noble matter, such as flies
From brains entranced, and filled with ecstasies."

Poetry must be affirmative. It is the piety of the intellect. "Thus saith the Lord," should begin the song. The poet who shall use nature as his hieroglyphic must have an adequate message to convey thereby. Therefore when we speak of the Poet in any high sense, we are driven to such examples as Zoroaster and Plato, St. John and Menu, with their moral burdens. The Muse shall be the counterpart of Nature, and equally rich. I find her not often in books. We know Nature and figure her exuberant, tranquil, magnificent in her fertility, coherent; so that every creation is omen of every other. She is not proud of the sea, of the stars, of space or time, or man or woman. All her kinds share the attributes of the selectest extremes. But in current literature I do not find her. Literature warps away from life, though at first it seems to bind it. In the world of letters how few commanding oracles! Homer did what he could; Pindar, Æschylus, and the Greek Gnostic poets and the tragedians. Dante was faithful when not carried away by his fierce hatreds. But in so many alcoves of English poetry I can count only nine or ten authors who are still inspirers and lawgivers to their race.

The supreme value of poetry is to educate us to a height beyond itself, or which it rarely reaches; — the subduing mankind to order and virtue. He is the true Orpheus who writes his ode, not with syllables, but men. "In poetry," said

Goethe, “only the really great and pure advances us, and this exists as a second nature, either elevating us to itself, or rejecting us.” The poet must let Humanity sit with the Muse in his head, as the charioteer sits with the hero in the Iliad. “Show me,” said Saron in the novel, “one wicked man who has written poetry, and I will show you where his poetry is not poetry; or rather, I will show you in his poetry no poetry at all.” [“Counterparts.” Vol. I. p. 67.]

I have heard that there is a hope which precedes and must precede all science of the visible or the invisible world; and that science is the realization of that hope in either region. I count the genius of Swedenborg and Wordsworth as the agents of a reform in philosophy, the bringing poetry back to nature, — to the marrying of nature and mind, undoing the old divorce in which poetry had been famished and false, and nature had been suspected and pagan. The philosophy which a nation receives, rules its religion, poetry, politics, arts, trades, and whole history. A good poem — say Shakspeare’s Macbeth, or Hamlet, or the Tempest — goes about the world offering itself to reasonable men, who read it with joy and carry it to their reasonable neighbors. Thus it draws to it the wise and generous souls, confirming their secret thoughts, and, through their sympathy, really publishing itself. It affects the characters of its readers by formulating their opinions and feelings, and inevitably prompting their daily action. If they build ships, they write “Ariel” or “Prospero” or “Ophelia” on the ship’s stern, and impart a tenderness and mystery to matters of fact. The ballad and romance work on the hearts of boys, who recite the rhymes to their hoops or their skates if alone, and these heroic songs or lines are remembered and determine many practical choices which they make later. Do you think Burns has had no influence on the life of men and women in Scotland, — has opened no eyes and ears to the face of nature and the dignity of man and the charm and excellence of woman?

We are a little civil, it must be owned, to Homer and Æschylus, to Dante and Shakspeare, and give them the benefit of the largest interpretation. We must be a little strict also, and ask whether, if we sit down at home, and do not go to Hamlet, Hamlet will come to us? whether we shall find our tragedy written in his, — our hopes, wants, pains, disgraces, described to the life, — and the way opened to the paradise which ever in the best hour beckons us? But our overpraise and idealization of famous masters is not in its origin a poor Boswellism, but an impatience of mediocrity. The praise we now give to our heroes we shall unsay when we make larger demands. How fast we outgrow the books of the nursery, — then those that satisfied our youth. What we once admired as poetry has long since come to be a sound of tin pans; and many of our later books we have outgrown. Perhaps Homer and Milton will be tin pans

yet. Better not to be easily pleased. The poet should rejoice if he has taught us to despise his song; if he has so moved us as to lift us, — to open the eye of the intellect to see farther and better.

In proportion as a man's life comes into union with truth, his thoughts approach to a parallelism with the currents of natural laws, so that he easily expresses his meaning by natural symbols, or uses the ecstatic or poetic speech. By successive states of mind all the facts of nature are for the first time interpreted. In proportion as his life departs from this simplicity, he uses circumlocution, — by many words hoping to suggest what he cannot say. Vexatious to find poets, who are by excellence the thinking and feeling of the world, deficient in truth of intellect and of affection. Then is conscience unfaithful, and thought unwise. To know the merit of Shakspeare, read Faust. I find Faust a little too modern and intelligible. We can find such a fabric at several mills, though a little inferior. Faust abounds in the disagreeable. The vice is prurient, learned, Parisian. In the presence of Jove, Priapus may be allowed as an offset, but here he is an equal hero. The egotism, the wit, is calculated. The book is undeniably written by a master, and stands unhappily related to the whole modern world; but it is a very disagreeable chapter of literature, and accuses the author as well as the times. Shakspeare could no doubt have been disagreeable, had he less genius, and if ugliness had attracted him. In short, our English nature and genius has made us the worst critics of Goethe, —

“We, who speak the tongue
That Shakspeare spake, the faith and manners hold
Which Milton held.”

It is not style or rhymes, or a new image more or less that imports, but sanity; that life should not be mean; that life should be an image in every part beautiful; that the old forgotten splendors of the universe should glow again for us; — that we should lose our wit, but gain our reason. And when life is true to the poles of nature, the streams of truth will roll through us in song.

Transcendency. — In a cotillon some persons dance and others await their turn when the music and the figure come to them. In the dance of God there is not one of the chorus but can and will begin to spin, monumental as he now looks, whenever the music and figure reach his place and duty. O celestial Bacchus! drive them mad, — this multitude of vagabonds, hungry for eloquence, hungry for poetry, starving for symbols, perishing for want of electricity to vitalize this too much pasture, and in the long delay indemnifying themselves with the false wine of alcohol, of politics, or of money.

Every man may be, and at some time a man is, lifted to a platform whence he looks beyond sense to moral and spiritual truth, and in that mood deals sovereignly with matter, and strings worlds like beads upon his thought. The success with which this is done can alone determine how genuine is the inspiration. The poet is rare because he must be exquisitely vital and sympathetic, and, at the same time, immovably centred. In good society, nay, among the angels in heaven, is not everything spoken in fine parable, and not so servilely as it befell to the sense? All is symbolized. Facts are not foreign, as they seem, but related. Wait a little and we see the return of the remote hyperbolic curve. The solid men complain that the idealist leaves out the fundamental facts; the poet complains that the solid men leave out the sky. To every plant there are two powers; one shoots down as rootlet, and one upward as tree. You must have eyes of science to see in the seed its nodes; you must have the vivacity of the poet to perceive in the thought its futurities. The poet is representative, — whole man, diamond-merchant, symbolizer, emancipator; in him the world projects a scribe's hand and writes the adequate genesis. The nature of things is flowing, a metamorphosis. The free spirit sympathizes not only with the actual form, but with the power or possible forms; but for obvious municipal or parietal uses God has given us a bias or a rest on to-day's forms. Hence the shudder of joy with which in each clear moment we recognize the metamorphosis, because it is always a conquest, a surprise from the heart of things. One would say of the force in the works of nature, all depends on the battery. If it give one shock, we shall get to the fish form, and stop; if two shocks, to the bird; if three, to the quadruped; if four, to the man. Power of generalizing differences men. The number of successive saltations the nimble thought can make, measures the difference between the highest and lowest of mankind. The habit of saliency, of not pausing but going on, is a sort of importation or domestication of the Divine effort in a man. After the largest circle has been drawn, a larger can be drawn around it. The problem of the poet is to unite freedom with precision; to give the pleasure of color, and be not less the most powerful of sculptors. Music seems to you sufficient, or the subtle and delicate scent of lavender; but Dante was free imagination, — all wings, — yet he wrote like Euclid. And mark the equality of Shakspeare to the eomic, the tender and sweet, and to the grand and terrible. A little more or less skill in whistling is of no account. See those weary pentameter tales of Dryden and others. Turnpike is one thing and blue sky another. Let the poet, of all men, stop with his inspiration. The inexorable rule in the muses' court, *either inspiration or silence*, compels the bard to report only his supreme moments. It teaches the enormous force of a few words, and in proportion to the inspiration checks

loquacity. Much that we call poetry is but polite verse. The high poetry which shall thrill and agitate mankind, restore youth and health, dissipate the dreams under which men reel and stagger, and bring in the new thoughts, the sanity and heroic aims of nations, is deeper hid and longer postponed than was America or Australia, or the finding of steam or of the galvanic battery. We must not conclude against poetry from the defects of poets. They are, in our experience, men of every degree of skill, — some of them only once or twice receivers of an inspiration, and presently falling back on a low life. The drop of *ichor* that tingles in their veins has not yet refined their blood and cannot lift the whole man to the digestion and function of ichor, — that is, to godlike nature. Time will be when ichor shall be their blood, when what are now glimpses and aspirations shall be the routine of the day. Yet even partial ascents to poetry and ideas are forerunners, and announce the dawn. In the mire of the sensual life, their religion, their poets, their admiration of heroes and benefactors, even their novel and newspaper, nay, their superstitions also, are hosts of ideals, — a cordage of ropes that hold them up out of the slough. Poetry is inestimable as a lonely faith, a lonely protest in the uproar of atheism.

But so many men are ill-born or ill-bred, — the brains are so marred, so imperfectly formed, unheroically, brains of the sons of fallen men, that the doctrine is imperfectly received. One man sees a spark or shimmer of the truth and reports it, and his saying becomes a legend or golden proverb for ages, and other men report as much, but none wholly and well. Poems! — we have no poem. Whenever that angel shall be organized and appear on earth, the Iliad will be reckoned a poor ballad-grinding. I doubt never the riches of nature, the gifts of the future, the immense wealth of the mind. O yes, poets we shall have, mythology, symbols, religion, of our own. We too shall know how to take up all this industry and empire, this Western civilization, into thought, as easily as men did when arts were few; but not by holding it high, but by holding it low. The intellect uses and is not used, — uses London and Paris and Berlin, East and West, to its end. The only heart that can help us is one that draws, not from our society, but from itself, a counterpoise to society. What if we find partiality and meanness in us? The grandeur of our life exists in spite of us, — all over and under and within us, in what of us is inevitable and above our control. Men are facts as well as persons, and the involuntary part of their life is so much as to fill the mind and leave them no countenance to say aught of what is so trivial as their selfish thinking and doing. Sooner or later that which is now life shall be poetry, and every fair and manly trait shall add a richer strain to the song.

SOCIAL AIMS.

Much ill-natured criticism has been directed on American manners. I do not think it is to be resented. Rather, if we are wise, we shall listen and mend. Our critics will then be our best friends, though they did not mean it. But in every sense the subject of manners has a constant interest to thoughtful persons. Who does not delight in fine manners? Their charm cannot be predicted or overstated. 'T is perpetual promise of more than can be fulfilled. It is music and sculpture and picture to many who do not pretend to appreciation of those arts. It is even true that grace is more beautiful than beauty. Yet how impossible to overcome the obstacle of an unlucky temperament and acquire good manners, unless by living with the well-bred from the start; and this makes the value of wise forethought to give ourselves and our children as much as possible the habit of cultivated society.

'T is an inestimable hint that I owe to a few persons of fine manners, that they make behavior the very first sign of force, — behavior, and not performance, or talent, or, much less, wealth. Whilst almost everybody has a supplicating eye turned on events and things and other persons, a few natures are central and forever unfold, and these alone charm us. He whose word or deed you cannot predict, who answers you without any supplication in his eye, who draws his determination from within, and draws it instantly, — that man rules.

The staple figure in novels is the man of *aplomb*, who sits, among the young aspirants and desperates, quite sure and compact, and, never sharing their affections or debilities, hurls his word like a bullet when occasion requires, knows his way, and carries his points. They may scream or applaud, he is never engaged or heated. Napoleon is the type of this class in modern history; Byron's heroes in poetry. But we for the most part are all drawn into the *charivari*; we chide, lament, cavil, and recriminate.

I think Hans Andersen's story of the cobweb cloth woven so fine that it was invisible, — woven for the king's garment, — must mean manners, which do really clothe a princely nature. Such a one can well go in a blanket, if he would. In the gymnasium or on the sea-beach his superiority does not leave him. But he who has not this fine garment of behavior is studious of dress, and then not less of house and furniture and pictures and gardens, in all which he hopes to lie *perdu*, and not be exposed.

"Manners are stronger than laws." Their vast convenience I must always admire. The perfect defence and isolation which they effect makes an insuperable protection. Though the person so clothed wrestle with you, or swim

with you, lodge in the same chamber, eat at the same table, he is yet a thousand miles off, and can at any moment finish with you. Manners seem to say, *You are you, and I am I*. In the most delicate natures, fine temperament and culture build this impassable wall. Balzac finely said: "Kings themselves cannot force the exquisite politeness of distance to capitulate, hid behind its shield of bronze."

Nature values manners. See how she has prepared for them. Who teaches manners of majesty, of frankness, of grace, of humility, — who but the adoring aunts and cousins that surround a young child? The babe meets such courting and flattery as only kings receive when adult; and, trying experiments, and at perfect leisure with these posture-masters and flatterers all day, he throws himself into all the attitudes that correspond to theirs. Are they humble? he is composed. Are they eager? he is nonchalant. Are they encroaching? he is dignified and inexorable. And this scene is daily repeated in hovels as well as in high houses.

Nature is the best posture-master. An awkward man is graceful when asleep, or when hard at work, or agreeably amused. The attitudes of children are gentle, persuasive, royal, in their games and in their house-talk and in the street, before they have learned to cringe. 'Tis impossible but thought disposes the limbs and the walk, and is masterly or secondary. No art can contravene it or conceal it. Give me a thought, and my hands and legs and voice and face will all go right. And we are awkward for want of thought. The inspiration is scanty, and does not arrive at the extremities.

It is a commonplace of romances to show the ungainly manners of the pedant who has lived too long in college. Intellectual men pass for vulgar, and are timid and heavy with the elegant. But if the elegant are also intellectual, instantly the hesitating scholar is inspired, transformed, and exhibits the best style of manners. An intellectual man, though of feeble spirit, is instantly reinforced by being put into the company of scholars, and, to the surprise of everybody, becomes a lawgiver. We think a man unable and desponding. It is only that he is misplaced. Put him with new companions, and they will find in him excellent qualities, unsuspected accomplishments, and the joy of life. 'Tis a great point in a gallery, how you hang pictures; and not less in society, how you seat your party. The circumstance of circumstance is timing and placing. When a man meets his accurate mate, society begins, and life is delicious.

What happiness they give, — what ties they form! Whilst one man by his manners pins me to the wall, with another I walk among the stars. One man can, by his voice, lead the cheer of a regiment; another will have no following. Nature made us all intelligent of these signs, for our safety and our happiness. Whilst certain faces are illumined with intelligence, decorated with invitation,

others are marked with warnings: certain voices are hoarse and truculent; sometimes they even bark. There is the same difference between heavy and genial manners as between the perceptions of octogenarians and those of young girls who see everything in the twinkling of an eye.

Manners are the revealers of secrets, the betrayers of any disproportion or want of symmetry in mind and character. It is the law of our constitution that every change in our experience instantly indicates itself on our countenance and carriage, as the lapse of time tells itself on the face of a clock. We may be too obtuse to read it, but the record is there. Some men may be obtuse to read it, but some men are not obtuse and do read it. In Borrow's "Lavengro," the gypsy instantly detects, by his companion's face and behavior, that some good fortune has befallen him, and that he has money. We say, in these days, that credit is to be abolished in trade: is it? When a stranger comes to buy goods of you, do you not look in his face and answer according to what you read there? Credit is to be abolished? Can't you abolish faces and character, of which credit is the reflection? As long as men are born babes they will live on credit for the first fourteen or eighteen years of their life. Every innocent man has in his countenance a promise to pay, and hence credit. Less credit will there be? You are mistaken. There will always be more and more. Character *must* be trusted; and just in proportion to the morality of a people will be the expansion of the credit system.

There is even a little rule of prudence for the young experimenter which Dr. Franklin omitted to set down, yet which the youth may find useful, — Do not go to ask your debtor the payment of a debt on the day when you have no other resource. He will learn by your air and tone how it is with you, and will treat you as a beggar. But work and starve a little longer. Wait till your affairs go better and you have other means at hand; you will then ask in a different tone, and he will treat your claim with entire respect.

Now we all wish to be graceful, and do justice to ourselves by our manners; but youth in America is wont to be poor and hurried, not at ease, or not in society where high behavior could be taught. But the sentiment of honor and the wish to serve make all our pains superfluous. Life is not so short but that there is always time enough for courtesy. Self-command is the main elegance. "Keep cool, and you command everybody," said St. Just; and the wily old Talleyrand would still say, *Surtout, messieurs, pas de zèle*, — "Above all, gentlemen, no heat."

Why have you statues in your hall, but to teach you that, when the door-bell rings, you shall sit like them. "Eat at your table as you would eat at the table of the king," said Confucius. It is an excellent custom of the Quakers, if only for a

school of manners, — the silent prayer before meals. It has the effect to stop mirth, and introduce a moment of reflection. After the pause, all resume their usual intercourse from a vantage-ground. What a check to the violent manners which sometimes come to the table, — of wrath, and whining, and heat in trifles!

'T is a rule of manners to avoid exaggeration. A lady loses as soon as she admires too easily and too much. In man or woman, the face and the person lose power when they are on the strain to express admiration. A man makes his inferiors his superiors by heat. Why need you, who are not a gossip, talk as a gossip, and tell eagerly what the neighbors or the journals say? State your opinion without apology. The attitude is the main point, assuring your companion that, come good news or come bad, you remain in good heart and good mind, which is the best news you can possibly communicate. Self-control is the rule. You have in you there a noisy, sensual savage, which you are to keep down, and turn all his strength to beauty. For example, what a seneschal and detective is laughter! It seems to require several generations of education to train a squeaking or a shouting habit out of a man. Sometimes, when in almost all expressions the Choctaw and the slave have been worked out of him, a coarse nature still betrays itself in his contemptible squeals of joy. It is necessary for the purification of drawing-rooms that these entertaining explosions should be under strict control. Lord Chesterfield had early made this discovery, for he says, "I am sure that since I had the use of my reason, no human being has ever heard me laugh." I know that there go two to this game, and, in the presence of certain formidable wits, savage nature must sometimes rush out in some disorder.

To pass to an allied topic, one word or two in regard to dress, in which our civilization instantly shows itself. No nation is dressed with more good sense than ours. And everybody sees certain moral benefit in it. When the young European emigrant, after a summer's labor, puts on for the first time a new coat, he puts on much more. His good and becoming clothes put him on thinking that he must behave like people who are so dressed; and silently and steadily his behavior mends. But quite another class of our own youth I should remind, of dress in general, that some people need it and others need it not. Thus a king or a general does not need a fine coat, and a commanding person may save himself all solicitude on that point. There are always slovens in State Street or Wall Street, who are not less considered. If a man have manners and talent he may dress roughly and carelessly. It is only when mind and character slumber that the dress can be seen. If the intellect were always awake, and every noble sentiment, the man might go in huckaback or mats, and his dress would be admired and imitated. Remember George Herbert's maxim, "This coat with my discretion will be brave." If, however, a man has not firm nerves and has keen sensibility, it

is perhaps a wise economy to go to a good shop and dress himself irreproachably. He can then dismiss all care from his mind, and may easily find that performance an addition of confidence, a fortification that turns the scale in social encounters, and allows him to go gayly into conversations where else he had been dry and embarrassed. I am not ignorant, — I have heard with admiring submission the experience of the lady who declared that “the sense of being perfectly well-dressed gives a feeling of inward tranquillity which religion is powerless to bestow.”

Thus much for manners: but we are not content with pantomime; we say, This is only for the eyes. We want real relations of the mind and the heart; we want friendship; we want knowledge; we want virtue; a more inward existence to read the history of each other. Welfare requires one or two companions of intelligence, probity, and grace, to wear out life with, — persons with whom we can speak a few reasonable words every day, by whom we can measure ourselves, and who shall hold us fast to good sense and virtue; and these we are always in search of. He must be inestimable to us to whom we can say what we cannot say to ourselves. Yet now and then we say things to our mates, or hear things from them, which seem to put it out of the power of the parties to be strangers again. “Either death or a friend,” is a Persian proverb. I suppose I give the experience of many when I give my own. A few times in my life it has happened to me to meet persons of so good a nature and so good breeding that every topic was open and discussed without possibility of offence, — persons who could not be shocked. One of my friends said in speaking of certain associates, “There is not one of them but I can offend at any moment.” But to the company I am now considering, were no terrors, no vulgarity. All topics were broached, — life, love, marriage, sex, hatred, suicide, magic, theism, art, poetry, religion, myself, thyself, all selves, and whatever else, with a security and vivacity which belonged to the nobility of the parties and to their brave truth. The life of these persons was conducted in the same calm and affirmative manner as their discourse. Life with them was an experiment continually varied, full of results, full of grandeur, and by no means the hot and hurried business which passes in the world. The delight in good company, in pure, brilliant, social atmosphere; the incomparable satisfaction of a society in which everything can be safely said, in which every member returns a true echo, in which a wise freedom, an ideal republic of sense, simplicity, knowledge, and thorough good-meaning abide, — doubles the value of life. It is this that justifies to each the jealousy with which the doors are kept. Do not look sourly at the set or the club which does not choose you. Every highly-organized person knows the value of the social barriers, since the best society has often been spoiled to him by the

intrusion of bad companions. He of all men would keep the right of choice sacred, and feel that the exclusions are in the interest of the admissions, though they happen at this moment to thwart his wishes.

The hunger for company is keen, but it must be discriminating, and must be economized. 'Tis a defect in our manners that they have not yet reached the prescribing a limit to visits. That every well-dressed lady or gentleman should be at liberty to exceed ten minutes in his or her call on serious people, shows a civilization still rude. A universal etiquette should fix an iron limit after which a moment should not be allowed without explicit leave granted on request of either the giver or receiver of the visit. There is inconvenience in such strictness, but vast inconvenience in the want of it. To trespass on a public servant is to trespass on a nation's time. Yet presidents of the United States are afflicted by rude Western and Southern gossips (I hope it is only by them) until the gossip's immeasurable legs are tired of sitting; then he strides out and the nation is relieved.

It is very certain that sincere and happy conversation doubles our powers; that in the effort to unfold our thought to a friend we make it clearer to ourselves, and surround it with illustrations that help and delight us. It may happen that each hears from the other a better wisdom than any one else will ever hear from either. But these ties are taken care of by Providence to each of us. A wise man once said to me that "all whom he knew, met:" — meaning that he need not take pains to introduce the persons whom he valued to each other: they were sure to be drawn together as by gravitation. The soul of a man must be the servant of another. The true friend must have an attraction to whatever virtue is in us. Our chief want in life, — is it not somebody who can make us do what we can? And we are easily great with the loved and honored associate. We come out of our eggshell existence and see the great dome arching over us; see the zenith above and the nadir under us.

Speech is power: speech is to persuade, to convert, to compel. It is to bring another out of his bad sense into your good sense. You are to be missionary and carrier of all that is good and noble. Virtues speak to virtues, vices to vices, — each to their own kind in the people with whom we deal. If you are suspiciously and dryly on your guard, so is he or she. If you rise to frankness and generosity, they will respect it now or later.

In this art of conversation, Woman, if not the queen and victor, is the lawgiver. If every one recalled his experiences, he might find the best in the speech of superior women; — which was better than song, and carried ingenuity, character, wise counsel and affection, as easily as the wit with which it was adorned. They are not only wise themselves, they make us wise. No one can be a

master in conversation who has not learned much from women; their presence and inspiration are essential to its success. Steele said of his mistress, that “to have loved her was a liberal education.” Shenstone gave no bad account of this influence in his description of the French woman: “There is a quality in which no woman in the world can compete with her, — it is the power of intellectual irritation. She will draw wit out of a fool. She strikes with such address the chords of self-love, that she gives unexpected vigor and agility to fancy, and electrifies a body that appeared non-electric.” Coleridge esteems cultivated women as the depositaries and guardians of “English undefiled;” and Luther commends that accomplishment of “pure German speech” of his wife.

Madame de Staël, by the unanimous consent of all who knew her, was the most extraordinary converser that was known in her time, and it was a time full of eminent men and women; she knew all distinguished persons in letters or society in England, Germany, and Italy, as well as in France; though she said, with characteristic nationality, “Conversation, like talent, exists only in France.” Madame de Staël valued nothing but conversation, When they showed her the beautiful Lake Lemman, she exclaimed, “O for the gutter of the Rue de Bac!” the street in Paris in which her house stood. And she said one day, seriously, to M. Molé, “If it were not for respect to human opinions, I would not open my window to see the Bay of Naples for the first time, whilst I would go five hundred leagues to talk with a man of genius whom I had not seen.” Sainte-Beuve tells us of the privileged circle at Coppet, that after making an excursion one day, the party returned in two coaches from Chambéry to Aix, on the way to Coppet. The first coach had many rueful accidents to relate, — a terrific thunder-storm, shocking roads, and danger and gloom to the whole company. The party in the second coach, on arriving, heard this story with surprise; — of thunder-storm, of steeps, of mud, of danger, they knew nothing; no, they had forgotten earth, and breathed a purer air: such a conversation between Madame de Staël and Madame Récamier and Benjamin Constant and Schlegel! they were all in a state of delight. The intoxication of the conversation had made them insensible to all notice of weather or rough roads. Madame de Tessé said, “If I were Queen, I should command Madame de Staël to talk to me every day.” Conversation fills all gaps, supplies all deficiencies. What a good trait is that recorded of Madame de Maintenon, that, during dinner, the servant slipped to her side, “Please, madame, one anecdote more, for there is no roast to-day.”

Politics, war, party, luxury, avarice, fashion, are all asses with loaded panniers to serve the kitchen of Intellect, the king. There is nothing that does not pass into lever or weapon.

And yet there are trials enough of nerve and character, brave choices enough

of taking the part of truth and of the oppressed against the oppressor, in privatest circles. A right speech is not well to be distinguished from action. Courage to ask questions; courage to expose our ignorance. The great gain is, not to shine, not to conquer your companion, — then you learn nothing but conceit, — but to find a companion who knows what you do not; to tilt with him and be overthrown, horse and foot, with utter destruction of all your logic and learning. There is a defeat that is useful. Then you can see the real and the counterfeit, and will never accept the counterfeit again. You will adopt the art of war that has defeated you. You will ride to battle horsed on the very logic which you found irresistible. You will accept the fertile truth, instead of the solemn customary lie.

Let nature bear the expense. The attitude, the tone, is all. Let our eyes not look away, but meet. Let us not look east and west for materials of conversation, but rest in presence and unity. A just feeling will fast enough supply fuel for discourse, if speaking be more grateful than silence. When people come to see us, we foolishly prattle, lest we be inhospitable. But things said for conversation are chalk eggs. Don't say things. What you *are* stands over you the while, and thunders so that I cannot hear what you say to the contrary. A lady of my acquaintance said, "I don't care so much for what they say as I do for what makes them say it."

The main point is to throw yourself on the truth, and say, with Newton, "There's no contending against facts." When Molyneux fancied that the observations of the nutation of the earth's axis destroyed Newton's theory of gravitation, he tried to break it softly to Sir Isaac, who only answered, "It may be so, there's no arguing against facts and experiments."

But there are people who cannot be cultivated, — people on whom speech makes no impression; swainish, morose people, who must be kept down and quieted as you would those who are a little tipsy; others, who are not only swainish, but are prompt to take oath that swainishness is the only culture; and though their odd wit may have some salt for you, your friends would not relish it. Bolt these out. And I have seen a man of genius who made me think that if other men were like him cooperation were impossible. Must we always talk for victory, and never once for truth, for comfort, and joy? Here is centrality and penetration, strong understanding, and the higher gifts, the insight of the real, or from the real, and the moral rectitude which belongs to it: but all this and all his resources of wit and invention are lost to me in every experiment that I make to hold intercourse with his mind; always some weary, captious paradox to fight you with, and the time and temper wasted. And beware of jokes; too much temperance cannot be used: inestimable for sauce, but corrupting for food, we go away hollow and ashamed. As soon as the company give in to this enjoyment,

we shall have no Olympus. True wit never made us laugh. Mahomet seems to have borrowed by anticipation of several centuries a leaf from the mind of Swedenborg, when he wrote in the Koran: —

“On the day of resurrection, those who have indulged in ridicule will be called to the door of Paradise, and have it shut in their faces when they reach it. Again, on their turning back, they will be called to another door, and again, on reaching it, will see it closed against them; and so on, ad infinitum , without end.”

Shun the negative side. Never worry people with your contritions, nor with dismal views of politics or society. Never name sickness: even if you could trust yourself on that perilous topic, beware of unmuzzling a valetudinarian, who will soon give you your fill of it.

The law of the table is Beauty, — a respect to the common soul of all the guests. Everything is unseasonable which is private to two or three or any portion of the company. Tact never violates for a moment this law; never intrudes the orders of the house, the vices of the absent, or a tariff of expenses, or professional privacies; as we say, we never “talk shop” before company. Lovers abstain from caresses and haters from insults whilst they sit in one parlor with common friends.

Stay at home in you mind Don’t recite other people’s opinions. See how it lies there in you; and if there is no counsel, offer none. What we want is not your activity or interference with your mind, but your content to be a vehicle of the simple truth. The way to have large occasional views, as in a political or social crisis, is to have large habitual views. When men consult you, it is not that they wish you to stand tip toe and pump your brains, but to apply your habitual view, your wisdom, to the present question, forbearing all pedantries and the very name of argument; for in good conversation parties don’t speak to the words, but to the meanings of each other.

Manners first, then conversation. Later, we see that as life was not in manners, so it is not in talk. Manners are external; talk is occasional; these require certain material conditions, human labor for food, clothes, house, tools, and, in short, plenty and ease, — since only so can certain finer and finest powers appear and expand. In a whole nation of Hottentots there shall not be one valuable man, — valuable out of his tribe. In every million of Europeans or of Americans there shall be thousands who would be valuable on any spot on the globe.

The consideration the rich possess in all societies is not without meaning or

right. It is the approval given by the human understanding to the act of creating value by knowledge and labor. It is the sense of every human being that man should have this dominion of nature, should arm himself with tools and force the elements to drudge for him and give him power. Every one must seek to secure his independence; but he need not be rich. The old Confucius in China admitted the benefit, but stated the limitation: "If the search for riches were sure to be successful, though I should become a groom with whip in hand to get them, I will do so. As the search may not be successful, I will follow after that which I love." There is in America a general conviction in the minds of all mature men, that every young man of good faculty and good habits can by perseverance attain to an adequate estate; if he have a turn for business, and a quick eye for the opportunities which are always offering for investment, he can come to wealth, and in such good season as to enjoy as well as transmit it.

Every human society wants to be officered by a best class, who shall be masters instructed in all the great arts of life; shall be wise, temperate, brave, public men, adorned with dignity and accomplishments. Every country wishes this, and each has taken its own method to secure such service to the state. In Europe, ancient and modern, it has been attempted to secure the existence of a superior class by hereditary nobility, with estates transmitted by primogeniture and entail. But in the last age, this system has been on its trial, and the verdict of mankind is pretty nearly pronounced. That method secured permanence of families, firmness of customs, a certain external culture and good taste; gratified the ear with preserving historic names: but the heroic father did not surely have heroic sons, and still less surely heroic grandsons; wealth and ease corrupted the race.

In America, the necessity of clearing the forest, laying out town and street, and building every house and barn and fence, then church and town-house, exhausted such means as the Pilgrims brought, and made the whole population poor; and the like necessity is still found in each new settlement in the Territories. These needs gave their character to the public debates in every village and State. I have been often impressed at our country town-meetings with the accumulated virility, in each village, of five or six or eight or ten men, who speak so well, and so easily handle the affairs of the town. I often hear the business of a little town (with which I am most familiar) discussed with a clearness and thoroughness, and with a generosity too, that would have satisfied me had it been in one of the larger capitals. I am sure each one of my readers has a parallel experience. And every one knows that in every town or city is always to be found a certain number of public-spirited men who perform, unpaid, a great amount of hard work in the interest of the churches, of schools, of public

grounds, works of taste and refinement. And as in civil duties, so in social power and duties. Our gentlemen of the old school, that is, of the school of Washington, Adams, and Hamilton, were bred after English types, and that style of breeding furnished fine examples in the last generation; but, though some of us have seen such, I doubt they are all gone. But nature is not poorer to-day. With all our haste, and slipshod ways, and flippant self-assertion, I have seen examples of new grace and power in address that honor the country. It was my fortune not long ago, with my eyes directed on this subject, to fall in with an American to be proud of. I said never was such force, good meaning, good sense, good action, combined with such domestic lovely behavior, such modesty and persistent preference for others. Wherever he moved he was the benefactor. It is of course that he should ride well, shoot well, said well, keep house well, administer affairs well; but he was the best talker, also, in the company: what with a perpetual practical wisdom, with an eye always to the working of the thing, what with the multitude and distinction of his facts (and one detected continually that he had a hand in everything that has been done), and in the temperance with which he parried all offence and opened the eyes of the person he talked with without contradicting him. Yet I said to myself, How little this man suspects, with his sympathy for men and his respect for lettered and scientific people, that he is not likely, in any company, to meet a man superior to himself. And I think this is a good country that can bear such a creature as he is.

The young men in America at this moment take little thought of what men in England are thinking or doing. That is the point which decides the welfare of a people; *which way does it look?* If to any other people, it is not well with them. If occupied in its own affairs and thoughts and men, with a heat which excludes almost the notice of any other people, — as the Jews, the Greeks, the Persians, the Romans, the Arabians, the French, the English, at their best times have been, — they are sublime; and we know that in this abstraction they are executing excellent work. Amidst the calamities which war has brought on our country this one benefit has accrued, — that our eyes are withdrawn from England, withdrawn from France, and look homeward. We have come to feel that “by ourselves our safety must be bought;” to know the vast resources of the continent, the good-will that is in the people, their conviction of the great moral advantages of freedom, social equality, education and religious culture, and their determination to hold these fast, and, by them, to hold fast the country and penetrate every square mile of it with this American civilization.

The consolation and happy moment of life, atoning for all short-comings, is sentiment; a flame of affection or delight in the heart, burning up suddenly for its object; — as the love of the mother for her child; of the child for its mate; of the

youth for his friend; of the scholar for his pursuit; of the boy for sea-life, or for painting, or in the passion for his country; or in the tender-hearted philanthropist to spend and be spent for some romantic charity, as Howard for the prisoner, or John Brown for the slave. No matter what the object is, so it be good, this flame of desire makes life sweet and tolerable. It reinforces the heart that feels it, makes all its acts and words gracious and interesting. Now society in towns is infested by persons who, seeing that the sentiments please, counterfeit the expression of them. These we call sentimentalists, — talkers who mistake the description for the thing, saying for having. They have, they tell you, an intense love of nature; poetry, — O, they adore poetry, — and roses, and the moon, and the cavalry regiment, and the governor; they love liberty, “dear liberty!” they worship virtue, “dear virtue!” Yes, they adopt whatever merit is in good repute, and almost make it hateful with their praise. The warmer their expressions, the colder we feel; we shiver with cold. A little experience acquaints us with the unconvertibility of the sentimentalist, the soul that is lost by mimicking soul. Cure the drunkard, heal the insane, mollify the homicide, civilize the Pawnee, but what lessons can be devised for the debauchee of sentiment? Was ever one converted? The innocence and ignorance of the patient is the first difficulty; he believes his disease is blooming health. A rough realist or a phalanx of realists would be prescribed; but that is like proposing to mend your bad road with diamonds. Then poverty, famine, war, imprisonment, might be tried. Another cure would be to fire with fire, to match a sentimentalist with a sentimentalist. I think each might begin to suspect that something was wrong.

Would we codify the laws that should reign in households, and whose daily transgression annoys and mortifies us and degrades our household life, we must learn to adorn every day with sacrifices. Good manners are made up of petty sacrifices. Temperance, courage, love, are made up of the same jewels. Listen to every prompting of honor. “As soon as sacrifice becomes a duty and necessity to the man, I see no limit to the horizon which opens before me.” [Ernest Renan.]

Of course those people, and no others, interest us, who believe in their thought, who are absorbed, if you please to say so, in their own dream. They only can give the key and leading to better society: those who delight in each other only because both delight in the eternal laws; who forgive nothing to each other; who, by their joy and homage to these, are made incapable of conceit, which destroys almost all the fine wits. Any other affection between men than this geometric one of relation to the same thing, is a mere mush of materialism.

These are the bases of civil and polite society; namely, manners, conversation, lucrative labor, and public action; whether political, or in the leading of social institutions. We have much to regret, much to mend, in our

society; but I believe that with all liberal and hopeful men there is a firm faith in the beneficent results which we really enjoy; that intelligence, manly enterprise, good education, virtuous life and elegant manners have been and are found here, and, we hope, in the next generation will still more abound.

ELOQUENCE.

I do not know any kind of history, except the event of a battle, to which people listen with more interest than to any anecdote of eloquence; and the wise think it better than a battle. It is a triumph of pure power, and it has a beautiful and prodigious surprise in it. For all can see and understand the means by which a battle is gained: they count the armies, they see the cannon, the musketry, the cavalry, and the character and advantages of the ground, so that the result is often predicted by the observer with great certainty before the charge is sounded. Not so in a court of law, or in a legislature. Who knows before the debate begins what the preparation, or what the means are of the combatants? The facts, the reasons, the logic, — above all, the flame of passion and the continuous energy of will which is presently to be let loose on this bench of judges, or on this miscellaneous assembly gathered from the streets, — are all invisible and unknown. Indeed, much power is to be exhibited which is not yet called into existence, but is to be suggested on the spot by the unexpected turn things may take, — at the appearance of new evidence, or by the exhibition of an unlooked-for bias in the judges or in the audience. It is eminently the art which only flourishes in free countries. It is an old proverb that “Every people has its prophet;” and every class of the people has. Our community runs through a long scale of mental power, from the highest refinement to the borders of savage ignorance and rudeness. There are not only the wants of the intellectual and learned and poetic men and women to be met, but also the vast interests of property, public and private, of mining, of manufactures, of trade, of railroads, *etc.* These must have their advocates of each improvement and each interest. Then the political questions, which agitate millions, find or form a class of men by nature and habit fit to discuss and deal with these measures, and make them intelligible and acceptable to the electors. So of education, of art, of philanthropy.

Eloquence shows the power and possibility of man. There is one of whom we took no note, but on a certain occasion it appears that he has a secret virtue never suspected, — that he can paint what has occurred and what must occur, with such clearness to a company, as if they saw it done before their eyes. By leading their thought he leads their will, and can make them do gladly what an hour ago they would not believe that they could be led to do at all: he makes them glad or angry or penitent at his pleasure; of enemies makes friends, and fills desponding men with hope and joy. After Sheridan’s speech in the trial of Warren Hastings, Mr. Pitt moved an adjournment, that the House might recover from the

overpowering effect of Sheridan's oratory. Then recall the delight that sudden eloquence gives, — the surprise that the moment is so rich. The orator is the physician. Whether he speaks in the Capitol or on a cart, he is the benefactor that lifts men above themselves, and creates a higher appetite than he satisfies. The orator is he whom every man is seeking when he goes into the courts, into the conventions, into any popular assembly, — though often disappointed, yet never giving over the hope. He finds himself perhaps in the Senate, when the forest has east out some wild, black-browed bantling to show the same energy in the crowd of officials which he had learned in driving cattle to the hills, or in scrambling through thickets in a winter forest, or through the swamp and river for his game. In the folds of his brow, in the majesty of his mien, Nature has marked her son; and in that artificial and perhaps unworthy place and company shall remind you of the lessons taught him in earlier days by the torrent in the gloom of the pine-woods, when he was the companion of the mountain cattle, of jays and foxes, and a hunter of the bear. Or you may find him in some lowly Bethel, by the seaside, where a hard-featured, scarred, and wrinkled Methodist becomes the poet of the sailor and the fisherman, whilst he pours out the abundant streams of his thought through a language all glittering and fiery with imagination; a man who never knew the looking-glass or the critic; a man whom college drill or patronage never made, and whom praise cannot spoil, — a man who conquers his audience by infusing his soul into them, and speaks by the right of being the person in the assembly who has the most to say, and so makes all other speakers appear little and cowardly before his face. For the time, his exceeding life throws all other gifts into shade, — philosophy speculating on its own breath, taste, learning, and all, — and yet how every listener gladly consents to be nothing in his presence, and to share this surprising emanation, and be steeped and ennobled in the new wine of this eloquence! it instructs in the power of man over men; that a man is a mover; to the extent of his being, a power; and, in contrast with the efficiency he suggests, our actual life and society appears a dormitory. Who can wonder at its influence on young and ardent minds? Uncommon boys follow uncommon men, and I think every one of us can remember when our first experiences made us for a time the victim and worshipper of the first master of this art whom we happened to hear in the court-house or in the caucus.

We reckon the bar, the senate, journalism, and the pulpit, peaceful professions; but you cannot escape the demand for courage in these, and certainly there is no true orator who is not a hero. His attitude in the rostrum, on the platform, requires that he counterbalance his auditory. He is challenger, and must answer all comers. The orator must ever stand with forward foot, in the attitude of advancing. His speech must be just ahead of the assembly, ahead of

the whole human race, or it is superfluous. His speech is not to be distinguished from action. It is the electricity of action. It is action, as the general's word of command or chart of battle is action. I must feel that the speaker compromises himself to his auditory, comes for something, — it is a cry on the perilous edge of the fight, — or let him be silent. You go to a town-meeting where the people are called to some disagreeable duty, such as, for example, often occurred during the war, at the occasion of a new draft. They come unwillingly; they have spent their money once or twice very freely. They have sent their best men; the young and ardent, those of a martial temper, went at the first draft, or the second, and it is not easy to see who else can be spared or can be induced to go. The silence and coldness after the meeting is opened and the purpose of it stated, are not encouraging. When a good man rises in the cold and malicious assembly, you think, Well, sir, it would be more prudent to be silent; why not rest, sir, on your good record? Nobody doubts your talent and power, but for the present business, we know all about it, and are tired of being pushed into patriotism by people who stay at home. But he, taking no counsel of past things but only of the inspiration of his to-day's feeling, surprises them with his tidings, with his better knowledge, his larger view, his steady gaze at the new and future event whereof they had not thought, and they are interested like so many children, and carried off out of all recollection of their malignant considerations, and he gains his victory by prophecy, where they expected repetition. He knew very well beforehand that they were looking behind and that he was looking ahead, and therefore it was wise to speak. Then the observer says, What a godsend is this manner of man to a town! and he, what a faculty! He is put together like a Waltham watch, or like a locomotive just finished at the Tredegar works.

No act indicates more universal health than eloquence. The special ingredients of this force are clear perceptions; memory; power of statement; logic; imagination, or the skill to clothe your thought in natural images; passion, which is the *heat*; and then a grand will, which, when legitimate and abiding, we call *character*, the height of manhood. As soon as a man shows rare power of expression, like Chatham, Erskine, Patrick Henry, Webster, or Phillips, all the great interests, whether of state or of property, crowd to him to be their spokesman, so that he is at once a potentate, a ruler of men. A worthy gentleman, Mr. Alexander, listening to the debates of the General Assembly of the Scottish Kirk in Edinburgh, and eager to speak to the questions but utterly failing in his endeavors, — delighted with the talent shown by Dr. Hugh Blair, went to him and offered him one thousand pounds sterling if he would teach him to speak with propriety in public. If the performance of the advocate reaches any high success it is paid in England with dignities in the professions, and in the

State with seats in the cabinet, earldoms, and woolsacks. And it is easy to see that the great and daily growing interests at stake in this country must pay proportional prices to their spokesmen and defenders. It does not surprise us then to learn from Plutarch what great sums were paid at Athens to the teachers of rhetoric; and if the pupils got what they paid for, the lessons were cheap.

But this power which so fascinates and astonishes and commands is only the exaggeration of a talent which is universal. All men are competitors in this art. We have all attended meetings called for some object in which no one had beforehand any warm interest. Every speaker rose unwillingly, and even his speech was a bad excuse; but it is only the first plunge which is formidable; and deep interest or sympathy thaws the ice, loosens the tongue, and will carry the cold and fearful presently into self-possession and possession of the audience. Go into an assembly well excited, some angry political meeting on the eve of a crisis. Then it appears that eloquence is as natural as swimming, — an art which all men might learn, though so few do. It only needs that they should be once well pushed off into the water, overhead, without corks, and, after a mad struggle or two they find their poise and the use of their arms, and henceforward they possess this new and wonderful element.

The most hard - fisted, disagreeably restless, thought-paralyzing companion sometimes turns out in a public assembly to be a fluent, various, and effective orator. Now you find what all that excess of power which so chafed and fretted you in a *tête-à-tête* with him was for. What is peculiar in it is a certain creative heat, which a man attains to perhaps only once in his life. Those whom we admire — the great orators — have some *habit* of heat, and moreover a certain control of it, an art of husbanding it, — as if their hand was on the organstop, and could now use it temperately, and now let out all the length and breadth of the power. I remember that Jenny Lind, when in this country, complained of concert-rooms and town-halls, that they did not give her room enough to unroll her voice, and exulted in the opportunity given her in the great halls she found sometimes built over a railroad depot. And this is quite as true of the action of the mind itself, that a man of this talent sometimes finds himself cold and slow in private company, and perhaps a heavy companion; but give him a commanding occasion and the inspiration of a great multitude, and he surprises by new and unlooked-for powers. Before, he was out of place, and unfitted as a cannon in a parlor. To be sure there are physical advantages, — some eminently leading to this art. I mentioned Jenny Lind's voice. A good voice has a charm in speech as in song; sometimes of itself enchains attention, and indicates a rare sensibility, especially when trained to wield all its powers. The voice, like the face, betrays the nature and disposition, and soon indicates what is the range of

the speaker's mind. Many people have no ear for music, but every one has an ear for skilful reading. Every one of us has at some time been the victim of a well-toned and cunning voice, and perhaps been repelled once for all by a harsh, mechanical speaker. The voice, indeed, is a delicate index of the state of mind. I have heard an eminent preacher say that he learns from the first tones of his voice on a Sunday morning whether he is to have a successful day. A singer cares little for the words of the song; he will make any words glorious. I think the like rule holds of the good reader. In the church I call him only a good reader who can read sense and poetry into any hymn in the hymn-book. Plutarch, in his enumeration of the ten Greek orators, is careful to mention their excellent voices, and the pains bestowed by some of them in training these. What character, what infinite variety belong to the voice! sometimes it is a flute, sometimes a triphammer; what range of force! In moments of clearer thought or deeper sympathy, the voice will attain a music and penetration which surprises the speaker as much as the auditor; he also is a sharer of the higher wind that blows over his strings. I believe that some orators go to the assembly as to a closet where to find their best thoughts. The Persian poet Saadi tells us that a person with a disagreeable voice was reading the Koran aloud, when a holy man, passing by, asked what was his monthly stipend. He answered, "Nothing at all." "But why then do you take so much trouble?" He replied, "I read for the sake of God." The other rejoined, "For God's sake, do not read; for if you read the Koran in this manner you will destroy the splendor of Islamism." Then there are persons of natural fascination, with certain frankness, winning manners, almost endearments in their style; like Bouillon, who could almost persuade you that a quartan ague was wholesome; like Louis XI. of France, whom Commynes praises for "the gift of managing all minds by his accent and the caresses of his speech;" like Galiani, Voltaire, Robert Burns, Barclay, Fox, and Henry Clay. What must have been the discourse of St. Bernard, when mothers hid their sons, wives their husbands, companions their friends, lest they should be led by his eloquence to join the monastery.

It is said that one of the best readers in his time was the late President John Quincy Adams. I have heard that no man could read the Bible with such powerful effect. I can easily believe it, though I never heard him speak in public until his fine voice was much broken by age. But the wonders he could achieve with that cracked and disobedient organ showed what power might have belonged to it in early manhood. If "indignation makes verses," as Horace says, it is not less true that a good indignation makes an excellent speech. In the early years of this century, Mr. Adams, at that time a member of the United States Senate at Washington, was elected Professor of Rhetoric and Oratory in Harvard

College. When he read his first lectures in 1806, not only the students heard him with delight, but the hall was crowded by the Professors and by unusual visitors. I remember, when, long after, I entered college, hearing the story of the numbers of coaches in which his friends came from Boston to hear him. On his return in the winter to the Senate at Washington, he took such ground in the debates of the following session as to lose the sympathy of many of his constituents in Boston. When, on his return from Washington, he resumed his lectures in Cambridge, his class attended, but the coaches from Boston did not come, and indeed many of his political friends deserted him. In 1809 he was appointed Minister to Russia, and resigned his chair in the University. His last lecture, in taking leave of his class, contained some nervous allusions to the treatment he had received from his old friends, which showed how much it had stung him, and which made a profound impression on the class. Here is the concluding paragraph, which long resounded in Cambridge: —

“At no hour of your life will the love of letters ever oppress you as a burden, or fail you as a resource. In the vain and foolish exultation of the heart, which the brighter prospects of life will sometimes excite, the pensive portress of Science shall call you to the sober pleasures of her holy cell. In the mortifications of disappointment, her soothing voice shall whisper serenity and peace. In social converse with the mighty dead of ancient days, you will never smart under the galling sense of dependence upon the mighty living of the present age. And in your struggles with the world, should a crisis ever occur when even friendship may deem it prudent to desert you, when even your country may seem ready to abandon herself and you, when priest and Levite shall come and look on you and pass by on the other side, seek refuge, my *un* failing friends, and be assured you shall find it, in the friendship of Lálíus and Scipio, in the patriotism of Cicero, Demosthenes, and Burke, as well as in the precepts and example of Him whose law is love, and who taught us to remember injuries only to forgive them.”

The orator must command the whole scale of the language, from the most elegant to the most low and vile. Every one has felt how superior in force is the language of the street to that of the academy. The street must be one of his schools. Ought not the scholar to be able to convey his meaning in terms as short and strong as the porter or truckman uses to convey his? And Lord Chesterfield thought that “without being instructed in the dialect of the *Halles* no man could be a complete master of French.” The speech of the man in the street is invariably strong, nor can you mend it by making it what you call parliamentary. You say, “If he could only express himself;” but he does already, better than any one can for him, — can always get the ear of an audience to the exclusion of

everybody else. Well, this is an example in point. That something which each man was created to say and do, he only or he best can tell you, and has a right to supreme attention so far. The power of their speech is, that it is perfectly understood by all; and I believe it to be true that when any orator at the bar or in the Senate rises in his thought, he descends in his language, — that is, when he rises to any height of thought or of passion he comes down to a language level with the ear of all his audience. It is the merit of John Brown and of Abraham Lincoln — one at Charlestown, one at Gettysburg — in the two best specimens of eloquence we have had in this country. And observe that all poetry is written in the oldest and simplest English words. Dr. Johnson said, “There is in every nation a style which never becomes obsolete, a certain mode of phraseology so consonant to the analogy and principles of its respective language as to remain settled and unaltered. This style is to be sought in the common intercourse of life among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned forsake the vulgar, when the vulgar is right; but there is a conversation above grossness and below refinement, where propriety resides.”

But all these are the gymnastics, the education of eloquence, and not itself. They cannot be too much considered and practised as preparation, but the powers are those I first named. If I should make the shortest list of the qualifications of the orator, I should begin with *manliness*; and perhaps it means here presence of mind. Men differ so much in control of their faculties! You can find in many, and indeed in all, a certain fundamental equality. Fundamentally all feel alike and think alike, and at a great heat they can all express themselves with an almost equal force. But it costs a great heat to enable a heavy man to come up with those who have a quick sensibility. Thus we have all of us known men who lose their talents, their wit, their fancy, at any sudden call. Some men, on such pressure, collapse, and cannot rally. If they are to put a thing in proper shape, fit for the occasion and the audience, their mind is a blank. Something which any boy would tell with color and vivacity they can only stammer out with hard literalness, — say it in the very words they heard, and no other. This fault is very incident to men of study, — as if the more they had read the less they knew. Dr. Charles Chauncy was, a hundred years ago, a man of marked ability among the clergy of New England. But when once going to preach the Thursday lecture in Boston (which in those days people walked from Salem to hear), on going up the pulpitstairs he was informed that a little boy had fallen into Frog Pond on the Common and was drowned, and the doctor was requested to improve the sad occasion. The doctor was much distressed, and in his prayer he hesitated, he tried to make soft approaches, he prayed for Harvard College, he

prayed for the schools, he implored the Divine Being “to — to — to bless to them all the boy that was this morning drowned in Frog Pond.” Now this is not want of talent or learning, but of manliness. The doctor, no doubt, shut up in his closet and his theology, had lost some natural relation to men, and quick application of his thought to the course of events. I should add what is told of him, — that he so disliked the “sensation” preaching of his time, that he had once prayed that “he might never be eloquent;” and, it appears, his prayer was granted. On the other hand, it would be easy to point to many masters whose readiness is sure; as the French say of Guizot, that “what Guizot learned this morning he has the air of having known from all eternity.” This unmanliness is so common a result of our half-education, — teaching a youth Latin and metaphysics and history, and neglecting to give him the rough training of a boy, — allowing him to skulk from the games of ball and skates and coasting down the hills on his sled, and whatever else would lead him and keep him on even terms with boys, so that he can meet them as an equal, and lead in his turn, — that I wish his guardians to consider that they are thus preparing him to play a contemptible part when he is full-grown. In England they send the most delicate and protected child from his luxurious home to learn to rough it with boys in the public schools. A few bruises and scratches will do him no harm if he has thereby learned not to be afraid. It is this wise mixture of good drill in Latin grammar with good drill in cricket, boating, and wrestling, that is the boast of English education, and of high importance to the matter in hand.

Lord Ashley, in 1696, while the bill for regulating trials in cases of high treason was pending, attempting to utter a premeditated speech in Parliament in favor of that clause of the bill which allowed the prisoner the benefit of counsel, fell into such a disorder that he was not able to proceed; but, having recovered his spirits and the command of his faculties, he drew such an argument from his own confusion as more advantaged his cause than all the powers of eloquence could have done. “For,” said he, “if I, who had no personal concern in the question, was so overpowered with my own apprehensions that I could not find words to express myself, what must be the case of one whose life depended on his own abilities to defend it?” This happy turn did great service in promoting that excellent bill.

These are ascending stairs, — a good voice, winning manners, plain speech, chastened, however, by the schools into correctness; but we must come to the main matter, of power of statement, — know your fact; hug your fact. For the essential thing is heat, and heat comes of sincerity. Speak what you do know and believe; and are personally in it; and are answerable for every word. Eloquence is *the power to translate a truth into language perfectly intelligible to the person*

to whom you speak. He who would convince the worthy Mr. Dunderhead of any truth which Dunderhead does not see, must be a master of his art. Declamation is common; but such possession of thought as is here required, such practical chemistry as the conversion of a truth written in God's language into a truth in Dunderhead's language, is one of the most beautiful and cogent weapons that are forged in the shop of the Divine Artificer.

It was said of Robespierre's audience, that though they understood not the words, they understood a fury in the words, and caught the contagion. This leads us to the high class, the men of character, who bring an overpowering personality into court, and the cause they maintain borrows importance from an illustrious advocate. Absoluteness is required, and he must have it or simulate it. If the cause be unfashionable, he will make it fashionable. 'T is the best man in the best training. If he does not know your fact, he will show that it is not worth the knowing. Indeed, as great generals do not fight many battles, but conquer by tactics, so all eloquence is a war of posts. What is said is the least part of the oration. It is the attitude taken, the unmistakable sign, never so casually given, in tone of voice, or manner, or word, that a greater spirit speaks from you than is spoken to in him.

But I say, *provided your cause is really honest.* There is always the previous question: How came you on that side? Your argument is ingenious, your language copious, your illustrations brilliant, but your major proposition palpably absurd. Will you establish a lie? You are a very elegant writer, but you can't write up what gravitates down.

An ingenious metaphysical writer, Dr. Stirling, of Edinburgh, has noted that intellectual works in any department breed each other, by what he calls *zymosis*, *i.e.* fermentation; thus in the Elizabethan Age there was a dramatic *zymosis*, when all the genius ran in that direction, until it culminated in Shakspeare; so in Germany we have seen a metaphysical *zymosis* culminating in Kant, Schelling, Schleiermacher, Schopenhauer, Hegel, and so ending. To this we might add the great eras not only of painters but of orators. The historian Paterculus says of Cicero, that only in Cicero's lifetime was any great eloquence in Rome; so it was said that no member of either house of the British Parliament will be ranked among the orators, whom Lord North did not see, or who did not see Lord North. But I should rather say that when a great sentiment, as religion or liberty, makes itself deeply felt in any age or country, then great orators appear. As the Andes and Alleghanies indicate the line of the fissure in the crust of the earth along which they were lifted, so the great ideas that suddenly expand at some moment the mind of mankind, indicate themselves by orators.

If there ever was a country where eloquence was a power, it is the United States. Here is room for every degree of it, on every one of its ascending stages, — that of useful speech, in our commercial, manufacturing, railroad, and educational conventions; that of political advice and persuasion on the grandest theatre, reaching, as all good men trust, into a vast future, and so compelling the best thought and noblest administrative ability that the citizen can offer. And here are the service of science, the demands of art, and the lessons of religion to be brought home to the instant practice of thirty millions of people. Is it not worth the ambition of every generous youth to train and arm his mind with all the resources of knowledge, of method, of grace, and of character, to serve such a constituency?

RESOURCES.

Men are made up of potencies. We are magnets in an iron globe. We have keys to all doors. We are all inventors, each sailing out on a voyage of discovery, guided each by a private chart, of which there is no duplicate. The world is all gates, all opportunities, strings of tension waiting to be struck; the earth sensitive as iodine to light; the most plastic and impressionable medium, alive to every touch, and, whether searched by the plough of Adam, the sword of Cásar, the boat of Columbus, the telescope of Galileo, or the surveyor's chain of Picard, or the submarine telegraph, — to every one of these experiments it makes a gracious response. I am benefited by every observation of a victory of man over nature; by seeing that wisdom is better than strength; by seeing that every healthy and resolute man is an organizer, a method coming into a confusion and drawing order out of it. We are touched and cheered by every such example. We like to see the inexhaustible riches of Nature, and the access of every soul to her magazines. These examples wake an infinite hope, and call every man to emulation. A low, hopeless spirit puts out the eyes; skepticism is slow suicide. A philosophy which sees only the worst; believes neither in virtue nor in genius; which says 't is all of no use, life is eating us up, 't is only question who shall be last devoured, — dispirits us; the sky shuts down before us. A Schopenhauer, with logic and learning and wit, teaching pessimism, — teaching that this is the worst of all possible worlds, and inferring that sleep is better than waking, and death than sleep, — all the talent in the world cannot save him from being odious. But if instead of these negatives you give me affirmatives; if you tell me that there is always life for the living; that what man has done man can do; that this world belongs to the energetic; that there is always a way to everything desirable; that every man is provided, in the new bias of his faculty, with a key to nature, and that man only rightly knows himself as far as he has experimented on things, — I am invigorated, put into genial and working temper; the horizon opens, and we are full of good-will and gratitude to the Cause of Causes. I like the sentiment of the poor woman who, coming from a wretched garret in an inland manufacturing town for the first time to the sea-shore, gazing at the ocean, said she was "glad for once in her life to see something which there was enough of."

Our Copernican globe is a great factory or shop of power, with its rotating constellations, times, and tides. The machine is of colossal size; the diameter of the water-wheel, the arms of the levers and the volley of the battery out of all mechanic measure; and it takes long to understand its parts and its workings.

This pump never sucks; these screws are never loose; this machine is never out of gear. The vat, the piston, the wheels and tires, never wear out, but are self-repairing. Is there any load which water cannot lift? If there be, try steam; or if not that, try electricity. Is there any exhausting of these means? Measure by barrels the spending of the brook that runs through your field. Nothing is great but the inexhaustible wealth of Nature. She shows us only surfaces, but she is million fathoms deep. What spaces! what durations! dealing with races as merely preparations of somewhat to follow; or, in humanity, millions of lives of men to collect the first observations on which our astronomy is built; millions of lives to add only sentiments and guesses, which at last, gathered in by an ear of sensibility, make the furniture of the poet. See how children build up a language; how every traveller, every laborer, every impatient boss who sharply shortens the phrase or the word to give his order quicker, reducing it to the lowest possible terms, and there it must stay, — improves the national tongue. What power does Nature not owe to her duration, of amassing infinitesimals into cosmical forces!

The marked events in history, as the emigration of a colony to a new and more delightful coast; the building of a large ship; the discovery of the mariner's compass, which perhaps the Phœnicians made; the arrival among an old stationary nation of a more instructed race, with new arts: — each of these events electrifies the tribe to which it befalls; supple the tough barbarous sinew, and brings it into that state of sensibility which makes the transition to civilization possible and sure. By his machines man can dive and remain under water like a shark; can fly like a hawk in the air; can see atoms like a gnat; can see the system of the universe like Uriel, the angel of the sun; can carry whatever loads a ton of coal can lift; can knock down cities with his fist of gunpowder; can recover the history of his race by the medals which the deluge, and every creature, civil or savage or brute, has involuntarily dropped of its existence; and divine the future possibility of the planet and its inhabitants by his perception of laws of nature. Ah! what a plastic little creature he is! so shifty, so adaptive! his body a chest of tools, and he making himself comfortable in every climate, in every condition.

Here in America are all the wealth of soil, of timber, of mines, and of the sea, put into the possession of a people who wield all these wonderful machines, have the secret of steam, of electricity; and have the power and habit of invention in their brain. We Americans have got suppld into the state of melioration. Life is always rapid here, but what acceleration to its pulse in ten years, — what in the four years of the war! We have seen the railroad and

telegraph subdue our enormous geography; we have seen the snowy deserts on the northwest, seats of Esquimaux, become lands of promise. When our population, swarming west, had reached the boundary of arable land, — as if to stimulate our energy, on the face of the sterile waste beyond, the land was suddenly in parts found covered with gold and silver, flooded with coal. It was thought a fable, what Guthrie, a traveller in Persia, told us, that “in Taurida, in any piece of ground where springs of naphtha (or petroleum) obtain, by merely sticking an iron tube in the earth and applying a light to the upper end, the mineral oil will burn till the tube is decomposed, or for a vast number of years.” But we have found the Taurida in Pennsylvania and Ohio. If they have not the lamp of Aladdin, they have the Aladdin oil. Resources of America! why, one thinks of St. Simon’s saying, “The Golden Age is not behind, but before you.” Here is man in the Garden of Eden; here the Genesis and the Exodus. We have seen slavery disappear like a painted scene in a theatre; we have seen the most healthful revolution in the politics of the nation, — the Constitution not only amended, but construed in a new spirit. We have seen China opened to European and American ambassadors and commerce; the like in Japan: our arts and productions begin to penetrate both. As the walls of a modern house are perforated with water-pipes, sound-pipes, gas-pipes, heat-pipes, — so geography and geology are yielding to man’s convenience, and we begin to perforate and mould the old ball, as a carpenter does with wood. All is ductile and plastic. We are working the new Atlantic telegraph. American energy is overriding every venerable maxim of political science. America is such a garden of plenty, such a magazine of power, that at her shores all the common rules of political economy utterly fail. Here is bread, and wealth, and power, and education for every man who has the heart to use his opportunity. The creation of power had never any parallel. It was thought that the immense production of gold would make gold cheap as pewter. But the immense expansion of trade has wanted every ounce of gold, and it has not lost its value.

See how nations of customers are formed. The disgust of California has not been able to drive nor kick the Chinaman back to his home; and now it turns out that he has sent home to China American food and tools and luxuries, until he has taught his people to use them, and a new market has grown up for our commerce. The emancipation has brought a whole nation of negroes as customers to buy all the articles which once their few masters bought, and every manufacturer and producer in the North has an interest in protecting the negro as the consumer of his wares.

The whole history of our civil war is rich in a thousand anecdotes attesting the fertility of resource, the presence of mind, the skilled labor of our people. At

Annapolis a regiment, hastening to join the army, found the locomotives broken, the railroad destroyed, and no rails. The commander called for men in the ranks who could rebuild the road. Many men stepped forward, searched in the water, found the hidden rails, laid the track, put the disabled engine together and continued their journey. The world belongs to the energetic man. His will gives him new eyes. He sees expedients and means where we saw none. The invalid sits shivering in lamb's-wool and furs; the woodsman knows how to make warm garments out of cold and wet themselves. The Indian, the sailor, the hunter, only these know the power of the hands, feet, teeth, eyes and ears. It is out of the obstacles to be encountered that they make the means of destroying them. The sailor by his boat and sail makes a ford out of deepest waters. The hunter, the soldier, rolls himself in his blanket, and the falling snow, which he did not have to bring in his knapsack, is his eider-down, in which he sleeps warm till the morning. Nature herself gives the hint and the example, if we have wit to take it. See how Nature keeps the lakes warm by tucking them up under a blanket of ice, and the ground under a cloak of snow. The old forester is never far from shelter; no matter how remote from camp or city, he carries Bangor with him. A sudden shower cannot wet him, if he cares to be dry; he draws his boat ashore, turns it over in a twinkling against a clump of alders, with catbriers which keep up the lee-side, crawls under it with his comrade, and lies there till the shower is over, happy in his stout roof. The boat is full of water, and resists all your strength to drag it ashore and empty it. The fisherman looks about him, puts a round stick of wood underneath, and it rolls as on wheels at once. Napoleon says, the Corsicans at the battle of Golo, not having had time to cut down the bridge, which was of stone, made use of the bodies of their dead to form an intrenchment. Malus, known for his discoveries in the polarization of light, was captain of a corps of engineers in Bonaparte's Egyptian campaign, which was heinously unprovided and exposed. "Wanting a picket to which to attach my horse," he says, "I tied him to my leg. I slept, and dreamed peaceably of the pleasures of Europe." M. Tissenet had learned among the Indians to understand their language, and, coming among a wild party of Illinois, he overheard them say that they would scalp him. He said to them, "Will you scalp me? Here is my scalp," and confounded them by lifting a little periwig he wore. He then explained to them that he was a great medicine-man, and that they did great wrong in wishing to harm him, who carried them all in his heart. So he opened his shirt a little and showed to each of the savages in turn the reflection of his own eyeball in a small pocket-mirror which he had hung next to his skin. He assured them that if they should provoke him he would burn up their rivers and their forests; and taking from his portmanteau a small phial of white brandy, he poured it into a cup, and

lighting a straw at the fire in the wigwam, he kindled the brandy (which they believed to be water), and burned it up before their eyes. Then taking up a chip of dry pine, he drew a burning-glass from his pocket and set the chip on fire.

What a new face courage puts on everything! A determined man, by his very attitude and the tone of his voice, puts a stop to defeat, and begins to conquer. "For they can conquer who believe they can." Every one hears gladly that cheerful voice. He reveals to us the enormous power of one man over masses of men; that one man whose eye commands the end in view and the means by which it can be attained, is not only better than ten men or a hundred men, but victor over all mankind who do not see the issue and the means. "When a man is once possessed with fear," said the old French Marshal Montluc, "and loses his judgment, as all men in a fright do, he knows not what he does. And it is the principal thing you are to beg at the hands of Almighty God, to preserve your understanding entire; for what danger soever there may be, there is still one way or other to get off, and perhaps to your honor. But when fear has once possessed you, God ye good even! You think you are flying towards the poop when you are running towards the prow, and for one enemy think you have ten before your eyes, as drunkards who see a thousand candles at once."

Against the terrors of the mob, which, intoxicated with passion, and once suffered to gain the ascendant, is diabolic and chaos come again, good sense has many arts of prevention and of relief. Disorganization it confronts with organization, with police, with military force. But in earlier stages of the disorder it applies milder and nobler remedies. The natural offset of terror is ridicule. And we have noted examples among our orators, who have on conspicuous occasions handled and controlled, and, best of all, converted a malignant mob, by superior manhood, and by a wit which disconcerted and at last delighted the ringleaders. What can a poor truckman, who is hired to groan and to hiss, do, when the orator shakes him into convulsions of laughter so that he cannot throw his egg? If a good story will not answer, still milder remedies sometimes serve to disperse a mob. Try sending round the contribution-box. Mr. Marshall, the eminent manufacturer at Leeds, was to preside at a Free-Trade festival in that city; it was threatened that the operatives, who were in bad humor, would break up the meeting by a mob. Mr. Marshall was a man of peace; he had the pipes laid from the waterworks of his mill, with a stop-cock by his chair from which he could discharge a stream that would knock down an ox, and sat down very peacefully to his dinner, which was not disturbed.

See the dexterity of the good aunt in keeping the young people all the weary holiday busy and diverted without knowing it: the story, the pictures, the ballad, the game, the cuckoo-clock, the stereoscope, the rabbits, the mino bird, the

popcorn, and Christmas hemlock spurting in the fire. The children never suspect how much design goes to it, and that this unfailing fertility has been rehearsed a hundred times, when the necessity came of finding for the little Asmodeus a rope of sand to twist. She relies on the same principle that makes the strength of Newton, — alternation of employment. See how he refreshed himself, resting from the profound researches of the calculus by astronomy; from astronomy by optics; from optics by chronology. It is a law of chemistry that every gas is a vacuum to every other gas; and when the mind has exhausted its energies for one employment, it is still fresh and capable of a different task. We have not a toy or trinket for idle amusement but somewhere it is the one thing needful, for solid instruction or to save the ship or army. In the Mammoth Cave in Kentucky, the torches which each traveller carries make a dismal funeral procession, and serve no purpose but to see the ground. When now and then the vaulted roof rises high overhead and hides all its possibilities in lofty depths, 't is but gloom on gloom. But the guide kindled a Roman candle, and held it here and there shooting its fireballs successively into each crypt of the groined roof, disclosing its starry splendor, and showing for the first time what that plaything was good for.

Whether larger or less, these strokes and all exploits rest at last on the wonderful structure of the mind. And we learn that our doctrine of resources must be carried into higher application, namely, to the intellectual sphere. But every power in energy speedily arrives at its limits, and requires to be husbanded: the law of light, which Newton said proceeded by “fits of easy reflection and transmission;” the come-and-go of the pendulum, is the law of mind; alternation of labors is its rest.

I should like to have the statistics of bold experimenting on the husbandry of mental power. In England men of letters drink wine; in Scotland, whiskey; in France, light wines; in Germany, beer. In England everybody rides in the saddle; in France the theatre and the ball occupy the night. In this country we have not learned how to repair the exhaustions of our climate. Is not the seaside necessary in summer? Games, fishing, bowling, hunting, gymnastics, dancing, — are not these needful to you? The chapter of pastimes is very long. There are better games than billiards and whist. It was a pleasing trait in Goethe's romance, that Makaria retires from society “to astronomy and her correspondence.”

I do not know that the treatise of Brillat Savarin on the Physiology of Taste deserves its fame. I know its repute, and I have heard it called the France of France. But the subject is so large and exigent, that a few particulars, and those the pleasures of the epicure, cannot satisfy. I know many men of taste whose single opinions and practice would interest much more. It should be extended to gardens and grounds, and mainly one thing should be illustrated: that life in the

country wants all things on a low tone, — wants coarse clothes, old shoes, no fleet horse that a man cannot hold, but an old horse that will stand tied in a pasture half a day without risk, so allowing the picnic party the full freedom of the woods. Natural history is, in the country, most attractive; at once elegant, immortal, always opening new resorts. The first care of a man settling in the country should be to open the face of the earth to himself by a little knowledge of nature, or a great deal, if he can; of birds, plants, rocks, astronomy; in short, the art of taking a walk. This will draw the sting out of frost, dreariness out of November and March, and the drowsiness out of August. To know the trees is, as Spenser says of the ash, “for nothing ill.” Shells, too; how hungry I found myself, the other day, at Agassiz’s Museum, for their names! But the uses of the woods are many, and some of them for the scholar high and peremptory. When his task requires the wiping out from memory

“all trivial fond records

That youth, and observation copied there,”

he must leave the house, the streets, and the club, and go to wooded uplands, to the clearing and the brook. Well for him if he can say with the old minstrel, “I know where to find a new song.”

If I go into the woods in winter, and am shown the thirteen or fourteen species of willow that grow in Massachusetts, I learn that they quietly expand in the warmer days, or when nobody is looking at them, and, though insignificant enough in the general bareness of the forest, yet a great change takes place in them between fall and spring; in the first relentings of March they hasten, and long before anything else is ready, these osiers hang out their joyful flowers in contrast to all the woods. You cannot tell when they do bud and blossom, these vivacious trees, so ancient, for they are almost the oldest of all. Among fossil remains, the willow and the pine appear with the ferns. They bend all day to every wind; the cart-wheel in the road may crush them; every passenger may strike off a twig with his cane; every boy cuts them for a whistle; the cow, the rabbit, the insect, bite the sweet and tender bark; yet, in spite of accident and enemy, their gentle persistency lives when the oak is shattered by storm, and grows in the night and snow and cold. When I see in these brave plants this vigor and immortality in weakness, I find a sudden relief and pleasure in observing the mighty law of vegetation, and I think it more grateful and health-giving than any news I am likely to find of man in the journals, and better than Washington politics.

It is easy to see that there is no limit to the chapter of Resources. I have not, in all these rambling sketches, gone beyond the beginning of my list. Resources of Man, — it is the inventory of the world, the roll of arts and sciences; it is the

whole of memory, the whole of invention; it is all the power of passion, the majesty of virtue, and the omnipotence of will.

But the one fact that shines through all this plenitude of powers is, that as is the receiver, so is the gift; that all these acquisitions are victories of the good brain and brave heart; that the world belongs to the energetic, belongs to the wise. It is in vain to make a paradise but for good men. The tropics are one vast garden; yet man is more miserably fed and conditioned there than in the cold and stingy zones. The healthy, the civil, the industrious, the learned, the moral race, — Nature herself only yields her secret to these. And the resources of America and its future will be immense only to wise and virtuous men.

THE COMIC.

A taste for fun is all but universal in our species, which is the only joker in nature. The rocks, the plants, the beasts, the birds, neither do anything ridiculous, nor betray a perception of anything absurd done in their presence. And as the lower nature does not jest, neither does the highest. The Reason pronounces its omniscient yea and nay, but meddles never with degrees or fractions; and it is in comparing fractions with essential integers or wholes that laughter begins.

Aristotle's definition of the ridiculous is, "what is out of time and place, without danger." If there be pain and danger, it becomes tragic; if not, comic. I confess, this definition, though by an admirable definer, does not satisfy me, does not say all we know.

The essence of all jokes, of all comedy, seems to be an honest or well-intended halfness; a non-performance of what is pretended to be performed, at the same time that one is giving loud pledges of performance. The balking of the intellect, the frustrated expectation, the break of continuity in the intellect, is comedy; and it announces itself physically in the pleasant spasms we call laughter.

With the trifling exception of the stratagems of a few beasts and birds, there is no seeming, no halfness in nature, until the appearance of man. Unconscious creatures do the whole will of wisdom. An oak or a chestnut undertakes no function it cannot execute; or if there be phenomena in botany which we call abortions, the abortion is also a function of nature, and assumes to the intellect the like completeness with the further function to which in different circumstances it had attained. The same rule holds true of the animals. Their activity is marked by unerring good-sense. But man, through his access to Reason, is capable of the perception of a whole and a part. Reason is the whole, and whatsoever is not that is a part. The whole of nature is agreeable to the whole of thought, or to the Reason; but separate any part of nature and attempt to look at it as a whole by itself, and the feeling of the ridiculous begins. The perpetual game of humor is to look with considerate goodnature at every object in existence, *aloof* as a man might look at a mouse, comparing it with the eternal Whole; enjoying the figure which each self-satisfied particular creature cuts in the unrespecting All, and dismissing it with a benison. Separate any object, as a particular bodily man, a horse, a turnip, a flour-barrel, an umbrella, from the connection of things, and contemplate it alone, standing there in absolute nature, it becomes at once comic; no useful, no respectable qualities can rescue it from the ludicrous.

In virtue of man's access to Reason, or the Whole, the human form is a pledge of wholeness, suggests to our imagination the perfection of truth or goodness, and exposes by contrast any halfness or imperfection. We have a primary association between perfectness and this form. But the facts that occur when actual men enter do not make good this anticipation; a discrepancy which is at once detected by the intellect, and the outward sign is the muscular irritation of laughter.

Reason does not joke, and men of reason do not; a prophet, in whom the moral sentiment predominates, or a philosopher, in whom the love of truth predominates, these do not joke, but they bring the standard, the ideal whole, exposing all actual defect; and hence the best of all jokes is the sympathetic contemplation of things by the understanding from the philosopher's point of view. There is no joke so true and deep in actual life as when some pure idealist goes up and down among the institutions of society, attended by a man who knows the world, and who, sympathizing with the philosopher's scrutiny, sympathizes also with the confusion and indignation of the detected, skulking institutions. His perception of disparity, his eye wandering perpetually from the rule to the crooked, lying, thieving fact, makes the eyes run over with laughter.

This is the radical joke of life and then of literature. The presence of the ideal of right and of truth in all action makes the yawning delinquencies of practice remorseful to the conscience, tragic to the interest, but droll to the intellect. The activity of our sympathies may for a time hinder our perceiving the fact intellectually, and so deriving mirth from it; but all falsehoods, all vices seen at sufficient distance, seen from the point where our moral sympathies do not interfere, become ludicrous. The comedy is in the intellect's perception of discrepancy. And whilst the presence of the ideal discovers the difference, the comedy is enhanced whenever that ideal is embodied visibly in a man. Thus Falstaff, in Shakspeare, is a character of the broadest comedy, giving himself unreservedly to his senses, coolly ignoring the Reason, whilst he invokes its name, pretending to patriotism and to parental virtues, not with any intent to deceive, but only to make the fun perfect by enjoying the confusion betwixt reason and the negation of reason, — in other words, the rank rascaldom he is calling by its name. Prince Hal stands by, as the acute understanding, who sees the Right, and sympathizes with it, and in the heyday of youth feels also the full attractions of pleasure, and is thus eminently qualified to enjoy the joke. At the same time he is to that degree under the Reason that it does not amuse him as much as it amuses another spectator.

If the essence of the Comic be the contrast in the intellect between the idea and the false performance, there is good reason why we should be affected by

the exposure. We have no deeper interest than our integrity, and that we should be made aware by joke and by stroke of any lie we entertain. Besides, a perception of the Comic seems to be a balance-wheel in our metaphysical structure. It appears to be an essential element in a fine character. Wherever the intellect is constructive, it will be found. We feel the absence of it as a defect in the noblest and most oracular soul. The perception of the Comic is a tie of sympathy with other men, a pledge of sanity, and a protection from those perverse tendencies and gloomy insanities in which fine intellects sometimes lose themselves. A rogue alive to the ludicrous is still convertible. If that sense is lost, his fellow-men can do little for him.

It is true the sensibility to the ludicrous may run into excess. Men celebrate their perception of halfness and a latent lie by the peculiar explosions of laughter. So painfully susceptible are some men to these impressions, that if a man of wit come into the room where they are, it seems to take them out of themselves with violent convulsions of the face and sides, and obstreperous roarings of the throat. How often and with what unfeigned compassion we have seen such a person receiving like a willing martyr the whispers into his ear of a man of wit. The victim who has just received the discharge, if in a solemn company, has the air very much of a stout vessel which has just shipped a heavy sea; and though it does not split it, the poor bark is for the moment critically staggered. The peace of society and the decorum of tables seem to require that next to a notable wit should always be posted a phlegmatic bolt-upright man, able to stand without movement of muscle whole broadsides of this Greek fire. It is a true shaft of Apollo, and traverses the universe, and unless it encounter a mystic or a dumpish soul, goes everywhere heralded and harbingered by smiles and greetings. Wit makes its own welcome, and levels all distinctions. No dignity, no learning, no force of character, can make any stand against good wit. It is like ice, on which no beauty of form, no majesty of carriage can plead any immunity, — they must walk gingerly, according to the laws of ice, or down they must go, dignity and all. “Dost thou think, because thou art virtuous, there shall be no more cakes and ale?” Plutarch happily expresses the value of the jest as a legitimate weapon of the philosopher. “Men cannot exercise their rhetoric unless they speak, but their philosophy even whilst they are silent or jest merrily; for as it is the highest degree of injustice not to be just and yet seem so, so it is the top of wisdom to philosophize yet not appear to do it, and in mirth to do the same with those that are serious and seem in earnest; for as in Euripides, the Bacchæ, though unprovided of iron weapons, and unarmed, wounded their invaders with the boughs of trees which they carried, thus the very jests and merry talk of true philosophers move those that are not altogether insensible, and

unusually reform.”

In all the parts of life, the occasion of laughter is some seeming, some keeping of the word to the ear and eye, whilst it is broken to the soul. Thus, as the religious sentiment is the most vital and sublime of all our sentiments, and capable of the most prodigious effects, so is it abhorrent to our whole nature, when, in the absence of the sentiment, the act or word or officer volunteers to stand in its stead. To the sympathies this is shocking, and occasions grief. But to the intellect the lack of the sentiment gives no pain; it compares incessantly the sublime idea with the bloated nothing which pretends to be it, and the sense of the disproportion is comedy. And as the religious sentiment is the most real and earnest thing in nature, being a mere rapture, and excluding, when it appears, all other considerations, the vitiating this is the greatest lie. Therefore, the oldest gibe of literature is the ridicule of false religion. This is the joke of jokes. In religion, the sentiment is all; the ritual or ceremony indifferent. But the inertia of men inclines them, when the sentiment sleeps, to imitate that thing it did; it goes through the ceremony omitting only the will, makes the mistake of the wig for the head, the clothes for the man. The older the mistake and the more overgrown the particular form is, the more ridiculous to the intellect. Captain John Smith, the discoverer of New England, was not wanting in humor. The Society in London which had contributed their means to convert the savages, hoping doubtless to see the Keokuks, Black Hawks, Roaring Thunders, and Tustanugges of that day converted into church-wardens and deacons at least, pestered the gallant rover with frequent solicitations out of England touching the conversion of the Indians, and the enlargement of the Church. Smith, in his perplexity how to satisfy the Society, sent out a party into the swamp, caught an Indian, and sent him home in the first ship to London, telling the Society they might convert one themselves.

The satire reaches its climax when the actual Church is set in direct contradiction to the dictates of the religious sentiment, as in the sketch of our Puritan politics in *Hudibras*: —

“Our brethren of New England use
Choice malefactors to excuse,
And hang the guiltless in their stead, Of whom the churches have less need;
As lately happened, in a town
Where lived a cobbler, and but one, That out of doctrine could cut use
And mend men’s lives as well as shoes.
This precious brother having slain In times of peace, an Indian
Not of malice, but mere zeal
(Because he was an infidel),

The mighty Tottipottymoy
Sent to our elders an envoy,

Complaining loudly of the breach
Of league held forth by Brother Patch, Against the articles in force
Between both churches, his and ours, For which he craved the saints to render
Into his hands, or hang the offender; But they, maturely having weighed
They had no more but him o' th' trade (A man that served them in the double
Capacity to teach and cobble),
Resolved to spare him; yet to do

The Indian Hoghan Moghan too
Impartial justice, in his stead did Hand an old weaver that was bedrid.”

In science the jest at pedantry is analogous to that in religion which lies against superstition. A classification or nomenclature used by the scholar only as a memorandum of his last lesson in the laws of nature, and confessedly a makeshift, a bivouac for a night, and implying a march and a conquest tomorrow, — becomes through indolence a barrack and a prison, in which the man sits down immovably, and wishes to detain others. The physiologist Camper humorously confesses the effect of his studies in dislocating his ordinary associations. “I have been employed,” he says, “six months on the *Cetacea*; I understand the osteology of the head of all these monsters, and have made the combination with the human head so well that everybody now appears to me narwhale, porpoise, or mar-souins. Women, the prettiest in society, and those whom I find less comely, they are all either narwhales or porpoises to my eyes.” I chanced the other day to fall in with an odd illustration of the remark I had heard, that the laws of disease are as beautiful as the laws of health; I was hastening to visit an old and honored friend, who, I was in-formed, was in a dying condition, when I met his physician, who accosted me in great spirits, with joy sparkling in his eyes. “And how is my friend, the reverend Doctor?” I inquired. “O, I saw him this morning; it is the most correct apoplexy I have ever seen: face and hands livid, breathing stertorous, all the symptoms perfect.” And he rubbed his hands with delight, for in the country we cannot find every day a case that agrees with the diagnosis of the books. I think there is malice in a very trifling story which goes about, and which I should not take any notice of, did I not suspect it to contain some satire upon my brothers of the Natural History Society. It is of a boy who was learning his alphabet. “That letter is A,” said the teacher; “A,” drawled the boy. “That is B,” said the teacher; “B,” drawled the boy, and so on. “That is W,” said the teacher. “The devil!” exclaimed the boy, “is that We?”

The pedantry of literature belongs to the same category. In both cases there is a lie, when the mind, seizing a classification to help it to a sincerer knowledge of the fact, stops in the classification; or learning languages and reading books to the end of a better acquaintance with man, stops in the languages and books: in both the learner seems to be wise, and is not.

The same falsehood, the same confusion of the sympathies because a pretension is not made good, points the perpetual satire against poverty, since, according to Latin poetry and English doggerel, “Poverty does nothing worse

Than to make man ridiculous.”

In this instance the halfness lies in the pretension of the parties to some consideration on account of their condition. If the man is not ashamed of his poverty, there is no joke. The poorest man who stands on his manhood destroys the jest. The poverty of the saint, of the rapt philosopher, of the naked Indian, is not comic. The lie is in the surrender of the man to his appearance; as if a man should neglect himself and treat his shadow on the wall with marks of infinite respect. It affects us oddly, as to see things turned upside down, or to see a man in a high wind run after his hat, which is always droll. The relation of the parties is inverted — hat being for the moment master, the by-standers cheering the hat. The multiplication of artificial wants and expenses in civilized life, and the exaggeration of all trifling forms, present innumerable occasions for this discrepancy to expose itself. Such is the story told of the painter Astley, who, going out of Rome one day with a party for a ramble in the Campagna and the weather proving hot, refused to take off his coat when his companions threw off theirs, but sweltered on; which, exciting remark, his comrades playfully forced off his coat, and behold on the back of his waistcoat a gay cascade was thundering down the rocks with foam and rainbow, very refreshing in so sultry a day; — a picture of his own, with which the poor painter had been fain to repair the shortcomings of his wardrobe. The same astonishment of the intellect at the disappearance of the man out of nature, through some superstition of his house or equipage, as if truth and virtue should be bowed out of creation by the clothes they wore, is the secret of all the fun that circulates concerning eminent fops and fashionists, and, in like manner, of the gay Rameau of Diderot, who believes in nothing but hunger, and that the sole end of art, virtue, and poetry is to put something for mastication between the upper and lower mandibles.

Alike in all these cases and in the instance of cowardice or fear of any sort, from the loss of life to the loss of spoons, the majesty of man is violated. He whom all things should serve, serves some one of his own tools. In fine pictures the head sheds on the limbs the expression of the face. In Raphael's Angel driving Heliodorus from the Temple, the crest of the helmet is so remarkable, that but for the extraordinary energy of the face, it would draw the eye too much; but the countenance of the celestial messenger subordinates it, and we see it not. In poor pictures the limbs and trunk degrade the face. So among the women in the street, you shall see one whose bonnet and dress are one thing, and the lady herself quite another, wearing withal an expression of meek submission to her bonnet and dress; and another whose dress obeys and heightens the expression of her form.

More food for the Comic is afforded whenever the personal appearance, the

face, form, and manners, are subjects of thought with the man himself. No fashion is the best fashion for those matters which will take care of themselves. This is the butt of those jokes of the Paris drawing-rooms, which Napoleon reckoned so formidable, and which are copiously recounted in the French Mémoires. A lady of high rank, but of lean figure, had given the Countess Dulauoy the nickname of "Le Grenadier tricolore," in allusion to her tall figure, as well as to her republican opinions; the Countess retaliated by calling Madame "the Venus of the Père-Lachaise," a compliment to her skeleton which did not fail to circulate. "Lord C.," said the Countess of Gordon, "O, he is a perfect comb, all teeth and back." The Persians have a pleasant story of Tamerlane which relates to the same particulars: "Timur was an ugly man; he had a blind eye and a lame foot. One day when Chodscha was with him, Timur scratched his head, since the hour of the barber was come, and commanded that the barber should be called. Whilst he was shaven, the barber gave him a looking-glass in his hand. Timur saw himself in the mirror and found his face quite too ugly. Therefore he began to weep; Chodscha also set himself to weep, and so they wept for two hours. On this, some courtiers began to comfort Timur, and entertained him with strange stories in order to make him forget all about it. Timur ceased weeping, but Chodscha ceased not, but began now first to weep amain, and in good earnest. At last said Timur to Chodscha, 'Hearken! I have looked in the mirror, and seen myself ugly. Thereat I grieved, because, although I am Caliph, and have also much wealth, and many wives, yet still I am so ugly; therefore have I wept. But thou, why weepest thou without ceasing?' Chodscha answered, 'If thou hast only seen thy face once, and at once seeing hast not been able to contain thyself, but hast wept, what should we do, — we who see thy face every day and night? If we weep not, who should weep? Therefore have I wept.' Timur almost split his sides with laughing."

Politics also furnish the same mark for satire. What is nobler than the expansive sentiment of patriotism, which would find brothers in a whole nation? But when this enthusiasm is perceived to end in the very intelligible maxims of trade, so much for so much, the intellect feels again the half-man. Or what is fitter than that we should espouse and carry a principle against all opposition? But when the men appear who ask our votes as representatives of this ideal, we are sadly out of countenance.

But there is no end to this analysis. We do nothing that is not laughable whenever we quit our spontaneous sentiment. All our plans, managements, houses, poems, if compared with the wisdom and love which man represents, are equally imperfect and ridiculous. But we cannot afford to part with any advantages. We must learn by laughter, as well as by tears and terrors; explore

the whole of nature, the farce and buffoonery in the yard below, as well as the lessons of poets and philosophers upstairs in the hall, and get the rest and refreshment of the shaking of the sides. But the Comic also has its own speedy limits. Mirth quickly becomes intemperate, and the man would soon die of inanition, as some persons have been tickled to death. The same scourge whips the joker and the enjoyer of the joke. When Carlini was convulsing Naples with laughter, a patient waited on a physician in that city, to obtain some remedy for excessive melancholy, which was rapidly consuming his life. The physician endeavored to cheer his spirits, and advised him to go to the theatre and see Carlini. He replied, "I am Carlini."

QUOTATION AND ORIGINALITY.

Whoever looks at the insect world, at flies, aphides, gnats, and innumerable parasites, and even at the infant mammals, must have remarked the extreme content they take in suction, which constitutes the main business of their life. If we go into a library or news-room, we see the same function on a higher plane, performed with like ardor, with equal impatience of interruption, indicating the sweetness of the act. In the highest civilization the book is still the highest delight. He who has once known its satisfactions is provided with a resource against calamity. Like Plato's disciple who has perceived a truth, "he is preserved from harm until another period." In every man's memory, with the hours when life culminated are usually associated certain books which met his views. Of a large and powerful class we might ask with confidence, What is the event they most desire? what gift? What but the book that shall come, which they have sought through all libraries, through all languages, that shall be to their mature eyes what many a tinsel-covered toy pamphlet was to their childhood, and shall speak to the imagination? Our high respect for a well-read man is praise enough of literature. If we encountered a man of rare intellect, we should ask him what books he read. We expect a great man to be a good reader; or in proportion to the spontaneous power should be the assimilating power. And though such are a more difficult and exacting class, they are not less eager. "He that borrows the aid of an equal understanding," said Burke, "doubles his own; he that uses that of a superior elevates his own to the stature of that he contemplates."

We prize books, and they prize them most who are themselves wise. Our debt to tradition through reading and conversation is so massive, our protest or private addition so rare and insignificant, — and this commonly on the ground of other reading or hearing, — that, in a large sense, one would say there is no pure originality. All minds quote. Old and new make the warp and woof of every moment. There is no thread that is not a twist of these two strands. By necessity, by proclivity, and by delight, we all quote. We quote not only books and proverbs, but arts, sciences, religion, customs, and laws; nay, we quote temples and houses, tables and chairs by imitation. The Patent-Office Commissioner knows that all machines in use have been invented and re-invented over and over; that the mariner's compass, the boat, the pendulum, glass, movable types, the kaleidoscope, the railway, the power-loom, etc., have been many times found and lost, from Egypt, China, and Pompeii down; and if we have arts which Rome wanted, so also Rome had arts which we have lost; that the invention of

yesterday of making wood indestructible by means of vapor of coal-oil or paraffine was suggested by the Egyptian method which has preserved its mummy-cases four thousand years.

The highest statement of new philosophy complacently caps itself with some prophetic maxim from the oldest learning. There is something mortifying in this perpetual circle. This extreme economy argues a very small capital of invention. The stream of affection flows broad and strong; the practical activity is a river of supply; but the dearth of design accuses the penury of intellect. How few thoughts! In a hundred years, millions of men and not a hundred lines of poetry, not a theory of philosophy that offers a solution of the great problems, not an art of education that fulfils the conditions. In this delay and vacancy of thought we must make the best amends we can by seeking the wisdom of others to fill the time.

If we confine ourselves to literature, 't is easy to see that the debt is immense to past thought. None escapes it. The originals are not original. There is imitation, model, and suggestion, to the very archangels, if we knew their history. The first book tyrannizes over the second. Read Tasso, and you think of Virgil; read Virgil, and you think of Homer; and Milton forces you to reflect how narrow are the limits of human invention. The "Paradise Lost" had never existed but for these precursors; and if we find in India or Arabia a book out of our horizon of thought and tradition, we are soon taught by new researches in its native country to discover its foregoers, and its latent, but real connection with our own Bibles.

Read in Plato and you shall find Christian dogmas, and not only so, but stumble on our evangelical phrases. Hegel pre-exists in Proclus, and, long before, in Heraclitus and Parmenides. Whoso knows Plutarch, Lucian, Rabelais, Montaigne and Bayle will have a key to many supposed originalities. Rabelais is the source of many a proverb, story, and jest, derived from him into all modern languages; and if we knew Rabelais's reading we should see the rill of the Rabelais river. Swedenborg, Behmen, Spinoza, will appear original to uninstructed and to thoughtless persons: their originality will disappear to such as are either well-read or thoughtful; for scholars will recognize their dogmas as reappearing in men of a similar intellectual elevation throughout history. Albert, the "wonderful doctor," St. Buonaventura, the "seraphic doctor," Thomas Aquinas, the "angelic doctor" of the thirteenth century, whose books made the sufficient culture of these ages, Dante absorbed, and he survives for us. "Renard the Fox," a German poem of the thirteenth century, was long supposed to be the original work, until Grimm found fragments of another original a century older. M. Le Grand showed that in the old Fabliaux were the originals of the tales of

Molière, La Fontaine, Boccaccio, and of Voltaire.

Mythology is no man's work; but, what we daily observe in regard to the *bon-mots* that circulate in society, — that every talker helps a story in repeating it, until, at last, from the slenderest filament of fact a good fable is constructed, — the same growth befalls mythology: the legend is tossed from believer to poet, from poet to believer, everybody adding a grace or dropping a fault or rounding the form, until it gets an ideal truth.

Religious literature, the psalms and liturgies of churches, are of course of this slow growth, — a fagot of selections gathered through ages, leaving the worse and saving the better, until it is at last the work of the whole communion of worshippers. The Bible itself is like an old Cremona; it has been played upon by the devotion of thousands of years until every word and particle is public and tunable. And whatever undue reverence may have been claimed for it by the prestige of philonic inspiration, the stronger tendency we are describing is likely to undo. What divines had assumed as the distinctive revelations of Christianity, theologic criticism has matched by exact parallelisms from the Stoics and poets of Greece and Rome. Later, when Confucius and the Indian scriptures were made known, no claim to monopoly of ethical wisdom could be thought of; and the surprising results of the new researches into the history of Egypt have opened to us the deep debt of the churches of Rome and England to the Egyptian hierology.

The borrowing is often honest enough, and comes of magnanimity and stoutness. A great man quotes bravely, and will not draw on his invention when his memory serves him with a word as good. What he quotes, he fills with his own voice and humor, and the whole cyclopádia of his table-talk is presently believed to be his own. Thirty years ago, when Mr. Webster at the bar or in the Senate filled the eyes and minds of young men, you might often hear cited as Mr. Webster's three rules: first, never to do to-day what he could defer till to-morrow; secondly, never to do himself what he could make another do for him; and, thirdly, never to pay any debt to-day. Well, they are none the worse for being already told, in the last generation, of Sheridan; and we find in Grimm's *Mémoires* that Sheridan got them from the witty D'Argenson; who, no doubt, if we could consult him, could tell of whom he first heard them told. In our own college days we remember hearing other pieces of Mr. Webster's advice to students, — among others, this: that, when he opened a new book, he turned to the table of contents, took a pen, and sketched a sheet of matters and topics, what he knew and what he thought, before he read the book. But we find in Southey's "Commonplace Book" this said of the Earl of Strafford: "I learned one rule of him," says Sir G. Radcliffe, "which I think worthy to be remembered. When he

met with a well-penned oration or tract upon any subject, he framed a speech upon the same argument, inventing and disposing what seemed fit to be said upon that subject, before he read the book; then, reading, compared his own with the author's, and noted his own defects and the author's art and fulness; whereby he drew all that ran in the author more strictly, and might better judge of his own wants to supply them." I remember to have heard Mr. Samuel Rogers, in London, relate, among other anecdotes of the Duke of Wellington, that a lady having expressed in his presence a passionate wish to witness a great victory, he replied: "Madam, there is nothing so dreadful as a great victory, — excepting a great defeat." But this speech is also D'Argenson's, and is reported by Grimm. So the sarcasm attributed to Baron Alderson upon Brougham, "What a wonderful versatile mind has Brougham! he knows politics, Greek, history, science; if he only knew a little of law, he would know a little of everything." You may find the original of this gibe in Grimm, who says that Louis XVI., going out of chapel after hearing a sermon from the Abbé Maury, said, "*Si l'Abbé nous avait parlé un peu de religion, il nous aurait parlé de tout.*" A pleasantry which ran through all the newspapers a few years since, taxing the eccentricities of a gifted family connection in New England, was only a theft of Lady Mary Wortley Montagu's *mot* of a hundred years ago, that "the world was made up of men and women and Herveys."

Many of the historical proverbs have a doubtful paternity. Columbus's egg is claimed for Brunelleschi. Rabelais's dying words, "I am going to see the great Perhaps" (*le grand Peut-être*), only repeats the "IF" inscribed on the portal of the temple at Delphi. Goethe's favorite phrase, "the open secret," translates Aristotle's answer to Alexander, "These books are published and not published." Madame de Staël's "Architecture is frozen music" is borrowed from Goethe's "dumb music," which is Vitruvius's rule, that "the architect must not only understand drawing, but music." Wordsworth's hero acting "on the plan which pleased his childish thought," is Schiller's "Tell him to reverence the dreams of his youth," and earlier, Bacon's "*Consilia juventutis plus divinitatis habent.*"

In romantic literature examples of this vamping abound. The fine verse in the old Scotch ballad of "The Drowned Lovers,"

"Thou art roaring ower loud, Clyde water,
Thy streams are ower strang;
Make me thy wrack when I come back,
But spare me when I gang,"

is a translation of Martial's epigram on Hero and Leander, where the prayer of Leander is the same: —

“Parcite dum propero, mergite dum redeo.”

Hafiz furnished Burns with the song of “John Barleycorn,” and furnished Moore with the original of the piece,

“When in death I shall calm recline

Oh, bear my heart to my mistress dear,” *etc.*

There are many fables which, as they are found in every language, and betray no sign of being borrowed, are said to be agreeable to the human mind. Such are “The Seven Sleepers,” “Gyges’s Ring,” “The Travelling Cloak,” “The Wandering Jew,” “The Pied Piper,” “Jack and his Beanstalk,” the “Lady Diving in the Lake and Rising in the Cave,” — whose omnipresence only indicates how easily a good story crosses all frontiers. The popular incident of Baron Munchausen, who hung his bugle up by the kitchen fire and the frozen tune thawed out, is found in Greece in Plato’s time. Antiphanes, one of Plato’s friends, laughingly compared his writings to a city where the words froze in the air as soon as they were pronounced, and the next summer, when they were warmed and melted by the sun, the people heard what had been spoken in the winter. It is only within this century that England and America discovered that their nursery-tales were old German and Scandinavian stories; and now it appears that they came from India, and are the property of all the nations descended from the Aryan race, and have been warbled and babbled between nurses and children for unknown thousands of years.

If we observe the tenacity with which nations cling to their first types of costume, of architecture, of tools and methods in tillage, and of decoration, — if we learn how old are the patterns of our shawls, the capitals of our columns, the fret, the beads, and other ornaments on our walls, the alternate lotus-bud and leaf-stem of our iron fences, — we shall think very well of the first men, or ill of the latest.

Now shall we say that only the first men were well alive, and the existing generation is invalided and degenerate? Is all literature eavesdropping, and all art Chinese imitation? our life a custom, and our body borrowed, like a beggar’s dinner, from a hundred charities? A more subtle and severe criticism might suggest that some dislocation has befallen the race; that men are off their centre; that multitudes of men do not live with Nature, but behold it as exiles. People go out to look at sunrises and sunsets who do not recognize their own, quietly and happily, but know that it is foreign to them. As they do by books, so they *quote* the sunset and the star, and do not make them theirs. Worse yet, they live as foreigners in the world of truth, and quote thoughts, and thus disown them. Quotation confesses inferiority. In opening a new book we often discover, from the unguarded devotion with which the writer gives his motto or text, all we

have to expect from him. If Lord Bacon appears already in the preface, I go and read the “Instauration” instead of the new book.

The mischief is quickly punished in general and in particular. Admirable mimics have nothing of their own. In every kind of parasite, when Nature has finished an aphid, a teredo, or a vampire bat, — an excellent sucking-pipe to tap another animal, or a mistletoe or dodder among plants, — the self-supplying organs wither and dwindle, as being superfluous. In common prudence there is an early limit to this leaning on an original. In literature, quotation is good only when the writer whom I follow goes my way, and, being better mounted than I, gives me a cast, as we say; but if I like the gay equipage so well as to go out of my road, I had better have gone afoot.

But it is necessary to remember there are certain considerations which go far to qualify a reproach too grave. This vast mental indebtedness has every variety that pecuniary debt has, — every variety of merit. The capitalist of either kind is as hungry to lend as the consumer to borrow; and the transaction no more indicates intellectual turpitude in the borrower than the simple fact of debt involves bankruptcy. On the contrary, in far the greater number of cases the transaction is honorable to both. Can we not help ourselves as discreetly by the force of two in literature? Certainly it only needs two well placed and well tempered for co-operation, to get somewhat far transcending any private enterprise! Shall we converse as spies? Our very abstaining to repeat and credit the fine remark of our friend is thievish. Each man of thought is surrounded by wiser men than he, if they cannot write as well. Cannot he and they combine? Cannot they sink their jealousies in God’s love, and call their poem Beaumont and Fletcher, or the Theban Phalanx’s? The city will for nine days or nine years make differences and sinister comparisons: there is a new and more excellent public that will bless the friends. Nay, it is an inevitable fruit of our social nature. The child quotes his father, and the man quotes his friend. Each man is a hero and an oracle to somebody, and to that person whatever he says has an enhanced value. Whatever we think and say is wonderfully better for our spirits and trust, in another mouth. There is none so eminent and wise but he knows minds whose opinion confirms or qualifies his own, and men of extraordinary genius acquire an almost absolute ascendant over their nearest companions. The Comte de Crillon said one day to M. d’Allonville, with French vivacity, “If the universe and I professed one opinion and M. Necker expressed a contrary one, I should be at once convinced that the universe and I were mistaken.”

Original power is usually accompanied with assimilating power, and we value in Coleridge his excellent knowledge and quotations perhaps as much possibly more, than his original suggestions. If an author give us just distinctions,

inspiring lessons, or imaginative poetry, it is not so important to us whose they are. If we are fired and guided by these, we know him as a benefactor, and shall return to him as long as he serves us so well. We may like well to know what is Plato's and what is Montesquieu's or Goethe's part, and what thought was always dear to the writer himself; but the worth of the sentences consists in their radiancy and equal aptitude to all intelligence. They fit all our facts like a charm. We respect ourselves the more that we know them.

Next to the originator of a good sentence is the first quoter of it. Many will read the book before one thinks of quoting a passage. As soon as he has done this, that line will be quoted east and west. Then there are great ways of borrowing. Genius borrows nobly. When Shakspeare is charged with debts to his authors, Landor replies: "Yet he was more original than his originals. He breathed upon dead bodies and brought them into life." And we must thank Karl Otfried Müller for the just remark, "Poesy, drawing within its circle all that is glorious and inspiring, gave itself but little concern as to where its flowers originally grew." So Voltaire usually imitated, but with such superiority that Dubuc said: "He is like the false Amphitryon; although the stranger, it is always he who has the air of being master of the house." Wordsworth, as soon as he heard a good thing, caught it up, meditated upon it, and very soon reproduced it in his conversation and writing. If De Quincey said, "That is what I told you," he replied, "No: that is mine, — mine, and not yours." On the whole, we like the valor of it. 'T is on Marmontel's principle, "I pounce on what is mine, wherever I find it;" and on Bacon's broader rule, "I take all knowledge to be my province." It betrays the consciousness that truth is the property of no individual, but is the treasure of all men. And inasmuch as any writer has ascended to a just view of man's condition, he has adopted this tone. In so far as the receiver's aim is on life, and not on literature, will be his indifference to the source. The nobler the truth or sentiment, the less imports the question of authorship. It never troubles the simple seeker from whom he derived such or such a sentiment. Whoever expresses to us a just thought makes ridiculous the pains of the critic who should tell him where such a word had been said before. "It is no more according to Plato than according to me." Truth is always present: it only needs to lift the iron lids of the mind's eye to read its oracles. But the moment there is the purpose of display, the fraud is exposed, In fact, it is as difficult to appropriate the thoughts of others, as it is to invent. Always some steep transition, some sudden alteration of temperature, or of point of view, betrays the foreign interpolation.

There is, besides, a new charm in such intellectual works as, passing through long time, have had a multitude of authors and improvers. We admire that poetry

which no man wrote, — no poet less than the genius of humanity itself, — which is to be read in a mythology, in the effect of a fixed or national style of pictures, of sculptures, or drama, or cities, or sciences, on us. Such a poem also is language. Every word in the language has once been used happily. The ear, caught by that felicity, retains it, and it is used again and again, as if the charm belonged to the word and not to the life of thought which so enforced it. These profane uses, of course, kill it, and it is avoided. But a quick wit can at any time reinforce it, and it comes into vogue again. Then people quote so differently: one finding only what is gaudy and popular; another, the heart of the author, the report of his select and happiest hour; and the reader sometimes giving more to the citation than he owes to it. Most of the classical citations you shall hear or read in the current journals or speeches were not drawn from the originals, but from previous quotations in English books; and you can easily pronounce, from the use and relevancy of the sentence, whether it had not done duty many times before, — whether your jewel was got from the mine or from an auctioneer. We are as much informed of a writer's genius by what he selects as by what he originates. We read the quotation with his eyes, and find a new and fervent sense; as a passage from one of the poets, well recited, borrows new interest from the rendering. As the journals say, "the italics are ours." The profit of books is according to the sensibility of the reader. The profoundest thought or passion sleeps as in a mine until an equal mind and heart finds and publishes it. The passages of Shakspeare that we most prize were never quoted until within this century; and Milton's prose, and Burke, even, have their best fame within it. Every one, too, remembers his friends by their favorite poetry or other reading.

Observe also that a writer appears to more advantage in the pages of another book than in his own. In his own he waits as a candidate for your approbation; in another's he is a lawgiver.

Then another's thoughts have a certain advantage with us simply because they are another's. There is an illusion in a new phrase. A man hears a fine sentence out of Swedenborg, and wonders at the wisdom, and is very merry at heart that he has now got so fine a thing. Translate it out of the new words into his own usual phrase, and he will wonder again at his own simplicity, such tricks do fine words play with us.

It is curious what new interest an old author acquires by official canonization in Tiraboschi, or Dr. Johnson, or Von Hammer-Purgstall, or Hallam, or other historian of literature. Their registration of his book, or citation of a passage, carries the sentimental value of a college diploma. Hallam, though never profound, is a fair mind, able to appreciate poetry unless it becomes deep, being always blind and deaf to imaginative and analogy-loving souls, like the

Platonists, like Giordano Bruno, like Donne, Herbert, Crashaw, and Vaughan; and Hallam cites a sentence from Bacon or Sidney, and distinguishes a lyric of Edwards or Vaux, and straightway it commends itself to us as if it had received the Isthmian crown.

It is a familiar expedient of brilliant writers, and not less of witty talkers, the device of ascribing their own sentence to an imaginary person, in order to give it weight, — as Cicero, Cowley, Swift, Landor, and Carlyle have done. And Cardinal de Retz, at a critical moment in the Parliament of Paris, described himself in an extemporaneous Latin sentence, which he pretended to quote from a classic author, and which told admirably well. It is a curious reflex effect of this enhancement of our thought by citing it from another, that many men can write better under a mask than for themselves; as Chatterton in archaic ballad, Le Sage in Spanish costume, Macpherson as “Ossian;” and, I doubt not, many a young barrister in chambers in London, who forges good thunder for the “Times,” but never works as well under his own name. This is a sort of dramatizing talent; as it is not rare to find great powers of recitation, without the least original eloquence, — or people who copy drawings with admirable skill, but are incapable of any design.

In hours of high mental activity we sometimes do the book too much honor, reading out of it better things than the author wrote, — reading, as we say, between the lines. You have had the like experience in conversation: the wit was in what you heard, not in what the speakers said. Our best thought came from others. We heard in their words a deeper sense than the speakers put into them, and could express ourselves in other people’s phrases to finer purpose than they knew. In Moore’s Diary, Mr. Hallam is reported as mentioning at dinner one of his friends who had said, “I don’t know how it is, a thing that falls flat from me seems quite an excellent joke when given at second-hand by Sheridan. I never like my own *bon-mots* until he adopts them.” Dumont was exalted by being used by Mirabeau, by Bentham, and by Sir Philip Francis, who, again, was less than his own “Junius;” and James Hogg (except in his poems “Kilmeny” and “The Witch of Fife”) is but a third-rate author, owing his fame to his effigy colossalized through the lens of John Wilson, — who, again, writes better under the domino of “Christopher North” than in his proper clothes. The bold theory of Delia Bacon, that Shakspeare’s plays were written by a society of wits, — by Sir Walter Raleigh, Lord Bacon, and others around the Earl of Southampton, — had plainly for her the charm of the superior meaning they would acquire when read under this light; this idea of the authorship controlling our appreciation of the works themselves. We once knew a man overjoyed at the notice of his pamphlet in a leading newspaper. What range he gave his imagination! Who could have

written it? Was it not Colonel Carbine, or Senator Tonitrus, or, at the least, Professor Maximilian? Yes, he could detect in the style that fine Roman hand. How it seemed the very voice of the refined and discerning public, inviting merit at last to consent to fame, and come up and take place in the reserved and authentic chairs! He carried the journal with haste to the sympathizing Cousin Matilda, who is so proud of all we do. But what dismay when the good Matilda, pleased with his pleasure, confessed she had written the criticism, and carried it with her own hands to the post-office! “Mr. Wordsworth,” said Charles Lamb, “allow me to introduce to you my only admirer.”

Swedenborg threw a formidable theory into the world, that every soul existed in a society of souls, from which all its thoughts passed into it, as the blood of the mother circulates in her unborn child; and he noticed that, when in his bed, alternately sleeping and waking, — sleeping, he was surrounded by persons disputing and offering opinions on the one side and on the other side of a proposition; waking, the like suggestions occurred for and against the proposition as his own thoughts; sleeping again, he saw and heard the speakers as before: and this as often as he slept or waked. And if we expand the image, does it not look as if we men were thinking and talking out of an enormous antiquity, as if we stood, not in a coterie of prompters that filled a sitting-room, but in a circle of intelligences that reached through all thinkers, poets, inventors, and wits, men and women, English, German, Celt, Aryan, Ninevite, Copt, — back to the first geometer, bard, mason, carpenter, planter, shepherd, — back to the first negro, who, with more health or better perception, gave a shriller sound or name for the thing he saw and dealt with? Our benefactors are as many as the children who invented speech, word by word. Language is a city to the building of which every human being brought a stone; yet he is no more to be credited with the grand result than the aculeph which adds a cell to the coral reef which is the basis of the continent.

q½Ä± åµÖ : all things are in flux. It is inevitable that you are indebted to the past. You are fed and formed by it. The old forest is decomposed for the composition of the new forest. The old animals have given their bodies to the earth to furnish through chemistry the forming race, and every individual is only a momentary fixation of what was yesterday another’s, is to-day his, and will belong to a third to-morrow. So it is in thought. Our knowledge is the amassed thought and experience of innumerable minds: our language, our science, our religion, our opinions, our fancies we inherited. Our country, customs, laws, our ambitions, and our notions of fit and fair, — all these we never made, we found them ready-made; we but quote them. Goethe frankly said, “What would remain to me if this art of appropriation were derogatory to genius? Every one of my

writings has been furnished to me by a thousand different persons, a thousand things: wise and foolish have brought me, without suspecting it, the offering of their thoughts, faculties, and experience. My work is an aggregation of beings taken from the whole of nature; it bears the name of Goethe.”

But there remains the indefeasible persistency of the individual to be himself. One leaf, one blade of grass, one meridian, does not resemble another. Every mind is different; and the more it is unfolded, the more pronounced is that difference. He must draw the elements into him for food, and, if they be granite and silex, will prefer them cooked by sun and rain, by time and art, to his hand. But, however received, these elements pass into the substance of his constitution, will be assimilated, and tend always to form, not a partisan, but a possessor of truth. To all that can be said of the preponderance of the Past, the single word Genius is a sufficient reply. The divine resides in the new. The divine never quotes, but is, and creates. The profound apprehension of the Present is Genius, which makes the Past forgotten. Genius believes its faintest presentiment against the testimony of all history; for it knows that facts are not ultimates, but that a state of mind is the ancestor of everything. And what is Originality? It is being, being one's self, and reporting accurately what we see and are. Genius is in the first instance, sensibility, the capacity of receiving just impressions from the external world, and the power of co-ordinating these after the laws of thought. It implies Will, or original force, for their right distribution and expression. If to this the sentiment of piety be added, if the thinker feels that the thought most strictly his own is not his own, and recognizes the perpetual suggestion of the Supreme Intellect, the oldest thoughts become new and fertile whilst he speaks them.

Originals never lose their value. There is always in them a style and weight of speech, which the immanence of the oracle bestowed, and which cannot be counterfeited. Hence the permanence of the high poets. Plato, Cicero, and Plutarch cite the poets in the manner in which Scripture is quoted in our churches. A phrase or a single word is adduced, with honoring emphasis, from Pindar, Hesiod, or Euripides, as precluding all argument, because thus had they said: importing that the bard spoke not his own, but the words of some god. True poets have always ascended to this lofty platform, and met this expectation. Shakspeare, Milton, Wordsworth, were very conscious of their responsibilities. When a man thinks happily, he finds no foot-track in the field he traverses. All spontaneous thought is irrespective of all else. Pindar uses this haughty defiance, as if it were impossible to find his sources: “There are many swift darts within my quiver, which have a voice for those with understanding; but to the crowd they need interpreters. He is gifted with genius who knoweth much by natural

talent.”

Our pleasure in seeing each mind take the subject to which it has a proper right is seen in mere fitness in time. He that comes second must needs quote him that comes first. The earliest describers of savage life, as Captain Cook’s account of the Society Islands, or Alexander Henry’s travels among our Indian tribes, have a charm of truth and just point of view. Landsmen and sailors freshly come from the most civilized countries, and with no false expectation, no sentimentality yet about wild life, healthily receive and report what they saw, — seeing what they must, and using no choice; and no man suspects the superior merit of the description, until Chateaubriand, or Moore, or Campbell, or Byron, or the artists, arrive, and mix so much art with their picture that the incomparable advantage of the first narrative appears. For the same reason we dislike that the poet should choose an antique or far-fetched subject for his muse, as if he avowed want of insight. The great deal always with the nearest. Only as braveries of too prodigal power can we pardon it, when the life of genius is so redundant that out of petulance it flings its fire into some old mummy, and, lo! it walks and blushes again here in the street.

We cannot overstate our debt to the Past, but the moment has the supreme claim. The Past is for us; but the sole terms on which it can become ours are its subordination to the Present. Only an inventor knows how to borrow, and every man is or should be an inventor. We must not tamper with the organic motion of the soul. ‘T is certain that thought has its own proper motion, and the hints which flash from it, the words overheard at unawares by the free mind, are trustworthy and fertile when obeyed and not perverted to low and selfish account. This vast memory is only raw material. The divine gift is ever the instant life, which receives and uses and creates, and can well bury the old in the omnipotency with which Nature decomposes all her harvest for recomposition.

PROGRESS OF CULTURE.

Address read before the B K Society at Cambridge , July 18, 1867.

We meet to-day under happy omens to our ancient society, to the commonwealth of letters, to the country, and to mankind. No good citizen but shares the wonderful prosperity of the Federal Union. The heart still beats with the public pulse of joy that the country has withstood the rude trial which threatened its existence, and thrills with the vast augmentation of strength which it draws from this proof. The storm which has been resisted is a crown of honor and a pledge of strength to the ship. We may be well contented with our fair inheritance. Was ever such coincidence of advantages in time and place as in America to-day? — the fusion of races and religions; the hungry cry for men which goes up from the wide continent; the answering facility of immigration, permitting every wanderer to choose his climate and government. Men come hither by nations. Science surpasses the old miracles of mythology, to fly with them over the sea, and to send their messages under it. They come from crowded, antiquated kingdoms to the easy sharing of our simple forms. Land without price is offered to the settler, cheap education to his children. The temper of our people delights in this whirl of life. Who would live in the stone age, or the bronze, or the iron, or the lacustrine? Who does not prefer the age of steel, of gold, of coal, petroleum, cotton, steam, electricity, and the spectroscope?

“Prisca juvent alios, ego me nune denique natum Gratulor.”

All this activity has added to the value of life, and to the scope of the intellect. I will not say that American institutions have given a new enlargement to our idea of a finished man, but they have added important features to the sketch.

Observe the marked ethical quality of the innovations urged or adopted. The new claim of woman to a political status is itself an honorable testimony to the civilization which has given her a civil status new in history. Now that by the increased humanity of law she controls her property, she inevitably takes the next step to her share in power. The war gave us the abolition of slavery, the success of the Sanitary Commission and of the Freedmen’s Bureau. Add to these the new scope of social science; the abolition of capital punishment and of imprisonment for debt; the improvement of prisons; the efforts for the suppression of intemperance; the search for just rules affecting labor; the co-operative societies; the insurance of life and limb; the free-trade league; the

improved almshouses; the enlarged scale of charities to relieve local famine, or burned towns, or the suffering Greeks; the incipient series of international congresses; — all, one may say, in a high degree revolutionary, teaching nations the taking of government into their own hands, and superseding kings.

The spirit is new. A silent revolution has impelled, step by step, all this activity. A great many full-blown conceits have burst. The coxcomb goes to the wall. To his astonishment he has found that this country and this age belong to the most liberal persuasion; that the day of ruling by scorn and sneers is past; that good sense is now in power, and *that* resting on a vast constituency of intelligent labor, and, better yet, on perceptions less and less dim of laws the most sublime. Men are now to be astonished by seeing acts of good-nature, common civility, and Christian charity proposed by statesmen, and executed by justices of the peace, — by policemen and the constable. The fop is unable to cut the patriot in the street; nay, he lies at his mercy in the ballot of the club.

Mark, too, the large resources of a statesman, of a socialist, of a scholar, in this age. When classes are exasperated against each other, the peace of the world is always kept by striking a new note. Instantly the units part, and form in a new order, and those who were opposed are now side by side. In this country the prodigious mass of work that must be done has either made new divisions of labor or created new professions. Consider, at this time, what variety of issues, of enterprises public and private, what genius of science, what of administration, what of practical skill, what masters, each in his several province, the railroad, the telegraph, the mines, the inland and marine explorations, the novel and powerful philanthropies, as well as agriculture, the foreign trade and the home trade (whose circuits in this country are as spacious as the foreign), manufactures, the very inventions, all on a national scale too, have evoked! — all implying the appearance of gifted men, the rapid addition to our society of a class of true nobles, by which the self-respect of each town and State is enriched.

Take as a type the boundless freedom here in Massachusetts. People have in all countries been burned and stoned for saying things which are commonplaces at all our breakfast-tables. Every one who was in Italy thirty-five years ago will remember the caution with which his host or guest in any house looked around him, if a political topic were broached. Here the tongue is free, and the hand; and the freedom of action goes to the brink, if not over the brink, of license.

A controlling influence of the times has been the wide and successful study of Natural Science. Steffens said, “The religious opinions of men rest on their views of nature.” Great strides have been made within the present century. Geology, astronomy, chemistry, optics, have yielded grand results. The correlation of forces and the polarization of light have carried us to sublime

generalizations, — have affected an imaginative race like poetic inspirations. We have been taught to tread familiarly on giddy heights of thought, and to wont ourselves to daring conjectures. The narrow sectarian cannot read astronomy with impunity. The creeds of his church shrivel like dried leaves at the door of the observatory, and a new and healthful air regenerates the human mind, and imparts a sympathetic enlargement to its inventions and method. That cosmical west-wind which, meteorologists tell us, constitutes, by the revolution of the globe, the upper current, is alone broad enough to carry to every city and suburb, to the farmer's house, the miner's shanty, and the fisher's boat, the inspirations of this new hope of mankind. Now, if any one say we have had enough of these boastful recitals, then I say, Happy is the land wherein benefits like these have grown trite and commonplace.

We confess that in America everything looks new and recent. Our towns are still rude, the make-shifts of emigrants, and the whole architecture tent-like when compared with the monumental solidity of medieval and primeval remains in Europe and Asia. But geology has effaced these distinctions. Geology, a science of forty or fifty summers, has had the effect to throw an air of novelty and mushroom speed over entire history. The oldest empires, — what we called venerable antiquity, — now that we have true measures of duration, show like creations of yesterday. It is yet quite too early to draw sound conclusions. The old six thousand years of chronology become a kitchen clock, no more a measure of time than an hour-glass or an egg-glass since the duration of geologic periods has come into view. Geology itself is only chemistry with the element of time added; and the rocks of Nahant or the dikes of the White Hills disclose that the world is a crystal, and the soil of the valleys and plains a continual decomposition and recomposition. Nothing is old but the mind.

But I find not only this equality between new and old countries, as seen by the eye of science, but also a certain equivalence of the ages of history; and as the child is in his playthings working incessantly at problems of natural philosophy, working as hard and as successfully as Newton, so it were ignorance not to see that each nation and period has done its full part to make up the result of existing civility. We are all agreed that we have not on the instant better men to show than Plutarch's heroes. The world is always equal to itself. We cannot yet afford to drop Homer, nor Æschylus, nor Plato, nor Aristotle, nor Archimedes. Later, each European nation, after the breaking up of the Roman Empire, had its romantic era, and the productions of that era in each rose to about the same height. Take for an example in literature the *Romance of Arthur*, in Britain, or in the opposite province of Brittany; the *Chanson de Roland*, in France; the *Chronicle of the Cid*, in Spain; the *Nibelungen Lied*, in Germany;

the Norse Sagas, in Scandinavia; and, I may add, the Arabian Nights, on the African coast. But if these works still survive and multiply, what shall we say of names more distant, or hidden through their very superiority to their coevals, — names of men who have left remains that certify a height of genius in their several directions not since surpassed, and which men in proportion to their wisdom still cherish, — as Zoroaster, Confucius, and the grand scriptures, only recently known to Western nations, of the Indian Vedas, the Institutes of Menu, the Puranas, the poems of the Mahabarat and the Ramayana?

In modern Europe, the Middle Ages were called the Dark Ages. Who dares to call them so now? They are seen to be the feet on which we walk, the eyes with which we see. It is one of our triumphs to have reinstated them. Their Dante and Alfred and Wickliffe and Abelard and Bacon; their Magna Charta, decimal numbers, mariner's compass, gunpowder, glass, paper, and clocks; chemistry, algebra, astronomy; their Gothic architecture, their painting, are the delight and tuition of ours. Six hundred years ago Roger Bacon explained the precession of the equinoxes and the necessity of reform in the calendar; looking over how many horizons as far as into Liverpool and New York, he announced that machines can be constructed to drive ships more rapidly than a whole galley of rowers could do, nor would they need anything but a pilot to steer; carriages, to move with incredible speed, without aid of animals; and machines to fly into the air like birds. Even the races that we still call savage or semisavage, and which preserve their arts from immemorial traditions, vindicate their faculty by the skill with which they make their yam-cloths, pipes, bows, boats, and carved war-clubs. The war-proa of the Malays in the Japanese waters struck Commodore Perry by its close resemblance to the yacht "America."

As we find thus a certain equivalence in the ages, there is also an equipollence of individual genius to the nation which it represents. It is a curious fact that a certain enormity of culture makes a man invisible to his contemporaries. It is always hard to go beyond your public. If they are satisfied with cheap performance, you will not easily arrive at better. If they know what is good, and require it, you will aspire and burn until you achieve it. But, from time to time in history, men are born a whole age too soon. The founders of nations, the wise men and inventors who shine afterwards as their gods, were probably martyrs in their own time. All the transcendent writers and artists of the world,— 't is doubtful who they were, they are lifted so fast into mythology; Homer, Menu, Viasa, Dádalus, Hermes, Zoroaster, even Swedenborg and Shakspeare. The early names are too typical, — Homer, or *blind man* ; Menu, or *man* ; Viasa, *compiler* ; Dádalus, *cunning* ; Hermes, *interpreter* ; and so on. Probably the men were so great, so self-fed, that the recognition of them by others was not

necessary to them. And every one has heard the remark (too often, I fear, politely made), that the philosopher was above his audience. I think I have seen two or three great men who, for that reason, were of no account among scholars.

But Jove is in his reserves. The truth, the hope of any time, must always be sought in the minorities. Michel Angelo was the conscience of Italy. We grow free with his name, and find it ornamental now; but in his own days his friends were few; and you would need to hunt him in a conventicle with the Methodists of the era, namely, Savonarola, Vittoria Colonna, Contarini, Pole, Occhino; superior souls, the religious of that day, drawn to each other and under some cloud with the rest of the world; reformers, the radicals of the hour, banded against the corruptions of Rome, and as lonely and as hated as Dante before them.

I find the single mind equipollent to a multitude of minds, say to a nation of minds, as a drop of water balances the sea; and under this view the problem of culture assumes wonderful interest. Culture implies all which gives the mind possession of its own powers; as languages to the critic, telescope to the astronomer. Culture alters the political status of an individual. It raises a rival royalty in a monarchy. 'T is king against king. It is ever the romance of history in all dynasties, — the co-presence of the revolutionary force in intel lect. It creates a personal independence which the monarch cannot look down, and to which he must often succumb. If a man know the laws of nature better than other men, his nation cannot spare him; nor if he know the power of numbers, the secret of geometry, of algebra; on which the computations of astronomy, of navigation, of machinery, rest. If he can converse better than any other, he rules the minds of men wherever he goes; if he has imagination, he intoxicates men. If he has wit, he tempers despotism by epigrams: a song, a satire, a sentence, has played its part in great events. Eloquence a hundred times has turned the scale of war and peace at will. The history of Greece is at one time reduced to two persons, — Philip, or the successor of Philip, on one side, and Demosthenes, a private citizen, on the other. If he has a military genius, like Belisarius, or administrative faculty, like Chatham or Bismarck, he is the king's king. If a theologian of deep convictions and strong understanding carries his country with him, like Luther, the state becomes Lutheran, in spite of the Emperor; as Thomas à Becket overpowered the English Henry. Wit has a great charter. Popes and kings and Councils of Ten are very sharp with their censorships and inquisitions, but it is on dull people. Some Dante or Angelo, Rabelais, Hafiz, Cervantes, Erasmus, Béranger, Bettine von Arnim, or whatever genuine wit of the old inimitable class, is always allowed. Kings feel that this is that which they themselves represent; this is no redkerchiefed, red-shirted rebel, but loyalty,

kingship. This is real kingship, and their own only titular. Even manners are a distinction which, we sometimes see, are not to be overborne by rank or official power, or even by other eminent talents, since they too proceed from a certain deep innate perception of fit and fair.

It is too plain that a cultivated laborer is worth many untaught laborers; that a scientific engineer, with instruments and steam, is worth many hundred men, many thousands; that Archimedes or Napoleon is worth for labor a thousand thousands, and that in every wise and genial soul we have England, Greece, Italy, walking, and can dispense with populations of *navvies* .

Literary history and all history is a record of the power of minorities, and of minorities of one. Every book is written with a constant secret reference to the few intelligent persons whom the writer believes to exist in the million. The artist has always the masters in his eye, though he affect to flout them. Michel Angelo is thinking of Da Vinci, and Raffaele is thinking of Michel Angelo. Tennyson would give his fame for a verdict in his favor from Wordsworth. Agassiz and Owen and Huxley affect to address the American and English people, but are really writing to each other. Everett dreamed of Webster. McKay, the shipbuilder, thinks of George Steers; and Steers, of Pook, the naval constructor. The names of the masters at the head of each department of science, art, or function are often little known to the world, but are always known to the adepts; as Robert Brown in botany, and Gauss in mathematics. Often the master is a hidden man, but not to the true student; invisible to all the rest, resplendent to him. All his own work and culture form the eye to see the master. In politics, mark the importance of minorities of one, as of Phocion, Cato, Lafayette, Arago. The importance of the one person who has the truth over nations who have it not, is because power obeys reality, and not appearance; according to quality, and not quantity. How much more are men than nations! the wise and good souls, the stoics in Greece and Rome, Socrates in Athens, the saints in Judea, Alfred the king, Shakspeare the poet, Newton the philosopher, the perceiver and obeyer of truth, — than the foolish and sensual millions around them! So that, wherever a true man appears, everything usually reckoned great dwarfs itself; he is the only great event, and it is easy to lift him into a mythological personage.

Then the next step in the series is the equivalence of the soul to nature. I said that one of the distinctions of our century has been the devotion of cultivated men to natural science. The benefits thence derived to the arts and to civilization are signal and immense. They are felt in navigation, in agriculture, in manufactures, in astronomy, in mining, and in war. But over all their utilities, I must hold their chief value to be metaphysical. The chief value is not the useful powers he obtained, but the test it has been of the scholar. He has accosted this

immeasurable nature, and got clear answers. He understood what he read. He found agreement with himself. It taught him anew the reach of the human mind, and that it was citizen of the universe.

The first quality we know in matter is centrality, — we call it gravity, — which holds the universe together, which remains pure and indestructible in each mote as in masses and planets, and from each atom rays out illimitable influence. To this material essence answers Truth, in the intellectual world, — Truth, whose centre is everywhere and its circumference nowhere, whose existence we cannot disimagine; the soundness and health of things, against which no blow can be struck but it recoils on the striker; Truth, on whose side we always heartily are. And the first measure of a mind is its centrality, its capacity of truth, and its adhesion to it.

When the correlation of the sciences was announced by Oersted and his colleagues, it was no surprise; we were found already prepared for it. The fact stated accorded with the auguries or divinations of the human mind. Thus, if we should analyze Newton's discovery, we should say that if it had not been anticipated by him, it would not have been found. We are told that in posting his books, after the French had measured on the earth a degree of the meridian, when he saw that his theoretic results were approximating that empirical one, his hand shook, the figures danced, and he was so agitated that he was forced to call in an assistant to finish the computation. Why agitated? — but because, when he saw, in the fall of an apple to the ground, the fall of the earth to the sun, of the sun and of all suns to the centre, that perception was accompanied by the spasm of delight by which the intellect greets a fact more immense still, a fact really universal, — holding in intellect as in matter, in morals as in intellect, — that atom draws to atom throughout nature, and truth to truth throughout spirit? His law was only a particular of the more universal law of centrality. Every law in nature, as gravity, centripetence, repulsion, polarity, undulation, has a counterpart in the intellect. The laws above are sisters of the laws below. Shall we study the mathematics of the sphere, and not its causal essence also? Nature is a fable whose moral blazes through it. There is no use in Copernicus if the robust periodicity of the solar system does not show its equal perfection in the mental sphere, the periodicity, the compensatory errors, the grand reactions. I shall never believe that centrifugence and centripetence balance, unless mind heats and meliorates, as well as the surface and soil of the globe.

On this power, this all-dissolving unity, the emphasis of heaven and earth is laid. Nature is brute but as this soul quickens it; Nature, always the effect, mind the flowing cause. Nature, we find, is ever as is our sensibility; it is hostile to ignorance, — plastic, transparent, delightful, to knowledge. Mind carries the

law; history is the slow and atomic unfolding. All things admit of this extended sense, and the universe at last is only prophetic, or, shall we say, symptomatic, of vaster interpretation and results. Nature is an enormous system, but in mass and in particle curiously available to the humblest need of the little creature that walks on the earth! The immeasurableness of Nature is not more astounding than his power to gather all her omnipotence into a manageable rod or wedge, bringing it to a hair-point for the eye and hand of the philosopher.

Here stretches out of sight, out of conception even, this vast Nature, daunting, bewildering, but all penetrable, all self-similar; an unbroken unity, and the mind of man is a key to the whole. He finds that the universe, as Newton said, was “made at one cast;” the mass is like the atom, — the same chemistry, gravity and conditions. The asteroids are the chips of an old star, and a meteoric stone is a chip of an asteroid. As language is in the alphabet, so is entire Nature, the play of all its laws, in one atom. The good wit finds the law from a single observation, — the law, and its limitations, and its correspondences, — as the farmer finds his cattle by a footprint. “State the sun, and you state the planets, and conversely.”

Whilst its power is offered to his hand, its laws to his science, not less its beauty speaks to his taste, imagination, and sentiment. Nature is sanative, refining, elevating. How cunningly she hides every wrinkle of her inconceivable antiquity under roses and violets and morning dew! Every inch of the mountains is scarred by unimaginable convulsions, yet the new day is purple with the bloom of youth and love. Look out into the July night and see the broad belt of silver flame which flashes up the half of heaven, fresh and delicate as the bonfires of the meadow-flies. Yet the powers of numbers cannot compute its enormous age, lasting as space and time, embosomed in time and space. And time and space, — what are they? Our first problems, which we ponder all our lives through, and leave where we found them; whose outrunning immensity, the old Greeks believed, astonished the gods themselves; of whose dizzy vastitudes all the worlds of God are a mere dot on the margin; impossible to deny, impossible to believe. Yet the moral element in man counterpoises this dismaying immensity and bereaves it of terror. The highest flight to which the muse of Horace ascended was in that triplet of lines in which he described the souls which can calmly confront the sublimity of Nature: —

“Hunc solem, et stellas, et decedentia certis
Tempora momentis, sunt qui formidine nulla
Imbuti spectant.”

The sublime point of experience is the value of a sufficient man. Cube this value by the meeting of two such, of two or more such, who understand and

support each other, and you have organized victory. At any time, it only needs the contemporaneous appearance of a few superior and attractive men to give a new and noble turn to the public mind.

The benefactors we have indicated were exceptional men, and great because exceptional. The question which the present age urges with increasing emphasis, day by day, is, whether the high qualities which distinguished them can be imparted. The poet Wordsworth asked, "What one is, why may not millions be?" Why not? Knowledge exists to be imparted. Curiosity is lying in wait for every secret. The inquisitiveness of the child to hear runs to meet the eagerness of the parent to explain. The air does not rush to fill a vacuum with such speed as the mind to catch the expected fact. Every artist was first an amateur. The ear outgrows the tongue, is sooner ripe and perfect; but the tongue is always learning to say what the ear has taught it, and the hand obeys the same lesson.

There is anything but humiliation in the homage men pay to a great man; it is sympathy, love of the same things, effort to reach them, — the expression of their hope of what they shall become when the obstructions of their malformation and maleducation shall be trained away. Great men shall not impoverish, but enrich us. Great men, — the age goes on their credit; but all the rest, when their wires are continued and not cut, can do as signal things, and in new parts of nature. "No angel in his heart acknowledges any one superior to himself but the Lord alone." There is not a person here present to whom omens that should astonish have not predicted his future, have not uncovered his past. The dreams of the night supplement by their divination the imperfect experiments of the day. Every soliciting instinct is only a hint of a coming fact, as the air and water that hang invisibly around us hasten to become solid in the oak and the animal. But the recurrence to high sources is rare. In our daily intercourse, we go with the crowd, lend ourselves to low fears and hopes, become the victims of our own arts and implements, and disuse our resort to the Divine oracle. It is only in the sleep of the soul that we help ourselves by so many ingenious crutches and machineries. What is the use of telegraphs? What of newspapers? To know in each social crisis how men feel in Kansas, in California, the wise man waits for no mails, reads no telegrams. He asks his own heart. If they are made as he is, if they breathe the like air, eat of the same wheat, have wives and children, he knows that their joy or resentment rises to the same point as his own. The inviolate soul is in perpetual telegraphic communication with the Source of events, has earlier information, a private despatch, which relieves him of the terror which presses on the rest of the community.

The foundation of culture, as of character, is at last the moral sentiment. This is the fountain of power, preserves its eternal newness, draws its own rent out of

every novelty in science. Science corrects the old creeds; sweeps away, with every new perception, our infantile catechisms, and necessitates a faith commensurate with the grander orbits and universal laws which it discloses. Yet it does not surprise the moral sentiment. That was older, and awaited expectant these larger insights.

The affections are the wings by which the intellect launches on the void, and is borne across it. Great love is the inventor and expander of the frozen powers, the feathers frozen to our sides. It was the conviction of Plato, of Van Helmont, of Pascal, of Swedenborg, that piety is an essential condition of science, that great thoughts come from the heart. It happens sometimes that poets do not believe their own poetry; they are so much the less poets. But great men are sincere. Great men are they who see that spiritual is stronger than any material force, that thoughts rule the world. No hope so bright but is the beginning of its own fulfilment. Every generalization shows the way to a larger. Men say, Ah! if a man could impart his talent, instead of his performance, what mountains of guineas would be paid! Yes, but in the measure of his absolute veracity he does impart it. When he does not play a part, does not wish to shine, — when he talks to men with the unrestrained frankness which children use with each other, he communicates himself, and not his vanity. All vigor is contagious, and when we see creation we also begin to create. Depth of character, height of genius, can only find nourishment in this soil. The miracles of genius always rest on profound convictions which refuse to be analyzed. Enthusiasm is the leaping lightning, not to be measured by the horse-power of the understanding. Hope never spreads her golden wings but on unfathomable seas. The same law holds for the intellect as for the will. When the will is absolutely surrendered to the moral sentiment, that is virtue; when the wit is surrendered to intellectual truth, that is genius. Talent for talent's sake is a bauble and a show. Talent working with joy in the cause of universal truth lifts the possessor to new power as a benefactor. I know well to what assembly of educated, reflecting, successful and powerful persons I speak. Yours is the part of those who have received much. It is an old legend of just men, *Noblesse oblige*; or, superior advantages bind you to larger generosity. Now I conceive that, in this economical world, where every drop and every crumb is husbanded, the transcendent powers of mind were not meant to be misused. The Divine Nature carries on its administration by good men. Here you are set down, scholars and idealists, as in a barbarous age; amidst insanity, to calm and guide it; amidst fools and blind, to see the right done; among violent proprietors, to check self-interest, stone-blind and stone-deaf, by considerations of humanity to the workman and to his child; amongst angry politicians swelling with self-esteem, pledged to parties, pledged to clients, you

are to make valid the large considerations of equity and good sense; under bad governments to force on them, by your persistence, good laws. Around that immovable persistency of yours, statesmen, legislatures, must revolve, denying you, but not less forced to obey.

We wish to put the ideal rules into practice, to offer liberty instead of chains, and see whether liberty will not disclose its proper checks; believing that a free press will prove safer than the censorship; to ordain free trade, and believe that it will not bankrupt us; universal suffrage, believing that it will not carry us to mobs, or back to kings again. I believe that the checks are as sure as the springs. It is thereby that men are great and have great allies. And who are the allies? Rude opposition, apathy, slander, — even these. Difficulties exist to be surmounted. The great heart will no more complain of the obstructions that make success hard, than of the iron walls of the gun which hinder the shot from scattering. It was walled round with iron tube with that purpose, to give it irresistible force in one direction. A strenuous soul hates cheap successes. It is the ardor of the assailant that makes the vigor of the defender. The great are not tender at being obscure, despised, insulted. Such only feel themselves in adverse fortune. Strong men greet war, tempest, hard times, which search till they find resistance and bottom. They wish, as Pindar said, “to tread the floors of hell, with necessities as hard as iron.” Periodicity, reaction, are laws of mind as well as of matter. Bad kings and governors help us, if only they are bad enough. In England, it was the game laws which exasperated the farmers to carry the Reform Bill. It was what we call *plantation manners* which drove peaceable forgiving New England to emancipation without phrase. In the Rebellion, who were our best allies? Always the enemy. The community of scholars do not know their own power, and dishearten each other by tolerating political baseness in their members. Now nobody doubts the power of manners, or that wherever high society exists it is very well able to exclude pretenders. The intruder finds himself uncomfortable, and quickly departs to his own gang.

It has been our misfortune that the politics of America have been often immoral. It has had the worst effect on character. We are a complaisant, forgiving people, presuming, perhaps, on a feeling of strength. But it is not by easy virtue, where the public is concerned, that heroic results are obtained. We have suffered our young men of ambition to play the game of politics and take the immoral side without loss of caste, — to come and go without rebuke. But that kind of loose association does not leave a man his own master. He cannot go from the good to the evil at pleasure, and then back again to the good. There is a text in Swedenborg which tells in figure the plain truth. He saw in vision the angels and the devils; but these two companies stood not face to face and hand in

hand, but foot to foot, — these perpendicular up, and those perpendicular down.

Brothers, I draw new hope from the atmosphere we breathe to-day, from the healthy sentiment of the American people, and from the avowed aims and tendencies of the educated class. The age has new convictions. We know that in certain historic periods there have been times of negation, — a decay of thought, and a consequent national decline; that in France, at one time, there was almost a repudiation of the moral sentiment in what is called, by distinction, society, — not a believer within the Church, and almost not a theist out of it. In England the like spiritual disease affected the upper class in the time of Charles II., and down into the reign of the Georges. But it honorably distinguishes the educated class here, that they believe in the succor which the heart yields to the intellect, and draw greatness from its inspirations. And when I say the educated class, I know what a benignant breadth that word has, — new in the world, — reaching millions instead of hundreds. And more, when I look around me, and consider the sound material of which the cultivated class here is made up, — what high personal worth, what love of men, what hope, is joined with rich information and practical power, and that the most distinguished by genius and culture are in this class of benefactors, — I cannot distrust this great knighthood of virtue, or doubt that the interests of science, of letters, of politics and humanity, are safe. I think their hands are strong enough to hold up the Republic. I read the promise of better times and of greater men.

PERSIAN POETRY

To Baron von Hammer Purgstall, who died in Vienna in 1856, we owe our best knowledge of the Persians. He has translated into German, besides the "Divan" of Hafiz, specimens of two hundred poets who wrote during a period of five and a half centuries, from A.D. 1050 to 1600. The seven masters of the Persian Parnassus — Firdusi, Enweri, Nisami, Jelaledin, Saadi, Hafiz, and Jami — have ceased to be empty names; and others, like Ferideddin Attar and Omar Khayyam, promise to rise in Western estimation. That for which mainly books exist is communicated in these rich extracts. Many qualities go to make a good telescope, — as the largeness of the field, facility of sweeping the meridian, achromatic purity of lenses, and so forth; but the one eminent value is the space-penetrating power; and there are many virtues in books, but the essential value is the adding of knowledge to our stock by the record of new facts, and, better, by the record of intuitions which distribute facts, and are the formulas which supersede all histories.

Oriental life and society, especially in the Southern nations, stand in violent contrast with the multitudinous detail, the secular stability, and the vast average of comfort of the Western nations. Life in the East is fierce, short, hazardous, and in extremes. Its elements are few and simple, not exhibiting the long range and undulation of European existence, but rapidly reaching the best and the worst. The rich feed on fruits and game, — the poor, on a watermelon's peel. All or nothing is the genius of Oriental life. Favor of the Sultan, or his displeasure, is a question of Fate. A war is undertaken for an epigram or a distich, as in Europe for a duchy. The prolific sun and the sudden and rank plenty which his heat engenders, make subsistence easy. On the other side, the desert, the simoon, the mirage, the lion and the plague endanger it, and life hangs on the contingency of a skin of water more or less. The very geography of old Persia showed these contrasts. "My father's empire," said Cyrus to Xenophon, "is so large that people perish with cold at one extremity whilst they are suffocated with heat at the other." The temperament of the people agrees with this life in extremes. Religion and poetry are all their civilization. The religion teaches an inexorable Destiny. It distinguishes only two days in each man's history, — his birthday, called *the Day of the Lot*, and the Day of Judgment. Courage and absolute submission to what is appointed him are his virtues.

The favor of the climate, making subsistence easy and encouraging an outdoor life, allows to the Eastern nations a highly intellectual organization, — leaving out of view, at present, the genius of the Hindoos (more Oriental in

every sense), whom no people have surpassed in the grandeur of their ethical statement. The Persians and the Arabs, with great leisure and few books, are exquisitely sensible to the pleasures of poetry. Layard has given some details of the effect which the *improv-visatori* produced on the children of the desert. "When the bard improvised an amatory ditty, the young chief's excitement was almost beyond control. The other Bedouins were scarcely less moved by these rude measures, which have the same kind of effect on the wild tribes of the Persian mountains. Such verses, chanted by their self-taught poets or by the girls of their encampment, will drive warriors to the combat, fearless of death, or prove an ample reward on their return from the dangers of the *ghazon*, or the fight. The excitement they produce exceeds that of the grape. He who would understand the influence of the Homeric ballads in the heroic ages should witness the effect which similar compositions have upon the wild nomads of the East." Elsewhere he adds, "Poetry and flowers are the wine and spirits of the Arab; a couplet is equal to a bottle, and a rose to a dram, without the evil effect of either."

The Persian poetry rests on a mythology whose few legends are connected with the Jewish history and the anterior traditions of the Pentateuch. The principal figure in the allusions of Eastern poetry is Solomon. Solomon had three talismans: first, the signet-ring by which he commanded the spirits, on the stone of which was engraven the name of God; second, the glass in which he saw the secrets of his enemies and the causes of all things, figured; the third, the east-wind, which was his horse. His counsellor was Simorg, king of birds, the all-wise fowl who had lived ever since the beginning of the world, and now lives alone on the highest summit of Mount Kaf. No fowler has taken him, and none now living has seen him. By him Solomon was taught the language of birds, so that he heard secrets whenever he went into his gardens. When Solomon travelled, his throne was placed on a carpet of green silk, of a length and breadth sufficient for all his army to stand upon, — men placing themselves on his right hand, and the spirits on his left. When all were in order, the east-wind, at his command, took up the carpet and transported it with all that were upon it, whither he pleased, — the army of birds at the same time flying overhead and forming a canopy to shade them from the sun. It is related that when the Queen of Sheba came to visit Solomon, he had built, against her arrival, a palace, of which the floor or pavement was of glass, laid over running water, in which fish were swimming. The Queen of Sheba was deceived thereby, and raised her robes, thinking she was to pass through the water. On the occasion of Solomon's marriage, all the beasts, laden with presents, appeared before his throne. Behind them all came the ant, with a blade of grass: Solomon did not despise the gift of

the ant. Asaph, the vizier, at a certain time, lost the seal of Solomon, which one of the Dews or evil spirits found, and, governing in the name of Solomon, deceived the people.

Firdusi, the Persian Homer, has written in the *Shah Nameh* the annals of the fabulous and heroic kings of the country: of Karun (the Persian Cræsus), the immeasurably rich gold-maker, who, with all his treasures, lies buried not far from the Pyramids, in the sea which bears his name; of Jamschid, the binder of demons, whose reign lasted seven hundred years; of Kai Kaus, in whose palace, built by demons on Alburz, gold and silver and precious stones were used so lavishly that in the brilliancy produced by their combined effect, night and day appeared the same; of Afrasiyab, strong as an elephant, whose shadow extended for miles, whose heart was bounteous as the ocean and his hands like the clouds when rain falls to gladden the earth. The crocodile in the rolling stream had no safety from Afrasiyab. Yet when he came to fight against the generals of Kaus, he was but an insect in the grasp of Rustem, who seized him by the girdle and dragged him from his horse. Rustem felt such anger at the arrogance of the King of Mazinderan that every hair on his body started up like a spear. The gripe of his hand cracked the sinews of an enemy.

These legends, with Chiser, the fountain of life, Tuba, the tree of life; the romances of the loves of Leila and Medschnun, of Chosru and Schirin, and those of the nightingale for the rose; pearl-diving, and the virtues of gems; the cohol, a cosmetic by which pearls and eyebrows are indelibly stained black, the bladder in which musk is brought, the down of the lip, the mole on the cheek, the eyelash; lilies, roses, tulips, and jasmines, — make the staple imagery of Persian odes.

The Persians have epics and tales, but, for the most part, they affect short poems and epigrams. Gnostic verses, rules of life conveyed in a lively image, especially in an image addressed to the eye and contained in a single stanza, were always current in the East; and if the poem is long, it is only a string of unconnected verses. They use an incon-secutiveness quite alarming to Western logic, and the connection between the stanzas of their longer odes is much like that between the refrain of our old English ballads, — “The sun shines fair on Carlisle wall,”

or

“The rain it raineth every day,” —
and the main story.

Take, as specimens of these gnostic verses, the following: — “The secret that should not be blown

Not one of thy nation must know;

You may padlock the gate of a town,
But never the mouth of a foe:”
or this of Omar Khayyam: —

“On earth’s wide thoroughfares below
Two only men contented go:
Who knows what’s right and what’s forbid,
And he from whom is knowledge hid.”

Here is a poem on a melon, by Adsched of Meru: —

“Color, taste, and smell, smaragdus, sugar, and musk, Amber for the tongue,
for the eye a picture rare,

If you cut the fruit in slices, every slice a crescent fair, If you leave it whole,
the full harvest moon is there.”

Hafiz is the prince of Persian poets, and in his extraordinary gifts adds to some of the attributes of Pindar, Anacreon, Horace and Burns, the insight of a mystic, that sometimes affords a deeper glance at Nature than belongs to either of these bards. He accosts all topics with an easy audacity. “He only,” he says, “is fit for company, who knows how to prize earthly happiness at the value of a nightcap. Our father Adam sold Paradise for two kernels of wheat; then blame me not, if I hold it dear at one grapestone.” He says to the Shah, “Thou who rulest after words and thoughts which no ear has heard and no mind has thought, abide firm until thy young destiny tears off his blue coat from the old graybeard of the sky.” He says, — “I batter the wheel of heaven

When it rolls not rightly by;
I am not one of the snivellers
Who fall thereon and die.”

The rapidity of his turns is always surprising us: — “See how the roses burn!
Bring wine to quench the fire!
Alas! the flames come up with us,
We perish with desire.”

After the manner of his nation, he abounds in pregnant sentences which might be engraved on a sword-blade and almost on a ring.

“In honor dies he to whom the great seems ever wonderful.”

“Here is the sum, that, when one door opens, another shuts.”

“On every side is an ambush laid by the robber-troops of circumstance; hence it is that the horseman of life urges on his courser at headlong speed.”

“The earth is a host who murders his guests.”

“Good is what goes on the road of Nature. On the straight way the traveller never misses.”

“Alas! till now I had not known My guide and Fortune’s guide are one.”

“The understanding’s copper coin Counts not with the gold of love.”

“’Tis writ on Paradise’s gate, ‘Woe to the dupe that yields to Fate!’”

“The world is a bride superbly dressed; — Who weds her for dowry must pay his soul.”

“Loose the knots of the heart; never think on thy fate: No Euclid has yet disentangled that snarl.”

“There resides in the grieving A poison to kill; Beware to go near them ‘T is pestilent still.”

Harems and wine-shops only give him a new ground of observation, whence to draw sometimes a deeper moral than regulated sober life affords, and this is foreseen: — “I will be drunk and down with wine;

Treasures we find in a ruined house.”

Riot, he thinks, can snatch from the deeply hidden lot the veil that covers it: — “To be wise the dull brain so earnestly throbs, Bring bands of wine for the stupid head.”

“The Builder of heaven Hath sundered the earth, So that no footway Leads out of it forth.

“On turnpikes of wonder Wine leads the mind forth, “Straight, sidewise, and upward, West, southward, and north.

“Stands the vault adamantine Until the Doomsday; The wine-cup shall ferry Thee o’er it away.”

That hardihood and self-equality of every sound nature, which result from the feeling that the spirit in him is entire and as good as the world, which entitle the poet to speak with authority, and make him an object of interest and his every phrase and syllable significant, are in Hafiz, and abundantly fortify and ennoble his tone.

His was the fluent mind in which every thought and feeling came readily to the lips. “Loose the knots of the heart,” he says. We absorb elements enough, but have not leaves and lungs for healthy perspiration and growth. An air of sterility, of incompetence to their proper aims, belongs to many who have both experience and wisdom. But a large utterance, a river that makes its own shores, quick perception and corresponding expression, a constitution to which every morrow is a new day, which is equal to the needs of life, at once tender and bold, with great arteries, — this generosity of ebb and flow satisfies, and we should be willing to die when our time comes, having had our swing and gratification. The difference is not so much in the quality of men’s thoughts as in the power of

uttering them. What is pent and smouldered in the dumb actor, is not pent in the poet, but passes over into new form, at once relief and creation.

The other merit of Hafiz is his intellectual liberty, which is a certificate of profound thought. We accept the religions and politics into which we fall, and it is only a few delicate spirits who are sufficient to see that the whole web of convention is the imbecility of those whom it entangles, — that the mind suffers no religion and no empire but its own. It indicates this respect to absolute truth by the use it makes of the symbols that are most stable and reverend, and therefore is always provoking the accusation of irreligion.

Hypocrisy is the perpetual butt of his arrows:

“Let us draw the cowl through the brook of wine.”

He tells his mistress that not the dervish, or the monk, but the lover, has in his heart the spirit which makes the ascetic and the saint; and certainly not their cowls and mummeries but her glances can impart to him the fire and virtue needful for such self-denial. Wrong shall not be wrong to Hafiz for the name's sake. A law or statute is to him what a fence is to a nimble school-boy, — a temptation for a jump. “We would do nothing but good, else would shame come to us on the day when the soul must hie hence; and should they then deny us Paradise, the Houris themselves would forsake that and come out to us.”

His complete intellectual emancipation he communicates to the reader. There is no example of such facility of allusion, such use of all materials. Nothing is too high, nothing too low for his occasion. He fears nothing, he stops for nothing. Love is a leveller, and Allah becomes a groom, and heaven a closet, in his daring hymns to his mistress or to his cupbearer. This boundless charter is the right of genius.

We do not wish to strew sugar on bottled spiders, or try to make mystical divinity out of the Song of Solomon, much less out of the erotic and bacchanalian songs of Hafiz. Hafiz himself is determined to defy all such hypocritical interpretation, and tears off his turban and throws it at the head of the meddling dervish, and throws his glass after the turban. But the love or the wine of Hafiz is not to be confounded with vulgar debauch. It is the spirit in which the song is written that imports, and not the topics. Hafiz praises wine, roses, maidens, boys, birds, mornings, and music, to give vent to his immense hilarity and sympathy with every form of beauty and joy; and lays the emphasis on these to mark his scorn of sanctimony and base prudence. These are the natural topics and language of his wit and perception. But it is the play of wit and the joy of song that he loves; and if you mistake him for a low rioter, he turns short on you with verses which express the poverty of sensual joys, and to ejaculate with equal fire the most unpalatable affirmations of heroic sentiment

assertion, always gracefully, sometimes almost in the fun of Falstaff, sometimes with feminine delicacy. He tells us, "The angels in heaven were lately learning his last pieces." He says, "The fishes shed their pearls, out of desire and longing as soon as the ship of Hafiz swims the deep."

"Out of the East, and out of the West, no man understands me; O, the happier I, who confide to none but the wind!

This morning heard I how the lyre of the stars resounded, 'Sweeter tones have we heard from Hafiz!'"

Again, —

"I heard the harp of the planet Venus, and it said in the early morning, 'I am the disciple of the sweet voiced Hafiz!'"

And again, —

"When Hafiz sings, the angels hearken, and Anaitis, the leader of the starry host, calls even the Messiah in heaven out to the dance."

"No one has unveiled thoughts like Hafiz, since the locks of the World-bride were first curled."

"Only he despises the verse of Hafiz who is not himself by nature noble."

But we must try to give some of these poetic flourishes the metrical form which they seem to require: — "Fit for the Pleiads' azure chord

The songs I sung, the pearls I bored."

Another: —

"I have no hoarded treasure,
Yet have I rich content;
The first from Allah to the Shah,
The last to Hafiz went."

Another: —

"High heart, O Hafiz! though not thine
Fine gold and silver ore;
More worth to thee the gift of song,
And the clear insight more."

Again: —

"O Hafiz! speak not of thy need;
Are not these verses thine?
Then all the poets are agreed,
No man can less repine."

He asserts his dignity as bard and inspired man of his people. To the vizier

returning from Mecca he says, — *“Boast not rashly, prince of pilgrims, of thy fortune. Thou hast indeed seen the temple; but I, the Lord of the temple. Nor has any man inhaled from the musk-bladder of the merchant or from the musky morning-wind that sweet air which I am permitted to breathe every hour of the day.”*

And with still more vigor in the following lines: — “Oft have I said, I say it once more,

I, a wanderer, do not stray from myself.

I am a kind of parrot; the mirror is holden to me; What the Eternal says, I stammering say again.

Give me what you will; I eat thistles as roses,

And according to my food I grow and I give.

Scorn me not, but know I have the pearl,

And am only seeking one to receive it.”

And his claim has been admitted from the first. The muleteers and camel-drivers, on their way through the desert, sing snatches of his songs, not so much for the thought as for their joyful temper and tone; and the cultivated Persians know his poems by heart. Yet Hafiz does not appear to have set any great value on his songs, since his scholars collected them for the first time after his death.

In the following poem the soul is figured as the Phœnix alighting on Tuba, the Tree of Life: — “My phœnix long ago secured His nest in the sky-vault’s cope; In the body’s cage immured, He was weary of life’s hope.

“Round and round this heap of ashes Now flies the bird amain, But in that odorous niche of heaven Nestles the bird again.

“Once flies he upward, he will perch On Tuba’s golden bough; His home is on that fruited arch Which cools the blest below.

“If over this world of ours His wings my phœnix spread, How gracious falls on land and sea The soul-refreshing shade!

“Either world inhabits he, Sees oft below him planets roll; His body is all of air compact, Of Allah’s love his soul.”

Here is an ode which is said to be a favorite with all educated Persians: — “Come! — the palace of heaven rests on aery pillars, — Come, and bring me wine; our days are wind.

I declare myself the slave of that masculine soul

Which ties and alliance on earth once forever renounces.

Told I thee yester-morn how the Iris of heaven

Brought to me in my cup a gospel of joy?

O high-flying falcon! the Tree of Life is thy perch; This nook of grief fits thee ill for a nest.

Hearken! they call to thee down from the ramparts of heaven; I cannot divine what holds thee here in a net.

I, too, have a counsel for thee; O, mark it and keep it, Since I received the same from the Master above:

Seek not for faith or for truth in a world of light-minded girls; A thousand suitors reckons this dangerous bride.

Cumber thee not for the world, and this my precept forget not, 'Tis but a toy that a vagabond sweetheart has left us.

Accept whatever befalls; uncover thy brow from thy locks; Never to me nor to thee was option imparted;

Neither endurance nor truth belongs to the laugh of the rose.

The loving nightingale mourns; — cause enow for mourning; — Why envies the bird the streaming verses of Hafiz?

Know that a god bestowed on him eloquent speech.”

The cedar, the cypress, the palm, the olive and fig-tree, the birds that inhabit them, and the garden flowers, are never wanting in these musky verses, and are always named with effect. “The willows,” he says, “bow themselves to every wind out of shame for their unfruitfulness.” We may open anywhere on a floral catalogue.

“By breath of beds of roses drawn, I found the grove in the morning pure, In the concert of the nightingales My drunken brain to cure.

“With unrelated glance I looked the rose in the eye: The rose in the hour of gloaming Flamed like a lamp hard-by “She was of her beauty proud, And prouder of her youth, The while unto her flaming heart The bulbul gave his truth.

“The sweet narcissus closed Its eye, with passion pressed; The tulips out of envy burned Moles in their scarlet breast.

“The lilies white prolonged Their sworded tongue to the smell; The clustering anemones Their pretty secrets tell.’

Presently we have, —

“All day the rain

Bathed the dark hyacinths in vain,

The flood may pour from morn till night

Nor wash the pretty Indians white.”

And so onward, through many a page.

This picture of the first days of Spring, from Enweri, seems to belong to Hafiz: — “O’er the garden water goes the wind alone

To rasp and to polish the cheek of the wave;

The fire is quenched on the dear hearthstone,
But it burns again on the tulips brave.”

Friendship is a favorite topic of the Eastern poets, and they have matched on this head the absoluteness of Montaigne.

Hafiz says, —

“Thou learnest no secret until thou knowest friendship, since to the unsound no heavenly knowledge enters.”

Ibn Jemin writes thus: —

“Whilst I disdain the populace,
I find no peer in higher place.
Friend is a word of royal tone,
Friend is a poem all alone.
Wisdom is like the elephant,
Lofty and rare inhabitant:
He dwells in deserts or in courts;
With hucksters he has no resorts.”

Jami says, —

“A friend is he, who, hunted as a foe,
So much the kindlier shows him than before;
Throw stones at him, or ruder javelins throw,
He builds with stone and steel a firmer floor.”

Of the amatory poetry of Hafiz we must be very sparing in our citations, though it forms the staple of the “Divan.” He has run through the whole gamut of passion, — from the sacred to the borders, and over the borders, of the profane. The same confusion of high and low, the celerity of flight and allusion which our colder muses forbid, is habitual to him. From the plain text, — “The chemist of love

Will this perishing mould,
Were it made out of mire,
Transmute into gold,” —

he proceeds to the celebration of his passion; and nothing in his religious or in his scientific traditions is too sacred or too remote to afford a token of his mistress. The Moon thought she knew her own orbit well enough; but when she saw the curve on Zuleika’s cheek, she was at a loss: — “And since round lines are drawn

My darling’s lips about,
The very Moon looks puzzled on,
And hesitates in doubt

If the sweet curve that rounds thy mouth
Be not her true way to the South.”

His ingenuity never sleeps: —

“Ah, could I hide me in my song,
To kiss thy lips from which it flows!”

and plays in a thousand pretty courtesies: —

“Fair fall thy soft heart!

A good work wilt thou do?

O, pray for the dead

Whom thine eyelashes slew!”

And what a nest has he found for his bonny bird, to take up her abode in! —
“They strew in the path of kings and czars Jewels and gems of price: But for thy
head I will pluck down stars, And pave thy way with eyes.

“I have sought for thee a costlier dome Than Mahmoud’s palace high, And
thou, returning, find thy home In the apple of Love’s eye.”

Then we have all degrees of passionate abandonment: — “I know this
perilous love-lane No whither the traveller leads, Yet my fancy the sweet scent
of Thy tangled tresses feeds.

“In the midnight of thy locks, I renounce the day; In the ring of thy rose-lips,
My heart forgets to pray.”

And sometimes his love rises to a religious sentiment: — “Plunge in you
angry waves, Renouncing doubt and care; The flowing of the seven broad seas
Shall never wet thy hair.

“Is Allah’s face on thee Bending with love benign, And thou not less on
Allah’s eye O fairest! turnest thine.”

We add to these fragments of Hafiz a few specimens from other poets.

NISAML

“While roses bloomed along the plain,
The nightingale to the falcon said,
‘Why, of all birds, must thou be dumb?
With closed mouth thou utterest,
Though dying, no last word to man.
Yet sitt’st thou on the hand of princes,
And feedest on the grouse’s breast,
Whilst I, who hundred thousand jewels
Squander in a single tone,
Lo! I feed myself with worms,

And my dwelling is the thorn.' —
The falcon answered, 'Be all ear:
I, experienced in affairs,
See fifty things, say never one;
But thee the people prizes not,
Who, doing nothing, say'st a thousand.
To me, appointed to the chase,
The king's hand gives the grouse's breast;
Whilst a chatterer like thee
Must gnaw worms in the thorn. Farewell!'"

The following passages exhibit the strong tendency of the Persian poets to contemplative and religious poetry and to allegory.

ENWERI. body and soul.

"A painter in China once painted a hall; — Such a web never hung on an emperor's wall; — One half from his brush with rich colors did run, The other he touched with a beam of the sun, So that all which delighted the eye in one side, The same, point for point, in the other replied. In thee, friend, that Tyrian chamber is found; Thine the star-pointing-roof, and the base on the ground: Is one half depicted with colors less bright? Beware that the counterpart blazes with light!"

IBN JEMIN.

"I read on the porch of a palace bold In a purple tablet letters cast,— 'A house though a million winters old, A house of earth comes down at last; Then quarry thy stones from the crystal All, And build the dome that shall not fall.'" "

"What need," cries the mystic Feisi, "of palaces and tapestry? What need even of a bed?"

"The eternal Watcher, who doth wake
All night in the body's earthen chest,
Will of thine arms a pillow make,
And a bolster of thy breast."

Ferideddin Attar wrote the "Bird Conversations," a mystical tale, in which the birds, coming together to choose their king, resolve on a pilgrimage to Mount Kaf, to pay their homage to the Simorg. From this poem, written five hundred years ago, we cite the following passage, as a proof of the identity of mysticism in all periods. The tone is quite modern. In the fable, the birds were soon weary

of the length and difficulties of the way, and at last almost all gave out. Three only persevered, and arrived before the throne of the Simorg.

“The bird-soul was ashamed;
Their body was quite annihilated;
They had cleaned themselves from the dust,
And were by the light ensouled.
What was, and was not, — the Past, —
Was wiped out from their breast.
The sun from near-by beamed
Clearest light into their soul;
The resplendence of the Simorg beamed
As one back from all three.
They knew not, amazed, if they
Were either this or that.
They saw themselves all as Simorg,
Themselves in the eternal Simorg.
When to the Simorg up they looked,
They beheld him among themselves;
And when they looked on each other,
They saw themselves in the Simorg.
A single look grouped the two parties,
The Simorg emerged, the Simorg vanished,
This in that and that in this,
As the world has never heard.
So remained they, sunk in wonder,
Thoughtless in deepest thinking,
And quite unconscious of themselves.
Speechless prayed they to the Highest
To open this secret,
And to unlock *Thou* and *We* .
There came an answer without tongue. —
‘The Highest is a sun-mirror;
Who comes to Him sees himself therein,
Sees body and soul, and soul and body;
When you came to the Simorg,
Three therein appeared to you,
And, had fifty of you come,
So had you seen yourselves as many.
Him has none of us yet seen.

Ants see not the Pleiades.
Can the gnat grasp with his teeth
The body of the elephant?
What you see is He not;
What you hear is He not.
The valleys which you traverse,
The actions which you perform,
They lie under our treatment
And among our properties.
You as three birds are amazed,
Impatient, heartless, confused:
Far over you am I raised,
Since I am in act Simorg.
Ye blot out my highest being,
That ye may find yourselves on my throne;
Forever ye blot out yourselves,
As shadows in the sun. Farewell!”

INSPIRATION.

It was Watt who told King George III. that he dealt in an article of which kings were said to be fond, — Power. ‘T is certain that the one thing we wish to know is, where power is to be bought. But we want a finer kind than that of commerce; and every reasonable man would give any price of house and land and future provision, for condensation, concentration, and the recalling at will of high mental energy. Our money is only a second best. We would jump to buy power with it, that is, intellectual perception moving the will. That is first best. But we don’t know where the shop is. If Watt knew, he forgot to tell us the number of the street. There are times when the intellect is so active that everything seems to run to meet it. Its supplies are found without much thought as to studies. Knowledge runs to the man, and the man runs to knowledge. In spring, when the snow melts, the maple-trees flow with sugar, and you cannot get tubs fast enough; but it is only for a few days. The hunter on the prairie, at the right season, has no need of choosing his ground; east, west, by the river, by the timber, he is everywhere near his game. But the favorable conditions are rather the exception than the rule.

The aboriginal man, in geology and in the dim lights of Darwin’s microscope, is not an engaging figure. We are very glad that he ate his fishes and snails and marrow-bones out of our sight and hearing, and that his doleful experiences were got through with so very long ago. They combed his mane, they pared his nails, cut off his tail, set him on end, sent him to school and made him pay taxes, before he could begin to write his sad story for the compassion or the repudiation of his descendants, who are all but unanimous to disown him. We must take him as we find him, — pretty well on in his education, and, in all *our* knowledge of him, an interesting creature, with a will, an invention, an imagination, a conscience and an inextinguishable hope.

The Hunterian law of *arrested development* is not confined to vegetable and animal structure, but reaches the human intellect also. In the savage man, thought is infantile; and, in the civilized, unequal and ranging up and down a long scale. In the best races it is rare and imperfect. In happy moments it is reinforced, and carries out what were rude suggestions to larger scope and to clear and grand conclusions. The poet cannot see a natural phenomenon which does not express to him a correspondent fact in his mental experience; he is made aware of a power to carry on and complete the metamorphosis of natural into spiritual facts. Everything which we hear for the first time was expected by the mind; the newest discovery was expected. In the mind we call this enlarged

power Inspiration. I believe that nothing great and lasting can be done except by inspiration, by leaning on the secret augury. The man's insight and power are interrupted and occasional; he can see and do this or that cheap task, at will, but it steads him not beyond. He is fain to make the ulterior step by mechanical means. It cannot so be done. That ulterior step is to be also by inspiration; if not through him, then by another man. Every real step is by what a poet called "lyrical glances," by lyrical facility, and never by main strength and ignorance. Years of mechanic toil will only seem to do it; it will not so be done.

Inspiration is like yeast. 'T is no matter in which of half a dozen ways you procure the infection; you can apply one or the other equally well to your purpose, and get your loaf of bread. And every earnest workman, in whatever kind, knows some favorable conditions for his task. When I wish to write on any topic, 't is of no consequence what kind of book or man gives me a hint or a motion, nor how far off that is from my topic.

Power is the first good. Rarey can tame a wild horse; but if he could give speed to a dull horse, were not that better? The toper finds, without asking, the road to the tavern, but the poet does not know the pitcher that holds his nectar. Every youth should know the way to prophecy as surely as the miller understands how to let on the water or the engineer the steam. A rush of thoughts is the only conceivable prosperity that can come to us. Fine clothes, equipages, villa, park, social consideration, cannot cover up real poverty and insignificance, from my own eyes or from others like mine.

Thoughts let us into realities. Neither miracle nor magic nor any religious tradition, not the immortality of the private soul is incredible, after we have experienced an insight, a thought. I think it comes to some men but once in their life, sometimes a religious impulse, sometimes an intellectual insight. But what we want is consecutiveness. 'T is with us a flash of light, then a long darkness, then a flash again. The separation of our days by sleep almost destroys identity. Could we but turn these fugitive sparkles into an astronomy of Copernican worlds! With most men, scarce a link of memory holds yesterday and to-day together. Their house and trade and families serve them as ropes to give a coarse continuity. But they have forgotten the thoughts of yesterday; they say to-day what occurs to them, and something else to-morrow. This insecurity of possession, this quick ebb of power, — as if life were a thunder-storm wherein you can see by a flash the horizon, and then cannot see your hand, — tantalizes us. We cannot make the inspiration consecutive. A glimpse, a point of view that by its brightness excludes the purview is granted, but no panorama. A fuller inspiration should cause the point to flow and become a line, should bend the line and complete the circle. To-day the electric machine will not work, no spark

will pass; then presently the world is all a cat's back, all sparkle and shock. Sometimes there is no sea-fire, and again the sea is aglow to the horizon. Sometimes the Æolian harp is dumb all day in the window, and again it is garrulous and tells all the secrets of the world. In June the morning is noisy with birds; in August they are already getting old and silent.

Hence arises the question, Are these moods in any degree within control? If we knew how to command them! But where is the Franklin with kite or rod for this fluid? — a Franklin who can draw off electricity from Jove himself, and convey it into the arts of life, inspire men, take them off their feet, withdraw them from the life of trifles and gain and comfort, and make the world transparent, so that they can read the symbols of nature? What metaphysician has undertaken to enumerate the tonics of the torpid mind, the rules for the recovery of inspiration? That is least within control which is best in them. Of the *modus* of inspiration we have no knowledge. But in the experience of meditative men there is a certain agreement as to the conditions of reception. Plato, in his seventh Epistle, notes that the perception is only accomplished by long familiarity with the objects of intellect, and a life according to the things themselves. "Then a light, as if leaping from a fire, will on a sudden be enkindled in the soul, and will then itself nourish itself." He said again, "The man who is his own master knocks in vain at the doors of poetry." The artists must be sacrificed to their art. Like bees, they must put their lives into the sting they give. What is a man good for without enthusiasm? and what is enthusiasm but this daring of ruin for its object? There are thoughts beyond the reaches of our souls; we are not the less drawn to them. The moth flies into the flame of the lamp; and Swedenborg must solve the problems that haunt him, though he be crazed or killed.

There is genius as well in virtue as in intellect. 'T is the doctrine of faith over works. The raptures of goodness are as old as history and new with this morning's sun. The legends of Arabia, Persia, and India are of the same complexion as the Christian. Socrates, Menu, Confucius, Zertusht, — we recognize in all of them this ardor to solve the hints of thought.

I hold that ecstasy will be found normal, or only an example on a higher plane of the same gentle gravitation by which stones fall and rivers run. Experience identifies. Shakspeare seems to you miraculous; but the wonderful juxtapositions, parallelisms, transfers, which his genius effected, were all to him locked together as links of a chain, and the mode precisely as conceivable and familiar to higher intelligence as the index-making of the literary hack. The result of the hack is inconceivable to the type-setter who waits for it.

We must prize our own youth. Later, we want heat to execute our plans: the

good-will, the knowledge, the whole armory of means are all present, but a certain heat that once used not to fail, refuses its office, and all is vain until this capricious fuel is supplied. It seems a semi-animal heat; as if tea, or wine, or sea-air, or mountains, or a genial companion, or a new thought suggested in book or conversation could fire the train, wake the fancy and the clear perception. Pit-coal, — where to find it? ‘T is of no use that your engine is made like a watch, — that you are a good workman, and know how to drive it, if there is no coal. We are waiting until some tyrannous idea emerging out of heaven shall seize and bereave us of this liberty with which we are falling abroad. Well, we have the same hint or suggestion, day by day. “I am not,” says the man, “at the top of my condition to-day, but the favorable hour will come when I can command all my powers, and when that will be easy to do which is at this moment impossible.” See how the passions augment our force, — anger, love, ambition! — sometimes sympathy, and the expectation of men. Garrick said that on the stage his great paroxysms surprised himself as much as his audience. If this is true on this low plane, it is true on the higher. Swedenborg’s genius was the perception of the doctrine that “The Lord flows into the spirits of angels and of men;” and all poets have signalized their consciousness of rare moments when they were superior to themselves, — when a light, a freedom, a power came to them which lifted them to performances far better than they could reach at other times; so that a religious poet once told me that he valued his poems, not because they were his, but because they were not. He thought the angels brought them to him.

Jacob Behmen said: “Art has not wrote here, nor was there any time to consider how to set it punctually down according to the right understanding of the letters, but all was ordered according to the direction of the spirit, which often went on haste, — so that the penman’s hand, by reason he was not accustomed to it, did often shake. And, though I could have written in a more accurate, fair, and plain manner, the burning fire often forced forward with speed, and the hand and pen must hasten directly after it, for it comes and goes as a sudden shower. In one quarter of an hour I saw and knew more than if I had been many years together at an university.”

The depth of the notes which we accidentally sound on the strings of nature is out of all proportion to our taught and ascertained faculty, and might teach us what strangers and novices we are, vagabond in this universe of pure power, to which we have only the smallest key. Herrick said: —

“‘T is not every day that I
Fitted am to prophesy;
No, but when the spirit fills

The fantastic panicles,
Full of fire, then I write
As the Godhead doth indite.
Thus enraged, my lines are hurled,
Like the Sibyl's, through the world:
Look how next the holy fire
Either slakes, or doth retire;
So the fancy cools, — till when
That brave spirit comes again.”

Bonaparte said: “There is no man more pusillanimous than I, when I make a military plan. I magnify all the dangers, and all the possible mischances. I am in an agitation utterly painful. That does not prevent me from appearing quite serene to the persons who surround me. I am like a woman with child, and when my resolution is taken, all is forgot except whatever can make it succeed.”

There are, to be sure, certain risks in this presentiment of the decisive perception, as in the use of ether or alcohol: —

“Great wits to madness nearly are allied;
Both serve to make our poverty our pride.”

Aristotle said: “No great genius was ever without some mixture of madness, nor can anything grand or superior to the voice of common mortals be spoken except by the agitated soul.” We might say of these memorable moments of life that we were in them, not they in us. We found ourselves by happy fortune in an illuminated portion or meteorous zone, and passed out of it again, so aloof was it from any will of ours. “It is a principle of war,” said Napoleon, “that when you can use the lightning it is better than cannon.”

How many sources of inspiration can we count? As many as our affinities. But to a practical purpose we may reckon a few of these.

1. Health is the first muse, comprising the magical benefits of air, landscape, and bodily exercise, on the mind. The Arabs say that “Allah does not count from life the days spent in the chase,” that is, those are thrown in. Plato thought “exercise would almost cure a guilty conscience.” Sydney Smith said: “You will never break down in a speech on the day when you have walked twelve miles.”

I honor health as the first muse, and sleep as the condition of health. Sleep benefits mainly by the sound health it produces; incidentally also by dreams, into whose farrago a divine lesson is sometimes slipped. Life is in short cycles or periods; we are quickly tired, but we have rapid rallies. A man is spent by his work, starved, prostrate; he will not lift his hand to save his life; he can never think more. He sinks into deep sleep and wakes with renewed youth, with hope,

courage, fertile in resources, and keen for daring adventure.

“Sleep is like death, and after sleep
The world seems new begun;
White thoughts stand luminous and firm,
Like statues in the sun;
Refreshed from supersensuous founts,
The soul to clearer vision mounts.” [Allingham.]

A man must be able to escape from his cares and fears, as well as from hunger and want of sleep; so that another Arabian proverb has its coarse truth: “When the belly is full, it says to the head, Sing, fellow!” The perfection of writing is when mind and body are both in key; when the mind finds perfect obedience in the body. And wine, no doubt, and all fine food, as of delicate fruits, furnish some elemental wisdom. And the fire, too, as it burns in the chimney; for I fancy that my logs, which have grown so long in sun and wind by Walden, are a kind of muses. So of all the particulars of health and exercise and fit nutriment and tonics. Some people will tell you there is a great deal of poetry and fine sentiment in a chest of tea.

2. The experience of writing letters is one of the keys to the *modus* of inspiration. When we have ceased for a long time to have any fulness of thoughts that once made a diary a joy as well as a necessity, and have come to believe that an image or a happy turn of expression is no longer at our command, in writing a letter to a friend we may find that we rise to thought and to a cordial power of expression that costs no effort, and it seems to us that this facility may be indefinitely applied and resumed. The wealth of the mind in this respect of seeing is like that of a looking-glass, which is never tired or worn by any multitude of objects which it reflects. You may carry it all round the world, it is ready and perfect as ever for new millions.

3. Another consideration, though it will not so much interest young men, will cheer the heart of older scholars, namely that there is diurnal and secular rest. As there is this daily renovation of sensibility, so it sometimes if rarely happens that after a season of decay or eclipse, darkening months or years, the faculties revive to their fullest force. One of the best facts I know in metaphysical science is Niebuhr’s joyful record that after his genius for interpreting history had failed him for several years, this divination returned to him. As this rejoiced me, so does Herbert’s poem “The Flower.” His health had broken down early, he had lost his muse, and in this poem he says: —

“And now in age I bud again,
After so many deaths I live and write;
I once more smell the dew and rain,
And relish versing: O my only light,

It cannot be

That I am he
On whom thy tempests fell all night.”

His poem called “The Forerunners” also has supreme interest. I understand “The Harbingers” to refer to the signs of age and decay which he detects in himself, not only in his constitution, but in his fancy and his facility and grace in writing verse; and he signalizes his delight in this skill, and his pain that the Herricks, Lovelaces, and Marlows, or whoever else, should use the like genius in language to sensual purpose, and consoles himself that his own faith and the divine life in him remain to him unchanged, unharmed.

4. The power of the will is sometimes sublime; and what is will for, if it cannot help us in emergencies? Seneca says of an almost fatal sickness that befell him, “The thought of my father, who could not have sustained such a blow as my death, restrained me; I commanded myself to live.” Goethe said to Eckermann, “I work more easily when the barometer is high than when it is low. Since I know this, I endeavor, when the barometer is low, to counteract the injurious effect by greater exertion, and my attempt is successful.”

“To the persevering mortal the blessed immortals are swift.” Yes, for they know how to give you in one moment the solution of the riddle you have pondered for months. “Had I not lived with Mirabeau,” says Dumont, “I never should have known all that can be done in one day, or, rather, in an interval of twelve hours. A day to him was of more value than a week or a month to others. To-morrow to him was not the same impostor as to most others.”

5. Plutarch affirms that “souls are naturally endowed with the faculty of prediction, and the chief cause that excites this faculty and virtue is a certain temperature of air and winds.” My anchorite thought it “sad that atmospheric influences should bring to our dust the communion of the soul with the Infinite.” But I am glad that the atmosphere should be an excitant, glad to find the dull rock itself to be deluged with Deity, — to be theist, Christian, poetic. The fine influences of the morning few can explain, but all will admit. Goethe acknowledges them in the poem in which he dislodges the nightingale from her place as Leader of the Muses: —

MUSAGETES.

“Often in deep midnight I called on the sweet muses. No dawn shines, And no day will appear: But at the right hour The lamp brings me pious light, That it, instead of Aurora or Phœbus, May enliven my quiet industry. But they left me lying in sleep Dull, and not to be enlivened, And after every Lite morning

Followed unprofitable days.

“When now the Spring stirred, I said to the nightingales: ‘Dear nightingales, trill Early, O, early before my lattice, Wake me out of the deep sleep Which mightily chains the young man’ But the love-filled singers Poured by night before my window Their sweet melodies, — Kept awake my dear soul, Roused tender new longings In my lately touched bosom, And so the night passed, And Aurora found me sleeping; Yea, hardly did the sun wake me. At last it has become summer, And at the first glimpse of morning The busy early fly stings me Out of my sweet slumber. Unmerciful she returns again: When often the half-awake victim Impatiently drives her off, She calls hither the unscrupulous sisters, And from my eyelids Sweet sleep must depart. Vigorous, I spring from my couch, Seek the beloved Muses, Find them in the beech grove, Pleased to receive me; And I thank the annoying insect For many a golden hour. Stand, then, for me, ye tormenting creatures, Highly praised by the poet As the true Musagetes.”

The French have a proverb to the effect that not the day only, but all things have their morning,— “ *Il n’y a que le matin en toutes choses.* “ And it is a primal rule to defend your morning, to keep all its dews on, and with fine foresight to relieve it from any jangle of affairs — even from the question, Which task? I remember a capital prudence of old President Quincy, who told me that he never went to bed at night until he had laid out the studies for the next morning. I believe that in our good days a well-ordered mind has a new thought awaiting it every morning. And hence, eminently thoughtful men, from the time of Pythagoras down, have insisted on an hour of solitude every day, to meet their own mind and learn what oracle it has to impart. If a new view of life or mind gives us joy, so does new arrangement. I don’t know but we take as much delight in finding the right place for an old observation, as in a new thought.

6. Solitary converse with nature; for thence are ejaculated sweet and dreadful words never uttered in libraries. Ah! the spring days, the summer dawns, the October woods! I confide that my reader knows these delicious secrets, has perhaps

“Slighted Minerva’s learned tongue,

But leaped with joy when on the wind the shell of Clio rung.”

Are you poetical, impatient of trade, tired of labor and affairs? Do you want Monadnoc, Aglocochook, or Helvellyn, or Plinlimmon, dear to English song, in your closet? Caerleon, Provence, Ossian, and Cadwallon? Tie a couple of strings across a board and set it in your window, and you have an instrument which no artist’s harp can rival. It needs no instructed ear; if you have sensibility it admits you to sacred interiors; it has the sadness of nature, yet, at the changes, tones of

triumph and festal notes ringing out all measures of loftiness. “Did you never observe,” says Gray, ““while rocking winds are piping loud,’ that pause, as the gust is recollecting itself, and rising upon the ear in a shrill and plaintive note, like the swell of an olian harp? I do assure you there is nothing in the world so like the voice of a spirit.” Perhaps you can recall a delight like it, which spoke to the eye, when you have stood by a lake in the woods in summer, and saw where little flaws of wind whip spots or patches of still water into fleets of ripples, — so sudden, so slight, so spiritual, that it was more like the rippling of the Aurora Borealis at night than any spectacle of day.

7. But the solitude of nature is not so essential as solitude of habit. I have found my advantage in going in summer to a country inn, in winter to a city hotel, with a task which would not prosper at home. I thus secured a more absolute seclusion; for it is almost impossible for a housekeeper who is in the country a small farmer, to exclude interruptions and even necessary orders, though I bar out by system all I can, and resolutely omit, to my constant damage, all that can be omitted. At home, the day is cut into short strips. In the hotel, I have no hours to keep, no visits to make or receive, and I command an astronomic leisure. I forget rain, wind, cold, and heat. At home, I remember in my library the wants of the farm, and have all too much sympathy. I envy the abstraction of some scholars I have known, who could sit on a curbstone in State Street, put up their back, and solve their problem. I have more womanly eyes. All the conditions must be right for my success, slight as that is. What untunes is as bad as what cripples or stuns me. Novelty, surprise, change of scene, refresh the artist,— “break up the tiresome old roof of heaven into new forms,” as Hafiz said. The sea-shore and the taste of two metals in contact, and our enlarged powers in the presence, or rather at the approach and at the departure of a friend, and the mixture of lie in truth, and the experience of poetic creativeness which is not found in staying at home nor yet in travelling, but in transitions from one to the other, which must therefore be adroitly managed to present as much transitional surface as possible, — these are the types or conditions of this power. “A ride near the sea, a sail near the shore,” said the ancient. So Montaigne travelled with his books, but did not read in them. “*La Nature aime les croisements*,” says Fourier.

I know there is room for whims here; but in regard to some apparent trifles there is great agreement as to their annoyance. And the machine with which we are dealing is of such an inconceivable delicacy that whims also must be respected. Fire must lend its aid. We not only want time, but warm time. George Sand says, “I have no enthusiasm for nature which the slightest chill will not instantly destroy.” And I remember that Thoreau, with his robust will, yet found

certain trifles disturbing the delicacy of that health which composition exacted, — namely, the slightest irregularity, even to the drinking too much water on the preceding day. Even a steel pen is a nuisance to some writers. Some of us may remember, years ago, in the English journals, the petition, signed by Carlyle, Browning, Tennyson, Dickens and other writers in London, against the license of the organgrinders, who infested the streets near their houses, to levy on them blackmail.

Certain localities, as mountain-tops, the sea-side, the shores of rivers and rapid brooks, natural parks of oak and pine, where the ground is smooth and unencumbered, are excitants of the muse. Every artist knows well some favorite retirement. And yet the experience of some good artists has taught them to prefer the smallest and plainest chamber, with one chair and table and with no outlook, to these picturesque liberties. William Blake said, “Natural objects always did and do weaken, deaden, and obliterate imagination in me.” And Sir Joshua Reynolds had no pleasure in Richmond; he used to say “the human face was his landscape.” These indulgences are to be used with great caution. Allston rarely left his studio by day. An old friend took him, one fine afternoon, a spacious circuit into the country, and he painted two or three pictures as the fruits of that drive. But he made it a rule not to go to the city on two consecutive days. One was rest; more was lost time. The times of force must be well husbanded, and the wise student will remember the prudence of Sir Tristram in *Morte d’Arthur*, who, having received from the fairy an enchantment of six hours of growing strength every day, took care to fight in the hours when his strength increased; since from noon to night his strength abated. What prudence again does every artist, every scholar need in the security of his easel or his desk! These must be remote from the work of the house, and from all knowledge of the feet that come and go therein. Allston, it is said, had two or three rooms in different parts of Boston, where he could not be found. For the delicate muses lose their head if their attention is once diverted. Perhaps if you were successful abroad in talking and dealing with men, you would not come back to your book-shelf and your task. When the spirit chooses you for its scribe to publish some commandment, it makes you odious to men and men odious to you, and you shall accept that loathsomeness with joy. The moth must fly to the lamp, and you must solve those questions though you die.

8. Conversation, which, when it is best, is a series of intoxications. Not Aristotle, not Kant or Hegel, but conversation, is the right metaphysical professor. This is the true school of philosophy, — this the college where you learn what thoughts are, what powers lurk in those fugitive gleams, and what becomes of them; how they make history. A wise man goes to this game to play

upon others and to be played upon, and at least as curious to know what can be drawn from himself as what can be drawn from them. For, in discourse with a friend, our thought, hitherto wrapped in our consciousness, detaches itself, and allows itself to be seen as a thought, in a manner as new and entertaining to us as to our companions. For provocation of thought, we use ourselves and use each other. Some perceptions — I think the best — are granted to the single soul; they come from the depth and go to the depth and are the permanent and controlling ones. Others it takes two to find. We must be warned by the fire of sympathy, to be brought into the right conditions and angles of vision. Conversation; for intellectual activity is contagious. We are emulous. If the tone of the companion is higher than ours, we delight in rising to it. 'T is a historic observation that a writer must find an audience up to his thought, or he will no longer care to impart it, but will sink to their level or be silent. Homer said, "When two come together, one apprehends before the other;" but it is because one thought well that the other thinks better: and two men of good mind will excite each other's activity, each attempting still to cap the other's thought. In enlarged conversation we have suggestions that require new ways of living, new books, new men, new arts and sciences. By sympathy, each opens to the eloquence, and begins to see with the eyes of his mind. We were all lonely, thoughtless; and now a principle appears to all: we see new relations, many truths; every mind seizes them as they pass; each catches by the mane one of these strong coursers like horses of the prairie, and rides up and down in the world of the intellect. We live day by day under the illusion that it is the fact or event that imports, whilst really it is not that which signifies, but the use we put it to, or what we think of it. We esteem nations important, until we discover that a few individuals much more concern us; then, later, that it is not at last a few individuals, or any sacred heroes, but the lowliness, the outpouring, the large equality to truth of a single mind, — as if in the narrow walls of a human heart the whole realm of truth, the world of morals, the tribunal by which the universe is judged, found room to exist.

9. New poetry; by which I mean chiefly, old poetry that is new to the reader. I have heard from persons who had practice in rhyming, that it was sufficient to set them on writing verses, to read any original poetry. What is best in literature is the affirming, prophesying, spermatic words of menmaking poets. Only that is poetry which cleanses and mans me.

Words used in a new sense and figuratively, dart a delightful lustre; and every word admits a new use, and hints ulterior meanings. We have not learned the law of the mind, — cannot control and domesticate at will the high states of contemplation and continuous thought. "Neither by sea nor by land," said Pindar, "canst thou find the way to the Hyperboreans;" neither by idle wishing,

nor by rule of three or rule of thumb. Yet I find a mitigation or solace by providing always a good book for my journeys, as Horace or Martial or Goethe, — some book which lifts me quite out of prosaic surroundings, and from which I draw some lasting knowledge. A Greek epigram out of the anthology, a verse of Herrick or Lovelace, are in harmony both with sense and spirit.

You shall not read newspapers, nor politics, nor novels, nor Montaigne, nor the newest French book. You may read Plutarch, Plato, Plotinus, Hindoo mythology and ethics. You may read Chaucer, Shakspeare, Ben Jonson, Milton, — and Milton's prose as his verse; read Collins and Gray; read Hafiz and the Trouveurs; nay, Welsh and British mythology of Arthur, and (in your ear) Ossian; fact-books, which all geniuses prize as raw material, and as antidote to verbiage and false poetry. Factbooks, if the facts be well and thoroughly told, are much more nearly allied to poetry than many books are that are written in rhyme. Only our newest knowledge works as a source of inspiration and thought, as only the outmost layer of *liber* on the tree. Books of natural science, especially those written by the ancients, — geography, botany, agriculture, explorations of the sea, of meteors, of astronomy, — all the better if written without literary aim or ambition. Every book is good to read which sets the reader in a working mood. The deep book, no matter how remote the subject, helps us best.

Neither are these all the sources, nor can I name all. The receptivity is rare. The occasions or predisposing circumstances I could never tabulate; but now one, now another landscape, form, color, or companion, or perhaps one kind of sounding word or syllable, "strikes the electric chain with which we are darkly bound," and it is impossible to detect and wilfully repeat the fine conditions to which we have owed our happiest frames of mind. The day is good in which we have had the most perceptions. The analysis is the more difficult, because poppy-leaves are strewn when a generalization is made; for I can never remember the circumstances to which I owe it, so as to repeat the experiment or put myself in the conditions: —

"T is the most difficult of tasks to keep
Heights which the soul is compotent to gain."

I value literary biography for the hints it furnishes from so many scholars, in so many countries, of what hygiene, what ascetic, what gymnastic, what social practices their experience suggested and approved. They are, for the most part, men who needed only a little wealth. Large estates, political relations, great hospitalities, would have been impediments to them. They are men whom a book could entertain, a new thought intoxicate and hold them prisoners for years perhaps. Aubrey and Burton and Wood tell me incidents which I find not

insignificant.

These are some hints towards what is in all education a chief necessity, — the right government, or, shall I not say? the right obedience to the powers of the human soul. Itself is the dictator; the mind itself the awful oracle. All our power, all our happiness consists in our reception of its hints, which ever become clearer and grander as they are obeyed.

GREATNESS.

There is a prize which we are all aiming at, and the more power and goodness we have, so much more the energy of that aim. Every human being has a right to it, and in the pursuit we do not stand in each other's way. For it has a long scale of degrees, a wide variety of views, and every aspirant, by his success in the pursuit, does not hinder but helps his competitors. I might call it completeness, but that is later, — perhaps adjourned for ages. I prefer to call it Greatness. It is the fulfilment of a natural tendency in each man. It is a fruitful study. It is the best tonic to the young soul. And no man is unrelated; therefore we admire eminent men, not for themselves, but as representatives. It is very certain that we ought not to be and shall not be contented with any goal we have reached. Our aim is no less than greatness; that which invites all, belongs to us all, — to which we are all sometimes untrue, cowardly, faithless, but of which we never quite despair, and which, in every sane moment, we resolve to make our own. It is also the only platform on which all men can meet. What anecdotes of any man do we wish to hear or read? Only the best. Certainly not those in which he was degraded to the level of dulness or vice, but those in which he rose above all competition by obeying a light that shone to him alone. This is the worthiest history of the world.

Greatness, — what is it? Is there not some injury to us, some insult in the word? What we commonly call greatness is only such in our barbarous or infant experience. 'Tis not the soldier, not Alexander or Bonaparte or Count Moltke surely, who represent the highest force of mankind; not the strong hand, but wisdom and civility, the creation of laws, institutions, letters, and art. These we call by distinction the *humanities*; these, and not the strong arm and brave heart, which are also indispensable to their defence. For the scholars represent the intellect, by which man is man; the intellect and the moral sentiment, — which in the last analysis can never be separated. Who can doubt the potency of an individual mind, who sees the shock given to torpid races — torpid for ages — by Mahomet; a vibration propagated over Asia and Africa? What of Menu? what of Buddha? of Shakspeare? of Newton? of Franklin?

There are certain points of identity in which these masters agree. Self-respect is the early form in which greatness appears. The man in the tavern maintains his opinion, though the whole crowd takes the other side; we are at once drawn to him. The porter or truckman refuses a reward for finding your purse, or for pulling you drowning out of the river. Thereby, with the service, you have got a moral lift. You say of some new person, That man will go far, — for you see in

his manners that the recognition of him by others is not necessary to him. And what a bitter-sweet sensation when we have gone to pour out our acknowledgment of a man's nobleness, and found him quite indifferent to our good opinion! They may well fear Fate who have any infirmity of habit or aim; but he who rests on what he is, has a destiny above destiny, and can make mouths at Fortune. If a man's centrality is incomprehensible to us, we may as well snub the sun. There is something in Archimedes or in Luther or Samuel Johnson that needs no protection. There is somewhat in the true scholar which he cannot be laughed out of, nor be terrified or bought off from. Stick to your own; don't inculcate yourself in the local, social, or national crime, but follow the path your genius traces like the galaxy of heaven for you to walk in.

A sensible person will soon see the folly and wickedness of thinking to please. Sensible men are very rare. A sensible man does not brag, avoids introducing the names of his creditable companions, omits himself as habitually as another man obtrudes himself in the discourse, and is content with putting his fact or theme simply on its ground. You shall not tell me that your commercial house, your partners, or yourself are of importance; you shall not tell me that you have learned to know men; you shall make me feel that; your saying so unsays it. You shall not enumerate your brilliant acquaintances, nor tell me by their titles what books you have read. I am to infer that you keep good company by your better information and manners, and to infer your reading from the wealth and accuracy of your conversation.

Young men think that the manly character requires that they should go to California, or to India, or into the army. When they have learned that the parlor and the college and the counting-room demand as much courage as the sea or the camp, they will be willing to consult their own strength and education in their choice of place.

There are to each function and department of nature supplementary men: to geology, sinewy, out-of-doors men, with a taste for mountains and rocks, a quick eye for differences and for chemical changes. Give such, first a course in chemistry, and then a geological survey. Others find a charm and a profession in the natural history of man and the mammalia or related animals; others in ornithology, or fishes, or insects; others in plants; others in the elements of which the whole world is made. These lately have stimulus to their study through the extraordinary revelations of the spectroscope that the sun and the planets are made in part or in whole of the same elements as the earth is. Then there is the boy who is born with a taste for the sea, and must go thither if he has to run away from his father's house to the fore-castle; another longs for travel in foreign lands; another will be a lawyer; another, an astronomer; another, a

painter, sculptor, architect, or engineer. Thus there is not a piece of nature in any kind but a man is born, who, as his genius opens, aims slower or faster to dedicate himself to that. Then there is the poet, the philosopher, the politician, the orator, the clergyman, the physician. 'T is gratifying to see this adaptation of man to the world, and to every part and particle of it.

Many readers remember that Sir Humphry Davy said, when he was praised for his important discoveries, "My best discovery was Michael Faraday." In 1848 I had the privilege of hearing Professor Faraday deliver, in the Royal Institution in London, a lecture on what he called Diamagnetism, — by which he meant *cross-magnetism*; and he showed us various experiments on certain gases, to prove that whilst ordinarily magnetism of steel is from north to south, in other substances, gases, it acts from east to west. And further experiments led him to the theory that every chemical substance would be found to have its own, and a different, polarity. I do not know how far his experiments and others have been pushed in this matter, but one fact is clear to me, that diamagnetism is a law of the *mind*, to the full extent of Faraday's idea; namely, that every mind has a new compass, a new north, a new direction of its own, differencing its genius and aim from every other mind; — as every man, with whatever family resemblances, has a new countenance, new manner, new voice, new thoughts, and new character. Whilst he shares with all mankind the gift of reason and the moral sentiment, there is a teaching for him from within which is leading him in a new path, and, the more it is trusted, separates and signalizes him, while it makes him more important and necessary to society. We call this specialty the *bias* of each individual. And none of us will ever accomplish anything excellent or commanding except when he listens to this whisper which is heard by him alone. Swedenborg called it the *proprium*, — not a thought shared with others, but constitutional to the man. A point of education that I can never too much insist upon is this tenet that every individual man has a bias which he must obey, and that it is only as he feels and obeys this that he rightly develops and attains his legitimate power in the world. It is his magnetic needle, which points always in one direction to his proper path, with more or less variation from any other man's. He is never happy nor strong until he finds it, keeps it; learns to be at home with himself; learns to watch the delicate hints and insights that come to him, and to have the entire assurance of his own mind. And in this self-respect or hearkening to the privatest oracle, he consults his ease I may say, or need never be at a loss. In morals this is conscience; in intellect, genius; in practice, talent; — not to imitate or surpass a particular man in *his* way, but to bring out your own new way; to each his own method, style, wit eloquence. It is easy for a

commander to command. Clinging to Nature, or to that province of nature which he knows, he makes no mistakes, but works after her laws and at her own pace, so that his doing, which is perfectly natural, appears miraculous to dull people. Montluc, the great Marshal of France, says of the Genoese admiral, Andrew Doria, "It seemed as if the sea stood in awe of this man." And a kindred genius, Nelson, said, "I feel that I am fitter to do the action than to describe it." Therefore I will say that another trait of greatness is facility.

This necessity of resting on the real, of speaking *your* private thought and experience, few young men apprehend. Set ten men to write their journal for one day, and nine of them will leave out their thought, or proper result, — that is, their net experience, — and lose themselves in misreporting the supposed experience of other people. Indeed I think it an essential caution to young writers, that they shall not in their discourse leave out the one thing which the discourse was written to say. Let that belief which you hold alone, have free course. I have observed that in all public speaking, the rule of the orator begins, not in the array of his facts, but when his deep conviction, and the right and necessity he feels to convey that conviction to his audience, — when these shine and burn in his address; when the thought which he stands for gives its own authority to him, adds to him a grander personality, gives him valor, breadth, and new intellectual power, so that not he, but mankind, seems to speak through his lips. There is a certain transfiguration; all great orators have it, and men who wish to be orators simulate it.

If we should ask ourselves what is this self-respect, it would carry us to the highest problems. It is our practical perception of the Deity in man. It has its deep foundations in religion. If you have ever known a good mind among the Quakers, you will have found *that* is the element of their faith. As they express it, it might be thus: "I do not pretend to any commandment or large revelation, but if at any time I form some plan, propose a journey or a course of conduct, I perhaps find a silent obstacle in my mind that I cannot account for. Very well, — I let it lie, thinking it may pass away, but if it do not pass away I yield to it, obey it. You ask me to describe it. I cannot describe it. It is not an oracle, nor an angel, nor a dream, nor a law; it is too simple to be described, it is but a grain of mustard-seed, but such as it is, it is something which the contradiction of all mankind could not shake, and which the consent of all mankind could not confirm."

You are rightly fond of certain books or men that you have found to excite your reverence and emulation. But none of these can compare with the greatness of that counsel which is open to you in happy solitude. I mean that there is for you the following of an inward leader, — a slow discrimination that there is for

each a Best Counsel which enjoins the fit word and the fit act for every moment. And the path of each, pursued, leads to greatness. How grateful to find in man or woman a new emphasis of their own.

But if the first rule is to obey your native bias, to accept that work for which you were inwardly formed, — the second rule is concentration, which doubles its force. Thus if you are a scholar, be that. The same laws hold for you as for the laborer. The shoemaker makes a good shoe because he makes nothing else. Let the student mind his own charge; sedulously wait every morning for the news concerning the structure of the world which the spirit will give him.

No way has been found for making heroism easy, even for the scholar. Labor, iron labor, is for him. The world was created as an audience for him; the atoms of which it is made are opportunities. Read the performance of Bentley, of Gibbon, of Cuvier, Geoffroy St. Hilaire, Laplace. “He can toil terribly,” said Cecil of Sir Walter Raleigh. These few words sting and bite and lash us when we are frivolous. Let us get out of the way of their blows by making them true of ourselves. There is so much to be done that we ought to begin quickly to bestir ourselves. This day-labor of ours, we confess, has hitherto a certain emblematic air, like the annual ploughing and sowing of the Emperor of China. Let us make it an honest sweat. Let the scholar measure his valor by his power to cope with intellectual giants. Leave others to count votes and calculate stocks. His courage is to weigh Plato, judge Laplace, know Newton, Faraday, judge of Darwin, criticise Kant and Swedenborg, and on all these arouse the central courage of insight. The scholar’s courage should be as terrible as the Cid’s, though it grow out of spiritual nature, not out of brawn. Nature, when she adds difficulty, adds brain.

With this respect to the bias of the individual mind add, what is consistent with it, the most catholic receptivity for the genius of others. The day will come when no badge, uniform, or medal will be worn; when the eye, which carries in it planetary influences from all the stars, will indicate rank fast enough by exerting power. For it is true that the stratification of crusts in geology is not more precise than the degrees of rank in minds. A man will say: ‘I am born to this position; I must take it, and neither you nor I can help or hinder me. Surely, then, I need not fret myself to guard my own dignity.’ The great man loves the conversation or the book that convicts him, not that which soothes or flatters him. He makes himself of no reputation; he conceals his learning, conceals his charity. For the highest wisdom does not concern itself with particular men, but with man enamored with the law and the Eternal Source. Say with Antoninus, “If the picture is good, who cares who made it? What matters it by whom the good is done, by yourself or another?” If it is the truth, what matters who said it?

If it was right, what signifies who did it? All greatness is in degree, and there is more above than below. Where were your own intellect, if greater had not lived? And do you know what the right meaning of Fame is? It is that sympathy, rather that fine element by which the good become partners of the greatness of their superiors.

Extremes meet, and there is no better example than the haughtiness of humility. No aristocrat, no prince born to the purple, can begin to compare with the self-respect of the saint. Why is he so lowly, but that he knows that he can well afford it, resting on the largeness of God in him? I have read in an old book that Barcena the Jesuit confessed to another of his order that when the Devil appeared to him in his cell one night, out of his profound humility he rose up to meet him, and prayed him to sit down in his chair, for he was more worthy to sit there than himself.

Shall I tell you the secret of the true scholar? It is this: Every man I meet is my master in some point, and in that I learn of him. The populace will say, with Horne Tooke, "If you would be powerful, pretend to be powerful." I prefer to say, with the old Hebrew prophet, "Seekest thou great things? — seek them not;" or, what was said of the Spanish prince, "The more you took from him, the greater he appeared," *Plus on lui ôte, plus il est grand.*

Scintillations of greatness appear here and there in men of unequal character, and are by no means confined to the cultivated and so-called moral class. It is easy to draw traits from Napoleon, who was not generous nor just, but was intellectual and knew the law of things. Napoleon commands our respect by his enormous self-trust, the habit of seeing with his own eyes, never the surface, but to the heart of the matter, whether it was a road, a cannon, a character, an officer, or a king, — and by the speed and security of his action in the premises, always new. He has left a library of manuscripts, a multitude of sayings, every one of widest application. He was a man who always fell on his feet. When one of his favorite schemes missed, he had the faculty of taking up his genius, as he said, and of carrying it somewhere else. "Whatever they may tell you, believe that one fights with cannon as with fists; when once the fire is begun, the least want of ammunition renders what you have done already useless." I find it easy to translate all his technics into all of mine, and his official advices are to me more literary and philosophical than the memoirs of the Academy. His advice to his brother, King Joseph of Spain, was: "I have only one counsel for you, — *Be Master.*" "Depth of intellect relieves even the ink of crime with a fringe of light. We perhaps look on its crimes as experiments of a universal student; as he may read any book who reads all books, and as the English judge in old times, when learning was rare, forgave a culprit who could read and write. It is difficult to

find greatness pure. Well, I please myself with its diffusion; to find a spark of true fire amid much corruption. It is some guaranty, I hope, for the health of the soul which has this generous blood. How many men, detested in contemporary hostile history, of whom, now that the mists have rolled away, we have learned to correct our old estimates, and to see them as, on the whole, instruments of great benefit. Diderot was no model, but unclean as the society in which he lived; yet was he the best-natured man in France, and would help any wretch at a pinch. His humanity knew no bounds. A poor scribbler who had written a lampoon against him and wished to dedicate it to a pious Due d'Orleans, came with it in his poverty to Diderot, and Diderot, pitying the creature, wrote the dedication for him, and so raised five-and-twenty louis to save his famishing lampooner alive.

Meantime we hate snivelling. I do not wish you to surpass others in any narrow or professional or monkish way. We like the natural greatness of health and wild power. I confess that I am as much taken by it in boys, and sometimes in people not normal, nor educated, nor presentable, nor church-members, — even in persons open to the suspicion of irregular and immoral living, in Bohemians, — as in more orderly examples. For we must remember that in the lives of soldiers, sailors and men of large adventure, many of the stays and guards of our household life are wanting, and yet the opportunities and incentives to sublime daring and performance are often close at hand. We must have some charity for the sense of the people, which admires natural power, and will elect it over virtuous men who have less. It has this excuse, that natural is really allied to moral power, and may always be expected to approach it by its own instincts. Intellect at least is not stupid, and will see the force of morals over men, if it does not itself obey. Henry VII. of England was a wise king. When Gerald, Earl of Kildare, who was in rebellion against him, was brought to London, and examined before the Privy Council, one said, “All Ireland cannot govern this Earl.” “Then let this Earl govern all Ireland,” replied the King.

It is noted of some scholars, like Swift and Gibbon and Donne, that they pretended to vices which they had not, so much did they hate hypocrisy. William Blake the artist frankly says, “I never knew a bad man in whom there was not something very good.” Bret Harte has pleased himself with noting and recording the sudden virtue blazing in the wild reprobates of the ranches and mines of California.

Men are ennobled by morals and by intellect; but those two elements know each other and always beckon to each other, until at last they meet in the man, if he is to be truly great. The man who sells you a lamp shows you that the flame of oil, which contented you before, casts a strong shade in the path of the

petroleum which he lights behind it; and this again casts a shadow in the path of the electric light. So does intellect when brought into the presence of character; character puts out that light. Goethe, in his correspondence with his Grand Duke of Weimar, does not shine. We can see that the Prince had the advantage of the Olympian genius. It is more plainly seen in the correspondence between Voltaire and Frederick of Prussia. Voltaire is brilliant, nimble, and various, but Frederick has the superior tone. But it is curious that Byron *writes down* to Scott; Scott writes up to him. The Greeks surpass all men till they face the Romans, when Roman character prevails over Greek genius. Whilst degrees of intellect interest only classes of men who pursue the same studies, as chemists or astronomers, mathematicians or linguists, and have no attraction for the crowd, there are always men who have a more catholic genius, are really great as men, and inspire universal enthusiasm. A great style of hero draws equally all classes, all the extremes of society, till we say the very dogs believe in him. We have had such examples in this country, in Daniel Webster, Henry Clay, and the seamen's preacher, Father Taylor; in England, Charles James Fox; in Scotland, Robert Burns; and in France, though it is less intelligible to us, Voltaire. Abraham Lincoln is perhaps the most remarkable example of this class that we have seen, — a man who was at home and welcome with the humblest, and with a spirit and a practical vein in the times of terror that commanded the admiration of the wisest. His heart was as great as the world, but there was no room in it to hold the memory of a wrong.

These may serve as local examples to indicate a magnetism which is probably known better and finer to each scholar in the little Olympus of his own favorites, and which makes him require geniality and humanity in his heroes. What are these but the promise and the preparation of a day when the air of the world shall be purified by nobler society, when the measure of greatness shall be usefulness in the highest sense, — greatness consisting in truth, reverence, and good-will?

Life is made of illusions, and a very common one is the opinion you hear expressed in every village: 'O yes, if I lived in New York or Philadelphia, Cambridge or New Haven or Boston or Andover, there might be fit society; but it happens that there are no fine young men, no superior women in my town.' You may hear this every day; but it is a shallow remark. Ah! have you yet to learn that the eye altering alters all; that "the world is an echo which returns to each of us what we say?" It is not examples of greatness, but sensibility to see them, that is wanting. The good botanist will find flowers between the street pavements, and any man filled with an idea or a purpose will find examples and illustrations and coadjutors wherever he goes. Wit is a magnet to find wit, and character to find character. Do you not know that people are as those with whom

they converse? And if all or any are heavy to me, that fact accuses me. Why complain, as if a man's debt to his inferiors were not at least equal to his debt to his superiors? If men were equals, the waters would not move; but the difference of level which makes Niagara a cataract, makes eloquence, indignation, poetry, in him who finds there is much to communicate. With self-respect then there must be in the aspirant the strong fellow-feeling, the humanity, which makes men of all classes warm to him as their leader and representative.

We are thus forced to express our instinct of the truth by exposing the failures of experience. The man whom we have not seen, in whom no regard of self degraded the adorer of the laws, — who by governing himself governed others; sportive in manner, but inexorable in act; who sees longevity in his cause; whose aim is always distinct to him; who is suffered to be himself in society; who carries fate in his eye; — he it is whom we seek, encouraged in every good hour that here or hereafter he shall be found.

IMMORTALITY.

In the year 626 of our era, when Edwin, the Anglo-Saxon king, was deliberating on receiving the Christian missionaries, one of his nobles said to him: "The present life of man, O king, compared with that space of time beyond, of which we have no certainty, reminds me of one of your winter feasts, where you sit with your generals and ministers. The hearth blazes in the middle and a grateful heat is spread around, while storms of rain and snow are raging without. Driven by the chilling tempest, a little sparrow enters at one door and flies delighted around us till it departs through the other. Whilst it stays in our mansion it feels not the winter storm; but when this short moment of happiness has been enjoyed, it is forced again into the same dreary tempest from which it had escaped, and we behold it no more. Such is the life of man, and we are as ignorant of the state which preceded our present existence as of that which will follow it. Things being so, I feel that if this new faith can give us more certainty, it deserves to be received."

In the first records of a nation in any degree thoughtful and cultivated, some belief in the life beyond life would of course be suggested. The Egyptian people furnish us the earliest details of an established civilization, and I read in the second book of Herodotus this memorable sentence: "The Egyptians are the first of mankind who have affirmed the immortality of the soul." Nor do I read it with less interest that the historian connects it presently with the doctrine of metempsychosis; for I know well that where this belief once existed it would necessarily take a base form for the savage and a pure form for the wise; — so that I only look on the counterfeit as a proof that the genuine faith had been there. The credence of men, more than race or climate, makes their manners and customs; and the history of religion may be read in the forms of sepulture. There never was a time when the doctrine of a future life was not held. Morals must be enjoined, but among rude men moral judgments were rudely figured under the forms of dogs and whips, or of an easier and more plentiful life after death. And as the savage could not detach in his mind the life of the soul from the body, he took great care for his body. Thus the whole life of man in the first ages was ponderously determined on death; and, as we know, the polity of the Egyptians, the by-laws of towns, of streets and houses, respected burial. It made every man an undertaker, and the priesthood a senate of sextons. Every palace was a door to a pyramid: a king or rich man was a *pyramidaire*. The labor of races was spent on the excavation of catacombs. The chief end of man being to be buried well, the arts most in request were masonry and embalming, to give imperishability to

the corpse.

The Greek, with his perfect senses and perceptions, had quite another philosophy, He loved life and delighted in beauty. He set his wit and taste, like elastic gas, under these mountains of stone, and lifted them. He drove away the embalmers; he built no more of those doleful mountainous tombs. He adorned death, brought wreaths of parsley and laurel; made it bright with games of strength and skill, and chariot-races. He looked at death only as the distributor of imperishable glory. Nothing can excel the beauty of his sarcophagus. He carried his arts to Rome, and built his beautiful tombs at Pompeii. The poet Shelley says of these delicately carved white marble cells, "They seem not so much hiding places of that which must decay, as voluptuous chambers for immortal spirit." In the same spirit the modern Greeks, in their songs, ask that they may be buried where the sun can see them, and that a little window may be cut in the sepulchre, from which the swallow might be seen when it comes back in the spring.

Christianity brought a new wisdom. But learning depends on the learner. No more truth can be conveyed than the popular mind can bear, and the barbarians who received the cross took the doctrine of the resurrection as the Egyptians took it. It was an affair of the body, and narrowed again by the fury of sect; so that grounds were sprinkled with holy water to receive only orthodox dust; and to keep the body still more sacredly safe for resurrection, it was put into the walls of the church; and the churches of Europe are really sepulchres. I read at Melrose Abbey the inscription on the ruined gate: —

"The Earth goes on the Earth glittering with gold;
The Earth goes to the Earth sooner than it wold;
The Earth builds on the Earth castles and towers;
The Earth says to the Earth, All this is ours."

Meantime the true disciples saw, through the letter, the doctrine of eternity, which dissolved the poor corpse and nature also, and gave grandeur to the passing hour. The most remarkable step in the religious history of recent ages is that made by the genius of Swedenborg, who described the moral faculties and affections of man, with the hard realism of an astronomer describing the suns and planets of our system, and explained his opinion of the history and destiny of souls in a narrative form, as of one who had gone in a trance into the society of other worlds. Swedenborg described an intelligible heaven, by continuing the like employments in the like circumstances as those we know; men in societies, in houses, towns, trades, entertainments; continuations of our earthly experience. We shall pass to the future existence as we enter into an agreeable dream. All

nature will accompany us there. Milton anticipated the leading thought of Swedenborg, when he wrote, in "Paradise Lost," —

"What if Earth
Be but the shadow of Heaven, and things therein
Each to the other like more than on earth is thought?"

Swedenborg had a vast genius and announced many things true and admirable, though always clothed in somewhat sad and Stygian colors. These truths, passing out of his system into general circulation, are now met with every day, qualifying the views and creeds of all churches and of men of no church. And I think we are all aware of a revolution in opinion. Sixty years ago, the books read, the sermons and prayers heard, the habits of thought of religious persons, were all directed on death. All were under the shadow of Calvinism and of the Roman Catholic purgatory, and death was dreadful. The emphasis of all the good books given to young people was on death. We were all taught that we were born to die; and over that, all the terrors that theology could gather from savage nations were added to increase the gloom. A great change has occurred. Death is seen as a natural event, and is met with firmness. "A wise man in our time caused to be written on his tomb, "Think on living." That inscription describes a progress in opinion. Cease from this antedating of your experience. Sufficient to to-day are the duties of to-day. Don't waste life in doubts and fears; spend yourself on the work before you, well assured that the right performance of this hour's duties will be the best preparation for the hours or ages that follow it:

"The name of death was never terrible
To him that knew to live."

A man of thought is willing to die, willing to live; I suppose because he has seen the thread on which the beads are strung, and perceived that it reaches up and down, existing quite independently of the present illusions. A man of affairs is afraid to die, is pestered with terrors, because he has not this vision, and is the victim of those who have moulded the religious doctrines into some neat and plausible system, as Calvinism, Romanism, or Swedenborgism, for household use. It is the fear of the young bird to trust its wings. The experiences of the soul will fast outgrow this alarm. The saying of Marcus Antoninus it were hard to mend: "It is well to die if there be gods, and sad to live if there be none." I think all sound minds rest on a certain preliminary conviction, namely, that if it be best

that conscious personal life shall continue, it will continue; if not best, then it will not: and we, if we saw the whole, should of course see that it was better so. Schiller said, "What is so universal as death, must be benefit." A friend of Michel Angelo saying to him that his constant labor for art must make him think of death with regret,— "By no means," he said; "for if life be a pleasure, yet since death also is sent by the hand of the same Master, neither should that displease us." Plutarch, in Greece, has a deep faith that the doctrine of the Divine Providence and that of the immortality of the soul rest on one and the same basis. Hear the opinion of Montesquieu: "If the immortality of the soul were an error, I should be sorry not to believe it. I avow that I am not so humble as the atheist; I know not how they think, but for me, I do not wish to exchange the idea of immortality against that of the beatitude of one day. I delight in believing myself as immortal as God himself. Independently of revealed ideas, metaphysical ideas give me a vigorous hope of my eternal well-being, which I would never renounce." [*Pensées Diverses*, p. 223.]

I was lately told of young children who feel a certain terror at the assurance of life without end. "What! will it never stop?" the child said; "what! never die? never, never? It makes me feel so tired." And I have in mind the expression of an older believer, who once said to me, "The thought that this frail being is never to end is so overwhelming that my only shelter is God's presence." This disquietude only marks the transition. The healthy state of mind is the love of life. What is so good, let it endure.

I find that what is called great and powerful life — the administration of large affairs, in commerce, in the courts, in the state, — is prone to develop narrow and special talent; but, unless combined with a certain contemplative turn, a taste for abstract truth, for the moral laws, does not build up faith or lead to content. There is a profound melancholy at the base of men of active and powerful talent, seldom suspected. Many years ago, there were two men in the United States Senate, both of whom are now dead. I have seen them both; one of them I personally knew. Both were men of distinction and took an active part in the politics of their day and generation. They were men of intellect, and one of them, at a later period, gave to a friend this anecdote. He said that when he entered the Senate he became in a short time intimate with one of his colleagues, and, though attentive enough to the routine of public duty, they daily returned to each other, and spent much time in conversation on the immortality of the soul and other intellectual questions, and cared for little else. When my friend at last left Congress, they parted, his colleague remaining there; and, as their homes were widely distant from each other, it chanced that he never met him again until, twenty-five years afterwards, they saw each other through open doors at a

distance in a crowded reception at the President's house in Washington. Slowly they advanced towards each other as they could, through the brilliant company, and at last met, — said nothing, but shook hands long and cordially. At last his friend said, "Any light, Albert?" "None," replied Albert. "Any light, Lewis?" "None," replied he. They looked in each other's eyes silently, gave one more shake each to the hand he held, and thus parted for the last time. Now I should say that the impulse which drew these minds to this inquiry through so many years was a better affirmative evidence than their failure to find a confirmation was negative. I ought to add that, though men of good minds, they were both pretty strong materialists in their daily aims and way of life. I admit that you shall find a good deal of skepticism in the streets and hotels and places of coarse amusement. But that is only to say that the practical faculties are faster developed than the spiritual. Where there is depravity there is a slaughter-house style of thinking. One argument of future life is the recoil of the mind in such company, — our pain at every skeptical statement. The skeptic affirms that the universe is a nest of boxes with nothing in the last box. All laughter at man is bitter, and puts us out of good activity. When Bonaparte insisted that the heart is one of the entrails, that it is the pit of the stomach that moves the world, — do we thank him for the gracious instruction? Our disgust is the protest of human nature against a lie.

The ground of hope is in the infinity of the world; which infinity reappears in every particle, the powers of all society in every individual, and of all mind in every mind. I know against all appearances that the universe can receive no detriment; that there is a remedy for every wrong and a satisfaction for every soul. Here is this wonderful thought. But whence came it? Who put it in the mind? It was not I, it was not you; it is elemental, — belongs to thought and virtue, and whenever we have either we see the beams of this light. When the Master of the universe has points to carry in his government he impresses his will in the structure of minds.

But proceeding to the enumeration of the few simple elements of the natural faith, the first fact that strikes us is our delight in permanence. All great natures are lovers of stability and permanence, as the type of the Eternal. After science begins, belief of permanence must follow in a healthy mind. Things so attractive, designs so wise, the secret workman so transcendently skilful that it tasks successive generations of observers only to find out, part with part, the delicate contrivance and adjustment of a weed, of a moss, to its wants, growth, and perpetuation; all these adjustments becoming perfectly intelligible to our study, — and the contriver of it all forever hidden! To breathe, to sleep, is wonderful. But never to know the Cause, the Giver, and infer his character and will! Of

what import this vacant sky, these puffing elements, these insignificant lives full of selfish loves and quarrels and ennui? Everything is prospective, and man is to live hereafter. That the world is for his education is the only sane solution of the enigma. And I think that the naturalist works not for himself, but for the believing mind, which turns his discoveries to revelations, receives them as private tokens of the grand good-will of the Creator.

The mind delights in immense time; delights in rocks, in metals, in mountain-chains, and in the evidence of vast geologic periods which these give; in the age of trees, say of the Sequoias, a few of which will span the whole history of mankind; in the noble toughness and imperishableness of the palm-tree, which thrives under abuse; delights in architecture, whose building lasts so long,— “A house,” says Ruskin, “is not in its prime until it is five hundred years old,” — and here are the Pyramids, which have as many thousands, and cromlechs and earthmounds much older than these.

We delight in stability, and really are interested in nothing that ends. What lasts a century pleases us in comparison with what lasts an hour. But a century, when we have once made it familiar and compared it with a true antiquity, looks dwarfish and recent; and it does not help the matter adding numbers, if we see that it has an end, which it will reach just as surely as the shortest. A candle a mile long or a hundred miles long does not help the imagination; only a self-feeding fire, an inextinguishable lamp, like the sun and the star, that we have not yet found date and origin for. But the nebular theory threatens their duration also, bereaves them of this glory, and will make a shift to eke out a sort of eternity by succession, as plants and animals do.

And what are these delights in the vast and permanent and strong, but approximations and resemblances of what is entire and sufficing, creative and self-sustaining life? For the Creator keeps his word with us. These long-lived or long-enduring objects are to us, as we see them, only symbols of somewhat in us far longer-lived. Our passions, our endeavors, have something ridiculous and mocking, if we come to so hasty an end. If not to *be*, how like the bells of a fool is the trump of fame! Nature does not, like the Empress Anne of Russia, call together all the architectural genius of the Empire to build and finish and furnish a palace of snow, to melt again to water in the first thaw. Will you, with vast cost and pains, educate your children to be adepts in their several arts, and, as soon as they are ready to produce a masterpiece, call out a file of soldiers to shoot them down? We must infer our destiny from the preparation. We are driven by instinct to hive innumerable experiences which are of no visible value, and we may revolve through many lives before we shall assimilate or exhaust them. Now there is nothing in nature capricious, or whimsical, or accidental, or unsupported.

Nature never moves by jumps, but always in steady and supported advances. The implanting of a desire indicates that the gratification of that desire is in the constitution of the creature that feels it; the wish for food, the wish for motion, the wish for sleep, for society, for knowledge, are not random whims, but grounded in the structure of the creature, and meant to be satisfied by food, by motion, by sleep, by society, by knowledge. If there is the desire to live, and in larger sphere, with more knowledge and power, it is because life and knowledge and power are good for us, and we are the natural depositaries of these gifts. The love of life is out of all proportion to the value set on a single day, and seems to indicate, like all our other experiences, a conviction of immense resources and possibilities proper to us, on which we have never drawn.

All the comfort I have found teaches me to confide that I shall not have less in times and places that I do not yet know. I have known admirable persons, without feeling that they exhaust the possibilities of virtue and talent. I have seen what glories of climate, of summer mornings and evenings, of midnight sky; I have enjoyed the benefits of all this complex machinery of arts and civilization, and its results of comfort. The good Power can easily provide me millions more as good. Shall I hold on with both hands to every paltry possession? All I have seen teaches me to trust the Creator for all I have not seen. Whatever it be which the great Providence prepares for us, it must be something large and generous, and in the great style of his works. The future must be up to the style of our faculties, — of memory, of hope, of imagination, of reason. I have a house, a closet which holds my books, a table, a garden, a field: are these, any or all, a reason for refusing the angel who beckons me away, — as if there were no room or skill elsewhere that could reproduce for me as my like or my enlarging wants may require? We wish to live for what is great, not for what is mean. I do not wish to live for the sake of my warm house, my orchard, or my pictures. I do not wish to live to wear out my boots.

As a hint of endless being, we may rank that novelty which perpetually attends life. The soul does not age with the body. On the borders of the grave, the wise man looks forward with equal elasticity of mind, or hope; and why not, after millions of years, on the verge of still newer existence? — for it is the nature of intelligent beings to be forever new to life. Most men are insolvent, or promise by their countenance and conversation and by their early endeavor much more than they ever perform, — suggesting a design still to be carried out; the man must have new motives, new companions, new condition, and another term. Franklin said, “Life is rather a state of embryo, a preparation for life. A man is not completely born until he has passed through death.” Every really able

man, in whatever direction he work, — a man of large affairs, an inventor, a statesman, an orator, a poet, a painter, — if you talk sincerely with him, considers his work, however much admired, as far short of what it should be. What is this Better, this flying Ideal, but the perpetual promise of his Creator?

The fable of the Wandering Jew is agreeable to men, because they want more time and land in which to execute their thoughts. But a higher poetic use must be made of the legend. Take us as we are, with our experience, and transfer us to a new planet, and let us digest for its inhabitants what we could of the wisdom of this. After we have found our depth there, and assimilated what we could of the new experience, transfer us to a new scene. In each transfer we shall have acquired, by seeing them at a distance, a new mastery of the old thoughts, in which we were too much immersed. In short, all our intellectual action, not promises but bestows a feeling of absolute existence. We are taken out of time and breathe a purer air. I know not whence we draw the assurance of prolonged life, of a life which shoots that gulf we call death and takes hold of what is real and abiding, by so many claims as from our intellectual history. Salt is a good preserver; cold is: but a truth cures the taint of mortality better, and “preserves from harm until another period.” A sort of absoluteness attends all perception of truth, — no smell of age, no hint of corruption. It is self-sufficing, sound, entire.

Lord Bacon said: “Some of the philosophers who were least divine denied generally the immortality of the soul, yet came to this point, that whatsoever motions the spirit of man could act and perform without the organs of the body, might remain after death; which were only those of the understanding, and not of the affections; so immortal and incorruptible a thing did knowledge seem to them to be.” And Van Helmont, the philosopher of Holland, drew his sufficient proof purely from the action of the intellect. “It is my greatest desire,” he said, “that it might be granted unto atheists to have tasted, at least but one only moment, what it is intellectually to understand; whereby they may feel the immortality of the mind, as it were by touching.” A farmer, a laborer, a mechanic, is driven by his work all day, but it ends at night; it has an end. But, as far as the mechanic or farmer is also a scholar or thinker, his work has no end. That which he has learned is that there is much more to be learned. The wiser he is, he feels only the more his incompetence. “What we know is a point to what we do not know.” A thousand years, — tenfold, a hundredfold his faculties, would not suffice. The demands of his task are such that it becomes omnipresent. He studies in his walking, at his meals, in his amusements, even in his sleep. Montesquieu said, “The love of study is in us almost the only eternal passion. All the others quit us in proportion as this miserable machine which holds them approaches its ruin.” “Art is long,” says the thinker, “and life is

short." He is but as a fly or a worm to this mountain, this continent, which his thoughts inhabit. It is a perception that comes by the activity of the intellect; never to the lazy or rusty mind. Courage comes naturally to those who have the habit of facing labor and danger, and who therefore know the power of their arms and bodies; and courage or confidence in the mind comes to those who know by use its wonderful forces and inspirations and returns. Belief in its future is a reward kept only for those who use it. "To me," said Goethe, "the eternal existence of my soul is proved from my idea of activity. If I work incessantly till my death, nature is bound to give me another form of existence, when the present can no longer sustain my spirit."

It is a proverb of the world that good-will makes intelligence, that goodness itself is an eye; and the one doctrine in which all religions agree is that new light is added to the mind in proportion as it uses that which it has. "He that doeth the will of God abideth forever." Ignorant people confound reverence for the intuitions with egotism. There is no confusion in the things themselves. The health of the mind consists in the perception of law. Its dignity consists in being under the law. Its goodness is the most generous extension of our private interests to the dignity and generosity of ideas. Nothing seems to me so excellent as a belief in the laws. It communicates nobleness, and, as it were, an asylum in temples to the loyal soul.

I confess that everything connected with our personality fails. Nature never spares the individual; we are always balked of a complete success: no prosperity is promised to our self-esteem. We have our indemnity only in the moral and intellectual reality to which we aspire. That is immortal, and we only through that. The soul stipulates for no private good. That which is private I see not to be good. "If truth live, I live; if justice live, I live," said one of the old saints, "and these by any man's suffering are enlarged and enthroned."

The moral sentiment measures itself by sacrifice. It risks or ruins property, health, life itself, without hesitation, for its thought, and all men justify the man by their praise for this act. And Mahomet in the same mind declared, "Not dead but living ye are to account all those who are slain in the way of God."

On these grounds I think that wherever man ripens, this audacious belief presently appears, — in the savage, savagely; in the good, purely. As soon as thought is exercised, this belief is inevitable; as soon as virtue glows, this belief confirms itself. It is a kind of summary or completion of man. It cannot rest on a legend; it cannot be quoted from one to another; it must have the assurance of a man's faculties that they can fill a larger theatre and a longer term than nature here allows him. Goethe said: "It is to a thinking being quite impossible to think himself non-existent, ceasing to think and live; so far does every one carry in

himself the proof of immortality, and quite spontaneously. But so soon as the man will be objective and go out of himself, so soon as he dogmatically will grasp a personal duration to bolster up in cockney fashion that inward assurance, he is lost in contradiction." The doctrine is not sentimental, but is grounded in the necessities and forces we possess. Nothing will hold but that which we must be and must do: —

"Man's heart the Almighty to the Future set
By secret but inviolable springs."

The revelation that is true is written on the palms of the hands, the thought of our mind, the desire of our heart, or nowhere. My idea of heaven is that there is no melodrama in it at all; that it is wholly real. Here is the emphasis of conscience and experience; this is no speculation, but the most practical of doctrines. Do you think that the eternal chain of cause and effect which pervades nature, which threads the globes as beads on a string, leaves this out of its circuit, — leaves out this desire of God and men as a waif and a caprice, altogether cheap and common, and falling without reason or merit?

We live by desire to live; we live by choice; by will, by thought, by virtue, by the vivacity of the laws which we obey, and obeying share their life, — or we die by sloth, by disobedience, by losing hold of life, which ebbs out of us. But whilst I find the signatures, the hints and suggestions, noble and wholesome, — whilst I find that all the ways of virtuous living lead upward and not downward, — yet it is not my duty to prove to myself the immortality of the soul. That knowledge is hidden very cunningly. Perhaps the archangels cannot find the secret of their existence, as the eye cannot see itself; — but, ending or endless, to live whilst I live.

There is a drawback to the value of all statements of the doctrine, and I think that one abstains from writing or printing on the immortality of the soul, because, when he comes to the end of his statement, the hungry eyes that run through it will close disappointed; the listeners say, That is not here which we desire; — and I shall be as much wronged by their hasty conclusions, as they feel themselves wronged by my omissions. I mean that I am a better believer, and all serious souls are better believers in the immortality, than we can give grounds for. The real evidence is too subtle, or is higher than we can write down in propositions, and therefore Wordsworth's "Ode" is the best modern essay on the subject.

We cannot prove our faith by syllogisms. The argument refuses to form in the mind. A conclusion, an inference, a grand augury, is ever hovering, but attempt to ground it, and the reasons are all vanishing and inadequate. You cannot make a written theory or demonstration of this as you can an orrery of the Copernican

astronomy. It must be sacredly treated. Speak of the mount in the mount. Not by literature or theology, but only by rare integrity, by a man permeated and perfumed with airs of heaven, — with manliest or womanliest enduring love, — can the vision be clear to a use the most sublime. And hence the fact that in the minds of men the testimony of a few inspired souls has had such weight and penetration. You shall not say, “O my bishop, O my pastor, is there any resurrection? What do you think? Did Dr. Channing believe that we should know each other? did Wesley? did Butler? did Fénelon?” What questions are these! Go read Milton, Shakspeare, or any truly ideal poet. Read Plato, or any seer of the interior realities. Read St. Augustine, Swedenborg, Immanuel Kant. Let any master simply recite to you the substantial laws of the intellect, and in the presence of the laws themselves you will never ask such primary-school questions.

Is immortality only an intellectual quality, or, shall I say, only an energy, there being no passive? He has it, and he alone, who gives life to all names, persons, things, where he comes. No religion, not the wildest mythology dies for him; no art is lost. He vivifies what he touches. Future state is an illusion for the ever-present state. It is not length of life, but depth of life. It is not duration, but a taking of the soul out of time, as all high action of the mind does: when we are living in the sentiments we ask no questions about time. The spiritual world takes place; — that which is always the same. But see how the sentiment is wise. Jesus explained nothing, but the influence of him took people out of time, and they felt eternal. A great integrity makes us immortal; an admiration, a deep love, a strong will, arms us above fear. It makes a day memorable. We say we lived years in that hour. It is strange that Jesus is esteemed by mankind the bringer of the doctrine of immortality. He is never once weak or sentimental; he is very abstemious of explanation, he never preaches the personal immortality; whilst Plato and Cicero had both allowed themselves to overstep the stern limits of the spirit, and gratify the people with that picture.

How ill agrees this majestic immortality of our religion with the frivolous population! “Will you build magnificently for mice? Will you offer empires to such as cannot set a house or private affairs in order? Here are people who cannot dispose of a day; an hour hangs heavy on their hands; and will you offer them rolling ages without end? But this is the way we rise. Within every man’s thought is a higher thought, — within the character he exhibits to-day, a higher character. The youth puts off the illusions of the child, the man puts off the ignorance and tumultuous passions of youth, proceeding thence puts off the egotism of manhood, and becomes at last a public and universal soul. He is rising to greater heights, but also rising to realities; the outer relations and

circumstances dying out, he entering deeper into God, God into him, until the last garment of egotism falls, and he is with God, — shares the will and the immensity of the First Cause.

It is curious to find the selfsame feeling, that it is not immortality, but eternity, — not duration, but a state of abandonment to the Highest, and so the sharing of His perfection, — appearing in the farthest east and west. The human mind takes no account of geography, language, or legends, but in all utters the same instinct.

Yama, the lord of Death, promised Nachiketas, the son of Gautama, to grant him three boons at his own choice. Nachiketas, knowing that his father Gautama was offended with him, said, “O Death! let Gautama be appeased in mind, and forget his anger against me: this I choose for the first boon.” Yama said, “Through my favor, Gautama will remember thee with love as before.” For the second boon, Nachiketas asks that the fire by which heaven is gained be made known to him; which also Yama allows, and says, “Choose the third boon, O Nachiketas!” Nachiketas said, there is this inquiry. Some say the soul exists after the death of man; others say it does not exist. This I should like to know, instructed by thee. Such is the third of the boons. Yama said, “For this question, it was inquired of old, even by the gods; for it is not easy to understand it. Subtle is its nature. Choose another boon, O Nachiketas! Do not compel me to this.” Nachiketas said, “Even by the gods was it inquired. And as to what thou sayest, O Death, that it is not easy to understand it, there is no other speaker to be found like thee. There is no other boon like this.” Yama said, “Choose sons and grandsons who may live a hundred years; choose herds of cattle; choose elephants and gold and horses; choose the wide expanded earth, and live thyself as many years as thou listeth. Or, if thou knowest a boon like this, choose it, together with wealth and far-extending life. Be a king, O Nachiketas! On the wide earth I will make thee the enjoyer of all desires. All those desires that are difficult to gain in the world of mortals, all those ask thou at thy pleasure; — those fair nymphs of heaven with their chariots, with their musical instruments; for the like of them are not to be gained by men. I will give them to thee, but do not ask the question of the state of the soul after death.” Nachiketas said, “All those enjoyments are of yesterday. With thee remain thy horses and elephants, with thee the dance and song. If we should obtain wealth, we live only as long as thou pleasest. The boon which I choose I have said.” Yama said, “One thing is good, another is pleasant. Blessed is he who takes the good, but he who chooses the pleasant loses the object of man. But thou, considering the objects of desire, hast abandoned them. These two, ignorance (whose object is what is pleasant) and knowledge (whose object is what is good), are known to be far asunder, and

to lead to different goals. Believing this world exists, and not the other, the careless youth is subject to my sway. That knowledge for which thou hast asked is not to be obtained by argument. I know worldly happiness is transient, for that firm one is not to be obtained by what is not firm. The wise, by means of the union of the intellect with the soul, thinking him whom it is hard to behold, leaves both grief and joy. Thee, O Nachiketas! I believe a house whose door is open to Brahma. Brahma the supreme, whoever knows him obtains whatever he wishes. The soul is not born; it does not die; it was not produced from any one. Nor was any produced from it. Unborn, eternal, it is not slain, though the body is slain; subtler than what is subtle, greater than what is great, sitting it goes far, sleeping it goes everywhere. Thinking the soul as unbodily among bodies, firm among fleeting things, the wise man casts off all grief. The soul cannot be gained by knowledge, not by understanding, not by manifold science. It can be obtained by the soul by which it is desired. It reveals its own truths.”

DEMONOLOGY.

Night - dreams trace on Memory's wall
Shadows of the thoughts of day,
And thy fortunes as they fall
The bias of thy will betray.
In the chamber, on the stairs,
Lurking dumb,

Go and come
Lemurs and Lars.

*[From the course of lectures on "Human Life," read in Boston, 1839-40.
Published in the North American Review, 1877.]*

The name Demonology covers dreams, omens, coincidences, luck, sortilege, magic, and other experiences which shun rather than court inquiry, and deserve notice chiefly because every man has usually in a lifetime two or three hints in this kind which are specially impressive to him. They also shed light on our structure.

The witchcraft of sleep divides with truth the empire of our lives. This soft enchantress visits two children lying locked in each other's arms, and carries them asunder by wide spaces of land and sea, and wide intervals of time: —

"There lies a sleeping city, God of dreams!
What an unreal and fantastic world
Is going on below!
Within the sweep of yon encircling wall
How many a large creation of the night,
Wide wilderness and mountain, rock and sea,
Peopled with busy, transitory groups,
Finds room to rise, and never feels the crowd."

'T is superfluous to think of the dreams of multitudes, the astonishment remains that one should dream; that we should resign so quietly this deifying Reason, and become the theatre of delirious shows, wherein time, space, persons, cities, animals, should dance before us in merry and mad confusion; a delicate creation outdoing the prime and flower of actual nature, antic comedy alternating with horrid pictures. Sometimes the forgotten companions of childhood reappear: —

"They come, in dim procession led,
The cold, the faithless, and the dead,
As warm each hand, each brow as gay,
As if they parted yesterday:" —

or we seem busied for hours and days in peregrinations over seas and lands, in earnest dialogues, strenuous actions for nothings and absurdities, cheated by spectral jokes and waking suddenly with ghastly laughter, to be rebuked by the cold, lonely, silent midnight, and to rake with confusion in memory among the gibbering nonsense to find the motive of this contemptible cachinnation. Dreams are jealous of being remembered; they dissipate instantly and angrily if you try to hold them. When newly awaked from lively dreams, we are so near them, still agitated by them, still in their sphere, — give us one syllable, one feature, one hint, and we should repossess the whole; hours of this strange entertainment would come trooping back to us; but we cannot get our hand on the first link or fibre, and the whole is lost. There is a strange wilfulness in the speed with which it disperses and baffles our grasp.

A dislocation seems to be the foremost trait of dreams. A painful imperfection almost always attends them. The fairest forms, the most noble and excellent persons, are deformed by some pitiful and insane circumstance. The very landscape and scenery in a dream seem not to fit us, but like a coat or cloak of some other person to overlap and encumber the wearer; so is the ground, the road, the house, in dreams, too long or too short, and if it served no other purpose would show us how accurately nature fits man awake.

There is one memory of waking and another of sleep. In our dreams the same scenes and fancies are many times associated, and that too, it would seem, for years. In sleep one shall travel certain roads in stage-coaches or gigs, which he recognizes as familiar, and has dreamed that ride a dozen times; or shall walk alone in familiar fields and meadows, which road or which meadow in waking hours he never looked upon. This feature of dreams deserves the more attention from its singular resemblance to that obscure yet startling experience which almost every person confesses in day light, that particular passages of conversation and action have occurred to him in the same order before, whether dreaming or waking; a suspicion that they have been with precisely these persons in precisely this room, and heard precisely this dialogue, at some former hour, they know not when.

Animals have been called “the dreams of nature.” Perhaps for a conception of their consciousness we may go to our own dreams. In a dream we have the instinctive obedience, the same torpidity of the highest power, the same unsurprised assent to the monstrous as these metamorphosed men exhibit. Our thoughts in a stable or in a menagerie, on the other hand, may well remind us of our dreams. What compassion do these imprisoning forms awaken! You may catch the glance of a dog sometimes which lays a kind of claim to sympathy and brotherhood. What! somewhat of me down there? Does he know it? Can he too,

as I, go out of himself, see himself, perceive relations? We fear lest the poor brute should gain one dreadful glimpse of his condition, should learn in some moment the tough limitations of this fettering organization. It was in this glance that Ovid got the hint of his metamorphoses; Calidasa of his transmigration of souls. For these fables are our own thoughts carried out. What keeps those wild tales in circulation for thousands of years? What but the wild fact to which they suggest some approximation of theory? Nor is the fact quite solitary, for in varieties of our own species where organization seems to predominate over the genius of man, in Kalmuck or Malay or Flathead Indian, we are sometimes pained by the same feeling; and sometimes too the sharp-witted prosperous white man awakens it. In a mixed assembly we have chanced to see not only a glance of Abdiel, so grand and keen, but also in other faces the features of the mink, of the bull, of the rat, and the barn-door fowl. You think, could the man overlook his own condition, he could not be restrained from suicide.

Dreams have a poetic integrity and truth. This limbo and dust-hole of thought is presided over by a certain reason, too. Their extravagance from nature is yet within a higher nature. They seem to us to suggest an abundance and fluency of thought not familiar to the waking experience. They pique us by independence of us, yet we know ourselves in this mad crowd, and owe to dreams a kind of divination and wisdom. My dreams are not me; they are not Nature, or the Not-me: they are both. They have a double consciousness, at once sub-and objective. We call the phantoms that rise, the creation of our fancy, but they act like mutineers, and fire on their commander; showing that every act, every thought, every cause, is bipolar, and in the act is contained the counteraction. If I strike, I am struck; if I chase, I am pursued.

Wise and sometimes terrible hints shall in them be thrown to the man out of a quite unknown intelligence. He shall be startled two or three times in his life by the justice as well as the significance of this phantasmagoria. Once or twice the conscious fetters shall seem to be unlocked, and a freer utterance attained. A prophetic character in all ages has haunted them. They are the maturation often of opinions not consciously carried out to statements, but whereof we already possessed the elements. Thus, when awake, I know the character of Rupert, but do not think what he may do. In dreams I see him engaged in certain actions which seem preposterous, — out of all fitness. He is hostile, he is cruel, he is frightful, he is a poltroon. It turns out prophecy a year later. But it was already in my mind as character, and the sibyl dreams merely embodied it in fact. Why then should not symptoms, auguries, forebodings be, and, as one said, the moanings of the spirit?

We are let by this experience into the high region of Cause, and acquainted

with the identity of very unlike-seeming effects. We learn that actions whose turpitude is very differently reputed proceed from one and the same affection. Sleep takes off the costume of circumstance, arms us with terrible freedom, so that every will rushes to a deed. A skilful man reads his dreams for his self-knowledge; yet not the details, but the quality. What part does he play in them, — a cheerful, manly part, or a poor drivelling part? However monstrous and grotesque their apparitions, they have a substantial truth. The same remark may be extended to the omens and coincidences which may have astonished us. Of all it is true that the reason of them is always latent in the individual. Goethe said: “These whimsical pictures, inasmuch as they originate from us, may well have an analogy with our whole life and fate.”

The soul contains in itself the event that shall presently befall it, for the event is only the actualizing of its thoughts. It is no wonder that particular dreams and presentiments should fall out and be prophetic. The fallacy consists in selecting a few insignificant hints when all are inspired with the same sense. As if one should exhaust his astonishment at the economy of his thumb-nail, and overlook the central causal miracle of his being a man. Every man goes through the world attended with innumerable facts prefiguring (yes, distinctly announcing) his fate, if only eyes of sufficient heed and illumination were fastened on the sign. The sign is always there, if only the eye were also; just as under every tree in the speckled sunshine and shade no man notices that every spot of light is a perfect image of the sun, until in some hour the moon eclipses the luminary; and then first we notice that the spots of light have become crescents, or annular, and correspond to the changed figure of the sun. Things are significant enough, Heaven knows; but the seer of the sign, — where is he? We doubt not a man’s fortune may be read in the lines of his hand, by palmistry; in the lines of his face, by physiognomy; in the outlines of the skull, by craniology: the lines are all there, but the reader waits. The long waves indicate to the instructed mariner that there is no near land in the direction from which they come. Belzoni describes the three marks which led him to dig for a door to the pyramid of Ghizeh. What thousands had beheld the same spot for so many ages, and seen no three marks!

Secret analogies tie together the remotest parts of nature, as the atmosphere of a summer morning is filled with innumerable gossamer threads running in every direction, revealed by the beams of the rising sun. All life, all creation, is tell-tale and betraying. A man reveals himself in every glance and step and movement and rest: —

“Head with foot hath private amity,
And both with moons and tides.”

Not a mathematical axiom but is a moral rule. The jest and byword to an intelligent ear extends its meaning to the soul and to all time. Indeed, all productions of man are so anthropomorphous that not possibly can he invent any fable that shall not have a deep moral and be true in senses and to an extent never intended by the inventor. Thus all the bravest tales of Homer and the poets, modern philosophers can explain with profound judgment of law and state and ethics. Lucian has an idle tale that Pancrates, journeying from Memphis to Coptus, and wanting a servant, took a door-bar and pronounced over it magical words, and it stood up and brought him water, and turned a spit, and carried bundles, doing all the work of a slave. What is this but a prophecy of the progress of art? For Pancrates write Watt or Fulton, and for “magical words” write “steam;” and do they not make an iron bar and half a dozen wheels do the work, not of one, but of a thousand skilful mechanics?

“Nature,” said Swedenborg, “makes almost as much demand on our faith as miracles do.” And I find nothing in fables more astonishing than my experience in every hour. One moment of a man’s life is a fact so stupendous as to take the lustre out of all fiction. The lovers of marvels, of what we call the occult and unproved sciences, of mesmerism, of astrology, of coincidences, of intercourse, by writing or by rapping or by painting, with departed spirits, need not reproach us with incredulity because we are slow to accept their statement. It is not the incredibility of the fact, but a certain want of harmony between the action and the agents. We are used to vaster wonders than these that are alleged. In the hands of poets, of devout and simple minds, nothing in the line of their character and genius would surprise us. But we should look for the style of the great artist in it, look for completeness and harmony. Nature never works like a conjuror, to surprise, rarely by shocks, but by infinite graduation; so that we live embosomed in sounds we do not hear, scents we do not smell, spectacles we see not, and by innumerable impressions so softly laid on that though important we do not discover them until our attention is called to them.

For Spiritism, it shows that no man almost is fit to give evidence. Then I say to the amiable and sincere among them, these matters are quite too important than that I can rest them on any legends. If I have no facts, as you allege, I can very well wait for them. I am content and occupied with such miracles as I know, such as my eyes and ears daily show me, such as humanity and astronomy. If any others are important to me they will certainly be shown to me.

In times most credulous of these fancies the sense was always met and the superstition rebuked by the grave spirit of reason and humanity. When Hector is told that the omens are unpropitious, he replies, —

“One omen is the best, to fight for one’s country.”

Euripides said, “He is not the best prophet who guesses well, and he is not the wisest man whose guess turns out well in the event, but he who, whatever the event be, takes reason and probability for his guide.” “Swans, horses, dogs and dragons,” says Plutarch, “we distinguish as sacred, and vehicles of the Divine foresight, and yet we cannot believe that men are sacred and favorites of Heaven.” The poor shipmaster discovered a sound theology, when in the storm at sea he made his prayer to Neptune, “O God, thou mayst save me if thou wilt, and if thou wilt thou mayst destroy me; but, however, I will hold my rudder true.” Let me add one more example of the same good sense, in a story quoted out of Hecateus of Abdera: —

“As I was once travelling by the Red Sea, there was one among the horsemen that attended us named Masollam, a brave and strong man, and according to the testimony of all the Greeks and barbarians, a very skilful archer. Now while the whole multitude was on the way, an augur called out to them to stand still, and this man inquired the reason of their halting. The augur showed him a bird, and told him, ‘If that bird remained where he was, it would be better for them all to remain; if he flew on, they might proceed; but if he flew back they must return.’ The Jew said nothing, but bent his bow and shot the bird to the ground. This act offended the augur and some others, and they began to utter imprecations against the Jew. But he replied, ‘Wherefore? Why are you so foolish as to take care of this unfortunate bird? How could this fowl give us any wise directions respecting our journey, when he could not save his own life? Had he known anything of futurity, he would not have come here to be killed by the arrow of Masollam the Jew.’”

It is not the tendency of our times to ascribe importance to whimsical pictures of sleep, or to omens. But the faith in peculiar and alien power takes another form in the modern mind, much more resembling the ancient doctrine of the guardian genius. The belief that particular individuals are attended by a good fortune which makes them desirable associates in any enterprise of uncertain success, exists not only among those who take part in political and military projects, but influences all joint action of commerce and affairs, and a corresponding assurance in the individuals so distinguished meets and justifies the expectation of others by a boundless self-trust. “I have a lucky hand, sir,” said Napoleon to his hesitating Chancellor; “those on whom I lay it are fit for

anything.” This faith is familiar in one form, — that often a certain abdication of prudence and foresight is an element of success; that children and young persons come off safe from casualties that would have proved dangerous to wiser people. We do not think the young will be forsaken; but he is fast approaching the age when the sub-miraculous external protection and leading are withdrawn and he is committed to his own care. The young man takes a leap in the dark and alights safe. As he comes into manhood he remembers passages and persons that seem, as he looks at them now, to have been supernaturally deprived of injurious influence on him. His eyes were holden that he could not see. But he learns that such risks he may no longer run. He observes, with pain, not that he incurs mishaps here and there, but that his genius, whose invisible benevolence was tower and shield to him, is no longer present and active.

In the popular belief, ghosts are a selecting tribe, avoiding millions, speaking to one. In our traditions, fairies, angels and saints show the like favoritism; so do the agents and the means of magic, as sorcerers and amulets. This faith in a doting power, so easily sliding into the current belief everywhere, and, in the particular of lucky days and fortunate persons, as frequent in America today day as the faith in incantations and philters was in old Rome, or the wholesome potency of the sign of the cross in modern Rome, — this supposed power runs athwart the recognized agencies, natural and moral, which science and religion explore. Heeded though it be in many actions and partnerships, it is not the power to which we build churches, or make liturgies and prayers, or which we regard in passing laws, or found college professorships to expound. Goethe has said in his Autobiography what is much to the purpose: —

“I believed that I discovered in nature, animate and inanimate, intelligent and brute, somewhat which manifested itself only in contradiction, and therefore could not be grasped by a conception, much less by a word. It was not god-like, since it seemed unreasonable; not human, since it had no understanding; not devilish, since it was beneficent; not angelic, since it is often a marplot. It resembled chance, since it showed no sequel. It resembled Providence, since it pointed at connection. All which limits us seemed permeable to that. It seemed to deal at pleasure with the necessary elements of our constitution; it shortened time and extended space. Only in the impossible it seemed to delight, and the possible to repel with contempt. This, which seemed to insert itself between all other things, to sever them, to bind them, I named the Demoniactal, after the example of the ancients, and of those who had observed the like.

“Although every demoniactal property can manifest itself in the corporeal and incorporeal, yes, in beasts too in a remarkable manner, yet it stands specially in

wonderful relations with men, and forms in the moral world, though not an antagonist, yet a transverse element, so that the former may be called the warp, the latter the woof. For the phenomena which hence originate there are countless names, since all philosophies and religions have attempted in prose or in poetry to solve this riddle, and to settle the thing once for all, as indeed they may be allowed to do.

“But this demonic element appears most fruitful when it shows itself as the determining characteristic in an individual. In the course of my life I have been able to observe several such, some near, some farther off. They are not always superior persons, either in mind or in talent. They seldom recommend themselves through goodness of heart. But a monstrous force goes out from them, and they exert an incredible power over all creatures, and even over the elements; who shall say how far such an influence may extend? All united moral powers avail nothing against them. In vain do the clear-headed part of mankind discredit them as deceivers or deceived, — the mass is attracted. Seldom or never do they meet their match among their contemporaries; they are not to be conquered save by the universe itself, against which they have taken up arms. Out of such experiences doubtless arose the strange, monstrous proverb, ‘Nobody against God but God.’” [*Goethe, Wahrheit and Dichtung, Book xx.*]

It would be easy in the political history of every time to furnish examples of this irregular success, men having a force which without virtue, without shining talent, yet makes them prevailing. No equal appears in the field against them. A power goes out from them which draws all men and events to favor them. The crimes they commit, the exposures which follow, and which would ruin any other man, are strangely overlooked, or do more strangely turn to their account.

I set down these things as I find them, but however poetic these twilights of thought, I like daylight, and I find somewhat wilful, some play at blindman’s-buff, when men as wise as Goethe talk mysteriously of the demonological. The insinuation is that the known eternal laws of morals and matter are sometimes corrupted or evaded by this gipsy principle, which chooses favorites and works in the dark for their behoof; as if the laws of the Father of the universe were sometimes balked and eluded by a meddling Aunt of the universe for her pets. You will observe that this extends the popular idea of success to the very gods; that they foster a success to you which is not a success to all; that fortunate men, fortunate youths exist, whose good is not virtue or the public good, but a private good, robbed from the rest. It is a midsummer-madness, corrupting all who hold the tenet. The demonologic is only a fine name for egotism; an exaggeration namely of the individual, whom it is Nature’s settled purpose to

postpone. "There is one world common to all who are awake, but each sleeper betakes himself to one of his own." [*Heraclitus.*] Dreams retain the infirmities of our character. The good genius may be there or not, our evil genius is sure to stay. The Ego partial makes the dream; the Ego total the interpretation. Life is also a dream on the same terms.

The history of man is a series of conspiracies to win from Nature some advantage without paying for it. It is curious to see what grand powers we have a hint of and are mad to grasp, yet how slow Heaven is to trust us with such edge-tools. "All that frees talent without increasing self-command is noxious." Thus the fabled ring of Gyges, making the wearer invisible, which is represented in modern fable by the telescope as used by Schlemil, is simply mischievous. A new or private language, used to serve only low or political purposes; the transfusion of the blood; the steam battery, so fatal as to put an end to war by the threat of universal murder; the desired discovery of the guided balloon, are of this kind. Tramps are troublesome enough in the city and in the highways, but tramps flying through the air and descending on the lonely traveller or the lonely farmer's house or the bank messenger in the country, can well be spared. Men are not fit to be trusted with these talismans.

Before we acquire great power we must acquire wisdom to use it well. Animal magnetism inspires the prudent and moral with a certain terror; so the divination of contingent events, and the alleged second-sight of the pseudo-spiritualists. There are many things of which a wise man might wish to be ignorant, and these are such. Shun them as you would the secrets of the undertaker and the butcher. The best are never demoniacal or magnetic; leave this limbo to the Prince of the power of the air. The lowest angel is better. It is the height of the animal; below the region of the divine. Power as such is not known to the angels.

Great men feel that they are so by sacrificing their selfishness and falling back on what is humane; in renouncing family, clan, country, and each exclusive and local connection, to beat with the pulse and breathe with the lungs of nations. A Highland chief, an Indian sachem or a feudal baron may fancy that the mountains and lakes were made specially for him Donald, or him Tecumseh; that the one question for history is the pedigree of his house, and future ages will be busy with his renown; that he has a guardian angel; that he is not in the roll of common men, but obeys a high family destiny; when he acts, unheard-of success evinces the presence of rare agents; what is to befall him, omens and coincidences foreshow; when he dies banshees will announce his fate to kinsmen in foreign parts. What more facile than to project this exuberant selfhood into the region where individuality is forever bounded by generic and cosmical laws?

The deepest flattery, and that to which we can never be insensible, is the flattery of omens.

We may make great eyes if we like, and say of one on whom the sun shines, "What luck presides over him!" But we know that the law of the Universe is one for each and for all. There is as precise and as describable a reason for every fact occurring to him, as for any occurring to any man. Every fact in which the moral elements intermingle is not the less under the dominion of fatal law. Lord Bacon uncovers the magic when he says, "Manifest virtues procure reputation; occult ones, fortune." Thus the so-called fortunate man is one who, though not gifted to speak when the people listen, or to act with grace or with understanding to great ends, yet is one who, in actions of a low or common pitch, relies on his instincts, and simply does not act where he should not, but waits his time, and without effort acts when the need is. If to this you add a fitness to the society around him, you have the elements of fortune; so that in a particular circle and knot of affairs he is not so much his own man as the hand of nature and time. Just as his eye and hand work exactly together, — and to hit the mark with a stone he has only to fasten his eye firmly on the mark and his arm will swing true, — so the main ambition and genius being bestowed in one direction, the lesser spirits and involuntary aids within his sphere will follow. The fault of most men is that they are busybodies; do not wait the simple movement of the soul, but interfere and thwart the instructions of their own minds.

Coincidences, dreams, animal magnetism, omens, sacred lots, have great interest for some minds. They run into this twilight and say, "There's more than is dreamed of in your philosophy." Certainly these facts are interesting, and deserve to be considered. But they are entitled only to a share of attention, and not a large share. *Nil magnificum, nil generosum sapit.* Let their value as exclusive subjects of attention be judged of by the infallible test of the state of mind in which much notice of them leaves us. Read a page of Cudworth or of Bacon, and we are exhilarated and armed to manly duties. Read demonology or Colquhoun's Report, and we are bewildered and perhaps a little besmirched. We grope. They who love them say they are to reveal to us a world of unknown, unsuspected truths. But suppose a diligent collection and study of these occult facts were made, they are merely physiological, semi-medical, related to the machinery of man, opening to our curiosity how we live, and no aid on the superior problems why we live, and what we do. While the dilettanti have been prying into the humors and muscles of the eye, simple men will have helped themselves and the world by using their eyes.

And this is not the least remarkable fact which the adepts have developed. Men who had never wondered at anything, who had thought it the most natural

thing in the world that they should exist in this orderly and replenished world, have been unable to suppress their amazement at the disclosures of the somnambulist. The peculiarity of the history of Animal Magnetism is that it drew in as inquirers and students a class of persons never on any other occasion known as students and inquirers. Of course the inquiry is pursued on low principles. Animal magnetism peeps. It becomes in such hands a black art. The uses of the thing, the commodity, the power, at once come to mind and direct the course of inquiry. It seemed to open again that door which was open to the imagination of childhood — of magicians and fairies and lamps of Aladdin, the travelling cloak, the shoes of swiftness and the sword of sharpness that were to satisfy the uttermost wish of the senses without danger or a drop of sweat. But as Nature can never be outwitted, as in the Universe no man was ever known to get a cent's worth without paying in some form or other the cent, so this prodigious promiser ends always and always will, as sorcery and alchemy have done before, in very small and smoky performance.

Mesmerism is high life below stairs; Momus playing Jove in the kitchens of Olympus. 'Tis a low curiosity or lust of structure, and is separated by celestial diameters from the love of spiritual truths. It is wholly a false view to couple these things in any manner with the religious nature and sentiment, and a most dangerous superstition to raise them to the lofty place of motives and sanctions. This is to prefer halos and rainbows to the sun and moon. These adepts have mistaken flatulency for inspiration. Were this drivel which they report as the voice of spirits really such, we must find out a more decisive suicide. I say to the table-rappers: —

“I well believe

Thou wilt not utter what thou dost not know,
And so far will I trust thee, gentle Kate.”

They are ignorant of all that is healthy and useful to know, and by laws of kind, — dunces seeking dunces in the dark of what they call the spiritual world, — preferring snores and gastric noises to the voice of any muse. I think the rappings a new test, like blue litmus or other chemical absorbent, to try catechisms with. It detects organic skepticism in the very heads of the Church. 'Tis a lawless world. We have left the geometry, the compensation, and the conscience of the daily world, and come into the realm or chaos of chance and pretty or ugly confusion; no guilt and no virtue, but a droll bedlam, where everybody believes only after his humor, and the actors and spectators have no conscience or reflection, no police, no foot-rule, no sanity, — nothing but whim and whim creative.

Meantime far be from me the impatience which cannot brook the

supernatural, the vast; far be from me the lust of explaining away all which appeals to the imagination, and the great presentiments which haunt us. Willingly I too say, Hail! to the unknown awful powers which transcend the ken of the understanding. And the attraction which this topic has had for me and which induces me to unfold its parts before you is precisely because I think the numberless forms in which this superstition has reappeared in every time and every people indicates the inextinguishableness of wonder in man, betrays his conviction that behind all your explanations is a vast and potent and living Nature, inexhaustible and sublime, which you cannot explain. He is sure no book, no man has told him all. He is sure the great Instinct, the circumambient soul which flows into him as into all, and is his life, has not been searched. He is sure that intimate relations subsist between his character and his fortunes, between him and his world; and until he can adequately tell them he will tell them wildly and fabulously. Demonology is the shadow of Theology.

The whole world is an omen and a sign. Why look so wistfully in a corner? Man is the Image of God. Why run after a ghost or a dream? The voice of divination resounds everywhere and runs to waste unheard, unregarded, as the mountains echo with the bleatings of cattle.

ARISTOCRACY.

But if thou do thy best,
Without remission, without rest,
And invite the sunbeam,
And abhor to feign or seem
Even to those who thee should love
And thy behavior approve;
If thou go in thine own likeness, —
Be it health or be it sickness, —
If thou go as thy father's son,
If thou wear no mask or lie,
Dealing purely and nakedly, — ...

[First read as a lecture — in England — in 1848; here printed with additions from other papers.]

There is an attractive topic, which never goes out of vogue and is impertinent in no community, — the permanent traits of the Aristocracy. It is an interest of the human race, and, as I look at it, inevitable, sacred and to be found in every country and in every company of men. My concern with it is that concern which all well-disposed persons will feel, that there should be model men, — true instead of spurious pictures of excellence, and, if possible, living standards.

I observe that the word *gentleman* is gladly heard in all companies; that the cogent motive with the best young men who are revolving plans and forming resolutions for the future, is the spirit of honor, the wish to be gentlemen. They do not yet covet political power, nor any exuberance of wealth, wealth that costs too much; nor do they wish to be saints; for fear of partialism; but the middle term, the reconciling element, the success of the manly character, they find in the idea of gentleman. It is not to be a man of rank, but a man of honor, accomplished in all arts and generosities, which seems to them the right mark and the true chief of our modern society. A reference to society is part of the idea of culture; science of a gentleman; art of a gentleman; poetry in a gentleman: intellectually held, that is, for their own sake, for what they are; for their universal beauty and worth; — not for economy, which degrades them, but not over-intellectually, that is, not to ecstasy, entrancing the man, but redounding to his beauty and glory.

In the sketches which I have to offer I shall not be surprised if my readers

should fancy that I am giving them, under a gayer title, a chapter on Education. It will not pain me if I am found now and then to rove from the accepted and historic, to a theoretic peerage: or if it should turn out, what is true, that I am describing a real aristocracy, a chapter of Templars who sit indifferently in all climates and under the shadow of all institutions, but so few, so heedless of badges, so rarely convened, so little in sympathy with the predominant politics of nations, that their names and doings are not recorded in any Book of Peerage, or any Court Journal, or even Daily Newspaper of the world.

I find the caste in the man. The Golden Book of Venice, the scale of European chivalry, the Barons of England, the hierarchy of India with its impassable degrees, is each a transcript of the decigrade or centigraded Man. A many-chambered Aristocracy lies already organized in his moods and faculties. Room is found for all the departments of the State in the moods and faculties of each human spirit, with separate function and difference of dignity.

The terrible aristocracy that is in nature. Real people dwelling with the real, face to face undaunted: then, far down, people of taste, people dwelling in a relation, or rumor, or influence of good and fair, entertained by it, superficially touched, yet charmed by these shadows: — and, far below these, gross and thoughtless, the animal man, billows of chaos, down to the dancing and menial organizations.

I observe the inextinguishable prejudice men have in favor of a hereditary transmission of qualities. It is in vain to remind them that Nature appears capricious. Some qualities she carefully fixes and transmits, but some, and those the finer, she exhales with the breath of the individual, as too costly to perpetuate. But I notice also that they may become fixed and permanent in any stock, by painting and repainting them on every individual, until at last Nature adopts them and bakes them into her porcelain.

At all events I take this inextinguishable persuasion in men's minds as a hint from the outward universe to man to inlay as many virtues and superiorities as he can into this swift fresco of the day, which is hardening to an immortal picture.

If one thinks of the interest which all men have in beauty of character and manners; that it is of the last importance to the imagination and affection, inspiring as it does that loyalty and worship so essential to the finish of character, — certainly, if culture, if laws, if primogeniture, if heraldry, if money could secure such a result as superior and finished men, it would be the interest of all mankind to see that the steps were taken, the pains incurred. No taxation, no concession, no conferring of privileges never so exalted would be a price too

large.

The old French Revolution attracted to its first movement all the liberality, virtue, hope and poetry in Europe. By the abolition of kingship and aristocracy, tyranny, inequality and poverty would end. Alas! no; tyranny, inequality, poverty, stood as fast and fierce as ever. We likewise put faith in Democracy; in the Republican principle carried out to the extremes of practice in universal suffrage, in the will of majorities. The young adventurer finds that the relations of society, the position of classes, irk and sting him, and he lends himself to each malignant party that assails what is eminent. He will one day know that this is not removable, but a distinction in the nature of things; that neither the caucus, nor the newspaper, nor the Congress, nor the mob, nor the guillotine, nor fire, nor all together, can avail to outlaw, cut out, burn, or destroy the offense of superiority in persons. The manners, the pretension, which annoy me so much, are not superficial, but built on a real distinction in the nature of my companion. The superiority in him is inferiority in me, and if this particular companion were wiped by a sponge out of nature, my inferiority would still be made evident to me by other persons everywhere and every day.

No, not the hardest utilitarian will question the value of an aristocracy if he love himself. For every man confesses that the highest good which the universe proposes to him is the highest society. If a few grand natures should come to us and weave duties and offices between us and them, it would make our bread ambrosial.

I affirm that inequalities exist, not in costume, but in the powers of expression and action; a primitive aristocracy; and that we, certainly, have not come here to describe well-dressed vulgarity. I cannot tell how English titles are bestowed, whether on pure blood, or on the largest holder in the three-per-cents. The English government and people, or the French government, may easily make mistakes; but Nature makes none. Every mark and scutcheon of hers indicates constitutional qualities. In science, in trade, in social discourse, as in the state it is the same thing. Forever and ever it takes a pound to lift a pound.

It is plain that all the deference of modern society to this idea of the Gentleman, and all the whimsical tyranny of Fashion which has continued to engraft itself on this reverence, is a secret homage to reality and love which ought to reside in every man. This is the steel that is hid under gauze and lace, under flowers and spangles. And it is plain that instead of this idolatry, a worship; instead of this impure, a pure reverence for character, a new respect for the sacredness of the individual man, is that antidote which must correct in our country the disgraceful deference to public opinion, and the insane subordination of the end to the means. From the folly of too much association we must come

back to the repose of self-reverence and trust.

The game of the world is a perpetual trial of strength between man and events. The common man is the victim of events. Whatever happens is too much for him, he is drawn this way and that way, and his whole life is a hurry. The superior man is at home in his own mind. We like cool people, who neither hope nor fear too much, but seem to have many strings to their bow, and can survive the blow well enough if stock should rise or fall, if parties should be broken up, if their money or their family should be dispersed; who can stand a slander very well; indeed on whom events make little or no impression, and who can face death with firmness. In short, we dislike every mark of a superficial life and action, and prize whatever mark of a central life.

What is the meaning of this invincible respect for war, here in the triumphs of our commercial civilization, that we can never quite smother the trumpet and the drum? How is it that the sword runs away with all the fame from the spade and the wheel? How sturdy seem to us in the history, those Merovingians, Guelphs, Dorias, Sforzas, Burgundies and Guesclins of the old warlike ages! We can hardly believe they were all such speedy shadows as we; that an ague or fever, a drop of water or a crystal of ice ended them. We give soldiers the same advantage to-day. From the most accumulated culture we are always running back to the sound of any drum and fife. And in any trade, or in law-courts, in orchard and farm, and even in saloons, they only prosper or they prosper best who have a military mind, who engineer in sword and cannon style, with energy and sharpness. Why, but because courage never loses its high price? Why, but because we wish to see those to whom existence is most adorned and attractive, foremost to peril it for their object, and ready to answer for their actions with their life.

The existence of an upper class is not injurious, as long as it is dependent on merit. For so long it is provocation to the bold and generous. These distinctions exist, and they are deep, not to be talked or voted away. If the differences are organic, so are the merits, that is to say the power and excellence we describe are real. Aristocracy is the class eminent by personal qualities, and to them belongs without assertion a proper influence. Men of aim must lead the aimless; men of invention the uninventive. I wish catholic men, who by their science and skill are at home in every latitude and longitude, who carry the world in their thoughts; men of universal politics, who are interested in things in proportion to their truth and magnitude; who know the beauty of animals and the laws of their nature, whom the mystery of botany allures, and the mineral laws; who see general effects and are not too learned to love the Imagination, the power and the spirits of Solitude; — men who see the dance in men's lives as well as in a ball-room,

and can feel and convey the sense which is only collectively or totally expressed by a population; men who are charmed by the beautiful Nemesis as well as by the dire Nemesis, and dare trust their inspiration for their welcome; who would find their fellows in persons of real elevation of whatever kind of speculative or practical ability. We are fallen on times so acquiescent and traditionary that we are in danger of forgetting so simple a fact as that the basis of all aristocracy must be truth, — the doing what elsewhere is pretended to be done. One would gladly see all our institutions rightly aristocratic in this wise.

I enumerate the claims by which men enter the superior class.

1. A commanding talent. In every company one finds the best man; and if there be any question, it is decided the instant they enter into any practical enterprise. If the finders of glass, gunpowder, printing, electricity, — if the healer of small-pox, the contriver of the safety lamp, of the aqueduct, of the bridge, of the tunnel; if the finders of parallax, of new planets, of steam power for boat and carriage, the finder of sulphuric ether and the electric telegraph, — if these men should keep their secrets, or only communicate them to each other, must not the whole race of mankind serve them as gods? It only needs to look at the social aspect of England and America and France, to see the rank which original practical talent commands.

Every survey of the dignified classes, in ancient or modern history, imprints universal lessons, and establishes a nobility of a prouder creation. And the conclusion which Roman Senators, Indian Brahmins, Persian Magians, European Nobles and great Americans inculcate, — that which they preach out of their material wealth and glitter, out of their old war and modern land-owning, even out of sensuality and sneers, is, that the radical and essential distinctions of every aristocracy are moral. Do not hearken to the men, but to the Destiny in the institutions. An aristocracy is composed of simple and sincere men for whom nature and ethics are strong enough, who say what they mean and go straight to their objects. It is essentially real.

The multiplication of monarchs known by telegraph and daily news from all countries to the daily papers, and the effect of freer institutions in England and America, has robbed the title of king of all its romance, as that of our commercial consuls as compared with the ancient Roman. We shall come to add “Kings” in the “Contents” of the Directory, as we do “Physicians,” “Brokers,” *etc.* In simple communities, in the heroic ages, a man was chosen for his knack; got his name, rank and living for that; and the best of the best was the aristocrat or king. In the Norse Edda it appears as the curious but excellent policy of contending tribes, when tired of war, to exchange hostages, and in reality each to adopt from the other a first-rate man, who thus acquired a new country; was at

once made a chief. And no wrong was so keenly resented as any fraud in this transaction. In the heroic ages, as we call them, the hero uniformly has some real talent. Ulysses in Homer is represented as a very skilful carpenter. He builds the boat with which he leaves Calypso's isle, and in his own palace carves a bedstead out of the trunk of a tree and inlays it with gold and ivory. Epeus builds the wooden horse. The English nation down to a late age inherited the reality of the Northern stock. In 1373, in writs of summons of members of Parliament, the sheriff of every county is to cause "two dubbed knights, or the most worthy esquires, the most expert in feats of arms, and no others; and of every city, two citizens, and of every borough, two burgesses, such as have greatest skill in shipping and merchandising, to be returned."

The ancients were fond of ascribing to their nobles gigantic proportions and strength. The hero must have the force of ten men. The chief is taller by a head than any of his tribe. Douglas can throw the bar a greater cast. Richard can sever the iron bolt with his sword. The horn of Roland, in the romance, is heard sixty miles. The Cid has a prevailing health that will let him nurse the leper, and share his bed without harm. And since the body is the pipe through which we tap all the succors and virtues of the material world, it is certain that a sound body must be at the root of any excellence in manners and actions; a strong and supple frame which yields a stock of strength and spirits for all the needs of the day, and generates the habit of relying on a supply of power for all extraordinary exertions. When Nature goes to create a national man, she puts a symmetry between the physical and intellectual powers. She moulds a large brain, and joins to it a great trunk to supply it; as if a fine alembic were fed with liquor for its distillations from broad full vats in the vaults of the laboratory.

Certainly, the origin of most of the perversities and absurdities that disgust us is, primarily, the want of health. Genius is health and Beauty is health and Virtue is health. The petty arts which we blame in the half-great seem as odious to them also; — the resources of weakness and despair. And the manners betray the like puny constitution. Temperament is fortune, and we must say it so often. In a thousand cups of life, only one is the right mixture, — a fine adjustment to the existing elements. When that befalls, when the wellmixed man is born, with eyes not too dull nor too good, with fire enough and earth enough, capable of impressions from all things, and not too susceptible, — then no gift need be bestowed on him, he brings with him fortune, followers, love, power.

"I think he'll be to Rome

As is the osprey to the fish, who takes it

By sovereignty of nature."

Not the phrenologist but the philosopher may well say, Let me see his brain,

and I will tell you if he shall be poet, king, founder of cities, rich, magnetic, of a secure hand, of a scientific memory, a right classifier; or whether he shall be a bungler, driveller, unlucky, heavy, and tedious.

It were to dispute against the sun, to deny this difference of brain. I see well enough that when I bring one man into an estate, he sees vague capabilities, what others might, could, would, or should do with it. If I bring another man, he sees what *he* should do with it. He appreciates the water-privilege, land fit for orchard, tillage, pasturage, wood-lot, cranberry-meadow; but just as easily he foresees all the means; all the steps of the process, and could lay his hand as readily on one as on another point in that series which opens the capability to the last point. The poet sees wishfully enough the result; the well-built head supplies all the steps, one as perfect as the other, in the series. Seeing this working head in him, it becomes to me as certain that he will have the direction of estates, as that there are estates. If we see tools in a magazine, as a file, an anchor, a plough, a pump, a paint-brush, a cider-press, a diving-bell, we can predict well enough their destination; and the man's associations, fortunes, love, hatred, residence, rank, the books he will buy, the roads he will traverse are predetermined in his organism. Men will need him, and he is rich and eminent by nature. That man cannot be too late or too early. Let him not hurry or hesitate. Though millions are already arrived, his seat is reserved. Though millions attend, they only multiply his friends and agents. It never troubles the Senator what multitudes crack the benches and bend the galleries to hear. He who understands the art of war, reckons the hostile battalions and cities, opportunities and spoils.

An aristocracy could not exist unless it were organic. Men are born to command, and — it is even so — “come into the world booted and spurred to ride.” The blood royal never pays, we say. It obtains service, gifts, supplies, furtherance of all kinds from the love and joy of those who feel themselves honored by the service they render.

Dull people think it Fortune that makes one rich and another poor. Is it? Yes, but the fortune was earlier than they think, namely, in the balance or adjustment between devotion to what is agreeable to-day and the forecast of what will be valuable to-morrow.

Certainly I am not going to argue the merits of gradation in the universe; the existing order of more or less. Neither do I wish to go into a vindication of the justice that disposes the variety of lot. I know how steep the contrast of condition looks; such excess here and such destitution there; like entire chance, like the freaks of the wind, heaping the snow-drift in gorges, stripping the plain; such despotism of wealth and comfort in banquet-halls, whilst death is in the pots of the wretched, — that it behooves a good man to walk with tenderness and heed

amidst so much suffering. I only point in passing to the order of the universe, which makes a rotation, — not like the coarse policy of the Greeks, ten generals, each commanding one day and then giving place to the next, or like our democratic politics, my turn now, your turn next, — but the constitution of things has distributed a new quality or talent to each mind, and the revolution of things is always bringing the need, now of this, now of that, and is sure to bring home the opportunity to every one.

The only relief that I know against the invidiousness of superior position is, that you exert your faculty; for whilst each does that, he excludes hard thoughts from the spectator. All right activity is amiable. I never feel that any man occupies my place, but that the reason why I do not have what I wish, is, that I want the faculty which entitles. All spiritual or real power makes its own place.

We pass for what we are, and we prosper or fail by what we are. There are men who may dare much and will be justified in their daring. But it is because they know they are in their place. As long as I am in my place, I am safe. “The best lightning-rod for your protection is your own spine.” Let a man’s social aims be proportioned to his means and power. I do not pity the misery of a man underplaced: that will right itself presently: but I pity the man overplaced. A certain quantity of power belongs to a certain quantity of faculty. Whoever wants more power than is the legitimate attraction of his faculty, is a politician, and must pay for that excess; must truckle for it. This is the whole game of society and the politics of the world. Being will always seem well; — but whether possibly I cannot contrive to seem, without the trouble of being? Every Frenchman would have a career. We English are not any better with our love of making a figure. “I told the Duke of Newcastle,” says Bubb Dodington in his Memoirs, “that it must end one way or another, it must not remain as it was; for I was determined to make some sort of a figure in life; I earnestly wished it might be under his protection, but if that could not be, I must make some figure; what it would be I could not determine yet; I must look round me a little and consult my friends, but some figure I was resolved to make.”

It will be agreed everywhere that society must have the benefit of the best leaders. How to obtain them? Birth has been tried and failed. Caste in India has no good result. Ennobling of one family is good for one generation; not sure beyond. Slavery had mischief enough to answer for, but it had this good in it, — the pricing of men. In the South a slave was bluntly but accurately valued at five hundred to a thousand dollars, if a good field-hand; if a mechanic, as carpenter or smith, twelve hundred or two thousand. In Rome or Greece what sums would not be paid for a superior slave, a confidential secretary and manager, an educated slave; a man of genius, a Moses educated in Egypt? I don’t know how

much Epictetus was sold for, or Æsop, or Toussaint l'Ouverture, and perhaps it was not a good market-day. Time was, in England, when the state stipulated beforehand what price should be paid for each citizen's life, if he was killed. Now, if it were possible, I should like to see that appraisal applied to every man, and every man made acquainted with the true number and weight of every adult citizen, and that he be placed where he belongs, with so much power confided to him as he could carry and use.

In the absence of such anthropometer I have a perfect confidence in the natural laws. I think that the community, — every community, if obstructing laws and usages are removed, — will be the best measure and the justest judge of the citizen, or will in the long run give the fairest verdict and reward; better than any royal patronage; better than any premium on race; better than any statute elevating families to hereditary distinction, or any class to sacerdotal education and power. The verdict of battles will best prove the general; the town-meeting, the Congress, will not fail to find out legislative talent. The prerogatives of a right physician are determined, not by his diplomas, but by the health he restores to body and mind; the powers of a geometer by solving his problem; of a priest by the act of inspiring us with a sentiment which disperses the grief from which we suffered. When the lawyer tries his case in court he himself is also on trial and his own merits appear as well as his client's. When old writers are consulted by young writers who have written their first book, they say, Publish it by all means; so only can you certainly know its quality.

But we venture to put any man in any place. It is curious how negligent the public is of the essential qualifications of its representatives. They ask if a man is a republican, a democrat? Yes. Is he a man of talent? Yes. Is he honest and not looking for an office or any manner of bribe? He is honest. Well then choose him by acclamation. And they go home and tell their wives with great satisfaction what a good thing they have done. But they forgot to ask the fourth question, not less important than either of the others, and without which the others do not avail. Has he a will? Can he carry his points against opposition? Probably not. It is not sufficient that your work follows your genius, or is organic, to give you the magnetic power over men. More than taste and talent must go to the Will. That must also be a gift of nature. It is in some; it is not in others. But I should say, if it is not in you, you had better not put yourself in places where not to have it is to be a public enemy.

The expectation and claims of mankind indicate the duties of this class. Some service they must pay. We do not expect them to be saints, and it is very pleasing to see the instinct of mankind on this matter, — how much they will forgive to such as pay substantial service and work energetically after their kind; but they

do not extend the same indulgence to those who claim and enjoy the same prerogative but render no returns. The day is darkened when the golden river runs down into mud; when genius grows idle and wanton and reckless of its fine duties of being Saint, Prophet, Inspirer to its humble fellows, baulks their respect and confounds their understanding by silly extravagances. To a right aristocracy, to Hercules, to Theseus, Odin, the Cid, Napoleon; to Sir Robert Walpole, to Fox, Chatham, Mirabeau, Jefferson, O'Connell; — to the men, that is, who are incomparably superior to the populace in ways agreeable to the populace, showing them the way they should go, doing for them what they wish done and cannot do; — of course everything will be permitted and pardoned, — gaming, drinking, fighting, luxury. These are the heads of party, who can do no wrong, — everything short of infamous crime will pass. But if those who merely sit in their places and are not, like them, able; if the dressed and perfumed gentleman, who serves the people in no wise and adorns them not, is not even *not afraid of them*, if such an one go about to set ill examples and corrupt them, who shall blame them if they burn his barns, insult his children, assault his person, and express their unequivocal indignation and contempt? He eats their bread, he does not scorn to live by their labor, and after breakfast he cannot remember that there are human beings. To live without duties is obscene.

2. Genius, what is so called in strictness, — the power to affect the Imagination, as possessed by the orator, the poet, the novelist, or the artist, — has a royal right in all possessions and privileges being itself representative and accepted by all men as their delegate. It has indeed the best right, because it raises men above themselves, intoxicates them with beauty. They are honored by rendering it honor, and the reason of this allowance is that Genius unlocks for all men the chains of use, temperament and drudgery, and gives them a sense of delicious liberty and power.

The first example that occurs is an extraordinary gift of eloquence. A man who has that possession of his means and that magnetism that he can at all times carry the convictions of a public assembly, we must respect, and he is thereby ennobled. He has the freedom of the city. He is entitled to neglect trifles. Like a great general, or a great poet, or a millionaire, he may wear his coat out at elbows, and his hat on his feet, if he will. He has established relation, representativeness. The best feat of genius is to bring all the varieties of talent and culture into its audience; the mediocre and the dull are reached as well as the intelligent. I have seen it conspicuously shown in a village. Here are classes which day by day have no intercourse, nothing beyond perhaps a surly nod in passing. But I have seen a man of teeming brain come among these men, so full of his facts, so unable to suppress them, that he has poured out a river of

knowledge to all comers, and drawing all these men round him, all sorts of men, interested the whole village, good and bad, bright and stupid, in his facts; the iron boundary lines had all faded away; the stupid had discovered that they were not stupid; the coldest had found themselves drawn to their neighbors by interest in the same things. This was a naturalist.

The more familiar examples of this power certainly are those who establish a wider dominion over men's minds than any speech can; who think, and paint, and laugh, and weep, in their eloquent closets, and then convert the world into a huge whispering gallery, to report the tale to all men, and win smiles and tears from many generations. The eminent examples are Shakspeare, Cervantes, Bunyan, Burns, Scott, and now we must add Dickens. In the fine arts, I find none in the present age who have any popular power, who have achieved any nobility by ennobling the people.

3. Elevation of sentiment, refining and inspiring the manners, must really take the place of every distinction whether of material power or of intellectual gifts. The manners of course must have that depth and firmness of tone to attest their centrality in the nature of the man. I mean the things themselves shall be judges, and determine. In the presence of this nobility even genius must stand aside. For the two poles of nature are Beauty and Meanness, and noble sentiment is the highest form of Beauty. He is beautiful in face, in port, in manners, who is absorbed in objects which he truly believes to be superior to himself. Is there any parchment or any cosmetic or any blood that can obtain homage like that security of air presupposing so undoubtingly the sympathy of men in his designs? What is it that makes the true knight? Loyalty to his thought. That makes the beautiful scorn, the elegant simplicity, the directness, the commanding port which all men admire and which men not noble affect. For the thought has no debts, no hunger, no lusts, no low obligations or relations, no intrigue or business, no murder, no envy, no crime, but large leisures and an inviting future.

The service we receive from the great is a mutual deference. If you deal with the vulgar, life is reduced to beggary indeed. The astronomers are very eager to know whether the moon has an atmosphere; I am only concerned that every man have one. I observe however that it takes two to make an atmosphere. I am acquainted with persons who go attended with this ambient cloud. It is sufficient that they come. It is not important what they say. The sun and the evening sky are not calmer. They seem to have arrived at the fact, to have got rid of the show, and to be serene. Their manners and behavior in the house and in the field are those of men at rest: what have they to conceal? what have they to exhibit? Others I meet, who have no deference, and who denude and strip one of all

attributes but material values. As much health and muscle as you have, as much land, as much house-room and dinner, avails. Of course a man is a poor bag of bones. There is no gracious interval, not an inch allowed. Bone rubs against bone. Life is thus a Beggar's Bush. I know nothing which induces so base and forlorn a feeling as when we are treated for our utilities, as economists do, starving the imagination and the sentiment. In this impoverishing animation, I seem to meet a Hunger, a wolf. Rather let us be alone whilst we live, than encounter these lean kine. Man should emancipate man. He does so, not by jamming him, but by distancing him. The nearer my friend, the more spacious is our realm, the more diameter our spheres have. It is a measure of culture, the number of things taken for granted. When a man begins to speak, the churl will take him up by disputing his first words, so he cannot come at his scope. The wise man takes all for granted until he sees the parallelism of that which puzzled him with his own view.

I will not protract this discourse by describing the duties of the brave and generous. And yet I will venture to name one, and the same is almost the sole condition on which knighthood is to be won; this, namely, loyalty to your own order. The true aristocrat is he who is at the head of his own order, and disloyalty is to mistake other chivalries for his own. Let him not divide his homage, but stand for that which he was born and set to maintain. It was objected to Gustavus that he did not better distinguish between the duties of a carabine and a general, but exposed himself to all dangers and was too prodigal of a blood so precious. For a soul on which elevated duties are laid will so realize its special and lofty duties as not to be in danger of assuming through a low generosity those which do not belong to it.

There are all degrees of nobility, but amid the levity and giddiness of people one looks round, as for a tower of strength, on some self-dependent mind, who does not go abroad for an estimate, and has long ago made up its conclusion that it is impossible to fail. The great Indian sages had a lesson for the Brahmin, which every day returns to mind, "All that depends on another gives pain; all that depends on himself gives pleasure; in these few words is the definition of pleasure and pain." The noble mind is here to teach us that failure is a part of success. Prosperity and pound-cake are for very young gentlemen, whom such things content; but a hero's, a man's success is made up of failures, because he experiments and ventures every day, and "the more falls he gets, moves faster on;" defeated all the time and yet to victory born. I have heard that in horsemanship he is not the good rider who never was thrown, but rather that a man never will be a good rider until he is thrown; then he will not be haunted any longer by the terror that he shall tumble, and will ride; — that is his

business, — to *ride*, whether with falls or whether with none, to ride unto the place whither he is bound. And I know no such unquestionable badge and ensign of a sovereign mind, as that tenacity of purpose which, through all change of companions, of parties, of fortunes, — changes never, bates no jot of heart or hope, but wearies out opposition, and arrives at its port. In his consciousness of deserving success, the caliph Ali constantly neglected the ordinary means of attaining it; and to the grand interests, a superficial success is of no account. It prospers as well in mistake as in luck, in obstruction and nonsense, as well as among the angels; it reckons fortunes mere paint; difficulty is its delight: perplexity is its noonday: minds that make their way without winds and against tides. But these are rare and difficult examples, we can only indicate them to show how high is the range of the realm of Honor.

I know the feeling of the most ingenious and excellent youth in America; I hear the complaint of the aspirant that we have no prizes offered to the ambition of virtuous young men; that there is no Theban Band; no stern exclusive Legion of Honor, to be entered only by long and real service and patient climbing up all the steps. We have a rich men's aristocracy, plenty of bribes for those who like them; but a grand style of culture, which, without injury, an ardent youth can propose to himself as a Pharos through long dark years, does not exist, and there is no substitute. The youth, having got through the first thickets that oppose his entrance into life, having got into decent society, is left to himself, and falls abroad with too much freedom. But in the hours of insight we rally against this skepticism. We then see that if the ignorant are around us, the great are much more near; that there is an order of men, never quite absent, who enroll no names in their archives but of such as are capable of truth. They are gathered in no one chamber; no chamber would hold them; but, out of the vast duration of man's race, they tower like mountains, and are present to every mind in proportion to its likeness to theirs. The solitariest man who shares their spirit walks environed by them; they talk to him, they comfort him, and happy is he who prefers these associates to profane companions. They also take shape in men, in women. There is no heroic trait, no sentiment or thought that will not sometime embody itself in the form of a friend. That highest good of rational existence is always coming to such as reject mean alliances.

One trait more we must celebrate, the self-reliance which is the patent of royal natures. It is so prized a jewel that it is sure to be tested. The rules and discipline are ordered for that. The Golden Table never lacks members; all its seats are kept full; but with this strange provision, that the members are carefully withdrawn into deep niches, so that no one of them can see any other of them, and each believes himself alone. In the presence of the Chapter it is easy for each

member to carry himself royally and well; but in the absence of his colleagues and in the presence of mean people he is tempted to accept the low customs of towns. The honor of a member consists in an indifferency to the persons and practices about him, and in the pursuing undisturbed the career of a Brother, as if always in their presence, and as if no other existed. Give up, once for all, the hope of approbation from the people in the street, if you are pursuing great ends. How can they guess your designs?

All reference to models, all comparison with neighboring abilities and reputations, is the road to mediocrity. The generous soul, on arriving in a new port, makes instant preparation for a new voyage. By experiment, by original studies, by secret obedience, he has made a place for himself in the world; stands there a real, substantial, unprecedented person, and when the great come by, as always there are angels walking in the earth, they know him at sight. Effectual service in his own legitimate fashion distinguishes the true man. For he is to know that the distinction of a royal nature is a great heart; that not Louis Quatorze, not Chesterfield, nor Byron, nor Bonaparte is the model of the Century, but, wherever found, the old renown attaches to the virtues of simple faith and staunch endurance and clear perception and plain speech, and that there is a master grace and dignity communicated by exalted sentiments to a human form, to which utility and even genius must do homage. And it is the sign and badge of this nobility, the drawing his counsel from his own breast. For to every gentleman, grave and dangerous duties are proposed. Justice always wants champions. The world waits for him as its defender, for he will find in the well-dressed crowd, yes, in the civility of whole nations, vulgarity of sentiment. In the best parlors of modern society he will find the laughing devil, the civil sneer; in English palaces the London twist, derision, coldness, contempt of the masses, contempt of Ireland, dislike of the Chartist. The English House of Commons is the proudest assembly of gentlemen in the world, yet the genius of the House of Commons, its legitimate expression, is a sneer. In America he shall find deprecation of purism on all questions touching the morals of trade and of social customs, and the narrowest contraction of ethics to the one duty of paying money. Pay that, and you may play the tyrant at discretion and never look back to the fatal question, — where had you the money that you paid?

I know the difficulties in the way of the man of honor. The man of honor is a man of taste and humanity. By tendency, like all magnanimous men, he is a democrat. But the revolution comes, and does he join the standard of Chartist and outlaw? No, for these have been dragged in their ignorance by furious chiefs to the Red Revolution; they are full of murder, and the student recoils, — and joins the rich. If he cannot vote with the poor, he should stay by himself. Let him

accept the position of armed neutrality, abhorring the crimes of the Chartist, abhorring the selfishness of the rich, and say, 'The time will come when these poor *enfants perdus* of revolution will have instructed their party, if only by their fate, and wiser counsels will prevail; the music and the dance of liberty will come up to bright and holy ground and will take me in also. Then I shall not have forfeited my right to speak and act for mankind.' Meantime shame to the fop of learning and philosophy who suffers a vulgarity of speech and habit to blind him to the grosser vulgarity of pitiless selfishness, and to hide from him the current of Tendency; who abandons his right position of being priest and poet of these impious and unpoetic doers of God's work. You must, for wisdom, for sanity, have some access to the mind and heart of the common humanity. The exclusive excludes himself. No great man has existed who did not rely on the sense and heart of mankind as represented by the good sense of the people, as correcting the modes and over-refinements and class-prejudices of the lettered men of the world.

There are certain conditions in the highest degree favorable to the tranquillity of spirit and to that magnanimity we so prize. And mainly the habit of considering large interests, and things in masses, and not too much in detail. The habit of directing large affairs generates a nobility of thought in every mind of average ability. For affairs themselves show the way in which they should be handled; and a good head soon grows wise, and does not govern too much.

Now I believe in the closest affinity between moral and material power. Virtue and genius are always on the direct way to the control of the society in which they are found. It is the interest of society that good men should govern, and there is always a tendency so to place them. But, for the day that now is, a man of generous spirit will not need to administer public offices or to direct large interests of trade, or war, or politics, or manufacture, but he will use a high prudence in the conduct of life to guard himself from being dissipated on many things. There is no need that he should count the pounds of property or the numbers of agents whom his influence touches; it suffices that his aims are high, that the interest of intellectual and moral beings is paramount with him, that he comes into what is called fine society from higher ground, and he has an elevation of habit which ministers of empires will be forced to see and to remember.

I do not know whether that word Gentleman, although it signifies a leading idea in recent civilization, is a sufficiently broad generalization to convey the deep and grave fact of self-reliance. To many the word expresses only the outsides of cultivated men, — only graceful manners, and independence in trifles; but the fountains of that thought are in the deeps of man, a beauty which

reaches through and through, from the manners to the soul; an honor which is only a name for sanctity, a self-trust which is a trust in God himself. Call it man of honor, or call it Man, the American who would serve his country must learn the beauty and honor of perseverance, he must reinforce himself by the power of character, and revisit the margin of that well from which his fathers drew waters of life and enthusiasm, the fountain I mean of the moral sentiments, the parent fountain from which this goodly Universe flows as a wave.

PERPETUAL FORCES.

“More servants wait on man
Than he ‘ll take notice of.”

George Herbert
Ever the Rock of Ages melts
Into the mineral air,
To be the quarry whence is built
Thought and its mansions fair.

[Reprinted from the North American Review, No. 125, 1877.]

The hero in the fairy tales has a servant who can eat granite rocks, another who can hear the grass grow, and a third who can run a hundred leagues in half an hour; so man in nature is surrounded by a gang of friendly giants who can accept harder stints than these, and help him in every kind. Each by itself has a certain omnipotence, but all, like contending kings and emperors, in the presence of each other, are antagonized and kept polite and own the balance of power.

We cannot afford to miss any advantage. Never was any man too strong for his proper work. Art is long, and life short, and he must supply this disproportion by borrowing and applying to his task the energies of Nature. Reinforce his self-respect, show him his means, his arsenal of forces, physical, metaphysical, immortal. Show him the riches of the poor, show him what mighty allies and helpers he has. And though King David had no good from making his census out of vain-glory, yet I find it wholesome and invigorating to enumerate the resources we can command, to look a little into this arsenal, and see how many rounds of ammunition, what muskets, and how many arms better than Springfield muskets, we can bring to bear.

Go out of doors and get the air. Ah, if you knew what was in the air. See what your robust neighbor, who never feared to live in it, has got from it; strength, cheerfulness, power to convince, heartiness and equality to each event.

All the earths are burnt metals. One half the avoirdupois of the rocks which compose the solid crust of the globe consists of oxygen. The adamant is always passing into smoke; the marble column, the brazen statue burn under the daylight, and would soon decompose if their molecular structure, disturbed by the raging sunlight, were not restored by the darkness of the night. What agencies of electricity, gravity, light, affinity combine to make every plant what it is, and in a manner so quiet that the presence of these tremendous powers is not ordinarily suspected. Faraday said, "A grain of water is known to have electric relations equivalent to a very powerful flash of lightning." The ripe fruit is dropped at last without violence, but the lightning fell and the storm raged, and strata were deposited and upturned and bent back, and Chaos moved from beneath, to create and flavor the fruit on your table to-day. The winds and the

rains come back a thousand and a thousand times. The coal on your grate gives out in decomposing to-day exactly the same amount of light and heat which was taken from the sunshine in its formation in the leaves and boughs of the antediluvian tree.

Take up a spadeful or a buck-load of loam; who can guess what it holds? But a gardener knows that it is full of peaches, full of oranges, and he drops in a few seeds by way of keys to unlock and combine its virtues; lets it lie in sun and rain, and by and by it has lifted into the air its full weight in golden fruit.

The earliest hymns of the world were hymns to these natural forces. The Vedas of India, which have a date older than Homer, are hymns to the winds, to the clouds, and to fire. They all have certain properties which adhere to them, such as conservation, persisting to be themselves, impossibility of being warped. The sun has lost no beams, the earth no elements; gravity is as adhesive, heat as expansive, light as joyful, air as virtuous, water as medicinal as on the first day. There is no loss, only transference. When the heat is less here it is not lost, but more heat is there. When the rain exceeds on the coast, there is drought on the prairie. When the continent sinks, the opposite continent that is to say, the opposite shore of the ocean, rises. When life is less here, it spawns there.

These forces are in an ascending series, but seem to leave no room for the individual; man or atom, he only shares them; he sails the way these irresistible winds blow. But behind all these are finer elements, the sources of them, and much more rapid and strong; a new style and series, the spiritual. Intellect and morals appear only the material forces on a higher plane. The laws of material nature run up into the invisible world of the mind, and hereby we acquire a key to those sublimities which skulk and hide in the caverns of human consciousness. And in the impenetrable mystery which hides — and hides through absolute transparency — the mental nature, I await the insight which our advancing knowledge of material laws shall furnish.

But the laws of force apply to every form of it. The husbandry learned in the economy of heat or light or steam or muscular fibre applies precisely to the use of wit. What I have said of the inexorable persistence of every elemental force to remain itself, the impossibility of tampering with it or warping it, — the same rule applies again strictly to this force of intellect; that it is perception, a seeing, not making, thoughts. The man must bend to the law, never the law to him.

The brain of man has methods and arrangements corresponding to these material powers, by which he can use them. See how trivial is the use of the world by any other of its creatures. Whilst these forces act on us from the outside and we are not in their counsel, we call them Fate. The animal instincts guide the animal as gravity governs the stone, and in man that bias or direction of his

constitution is often as tyrannical as gravity. We call it temperament, and it seems to be the remains of wolf, ape, and rattlesnake in him. While the reason is yet dormant, this rules; as the reflective faculties open, this subsides. We come to reason and knowledge; we see the causes of evils and learn to parry them and use them as instruments, by knowledge, being inside of them and dealing with them as the Creator does. It is curious to see how a creature so feeble and vulnerable as a man, who, unarmed, is no match for the wild beasts, tiger, or crocodile, none for the frost, none for the sea, none for a fog, or a damp air, or the feeble fork of a poor worm, — each of a thousand petty accidents puts him to death every day, — is yet able to subdue to his will these terrific forces, and more than these. His whole frame is responsive to the world, part for part, every sense, every pore to a new element, so that he seems to have as many talents as there are qualities in nature. No force but is his force. He does not possess them, he is a pipe through which their currents flow. If a straw be held still in the direction of the ocean-current, the sea will pour through it as through Gibraltar. If he should measure strength with them, if he should fight the sea and the whirlwind with his ship, he would snap his spars, tear his sails, and swamp his bark; but by cunningly dividing the force, tapping the tempest for a little side-wind, he uses the monsters, and they carry him where he would go. Look at him; you can give no guess at what power is in him. It never appears directly, but follow him and see his effects, see his productions. He is a planter, a miner, a shipbuilder, a machinist, a musician, a steam-engine, a geometer, an astronomer, a persuader of men, a lawgiver, a builder of towns; — and each of these by dint of a wonderful method or series that resides in him and enables him to work on the material elements.

We are surrounded by human thought and labor. Where are the farmer's days gone? See, they are hid in that stone-wall, in that excavated trench, in the harvest grown on what was shingle and pinebarren. He put his days into carting from the distant swamp the mountain of muck which has been trundled about until it now makes the cover of fruitful soil. Labor hides itself in every mode and form. It is massed and blocked away in that stone house, for five hundred years. It is twisted and screwed into fragrant hay which fills the barn. It surprises in the perfect form and condition of trees clean of caterpillars and borers, rightly pruned, and loaded with grafted fruit. It is under the house in the well; it is over the house in slates and copper and water-spout; it grows in the corn; it delights us in the flower-bed; it keeps the cow out of the garden, the rain out of the library, the miasma out of the town. It is in dress, in pictures, in ships, in cannon; in every spectacle, in odors, in flavors, in sweet sounds, in works of safety, of delight, of wrath, of science.

The thoughts, no man ever saw, but disorder becomes order where he goes; weakness becomes power; surprising and admirable effects follow him like a creator. All forces are his; as the wise merchant by truth in his dealings finds his credit unlimited, — he can use in turn, as he wants it, all the property in the world, — so a man draws on all the air for his occasions, as if there were no other breather; on all the water as if there were no other sailor; he is warmed by the sun, and so of every element; he walks and works by the aid of gravitation; he draws on all knowledge as his province, on all beauty for his innocent delight, and first or last he exhausts by his use all the harvests, all the powers of the world. For man, the receiver of all, and depository of these volumes of power, I am to say that his ability and performance are according to his reception of these various streams of force. We define Genius to be a sensibility to all the impressions of the outer world, a sensibility so equal that it receives accurately all impressions, and can truly report them, without excess or loss, as it received. It must not only receive all, but it must render all. And the health of man is an equality of inlet and outlet, gathering and giving. Any hoarding is tumor and disease.

If we were truly to take account of stock before the last Court of Appeals, — that were an inventory! What are my resources? “Our stock in life, our real estate, is that amount of thought which we have had,” — and which we have applied, and so domesticated. The ground we have thus created is forever a fund for new thoughts. A few moral maxims confirmed by much experience would stand high on the list, constituting a supreme prudence. Then the knowledge unutterable of our private strength, of where it lies, of its accesses and facilitations, and of its obstructions. My conviction of principles, — that is great part of my possessions. Certain thoughts, certain observations, long familiar to me in night-watches and daylights, would be my capital if I removed to Spain or China, or, by stranger translation, to the planet Jupiter or Mars, or to new spiritual societies. Every valuable person who joins in an enterprise, — is it a piece of industry, or the founding of a colony or a college, the reform of some public abuse, or some effort of patriotism, — what he chiefly brings, all he brings, is not his land or his money or body’s strength, but his thoughts, his way of classifying and seeing things, his method. And thus with every one a new power. In proportion to the depth of the insight is the power and reach of the kingdom he controls.

It would be easy to awake wonder by sketching the performance of each of these mental forces; as of the diving-bell of the Memory, which descends into the deeps of our past and oldest experience and brings up every lost jewel; or of the Fancy, which sends its gay balloon aloft into the sky to catch every tint and

gleam of romance; of the Imagination, which turns every dull fact into pictures and poetry, by making it an emblem of thought. What a power, when, combined with the analyzing understanding, it makes Eloquence; the art of compelling belief, the art of making peoples' hearts dance to his pipe! And not less, method, patience, self-trust, perseverance, love, desire of knowledge, the passion for truth. These are the angels that take us by the hand, these our immortal, invulnerable guardians. By their strength we are strong, and on the signal occasions in our career their inspirations flow to us and make the selfish and protected and tenderly-bred person strong for his duty, wise in counsel, skilful in action, competent to rule, willing to obey.

I delight in tracing these wonderful powers, the electricity and gravity of the human world. The power of persistence, of enduring defeat and of gaining victory by defeats, is one of these forces which never loses its charm. The power of a man increases steadily by continuance in one direction. He becomes acquainted with the resistances, and with his own tools; increases his skill and strength and learns the favorable moments and favorable accidents. He is his own apprentice, and more time gives a great addition of power, just as a falling body acquires momentum with every foot of the fall. How we prize a good continuer! I knew a manufacturer who found his property invested in chemical works which were depreciating in value. He undertook the charge of them himself, began at the beginning, learned chemistry and acquainted himself with all the conditions of the manufacture. His friends dissuaded him, advised him to give up the work, which was not suited to the country. Why throw good money after bad? But he persisted, and after many years succeeded in his production of the right article for commerce brought up the stock of his mills to par, and then sold out his interest, having accomplished the reform that was required.

In each the talent is the perception of an order and series in the department he deals with, — of an order and series which pre-existed in nature, and which this mind sees and conforms to. The geometer shows us the true order in figures; the painter in laws of color; the dancer in grace. Bonaparte, with his celerity of combination, mute, unfathomable, reads the geography of Europe as if his eyes were telescopes; his will is an immense battery discharging irresistible volleys of power always at the right point in the right time.

There was a story in the journals of a poor prisoner in a Western police-court who was told he might be released if he would pay his fine. He had no money, he had no friends, but he took his flute out of his pocket and began to play, to the surprise, and, as it proved, to the delight of all the company; the jurors waked up, the sheriff forgot his duty, the judge himself beat time, and the prisoner was by general consent of court and officers allowed to go his way without any money.

And I suppose, if he could have played loud enough, we here should have beat time, and the whole population of the globe would beat time, and consent that he should go without his fine.

I knew a stupid young farmer, churlish, living only for his gains, and with whom the only intercourse you could have was to buy what he had to sell. One day I found his little boy of four years dragging about after him the prettiest little wooden cart, so neatly built, and with decorations too, and learned that Papa had made it; that hidden deep in that thick skull was this gentle art and taste which the little fingers and caresses of his son had the power to draw out into day; he was no peasant after all. So near to us is the flowering of Fine Art in the rudest population. See in a circle of school-girls one with no beauty, no special vivacity, — but she can so recite her adventures that she is never alone, but at night or at morning wherever she sits the inevitable circle gathers around her, willing prisoners of that wonderful memory and fancy and spirit of life. Would you know where to find her? Listen for the laughter, follow the cheerful hum, see where is the rapt attention, and a pretty crowd all bright with one electricity; there in the centre of fellowship and joy is Scheherazade again.

See how rich life is; rich in private talents, each of which charms us in turn and seems the best. If we hear music we give up all to that; if we fall in with a cricket-club and see the game masterly played, the best player is the first of men; if we go to the regatta, we forget the bowler for the stroke oar; and when the soldier comes home from the fight, he fills all eyes. But the soldier has the same admiration of the great parliamentary debater. And poetry and literature are disdainful of all these claims beside their own. Like the boy who thought in turn each one of the four seasons the best, and each of the three hundred and sixty-five days in the year the crowner. The sensibility is all.

Every one knows what are the effects of music to put people in gay or mournful or martial mood. But these are the effects on dull subjects, and only the hint of its power on a keener sense. It is a stroke on a loose or tense cord. The story of Orpheus, of Arion, of the Arabian minstrel, are not fables, but experiments on the same iron at white heat.

By this wondrous susceptibility to all the impressions of Nature the man finds himself the receptacle of celestial thoughts, of happy relations to all men. The imagination enriches him, as if there were no other; the memory opens all her cabinets and archives; Science her length and breadth; Poetry her splendor and joy and the august circles of eternal law. These are means and stairs for new ascensions of the mind. But they are nowise impoverished for any other mind, not tarnished, not breathed upon; for the mighty Intellect did not stoop to him and become property, but he rose to it and followed its circuits. "It is ours while

we use it, it is not ours when we do not use it.”

And so, one step higher, when he comes into the realm of sentiment and will. He sees the grandeur of justice, the victory of love, the eternity that belongs to all moral nature. He does not then invent his sentiment or his act, but obeys a pre-existing right which he sees. We arrive at virtue by taking its direction instead of imposing ours.

The last revelation of intellect and of sentiment is that in a manner it severs the man from all other men; makes known to him that the spiritual powers are sufficient to him if no other being existed; that he is to deal absolutely in the world, as if he alone were a system and a state, and though all should perish could make all anew.

The forces are infinite. Every one has the might of all, for the secret of the world is that its energies are *solidaires*; that they work together on a system of mutual aid, all for each and each for all; that the strain made on one point bears on every arch and foundation of the structure. But if you wish to avail yourself of their might, and in like manner if you wish the force of the intellect, the force of the will, you must take their divine direction, not they yours. Obedience alone gives the right to command. It is like the village operator who taps the telegraph-wire and surprises the secrets of empires as they pass to the capital. So this child of the dust throws himself by obedience into the circuit of the heavenly wisdom, and shares the secret of God.

Thus is the world delivered into your hand, but on two conditions, — not for property, but for use, use according to the noble nature of the gifts; and not for toys, not for self-indulgence. Things work to their ends, not to yours, and will certainly defeat any adventurer who fights against this ordination.

The effort of men is to use them for private ends. They wish to pocket land and water and fire and air and all fruits of these, for property, and would like to have Aladdin's lamp to compel darkness, and iron-bound doors, and hostile armies, and lions and serpents to serve them like footmen. And they wish the same service from the spiritual faculties. A man has a rare mathematical talent, inviting him to the beautiful secrets of geometry, and wishes to clap a patent on it; or has the fancy and invention of a poet, and says, 'I will write a play that shall be repeated in London a hundred nights;'; or a military genius, and instead of using that to defend his country, he says, 'I will fight the battle so as to give me place and political consideration;'; or Canning or Thurlow has a genius of debate, and says, 'I will know how with this weapon to defend the cause that will pay best and make me Chancellor or Foreign Secretary.' But this perversion is punished with instant loss of true wisdom and real power.

I find the survey of these cosmical powers a doctrine of consolation in the

dark hours of private or public fortune. It shows us the world alive, guided, incorruptible; that its cannon cannot be stolen nor its virtues misapplied. It shows us the long Providence, the safeguards of rectitude. It animates exertion; it warns us out of that despair into which Saxon men are prone to fall, — out of an idolatry of forms, instead of working to simple ends, in the belief that Heaven always succors us in working for these. This world belongs to the energetical. It is a fagot of laws, and a true analysis of these laws, showing how immortal and how self-protecting they are, would be a wholesome lesson for every time and for this time. That band which ties them together is unity, is universal good, saturating all with one being and aim, so that each translates the other, is only the same spirit applied to new departments. Things are saturated with the moral law. There is no escape from it. Violets and grass preach it; rain and snow, wind and tides, every change, every cause in Nature is nothing but a disguised missionary.

All our political disasters grow as logically out of our attempts in the past to do without justice, as the sinking of some part of your house comes of defect in the foundation. One thing is plain; a certain personal virtue is essential to freedom; and it begins to be doubtful whether our corruption in this country has not gone a little over the mark of safety, so that when canvassed we shall be found to be made up of a majority of reckless self-seekers. The divine knowledge has ebbed out of us and we do not know enough to be free.

I hope better of the state. Half a man's wisdom goes with his courage. A boy who knows that a bully lives round the corner which he must pass on his daily way to school, is apt to take sinister views of streets and of school-education. And a sensitive politician suffers his ideas of the part New York or Pennsylvania or Ohio are to play in the future of the Union, to be fashioned by the election of rogues in some counties. But we must not gratify the rogues so deeply. There is a speedy limit to profligate politics.

Fear disenchants life and the world. If I have not my own respect I am an impostor, not entitled to other men's, and had better creep into my grave. I admire the sentiment of Thoreau, who said, "Nothing is so much to be feared as fear; God himself likes atheism better." For the world is a battle-ground; every principle is a war-note, and the most quiet and protected life is at any moment exposed to incidents which test your firmness. The illusion that strikes me as the masterpiece in that ring of illusions which our life is, is the timidity with which we assert our moral sentiment. We are made of it, the world is built by it, things endure as they share it; all beauty, all health, all intelligence exist by it; yet we shrink to speak of it or to range ourselves by its side. Nay, we presume strength of him or them who deny it. Cities go against it; the college goes against it, the

courts snatch at any precedent, at any vicious form of law to rule it out; legislatures listen with appetite to declamations against it, and vote it down. Every new asserter of the right surprises us, like a man joining the church, and we hardly dare believe he is in earnest.

What we do and suffer is in moments, but the cause of right for which we labor never dies, works in long periods, can afford many checks, gains by our defeats, and will know how to compensate our extremest sacrifice. Wrath and petulance may have their short success, but they quickly reach their brief date and decompose, whilst the massive might of ideas is irresistible at last. Whence does the knowledge come? Where is the source of power? The soul of God is poured into the world through the thoughts of men. The world stands on ideas, and not on iron or cotton; and the iron of iron, the fire of fire, the ether and source of all the elements is moral force. As cloud on cloud, as snow on snow, as the bird on the air, and the planet on space in its flight, so do nations of men and their institutions rest on thoughts.

CHARACTER.

Shun passion, fold the hands of thrift,
Sit still, and Truth is near;

Suddenly it will uplift
Your eyelids to the sphere:
Wait a little, you shall see
The portraiture of things to be.
For what need I of book or priest
Or Sibyl from the mummied East
When every star is Bethlehem Star, —
I count as many as there are
Cinquefoils or violets in the grass,
So many saints and saviours,
So many high behaviours.

[Reprinted from the North American Review of April, 1866.]

Morals respects what men call goodness, that which all men agree to honor as justice, truth-speaking, good-will and good works. Morals respects the source or motive of this action. It is the science of substances, not of shows. It is the *what*, and not the *how*. It is that which all men profess to regard, and by their real respect for which recommend themselves to each other.

There is this eternal advantage to morals, that, in the question between truth and goodness, the moral cause of the world lies behind all else in the mind. It was for good, it is to good, that all works. Surely it is not to prove or show the truth of things, — that sounds a little cold and scholastic, — no, it is for benefit, that all subsists. As we say in our modern politics, catching at last the language of morals, that the object of the State is the greatest good of the greatest number, — so, the reason we must give for the existence of the world is, that it is for the benefit of all being.

Morals implies freedom and will. The will constitutes the man. He has his life in Nature, like a beast: but choice is born in him; here is he that chooses; here is the Declaration of Independence, the July Fourth of zoölogy and astronomy. He chooses, — as the rest of the creation does not. But will, pure and perceiving, is not wilfulness. When a man, through stubbornness, insists to do this or that, something absurd or whimsical, only because he will, he is weak; he blows with his lips against the tempest, he dams the incoming ocean with his cane. It were an unspeakable calamity if any one should think he had the right to impose a private will on others. That is the part of a striker, an assassin. All violence, all that is dreary and repels, is not power but the absence of power.

Morals is the direction of the will on universal ends. He is immoral who is

acting to any private end. He is moral, — we say it with Marcus Aurelius and with Kant, — whose aim or motive may become a universal rule, binding on all intelligent beings; and with Vauvenargues, “the mercenary sacrifice of the public good to a private interest is the eternal stamp of vice.”

All the virtues are special directions of this motive; justice is the application of this good of the whole to the affairs of each one; courage is contempt of danger in the determination to see this good of the whole enacted; love is delight in the preference of that benefit redounding to another over the securing of our own share; humility is a sentiment of our insignificance when the benefit of the universe is considered.

If from these external statements we seek to come a little nearer to the fact, our first experiences in moral as in intellectual nature force us to discriminate a universal mind, identical in all men. Certain biases, talents, executive skills, are special to each individual; but the high, contemplative, all-commanding vision, the sense of Right and Wrong, is alike in all. Its attributes are self-existence, eternity, intuition and command. It is the mind of the mind. We belong to it, not it to us. It is in all men, and constitutes them men. In bad men it is dormant, as health is in men entranced or drunken; but, however inoperative, it exists underneath whatever vices and errors. The extreme simplicity of this intuition embarrasses every attempt at analysis. We can only mark, one by one, the perfections which it combines in every act. It admits of no appeal, looks to no superior essence. It is the reason of things.

The antagonist nature is the individual, formed into a finite body of exact dimensions, with appetites which take from everybody else what they appropriate to themselves, and would enlist the entire spiritual faculty of the individual, if it were possible, in catering for them. On the perpetual conflict between the dictate of this universal mind and the wishes and interests of the individual, the moral discipline of life is built. The one craves a private benefit, which the other requires him to renounce out of respect to the absolute good. Every hour puts the individual in a position where his wishes aim at something which the sentiment of duty forbids him to seek. He that speaks the truth executes no private function of an individual will, but the world utters a sound by his lips. He who doth a just action seeth therein nothing of his own, but an inconceivable nobleness attaches to it, because it is a dictate of the general mind. We have no idea of power so simple and so entire as this. It is the basis of thought, it is the basis of being. Compare all that we call ourselves, all our private and personal venture in the world, with this deep of moral nature in which we lie, and our private good becomes an impertinence, and we take part with hasty shame against ourselves: —

“High instincts, before which our mortal nature
Doth tremble like a guilty thing surprised, —
Which, be they what they may,
Are yet the fountain-light of all our day,
Are yet the master-light of all our seeing, —
Uphold us, cherish, and have power to make
Our noisy years seem moments in the being
Of the eternal silence, — truths that wake
To perish never.”

The moral element invites man to great enlargements, to find his satisfaction, not in particulars or events, but in the purpose and tendency; not in bread, but in his right to his bread; not in much corn or wool, but in its communication.

Not by adding, then, does the moral sentiment help us; no, but in quite another manner. It puts us in place. It centres, it concentrates us. It puts us at the heart of Nature, where we belong, in the cabinet of science and of causes, there where all the wires terminate which hold the world in magnetic unity, and so converts us into universal beings.

This wonderful sentiment, which endears itself as it is obeyed, seems to be the fountain of intellect; for no talent gives the impression of sanity, if wanting this; nay, it absorbs everything into itself. Truth, Power, Goodness, Beauty, are its varied names, — faces of one substance, the heart of all. Before it, what are persons, prophets, or seraphim but its passing agents, momentary rays of its light?

The moral sentiment is alone omnipotent. There is no labor or sacrifice to which it will not bring a man, and which it will not make easy. Thus there is no man who will bargain to sell his life, say at the end of a year, for a million or ten millions of gold dollars in hand, or for any temporary pleasures, or for any rank, as of peer or prince; but many a man who does not hesitate to lay down his life for the sake of a truth, or in the cause of his country, or to save his son or his friend. And under the action of this sentiment of the Right, his heart and mind expand above himself, and above Nature.

Though Love repine, and Reason chafe,
There came a voice without reply, —
“T is man’s perdition to be safe,
When for the truth he ought to die.”

Such is the difference of the action of the heart within and of the senses without. One is enthusiasm, and the other more or less amounts of horse power.

Devout men, in the endeavor to express their convictions, have used different images to suggest this latent force; as, the light, the seed, the Spirit, the Holy

Ghost, the Comforter, the Dæmon, the still, small voice, etc., — all indicating its power and its latency. It is serenely above all mediation. In all ages, to all men, it saith, *I am*; and he who hears it feels the impiety of wandering from this revelation to any record or to any rival. The poor Jews of the wilderness cried: “Let not the Lord speak to us; let Moses speak to us.” But the simple and sincere soul makes the contrary prayer: ‘Let no intruder come between thee and me; deal Thou with me; let me know it is thy will, and I ask no more.’ The excellence of Jesus, and of every true teacher, is, that he affirms the Divinity in him and in us, — not thrusts himself between it and us. It would instantly indispose us to any person claiming to speak for the Author of Nature, the setting forth any fact or law which we did not find in our consciousness. We should say with Heraclitus: “Come into this smoky cabin; God is here also: approve yourself to him.”

We affirm that in all men is this majestic perception and command; that it is the presence of the Eternal in each perishing man; that it distances and degrades all statements of whatever saints, heroes, poets, as obscure and confused stammerings before its silent revelation. *They* report the truth. *It* is the truth. When I think of Reason, of Truth, of Virtue, I cannot conceive them as lodged in your soul and lodged in my soul, but that you and I and all souls are lodged in that; and I may easily speak of that adorable nature, there where only I behold it in my dim experiences, in such terms as shall seem to the frivolous, who dare not fathom their consciousness, as profane. How is a man a man? How can he exist to weave relations of joy and virtue with other souls, but because he is inviolable, anchored at the centre of Truth and Being? In the ever-returning hour of reflection, he says: ‘I stand here glad at heart of all the sympathies I can awaken and share, clothing myself with them as with a garment of shelter and beauty, and yet knowing that it is not in the power of all who surround me to take from me the smallest thread I call mine. If all things are taken away, I have still all things in my relation to the Eternal.’

We pretend not to define the way of its access to the private heart. It passes understanding. There was a time when Christianity existed in one child. But if the child had been killed by Herod, would the element have been lost? God sends his message, if not by one, then quite as well by another. When the Master of the Universe has ends to fulfill, he impresses his will on the structure of minds.

The Divine Mind imparts itself to the single person: his whole duty is to this rule and teaching. The aid which others give us is like that of the mother to the child, — temporary, gestative, a short period of lactation, a nurse’s or a governess’s care; but on his arrival at a certain maturity, it ceases, and would be hurtful and ridiculous if prolonged. Slowly the body comes to the use of its

organs; slowly the soul unfolds itself in the new man. It is partial at first, and honors only some one or some few truths. In its companions it sees other truths honored, and successively finds their foundation also in itself. Then it cuts the cord, and no longer believes “because of thy saying,” but because it has recognized them in itself.

The Divine Mind imparts itself to the single person: but it is also true that men act powerfully on us. There are men who astonish and delight, men who instruct and guide. Some men’s words I remember so well that I must often use them to express my thought. Yes, because I perceive that we have heard the same truth, but they have heard it better. That is only to say, there is degree and gradation throughout Nature; and the Deity does not break his firm laws in respect to imparting truth, more than in imparting material heat and light. Men appear from time to time who receive with more purity and fulness these high communications. But it is only as fast as this hearing from another is authorized by its consent with his own, that it is pure and safe to each; and all receiving from abroad must be controlled by this immense reservation.

It happens now and then, in the ages, that a soul is born which has no weakness of self, which offers no impediment to the Divine Spirit, which comes down into Nature as if only for the benefit of souls, and all its thoughts are perceptions of things as they are, without any infirmity of earth. Such souls are as the apparition of gods among men, and simply by their presence pass judgment on them. Men are forced by their own self-respect to give them a certain attention. Evil men shrink and pay involuntary homage by hiding or apologizing for their action.

When a man is born with a profound moral sentiment, preferring truth, justice and the serving of all men to any honors or any gain, men readily feel the superiority. They who deal with him are elevated with joy and hope; he lights up the house or the landscape in which he stands. His actions are poetic and miraculous in their eyes. In his presence, or within his influence, every one believes in the immortality of the soul. They feel that the invisible world sympathizes with him. The Arabians delight in expressing the sympathy of the unseen world with holy men.

When Omar prayed and loved,
“Where Syrian waters roll,
Aloft the ninth heaven glowed and moved
To the tread of the jubilant soul.

A chief event of life is the day in which we have encountered a mind that startled us by its large scope. I am in the habit of thinking, — not, I hope, out of a partial experience, but confirmed by what I notice in many lives, — that to

every serious mind Providence sends from time to time five or six or seven teachers who are of the first importance to him in the lessons they have to impart. The highest of these not so much give particular knowledge, as they elevate by sentiment and by their habitual grandeur of view.

Great men serve us as insurrections do in bad governments. The world would run into endless routine, and forms incrust forms, till the life was gone. But the perpetual supply of new genius shocks us with thrills of life, and recalls us to principles. Lucifer's wager in the old drama was, "There is no steadfast man on earth." He is very rare. "A man is already of consequence in the world when it is known that we can implicitly rely on him." See how one noble person dwarfs a whole nation of underlings. This steadfastness we indicate when we praise character.

Character denotes habitual self-possession, habitual regard to interior and constitutional motives, a balance not to be upset or easily disturbed by outward events and opinion, and by implication points to the source of right motive. We sometimes employ the word to express the strong and consistent will of men of mixed motive, but, when used with emphasis, it points to what no events can change, that is, a will built on the reason of things. Such souls do not come in troops: oftenest appear solitary, like a general without his command, because those who can understand and uphold such appear rarely, not many, perhaps not one, in a generation. And the memory and tradition of such a leader is preserved in some strange way by those who only half understand him, until a true disciple comes, who apprehends and interprets every word.

The sentiment never stops in pure vision, but will be enacted. It affirms not only its truth, but its supremacy. It is not only insight, as science, as fancy, as imagination is; or an entertainment, as friendship and poetry are; but it is a sovereign rule; and the acts which it suggests — as when it impels a man to go forth and impart it to other men, or sets him on some asceticism or some practice of self-examination to hold him to obedience, or some zeal to unite men to abate some nuisance, or establish some reform or charity which it commands — are the homage we render to this sentiment, as compared with the lower regard we pay to other thoughts: and the private or social practices we establish in its honor we call religion.

The sentiment, of course, is the judge and measure of every expression of it, — measures Judaism, Stoicism, Christianity, Buddhism, or whatever philanthropy, or politics, or saint, or seer pretends to speak in its name. The religions we call false were once true. They also were affirmations of the conscience correcting the evil customs of their times. The populace drag down the gods to their own level, and give them their egotism; whilst in Nature is none

at all, God keeping out of sight, and known only as pure law, though resistless. Châteaubriand said, with some irreverence of phrase, If God made man in his image, man has paid him well back. "*Si Dieu a fait l'homme à son image, l'homme l'a bien rendu.*" Every nation is degraded by the goblins it worships instead of this Deity. The Dionysia and Saturnalia of Greece and Rome, the human sacrifice of the Druids, the Sradda of Hindoos, the Purgatory, the Indulgences, and the Inquisition of Popery, the vindictive mythology of Calvinism, are examples of this perversion.

Every particular instruction is speedily embodied in a ritual, is accommodated to humble and gross minds, and corrupted. The moral sentiment is the perpetual critic on these forms, thundering its protest, sometimes in earnest and lofty rebuke; but sometimes also it is the source, in natures less pure, of sneers and flippant jokes of common people, who feel that the forms and dogmas are not true for them, though they do not see where the error lies.

The religion of one age is the literary entertainment of the next, We use in our idlest poetry and discourse the words Jove, Neptune, Mercury, as mere colors, and can hardly believe that they had to the lively Greek the anxious meaning which, in our towns, is given and received in churches when our religious names are used: and we read with surprise the horror of Athens when, one morning, the statues of Mercury in the temples were found broken, and the like consternation was in the city as if, in Boston, all the Orthodox churches should be burned in one night.

The greatest dominion will be to the deepest thought. The establishment of Christianity in the world does not rest on any miracle but the miracle of being the broadest and most humane doctrine. Christianity was once a schism and protest against the impieties of the time, which had originally been protests against earlier impieties, but had lost their truth. Varnhagen von Ense, writing in Prussia in 1848, says: "The Gospels belong to the most aggressive writings. No leaf thereof could attain the liberty of being printed (in Berlin) to-day. What Mirabeaus, Rousseaus, Diderots, Fichtes, Heines, and many another heretic, one can detect therein!"

But before it was yet a national religion it was alloyed, and, in the hands of hot Africans, of luxurious Byzantines, of fierce Gauls, its creeds were tainted with their barbarism. In Holland, in England, in Scotland, it felt the national narrowness. How unlike our habitual turn of thought was that of the last century in this country! Our ancestors spoke continually of angels and archangels with the same good faith as they would have spoken of their own parents or their late minister. Now the words pale, are rhetoric, and all credence is gone. Our horizon is not far, say one generation, or thirty years: we all see so much. The older see

two generations, or sixty years. But what has been running on through three horizons, or ninety years, looks to all the world like a law of Nature, and 't is an impiety to doubt. Thus, 't is incredible to us, if we look into the religious books of our grandfathers, how they held themselves in such a pinfold. But why not? As far as they could see, through two or three horizons, nothing but ministers and ministers. Calvinism was one and the same thing in Geneva, in Scotland, in Old and New England. If there was a wedding, they had a sermon; if a funeral, then a sermon; if a war, or small-pox, or a comet, or canker-worms, or a deacon died, — still a sermon: Nature was a pulpit; the churchwarden or tithing-man was a petty persecutor; the presbytery, a tyrant; and in many a house in country places the poor children found seven sabbaths in a week. Fifty or a hundred years ago, prayers were said, morning and evening, in all families; grace was said at table; an exact observance of the Sunday was kept in the houses of laymen as of clergymen. And one sees with some pain the disuse of rites so charged with humanity and aspiration. But it by no means follows, because those offices are much disused, that the men and women are irreligious; certainly not that they have less integrity or sentiment, but only, let us hope, that they see that they can omit the form without loss of real ground; perhaps that they find some violence, some cramping of their freedom of thought, in the constant recurrence of the form.

So of the changed position and manners of the clergy. They have dropped, with the sacerdotal garb and manners of the last century, many doctrines and practices once esteemed indispensable to their order. But the distinctions of the true clergyman are not less decisive. Men ask now, "Is he serious? Is he a sincere man, who lives as he teaches? Is he a benefactor?" So far the religion is now where it should be. Persons are discriminated as honest, as veracious, as illuminated, as helpful, as having public and universal regards, or otherwise; — are discriminated according to their aims, and not by these ritualities.

The changes are inevitable; the new age cannot see with the eyes of the last. But the change is in what is superficial; the principles are immortal, and the rally on the principle must arrive as people become intellectual. I consider theology to be the rhetoric of morals. The mind of this age has fallen away from theology to morals. I conceive it an advance. I suspect, that, when the theology was most florid and dogmatic, it was the barbarism of the people, and that, in that very time, the best men also fell away from theology, and rested in morals. I think that all the dogmas rest on morals, and that it is only a question of youth or maturity, of more or less fancy in the recipient; that the stern determination to do justly, to speak the truth, to be chaste and humble, was substantially the same, whether under a self-respect, or under a vow made on the knees at the shrine of

Madonna.

When once Selden had said that the priests seemed to him to be baptizing their own fingers, the rite of baptism was getting late in the world. Or when once it is perceived that the English missionaries in India put obstacles in the way of schools, (as is alleged,) — do not wish to enlighten but to Christianize the Hindoos, — it is seen at once how wide of Christ is English Christianity.

Mankind at large always resemble frivolous children: they are impatient of thought, and wish to be amused. Truth is too simple for us; we do not like those who unmask our illusions. Fontenelle said: “If the Deity should lay bare to the eyes of men the secret system of Nature, the causes by which all the astronomic results are effected, and they finding no magic, no mystic numbers, no fatalities, but the greatest simplicity, I am persuaded they would not be able to suppress a feeling of mortification, and would exclaim, with disappointment, ‘Is that all?’” And so we paint over the bareness of ethics with the quaint grotesques of theology.

We boast the triumph of Christianity over Paganism, meaning the victory of the spirit over the senses; but Paganism hides itself in the uniform of the Church. Paganism has only taken the oath of allegiance, taken the cross, but is Paganism still, outvotes the true men by millions of majority, carries the bag, spends the treasure, writes the tracts, elects the minister, and persecutes the true believer.

There is a certain secular progress of opinion, which, in civil countries, reaches everybody. One service which this age has rendered is, to make the life and wisdom of every past man accessible and available to all. Socrates and Marcus Aurelius are allowed to be saints; Mahomet is no longer accursed; Voltaire is no longer a scarecrow; Spinoza has come to be revered. “The time will come,” says Varnhagen von Ense, “when we shall treat the jokes and sallies against the myths and churchrituals of Christianity — say the sarcasms of Voltaire, Frederic the Great, and D’Alembert — good-naturedly and without offence: since, at bottom, those men mean honestly, their polemics proceed out of a religious striving, and what Christ meant and willed is in essence more with them than with their opponents, who only wear and misrepresent the *name* of Christ. ... Voltaire was an apostle of Christian ideas; only the names were hostile to him, and he never knew it otherwise. He was like the son of the vine-dresser in the Gospel, who said No, and went; the other said Yea, and went not. These men preached the true God, — Him whom men serve by justice and uprightness; but they called themselves atheists.”

When the highest conceptions, the lessons of religion, are imported, the nation is not culminating, has not genius, but is servile. A true nation loves its vernacular tongue. A completed nation will not import its religion. Duty grows

everywhere, like children, like grass; and we need not go to Europe or to Asia to learn it. I am not sure that the English religion is not all quoted. Even the Jeremy Taylors, Fullers, George Herberts, steeped, all of them, in Church traditions, are only using their fine fancy to emblazon their memory. 'T is Judæa, not England, which is the ground. So with the mordant Calvinism of Scotland and America. But this quoting distances and disables them: since with every repeater something of creative force is lost, as we feel when we go back to each original moralist. Pythagoras, Socrates, the Stoics, the Hindoo, Behmen, George Fox, — these speak originally; and how many sentences and books we owe to unknown authors, — to writers who were not careful to set down name or date or titles or cities or postmarks in these illuminations!

We, in our turn, want power to drive the ponderous State. The constitution and law in America must be written on ethical principles, so that the entire power of the spiritual world can be enlisted to hold the loyalty of the citizen, and to repel every enemy as by force of Nature. The laws of old empires stood on the religious convictions. Now that their religions are outgrown, the empires lack strength. Romanism in Europe does not represent the real opinion of enlightened men. The Lutheran Church does not represent in Germany the opinions of the universities. In England, the gentlemen, the journals, and now, at last, churchmen and bishops, have fallen away from the Anglican Church. And in America, where are no legal ties to churches, the looseness appears dangerous.

Our religion has got on as far as Unitarianism. But all the forms grow pale. The walls of the temple are wasted and thin, and, at last, only a film of whitewash, because the mind of our culture has already left our liturgies behind. "Every age," says Varnhagen, "has another sieve for the religious tradition, and will sift it out again. Something is continually lost by this treatment, which posterity cannot recover."

But it is a capital truth that Nature, moral as well as material, is always equal to herself. Ideas always generate enthusiasm. The creed, the legend, forms of worship, swiftly decay. Morals is the incorruptible essence, very heedless in its richness of any past teacher or witness, heedless of their lives and fortunes. It does not ask whether you are wrong or right in your anecdotes of them; but it is all in all how you stand to your own tribunal.

The lines of the religious sects are very shifting; their platforms unstable; the whole science of theology of great uncertainty, and resting very much on the opinions of who may chance to be the leading doctors of Oxford or Edinburgh, of Princeton or Cambridge, to-day. No man can tell what religious revolutions await us in the next years; and the education in the divinity colleges may well hesitate and vary. But the science of ethics has no mutation; and whoever feels

any love or skill for ethical studies may safely lay out all his strength and genius in working in that mine. The pulpit may shake, but this platform will not. All the victories of religion belong to the moral sentiment. Some poor soul beheld the Law blazing through such impediments as he had, and yielded himself to humility and joy. What was gained by being told that it was justification by faith?

The Church, in its ardor for beloved persons, clings to the miraculous, in the vulgar sense, which has even an immoral tendency, as one sees in Greek, Indian and Catholic legends, which are used to gloze every crime. The soul, penetrated with the beatitude which pours into it on all sides, asks no interpositions, no new laws, — the old are good enough for it, — finds in every cart-path of labor ways to heaven, and the humblest lot exalted. Men will learn to put back the emphasis peremptorily on pure morals, always the same, not subject to doubtful interpretation, with no sale of indulgences no massacre of heretics, no female slaves, no disfranchisement of woman, no stigma on race; to make morals the absolute test, and so uncover and drive out the false religions. There is no vice that has not skulked behind them. It is only yesterday that our American churches, so long silent on Slavery, and notoriously hostile to the Abolitionist, wheeled into line for Emancipation.

I am far from accepting the opinion that the revelations of the moral sentiment are insufficient, as if it furnished a rule only, and not the spirit by which the rule is animated. For I include in these, of course, the history of Jesus, as well as those of every divine soul which in any place or time delivered any grand lesson to humanity; and I find in the eminent experiences in all times a substantial agreement. The sentiment itself teaches unity of source, and disowns every superiority other than of deeper truth. Jesus has immense claims on the gratitude of mankind, and knew how to guard the integrity of his brother's soul from himself also; but, in his disciples, admiration of him runs away with their reverence for the human soul, and they hamper us with limitations of person and text. Every exaggeration of these is a violation of the soul's right, and inclines the manly reader to lay down the New Testament, to take up the Pagan philosophers. It is not that the Upanishads or the Maxims of Antoninus are better, but that they do not invade his freedom; because they are only suggestions, whilst the other adds the inadmissible claim of positive authority, — of an external command, where command cannot be. This is the secret of the mischievous result that, in every period of intellectual expansion, the Church ceases to draw into its clergy those who best belong there, the largest and freest minds, and that in its most liberal forms, when such minds enter it, they are coldly received, and find themselves out of place. This tharm in the Pagan

moralists, of suggestion, the charm of poetry, of mere truth, (easily disengaged from their historical accidents which nobody wishes to force on us,) the New Testament loses by its connection with a church. Mankind cannot long suffer this loss, and the office of this age is to put all these writings on the eternal footing of equality of origin in the instincts of the human mind. It is certain that each inspired master will gain instantly by the separation from the idolatry of ages.

To their great honor, the simple and free minds among our clergy have not resisted the voice of Nature and the advanced perceptions of the mind; and every church divides itself into a liberal and expectant class, on one side, and an unwilling and conservative class on the other. As it stands with us now, a few clergymen, with a more theological cast of mind, retain the traditions, but they carry them quietly. In general discourse, they are never obtruded. If the clergyman should travel in France, in England, in Italy, he might leave them locked up in the same closet with his “occasional sermons” at home, and, if he did not return, would never think to send for them. The orthodox clergymen hold a little firmer to theirs, as Calvinism has a more tenacious vitality; but that is doomed also, and will only die last; for Calvinism rushes to be Unitarianism, as Unitarianism rushes to be pure Theism.

But the inspirations are never withdrawn. In the worst times, men of organic virtue are born, — men and women of native integrity, and indifferently in high and low conditions. There will always be a class of imaginative youths, whom poetry, whom the love of beauty, lead to the adoration of the moral sentiment, and these will provide it with new historic forms and songs. Religion is as inexpugnable as the use of lamps, or of wells, or of chimneys. We must have days and temples and teachers. The Sunday is the core of our civilization, dedicated to thought and reverence. It invites to the noblest solitude and the noblest society, to whatever means and aids of spiritual refreshment. Men may well come together to kindle each other to virtuous living. Confucius said, “If in the morning I hear of the right way, and in the evening die, I can be happy.”

The churches already indicate the new spirit in adding to the perennial office of teaching, beneficent activities, — as in creating hospitals, ragged schools, offices of employment for the poor, appointing almoners to the helpless, guardians of foundlings and orphans. The power that in other times inspired crusades, or the colonization of New England, or the modern revivals, flies to the help of the deaf-mute and the blind, to the education of the sailor and the vagabond boy, to the reform of convicts and harlots, — as the war created the Hilton Head and Charleston missions, the Sanitary Commission, the nurses and teachers at Washington.

In the present tendency of our society, in the new importance of the individual, when thrones are crumbling and presidents and governors are forced every moment to remember their constituencies; when counties and towns are resisting centralization, and the individual voter his party, — society is threatened with actual granulation, religious as well as political. How many people are there in Boston? Some two hundred thousand. Well, then so many sects. Of course each poor soul loses all his old stays; no bishop watches him, no confessor reports that he has neglected the confessional, no class-leader admonishes him of absences, no fagot, no penance, no fine, no rebuke. Is not this wrong? is not this dangerous? 'T is not wrong, but the law of growth. It is not dangerous, any more than the mother's withdrawing her hands from the tottering babe, at his first walk across the nursery-floor: the child fears and cries, but achieves the feat, instantly tries it again, and never wishes to be assisted more. And this infant soul must learn to walk alone. At first he is forlorn, homeless; but this rude stripping him of all support drives him inward, and he finds himself unhurt; he finds himself face to face with the majestic Presence, reads the original of the Ten Commandments, the original of Gospels and Epistles; nay, his narrow chapel expands to the blue cathedral of the sky, where he

“Looks in and sees each blissful deity,

Where he before the thunderous throne doth lie.”

To nations or to individuals the progress of opinion is not a loss of moral restraint, but simply a change from coarser to finer checks. No evil can come from reform which a deeper thought will not correct. If there is any tendency in national expansion to form character, religion will not be a loser. There is a fear that pure truth, pure morals, will not make a religion for the affections. Whenever the sublimities of character shall be incarnated in a man, we may rely that awe and love and insatiable curiosity will follow his steps. Character is the habit of action from the permanent vision of truth. It carries a superiority to all the accidents of life. It compels right relation to every other man, — domesticates itself with strangers and enemies. “But I, father,” says the wise Prahlada, in the Vishnu Purana, “know neither friends nor foes, for I behold Kesava in all beings as in my own soul.” It confers perpetual insight. It sees that a man's friends and his foes are of his own house-hold, of his own person. What would it avail me, if I could destroy my enemies? There would be as many tomorrow. That which I hate and fear is really in myself, and no knife is long enough to reach to its heart. Confucius said one day to Ke Kang: “Sir, in carrying on your government, why should you use killing at all? Let your evinced desires be for what is good, and the people will be good. The grass must bend, when the wind blows across it.” Ke Kang, distressed about the number of

thieves in the state, inquired of Confucius how to do away with them. Confucius said, "If you, sir, were not covetous, although you should reward them to do it, they would not steal."

Its methods are subtle, it works without means. It indulges no enmity against any, knowing, with Prahlada that "the suppression of malignant feeling is itself a reward." The more reason, the less government. In a sensible family, nobody ever hears the words "shall" and "sha'n't;" nobody commands, and nobody obeys, but all conspire and joyfully co-operate. Take off the roofs of hundreds of happy houses, and you shall see this order without ruler, and the like in every intelligent and moral society. Command is exceptional, and marks some break in the link of reason; as the electricity goes round the world without a spark or a sound, until there is a break in the wire or the water chain. Swedenborg said, that, "in the spiritual world, when one wishes to rule, or despises others, he is thrust out of doors." Goethe, in discussing the characters in "Wilhelm Meister," maintained his belief that "pure loveliness and right good-will are the highest manly prerogatives, before which all energetic heroism, with its lustre and renown, must recede." In perfect accord with this, Henry James affirms, that "to give the feminine element in life its hardearned but eternal supremacy over the masculine has been the secret inspiration of all past history."

There is no end to the sufficiency of character. It can afford to wait; it can do without what is called success; it cannot but succeed. To a well-principled man existence is victory. He defends himself against failure in his main design by making every inch of the road to it pleasant. There is no trifle, and no obscurity to him: he feels the immensity of the chain whose last link he holds in his hand, and is led by it. Having nothing, this spirit hath all. It asks, with Marcus Aurelius, "What matter by whom the good is done?" It extols humility, — by every self-abasement lifted higher in the scale of being. It makes no stipulations for earthly felicity, — does not ask, in the absoluteness of its trust, even for the assurance of continued life.

EDUCATION.

With the key of the secret he marches faster
From strength to strength, and for night brings day,
While classes or tribes too weak to master
The flowing conditions of life, give way.

A new degree of intellectual power seems cheap at any price. The use of the world is that man may learn its laws. And the human race have wisely signified their sense of this, by calling wealth, means, — Man being the end. Language is always wise.

Therefore I praise New England because it is the country in the world where is the freest expenditure for education. We have already taken, at the planting of the Colonies, (for aught I know for the first time in the world,) the initial step, which for its importance might have been resisted as the most radical of revolutions, thus deciding at the start the destiny of this country, — this, namely, that the poor man, whom the law does not allow to take an ear of corn when starving, nor a pair of shoes for his freezing feet, is allowed to put his hand into the pocket of the rich, and say, You shall educate me, not as you will, but as I will: not alone in the elements, but, by further provision, in the languages, in sciences, in the useful and in elegant arts. The child shall be taken up by the State, and taught, at the public cost, the rudiments of knowledge, and, at last, the ripest results of art and science.

Humanly speaking, the school, the college, society, make the difference between men. All the fairy tales of Aladdin or the invisible Gyges or the talisman that opens kings' palaces or the enchanted halls under-ground or in the sea, are only fictions to indicate the one miracle of intellectual enlargement. When a man stupid becomes a man inspired, when one and the same man passes out of the torpid into the perceiving state, leaves the din of trifles, the stupor of the senses, to enter into the quasi-omniscience of high thought, — up and down, around, all limits disappear. No horizon shuts down. He sees things in their causes, all facts in their connection.

One of the problems of history is the beginning of civilization. The animals that accompany and serve man make no progress as races. Those called domestic are capable of learning of man a few tricks of utility or amusement, but they cannot communicate the skill to their race. Each individual must be taught anew. The trained dog cannot train another dog. And Man himself in many races

retains almost the unteachableness of the beast. For a thousand years the islands and forests of a great part of the world have been filled with savages who made no steps of advance in art or skill beyond the necessity of being fed and warmed. Certain nations with a better brain and usually in more temperate climates, have made such progress as to compare with these as these compare with the bear and the wolf.

Victory over things is the office of man. Of course, until it is accomplished, it is the war and insult of things over him. His continual tendency, his great danger, is to overlook the fact that the world is only his teacher, and the nature of sun and moon, plant and animal only means of arousing his interior activity. Enamored of their beauty, comforted by their convenience, he seeks them as ends, and fast loses sight of the fact that they have worse than no values, that they become noxious, when he becomes their slave.

This apparatus of wants and faculties, this craving body, whose organs ask all the elements and all the functions of Nature for their satisfaction, educate the wondrous creature which they satisfy with light, with heat, with water, with wood, with bread, with wool. The necessities imposed by this most irritable and all-related texture have taught Man hunting, pasturage, agriculture, commerce, weaving, joining, masonry, geometry, astronomy. Here is a world pierced and belted with natural laws, and fenced and planted with civil partitions and properties which all put new restraints on the young inhabitant. He too must come into this magic circle of relations, and know health and sickness, the fear of injury, the desire of external good, the charm of riches, the charm of power. The household is a school of power. There, within the door, learn the tragicomedy of human life. Here is the sincere thing, the wondrous composition for which day and night go round. In that routine are the sacred relations, the passions that bind and sever. Here is poverty and all the wisdom its hated necessities can teach, here labor drudges, here affections glow, here the secrets of character are told, the guards of man, the guards of woman, the compensations which, like angels of justice, pay every debt: the opium of custom, whereof all drink and many go mad. Here is Economy, and Glee, and Hospitality, and Ceremony, and Frankness, and Calamity, and Death, and Hope.

Every one has a trust of power, — every man, every boy a jurisdiction, whether it be over a cow or a rood of a potato-field, or a fleet of ships, or the laws of a state. And what activity the desire of power inspires! What toils it sustains! How it sharpens the perceptions and stores the memory with facts. Thus a man may well spend many years of life in trade. It is a constant teaching of the laws of matter and of mind. No dollar of property can be created without some direct communication with nature, and of course some acquisition of

knowledge and practical force. It is a constant contest with the active faculties of men, a study of the issues of one and another course of action, an accumulation of power, and, if the higher faculties of the individual be from time to time quickened, he will gain wisdom and virtue from his business.

As every wind draws music out of the Æolian harp, so doth every object in Nature draw music out of his mind. Is it not true that every landscape I behold, every friend I meet, every act I perform, every pain I suffer, leaves me a different being from that they found me? That poverty, love, authority, anger, sickness, sorrow, success, all work actively upon our being and unlock for us the concealed faculties of the mind? Whatever private or petty ends are frustrated, this end is always answered. Whatever the man does, or whatever befalls him, opens another chamber in his soul, — that is, he has got a new feeling, a new thought, a new organ. Do we not see how amazingly for this end man is fitted to the world?

What leads him to science? Why does he track in the midnight heaven a pure spark, a luminous patch wandering from age to age, but because he acquires thereby a majestic sense of power; learning that in his own constitution he can set the shining maze in order, and finding and carrying their law in his mind, can, as it were, see his simple idea realized up yonder in giddy distances and frightful periods of duration. If Newton come and first of men perceive that not alone certain bodies fall to the ground at a certain rate, but that all bodies in the Universe, the universe of bodies, fall always, and at one rate; that every atom in nature draws to every other atom, — he extends the power of his mind not only over every cubic atom of his native planet, but he reports the condition of millions of worlds which his eye never saw. And what is the charm which every ore, every new plant, every new fact touching winds, clouds, ocean currents, the secrets of chemical composition and decomposition possess for Humboldt? What but that much revolving of similar facts in his mind has shown him that always the mind contains in its transparent chambers the means of classifying the most refractory phenomena, of depriving them of all casual and chaotic aspect, and subordinating them to a bright reason of its own, and so giving to man a sort of property, — yea, the very highest property in every district and particle of the globe.

By the permanence of Nature, minds are trained alike, and made intelligible to each other. In our condition are the roots of language and communication, and these instructions we never exhaust.

In some sort the end of life is that the man - should take up the universe into himself, or out of that quarry leave nothing unrepresented. Yonder mountain must migrate into his mind. Yonder magnificent astronomy he is at last to

import, fetching away moon, and planet, solstice, period, comet and binal star, by comprehending their relation and law. Instead of the timid stripling he was, he is to be the stalwart Archimedes, Pythagoras, Columbus, Newton, of the physic, metaphysic and ethics of the design of the world.

For truly the population of the globe has its origin in the aims which their existence is to serve; and so with every portion of them. The truth takes flesh in forms that can express it; and thus in history an idea always overhangs, like the moon, and rules the tide which rises simultaneously in all the souls of a generation.

Whilst thus the world exists for the mind; whilst thus the man is ever invited inward into shining realms of knowledge and power by the shows of the world, which interpret to him the infinitude of his own consciousness, — it becomes the office of a just education to awaken him to the knowledge of this fact.

We learn nothing rightly until we learn the symbolical character of life. Day creeps after day, each full of facts, dull, strange, despised things, that we cannot enough despise, — call heavy, prosaic, and desert. The time we seek to kill: the attention it is elegant to divert from things around us. And presently the aroused intellect finds gold and gems in one of these scorned facts, — then finds that the day of facts is a rock of diamonds; that a fact is an Epiphany of God.

We have our theory of life, our religion, our philosophy; and the event of each moment, the shower, the steamboat disaster, the passing of a beautiful face, the apoplexy of our neighbor, are all tests to try our theory, the approximate result we call truth, and reveal its defects. If I have renounced the search of truth, if I have come into the port of some pretending dogmatism, some new church or old church, some Schelling or Cousin, I have died to all use of these new events that are born out of prolific time into multitude of life every hour. I am as a bankrupt to whom brilliant opportunities offer in vain. He has just foreclosed his freedom, tied his hands, locked himself up and given the key to another to keep.

When I see the doors by which God enters into the mind; that there is no sot or fop, ruffian or pedant into whom thoughts do not enter by passages which the individual never left open, I can expect any revolution in character, “I have hope,” said the great Leibnitz, “that society may be reformed, when I see how much education may be reformed.”

It is ominous, a presumption of crime, that this word Education has so cold, so hopeless a sound. A treatise on education, a convention for education, a lecture, a system, affects us with slight paralysis and a certain yawning of the jaws. We are not encouraged when the law touches it with its fingers. Education should be as broad as man. Whatever elements are in him that should foster and demonstrate. If he be dexterous, his tuition should make it appear; if he be

capable of dividing men by the trenchant sword of his thought, education should unsheathe and sharpen it; if he is one to cement society by his all-reconciling affinities, oh! hasten their action! If he is jovial, if he is mercurial, if he is greathearted, a cunning artificer, a strong commander, a potent ally, ingenious, useful, elegant, witty, prophet, diviner, — society has need of all these. The imagination must be addressed. Why always coast on the surface and never open the interior of nature, not by science, which is surface still, but by poetry? Is not the Vast an element of the mind? Yet what teaching, what book of this day appeals to the Vast?

Our culture has truckled to the times, — to the senses. It is not manworthy. If the vast and the spiritual are omitted, so are the practical and the moral. It does not make us brave or free. “We teach boys to be such men as we are. We do not teach them to aspire to be all they can. We do not give them a training as if we believed in their noble nature. We scarce educate their bodies. We do not train the eye and the hand. We exercise their understandings to the apprehension and comparison of some facts, to a skill in numbers, in words; we aim to make accountants, attorneys, engineers; but not to make able, earnest, greathearted men. The great object of Education should be commensurate with the object of life. It should be a moral one; to teach self-trust: to inspire the youthful man with an interest in himself; with a curiosity touching his own nature; to acquaint him with the resources of his mind, and to teach him that there is all his strength, and to inflame him with a piety towards the Grand Mind in which he lives. Thus would education conspire with the Divine Providence. A man is a little thing whilst he works by and for himself, but, when he gives voice to the rules of love and justice, is godlike, his word is current in all countries; and all men, though his enemies, are made his friends and obey it as their own.

In affirming that the moral nature of man is the predominant element and should therefore be mainly consulted in the arrangements of a school, I am very far from wishing that it should swallow up all the other instincts and faculties of man. It should be enthroned in his mind, but if it monopolize the man he is not yet sound, he does not yet know his wealth. He is in danger of becoming merely devout, and wearisome through the monotony of his thought. It is not less necessary that the intellectual and the active faculties should be nourished and matured. Let us apply to this subject the light of the same torch by which we have looked at all the phenomena of the time; the infinitude, namely, of every man. Everything teaches that.

One fact constitutes all my satisfaction, inspires all my trust, viz., this perpetual youth, which, as long as there is any good in us, we cannot get rid of. It is very certain that the coming age and the departing age seldom understand

each other. The old man thinks the young man has no distinct purpose, for he could never get anything intelligible and earnest out of him. Perhaps the young man does not think it worth his while to explain himself to so hard and inapprehensive a confessor. Let him be led up with a long-sighted forbearance, and let not the sallies of his petulance or folly be checked with disgust or indignation or despair.

I call our system a system of despair, and I find all the correction, all the revolution that is needed and that the best spirits of this age promise, in one word, in Hope. Nature, when she sends a new mind into the world, fills it beforehand with a desire for that which she wishes it to know and do. Let us wait and see what is this new creation, of what new organ the great Spirit had need when it incarnated this new Will. A new Adam in the garden, he is to name all the beasts in the field, all the gods in the sky. And jealous provision seems to have been made in his constitution that you shall not invade and contaminate him with the worn weeds of your language and opinions. The charm of life is this variety of genius, these contrasts and flavors by which Heaven has modulated the identity of truth, and there is a perpetual hankering to violate this individuality, to warp his ways of thinking and behavior to resemble or reflect your thinking and behavior. A low self-love in the parent desires that his child should repeat his character and fortune; an expectation which the child, if justice is done him, will nobly disappoint. By working on the theory that this resemblance exists, we shall do what in us lies to defeat his proper promise and produce the ordinary and mediocre. I suffer whenever I see that common sight of a parent or senior imposing his opinion and way of thinking and being on a young soul to which they are totally unfit. Cannot we let people be themselves, and enjoy life in their own way? You are trying to make that man another you. One's enough.

Or we sacrifice the genius of the pupil, the unknown possibilities of his nature, to a neat and safe uniformity, as the Turks whitewash the costly mosaics of ancient art which the Greeks left on their temple walls. Rather let us have men whose manhood is only the continuation of their boyhood, natural characters still; such are able and fertile for heroic action; and not that sad spectacle with which we are too familiar, educated eyes in uneducated bodies.

I like boys, the masters of the playground and of the street, — boys, who have the same liberal ticket of admission to all shops, factories, armories, town-meetings, caucuses, mobs, target-shootings, as flies have; quite unsuspected, coming in as naturally as the janitor, — known to have no money in their pockets, and themselves not suspecting the value of this poverty; putting nobody on his guard, but seeing the inside of the show, — hearing all the asides. There

are no secrets from them, they know everything that befalls in the fire-company, the merits of every engine and of every man at the brakes, how to work it, and are swift to try their hand at every part; so too the merits of every locomotive on the rails, and will coax the engineer to let them ride with him and pull the handles when it goes to the engine-house. They are there only for fun, and not knowing that they are at school in the courthouse, or the cattle-show, quite as ranch and more than they were, an hour ago, in the arithmetic class.

They know truth from counterfeit as quick as the chemist does. They detect weakness in your eye and behavior a week before you open your mouth, and have given you the benefit of their opinion quick as a wink. They make no mistakes, have no pedantry, but entire belief-on experience. Their elections at base-ball or cricket are founded on merit, and are right. They don't pass for swimmers until they can swim, nor for stroke-oar until they can row: and I desire to be saved from their contempt. If I can pass with them, I can manage well enough with their fathers.

Everybody delights in the energy with which boys deal and talk with each other; the mixture of fun and earnest, reproach and coaxing, love and wrath, with which the game is played; — the good-natured yet defiant independence of a leading boy's behavior in the school-yard. How we envy in later life the happy youths to whom their boisterous games and rough exercise furnish the precise element which frames and sets off their school and college tasks, and teaches them, when least they think it, the use and meaning of these. In their fun and extreme freak they hit on the topmost sense of Horace. The young giant, brown from his hunting-tramp, tells his story well, interlarded with lucky allusions to Homer, to Virgil, to college-songs, to Walter Scott; and Jove and Achilles, partridge and trout, opera and binomial theorem, Caesar in Gaul, Sherman in Savannah, and hazing in Holwortky, dance through the narrative in merry confusion, yet the logic is good. If he can turn his books to such picturesque account in his fishing and hunting, it is easy to see how his reading and experience, as he has more of both, will interpenetrate each other. And every one desires that this pure vigor of action and wealth of narrative, cheered with so much humor and street rhetoric, should be carried into the habit of the young man, purged of its uproar and rudeness, but with all its vivacity entire. His hunting and campings-out have given him an indispensable base: I wish to add a taste for good company through his impatience of bad. That stormy genius of his needs a little direction to games, charades, verses of society, song, and a correspondence year by year with his wisest and best friends. Friendship is an order of nobility; from its revelations we come more worthily into nature. Society he must have or he is poor indeed; he gladly enters a school which

forbids conceit, affectation, emphasis and dulness, and requires of each only the flower of his nature and experience; requires good-will, beauty, wit, and select information; teaches by practice the law of conversation, namely, to hear as well as to speak.

Meantime, if circumstances do not permit the high social advantages, solitude has also its lessons. The obscure youth learns there the practice instead of the literature of his virtues; and, because of the disturbing effect of passion and sense, which by a multitude of trifles impede the mind's eye from the quiet search of that fine horizon-line which truth keeps, — the way to knowledge and power has ever been an escape from too much engagement with affairs and possessions; a way, not through plenty and superfluity, but by denial and renunciation, into solitude and privation; and, the more is taken away, the more real and inevitable wealth of being is made known to us. The solitary knows the essence of the thought, the scholar in society only its fair face. There is no want of example of great men, great benefactors, who have been monks and hermits in habit. The bias of mind is sometimes irresistible in that direction. The man is, as it were, born deaf and dumb, and dedicated to a narrow and lonely life. Let him study the art of solitude, yield as gracefully as he can to his destiny. Why cannot he get the good of his doom, and if it is from eternity a settled fact that he and society shall be nothing to each other, why need he blush so, and make wry faces to keep up a freshman's seat in the fine world? Heaven often protects valuable souls charged with great secrets, great ideas, by long shutting them up with their own thoughts. And the most genial and amiable of men must alternate society with solitude, and learn its severe lessons.

There comes the period of the imagination to each, a later youth; the power of beauty, the power of books, of poetry. Culture makes his books realities to him, their characters more brilliant, more effective on his mind, than his actual mates. Do not spare to put novels into the hands of young people as an occasional holiday and experiment; but, above all, good poetry in all kinds, epic, tragedy, lyric. If we can touch the imagination, we serve them, they will never forget it. Let him read "Tom Brown at Rugby," read "Tom Brown at Oxford," — better yet, read "Hodson's Life" — Hodson who took prisoner the king of Delhi. They teach the same truth, — a trust, against all appearances, against all privations, in your own worth, and not in tricks, plotting, or patronage.

I believe that our own experience instructs us that the secret of Education lies in respecting the pupil. It is not for you to choose what he shall know, what he shall do. It is chosen and foreordained, and he only holds the key to his own secret. By your tampering and thwarting and too much governing he may be hindered from his end and kept out of his own. Respect the child. Wait and see

the new product of Nature. Nature loves analogies, but not repetitions. Respect the child. Be not too much his parent. Trespass not on his solitude.

But I hear the outcry which replies to this suggestion: — Would you verily throw up the reins of public and private discipline; would you leave the young child to the mad career of his own passions and whimsies, and call this anarchy a respect for the child's nature? I answer, — Respect the child, respect him to the end, but also respect yourself. Be the companion of his thought, the friend of his friendship, the lover of his virtue, — but no kinsman of his sin. Let him find you so true to yourself that you are the irreconcilable hater of his vice and the imperturbable slighter of his trifling.

The two points in a boy's training are, to keep his *naturel* and train off all but that: — to keep his *naturel*, but stop off his uproar, fooling and horse-play; — keep his nature and arm it with knowledge in the very direction in which it points. Here are the two capital facts, Genius and Drill. The first is the inspiration in the well-born healthy child, the new perception he has of nature. Somewhat he sees in forms or hears in music or apprehends in mathematics, or believes practicable in mechanics or possible in political society, which no one else sees or hears or believes. This is the perpetual romance of new life, the invasion of God into the old dead world, when he sends into quiet houses a young soul with a thought which is not met, looking for something which is not there, but which ought to be there: the thought is dim but it is sure, and he casts about restless for means and masters to verify it; he makes wild attempts to explain himself and invoke the aid and consent of the bystanders. Baffled for want of language and methods to convey his meaning, not yet clear to himself, he conceives that though not in this house or town, yet in some other house or town is the wise master who can put him in possession of the rules and instruments to execute his will. Happy this child with a bias, with a thought which entrances him, leads him, now into deserts now into cities, the fool of an idea. Let him follow it in good and in evil report, in good or bad company; it will justify itself; it will lead him at last into the illustrious society of the lovers of truth.

In London, in a private company, I became acquainted with a gentleman, Sir Charles Fellowes, who, being at Xanthus, in the Ægean Sea, had seen a Turk point with his staff to some carved work on the corner of a stone almost buried in the soil. Fellowes scraped away the dirt, was struck with the beauty of the sculptured ornaments, and, looking about him, observed more blocks and fragments like this. He returned to the spot, procured laborers and uncovered many blocks. He went back to England, bought a Greek grammar and learned the language; he read history and studied ancient art to explain his stones; he

interested Gibson the sculptor; he invoked the assistance of the English Government; he called in the succor of Sir Humphry Davy to analyze the pigments; of experts in coins, of scholars and connoisseurs; and at last in his third visit brought home to England such statues and marble reliefs and such careful plans that he was able to reconstruct, in the British Museum where it now stands, the perfect model of the Ionic trophy-monument, fifty years older than the Parthenon of Athens, and which had been destroyed by earthquakes, then by iconoclast Christians, then by savage Turks. But mark that in the task he had achieved an excellent education, and become associated with distinguished scholars whom he had interested in his pursuit; in short, had formed a college for himself; the enthusiast had found the master, the masters, whom he sought. Always genius seeks genius, desires nothing so much as to be a pupil and to find those who can lend it aid to perfect itself.

Nor are the two elements, enthusiasm and drill, incompatible. Accuracy is essential to beauty. The very definition of the intellect is Aristotle's: "that by which we know terms or boundaries." Give a boy accurate perceptions. Teach him the difference between the similar and the same. Make him call things by their right names. Pardon in him no blunder. Then he will give you solid satisfaction as long as he lives. It is better to teach the child arithmetic and Latin grammar than rhetoric or moral philosophy, because they require exactitude of performance; it is made certain that the lesson is mastered, and that power of performance is worth more than the knowledge. He can learn anything which is important to him now that the power to learn is secured: as mechanics say, when one has learned the use of tools, it is easy to work at a new craft.

Letter by letter, syllable by syllable, the child learns to read, and in good time can convey to all the domestic circle the sense of Shakspeare. By many steps each just as short, the stammering boy and the hesitating collegian, in the school debate, in college clubs, in mock court, comes at last to full, secure, triumphant unfolding of his thought in the popular assembly, with a fullness of power that makes all the steps forgotten.

But this function of opening and feeding the human mind is not to be fulfilled by any mechanical or military method; is not to be trusted to any skill less large than Nature itself. You must not neglect the form, but you must secure the essentials. It is curious how perverse and intermeddling we are, and what vast pains and cost we incur to do wrong. Whilst we all know in our own experience and apply natural methods in our own business, — in education our common sense fails us, and we are continually trying costly machinery against nature, in patent schools and academies and in great colleges and universities.

The natural method forever confutes our experiments, and we must still come

back to it. The whole theory of the school is on the nurse's or mother's knee. The child is as hot to learn as the mother is to impart. There is mutual delight. The joy of our childhood in hearing beautiful stories from some skilful aunt who loves to tell them, must be repeated in youth. The boy wishes to learn to skate, to coast, to catch a fish in the brook, to hit a mark with a snowball or a stone; and a boy a little older is just as well pleased to teach him these sciences. Not less delightful is the mutual pleasure of teaching and learning the secret of algebra, or of chemistry, or of good reading and good recitation of poetry or of prose, or of chosen facts in history or in biography.

Nature provided for the communication of thought, by planting with it in the receiving mind a fury to impart it. 'T is so in every art, in every science. One burns to tell the new fact, the other burns to hear it. See how far a young doctor will ride or walk to witness a new surgical operation, I have seen a carriage-maker's shop emptied of all its workmen into the street, to scrutinize a new pattern from New York. So in literature, the young man who has taste for poetry, for fine images, for noble thoughts, is insatiable for this nourishment, and forgets all the world for the more learned friend, — who finds equal joy in dealing out his treasures.

Happy the natural college thus self-instituted around every natural teacher; the young men of Athens around Socrates; of Alexandria around Plotinus; of Paris around Abelard; of Germany around Fichte, or Niebuhr, or Goethe: in short the natural sphere of every leading mind. But the moment this is organized, difficulties begin. The college was to be the nurse and home of genius; but, though every young man is born with some determination in his nature, and is a potential genius; is at last to be one; it is, in the most, obstructed and delayed, and, whatever they may hereafter be, their senses are now opened in advance of their minds. They are more sensual than intellectual. Appetite and indolence they have, but no enthusiasm. These come in numbers to the college: few geniuses: and the teaching comes to be arranged for these many, and not for those few. Hence the instruction seems to require skilful tutors, of accurate and systematic mind, rather than ardent and inventive masters. Besides, the youth of genius are eccentric, won't drill, are irritable, uncertain, explosive, solitary, not men of the world, not good for every-day association. You have to work for large classes instead of individuals; you must lower your flag and reef your sails to wait for the dull sailors; you grow departmental, routinary, military almost with your discipline and college police. But what doth such a school to form a great and heroic character? What abiding Hope can it inspire? What Reformer will it nurse? What poet will it breed to sing to the human, race? What discoverer of Nature's laws will it prompt to enrich us by disclosing in the mind the statute

which all matter must obey? What fiery soul will it send out to warm a nation with his charity? What tranquil mind will it have fortified to walk with meekness in private and obscure duties, to wait and to suffer? Is it not manifest that our academic institutions should have a wider scope; that they should not be timid and keep the ruts of the last generation, but that wise men thinking for themselves and heartily seeking the good of mankind, and counting the cost of innovation, should dare to arouse the young to a just and heroic life; that the moral nature should be addressed in the school-room, and children should be treated as the high-born candidates of truth and virtue?

So to regard the young child, the young man, requires, no doubt, rare patience: a patience that nothing but faith in the remedial forces of the soul can give. You see his sensualism; you see his want of those tastes and perceptions which make the power and safety of your character. Very likely. But he has something else. If he has his own vice, he has its correlative virtue. Every mind should be allowed to make its own statement in action, and its balance will appear. In these judgments one needs that foresight which was attributed to an eminent reformer, of whom it was said "his patience could see in the bud of the aloe the blossom at the end of a hundred years." Alas for the cripple Practice when it seeks to come up with the bird Theory, which flies before it. Try your design on the best school. The scholars are of all ages and temperaments and capacities. It is difficult to class them, some are too young, some are slow, some perverse. Each requires so much consideration, that the morning hope of the teacher, of a day of love and progress, is often closed at evening by despair. Each single case, the more it is considered, shows more to be done; and the strict conditions of the hours, on one side, and the number of tasks, on the other. Whatever becomes of our method, the conditions stand fast, — six hours, and thirty, fifty, or a hundred and fifty pupils. Something must be done, and done speedily, and in this distress the wisest are tempted to adopt violent means, to proclaim martial law, corporal punishment, mechanical arrangement, bribes, spies, wrath, main strength and ignorance, in lieu of that wise genial providential influence they had hoped, and yet hope at some future day to adopt. Of course the devotion to details reacts injuriously on the teacher. He cannot indulge his genius, he cannot delight in personal relations with young friends, when his eye is always on the clock, and twenty classes are to be dealt with before the day is done. Besides, how can he please himself with genius, and foster modest virtue? A sure proportion of rogue and dunce finds its way into every school and requires a cruel share of time, and the gentle teacher, who wished to be a Providence to youth, is grown a martinet, sore with suspicions; knows as much vice as the judge of a police court, and his love of learning is lost in the routine

of grammars and books of elements.

A rule is so easy that it does not need a man to apply it; an automaton, a machine, can be made to keep a school so. It facilitates labor and thought so much that there is always the temptation in large schools to omit the endless task of meeting the wants of each single mind, and to govern by steam. But it is at frightful cost. Our modes of Education aim to expedite, to save labor; to do for masses what cannot be done for masses, what must be done reverently, one by one: say rather, the whole world is needed for the tuition of each pupil. The advantages of this system of emulation and display are so prompt and obvious, it is such a time-saver, it is so energetic on slow and on bad natures, and is of so easy application, needing no sage or poet, but any tutor or schoolmaster in his first term can apply it, — that it is not strange that this calomel of culture should be a popular medicine. On the other hand, total abstinence from this drug, and the adoption of simple discipline and the following of nature, involves at once immense claims on the time, the thoughts, on the life of the teacher. It requires time, use, insight, event, all the great lessons and assistances of God; and only to think of using it implies character and profoundness; to enter on this course of discipline is to be good and great. It is precisely analogous to the difference between the use of corporal punishment and the methods of love. It is so easy to bestow on a bad boy a blow, overpower him, and get obedience without words, that in this world of hurry and distraction, who can wait for the returns of reason and the conquest of self; in the uncertainty too whether that will ever come? And yet the familiar observation of the universal compensations might suggest the fear that so summary a stop of a bad humor was more jeopardous than its continuance.

Now the correction of this quack practice is to import into Education the wisdom of life. Leave this military hurry and adopt the pace of Nature. Her secret is patience. Do you know how the naturalist learns all the secrets of the forest, of plants, of birds, of beasts, of reptiles, of fishes, of the rivers and the sea? When he goes into the woods the birds fly before him and he finds none; when he goes to the river bank, the fish and the reptile swim away and leave him alone. His secret is patience; he sits down, and sits still; he is a statue; he is a log. These creatures have no value for their time, and he must put as low a rate on his. By dint of obstinate sitting still, reptile, fish, bird and beast, which all wish to return to their haunts, begin to return. He sits still; if they approach, he remains passive as the stone he sits upon. They lose their fear. They have curiosity too about him. By and by the curiosity masters the fear, and they come swimming, creeping and flying towards him; and as he is still immovable; they not only resume their haunts and their ordinary labors and manners, show

themselves to him in their work-day trim, but also volunteer some degree of advances towards fellowship and good understanding with a biped who behaves so civilly and well. Can you not baffle the impatience and passion of the child by your tranquillity? Can you not wait for him, as Nature and Providence do? Can you not keep for his mind and ways, for his secret, the same curiosity you give to the squirrel, snake, rabbit, and the sheldrake and the deer? He has a secret; wonderful methods in him; he is, — every child, — a new style of man; give him time and opportunity. Talk of Columbus and Newton! I tell you the child just born in yonder hovel is the beginning of a revolution as great as theirs. But you must have the believing and prophetic eye. Have the self-command you wish to inspire. Your teaching and discipline must have the reserve and taciturnity of Nature. Teach them to hold their tongues by holding your own. Say little; do not snarl; do not chide; but govern by the eye. See what they need, and that the right thing is done.

I confess myself utterly at a loss in suggesting particular reforms in our ways of teaching. No discretion that can be lodged with a school-committee, with the overseers or visitors of an academy, of a college, can at all avail to reach these difficulties and perplexities, but they solve themselves when we leave institutions and address individuals. The will, the male power, organizes, imposes its own thought and wish on others, and makes that military eye which controls boys as it controls men; admirable in its results, a fortune to him who has it, and only dangerous when it leads the workman to overvalue and overuse it and precludes him from finer means. Sympathy, the female force, — which they must use who have not the first, — deficient in instant control and the breaking down of resistance, is more subtle and lasting and creative. I advise teachers to cherish mother-wit. I assume that you will keep the grammar, reading, writing and arithmetic in order; 't is easy and of course you will. But smuggle in a little contraband wit, fancy, imagination, thought. If you have a taste which you have suppressed because it is not shared by those about you, tell them that. Set this law up, whatever becomes of the rules of the school: they must not whisper, much less talk; but if one of the young people says a wise thing, greet it, and let all the children clap their hands. They shall have no book but school-books in the room; but if one has brought in a Plutarch or Shakspeare or Don Quixote or Goldsmith or any other good book, and understands what he reads, put him at once at the head of the class. Nobody shall be disorderly, or leave his desk without permission, but if a boy runs from his bench, or a girl, because the fire falls, or to check some injury that a little dastard is inflicting behind his desk on some helpless sufferer, take away the medal from the head of the class and give it on the instant to the brave rescuer. If a child happens to

show that he knows any fact about astronomy, or plants, or birds, or rocks, or history, that interests him and you, hush all the classes and encourage him to tell it so that all may hear. Then you have made your school-room like the world. Of course you will insist on modesty in the children, and respect to their teachers, but if the boy stops you in your speech, cries out that you are wrong and sets you right, hug him!

To whatsoever upright mind, to whatsoever beating heart I speak, to you it is committed to educate men. By simple living, by an illimitable soul, you inspire, you correct, you instruct, you raise, you embellish all. By your own act you teach the beholder how to do the practicable. According to the depth from which you draw your life, such is the depth not only of your strenuous effort, but of your manners and presence.

The beautiful nature of the world has here blended your happiness with your power. Work straight on in absolute duty, and you lend an arm and an encouragement to all the youth of the universe. Consent yourself to be an organ of your highest thought, and lo! suddenly you put all men in your debt, and are the fountain of an energy that goes pulsing on with waves of benefit to the borders of society, to the circumference of things.

THE SUPERLATIVE.

When wrath and terror changed Jove's regal port
And the rash-leaping thunderbolt fell short.
For Art, for Music overthrilled,
The wine-cup shakes, the wine is spilled.

[Reprinted from the Century of February, 1882.]

The doctrine of temperance is one of many degrees. It is usually taught on a low platform, but one of great necessity, — that of meats and drinks, and its importance cannot be denied and hardly exaggerated. But it is a long way from the Maine Law to the heights of absolute self-command which respect the conservatism of the entire energies of the body, the mind, and the soul. I wish to point at some of its higher functions as it enters into mind and character.

There is a superlative temperament which has no medium range, but swiftly oscillates from the freezing to the boiling point, and which affects the manners of those who share it with a certain desperation. Their aspect is grimace. They go tearing, convulsed through life, — wailing, praying, exclaiming, swearing. We talk, sometimes, with people whose conversation would lead you to suppose that they had lived in a museum, where all the objects were monsters and extremes. Their good people are phœnixes; their naughty are like the prophet's figs. They use the superlative of grammar: "most perfect," "most exquisite," "most horrible." Like the French, they are enchanted, they are desolate, because you have got or have not got a shoe-string or a wafer you happen to want, — not perceiving that superlatives are diminutives, and weaken; that the positive is the sinew of speech, the superlative the fat. If the talker lose a tooth, he thinks the universal thaw and dissolution of things has come. Controvert his opinion and he cries "Persecution!" and reckons himself with Saint Barnabas, who was sawn in two.

Especially we note this tendency to extremes in the pleasant excitement of horror-mongers. Is there something so delicious in disasters and pain? Bad news is always exaggerated, and we may challenge Providence to send a fact so tragical that we cannot contrive to make it a little worse in our gossip.

All this comes of poverty. We are unskilful definers. From want of skill to convey quality, we hope to move admiration by quantity. Language should aim to describe the fact. It is not enough to suggest it and magnify it. Sharper sight would indicate the true line. 'T is very wearisome, this straining talk, these

experiences all exquisite, intense and tremendous,— “The best I ever saw;” “I never in my life!” One wishes these terms gazetted and forbidden. Every favorite is not a cherub, nor every cat a griffin, nor each unpleasing person a dark, diabolical intriguer; nor agonies, excruciations nor ecstasies our daily bread.

Horace Walpole relates that in the expectation, current in London a century ago, of a great earthquake, some people provided themselves with dresses for the occasion. But one would not wear earthquake dresses or resurrection robes for a working jacket, nor make a codicil to his will whenever he goes out to ride; and the secrets of death, judgment and eternity are tedious when recurring as minute-guns. Thousands of people live and die who were never, on a single occasion, hungry or thirsty, or furious or terrified. The books say, “It made my hair stand on end!” Who, in our municipal life, ever had such an experience? Indeed, I believe that much of the rhetoric of terror,— “It froze my blood,” “It made my knees knock,” *etc.* — most men have realized only in dreams and nightmares.

Then there is an inverted superlative, or superlative contrary, which shivers, like Demophoön, in the sun: wants fan and parasol on the cold Friday; is tired by sleep; feeds on drugs and poisons; finds the rainbow a discoloration; hates birds and flowers.

The exaggeration of which I complain makes plain fact the more welcome and refreshing. It is curious that a face magnified in a concave mirror loses its expression. All this overstatement is needless. A little fact is worth a whole limbo of dreams, and I can well spare the exaggerations which appear to me screens to conceal ignorance. Among these glorifiers, the coldest stickler for names and dates and measures cannot lament his criticism and coldness of fancy. Think how much pains astronomers and opticians have taken to procure an achromatic lens. Discovery in the heavens has waited for it; discovery on the face of the earth not less. I hear without sympathy the complaint of young and ardent persons that they find life no region of romance, with no enchanter, no giant, no fairies, nor even muses. I am very much indebted to my eyes, and am content that they should see the real world, always geometrically finished without blur or halo. The more I am engaged with it the more it suffices.

How impatient we are, in these northern latitudes, of looseness and intemperance in speech! Our measure of success is the moderation and low level of an individual’s judgment. Doctor Channing’s piety and wisdom had such weight that, in Boston, the popular idea of religion was whatever this eminent divine held. But I remember that his best friend, a man of guarded lips, speaking of him in a circle of his admirers, said: “I have known him long, I have studied his character, and I believe him capable of virtue.” An eminent French journalist paid a high compliment to the Duke of Wellington, when his documents were

published: "Here are twelve volumes of military-dispatches, and the word *glory* is not found in them."

The English mind is arithmetical, values exactness, likes literal statement; stigmatizes any heat or hyperbole as Irish, French, Italian, and infers weakness and inconsequence of character in speakers who use it. It does not love the superlative but the positive degree. Our customary and mechanical existence is not favorable to flights; long nights and frost hold us pretty fast to realities. The people of English stock, in all countries, are a solid people, wearing good hats and shoes, and owners of land whose title-deeds are properly recorded. Their houses are of wood, and brick, and stone, not designed to reel in earthquakes, nor blow about through the air much in hurricanes, nor to be lost under sand-drifts, nor to be made bonfires of by whimsical viziers; but to stand as commodious, rentable tenements for a century or two. All our manner of life is on a secure and moderate pattern, such as can last. Violence and extravagance are once for all, distasteful; competence, quiet, comfort, are the agreed welfare.

Ever a low style is best. "I judge by every man's truth of his degree of understanding," said Chesterfield. And I do not know any advantage more conspicuous which a man owes to his experience in markets and the Exchange, or politics, than the caution and accuracy he acquires in his report of facts. "Uncle *Joel's* news is always true," said a person to me with obvious satisfaction, and said it justly; for the old head, after deceiving and being deceived *many times*, *thinks*, "What's the use of having to unsay to-day what I said yesterday? I will not be responsible; I will not add an epithet. I will be as moderate as the fact, and will use the same expression, without color, which I received; and rather repeat it several times, word for word, than vary it ever so little."

The first valuable power in a reasonable mind, one would say, was the power of plain statement, or the power to receive things as they befall, and to transfer the picture of them to another mind unaltered. 'T is a good rule of rhetoric which Schlegel gives,— "In good prose, every word is underscored;" which, I suppose, means, Never italicize.

Spartans, stoics, heroes, saints and gods use a short and positive speech. They are never off their centres. As soon as they swell and paint and find truth not enough for them, softening of the brain has already begun. It seems as if inflation were a disease incident to too much use of words, and the remedy lay in recourse to things. I am daily struck with the forcible understatement of people who have no literary habit. The low expression is strong and agreeable. The citizen dwells in delusions. His dress and draperies, house and stables, occupy him. The poor countryman, having no circumstance of carpets, coaches, dinners,

wine and dancing in his head to confuse him, is able to look straight at you, without refraction or prismatic glories, and he sees whether you see straight also, or whether your head is addled by this mixture of wines.

The common people diminish: “a cold snap;” “it rains easy;” “good haying weather.” When a farmer means to tell you that he is doing well with his farm, he says, “I don’t work as hard as I did, and I don’t mean to.” When he wishes to condemn any treatment of soils or of stock, he says, “It won’t do any good.” Under the Catskill Mountains the boy in the steamboat said, “Come up here, Tony; it looks pretty out-of-doors.” The farmers in the region do not call particular summits, as Killington, Camel’s Hump, Saddle-back, etc., mountains, but only “them ‘ere rises,” and reserve the word mountains for the range.

I once attended a dinner given to a great state functionary by functionaries, — men of law, state, and trade. The guest was a great man in his own country and an honored diplomatist in this. His health was drunk with some acknowledgment of his distinguished services to both countries, and followed by nine cold hurrahs. There was the vicious superlative. Then the great official spoke and beat his breast, and declared that he should remember this honor to the latest moment of his existence. He was answered again by officials. Pity, thought I, they should lie so about their keen sensibility to the nine cold hurrahs and to the commonplace compliment of a dinner. Men of the world value truth, in proportion to their ability; not by its sacredness, but for its convenience. Of such, especially of diplomatists, one has a right to expect wit and ingenuity to avoid the lie if they must comply with the form. Now, I had been present, a little before, in the country at a cattle-show dinner, which followed an agricultural discourse delivered by a farmer: the discourse, to say the truth, was bad; and one of our village fathers gave at the dinner this toast: “The orator of the day: his subject deserves the attention of every farmer.” The caution of the toast did honor to our village father. I wish great lords and diplomatists had as much respect for truth.

But whilst thus everything recommends simplicity and temperance of action; the utmost directness, the positive degree, we mean thereby that “rightly to be great is not to stir without great argument.” Whenever the true objects of action appear, they are to be heartily sought. Enthusiasm is the height of man; it is the passing from the human to the divine.

The superlative is as good as the positive, if it be alive. If man loves the conditioned, he also loves the unconditioned. We don’t wish to sin on the other side, and to be purists, nor to check the invention of wit or the sally of humor. ‘T is very different, this weak and wearisome lie, from the stimulus to the fancy

which is given by a romancing talker who does not mean to be exactly taken, — like the gallant skipper who complained to his owners that he had pumped the Atlantic Ocean three times through his ship on the passage, and ‘t was common to strike seals and porpoises in the hold. Or what was similarly asserted of the late Lord Jeffrey, at the Scottish bar, — an attentive auditor declaring on one occasion after an argument of three hours, that he had spoken the whole English language three times over in his speech.

The objection to unmeasured speech is its lie. All men like an impressive fact. The astronomer shows you in his telescope the nebula of Orion, that you may look on that which is esteemed the farthest-off land in visible nature. At the Bank of England they put a scrap of paper that is worth a million pounds sterling into the hands of the visitor to touch. Our travelling is a sort of search for the superlatives or summits of art, — much more the real wonders of power in the human form. The arithmetic of Newton, the memory of Magliabecchi or Mirandola, the versatility of Julius Cæsar, the concentration of Bonaparte, the inspiration of Shakspeare, are sure of commanding interest and awe in every company of men.

The superlative is the excess of expression. We are a garrulous, demonstrative kind of creatures, and cannot live without much outlet for all our sense and nonsense. And fit expression is so rare that mankind have a superstitious value for it, and it would seem the whole human race agree to value a man precisely in proportion to his power of expression; and to the most expressive man that has existed, namely, Shakspeare, they have awarded the highest place.

The expressors are the gods of the world, but the men whom these expressors revere are the solid, balanced, undemonstrative citizens who make the reserved guard, the central sense, of the world. For the luminous object wastes itself by its shining, — is luminous because it is burning up: and if the powers are disposed for display, there is all the less left for use and creation. The talent sucks the substance of the man. Superlatives must be bought by too many positives. Gardens of roses must be stripped to make a few drops of otto. And these raptures of fire and frost, which indeed cleanse pedantry out of conversation and make the speech salt and biting, would cost me the days of well being which are now so cheap to me, yet so valued. I like no deep stakes. I am a coward at gambling. I will bask in the common sun a while longer.

Children and thoughtless people like exaggerated event and activity; like to run to a house on fire, to a fight, to an execution; like to talk of a marriage, of a bankruptcy, of a debt, of a crime. The wise man shuns all this. I knew a grave man who, being urged to go to a church where a clergyman was newly ordained, said “he liked him very well, but he would go when the interesting Sundays were

over.”

All rests at last on the simplicity of nature, or real being. Nothing is for the most part less teemed. We are fond of dress, of ornament, of accomplishments, of talents, but distrustful of health, of soundness, of pure innocence. Yet nature measures her greatness by what she can spare, by what remains when all superfluity and accessories are shorn off.

Nor is there in nature itself any swell, any brag, any strain or shock, but a firm common sense through all her elephants and lions, through all her ducks and geese; a true proportion between her means and her performance. *Semper sibi similis*. You shall not catch her in any anomalies, nor swaggering into any monsters. In all the years that I have sat in town and forest, I never saw a winged dragon, a flying man, or a talking fish, but ever the strictest regard to rule, and an absence of all surprises. No; nature encourages no looseness, pardons no errors; freezes punctually at 32°, boils punctually at 212°; crystallizes in water at one invariable angle, in diamond at one, in granite at one; and if you omit the smallest condition the experiment will not succeed. Her communication obeys the gospel rule, yea or nay. She never expatiates, never goes into the reasons. Plant beech mast and it comes up, or it does not come up. Sow grain, and it does not come up: put lime into the soil and try again, and this time she says yea. To every question an abstemious but absolute reply. The like staidness is in her dealings with us. Nature is always serious, — does not jest with us. Where we have begun in folly, we are brought quickly to plain dealing. Life could not be carried on except by fidelity and good earnest; and she brings the most heartless trifler to determined purpose presently. The men whom she admits to her confidence, the simple and great characters, are uniformly marked by absence of pretension and by understatement. The old and the modern sages of clearest insight are plain men, who have held them selves hard to the poverty of nature.

The firmest and noblest ground on which people can live is truth; the real with the real; a ground on which nothing is assumed, but where they speak and think and do what they must, because they are so and not otherwise.

But whilst the basis of character must be simplicity, the expression of character, it must be remembered, is, in great degree, a matter of climate. In the temperate climates there is a temperate speech, in torrid climates an ardent one. Whilst in Western nations the superlative in conversation is tedious and weak, and in character is a capital defect, nature delights in showing us that in the East it is animated, it is pertinent, pleasing, poetic. Whilst she appoints us to keep within the sharp boundaries of form as the condition of our strength, she creates in the East the uncontrollable yearning to escape from limitation into the vast and boundless; to use a freedom of fancy which plays with all the works of

nature, great or minute, galaxy or grain of dust, as toys and words of the mind; inculcates the tenet of a beatitude to be found in escape from all organization and all personality, and makes ecstasy an institution.

Religion and poetry are all the civilization of the Arab. "The ground of Paradise," said Mohammed, "is extensive, and the plants of it are hallelujahs." Religion and poetry: the religion teaches an inexorable destiny; it distinguishes only two days in each man's history, the day of his lot, and the day of judgment. The religion runs into asceticism and fate. The costume, the articles in which wealth is displayed, are in the same extremes. Thus the diamond and the pearl, which are only accidental and secondary in their use and value to us, are proper to the oriental world. The diver dives a beggar and rises with the price of a kingdom in his hand. A bag of sequins, a jewel, a balsam, a single horse, constitute an estate in countries where insecure institutions make every one desirous of concealable and convertible property. Shall I say, further, that the orientals excel in costly arts, in the cutting of precious stones, in working in gold, in weaving on hand-looms costly stuffs from silk and wool, in spices, in dyes and drugs, henna, otto and camphor, and in the training of slaves, elephants and camels, — things which are the poetry and superlative of commerce.

On the other hand, — and it is a good illustration of the difference of genius, — the European nations, and, in general, all nations in proportion to their civilization, understand the manufacture of iron. One of the meters of the height to which any civility rose is the skill in the fabric of iron. Universally, the better gold, the worse man. The political economist defies us to show any gold-mine country that is traversed by good roads: or a shore where pearls are found on which good schools are erected. The European civility, or that of the positive degree, is established by coal-mines, by ventilation, by irrigation and every skill — in having water cheap and pure, by iron, by agriculture for bread-stuffs, and manufacture of coarse and family cloths. Our modern improvements have been in the invention of friction matches; of India rubber shoes; of the famous two parallel bars of iron; then of the air-chamber of Watt, and of the judicious tubing of the engine, by Stephenson, in order to the construction of locomotives.

Meantime, Nature, who loves crosses and mixtures, makes these two tendencies necessary each to the other, and delights to re-enforce each peculiarity by imparting the other. The Northern genius finds itself singularly refreshed and stimulated by the breadth and luxuriance of Eastern imagery and modes of thinking, which go to check the pedantry of our inventions and the excess of our detail. There is no writing which has more electric power to unbind and animate the torpid intellect than the bold Eastern muse.

If it come back however to the question of final superiority, it is too plain that

there is no question that the star of empire rolls West: that the warm sons of the Southeast have bent the neck under the yoke of the cold temperament and the exact understanding of the Northwestern races.

THE SOVEREIGNTY OF ETHICS.

These rules were writ in human heart
By Him who built the day;

The columns of the universe
Not firmer based than they.

Thou shalt not try

To plant thy shrivelled pedantry
On the shoulders of the sky

[Reprinted from the North American Review, of May, 1878.]

Since the discovery of Oersted that galvanism and electricity and magnetism are only forms of one and the same force, and convertible each into the other, we have continually suggested to us a larger generalization: that each of the great departments of Nature — chemistry, vegetation, the animal life — exhibits the same laws on a different plane; that the intellectual and moral worlds are analogous to the material. There is a kind of latent omniscience not only in every man but in every particle. That convertibility we so admire in plants and animal structures, whereby the repairs and the ulterior uses are subserved, when one part is wounded or deficient, by another; this self-help and self-creation proceed from the same original power which works remotely in grandest and meanest structures by the same design, — works in a lobster or a mite worm as a wise man would if imprisoned in that poor form. 'T is the effort of God, of the Supreme Intellect, in the extremest frontier of his universe.

As this unity exists in the organization of insect, beast and bird, still ascending to man, and from lower type of man to the highest yet attained, so it does not less declare itself in the spirit or intelligence of the brute. In ignorant ages it was common to vaunt the human superiority by underrating the instinct of other animals; but a better discernment finds that the difference is only of less and more. Experiment shows that the bird and the dog reason as the hunter does, that all the animals show the same good sense in their humble walk that the man who is their enemy or friend does; and, if it be in smaller measure, yet it is not diminished, as his often is, by freak and folly. St. Pierre says of the animals that a moral sentiment seems to have determined their physical organization.

I see the unity of thought and of morals running through all animated Nature; there is no difference of quality, but only of more and less. The animal who is wholly kept down in Nature has no anxieties. By yielding, as he must do, to it, he is enlarged and reaches his highest point. The poor grub, in the hole of a tree, by yielding itself to Nature, goes blameless through its low part and is rewarded at last, casts its filthy hull, expands into a beautiful form with rainbow wings, and makes a part of the summer day. The Greeks called it Psyche, a manifest emblem of the soul. The man down in Nature occupies himself in guarding, in feeding, in warming and multiplying his body, and, as long as he knows no more, we justify him; but presently a mystic change is wrought, a new perception opens, and he is made a citizen of the world of souls: he feels what is

called duty; he is aware that he owes a higher allegiance to do and live as a good member of this universe. In the measure in which he has this sense he is a man, rises to the universal life. The high intellect is absolutely at one with moral nature. A thought is imbosomed in a sentiment, and the attempt to detach and blazon the thought is like a show of cut flowers. The moral is the measure of health, and in the voice of Genius I hear invariably the moral tone, even when it is disowned in words; — health, melody and a wider horizon belong to moral sensibility. The finer the sense of justice, the better poet. The believer says to the skeptic: —

“One avenue was shaded from thine eyes
Through which I wandered to eternal truth.”

Humility is the avenue. To be sure, we exaggerate when we represent these two elements as disunited; every man shares them both; but it is true that men generally are marked by a decided predominance of one or of the other element.

In youth and in age we are moralists, and in mature life the moral element steadily rises in the regard of all reasonable men.

‘T is a sort of proverbial dying speech of scholars (at least it is attributed to many) that which Anthony Wood reports of Nathaniel Carpenter, an Oxford Fellow. “It did repent him,” he said, “that he had formerly so much courted the maid instead of the mistress,” (meaning philosophy and mathematics to the neglect of divinity). This, in the language of our time, would be ethics.

And when I say that the world is made up of moral forces, these are not separate. All forces are found in Nature united with that which they move: heat is not separate, light is not massed aloof, nor electricity, nor gravity, but they are always in combination. And so moral powers; they are thirsts for action, and the more you accumulate, the more they mould and form.

It is in the stomach of plants that development begins, and ends in the circles of the universe. ‘T is a long scale from the gorilla to the gentleman — from the gorilla to Plato, Newton, Shakspeare — to the sanctities of religion, the refinements of legislation, the summits of science, art and poetry. The beginnings are slow and infirm, but it is an always accelerated march. The geologic world is chronicled by the growing ripeness of the strata from lower to higher, as it becomes the abode of more highly organized plants and animals. The civil history of men might be traced by the successive meliorations as marked in higher moral generalizations; — virtue meaning physical courage, then chastity and temperance, then justice and love; — bargains of kings with peoples of certain rights to certain classes, then of rights to masses, — then at last came the day when, as the historians rightly tell, the nerves of the world were electrified by the proclamation that all men are born free and equal.

Every truth leads in another. The bud extrudes the old leaf, and every truth brings that which will supplant it. In the court of law the judge sits over the culprit, but in the court of life in the same hour the judge also stands as culprit before a true tribunal. Every judge is a culprit, every law an abuse. Montaigne kills off bigots as cowhage kills worms; but there is a higher muse there sitting where he durst not soar, of eye so keen that it can report of a realm in which all the wit and learning of the Frenchman is no more than the cunning of a fox.

It is the same fact existing as sentiment and as will in the mind, which works in Nature as irresistible law, exerting influence over nations, intelligent beings, or down in the kingdoms of brute or of chemical atoms. Nature is a tropical swamp in sunshine, on whose purlieus we hear the song of summer birds, and see prismatic dew-drops — but her interiors are terrific, full of hydras and crocodiles. In the pre-adamite she bred valor only; by-and-by she gets on to man, and adds tenderness, and thus raises virtue piecemeal.

When we trace from the beginning, that ferocity has uses; only so are the conditions of the then world met, and these monsters are the scavengers, executioners, diggers, pioneers and fertilizers, destroying what is more destructive than they, and making better life possible. We see the steady aim of Benefit in view from the first. Melioration is the law. The cruelest foe is a masked benefactor. The wars which make history so dreary, have served the cause of truth and virtue. There is always an instinctive sense of right, an obscure idea which animates either party and which in long periods vindicates itself at last. Thus a sublime confidence is fed at the bottom of the heart that, in spite of appearances, in spite of malignity and blind self-interest living for the moment, an eternal, beneficent necessity is always bringing things right; and, though we should fold our arms, — which we cannot do, for our duty requires us to be the very hands of this guiding sentiment, and work in the present moment, — the evils we suffer will at last end themselves through the incessant opposition of Nature to everything hurtful.

The excellence of men consists in the complete-ness with which the lower system is taken up into the higher — a process of much time and delicacy, but in which no point of the lower should be left untranslated; so that the warfare of beasts should be renewed in a finer field, for more excellent victories. Savage war gives place to that of Turenne and Wellington, which has limitations and a code. This war again gives place to the finer quarrel of property, where the victory is wealth and the defeat poverty.

The inevitabilities are always sapping every seeming prosperity built on a wrong. No matter how you seem to fatten on a crime, that can never be good for the bee which is bad for the hive. See how these things look in the page of

history. Nations come and go, cities rise and fall, all the instincts of man, good and bad, work, — and every wish, appetite, and passion, rushes into act and embodies itself in usages, protects itself with laws. Some of them are useful and universally acceptable, hinder none, help all, and these are honored and perpetuated. Others are noxious. Community of property is tried, as when a Tartar horde or an Indian tribe roam over a vast tract for pasturage or hunting; but it is found at last that some establishment of property, allowing each on some distinct terms to fence and cultivate a piece of land, is best for all.

“For my part,” said Napoleon, “it is not the mystery of the incarnation which I discover in religion, but the mystery of social order, which associates with heaven that idea of equality which prevents the rich from destroying the poor.”

Shall I say then it were truer to see Necessity calm, beautiful, passionless, without a smile, covered with ensigns of woe, stretching her dark warp across the universe? These threads are Nature’s pernicious elements, her deluges, miasma, disease, poison; her curdling cold, her hideous reptiles and worse men, cannibals, and the depravities of civilization; the secrets of the prisons of tyranny, the slave and his master, the proud man’s scorn, the orphan’s tears, the vices of men, lust, cruelty and pitiless avarice. These make the gloomy warp of ages. Humanity sits at the dread loom and throws the shuttle and fills it with joyful rainbows, until the sable ground is flowered all over with a woof of human industry and wisdom, virtuous examples, symbols of useful and generous arts, with beauty and pure love, courage and the victories of the just and wise over malice and wrong.

Nature is not so helpless but it can rid itself at last of every crime. An Eastern poet, in describing the golden age, said that God had made justice so dear to the heart of Nature that, if any injustice lurked anywhere under the sky, the blue vault would shrivel to a snake-skin and cast it out by spasms. But the spasms of Nature are years and centuries, and it will tax the faith of man to wait so long.

Man is always throwing his praise or blame on events, and does not see that he only is real, and the world his mirror and echo. He imputes the stroke to fortune, which in reality himself strikes. The student discovers one day that he lives in enchantment: the house, the works, the persons, the days, the weathers — all that he calls Nature, all that he calls institutions, when once his mind is active are visions merely, wonderful allegories, significant pictures of the laws of the mind; and through this enchanted gallery he is led by unseen guides to read and learn the laws of Heaven. This discovery may come early, — sometimes in the nursery, to a rare child; later in the school, but oftener when the mind is more mature; and to multitudes of men wanting in mental activity it never comes — any more than poetry or art. But it ought to come; it belongs to

the human intellect, and is an insight which we cannot spare.

The idea of right exists in the human mind, and lays itself out in the equilibrium of Nature, in the equalities and periods of our system, in the level of seas, in the action and reaction of forces. Nothing is allowed to exceed or absorb the rest; if it do, it is disease, and is quickly destroyed. It was an early discovery of the mind, — this beneficent rule. Strength enters just as much as the moral element prevails. The strength of the animal to eat and to be luxurious and to usurp is rudeness and imbecility. The law is: To each shall be rendered his own. As thou sowest, thou shalt reap. Smite, and thou shalt smart. Serve, and thou shalt be served. If you love and serve men, you cannot, by any hiding or stratagem, escape the remuneration. Secret retributions are always restoring the level, when disturbed, of the Divine justice. It is impossible to tilt the beam. All the tyrants and proprietors and monopolists of the world in vain set their shoulders to heave the bar. Settles for evermore the ponderous equator to its line, and man and mote and star and sun must range with it, or be pulverized by the recoil.

It is a doctrine of unspeakable comfort. He that plants his foot here, passes at once out of the kingdom of illusions. Others may well suffer in the hideous picture of crime with which earth is filled and the life of society threatened, but the habit of respecting that great order which certainly contains and will dispose of our little system, will take all fear from the heart. It did itself create and distribute all that is created and distributed, and, trusting to its power, we cease to care for what it will certainly order well. To good men, as we call good men, this doctrine of Trust is an unsounded secret. They use the word, they have accepted the notion of a mechanical supervision of human life, by which that certain wonderful being whom they call God does take up their affairs where their intelligence leaves them, and somehow knits and co-ordinates the issues of them in all that is beyond the reach of private faculty. They do not see that *He*, that *It*, is there, next and within; the thought of the thought; the affair of affairs; that he is existence, and take him from them and they would not be. They do not see that particulars are sacred to him, as well as the scope and outline; that these passages of daily life are his work; that in the moment when they desist from interference, these particulars take sweetness and grandeur, and become the language of mighty principles.

A man should be a guest in his own house, and a guest in his own thought. He is there to speak for truth; but who is he? Some clod the truth has snatched from the ground, and with fire has fashioned to a momentary man. Without the truth, he is a clod again. Let him find his superiority in not wishing superiority; find the riches of love which possesses that which it adores; the riches of poverty; the

height of lowliness, the immensity of to-day; and, in the passing hour, the age of ages.

Wondrous state of man! never so happy as when he has lost all private interests and regards, and exists only in obedience and love of the Author.

The fiery soul said: "Let me be a blot on this fair world, the obscurest, the loneliest sufferer, with one proviso, — that I know it is His agency. I will love him, though he shed frost and darkness on every way of mine." The emphasis of that blessed doctrine lay in lowliness. The new saint gloried in infirmities. Who or what was he? His rise and his recovery were vicarious. He has fallen in another; he rises in another.

We perish, and perish gladly, if the law remains. I hope it is conceivable that a man may go to ruin gladly, if he see that thereby no shade falls on that he loves and adores. We need not always be stipulating for our clean shirt and roast joint *per diem*. We do not believe the less in astronomy and vegetation, because we are writhing and roaring in our beds with rheumatism. Cripples and invalids, we doubt not there are bounding fawns in the forest, and lilies with graceful, springing stem; so neither do we doubt or fail to love the eternal law, of which we are such shabby practisers. Truth gathers itself spotless and unhurt after all our surrenders and concealments and partisanship — never hurt by the treachery or ruin of its best defenders, whether Luther, or William Penn, or St. Paul. We answer, when they tell us of the bad behavior of Luther or Paul: "Well, what if he did? Who was more pained than Luther or Paul?" Shall we attach ourselves violently to our teachers and historical personalities, and think the foundation shaken if any fault is shown in their record? But how is the truth hurt by their falling from it? The law of gravity is not hurt by every accident, though our leg be broken, No more is the law of justice by our departure from it.

We are to know that we are never without a pilot. When we know not how to steer, and dare not hoist a sail, we can drift. The current knows the way, though we do not. When the stars and sun appear, when we have conversed with navigators who know the coast, we may begin to put out an oar and trim a sail. The ship of heaven guides itself, and will not accept a wooden rudder.

Have you said to yourself ever: 'I abdicate all choice, I see it is not for me to interfere. I see that I have been one of the crowd; that I have been a pitiful person, because I have wished to be my own master, and to dress and order my whole way and system of living. I thought I managed it very well. I see that my neighbors think so. I have heard prayers, I have prayed even, but I have never until now dreamed that this undertaking the entire management of my own affairs was not commendable. I have never seen, until now, that it dwarfed me. I have not discovered, until this blessed ray flashed just now through my soul, that

there dwelt any power in Nature that would relieve me of my load. But now I see.'

What is this intoxicating sentiment that allies this scrap of dust to the whole of Nature and the whole of Fate, — that makes this doll a dweller in ages, mocker at time, able to spurn all outward advantages, peer and master of the elements? I am taught by it that what touches any thread in the vast web of being touches me. I am representative of the whole; and the good of the whole, or what I call the right, makes me invulnerable.

How came this creation so magically woven that nothing can do me mischief but myself, — that an invisible fence surrounds my being which screens me from all harm that I will to resist? If I will stand upright, the creation cannot bend me. But if I violate myself, if I commit a crime, the lightning loiters by the speed of retribution, and every act is not hereafter but instantaneously rewarded according to its quality. Virtue is the adopting of this dictate of the universal mind by the individual will. Character is the habit of this obedience, and Religion is the accompanying emotion, the emotion of reverence which the presence of the universal mind ever excites in the individual.

We go to famous books for our examples of character, just as we send to England for shrubs which grow as well in our own door-yards and cow-pastures. Life is always rich, and spontaneous graces and forces elevate it in every domestic circle, which are overlooked while we are reading something less excellent in old authors. From the obscurity and casualty of those which I know, I infer the obscurity and casualty of the like balm and consolation and immortality in a thousand homes which I do not know, all round the world. And I see not why to these simple instincts, simple yet grand, all the heights and transcendencies of virtue and of enthusiasm are not open. There is power enough in them to move the world; and it is not any sterility or defect in ethics, but our negligence of these fine monitors, of these world-embracing sentiments, that makes religion cold and life low.

While the immense energy of the sentiment of duty and the awe of the supernatural exert incomparable influence on the mind, — yet it is often perverted, and the tradition received with awe, but without correspondent action of the receiver. Then you find so many men infatuated on that topic! Wise on all other, they lose their head the moment they talk of religion. It is the sturdiest prejudice in the public mind that religion is something by itself; a department distinct from all other experiences, and to which the tests and judgment men are ready enough to show on other things, do not apply. You may sometimes talk with the gravest and best citizen, and the moment the topic of religion is broached, he runs into a childish superstition. His face looks infatuated, and his

conversation is. When I talked with an ardent missionary, and pointed out to him that his creed found no support in my experience, he replied, "It is not so in your experience, but is so in the other world." I answer: Other world! there is no other world. God is one and omnipresent; here or nowhere is the whole fact. The one miracle which God works evermore is in Nature, and imparting himself to the mind. When we ask simply, "What is true in thought? what is just in action?" it is the yielding of the private heart to the Divine mind, and all personal preferences, and all requiring of wonders, are profane.

The word miracle, as it is used, only indicates the ignorance of the devotee, staring with wonder to see water turned into wine, and heedless of the stupendous fact of his own personality. Here he stands, a lonely thought harmoniously organized into correspondence with the universe of mind and matter. What narrative of wonders coming down from a thousand years ought to charm his attention like this? Certainly it is human to value a general consent, a fraternity of believers, a crowded church; but as the sentiment purifies and rises, it leaves crowds. It makes churches of two, churches of one. A fatal disservice does this Swedenborg or other who offers to do my thinking for me. It seems as if, when the Spirit of God speaks so plainly to each soul, it were an impiety to be listening to one or another saint. Jesus was better than others, because he refused to listen to others and listened at home.

You are really interested in your thought. You have meditated in silent wonder on your existence in this world. You have perceived in the first fact of your conscious life here a miracle so astounding, — a miracle comprehending all the universe of miracles to which your intelligent life gives you access, — as to exhaust wonder, and leave you no need of hunting here or there for any particular exhibitions of power. Then up comes a man with a text of 1 John v. 7, or a knotty sentence from St. Paul, which he considers as the axe at the root of your tree. You cannot bring yourself to care for it. You say: "Cut away; my tree is Ygdrasil — the tree of life." He interrupts for the moment your peaceful trust in the Divine Providence. Let him know by your security that your conviction is clear and sufficient, and if he were Paul himself, you also are here, and with your Creator.

We all give way to superstitions. The house in which we were born is not quite mere timber and stone; is still haunted by parents and progenitors. The creeds into which we were initiated in childhood and youth no longer hold their old place in the minds of thoughtful men, but they are not nothing to us, and we hate to have them treated with contempt. There is so much that we do not know, that we give to these suggestions the benefit of the doubt.

It is a necessity of the human mind that he who looks at one object should

look away from all other objects. He may throw himself upon some sharp statement of one fact, some verbal creed, with such concentration as to hide the universe from him: but the stars roll above; the sun warms him. With patience and fidelity to truth he may work his way through, if only by coming against somebody who believes more fables than he does; and, in trying to dispel the illusions of his neighbor, he opens his own eyes.

In the Christianity of this country there is wide difference of opinion in regard to inspiration, prophecy, miracles, the future state of the soul; every variety of opinion, and rapid revolution in opinions, in the last half-century. It is simply impossible to read the old history of the first century as it was read in the ninth; to do so you must abolish in your mind the lessons of all the centuries from the ninth to the nineteenth.

Shall I make the mistake of baptizing the daylight, and time, and space, by the name of John or Joshua, in whose tent I chance to behold daylight, and space, and time? What anthropomorphists we are in this, that we cannot let moral distinctions be, but must mould them into human shape! “Mere morality” means, — not put into a personal master of morals. Our religion is geographical, belongs to our time and place; respects and mythologizes some one time and place and person and people. So it is occasional. It visits us only on some exceptional and ceremonial occasion, on a wedding or a baptism, on a sick-bed, or at a funeral, or perhaps on a sublime national victory or a peace. But that be sure is not the religion of the universal unsleeping providence, which lurks in trifles, in still, small voices, in the secrets of the heart and our closest thoughts, as efficiently as in our proclamations and successes.

Far be it from me to underrate the men or the churches that have fixed the hearts of men and organized their devout impulses or oracles into good institutions. The Church of Rome had its saints, and inspired the conscience of Europe — St. Augustine, and Thomas à Kempis, and Fénelon; the piety of the English Church in Cranmer, and Herbert, and Taylor; the Reformed Church, Scougal; the mystics, Behmen and Swedenborg; the Quakers, Fox and James Naylor. I confess our later generation appears ungirt, frivolous, compared with the religions of the last or Calvinistic age. There was in the last century a serious habitual reference to the spiritual world, running through diaries, letters and conversation — yes, and into wills and legal instruments also, compared with which our liberation looks a little foppish and dapper.

The religion of seventy years ago was an iron belt to the mind, giving it concentration and force. A rude people were kept respectable by the determination of thought on the eternal world. Now men fall abroad, — want polarity, — suffer in character and intellect. A sleep creeps over the great

functions of man. Enthusiasm goes out. In its stead a low prudence seeks to hold society staunch, but its arms are too short, cordage and machinery never supply the place of life.

Luther would cut his hand off sooner than write theses against the pope if he suspected that he was bringing on with all his might the pale negations of Boston Unitarianism. I will not now go into the metaphysics of that reaction by which in history a period of belief is followed by an age of criticism, in which wit takes the place of faith in the leading spirits, and an excessive respect for forms out of which the heart has departed becomes most obvious in the least religious minds. I will not now explore the causes of the result, but the fact must be conceded as of frequent recurrence, and never more evident than in our American church. To a self-denying, ardent church, delighting in rites and ordinances, has succeeded a cold, intellectual race, who analyze the prayer and psalm of their forefathers, and the more intellectual reject every yoke of authority and custom with a petulance unprecedented. It is a sort of mark of probity and sincerity to declare how little you believe, while the mass of the community indolently follow the old forms with childish scrupulosity, and we have punctuality for faith, and good taste for character.

But I hope the defect of faith with us is only apparent. We shall find that freedom has its own guards, and, as soon as in the vulgar it runs to license, sets all reasonable men on exploring those guards. I do not think the summit of this age truly reached or expressed unless it attain the height which religion and philosophy reached in any former age. If I miss the inspiration of the saints of Calvinism, or of Platonism, or Buddhism, our times are not up to theirs, or, more truly, have not yet their own legitimate force.

Worship is the regard for what is above us. Men are respectable only as they respect. We delight in children because of that religious eye which belongs to them; because of their reverence for their seniors, and for their objects of belief. The poor Irish laborer one sees with respect, because he believes in something, in his church, and in his employers. Superstitious persons we see with respect, because their whole existence is not bounded by their hats and their shoes, but they walk attended by pictures of the imagination, to which they pay homage. You cannot impoverish man by taking away these objects above him without ruin. It is very sad to see men who think their goodness made of themselves; it is very grateful to see those who hold an opinion the reverse of this.

All ages of belief have been great; all of unbelief have been mean. The Orientals believe in Fate. That which shall befall them is written on the iron leaf; they will not turn on their heel to avoid famine, plague, or the sword of the enemy. That is great, and gives a great air to the people. We in America are

charged with a great deficiency in worship; that reverence does not belong to our character; that our institutions, our politics, and our trade, have fostered a self-reliance which is small, liliputian, full of fuss and bustle; we look at and will bear nothing above us in the state, and do exceedingly applaud and admire ourselves, and believe in our senses and understandings, while our imagination and our moral sentiment are desolated. In religion too we want objects above; we are fast losing or have already lost our old reverence; new views of inspiration, of miracles, of the saints, have supplanted the old opinions, and it is vain to bring them again. Revolutions never go backward, and in all churches a certain decay of ancient piety is lamented, and all threatens to lapse into apathy and indifferentism. It becomes us to consider whether we cannot have a real faith and real objects in lieu of these false ones. The human mind, when it is trusted, is never false to itself. If there be sincerity and good meaning — if there be really in us the wish to seek for our superiors, for that which is lawfully above us, we shall not long look in vain.

Meantime there is great centrality, a centripetence equal to the centrifugence. The mystic or theist is never scared by any startling materialism. He knows the laws of gravitation and of repulsion are deaf to French talkers, be they never so witty. If theology shows that opinions are fast changing, it is not so with the convictions of men with regard to conduct. These remain. The most daring heroism, the most accomplished culture, or rapt holiness, never exhausted the claim of these lowly duties, — never penetrated to their origin, or was able to look behind their source. We cannot disenchant, we cannot impoverish ourselves, by obedience; but by humility we rise, by obedience we command, by poverty we are rich, by dying we live.

We are thrown back on rectitude forever and ever, only rectitude, — to mend one; that is all we can do. *But that* the zealot stigmatizes as a sterile chimney-corner philosophy. Now the first position I make is that natural religion supplies still all the facts which are disguised under the dogma of popular creeds. The progress of religion is steadily to its identity with morals.

How is the new generation to be edified? How should it not? The life of those once omnipotent traditions was really not in the legend, but in the moral sentiment and the metaphysical fact which the legends enclosed — and these survive. A new Socrates, or Zeno, or Swedenborg, or Pascal, or a new crop of geniuses like those of the Elizabethan age, may be born in this age, and, with happy heart and a bias for theism, bring asceticism, duty, and magnanimity into vogue again.

It is true that Stoicism, always attractive to the intellectual and cultivated, has now no temples, no academy, no commanding Zeno or Antoninus. It accuses us

that it has none: that pure ethics is not now *formulated* and concreted into a *cultus*, a fraternity with assemblings and holy-days, with song and book, with brick and stone. Why have not those who believe in it and love it left all for this, and dedicated themselves to write out its scientific scriptures to become its Vulgate for millions? I answer for one that the inspirations we catch of this law are not continuous and technical, but joyful sparkles, and are recorded for their beauty, for the delight they give, not for their obligation; and that is their priceless good to men, that they charm and uplift, not that they are imposed. It has not yet its first hymn. But, that every line and word may be coals of true fire, ages must roll, ere these casual wide-falling cinders can be gathered into broad and steady altar-flame.

It does not yet appear what forms the religious feeling will take. It prepares to rise out of all forms to an absolute justice and healthy perception. Here is now a new feeling of humanity infused into public action. Here is contribution of money on a more extended and systematic scale than ever before to repair public disasters at a distance, and of political support to oppressed parties. Then there are the new conventions of social science, before which the questions of the rights of women, the laws of trade, the treatment of crime, regulation of labor, come for a hearing. If these are tokens of the steady currents of thought and will in these directions, one might well anticipate a new nation.

I know how delicate this principle is, — how difficult of adaptation to practical and social arrangements. It cannot be profaned; it cannot be forced; to draw it out of its natural current is to lose at once all its power. Such experiments as we recall are those in which some sect or dogma made the tie, and that was an artificial element, which chilled and checked the union. But is it quite impossible to believe that men should be drawn to each other by the simple respect which each man feels for another in whom he discovers absolute honesty; the respect he feels for one who thinks life is quite too coarse and frivolous, and that he should like to lift it a little, should like to be the friend of some man's virtue? for another who, underneath his compliances with artificial society, would dearly like to serve somebody, — to test his own reality by making himself useful and indispensable?

Man does not live by bread alone, but by faith, by admiration, by sympathy. 'T is very shallow to say that cotton, or iron, or silver and gold are kings of the world; there are rulers that will at any moment make these forgotten. Fear will. Love will. Character will. Men live by their credence. Governments stand by it, — by the faith that the people share, — whether it comes from the religion in which they were bred, or from an original conscience in themselves, which the popular religion echoes. If government could only stand by force, if the instinct

of the people was to resist the government, it is plain the government must be two to one in order to be secure, and then it would not be safe from desperate individuals. But no; the old commandment, "Thou shalt not kill," holds down New York, and London, and Paris, and not a police or horse-guards.

The credence of men it is that moulds them, and creates at will one or another surface. The mind as it opens transfers very fast its choice from the circumstance to the cause; from courtesy to love, from inventions to science, from London or Washington law, or public opinion, to the self-revealing idea; from all that talent executes to the sentiment that fills the heart and dictates the future of nations. The commanding fact which I never do not see, is the sufficiency of the moral sentiment. We buttress it up, in shallow hours or ages, with legends, traditions and forms, each good for the one moment in which it was a happy type or symbol of the Power; but the Power sends in the next moment a new lesson, which we lose while our eyes are reverted and striving to perpetuate the old.

America shall introduce a pure religion. Ethics are thought not to satisfy affection. But all the religion we have is the ethics of one or another holy person; as soon as character appears, be sure love will, and veneration, and anecdotes and fables about him, and delight of good men and women in him. And what deeps of grandeur and beauty are known to us in ethical truth, what divination or insight belongs to it! For innocence is a wonderful electuary for purging the eyes to search the nature of those souls that pass before it. What armor it is to protect the good from outward or inward harm, and with what power it converts evil accidents into benefits; the power of its countenance; the power of its presence! To it alone comes true friendship; to it come grandeur of situation and poetic perception, enriching all it deals with.

Once men thought Spirit divine, and Matter diabolic; one Ormuzd, the other Ahriman. Now science and philosophy recognize the parallelism, the approximation, the unity of the two: how each reflects the other as face answers to face in a glass: nay, how the laws of both are one, or how one is the realization. We are learning not to fear truth.

The man of this age must be matriculated in the university of sciences and tendencies flowing from all past periods. He must not be one who can be surprised and shipwrecked by every bold or subtile word which malignant and acute men may utter in his hearing, but should be taught all skepticisms and unbeliefs, and made the destroyer of all card-houses and paper walls, and the sifter of all opinions, by being put face to face from his infancy with Reality.

A man who has accustomed himself to look at all his circumstances as very mutable, to carry his possessions, his relations to persons, and even his opinions, in his hand, and in all these to pierce to the principle and moral law, and

everywhere to find that, — has put himself out of the reach of all skepticism; and it seems as if whatever is most affecting and sublime in our intercourse, in our happiness, and in our losses, tended steadily to uplift us to a life so extraordinary, and, one might say, superhuman.

THE PREACHER.

Ascending thorough just degrees
To a consummate holiness,
As angel blind to trespass done,
And bleaching all souls like the sun.

[Originally written as a parlor lecture to some Divinity students, in 1867; afterwards enlarged from earlier writings, and read in its present form at the Divinity Chapel, Cambridge, May 5th, 1879. Reprinted from the *Unitarian Review* for January, 1880.]

In the history of opinion, the pinch of falsehood shows itself first, not in argument and formal protest, but in insincerity, indifference and abandonment of the Church or the scientific or political or economic institution for other better or worse forms.

The venerable and beautiful traditions in which we were educated are losing their hold on human belief, day by day; a restlessness and dissatisfaction in the religious world marks that we are in a moment of transition; as when the Roman Church broke into Protestant and Catholic, or, earlier, when Paganism broke into Christians and Pagans. The old forms rattle, and the new delay to appear; material and industrial activity have materialized the age, and the mind, haughty with its sciences, disdains the religious forms as childish.

In consequence of this revolution in opinion, it appears, for the time, as the misfortune of this period that the cultivated mind has not the happiness and dignity of the religious sentiment. We are born too late for the old and too early for the new faith. I see in those classes and those persons in whom I am accustomed to look for tendency and progress, for what is most positive and most rich in human nature, and who contain the activity of to-day and the assurance of to-morrow, — I see in them character, but skepticism; a clear enough perception of the inadequacy of the popular religious statement to the wants of their heart and intellect, and explicit declarations of this fact. They have insight and truthfulness; they will not mask their convictions; they hate cant; but more than this I do not readily find. The gracious motions of the soul, — piety, adoration, — I do not find. Scorn of hypocrisy, pride of personal character, elegance of taste and of manners and pursuit, a boundless ambition of the intellect, willingness to sacrifice personal interests for the integrity of the character, — all these they have; but that religious submission and abandonment which give man a new element and being, and make him sublime, — it is not in churches, it is not in houses. I see movement, I hear aspirations, but I see not

how the great God prepares to satisfy the heart in the new order of things. No Church, no State emerges; and when we have extricated ourselves from all the embarrassments of the social problem, the oracle does not yet emit any light on the mode of individual life. A thousand negatives it utters, clear and strong, on all sides; but the sacred affirmative it hides in the deepest abyss.

We do not see that heroic resolutions will save men from those tides which a most fatal moon heaps and levels in the moral, emotive and intellectual nature. It is certain that many dark hours, many imbecilities, periods of inactivity, — solstices when we make no progress, but stand still, — will occur. In those hours, we can find comfort in reverence of the highest power, and only in that. We never do quite nothing, or never need. It looks as if there were much doubt, much waiting, to be endured by the best. Perhaps there must be austere elections and determinations before any clear vision.

No age and no person is destitute of the sentiment, but in actual history its illustrious exhibitions are interrupted and periodical, — the ages of belief, of heroic action, of intellectual activity, of men cast in a higher mould.

But the sentiment that pervades a nation, the nation must react upon. It is resisted and corrupted by that obstinate tendency to personify and bring under the eyesight what should be the contemplation of Reason alone. The Understanding will write out the vision in a Confession of Faith. Art will embody this vanishing Spirit in temples, pictures, sculptures and hymns. The senses instantly transfer the reverence from the vanishing Spirit to this steadfast form. Ignorance and passion alloy and degrade. In proportion to a man's want of goodness, it seems to him another and not himself; that is to say, the Deity becomes more objective, until finally flat idolatry prevails.

Of course the virtuous sentiment appears arrayed against the nominal religion, and the true men are hunted as unbelievers, and burned. Then the good sense of the people wakes up so far as to take tacit part with them, to cast off reverence for the Church; and there follows an age of unbelief.

This analysis was inevitable and useful. But the sober eye finds something ghastly in this empiricism. At first, delighted with the triumph of the intellect, the surprise of the results and the sense of power, we are like hunters on the scent and soldiers who rush to battle: but when the game is run down, when the enemy lies cold in his blood at our feet, we are alarmed at our solitude; we would gladly recall the life that so offended us; the face seems no longer that of an enemy.

I say the effect is withering; for, this examination resulting in the constant detection of errors, the flattered understanding assumes to judge all things, and to anticipate the same victories. In the activity of the understanding, the

sentiments sleep. The understanding presumes in things above its sphere, and, because it has exposed errors in a church, concludes that a church is an error; because it has found absurdities to which the sentiment of veneration is attached, sneers at veneration; so that analysis has run to seed in unbelief. There is no faith left. We laugh and hiss, pleased with our power in making heaven and earth a howling wilderness.

Unlovely, nay, frightful, is the solitude of the soul which is without God in the world. To wander all day in the sunlight among the tribes of animals, unrelated to anything better; to behold the horse, cow and bird, and to foresee an equal and speedy end to him and them; — no, the bird, as it hurried by with its bold and perfect flight, would disclaim his sympathy and declare him an outcast. To see men pursuing in faith their varied action, warm-hearted, providing for their children, loving their friends, performing their promises, — what are they to this chill, houseless, fatherless, aimless Cain, the man who hears only the sound of his own footsteps in God's resplendent creation? To him, it is no creation; to him, these fair creatures are hapless spectres: he knows not what to make of it. To him, heaven and earth have lost their beauty. How gloomy is the day, and upon yonder shining pond what melancholy light! I cannot keep the sun in heaven, if you take away the purpose that animates him. The ball, indeed, is there, but his power to cheer, to illuminate the heart as well as the atmosphere, is gone forever. It is a lamp-wick for meanest uses. The words, *great, venerable*, have lost their meaning; every thought loses all its depth and has become mere surface.

But religion has an object. It does not grow thin or robust with the health of the votary. The object of adoration remains forever unhurt and identical. We are in transition, from the worship of the fathers which enshrined the law in a private and personal history, to a worship which recognizes the true eternity of the law, its presence to you and me, its equal energy in what is called brute nature as in what is called sacred. The next age will behold God in the ethical laws — as mankind begins to see them in this age, self-equal, self-executing, instantaneous and self-affirmed; needing no voucher, no prophet and no miracle besides their own irresistibility, — and will regard natural history, private fortunes and politics, not for themselves, as we have done, but as illustrations of those laws, of that beatitude and love. Nature is too thin a screen; the glory of the One breaks in everywhere.

Every movement of religious opinion is of profound importance to politics and social life; and this of to-day has the best omens as being of the most expansive humanity, since it seeks to find in every nation and creed the imperishable doctrines. I find myself always struck and stimulated by a good

anecdote, any trait of heroism, of faithful service. I do not find that the age or country makes the least difference; no, nor the language the actors spoke, nor the religion which they professed, whether Arab in the desert, or Frenchman in the Academy. I see that sensible men and conscientious men all over the world were of one religion, — the religion of well-doing and daring, men of sturdy truth, men of integrity and feeling for others. My inference is that there is a statement of religion possible which makes all skepticism absurd.

The health and welfare of man consist in ascent from surfaces to solids; from occupation with details to knowledge of the design; from self-activity of talents, which lose their way by the lust of display, to the controlling and reinforcing of talents by the emanation of character. All that we call religion, all that saints and churches and Bibles from the beginning of the world have aimed at, is to suppress this impertinent surface-action, and animate man to central and entire action. The human race are afflicted with a St. Vitus' dance; their fingers and toes, their members, their senses, their talents, are superfluously active, while the torpid heart gives no oracle. When that wakes, it will revolutionize the world. Let that speak, and all these rebels will fly to their loyalty. Now every man defeats his own action, — professes this but practises the reverse; with one hand rows, and with the other backs water. A man acts not from one motive, but from many shifting fears and short motives; it is as if he were ten or twenty less men than himself, acting at discord with one another, so that the result of most lives is zero. But when he shall act from one motive, and all his faculties play true, it is clear mathematically, is it not, that this will tell in the result as if twenty men had cooperated, — will give new senses, new wisdom of its own kind; that is, not more facts, nor new combinations, but divination, or direct intuition of the state of men and things?

The lessons of the moral sentiment are, once for all, an emancipation from that anxiety which takes the joy out of all life. It teaches a great peace. It comes itself from the highest place. It is that, which being in all sound natures, and strongest in the best and most gifted men, we know to be implanted by the Creator of Men. It is a commandment at every moment and in every condition of life to do the duty of that moment and to abstain from doing the wrong. And it is so near and inward and constitutional to each, that no commandment can compare with it in authority. All wise men regard it as the voice of the Creator himself.

I know there are those to whom the question of what shall be believed is the more interesting because they are to proclaim and teach what they believe.

All positive rules, ceremonial, ecclesiastical, distinctions of race or of person, are perishable; only those distinctions hold which are in the nature of things, not

matters of positive ordinance. As the earth we stand upon is not imperishable, but is chemically resolvable into gases and nebulæ, so is the universe an infinite series of planes, each of which is a false bottom; and, when we think our feet are planted now at last on adamant, the slide is drawn out from under us.

We must reconcile ourselves to the new order of things. But is it a calamity? The poet Wordsworth greeted even the steam-engine and railroads; and when they came into his poetic Westmoreland, bisecting every delightful valley, deforming every consecrated grove, yet manned himself to say: —

“In spite of all that Beauty may disown
In your harsh features, Nature doth embrace
Her lawful offspring in man’s art, and Time,
Pleased with your triumphs o’er his brother Space,
Accepts from your bold hands the proffered crown
Of hope, and smiles on you with cheer sublime.”

And we can keep our religion, despite of the violent railroads of generalization, whether French or German, that block and intersect our old parish highways.

In matters of religion, men eagerly fasten their eyes on the differences between their creed and yours, whilst the charm of the study is in finding the agreements and identities in all the religions of men. What is essential to the theologian is, that whilst he is select in his opinions, severe in his search for truth, he shall be broad in his sympathies, — not to allow himself to be excluded from any church. He is to claim for his own whatever eloquence of St. Chrysostom or St. Jerome or St. Bernard he has felt. So not less of Bishop Taylor or George Herbert or Henry Scougal. He sees that what is most effective in the writer is what is dear to his, the reader’s, mind.

Be not betrayed into undervaluing the churches which annoy you by their bigoted claims. They too were real churches. They answered to their times the same need as your rejection of them does to ours. The Catholic Church has been immensely rich in men and influences. Augustine, à Kempis, Fénelon, breathe the very spirit which now fires you. So with Cudworth, More, Bunyan. I agree with them more than I disagree. I agree with their heart and motive; my discontent is with their limitations and surface and language. Their statement is grown as fabulous as Dante’s *Inferno*. Their purpose is as real as Dante’s sentiment and hatred of vice. Always put the best interpretation on a tenet. Why not on Christianity, wholesome, sweet and poetic? It is the record of a pure and holy soul, humble, absolutely disinterested, a truth-speaker and bent on serving, teaching and uplifting men. Christianity taught the capacity, the element, to love the All-perfect without a stingy bargain for personal happiness. It taught that to

love him was happiness, — to love him in other's virtues.

An era in human history is the life of Jesus; and the immense influence for good leaves all the perversion and superstition almost harmless. Mankind have been subdued to the acceptance of his doctrine, and cannot spare the benefit of so pure a servant of truth and love.

Of course a hero so attractive to the hearts of millions drew the hypocrite and the ambitious into his train, and they used his name to falsify his history and undo his work. I fear that what is called religion, but is perhaps pew-holding, not obeys but conceals the moral sentiment. I put it to this simple test: Is a rich rogue made to feel his roguery among divines or literary men? No? Then 't is rogue again under the cassock. What sort of respect can these preachers or newspapers inspire by their weekly praises of texts and saints, when we know that they would say just the same things if Beelzebub had written the chapter, provided it stood where it does in the public opinion?

Anything but unbelief, anything but losing hold of the moral intuitions, as betrayed in the clinging to a form of devotion or a theological dogma; as if it was the liturgy, or the chapel, that was sacred, and not justice and humility and the loving heart and serving hand.

But besides the passion and interest which pervert, is the shallowness which impoverishes. The opinions of men lose all worth to him who perceives that they are accurately predictable from the ground of their sect. Nothing is more rare, in any man, than an act of his own. The clergy are as like as peas. I cannot tell them apart. It was said: They have bronchitis because they read from their papers sermons with a near voice, and then, looking at the congregation, they try to speak with their far voice, and the shock is noxious. I think they do this, or the converse of this, with their thought. They look into Plato, or into the mind, and then try to make parish mince-meat of the amplitudes and eternities, and the shock is noxious. It is the old story again: once we had wooden chalices and golden priests, now we have golden chalices and wooden priests.

The clergy are always in danger of becoming wards and pensioners of the so-called producing classes. Their first duty is self-possession founded on knowledge. The man of practice or worldly force requires of the preacher a talent, a force, like his own; the same as his own, but wholly applied to the priest's things. He does not forgive an application in the preacher to the merchant's things. He wishes him to be such a one as he himself should have been, had he been priest. He is sincere and ardent in his vocation, and plunged in it. Let priest or poet be as good in theirs.

The simple fact that the pulpit exists, that all over this country the people are waiting to hear a sermon on Sunday, assures that opportunity which is

inestimable to young men, students of theology, for those large liberties. The existence of the Sunday, and the pulpit waiting for a weekly sermon, give him the very conditions, the $\tilde{A};\$ \tilde{A}\tilde{A}\$$ he wants. That must be filled, and he is armed to fill it. Let him value his talent as a door into Nature. Let him see his performances only as limitations. Then, over all, let him value the sensibility that receives, that loves, that dares, that affirms.

There are always plenty of young, ignorant people, — though some of them are seven, and some of them seventy years old, — wanting peremptorily instruction; but, in the usual averages of parishes, only one person that is qualified to give it. It is only that person who concerns me, — him only that I see. The others are very amiable and promising, but they are only neuters in the hive, — every one a possible royal bee, but not now significant. It does not signify what they say or think to-day; 't is the cry and the babble of the nursery, and their only virtue, docility. Buckminster, Channing, Dr. Lowell, Edward Taylor, Parker, Bushnell, Chapin, — it is they who have been necessary, and the opinions of the floating crowd of no importance whatever.

I do not love sensation preaching, — the personalities for spite, the hurrah for our side, the review of our appearances and what others say of us! That you may read in the gazette. We come to church properly for self-examination, for approach to principles to see how it stands with *us*, with the deep and dear facts of right and love. At the same time it is impossible to pay no regard to the day's events, to the public opinion of the times, to the stirring shouts of parties, to the calamities and prosperities of our town and country; to war and peace, new events, great personages, to good harvests, new resources, to bankruptcies, famines and desolations. We are not stocks or stones, we are not thinking machines, but allied to men around us, as really though not quite so visibly as the Siamese brothers. And it were inhuman to affect ignorance or indifference on Sundays to what makes our blood beat and our countenance dejected Saturday or Monday. No, these are fair tests to try our doctrines by, and see if they are worth anything in life. The value of a principle is the number of things it will explain; and there is no good theory of disease which does not at once suggest a cure.

Man proposes, but God disposes. We shall not very long have any part or lot in this earth, in whose affairs we so hotly mix, and where we feel and speak so energetically of our country and our cause. It is a comfort to reflect that the gigantic evils which seem to us so mischievous and so incurable will at last end themselves and rid the world of their presence, as all crime sooner or later must. But be that event for us soon or late, we are not excused from playing our short part in the best manner we can, no matter how insignificant our aid may be. Our children will be here, if we are not; and their children's history will be colored

by our action. But if we have no children, or if the events in which we have taken our part shall not see their solution until a distant future, there is yet a deeper fact; that as much justice as we can see and practise is useful to men, and imperative, whether we can see it to be useful or not.

The essential ground of a new book or a new sermon is a new spirit. The author has a new thought, sees the sweep of a more comprehensive tendency than others are aware of; falters never, but takes the victorious tone. For power is not so much shown in talent as in tone. And if I had to counsel a young preacher, I should say: When there is any difference felt between the foot-board of the pulpit and the floor of the parlor, you have not yet said that which you should say.

Inspiration will have advance, affirmation, the forward foot, the ascending state; it will be an opener of doors; it will invent its own methods: the new wine will make the bottles new. Spirit is motive and ascending. Only let there be a deep observer, and he will make light of new shop and new circumstance that afflict you; new shop, or old cathedral, it is all one to him. He will find the circumstance not altered, as deep a cloud of mystery on the cause, as dazzling a glory on the invincible law. Given the insight, and he will find as many beauties and heroes and strokes of genius close by him as Dante or Shakspeare beheld. A vivid thought brings the power to paint it; and in proportion to the depth of its source is the force of its projection. We are happy and enriched; we go away invigorated, assisted each in our own work, however different, and shall not forget to come again for new impulses.

The supposed embarrassments to young clergymen exist only to feeble wills. They need not consider them. The differences of opinion, the strength of old sects or timorous literalists, since it is not armed with prisons or fagots as in ruder times or countries, is not worth considering except as furnishing a needed stimulus. That gray deacon or respectable matron with Calvinistic antecedents, you can readily see, could not have presented any obstacle to the march of St. Bernard or of George Fox, of Luther or of Theodore Parker. And though I observe the deafness to counsel among men, yet the power of sympathy is always great; and affirmative discourse, presuming assent, will often obtain it when argument would fail. Such, too, is the active power of good temperament. Great sweetness of temper neutralizes such vast amounts of acid! As for position, the position is always the same, — insulting the timid, and not taken by storm, but flanked, I may say, by the resolute, simply by minding their own affair. Speak the affirmative; emphasize your choice by utter ignoring of all that you reject; seeing that opinions are temporary, but convictions uniform and eternal, — seeing that a sentiment never loses its pathos or its persuasion, but is

youthful after a thousand years.

The inevitable course of remark for us, when we meet each other for meditation on life and duty, is not so much the enjoining of this or that cure or burning out of our errors of practice, as simply the celebration of the power and beneficence amid which and by which we live, not critical, but affirmative.

All civil mankind have agreed in leaving one day for contemplation against six for practice. I hope that day will keep its honor and its use. A wise man advises that we should see to it that we read and speak two or three reasonable words, every day, amid the crowd of affairs and the noise of trifles. I should say boldly that we should astonish every day by a beam out of eternity; retire a moment to the grand secret we carry in our bosom, of inspiration from heaven. But certainly on this seventh let us be the children of liberty, of reason, of hope; refresh the sentiment; think as spirits think, who belong to the universe, whilst our feet walk in the streets of a little town and our hands work in a small knot of affairs. We shall find one result, I am sure, — a certain originality and a certain haughty liberty proceeding out of our retirement and self-communion, which streets can never give, infinitely removed from all vapping and bravado, and which yet is more than a match for any physical resistance. It is true that which they say of our New England œstrum, which will never let us stand or sit, but drives us like mad through the world. The calmest and most protected life cannot save us. We want some intercalated days, to bethink us and to derive order to our life from the heart. That should be the use of the Sabbath, — to check this headlong racing and put us in possession of ourselves once more, for love or for shame.

The Sabbath changes its forms from age to age, but the substantial benefit endures. We no longer recite the old creeds of Athanasius or Arius, of Calvin or Hopkins. The forms are flexible, but the uses not less real. The old heart remains as ever with its old human duties. The old intellect still lives, to pierce the shows to the core. Truth is simple, and will not be antique; is ever present, and insists on being of this age and of this moment. Here is thought and love and truth and duty, new as on the first day of Adam and of angels.

“There are two pairs of eyes in man; and it is requisite that the pair which are beneath should be closed when the pair that are above them perceive; and that when the pair above are closed, those which are beneath are opened.” The lower eyes see only surfaces and effects, the upper eyes behold causes and the connection of things. And when we go alone, or come into the house of thought and worship, we come with purpose to be disabused of appearances, to see realities, the great lines of our destiny, to see that life has no caprice or fortune, is no hopping squib, but a growth after immutable laws under beneficent

influences the most immense. The Church is open to great and small in all nations; and how rare and lofty, how unattainable, are the aims it labors to set before men! We come to educate, come to isolate, to be abstractionists; in fine, to open the upper eyes to the deep mystery of cause and effect, to know that though ministers of justice and power fail, Justice and Power fail never. The open secret of the world is the art of subliming a private soul with inspirations from the great and public and divine Soul from which we live.

THE MAN OF LETTERS.

On bravely through the sunshine and the showers,
Time hath his work to do, and we have ours.
So nigh is grandeur to our dust,
So near is God to man;
When Duty whispers low 'Thou must,'
The youth replies, 'I can.'

AN ADDRESS DELIVERED BEFORE THE LITERARY SOCIETIES OF WATERVILLE COLLEGE, 1863.

Gentlemen of the Literary Societies:

Some of you are to-day saying your farewells to each other, and to-morrow will receive the parting honors of the College. You go to be teachers, to become physicians, lawyers, divines; in due course, statesmen, naturalists, philanthropists; I hope, some of you, to be the men of letters, critics, philosophers; perhaps the rare gift of poetry already sparkles, and may yet burn. At all events, before the shadows of these times darken over your youthful sensibility and candor, let me use the occasion which your kind request gives me, to offer you some counsels which an old scholar may without pretension bring to youth, in regard to the career of letters, — the power and joy that belong to it, and its high office in evil times. I offer perpetual congratulation to the scholar; he has drawn the white lot in life. The very disadvantages of his condition point at superiorities. He is too good for the world; he is in advance of his race; his function is prophetic. He belongs to a superior society, and is born one or two centuries too early for the rough and sensual population into which he is thrown. But the Heaven which sent him hither knew that well enough, and sent him as a leader to lead. Are men perplexed with evil times? The inviolate soul is in perpetual telegraphic communication with the source of events. He has earlier information, a private despatch which relieves him of the terror which presses on the rest of the community. He is a learner of the laws of nature and the experiences of history; a prophet surrendered with self-abandoning sincerity to the Heaven which pours through him its will to mankind. This is the theory, but you know how far this is from the fact, that nothing has been able to resist the tide with which the material prosperity of America in years past has beat down the hope of youth, the piety of learning. The country was full of activity, with its wheat, coal, iron, cotton; the wealth of the globe was here, too much work and not men enough to do it. Britain, France, Germany, Scandinavia sent

millions of laborers; still the need was more. Every kind of skill was in demand, and the bribe came to men of intellectual culture, — Come, drudge in our mill. America at large exhibited such a confusion as California showed in 1849, when the cry of gold was first raised. All the distinctions of profession and habit ended at the mines. All the world took off their coats and worked in shirt-sleeves. Lawyers went and came with pick and wheelbarrow; doctors of medicine turned teamsters; stray clergymen kept the bar in saloons; professors of colleges sold cigars, mince-pies, matches, and so on. It is the perpetual tendency of wealth to draw on the spiritual class, not in this coarse way, but in plausible and covert ways. It is charged that all vigorous nations, except our own, have balanced their labor by mental activity, and especially by the imagination, — the cardinal human power, the angel of earnest and believing ages. The subtle Hindoo, who carried religion to ecstasy and philosophy to idealism, produced the wonderful epics of which, in the present century, the translations have added new regions to thought. The Egyptian built Thebes and Karnak on a scale which dwarfs our art, and by the paintings on their interior walls invited us into the secret of the religious belief whence he drew such power. The Greek was so perfect in action and in imagination, his poems, from Homer to Euripides, so charming in form and so true to the human mind that we cannot forget or outgrow their mythology. The Hebrew nation compensated for the insignificance of its members and territory by its religious genius, its tenacious belief; its poems and histories cling to the soil of this globe like the primitive rocks. On the south and east shores of the Mediterranean Mahomet impressed his fierce genius how deeply into the manners, language and poetry of Arabia and Persia! See the activity of the imagination in the Crusades: the front of morn was full of fiery shapes; the chasm was bridged over; heaven walked on earth, and Earth could see with eyes the Paradise and the Inferno. Dramatic “mysteries” were the entertainment of the people. Parliaments of Love and Poesy served them, instead of the House of Commons, Congress and the newspapers. In Puritanism, how the whole Jewish history became flesh and blood in those men, let Bunyan show. Now it is agreed that we are utilitarian; that we are skeptical, frivolous; that with universal cheap education we have stringent theology, but religion is low. There is much criticism, not on deep grounds, but an affirmative philosophy is wanting. Our profoundest philosophy (if it were not contradiction in terms) is skepticism. The great poem of the age is the disagreeable poem of “Faust,” — of which the “Festus” of Bailey and the “Paracelsus” of Browning are English variations. We have superficial sciences, restless, gossiping, aimless activity. We run to Paris, to London, to Rome, to Mesmerism, Spiritualism, to Pusey, to the Catholic Church, as if for the want of thought, and those who would check and guide have a

dreary feeling that in the change and decay of the old creeds and motives there was no offset to supply their place. Our industrial skill, arts ministering to convenience and luxury, have made life expensive, and therefore greedy, careful, anxious; have turned the eyes downward to the earth, not upward to thought.

Ernest Renan finds that Europe has thrice assembled for exhibitions of industry, and not a poem graced the occasion; and nobody remarked the defect. A French prophet of our age, Fourier, predicted that one day, instead of by battles and Œcumenical Councils, the rival portions of humanity would dispute each other's excellence in the manufacture of little cakes.

"In my youth," said a Scotch mountaineer, "a Highland gentleman measured his importance by the number of men his domain could support. After some time the question was, to know how many great cattle it would feed. To-day we are come to count the number of sheep. I suppose posterity will ask how many rats and mice it will feed."

Dickens complained that in America, as soon as he arrived in any of the Western towns, a committee waited on him and invited him to deliver a temperance lecture. Bowditch translated Laplace, and when he removed to Boston, the Hospital Life Assurance Company insisted that he should make their tables of annuities. Napoleon knows the art of war, but should not be put on picket duty. Linnœus or Robert Brown must not be set to raise gooseberries and cucumbers, though they be excellent botanists. A shrewd broker out of State Street visited a quiet countryman possessed of all the virtues, and in his glib talk said, "With your character now I could raise all this money at once, and make an excellent thing of it."

There is an oracle current in the world, that nations die by suicide. The sign of it is the decay of thought. Niebuhr has given striking examples of that fatal portent; as in the loss of power of thought that followed the disasters of the Athenians in Sicily.

I cannot forgive a scholar his homeless despondency. He represents intellectual or spiritual force. I wish him to rely on the spiritual arm; to live by his strength, not by his weakness. A scholar defending the cause of slavery, of arbitrary government, of monopoly, of the oppressor, is a traitor to his profession. He has ceased to be a scholar. He is not company for clean people. The worst times only show him how independent he is of times; only relieve and bring out the splendor of his privilege. Disease alarms the family, but the physician sees in it a temporary mischief, which he can check and expel. The fears and agitations of men who watch the markets, the crops, the plenty or scarcity of money, or other superficial events, are not for him. He knows that the world is always equal to itself; that the forces which uphold and pervade it are

eternal. Air, water, fire, iron, gold, wheat, electricity, animal fibre, have not lost a particle of power, and no decay has crept over the spiritual force which gives bias and period to boundless nature. Bad times, — what are bad times? Nature is rich, exuberant, and mocks at the puny forces of destruction. Man makes no more impression on her wealth than the caterpillar or the cankerworm whose petty ravage, though noticed in an orchard or a village, is insignificant in the vast exuberance of the summer. There is no unemployed force in Nature. All decomposition is recomposition. War disorganizes, but it is to reorganize. Weeks, months pass — a new harvest; trade springs up, and there stand new cities, new homes all rebuilt and sleepy with permanence. Italy, France — a hundred times those countries have been trampled with armies and burned over: a few summers, and they smile with plenty and yield new men and new revenues.

If churches are effete, it is because the new Heaven forms. You are here as the carriers of the power of Nature, — as Roger Bacon, with his secret of gunpowder, with his secret of the balloon and of steam; as Copernicus, with his secret of the true astronomy; as Columbus, with America in his logbook; as Newton, with his gravity; Harvey, with his circulation; Smith, with his law of trade; Franklin, with lightning; Adams, with Independence; Kant, with pure reason; Swedenborg, with his spiritual world. You are the carriers of ideas which are to fashion the mind and so the history of this breathing world, so as they shall be, and not otherwise.

Every man is a scholar potentially, and does not need any one good so much as this of right thought.

“Calm pleasures here abide, majestic pains.”

Coleridge traces “three silent revolutions,” of which the first was “when the clergy fell from the Church.” A scholar was once a priest. But the Church clung to ritual, and the scholar clung to joy, low as well as high, and thus the separation was a mutual fault. But I think it is a schism which must be healed. The true scholar is the Church. Only the duties of Intellect must be owned. Down with these dapper trimmers and sycophants! let us have masculine and divine men, formidable lawgivers, Pythagoras, Plato, Aristotle, who warp the churches of the world from their traditions, and penetrate them through and through with original perception. The intellectual man lives in perpetual victory. As certainly as water falls in rain on the tops of mountains and runs down into valleys, plains and pits, so does thought fall first on the best minds, and run down, from class to class, until it reaches the masses, and works revolutions.

Nature says to the American: “I understand mensuration and numbers; I

compute the ellipse of the moon, the ebb and flow of waters, the curve and the errors of planets, the balance of attraction and recoil. I have measured out to you by weight and tally the powers you need. I give you the land and sea, the forest and the mine, the elemental forces nervous energy. When I add difficulty, I add brain. See to it that you hold and administer the continent for mankind. One thing you have rightly done. You have offered a patch of land in the wilderness to every son of Adam who will till it. Other things you have begun to do, — to strike off the chains which snuffling hypocrites had bound on the weaker race. You are to imperil your lives and fortunes for a principle. The ambassador is held to maintain the dignity of the Republic which he represents. But what does the scholar represent? The organ of ideas, the subtle force which creates Nature and men and states; — consoler, upholder, imparting pulses of light and shocks of electricity, guidance and courage. So let his habits be formed, and all his economies heroic; no spoiled child, no drone, no epicure, but a stoic, formidable, athletic, knowing how to be poor, loving labor, and not flogging his youthful wit with tobacco and wine; treasuring his youth. I wish the youth to be an armed and complete man; no helpless angel to be slapped in the face, but a man dipped in the Styx of human experience, and made invulnerable so, — self-helping. A redeeming trait of the Sophists of Athens, Hippias and Gorgias, is that they made their own clothes and shoes. Learn to harness a horse, to row a boat, to camp down in the woods, to cook your supper. I chanced lately to be at West Point, and, after attending the examination in scientific classes, I went into the barracks. The chamber was in perfect order; the mattress on the iron camp-bed rolled up, as if ready for removal. I asked the first Cadet, “Who makes your bed?” “I do.” “Who fetches your water?” “I do.” “Who blacks your shoes?” “I do.” It was so in every room. These are first steps to power. Learn of Samuel Johnson or David Hume, that it is a primary duty of the man of letters to secure his independence.

Stand by your order. ‘T is some thirty years since the days of the Reform Bill in England, when on the walls in London you read everywhere placards, “Down with the Lords.” At that time, Earl Grey, who was leader of Reform, was asked, in Parliament, his policy on the measures of the Radicals. He replied, “I shall stand by my order.” Where there is no vision, the people perish. The fault lies with the educated class, the men of study and thought. There is a very low feeling of duty: the merchant is true to the merchant, the noble in England and Europe stands by his order, the politician believes in his arts and combinations; but the scholar does not stand by his order, but defers to the men of this world.

Gentlemen, I am here to commend to you your art and profession as thinkers. It is real. It is the secret of power. It is the art of command. All superiority is this,

or related to this. "All that the world admires comes from within." Thought makes us men; ranks us; distributes society; distributes the work of the world; is the prolific source of all arts, of all wealth, of all delight, of all grandeur. Men are as they believe. Men are as they think, and the man who knows any truth not yet discerned by other men, is master of all other men so far as that truth and its wide relations are concerned.

Intellect measures itself by its counteraction to any accumulation of material force. There is no mass which it cannot surmount and dispose of. The exertions of this force are the eminent experiences, — out of a long life all that is worth remembering. These are the moments that balance years. Does any one doubt between the strength of a thought and that of an institution? Does any one doubt that a good general is better than a park of artillery? See a political revolution dogging a book. See armies, institutions, literatures, appearing in the train of some wild Arabian's dream.

There is a proverb that Napoleon, when the Mameluke cavalry approached the French lines, ordered the grenadiers to the front, and the asses and the *savans* to fall into the hollow square. It made a good story, and circulated in that day. But how stands it now? The military expedition was a failure. Bonaparte himself deserted, and the army got home as it could, all fruitless; not a trace of it remains. All that is left of it is the researches of those *savans* on the antiquities of Egypt, including the great work of Denon, which led the way to all the subsequent studies of the English and German scholars on that foundation. Pytheas of Ægina was victor in the Pancratium of the boys, at the Isthmian games. He came to the poet Pindar and wished him to write an ode in his praise, and inquired what was the price of a poem. Pindar replied that he should give him one talent, about a thousand dollars of our money. "A talent!" cried Pytheas; "why, for so much money I can erect a statue of bronze in the temple." "Very likely." On second thoughts, he returned and paid for the poem. And now not only all the statues of bronze in the temples of Ægina are destroyed, but the temples themselves, and the very walls of the city are utterly gone, whilst the ode of Pindar, in praise of Pytheas, remains entire.

The treachery of scholars! They are idealists, and should stand for freedom, justice, and public good. The scholar is bound to stand for all the virtues and all the liberties, — liberty of trade, liberty of the press, liberty of religion, — and he should open all the prizes of success and all the roads of Nature to free competition.

The country complains loudly of the inefficiency of the army. It was badly led. But, before this, it was not the army alone, it was the population that was badly led. The clerisy, the spiritual guides, the scholars, the seers have been false

to their trust.

Rely on yourself. There is respect due to your teachers, but every age is new, and has problems to solve, insoluble by the last age. Men over forty are no judges of a book written in a new spirit. Neither your teachers, nor the universal teachers, the laws, the customs or dogmas of nations, neither saint nor sage, can compare with that counsel which is open to you. No, it is not nations, no, nor even masters, not at last a few individuals or any heroes, but himself only, the large equality to truth of a single mind, — as if, in the narrow walls of a human heart, the wide realm of truth, the world of morals, the tribunal by which the universe is judged, found room to exist.

Our people have this levity and complaisance, — they fear to offend, do not wish to be misunderstood; do not wish, of all things, to be in the minority. God and Nature are altogether sincere, and Art should be as sincere. It is not enough that the work should show a skilful hand, ingenious contrivance and admirable polish and finish; it should have a commanding motive in the time and condition in which it was made. We should see in it the great belief of the artist, which caused him to make it so as he did, and not otherwise; nothing frivolous, nothing that he might do or not do, as he chose, but somewhat that must be done then and there by him; he could not take his neck out of that yoke, and save his soul. And this design must shine through the whole performance. Sincerity is, in dangerous times, discovered to be an immeasurable advantage. I distrust all the legends of great accomplishments or performance of unprincipled men. Very little reliance must be put on the common stories that circulate of this great senator's or that great barrister's learning, their Greek, their varied literature. That ice won't bear. Reading! — do you mean that this senator or this lawyer, who stood by and allowed the passage of infamous laws, was a reader of Greek books? That is not the question; but to what purpose did they read? I allow them the merit of that reading which appears in their opinions, tastes, beliefs, and practice. They read that they might know, did they not? Well, these men did not know. They blundered; they were utterly ignorant of that which every boy or girl of fifteen knows perfectly, — the rights of men and women. And this big-mouthed talker, among his dictionaries and Leipzig editions of Lysias, had lost his knowledge. But the President of the Bank nods to the President of the Insurance Office, and relates that at Virginia Springs this idol of the forum exhausted a trunkful of classic authors. There is always the previous question, How came you on that side? You are a very elegant writer, but you can't write up what gravitates down.

It is impossible to extricate oneself from the questions in which our age is involved. All of us have shared the new enthusiasm of country and of liberty

which swept like a whirlwind through all souls at the outbreak of war, and brought, by ennobling us, an offset for its calamity.

War, seeking for the roots of strength, comes upon the moral aspects at once. In quiet times, custom stifles this discussion as sentimental, and brings in the brazen devil, as by immemorial right. The war uplifted us into generous sentiments. War ennobles the age. We do not often have a moment of grandeur in these hurried, slipshod lives, but the behavior of the young men has taught us much. We will not again disparage America, now that we have seen what men it will bear. Battle, with the sword, has cut many a Gordian knot in twain which all the wit of East and West, of Northern and Border statesmen could not untie.

I learn with joy and with deep respect that this college has sent its full quota to the field. I learn with grief, but with honoring pain, that you have had your sufferers in the battle, and that the noble youth have returned wounded and maimed. The times are dark, but heroic. The times develop the strength they need. Boys are heroes. Women have shown a tender patriotism and inexhaustible charity. And on each new threat of faction, the ballot of the people has been unexpectedly right. But the issues already appearing overpay the cost. Slavery is broken, and, if we use our advantage, irretrievably. For such a gain, to end once for all that pest of all our free institutions, one generation might well be sacrificed; perhaps it will; that this continent be purged and a new era of equal rights dawn on the universe. Who would not, if it could be made certain that the new morning of universal liberty should rise on our race by the perishing of one generation, — who would not consent to die?

THE SCHOLAR.

For thought, and not praise,

Thought is the wages
For which I sell days,

Will gladly sell ages
And willing grow old,
Deaf and dumb, blind and cold,
Melting matter into dreams,
Panoramas which I saw,

And whatever glows or seems
Into substance, into Law.
The sun and moon shall fall amain
Like sowers' seeds into his brain,
There quickened to be born again

AN ORATION DELIVERED BEFORE THE WASHINGTON AND
JEFFERSON SOCIETIES AT THE UNIVERSITY OF VIRGINIA, 28TH
JUNE, 1876.

Gentlemen:

The Athenians took an oath, on a certain crisis in their affairs, to esteem wheat, the vine and the olive the bounds of Attica. The territory of scholars is yet larger. A stranger but yesterday to every person present, I find myself already at home, for the society of lettered men is a university which does not bound itself with the walls of one cloister or college, but gathers in the distant and solitary student into its strictest amity. Literary men gladly acknowledge these ties which find for the homeless and the stranger a welcome where least looked for. But in proportion as we are conversant with the laws of life, we have seen the like. We are used to these surprises. This is but one operation of a more general law. As in coming among strange faces we find that the love of letters makes us friends, so in strange thoughts, in the worldly habits which harden us, we find with some surprise that learning and truth and beauty have not let us go; that the spiritual nature is too strong for us; that those excellent influences which men in all ages have called the *Muse*, or by some kindred name, come in to keep us warm and true; that the face of Nature remains irresistibly alluring. We have strayed from the territorial monuments of Attica, but here still are wheat and olives and the vine.

I do not now refer to that intellectual conscience which forms itself in tender natures, and gives us many twinges for our sloth and unfaithfulness: — the influence I speak of is of a higher strain. Stung by this intellectual conscience, we go to measure our tasks as scholars, and screw ourselves up to energy and fidelity, and our sadness is suddenly overshadowed by a sympathy of blessing. Beauty, the inspirer, the cheerful festal principle, the leader of gods and men, which draws by being beautiful, and not by considerations of advantage, comes in and puts a new face on the world. I think the peculiar office of scholars in a careful and gloomy generation is to be (as the poets were called in the Middle Ages) Professors of the Joyous Science, detectors and delineators of occult symmetries and unpublished beauties; heralds of civility, nobility, learning and wisdom; affirmers of the one law, yet as those who should affirm it in music and

dancing; expressors themselves of that firm and cheerful temper, infinitely removed from sadness, which reigns through the kingdoms of chemistry, vegetation, and animal life. Every natural power exhilarates; a true talent delights the possessor first. A celebrated musician was wont to say, that men knew not how much more he delighted himself with his playing than he did others; for if they knew, his hearers would rather demand of him than give him a reward. The scholar is here to fill others with love and courage by confirming their trust in the love and wisdom which are at the heart of all things; to affirm noble sentiments; to hear them wherever spoken, out of the deeps of ages, out of the obscurities of barbarous life, and to republish them: — to untune nobody, but to draw all men after the truth, and to keep men spiritual and sweet.

Language can hardly exaggerate the beatitude of the intellect flowing into the faculties. This is the power that makes the world incarnated in man, and laying again the beams of heaven and earth, setting the north and the south, and the stars in their places. Intellect is the science of metes and bounds; yet it sees no bound to the eternal proceeding of law forth into nature. All the sciences are only new applications, each translatable into the other, of the one law which his mind is.

This, gentlemen, is the topic on which I shall speak, — the natural and permanent function of the Scholar, as he is no permissive or accidental appearance, but an organic agent in nature. He is here to be the beholder of the real; self-centred amidst the superficial; here to revere the dominion of a serene necessity and be its pupil and apprentice by tracing everything home to a cause; here to be sobered, not by the cares of life, as men say, no, but by the depth of his draughts of the cup of immortality.

One is tempted to affirm the office and attributes of the scholar a little the more eagerly, because of a frequent perversity of the class itself. Men are ashamed of their intellect. The men committed by profession as well as by bias to study, the clergyman, the chemist, the astronomer, the metaphysician, the poet, talk hard and worldly, and share the infatuation of cities. The poet and the citizen perfectly agree in conversation on the wise life. The poet counsels his own son as if he were a merchant. The poet with poets betrays no amiable weakness. They all chime in, and are as inexorable as bankers on the subject of real life. They have no toleration for literature; art is only a fine word for appearance in default of matter. And they sit white over their stoves, and talk themselves hoarse over the mischief of books and the effeminacy of book-makers. But at a single strain of a bugle out of a grove, or at the dashing among the stones of a brook from the hills; at the sound of some subtle word that falls from the lips of an imaginative person, or even at the reading in solitude of some

moving image of a wise poet, this grave conclusion is blown out of memory; the sun shines, and the worlds roll to music, and the poet replaces all this cowardly Self-denial and God-denial of the literary class with the conviction that to one poetic success the world will surrender on its knees. Instantly he casts in his lot with the pearl-diver and the diamond-merchant. Like them he will joyfully lose days and months, and estates and credit, in the profound hope that one restoring, all-rewarding, immense success will arrive at last, which will give him at one bound a universal dominion. And rightly; for if his wild prayers are granted, if he is to succeed, his achievement is the piercing of the brass heavens of use and limitation, and letting in a beam of the pure eternity which burns up this limbo of shadows and chimeras in which we dwell. Yes, Nature is too strong for us; she will not be denied; she has balsams for our hurts, and hellebores for our insanities. She does not bandy words with us, but comes in with a new ravishing experience and makes the old time ridiculous. Every poet knows the unspeakable hope, and represents its audacity.

I am not disposed to magnify temporary differences, but for the moment it appears as if in former times learning and intellectual accomplishments had secured to the possessor greater rank and authority. If this were only the reaction from excessive expectations from literature, now disappointed, it were a just censure. It was superstitious to exact too much from philosophers and the literary class. The Sophists, the Alexandrian grammarians, the wits of Queen Anne's, the philosophers and diffusion — societies have not much helped us. Granted, freely granted. Men run out of one superstition into an opposite superstition, and practical people in America give themselves wonderful airs. The cant of the time inquires superciliously after the new ideas; it believes that ideas do not lead to the owning of stocks; they are perplexing and effeminating.

Young men, I warn you against the clamors of these self-praising frivolous activities, — against these busy-bodies; against irrational labor; against chattering, meddling, rich and official people. If their doing came to any good end! Action is legitimate and good; forever be it honored! right, original, private, necessary action, proceeding new from the heart of man, and going forth to beneficent and as yet incalculable ends. Yes; but not a petty fingering and running, a senseless repeating of yesterday's fingering and running; an acceptance of the method and frauds of other men; an overdoing and busy-ness which pretends to the honors of action, but resembles the twitches of St. Vitus. The action of these men I cannot respect, for they do not respect it themselves. They were better and more respectable abed and asleep. All the best of this class, all who have any insight or generosity of spirit are frequently disgusted, and fain to put it behind them.

Gentlemen, I do not wish to check your impulses to action: I would not hinder you of one swing of your arm. I do not wish to see you effeminate gownsmen, taking hold of the world with the tips of your fingers, or that life should be to you as it is to many, optical, not practical. Far otherwise: I rather wish you to experiment boldly and give play to your energies, but not, if I could prevail with you, in conventional ways. I should wish your energy to run in works and emergencies growing out of your personal character. Nature will fast enough instruct you in the occasion and the need, and will bring to each of you the crowded hour, the great opportunity. Love, Rectitude, everlasting Fame, will come to each, of you in loneliest places with their grand alternatives, and Honor watches to see whether you dare seize the palms.

I have no quarrel with action, only I prefer no action to misaction, and I reject the abusive application of the term *practical* to those lower activities. Let us hear no more of the practical men, or I will tell you something of them, — this, namely, that the scholar finds in them unlooked-for acceptance of his most paradoxical experience. There is confession in their eyes, and if they parade their business and public importance, it is by way of apology and palliation for not being the students and obeyers of those diviner laws. Talk frankly with them and you learn that you have little to tell them; that the Spirit of the Age has been before you with influences impossible to parry or resist. The dry-goods men, and the brokers, the lawyers and the manufacturers are idealists, and only differ from the philosopher in the intensity of the charge. We are all contemporaries and bones of one body.

The shallow clamor against theoretic men comes from the weak. Able men may sometimes affect a contempt for thought, which no able man ever feels. For what alone in the history of this world interests all men in proportion as they are men? What but truth, and perpetual advance in knowledge of it, and brave obedience to it in right action? Every man or woman who can voluntarily or involuntarily give them any insight or suggestion on these secrets they will hearken after. The poet writes his verse on a scrap of paper, and instantly the desire and love of all mankind take charge of it, as if it were Holy Writ. What need has he to cross the sill of his door? Why need he meddle with politics? His idlest thought, his yesternight's dream is told already in the Senate. What the Genius whispered him at night he reported to the young men at dawn. He rides in them, he traverses sea and land. The engineer in the locomotive is waiting for him; the steamboat is hissing at the wharf, and the wheels whirling to go. 'T is wonderful, 't is almost scandalous, this extraordinary favoritism shown to poets. I do not mean to excuse it. I admit the enormous partiality. It only shows that such is the gulf between our perception and our painting, the eye is so wise, and

the hand so clumsy, that all the human race have agreed to value a man according to his power of expression. For him arms, art, politics, trade waited like menials, until the lord of the manor should arrive. Even the demonstrations of nature for millenniums seem not to have attained their end, until this interpreter arrives. "I," said the great-hearted Kepler, "may well wait a hundred years for a reader, since God Almighty has waited six thousand years for an observer like myself."

Genius is a poor man and has no house, but see, this proud landlord who has built the palace and furnished it so delicately, opens it to him and beseeches him to make it honorable by entering there and eating bread. Where is the palace in England whose tenants are not too happy if it can make a home for Pope or Addison or Swift or Burke or Canning or Tennyson? Or if wealth has humors and wishes to shake off the yoke and assert itself, — oh, by all means let it try! Will it build its fences very high, and make its Almacks too narrow for a wise man to enter? Will it be independent? I incline to concede the isolation which it asks, that it may learn that it is not independent but parasitical.

There could always be traced, in the most barbarous tribes, and also in the most character-destroying civilization, some vestiges of a faith in genius, as in the exemption of a priesthood or bards or artists from taxes and tolls levied on other men; or in civic distinction; or in enthusiastic homage; or in hospitalities; as if men would signify their sense that genius and virtue should not pay money for house and land and bread, because they have a royal right in these and in all things, — a first mortgage that takes effect before the right of the present proprietor. For they are the First Good, of which Plato affirms that "all things are for its sake, and it is the cause of everything beautiful."

This reverence is the re-establishment of natural order; for as the solidest rocks are made up of invisible gases, as the world is made of thickened light and arrested electricity, so men know that ideas are the parents of men and things; there was never anything that did not proceed from a thought. The scholar has a deep ideal interest in the moving show around him. He knew the motley system in its egg. We have — have we not? — a real relation to markets and brokers and currency and coin. "Gold and silver," says one of the Platonists, "grow in the earth from the celestial gods, — an effluxion from them." The unmentionable dollar itself has at last a high origin in moral and metaphysical nature. Union Pacific stock is not quite private property, but the quality and essence of the universe is in that also. Have we less interest in ships or in shops, in manual work or in household affairs; in any object of nature, or in any handiwork of man; in any relation of life or custom of society? The scholar is to show, in each, identity and connexion; he is to show its origin in the brain of

man, and its secret history and issues. He is the attorney of the world, and can never be superfluous where so vast a variety of questions are ever coming up to be solved, and for ages.

I proceed to say that the allusions just now made to the extent of his duties, the manner in which every day's events will find him in work, may show that his place is no sinecure. The scholar, when he comes, will be known by an energy that will animate all who see him. The labor of ambition and avarice will appear fumbling beside his. In the right hands, literature is not resorted to as a consolation, and by the broken and decayed, but as a decalogue. In this country we are fond of results and of short ways to them; and most in this department. In our experiences, learning is not learned, nor is genius wise. The name of the Scholar is taken in vain. We who should be the channel of that unweariable Power which never sleeps, must give our diligence no holidays. Other men are planting and building, baking and tanning, running and sailing, heaving and carrying, each that he may peacefully execute the fine function by which they all are helped. Shall he play, whilst their eyes follow him from far with reverence, attributing to him the delving in great fields of thought, and conversing with supernatural allies? If he is not kindling his torch or collecting oil, he will fear to go by a workshop; he will not dare to hear the music of a saw or plane; the steam-engine will reprimand, the steam-pipe will hiss at him; he cannot look a blacksmith in the eye; in the field he will be shamed by mowers and reapers. The speculative man, the scholar, is the right hero. He is brave, because he sees the omnipotence of that which inspires him. Is there only one courage and one warfare? I cannot manage sword and rifle; can I not therefore be brave? I thought there were as many courages as men. Is an armed man the only hero? Is a man only the breech of a gun or the haft of a bowie-knife? Men of thought fail in fighting down malignity, because they wear other armor than their own. Let them decline henceforward foreign methods and foreign courages. Let them do that which they can do. Let them fight by their strength, not by their weakness. It seems to me that the thoughtful man needs no armor but this — concentration. One thing is for him settled, that he is to come at his ends. He is not there to defend himself, but to deliver his message; if his voice is clear, then clearly; if husky, then huskily; if broken, he can at least scream; gag him, he can still write it; bruise, mutilate him, cut off his hands and feet, he can still crawl towards his object on his stumps. It is the corruption of our generation that men value a long life, and do not esteem life simply as a means of expressing a sentiment.

The great English patriot Algernon Sidney wrote to his father from his prison a little before his execution: "I have ever had in my mind that when God should cast me into such a condition as that I cannot save my life but by doing an

indecent thing he shows me the time has come when I should resign it." Beauty belongs to the sentiment, and is always departing from those who depart out of that. The hero rises out of all comparison with contemporaries and with ages of men, because he disesteems old age, and lands, and money, and power, and will oppose all mankind at the call of that private and perfect Right and Beauty in which he lives.

Man is a torch borne in the wind. The ends I have hinted at made the scholar or spiritual man indispensable to the Republic or Commonwealth of Man. Nature could not leave herself without a seer and expounder. But he could not see or teach without organs. The same necessity then that would create him reappears in his splendid gifts. There is no power in the mind but in turn becomes an instrument. The descent of genius into talents is part of the natural order and history of the world. The incarnation must be. We cannot eat the granite nor drink hydrogen. They must be decomposed and recomposed into corn and water before they can enter our flesh. There is a great deal of spiritual energy in the universe, but it is not palpable to us until we can make it up into man. There is plenty of air, but it is worth nothing until by gathering it into sails we can get it into shape and service to carry us and our cargo across the sea. Then it is paid for by hundreds of thousands of our money. Plenty of water also, sea full, sky full; who cares for it? But when we can get it where we want it, and in measured portions, on a mill-wheel, or boat-paddle, we will buy it with millions. There is plenty of wild azote and carbon unappropriated, but it is nought till we have made it up into loaves and soup. So we find it in higher relations. There is plenty of wild wrath, but it steads not until we can get it racked off, shall I say? and bottled into persons; a little pure, and not too much, to every head. How many young geniuses we have known, and none but ourselves will ever hear of them for want in them of a little talent!

Ah, gentlemen, I own I love talents and accomplishments; the feet and hands of genius. As Burke said, "it is not only our duty to make the right known, but to make it prevalent." So I delight to see the Godhead in distribution; to see men that can come at their ends. These shrewd faculties belong to man. I love to see them in play, and to see them trained: this memory carrying in its caves the pictures of all the past, and rendering them in the instant when they can serve the possessor; — the craft of mathematical combination, which carries a working-plan of the heavens and of the earth in a formula. I am apt to believe, with the Emperor Charles V., that "as many languages as a man knows, so many times is he a man." I like to see a man of that virtue that no obscurity or disguise can conceal, who wins all souls to his way of thinking. I delight in men adorned and weaponed with manlike arts, who could alone, or with a few like them,

reproduce Europe and America, the result of our civilization.

It is excellent when the individual is ripened to that degree that he touches both the centre and the circumference, so that he is not only widely intelligent, but carries a council in his breast for the emergency of to-day; and alternates the contemplation of the fact in pure intellect, with the total conversion of the intellect into energy; Jove, and the thunderbolt launched from his hand. Perhaps I value power of achievement a little more because in America there seems to be a certain indigence in this respect. I think there is no more intellectual people than ours. They are very apprehensive and curious. But there is a sterility of talent. These iron personalities, such as in Greece and Italy and once in England were formed to strike fear into kings and draw the eager service of thousands, rarely appear. We have general intelligence, but no Cyclop arms. A very little intellectual force makes a disproportionately great impression, and when one observes how eagerly our people entertain and discuss a new theory, whether home-born or imported, and how little thought operates how great an effect, one would draw a favorable inference as to their intellectual and spiritual tendencies. It seems as if two or three persons coming who should add to a high spiritual aim great constructive energy, would carry the country with them.

In making this claim of costly accomplishments for the scholar, I chiefly wish to infer the dignity of his work by the lustre of his appointments. He is not cheaply equipped. The universe was rifled to furnish him. He is to forge out of coarsest ores the sharpest weapons. But if the weapons are valued for themselves, if his talents assume an independence, and come to work for ostentation, they cannot serve him. It was said of an eminent Frenchman, that "he was drowned in his talents." The peril of every fine faculty is the delight of playing with it for pride. Talent is commonly developed at the expense of character, and the greater it grows, the more is the mischief and misleading; so that presently all is wrong, talent is mistaken for genius, a dogma or system for truth, ambition for greatness, ingenuity for poetry, sensuality for art; and the young, coming up with innocent hope, and looking around them at education, at the professions and employments, at religious and literary teachers and teaching, — finding that nothing outside corresponds to the noble order in the soul, are confused, and become skeptical and forlorn. Hope is taken from youth unless there be, by the grace of God, sufficient vigor in their instinct to say, "All is wrong and human invention. I declare anew from Heaven that truth exists new and beautiful and profitable forevermore." Order is heaven's first law. These gifts, these senses, these facilities are excellent as long as subordinated; all wasted and mischievous when they assume to lead and not obey. What is the use of strength or cunning or beauty, or musical voice, or birth, or breeding, or

money, to a maniac? Yet society, in which we live, is subject to fits of frenzy; sometimes is for an age together a maniac, with birth, breeding, beauty, cunning, strength and money. And there is but one defence against this principle of chaos, and that is the principle of order, or brave return at all hours to an infinite common-sense, to the mother-wit, to the wise instinct, to the pure intellect.

When a man begins to dedicate himself to a particular function, as his logical, or his remembering, or his oratorical, or his arithmetical skill; the advance of his character and genius pauses; he has run to the end of his line; seal the book; the development of that mind is arrested. The scholar is lost in the showman. Society is babyish, and is, dazzled and deceived by the weapon, without inquiring into the cause for which it is drawn; like boys by the drums and colors of the troops.

The objection of men of the world to what they call the morbid intellectual tendency in our young men at present, is not a hostility to their truth, but to this, its shortcoming, that the idealistic views unfit their children for business in their sense, and do not qualify them for any complete life of a better kind. They threaten the validity of contracts, but do not prevail so far as to establish the new kingdom which shall supersede contracts, oaths, and property. "We have seen to weariness what you cannot do; now show us what you can and will do," asks the practical man, and with perfect reason.

We are not afraid of new truth, — of truth never, new, or old, — no, but of a counterfeit. Everybody hates imbecility and shortcoming, not new methods. The astronomer is not ridiculous inasmuch as he is an astronomer, but inasmuch as he is not an astronomer. Be that you are: be that cheerly and sovereignly. Plotinus makes no apologies, he says roundly, "the knowledge of the senses is truly ludicrous." "Body and its properties belong to the region of nonentity, as if more of body was necessarily produced where a defect of being happens in a greater degree." "Matter," says Plutarch, "is privation." Let the man of ideas at this hour be as direct, and as fully committed. Have you a thought in your heart? There was never such need of it as now. As we read the newspapers, as we see the effrontery with which money and power carry their ends and ride over honesty and good-meaning, patriotism and religion seem to shriek like ghosts. We will not speak for them, because to speak for them seems so weak and hopeless. We will hold fast our opinion and die in silence. But a true orator will make us feel that the states and kingdoms, the senators, lawyers and rich men are caterpillars' webs and caterpillars, when seen in the light of this despised and imbecile truth. Then we feel what cowards we have been. Truth alone is great. The orator too becomes a fool and a shadow before this light which lightens through him. It shines backward and forward, diminishes and annihilates

everybody, and the prophet so gladly feels his personality lost in this victorious life. The spiritual nature exhibits itself so in its counteraction to any accumulation of material force. There is no mass that can be a counterweight for it. This makes one man good against mankind. This is the secret of eloquence, for it is the end of eloquence in a half-hour's discourse, — perhaps by a few sentences, — to persuade a multitude of persons to renounce their opinions, and change the course of life. They go forth not the men they came in, but shriven, convicted, and converted.

We have many revivals of religion. We have had once what was called the Revival of Letters. I wish to see a revival of the human mind: to see men's sense of duty extend to the cherishing and use of their intellectual powers: their religion should go with their thought and hallow it. Whosoever looks with heed into his thoughts will find that our science of the mind has not got far. He will find there is somebody within him that knows more than he does, a certain dumb life in life; a simple wisdom behind all acquired wisdom; some-what not educated or educable; not altered or alterable; a mother-wit which does not learn by experience or by books, but knew it all already; makes no progress, but was wise in youth as in age. More or less clouded it yet resides the same in all, saying *Ay, ay, or No, no* to every proposition. Yet its grand *Ay* and its grand *No* are more musical than all eloquence. Nobody has found the limit of its knowledge. Whatever object is brought before it is already well known to it. Its justice is perfect; its look is catholic and universal, its light ubiquitous like the sun. It does not put forth organs, it rests in presence: yet trusted and obeyed in happy natures it becomes active and salient, and makes new means for its great ends.

The scholar then is unfurnished who has only literary weapons. He ought to have as many talents as he can; memory, arithmetic, practical power, manners, temper, lion-heart, are all good things, and if he has none of them he can still manage, if he have the main-mast, — if he is anything. But he must have the resource of resources, and be planted on necessity. For the sure months are bringing him to an examination-day in which nothing is remitted or excused, and for which no tutor, no book, no lectures, and almost no preparation can be of the least avail. He will have to answer certain questions, which, I must plainly tell you, cannot be staved off. For all men, all women, Time, your country, your condition, the invisible world, are the interrogators: *Who are you? What do you? Can you obtain what you wish? Is there method in your consciousness? Can you see tendency in your life? Can you help any soul?*

Can he answer these questions? can he dispose of them? Happy if you can

answer them mutely in the order and disposition of your life! Happy for more than yourself, a benefactor of men, if you can answer them in works of wisdom, art, or poetry; bestowing on the general mind of men organic creations, to be the guidance and delight of all who know them. These questions speak to Genius, to that power which is underneath and greater than all talent, and which proceeds out of the constitution of every man: to Genius, which is an emanation of that it tells of; whose private counsels are not tinged with selfishness, but are laws. Men of talent fill the eye with their pretension. They go out into some camp of their own, and noisily persuade society that this thing which they do is the needful cause of all men. They have talents for contention, and they nourish a small difference into a loud quarrel. But the world is wide, nobody will go there after to-morrow. The gun they have pointed can defend nothing but itself, nor itself any longer than the man is by. What is the use of artificial positions? But Genius has no taste for weaving sand, or for any trifling, but flings itself on real elemental things, which are powers, self-defensive; which first subsist, and then resist unweariably forevermore all that opposes. Genius has truth and clings to it, so that what it says and does is not in a by-road, visited only by curiosity, but on the great highways of nature, which were before the Appian Way, and which all souls must travel. Genius delights only in statements which are themselves true, which attack and wound any who opposes them, whether he who brought them here remains here or not; — which are live men, and do daily declare fresh war against all falsehood and custom, and will not let an offender go; which society cannot dispose of or forget, but which abide there and will not down at anybody's bidding, but stand frowning and formidable, and will and must be finally obeyed and done.

The scholar must be ready for bad weather, poverty, insult, weariness, repute of failure, and many vexations. He must have a great patience, and ride at anchor and vanquish every enemy whom his small arms cannot reach, by the grand resistance of submission, of ceasing to do. He is to know that in the last resort he is not here to work, but to be worked upon. He is to eat insult, drink insult, be clothed and shod in insult until he has learned that this bitter bread and shameful dress is also wholesome and warm, is in short indifferent; is of the same chemistry as praise and fat living; that they also are disgrace and soreness to him who has them. I think much may be said to discourage and dissuade the young scholar from his career. Freely be that said. Dissuade all you can from the lists. Sift the wheat, frighten away the lighter souls. Let us keep only the heavy-armed. Let those come who cannot but come, and who see that there is no choice here, no advantage and no disadvantage compared with other careers. For the great Necessity is our patron, who distributes sun and shade after immutable

laws.

Yes, he has his dark days, he has weakness, he has waitings, he has bad company, he is pelted by storms of cares, untuning cares, untuning company. Well, let him meet them. He has not consented to the frivolity, nor to the dispersion. The practical aim is forever higher than the literary aim. He shall not submit to degradation, but shall bear these crosses with what grace he can. He is still to decline how many glittering opportunities, and to retreat, and wait. So shall you find in this penury and absence of thought a purer splendor than ever clothed the exhibitions of wit. I invite you not to cheap joys, to the flutter of gratified vanity, to a sleek and rosy comfort; no, but to bareness, to power, to enthusiasm, to the mountain of vision, to true and natural supremacy, to the society of the great, and to love. Give me bareness and poverty so that I know them as the sure heralds of the Muse. Not in plenty, not in a thriving, well-to-do condition, she delighteth. He that would sacrifice at her altar must not leave a few flowers, an apple, or some symbolic gift. No; he must relinquish orchards and gardens, prosperity and convenience; he may live on a heath without trees; sometimes hungry, and sometimes rheumatic with cold. The fire retreats and concentrates within into a pure flame, pure as the stars to which it mounts.

But, gentlemen, there is plainly no end to these expansions. I have exhausted your patience, and I have only begun. I had perhaps wiselier adhered to my first purpose of confining my illustration to a single topic, but it is so much easier to say many things than to explain one. Well, you will see the drift of all my thoughts, this namely — that the scholar must be much more than a scholar, that his ends give value to every means, but he is to subdue and keep down his methods; that his use of books is occasional, and infinitely subordinate; that he should read a little proudly, as one who knows the original, and cannot therefore very highly value the copy. In like manner he is to hold lightly every tradition, every opinion, every person, out of his piety to that Eternal Spirit which dwells unexpressed with him. He shall think very highly of his destiny. He is here to know the secret of Genius; to become, not a reader of poetry, but Homer, Dante, Milton, Shakspeare, Swedenborg, in the fountain, through that. If one man could impart his faith to another, if I could prevail to communicate the incommunicable mysteries, you should see the breadth of your realm; — that ever as you ascend your proper and native path, you receive the keys of Nature and history, and rise on the same stairs to science and to joy.

PLUTARCH.

The soul

Shall have society of its own rank:
Be great, be true, and all the Scipios,
The Catos, the wise patriots of Rome,
Shall flock to you and tarry by your side
And comfort you with their high company.
For Joy and Beauty planted it
With faerie gardens cheered,

And boding Fancy haunted it
With men and women weird.

[This paper was originally printed as an introduction to Plutarch's *Morals*, edited by Professor William W. Goodwin, and published, in 1871, by Messrs. Little, Brown & Co, through whose courtesy it is included in this edition.]

It is remarkable that of an author so familiar as Plutarch, not only to scholars, but to all reading men, and whose history is so easily gathered from his works, no accurate memoir of his life, not even the dates of his birth and death, should have come down to us. Strange that the writer of so many illustrious biographies should wait so long for his own. It is agreed that he was born about the year 50 of the Christian era. He has been represented as having been the tutor of the Emperor Trajan, as dedicating one of his books to him, as living long in Rome in great esteem, as having received from Trajan the consular dignity, and as having been appointed by him the governor of Greece. He was a man whose real superiority had no need of these flatteries. Meantime, the simple truth is, that he was not the tutor of Trajan, that he dedicated no book to him, was not consul in Rome, nor governor of Greece; appears never to have been in Rome but on two occasions, and then on business of the people of his native city, Chœronea; and though he found or made friends at Rome, and read lectures to some friends or scholars, he did not know or learn the Latin language there; with one or two doubtful exceptions, never quotes a Latin book; and though the contemporary, in his youth or in his old age, of Persius, Juvenal, Lucan and Seneca, of Quintilian, Martial, Tacitus, Suetonius, Pliny the Elder and the Younger, he does not cite them, and, in return, his name is never mentioned by any Roman writer. It would seem that the community of letters and of personal news was even more rare at that day than the want of printing, of railroads and telegraphs, would suggest to us.

But this neglect by his contemporaries has been compensated by an immense popularity in modern nations. Whilst his books were never known to the world in their own Greek tongue, it is curious that the "Lives" were translated and printed in Latin, thence into Italian, French, and English, more than a century before the original "Works" were yet printed. For whilst the "Lives" were translated in Rome in 1470, and the "Morals," part by part, soon after, the first printed edition of the Greek "Works" did not appear until 1572. Hardly current in his own Greek, these found learned interpreters in the scholars of Germany, Spain and Italy. In France, in the middle of the most turbulent civil wars,

Amyot's translation awakened general attention. His genial version of the "Lives" in 1559, of the "Morals" in 1572, had signal success. King Henry IV. wrote to his wife, Marie de Medicis: "*Vive Dieu*. As God liveth, you could not have sent me anything which could be more agreeable than the news of the pleasure you have taken in this reading. Plutarch always delights me with a fresh novelty. To love him is to love me; for he has been long time the instructor of my youth. My good mother, to whom I owe all, and who would not wish, she said, to see her son an illustrious dunce, put this book into my hands almost when I was a child at the breast. It has been like my conscience, and has whispered in my ear many good suggestions and maxims for my conduct and the government of my affairs." Still earlier, Rabelais cites him with due respect. Montaigne, in 1589, says: "We dunces had been lost, had not this book raised us out of the dirt. By this favor of his we dare now speak and write. The ladies are able to read to schoolmasters. 'Tis our breviary." Montesquieu drew from him his definition of law, and, in his *Pensées*, declares, "I am always charmed with Plutarch; in his writings are circumstances attached to persons, which give great pleasure;" and adds examples. Saint Evremond read Plutarch to the great Condé under a tent. Rollin, so long the historian of antiquity for France, drew unhesitatingly his history from him. Voltaire honored him, and Rousseau acknowledged him as his master. In England, Sir Thomas North translated the "Lives" in 1579, and Holland the "Morals" in 1603, in time to be used by Shakspeare in his plays, and read by Bacon, Dryden, and Cudworth.

Then, recently, there has been a remarkable revival, in France, in the taste for Plutarch and his contemporaries; led, we may say, by the eminent critic Sainte-Beuve. M. Octave Gréard, in a critical work on the "Morals," has carefully corrected the popular legends and constructed from the works of Plutarch himself his true biography. M. Levéque has given an exposition of his moral philosophy, under the title of "A Physician of the Soul," in the *Revue des Deux Mondes*; and M. C. Martha, chapters on the genius of Marcus Aurelius, of Persius, and Lucretius, in the same journal; whilst M. Fustel de Coulanges has explored from its roots in the Aryan race, then in their Greek and Roman descendants, the primeval religion of the household.

Plutarch occupies a unique place in literature as an encyclopædia of Greek and Roman antiquity. Whatever is eminent in fact or in fiction, in opinion, in character, in institutions, in science — natural, moral, or metaphysical, or in memorable sayings, drew his attention and came to his pen with more or less fulness of record. He is, among prose writers, what Chaucer is among English poets, a repository for those who want the story without searching for it at first

hand, — a compend of all accepted traditions. And all this without any supreme in tellectual gifts. He is not a profound mind; not a master in any science; not a lawgiver, like Lycurgus or Solon; not a metaphysician, like Parmenides, Plato, or Aristotle; not the founder of any sect or community, like Pythagoras or Zeno; not a naturalist, like Pliny or Linnœus; not a leader of the mind of a generation, like Plato or Goethe. But if he had not the highest powers, he was yet a man of rare gifts. He had that universal sympathy with genius which makes all its victories his own; though he never used verse, he had many qualities of the poet in the power of his imagination, the speed of his mental associations, and his sharp, objective eyes. But what specially marks him, he is a chief example of the illumination of the intellect by the force of morals. Though the most amiable of boon-companions, this generous religion gives him *aperçus* like Goethe's.

Plutarch was well-born, well-taught, well-conditioned; a self-respecting, amiable man, who knew how to better a good education by travels, by devotion to affairs private and public; a master of ancient culture, he read books with a just criticism; eminently social, he was a king in his own house, surrounded himself with select friends, and knew the high value of good conversation; and declares in a letter written to his wife that “he finds scarcely an erasure, as in a book well-written, in the happiness of his life.”

The range of mind makes the glad writer. The reason of Plutarch's vast popularity is his humanity. A man of society, of affairs; upright, practical; a good son, husband, father, and friend, — he has a taste for common life, and knows the court, the camp and the judgment-hall, but also the forge, farm, kitchen and cellar, and every utensil and use, and with a wise man's or a poet's eye. Thought defends him from any degradation. He does not lose his way, for the attractions are from within, not from without. A poet in verse or prose must have a sensuous eye, but an intellectual co-perception. Plutarch's memory is full, and his horizon wide. Nothing touches man but he feels to be his; he is tolerant even of vice, if he finds it genial; enough a man of the world to give even the Devil his due, and would have hugged Robert Burns, when he cried: —

“O wad ye tak' a thought and mend!”

He is a philosopher with philosophers, a naturalist with naturalists, and sufficiently a mathematician to leave some of his readers, now and then, at a long distance behind him, or respectfully skipping to the next chapter. But this scholastic omniscience of our author engages a new respect, since they hope he understands his own diagram.

He perpetually suggests Montaigne, who was the best reader he has ever found, though Montaigne excelled his master in the point and surprise of his

sentences. Plutarch had a religion which Montaigne wanted, and which defends him from wantonness; and though Plutarch is as plain-spoken, his moral sentiment is always pure. What better praise has any writer received than he whom Montaigne finds “frank in giving things, not words,” dryly adding, “it vexes me that he is so exposed to the spoil of those that are conversant with him.” It is one of the felicities of literary history, the tie which inseparably couples these two names across fourteen centuries. Montaigne, whilst he grasps *Ætienne de la Boèce* with one hand, reaches back the other to Plutarch. These distant friendships charm us, and honor all the parties, and make the best example of the universal citizenship and fraternity of the human mind.

I do not know where to find a book — to borrow a phrase of Ben Jonson’s— “so rammed with life,” and this in chapters chiefly ethical, which are so prone to be heavy and sentimental. No poet could illustrate his thought with more novel or striking similes or happier anecdotes. His style is realistic, picturesque and varied; his sharp objective eyes seeing everything that moves, shines, or threatens in nature or art, or thought or dreams. Indeed, twilights, shadows, omens and spectres have a charm for him. He believes in witchcraft and the evil eye, in demons and ghosts, — but prefers, if you please, to talk of these in the morning. His vivacity and abundance never leave him to loiter or pound on an incident. I admire his rapid and crowded style, as if he had such store of anecdotes of his heroes that he is forced to suppress more than he recounts, in order to keep up with the hasting history.

His surprising merit is the genial facility with which he deals with his manifold topics. There is no trace of labor or pain. He gossips of heroes, philosophers and poets; of virtues and genius; of love and fate and empires. It is for his pleasure that he recites all that is best in his reading: he prattles history. But he is no courtier, and no Boswell: he is ever manly, far from fawning, and would be welcome to the sages and warriors he reports, as one having a native right to admire and recount these stirring deeds and speeches. I find him a better teacher of rhetoric than any modern. His superstitions are poetic, aspiring, affirmative. A poet might rhyme all day with hints drawn from Plutarch, page on page. No doubt, this superior suggestion for the modern reader owes much to the foreign air, the Greek wine, the religion and history of antique heroes. Thebes, Sparta, Athens and Rome charm us away from the disgust of the passing hour. But his own cheerfulness and rude health are also magnetic. In his immense quotation and allusion we quickly cease to discriminate between what he quotes and what he invents. We sail on his memory into the ports of every nation, enter into every private property, and do not stop to discriminate owners, but give him the praise of all. ‘T is all Plutarch, by right of eminent domain, and all property

vests in this emperor. This facility and abundance make the joy of his narrative, and he is read to the neglect of more careful historians. Yet he inspires a curiosity, sometimes makes a necessity, to read them. He disowns any attempt to rival Thucydides; but I suppose he has a hundred readers where Thucydides finds one, and Thucydides must often thank Plutarch for that one. He has preserved for us a multitude of precious sentences, in prose or verse, of authors whose books are lost; and these embalmed fragments, through his loving selection alone, have come to be proverbs of later mankind. I hope it is only my immense ignorance that makes me believe that they do not survive out of his pages, — not only Thespis, Polemos, Euphorion, Ariston, Evenus, etc., but fragments of Menander and Pindar. At all events, it is in reading the fragments he has saved from lost authors that I have hailed another example of the sacred care which has unrolled in our times, and still searches and unrolls *papyri* from ruined libraries and buried cities, and has drawn attention to what an ancient might call the politeness of Fate, — we will say, more advisedly, the benign Providence which uses the violence of war, of earthquakes and changed water-courses, to save underground through barbarous ages the relics of ancient art, and thus allows us to witness the upturning of the alphabets of old races, and the deciphering of forgotten languages, so to complete the annals of the forefathers of Asia, Africa and Europe.

His delight in poetry makes him cite with joy the speech of Gorgias, “that the tragic poet who deceived was juster than he who deceived not, and he that was deceived was wiser than he who was not deceived.”

It is a consequence of this poetic trait in his mind, that I confess that, in reading him, I embrace the particulars, and carry a faint memory of the argument or general design of the chapter; but he is not less welcome, and he leaves the reader with a relish and a necessity for completing his studies. Many examples might be cited of nervous expression and happy allusion, that indicate a poet and an orator, though he is not ambitious of these titles, and cleaves to the security of prose narrative, and only shows his intellectual sympathy with these; yet I cannot forbear to cite one or two sentences which none who reads them will forget. In treating of the style of the Pythian Oracle, he says: —

“Do you not observe, some one will say, what a grace there is in Sappho’s measures, and how they delight and tickle the ears and fancies of the hearers? Whereas the Sibyl, with her frantic grimaces, uttering sentences altogether thoughtful and serious, neither fucused nor perfumed, continues her voice a thousand years through the favor of the Divinity that speaks within her.”

Another gives an insight into his mystic tendencies: —

“Early this morning, asking Epaminondas about the manner of Lysis’s burial, I found that Lysis had taught him as far as the incommunicable mysteries of our sect, and that the same Dæmon that waited on Lysis, presided over him, if I can guess at the pilot from the sailing of the ship. The paths of life are large, but in few are men directed by the Dæmons. When Theanor had said this, he looked attentively on Epaminondas, as if he designed a fresh search into his nature and inclinations.”

And here is his sentiment on superstition, some what condensed in Lord Bacon’s citation of it: “I had rather a great deal that men should say, There was no such man at all as Plutarch, than that they should say that there was one Plutarch that would eat up his children as soon as they were born, as the poets speak of Saturn.”

The chapter “On Fortune” should be read by poets, and other wise men; and the vigor of his pen appears in the chapter “Whether the Athenians were more Warlike or Learned,” and in his attack upon Usurers.

There is, of course, a wide difference of time in the writing of these discourses, and so in their merit. Many of them are mere sketches or notes for chapters in preparation, which were never digested or finished. Many are notes for disputations in the lecture-room. His poor indignation against Herodotus was perhaps a youthful prize essay: it appeared to me captious and labored; or perhaps, at a rhetorician’s school, the subject of Herodotus being the lesson of the day, Plutarch was appointed by lot to take the adverse side.

The plain-speaking of Plutarch, as of the ancient writers generally, coming from the habit of writing for one sex only, has a great gain for brevity, and, in our new tendencies of civilization, may tend to correct a false delicacy.

We are always interested in the man who treats the intellect well. We expect it from the philosopher, — from Plato, Aristotle, Spinoza and Kant; but we know that metaphysical studies in any but minds of large horizon and incessant inspiration have their dangers. One asks sometimes whether a metaphysician can treat the intellect well. The central fact is the superhuman intelligence, pouring into us from its unknown fountain, to be received with religious awe, and defended from any mixture of our will. But this high Muse comes and goes; and the danger is that, when the Muse is wanting, the student is prone to supply its place with microscopic subtleties and logomachy. It is fatal to spiritual health to lose your admiration. “Let others wrangle,” said St. Augustine; “I will wonder.” Plato and Plotinus are enthusiasts, who honor the race; but the logic of the

sophists and materialists, whether Greek or French, fills us with disgust. Whilst we expect this awe and reverence of the spiritual power from the philosopher in his closet, we praise it in the man of the world; — the man who lives on quiet terms with existing institutions, yet indicates his perception of these high oracles; as do Plutarch, Montaigne, Hume and Goethe. These men lift themselves at once from the vulgar and are not the parasites of wealth. Perhaps they sometimes compromise, go out to dine, make and take compliments; but they keep open the source of wisdom and health. Plutarch is uniformly true to this centre. He had not lost his wonder. He is a pronounced idealist, who does not hesitate to say, like another Berkeley, “Matter is itself privation;” and again, “The Sun is the cause that all men are ignorant of Apollo, by sense withdrawing the rational intellect from that which is to that which appears.” He thinks that “souls are naturally endowed with the faculty of prediction;” he delights in memory, with its miraculous power of resisting time. He thinks that “Alexander invaded Persia with greater assistance from Aristotle than from his father Philip.” He thinks that “he who has ideas of his own is a bad judge of another man’s, it being true that the Eleans would be the most proper judges of the Olympic games, were no Eleans gamesters.” He says of Socrates, that he endeavored to bring reason and things together, and make truth consist with sober sense. He wonders with Plato at that nail of pain and pleasure which fastens the body to the mind. The mathematics give him unspeakable pleasure, but he chiefly liked that proportion which teaches us to account that which is just, equal; and not that which is equal, just.

Of philosophy he is more interested in the results than in the method. He has a just instinct of the presence of a master, and prefers to sit as a scholar with Plato, than as a disputant; and, true to his practical character, he wishes the philosopher not to hide in a corner, but to commend himself to men of public regards and ruling genius: “for, if he once possess such a man with principles of honor and religion, he takes a compendious method, by doing good to one, to oblige a great part of mankind.” ‘T is a temperance, not an eclecticism, which makes him adverse to the severe Stoic, or the Gymnosophist, or Diogenes, or any other extremist. That vice of theirs shall not hinder him from citing any good word they chance to drop. He is an eclectic in such sense as Montaigne was, — willing to be an expectant, not a dogmatist.

In many of these chapters it is easy to infer the relation between the Greek philosophers and those who came to them for instruction. This teaching was no play nor routine, but strict, sincere and affectionate. The part of each of the class is as important as that of the master. They are like the base-ball players, to whom the pitcher, the bat, the catcher and the scout are equally important. And Plutarch

thought, with Ariston, "that neither a bath nor a lecture served any purpose, unless they were purgative." Plutarch has such a keen pleasure in realities that he has none in verbal disputes; he is impatient of sophistry, and despises the Epicharmian disputations: as, that he who ran in debt yesterday owes nothing today, as being another man; so, he that was yesterday invited to supper, the next night comes an unbidden guest, for that he is quite another person.

Except as historical curiosities, little can be said in behalf of the scientific value of the "Opinions of the Philosophers," the "Questions" and the "Symposiacs." They are, for the most part, very crude opinions; many of them so puerile that one would believe that Plutarch in his haste adopted the notes of his younger auditors, some of them jocosely misreporting the dogma of the professor, who laid them aside as *memoranda* for future revision, which he never gave, and they were posthumously published. Now and then there are hints of superior science. You may cull from this record of barbarous guesses of shepherds and travellers, statements that are predictions of facts established in modern science. Usually, when Thales, Anaximenes or An-aximander are quoted, it is really a good judgment. The explanation of the rainbow, of the floods of the Nile, and of the *remora*, etc., are just; and the bad guesses are not worse than many of Lord Bacon's.

His Natural History is that of a lover and poet, and not of a physicist. His humanity stooped affectionately to trace the virtues which he loved in the animals also. "Knowing and not knowing is the affirmative or negative of the dog; knowing you is to be your friend; not knowing you, your enemy." He quotes Thucydides' saying that "not the desire of honor only never grows old, but much less also the inclination to society and affection to the State, which continue even in ants and bees to the very last."

But, though curious in the questions of the schools on the nature and genesis of things, his extreme interest in every trait of character, and his broad humanity, lead him constantly to Morals, to the study of the Beautiful and Good. Hence his love of heroes, his rule of life, and his clear convictions of the high destiny of the soul. La Harpe said that "Plutarch is the genius the most naturally moral that ever existed."

'T is almost inevitable to compare Plutarch with Seneca, who, born fifty years earlier, was for many years his contemporary, though they never met, and their writings were perhaps unknown to each other. Plutarch is genial, with an endless interest in all human and divine things; Seneca, a professional philosopher, a writer of sentences, and, though he keep a sublime path, is less interesting, because less humane; and when we have shut his book, we forget to open it again. There is a certain violence in his opinions, and want of sweetness. He

lacks the sympathy of Plutarch. He is tiresome through perpetual didactics. He is not happily living. Cannot the simple lover of truth enjoy the virtues of those he meets, and the virtues suggested by them, so to find himself at some time purely contented? Seneca was still more a man of the world than Plutarch; and, by his conversation with the Court of Nero, and his own skill, like Voltaire's, of living with men of business and emulating their address in affairs by great accumulation of his own property, learned to temper his philosophy with facts. He ventured far, — apparently too far, — for so keen a conscience as he inly had. Yet we owe to that wonderful moralist illustrious maxims; as if the scarlet vices of the times of Nero had the natural effect of driving virtue to its loftiest antagonisms. "Seneca," says L'Estrange, "was a pagan Christian, and is very good reading for our Christian pagans." He was Buddhist in his cold abstract virtue, with a certain impassibility beyond humanity. He called pity, "that fault of narrow souls." Yet what noble words we owe to him: "God divided man into men, that they might help each other;" and again, "The good man differs from God in nothing but duration." His thoughts are excellent, if only he had the right to say them. Plutarch, meantime, with every virtue under heaven, thought it the top of wisdom to philosophize yet not appear to do it, and to reach in mirth the same ends which the most serious are proposing.

Plutarch thought "truth to be the greatest good that man can receive, and the goodliest blessing that God can give." "When you are persuaded in your mind that you cannot either offer or perform anything more agreeable to the gods than the entertaining a right notion of them, you will then avoid superstition as a no less evil than atheism." He cites Euripides to affirm, "If gods do aught dishonest, they are no gods," and the memorable words of Antigone, in Sophocles, concerning the moral sentiment: —

"For neither now nor yesterday began
These thoughts, which have been ever, nor yet can
A man be found who their first entrance knew."

His faith in the immortality of the soul is another measure of his deep humanity. He reminds his friends that the Delphic oracles have given several answers the same in substance as that formerly given to Corax the Naxian: —

"It sounds profane impiety
To teach that human souls e'er die."

He believes that the doctrine of the Divine Providence, and that of the immortality of the soul, rest on one and the same basis. He thinks it impossible either that a man beloved of the gods should not be happy, or that a wise and just man should not be beloved of the gods. To him the Epicureans are hateful, who held that the soul perishes when it is separated from the body. "The soul,

incapable of death, suffers in the same manner in the body, as birds that are kept in a cage." He believes "that the souls of infants pass immediately into a better and more divine state."

I can easily believe that an anxious soul may find in Plutarch's chapter called "Pleasure not attainable by Epicurus," and his "Letter to his Wife Timoxena," a more sweet and reassuring argument on the immortality than in the *Phædo* of Plato; for Plutarch always addresses the question on the human side, and not on the metaphysical; as Walter Scott took hold of boys and young men, in England and America, and through them of their fathers. His grand perceptions of duty lead him to his stern delight in heroism; a stoic resistance to low indulgence; to a fight with fortune; a regard for truth; his love of Sparta, and of heroes like Aristides, Phocion and Cato. He insists that the highest good is in action. He thinks that the inhabitants of Asia came to be vassals to one, only for not having been able to pronounce one syllable; which is, No. So keen is his sense of allegiance to right reason, that he makes a fight against Fortune whenever she is named. At Rome he thinks her wings were clipped: she stood no longer on a ball, but on a cube as large as Italy. He thinks it was by superior virtue that Alexander won his battles in Asia and Africa, and the Greeks theirs against Persia.

But this Stoic in his fight with Fortune, with vices, effeminacy and indolence, is gentle as a woman when other strings are touched. He is the most amiable of men. "To erect a trophy in the soul against anger is that which none but a great and victorious puissance is able to achieve."— "Anger turns the mind out of doors, and bolts the door." He has a tenderness almost to tears when he writes on "Friendship," on the "Training of Children," and on the "Love of Brothers." "There is no treasure," he says, "parents can give to their children, like a brother; 'tis a friend given by nature, a gift nothing can supply; once lost, not to be replaced. The Arcadian prophet, of whom Herodotus speaks, was obliged to make a wooden foot in place of that which had been chopped off. A brother, embroiled with his brother, going to seek in the street a stranger who can take his place, resembles him who will cut off his foot to give himself one of wood."

All his judgments are noble. He thought, with Epicurus, that it is more delightful to do than to receive a kindness. "This courteous, gentle, and benign disposition and behavior is not so acceptable, so obliging or delightful to any of those with whom we converse, as it is to those who have it." There is really no limit to his bounty: "It would be generous to lend our eyes and ears, nay, if possible, our reason and fortitude to others, whilst we are idle or asleep." His excessive and fanciful humanity reminds one of Charles Lamb, whilst it much exceeds him. When the guests are gone, he "would leave one lamp burning, only

as a sign of the respect he bore to fires, for nothing so resembles an animal as fire. It is moved and nourished by itself, and by its brightness, like the soul, discovers and makes everything apparent, and in its quenching shows some power that seems to proceed from a vital principle, for it makes a noise and resists, like an animal dying, or violently slaughtered;" and he praises the Romans, who, when the feast was over, "dealt well with the lamps, and did not take away the nourishment they had given, but permitted them to live and shine by it."

I can almost regret that the learned editor of the present republication has not preserved, if only as a piece of history, the preface of Mr. Morgan, the editor and in part writer of this Translation of 1718. In his dedication of the work to the Archbishop of Canterbury, Wm. Wake, he tells the Primate that "Plutarch was the wisest man of his age, and, if he had been a Christian, one of the best too; *but it was his severe fate to flourish in those days of ignorance, which, 't is a favorable opinion to hope that the Almighty will sometime wink at; that our souls may be with these philosophers together in the same state of bliss.*" The puzzle in the worthy translator's mind between his theology and his reason well reappears in the puzzle of his sentence.

I know that the chapter of "Apothegms of Noble Commanders" is rejected by some critics as not a genuine work of Plutarch; but the matter is good, and is so agreeable to his taste and genius, that if he had found it, he would have adopted it. If he did not compile the piece, many, perhaps most of the anecdotes were already scattered in his works. If I do not lament that a work not his should be ascribed to him, I regret that he should have suffered such destruction of his own. What a trilogy is lost to mankind in his Lives of Scipio, Epaminondas, and Pindar!

His delight in magnanimity and self-sacrifice has made his books, like Homer's Iliad, a bible for heroes; and wherever the Cid is relished, the legends of Arthur, Saxon Alfred and Richard the Lion-hearted, Robert Bruce, Sydney, Lord Herbert of Cherbury, Cromwell, Nelson, Bonaparte, and Walter Scott's Chronicles in prose or verse, — there will Plutarch, who told the story of Leonidas, of Agesilaus, of Aristides, Phocion, Themistocles, Demosthenes, Epaminondas, Cæsar, Cato and the rest, sit as the bestower of the crown of noble knighthood, and laureate of the ancient world.

The chapters "On the Fortune of Alexander," in the "Morals," are an important appendix to the portrait in the "Lives." The union in Alexander of sublime courage with the refinement of his pure tastes, making him the carrier of civilization into the East, are in the spirit of the ideal hero, and endeared him to

Plutarch. That prince kept Homer's poems not only for himself under his pillow in his tent, but carried these for the delight of the Persian youth, and made them acquainted also with the tragedies of Euripides and Sophocles. He persuaded the Sogdians not to kill, but to cherish their aged parents; the Persians to reverence, not marry their mothers; the Scythians to bury and not eat their dead parents. What a fruit and fitting monument of his best days was his city Alexandria, to be the birthplace or home of Plotinus, St. Augustine, Synesius, Posidonius, Ammonius, Jamblichus, Porphyry, Origen, Aratus, Apollonius and Apuleius.

If Plutarch delighted in heroes, and held the balance between the severe Stoic and the indulgent Epicurean, his humanity shines not less in his intercourse with his personal friends. He was a genial host and guest, and delighted in bringing chosen companions to the supper-table. He knew the laws of conversation and the laws of good-fellowship quite as well as Horace, and has set them down with such candor and grace as to make them good reading to-day. The guests not invited to a private board by the entertainer, but introduced by a guest as his companions, the Greek called *shadows*; and the question is debated whether it was civil to bring them, and he treats it candidly, but concludes: "Therefore, when I make an invitation, since it is hard to break the custom of the place, I give my guests leave to bring shadows; but when I myself am invited as a shadow, I assure you I refuse to go." He has an objection to the introduction of music at feasts. He thought it wonderful that a man having a muse in his own breast, and all the pleasantness that would fit an entertainment, would have pipes and harps play, and by that external noise destroy all the sweetness that was proper and his own.

I cannot close these notes without expressing my sense of the valuable service which the Editor has rendered to his Author and to his readers. Professor Goodwin is a silent benefactor to the book, wherever I have compared the editions. I did not know how careless and vicious in parts the old book was, until, in recent reading of the old text, on coming on anything absurd or unintelligible, I referred to the new text and found a clear and accurate statement in its place. It is the vindication of Plutarch. The correction is not only of names of authors and of places grossly altered or misspelled, but of unpardonable liberties taken by the translators, whether from negligence or freak.

One proof of Plutarch's skill as a writer is that he bears translation so well. In spite of its carelessness and manifold faults, which, I doubt not, have tried the patience of its present learned editor and corrector, I yet confess my enjoyment of this old version, for its vigorous English style. The work of some forty or fifty University men, some of them imperfect in their Greek, it is a monument of the English language at a period of singular vigor and freedom of style. I hope the

Commission of the Philological Society in London, charged with the duty of preparing a Critical Dictionary, will not overlook these volumes, which show the wealth of their tongue to greater advantage than many books of more renown as models. It runs through the whole scale of conversation in the street, the market, the coffee-house, the law courts, the palace, the college and the church. There are, no doubt, many vulgar phrases, and many blunders of the printer; but it is the speech of business and conversation, and in every tone, from lowest to highest.

We owe to these translators many sharp perceptions of the wit and humor of their author, sometimes even to the adding of the point. I notice one, which, although the translator has justified his rendering in a note, the severer criticism of the Editor has not retained. "Were there not a sun, we might, for all the other stars, pass our days in the Reverend Dark, as Heraclitus calls it." I find a humor in the phrase which might well excuse its doubtful accuracy.

It is a service to our Republic to publish a book that can force ambitious young men, before they mount the platform of the county conventions, to read the "Laconic Apothegms" and the "Apothegms of Great Commanders." If we could keep the secret, and communicate it only to a few chosen aspirants, we might confide that, by this noble infiltration, they would easily carry the victory over all competitors. But, as it was the desire of these old patriots to fill with their majestic spirit all Sparta or Rome, and not a few leaders only, we hasten to offer them to the American people.

Plutarch's popularity will return in rapid cycles. If over-read in this decade, so that his anecdotes and opinions become commonplace, and to-day's novelties are sought for variety, his sterling values will presently recall the eye and thought of the best minds, and his books will be reprinted and read anew by coming generations. And thus Plutarch will be perpetually rediscovered from time to time as long as books last.

HISTORIC NOTES OF LIFE AND LETTERS IN NEW ENGLAND.

“Of old things all are over old,
Of good things none are good enough; —
We’ll show that we can help to frame
A world of other stuff.”

The ancient manners were giving way. There grew a certain tenderness on the people, not before remarked. Children had been repressed and kept in the background; now they were considered, cosseted and pampered. I recall the remark of a witty physician who remembered the hardships of his own youth; he said, “It was a misfortune to have been born when children were nothing, and to live till men were nothing.”

There are always two parties, the party of the Past and the party of the Future; the Establishment and the Movement. At times the resistance is reanimated, the schism runs under the world and appears in Literature, Philosophy, Church, State, and social customs. It is not easy to date these eras of activity with any precision, but in this region one made itself remarked, say in 1820 and the twenty years following.

It seemed a war between intellect and affection; a crack in nature, which split every church in Christendom into Papal and Protestant; Calvinism into Old and New schools; Quakerism into Old and New; brought new divisions in politics; as the new conscience touching temperance and slavery. The key to the period appeared to be that the mind had become aware of itself. Men grew reflective and intellectual. There was a new consciousness. The former generations acted under the belief that a shining social prosperity was the beatitude of man, and sacrificed uniformly the citizen to the State. The modern mind believed that the nation existed for the individual, for the guardianship and education of every man. This idea, roughly written in revolutions and national movements, in the mind of the philosopher had far more precision; the individual is the world.

This perception is a sword such as was never drawn before. It divides and detaches bone and marrow, soul and body, yea, almost the man from himself. It is the age of severance, of dissociation, of freedom, of analysis, of detachment. Every man for himself. The public speaker disclaims speaking for any other; he answers only for himself. The social sentiments are weak; the sentiment of patriotism is weak; veneration is low; the natural affections feebler than they

were. People grow philosophical about native land and parents and relations. There is an universal resistance to ties and ligaments once supposed essential to civil society. The new race is stiff, heady and rebellious; they are fanatics in freedom; they hate tolls, taxes, turnpikes, banks, hierarchies, governors, yea, almost laws. They have a neck of unspeakable tenderness; it winces at a hair. They rebel against theological as against political dogmas; against mediation, or saints, or any nobility in the unseen.

The age tends to solitude. The association of the time is accidental and momentary and hypocritical, the detachment intrinsic and progressive. The association is for power, merely, — for means; the end being the enlargement and independency of the individual. Anciently, society was in the course of things. There was a Sacred Band, a Theban Phalanx. There can be none now. College classes, military corps, or trades-unions may fancy themselves indissoluble for a moment, over their wine; but it is a painted hoop, and has no girth. The age of arithmetic and of criticism has set in. The structures of old faith in every department of society a few centuries have sufficed to destroy. Astrology, magic, palmistry, are long gone. The very last ghost is laid. Demonology is on its last legs. Prerogative, government, goes to pieces day by day. Europe is strewn with wrecks; a constitution once a week. In social manners and morals the revolution is just as evident. In the law courts, crimes of fraud have taken the place of crimes of force. The stockholder has stepped into the place of the warlike baron. The nobles shall not any longer, as feudal lords, have power of life and death over the churls, but now, in another shape, as capitalists, shall in all love and peace eat them up as before. Nay, government itself becomes the resort of those whom government was invented to restrain. “Are there any brigands on the road?” inquired the traveller in France. “Oh, no, set your heart at rest on that point,” said the landlord; “what should these fellows keep the highway for, when they can rob just as effectually, and much more at their ease, in the bureaus of office?”

In literature the effect appeared in the decided tendency of criticism. The most remarkable literary work of the age has for its hero and subject precisely this introversion: I mean the poem of Faust. In philosophy, Immanuel Kant has made the best catalogue of the human faculties and the best analysis of the mind. Hegel also, especially. In science the French *savant*, exact, pitiless, with barometer, crucible, chemic test and calculus in hand, travels into all nooks and islands, to weigh, to analyze and report. And chemistry, which is the analysis of matter, has taught us that we eat gas, drink gas, tread on gas, and are gas. The same decomposition has changed the whole face of physics; the like in all arts, modes. Authority falls, in Church, College, Courts of Law, Faculties, Medicine.

Experiment is credible; antiquity is grown ridiculous.

It marked itself by a certain predominance of the intellect in the balance of powers. The warm swart Earth-spirit which made the strength of past ages, mightier than it knew, with instincts instead of science, like a mother yielding food from her own breast instead of preparing it through chemic and culinary skill, — warm negro ages of sentiment and vegetation, — all gone; another hour had struck and other forms arose. Instead of the social existence which all shared, was now separation. Every one for himself; driven to find all his resources, hopes, rewards, society and deity within himself.

The young men were born with knives in their brain, a tendency to introversion, self-dissection, anatomizing of motives. The popular religion of our fathers had received many severe shocks from the new times; from the Arminians, which was the current name of the backsliders from Calvinism, sixty years ago; then from the English philosophic theologians, Hartley and Priestley and Belsham, the followers of Locke; and then I should say much later from the slow but extraordinary influence of Swedenborg; a man of prodigious mind, though as I think tainted with a certain suspicion of insanity, and therefore generally disowned, but exerting a singular power over an important intellectual class; then the powerful influence of the genius and character of Dr. Channing.

Germany had created criticism in vain for us until 1820, when Edward Everett returned from his five years in Europe, and brought to Cambridge his rich results, which no one was so fitted by natural grace and the splendor of his rhetoric to introduce and recommend. He made us for the first time acquainted with Wolff's theory of the Homeric writings, with the criticism of Heyne. The novelty of the learning lost nothing in the skill and genius of his relation, and the rudest undergraduate found a new morning opened to him in the lectureroom of Harvard Hall.

There was an influence on the young people from the genius of Everett which was almost comparable to that of Pericles in Athens. He had an inspiration which did not go beyond his head, but which made him the master of elegance. If any of my readers were at that period in Boston or Cambridge, they will easily remember his radiant beauty of person, of a classic style, his heavy large eye, marble lids, which gave the impression of mass which the slightness of his form needed; sculptured lips; a voice of such rich tones, such precise and perfect utterance, that, although slightly nasal, it was the most mellow and beautiful and correct of all the instruments of the time. The word that he spoke, in the manner in which he spoke it, became current and classical in New England. He had a great talent for collecting facts, and for bringing those he had to bear with ingenious felicity on the topic of the moment. Let him rise to speak on what

occasion soever, a fact had always just transpired which composed, with some other fact well known to the audience, the most pregnant and happy coincidence. It was remarked that for a man who threw out so many facts he was seldom convicted of a blunder. He had a good deal of special learning, and all his learning was available for purposes of the hour. It was all new learning, that wonderfully took and stimulated the young men. It was so coldly and weightily communicated from so commanding a platform, as if in the consciousness and consideration of all history and all learning, — adorned with so many simple and austere beauties of expression, and enriched with so many excellent digressions and significant quotations, that, though nothing could be conceived beforehand less attractive or indeed less fit for green boys from Connecticut, New Hampshire and Massachusetts, with their unripe Latin and Greek reading, than exegetical discourses in the style of Voss and Wolff and Ruhnken, on the Orphic and Ante-Homeric remains, — yet this learning instantly took the highest place to our imagination in our unoccupied American Parnassus. All his auditors felt the extreme beauty and dignity of the manner, and even the coarsest were contented to go punctually to listen, for the manner, when they had found out that the subject-matter was not for them. In the lectureroom, he abstained from all ornament, and pleased himself with the play of detailing erudition in a style of perfect simplicity. In the pulpit (for he was then a clergyman) he made amends to himself and his auditor for the self-denial of the professor's chair, and, with an infantine simplicity still, of manner, he gave the reins to his florid, quaint and affluent fancy.

Then was exhibited all the richness of a rhetoric which we have never seen rivalled in this country. Wonderful how memorable were words made which were only pleasing pictures, and covered no new or valid thoughts. He abounded in sentences, in wit, in satire, in splendid allusion, in quotation impossible to forget, in daring imagery, in parable and even in a sort of defying experiment of his own wit and skill in giving an oracular weight to Hebrew or Rabbinical words; — feats which no man could better accomplish, such was his self-command and the security of his manner. All his speech was music, and with such variety and invention that the ear was never tired. Especially beautiful were his poetic quotations. He delighted in quoting Milton, and with such sweet modulation that he seemed to give as much beauty as he borrowed; and whatever he has quoted will be remembered by any who heard him, with inseparable association with his voice and genius. He had nothing in common with vulgarity and infirmity, but, speaking, walking, sitting, was as much aloof and uncommon as a star. The smallest anecdote of his behavior or conversation was eagerly caught and repeated, and every young scholar could recite brilliant sentences

from his sermons, with mimicry, good or bad, of his voice. This influence went much farther, for he who was heard with such throbbing hearts and sparkling eyes in the lighted and crowded churches, did not let go his hearers when the church was dismissed, but the bright image of that eloquent form followed the boy home to his bed-chamber; and not a sentence was written in academic exercises, not a declamation attempted in the college chapel, but showed the omnipresence of his genius to youthful heads. This made every youth his defender, and boys filled their mouths with arguments to prove that the orator had a heart. This was a triumph of Rhetoric. It was not the intellectual or the moral principles which he had to teach. It was not thoughts. When Massachusetts was full of his fame it was not contended that he had thrown any truths into circulation. But his power lay in the magic of form; it was in the graces of manner; in a new perception of Grecian beauty, to which he had opened our eyes. There was that finish about this person which is about women, and which distinguishes every piece of genius from the works of talent, — that these last are more or less matured in every degree of completeness according to the time bestowed on them, but works of genius in their first and slightest form are still wholes. In every public discourse there was nothing left for the indulgence of his hearer, no marks of late hours and anxious, unfinished study, but the goddess of grace had breathed on the work a last fragrancancy and glitter.

By a series of lectures largely and fashionably attended for two winters in Boston he made a beginning of popular literary and miscellaneous lecturing, which in that region at least had important results. It is acquiring greater importance every day, and becoming a national institution. I am quite certain that this purely literary influence was of the first importance to the American mind.

In the pulpit Dr. Frothingham, an excellent classical and German scholar, had already made us acquainted, if prudently, with the genius of Eich horn's theologic criticism. And Professor Norton a little later gave form and method to the like studies in the then infant Divinity School. But I think the paramount source of the religious revolution was Modern Science; beginning with Copernicus, who destroyed the pagan fictions of the Church, by showing mankind that the earth on which we live was not the centre of the Universe, around which the sun and stars revolved every day, and thus fitted to be the platform on which the Drama of the Divine Judgment was played before the assembled Angels of Heaven,— “the scaffold of the divine vengeance” Saurin called it, — but a little scrap of a planet, rushing round the sun in our system, which in turn was too minute to be seen at the distance of many stars which we behold. Astronomy taught us our insignificance in Nature; showed that our

sacred as our profane history had been written in gross ignorance of the laws, which were far grander than we knew; and compelled a certain extension and uplifting of our views of the Deity and his Providence. This correction of our superstitions was confirmed by the new science of Geology, and the whole train of discoveries in every department. But we presently saw also that the religious nature in man was not affected by these errors in his understanding. The religious sentiment made nothing of bulk or size, or far or near; triumphed over time as well as space; and every lesson of humility, or justice, or charity, which the old ignorant saints had taught him, was still forever true.

Whether from these influences, or whether by a reaction of the general mind against the too formal science, religion and social life of the earlier period, — there was, in the first quarter of our nineteenth century, a certain sharpness of criticism, an eagerness for reform, which showed itself in every quarter. It appeared in the popularity of Lavater's Physiognomy, now almost forgotten. Gall and Spurzheim's Phrenology laid a rough hand on the mysteries of animal and spiritual nature, dragging down every sacred secret to a street show. The attempt was coarse and odious to scientific men, but had a certain truth in it; it felt connection where the professors denied it, and was a leading to a truth which had not yet been announced. On the heels of this intruder came Mesmerism, which broke into the inmost shrines, attempted the explanation of miracle and prophecy, as well as of creation. What could be more revolting to the contemplative philosopher! But a certain success attended it, against all expectation. It was human, it was genial, it affirmed unity and connection between remote points, and as such was excellent criticism on the narrow and dead classification of what passed for science; and the joy with which it was greeted was an instinct of the people which no true philosopher would fail to profit by. But while society remained in doubt between the indignation of the old school and the audacity of the new, a higher note sounded. Unexpected aid from high quarters came to iconoclasts. The German poet Goethe revolted against the science of the day, against French and English science, declared war against the great name of Newton, proposed his own new and simple optics: in Botany, his simple theory of metamorphosis; — the eye of a leaf is all; every part of the plant from root to fruit is only a modified leaf, the branch of a tree is nothing but a leaf whose serratures have become twigs. He extended this into anatomy and animal life, and his views were accepted. The revolt became a revolution. Schelling and Oken introduced their ideal natural philosophy, Hegel his metaphysics, and extended it to Civil History.

The result in literature and the general mind was a return to law; in science, in politics, in social life; as distinguished from the profligate manners and politics

of earlier times. The age was moral. Every immorality is a departure from nature, and is punished by natural loss and deformity. The popularity of Combe's Constitution of Man; the humanity which was the aim of all the multitudinous works of Dickens; the tendency even of Punch's caricature, was all on the side of the people. There was a breath of new air, much vague expectation, a consciousness of power not yet finding its determinate aim.

I attribute much importance to two papers of Dr. Channing, one on Milton and one on Napoleon, which were the first specimens in this country of that large criticism which in England had given power and fame to the Edinburgh Review. They were widely read, and of course immediately fruitful in provoking emulation which lifted the style of Journalism. Dr. Channing, whilst he lived, was the star of the American Church, and we then thought, if we do not still think, that he left no successor in the pulpit. He could never be reported, for his eye and voice could not be printed, and his discourses lose their best in losing them. He was made for the public; his cold temperament made him the most unprofitable private companion; but all America would have been impoverished in wanting him. We could not then spare a single word he uttered in public, not so much as the reading a lesson in Scripture, or a hymn, and it is curious that his printed writings are almost a history of the times; as there was no great public interest, political, literary, or even economical (for he wrote on the Tariff), on which he did not leave some printed record of his brave and thoughtful opinion. A poor little invalid all his life, he is yet one of those men who vindicate the power of the American race to produce greatness.

Dr. Channing took counsel in 1840 with George Ripley, to the point whether it were possible to bring cultivated, thoughtful people together, and make society that deserved the name. He had earlier talked with Dr. John Collins Warren on the like purpose, who admitted the wisdom of the design and undertook to aid him in making the experiment. Dr. Channing repaired to Dr. Warren's house on the appointed evening, with large thoughts which he wished to open. He found a well-chosen assembly of gentlemen variously distinguished; there was mutual greeting and introduction, and they were chatting agreeably on indifferent matters and drawing gently towards their great expectation, when a side-door opened, the whole company streamed in to an oyster supper, crowned by excellent wines; and so ended the first attempt to establish æsthetic society in Boston.

Some time afterwards Dr. Channing opened his mind to Mr. and Mrs. Ripley, and with some care they invited a limited party of ladies and gentlemen. I had the honor to be present. Though I recall the fact, I do not retain any instant consequence of this attempt, or any connection between it and the new zeal of

the friends who at that time began to be drawn together by sympathy of studies and of aspiration. Margaret Fuller, George Ripley, Dr. Convers Francis, Theodore Parker, Dr. Hedge, Mr. Brownson, James Freeman Clarke, William H. Channing, and many others, gradually drew together and from time to time spent an afternoon at each other's houses in a serious conversation. With them was always one well-known form, a pure idealist, not at all a man of letters, nor of any practical talent, nor a writer of books; a man quite too cold and contemplative for the alliances of friendship, with rare simplicity and grandeur of perception, who read Plato as an equal, and inspired his companions only in proportion as they were intellectual, — whilst the men of talent complained of the want of point and precision in this abstract and religious thinker.

These fine conversations, of course, were incomprehensible to some in the company, and they had their revenge in their little joke. One declared that "It seemed to him like going to heaven in a swing;" another reported that, at a knotty point in the discourse, a sympathizing Englishman with a squeaking voice interrupted with the question, "Mr. Alcott, a lady near me desires to inquire whether omnipotence abnegates attribute?"

I think there prevailed at that time a general belief in Boston that there was some concert of *doctrinaires* to establish certain opinions and inaugurate some movement in literature, philosophy, and religion, of which design the supposed conspirators were quite innocent; for there was no concert, and only here and there two or three men or women who read and wrote, each alone, with unusual vivacity. Perhaps they only agreed in having fallen upon Coleridge and Wordsworth and Goethe, then on Carlyle, with pleasure and sympathy. Otherwise, their education and reading were not marked, but had the American superficialness, and their studies were solitary. I suppose all of them were surprised at this rumor of a school or sect, and certainly at the name of Transcendentalism, given nobody knows by whom, or when it was first applied. As these persons became in the common chances of society acquainted with each other, there resulted certainly strong friendships, which of course were exclusive in proportion to their heat: and perhaps those persons who were mutually the best friends were the most private and had no ambition of publishing their letters, diaries, or conversation.

From that time meetings were held for conversation, with very little form, from house to house, of people engaged in studies, fond of books, and watchful of all the intellectual light from whatever quarter it flowed. Nothing could be less formal, yet the intelligence and character and varied ability of the company gave it some notoriety and perhaps waked curiosity as to its aims and results.

Nothing more serious came of it than the modest quarterly journal called

“The Dial” which, under the editorship of Margaret Fuller, and later of some other, enjoyed its obscurity for four years. All its papers were unpaid contributions, and it was rather a work of friendship among the narrow circle of students than the organ of any party. Perhaps its writers were its chief readers: yet it contained some noble papers by Margaret Fuller, and some numbers had an instant exhausting sale, because of papers by Theodore Parker.

Theodore Parker was our Savonarola, an excellent scholar, in frank and affectionate communication with the best minds of his day, yet the tribune of the people, and the stout Reformer to urge and defend every cause of humanity with and for the humblest of mankind. He was no artist. Highly refined persons might easily miss in him the element of beauty. What he said was mere fact, almost offended you, so bald and detached; little cared he. He stood altogether for practical truth; and so to the last. He used every day and hour of his short life, and his character appeared in the last moments with the same firm control as in the mid day of strength. I habitually apply to him the words of a French philosopher who speaks of “the man of Nature who abominates the steam-engine and the factory. His vast lungs breathe independence with the air of the mountains and the woods.”

The vulgar politician disposed of this circle cheaply as “the sentimental class.” State Street had an instinct that they invalidated contracts and threatened the stability of stocks; and it did not fancy brusque manners. Society always values, even in its teachers, inoffensive people, susceptible of conventional polish. The clergyman who would live in the city *may* have piety, but *must* have taste, whilst there was often coming, among these, some John the Baptist, wild from the woods, rude, hairy, careless of dress and quite scornful of the etiquette of cities. There was a pilgrim in those days walking in the country who stopped at every door where he hoped to find hearing for his doctrine, which was, Never to give or receive money. He was a poor printer, and explained with simple warmth the belief of himself and five or six young men with whom he agreed in opinion, of the vast mischief of our insidious coin. He thought every one should labor at some necessary product, and as soon as he had made more than enough for himself, were it corn, or paper, or cloth, or boot-jacks, he should give of the commodity to any applicant, and in turn go to his neighbor for any article which he had to spare. Of course we were curious to know how he sped in his experiments on the neighbor, and his anecdotes were interesting, and often highly creditable. But he had the courage which so stern a return to Arcadian manners required, and had learned to sleep, in cold nights, when the farmer at whose door he knocked declined to give him a bed, on a wagon covered with the buffalo-robe under the shed, — or under the stars, when the farmer denied the

shed and the buffalo-robe. I think he persisted for two years in his brave practice, but did not enlarge his church of believers.

These reformers were a new class. Instead of the fiery souls of the Puritans, bent on hanging the Quaker, burning the witch and banishing the Romanist, these were gentle souls, with peaceful and even with genial dispositions, casting sheep's-eyes even on Fourier and his houris. It was a time when the air was full of reform. Robert Owen of Lanark came hither from England in 1845, and read lectures or held conversations wherever he found listeners; the most amiable, sanguine and candid of men. He had not the least doubt that he had hit on a right and perfect socialism, or that all mankind would adopt it. He was then seventy years old, and being asked, "Well, Mr. Owen, who is your disciple? How many men are there possessed of your views who will remain after you are gone, to put them in practice?" "Not one," was his reply. Robert Owen knew Fourier in his old age. He said that Fourier learned of him all the truth he had; the rest of his system was imagination, and the imagination of a banker. Owen made the best impression by his rare benevolence. His love of men made us forget his "Three Errors." His charitable construction of men and their actions was invariable. He was the better Christian in his controversy with Christians, and he interpreted with great generosity the acts of the "Holy Alliance," and Prince Metternich, with whom the persevering *doctrinaire* had obtained interviews; "Ah," he said, "you may depend on it there are as tender hearts and as much good will to serve men, in palaces, as in colleges."

And truly I honor the generous ideas of the Socialists, the magnificence of their theories, and the enthusiasm with which they have been urged. They appeared the inspired men of their time. Mr. Owen preached his doctrine of labor and reward, with the fidelity and devotion of a saint, to the slow ears of his generation. Fourier, almost as wonderful an example of the mathematical mind of France as La Place or Napoleon, turned a truly vast arithmetic to the question of social misery, and has put men under the obligation which a generous mind always confers, of conceiving magnificent hopes and making great demands as the right of man. He took his measure of that which all should and might enjoy, from no soup-society or charity-concert, but from the refinements of palaces, the wealth of universities, and the triumphs of artists. He thought nobly. A man is entitled to pure air, and to the air of good conversation in his bringing up, and not, as we or so many of us, to the poor-smell and musty chambers, cats and fools. Fourier carried a whole French Revolution in his head, and much more. Here was arithmetic on a huge scale. His ciphering goes where ciphering never went before, namely, into stars, atmospheres, and animals, and men and women,

and classes of every character. It was the most entertaining of French romances, and could not but suggest vast possibilities of reform to the coldest and least sanguine.

We had an opportunity of learning something of these Socialists and their theory, from the indefatigable apostle of the sect in New York, Albert Brisbane. Mr. Brisbane pushed his doctrine with all the force of memory, talent, honest faith and importunacy. As we listened to his exposition it appeared to us the sublime of mechanical philosophy; for the system was the perfection of arrangement and contrivance. The force of arrangement could no farther go. The merit of the plan was that it was a system; that it had not the partiality and hint-and-fragment character of most popular schemes, but was coherent and comprehensive of facts to a wonderful degree. It was not daunted by distance, or magnitude, or remoteness of any sort, but strode about nature with a giant's step, and skipped no fact, but wove its large Ptolemaic web of cycle and epicycle, of phalanx and phalanstery, with laudable assiduity. Mechanics were pushed so far as fairly to meet spiritualism. One could not but be struck with strange coincidences betwixt Fourier and Swedenborg. Genius hitherto has been shamefully misapplied, a mere trifler. It must now set itself to raise the social condition of man and to redress the disorders of the planet he inhabits. The Desert of Sahara, the Campagna di Roma, the frozen Polar circles, which by their pestilential or hot or cold airs poison the temperate regions, accuse man. Society, concert, co-operation, is the secret of the coming Paradise. By reason of the isolation of men at the present day, all work is drudgery. By concert and the allowing each laborer to choose his own work, it becomes pleasure. "Attractive Industry" would speedily subdue, by adventurous scientific and persistent tillage, the pestilential tracts; would equalize temperature, give health to the globe and cause the earth to yield "healthy imponderable fluids" to the solar system, as now it yields noxious fluids. The hyæna, the jackal, the gnat, the bug, the flea, were all beneficent parts of the system; the good Fourier knew what those creatures should have been, had not the mould slipped, through the bad state of the atmosphere; caused no doubt by the same vicious imponderable fluids. All these shall be redressed by human culture, and the useful goat and dog and innocent poetical moth, or the wood-tick to consume decomposing wood, shall take their place. It takes sixteen hundred and eighty men to make one Man, complete in all the faculties; that is, to be sure that you have got a good joiner, a good cook, a barber, a poet, a judge, an umbrella-maker, a mayor and alderman, and so on. Your community should consist of two thousand persons, to prevent accidents of omission; and each community should take up six thousand acres of land. Now fancy the earth planted with fifties and hundreds of these phalanxes

side by side, — what tillage, what architecture, what refectories, what dormitories, what reading-rooms, what concerts, what lectures, what gardens, what baths! What is not in one will be in another, and many will be within easy distance. Then know you one and all, that Constantinople is the natural capital of the globe. There, in the Golden Horn, will the Arch-Phalanx be established; there will the Omniarch reside. Aladdin and his magician, or the beautiful Scheherezade can alone, in these prosaic times before the sight, describe the material splendors collected there. Poverty shall be abolished; deformity, stupidity and crime shall be no more. Genius, grace, art, shall abound, and it is not to be doubted but that in the reign of “Attractive Industry” all men will speak in blank verse.

Certainly we listened with great pleasure to such gay and magnificent pictures. The ability and earnestness of the advocate and his friends, the comprehensiveness of their theory, its apparent directness of proceeding to the end they would secure, the indignation they felt and uttered in the presence of so much social misery, commanded our attention and respect. It contained so much truth, and promised in the attempts that shall be made to realize it so much valuable instruction, that we are engaged to observe every step of its progress. Yet in spite of the assurances of its friends that it was new and widely discriminated from all other plans for the regeneration of society, we could not exempt it from the criticism which we apply to so many projects for reform with which the brain of the age teems. Our feeling was that Fourier had skipped no fact but one, namely Life. He treats man as a plastic thing, something that may be put up or down, ripened or retarded, moulded, polished, made into solid or fluid or gas, at the will of the leader; or perhaps as a vegetable, from which, though now a poor crab, a very good peach can by manure and exposure be in time produced, — but skips the faculty of life, which spawns and scorns system and system-makers; which eludes all conditions; which makes or supplants a thousand phalanxes and New Harmonies with each pulsation. There is an order in which in a sound mind the faculties always appear, and which, according to the strength of the individual, they seek to realize in the surrounding world. The value of Fourier’s system is that it is a statement of such an order externized, or carried outward into its correspondence in facts. The mistake is that this particular order and series is to be imposed, by force or preaching and votes, on all men, and carried into rigid execution. But what is true and good must not only be begun by life, but must be conducted to its issues by life. Could not the conceiver of this design have also believed that a similar model lay in every mind, and that the method of each associate might be trusted, as well as that of his particular Committee and General Office, No. 200 Broadway? Nay, that it

would be better to say, Let us be lovers and servants of that which is just, and straightway every man becomes a centre of a holy and beneficent republic, which he sees to include all men in its law, like that of Plato, and of Christ. Before such a man the whole world becomes Fourierized or Christized or humanized, and in obedience to his most private being he finds himself, according to his presentiment, though against all sensuous probability, acting in strict concert with all others who followed their private light.

Yet, in a day of small, sour and fierce schemes, one is admonished and cheered by a project of such friendly aims and of such bold and generous proportion; there is an intellectual courage and strength in it which is superior and commanding; it certifies the presence of so much truth in the theory, and in so far is destined to be fact.

It argued singular courage, the adoption of Fourier's system, to even a limited extent, with his books lying before the world only defended by the thin veil of the French language. The Stoic said, Forbear, Fourier said, Indulge. Fourier was of the opinion of St. Evremond; abstinence from pleasure appeared to him a great sin. Fourier was very French indeed. He labored under a misapprehension of the nature of women. The Fourier marriage was a calculation how to secure the greatest amount of kissing that the infirmity of human constitution admitted. It was false and prurient, full of absurd French superstitions about women; ignorant how serious and how moral their nature always is; how chaste is their organization; how lawful a class.

It is the worst of community that it must inevitably transform into charlatans the leaders, by the endeavor continually to meet the expectation and admiration of this eager crowd of men and women seeking they know not what. Unless he have a Cossack roughness of clearing himself of what belongs not, charlatan he must be.

It was easy to see what must be the fate of this fine system in any serious and comprehensive attempt to set it on foot in this country. As soon as our people got wind of the doctrine of Marriage held by this master, it would fall at once into the hands of a lawless crew who would flock in troops to so fair a game, and, like the dreams of poetic people on the first outbreak of the old French Revolution, so theirs would disappear in a slime of mire and blood.

There is of course to every theory a tendency to run to an extreme, and to forget the limitations. In our free institutions, where every man is at liberty to choose his home and his trade, and all possible modes of working and gaining are open to him, fortunes are easily made by thousands, as in no other country. Then property proves too much for the man, and the men of science, art, intellect, are pretty sure to degenerate into selfish housekeepers, dependent on

wine, coffee, furnace-heat, gas-light and fine furniture. Then instantly things swing the other way, and we suddenly find that civilization crowded too soon; that what we bragged as triumphs were treacheries: that we have opened the wrong door and let the enemy into the castle; that civilization was a mistake; that nothing is so vulgar as a great warehouse of rooms full of furniture and trumpery; that, in the circumstances, the best wisdom were an auction or a fire. Since the foxes and the birds have the right of it, with a warm hole to keep out the weather, and no more, — a pent-house to fend the sun and rain is the house which lays no tax on the owner's time and thoughts, and which he can leave, when the sun is warm, and defy the robber. This was Thoreau's doctrine, who said that the Fourierists had a sense of duty which led them to devote themselves to their second-best. And Thoreau gave in flesh and blood and pertinacious Saxon belief the purest ethics. He was more real and practically believing in them than any of his company, and fortified you at all times with an affirmative experience which refused to be set aside. Thoreau was in his own person a practical answer, almost a refutation, to the theories of the socialists. He required no Phalanx, no Government, no society, almost no memory. He lived extempore from hour to hour, like the birds and the angels; brought every day a new proposition, as revolutionary as that of yesterday, but different: the only man of leisure in his town; and his independence made all others look like slaves. He was a good Abbot Sampson, and carried a counsel in his breast. "Again and again I congratulate myself on my so-called poverty, I could not overstate this advantage." "What you call bareness and poverty, is to me simplicity. God could not be unkind to me if he should try. I love best to have each thing in its season only, and enjoy doing without it at all other times. It is the greatest of all advantages to enjoy no advantage at all. I have never got over my surprise that I should have been born into the most estimable place in all the world, and in the very nick of time too." There's an optimist for you.

I regard these philanthropists as themselves the effects of the age in which we live, and, in common with so many other good facts, the efflorescence of the period, and predicting a good fruit that ripens. They were not the creators they believed themselves, but they were unconscious prophets of a true state of society; one which the tendencies of nature lead unto, one which always establishes itself for the sane soul, though not in that manner in which they paint it; but they were describers of that which is really being done. The large cities are phalansteries; and the theorists drew all their argument from facts already taking place in our experience. The cheap way is to make every man do what he was born for. One merchant to whom I described the Fourier project, thought it must not only succeed, but that agricultural association must presently fix the

price of bread, and drive single farmers into association in self-defence, as the great commercial and manufacturing companies had done. Society in England and in America is trying the experiment again in small pieces, in co-operative associations, in cheap eating-houses, as well as in the economies of club-houses and in cheap reading-rooms.

It chanced that here in one family were two brothers, one a brilliant and fertile inventor, and close by him his own brother, a man of business, who knew how to direct his faculty and make it instantly and permanently lucrative. Why could not the like partnership be formed between the inventor and the man of executive talent everywhere? Each man of thought is surrounded by wiser men than he, if they cannot write as well. Cannot he and they combine? Talents supplement each other. Beaumont and Fletcher and many French novelists have known how to utilize such partnerships. Why not have a larger one, and with more various members?

Housekeepers say, "There are a thousand things to everything," and if one must study all the strokes to be laid, all the faults to be shunned in a building or work of art, of its keeping, its composition, its site, its color, there would be no end. But the architect, acting under a necessity to build the house for its purpose, finds himself helped, he knows not how, into all these merits of detail, and steering clear, though in the dark, of those dangers which might have shipwrecked him.

BROOK FARM.

The West Roxbury association was formed in 1841, by a society of members, men and women, who bought a farm in West Roxbury, of about two hundred acres, and took possession of the place in April. Mr. George Ripley was the President, and I think Mr. Charles Dana (afterwards well known as one of the editors of the New York Tribune), was the secretary. Many members took shares by paying money, others held shares by their labor. An old house on the place was enlarged, and three new houses built. William Allen was at first and for some time the head farmer, and the work was distributed in orderly committees to the men and women. There were many employments more or less lucrative found for, or brought hither by these members, — shoemakers, joiners, sempstresses. They had good scholars among them, and so received pupils for their education. The parents of the children in some instances wished to live there, and were received as boarders. Many persons attracted by the beauty of the place and the culture and ambition of the community, joined them as boarders, and lived there for years. I think the numbers of this mixed community

soon reached eighty or ninety souls.

It was a noble and generous movement in the projectors, to try an experiment of better living. They had the feeling that our ways of living were too conventional and expensive, not allowing each to do what he had a talent for, and not permitting men to combine cultivation of mind and heart with a reasonable amount of daily labor. At the same time, it was an attempt to lift others with themselves, and to share the advantages they should attain, with others now deprived of them.

There was no doubt great variety of character and purpose in the members of the community. It consisted in the main of young people, — few of middle age, and none old. Those who inspired and organized it were of course persons impatient of the routine, the uniformity, perhaps they would say the squalid contentment of society around them, which was so timid and skeptical of any progress. One would say then that impulse was the rule in the society, without centripetal balance; perhaps it would not be severe to say, intellectual sansculottism, an impatience of the formal, routinary character of our educational, religious, social and economical life in Massachusetts. Yet there was immense hope in these young people. There was nobleness; there were self-sacrificing victims who compensated for the levity and rashness of their companions. The young people lived a great deal in a short time, and came forth some of them perhaps with shattered constitutions. And a few grave sanitary influences of character were happily there, which, I was assured, were always felt.

George W. Curtis of New York, and his brother, of English Oxford, were members of the family from the first. Theodore Parker, the near neighbor of the farm and the most intimate friend of Mr. Ripley, was a frequent visitor. Mr. Ichabod Morton of Plymouth, a plain man formerly engaged through many years in the fisheries with success, — eccentric, with a persevering interest in Education, and of a very democratic religion, came and built a house on the farm, and he, or members of his family, continued there to the end. Margaret Fuller, with her joyful conversation and large sympathy, was often a guest, and always in correspondence with her friends. Many ladies, whom to name were to praise, gave character and varied attraction to the place.

In and around Brook Farm, whether as members, boarders, or visitors, were many remarkable persons, for character, intellect, or accomplishments. I recall one youth of the subtlest mind, I believe I must say the subtlest observer and diviner of character I ever met, living, reading, writing, talking there, perhaps as long as the colony held together; his mind fed and overfed by whatever is exalted in genius, whether in Poetry or Art, in Drama or Music, or in social accomplishment and elegance; a man of no. employment or practical aims, a

student and philosopher, who found his daily enjoyment not with the elders or his exact contemporaries so much as with the fine boys who were skating and playing ball or bird-hunting; forming the closest friendships with such, and finding his delight in the petulant heroisms of boys; yet was he the chosen counsellor to whom the guardians would repair on any hitch or difficulty that occurred, and draw from him a wise counsel. A fine, subtle, inward genius, puny in body and habit as a girl, yet with an *aplomb* like a general, never disconcerted. He lived and thought, in 1842, such worlds of life; all hinging on the thought of Being or Reality as opposed to consciousness; hating intellect with the ferocity of a Swedenborg. He was the Abbé or spiritual father, from his religious bias. His reading lay in Æschylus, Plato, Dante, Calderon, Shakspeare, and in modern novels and romances of merit. There too was Hawthorne, with his cold yet gentle genius, if he failed to do justice to this temporary home. There was the accomplished Doctor of Music, who has presided over its literature ever since in our metropolis. Rev. William Henry Channing, now of London, was from the first a student of Socialism in France and England, and in perfect sympathy with this experiment. An English baronet, Sir John Caldwell, was a frequent visitor, and more or less directly interested in the leaders and the success.

Hawthorne drew some sketches, not happily, as I think; I should rather say, quite unworthy of his genius. No friend who knew Margaret Fuller could recognize her rich and brilliant genius under the dismal mask which the public fancied was meant for her in that disagreeable story.

The Founders of Brook Farm should have this praise, that they made what all people try to make, an agreeable place to live in. All comers, even the most fastidious, found it the pleasantest of residences. It is certain that freedom from household routine, variety of character and talent, variety of work, variety of means of thought and instruction, art, music, poetry, reading, masquerade, did not permit sluggishness or despondency; broke up routine. There is agreement in the testimony that it was, to most of the associates, education; to many, the most important period of their life, the birth of valued friendships, their first acquaintance with the riches of conversation, their training in behavior. The art of letter-writing, it is said, was immensely cultivated. Letters were always flying not only from house to house, but from room to room. It was a perpetual picnic, a French Revolution in small, an Age of Reason in a patty-pan.

In the American social communities, the gossip found such vent and sway as to become despotic. The institutions were whispering-galleries, in which the adored Saxon privacy was lost. Married women I believe uniformly decided against the community. It was to them like the brassy and lacquered life in hotels. The common school was well enough, but to the common nursery they

had grave objections. Eggs might be hatched in ovens, but the hen on her own account much preferred the old way. A hen without her chickens was but half a hen.

It was a curious experience of the patrons and leaders of this noted community, in which the agreement with many parties was that they should give so many hours of instruction in mathematics, in music, in moral and intellectual philosophy, and so forth, — that in every instance the new comers showed themselves keenly alive to the advantages of the society, and were sure to avail themselves of every means of instruction; their knowledge was increased, their manners refined, — but they became in that proportion averse to labor, and were charged by the heads of the departments with a certain indolence and selfishness.

In practice it is always found that virtue is occasional, spotty, and not linear or cubic. Good people are as bad as rogues if steady performance is claimed; the conscience of the conscientious runs in veins, and the most punctilious in some particulars are latitudinarian in others. It was very gently said that people on whom beforehand all persons would put the utmost reliance were not responsible. They saw the necessity that the work must be done, and did it not, and it of course fell to be done by the few religious workers. No doubt there was in many a certain strength drawn from the fury of dissent. Thus Mr. Ripley told Theodore Parker, “There is your accomplished friend — : he would hoe corn all Sunday if I would let him, but all Massachusetts could not make him do it on Monday.”

Of course every visitor found that there was a comic side to this Paradise of shepherds and shepherdesses. There was a stove in every chamber, and every one might burn as much wood as he or she would saw. The ladies took cold on washing-day; so it was ordained that the gentlemen-shepherds should wring and hang out clothes; which they punctually did. And it would sometimes occur that when they danced in the evening, clothespins dropped plentifully from their pockets. The country members naturally were surprised to observe that one man ploughed all day and one looked out of the window all day, and perhaps drew his picture, and both received at night the same wages. One would meet also some modest pride in their advanced condition, signified by a frequent phrase, “Before we came out of civilization.”

The question which occurs to you had occurred much earlier to Fourier: “How in this charming Elysium is the dirty work to be done?” And long ago Fourier had exclaimed, “Ah! I have it,” and jumped with joy. “Don’t you see,” he cried, “that nothing so delights the young Caucasian child as dirt? See the mud-pies that all children will make if you will let them. See how much more joy they find in pouring their pudding on the table-cloth than into their beautiful

mouths. The children from six to eight, organized into companies with flags and uniforms, shall do this last function of civilization.”

In Brook Farm was this peculiarity, that there was no head. In every family is the father; in every factory, a foreman; in a shop, a master; in a boat, the skipper; but in this Farm, no authority; each was master or mistress of his or her actions; happy, hapless anarchists. They expressed, after much perilous experience, the conviction that plain dealing was the best defence of manners and moral between the sexes. People cannot live together in any but necessary ways. The only candidates who will present themselves will be those who have tried the experiment of independence and ambition, and have failed; and none others will barter for the most comfortable equality the chance of superiority. Then all communities have quarrelled. Few people can live together on their merits. There must be kindred, or mutual economy, or a common interest in their business, or other external tie.

The society at Brook Farm existed, I think, about six or seven years, and then broke up, the Farm was sold, and I believe all the partners came out with pecuniary loss. Some of them had spent on it the accumulations of years. I suppose they all, at the moment, regarded it as a failure. I do not think they can so regard it now, but probably as an important chapter in their experience which has been of lifelong value. What knowledge of themselves and of each other, what various practical wisdom, what personal power, what studies of character, what accumulated culture many of the members owed to it! What mutual measure they took of each other! It was a close union, like that in a ship's cabin, of clergymen, young collegians, merchants, mechanics, farmers' sons and daughters, with men and women of rare opportunities and delicate culture, yet assembled there by a sentiment which all shared, some of them hotly shared, of the honesty of a life of labor and of the beauty of a life of humanity. The yeoman saw refined manners in persons who were his friends; and the lady or the romantic scholar saw the continuous strength and faculty in people who would have disgusted them but that these powers were now spent in the direction of their own theory of life.

I recall these few selected facts, none of them of much independent interest, but symptomatic of the times and country. I please myself with the thought that our American mind is not now eccentric or rude in its strength, but is beginning to show a quiet power, drawn from wide and abundant sources, proper to a Continent and to an educated people. If I have owed much to the special influences I have indicated, I am not less aware of that excellent and increasing circle of masters in arts and in song and in science, who cheer the intellect of our cities and this country to-day, — whose genius is not a lucky accident, but

normal, and with broad foundation of culture, and so inspires the hope of steady strength advancing on itself, and a day without night.

THE CHARDON STREET CONVENTION.

[The Dial, vol. iii., p. 100.]

In the month of November, 1840, a Convention of Friends of Universal Reform assembled in the Chardon Street Chapel in Boston, in obedience to a call in the newspapers, signed by a few individuals, inviting all persons to a public discussion of the institutions of the Sabbath, the Church and the Ministry. The Convention organized itself by the choice of Edmund Quincy as Moderator, spent three days in the consideration of the Sabbath, and adjourned to a day in March of the following year, for the discussion of the second topic. In March, accordingly, a three-days' sessions was holden in the same place, on the subject of the Church, and a third meeting fixed for the following November, which was accordingly holden; and the Convention debated, for three days again, the remaining subject of the Priesthood. This Convention never printed any report of its deliberations, nor pretended to arrive at any result by the expression of its sense in formal resolutions; — the professed objects of those persons who felt the greatest interest in its meetings being simply the elucidation of truth through free discussion. The daily newspapers reported, at the time, brief sketches of the course of proceedings, and the remarks of the principal speakers. These meetings attracted a great deal of public attention, and were spoken of in different circles in every note of hope, of sympathy, of joy, of alarm, of abhorrence and of merriment. The composition of the assembly was rich and various. The singularity and latitude of the summons drew together, from all parts of New England and also from the Middle States, men of every shade of opinion from the strictest orthodoxy to the wildest heresy, and many persons whose church was a church of one member only. A great variety of dialect and of costume was noticed; a great deal of confusion, eccentricity, and freak appeared, as well as of zeal and enthusiasm. If the assembly was disorderly, it was picturesque. Madmen, madwomen, men with beards, Dunkers, Muggletonians, Come-outers, Groaners, Agrarians, Seventh-day-Baptists, Quakers, Abolitionists, Calvinists, Unitarians and Philosophers, — all came successively to the top, and seized their moment, if not their hour, wherein to chide, or pray, or preach, or protest. The faces were a study. The most daring innovators and the champions-until-death of the old cause sat side by side. The still-living merit of the oldest New England families, glowing yet after several generations, encountered the founders of families, fresh merit, emerging, and expanding the brows to a new breadth, and lighting a clownish face with sacred fire. The assembly was characterized by the predominance of a certain plain, sylvan strength and earnestness, whilst many of

the most intellectual and cultivated persons attended its councils. Dr. Channing, Edward Taylor, Bronson Alcott, Mr. Garrison, Mr. May, Theodore Parker, H. C. Wright, Dr. Osgood, William Adams, Edward Palmer, Jones Very, Maria W. Chapman, and many other persons of a mystical or sectarian or philanthropic renown, were present, and some of them participant. And there was no want of female speakers; Mrs. Little and Mrs. Lucy Sessions took a pleasing and memorable part in the debate, and that flea of Conventions, Mrs. Abigail Folsom, was but too ready with her interminable scroll. If there was not parliamentary order, there was life, and the assurance of that constitutional love for religion and religious liberty which, in all periods, characterizes the inhabitants of this part of America.

There was a great deal of wearisome speaking in each of those three-days' sessions, but relieved by signal passages of pure eloquence, by much vigor of thought, and especially by the exhibition of character, and by the victories of character. These men and women were in search of something better and more satisfying than a vote or a definition, and they found what they sought, or the pledge of it, in the attitude taken by individuals of their number of resistance to the insane routine of parliamentary usage; in the lofty reliance on principles, and the prophetic dignity and transfiguration which accompanies, even amidst opposition and ridicule, a man whose mind is made up to obey the great inward Commander, and who does not anticipate his own action, but awaits confidently the new emergency for the new counsel. By no means the least value of this Convention, in our eye, was the scope it gave to the genius of Mr. Alcott, and not its least instructive lesson was the gradual but sure ascendancy of his spirit, in spite of the incredulity and derision with which he is at first received, and in spite, we might add, of his own failures. Moreover, although no decision was had, and no action taken on all the great points mooted in the discussion, yet the Convention brought together many remarkable persons, face to face, and gave occasion to memorable interviews and conversations, in the hall, in the lobbies, or around the doors.

EZRA RIPLEY, D. D.

We love the venerable house Our fathers built to God: In Heaven are kept their grateful vows, Their dust endears the sod.

From humble tenements around Came up the pensive train And in the church a blessing found That filled their homes again.

[This sketch was written for the Social Circle, a club in Concord now more than a century old, and said to be the lineal descendant of the Committee of Safety in the Revolution. Mr. Emerson was a member for many years and greatly valued its weekly evening meetings, held, during the winter, at the houses of the members. After the death of Dr. Ripley, an early member and connected with him by marriage, Mr. Emerson was asked to prepare the customary Memoir for the Club Book.]

Ezra Ripley was born May 1, 1751 (O. S.), at Woodstock, Connecticut. He was the fifth of the nineteen children of Noah and Lydia (Kent) Ripley. Seventeen of these nineteen children married, and it is stated that the mother died leaving nineteen children, one hundred and two grandchildren and ninety-six great-grandchildren. The father was born at Hingham, on the farm purchased by his ancestor, William Ripley, of England, at the first settlement of the town; which farm has been occupied by seven or eight generations. Ezra Ripley followed the business of farming till sixteen years of age, when his father wished him to be qualified to teach a grammar school, not thinking himself able to send one son to college without injury to his other children. With this view, the father agreed with the late Rev. Dr. Forbes of Gloucester, then minister of North Brookfield, to fit Ezra for college by the time he should be twenty-one years of age, and to have him labor during the time sufficiently to pay for his instruction, clothing and books.

But, when fitted for college, the son could not be contented with teaching, which he had tried the preceding winter. He had early manifested a desire for learning, and could not be satisfied without a public education. Always inclined to notice ministers, and frequently attempting, when only five or six years old, to imitate them by preaching, now that he had become a professor of religion he had an ardent desire to be a preacher of the gospel. He had to encounter great difficulties, but, through a kind providence and the patronage of Dr. Forbes, he entered Harvard University, July, 1772. The commencement of the Revolutionary War greatly interrupted his education at college. In 1775, in his senior year, the college was removed from Cambridge to this town. The studies

were much broken up. Many of the students entered the army, and the class never returned to Cambridge. There were an unusually large number of distinguished men in this class of 1776: Christopher Gore, Governor of Massachusetts and Senator in Congress; Samuel Sewall, Chief Justice of Massachusetts; George Thacher, Judge of the Supreme Court; Royall Tyler, Chief Justice of Vermont; and the late learned Dr. Prince, of Salem.

Mr. Ripley was ordained minister of Concord November 7, 1778. He married, November 16, 1780, Mrs. Phoebe (Bliss) Emerson, then a widow of thirty-nine, with five children. They had three children: Samuel, born May 11, 1783; Daniel Bliss, born August 1, 1784; Sarah, born April 8, 1789. He died September 21, 1841.

To these facts, gathered chiefly from his own diary, and stated nearly in his own words, I can only add a few traits from memory.

He was identified with the ideas and forms of the New England Church, which expired about the same time with him, so that he and his coevals seemed the rear guard of the great camp and army of the Puritans, which, however in its last days declining into formalism, in the heyday of its strength had planted and liberated America. It was a pit that his old meeting-house should have been modernized in his time. I am sure all who remember both will associate his form with whatever was grave and droll in the old, cold, unpainted, uncarpeted, square-pewed meeting-house, with its four iron-gray deacons in their little box under the pulpit, — with Watts's hymns, with long prayers, rich with the diction of ages; and not less with the report like musketry from the movable seats. He and his contemporaries, the old New England clergy, were believers in what is called a particular providence, — certainly, as they held it, a very particular providence, — following the narrowness of King David and the Jews, who thought the universe existed only or mainly for their church and congregation. Perhaps I cannot better illustrate this tendency than by citing a record from the diary of the father of his predecessor, [*Rev. Joseph Emerson.*] the minister of Malden, written in the blank leaves of the almanac for the year 1735. The minister writes against January 31st: "Bought a shay for 27 pounds, 10 shillings. The Lord grant it may be a comfort and blessing to my family." In March following he notes: "Had a safe and comfortable journey to York." But April 24th, we find: "Shay overturned, with my wife and I in it, yet neither of us much hurt. Blessed be our gracious Preserver. Part of the shay, as it lay upon one side, went over my wife, and yet she was scarcely anything hurt. How wonderful the preservation." Then again, May 5th: "Went to the beach with three of the children. The beast, being frightened when we were all out of the shay, overturned and broke it. I desire (I hope I desire it) that the Lord would teach me

suitably to repent this Providence, to make suitable remarks on it, and to be suitably affected with it. Have I done well to get me a shay? Have I not been proud or too fond of this convenience? Do I exercise the faith in the Divine care and protection which I ought to do? Should I not be more in my study and less fond of diversion? Do I not withhold more than is meet from pious and charitable uses?" Well, on 15th May we have this: "Shay brought home; mending cost thirty shillings. Favored in this respect beyond expectation." 16th May: "My wife and I rode together to Rumney Marsh. The beast frightened several times." And at last we have this record, June 4th: "Disposed of my shay to Rev. Mr. White."

The same faith made what was strong and what was weak in Dr. Ripley and his associates. He was a perfectly sincere man, punctual, severe, but just and charitable, and if he made his forms a strait-jacket to others, he wore the same himself all his years. Trained in this church, and very well qualified by his natural talent to work in it, it was never out of his mind. He looked at every person and thing from the parochial point of view. I remember, when a boy, driving about Concord with him, and in passing each house he told the story of the family that lived in it, and especially he gave me anecdotes of the nine church members who had made a division in the church in the time of his predecessor, and showed me how every one of the nine had come to bad fortune or to a bad end. His prayers for rain and against the lightning, "that it may not lick up our spirits;" and for good weather; and against sickness and insanity; "that we have not been tossed to and fro until the dawning of the day, that we have not been a terror to ourselves and others;" are well remembered, and his own entire faith that these petitions were not to be overlooked, and were entitled to a favorable answer. Some of those around me will remember one occasion of severe drought in this vicinity, when the late Rev. Mr. Goodwin offered to relieve the Doctor of the duty of leading in prayer; but the Doctor suddenly remembering the season, rejected his offer with some humor, as with an air that said to all the congregation, "This is no time for you young Cambridge men; the affair, sir, is getting serious. I will pray myself." One August afternoon, when I was in his hayfield helping him with his man to rake up his hay, I well remember his pleading, almost reproachful looks at the sky, when the thunder gust was coming up to spoil his hay. He raked very fast, then looked at the cloud, and said, "We are in the Lord's hand; mind your rake, George! We are in the Lord's hand;" and seemed to say, "You know me; this field is mine, — Dr. Ripley's, — thine own servant!"

He used to tell the story of one of his old friends, the minister of Sudbury, who, being at the Thursday lecture in Boston, heard the officiating clergyman

praying for rain. As soon as the service was over, he went to the petitioner, and said, "You Boston ministers, as soon as a tulip wilts under your windows, go to church and pray for rain, until all Concord and Sudbury are under water." I once rode with him to a house at Nine Acre Corner to attend the funeral of the father of a family. He mentioned to me on the way his fears that the oldest son, who was now to succeed to the farm, was becoming intemperate. We presently arrived, and the Doctor addressed each of the mourners separately: "Sir, I condole with you." "Madam, I condole with you." "Sir, I knew your great-grandfather. When I came to this town, your great-grand-father was a substantial farmer in this very place, a member of the church, and an excellent citizen. Your grandfather followed him, and was a virtuous man. Now your father is to be carried to his grave, full of labors and virtues. There is none of that large family left but you, and it rests with you to bear up the good name and usefulness of your ancestors. If you fail,— 'Ichabod, the glory is departed.' Let us pray." Right manly he was, and the manly thing he could always say. I can remember a little speech he made to me, when the last tie of blood which held me and my brothers to his house was broken by the death of his daughter. He said, on parting, "I wish you and your brothers to come to this house as you have always done. You will not like to be excluded; I shall not like to be neglected."

When "Put" Merriam, after his release from the state prison, had the effrontery to call on the doctor as an old acquaintance, in the midst of general conversation Mr. Frost, came in, and the doctor presently said, "Mr. Merriam, my brother and colleague, Mr. Frost, has come to take tea with me. I regret very much the causes (which you know very well) which make it impossible for me to ask you to stay and break bread with us." With the Doctor's views it was a matter of religion to say thus much. He had a reverence and love of society, and the patient, continuing courtesy, carrying out every respectful attention to the end, which marks what is called the manners of the old school. His hospitality obeyed Charles Lamb's rule, and "ran fine to the last." His partiality for ladies was always strong, and was by no means abated by time. He claimed privilege of years, was much addicted to kissing; spared neither maid, wife, nor widow, and, as a lady thus favored remarked to me, "seemed as if he was going to make a meal of you."

He was very credulous, and as he was no reader of books or journals, he knew nothing beyond the columns of his weekly religious newspaper, the tracts of his sect, and perhaps the Middlesex Yeoman. He was the easy dupe of any tonguey agent, whether colonizationist or anti-papist, or charlatan of iron combs, or tractors, or phrenology, or magnetism, who went by. At the time when Jack Downing's letters were in every paper, he repeated to me at table some of the

particulars of that gentleman's intimacy with General Jackson, in a manner that betrayed to me at once that he took the whole for fact. To undeceive him, I hastened to recall some particulars to show the absurdity of the thing, as the Major and the President going out skating on the Potomac, *etc.* "Why," said the Doctor with perfect faith, "it was a bright moonlight night;" and I am not sure that he did not die in the belief in the reality of Major Downing. Like other credulous men, he was opinionative, and, as I well remember, a great browbeater of the poor old fathers who still survived from the 19th of April, to the end that they should testify to his history as he had written it.

He was a man so kind and sympathetic, his character was so transparent, and his merits so intelligible to all observers, that he was very justly appreciated in this community. He was a natural gentleman, no dandy, but courtly, hospitable, manly and public - spirited; his nature social, his house open to all men. We remember the remark made by the old farmer who used to travel hither from Maine, that no horse from the Eastern country would go by the doctor's gate. Travellers from the West and North and South bear the like testimony. His brow was serene and open to his visitor, for he loved men, and he had no studies, no occupations, which company could interrupt. His friends were his study, and to see them loosened his talents and his tongue. In his house dwelt order and prudence and plenty. There was no waste and no stint. He was open-handed and just and generous. Ingratitude and meanness in his beneficiaries did not wear out his compassion; he bore the insult, and the next day his basket for the beggar, his horse and chaise for the cripple, were at their door. Though he knew the value of a dollar as well as another man, yet he loved to buy dearer and sell cheaper than others. He subscribed to all charities, and it is no reflection on others to say that he was the most public-spirited man in the town. The late Dr. Gardiner, in a funeral sermon on some parishioner whose virtues did not readily come to mind, honestly said, "He was good at fires." Dr. Ripley had many virtues, and yet all will remember that even in his old age, if the fire-bell was rung, he was instantly on horseback with his buckets and bag.

He showed even in his fireside discourse traits of that pertinency and judgment, softening ever and anon into elegancy, which make the distinction of the scholar, and which, under better discipline, might have ripened into a Bentley or a Porson. He had a foresight, when he opened his mouth, of all that he would say, and he marched straight to the conclusion. In debate in the vestry of the Lyceum, the structure of his sentences was admirable; so neat, so natural, so terse, his words fell like stones; and often, though quite unconscious of it, his speech was a satire on the loose, voluminous, draggle-tail periods of other speakers. He sat down when he had done. A man of anecdote, his talk in the

parlor was chiefly narrative. We remember the remark of a gentleman who listened with much delight to his conversation at the time when the Doctor was preparing to go to Baltimore and Washington, that “a man who could tell a story so well was company for kings and John Quincy Adams.”

Sage and savage strove harder in him than in any of my acquaintances, each getting the mastery by turns, and pretty sudden turns: “Save us from the extremity of cold and these violent sudden changes.” “The society will meet after the Lyceum, as it is difficult to bring people together in the evening, — and no moon.” “Mr. N. F. is dead, and I expect to hear of the death of Mr. B. It is cruel to separate old people from their wives in this cold weather.”

With a very limited acquaintance with books, his knowledge was an external experience, an Indian wisdom, the observation of such facts as country life for nearly a century could supply. He watched with interest the garden, the field, the orchard, the house and the barn, horse, cow, sheep and dog, and all the common objects that engage the thought of the farmer. He kept his eye on the horizon, and knew the weather like a sea-captain. The usual experiences of men, birth, marriage, sickness, death, burial; the common temptations; the common ambitions; — he studied them all, and sympathized so well in these that he was excellent company and counsel to all, even the most humble and ignorant. With extraordinary states of mind, with states of enthusiasm or enlarged speculation, he had no sympathy, and pretended to none. He was sincere, and kept to his point, and his mark was never remote. His conversation was strictly personal and apt to the party and the occasion. An eminent skill he had in saying difficult and unspeakable things; in delivering to a man or a woman that which all their other friends had abstained from saying, in uncovering the bandage from a sore place, and applying the surgeon’s knife with a truly surgical spirit. Was a man a sot, or a spendthrift, or too long time a bachelor, or suspected of some hidden crime, or had he quarrelled with his wife, or collared his father, or was there any cloud or suspicious circumstances in his behavior, the good pastor knew his way straight to that point, believing himself entitled to a full explanation, and whatever relief to the conscience of both parties plain speech could effect was sure to be procured. In all such passages he justified himself to the conscience, and commonly to the love, of the persons concerned. He was the more competent to these searching discourses from his knowledge of family history. He knew everybody’s grand father, and seemed to address each person rather as the representative of his house and name, than as an individual. In him have perished more local and personal anecdotes of this village and vicinity than are possessed by any survivor. This intimate knowledge of families, and this skill of speech, and still more, his sympathy, made him incomparable in his parochial

visits, and in his exhortations and prayers. He gave himself up to his feelings, and said on the instant the best things in the world. Many and many a felicity he had in his prayer, now forever lost, which defied all the rules of all the rhetoricians. He did not know when he was good in prayer or sermon, for he had no literature and no art; but he believed, and therefore spoke. He was eminently loyal in his nature, and not fond of adventure or innovation. By education, and still more by temperament, he was engaged to the old forms of the New England Church. Not speculative, but affectionate; devout, but with an extreme love of order, he adopted heartily, though in its mildest form, the creed and catechism of the fathers, and appeared a modern Israelite in his attachment to the Hebrew history and faith. He was a man very easy to read, for his whole life and conversation were consistent. All his opinions and actions might be securely predicted by a good observer on short acquaintance. My classmate at Cambridge, Frederick King, told me from Governor Gore, who was the Doctor's classmate, that in college he was called Holy Ripley.

And now, in his old age, when all the antique Hebraism and its customs are passing away, it is fit that he too should depart, — most fit that in the fall of laws a loyal man should die.

MARY MOODY EMERSON.

The yesterday doth never smile,
To-day goes drudging through the while,
Yet in the name of Godhead, I
The morrow front and can defy;
Though I am weak, yet God, when prayed,
Cannot withhold his conquering aid.
Ah me! it was my childhood's thought,
If He should make my web a blot
On life's fair picture of delight,
My heart's content would find it right.
But O, these waves and leaves, —
When happy, stoic Nature grieves, —

No human speech so beautiful
As their murmurs mine to lull.
On this altar God hath built
I lay my vanity and guilt;
Nor me can Hope or Passion urge,
Hearing as now the lofty dirge
Which blasts of Northern mountains hymn,
Nature's funeral high and dim, —
Sable pageantry of clouds,
Mourning summer laid in shrouds.
Many a day shall dawn and die,
Many an angel wander by,
And passing, light my sunken turf,
Mcist perhaps by ocean surf,
Forgotten amid splendid tombs,
Yet wreathed and hid by summer blooms.
On earth I dream; — I die to be:
Time! shake not thy bald head at me.
I challenge thee to hurry past,
Or for my turn to fly too fast.

[Lucy Percy, Countess of Carlisle, the friend of Strafford and of Pym, is thus described by Sir Toby Matthews:]

“She is of too high a mind and dignity not only to seek, but almost to wish, the friendship of any creature. They whom she is pleased to choose are such as are of the most eminent condition both for power and employment, — not with any design towards her own particular, either of advantage or curiosity, but her nature values fortunate persons. She prefers the conversation of men to that of women; not but she can talk on the fashions with her female friends, but she is too soon sensible that she can set them as she wills; that pre-eminence shortens all equality. She converses with those who are most distinguished for their conversational powers. Of Love freely will she discourse, listen to all its faults and mark its power: and will take a deep interest for persons of celebrity.”

[Aunt of Mr. Emerson, and a potent influence on the lives of him and his brothers. This paper was read before the “Woman’s Club,” in Boston, in 1869, under the title “Amita,” which was also the original superscription of the “Nun’s

Aspiration,” in his Poems; a rendering into verse of a passage in Miss Emerson’s diary. Part of this poem forms the motto of this chapter.]

I wish to meet the invitation with which the ladies have honored me by offering them a portrait of real life. It is a representative life, such as could hardly have appeared out of New England; of an age now past, and of which I think no types survive. Perhaps I deceive myself and overestimate its interest. It has to me a value like that which many readers find in Madame Guyon, in Rahel, in Eugénie de Guérin, but it is purely original and hardly admits of a duplicate. Then it is a fruit of Calvinism and New England, and marks the precise time when the power of the old creed yielded to the influence of modern science and humanity.

I have found that I could only bring you this portrait by selections from the diary of my heroine, premising a sketch of her time and place. I report some of the thoughts and soliloquies of a country girl, poor, solitary,— ‘a goody’ as she called herself, — growing from youth to age amid slender opportunities and usually very humble company.

Mary Moody Emerson was born just before the outbreak of the Revolution. When introduced to Lafayette at Portland, she told him that she was “in arms” at the Concord Fight. Her father, the minister of Concord, a warm patriot in 1775, went as a chaplain to the American army at Ticonderoga: he carried his infant daughter, before he went, to his mother in Malden and told her to keep the child until he returned. He died at Rutland, Vermont, of army-fever, the next year, and Mary remained at Malden with her grandmother, and, after her death, with her father’s sister, in whose house she grew up, rarely seeing her brothers and sisters in Concord. This aunt and her husband lived on a farm, were getting old, and the husband a shiftless, easy man. There was plenty of work for the little niece to do day by day, and not always bread enough in the house.

One of her tasks, it appears, was to watch for the approach of the deputy-sheriff, who might come to confiscate the spoons or arrest the uncle for debt. Later, another aunt, who had become insane, was brought hither to end her days. More and sadder work for this young girl. She had no companions, lived in entire solitude with these old people, very rarely cheered by short visits from her brothers and sisters. Her mother had married again, — married the minister who succeeded her husband in the parish at Concord, [*Dr. Ezra Ripley,*] and had now a young family growing up around her.

Her aunt became strongly attached to Mary, and persuaded the family to give the child up to her as a daughter, on some terms embracing a care of her future interests. She would leave the farm to her by will. This promise was kept; she came into possession of the property many years after, and her dealings with it

gave her no small trouble, though they give much piquancy to her letters in after years. Finally it was sold, and its price invested in a share of a farm in Maine, where she lived as a boarder with her sister, for many years. It was in a picturesque country, within sight of the White Mountains, with a little lake in front at the foot of a high hill called Bear Mountain. Not far from the house was a brook running over a granite floor like the Franconia Flume, and noble forests around. Every word she writes about this farm ("Elm Vale," Waterford,) her dealings and vexations about it, her joys and raptures of religion and Nature, interest like a romance, and to those who may hereafter read her letters, will make its obscure acres amiable.

In Malden she lived through all her youth and early womanhood, with the habit of visiting the families of her brothers and sisters on any necessity of theirs. Her good will to serve in time of sickness or of pressure was known to them, and promptly claimed, and her attachment to the youths and maidens growing up in those families was secure for any trait of talent or of character. Her sympathy for young people who pleased her was almost passionate, and was sure to make her arrival in each house a holiday.

Her early reading was Milton, Young, Akenside, Samuel Clarke, Jonathan Edwards, and always the Bible. Later, Plato, Plotinus, Marcus Antoninus, Stewart, Coleridge, Cousin, Harder, Locke, Madame De Staël, Channing, Mackintosh, Byron. Nobody can read in her manuscript, or recall the conversation of old-school people, without seeing that Milton and Young had a religious authority in their mind, and nowise the slight, merely entertaining quality of modern bards. And Plato, Aristotle, Plotinus, — how venerable and organic as Nature they are in her mind! What a subject is her mind and life for the finest novel I When I read Dante, the other day, and his paraphrases to signify with more adequateness Christ or Jehovah, whom do you think I was reminded of? Whom but Mary Emerson and her eloquent theology?

She had a deep sympathy with genius. When it was unhallowed, as in Byron, she had none the less, whilst she deplored and affected to denounce him. But she adored it when ennobled by character. She liked to notice that the greatest geniuses have died ignorant of their power and influence. She wished you to scorn to shine. "My opinion," she writes, (is) "that a mind like Byron's would never be satisfied with modern Unitarianism, — that the fiery depths of Calvinism, its high and mysterious elections to eternal bliss, beyond angels, and all its attendant wonders would have alone been fitted to fix his imagination."

Her wit was so fertile, and only used to strike, that she never used it for display, any more than a wasp would parade his sting. It was ever the will and not the phrase that concerned her. Yet certain expressions, when they marked a

memorable state of mind in her experience, recurred to her afterwards, and she would vindicate herself as having said to Dr, R — or Uncle L — so and so, at such a period of her life. But they were intensely true when first spoken. All her language was happy, but inimitable, unattainable by talent, as if caught from some dream. She calls herself “the puny pilgrim, whose sole talent is sympathy.” “I like that kind of apathy that is a triumph to overset.”

She writes to her nephew Charles Emerson, in 1833:— “I could never have adorned the garden. If I had been in aught but dreary deserts, I should have idolized my friends, despised the world and been haughty. I never expected connections and matrimony. My taste was formed in romance, and I knew I was not destined to please. I love God and his creation as I never else could. I scarcely feel the sympathies of this life enough to agitate the pool. This in general, one ease or so excepted, and even this is a relation to God through you. ‘T was so in my happiest early days, when you were at my side.’”

Destitution is the Muse of her genius, — Destitution and Death. I used to propose that her epitaph should be: “Here lies the angel of Death.” And wonderfully as she varies and poetically repeats that image in every page and day, yet not less fondly and sublimely she returns to the other, — the grandeur of humility and privation, as thus; “The chief witness which I have had of a Godlike principle of action and feeling is in the disinterested joy felt in others’ superiority. For the love of superior virtue is mine own gift from God.’ “Where were thine own intellect if others had not lived?”

She had many acquaintances among the notables of the time; and now and then in her migrations from town to town in Maine and Massachusetts, in search of a new boarding-place, discovered some preacher with sense or piety, or both. For on her arrival at any new home she was likely to steer first to the minister’s house and pray his wife to take a boarder; and as the minister found quickly that she knew all his books and many more, and made shrewd guesses at his character and possibilities, she would easily rouse his curiosity, as a person who could read his secret and tell him his fortune.

She delighted in success, in youth, in beauty, in genius, in manners. When she met a young person who interested her, she made herself acquainted and intimate with him or her at once, by sympathy, by flattery, by raillery, by anecdotes, by wit, by rebuke, and stormed the castle. None but was attracted or piqued by her interest and wit and wide acquaintance with books and with eminent names. She said she gave herself full swing in these sudden intimacies, for she knew she should disgust them soon, and resolved to have their best hours. “Society is shrewd to detect those who do not belong to her train, and seldom wastes her attentions.” She surprised, attracted, chided and denounced

her companion by turns, and pretty rapid turns. But no intelligent youth or maiden could have once met her without remembering her with interest, and learning something of value.' Scorn trifles, lift your aims: do what you are afraid to do: sublimity of character must come from sublimity of motive: these were the lessons which were urged with vivacity, in ever new language. But if her companion was dull, her impatience knew no bounds. She tired presently of dull conversations, and asked to be read to, and so disposed of the visitor. If the voice or the reading tired her, she would ask the friend if he or she would do an errand for her, and so dismiss them. If her companion were a little ambitious, and asked her opinions on books or matters on which she did not wish rude hands laid, she did not hesitate to stop the intruder with "How's your cat, Mrs. Tenner?"

"I was disappointed," she writes, "in finding my little Calvinist no companion, a cold little thing who lives in society alone, and is looked up to as a specimen of genius. I performed a mission in secretly undermining his vanity, or trying to. Alas! never done but by mortifying affliction." From the country she writes to her sister in town, "You cannot help saying that my epistle is a striking specimen of egotism. To which I can only answer that, in the country, we converse so much more with ourselves, that we are almost led to forget everybody else. The very sound of your bells and the rattling of the carriages have a tendency to divert selfishness." "This seems a world rather of trying each others' dispositions than of enjoying each others' virtues."

She had the misfortune of spinning with a greater velocity than any of the other tops. She would tear into the chaise or out of it, into the house or out of it, into the conversation, into the thought, into the character of the stranger, — disdainful of all the graduation by which her fellows time their steps: and though she might do very happily in a planet where others moved with the like velocity, she was offended here by the phlegm of all her fellow-creatures, and disgusted them by her impatience. She could keep step with no human being. Her nephew [C. C. E.] wrote of her: "I am glad the friendship with Aunt Mary is ripening. As by seeing a high tragedy, reading a true poem, or a novel like 'Corinne,' so, by society with her, one's mind is electrified and purged. She is no statute book of practical commandments, nor orderly digest of any system of philosophy, divine or human, but a Bible, miscellaneous in its parts, but one in its spirit, wherein are sentences of condemnation, promises and covenants of love that make foolish the wisdom of the world with the power of God."

Our Delphian was fantastic enough, Heaven knows, yet could always be tamed by large and sincere conversation. Was there thought and eloquence, she would listen like a child. Her aspiration and prayer would begin, and the whim and petulance in which by diseased habit she had grown to indulge without

suspecting it, was burned up in the glow of her pure and poetic spirit, which dearly loved the Infinite.

She writes: "August, 1847: Vale. — My oddities were never designed — effect of an uncalculating constitution, at first, then through isolation; and as to dress, from duty. To be singular of choice, without singular talents and virtues, is as ridiculous as ungrateful." "It is so universal with all classes to avoid contact with me that I blame none. The fact has generally, increased piety and self-love." "As a traveller enters some fine palace and finds all the doors closed, and he only allowed the use of some avenues and passages, so have I wandered from the cradle over the apartments of social affections, or the cabinets of natural or moral philosophy, the recesses of ancient and modern lore. All say — Forbear to enter the pales of the initiated by birth, wealth, talents and patronage. I submit with delight, for it is the echo of a decree from above; and from the highway hedges where I get lodging, and from the rays which burst forth when the crowd are entering these noble saloons, whilst I stand in the doors, I get a pleasing vision which is an earnest of the interminable skies where the mansions are prepared for the poor."

"To live to give pain rather than pleasure (the latter so delicious) seems the spider-like necessity of my being on earth, and I have gone on my queer way with joy, saying, "Shall the clay interrogate?" But in every actual case, 't is hard, and we lose sight of the first necessity, — here too amid works red with default in all great and grand and infinite aims. Yet with intentions disinterested, though uncontrolled by proper reverence for others."

When Mrs. Thoreau called on her one day, wearing pink ribbons, she shut her eyes, and so conversed with her for a time. By and by she said, "Mrs. Thoreau, I don't know whether you have observed that my eyes are shut." "Yes, Madam, I have observed it." "Perhaps you would like to know the reasons?" "Yes, I should." "I don't like to see a person of your age guilty of such levity in her dress."

When her cherished favorite, E. H., was at the Vale, and had gone out to walk in the forest with Hannah, her niece, Aunt Mary feared they were lost, and found a man in the next house and begged him to go and look for them. The man went and returned saying that he could not find them. "Go and cry, 'Elizabeth!'" The man rather declined this service, as he did not know Miss H. She was highly offended, and exclaimed, "God has given you a voice that you might use it in the service of your fellow-creatures. Go instantly and call 'Elizabeth' till you find them." The man went immediately, and did as he was bid, and having found them apologized for calling thus, by telling what Miss Emerson had said to him.

When some ladies of my acquaintance by an unusual chance found

themselves in her neighborhood and visited her, I told them that she was no whistle that every mouth could play on, but a quite clannish instrument, a pibroch, for example, from which none but a native Highlander could draw music.

In her solitude of twenty years, with fewest books and those only sermons, and a copy of "Paradise Lost," without covers or title-page, so that later, when she heard much of Milton and sought his work, she found it was her very book which she knew so well, — she was driven to find Nature her companion and solace. She speaks of "her attempts in Malden, to wake up the soul amid the dreary scenes of monotonous Sabbaths, when Nature looked like a pulpit."

"Malden, November 15th, 1805. — What a rich day, so fully occupied in pursuing truth that I scorned to touch a novel which for so many years I have wanted. How insipid is fiction to a mind touched with immortal views! November 16th. — I am so small in my expectations, that a week of industry delights. Rose before light every morn; visited from necessity once, and again for books; read Butler's Analogy; commented on the Scriptures; read in a little book, — Cicero's Letters, — a few: touched Shakspeare, — washed, carded, cleaned house, and baked. To-day cannot recall an error, nor scarcely a sacrifice, but more fulness of content in the labors of a day never was felt. There is a sweet pleasure in bending to circumstances while superior to them.

"Malden, September, 1807. — The rapture of feeling I would part from, for days more devoted to higher discipline. But when Nature beams with such excess of beauty, when the heart thrills with hope in its Author, — feels that it is related to him more than by any ties of Creation, — it exults, too fondly perhaps for a state of trial. But in dead of night, nearer morning, when the eastern stars glow or appear to glow with more indescribable lustre, a lustre which penetrates the spirit with wonder and curiosity, — then, however awed, who can fear? Since Sabbath, Aunt B — [*the insane aunt*] was brought here. Ah! mortifying sight! instinct perhaps triumphs over reason, and every dignified respect to herself, in her anxiety about recovery, and the smallest means connected. Not one wish of others detains her, not one care. But it alarms me not, I shall delight to return to God. His name my fullest confidence. His sole presence ineffable pleasure.

"I walked yesterday five or more miles, lost to mental or heart existence, through fatigue, — just fit for the society I went into, all mildness and the most commonplace virtue. The lady is celebrated for her cleverness, and she was never so good to me. Met a lady in the morning walk, a foreigner, — conversed on the accomplishments of Miss T. My mind expanded with novel and innocent pleasure. Ah! were virtue, and that of dear heavenly meekness attached by any

necessity to a lower rank of genteel people, who would sympathize with the exalted with satisfaction? But that is not the case, I believe. A mediocrity does seem to me more distant from eminent virtue than the extremes of station; though after all it must depend on the nature of the heart. A mediocre mind will be deranged in either extreme of wealth or poverty, praise or censure, society or solitude. The feverish lust of notice perhaps in all these cases would injure the heart of common refinement and virtue.”

Later she writes of her early days in Malden: “When I get a glimpse of the revolutions of nations — that retribution which seems forever going on in this part of creation, — I remember with great satisfaction that from all the ills suffered, in childhood and since, from others, I felt that it was rather the order of things than their individual fault. It was from being early impressed by my poor unpractical aunt, that Providence and Prayer were all in all. Poor woman! Could her own temper in childhood or age have been subdued, how happy for herself, who had a warm heart; but for me would have prevented those early lessons of fortitude, which her caprices taught me to practise. Had I prospered in life, what a proud, excited being, even to feverishness, I might have been. Loving to shine, flattered and flattering, anxious, and wrapped in others, frail and feverish as myself.”

She alludes to the early days of her solitude, sixty years afterward, on her own farm in Maine, speaking sadly the thoughts suggested by the rich autumn landscape around her: “Ah! as I walked out this afternoon, so sad was wearied Nature that I felt her whisper to me, ‘Even these leaves you use to think my better emblems have lost their charm on me too, and I weary of my pilgrimage, — tired that I must again be clothed in the grandeurs of winter, and anon be bedizened in flowers and cascades. Oh, if there be a power superior to me, — and that there is, my own dread fetters proclaim, — when will He let my lights go out, my tides cease to an eternal ebb? Oh for transformation! I am not infinite, nor have I power or will, but bound and imprisoned, the tool of mind, even of the beings I feed and adorn. Vital, I feel not: not active, but passive, and cannot aid the creatures which seem my progeny, — myself. But you are ingrate to tire of me, now you want to look beyond. ‘T was I who soothed your thorny childhood, though you knew me not, and you were placed in my most leafless waste. Yet I comforted thee when going on the daily errand, fed thee with my mallows, on the first young day of bread failing. More, I led thee when thou knewest not a syllable of my active Cause, (any more than if it had been dead eternal matter,) to that Cause; and from the solitary heart taught thee to say, at first womanhood, Alive with God is enough,— ‘t is rapture.’”

“This morning rich in existence; the remembrance of past destitution in the

deep poverty of my aunt, and her most unhappy temper; of bitterer days of youth and age, when my senses and understanding seemed but means of labor, or to learn my own unpopular destiny, and that — but no more; — joy, hope and resignation unite me to Him whose mysterious Will adjusts everything, and the darkest and lightest are alike welcome. Oh! could this state of mind continue, death would not be longed for.” “I felt, till above twenty years old, as though Christianity were as necessary to the world as existence; — was ignorant that it was lately promulged, or partially received.” Later: “Could I have those hours in which in fresh youth I said, To obey God is joy, though there were no hereafter, I should rejoice, though returning to dust.”

“Folly follows me as the shadow does the form. Yet my whole life devoted to find some new truth which will link me closer to God. And the simple principle which made me say, in youth and laborious poverty, that, should He make me a blot on the fair face of his Creation, I should rejoice in His will, has never been equalled, though it returns in the long life of destitution like an Angel. I end days of fine health and cheerfulness without getting upward now. How did I use to think them lost! If more liberal views of the divine government make me think nothing lost which carries me to His now hidden presence, there may be danger of losing and causing others the loss of that awe and sobriety so indispensable.”

She was addressed and offered marriage by a man of talents, education and good social position, whom she respected. The proposal gave her pause and much to think, but after consideration she refused it, I know not on what grounds: but a few allusions to it in her diary suggest that it was a religious act, and it is easy to see that she could hardly promise herself sympathy in her religious abandonment with any but a rarely-found partner.

“1807. Jan. 19, Malden [*alluding to the sale of her farm*]. Last night I spoke two sentences about that foolish place, which I most bitterly lament, — not because they were improper, but they arose from anger. It is difficult, when we have no kind of barrier, to command our feelings. But this shall teach me. It humbles me beyond anything I have met, to find myself for a moment affected with hope, fear, or especially anger, about interest. But I did overcome and return kindness for the repeated provocations. What is it? My uncle has been the means of lessening my property. Ridiculous to wound him for that. He was honestly seeking his own. But at last, this very night, the bargain is closed, and I am delighted with myself: — my dear self has done well. Never did I so exult in a trifle. Happy beginning of my bargain, though the sale of the place appears to me one of the worst things for me at this time.”

“Jan. 21. Weary at times of objects so tedious to hear and see. O the power of vision, then the delicate power of the nerve which receives impressions from

sounds! If ever I am blest with a social life, let the accent be grateful. Could I at times be regaled with music, it would remind me that there are *sounds*. Shut up in this severe weather with careful, infirm, afflicted age, it is wonderful, my spirits: hopes I can have none. Not a prospect but is dark on earth, as to knowledge and joy from externals: but the prospect of a dying bed reflects lustre on all the rest.

“The evening is fine, but I dare not enjoy it. The moon and stars reproach me, because I had to do with mean fools. Should I take so much care to save a few dollars? Never was I so much ashamed. Did I say with what rapture I might dispose of them to the poor? Pho! self-preservation, dignity, confidence in the future, contempt of trifles! Alas, I am disgraced. Took a momentary revenge on — for worrying me.”

“Jan. 30. I walked to Captain Dexter’s. Sick. Promised never to put that ring on. Ended miserably the month which began so worldly.

“It was the choice of the Eternal that gave the glowing seraph his joys, and to me my vile imprisonment. I adore Him. It was His will that gives my superiors to shine in wisdom, friendship, and ardent pursuits, while I pass my youth, its last traces, in the veriest shades of ignorance and complete destitution of society. I praise Him, though when my strength of body falters, it is a trial not easily described.”

“True, I must finger the very farthing candleends, — the duty assigned to my pride; and indeed so poor are some of those allotted to join me on the weary needy path, that’t is benevolence enjoins selfdenial. Could I but dare it in the bread-and-water diet! Could I but live free from calculation, as in the first half of life, when my poor aunt lived. I had ten dollars a year for clothes and charity, and I never remember to have been needy, though I never had but two or three aids in those six years of earning my home. That ten dollars my dear father earned, and one hundred dollars remain, and I can’t bear to take it, and don’t know what to do. Yet I would not breathe to — or — my want. ‘T is only now that I would not let — pay my hotel-bill. They have enough to do. Besides, it would send me packing to depend for anything. Better anything than dishonest dependence, which robs the poorer, and despoils friendship of equal connection.”

In 1830, in one of her distant homes, she reproaches herself with some sudden passion she has for visiting her old home and friends in the city, where she had lived for a while with her brother [*Mr. Emerson’s father*] and afterwards with his widow. “Do I yearn to be in Boston? ‘T would fatigue, disappoint; I, who have so long despised means, who have always found it a sort of rebellion to seek them? Yet the old desire for the worm is not so greedy as [*mine*] to find

myself in my old haunts.”

1833. “The difficulty of getting places of low board for a lady, is obvious. And, at moments, I am tired out. Yet how independent, how better than to hang on friends! And sometimes I fancy that I am emptied and peeled to carry some seed to the ignorant, which no idler wind can so well dispense.” “Hard to contend for a health which is daily used in petition for a final close.” “Am I, poor victim, swept on through the sternest ordinations of nature’s laws which slay? yet I’ll trust.” “There was great truth in what a pious enthusiast said, that, if God should cast him into hell, he would yet clasp his hands around Him.”

“Newburyport, Sept. 1822. High, solemn, entrancing noon, prophetic of the approach of the Presiding Spirit of Autumn. God preserve my reason! Alone, feeling strongly, fully, that I have deserved nothing; according to Adam Smith’s idea of society, ‘done nothing;’ doing nothing, never expect to; yet joying in existence, perhaps striving to beautify one individual of God’s creation.

“Our civilization is not always mending our poetry. It is sauced and spiced with our complexity of arts and inventions, but lacks somewhat of the grandeur that belongs to a Doric and unphilosophical age. In a religious contemplative public it would have less outward variety, but simpler and grander means; a few pulsations of created beings a few successions of acts, a few lamps held out in the firmament enable us to talk of Time, make epochs, write histories, — to do more, — to date the revelations of God to man. But these lamps are held to measure out some of the moments of eternity, to divide the history of God’s operations in the birth and death of nations, of worlds. It is a goodly name for our notions of breathing, suffering, enjoying, acting. We personify it. We call it by every name of fleeting, dreaming, vapping imagery. Yet it is nothing. We exist in eternity. Dissolve the body and the night is gone, the stars are extinguished, and we measure duration by the number of our thoughts, by the activity of reason, the discovery of truths, the acquirement of virtue, the approach to God. And the gray-headed god throws his shadows all around, and his slaves catch, now at this, now at that, one at the halo he throws around poetry, or pebbles, bugs, or bubbles. Sometimes they climb, sometimes creep into the meanest holes — but they are all alike in vanishing, like the shadow of a cloud.”

To her nephew Charles: “War; what do I think of it? Why in your ear I think it so much better than oppression that if it were ravaging the whole geography of despotism it would be an omen of high and glorious import. Channing paints its miseries, but does he know those of a worse war, — private animosities, pinching, bitter warfare of the human heart, the cruel oppression of the poor by the rich, which corrupts old worlds? How much better, more honest, are

storming and conflagration of towns! They are but letting blood which corrupts into worms and dragons. A war-trump would be harmony to the jars of theologians and statesmen such as the papers bring. It was the glory of the Chosen People, nay, it is said there was war in Heaven. War is among the means of discipline, the rough meliorators, and no worse than the strife with poverty, malice and ignorance. War devastates the conscience of men, yet corrupt peace does not less. And if you tell me of the miseries of the battle-field, with the sensitive Channing, (of whose love of life I am ashamed), what of a few days of agony, what of a vulture being the bier, tomb and parson of a hero, compared to the long years of sticking on a bed and wished away? For the widows and orphans — Oh, I could give facts of the long-drawn years of imprisoned minds and hearts, which uneducated orphans endure!

“O Time! Thou loiterer. Thou, whose might has laid low the vastest and crushed the worm, retest on thy hoary throne, with like potency over thy agitations and thy graves. When will thy routines give way to higher and lasting institutions? When thy trophies and thy name and all its wizard forms be lost in the Genius of Eternity? In Eternity, no deceitful promises, no fantastic illusions, no riddles concealed by thy shrouds, none of thy Arachnean webs, which decoy and destroy. Hasten to finish thy motley work, on which frightful Gorgons are at play, spite of holy ghosts. ‘T is already moth-eaten and its shuttles quaver, as the beams of the loom are shaken.

“Sat. 25. Hail requiem of departed Time! Never was incumbent’s funeral followed by expectant heir with more satisfaction. Yet not his hope is mine. For in the weary womb are prolific numbers of the same sad hour, colored by the memory of defeats in virtue, by the prophecy of others, more dreary, blind and sickly. Yet He who formed thy web, who stretched thy warp from long ages, has graciously given man to throw his shuttle, or feel he does, and irradiate the filling woof with many a flowery rainbow, — labors, rather — evanescent efforts, which will wear like flowerets in brighter soils; — has attuned his mind in such unison with the harp of the universe, that he is never without some chord of hope’s music. ‘T is not in the nature of existence, while there is a God, to be without the pale of excitement. When the dreamy pages of life seem all turned and folded down to very weariness, even this idea of those who fill the hour with crowded virtues, lifts the spectator to other worlds, and he adores the eternal purposes of Him who lifteth up and casteth down, bringeth to dust, and raiseth to the skies. ‘T is a strange deficiency in Brougham’s title of a System of Natural Theology, when the moral constitution of the being for whom these contrivances were made is not recognized. The wonderful inhabitant of the building to which unknown ages were the mechanics, is left out as to that part where the Creator

had put his own lighted candle, placed a vice-gerent. Not to complain of the poor old earth's chaotic state, brought so near in its long and gloomy transmutings by the geologist. Yet its youthful charms as decked by the hand of Moses' Cosmogony, will linger about the heart, while Poetry succumbs to Science. Yet there is a sombre music in the whirl of times so long gone by. And the bare bones of this poor embryo earth may give the idea of the Infinite far, far better than when dignified with arts and industry: — its oceans, when beating the symbols of ceaseless ages, than when covered with cargoes of war and oppression. How grand its preparation for souls, — souls who were to feel the Divinity, before Science had dissected the emotions, and applied its steely analysis to that state of being which recognizes neither psychology nor element.

“September, 1836. Vale. The mystic dream which is shed over the season. O, to dream more deeply; to lose external objects a little more! Yet the hold on them is so slight, that duty is lost sight of perhaps, at times. Sadness is better than walking talking acting somnambulism. Yes, this entire solitude with the Being who makes the powers of life! Even Fame, which lives in other states of Virtue, palls. Usefulness, if it requires action, seems less like existence than the desire of being absorbed in God, retaining consciousness. Number the wastepieces of the journey, — the secret martyrdom of youth, heavier than the stake, I thought, the narrow limits which know no outlet, the bitter dregs of the cup, — and all are sweetened by the purpose of Him I love. The idea of being no mate for those intellectualists I've loved to admire, is no pain. Hereafter the same solitary joy will go with me, were I not to live, as I expect, in the vision of the Infinite. Never do the feelings of the Infinite, and the consciousness of finite frailty and ignorance, harmonize so well as at this mystic season in the deserts of life. Contradictions the modern German says, of the Infinite and finite.”

I sometimes fancy I detect in her writings, a certain — shall I say — polite and courtly homage to the name and dignity of Jesus, not at all spontaneous, but growing out of her respect to the Revelation, and really Telling and betraying her organic dislike to any interference, any mediation between her and the Author of her being, assurance of whose direct dealing with her she incessantly invokes: for example, the parenthesis “Saving thy presence, Priest and Medium of all this approach for a sinful creature!” “Were it possible that the Creator was not virtually present with the spirits and bodies which He has made: — if it were in the nature of things possible He could withdraw himself, — I would hold on to the faith, that, at some moment of His existence, I was present: that, though cast from Him, my sorrows, my ignorance and meanness were a part of His plan; my death, too, however long and tediously delayed to prayer, — was decreed, was fixed. Oh how weary in youth — more so scarcely now, not whenever I can

breathe, as it seems, the atmosphere of the Omnipresence: then I ask not faith nor knowledge; honors, pleasures, labors, I always refuse, compared to this divine partaking of existence; — but how rare, how dependent on the organs through which the soul operates!

The sickness of the last week was fine medicine; pain disintegrated the spirit, or became spiritual. I rose, — I felt that I had given to God more perhaps than an angel could, — had promised Him in youth that to be a blot on this fair world, at His command, would be acceptable. Constantly offer myself to continue the obscurest and loneliest thing ever heard of, with one proviso, — His agency. Yes, love Thee, and all Thou dost, while Thou sheddest frost and darkness on every path of mine.”

For years she had her bed made in the form of a coffin; and delighted herself with the discovery of the figure of a coffin made every evening on their sidewalk, by the shadow of a church tower which adjoined the house.

Saladin caused his shroud to be made, and carried it to battle as his standard. She made up her shroud, and death still refusing to come, and she thinking it a pity to let it lie idle, wore it as a night-gown, or a day-gown, nay, went out to ride in it, on horseback, in her mountain roads, until it was worn out. Then she had another made up, and as she never travelled without being provided for this dear and indispensable contingency, I believe she wore out a great many.

“1833. I have given up, the last year or two, the hope of dying. In the lowest ebb of health nothing is ominous; diet and exercise restore. So it seems best to get that very humbling business of insurance. I enter my dear sixty the last of this month.” “1835, June 16. Tedious indisposition: — hoped, as it took a new form, it would open the cool, sweet grave. Now existence itself in any form is sweet. Away with knowledge; — God alone. He communicates this our condition and humble waiting, or I should never perceive Him. Science, Nature, — O, I’ve yearned to open some page; — not now, too late. Ill health and nerves. O dear worms, — how they will at some sure time take down this tedious tabernacle, most valuable companions, instructors in the science of mind, by gnawing away the meshes which have chained it. A very Beatrice in showing the Paradise. Yes, I irk under contact with forms of depravity, while I am resigned to being nothing, never expect a palm, a laurel, hereafter.”

“1826, July. If one could choose, and without crime be gibbeted, — were it not altogether better than the long drooping away by age without mentality or devotion? The vulture and crow would *caw caw*, and, unconscious of any deformity in the mutilated body, would relish their meal, make no grimace of affected sympathy, nor suffer any real compassion. I pray to die, though happier myriads and mine own companions press nearer to the throne. His coldest beam

will purify and render me forever holy. Had I the highest place of acquisition and diffusing virtue here, the principle of human sympathy would be too strong for that rapt emotion, that severe delight which I crave; nay for that kind of obscure virtue which is so rich to lay at the feet of the Author of morality. Those economists (Adam Smith) who say nothing is added to the wealth of a nation but what is dug out of the earth, and that, whatever disposition of virtue may exist, unless something is done for society, deserves no fame, — why I am content with such paradoxical kind of facts; but one secret sentiment of virtue, disinterested (or perhaps not), is worthy, and will tell, in the world of spirits, of God's immediate presence, more than the blood of many a martyr who has it not." "I have heard that the greatest geniuses have died ignorant of their power and influence on the arts and sciences. I believe thus much, that their large perception consumed their egotism, or made it impossible for them to make small calculations."

"That greatest of all gifts, however small my power of receiving, — the capacity, the element to love the All-perfect, without regard to personal happiness: — happiness?— 't is itself." She checks herself amid her passionate prayers for immediate communion with God;— "I who never made a sacrifice to record, — I cowering in the nest of quiet for so many years; — I indulge the delight of sympathizing with great virtues, — blessing their Original: Have I this right?" "While I am sympathizing in the government of God over the world, perhaps I lose nearer views. Well, I learned his existence *a priori*. No object of science or observation ever was pointed out to me by my poor aunt, but His Being and commands; and oh how much I trusted Him with every event till I learned the order of human events from the pressure of wants."

"What a timid, ungrateful creature! Fear the deepest pit-falls of age, when pressing on, in imagination at least, to Him with whom a day is a thousand years, — with whom all miseries and irregularities are conforming to universal good! Shame on me who have learned within three years to sit whole days in peace and enjoyment without the least apparent benefit to any, or knowledge to myself; — resigned, too, to the memory of long years of slavery passed in labor and ignorance, to the loss of that character which I once thought and felt so sure of, without ever being conscious of acting from calculation."

Her friends used to say to her, "I wish you joy of the worm." And when at last her release arrived, the event of her death had really such a comic tinge in the eyes of every one who knew her, that her friends feared they might, at her funeral, not dare to look at each other, lest they should forget the serious proprieties of the hour.

She gave high counsels. It was the privilege of certain boys to have this

immeasurably high standard indicated to their childhood; a blessing which nothing else in education could supply. It is frivolous to ask,— “And was she ever a Christian in practice?” Cassandra uttered, to a frivolous, skeptical time, the arcana of the Gods: but it is easy to believe that Cassandra domesticated in a lady’s house would have proved a troublesome boarder. Is it the less desirable to have the lofty abstractions because the abstractionist is nervous and irritable? Shall we not keep Flamsteed and Herschel in the observatory, though it should even be proved that they neglected to rectify their own kitchen clock? It is essential to the safety of every mackerel fisher that latitudes and longitudes should be astronomically ascertained; and so every banker, shopkeeper and wood-sawyer has a stake in the elevation of the moral code by saint and prophet. Very rightly, then, the Christian ages, proceeding on a grand instinct, have said: Faith alone, Faith alone.

SAMUEL HOAR.

“Magno se iudice quisque tuetur; Victrix causa deis placuit sed victa Catoni.”

A year ago, how often did we meet Beneath these elms, once more in sober bloom, Thy tall, sad figure pacing down the street, And now the robin sings above thy tomb! Thy name on other shores may ne'er be known, Though Rome austere no graver consul knew, But Massachusetts her true son shall own; Out of her soil thy hardy virtues grew. She loves the man that chose the conquered cause, With upright soul that bowed to God alone; The clean hands that upheld her equal laws, The old religion ne'er to be outgrown; The cold demeanor, the warm heart beneath, The simple grandeur of thy life and death. F. B. Sanborn. April, 1857.

[Written on the 4th Nov., 1856, the day when Mr. Buchanan was chosen President of the United States. Reprinted from Putnam's Magazine.]

Here is a day on which more public good or evil is to be done than was ever done on any day. And this is the pregnant season, when our old Roman, Samuel Hoar, has chosen to quit this world. *Ab iniquo certamine indignabundus recessit.*

He was born under a Christian and humane star, full of mansuetude and nobleness, honor and charity; and, whilst he was willing to face every disagreeable duty, whilst he dared to do all that might beseem a man, his self-respect restrained him from any foolhardiness. The Homeric heroes, when they saw the gods mingling in the fray, sheathed their swords. So did not he feel any call to make it a contest of personal strength with mobs or nations; but when he saw the day and the gods went against him, he withdrew, but with an unaltered belief. All was conquered *præter atrocem animum Catonis.*

At the time when he went to South Carolina as the Commissioner of Massachusetts, in 1844, whilst staying in Charleston, pending his correspondence with the governor and the legal officers, he was repeatedly warned that it was not safe for him to appear in public, or to take his daily walk, as he had done, unattended by his friends, in the streets of the city. He was advised to withdraw to private lodgings, which were eagerly offered him by friends. He rejected the advice, and refused the offers, saying that he was old, and his life was not worth much, but he had rather the boys should troll his old head like a foot-ball in their streets, than that he should hide it. And he continued the uniform practice of his daily walk into all parts of the city. But when the mob of Charleston was assembled in the streets before his hotel, and a deputation of

gentlemen waited upon him in the hall to say they had come with the unanimous voice of the State to remove him by force, and the carriage was at the door, he considered his duty discharged to the last point of possibility. The force was apparent and irresistible; the legal officer's part was up; it was now time for the military officer to be sent; and he said, "Well, gentlemen, since it is your pleasure to use force, I must go." But his opinion was unchanged.

In like manner now, when the votes of the Free States, as shown in the recent election in the State of Pennsylvania, had disappointed the hopes of mankind and betrayed the cause of freedom, he considered the question of justice and liberty, for his age, lost, and had no longer the will to drag his days through the dishonors of the long defeat, and promptly withdrew, but with unaltered belief.

He was a very natural, but a very high character; a man of simple tastes, plain and true in speech, with a clear perception of justice, and a perfect obedience thereto in his action; of a strong understanding, precise and methodical, which gave him great eminence in the legal profession. It was rather his reputation for severe method in his intellect than any special direction in his studies that caused him to be offered the mathematical chair in Harvard University, when vacant in 1806. The severity of his logic might have inspired fear, had it not been restrained by his natural reverence, which made him modest and courteous, though his courtesy had a grave and almost military air. He combined a uniform self-respect with a natural reverence for every other man; so that it was perfectly easy for him to associate with farmers, and with plain, uneducated, poor men, and he had a strong, unaffected interest in farms, and crops, and weathers, and the common incidents of rural life. It was just as easy for him to meet on the same floor, and with the same plain courtesy, men of distinction and large ability. He was fond of farms and trees, fond of birds, and attentive to their manners and habits; addicted to long and retired walks; temperate to asceticism, for no lesson of his experience was lost on him, and his self-command was perfect. Though rich, of a plainness and almost poverty of personal expenditure, yet liberal of his money to any worthy use, readily lending it to young men, and industrious men, and by no means eager to reclaim of them either the interest or the principal. He was open-handed to every charity, and every public claim that had any show of reason in it. When I talked with him one day of some inequality of taxes in the town, he said it was his practice to pay whatever was demanded; for, though he might think the taxation large and very unequally proportioned, yet he thought the money might as well go in this way as in any other.

The strength and the beauty of the man lay in the natural goodness and justice of his mind, which, in manhood and in old age, after dealing all his life with weighty private and public interests, left an infantile innocence, of which we

have no second or third example, — the strength of a chief united to the modesty of a child. He returned from courts or congresses to sit down, with unaltered humility, in the church or in the town-house, on the plain wooden bench where honor came and sat down beside him.

He was a man in whom so rare a spirit of justice visibly dwelt, that if one had met him in a cabin or in a forest he must still seem a public man, answering as sovereign state to sovereign state; and might easily suggest Milton's picture of John Bradshaw, that "he was a consul from whom the fasces did not depart with the year, but in private seemed ever sitting in judgment on kings." Everybody knew where to find him. What he said, that would he do. But he disdained any arts in his speech: he was not adorned with any graces of rhetoric,

"But simple truth his utmost skill."

So cautious was he, and tender of the truth, that he sometimes wearied his audience with the pains he took to qualify and verify his statements, adding clause on clause to do justice to all his conviction. He had little or no power of generalization. But a plain way he had of putting his statement with all his might, and now and then borrowing the aid of a good story, or a farmer's phrase, whose force had imprinted it on his memory, and, by the same token, his hearers were bound to remember his point.

The impression he made on juries was honorable to him and them. For a long term of years, he was at the head of the bar in Middlesex, practising, also, in the adjoining counties. He had one side or the other of every important case, and his influence was reckoned despotic, and sometimes complained of as a bar to public justice. Many good stories are still told of the perplexity of jurors who found the law and the evidence on one side, and yet Squire Hoar had said that he believed, on his conscience, his client entitled to a verdict. And what Middlesex jury, containing any God-fearing men in it, would hazard an opinion in flat contradiction to what Squire Hoar believed to be just? He was entitled to this respect; for he discriminated in the business that was brought to him, and would not argue a rotten cause; and he refused very large sums offered him to undertake the defense of criminal persons.

His character made him the conscience of the community in which he lived. And in many a town it was asked, "What does Squire Hoar think of this?" and in political crises, he was entreated to write a few lines to make known to good men in Chelmsford, or Marlborough, or Shirley, what that opinion was. I used to feel that his conscience was a kind of meter of the degree of honesty in the country, by which on each occasion it was tried, and sometimes found wanting. I am sorry to say he could not be elected to Congress a second time from

Middlesex.

And in his own town, if some important end was to be gained, — as, for instance, when the county commissioners refused to rebuild the burned courthouse, on the belief that the courts would be transferred from Concord to Lowell, — all parties combined to send Mr. Hoar to the Legislature, where his presence and speech, of course, secured the rebuilding; and, of course also, having answered our end, we passed him by and elected somebody else at the next term.

His head, with singular grace in its lines, had a resemblance to the bust of Dante. He retained to the last the erectness of his tall but slender form, and not less the full strength of his mind. Such was, in old age, the beauty of his person and carriage, as if the mind radiated, and made the same impression of probity on all beholders. His beauty was pathetic and touching in these latest days, and, as now appears, it awakened a certain tender fear in all who saw him, that the costly ornament of our homes and halls and streets was speedily to be removed. Yet how solitary he looked, day by day in the world, this man so revered, this man of public life, of large acquaintance and wide family connection! Was it some reserve of constitution, or was it only the lot of excellence, that with aims so pure and single, he seemed to pass out of life alone, and, as it were, unknown to those who were his content poraries and familiars?

[The following sketch of Mr. Hoar from a slightly different point of view, was prepared by Mr. Emerson, shortly after the above paper appeared in "Putnam's Magazine" (December, 1856), at the request of the Editor of the "Monthly Religious Magazine," and was printed there, January, 1857. It is here appended as giving some additional traits of a characteristic figure which may serve as a pendant in some respects to that of Dr. Ripley.]

Mr. Hoar was distinguished in his profession by the grasp of his mind, and by the simplicity of his means. His ability lay in the clear apprehension and the powerful statement of the material points of his case. He soon possessed it, and he never possessed it better, and he was equally ready at any moment to state the facts. He saw what was essential and refused whatever was not, so that no man embarrassed himself less with a needless array of books and evidences of contingent value.

These tactics of the lawyer were the tactics of his life. He had uniformly the air of knowing just what he wanted and of going to that in the shortest way. It is singular that his character should make so deep an impression, standing and working as he did on so common a ground. He was neither spiritualist nor man of genius nor of a literary nor an executive talent. In strictness the vigor of his understanding was directed on the ordinary domestic and municipal well-being.

Society had reason to cherish him, for he was a main pillar on which it leaned. The useful and practical super-abounded in his mind, and to a degree which might be even comic to young and poetical persons. If he spoke of the engagement of two lovers, he called it a contract. Nobody cared to speak of thoughts or aspirations to a black-letter lawyer, who only studied to keep men out of prison, and their lands out of attachment. Had you read Swedenborg or Plotinus to him, he would have waited till you had done, and answered you out of the Revised Statutes. He had an affinity for mathematics, but it was a taste rather than a pursuit, and of the modern sciences he liked to read popular books on geology. Yet so entirely was this respect to the ground plan and substructure of society a natural ability, and from the order of his mind, and not for “tickling commodity,” that it was admirable, as every work of nature is, and like one of those opaque crystals, big beryls weighing tons, which are found in Acworth, New Hampshire, not less perfect in their angles and structure, and only less beautiful, than the transparent topazes and diamonds. Meantime, whilst his talent and his profession led him to guard the material wealth of society, a more disinterested person did not exist. And if there were regions of knowledge not open to him, he did not pretend to them. His modesty was sincere. He had a childlike innocence and a native temperance, which left him no temptations, and enabled him to meet every comer with a free and disengaged courtesy that had no memory in it.

“Of wrong and outrage with which earth is filled.”

No person was more keenly alive to the stabs which the ambition and avarice of men inflicted on the common-wealth. Yet when politicians or speculators approached him, these memories left no scar; his countenance had an unalterable tranquillity and sweetness; he had nothing to repent of, — let the cloud rest where it might, he dwelt in eternal sunshine.

He had his birth and breeding in a little country town, where the old religion existed in strictness, and spent all his energy in creating purity of manners and careful education. No art or practice of the farm was unknown to him, and the farmers greeted him as one of themselves, whilst they paid due homage to his powers of mind and to his virtues.

He loved the dogmas and the simple usages of his church; was always an honored and sometimes an active member. He never shrunk from a disagreeable duty. In the time of the Sunday laws he was a tithing-man; under the Maine Law he was a prosecutor of the liquor dealers. It seemed as if the New England church had formed him to be its friend and defender; the lover and assured friend of its parish by-laws, of its ministers, its rites, and its social reforms. He was a

model of those formal but reverend manners which make what is called a gentleman of the old school, so called under an impression that the style is passing away, but which, I suppose, is an optical illusion, as there are always a few more of the class remaining, and always a few young men to whom these manners are native.

I have spoken of his modesty; he had nothing to say about himself; and his sincere admiration was commanded by certain heroes of the profession, like Judge Parsons and Judge Marshall, Mr. Mason and Mr. Webster. When some one said, in his presence, that Chief Justice Marshall was failing in his intellect, Mr. Hoar remarked that "Judge Marshall could afford to lose brains enough to furnish three or four common men, before common men would find it out." He had a huge respect for Mr. Webster's ability, with whom he had often occasion to try his strength at the bar, and a proportionately deep regret at Mr. Webster's political course in his later years.

There was no elegance in his reading or tastes beyond the crystal clearness of his mind. He had no love of poetry; and I have heard that the only verse that he was ever known to quote was the Indian rule:

"When the oaks are in the gray,
Theu, farmers, plant away."

But I find an elegance in his quiet but firm withdrawal from all business in the courts which he could drop without manifest detriment to the interests involved (and this when in his best strength), and his self-dedication thenceforward to unpaid services of the Temperance and Peace and other philanthropic societies, the Sunday Schools, the cause of Education, and specially of the University, and to such political activities as a strong sense of duty and the love of order and of freedom urged him to forward.

Perfect in his private life, the husband, father, friend, he was severe only with himself. He was as if on terms of honor with those nearest him, nor did he think a lifelong familiarity could excuse any omission of courtesy from him. He carried ceremony finely to the last. But his heart was all gentleness, gratitude and bounty.

With beams December planets dart,
His cold eye truth and conduct scanned;
July was in his sunny heart,
October in his liberal hand.

THOREAU.

A Queen rejoices in her peers,
And wary Nature knows her own,
By court and city, dale and down,
And like a lover volunteers.
And to her son will treasures more,
And more to purpose, freely pour
In one wood walk, than learned men
Will find with glass in ten times ten.
It seemed as if the breezes brought him,
It seemed as if the sparrows taught him,
As if by secret sign he knew
Where in far fields the orchis grew.

[Part of this paper was the Address delivered by Mr. Emerson at the funeral of Mr. Thoreau, in May, 1862. In the following summer it was enlarged and printed in the "Atlantic Monthly" in its present form.]

Henry David Thoreau was the last male descendant of a French ancestor who came to this country from the Isle of Guernsey. His character exhibited occasional traits drawn from this blood, in singular combination with a very strong Saxon genius.

He was born in Concord, Massachusetts, on the 12th of July, 1817. He was graduated at Harvard College in 1837, but without any literary distinction. An iconoclast in literature, he seldom thanked colleges for their service to him, holding them in small esteem, whilst yet his debt to them was important. After leaving the University, he joined his brother in teaching a private school, which he soon renounced. His father was a manufacturer of lead-pencils, and Henry applied himself for a time to this craft, believing he could make a better pencil than was then in use. After completing his experiments, he exhibited his work to chemists and artists in Boston, and having obtained their certificates to its excellence and to its equality with the best London manufacture, he returned home contented. His friends congratulated him that he had now opened his way to fortune. But he replied, that he should never make another pencil. "Why should I? I would not do again what I have done once." He resumed his endless walks and miscellaneous studies, making every day some new acquaintance with Nature, though as yet never speaking of zoology or botany, since, though very studious of natural facts, he was incurious of technical and textual science.

At this time, a strong, healthy youth, fresh from college, whilst all his companions were choosing their profession, or eager to begin some lucrative employment, it was inevitable that his thoughts should be exercised on the same question, and it required rare decision to refuse all the accustomed paths and keep his solitary freedom at the cost of disappointing the natural expectations of his family and friends: all the more difficult that he had a perfect probity, was exact in securing his own independence, and in holding every man to the like duty. But Thoreau never faltered. He was a born protestant. He declined to give up his large ambition of knowledge and action for any narrow craft or profession, aiming at a much more comprehensive calling, the art of living well. If he slighted and defied the opinions of others, it was only that he was more intent to reconcile his practice with his own belief. Never idle or self-indulgent, he preferred, when he wanted money, earning it by some piece of manual labor agreeable to him, as building a boat or a fence, planting, grafting, surveying, or other short work, to any long engagements. With his hardy habits and few wants, his skill in wood-craft, and his powerful arithmetic, he was very competent to live in any part of the world. It would cost him less time to supply his wants than another. He was therefore secure of his leisure.

A natural skill for mensuration, growing out of his mathematical knowledge and his habit of ascertaining the measures and distances of objects which interested him, the size of trees, the depth and extent of ponds and rivers, the height of mountains, and the air-line distance of his favorite summits, — this, and his intimate knowledge of the territory about Concord, made him drift into the profession of land-surveyor. It had the advantage for him that it led him continually into new and secluded grounds, and helped his studies of Nature. His accuracy and skill in this work were readily appreciated, and he found all the employment he wanted.

He could easily solve the problems of the surveyor, but he was daily beset with graver questions, which he manfully confronted. He interrogated every custom, and wished to settle all his practice on an ideal foundation. He was a protestant a, *outrance*, and few lives contain so many renunciations. He was bred to no profession; he never married; he lived alone; he never went to church; he never voted; he refused to pay a tax to the State; he ate no flesh, he drank no wine, he never knew the use of tobacco; and, though a naturalist—he used neither trap nor gun. He chose, wisely no doubt for himself, to be the bachelor of thought and Nature. He had no talent for wealth, and knew how to be poor without the least hint of squalor or inelegance. Perhaps he fell into his way of living without forecasting it much, but approved it with later wisdom. “I am often reminded,” he wrote in his journal, “that if I had bestowed on me the

wealth of Cræsus, my aims must be still the same, and my means essentially the same." He had no temptations to fight against, no appetites, no passions, no taste for elegant trifles. A fine house, dress, the manners and talk of highly cultivated people were all thrown away on him. He much preferred a good Indian, and considered these refinements as impediments to conversation, wishing to meet his companion on the simplest terms. He declined invitations to dinner-parties, because there each was in every one's way, and he could not meet the individuals to any purpose. "They make their pride," he said, "in making their dinner cost much; I make my pride in making my dinner cost little." When asked at table what dish he preferred, he answered, "The nearest." He did not like the taste of wine, and never had a vice in his life. He said,— "I have a faint recollection of pleasure derived from smoking dried lily-stems, before I was a man. I had commonly a supply of these. I have never smoked anything more noxious."

He chose to be rich by making his wants few, and supplying them himself. In his travels, he used the railroad only to get over so much country as was unimportant to the present purpose, walking hundreds of miles, avoiding taverns, buying a lodging in farmers' and fishermen's houses, as cheaper, and more agreeable to him, and because there he could better find the men and the information he wanted.

There was somewhat military in his nature, not to be subdued, always manly and able, but rarely tender, as if he did not feel himself except in opposition. He wanted a fallacy to expose, a blunder to pillory, I may say required a little sense of victory, a roll of the drum, to call his powers into full exercise. It cost him nothing to say No; indeed he found it much easier than to say Yes. It seemed as if his first instinct on hearing a proposition was to controvert it, so impatient was he of the limitations of our daily thought. This habit, of course, is a little chilling to the social affections; and though the companion would in the end acquit him of any malice or untruth, yet it mars conversation. Hence, no equal companion stood in affectionate relations with one so pure and guileless. "I love Henry," said one of his friends, "but I cannot like him; and as for taking his arm, I should as soon think of taking the arm of an elm-tree."

Yet, hermit and stoic as he was, he was really fond of sympathy, and threw himself heartily and childlike into the company of young people whom he loved, and whom he delighted to entertain, as he only could, with the varied and endless anecdotes of his experiences by field and river: and he was always ready to lead a huckleberry-party or a search for chestnuts or grapes. Talking, one day, of a public discourse, Henry remarked, that whatever succeeded with the audience was bad. I said, "Who would not like to write something which all can

read, like Robinson Crusoe? and who does not see with regret that his page is not solid with a right materialistic treatment, which delights everybody?" Henry objected, of course, and vaunted the better lectures which reached only a few persons. But, at supper, a young girl, understanding that he was to lecture at the Lyceum, sharply asked him, "Whether his lecture would be a nice, interesting story, such as she wished to hear, or whether it was one of those old philosophical things that she did not care about." Henry turned to her, and bethought himself, and, I saw, was trying to believe that he had matter that might fit her and her brother, who were to sit up and go to the lecture, if it was a good one for them.

He was a speaker and actor of the truth, born such, and was ever running into dramatic situations from this cause. In any circumstance it interested all bystanders to know what part Henry would take, and what he would say; and he did not disappoint expectation, but used an original judgment on each emergency. In 1845 he built himself a small framed house on the shores of Walden Pond, and lived there two years alone, a life of labor and study. This action was quite native and fit for him. No one who knew him would tax him with affectation. He was more unlike his neighbors in his thought than in his action. As soon as he had exhausted the advantages of that solitude, he abandoned it. In 1847, not approving some uses to which the public expenditure was applied, he refused to pay his town tax, and was put in jail. A friend paid the tax for him, and he was released. The like annoyance was threatened the next year. But, as his friends paid the tax, notwithstanding his protest, I believe he ceased to resist. No opposition or ridicule had any weight with him. He coldly and fully stated his opinion without affecting to believe that it was the opinion of the company. It was of no consequence if every one present held the opposite opinion. On one occasion he went to the University Library to procure some books. The librarian refused to lend them. Mr. Thoreau repaired to the President, who stated to him the rules and usages, which permitted the loan of books to resident graduates, to clergymen who were alumni, and to some others resident within a circle of ten miles' radius from the College. Mr. Thoreau explained to the President that the railroad had destroyed the old scale of distances, — that the library was useless, yes, and President and College useless, on the terms of his rules, — that the one benefit he owed to the College was its library, — that, at this moment, not only his want of books was imperative but he wanted a large number of books, and assured him that he, Thoreau, and not the librarian, was the proper custodian of these. In short, the President found the petitioner so formidable, and the rules getting to look so ridiculous, that he ended by giving

him a privilege which in his hands proved unlimited thereafter.

No truer American existed than Thoreau. His preference of his country and condition was genuine, and his aversion from English and European manners and tastes almost reached contempt. He listened impatiently to news or *bonmots* gleaned from London circles; and though he tried to be civil, these anecdotes fatigued him. The men were all imitating each other, and on a small mould. Why can they not live as far apart as possible, and each be a man by himself? What he sought was the most energetic nature; and he wished to go to Oregon, not to London. "In every part of Great Britain," he wrote in his diary, "are discovered traces of the Romans, their funereal urns, their camps, their roads, their dwellings. But New England, at least, is not based on any Roman ruins. We have not to lay the foundations of our houses on the ashes of a former civilization."

But, idealist as he was, standing for abolition of slavery, abolition of tariffs, almost for abolition of government, it is needless to say he found himself not only unrepresented in actual politics, but almost equally opposed to every class of reformers.. Yet he paid the tribute of his uniform respect to the Anti-Slavery party. One man, whose personal acquaintance he had formed, he honored with exceptional regard. Before the first friendly word had been spoken for Captain John Brown, he sent notices to most houses in Concord that; he would speak in a public hall on the condition and character of John Brown, on Sunday evening, and invited all people to come. The Republican Committee, the Abolitionist Committee, sent him word that it was premature and not advisable. He replied, — "I did not send to you for advice, but to announce that I am to speak." The hall was filled at an early hour by people of all parties, and his earnest eulogy of the hero was heard by all respectfully, by many with a sympathy that surprised themselves.

It was said of Plotinus that he was ashamed of his body, and 't is very likely he had good reason for it, — that his body was a bad servant, and he had not skill in dealing with the material world, as happens often to men of abstract intellect. But Mr. Thoreau was equipped with a most adapted and serviceable body. He was of short stature, firmly built, of light complexion, with strong, serious blue eyes, and a grave aspect, — his face covered in the late years with a becoming beard. His senses were acute, his frame well-knit and hardy, his hands strong and skilful in the use of tools. And there was a wonderful fitness of body and mind. He could pace sixteen rods more accurately than another man could measure them with rod and chain. He could find his path in the woods at night, he said, better by his feet than his eyes. He could estimate the measure of a tree very well by his eye; he could estimate the weight of a calf or a pig, like a dealer. From, a box containing a bushel or more of loose pencils, he, could take up with

his hands fast enough just a dozen pencils at every grasp. He was a good swimmer, runner, skater, boatman, and would probably outwalk most countrymen in a day's journey. And the relation of body to mind was still finer than we have indicated. He said he wanted every stride his legs made. The length of his walk uniformly made the length of his writing. If shut up in the house he did not write at all.

He had a strong common-sense, like that which Rose Flammock the weaver's daughter in Scott's romance commends in her father, as resembling a yardstick, which, whilst it measures dowlas and diaper, can equally well measure tapestry and cloth of gold. He had always a new resource. When I was planting forest trees, and had procured half a peck of acorns, he said that only a small portion of them would be sound, and proceeded to examine them and select the sound ones. But finding this took time, he said, "I think if you put them all into water the good ones will sink;" which experiment we tried with success. He could plan a garden or a house or a barn; would have been competent to lead a "Pacific Exploring Expedition;" could give judicious counsel in the gravest private or public affairs.

He lived for the day, not cumbered and mortified by his memory. If he brought you yesterday a new proposition, he would bring you to-day another not less revolutionary. A very industrious man, and setting, like all highly organized men, a high value on his time, he seemed the only man of leisure in town, always ready for any excursion that promised well, or for conversation prolonged into late hours. His trenchant sense was never stopped by his rules of daily prudence, but was always up to the new occasion. He liked and used the simplest food, yet, when some one urged a vegetable diet, Thoreau thought all diets a very small matter, saying that "the man who shoots the buffalo lives better than the man who boards at the Graham House." He said,— "You can sleep near the railroad, and never be disturbed: Nature knows very well what sounds are worth attending to and has made up her mind not to hear the railroad-whistle. But things respect the devout mind, and a mental ecstasy was never interrupted." He noted what repeatedly befell him, that, after receiving from a distance a rare plant, he would presently find the same in his own haunts. And those pieces of luck which happen only to good players happened to him. One day, walking with a stranger, who inquired where Indian arrow-heads could be found, he replied, "Everywhere," and, stooping forward, picked one on the instant from the ground. At Mount Washington, in Tuckerman's Ravine, Thoreau had a bad fall, and sprained his foot. As he was in the act of getting up from his fall, he saw for the first time the leaves of the *Arnica mollis*.

His robust common sense, armed with stout hands, keen perceptions and

strong will, cannot yet account for the superiority which shone in his simple and hidden life. I must add the cardinal fact, that there was an excellent wisdom in him, proper to a rare class of men, which showed him the material world as a means and symbol. This discovery, which sometimes yields to poets a certain casual and interrupted light, serving for the ornament of their writing, was in him an unsleeping insight; and whatever faults or obstructions of temperament might cloud it, he was not disobedient to the heavenly vision. In his youth, he said, one day, "The other world is all my art; my pencils will draw no other; my jack-knife will cut nothing else; I do not use it as a means." This was the muse and genius that ruled his opinions, conversation, studies, work and course of life. This made him a searching judge of men. At first glance he measured his companion, and, though insensible to some fine traits of culture, could very well report his weight and calibre. And this made the impression of genius which his conversation sometimes gave.

He understood the matter in hand at a glance, and saw the limitations and poverty of those he talked with, so that nothing seemed concealed from such terrible eyes. I have repeatedly known young men of sensibility converted in a moment to the belief that this was the man they were in search of, the man of men, who could tell them all they should do. His own dealing with them was never affectionate, but superior, didactic, scorning their petty ways, — very slowly conceding, or not conceding at all, the promise of his society at their houses, or even at his own. "Would he not walk with them?" "He did not know. There was nothing so important to him as his walk; he had no walks to throw away on company." Visits were offered him from respectful parties, but he declined them. Admiring friends offered to carry him at their own cost to the Yellowstone River, — to the West Indies, — to South America. But though nothing could be more grave or considered than his refusals, they remind one, in quite new relations, of that fop Brummel's reply to the gentleman who offered him his carriage in a shower, "But where will you ride, then?" — and what accusing silences, and what searching and irresistible speeches, battering down all defenses, his companions can remember!

Mr. Thoreau dedicated his genius with such en. tire love to the fields, hills and waters of his native town, that he made them known and interesting to all reading Americans, and to people over the sea. The river on whose banks he was born and died he knew from its springs to its confluence with the Merrimack. He had made summer and winter observations on it for many years, and at every hour of the day and night. The result of the recent survey of the Water Commissioners appointed by the State of Massachusetts he had reached by his private experiments, several years earlier. Every fact which occurs in the bed, on

the banks, or in the air over it; the fishes, and their spawning and nests, their manners, their food; the shad-flies which fill the air on a certain evening once a year, and which are snapped at by the fishes so ravenously that many of these die of repletion; the conical heaps of small stones on the river-shallows, the huge nests of small fishes, one of which will sometimes overflow a cart; the birds which frequent the stream, heron, duck, sheldrake, loon, osprey; the snake, muskrat, otter, woodchuck and fox, on the banks; the turtle, frog, hyla and cricket, which make the banks vocal, — were all known to him, and, as it were, townsmen and fellow-creatures; so that he felt an absurdity or violence in any narrative of one of these by itself apart, and still more of its dimensions on an inch-rule, or in the exhibition of its skeleton, or the specimen of a squirrel or a bird in brandy. He liked to speak of the manners of the river, as itself a lawful creature, yet with exactness, and always to an observed fact. As he knew the river, so the ponds in this region.

One of the weapons he used, more important to him than microscope or alcohol-receiver to other investigators, was a whim which grew on him by indulgence, yet appeared in gravest statement, namely, of extolling his own town and neighborhood as the most favored centre for natural observation. He remarked that the Flora of Massachusetts embraced almost all the important plants of America, — most of the oaks, most of the willows, the best pines, the ash, the maple, the beech, the nuts. He returned Kane's "Arctic Voyage" to a friend of whom he had borrowed it, with the remark, that "Most of the phenomena noted might be observed in Concord." He seemed a little envious of the Pole, for the coincident sunrise and sunset, or five minutes' day after six months: a splendid fact, which Annursnuc had never afforded him. He found red snow in one of his walks, and told me that he expected to find yet the *Victoria regia* in Concord. He was the attorney of the indigenous plants, and owned to a preference of the weeds to the imported plants as of the Indian to the civilized man, and noticed, with pleasure, that the willow bean-poles his neighbor had grown more than his beans, "See these weeds," he said, "which have been hoed at by a million farmers all spring and summer, and yet have prevailed, and just now come out triumphant over all lanes, pastures, fields and gardens, such is their vigor. We have insulted them with low names, too, — as Pigweed, Wormwood, Chick-weed, Shad-blossom." He says, "They have brave names, too, — Ambrosia, Stellaria, Amelanchier, Amaranth, etc."

I think his fancy for referring everything to the meridian of Concord did not grow out of any ignorance or depreciation of other longitudes or latitudes, but was rather a playful expression of his conviction of the indifferency of all places, and that the best place for each is where he stands. He expressed it once in this

wise:— “I think nothing is to be hoped from you, if this bit of mould under your feet is not sweeter to you to eat than any other in this world, or in any world.”

The other weapon with which he conquered all obstacles in science was patience. He knew how to sit immovable, a part of the rock he rested on, until the bird, the reptile, the fish, which had retired from him, should come back and resume its habits, nay, moved by curiosity, should come to him and watch him.

It was a pleasure and a privilege to walk with him. He knew the country like a fox or a bird, and passed through it as freely by paths of his own. He knew every track in the snow or on the ground, and what creature had taken this path before him. One must submit abjectly to such a guide, and the reward was great. Under his arm he carried an old music-book to press plants; in his pocket, his diary and pencil, a spy-glass for birds, microscope, jack-knife, and twine. He wore a straw hat, stout shoes, strong gray trousers, to brave scrub-oaks and smilax, and to climb a tree for a hawk's or a squirrel's nest. He waded into the pool for the water-plants, and his strong legs were no insignificant part of his armor. On the day I speak of he looked for the *Menyanthes*, detected it across the wide pool, and, on examination of the florets, decided that it had been in flower five days. He drew out of his breast-pocket his diary, and read the names of all the plants that should bloom on this day, whereof he kept account as a banker when his notes fall due. The *Cypripedium* not due till to-morrow. He thought that, if waked up from a trance, in this swamp, he could tell by the plants what time of the year it was within two days. The redstart was flying about, and presently the fine grosbeaks, whose brilliant scarlet “makes the rash gazer wipe his eye,” and whose fine clear note Thoreau compared to that of a tanager which has got rid of its hoarseness. Presently he heard a note which he called that of the night-warbler, a bird he had never identified, had been in search of twelve years, which always, when he saw it, was in the act of diving down into a tree or bush, and which it was vain to seek; the only bird which sings indifferently by night and by day. I told him he must beware of finding and booking it, lest life should have nothing more to show him. He said, “What you seek in vain for, half your life, one day you come full upon, all the family at dinner. You seek it like a dream, and as soon as you find it you become its prey.”

His interest in the flower or the bird lay very deep in his mind, was connected with Nature, — and the meaning of Nature was never attempted to be defined by him. He would not offer a memoir of his observations to the Natural History Society, “Why should I? To detach the description from its connections in my mind would make it no longer true or valuable to me: and they do not wish what belongs to it.” His power of observation seemed to indicate additional senses. He saw as with microscope, heard as with ear-trumpet, and his memory was a

photographic register of all he saw and heard. And yet none knew better than he that it is not the fact that imports, but the impression or effect of the fact on your mind. Every fact lay in glory in his mind, a type of the order and beauty of the whole.

His determination on Natural History was organic. He confessed that he sometimes felt like a hound or a panther, and, if horn among Indians, would have been a fell hunter. But, restrained by his Massachusetts culture, he played out the game in this mild form of botany and ichthyology. His intimacy with animals suggested what Thomas Fuller records of Butler the apologist, that "either he had told the bees things or the bees had told him." Snakes coiled round his leg; the fishes swam into his hand, and he took them out of the water; he pulled the woodchuck out of its hole by the tail and took the foxes under his protection from the hunters. Our naturalist had perfect magnanimity; he had no secrets: he would carry you to the heron's haunt, or even to his most prized botanical swamp, — possibly knowing that you could never find it again, yet willing to take his risks.

No college ever offered him a diploma, or a professor's chair; no academy made him its corresponding secretary, its discoverer, or even its member. Perhaps these learned bodies feared the satire of his presence. Yet so much knowledge of Nature's secret and genius few others possessed; none in a more large and religious synthesis. For not a particle of respect had he to the opinions of any man or body of men, but homage solely to the truth itself; and as he discovered everywhere among doctors some leaning of courtesy, it discredited them. He grew to be revered and admired by his townsmen, who had at first known him only as an oddity. The farmers who employed him as a surveyor [soon discovered his rare accuracy and skill, his knowledge of their lands, of trees, of birds, of Indian remains and the like, which enabled him to tell every farmer more than he knew before of his own farm; so that he began to feel a little as if Mr. Thoreau had better rights in his land than he. They felt, too, the superiority of character which addressed all men with a native authority,

Indian relics abound in Concord, — arrow-heads, stone chisels, pestles, and fragments of pottery; and on the river-bank, large heaps of clam-shells and ashes mark spots which the savages frequented. These, and every circumstance touching the Indian, were important in his eyes. His visits to Maine were chiefly for love of the Indian. He had the satisfaction of seeing the manufacture of the bark-canoe, as well as of trying his hand in its management on the rapids. He was inquisitive about the making of the stone arrow-head, and in his last days charged a youth setting out for the Rocky Mountains to find an Indian who could tell him that: "It was well worth a visit to California to learn it" Occasionally, a

small party of Penobscot Indians would visit Concord, and pitch their tents for a few weeks in summer on the river-bank. He failed not to make acquaintance with the best of them; though he well knew that asking questions of Indians is like catechizing beavers and rabbits. In his last visit to Maine he had great satisfaction from Joseph Polis, an intelligent Indian of Oldtown, who was his guide for some weeks.

He was equally interested in every natural fact. The depth of his perception found likeness of law throughout Nature, and I know not any genius who so swiftly inferred universal law from the single fact. He was no pedant of a department. His eye was open to beauty, and his ear to music. He found these, not in rare conditions, but wheresoever he went. He thought the best of music was in single strains; and he found poetic suggestion in the humming of the telegraph-wire.

His poetry might be bad or good; he no doubt wanted a lyric facility and technical skill, but he had the source of poetry in his spiritual perception. He was a good reader and critic, and his judgment on poetry was to the ground of it. He could not be deceived as to the presence or absence of the poetic element in any composition, and his thirst for this made him negligent and perhaps scornful of superficial graces. He would pass by many delicate rhythms, but he would have detected every live stanza or line in a volume, and knew very well where to find an equal poetic charm in prose. He was so enamored of the spiritual beauty that he held all actual written poems in very light esteem in the comparison. He admired Æschylus and Pindar; but, when some one was commending them, he said that Æschylus and the Greeks, in describing Apollo and Orpheus, had given no song, or no good one. "They ought not to have moved trees, but to have chanted to the gods such a hymn as would have sung all their old ideas out of their heads, and new ones in." His own verses are often rude and defective. The gold does not yet run pure, is drossy and crude. The thyme and marjoram are not yet honey. But if he want lyric fineness and technical merits, if he have not the poetic temperament, he never lacks the causal thought, showing that his genius was better than his talent. He knew the worth of the Imagination for the uplifting and consolation of human life, and liked to throw every thought into a symbol. The fact you tell is of no value, but only the impression. For this reason his presence was poetic, always piqued the curiosity to know more deeply the secrets of his mind. He had many reserves, an unwillingness to exhibit to profane eyes what was still sacred in his own, and knew well how to throw a poetic veil over his experience. All readers of "Walden" will remember his mythical record of his disappointments: —

"I long ago lost a hound, a bay horse and a turtle-dove, and am still on their

trail. Many are the travellers I have spoken concerning them, describing their tracks, and what calls they answered to. I have met one or two who have heard the hound, and the tramp of the horse, and even seen the dove disappear behind a cloud; and they seemed as anxious to recover them as if they had lost them themselves." [Walden: p. 20.]

His riddles were worth the reading, and I confide that if at any time I do not understand the expression, it is yet just. Such was the wealth of his truth that it was not worth his while to use words in vain. His poem entitled "Sympathy" reveals the tenderness under that triple steel of stoicism, and the intellectual subtlety it could animate. His classic poem on "Smoke" suggests Simonides, but is better than any poem of Simonides. His biography is in his verses. His habitual thought makes all his poetry a hymn to the Cause of causes, the Spirit which vivifies and controls his own: —

"I hearing get, who had but ears,
And sight, who had but eyes before;
I moments live, who lived but years,
And truth discern, who knew but learning's lore."

And still more in these religious lines: —

"Now chiefly is my natal hour,
And only now my prime of life;
I will not doubt the love untold,
Which not my worth nor want have bought,
Which wooed me young, and woos me old,
And to this evening hath me brought."

Whilst he used in his writings a certain petulance of remark in reference to churches or churchmen, he was a person of a rare, tender and absolute religion, a person incapable of any profanation, by act or by thought. Of course, the same isolation which belonged to his original thinking and living detached him from the social religious forms. This is neither to be censured nor regretted. Aristotle long ago explained it, when he said, "One who surpasses his fellow-citizens in virtue is no longer a part of the city. Their law is not for him, since he is a law to himself."

Thoreau was sincerity itself, and might fortify the convictions of prophets in the ethical laws by his holy living. It was an affirmative experience which refused to be set aside. A truth-speaker he, capable of the most deep and strict conversation; a physician to the wounds of any soul; a friend, knowing not only the secret of friendship, but almost worshipped by those few persons who resorted to him as their confessor and prophet, and knew the deep value of his mind and great heart. He thought that without religion or devotion of some kind

nothing great was ever accomplished: and he thought that the bigoted sectarian had better bear this in mind.

His virtues, of course, sometimes ran into extremes. It was easy to trace to the inexorable demand on all for exact truth that austerity which made this willing hermit more solitary even than he wished. Himself of a perfect probity, he required not less of others. He had a disgust at crime, and no worldly success would cover it. He detected paltering as readily in dignified and prosperous persons as in beggars, and with equal scorn. Such dangerous frankness was in his dealing that his admirers called him "that terrible Thoreau," as if he spoke when silent, and was still present when he had departed. I think the severity of his ideal interfered to deprive him of a healthy sufficiency of human society.

The habit of a realist to find things the reverse of their appearance inclined him to put every statement in a paradox. A certain habit of antagonism defaced his earlier writings, — a trick of rhetoric not quite outgrown in his later, of substituting for the obvious word and thought its diametrical opposite. He praised wild mountains and winter forests for their domestic air, in snow and ice he would find sultriness, and commended the wilderness for resembling Rome and Paris. "It was so dry, that you might call it wet."

The tendency to magnify the moment, to read all the laws of Nature in the one object or one combination under your eye, is of course comic to those who do not share the philosopher's perception of identity. To him there was no such thing as size. The pond was a small ocean; the Atlantic, a large Walden Pond. He referred every minute fact to cosmical laws. Though he meant to be just, he seemed haunted by a certain chronic assumption that the science of the day pretended completeness, and he had just found out that the *savans* had neglected to discriminate a particular botanical variety, had failed to describe the seeds or count the sepals. "That is to say," we replied, "the blockheads were not born in Concord; but who said they were? It was their unspeakable misfortune to be born in London, or Paris, or Rome; but, poor fellows, they did what they could, considering that they never saw Bateman's Pond, or Nine-Acre Corner, or Becky Stow's Swamp; besides, what were you sent into the world for, but to add this observation?"

Had his genius been only contemplative, he had been fitted to his life, but with his energy and practical ability he seemed born for great enterprise and for command; and I so much regret the loss of his rare powers of action, that I cannot help counting it a fault in him that he had no ambition. Wanting this, instead of engineering for all America, he was the captain of a huckleberry-party. Pounding beans is good to the end of pounding empires one of these days; but if, at the end of years, it is still only beans!

But these foibles, real or apparent, were fast vanishing in the incessant growth of a spirit so robust and wise, and which effaced its defeats with new triumphs. His study of Nature was a perpetual ornament to him, and inspired his friends with curiosity to see the world through his eyes, and to hear his adventures. They possessed every kind of interest.

He had many elegancies of his own, whilst he scoffed at conventional elegance. Thus, he could not bear to hear the sound of his own steps, the grit of gravel; and therefore never willingly walked in the road, but in the grass, on mountains and in woods. His senses were acute, and he remarked that by night every dwelling-house gives out bad air, like a slaughter-house. He liked the pure fragrance of melilot. He honored certain plants with special regard, and, over all, the pond-lily, — then, the gentian, and the *Mikania scandens*, and “life-everlasting,” and a bass-tree which he visited every year when it bloomed, in the middle of July. He thought the scent a more oracular inquisition than the sight, — more oracular and trustworthy. The scent, of course, reveals what is concealed from the other senses. By it he detected earthiness. He delighted in echoes, and said they were almost the only kind of kindred voices that he heard. He loved Nature so well, was so happy in her solitude, that he became very jealous of cities and the sad work which their refinements and artifices made with man and his dwelling. The axe was always destroying his forest. “Thank God,” he said, “they cannot cut down the clouds!” “All kinds of figures are drawn on the blue ground with this fibrous white paint.”

I subjoin a few sentences taken from his unpublished manuscripts, not only as records of his thought and feeling, but for their power of description and literary excellence: —

“Some circumstantial evidence is very strong, as when you find a trout in the milk.”

“The chub is a soft fish, and tastes like boiled brown paper salted.”

“The youth gets together his materials to build a bridge to the moon, or, perchance, a palace or temple on the earth, and, at length the middle-aged man concludes to build a wood-shed with them.”

“The locust z-ing.”

“Devil’s - needles zigzagging along the Nut-Meadow brook.”

“Sugar is not so sweet to the palate as sound to the healthy ear.”

“I put on some hemlock-boughs, and the rich salt crackling of their leaves was like mustard to the ear, the crackling of uncountable regiments. Dead trees love the fire.”

“The bluebird carries the sky on his back.”

“The tanager flies through the green foliage as if it would ignite the leaves.”

“If I wish for a horse-hair for my compass-sight I must go to the stable; but the hair-bird, with her sharp eyes, goes to the road.”

“Immortal water, alive even to the superficies.”

“Fire is the most tolerable third party.”

“Nature made ferns for pure leaves, to show what she could do in that line.”

“No tree has so fair a bole and so handsome an instep as the beech.”

“How did these beautiful rainbow-tints get into the shell of the fresh-water clam, buried in the mud at the bottom of our dark river?”

“Hard are the times when the infant’s shoes are second-foot.”

“We are strictly confined to our men to whom we give liberty.”

“Nothing is so much to be feared as fear. Atheism may comparatively be popular with God himself.”

“Of what significance the things you can forget? A little thought is sexton to all the world.”

“How can we expect a harvest of thought who have not had a seed-time of character?”

“Only he can be trusted with gifts who can present a face of bronze to expectations.”

“I ask to be melted. You can only ask of the metals that they be tender to the fire that melts them. To nought else can they be tender.”

There is a flower known to botanists, one of the same genus with our summer plant called “Life-Everlasting,” a *Gnaphalium* like that, which grows on the most inaccessible cliffs of the Tyrolese mountains, where the chamois dare hardly venture, and which the hunter, tempted by its beauty, and by his love (for it is immensely valued by the Swiss maidens), climbs the cliffs to gather, and is sometimes found dead at the foot, with the flower in his hand. It is called by botanists the *Gnaphalium leontopodium*, but by the Swiss *Edelweisse*, which signifies *Noble Purity*. Thoreau seemed to me living in the hope to gather this plant, which belonged to him of right. The scale on which his studies proceeded was so large as to require longevity, and we were the less prepared for his sudden disappearance. The country knows not yet, or in the least part, how great a son it has lost. It seems an injury that he should leave in the midst his broken task which none else can finish, a kind of indignity to so noble a soul that he should depart out of Nature before yet he has been really shown to his peers for what he is. But he, at least, is content. His soul was made for the noblest society; he had in a short life exhausted the capabilities of this world; wherever there is knowledge, wherever there is virtue, wherever there is beauty, he will find a home.

CARLYLE.

Hold with the Maker, not the Made,
Sit with the Cause, or grim or glad.

[From a letter written soon after Mr. Emerson's visit to Carlyle in 1848. Read before the Massachusetts Historical Society at their meeting after the death of Carlyle, February, 1881. Published in their Proceedings, and also in "Scribner's Magazine," May, 1881.]

Thomas Carlyle is an immense talker, as extraordinary in his conversation as in his writing, — I think even more so.

He is not mainly a scholar, like the most of my acquaintances, but a practical Scotchman, such as you would find in any saddler's or iron-dealer's shop, and then only accidentally and by a surprising addition, the admirable scholar and writer he is. If you would know precisely how he talks, just suppose Hugh Whelan (the gardener) had found leisure enough in addition to all his daily work to read Plato and Shakspeare, Augustine and Calvin, and, remaining Hugh Whelan all the time, should talk scornfully of all this nonsense of books that he had been bothered with, and you shall have just the tone and talk and laughter of Carlyle. I called him a trip-hammer with "an Æolian attachment."

He has, too, the strong religious tinge you sometimes find in burly people. That, and all his qualities, have a certain virulence, coupled though it be in his case with the utmost impatience of Christendom and Jewdom and all existing presentments of the good old story. He talks like a very unhappy man, — profoundly solitary, displeased and hindered by all men and things about him, and, biding his time, meditating how to undermine and explode the whole world of nonsense which torments him. He is obviously greatly respected by all sorts of people, understands his own value quite as well as Webster, of whom his behavior sometimes reminds me, and can see society on his own terms.

And, though no mortal in America could pretend to talk with Carlyle, who is also as remarkable in England as the Tower of London, yet neither would he in any manner satisfy us (Americans), or begin to answer the questions which we ask. He is a very national figure, and would by no means bear transplantation. They keep Carlyle as a sort of portable cathedral-bell, which they like to produce in companies where he is unknown, and set a-swinging, to the surprise and consternation of all persons, — bishops, courtiers, scholars, writers, — and, as in companies here (in England) no man is named or introduced, great is the effect

and great the inquiry Forster of Rawdon described to me a dinner at the *table d'ôte* of some provincial hotel where he carried Carlyle, and where an Irish canon had uttered something. Carlyle began to talk, first to the waiters, and then to the walls, and then, lastly, unmistakably to the priest, in a manner that frightened the whole company.

Young men, especially those holding liberal opinions, press to see him, but it strikes me like being hot to see the mathematical or Greek professor before they have got their lesson. It needs something more than a clean shirt and reading German to visit him. He treats them with contempt; they profess freedom and he stands for slavery; they praise republics and he likes the Russian Czar; they admire Cobden and free trade and he is a protectionist in political economy; they will eat vegetables and drink water, and he is a Scotchman who thinks English national character has a pure enthusiasm for beef and mutton, — describes with gusto the crowds of people who gaze at the sirloins in the dealer's shop-window, and even likes the Scotch night-cap; they praise moral suasion, he goes for murder, money, capital punishment, and other pretty abominations of English law. They wish freedom of the press, and he thinks the first thing he would do, if he got into Parliament, would be to turn out the reporters, and stop all manner of mischievous speaking to Buncombe, and wind-bags. "In the Long Parliament," he says, "the only great Parliament, they sat secret and silent, grave as an ecumenical council, and I know not what they would have done to anybody that had got in there and attempted to tell out of doors what they did." They go for free institutions, for letting things alone, and only giving opportunity and motive to every man; he for a stringent government, that shows people what they must do, and makes them do it. "Here," he says, "the Parliament gathers up six millions of pounds every year to give to the poor, and yet the people starve. I think if they would give it to me, to provide the poor with labor, and with authority to make them work or shoot them, — and I to be hanged if I did not do it, — I could find them in plenty of Indian meal."

He throws himself readily on the other side. If you urge free trade, he remembers that every laborer is a monopolist. The navigation laws of England made its commerce. "St. John was insulted by the Dutch; he came home, got the law passed that foreign vessels should pay high fees, and it out the throat of the Dutch, and made the English trade." If you boast of the growth of the country, and show him the wonderful results of the census, he finds nothing so depressing as the sight of a great mob. He saw once, as he told me, three or four miles of human beings, and fancied that "the airth was some great cheese, and these were mites." If a tory takes heart at his hatred of stump-oratory and model republics, he replies, "Yes, the idea of a pig-headed soldier who will obey orders, and fire

on his own father at the command of his officer, is a great comfort to the aristocratic mind." It is not so much that Carlyle cares for this or that dogma, as that he likes genuineness (the source of all strength) in his companions.

If a scholar goes into a camp of lumbermen or a gang of riggers, those men will quickly detect any fault of character. Nothing will pass with them but what is real and sound. So this man is a hammer that crushes mediocrity and pretension. He detects weakness on the instant, and touches it. He has a vivacious, aggressive temperament, and unimpressionable. The literary, the fashionable, the political man, each fresh from triumphs in his own sphere, comes eagerly to see this man, whose fun they have heartily enjoyed, sure of a welcome, and are struck with despair at the first onset. His firm, victorious, scoffing vituperation strikes them with chill and hesitation. His talk often reminds you of what was said of Johnson: "If his pistol missed fire he would knock you down with the butt-end."

Mere intellectual partisanship wearies him; he detects in an instant if a man stands for any cause to which he is not born and organically committed. A natural defender of anything, a lover who will live and die for that which he speaks for, and who does not care for him or for anything but his own business, he respects; and the nobler this object, of course, the better. He hates a literary trifler, and if, after Guizot had been a tool of Louis Philippe for years, he is now to come and write essays on the character of Washington, on "The Beautiful," and on "Philosophy of History," he thinks that nothing.

Great is his reverence for realities, — for all such traits as spring from the intrinsic nature of the actor. He humors this into the idolatry of strength. A strong nature has a charm for him, previous, it would seem, to all inquiry whether the force be divine or diabolic. He preaches, as by cannonade, the doctrine that every noble nature was made by God, and contains, if savage passions, also fit checks and grand impulses, and, however extravagant, will keep its orbit and return from far.

Nor can that decorum which is the idol of the Englishman, and in attaining which the Englishman exceeds all nations, win from him any obeisance. He is eaten up with indignation against such as desire to make a fair show in the flesh.

Combined with this warfare on respectabilities, and, indeed, pointing all his satire, is the severity of his moral sentiment. In proportion to the peals of laughter amid which he strips the plumes of a pretender and shows the lean hypocrisy to every vantage of ridicule, does he worship whatever enthusiasm, fortitude, love, or other sign of a good nature is in a man.

There is nothing deeper in his constitution than his humor, than the considerate, condescending good-nature with which he looks at every object in

existence, as a man might look at a mouse. He feels that the perfection of health is sportiveness, and will not look grave even at dullness or tragedy.

His guiding genius is his moral sense, his perception of the sole importance of truth and justice; but that is a truth of character, not of catechisms. He says, "There is properly no religion in England. These idle nobles at Tattersall's — there is no work or word of serious purpose in them; they have this great lying Church; and life is a humbug." He prefers Cambridge to Oxford, but he thinks Oxford and Cambridge education indurates the young men, as the Styx hardened Achilles, so that when they come forth of them, they say, "Now we are proof; we have gone through all the degrees, and are case-hardened against the veracities of the Universe; nor man nor God can penetrate us."

Wellington he respects as real and honest, and as having made up his mind, once for all, that he will not have to do with any kind of a lie. Edwin Chadwick is one of his heroes, — who proposes to provide every house in London with pure water, sixty gallons to every head, at a penny a week; and in the decay and downfall of all religions, Carlyle thinks that the only religious act which a man nowadays can securely perform is to wash himself well.

Of course the new French revolution of 1848 was the best thing he had seen, and the teaching this great swindler, Louis Philippe, that there is a God's justice in the *Universe*, after all, was a great satisfaction. Czar Nicholas was his hero; for in the ignominy of Europe, when all thrones fell like card-houses, and no man was found with conscience enough to fire a gun for his crown, but every one ran away in a *coucou*, with his head shaved, through the Barrière de Passy, one man remained who believed he was put there by God Almighty to govern his empire, and, by the help of God, had resolved to stand there.

He was very serious about the bad times; he had seen this evil coming, but thought it would not come in his time. But now't is coming, and the only good he sees in it is the visible appearance of the gods. He thinks it the only question for wise men, instead of art and fine fancies and poetry and such things, to address themselves to the problem of society. This confusion is the inevitable end of such falsehoods and nonsense as they have been embroiled with.

Carlyle has, best of all men in England, kept the manly attitude in his time. He has stood for scholars, asking no scholar what he should say. Holding an honored place in the best society, he has stood for the people, for the Chartist, for the pauper, intrepidly and scornfully teaching the nobles their peremptory duties.

His errors of opinion are as nothing in comparison with this merit, in my judgment. This *aplomb* cannot be mimicked; it is the speaking to the heart of the

thing. And in England, where the *morgue* of aristocracy has very slowly admitted scholars into society, — a very few houses only in the high circles being ever opened to them, — he has carried himself erect, made himself a power confessed by all men, and taught scholars their lofty duty. He never feared the face of man.

GEORGE L. STEARNS.

“Who, when great trials come, Nor seeks nor shunnes them; but doth calmly stay
Till he the thing and the example weigh: All being brought into a summe What
place or person calls for he doth pay.”

George Herbert.

[Mr. Emerson paid this tribute to the nobility of character, and eminent services to the republic, of his friend, Major George L. Stearns, at his funeral at Medford, on the 18th of April, 1867.]

We do not know how to prize good men until they depart. High virtue has such an air of nature and necessity that to thank its possessor would be to praise the water for flowing or the fire for warming us. But, on the instant of their death, we wonder at our past insensibility, when we see how impossible it is to replace them. There will be other good men, but not these again. And the painful surprise which the last week brought us, in the tidings of the death of Mr. Stearns, opened all eyes to the just consideration of the singular merits of the citizen, the neighbor, the friend, the father, and the husband, whom this assembly mourns. We recall the all but exclusive devotion of this excellent man during the last twelve years to public and patriotic interests. Known until that time in no very wide circle as a man of skill and perseverance in his business; of pure life; of retiring and affectionate habits; happy in his domestic relations, — his extreme interest in the national politics, then growing more anxious year by year, engaged him to scan the fortunes of freedom with keener attention. He was an early laborer in the resistance to slavery. This brought him into sympathy with the people of Kansas. As early as 1855 the Emigrant Aid Society was formed; and in 1856 he organized the Massachusetts State Kansas Committee, by means of which a large amount of money was obtained for the “free-State men,” at times of the greatest need. He was the more engaged to this cause by making in 1857 the acquaintance of Captain John Brown, who was not only an extraordinary man, but one who had a rare magnetism for men of character, and attached some of the best and noblest to him, on very short acquaintance, by lasting ties. Mr. Stearns made himself at once necessary to Captain Brown as one who respected his inspirations, and had the magnanimity to trust him entirely, and to arm his hands with all needed help.

For the relief of Kansas, in 1856-57, his own contributions were the largest and the first. He never asked any one to give so much as he himself gave, and his

interest was so manifestly pure and sincere that he easily obtained eager offerings in quarters where other petitioners failed. He did not hesitate to become the banker of his clients, and to furnish them money and arms in advance of the subscriptions which he obtained. His first donations were only entering-wedges of his later; and, unlike other benefactors, he did not give money to excuse his entire preoccupation in his own pursuits, but as an earnest of the dedication of his heart and hand to the interests of the sufferers, — a pledge kept until the success he wrought and prayed for was consummated. In 1862, on the President's first or preliminary Proclamation of Emancipation, he took the first steps for organizing the Freedman's Bureau, — a department which has since grown to great proportions. In 1863 he began to recruit colored soldiers in Buffalo, then at Philadelphia and Nashville. But these were only parts of his work. He passed his time in incessant consultation with all men whom he could reach, to *suggest* and urge the measures needed for the hour. And there are few men with real or supposed influence, North or South, with whom he has not at some time communicated. Every important patriotic measure in this region has had his sympathy, and of many he has been the prime mover. He gave to each his strong support, but uniformly shunned to appear in public. For himself or his friends he asked no reward; for himself, he asked only to do the hard work. His transparent singleness of purpose, his freedom from all by-ends, his plain good sense, courage, adherence, and his romantic generosity disarmed, first or last, all gainsayers. His examination before the United States Senate Committee on the Harper's Ferry Invasion, in January, 1860, as reported in the public documents, is a chapter well worth reading, as a shining example of the manner in which a truth-speaker baffles all statecraft, and extorts at last a reluctant homage from the bitterest adversaries.

I have heard, what must be true, that he had great executive skill, a clear method, and a just attention to all the details of the task in hand. Plainly he was no boaster or pretender, but a man for up-hill work, a soldier to bide the brunt; a man whom disasters, which dishearten other men, only stimulated to new courage and endeavor.

I have heard something of his quick temper, that he was indignant at this or that man's behavior, but never that his anger outlasted for a moment the mischief done or threatened to the good cause, or ever stood in the way of his hearty coöperation with the offenders when they returned to the path of public duty. I look upon him as a type of the American republican. A man of the people, in strictly private life, girt with family ties; an active and intelligent manufacturer and merchant, enlightened, enough to see a citizen's interest in the public affairs, and virtuous enough to obey to the uttermost the truth he saw, — he became, in

the most natural manner, an indispensable power in the state. Without such vital support as he, and such as he, brought to the government, where would that government be? When one remembers his incessant service; his journeys and residences in many States; the societies he worked with; the councils in which he sat; the wide correspondence, presently enlarged by printed circulars, then by newspapers established wholly or partly at his own cost; the useful suggestions; the celerity with which his purpose took form; and his immovable convictions, — I think this single will was worth to the cause ten thousand ordinary partisans, well-disposed enough, but of feebler and interrupted action.

These interests, which he passionately adopted, inevitably led him into personal communication with patriotic persons holding the same views, — with two Presidents, with members of Congress, with officers of the government and of the army, and with leading people everywhere. He had been always a man of simple tastes, and through all his years devoted to the growing details of his prospering manufactory. But this sudden association now with the leaders of parties and persons of pronounced power and influence in the nation, and the broad hospitality which brought them about his board at his own house or in New York, or in Washington, never altered one feature of his face, one trait of his manners. There he sat in the council, a simple, resolute Republican, an enthusiast only in his love of freedom and the good of men; with no pride of opinion, and with this distinction, that, if he could not bring his associates to adopt his measure, he accepted, with entire sweetness the next best measure which could secure their assent. But these public benefits were purchased at a severe cost. For a year or two, the most affectionate and domestic of men became almost a stranger in his beautiful home. And it was too plain that the excessive toil and anxieties, into which his ardent spirit led him, overtasked his strength and wore out prematurely his constitution. It is sad that such a life should end prematurely; but when I consider that he lived long enough to see with his own eyes the salvation of his country, to which he had given all his heart; that he did not know an idle day; was never called to suffer under the decays and loss of his powers, or to see that others were waiting for his place and privilege, but lived while he lived, and beheld his work prosper for the joy and benefit of all mankind, — I count him happy among men.

Almost I am ready to say to these mourners, Be not too proud in your grief, when you remember that there is not a town in the remote State of Kansas that will not weep with you as at the loss of its founder; not a Southern State in which the freedmen will not learn to-day from their preachers that one of their most efficient benefactors has departed, and will cover his memory with benedictions; and that, after all his efforts to serve men without appearing to do

so, there is hardly a man in this country worth knowing who does not hold his name in exceptional honor. And there is to my mind somewhat so absolute in the action of a good man that we do not, in thinking of him, so much as make any question of the future. For the Spirit of the Universe seems to say: "He has done well; is not that saying all?"

THE LORD'S SUPPER.

SERMON DELIVERED BEFORE THE SECOND CHURCH IN BOSTON
SEPTEMBER 9, 1832

The Kingdom of God is not meat and drink; but righteousness, and peace, and joy in the Holy Ghost. — Romans xiv. 17.

In the history of the Church no subject has been more fruitful of controversy than the Lord's Supper. There never has been any unanimity in the understanding of its nature, nor any uniformity in the mode of celebrating it. Without considering the frivolous questions which have been lately debated as to the posture in which men should partake of it; whether mixed or unmixed wine should be served; whether leavened or unleavened bread should be broken; — the questions have been settled differently in every church, who should be admitted to the feast, and how often it should be prepared. In the Catholic Church, infants were at one time permitted and then forbidden to partake; and, since the ninth century, the laity receive the bread only, the cup being reserved to the priesthood. So, as to the time of the solemnity. In the Fourth Lateran Council, it was decreed that any believer should communicate at least once in a year, — at Easter. Afterwards it was determined that this Sacrament should be received three times in the year, — at Easter, Whitsuntide and Christmas. But more important controversies have arisen respecting its nature. The famous question of the Real Presence was the main controversy between the Church of England and the Church of Rome. The doctrine of the Consubstantiation taught by Luther was denied by Calvin. In the Church of England, Archbishops Laud and Wake maintained that the elements were an Eucharist, or sacrifice of Thanksgiving to God; Cudworth and Warburton, that this was not a sacrifice, but a sacrificial feast; and Bishop Hoadley, that it was neither a sacrifice nor a feast after sacrifice, but a simple commemoration. And finally, it is now near two hundred years since the Society of Quakers denied the authority of the rite altogether, and gave good reasons for disusing it.

I allude to these facts only to show that, so far from the supper being a tradition in which men are fully agreed, there has always been the widest room for difference of opinion upon this particular. Having recently given particular attention to this subject, I was led to the conclusion that Jesus did not intend to establish an institution for perpetual observance when he ate the Passover with his disciples; and, further, to the opinion, that it is not expedient to celebrate it as we do. I shall now endeavor to state distinctly my reasons for these two

opinions.

I. The authority of the rite.

An account of the last supper of Christ with his disciples is given by the four Evangelists, Matthew, Mark, Luke, and John.

In St. Matthew's Gospel (Matt. xxvi. 26-30) are recorded the words of Jesus in giving bread and wine on that occasion to his disciples, but no expression occurs intimating that this feast was hereafter to be commemorated. In St. Mark (Mark xiv. 22-25) the same words are recorded, and still with no intimation that the occasion was to be remembered. St. Luke (Luke xxii. 19), after relating the breaking of the bread, has these words: "This do in remembrance of me." In St. John, although other occurrences of the same evening are related, this whole transaction is passed over without notice.

Now observe the facts. Two of the Evangelists, namely, Matthew and John, were of the twelve disciples, and were present on that occasion. Neither of them drops the slightest intimation of any intention on the part of Jesus to set up anything permanent. John especially, the beloved disciple, who has recorded with minuteness the conversation and the transactions of that memorable evening, has quite omitted such a notice. Neither does it appear to have come to the knowledge of Mark, who, though not an eye-witness, relates the other facts. This material fact, that the occasion was to be remembered, is found in Luke alone, who was not present. There is no reason, however, that we know, for rejecting the account of Luke. I doubt not, the expression was used by Jesus. I shall presently consider its meaning. I have only brought these accounts together, that you may judge whether it is likely that a solemn institution, to be continued to the end of time by all mankind, as they should come, nation after nation, within the influence of the Christian religion, would have been established in this slight manner — in a manner so slight, that the intention of commemorating it should not appear, from their narrative, to have caught the ear or dwelt in the mind of the only two among the twelve who wrote down what happened.

Still we must suppose that the expression, "This do in remembrance of me," had come to the ear of Luke from some disciple who was present. What did it really signify? It is a prophetic and an affectionate expression. Jesus is a Jew, sitting with his countrymen, celebrating their national feast. He thinks of his own impending death, and wishes the minds of his disciples to be prepared for it. "When hereafter," he says to them, "you shall keep the Passover, it will have an altered aspect to your eyes. It is now a historical covenant of God with the Jewish nation. Hereafter it will remind you of a new covenant sealed with my blood. In years to come, as long as your people shall come up to Jerusalem to

keep this feast, the connection which has subsisted between us will give a new meaning in your eyes to the national festival, as the anniversary of my death." I see natural feeling and beauty in the use of such language from Jesus, a friend to his friends; I can readily imagine that he was willing and desirous, when his disciples met, his memory should hallow their intercourse; but I cannot bring myself to believe that in the use of such an expression he looked beyond the living generation, beyond the abolition of the festival he was celebrating, and the scattering of the nation, and meant to impose a memorial feast upon the whole world.

Without presuming to fix precisely the purpose in the mind of Jesus, you will see that many opinions may be entertained of his intention, all consistent with the opinion that he did not design a perpetual ordinance. He may have foreseen that his disciples would meet to remember him, and that with good effect. It may have crossed his mind that this would be easily continued a hundred or a thousand years, — as men more easily transmit a form than a virtue, — and yet have been altogether out of his purpose to fasten it upon men in all times and all countries.

But though the words, "Do this in remembrance of me," do not occur in Matthew, Mark or John, and although it should be granted us that, taken alone, they do not necessarily import so much as is usually thought, yet many persons are apt to imagine that the very striking and personal manner in which the eating and drinking is described, indicates a striking and formal purpose to found a festival. And I admit that this impression might probably be left upon the mind of one who read only the passages under consideration in the New Testament. But this impression is removed by reading any narrative of the mode in which the ancient or the modern Jews have kept the Passover. It is then perceived that the leading circumstances in the Gospels are only a faithful account of that ceremony. Jesus did not celebrate the Passover, and afterwards the Supper, but the Supper was the Passover. He did with his disciples exactly what every master of a family in Jerusalem was doing at the same hour with his household. It appears that the Jews ate the lamb and the unleavened bread and drank wine after a prescribed manner. It was the custom for the master of the feast to break the bread and to bless it, using this formula, which the Talmudists have preserved to us, "Blessed be Thou, O Lord, our God, who givest us the fruit of the vine," — and then to give the cup to all. Among the modern Jews, who in their dispersion retain the Passover, a hymn is also sung after this ceremony, specifying the twelve great works done by God for the deliverance of their fathers out of Egypt.

But still it may be asked, Why did Jesus make expressions so extraordinary

and emphatic as these— “This is my body which is broken for you. Take; eat. This is my blood which is shed for you. Drink it”? — I reply they are not extraordinary expressions from him. They were familiar in his mouth. He always taught by parables and symbols. It was the national way of teaching, and was largely used by him. Remember the readiness which he always showed to spiritualize every occurrence. He stopped and wrote on the sand. He admonished his disciples respecting the leaven of the Pharisees. He instructed the woman of Samaria respecting living water. He permitted himself to be anointed, declaring that it was for his interment. He washed the feet of his disciples. These are admitted to be symbolical actions and expressions. Here, in like manner, he calls the bread his body, and bids the disciples eat. He had used the same expression repeatedly before. The reason why St. John does not repeat his words on this occasion, seems to be that he had reported a similar discourse of Jesus to the people of Capernaum more at length already (John vi. 27-60.) He there tells the Jews, “Except ye eat the flesh of the Son of Man and drink his blood, ye have no life in you.” And when the Jews on that occasion complained that they did not comprehend what he meant, he added for their better understanding, and as if for our understanding, that we might not think his body was to be actually eaten, that he only meant we should live by his commandment. He closed his discourse with these explanatory expressions: “The flesh profiteth nothing; the words that I speak to you, they are spirit and they are life.”

Whilst I am upon this topic, I cannot help remarking that it is not a little singular that we should have preserved this rite and insisted upon perpetuating one symbolical act of Christ whilst we have totally neglected all others, — particularly one other which had at least an equal claim to our observance. Jesus washed the feet of his disciples and told them that, as he had washed their feet they ought to wash one another’s feet; for he had given them an example, that they should do as he had done to them. I ask any person who believes the Supper to have been designed by Jesus to be commemorated forever, to go and read the account of it in the other Gospels, and then compare with it the account of this transaction in St. John, and tell me if this be not much more explicitly authorized than the Supper. It only differs in this, that we have found the Supper used in New England and the washing of the feet not. But if we had found it an established rite in our churches, on grounds of mere authority, it would have been impossible to have argued against it. That rite is used by the Church of Rome, and by the Sandemanians. It has been very properly dropped by other Christians. Why? For two reasons: (1) because it was a local custom, and unsuitable in western countries; and (2) because it was typical, and all understood that humility is the thing signified. But the Passover was local too,

and does not concern us, and its bread and wine were typical, and do not help us to understand the redemption which they signified. These views of the original account of the Lord's Supper lead me to esteem it an occasion full of solemn and prophetic interest, but never intended by Jesus to be the foundation of a perpetual institution.

It appears however in Christian history that the disciples had very early taken advantage of these impressive words of Christ to hold religious meetings, where they broke bread and drank wine as symbols. I look upon this fact as very natural in the circumstances of the Church. The disciples lived together; they threw all their property into a common stock; they were bound together by the memory of Christ, and nothing could be more natural than that this eventful evening should be affectionately remembered by them; that they, Jews like Jesus, should adopt his expressions and his types, and furthermore, that what was done with peculiar propriety by them, his personal friends, with less propriety should come to be extended to their companions also. In this way religious feasts grew up among the early Christians. They were readily adopted by the Jewish converts who were familiar with religious feasts, and also by the Pagan converts whose idolatrous worship had been made up of sacred festivals, and who very readily abused these to gross riot, as appears from the censures of St. Paul. Many persons consider this fact, the observance of such a memorial feast by the early disciples, decisive of the question whether it ought to be observed by us. There was good reason for his personal friends to remember their friend and repeat his words. It was only too probable that among the half converted Pagans and Jews, any rite, any form, would find favor, whilst yet unable to comprehend the spiritual character of Christianity.

The circumstance, however, that St. Paul adopts these views, has seemed to many persons conclusive in favor of the institution. I am of opinion that it is wholly upon the epistle to the Corinthians, and not upon the Gospels, that the ordinance stands. Upon this matter of St. Paul's view of the Supper, a few important considerations must be stated.

The end which he has in view, in the eleventh chapter of the first Epistle is not to enjoin upon his friends to observe the Supper, but to censure their abuse of it. We quote the passage nowadays as if it enjoined attendance upon the Supper; but he wrote it merely to chide them for drunkenness. To make their enormity plainer he goes back to the origin of this religious feast to show what sort of feast that was, out of which this riot of theirs came, and so relates the transactions of the Last Supper. "I have received of the Lord," he says, "that which I delivered to you." By this expression it is often thought that a miraculous communication is implied; but certainly without good reason, if it is

remembered that St. Paul was living in the lifetime of all the apostles who could give him an account of the transaction; and it is contrary to all reason to suppose that God should work a miracle to convey information that could so easily be got by natural means. So that the import of the expression is that he had received the story of an eye-witness such as we also possess.

But there is a material circumstance which diminishes our confidence in the correctness of the Apostle's view; and that is, the observation that his mind had not escaped the prevalent error of the primitive church, the belief, namely, that the second coming of Christ would shortly occur, until which time, he tells them, this feast was to be kept. Elsewhere he tells them that at that time the world would be burnt up with fire, and a new government established, in which the Saints would sit on thrones; so slow were the disciples during the life and after the ascension of Christ, to receive the idea which we receive, that his second coming was a spiritual kingdom, the dominion of his religion in the hearts of men, to be extended gradually over the whole world. In this manner we may see clearly enough how this ancient ordinance got its footing among the early Christians, and this single expectation of a speedy reappearance of a temporal Messiah, which kept its influence even over so spiritual a man as St. Paul, would naturally tend to preserve the use of the rite when once established.

We arrive then at this conclusion: first, that it does not appear, from a careful examination of the account of the Last Supper in the Evangelists, that it was designed by Jesus to be perpetual; secondly, that it does not appear that the opinion of St. Paul, all things considered, ought to alter our opinion derived from the Evangelists.

One general remark before quitting this branch of this subject. We ought to be cautious in taking even the best ascertained opinions and practices of the primitive church, for our own. If it could be satisfactorily shown that they esteemed it authorized and to be transmitted forever, that does not settle the question for us. We know how inveterately they were attached to their Jewish prejudices, and how often even the influence of Christ failed to enlarge their views. On every other subject succeeding times have learned to form a judgment more in accordance with the spirit of Christianity than was the practice of the early ages.

II. But it is said: "Admit that the rite was not designed to be perpetual. What harm doth it? Here it stands, generally accepted, under some form, by the Christian world, the undoubted occasion of much good; is it not better it should remain?" This is the question of expediency.

I proceed to state a few objections that in my judgment lie against its use in its present form.

1. If the view which I have taken of the history of the institution be correct, then the claim of authority should be dropped in administering it. You say, every time you celebrate the rite, that Jesus enjoined it; and the whole language you use conveys that impression. But if you read the New Testament as I do, you do not believe he did.

2. It has seemed to me that the use of this ordinance tends to produce confusion in our views of the relation of the soul to God. It is the old objection to the doctrine of the Trinity, — that the true worship was transferred from God to Christ, or that such confusion was introduced into the soul that an undivided worship was given nowhere. Is not that the effect of the Lord's Supper? I appeal now to the convictions of communicants, and ask such persons whether they have not been occasionally conscious of a painful confusion of thought between the worship due to God and the commemoration due to Christ. For the service does not stand upon the basis of a voluntary act, but is imposed by authority. It is an expression of gratitude to Christ, enjoined by Christ. There is an endeavor to keep Jesus in mind, whilst yet the prayers are addressed to God. I fear it is the effect of this ordinance to clothe Jesus with an authority which he never claimed and which distracts the mind of the worshipper. I know our opinions differ much respecting the nature and offices of Christ, and the degree of veneration to which he is entitled. I am so much a Unitarian as this: that I believe the human mind can admit but one God, and that every effort to pay religious homage to more than one being, goes to take away all right ideas. I appeal, brethren, to your individual experience. In the moment when you make the least petition to God, though it be but a silent wish that he may approve you, or add one moment to your life, — do you not, in the very act, necessarily exclude all other beings from your thought? In that act, the soul stands alone with God, and Jesus is no more present to your mind than your brother or your child.

But is not Jesus called in Scripture the Mediator? He is the mediator in that only sense in which possibly any being can mediate between God and man, — that is, an instructor of man. He teaches us how to become like God. And a true disciple of Jesus will receive the light he gives most thankfully; but the thanks he offers, and which an exalted being will accept, are not compliments, commemorations, but the use of that instruction.

3. Passing other objections, I come to this, that the use of the elements, however suitable to the people and the modes of thought in the East, where it originated, is foreign and unsuited to affect us. Whatever long usage and strong association may have done in some individuals to deaden this repulsion, I apprehend that their use is rather tolerated than loved by any of us. We are not accustomed to express our thoughts or emotions by symbolical actions. Most

men find the bread and wine no aid to devotion, and to some it is a painful impediment. To eat bread is one thing; to love the precepts of Christ and resolve to obey them is quite another.

The statement of this objection leads me to say that I think this difficulty, wherever it is felt, to be entitled to the greatest weight. It is alone a sufficient objection to the ordinance. It is my own objection. This mode of commemorating Christ is not suitable to me. That is reason enough why I should abandon it. If I believed it was enjoined by Jesus on his disciples, and that he even contemplated making permanent this mode of commemoration, every way agreeable to an Eastern mind, and yet on trial it was disagreeable to my own feelings, I should not adopt it. I should choose other ways which, as more effectual upon me, he would approve more. For I choose that my remembrances of him should be pleasing, affecting, religious. I will love him as a glorified friend, after the free way of friendship, and not pay him a stiff sign of respect, as men do those whom they fear. A passage read from his discourses, a moving provocation to works like his, any act or meeting which tends to awaken a pure thought, a flow of love, an original design of virtue, I call a worthy, a true commemoration.

4. The importance ascribed to this particular ordinance is not consistent with the spirit of Christianity. The general object and effect of the ordinance is unexceptionable. It has been, and is, I doubt not, the occasion of indefinite good; but an importance is given by Christians to it which never can belong to any form. My friends, the apostle well assures us that “the kingdom of God is not meat and drink, but righteousness and peace and joy in the Holy Ghost.” I am not so foolish as to declaim against forms. Forms are as essential as bodies; but to exalt particular forms, to adhere to one form a moment after it is outgrown, is unreasonable, and it is alien to the spirit of Christ. If I understand the distinction of Christianity, the reason why it is to be preferred over all other systems and is divine is this, that it is a moral system; that it presents men with truths which are their own reason, and enjoins practices that are their own justification; that if miracles may be said to have been its evidence to the first Christians, they are not its evidence to us, but the doctrines themselves; that every practice is Christian which praises itself, and every practice unchristian which condemns itself. I am not engaged to Christianity by decent forms, or saving ordinances; it is not usage, it is not what I do not understand, that binds me to it, — let these be the sandy foundations of falsehoods. What I revere and obey in it is its reality, its boundless charity, its deep interior life, the rest it gives to mind, the echo it returns to my thoughts, the perfect accord it makes with my reason through all its representation of God and His Providence; and the persuasion and courage

that come out thence to lead me upward and onward. Freedom is the essence of this faith. It has for its object simply to make men good and wise. Its institutions then should be as flexible as the wants of men. That form out of which the life and suitableness have departed, should be as worthless in its eyes as the dead leaves that are falling around us.

And therefore, although for the satisfaction of others I have labored to show by the history that this rite was not intended to be perpetual; although I have gone back to weigh the expressions of Paul, I feel that here is the true point of view. In the midst of considerations as to what Paul thought, and why he so thought, I cannot help feeling that it is time misspent to argue to or from his convictions, or those of Luke and John, respecting any form. I seem to lose the substance in seeking the shadow. That for which Paul lived and died so gloriously; that for which Jesus gave himself to be crucified; the end that animated the thousand martyrs and heroes who have followed his steps, was to redeem us from a formal religion, and teach us to seek our well-being in the formation of the soul. The whole world was full of idols and ordinances. The Jewish was a religion of forms; it was all body, it had no life, and the Almighty God was pleased to qualify and send forth a man to teach men that they must serve him with the heart; that only that life was religious which was thoroughly good; that sacrifice was smoke, and forms were shadows. This man lived and died true to this purpose; and now, with his blessed word and life before us, Christians must contend that it is a matter of vital importance, — really a duty, to commemorate him by a certain form, whether that form be agreeable to their understandings or not. Is not this to make vain the gift of God? Is not this to turn back the hand on the dial? Is not this to make men, — to make ourselves, — forget that not forms, but duties; not names, but righteousness and love are enjoined; and that in the eye of God there is no other measure of the value of any one form than the measure of its use?

There remain some practical objections to the ordinance, into which I shall not now enter. There is one on which I had intended to say a few words; I mean the unfavorable relation in which it places that numerous class of persons who abstain from it merely from disinclination to the rite.

Influenced by these considerations, I have proposed to the brethren of the Church to drop the use of the elements and the claim of authority in the administration of this ordinance, and have suggested a mode in which a meeting for the same purpose might be held, free of objection.

My brethren have considered my views with patience and candor, and have recommended, unanimously, an adherence to the present form. I have therefore been compelled to consider whether it becomes me to administer it. I am clearly

of opinion I ought not. This discourse has already been so far extended that I can only say that the reason of my determination is shortly this: — It is my desire, in the office of a Christian minister, to do nothing which I cannot do with my whole heart. Having said this, I have said all. I have no hostility to this institution; I am only stating my want of sympathy with it. Neither should I ever have obtruded this opinion upon other people, had I not been called by my office to administer it. That is the end of my opposition, that I am not interested in it. I am content that it stand to the end of the world, if it please men and please Heaven, and I shall rejoice in all the good it produces.

As it is the prevailing opinion and feeling in our religious community, that it is an indispensable part of the pastoral office to administer this ordinance, I am about to resign into your hands that office which you have confided to me. It has many duties for which I am feebly qualified. It has some which it will always be my delight to discharge according to my ability, wherever I exist. And whilst the recollection of its claims oppresses me with a sense of my unworthiness, I am consoled by the hope that no time and no change can deprive me of the satisfaction of pursuing and exercising its highest functions.

HISTORICAL DISCOURSE, AT CONCORD

ON THE SECOND CENTENNIAL ANNIVERSARY OF THE
INCORPORATION OF THE TOWN, SEPTEMBER 12, 1835.

Fellow Citizens:

The town of Concord begins, this day, the third century of its history. By a common consent, the people of New England, for a few years past, as the second centennial anniversary of each of its early settlements arrived, have seen fit to observe the day. You have thought it becoming to commemorate the planting of the first inland town. The sentiment is just, and the practice is wise. Our ears shall not be deaf to the voice of time. We will review the deeds of our fathers, and pass that just verdict on them we expect from posterity on our own.

And yet, in the eternity of nature, how recent our antiquities appear! The imagination is impatient of a cycle so short. Who can tell how many thousand years, every day, the clouds have shaded these fields with their purple awning? The river, by whose banks most of us were born, every winter, for ages, has spread its crust of ice over the great meadows which, in ages, it had formed. But the little society of men who now, for a few years, fish in this river, plough the fields it washes, mow the grass and reap the corn, shortly shall hurry from its banks as did their forefathers. "Man's life," said the Witan to the Saxon king, "is the sparrow that enters at a window, flutters round the house, and flies out at another, and none knoweth whence he came, or whither he goes." The more reason that we should give to our being what permanence we can; — that we should recall the Past, and expect the Future.

Yet the race survives whilst the individual dies. In the country, without any interference of the law, the agricultural life favors the permanence of families. Here are still around me the lineal descendants of the first settlers of this town. Here is Blood, Flint, Willard, Meriam, Wood, Hosmer, Barrett, Wheeler, Jones, Brown, Buttrick, Brooks, Stow, Hoar, Heywood, Hunt, Miles, — the names of the inhabitants for the first thirty years; and the family is in many cases represented, when the name is not. If the name of Bulkeley is wanting, the honor you have done me this day, in making me your organ, testifies your persevering kindness to his blood.

I shall not be expected, on this occasion, to repeat the details of that oppression which drove our fathers out hither. Yet the town of Concord was settled by a party of non-conformists, immediately from Great Britain. The best friend the Massachusetts colony had, though much against his will, was

Archbishop Laud in England. In consequence of his famous proclamation setting up certain novelties in the rites of public worship, fifty godly ministers were suspended for contumacy, in the course of two years and a half. Hindered from speaking, some of these dared to print the reasons of their dissent, and were punished with imprisonment or mutilation. 1 This severity brought some of the best men in England to overcome that natural repugnance to emigration which holds the serious and moderate of every nation to their own soil. Among the silenced clergymen was a distinguished minister of Woodhill, in Bedfordshire, Rev. Peter Bulkeley, descended from a noble family, honored for his own virtues, his learning and gifts as a preacher, and adding to his influence the weight of a large estate. 2 Persecution readily knits friendship between its victims. Mr. Bulkeley having turned his estate into money and set his face towards New England, was easily able to persuade a good number of planters to join him. They arrived in Boston in 1634. 3 Probably there had been a previous correspondence with Governor Winthrop, and an agreement that they should settle at Musketaquid. With them joined Mr. Simon Willard, a merchant from Kent in England. They petitioned the General Court for a grant of a township, and on the 2d of September, 1635, corresponding in New Style to 12th September, two hundred years ago this day, leave to begin a plantation at Musketaquid was given to Peter Bulkeley, Simon Willard, and about twelve families more. A month later, Rev. John Jones and a large number of settlers destined for the new town arrived in Boston. 4

The grant of the General Court was but a preliminary step. The green meadows of Musketaquid or *Grassy Brook* were far up in the woods, not to be reached without a painful and dangerous journey through an uninterrupted wilderness. They could cross the Massachusetts or Charles river, by the ferry at Newtown; they could go up the river as far as Watertown. But the Indian paths leading up and down the country were a foot broad. They must then plunge into the thicket, and with their axes cut a road for their teams, with their women and children and their household stuff, forced to make long circuits too, to avoid hills and swamps. Edward Johnson of Woburn has described in an affecting narrative their labors by the way. "Sometimes passing through thickets where their hands are forced to make way for their bodies' passage, and their feet clambering over the crossed trees, which when they missed, they sunk into an uncertain bottom in water, and wade up to their knees, tumbling sometimes higher, sometimes lower. At the end of this, they meet a scorching plain, yet not so plain but that the ragged bushes scratch their legs foully, even to wearing their stockings to their bare skin in two or three hours. Some of them, having no leggins, have had the blood trickle down at every step. And in time of summer, the sun casts such a

reflecting heat from the sweet fern, whose scent is very strong, that some nearly fainted.” They slept on the rocks, wherever the night found them. Much time was lost in travelling they knew not whither, when the sun was hidden by clouds; for “their compass miscarried in crowding through the bushes,” and the Indian paths, once lost, they did not easily find.

Johnson, relating undoubtedly what he had himself heard from the pilgrims, intimates that they consumed many days in exploring the country, to select the best place for the town. Their first temporary accommodation was rude enough. “After they have found a place of abode, they burrow themselves in the earth for their first shelter, under a hill-side, and casting the soil aloft upon timbers, they make a fire against the earth, at the highest side. And thus these poor servants of Christ provide shelter for themselves, their wives and little ones, keeping off the short showers from their lodgings, but the long rains penetrate through, to their great disturbance in the night season. Yet in these poor wigwams they sing psalms, pray and praise their God, till they can provide them houses, which they could not ordinarily, till the earth, by the Lord’s blessing, brought forth bread to feed them. This they attain with sore travail, every one that can lift a hoe to strike into the earth, standing stoutly to his labors, and tearing up the roots and bushes from the ground, which, the first year, yielded them a lean crop, till the sod of the earth was rotten, and therefore they were forced to cut their bread very thin for a long season. But the Lord is pleased to provide for them great store of fish in the spring time, and especially, alewives, about the bigness of a herring.”
5 These served them also for manure. For flesh, they looked not for any, in those times, unless they could barter with the Indians for venison and raccoons. “Indian corn, even the coarsest, made as pleasant meal as rice.” 6 All kinds of garden fruits grew well, “and let no man,” writes our pious chronicler, in another place, “make a jest of pumpkins, for with this fruit the Lord was pleased to feed his people until their corn and cattle were increased.” 7

The great cost of cattle, and the sickening of their cattle upon such wild fodder as was never cut before; the loss of their sheep and swine by wolves; the sufferings of the people in the great snows and cold soon following; and the fear of the Pequots; are the other disasters enumerated by the historian.

The hardships of the journey and of the first encampment, are certainly related by their contemporary with some air of romance, yet they can scarcely be exaggerated. A march of a number of families with their stuff, through twenty miles of unknown forest, from a little rising town that had not much to spare, to an Indian town in the wilderness that had nothing, must be laborious to all, and for those who were new to the country and bred in softness, a formidable adventure. But the pilgrims had the preparation of an armed mind, better than

any hardihood of body. And the rough welcome which the new land gave them was a fit introduction to the life they must lead in it.

But what was their reception at Musketaquid? This was an old village of the Massachusetts Indians. Tahattawan, the Sachem, with Waban his son-in-law, lived near Nashawtuck, now Lee's Hill. 8 Their tribe, once numerous, the epidemic had reduced. Here they planted, hunted and fished. The moose was still trotting in the country, and of his sinews they made their bowstring. Of the pith elder, that still grows beside our brooks, they made their arrow. Of the Indian Hemp they spun their nets and lines for summer angling, and, in winter, they sat around holes in the ice, catching salmon, pickerel, breams and perch, with which our river abounded. 9 Their physical powers, as our fathers found them, and before yet the English alcohol had proved more fatal to them than the English sword, astonished the white men. 10 Their sight was so excellent, that, standing on the sea shore, they often told of the coming of a ship at sea, sooner by one hour, yea, two hours sail, than any Englishman that stood by, on purpose to look out. 11 Roger Williams affirms that he has known them run between eighty and a hundred miles in a summer's day, and back again within two days. A little pounded parched corn or no-cake sufficed them on the march. To his bodily perfection, the wild man added some noble traits of character. He was open as a child to kindness and justice. Many instances of his humanity were known to the Englishmen who suffered in the woods from sickness or cold. "When you came over the morning waters," said one of the Sachems, "we took you into our arms. We fed you with our best meat. Never went white man cold and hungry from Indian wigwam."

The faithful dealing and brave good-will, which, during the life of the friendly Massasoit, they uniformly experienced at Plymouth and at Boston, went to their hearts. So that the peace was made, and the ear of the savage already secured, before the pilgrims arrived at his seat of Musketaquid, to treat with him for his lands.

It is said that the covenant made with the Indians by Mr. Bulkeley and Major Willard, was made under a great oak, formerly standing near the site of the Middlesex Hotel. 12 Our Records affirm that Squaw Sachem, Tahattawan, and Nimrod did sell a tract of six miles square to the English, receiving for the same, some fathoms of Wampumpeag, hatchets, hoes, knives, cotton cloth and shirts. Wibbacowet, the husband of Squaw Sachem, received a suit of cloth, a hat, a white linen band, shoes, stockings and a great coat; and, in conclusion, the said Indians declared themselves satisfied, and told the Englishmen they were welcome. And after the bargain was concluded, Mr. Simon Willard, pointing to the four corners of the world, declared that they had bought three miles from that

place, east, west, north and south. 13

The Puritans, to keep the remembrance of their unity one with another, and of their peaceful compact with the Indians, named their forest settlement CONCORD. They proceeded to build, under the shelter of the hill that extends for a mile along the north side of the Boston road, their first dwellings. The labors of a new plantation were paid by its excitements. I seem to see them, with their pious pastor, addressing themselves to the work of clearing the land. Natives of another hemisphere, they beheld, with curiosity, all the pleasing features of the American forest. The landscape before them was fair, if it was strange and rude. The little flower which at this season stars our woods and roadsides with its profuse blooms, might attract even eyes as stern as theirs with its humble beauty. The useful pine lifted its cones into the frosty air. The maple which is already making the forest gay with its orange hues, reddened over those houseless men. The majestic summits of Wachusett and Monadnoc towering in the horizon, invited the steps of adventure westward.

As the season grew later, they felt its inconveniences. “Many were forced to go barefoot and bareleg, and some in time of frost and snow, yet were they more healthy than now they are.” 14 The land was low but healthy; and if, in common with all the settlements, they found the air of America very cold, they might say with Higginson, after his description of the other elements, that “New England may boast of the element of fire, more than all the rest; for all Europe is not able to afford to make so great fires as New England. A poor servant, that is to possess but fifty acres, may afford to give more wood for fire as good as the world yields, than many noblemen in England.” 15 Many were their wants, but more their privileges. The light struggled in through windows of oiled paper, 16 but they read the word of God by it. They were fain to make use of their knees for a table, but their limbs were their own. Hard labor and spare diet they had, and off wooden trenchers, but they had peace and freedom, and the wailing of the tempest in the woods sounded kindlier in their ear than the smooth voice of the prelates, at home, in England. “There is no people,” said their pastor to his little flock of exiles, “but will strive to excel in something What can we excel in, if not in holiness? If we look to number, we are the fewest; if to strength, we are the weakest; if to wealth and riches, we are the poorest of all the people of God through the whole world. We cannot excel nor so much as equal other people in these things; and if we come short in grace and holiness too, we are the most despicable people under heaven. Strive we, therefore, herein to excel, and suffer not this crown to be taken away from us.” 17 The sermon fell into good and tender hearts; the people conspired with their teacher. Their religion was sweetness and peace amidst toil and tears. And, as we are informed. “the edge of

their appetite was greater to spiritual duties at their first coming, in time of wants, than afterwards.”

The original Town Records, for the first thirty years, are lost. We have records of marriages and deaths, beginning nineteen years after the settlement; and copies of some of the doings of the town in regard to territory, of the same date. But the original distribution of the land, or an account of the principles on which it was divided, are not preserved. Agreeably to the custom of the times, a large portion was reserved to the public, and it appears from a petition of some new comers, in 1643, that a part had been divided among the first settlers without price, on the single condition of improving it. 18 Other portions seem to have been successively divided off and granted to individuals, at the rate of sixpence or a shilling an acre. But, in the first years, the land would not pay the necessary public charges, and they seem to have fallen heavily on the few wealthy planters. Mr. Bulkeley, by his generosity, spent his estate, and, doubtless in consideration of his charges, the General Court, in 1639, granted him 300 acres towards Cambridge; and to Mr. Spencer, probably for the like reason, 300 acres by the Alewife River. In 1638, 1200 acres were granted to Governor Winthrop, and 1000 to Thomas Dudley of the lands adjacent to the town, and Governor Winthrop selected as a building spot the land near the house of Capt. Humphrey Hunt. 19 The first record now remaining is that of a reservation of land for the minister, and the appropriation of new lands as commons or pastures to some poor men. At the same date, in 1654, the town having divided itself into three districts, called the North, South and East quarters, Ordered, “that the North quarter are to keep and maintain all their highways and bridges over the great river, in their quarter, and, in respect of the greatness of their charge there about, and in regard of the ease of the East quarter above the rest, in their highways, they are to allow the North quarter £3.” 20

Fellow Citizens, this first recorded political act of our fathers, this tax assessed on its inhabitants by a town, is the most important event in their civil history, implying, as it does, the exercise of a sovereign power, and connected with all the immunities and powers of a corporate town in Massachusetts. The greater speed and success that distinguish the planting of the human race in this country, over all other plantations in history, owe themselves mainly to the new subdivisions of the State into small corporations of land and power. It is vain to look for the inventor. No man made them. Each of the parts of that perfect structure grew out of the necessities of an instant occasion. The germ was formed in England. The charter gave to the freemen of the Company of Massachusetts Bay, the election of the Governor and Council of Assistants. It moreover gave them the power of prescribing the manner in which freemen

should be elected; and ordered that all fundamental laws should be enacted by the freemen of the colony. But the Company removed to New England; more than one hundred freemen were admitted the first year, and it was found inconvenient to assemble them all. 21 And when, presently, the design of the colony began to fulfill itself, by the settlement of new plantations in the vicinity of Boston, and parties, with grants of land, straggled into the country to truck with the Indians and to clear the land for their own benefit, the Governor and freemen in Boston found it neither desirable nor possible to control the trade and practices of these farmers. What could the body of freemen, meeting four times a year, at Boston, do for the daily wants of the planters at Musketaquid? The wolf was to be killed; the Indian to be watched and resisted; wells to be dug; the forest to be felled; pastures to be cleared; corn to be raised; roads to be cut; town and farm lines to be run. These things must be done, govern who might. The nature of man and his condition in the world, for the first time within the period of certain history, controlled the formation of the State. The necessity of the colonists wrote the law. Their wants, their poverty, their manifest convenience made them bold to ask of the Governor and of the General Court, immunities, and, to certain purposes, sovereign powers. The townsmen's words were heard and weighed, for all knew that it was a petitioner that could not be slighted; it was the river, or the winter, or famine, or the Pequots, that spoke through them to the Governor and Council of Massachusetts Bay. Instructed by necessity, each little company organized itself after the pattern of the larger town, by appointing its constable, and other petty half-military officers. As early as 1633, 22 the office of townsman or *selectman* appears, who seems first to have been appointed by the General Court, as here, at Concord, in 1639. In 1635, the Court say," whereas particular towns have many things which concern only themselves, it is Ordered, that the freemen of every town shall have power to dispose of their own lands, and woods, and choose their own particular officers." 23 This pointed chiefly at the office of constable, but they soon chose their own selectmen, and very early assessed taxes; a power at first resisted, 24 but speedily confirmed to them.

Meantime, to this paramount necessity, a milder and more pleasing influence was joined. I esteem it the happiness of this country, that its settlers, whilst they were exploring their granted and natural rights and determining the power of the magistrate, were united by personal affection. Members of a church before whose searching covenant all rank was abolished, they stood in awe of each other, as religious men. They bore to John Winthrop, the Governor, a grave but hearty kindness. For the first time, men examined the powers of the chief whom they loved and revered. For the first time, the ideal social compact was real. The

bands of love and reverence held fast the little state, whilst they untied the great cords of authority to examine their soundness and learn on what wheels they ran. They were to settle the internal constitution of the towns, and, at the same time, their power in the commonwealth. The Governor conspires with them in limiting his claims to their obedience, and values much more their love than his chartered authority. The disputes between that forbearing man and the deputies are like the quarrels of girls, so much do they turn upon complaints of unkindness, and end in such loving reconciliations. It was on doubts concerning their own power, that, in 1634, a committee repaired to him for counsel, and he advised, seeing the freemen were grown so numerous, to send deputies from every town once in a year to revise the laws and to assess all monies. 25 And the General Court, thus constituted, only needed to go into separate session from the council, as they did in 1644, 26 to become essentially the same assembly they are this day.

By this course of events, Concord and the other plantations found themselves separate and independent of Boston, with certain rights of their own, which, what they were, time alone could fully determine; enjoying, at the same time, a strict and loving fellowship with Boston, and sure of advice and aid, on every emergency. Their powers were speedily settled by obvious convenience, and the towns learned to exercise a sovereignty in the laying of taxes; in the choice of their deputy to the house of representatives; in the disposal of the town lands; in the care of public worship, the school and the poor; and, what seemed of at least equal importance, to exercise the right of expressing an opinion on every question before the country. In a town-meeting, the great secret of political science was uncovered, and the problem solved, how to give every individual his fair weight in the government, without any disorder from numbers. In a town-meeting, the roots of society were reached. Here the rich gave counsel, but the poor also; and moreover, the just and the unjust. He is ill-informed who expects, on running down the town records for two hundred years, to find a church of saints, a metropolis of patriots, enacting wholesome and creditable laws. The constitution of the towns forbid it. In this open democracy, every opinion had utterance; every objection, every fact, every acre of land, every bushel of rye, its entire weight. The moderator was the passive mouth-piece, and the vote of the town, like the vane on the turret overhead, free for every wind to turn, and always turned by the last and strongest breath. In these assemblies, the public weal, the call of interest, duty, religion, were heard; and every local feeling, every private grudge, every suggestion of petulance and ignorance, were not less faithfully produced. Wrath and love came up to town-meeting in company. By the law of 1641, every man, — freeman or not, — inhabitant or not, — might introduce any business into a public meeting. Not a complaint occurs in all the

volumes of our Records, of any inhabitant being hindered from speaking, or suffering from any violence or usurpation of any class. The negative ballot of a ten shilling freeholder was as fatal as that of the honored owner of Blood's Farms or Willard's Purchase. A man felt himself at liberty to exhibit, at town-meeting, feelings and actions that he would have been ashamed of anywhere but amongst his neighbors. Individual protests are frequent. Peter Wright desired his dissent might be recorded from the town's grant to John Shepard. 27 In 1795, several town-meetings are called, upon the compensation to be made to a few proprietors for land taken in making a bridle road; and one of them demanding large damages, many offers were made him in town-meeting, and refused; "which the town thought very unreasonable." The matters there debated are such as to invite very small considerations. The ill-spelled pages of the town records contain the result. I shall be excused for confessing that I have set a value upon any symptom of meanness and private pique which I have met with in these antique books, as proof that justice was done; that if the results of our history are approved as wise and good, it was yet a free strife; if the good counsel prevailed, the sneaking counsel did not fail to be suggested; freedom and virtue, if they triumphed, triumphed in a fair field. And so be it an everlasting testimony for them, and so much ground of assurance of man's capacity for self-government.

It is the consequence of this institution that not a schoolhouse, a public pew, a bridge, a pound, a mill-dam, hath been set up, or pulled down, or altered, or bought, or sold, without the whole population of this town having a voice in the affair. A general contentment is the result. And the people truly feel that they are lords of the soil. In every winding road, in every stone fence, in the smokes of the poor-house chimney, in the clock on the church, they read their own power, and consider, at leisure, the wisdom and error of their judgments.

The British government has recently presented to the several public libraries of this country, copies of the splendid edition of the Domesday Book, and other ancient public Records of England. I cannot but think that it would be a suitable acknowledgment of this national munificence, if the records of one of our towns, — of this town, for example, — should be printed, and presented to the governments of Europe; to the English nation, as a thank-offering, and as a certificate of the progress of the Saxon race; to the continental nations as a lesson of humanity and love. Tell them, the Union has twenty-four States, and Massachusetts is one. Tell them, Massachusetts has three hundred towns, and Concord is one; that in Concord are five hundred rateable polls, and every one has an equal vote.

About ten years after the planting of Concord, efforts began to be made to civilize the Indians, and "to win them to the knowledge of the true God." This

indeed, in so many words, is expressed in the charter of the Colony as one of its ends; and this design is named first in the printed "Considerations," 28 that inclined Hampden, and determined Winthrop and his friends, to come hither. The interest of the Puritans in the natives was heightened by a suspicion at that time prevailing, that these were the lost ten tribes of Israel. The man of the woods might well draw on himself the compassion of the planters. His erect and perfect form, though disclosing some irregular virtues, was found joined to a dwindled soul. Master of all sorts of wood-craft, he seemed a part of the forest and the lake, and the secret of his amazing skill seemed to be that he partook of the nature and fierce instincts of the beasts he slew. Those who dwelled by ponds and rivers had some tincture of civility, but the hunters of the tribe were found intractable at catechism. Thomas Hooker anticipated the opinion of Humboldt, and called them "the ruins of mankind."

Early efforts were made to instruct them, in which Mr. Bulkeley, Mr. Flint, and Capt. Willard, took an active part. In 1644, Squaw Sachem, the widow of Nanepashemet, the great Sachem of Concord and Mystic, with two sachems of Wachusett, made a formal submission to the English government, and intimated their desire, "as opportunity served, and the English lived among them, to learn to read God's word, and know God aright;" and the General Court acted on their request. 29 John Eliot, in October, 1646, preached his first sermon in the Indian language at Noonantum; Waban, Tahattawan, and their sannaps, going thither from Concord to hear him. There under the rubbish and ruins of barbarous life, the human heart heard the voice of love, and awoke as from a sleep. The questions which the Indians put betray their reason and their ignorance. "Can Jesus Christ understand prayers in the Indian language?" "If a man be wise, and his sachem weak, must he obey him?" At a meeting which Eliot gave to the squaws apart, the wife of Wampooas propounded the question, "Whether do I pray when my husband prays, if I speak nothing as he doth, yet if I like what he saith?"— "which questions were accounted of by some, as part of the whitenings of the harvest toward." 30 Tahattawan, our Concord sachem, called his Indians together, and bid them not oppose the courses which the English were taking for their good; for, said he, all the time you have lived after the Indian fashion, under the power of the higher sachems, what did they care for you? They took away your skins, your kettles and your wampum, at their own pleasure, and this was all they regarded. But you may see the English mind no such things, but only seek your welfare, and instead of taking away, are ready to give to you. Tahattawan and his son-in-law Waban, besought Eliot to come and preach to them at Concord, and here they entered, by his assistance, into an agreement to twenty-nine rules, all breathing a desire to conform themselves to English

customs. 31 They requested to have a town given them within the bounds of Concord, near unto the English. When this question was propounded by Tahattawan, he was asked, why he desired a town so near, when there was more room for them up in the country? The Sachem replied, that he knew if the Indians dwelt far from the English, they would not so much care to pray, nor could they be so ready to hear the word of God, but would be, all one, Indians still; but dwelling near the English, he hoped it might be otherwise with them then. We, who see in the squalid remnants of the twenty tribes of Massachusetts, the final failure of this benevolent enterprise, can hardly learn without emotion, the earnestness with which the most sensible individuals of the copper race held on to the new hope they had conceived, of being elevated to equality with their civilized brother. It is piteous to see their self-distrust in their request to remain near the English, and their unanimous entreaty to Capt. Willard, to be their Recorder, being very solicitous that what they did agree upon might be faithfully kept without alteration. It was remarkable that the preaching was not wholly new to them. "Their forefathers," the Indians told Eliot, "did know God, but after this, they fell into a deep sleep, and when they did awake, they quite forgot him." 32

At the instance of Eliot, in 1651, their desire was granted by the General Court, and Nashobah, lying near Nagog pond, now partly in Littleton, partly in Acton, became an Indian town, where a Christian worship was established under an Indian ruler and teacher. 33 Wilson relates, that, at their meetings, "the Indians sung a psalm, made Indian by Eliot, in one of our ordinary English tunes, melodiously." 34 Such was, for half a century, the success of the general enterprise, that, in 1676, there were five hundred and sixty-seven praying Indians, and in 1689, twenty-four Indian preachers, and eighteen assemblies.

Meantime, Concord increased in territory and population. The lands were divided; highways were cut from farm to farm, and from this town to Boston. A military company had been organized in 1636. The Pequots, the terror of the farmer, were exterminated in 1637. Capt. Underhill, in 1638, declared, that "the new plantations of Dedham and Concord do afford large accommodation, and will contain abundance of people." 35 In 1639, our first selectmen, Mr. Flint, Lt. Willard, and Richard Griffin were appointed. 36 And, in 1640, when the colony rate was £1200, Concord was assessed £50. 37 The country already began to yield more than was consumed by the inhabitants. 38 The very great immigration from England made the lands more valuable every year, and supplied a market for the produce. In 1643, the colony was so numerous, that it became expedient to divide it into four counties, Concord being included in Middlesex. 39 In 1644, the town contained sixty families.

But, in 1640, all immigration ceased, and the country produce and farm-stock depreciated. 40 Other difficulties accrued. The fish, which had been the abundant manure of the settlers, was found to injure the land. 41 The river, at this period, seems to have caused some distress now by its overflow, now by its drought. 42 A cold and wet summer blighted the corn; enormous flocks of pigeons beat down and eat up all sorts of English grain; and the crops suffered much from mice. 43 New plantations and better land had been opened, far and near; and whilst many of the colonists at Boston thought to remove, or did remove to England, the Concord people became uneasy, and looked around for new seats. In 1643, one seventh or one eighth part of the inhabitants went to Connecticut with Rev. Mr. Jones, and settled Fairfield. Weakened by this loss, the people begged to be released from a part of their rates, to which the General Court consented. 44 Mr. Bulkeley dissuaded his people from removing, and admonished them to increase their faith with their griefs. Even this check which befell them acquaints us with the rapidity of their growth, for the good man, in dealing with his people, taxes them with luxury. "We pretended to come hither," he says, "for ordinances; but now ordinances are light matters with us; we are turned after the prey. We have among us excess and pride of life; pride in apparel, daintiness in diet, and that in those who, in times past, would have been satisfied with bread. *This is the sin of the lowest of the people.*" 45 Better evidence could not be desired of the rapid growth of the settlement.

The check was but momentary. The earth teemed with fruits. The people on the bay built ships, and found the way to the West Indies, with pipe-staves, lumber and fish; and the country people speedily learned to supply themselves with sugar, tea and molasses. The college had been already gathered in 1638. Now the school house went up. The General Court, in 1647, "to the end that learning may not be buried in the graves of our forefathers, Ordered, that every township, after the Lord had increased them to the number of fifty householders, shall appoint one to teach all children to write and read; and where any town shall increase to the number of one hundred families, they shall set up a Grammar school, the masters thereof being able to instruct youth so far as they may be fitted for the University." 46 With these requirements Concord not only complied, but, in 1653, subscribed a sum for several years to the support of Harvard College. 47

But a new and alarming public distress retarded the growth of this, as of the sister towns during more than twenty years from 1654 to 1676. In 1654, the four united New England Colonies agreed to raise 270 foot and 40 horse, to reduce Ninigret, Sachem of the Niantics, and appointed Major Simon Willard, of this town, to the command. 48 This war seems to have been pressed by three of the

colonies, and reluctantly entered by Massachusetts. Accordingly, Major Willard did the least he could, and incurred the censure of the Commissioners, who write to their "loving friend Major Willard," "that they leave to his consideration the inconveniences arising from his non-attendance to his commission." 49 This expedition was but the introduction of the war with King Philip. In 1670, the Wampanoags began to grind their hatchets, and mend their guns, and insult the English. Philip surrendered seventy guns to the Commissioners in Taunton Meetinghouse, 50 but revenged his humiliation a few years after, by carrying fire and the tomahawk into the English villages. From Narraganset to the Connecticut River, the scene of war was shifted as fast as these red hunters could traverse the forest. Concord was a military post. The inactivity of Major Willard, in Ninigret's war, had lost him no confidence. He marched from Concord to Brookfield, in season to save the people whose houses had been burned, and who had taken shelter in a fortified house. 51 But he fought with disadvantage against an enemy who must be hunted before every battle. Some flourishing towns were burned. John Monoco, a formidable savage, boasted that "he had burned Medfield and Lancaster, and would burn Groton, Concord, Watertown and Boston;" adding, "what me will, me do." He did burn Groton, but before he had executed the remainder of his threat he was hanged, in Boston, in September, 1676. 52

A still more formidable enemy was removed, in the same year, by the capture of Canonchet, the faithful ally of Philip, who was soon afterwards shot at Stonington. He stoutly declared to the Commissioners that "he would not deliver up a Wampanoag, nor the paring of a Wampanoag's nail," and when he was told that his sentence was death, he said "he liked it well that he was to die before his heart was soft, or he had spoken anything unworthy of himself." 53

We know beforehand who must conquer in that unequal struggle. The red man may destroy here and there a straggler, as a wild beast may; he may fire a farm-house, or a village; but the association of the white men and their arts of war give them an overwhelming advantage, and in the first blast of their trumpet we already hear the flourish of victory. I confess what chiefly interests me, in the annals of that war, is the grandeur of spirit exhibited by a few of the Indian chiefs. A nameless Wampanoag who was put to death by the Mohicans, after cruel tortures, was asked by his butchers during the torture, how he liked the war? — he said, "he found it as sweet as sugar was to Englishmen." 54

The only compensation which war offers for its manifold mischiefs, is in the great personal qualities to which it gives scope and occasion. The virtues of patriotism and of prodigious courage and address were exhibited on both sides, and, in many instances, by women. The historian of Concord has preserved an

instance of the resolution of one of the daughters of the town. Two young farmers, Abraham and Isaac Shepherd, had set their sister Mary, a girl of fifteen years, to watch whilst they threshed grain in the barn. The Indians stole upon her before she was aware, and her brothers were slain. She was carried captive into the Indian country, but, at night, whilst her captors were asleep, she plucked a saddle from under the head of one of them, took a horse they had stolen from Lancaster, and having girt the saddle on, she mounted, swam across the Nashua river, and rode through the forest to her home. 55

With the tragical end of Philip, the war ended. Beleaguered in his own country, his corn cut down, his piles of meal and other provision wasted by the English, it was only a great thaw in January, that, melting the snow and opening the earth, enabled his poor followers to come at the ground-nuts, else they had starved. Hunted by Captain Church, he fled from one swamp to another; his brother, his uncle, his sister, and his beloved squaw being taken or slain, he was at last shot down by an Indian deserter, as he fled alone in the dark of the morning, not far from his own fort. 56

Concord suffered little from the war. This is to be attributed no doubt, in part, to the fact that troops were generally quartered here, and that it was the residence of many noted soldiers. Tradition finds another cause in the sanctity of its minister. The elder Bulkeley was gone. In 1659, 57 his bones were laid at rest in the forest. But the mantle of his piety and of the people's affection fell upon his son Edward, 58 the fame of whose prayers, it is said, once saved Concord from an attack of the Indian. 59 A great defence undoubtedly was the village of Praying Indians, until this settlement fell a victim to the envenomed prejudice against their countrymen. The worst feature in the history of those years, is, that no man spake for the Indian. When the Dutch, or the French, or the English royalist disagreed with the Colony, there was always found a Dutch, or French, or tory party, — an earnest minority, — to keep things from extremity. But the Indian seemed to inspire such a feeling as the wild beast inspires in the people near his den. It is the misfortune of Concord to have permitted a disgraceful outrage upon the friendly Indians settled within its limits, in February, 1676, which ended in their forcible expulsion from the town.

This painful incident is but too just an example of the measure which the Indians have generally received from the whites. For them the heart of charity, of humanity, was stone. After Philip's death, their strength was irrecoverably broken. They never more disturbed the interior settlements, and a few vagrant families, that are now pensioners on the bounty of Massachusetts, are all that is left of the twenty tribes.

“Alas! for them — their day is o'er,

Their fires are out from hill and shore,
No more for them the wild deer bounds,
The plough is on their hunting grounds;
The pale man's axe rings in their woods,
The pale man's sail skims o'er their floods,
Their pleasant springs are dry." 60

I turn gladly to the progress of our civil history. Before 1666, 15,000 acres had been added by grants of the General Court to the original territory of the town, 61 so that Concord then included the greater part of the towns of Bedford, Acton, Lincoln and Carlisle.

In the great growth of the country, Concord participated, as is manifest from its increasing polls and increased rates. Randolph at this period writes to the English Government, concerning the country towns; "The farmers are numerous and wealthy, live in good houses; are given to hospitality; and make good advantage by their corn, cattle, poultry, butter and cheese." 62 Edward Bulkeley was the pastor, until his death, in 1696. His youngest brother, Peter, was deputy from Concord, and was chosen speaker of the house of deputies in 1676. The following year, he was sent to England, with Mr. Stoughton, as agent for the colony; and, on his return, in 1685, was a royal councillor. But I am sorry to find that the servile Randolph speaks of him with marked respect. 63 It would seem that his visit to England had made him a courtier. In 1689, Concord partook of the general indignation of the province against Andros. A company marched to the capital under Lieut. Heald, forming a part of that body concerning which we are informed, "the country people came armed into Boston, on the afternoon (of Thursday, 18th April,) in such rage and heat, as made us all tremble to think what would follow; for nothing would satisfy them but that the governor must be bound in chains or cords, and put in a more secure place, and that they would see done before they went away; and to satisfy them he was guarded by them to the fort." 64 But the town records of that day confine themselves to descriptions of lands, and to conferences with the neighboring towns to run boundary lines. In 1699, so broad was their territory, I find the selectmen running the lines with Chelmsford, Cambridge and Watertown. 65 Some interesting peculiarities in the manners and customs of the time, appear in the town's books. Proposals of marriage were made by the parents of the parties, and minutes of such private agreements sometimes entered on the clerk's records. 66 The public charity seems to have been bestowed in a manner now obsolete. The town lends its commons as pastures, to poor men; and "being informed of the great present want of Thomas Pellit, gave order to Stephen Hosmer, to deliver a town cow, of a black color, with a white face, unto

said Pellit, for his present supply.” 67

From the beginning to the middle of the eighteenth century, our records indicate no interruption of the tranquillity of the inhabitants, either in church or in civil affairs. After the death of Rev. Mr. Estabrook, in 1711, it was propounded at the town meeting, “whether one of the three gentlemen lately improved here in preaching, namely, Mr. John Whiting, Mr. Holyoke and Mr. Prescott shall be now chosen in the work of the ministry? Voted affirmatively.”

68 Mr. Whiting, who was chosen, was, we are told in his epitaph, “a universal lover of mankind.” The charges of education and of legislation, at this period, seem to have afflicted the town; for, they vote to petition the General Court, to be eased of the law relating to providing a schoolmaster; happily, the Court refused; and in 1712, the selectmen agreed with Capt. James Minott, “for his son Timothy to keep the school at the schoolhouse for the town of Concord, for half a year beginning 2d June; and if any scholar shall come, within the said time, for learning exceeding his son’s ability, the said Captain doth agree to instruct them himself in the tongues, till the above said time be fulfilled; for which service, the town is to pay Capt. Minott ten pounds.” 69 Capt. Minott seems to have served our prudent fathers in the double capacity of teacher and representative. It is an article in the selectmen’s warrant for the town meeting, “to see if the town will lay in for a representative not exceeding four pounds.” Captain Minott was chosen, and after the General Court was adjourned received of the town for his services, an allowance of three shillings per day. The country was not yet so thickly settled but that the inhabitants suffered from wolves and wild-cats, which infested the woods; since bounties of twenty shillings are given as late as 1735, to Indians and whites, for the heads of these animals, after the constable has cut off the ears. 70

Mr. Whiting was succeeded in the pastoral office by Rev. Daniel Bliss, in 1738. Soon after his ordination, the town seems to have been divided by ecclesiastical discords. In 1741, the celebrated Whitfield preached here, in the open air, to a great congregation. Mr. Bliss heard that great orator with delight, and by his earnest sympathy with him, in opinion and practice, gave offence to a part of his people. Party and mutual councils were called, but no grave charge was made good against him. I find, in the Church Records, the charges preferred against him, his answer thereto, and the result of the Council. The charges seem to have been made by the lovers of order and moderation against Mr. Bliss, as a favorer of religious excitements. His answer to one of the counts breathes such true piety that I cannot forbear to quote it. The ninth allegation is “That in praying for himself, in a church meeting, in December last, he said, ‘he was a poor vile worm of the dust, that was allowed as Mediator between God and this

people.” To this Mr. Bliss replied, “In the prayer you speak of, Jesus Christ was acknowledged as the only Mediator between God and man; at which time, I was filled with wonder, that such a sinful and worthless worm as I am, was allowed to represent Christ, in any manner, even so far as to be bringing the petitions and thank-offerings of the people unto God, and God’s will and truths to the people; and used the word Mediator in some differing light from that you have given it; but I confess I was soon uneasy that I had used the word, lest some would put a wrong meaning thereupon.” 71 The Council admonished Mr. Bliss of some improprieties of expression, but bore witness to his purity and fidelity in his office. In 1764, Whitfield preached again at Concord, on Sunday afternoon; Mr. Bliss preached in the morning, and the Concord people thought their minister gave them the better sermon of the two. It was also his last.

The planting of the Colony was the effect of religious principle. The Revolution was the fruit of another principle, — the devouring thirst for justice. From the appearance of the article in the Selectmen’s warrant, in 1765, “to see if the town will give the Representative any instructions about any important affair to be transacted by the General Court, concerning the Stamp Act;” 72 to the peace of 1783, the Town Records breathe a resolute and warlike spirit, so bold from the first as hardly to admit of increase.

It would be impossible on this occasion to recite all these patriotic papers. I must content myself with a few brief extracts. On the 24th January, 1774, in answer to letters received from the united committees of correspondence, in the vicinity of Boston, the town say:

“We cannot possibly view with indifference the past and present obstinate endeavors of the enemies of this, as well as the mother country, to rob us of those rights, that are the distinguishing glory and felicity of this land; rights, that we are obliged to no power, under heaven, for the enjoyment of; as they are the fruit of the heroic enterprises of the first settlers of these American colonies. And though we cannot but be alarmed at the great majority, in the British parliament, for the imposition of unconstitutional taxes on the colonies, yet, it gives life and strength to every attempt to oppose them, that not only the people of this, but the neighboring provinces are remarkably united in the important and interesting opposition, which, as it succeeded before, in some measure, by the blessing of heaven, so, we cannot but hope it will be attended with still greater success, in future.

“ *Resolved* , That these colonies have been and still are illegally taxed by the British parliament, as they are not virtually represented therein.

“That the purchasing commodities subject to such illegal taxation is an explicit, though an impious and sordid resignation of the liberties of this free and

happy people.

“That, as the British parliament have empowered the East India Company to export their tea into America, for the sole purpose of raising a revenue from hence; to render the design abortive, we will not, in this town, either by ourselves, or any from or under us, buy, sell, or use any of the East India Company’s tea, or any other tea, whilst there is a duty for raising a revenue thereon in America; neither will we suffer any such tea to be used in our families.

“That, all such persons as shall purchase, sell, or use any such tea, shall, for the future, be deemed unfriendly to the happy constitution of this country.

“That, in conjunction with our brethren in America, we will risk our fortunes, and even our lives, in defence of his majesty, King George the Third, his person, crown and dignity; and will, also, with the same resolution, as his free-born subjects in this country, to the utmost of our power, defend all our rights inviolate to the latest posterity.

“That, if any person or persons, inhabitants of this province, so long as there is a duty on tea, shall import any tea from the India House, in England, or be factors for the East India Company, we will treat them, in an eminent degree, as enemies to their country, and with contempt and detestation.

“That, we think it our duty, at this critical time of our public affairs, to return our hearty thanks to the town of Boston, for every rational measure they have taken for the preservation or recovery of our invaluable rights and liberties infringed upon; and we hope, should the state of our public affairs require it, that they will still remain watchful and persevering; with a steady zeal to espy out everything that shall have a tendency to subvert our happy constitution.” 73

On the 27th June, near three hundred persons, upwards of twenty-one years of age, inhabitants of Concord, entered into a covenant, “solemnly engaging with each other, in the presence of God, to suspend all commercial intercourse with Great Britain, until the act for blocking the harbor of Boston be repealed; and neither to buy nor consume any merchandise imported from Great Britain, nor to deal with those who do.” 74

In August, a County Convention met in this town, to deliberate upon the alarming state of public affairs, and published an admirable report. 75 In September, incensed at the new royal law which made the judges dependent on the crown, the inhabitants assembled on the common, and forbade the justices to open the court of sessions. This little town then assumed the sovereignty. It was judge and jury and council and king. On the 26th of the month, the whole town resolved itself into a committee of safety, “to suppress all riots, tumults, and disorders in said town, and to aid all untainted magistrates in the execution of the

laws of the land.” 76 It was then voted, to raise one or more companies of Minute Men, by enlistment, to be paid by the town whenever called out of town; and to provide arms and ammunition, “that those who are unable to purchase them themselves, may have the advantage of them, if necessity calls for it.” 77 In October, the Provincial Congress met in Concord. John Hancock was President. This body was composed of the foremost patriots, and adopted those efficient measures whose progress and issue belong to the history of the nation. 78

The clergy of New England were, for the most part, zealous promoters of the revolution. A deep religious sentiment sanctified the thirst for liberty. All the military movements in this town were solemnized by acts of public worship. In January, 1775, a meeting was held for the enlisting of minute men. Rev. William Emerson, the Chaplain of the Provincial Congress, preached to the people. Sixty men enlisted and, in a few days, many more. On 13th March, at a general review of all the military companies, he preached to a very full assembly, taking for his text, 2 Chronicles xiii. 12, “And, behold, God himself is with us for our captain, and his priests with sounding trumpets to cry alarm against you.” 79 It is said that all the services of that day made a deep impression on the people, even to the singing of the psalm.

A large amount of military stores had been deposited in this town, by order of the Provincial Committee of Safety. It was to destroy those stores, that the troops who were attacked in this town, on the 19th April, 1775, were sent hither by General Gage.

The story of that day is well known. In these peaceful fields, for the first time since a hundred years, the drum and alarm-gun were heard, and the farmers snatched down their rusty firelocks from the kitchen walls, to make good the resolute words of their town debates. In the field where the western abutment of the old bridge may still be seen, about half a mile from this spot, the first organized resistance was made to the British arms. There the Americans first shed British blood. Eight hundred British soldiers, under the command of Lieut.-Col. Francis Smith, had marched from Boston to Concord; at Lexington had fired upon the brave handful of militia, for which a speedy revenge was reaped by the same militia in the afternoon. When they entered Concord, they found the militia and minute-men assembled under the command of Col. Barrett and Major Buttrick. This little battalion, though in their hasty council some were urgent to stand their ground, retreated before the enemy to the high land on the other bank of the river, to wait for reinforcement. Col. Barrett ordered the troops not to fire, unless fired upon. The British following them across the bridge, posted two companies, amounting to about one hundred men, to guard the bridge, and

secure the return of the plundering party. Meantime, the men of Acton, Bedford, Lincoln and Carlisle, all once included in Concord, remembering their parent town in the hour of danger, arrived and fell into the ranks so fast, that Major Buttrick found himself superior in number to the enemy's party at the bridge. And when the smoke began to rise from the village where the British were burning cannon-carriages and military stores, the Americans resolved to force their way into town. The English beginning to pluck up some of the planks of the bridge, the Americans quickened their pace, and the British fired one or two shots up the river, (our ancient friend here, Master Blood, saw the water struck by the first ball;) then a single gun, the ball from which wounded Luther Blanchard and Jonas Brown, and then a volley, by which Captain Isaac Davis and Abner Hosmer of Acton were instantly killed. Major Buttrick leaped from the ground, and gave the command to fire, which was repeated in a simultaneous cry by all his men. The Americans fired, and killed two men and wounded eight. A head stone and a foot stone, on this bank of the river, mark the place where these first victims lie. The British retreated immediately towards the village, and were joined by two companies of grenadiers, whom the noise of the firing had hastened to the spot. The militia and minute men, — every one from that moment being his own commander, — ran over the hills opposite the battlefield, and across the great fields, into the east quarter of the town, to waylay the enemy, and annoy his retreat. The British, as soon as they were rejoined by the plundering detachment, began that disastrous retreat to Boston, which was an omen to both parties of the event of the war.

In all the anecdotes of that day's events we may discern the natural action of the people. It was not an extravagant ebullition of feeling, but might have been calculated on by any one acquainted with the spirits and habits of our community. Those poor farmers who came up, that day, to defend their native soil, acted from the simplest instincts. They did not know it was a deed of fame they were doing. These men did not babble of glory. They never dreamed their children would contend who had done the most. They supposed they had a right to their corn and their cattle, without paying tribute to any but their own governors. And as they had no fear of man, they yet did have a fear of God. Capt. Charles Miles, who was wounded in the pursuit of the enemy, told my venerable friend who sits by me, that "he went to the services of that day, with the same seriousness and acknowledgement of God, which he carried to church."

The presence of these aged men who were in arms on that day, seems to bring us nearer to it. The benignant Providence which has prolonged their lives to this hour, gratifies the strong curiosity of the new generation. The Pilgrims are gone; but we see what manner of persons they were who stood in the worst perils of

the Revolution. We hold by the hand the last of the invincible men of old, and confirm from living lips the sealed records of time.

And you, my fathers, whom God and the history of your country have ennobled, may well bear a chief part in keeping this peaceful birth-day of our town. You are indeed extraordinary heroes. If ever men in arms had a spotless cause, you had. You have fought a good fight. And having quit you like men in the battle, you have quit yourselves like men in your virtuous families; in your cornfields; and in society. We will not hide your honorable gray hairs under perishing laurel leaves, but the eye of affection and veneration follows you. You are set apart, — and forever, — for the esteem and gratitude of the human race, To you belongs a better badge than stars and ribbons. This prospering country is your ornament, and this expanding nation is multiplying your praise with millions of tongues.

The agitating events of those days were duly remembered in the church. On the second day after the affray, divine service was attended, in this house, by 700 soldiers. William Emerson, the pastor, had a hereditary claim to the affection of the people, being descended in the fourth generation from Edward Bulkeley, son of Peter. But he had merits of his own. The cause of the colonies was so much in his heart, that he did not cease to make it the subject of his preaching and his prayers, and is said to have deeply inspired many of his people with his own enthusiasm. He, at least, saw clearly the pregnant consequences of the 19th April. I have found within a few days, among some family papers, his almanac of 1775, in a blank leaf of which he has written a narrative of the fight; 80 and, at the close of the month, he writes, “This month remarkable for the greatest events of the present age.” To promote the same cause, he asked, and obtained of the town, leave to accept the commission of chaplain to the Northern army, at Ticonderoga, and died, after a few months, of the distemper that prevailed in the camp.

In the whole course of the war the town did not depart from this pledge it had given. Its little population of 1300 souls behaved like a party to the contest. The number of its troops constantly in service is very great. Its pecuniary burdens are out of all proportion to its capital. The economy so rigid which marked its earlier history, has all vanished. It spends profusely, affectionately, in the service. “Since,” say the plaintive records, “General Washington, at Cambridge, is not able to give but 24s. per cord for wood, for the army; it is Voted, that this town encourage the inhabitants to supply the army, by paying two dollars per cord, over and above the General’s price, to such as shall carry wood thither;” 81 and 210 cords of wood were carried. 82 A similar order is taken respecting hay. Whilst Boston was occupied by the British troops, Concord contributed to the

relief of the inhabitants, £70, in money; 225 bushels of grain; and a quantity of meat and wood. When, presently, the poor of Boston were quartered by the Provincial Congress on the neighboring country, Concord received 82 persons to its hospitality. 83 In the year 1775, it raised 100 minute men, and 74 soldiers to serve at Cambridge. In March, 1776, 145 men were raised by this town to serve at Dorchester Heights. 84 In June, the General Assembly of Massachusetts resolved to raise 5,000 militia for six months, to reinforce the Continental army. "The numbers," say they, "are large, but this Court has the fullest assurance, that their brethren, on this occasion, will not confer with flesh and blood, but will, without hesitation, and with the utmost alacrity and despatch, fill up the numbers proportioned to the several towns." 85 On that occasion, Concord furnished 67 men, paying them itself, at an expense of £622. And so on, with every levy, to the end of the war. For these men it was continually providing shoes, stockings, shirts, coats, blankets and beef. The taxes, which, before the war, had not much exceeded £200 per annum, amounted, in the year 1782, to \$9,544, in silver. 86

The great expense of the war was borne with cheerfulness, whilst the war lasted; but years passed, after the peace, before the debt was paid. As soon as danger and injury ceased, the people were left at leisure to consider their poverty and their debts. The town records show how slowly the inhabitants recovered from the strain of excessive exertion. Their instructions to their representatives are full of loud complaints of the disgraceful state of public credit, and the excess of public expenditure. They may be pardoned, under such distress, for the mistakes of an extreme frugality. They fell into a common error, not yet dismissed to the moon, that the remedy was, to forbid the great importation of foreign commodities, and to prescribe by law the prices of articles. The operation of a new government was dreaded, lest it should prove expensive, and the country towns thought it would be cheaper if it were removed from the capital. They were jealous lest the General Court should pay itself too liberally, and our fathers must be forgiven by their charitable posterity, if, in 1782, before choosing a representative, it was "Voted, that the person who should be chosen representative to the General Court should receive 6s. per day, whilst in actual service, an account of which time he should bring to the town, and if it should be that the General Court should resolve, that, their pay should be more than 6s., then the representative shall be hereby directed to pay the overplus into the town treasury." 87 This was securing the prudence of the public servants.

But whilst the town had its own full share of the public distress, it was very far from desiring relief at the cost of order and law. In 1786, when the general sufferings drove the people in parts of Worcester and Hampshire counties to insurrection, a large party of armed insurgents arrived in this town, on the 12th

September, to hinder the sitting of the Court of Common Pleas. But they found no countenance here. 88 The same people who had been active in a County Convention to consider grievances, condemned the rebellion, and joined the authorities in putting it down. In 1787, the admirable instructions given by the town to its representative are a proud monument of the good sense and good feeling that prevailed. The grievances ceased with the adoption of the Federal constitution. The constitution of Massachusetts had been already accepted. It was put to the town of Concord, in October, 1776, by the Legislature, whether the existing house of representatives should enact a constitution for the State? The town answered No. 89 The General Court, notwithstanding, draughted a constitution, sent it here, and asked the town whether they would have it for the law of the State? The town answered No, by a unanimous vote. In 1780, a constitution of the State, proposed by the Convention chosen for that purpose, was accepted by the town with the reservation of some articles. 90 And, in 1788, the town, by its delegate, accepted the new Constitution of the United States, and this event closed the whole series of important public events in which this town played a part.

From that time to the present hour, this town has made a slow but constant progress in population and wealth, and the arts of peace. It has suffered neither from war, nor pestilence, nor famine, nor flagrant crime. Its population, in the census of 1830, was 2,020 souls. The public expenses, for the last year, amounted to \$4,290; for the present year, to \$5,040. 91 If the community stints its expense in small matters, it spends freely on great duties. The town raises, this year, \$1,800 for its public schools; besides about \$1,200 which are paid, by subscription, for private schools. This year, it expends \$800 for its poor; the last year it expended \$900. Two religious societies, of differing creed, dwell together in good understanding, both promoting, we hope, the cause of righteousness and love. Concord has always been noted for its ministers. The living need no praise of mine. Yet it is among the sources of satisfaction and gratitude, this day, that the aged with whom is wisdom, our fathers' counsellor and friend, is spared to counsel and intercede for the sons.

Such, Fellow Citizens, is an imperfect sketch of the history of Concord. I have been greatly indebted, in preparing this sketch, to the printed but unpublished History of this town, furnished me by the unhesitating kindness of its author, long a resident in this place. I hope that History will not long remain unknown. The author has done us and posterity a kindness, by the zeal and patience of his research, and has wisely enriched his pages with the resolutions, addresses and instructions to its agents, which from time to time, at critical periods, the town has voted. Meantime, I have read with care the town records

themselves. They must ever be the fountains of all just information respecting your character and customs. They are the history of the town. They exhibit a pleasing picture of a community almost exclusively agricultural, where no man has much time for words, in his search after things; of a community of great simplicity of manners, and of a manifest love of justice. For the most part, the town has deserved the name it wears. I find our annals marked with a uniform good sense. I find no ridiculous laws, no eavesdropping legislators, no hanging of witches, no ghosts, no whipping of Quakers, no unnatural crimes. The tone of the records rises with the dignity of the event. These soiled and musty books are luminous and electric within. The old town clerks did not spell very correctly, but they contrive to make pretty intelligible the will of a free and just community. Frugal our fathers were, — very frugal, — though, for the most part, they deal generously by their minister, and provide well for the schools and the poor. If, at any time, in common with most of our towns, they have carried this economy to the verge of a vice, it is to be remembered that a town is, in many respects, a financial corporation. They economize, that they may sacrifice. They stint and higggle on the price of a pew, that they may send 200 soldiers to General Washington to keep Great Britain at bay. For splendor, there must somewhere be rigid economy. That the head of the house may go brave, the members must be plainly clad, and the town must save that the State may spend. Of late years, the growth of Concord has been slow. Without navigable waters, without mineral riches, without any considerable mill privileges, the natural increase of her population is drained by the constant emigration of the youth. Her sons have settled the region around us, and far from us. Their wagons have rattled down the remote western hills. And in every part of this country, and in many foreign parts, they plough the earth, they traverse the sea, they engage in trade and in all the professions.

Fellow Citizens; let not the solemn shadows of two hundred years, this day, fall over us in vain. I feel some unwillingness to quit the remembrance of the past. With all the hope of the new I feel that we are leaving the old. Every moment carries us farther from the two great epochs of public principle, the Planting, and the Revolution of the colony. Fortunate and favored this town has been, in having received so large an infusion of the spirit of both of those periods. Humble as is our village in the circle of later and prouder towns that whiten the land, it has been consecrated by the presence and activity of the purest men. Why need I remind you of our own Hosmers, Minotts, Cumings, Barretts, Beattons, the departed benefactors of the town? On the village green have been the steps of Winthrop and Dudley; of John Eliot, the Indian apostle, who had a courage that intimidated those savages whom his love could not melt;

of Whitfield, whose silver voice melted his great congregation into tears; of Hancock, and his compatriots of the provincial Congress; of Langdon, and the college over which he presided. But even more sacred influences than these have mingled here with the stream of human life. The merit of those who fill a space in the world's history, who are borne forward, as it were, by the weight of thousands whom they lead, sheds a perfume less sweet than do the sacrifices of private virtue. I have had much opportunity of access to anecdotes of families, and I believe this town to have been the dwelling place, in all times since its planting, of pious and excellent persons, who walked meekly through the paths of common life, who served God, and loved man, and never let go the hope of immortality. The benediction of their prayers and of their principles lingers around us. The acknowledgment of the Supreme Being exalts the history of this people. It brought the fathers hither. In a war of principle, it delivered their sons. And so long as a spark of this faith survives among the children's children, so long shall the name of Concord be honest and venerable.

ADDRESS AT THE DEDICATION OF THE SOLDIERS' MONUMENT IN CONCORD APRIL 19TH, 1867.

Fellow Citizens:

The day is in Concord doubly our calendar day, as being the anniversary of the invasion of the town by the British troops in 1775, and of the departure of the company of volunteers for Washington, in 1861. We are all pretty well aware that the facts which make to us the interest of this day are in a great degree personal and local here: that every other town and city has its own heroes and memorial days, and that we can hardly expect a wide sympathy for the names and anecdotes which we delight to record. We are glad and proud that we have no monopoly of merit. We are thankful that other towns and cities are as rich; that the heroes of old and of recent date, who made and kept America free and united, were not rare or solitary growths, but sporadic over vast tracts of the Republic. Yet, as it is a piece of nature and the common sense that the throbbing chord that holds us to our kindred, our friends and our town, is not to be denied or resisted, — no matter how frivolous or unphilosophical its pulses, — we shall cling affectionately to our houses, our river and pastures, and believe that our visitors will pardon us if we take the privilege of talking freely about our nearest neighbors as in a family party; — well assured, meantime, that the virtues we are met to honor were directed on aims which command the sympathy of every loyal American citizen, were exerted for the protection of our common country, and aided its triumph.

The town has thought fit to signify its honor for a few of its sons by raising an obelisk in the square. It is a simple pile enough, — a few slabs of granite, dug just below the surface of the soil, and laid upon, the top of it; but as we have learned that the upheaved mountain, from which these discs or flakes were broken, was once a glowing mass at white heat, slowly crystallized, then uplifted by the central fires of the globe: so the roots of the events it appropriately marks are in the heart of the universe. I shall say of this obelisk, planted here in our quiet plains, what Richter says of the volcano in the fair landscape of Naples: “Vesuvius stands in this poem of Nature, and exalts everything, as war does the age.”

The art of the architect and the sense of the town have made these dumb stones speak; have, if I may borrow the old language of the church, converted these elements from a secular to a sacred and spiritual use; have made them look to the past and the future; have given them a meaning for the imagination and the heart. The sense of the town, the eloquent inscriptions the shaft now hears,

the memories of these martyrs, the noble names which yet have gathered only their first fame, whatever good grows to the country out of the war, the largest results, the future power and genius of the land, will go on clothing this shaft with daily beauty and spiritual life. 'T is certain that a plain stone like this, standing on such memories, having no reference to utilities, but only to the grand instincts of the civil and moral man, mixes with surrounding nature, — by day, with the changing seasons, by night the stars roll over it gladly, — becomes a sentiment, a poet, a prophet, an orator, to every townsman and passenger, an altar where the noble youth shall in all time come to make his secret vows.

The old Monument, a short half-mile from this house, stands to signalize the first Revolution, where the people resisted offensive usurpations, offensive taxes of the British Parliament, claiming that there should be no tax without representation. Instructed by events, after the quarrel began, the Americans took higher ground, and stood for political independence. But in the necessities of the hour, they overlooked the moral law, and winked at a practical exception to the Bill of Rights they had drawn up. They winked at the exception, believing it insignificant. But the moral law, the nature of things, did not wink at it, but kept its eye wide open. It turned out that this one violation was a subtle poison, which in eighty years corrupted the whole overgrown body politic, and brought the alternative of extirpation of the poison or ruin to the Republic.

This new Monument is built to mark the arrival of the nation at the new principle, — say, rather, at its new acknowledgment, for the principle is as old as Heaven, — that only that State can live, in which injury to the least member is recognized as damage to the whole.

Reform must begin at home. The aim of the hour was to reconstruct the South; but first the North had to be reconstructed. Its own theory and practice of liberty had got sadly out of gear, and must be corrected. It was done on the instant. A thunderstorm at sea sometimes reverses the magnets in the ship, and south is north. The storm of war works the like miracle on men. Every democrat who went South came back a republican, like the governors who, in Buchanan's time, went to Kansas, and instantly took the free-state colors. War, says the poet, is

“the arduous strife,

To which the triumph of all good is given.”

Every principle is a war-note. When the rights of man are recited under any old government, every one of them is a declaration of war. War civilizes, rearranges the population, distributing by ideas, — the innovators on one side, the antiquaries on the other. It opens the eyes wider. Once we were patriots up to the town-bounds, or the State-line. But when you replace the love of family or clan

by a principle, as freedom, instantly that fire runs over the State-line into New Hampshire, Vermont, New York and Ohio, into the prairie and beyond, leaps the mountains, bridges river and lake, burns as hotly in Kansas and California as in Boston, and no chemist can discriminate between one soil and the other. It lifts every population to an equal power and merit.

As long as we debate in council, both sides may form their private guess what the event may be, or which is the strongest. But the moment you cry "Every man to his tent, O Israel!" the delusions of hope and fear are at an end; — the strength is now to be tested by the eternal facts. There will be no doubt more. The world is equal to itself. The secret architecture of things begins to disclose itself; the fact that all things were made on a basis of right; that justice is really desired by all intelligent beings; that opposition to it is against the nature of things; and that, whatever may happen in this hour or that, the years and the centuries are always pulling down the wrong and building up the right.

The war made the Divine Providence credible to many who did not believe the good Heaven quite honest. Every man was an abolitionist by conviction, but did not believe that his neighbor was. The opinions of masses of men, which the tactics of primary caucuses and the proverbial timidity of trade had concealed, the war discovered; and it was found, contrary to all popular belief, that the country was at heart abolitionist, and for the Union was ready to die.

As cities of men are the first effects of civilization, and also instantly causes of more civilization, so armies, which are only wandering cities, generate a vast heat, and lift the spirit of the soldiers who compose them to the boiling point. The armies mustered in the North were as much missionaries to the mind of the country as they were carriers of material force, and had the vast advantage of carrying whither they marched a higher civilization. Of course, there are noble men everywhere, and there are such in the South; and the noble know the noble, wherever they meet; and we have all heard passages of generous and exceptional behavior exhibited by individuals there to our officers and men, during the war. But the common people, rich or poor, were the narrowest and most conceited of mankind, as arrogant as the negroes on the Gambia River; and, by the way, it looks as if the editors of the Southern press were in all times selected from this class. The invasion of Northern farmers, mechanics, engineers, tradesmen, lawyers and students did more than forty years of peace had done to educate the South. "This will be a slow business," writes our Concord captain home, "for we have to stop and civilize the people as we go along."

It is an interesting part of the history, the manner in which this incongruous militia were made soldiers. That was done again on the Kansas plan. Our farmers went to Kansas as peaceable, Godfearing men as the members of our

school-committee here. But when the Border raids were let loose on their villages, these people, who turned pale at home if called to dress a cut finger, on witnessing the butchery done by the Missouri riders on women and babes, were so beside themselves with rage, that they became on the instant the bravest soldiers and the most determined avengers. And the first events of the war of the Rebellion gave the like training to the new recruits.

All sorts of men went to the war, — the roughs, men who liked harsh play and violence, men for whom pleasure was not strong enough, but who wanted pain, and found sphere at last for their superabundant energy; then the adventurous type of New Englander, with his appetite for novelty and travel; the village politician, who could now verify his newspaper knowledge, see the South, and amass what a stock of adventures to retail hereafter at the fireside, or to the well-known companions on the Mill-dam; young men, also, of excellent education and polished manners, delicately brought up; manly farmers, skilful mechanics, young tradesmen, men hitherto of narrow opportunities of knowing the world, but well taught in the grammar-schools. But perhaps in every one of these classes were idealists, men who went from a religious duty. I have a note of a conversation that occurred in our first company, the morning before the battle of Bull Run. At a halt in the march, a few of our boys were sitting on a rail fence talking together whether it was right to sacrifice themselves. One of them said, “he had been thinking a good deal about it, last night, and he thought one was never too young to die for a principle.” One of our later volunteers, on the day when he left home, in reply to my question, How can you be spared from your farm, now that your father is so ill? said: “I go because I shall always be sorry if I did not go when the country called me. I can go as well as another.” One wrote to his father these words:— “You may think it strange that I, who have always naturally rather shrunk from danger, should wish to enter the army; but there is a higher Power that tunes the hearts of men, and enables them to see their duty, and gives them courage to face the dangers with which those duties are attended.” And the captain writes home of another of his men,— “ B — comes from a sense of duty and love of country, and these are the soldiers you can depend upon.”

None of us can have forgotten how sharp a test to try our peaceful people with, was the first call for troops. I doubt not many of our soldiers could repeat the confession of a youth whom I knew in the beginning of the war, who enlisted in New York, went to the field, and died early. Before his departure he confided to his sister that he was naturally a coward, but was determined that no one should ever find it out; that he had long trained himself by forcing himself, on the suspicion of any near danger, to go directly up to it, cost him what struggles

it might. Yet it is from this temperament of sensibility that great heroes have been formed.

Our first company was led by an officer who had grown up in this village from a boy. The older among us can well remember him at school, at play and at work, all the way up, the most amiable, sensible, unpretending of men; fair, blonde, the rose lived long in his cheek; grave, but social, and one of the last men in this town you would have picked out for the rough dealing of war, — not a trace of fierceness, much less of recklessness, or of the devouring thirst for excitement; tender as a woman in his care for a cough or a chilblain in his men; had troches and arnica in his pocket for them. The army officers were welcome to their jest on him as too kind for a captain, and, later, as the colonel who got off his horse when he saw one of his men limp on the march, and told him to ride. But *he* knew that his men had found out, first that he was captain, then that he was colonel, and neither dared nor wished to disobey him. He was a man without conceit, who never fancied himself a philosopher or a saint; the most modest and amiable of men, engaged in common duties, but equal always to the occasion; and the war showed him still equal, however stern and terrible the occasion grew, — disclosed in him a strong good sense, great fertility of resource, the helping hand, and then the moral qualities of a commander, — a patience not to be tired out, a serious devotion to the cause of the country that never swerved, a hope that never failed. He was a Puritan in the army, with traits that remind one of John Brown, — an integrity incorruptible, and an ability that always rose to the need.

You will remember that these colonels, captains and lieutenants, and the privates too, are domestic men, just wrenched away from their families and their business by this rally of all the manhood in the land. They have notes to pay at home; have farms, shops, factories, affairs of every kind to think of and write home about. Consider what sacrifice and havoc in business arrangements this war-blast made. They have to think carefully of every last resource at home on which their wives or mothers may fall back; upon the little account in the savings-bank, the grass that can be sold, the old cow, or the heifer. These necessities make the topics of the ten thousand letters with which the mail-bags came loaded day by day. These letters play a great part in the war. The writing of letters made the Sunday in every camp: — meantime they are without the means of writing. After the first marches there is no letter-paper, there are no envelopes, no postage-stamps, for these were wetted into a solid mass in the rains and mud. Some of these letters are written on the back of old bills, some on brown paper, or strips of newspaper; written by firelight, making the short night shorter; written on the knee, in the mud, with pencil, six words at a time; or in the saddle,

and have to stop because the horse will not stand still. But the words are proud and tender,— “Tell mother I will not disgrace her;” “tell her not to worry about me, for I know she would not have had me stay at home if she could as well as not.” The letters of the captain are the dearest treasures of this town. Always devoted, sometimes anxious, sometimes full of joy at the deportment of his comrades, they contain the sincere praise of men whom I now see in this assembly. If Marshal Montluc’s Memoirs are the Bible of soldiers, as Henry IV. of France said, Colonel Prescott might furnish the Book of Epistles.

He writes, “You don’t know how one gets attached to a company by living with them and sleeping with them all the time. I know every man by heart. I know every man’s weak spot, — who is shaky, and who is true blue.” He never remits his care of the men, aiming to hold them to their good habits and to keep them cheerful. For the first point, he keeps up a constant acquaintance with them; urges their correspondence with their friends; writes news of them home, urging his own correspondent to visit their families and keep them informed about the men; encourages a temperance society which is formed in the camp. “I have not had a man drunk, or affected by liquor, since we came here.” At one time he finds his company unfortunate in having fallen between two companies of quite another class,— “t is profanity all the time: yet instead of a bad influence on our men, I think it works the other way, — it disgusts them.”

One day he writes: “I expect to have a time, this forenoon, with the officer from West Point who drills us. He is very profane, and I will not stand it. If he does not stop it, I shall march my men right away when he is drilling them. There is a fine for officers swearing in the army, and I have too many young men that are not used to such talk. I told the colonel this morning I should do it, and shall, — don’t care what the consequence is. This lieutenant seems to think that these men who never saw a gun, can drill as well as he, who has been at West Point four years.” At night he adds: “I told that officer from West Point, this morning, that he could not swear at my company as he did yesterday; told him I would not stand it any way. I told him I had a good many young men in my company whose mothers asked me to look after them, and I should do so, and not allow them to hear such language, especially from an officer, whose duty it was to set them a better example. Told him I did not swear myself and would not allow him to. He looked at me as much as to say, *Do you know whom you are talking to ?* and I looked at him as much as to say, *Yes, I do.* He looked rather ashamed, but went through the drill without an oath.” So much for the care of their morals. His next point is to keep them cheerful. ‘T is better than medicine. He has games of baseball, and pitching quoits, and euchre, whilst part of the military discipline is sham-fights.

The best men heartily second him, and invent excellent means of their own. When, afterwards, five of these men were prisoners in the Parish Prison in New Orleans, they set themselves to use the time to the wisest advantage, — formed a debating club, wrote a daily or weekly newspaper, called it “Stars and Stripes.” It advertises, “prayer meeting at 7 o’clock, in cell No. 8, second floor,” and their own printed record is a proud and affecting narrative.

Whilst the regiment was encamped at Camp Andrew, near Alexandria, in June, 1861, marching orders came. Colonel Lawrence sent for eight wagons, but only three came. On these they loaded all the canvas of the tents, but took no tent-poles.

“It looked very much like a severe thunderstorm,” writes the captain, “and I knew the men would all have to sleep out of doors, unless we carried them. So I took six poles, and went to the colonel, and told him I had got the poles for two tents, which would cover twenty-four men, and unless he ordered me not to carry them, I should do so. He said he had no objection, only thought they would be too much for me. We only had about twelve men” (the rest of the company being, perhaps, on picket or other duty), “and some of them have their heavy knapsacks and guns to carry, so could not carry any poles. We started and marched two miles without stopping to rest, not having had anything to eat, and being very hot and dry.” At this time Captain Prescott was daily threatened with sickness, and suffered the more from this heat. “I told Lieutenant Bowers, this morning, that I could afford to be sick from bringing the tent-poles, for it saved the whole regiment from sleeping out doors; for they would not have thought of it, if I had not taken mine. The major had tried to discourage me; — said, ‘perhaps, if I carried them over, some other company would get them;’ — I told him, perhaps he did not think I was smart.” He had the satisfaction to see the whole regiment enjoying the protection of these tents.

In the disastrous battle of Bull Run this company behaved well, and the regimental officers believed, what is now the general conviction of the country, that the misfortunes of the day were not so much owing to the fault of the troops, as to the insufficiency of the combinations by the general officers. It happened, also, that the Fifth Massachusetts was almost unofficered. The colonel was, early in the day, disabled by a casualty; the lieutenant-colonel, the major and the adjutant were already transferred to new regiments, and their places were not yet filled. The three months of the enlistment expired a few days after the battle.

In the fall of 1861, the old Artillery company of this town was reorganized, and Captain Richard Barrett received a commission in March, 1862, from the State, as its commander. This company, chiefly recruited here, was later embodied in the Forty-seventh Regiment, Massachusetts Volunteers, enlisted as

nine months' men, and sent to New Orleans, where they were employed in guard duty during their term of service. Captain Humphrey H. Buttrick, lieutenant in this regiment, as he had been already lieutenant in Captain Prescott's company in 1861, went out again in August, 1864, a captain in the Fifty-ninth Massachusetts, and saw hard service in the Ninth Corps, under General Burnside. The regiment being formed of veterans, and in fields requiring great activity and exposure, suffered extraordinary losses; Captain Buttrick and one other officer being the only officers in it who were neither killed, wounded, nor captured. In August, 1862, on the new requisition for troops, when it was becoming difficult to meet the draft, — mainly through the personal example and influence of Mr. Sylvester Lovejoy, twelve men, including himself, were enlisted for three years, and, being soon after enrolled in the Fortieth Massachusetts, went to the war; and a very good account has been heard, not only of the regiment, but of the talents and virtues of these men.

After the return of the three months' company to Concord, in 1861, Captain Prescott raised a new company of volunteers, and Captain Bowers another. Each of these companies included recruits from this town, and they formed part of the Thirty-second Regiment of Massachusetts Volunteers. Enlisting for three years, and remaining to the end of the war, these troops saw every variety of hard service which the war offered, and, though suffering at first some disadvantage from change of commanders, and from severe losses, they grew at last, under the command of Colonel Prescott, to an excellent reputation, attested by the names of the thirty battles they were authorized to inscribe on their flag, and by the important position usually assigned them in the field.

I have found many notes of their rough experience in the march and in the field. In McClellan's retreat in the Peninsula, in July, 1862, "it is all our men can do to draw their feet out of the mud. We marched one mile through mud, without exaggeration, one foot deep, — a good deal of the way over my boots, and with short rations; on one day nothing but liver, blackberries, and pennyroyal tea." — "At Fredericksburg we lay eleven hours in one spot without moving, except to rise and fire." The next note is, "cracker for a day and a half, — but all right." Another day, "had not left the ranks for thirty hours, and the nights were broken by frequent alarms. How would Concord people," he asks, "like to pass the night on the battle-field, and hear the dying cry for help, and not be able to go to them?" But the regiment did good service at Harrison's Landing, and at Antietam, under Colonel Parker; and at Fredericksburg, in December, Lieutenant-Colonel Prescott loudly expresses his satisfaction at his comrades, now and then particularizing names: "Bowers, Shepard and Lauriat are as brave as lions."

At the battle of Gettysburg, in July, 1863, the brigade of which the Thirty-second Regiment formed a part, was in line of battle seventy-two hours, and suffered severely. Colonel Prescott's regiment went in with two hundred and ten men, nineteen officers. On the second of July they had to cross the famous wheat-field, under fire from the rebels in front and on both flanks. Seventy men were killed or wounded out of seven companies. Here Francis Buttrick, whose manly beauty all of us remember, and Sergeant Appleton, an excellent soldier, were fatally wounded. The colonel was hit by three bullets. "I feel," he writes, "I have much to be thankful for that my life is spared, although I would willingly die to have the regiment do as well as they have done. Our colors had several holes made, and were badly torn. One bullet hit the staff which the bearer had in his hand. The color-bearer is brave as a lion; he will go anywhere you say, and no questions asked; his name is Marshall Davis." The Colonel took evident pleasure in the fact that he could account for all his men. There were so many killed, so many wounded, — but no missing. For that word "missing" was apt to mean skulking. Another incident: "A friend of Lieutenant Barrow complains that we did not treat his body with respect, inasmuch as we did not send it home. I think we were very fortunate to save it at all, for in ten minutes after he was killed the rebels occupied the ground, and we had to carry him and all of our wounded nearly two miles in blankets. There was no place nearer than Baltimore where we could have got a coffin, and I suppose it was eighty miles there. We laid him in two double blankets, and then sent off a long distance and got boards off a barn to make the best coffin we could, and gave him burial."

After Gettysburg, Colonel Prescott remarks that our regiment is highly complimented. When Colonel Gurney, of the Ninth, came to him the next day to tell him that "folks are just beginning to appreciate the Thirty-second Regiment: it always was a good regiment, and people are just beginning to find it out;" Colonel Prescott notes in his journal,— "Pity they have not found it out before it was all gone. We have a hundred and seventy-seven guns this morning."

Let me add an extract from the official report of the brigade commander: "Word was sent by General Barnes, that, when we retired, we should fall back under cover of the woods. This order was communicated to Colonel Prescott, whose regiment was then under the hottest fire. Understanding it to be a peremptory order to retire them, he replied, 'I don't want to retire; I am not ready to retire; I can hold this place;' and he made good his assertion. Being informed that he misunderstood the order, which was only to inform him how to retire when it became necessary, he was satisfied, and he and his command held their ground manfully." It was said that Colonel Prescott's reply, when reported, pleased the Acting Brigadier-General Sweitzer mightily.

After Gettysburg, the Thirty-second Regiment saw hard service at Rappahannock Station; and at Baltimore, in Virginia, where they were drawn up in battle order for ten days successively: crossing the Rapidan, and suffering from such extreme cold, a few days later, at Mine Run, that the men were compelled to break rank and run in circles to keep themselves from being frozen. On the third of December, they went into winter quarters.

I must not follow the multiplied details that make the hard work of the next year. But the campaign in the Wilderness surpassed all their worst experience hitherto of the soldier's life. On the third of May, they crossed the Rapidan for the fifth time. On the twelfth, at Laurel Hill, the regiment had twenty-one killed and seventy-five wounded, including five officers. "The regiment has been in the front and centre since the battle begun, eight and a half days ago, and is now building breastworks on the Fredericksburg road. This has been the hardest fight the world ever knew. I think the loss of our army will be forty thousand. Every day, for the last eight days, there has been a terrible battle the whole length of the line. One day they drove us; but it has been regular bulldog fighting." On the twenty-first, they had been, for seventeen days and nights, under arms without rest. On the twenty-third, they crossed the North Anna, and achieved a great success. On the thirtieth, we learn, "Our regiment has never been in the second line since we crossed the Rapidan, on the third." On the night of the thirtieth.— "The hardest day we ever had. We have been in the first line twenty-six days, and fighting every day but two; whilst your newspapers talk of the inactivity of the Army of the Potomac. If those writers could be here and fight all day, and sleep in the trenches, and be called up several times in the night by picket-firing, they would not call it inactive." June fourth is marked in the diary as "An awful day; — two hundred men lost to the command;" and not until the fifth of June comes at last a respite for a short space, during which the men drew shoes and socks, and the officers were able to send to the wagons and procure a change of clothes, for the first time in five weeks.

But from these incessant labors there was now to be rest for one head, — the honored and beloved commander of the regiment. On the sixteenth of June, they crossed the James River, and marched to within three miles of Petersburg. Early in the morning of the eighteenth they went to the front, formed line of battle, and were ordered to take the Norfolk and Petersburg Railroad from the Rebels. In this charge, Colonel George L. Prescott was mortally wounded. After driving the enemy from the railroad, crossing it, and climbing the farther bank to continue the charge, he was struck, in front of his command, by a musket ball which entered his breast near the heart. He was carried off the field to the division hospital, and died on the following morning. On his death-bed, he received the

needless assurances of his general, that “he had done more than all his duty,” — needless to a conscience so faithful and unspotted. One of his townsmen and comrades, a sergeant in his regiment, writing to his own family, uses these words: “He was one of the few men who fight for principle. He did not fight for glory, honor, nor money, but because he thought it his duty. These are not my feelings only, but of the whole regiment.”

On the first of January, 1865, the Thirty-second Regiment made itself comfortable in log huts, a mile south of our rear line of works before Petersburg. On the fourth of February, sudden orders came to move next morning at daylight. At Dabney’s Mills, in a sharp fight, they lost seventy-four in killed, wounded and missing. Here Major Shepard was taken prisoner. The lines were held until the tenth, with more than usual suffering from snow and hail and intense cold, added to the annoyance of the artillery fire. On the first of April, the regiment connected with Sheridan’s cavalry, near the Five Forks, and took an important part in that battle which opened Petersburg and Richmond, and forced the surrender of Lee. On the ninth, they marched in support of the cavalry, and were advancing in a grand charge, when the white flag of Gen. Lee appeared. The brigade of which the Thirty-second Regiment formed part was detailed to receive the formal surrender of the Rebel arms. The homeward march began on the thirteenth, and the regiment was mustered out in the field, at Washington, on the twenty-eighth of June, and arrived in Boston on the first of July.

Fellow-citizens: The obelisk records only the names of the dead. There is something partial in this distribution of honor. Those who went through those dreadful fields and returned not, deserve much more than all the honor we can pay. But those also who went through the same fields and returned alive, put just as much at hazard as those who died, and, in other countries, would wear distinctive badges of honor as long as they lived. I hope the disuse of such medals or badges in this country only signifies that everybody knows these men, and carries their deed in such lively remembrance that they require no badge or reminder. I am sure I need not bespeak your gratitude to these fellow-citizens and neighbors of ours. I hope they will be content with the laurels of one war.

But let me, in behalf of this assembly, speak directly to you, our defenders, and say, that it is easy to see that if danger should ever threaten the homes which you guard, the knowledge of your presence will be a wall of fire for their protection. Brave men! you will hardly be called to see again fields as terrible as those you have already trampled with your victories.

There are people who can hardly read the names on yonder bronze tablet, the mist so gathers in their eyes. Three of the names are of sons of one family. A gloom gathers on this assembly, composed as it is of kindred men and women,

for, in many houses, the dearest and noblest is gone from their hearthstone. Yet it is tinged with light from heaven. A duty so severe has been discharged, and with such immense results of good, lifting private sacrifice to the sublime, that, though the cannon volleys have a sound of funeral echoes, they can yet hear through them the benedictions of their country and mankind.

ADDRESS DELIVERED IN CONCORD ON THE ANNIVERSARY OF THE EMANCIPATION OF THE NEGROES IN THE BRITISH WEST INDIES, AUGUST 1, 1844.

Friends and Fellow Citizens :

We are met to exchange congratulations on the anniversary of an event singular in the history of civilization; a day of reason; of the clear light; of that which makes us better than a flock of birds and beasts: a day which gave the immense fortification of a fact, of gross history, to ethical abstractions. It was the settlement, as far as a great Empire was concerned, of a question on which almost every leading citizen in it had taken care to record his vote; one which for many years absorbed the attention of the best and most eminent of mankind. I might well hesitate, coming from other studies, and without the smallest claim to be a special laborer in this work of humanity, to undertake to set this matter before you; which ought rather to be done by a strict co-operation of many well-advised persons; but I shall not apologize for my weakness. In this cause, no man's weakness is any prejudice: it has a thousand sons; if one man cannot speak, ten others can; and, whether by the wisdom of its friends, or by the folly of the adversaries; by speech and by silence; by doing and by omitting to do, it goes forward. Therefore I will speak, — or, not I, but the might of liberty in my weakness. The subject is said to have the property of making dull men eloquent.

It has been in all men's experience a marked effect of the enterprise in behalf of the African, to generate an overbearing and defying spirit. The institution of slavery seems to its opponent to have but one side, and he feels that none but a stupid or a malignant person can hesitate on a view of the facts. Under such an impulse, I was about to say, If any cannot speak, or cannot hear the words of freedom, let him go hence, — I had almost said, Creep into your grave, the universe has no need of you! But I have thought better: let him not go. When we consider what remains to be done for this interest in this country, the dictates of humanity make us tender of such as are not yet persuaded. The hardest selfishness is to be borne with. Let us withhold every reproachful, and, if we can, every indignant remark. In this cause, we must renounce our temper, and the risings of pride. If there be any man who thinks the ruin of a race of men a small matter, compared with the last decoration and completions of his own comfort, — who would not so much as part with his ice-cream, to save them from rapine and manacles, I think I must not hesitate to satisfy that man that also his cream and vanilla are safer and cheaper by placing the negro nation on a fair footing, than by robbing them. If the Virginian piques himself on the picturesque luxury

of his vassalage, on the heavy Ethiopian manners of his house-servants, their silent obedience, their hue of bronze, their turbaned heads, and would not exchange them for the more intelligent but precarious hired service of whites, I shall not refuse to show him that when their free-papers are made out, it will still be their interest to remain on his estate, and that the oldest planters of Jamaica are convinced that it is cheaper to pay wages than to own the slave.

The history of mankind interests us only as it exhibits a steady gain of truth and right, in the incessant conflict which it records between the material and the moral nature. From the earliest monuments it appears that one race was victim and served the other races. In the oldest temples of Egypt, negro captives are painted on the tombs of kings, in such attitudes as to show that they are on the point of being executed; and Herodotus, our oldest historian, relates that the Troglodytes hunted the Ethiopians in four-horse chariots. From the earliest time, the negro has been an article of luxury to the commercial nations. So has it been, down to the day that has just dawned on the world. Language must be raked, the secrets of slaughterhouses and infamous holes that cannot front the day, must be ransacked, to tell what negro-slavery has been. These men, our benefactors, as they are producers of corn and wine, of coffee, of tobacco, of cotton, of sugar, of rum and brandy; gentle and joyous themselves, and producers of comfort and luxury for the civilized world, — there seated in the finest climates of the globe, children of the sun, — I am heart-sick when I read how they came there, and how they are kept there. Their case was left out of the mind and out of the heart of their brothers. The prizes of society, the trumpet of fame, the privileges of learning, of culture, of religion, the decencies and joys of marriage, honor, obedience, personal authority and a perpetual melioration into a finer civility, — these were for all, but not for them. For the negro, was the slave-ship to begin with, in whose filthy hold he sat in irons, unable to lie down; bad food, and insufficiency of that; dis-franchisement; no property in the rags that covered him; no marriage, no right in the poor black woman that cherished him in her bosom, no right to the children of his body; no security from the humors, none from the crimes, none from the appetites of his master: toil, famine, insult and flogging; and, when he sank in the furrow, no wind of good fame blew over him, no priest of salvation visited him with glad tidings: but he went down to death with dusky dreams of African shadow-catchers and Obeahs hunting him. Very sad was the negro tradition, that the Great Spirit, in the beginning, offered the black man, whom he loved better than the buckra, or white, his choice of two boxes, a big and a little one. The black man was greedy, and chose the largest. “The buckra box was full up with pen, paper and whip, and the negro box with hoe and bill; and hoe and bill for negro to this day.”

But the crude element of good in human affairs must work and ripen, spite of whips and plantation-laws and West Indian interest. Conscience rolled on its pillow, and could not sleep. We sympathize very tenderly here with the poor aggrieved planter, of whom so many unpleasant things are said; but if we saw the whip applied to old men, to tender women; and, undeniably, though I shrink to say so, pregnant women set in the treadmill for refusing to work; when, not they, but the eternal law of animal nature refused to work; — if we saw men’s backs flayed with cowhides, and “hot rum poured on, superinduced with brine or pickle, rubbed in with a cornhusk, in the scorching heat of the sun;” — if we saw the runaways hunted with blood-hounds into swamps and hills; and, in cases of passion, a planter throwing his negro into a copper of boiling cane-juice, — if we saw these things with eyes, we too should wince. They are not pleasant sights. The blood is moral: the blood is anti-slavery: it runs cold in the veins: the stomach rises with disgust, and curses slavery. Well, so it happened; a good man or woman, a country boy or girl, — it would so fall out, — once in a while saw these injuries and had the indiscretion to tell of them. The horrid story ran and flew; the winds blew it all over the world. They who heard it asked their rich and great friends if it was true, or only missionary lies. The richest and greatest, the prime minister of England, the king’s privy council were obliged to say that it was too true. It became plain to all men, the more this business was looked into, that the crimes and cruelties of the slave-traders and slave-owners could not be overstated. The more it was searched, the more shocking anecdotes came up, — things not to be spoken. Humane persons who were informed of the reports, insisted on proving them. Granville Sharpe was accidentally made acquainted with the sufferings of a slave, whom a West Indian planter had brought with him to London and had beaten with a pistol on his head, so badly that his whole body became diseased, and the man useless to his master, who left him to go whither he pleased. The man applied to Mr. William Sharpe, a charitable surgeon, who attended the diseases of the poor. In process of time, he was healed. Granville Sharpe found him at his brother’s and procured a place for him in an apothecary’s shop. The master accidentally met his recovered slave, and instantly endeavored to get possession of him again. Sharpe protected the slave. In consulting with the lawyers, they told Sharpe the laws were against him. Sharpe would not believe it; no prescription on earth could ever render such iniquities legal. ‘But the decisions are against you, and Lord Mansfield, now Chief Justice of England, leans to the decisions.’ Sharpe instantly sat down and gave himself to the study of English law for more than two years, until he had proved that the opinions relied on, of Talbot and Yorke, were incompatible with the former English decisions and with the whole spirit of English law. He

published his book in 1769, and he so filled the heads and hearts of his advocates that when he brought the case of George Somerset, another slave, before Lord Mansfield, the slavish decisions were set aside, and equity affirmed. There is a sparkle of God's righteousness in Lord Mansfield's judgment, which does the heart good. Very unwilling had that great lawyer been to reverse the late decisions; he suggested twice from the bench, in the course of the trial, how the question might be got rid of: but the hint was not taken; the case was adjourned again and again, and judgment delayed. At last judgment was demanded, and on the 22d June, 1772, Lord Mansfield is reported to have decided in these words:

“Immemorial usage preserves the memory of *positive law* , long after all traces of the occasion, reason, authority and time of its introduction, are lost; and in a case so odious as the condition of slaves, must be taken strictly; (tracing the subject to *natural principles* , the claim of slavery never can be supported.) The power claimed by this return never was in use here. We cannot say the cause set forth by this return is allowed or approved of by the laws of this kingdom; and therefore the man must be discharged.”

This decision established the principle that the “air of England is too pure for any slave to breathe,” but the wrongs in the islands were not thereby touched. Public attention, however, was drawn that way, and the methods of the stealing and the transportation from Africa became noised abroad. The Quakers got the story. In their plain meeting-houses and prim dwellings this dismal agitation got entrance. They were rich: they owned, for debt or by inheritance, island property; they were religious, tender-hearted men and women; and they had to hear the news and digest it as they could. Six Quakers met in London on the 6th July, 1783, — William Dillwyn, Samuel Hoar, George Harrison, Thomas Knowles, John Lloyd, Joseph Woods, “to consider what step they should take for the relief and liberation of the negro slaves in the West Indies, and for the discouragement of the slave-trade on the coast of Africa.” They made friends and raised money for the slave; they interested their Yearly Meeting; and all English and all American Quakers. John Woolman of New Jersey, whilst yet an apprentice, was uneasy in his mind when he was set to write a bill of sale of a negro, for his master. He gave his testimony against the traffic, in Maryland and Virginia. Thomas Clarkson was a youth at Cambridge, England, when the subject given out for a Latin prize dissertation was, “Is it right to make slaves of others against their will?” He wrote an essay, and won the prize; but he wrote too well for his own peace; he began to ask himself if these things could be true; and if they were, he could no longer rest. He left Cambridge; he fell in with the six Quakers. They engaged him to act for them. He himself interested Mr.

Wilberforce in the matter. The shipmasters in that trade were the greatest miscreants, and guilty of every barbarity to their own crews. Clarkson went to Bristol, made himself acquainted with the interior of the slave-ships and the details of the trade. The facts confirmed his sentiment, "that Providence had never made that to be wise which was immoral, and that the slave-trade was as impolitic as it was unjust;" that it was found peculiarly fatal to those employed in it. More seamen died in that trade in one year than in the whole remaining trade of the country in two. Mr. Pitt and Mr. Fox were drawn into the generous enterprise. In 1788, the House of Commons voted Parliamentary inquiry. In 1791, a bill to abolish the trade was brought in by Wilberforce, and supported by him and by Fox and Burke and Pitt, with the utmost ability and faithfulness; resisted by the planters and the whole West Indian interest, and lost. During the next sixteen years, ten times, year after year, the attempt was renewed by Mr. Wilberforce, and ten times defeated by the planters. The king, and all the royal family but one, were against it. These debates are instructive, as they show on what grounds the trade was assailed and defended. Everything generous, wise, and sprightly is sure to come to the attack. On the other part are found cold prudence, barefaced selfishness and silent votes. But the nation was aroused to enthusiasm. Every horrid fact became known. In 1791, three hundred thousand persons in Britain pledged themselves to abstain from all articles of island produce. The planters were obliged to give way; and in 1807, on the 25th March, the bill passed, and the slave-trade was abolished.

The assailants of slavery had early agreed to limit their political action on this subject to the abolition of the trade, but Granville Sharpe, as a matter of conscience, whilst he acted as chairman of the London Committee, felt constrained to record his protest against the limitation, declaring that slavery was as much a crime against the Divine law, as the slave-trade. The trade, under false flags, went on as before. In 1821, according to official documents presented to the American government by the Colonization Society, 200,000 slaves were deported from Africa. Nearly 30,000 were landed in the port of Havana alone. In consequence of the dangers of the trade growing out of the act of abolition, ships were built sharp for swiftness, and with a frightful disregard of the comfort of the victims they were destined to transport. They carried five, six, even seven hundred stowed in a ship built so narrow as to be unsafe, being made just broad enough on the beam to keep the sea. In attempting to make its escape from the pursuit of a man-of-war, one ship flung five hundred slaves alive into the sea. These facts went into Parliament. In the islands was an ominous state of cruel and licentious society; every house had a dungeon attached to it; every slave was worked by the whip. There is no end to the tragic anecdotes in the municipal

record's of the colonies. The boy was set to strip and to flog his own mother to blood, for a small offence. Looking in the face of his master by the negro was held to be violence by the island courts. He was worked sixteen hours, and his ration by law, in some islands, was a pint of flour and one salt herring a day. He suffered insult, stripes, mutilation, at the humor of the master: iron collars were riveted on their necks with iron prongs ten inches long; capsicum pepper was rubbed in the eyes of the females; and they were done to death with the most shocking levity between the master and manager, without fine or inquiry. And when, at last, some Quakers, Moravians, and Wesleyan and Baptist missionaries, following in the steps of Carey and Ward in the East Indies, had been moved to come and cheer the poor victim with the hope of some reparation, in a future world, of the wrongs he suffered in this, these missionaries were persecuted by the planters, their lives threatened, their chapels burned, and the negroes furiously forbidden to go near them. These outrages rekindled the flame of British indignation. Petitions poured into Parliament: a million persons signed their names to these; and in 1833, on the 14th May, Lord Stanley, minister of the colonies, introduced into the House of Commons his bill for the Emancipation.

The scheme of the minister, with such modification as it received in the legislature, proposed gradual emancipation; that, on 1st August, 1834, all persons now slaves should be entitled to be registered as apprenticed laborers, and to acquire thereby all the rights and privileges of freemen, subject to the restriction of laboring under certain conditions. These conditions were, that the prædials should owe three fourths of the profits of their labor to their masters for six years, and the non-prædials for four years. The other fourth of the apprentice's time was to be his own, which he might sell to his master, or to other persons; and at the end of the term of years fixed, he should be free.

With these provisions and conditions, the bill proceeds, in the twelfth section, in the following terms: "Be it enacted, that all and every person who, on the 1st August, 1834, shall be holden in slavery within any such British colony as aforesaid, shall upon and from and after the said 1st August, become and be to all intents and purposes free, and discharged of and from all manner of slavery, and shall be absolutely and forever manumitted; and that the children thereafter born to any such persons, and the offspring of such children, shall, in like manner, be free, from their birth; and that from and after the 1st August, 1834, slavery shall be and is hereby utterly and forever abolished and declared unlawful throughout the British colonies, plantations, and possessions abroad."

The ministers, having estimated the slave products of the colonies in annual exports of sugar, rum and coffee, at £1,500,000 *per annum*, estimated the total value of the slave-property at 30,000,000 pounds sterling, and proposed to give

the planters, as a compensation for so much of the slaves' time as the act took from them, 20,000,000 pounds sterling, to be divided into nineteen shares for the nineteen colonies, and to be distributed to the owners of slaves by commissioners, whose appointment and duties were regulated by the Act. After much debate, the bill passed by large majorities. The apprenticeship system is understood to have proceeded from Lord Brougham, and was by him urged on his colleagues, who, it is said, were inclined to the policy of immediate emancipation.

The colonial legislatures received the act of Parliament with various degrees of displeasure, and, of course, every provision of the bill was criticised with severity. The new relation between the master and the apprentice, it was feared, would be mischievous; for the bill required the appointment of magistrates who should hear every complaint of the apprentice and see that justice was done him. It was feared that the interest of the master and servant would now produce perpetual discord between them. In the island of Antigua, containing 37,000 people, 30,000 being negroes, these objections had such weight, that the legislature rejected the apprenticeship system, and adopted absolute emancipation. In the other islands the system of the ministry was accepted.

The reception of it by the negro population was equal in nobleness to the deed. The negroes were called together by the missionaries and by the planters, and the news explained to them. On the night of the 31st July, they met everywhere at their churches and chapels, and at midnight, when the clock struck twelve, on their knees, the silent, weeping assembly became men; they rose and embraced each other; they cried, they sung, they prayed, they were wild with joy, but there was no riot, no feasting. I have never read anything in history more touching than the moderation of the negroes. Some American captains left the shore and put to sea, anticipating insurrection and general murder. With far different thoughts, the negroes spent the hour in their huts and chapels. I will not repeat to you the well-known paragraph, in which Messrs. Thome and Kimball, the commissioners sent out in the year 1837 by the American Anti-slavery Society, describe the occurrences of that night in the island of Antigua. It has been quoted in every newspaper, and Dr. Channing has given it additional fame. But I must be indulged in quoting a few sentences from the pages that follow it, narrating the behavior of the emancipated people on the next day. 93

“The first of August came on Friday, and a release was proclaimed from all work until the next Monday. The day was chiefly spent by the great mass of the negroes in the churches and chapels. The clergy and missionaries throughout the island were actively engaged, seizing the opportunity to enlighten the people on all the duties and responsibilities of their new relation, and urging them to the

attainment of that higher liberty with which Christ maketh his children free. In every quarter, we were assured, the day was like a Sabbath. Work had ceased. The hum of business was still: tranquillity pervaded the towns and country. The planters informed us, that they went to the chapels where their own people were assembled, greeted them, shook hands with them, and exchanged the most hearty good wishes. At Grace Hill, there were at least a thousand persons around the Moravian Chapel who could not get in. For once the house of God suffered violence, and the violent took it by force. At Grace Bay, the people, all dressed in white, formed a procession, and walked arm in arm into the chapel. We were told that the dress of the negroes on that occasion was uncommonly simple and modest. There was not the least disposition to gayety. Throughout the island, there was not a single dance known of, either day or night, nor so much as a fiddle played.”

On the next Monday morning, with very few exceptions, every negro on every plantation was in the field at his work. In some places, they waited to see their master, to know what bargain he would make; but, for the most part, throughout the islands, nothing painful occurred. In June, 1835, the ministers, Lord Aberdeen and Sir George Grey, declared to the Parliament that the system worked well; that now for ten months, from 1st August, 1834, no injury or violence had been offered to any white, and only one black had been hurt in 800,000 negroes: and, contrary to many sinister predictions, that the new crop of island produce would not fall short of that of the last year.

But the habit of oppression was not destroyed by a law and a day of jubilee. It soon appeared in all the islands that the planters were disposed to use their old privileges, and overwork the apprentices; to take from them, under various pretences, their fourth part of their time; and to exert the same licentious despotism as before. The negroes complained to the magistrates and to the governor. In the island of Jamaica, this ill blood continually grew worse. The governors, Lord Belmore, the Earl of Sligo, and afterwards Sir Lionel Smith (a governor of their own class, who had been sent out to gratify the planters,) threw themselves on the side of the oppressed, and were at constant quarrel with the angry and bilious island legislature. Nothing can exceed the ill humor and sulkiness of the addresses of this assembly.

I may here express a general remark, which the history of slavery seems to justify, that it is not founded solely on the avarice of the planter. We sometimes say, the planter does not want slaves, he only wants the immunities and the luxuries which the slaves yield him; give him money, give him a machine that will yield him as much money as the slaves, and he will thankfully let them go. He has no love of slavery, he wants luxury, and he will pay even this price of

crime and danger for it. But I think experience does not warrant this favorable distinction, but shows the existence, beside the covetousness, of a bitterer element, the love of power, the voluptuousness of holding a human being in his absolute control. We sometimes observe that spoiled children contract a habit of annoying quite wantonly those who have charge of them, and seem to measure their own sense of well-being, not by what they do, but by the degree of reaction they can cause. It is vain to get rid of them by not minding them: if purring and humming is not noticed, they squeal and screech; then if you chide and console them, they find the experiment succeeds, and they begin again. The child will sit in your arms contented, provided you do nothing. If you take a book and read, he commences hostile operations. The planter is the spoiled child of his unnatural habits, and has contracted in his indolent and luxurious climate the need of excitement by irritating and tormenting his slave.

Sir Lionel Smith defended the poor negro girls, prey to the licentiousness of the planters; they shall not be whipped with tamarind rods if they do not comply with their master's will; he defended the negro women; they should not be made to dig the cane-holes, (which is the very hardest of the field-work;) he defended the Baptist preachers and the stipendiary magistrates, who are the negroes' friends, from the power of the planter. The power of the planters however, to oppress, was greater than the power of the apprentice and of his guardians to withstand. Lord Brougham and Mr. Buxton declared that the planter had not fulfilled his part in the contract, whilst the apprentices had fulfilled theirs; and demanded that the emancipation should be hastened, and the apprenticeship abolished. Parliament was compelled to pass additional laws for the defence and security of the negro, and in ill humor at these acts, the great island of Jamaica, with a population of half a million, and 300,000 negroes, early in 1838, resolved to throw up the two remaining years of apprenticeship, and to emancipate absolutely on the 1st August, 1838. In British Guiana, in Dominica, the same resolution had been earlier taken with more good will; and the other islands fell into the measure; so that on the 1st August, 1838, the shackles dropped from every British slave. The accounts which we have from all parties, both from the planters (and those too who were originally most opposed to the measure), and from the new freemen, are of the most satisfactory kind. The manner in which the new festival was celebrated, brings tears to the eyes. The First of August, 1838, was observed in Jamaica as a day of thanksgiving and prayer. Sir Lionel Smith, the governor, writes to the British Ministry, "It is impossible for me to do justice to the good order, decorum and gratitude which the whole laboring population manifested on that happy occasion. Though joy beamed on every countenance, it was throughout tempered with solemn thankfulness to God, and

the churches and chapels were everywhere filled with these happy people in humble offering of praise.”

The Queen, in her speech to the Lords and Commons, praised the conduct of the emancipated population: and in 1840 Sir Charles Metcalfe, the new governor of Jamaica, in his address to the Assembly expressed himself to that late exasperated body in these terms: “All those who are acquainted with the state of the island know that our emancipated population are as free, as independent in their conduct, as well-conditioned, as much in the enjoyment of abundance, and as strongly sensible of the blessings of liberty, as any that we know of in any country. All disqualifications and distinctions of color have ceased; men of all colors have equal rights in law, and an equal footing in society, and every man’s position is settled by the same circumstances which regulate that point in other free countries, where no difference of color exists. It may be asserted, without fear of denial, that the former slaves of Jamaica are now as secure in all social rights, as freeborn Britons.” He further describes the erection of numerous churches, chapels and schools which the new population required, and adds that more are still demanded. The legislature, in their reply, echo the governor’s statement, and say, “The peaceful demeanor of the emancipated population redounds to their own credit, and affords a proof of their continued comfort and prosperity.”

I said, this event is signal in the history of civilization. There are many styles of civilization, and not one only. Ours is full of barbarities. There are many faculties in man, each of which takes its turn of activity, and that faculty which is paramount in any period and exerts itself through the strongest nation, determines the civility of that age: and each age thinks its own the perfection of reason. Our culture is very cheap and intelligible. Unroof any house, and you shall find it. The well-being consists in having a sufficiency of coffee and toast, with a daily newspaper; a well glazed parlor, with marbles, mirrors and centre-table; and the excitement of a few parties and a few rides in a year. Such as one house, such are all. The owner of a New York manor imitates the mansion and equipage of the London nobleman; the Boston merchant rivals his brother of New York; and the villages copy Boston. There have been nations elevated by great sentiments. Such was the civility of Sparta and the Dorian race, whilst it was defective in some of the chief elements of ours. That of Athens, again, lay in an intellect dedicated to beauty. That of Asia Minor in poetry, music and arts; that of Palestine in piety; that of Rome in military arts and virtues, exalted by a prodigious magnanimity; that of China and Japan in the last exaggeration of decorum and etiquette. Our civility, England determines the style of, inasmuch as England is the strongest of the family of existing nations, and as we are the

expansion of that people. It is that of a trading nation; it is a shopkeeping civility. The English lord is a retired shopkeeper, and has the prejudices and timidities of that profession. And we are shopkeepers, and have acquired the vices and virtues that belong to trade. We peddle, we truck, we sail, we row, we ride in cars, we creep in teams, we go in canals, — to market, and for the sale of goods. The national aim and employment streams into our ways of thinking, our laws, our habits and our manners. The customer is the immediate jewel of our souls. Him we flatter, him we feast, compliment, vote for, and will not contradict. It was, or it seemed the dictate of trade, to keep the negro down. We had found a race who were less warlike, and less energetic shopkeepers than we; who had very little skill in trade. We found it very convenient to keep them at work, since, by the aid of a little whipping, we could get their work for nothing but their board and the cost of whips.

What if it cost a few unpleasant scenes on the coast of Africa? That was a great way off; and the scenes could be endured by some sturdy, unscrupulous fellows, who could go, for high wages, and bring us the men, and need not trouble our ears with the disagreeable particulars. If any mention was made of homicide, madness, adultery, and intolerable tortures, we would let the churchbells ring louder, the church-organ swell its peal and drown the hideous sound. The sugar they raised was excellent: nobody tasted blood in it. The coffee was fragrant; the tobacco was incense; the brandy made nations happy; the cotton clothed the world. What! all raised by these men, and no wages? Excellent! What a convenience! They seemed created by Providence to bear the heat and the whipping, and make these fine articles.

But unhappily, most unhappily, gentlemen, man is born with intellect, as well as with a love of sugar; and with a sense of justice, as well as a taste for strong drink. These ripened, as well as those. You could not educate him, you could not get any poetry, any wisdom, any beauty in woman, any strong and commanding character in man, but these absurdities would still come flashing out, — these absurdities of a demand for justice, a generosity for the weak and oppressed. Unhappily too for the planter, the laws of nature are in harmony with each other: that which the head and the heart demand, is found to be, in the long run, for what the grossest calculator calls his advantage. The moral sense is always supported by the permanent interest of the parties. Else, I know not how, in our world, any good would ever get done. It was shown to the planters that they, as well as the negroes, were slaves; that though they paid no wages, they got very poor work; that their estates were ruining them, under the finest climate; and that they needed the severest monopoly laws at home to keep them from bankruptcy. The oppression of the slave recoiled on them. They were full of vices; their

children were lumps of pride, sloth, sensuality and rottenness. The position of woman was nearly as bad as it could be; and, like other robbers, they could not sleep in security. Many planters have said, since the emancipation, that, before that day, they were the greatest slaves on the estates. Slavery is no scholar, no improver; it does not love the whistle of the railroad; it does not love the newspaper, the mailbag, a college, a book or a preacher who has the absurd whim of saying what he thinks; it does not increase the white population; it does not improve the soil; everything goes to decay. For these reasons the islands proved bad customers to England. It was very easy for manufacturers less shrewd than those of Birmingham and Manchester to see that if the state of things in the islands was altered, if the slaves had wages, the slaves would be clothed, would build houses, would fill them with tools, with pottery, with crockery, with hardware; and negro women love fine clothes as well as white women. In every naked negro of those thousands, they saw a future customer. Meantime, they saw further that the slave-trade, by keeping in barbarism the whole coast of eastern Africa, deprives them of countries and nations of customers, if once freedom and civility and European manners could get a foothold there. But the trade could not be abolished whilst this hungry West Indian market, with an appetite like the grave, cried, "More, more, bring me a hundred a day;" they could not expect any mitigation in the madness of the poor African war-chiefs. These considerations opened the eyes of the dullest in Britain. More than this, the West Indian estate was owned or mortgaged in England, and the owner and the mortgagee had very plain intimations that the feeling of English liberty was gaining every hour new mass and velocity, and the hostility to such as resisted it would be fatal. The House of Commons would destroy the protection of island produce, and interfere in English politics in the island legislation: so they hastened to make the best of their position, and accepted the bill.

These considerations, I doubt not, had their weight; the interest of trade, the interest of the revenue, and, moreover, the good fame of the action. It was inevitable that men should feel these motives. But they do not appear to have had an excessive or unreasonable weight. On reviewing this history, I think the whole transaction reflects infinite honor on the people and parliament of England. It was a stately spectacle, to see the cause of human rights argued with so much patience and generosity and with such a mass of evidence before that powerful people. It is a creditable incident in the history that when, in 1789, the first privy-council report of evidence on the trade (a bulky folio embodying all the facts which the London Committee had been engaged for years in collecting,

and all the examinations before the council) was presented to the House of Commons, a late day being named for the discussion, in order to give members time, — Mr. Wilberforce, Mr. Pitt, the prime minister, and other gentlemen, took advantage of the postponement to retire into the country to read the report. For months and years the bill was debated, with some consciousness of the extent of its relations, by the first citizens of England, the foremost men of the earth; every argument was weighed, every particle of evidence was sifted and laid in the scale; and, at last, the right triumphed, the poor man was vindicated, and the oppressor was flung out. I know that England has the advantage of trying the question at a wide distance from the spot where the nuisance exists: the planters are not, excepting in rare examples, members of the legislature. The extent of the empire, and the magnitudes and number of other questions crowding into court, keep this one in balance, and prevent it from obtaining that ascendancy, and being urged with that intemperance which a question of property tends to acquire. There are causes in the composition of the British legislature, and the relation of its leaders to the country and to Europe, which exclude much that is pitiful and injurious in other legislative assemblies. From these reasons, the question was discussed with a rare independence and magnanimity. It was not narrowed down to a paltry electioneering trap; and, I must say, a delight in justice, an honest tenderness for the poor negro, for man suffering these wrongs, combined with the national pride, which refused to give the support of English soil or the protection of the English flag to these disgusting violations of nature.

Forgive me, fellow-citizens, if I own to you, that in the last few days that my attention has been occupied with this history, I have not been able to read a page of it without the most painful comparisons. Whilst I have read of England, I have thought of New England. Whilst I have meditated in my solitary walks on the magnanimity of the English Bench and Senate, reaching out the benefit of the law to the most helpless citizen in her world-wide realm, I have found myself oppressed by other thoughts. As I have walked in the pastures and along the edge of woods, I could not keep my imagination on those agreeable figures, for other images that intruded on me. I could not see the great vision of the patriots and senators who have adopted the slave's cause: — they turned their backs on me. No: I see other pictures, — of mean men: I see very poor, very ill-clothed, very ignorant men, not surrounded by happy friends, — to be plain, — poor black men of obscure employment as mariners, cooks, or stewards, in ships, yet citizens of this our Commonwealth of Massachusetts, — freeborn as we, — whom the slave-laws of the States of South Carolina, Georgia and Louisiana have arrested in the vessels in which they visited those ports, and shut up in jails so long as the vessel remained in port, with the stringent addition, that if the

shipmaster fails to pay the costs of this official arrest and the board in jail, these citizens are to be sold for slaves, to pay that expense. This man, these men, I see, and no law to save them. Fellow-citizens, this crime will not be hushed up any longer. I have learned that a citizen of Nantucket, walking in New Orleans, found a freeborn citizen of Nantucket, a man, too, of great personal worth, and, as it happened, very dear to him, as having saved his own life, working chained in the streets of that city, kidnapped by such a process as this. In the sleep of the laws, the private interference of two excellent citizens of Boston has, I have ascertained, rescued several natives of this State from these Southern prisons. Gentlemen, I thought the deck of a Massachusetts ship was as much the territory of Massachusetts as the floor on which we stand. It should be as sacred as the temple of God. The poorest fishing smack that floats under the shadow of an iceberg in the Northern seas, or hunts the whale in the Southern ocean, should be encompassed by her laws with comfort and protection, as much as within the arms of Cape Ann and Cape Cod. And this kidnapping is suffered within our own land and federation, whilst the fourth article of the Constitution of the United States ordains in terms, that, "The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States." If such a damnable outrage can be committed on the person of a citizen with impunity, let the Governor break the broad seal of the State; he bears the sword in vain. The Governor of Massachusetts is a trifler; the State-house in Boston is a play-house; the General Court is a dishonored body, if they make laws which they cannot execute. The great-hearted Puritans have left no posterity. The rich men may walk in State Street, but they walk without honor; and the farmers may brag their democracy in the country, but they are disgraced men. If the State has no power to defend its own people in its own shipping, because it has delegated that power to the Federal Government, has it no representation in the Federal Government? Are those men dumb? I am no lawyer, and cannot indicate the forms applicable to the case, but here is something which transcends all forms. Let the senators and representatives of the State, containing a population of a million freemen, go in a body before the Congress and say that they have a demand to make on them, so imperative that all functions of government must stop until it is satisfied. If ordinary legislation cannot reach it, then extraordinary must be applied. The Congress should instruct the President to send to those ports of Charleston, Savannah and New Orleans such orders and such force as should release, forthwith, all such citizens of Massachusetts as were holden in prison without the allegation of any crime, and should set on foot the strictest inquisition to discover where such persons, brought into slavery by these local laws at any time heretofore, may now be. That first; — and then, let order be taken to indem

nify all such as have been incarcerated. As for dangers to the Union, from such demands! — the Union is already at an end when the first citizen of Massachusetts is thus outraged. Is it an union and covenant in which the State of Massachusetts agrees to be imprisoned, and the State of Carolina to imprison? Gentlemen, I am loath to say harsh things, and perhaps I know too little of politics for the smallest weight to attach to any censure of mine, — but I am at a loss how to characterize the tameness and silence of the two senators and the ten representatives of the State at Washington. To what purpose have we clothed each of those representatives with the power of seventy thousand persons, and each senator with near half a million, if they are to sit dumb at their desks and see their constituents captured and sold; — perhaps to gentlemen sitting by them in the hall? There is a scandalous rumor that has been swelling louder of late years, — perhaps it is wholly false, — that members are bullied into silence by Southern gentlemen. It is so easy to omit to speak, or even to be absent when delicate things are to be handled. I may as well say what all men feel, that whilst our very amiable and very innocent representatives and senators at Washington are accomplished lawyers and merchants, and very eloquent at dinners and at caucuses, there is a disastrous want of *men* from New England. I would gladly make exceptions, and you will not suffer me to forget one eloquent old man, in whose veins the blood of Massachusetts rolls, and who singly has defended the freedom of speech, and the rights of the free, against the usurpation of the slaveholder. But the reader of Congressional debates, in New England, is perplexed to see with what admirable sweetness and patience the majority of the free States are schooled and ridden by the minority of slave-holders. What if we should send thither representatives who were a particle less amiable and less innocent? I entreat you, sirs, let not this stain attach, let not this misery accumulate any longer. If the managers of our political parties are too prudent and too cold; — if, most unhappily, the ambitious class of young men and political men have found out that these neglected victims are poor and without weight; that they have no graceful hospitalities to offer; no valuable business to throw into any man's hands, no strong vote to cast at the elections; and therefore may with impunity be left in their chains or to the chance of chains, — then let the citizens in their primary capacity take up their cause on this very ground, and say to the government of the State, and of the Union, that government exists to defend the weak and the poor and the injured party; the rich and the strong can better take care of themselves. And as an omen and assurance of success, I point you to the bright example which England set you, on this day, ten years ago.

There are other comparisons and other imperative duties which come sadly to mind, — but I do not wish to darken the hours of this day by crimination; I turn

gladly to the rightful theme, to the bright aspects of the occasion.

This event was a moral revolution. The history of it is before you. Here was no prodigy, no fabulous hero, no Trojan horse, no bloody war, but all was achieved by plain means of plain men, working not under a leader, but under a sentiment. Other revolutions have been the insurrection of the oppressed; this was the repentance of the tyrant. It was the masters revolting from their mastery. The slave-holder said, I will not hold slaves. The end was noble and the means were pure. Hence the elevation and pathos of this chapter of history. The lives of the advocates are pages of greatness, and the connection of the eminent senators with this question constitutes the immortalizing moments of those men's lives. The bare enunciation of the theses at which the lawyers and legislators arrived, gives a glow to the heart of the reader. Lord Chancellor Northington is the author of the famous sentence, "As soon as any man puts his foot on English ground, he becomes free." "I was a slave," said the counsel of Somerset, speaking for his client, "for I was in America: I am now in a country where the common rights of mankind are known and regarded." Granville Sharpe filled the ear of the judges with the sound principles that had from time to time been affirmed by the legal authorities: "Derived power cannot be superior to the power from which it is derived: "The reasonableness of the law is the soul of the law:" "It is better to suffer every evil, than to consent to any." Out it would come, the God's truth, out it came, like a bolt from a cloud, for all the mumbling of the lawyers. One feels very sensibly in all this history that a great heart and soul are behind there, superior to any man, and making use of each, in turn, and infinitely attractive to every person according to the degree of reason in his own mind, so that this cause has had the power to draw to it every particle of talent and of worth in England, from the beginning. All the great geniuses of the British senate, Fox, Pitt, Burke, Grenville, Sheridan, Grey, Canning, ranged themselves on its side; the poet Cowper wrote for it: Franklin, Jefferson, Washington, in this country, all recorded their votes. All men remember the subtlety and the fire of indignation which the "Edinburgh Review" contributed to the cause; and every liberal mind, poet, preacher, moralist, statesman, has had the fortune to appear somewhere for this cause. On the other part, appeared the reign of pounds and shillings, and all manner of rage and stupidity; a resistance which drew from Mr. Huddleston in Parliament the observation, "That a curse attended this trade even in the mode of defending it. By a certain fatality, none but the vilest arguments were brought forward, which corrupted the very persons who used them. Every one of these was built on the narrow ground of interest, of pecuniary profit, of sordid gain, in opposition to every motive that had reference to humanity, justice, and religion, or to that great principle which comprehended

them all.” This moral force perpetually reinforces and dignifies the friends of this cause. It gave that tenacity to their point which has insured ultimate triumph; and it gave that superiority in reason, in imagery, in eloquence, which makes in all countries anti-slavery meetings so attractive to the people, and has made it a proverb in Massachusetts, that “eloquence is dog-cheap at the anti-slavery chapel.”

I will say further that we are indebted mainly to this movement and to the continuers of it, for the popular discussion of every point of practical ethics, and a reference of every question to the absolute standard. It is notorious that the political, religious and social schemes, with which the minds of men are now most occupied, have been matured, or at least broached, in the free and daring discussions of these assemblies. Men have become aware, through the emancipation and kindred events, of the presence of powers which, in their days of darkness, they had overlooked. Virtuous men will not again rely on political agents. They have found out the deleterious effect of political association. Up to this day we have allowed to statesmen a paramount social standing, and we bow low to them as to the great. We cannot extend this deference to them any longer. The secret cannot be kept, that the seats of power are filled by underlings, ignorant, timid and selfish to a degree to destroy all claim, excepting that on compassion, to the society of the just and generous. What happened notoriously to an American ambassador in England, that he found himself compelled to palter and to disguise the fact that he was a slave-breeder, happens to men of state. Their vocation is a presumption against them among well-meaning people. The superstition respecting power and office is going to the ground. The stream of human affairs flows its own way, and is very little affected by the activity of legislators. What great masses of men wish done, will be done; and they do not wish it for a freak, but because it is their state and natural end. There are now other energies than force, other than political, which no man in future can allow himself to disregard. There is direct conversation and influence. A man is to make himself felt by his proper force. The tendency of things runs steadily to this point, namely, to put every man on his merits, and to give him so much power as he naturally exerts, — no more, no less. Of course, the timid and base persons, all who are conscious of no worth in themselves, and who owe all their place to the opportunities which the old order of things allowed them, to deceive and defraud men, shudder at the change, and would fain silence every honest voice, and lock up every house where liberty and innovation can be pleaded for. They would raise mobs, for fear is very cruel. But the strong and healthy yeomen and husbands of the land, the self-sustaining class of inventive and industrious men, fear no competition or superiority. Come what will, their faculty cannot be

spared.

The First of August marks the entrance of a new element into modern politics, namely, the civilization of the negro. A man is added to the human family. Not the least affecting part of this history of abolition is the annihilation of the old indecent nonsense about the nature of the negro. In the case of the ship *Zong*, in 1781, whose master had thrown one hundred and thirty-two slaves alive into the sea, to cheat the underwriters, the first jury gave a verdict in favor of the master and owners: they had a right to do what they had done. Lord Mansfield is reported to have said on the bench, "The matter left to the jury is, — Was it from necessity? For they had no doubt, — though it shocks one very much, — that the case of slaves was the same as if horses had been thrown overboard. It is a very shocking case." But a more enlightened and humane opinion began to prevail. Mr. Clarkson, early in his career, made a collection of African productions and manufactures, as specimens of the arts and culture of the negro; comprising cloths and loom, weapons, polished stones and woods, leather, glass, dyes, ornaments, soap, pipe-bowls and trinkets. These he showed to Mr. Pitt, who saw and handled them with extreme interest. "On sight of these," says Clarkson, "many sublime thoughts seemed to rush at once into his mind, some of which he expressed;" and hence appeared to arise a project which was always dear to him, of the civilization of Africa, — a dream which forever elevates his fame. In 1791, Mr. Wilberforce announced to the House of Commons, "We have already gained one victory: we have obtained for these poor creatures the recognition of their human nature, which for a time was most shamefully denied them." It was the sarcasm of Montesquieu, "it would not do to suppose that negroes were men, lest it should turn out that whites were not;" for the white has, for ages, done what he could to keep the negro in that hoggish state. His laws have been furies. It now appears that the negro race is, more than any other, susceptible of rapid civilization. The emancipation is observed, in the islands, to have wrought for the negro a benefit as sudden as when a thermometer is brought out of the shade into the sun. It has given him eyes and ears. If, before, he was taxed with such stupidity, or such defective vision, that he could not set a table square to the walls of an apartment, he is now the principal if not the only mechanic in the West Indies; and is, besides, an architect, a physician, a lawyer, a magistrate, an editor, and a valued and increasing political power. The recent testimonies of Sturge, of Thome and Kimball, of Gurney, of Philipppo, are very explicit on this point, the capacity and the success of the colored and the black population in employments of skill, of profit and of trust; and best of all is the testimony to their moderation. They receive hints and advances from the whites that they will be gladly received as subscribers to the Exchange, as members of this or that

committee of trust. They hold back, and say to each other that “social position is not to be gained by pushing.”

I have said that this event interests us because it came mainly from the concession of the whites; I add, that in part it is the earning of the blacks. They won the pity and respect which they have received, by their powers and native endowments. I think this a circumstance of the highest import. Their whole future is in it. Our planet, before the age of written history, had its races of savages, like the generations of sour paste, or the animalcules that wriggle and bite in a drop of putrid water. Who cares for these or for their wars? We do not wish a world of bugs or of birds; neither afterward of Seythians, Carraibs or Feejees. The grand style of nature, her great periods, is all we observe in them. Who cares for oppressing whites, or oppressed blacks, twenty centuries ago, more than for bad dreams? Eaters and food are in the harmony of nature; and there too is the germ forever protected, unfolding gigantic leaf after leaf, a newer flower, a richer fruit, in every period, yet its next product is never to be guessed. It will only save what is worth saving; and it saves not by compassion, but by power. It appoints no police to guard the lion, but his teeth and claws; no fort or city for the bird, but his wings; no rescue for flies and mites, but their spawning numbers, which no ravages can overcome. It deals with men after the same manner. If they are rude and foolish, down they must go. When at last in a race, a new principle appears, an idea, — *that* conserves it; ideas only save races. If the black man is feeble and not important to the existing races, not on a parity with the best race, the black man must serve, and be exterminated. But if the black man carries in his bosom an indispensable element of a new and coming civilization; for the sake of that element, no wrong, nor strength nor circumstance can hurt him: he will survive and play his part. So now, the arrival in the world of such men as Toussaint, and the Haytian heroes, or of the leaders of their race in Barbadoes and Jamaica, outweighs in good omen all the English and American humanity. The anti-slavery of the whole world is dust in the balance before this, — is a poor squeamishness and nervousness: the might and the right are here: here is the anti-slave: here is man: and if you have man, black or white is an insignificance. The intellect, — that is miraculous! Who has it, has the talisman: his skin and bones, though they were of the color of night, are transparent, and the everlasting stars shine through, with attractive beams. But a compassion for that which is not and cannot be useful or lovely, is degrading and futile. All the songs and newspapers and money-subscriptions and vituperation of such as do not think with us, will avail nothing against a fact. I say to you, you must save yourself, black or white, man or woman; other help is none. I esteem the occasion of this jubilee to be the proud discovery that the black race

can contend with the white; that, in the great anthem which we call history, a piece of many parts and vast compass, after playing a long time a very low and subdued accompaniment, they perceive the time arrived when they can strike in with effect and take a master's part in the music. The civility of the world has reached that pitch that their more moral genius is becoming indispensable, and the quality of this race is to be honored for itself. For this, they have been preserved in sandy deserts, in rice-swamps, in kitchens and shoe-shops, so long: now let them emerge, clothed and in their own form.

There remains the very elevated consideration which the subject opens, but which belongs to more abstract views than we are now taking, this namely, that the civility of no race can be perfect whilst another race is degraded. It is a doctrine alike of the oldest and of the newest philosophy, that man is one, and that you cannot injure any member, without a sympathetic injury to all the members. America is not civil, whilst Africa is barbarous.

These considerations seem to leave no choice for the action of the intellect and the conscience of the country. There have been moments in this, as well as in every piece of moral history, when there seemed room for the infusions of a skeptical philosophy; when it seemed doubtful whether brute force would not triumph in the eternal struggle. I doubt not that sometimes, a despairing negro, when jumping over the ship's sides to escape from the white devils who surrounded him, has believed there was no vindication of right; it is horrible to think of, but it seemed so. I doubt not that sometimes the negro's friend, in the face of scornful and brutal hundreds of traders and drivers, has felt his heart sink. Especially, it seems to me, some degree of despondency is pardonable, when he observes the men of conscience and of intellect, his own natural allies and champions, — those whose attention should be nailed to the grand objects of this cause, so hotly offended by whatever incidental petulances or infirmities of indiscreet defenders of the negro, as to permit themselves to be ranged with the enemies of the human race; and names which should be the alarums of liberty and the watchwords of truth, are mixed up with all the rotten rabble of selfishness and tyranny. I assure myself that this coldness and blindness will pass away. A single noble wind of sentiment will scatter them forever. I am sure that the good and wise elders, the ardent and generous youth, will not permit what is incidental and exceptional to withdraw their devotion from the essential and permanent characters of the question. There have been moments, I said, when men might be forgiven who doubted. Those moments are past. Seen in masses, it cannot be disputed, there is progress in human society. There is a blessed necessity by which the interest of men is always driving them to the right; and, again, making all crime mean and ugly. The genius of the Saxon race,

friendly to liberty; the enterprise, the very muscular vigor of this nation, are inconsistent with slavery. The Intellect, with blazing eye, looking through history from the beginning onward, gazes on this blot and it disappears. The sentiment of Right, once very low and indistinct, but ever more articulate, because it is the voice of the universe, pronounces Freedom. The Power that built this fabric of things affirms it in the heart; and in the history of the First of August, has made a sign to the ages, of his will.

WAR.

The archangel Hope

Looks to the azure cope,
Waits through dark ages for the morn,
Defeated day by day, but unto Victory born.

It has been a favorite study of modern philosophy to indicate the steps of human progress, to watch the rising of a thought in one man's mind, the communication of it to a few, to a small minority, its expansion and general reception, until it publishes itself to the world by destroying the existing laws and institutions, and the generation of new. Looked at in this general and historical way, many things wear a very different face from that they show near by, and one at a time, — and, particularly, war. War, which to sane men at the present day begins to look like an epidemic insanity, breaking out here and there like the cholera or influenza, infecting men's brains instead of their bowels, — when seen in the remote past, in the infancy of society, appears a part of the connection of events, and, in its place, necessary.

As far as history has preserved to us the slow unfoldings of any savage tribe, it is not easy to see how war could be avoided by such wild, passionate, needy, ungoverned, strong-bodied creatures. For in the infancy of society, when a thin population and improvidence make the supply of food and of shelter insufficient and very precarious, and when hunger, thirst, ague and frozen limbs universally take precedence of the wants of the mind and the heart, the necessities of the strong will certainly be satisfied at the cost of the weak, at whatever peril of future revenge. It is plain, too, that in the first dawnings of the religious sentiment, *that* blends itself with their passions and is oil to the fire. Not only every tribe has war-gods, religious festivals in victory, but *religious wars*.

The student of history acquiesces the more readily in this copious bloodshed of the early annals, bloodshed in God's name too, when he learns that it is a temporary and preparatory state, and does actively forward the culture of man. War educates the senses, calls into action the will, perfects the physical constitution, brings men into such swift and close collision in critical moments that man measures man. On its own scale, on the virtues it loves, it endures no counterfeit, but shakes the whole society until every atom falls into the place its specific gravity assigns it. It presently finds the value of good sense and of foresight, and Ulysses takes rank next to Achilles. The leaders, picked men of a courage and vigor tried and augmented in fifty battles, are emulous to distinguish themselves above each other by new merits, as clemency, hospitality, splendor of living. The people imitate the chiefs. The strong tribe, in which war has become an art, attack and conquer their neighbors, and teach them their arts

and virtues. New territory, augmented numbers and extended interests call out new virtues and abilities, and the tribe makes long strides. And, finally, when much progress has been made, all its secrets of wisdom and art are disseminated by its invasions. Plutarch, in his essay "On the Fortune of Alexander," considers the invasion and conquest of the East by Alexander as one of the most bright and pleasing pages in history; and it must be owned he gives sound reason for his opinion. It had the effect of uniting into one great interest the divided commonwealths of Greece, and infusing a new and more enlarged public spirit into the councils of their statesmen. It carried the arts and language and philosophy of the Greeks into the sluggish and barbarous nations of Persia, Assyria and India. It introduced the arts of husbandry among tribes of hunters and shepherds. It weaned the Scythians and Persians from some cruel and licentious practices to a more civil way of life. It introduced the sacredness of marriage among them. It built seventy cities, and sowed the Greek customs and humane laws over Asia, and united hostile nations under one code. It brought different families of the human race together, — to blows at first, but afterwards to truce, to trade and to intermarriage. It would be very easy to show analogous benefits that have resulted from military movements of later ages.

Considerations of this kind lead us to a true view of the nature and office of war. We see it is the subject of all history; that it has been the principal employment of the most conspicuous men; that it is at this moment the delight of half the world, of almost all young and ignorant persons; that it is exhibited to us continually in the dumb show of brute nature, where war between tribes, and between individuals of the same tribe, perpetually rages. The microscope reveals miniature butchery in atomies and infinitely small biters that swim and fight in an illuminated drop of water; and the little globe is but a too faithful miniature of the large.

What does all this war, beginning from the lowest races and reaching up to man, signify? Is it not manifest that it covers a great and beneficent principle, which nature had deeply at heart? What is that principle? — It is self-help. Nature implants with life the instinct of self-help, perpetual struggle to be, to resist opposition, to attain to freedom, to attain to a mastery and the security of a permanent, self-defended being; and to each creature these objects are made so dear that it risks its life continually in the struggle for these ends.

But whilst this principle, necessarily, is inwrought into the fabric of every creature, yet it is but *one* instinct; and though a primary one, or we may say the very first, yet the appearance of the other instincts immediately modifies and controls this; turns its energies into harmless, useful and high courses, showing thereby what was its ultimate design; and, finally, takes out its fangs. The

instinct of self-help is very early unfolded in the coarse and merely brute form of war, only in the childhood and imbecility of the other instincts, and remains in that form only until their development. It is the ignorant and childish part of mankind that is the fighting part. Idle and vacant minds want excitement, as all boys kill cats. Bull-baiting, cockpits and the boxer's ring are the enjoyment of the part of society whose animal nature alone has been developed. In some parts of this country, where the intellectual and moral faculties have as yet scarcely any culture, the absorbing topic of all conversation is whipping; who fought, and which whipped? Of man, boy, or beast, the only trait that much interests the speakers is the pugnacity. And why? Because the speaker has as yet no other image of manly activity and virtue, none of endurance, none of perseverance, none of charity, none of the attainment of truth. Put him into a circle of cultivated men, where the conversation broaches the great questions that besiege the human reason, and he would be dumb and unhappy, as an Indian in church.

To men of a sedate and mature spirit, in whom is any knowledge or mental activity, the detail of battle becomes insupportably tedious and revolting. It is like the talk of one of those monomaniacs whom we sometimes meet in society, who converse on horses; and Fontenelle expressed a volume of meaning when he said, "I hate war, for it spoils conversation."

Nothing is plainer than that the sympathy with war is a juvenile and temporary state. Not only the moral sentiment, but trade, learning and whatever makes intercourse, conspire to put it down. Trade, as all men know, is the antagonist of war. Wherever there is no property, the people will put on the knapsack for bread; but trade is instantly endangered and destroyed. And, moreover, trade brings men to look each other in the face, and gives the parties the knowledge that these enemies over sea or over the mountain are such men as we; who laugh and grieve, who love and fear, as we do. And learning and art, and especially religion, weave ties that make war look like fratricide, as it is. And as all history is the picture of war, as we have said, so it is no less true that it is the record of the mitigation and decline of war. Early in the eleventh and twelfth centuries, the Italian cities had grown so populous and strong, that they forced the rural nobility to dismantle their castles, which were dens of cruelty, and come and reside in the towns. The Popes, to their eternal honor, declared religious jubilees, during which all hostilities were suspended throughout Christendom, and man had a breathing space. The increase of civility has abolished the use of poison and of torture, once supposed as necessary as navies now. And, finally, the art of war, what with gunpowder and tactics, has made, as all men know, battles less frequent and less murderous.

By all these means, war has been steadily on the decline; and we read with

astonishment of the beastly fighting of the old times. Only in Elizabeth's time, out of the European waters, piracy was all but universal. The proverb was,— "No peace beyond the line;" and the seaman shipped on the buccaneer's bargain, "No prey, no pay." The celebrated Cavendish, who was thought in his times a good Christian man, wrote thus to Lord Hunsdon, on his return from a voyage round the world:— "Sept. 1588. It hath pleased Almighty God to suffer me to circumpass the whole globe of the world, entering in at the Strait of Magellan, and returning by the Cape of Buena Esperança; in which voyage, I have either discovered or brought certain intelligence of all the rich places of the world, which were ever discovered by any Christian. I navigated along the coast of Chili, Peru, and New Spain, *where I made great spoils. I burnt and sunk nineteen sail of ships, small and great. All the villages and towns that ever I landed at, I burned and spoiled.* And had I not been discovered upon the coast, I had taken great quantity of treasure. The matter of most profit to me was a great ship of the king's, which I took at California," c. And the good Cavendish piously begins this statement,— "It hath pleased Almighty God."

Indeed, our American annals have preserved the vestiges of barbarous warfare down to more recent times. I read in Williams's "History of Maine," that "Assacombuit, the Sagamore of the Anagunti-cook tribe, was remarkable for his turpitude and ferocity above all other known Indians; that, in 1705, Vaudreuil sent him to France, where he was introduced to the king. When he appeared at court, he lifted up his hand, and said, 'This hand has slain a hundred and fifty of your majesty's enemies within the territories of New England.' This so pleased the king that he knighted him, and ordered a pension of eight livres a day to be paid him during life." This valuable person, on his return to America, took to killing his own neighbors and kindred, with such appetite that his tribe combined against him, and would have killed him had he not fled his country for ever.

The scandal which we feel in such facts certainly shows that we have got on a little. All history is the decline of war, though the slow decline. All that society has yet gained is mitigation: the doctrine of the right of war still remains.

For ages (for ideas work in ages, and animate vast societies of men) the human race has gone on under the tyranny — shall I so call it? — of this first brutish form of their effort to be men; that is, for ages they have shared so much of the nature of the lower animals, the tiger and the shark, and the savages of the water-drop. They have nearly exhausted all the good and all the evil of this form: they have held as fast to this degradation as their worst enemy could desire; but all things have an end, and so has this. The eternal germination of the better has unfolded new powers, new instincts, which were really concealed under this rough and base rind. The sublime question has startled one and another happy

soul in different quarters of the globe, — Cannot love be, as well as hate? Would not love answer the same end, or even a better? Cannot peace be, as well as war?

This thought is no man's invention, neither St. Pierre's nor Rousseau's, but the rising of the general tide in the human soul, — and rising highest, and first made visible, in the most simple and pure souls, who have therefore announced it to us beforehand; but presently we all see it. It has now become so distinct as to be a social thought: societies can be formed on it. It is expounded, illustrated, defined, with different degrees of clearness; and its actualization, or the measures it should inspire, predicted according to the light of each seer.

The idea itself is the epoch; the fact that it has become so distinct to any small number of persons as to become a subject of prayer and hope, of concert and discussion, — *that* is the commanding fact. This having come, much more will follow. Revolutions go not backward. The star once risen, though only one man in the hemisphere has yet seen its upper limb in the horizon, will mount and mount, until it becomes visible to other men, to multitudes, and climbs the zenith of all eyes. And so it is not a great matter how long men refuse to believe the advent of peace: war is on its last legs; and a universal peace is as sure as is the prevalence of civilization over barbarism, of liberal governments over feudal forms. The question for us is only *How soon* ?

That the project of peace should appear visionary to great numbers of sensible men; should appear laughable even, to numbers; should appear to the grave and good-natured to be embarrassed with extreme practical difficulties, — is very natural. 'This is a poor, tedious society of yours,' they say: 'we do not see what good can come of it. Peace! why, we are all at peace now. But if a foreign nation should wantonly insult or plunder our commerce, or, worse yet, should land on our shores to rob and kill, you would not have us sit, and be robbed and killed? You mistake the times; you overestimate the virtue of men. You forget that the quiet which now sleeps in cities and in farms, which lets the wagon go unguarded and the farmhouse unbolted, rests on the perfect understanding of all men that the musket, the halter and the jail stand behind there, ready to punish any disturber of it. All admit that this would be the best policy, if the world were all a church, if all men were the best men, if all would agree to accept this rule. But it is absurd for one nation to attempt it alone.'

In the first place, we answer that we never make much account of objections which merely respect the actual state of the world at this moment, but which admit the general expediency and permanent excellence of the project. What is the best must be the true; and what is true, — that is, what is at bottom fit and agreeable to the constitution of man, — must at last prevail over all obstruction and all opposition. There is no good now enjoyed by society that was not once as

problematical and visionary as this. It is the tendency of the true interest of man to become his desire and steadfast aim.

But, further, it is a lesson which all history teaches wise men, to put trust in ideas, and not in circumstances. We have all grown up in the sight of frigates and navy yards, of armed forts and islands, of arsenals and militia. The reference to any foreign register will inform us of the number of thousand or million men that are now under arms in the vast colonial system of the British empire, of Russia, Austria and France; and one is scared to find at what a cost the peace of the globe is kept. This vast apparatus of artillery, of fleets, of stone bastions and trenches and embankments; this incessant patrolling of sentinels; this waving of national flags; this reveille and evening gun; this martial music and endless playing of marches and singing of military and naval songs seem to us to constitute an imposing actual, which will not yield in centuries to the feeble, deprecatory voices of a handful of friends of peace.

Thus always we are daunted by the appearances; not seeing that their whole value lies at bottom in the state of mind. It is really a thought that built this portentous war-establishment, and a thought shall also melt it away. Every nation and every man instantly surround themselves with a material apparatus which exactly corresponds to their moral state, or their state of thought. Observe how every truth and every error, each a *thought* of some man's mind, clothes itself with societies, houses, cities, language, ceremonies, newspapers. Observe the ideas of the present day, — orthodoxy, skepticism, missions, popular education, temperance, antimasonry, anti-slavery; see how each of these abstractions has embodied itself in an imposing apparatus in the community; and how timber, brick, lime and stone have flown into convenient shape, obedient to the master-idea reigning in the minds of many persons.

You shall hear, some day, of a wild fancy which some man has in his brain, of the mischief of secret oaths. Come again one or two years afterwards, and you shall see it has built great houses of solid wood and brick and mortar. You shall see a hundred presses printing a million sheets; you shall see men and horses and wheels made to walk, run and roll for it: this great body of matter thus executing that one man's wild thought. This happens daily, yearly about us, with half thoughts, often with flimsy lies, pieces of policy and speculation. With good nursing they will last three or four years before they will come to nothing. But when a truth appears, — as, for instance, a perception in the wit of one Columbus that there is land in the Western Sea; though he alone of all men has that thought, and they all jeer, — it will build ships; it will build fleets; it will carry over half Spain and half England; it will plant a colony, a state, nations and half a globe full of men.

We surround ourselves always, according to our freedom and ability, with true images of ourselves in things, whether it be ships or books or cannons or churches. The standing army, the arsenal, the camp and the gibbet do not appertain to man. They only serve as an index to show where man is now; what a bad, ungoverned temper he has; what an ugly neighbor he is; how his affections halt; how low his hope lies. He who loves the bristle of bayonets only sees in their glitter what beforehand he feels in his heart. It is avarice and hatred; it is that quivering lip, that cold, hating eye, which built magazines and powder-houses.

It follows of course that the least change in the man will change his circumstances; the least enlargement of his ideas, the least mitigation of his feelings in respect to other men; if, for example, he could be inspired with a tender kindness to the souls of men, and should come to feel that every man was another self with whom he might come to join, as left hand works with right. Every degree of the ascendancy of this feeling would cause the most striking changes of external things: the tents would be struck; the men-of-war would rot ashore; the arms rust; the cannon would become streetposts; the pikes, a fisher's harpoon; the marching regiment would be a caravan of emigrants, *peaceful* pioneers at the fountains of the Wabash and the Missouri. And so it must and will be: bayonet and sword must first retreat a little from their ostentatious prominence; then quite hide themselves, as the sheriff's halter does now, inviting the attendance only of relations and friends; and then, lastly, will be transferred to the museums of the curious, as poisoning and torturing tools are at this day.

War and peace thus resolve themselves into a mercury of the state of cultivation. At a certain stage of his progress, the man fights, if he be of a sound body and mind. At a certain higher stage, he makes no offensive demonstration, but is alert to repel injury, and of an unconquerable heart. At a still higher stage, he comes into the region of holiness; passion has passed away from him; his warlike nature is all converted into an active medicinal principle; he sacrifices himself, and accepts with alacrity wearisome tasks of denial and charity; but, being attacked, he bears it and turns the other cheek, as one engaged, throughout his being, no longer to the service of an individual but to the common soul of all men.

Since the peace question has been before the public mind, those who affirm its right and expediency have naturally been met with objections more or less weighty. There are cases frequently put by the curious, — moral problems, like those problems in arithmetic which in long winter evenings the rustics try the hardness of their heads in ciphering out. And chiefly it is said, — Either accept this principle for better, for worse, carry it out to the end, and meet its absurd

consequences; or else, if you pretend to set an arbitrary limit, a “Thus far, no farther,” then give up the principle, and take that limit which the common-sense of all mankind has set, and which distinguishes offensive war as criminal, defensive war as just. Otherwise, if you go for no war, then be consistent, and give up self-defence in the highway, in your own house. Will you push it thus far? Will you stick to your principle of non-resistance when your strong-box is broken open, when your wife and babes are insulted and slaughtered in your sight? If you say yes, you only invite the robber and assassin; and a few bloody-minded desperadoes would soon butcher the good.

In reply to this charge of absurdity on the extreme peace doctrine, as shown in the supposed consequences, I wish to say that such deductions consider only one half of the fact. They look only at the passive side of the friend of peace, only at his passivity; they quite omit to consider his activity. But no man, it may be presumed, ever embraced the cause of peace and philanthropy for the sole end and satisfaction of being plundered and slain. A man does not come the length of the spirit of martyrdom without some active purpose, some equal motive, some flaming love. If you have a nation of men who have risen to that height of moral cultivation that they will not declare war or carry arms, for they have not so much madness left in their brains, you have a nation of lovers, of benefactors, of true, great and able men. Let me know more of that nation; I shall not find them defenceless, with idle hands springing at their sides. I shall find them men of love, honor and truth; men of an immense industry; men whose influence is felt to the end of the earth; men whose very look and voice carry the sentence of honor and shame; and all forces yield to their energy and persuasion. Whenever we see the doctrine of peace embraced by a nation, we may be assured it will not be one that invites injury; but one, on the contrary, which has a friend in the bottom of the heart of every man, even of the violent and the base; one against which no weapon can prosper; one which is looked upon as the asylum of the human race and has the tears and the blessings of mankind.

In the second place, as far as it respects individual action in difficult and extreme cases, I will say, such cases seldom or never occur to the good and just man; nor are we careful to say, or even to know, what in such crises is to be done. A wise man will never impawn his future being and action, and decide beforehand what he shall do in a given extreme event. Nature and God will instruct him in that hour.

The question naturally arises, How is this new aspiration of the human mind to be made visible and real? How is it to pass out of thoughts into things?

Not, certainly, in the first place, *in the way of routine and mere forms*, — the universal specific of modern politics; not by organizing a society, and going

through a course of resolutions and public manifestoes, and being thus formally accredited to the public and to the civility of the newspapers. We have played this game to tediousness. In some of our cities they choose noted duellists as presidents and officers of anti-duelling societies. Men who love that bloated vanity called public opinion think all is well if they have once got their bantling through a sufficient course of speeches and cheerings, of one, two, or three public meetings; as if *they* could do anything: they vote and vote, cry hurrah on both sides, no man responsible, no man caring a pin. The next season, an Indian war, or an aggression on our commerce by Malays; or the party this man votes with have an appropriation to carry through Congress: instantly he wags his head the other way, and cries, Havoc and war!

This is not to be carried by public opinion, but by private opinion, by private conviction, by private, dear and earnest love. For the only hope of this cause is in the increased insight, and it is to be accomplished by the spontaneous teaching, of the cultivated soul, in its secret experience and meditation, — that it is now time that it should pass out of the state of beast into the state of man; it is to hear the voice of God, which bids the devils that have rended and torn him come out of him and let him now be clothed and walk forth in his right mind.

Nor, in the next place, is the peace principle to be carried into effect by fear. It can never be defended, it can never be executed, by cowards. Everything great must be done in the spirit of greatness. The manhood that has been in war must be transferred to the cause of peace, before war can lose its charm, and peace be venerable to men.

The attractiveness of war shows one thing through all the throats of artillery, the thunders of so many sieges, the sack of towns, the jousts of chivalry, the shock of hosts, — this namely, the conviction of man universally, that a man should be himself responsible, with goods, health and life, for his behavior; that he should not ask of the State protection; should ask nothing of the State; should be himself a kingdom and a state; fearing no man; quite willing to use the opportunities and advantages that good government throw in his way, but nothing daunted, and not really the poorer if government, law and order went by the board; because in himself reside infinite resources; because he is sure of himself, and never needs to ask another what in any crisis it behooves him to do.

What makes to us the attractiveness of the Greek heroes? of the Roman? What makes the attractiveness of that romantic style of living which is the material of ten thousand plays and romances, from Shakspeare to Scott; the feudal baron, the French, the English nobility, the Warwicks, Plantagenets? It is their absolute self-dependence. I do not wonder at the dislike some of the friends of peace have expressed at Shakspeare. The veriest churl and Jacobin cannot

resist the influence of the style and manners of these haughty lords. We are affected, as boys and barbarians are, by the appearance of a few rich and wilful gentlemen who take their honor into their own keeping, defy the world, so confident are they of their courage and strength, and whose appearance is the arrival of so much life and virtue. In dangerous times they are presently tried, and therefore their name is a flourish of trumpets. They, at least, affect us as a reality. They are not shams, but the substance of which that age and world is made. They are true heroes for their time. They make what is in their minds the greatest sacrifice. They will, for an injurious word, peril all their state and wealth, and go to the field. Take away that principle of responsibility, and they become pirates and ruffians.

This self-subsistency is the charm of war; for this self-subsistency is essential to our idea of man. But another age comes, a truer religion and ethics open, and a man puts himself under the dominion of principles. I see him to be the servant of truth, of love and of freedom, and immovable in the waves of the crowd. The man of principle, that is, the man who, without any flourish of trumpets, titles of lordship or train of guards, without any notice of his action abroad, expecting none, takes in solitude the right step uniformly, on his private choice and disdaining consequences, — does not yield, in my imagination, to any man. He is willing to be hanged at his own gate, rather than consent to any compromise of his freedom or the suppression of his conviction. I regard no longer those names that so tingled in my ear. This is a baron of a better nobility and a stouter stomach.

The cause of peace is not the cause of cowardice. If peace is sought to be defended or preserved for the safety of the luxurious and the timid, it is a sham, and the peace will be base. War is better, and the peace will be broken. If peace is to be maintained, it must be by brave men, who have come up to the same height as the hero, namely, the will to carry their life in their hand, and stake it at any instant for their principle, but who have gone one step beyond the hero, and will not seek another man's life; — men who have, by their intellectual insight or else by their moral elevation, attained such a perception of their own intrinsic worth, that they do not think property or their own body a sufficient good to be saved by such dereliction of principle as treating a man like a sheep.

If the universal cry for reform of so many inveterate abuses, with which society rings, — if the desire of a large class of young men for a faith and hope, intellectual and religious, such as they have not yet found, be an omen to be trusted; if the disposition to rely more in study and in action on the unexplored riches of the human constitution, — if the search of the sublime laws of morals and the sources of hope and trust, in man, and not in books, in the present, and

not in the past, proceed; if the rising generation can be provoked to think it unworthy to nestle into every abomination of the past, and shall feel the generous darings of austerity and virtue, then war has a short day, and human blood will cease to flow.

It is of little consequence in what manner, through what organs, this purpose of mercy and holiness is effected. The proposition of the Congress of Nations is undoubtedly that at which the present fabric of our society and the present course of events do point. But the mind, once prepared for the reign of principles, will easily find modes of expressing its will. There is the highest fitness in the place and time in which this enterprise is begun. Not in an obscure corner, not in a feudal Europe, not in an antiquated appanage where no onward step can be taken without rebellion, is this seed of benevolence laid in the furrow, with tears of hope; but in this broad America of God and man, where the forest is only now falling, or yet to man, where the green earth opened to the inundation of emigrant men from all quarters of oppression and guilt; here, where not a family, not a few men, but mankind, shall say what shall be; here, we ask, Shall it be War, or shall it be Peace?

THE FUGITIVE SLAVE LAW.

LECTURE READ IN THE TABERNACLE, NEW YORK CITY, MARCH 7, 1854.

I do not often speak to public questions; — they are odious and hurtful, and it seems like meddling or leaving your work. I have my own spirits in prison; — spirits in deeper prisons, whom no man visits if I do not. And then I see what havoc it makes with any good mind, a dissipated philanthropy. The one thing not to be forgiven to intellectual persons is, not to know their own task, or to take their ideas from others. From this want of manly rest in their own and rash acceptance of other people's watchwords, come the imbecility and fatigue of their conversation. For they cannot affirm these from any original experience, and of course not with the natural movement and total strength of their nature and talent, but only from their memory, only from their cramp position of standing for their teacher. They say what they would have you believe, but what they do not quite know.

My own habitual view is to the well-being of students or scholars. And it is only when the public event affects them, that it very seriously touches me. And what I have to say is to them. For every man speaks mainly to a class whom he works with and more or less fully represents. It is to these I am beforehand related and engaged, in this audience or out of it — to them and not to others. And yet, when I say the class of scholars or students, — that is a class which comprises in some sort all mankind, comprises every man in the best hours of his life; and in these days not only virtually but actually. For who are the readers and thinkers of 1854? Owing to the silent revolution which the newspaper has wrought, this class has come in this country to take in all classes. Look into the morning trains which, from every suburb, carry the business men into the city to their shops, counting-rooms, work-yards and warehouses. With them enters the car — the newsboy, that humble priest of politics, finance, philosophy, and religion. He unfolds his magical sheets, — twopence a head his bread of knowledge costs — and instantly the entire rectangular assembly, fresh from their breakfast, are bending as one man to their second breakfast. There is, no doubt, chaff enough in what he brings; but there is fact, thought, and wisdom in the crude mass, from all regions of the world.

I have lived all my life without suffering any known inconvenience from American Slavery. I never saw it; I never heard the whip; I never felt the check on my free speech and action, until, the other day, when Mr. Webster, by his personal influence, brought the Fugitive Slave Law on the country. I say Mr.

Webster, for though the Bill was not his, it is yet notorious that he was the life and soul of it, that he gave it all he had: it cost him his life, and under the shadow of his great name inferior men sheltered themselves, threw their ballots for it and made the law. I say inferior men. There were all sorts of what are called brilliant men, accomplished men, men of high station, a President of the United States, Senators, men of eloquent speech, but men without self-respect, without character, and it was strange to see that office, age, fame, talent, even a repute for honesty, all count for nothing. They had no opinions, they had no memory for what they had been saying like the Lord's Prayer all their lifetime: they were only looking to what their great Captain did: if he jumped, they jumped, if he stood on his head, they did. In ordinary, the supposed sense of their district and State is their guide, and that holds them to the part of liberty and justice. But it is always a little difficult to decipher what this public sense is; and when a great man comes who knots up into himself the opinions and wishes of the people, it is so much easier to follow him as an exponent of this. He too is responsible; they will not be. It will always suffice to say,— "I followed him."

I saw plainly that the great show their legitimate power in nothing more than in their power to misguide us. I saw that a great man, deservedly admired for his powers and their general right direction, was able, — fault of the total want of stamina in public men, — when he failed, to break them all with him, to carry parties with him.

In what I have to say of Mr. Webster I do not confound him with vulgar politicians before or since. There is always base ambition enough, men who calculate on the immense ignorance of the masses; that is their quarry and farm: they use the constituencies at home only for their shoes. And, of course, they can drive out from the contest any honorable man. The low can best win the low, and all men like to be made much of. There are those too who have power and inspiration only to do ill. Their talent or their faculty deserts them when they undertake any thing right. Mr. Webster had a natural ascendancy of aspect and carriage which distinguished him over all his contemporaries. His countenance, his figure, and his manners were all in so grand a style, that he was, without effort, as superior to his most eminent rivals as they were to the humblest; so that his arrival in any place was an event which drew crowds of people, who went to satisfy their eyes, and could not see him enough. I think they looked at him as the representative of the American Continent. He was there in his Adamitic capacity, as if he alone of all men did not disappoint the eye and the ear, but was a fit figure in the landscape.

I remember his appearance at Bunker's Hill. There was the Monument, and here was Webster. He knew well that a little more or less of rhetoric signified

nothing: he was only to say plain and equal things, — grand things if he had them, and, if he had them not, only to abstain from saying unfit things, — and the whole occasion was answered by his presence. It was a place for behavior more than for speech, and Mr. Webster walked through his part with entire success. His excellent organization, the perfection of his elocution and all that thereto belongs, — voice, accent, intonation, attitude, manner, — we shall not soon find again. Then he was so thoroughly simple and wise in his rhetoric; he saw through his matter, hugged his fact so close, went to the principle or essential, and never indulged in a weak flourish, though he knew perfectly well how to make such exordiums, episodes and perorations as might give perspective to his harangues without in the least embarrassing his march or confounding his transitions. In his statement things lay in daylight; we saw them in order as they were. Though he knew very well how to present his own personal claims, yet in his argument he was intellectual, — stated his fact pure of all personality, so that his splendid wrath, when his eyes became lamps, was the wrath of the fact and the cause he stood for.

His power, like that of all great masters, was not in excellent parts, but was total. He had a great and everywhere equal property. He worked with that closeness of adhesion to the matter in hand which a joiner or a chemist uses, and the same quiet and sure feeling of right to his place that an oak or a mountain have to theirs. After all his talents have been described, there remains that perfect propriety which animated all the details of the action or speech with the character of the whole, so that his beauties of detail are endless. He seemed born for the bar, born for the senate, and took very naturally a leading part in large private and in public affairs; for his head distributed things in their right places, and what he saw so well he compelled other people to see also. Great is the privilege of eloquence. What gratitude does every man feel to him who speaks well for the right, — who translates truth into language entirely plain and clear!

The history of this country has given a disastrous importance to the defects of this great man's mind. Whether evil influences and the corruption of politics, or whether original infirmity, it was the misfortune of his country that with this large understanding he had not what is better than intellect, and the source of its health. It is a law of our nature that great thoughts come from the heart. If his moral sensibility had been proportioned to the force of his understanding, what limits could have been set to his genius and beneficent power. But he wanted that deep source of inspiration. Hence a sterility of thought, the want of generalization in his speeches, and the curious fact that, with a general ability which impresses all the world, there is not a single general remark, not an observation on life and manners, not an aphorism that can pass into literature

from his writings.

Four years ago to-night, on one of those high critical moments in history when great issues are determined, when the powers of right and wrong are mustered for conflict, and it lies with one man to give a casting vote, — Mr. Webster, most unexpectedly, threw his whole weight on the side of Slavery, and caused by his personal and official authority the passage of the Fugitive Slave Bill.

It is remarked of the Americans that they value dexterity too much, and honor too little; that they think they praise a man more by saying that he is “smart” than by saying that he is right. Whether the defect be national or not, it is the defect and calamity of Mr. Webster; and it is so far true of his countrymen, namely, that the appeal is sure to be made to his physical and mental ability when his character is assailed. His speeches on the seventh of March, and at Albany, at Buffalo, at Syracuse and Boston are cited in justification. And Mr. Webster’s literary editor believes that it was his wish to rest his fame on the speech of the seventh of March. Now, though I have my own opinions on this seventh of March discourse and those others, and think them very transparent and very open to criticism, — yet the secondary merits of a speech, namely, its logic, its illustrations, its points, etc., are not here in question. Nobody doubts that Daniel Webster could make a good speech. Nobody doubts that there were good and plausible things to be said on the part of the South. But this is not a question of ingenuity, not a question of syllogisms, but of sides. *How came he there?*

There are always texts and thoughts and arguments. But it is the genius and temper of the man which decides whether he will stand for right or for might. Who doubts the power of any fluent debater to defend either of our political parties, or any client in our courts? There was the same law in England for Jeffries and Talbot and Yorke to read slavery out of, and for Lord Mansfield to read freedom. And in this country one sees that there is always margin enough in the statute for a liberal judge to read one way and a servile judge another.

But the question which History will ask is broader. In the final hour when he was forced by the peremptory necessity of the closing armies to take a side, — did he take the part of great principles, the side of humanity and justice, or the side of abuse and oppression and chaos?

Mr. Webster decided for Slavery, and that, when the aspect of the institution was no longer doubtful, no longer feeble and apologetic and proposing soon to end itself, but when it was strong, aggressive, and threatening an illimitable increase. He listened to State reasons and hopes, and left, with much complacency we are told, the testament of his speech to the astonished State of

Massachusetts, *vera pro gratis* ; a ghastly result of all those years of experience in affairs, this, that there was nothing better for the foremost American man to tell his countrymen than that Slavery was now at that strength that they must beat down their conscience and become kidnappers for it.

This was like the doleful speech falsely ascribed to the patriot Brutus: "Virtue, I have followed thee through life, and I find thee but a shadow." Here was a question of an immoral law; a question agitated for ages, and settled always in the same way by every great jurist, that an immoral law cannot be valid. Cicero, Grotius, Coke, Blackstone, Burlamaqui, Vattel, Burke, Jefferson, do all affirm this, and I cite them, not that they can give evidence to what is indisputable, but because, though lawyers and practical statesmen, the habit of their profession did not hide from them that this truth was the foundation of States.

Here was the question, Are you for man and for the good of man; or are you for the hurt and harm of man? It was question whether man shall be treated as leather? whether the Negroes shall be as the Indians were in Spanish America, a piece of money? Whether this system, which is a kind of mill or factory for converting men into monkeys, shall be upheld and enlarged? And Mr. Webster and the country went for the application to these poor men of quadruped law.

People were expecting a totally different course from Mr. Webster. If any man had in that hour possessed the weight with the country which he had acquired, he could have brought the whole country to its senses. But not a moment's pause was allowed. Angry parties went from bad to worse, and the decision of Webster was accompanied with everything offensive to freedom and good morals. There was something like an attempt to debauch the moral sentiment of the clergy and of the youth. Burke said he "would pardon something to the spirit of liberty." But by Mr. Webster the opposition to the law was sharply called treason, and prosecuted so. He told the people at Boston "they must conquer their prejudices;" that "agitation of the subject of Slavery must be suppressed." He did as immoral men usually do, made very low bows to the Christian Church, and went through all the Sunday decorums; but when allusion was made to the question of duty and the sanctions of morality, he very frankly said, at Albany, "Some higher law, something existing somewhere between here and the third heaven, — I do not know where." And if the reporters say true, this wretched atheism found some laughter in the company.

I said I had never in my life up to this time suffered from the Slave Institution. Slavery in Virginia or Carolina was like Slavery in Africa or the Feejees, for me. There was an old fugitive law, but it had become or was fast becoming a dead letter, and, by the genius and laws of Massachusetts,

inoperative. The new Bill made it operative, required me to hunt slaves, and it found citizens in Massachusetts willing to act as judges and captors. Moreover, it discloses the secret of the new times, that Slavery was no longer mendicant, but was become aggressive and dangerous.

The way in which the country was dragged to consent to this, and the disastrous defection (on the miserable cry of Union) of the men of letters, of the colleges, of educated men, nay, of some preachers of religion, — was the darkest passage in the history. It showed that our prosperity had hurt us, and that we could not be shocked by crime. It showed that the old religion and the sense of the right had faded and gone out; that while we reckoned ourselves a highly cultivated nation, our bellies had run away with our brains, and the principles of culture and progress did not exist.

For I suppose that liberty is an accurate index, in men and nations, of general progress. The theory of personal liberty must always appeal to the most refined communities and to the men of the rarest perception and of delicate moral sense. For there are rights which rest on the finest sense of justice, and, with every degree of civility, it will be more truly felt and defined. A barbarous tribe of good stock will, by means of their best heads, secure substantial liberty. But where there is any weakness in a race, and it becomes in a degree matter of concession and protection from their stronger neighbors, the incompatibility and offensiveness of the wrong will of course be most evident to the most cultivated. For it is, — is it not? — the essence of courtesy, of politeness, of religion, of love, to prefer another, to postpone oneself, to protect another from oneself? That is the distinction of the gentleman, to defend the weak and redress the injured, as it is of the savage and the brutal to usurp and use others.

In Massachusetts, as we all know, there has always existed a predominant conservative spirit. We have more money and value of every kind than other people, and wish to keep them. The plea on which freedom was resisted was Union. I went to certain serious men, who had a little more reason than the rest, and inquired why they took this part? They answered that they had no confidence in their strength to resist the Democratic party; that they saw plainly that all was going to the utmost verge of licence; each was vying with his neighbor to lead the party, by proposing the worst measure, and they threw themselves on the extreme conservatism, as a drag on the wheel: that they knew Cuba would be had, and Mexico would be had, and they stood stiffly on conservatism, and as near to monarchy as they could, only to moderate the velocity with which the car was running down the precipice. In short, their theory was despair; the Whig wisdom was only reprieve, a waiting to be last devoured. They side with Carolina, or with Arkansas, only to make a show of

Whig strength, wherewith to resist a little longer this general ruin.

I have a respect for conservatism. I know how deeply founded it is in our nature, and how idle are all attempts to shake ourselves free from it. We are all conservatives, half Whig, half Democrat, in our essences: and might as well try to jump out of our skins as to escape from our Whiggery. There are two forces in Nature, by whose antagonism we exist; the power of Fate, Fortune, the laws of the world, the order of things, or however else we choose to phrase it, the material necessities, on the one hand, — and Will or Duty or Freedom on the other.

May and Must, and the sense of right and duty, on the one hand, and the material necessities on the other: May and Must. In vulgar politics the Whig goes for what has been, for the old necessities, — the Musts. The reformer goes for the Better, for the ideal good, for the Mays. But each of these parties must of necessity take in, in some measure, the principles of the other. Each wishes to cover the whole ground; to hold fast *and* to advance. Only, one lays the emphasis on keeping, and the other on advancing. I too think the *musts* are a safe company to follow, and even agreeable. But if we are Whigs, let us be Whigs of nature and science, and so for all the necessities. Let us know that, over and above all the *musts* of poverty and appetite, is the instinct of man to rise, and the instinct to love and help his brother.

Now, Gentlemen, I think we have in this hour instruction again in the simplest lesson. Events roll, millions of men are engaged, and the result is the enforcing of some of those first commandments which we heard in the nursery. We never get beyond our first lesson, for, really, the world exists, as I understand it, to teach the science of liberty, which begins with liberty from fear.

The events of this month are teaching one thing plain and clear, the worthlessness of good tools to bad workmen; that official papers are of no use; resolutions of public meetings, platforms of conventions, no, nor laws, nor constitutions, any more. These are all declaratory of the will of the moment, and are passed with more levity and on grounds far less honorable than ordinary business transactions of the street.

You relied on the constitution. It has not the word *slave* in it; and very good argument has shown that it would not warrant the crimes that are done under it; that, with provisions so vague for an object not named, and which could not be availed of to claim a barrel of sugar or a barrel of corn, — the robbing of a man and of all his posterity is effected. You relied on the Supreme Court. The law was right, excellent law for the lambs. But what if unhappily the judges were chosen from the wolves, and give to all the law a wolfish interpretation? You

relied on the Missouri Compromise. That is ridden over. You relied on State sovereignty in the Free States to protect their citizens. They are driven with contempt out of the courts and out of the territory of the Slave States, — if they are so happy as to get out with their lives, — and now you relied on these dismal guaranties infamously made in 1850; and, before the body of Webster is yet crumbled, it is found that they have crumbled. This eternal monument of his fame and of the Union is rotten in four years. They are no guaranty to the Free States. They are a guaranty to the Slave States that, as they have hitherto met with no repulse, they shall meet with none.

I fear there is no reliance to be put on any kind or form of covenant, no, not on sacred forms, none on churches, none on bibles. For one would have said that a Christian would not keep slaves; — but the Christians keep slaves. Of course they will not dare to read the Bible? Won't they? They quote the Bible, quote Paul, quote Christ to justify slavery. If slavery is good, then is lying, theft, arson, homicide, each and all good, and to be maintained by Union societies.

These things show that no forms, neither constitutions, nor laws, nor covenants, nor churches, nor bibles, are of any use in themselves. The Devil nestles comfortably into them all. There is no help but in the head and heart and hamstrings of a man. Covenants are of no use without honest men to keep them; laws of none, but with loyal citizens to obey them. To interpret Christ it needs Christ in the heart. The teachings of the Spirit can be apprehended only by the same spirit that gave them forth. To make good the cause of Freedom, you must draw off from all foolish trust in others. You must be citadels and warriors, yourselves, declarations of Independence, the charter, the battle and the victory. Cromwell said, "We can only resist the superior training of the King's soldiers, by enlisting godly men." And no man has a right to hope that the laws of New York will defend him from the contamination of slaves another day until he has made up his mind that he will not owe his protection to the laws of New York, but to his own sense and spirit. Then he protects New York. He only who is able to stand alone is qualified for society. And that I understand to be the end for which a soul exists in this world, — to be himself the counterbalance of all falsehood and all wrong. "The army of unright is encamped from pole to pole, but the road of victory is known to the just." Everything may be taken away; he may be poor, he may be houseless, yet he will know out of his arms to make a pillow, and out of his breast a bolster. Why have the minority no influence? Because they have not a real minority of one.

I conceive that thus to detach a man and make him feel that he is to owe all to himself, is the way to make him strong and rich; and here the optimist must find, if anywhere, the benefit of Slavery. We have many teachers; we are in this world

for culture, to be instructed in realities, in the laws of moral and intelligent nature; and our education is not conducted by toys and luxuries, but by austere and rugged masters, by poverty, solitude, passions, War, Slavery; to know that Paradise is under the shadow of swords; that divine sentiments which are always soliciting us are breathed into us from on high, and are an offset to a Universe of suffering and crime; that self-reliance, the height and perfection of man, is reliance on God. The insight of the religious sentiment will disclose to him unexpected aids in the nature of things. The Persian Saadi said, "Beware of hurting, the orphan. When the orphan sets a-crying, the throne of the Almighty is rocked from side to side."

Whenever a man has come to this mind, that there is no Church for him but his believing prayer; no Constitution but his dealing well and justly with his neighbor; no liberty but his invincible will to do right, — then certain aids and allies will promptly appear: for the constitution of the Universe is on his side. It is of no use to vote down gravitation or morals. What is useful will last, whilst that which is hurtful to the world will sink beneath all the opposing forces which it must exasperate. The terror which the Marseillaise struck into oppression, it thunders again to-day,

"Tout est soldat pour vous combattre."

Everything turns soldier to fight you down. The end for which man was made is not crime in any form, and a man cannot steal without incurring the penalties of the thief, though all the legislatures vote that it is virtuous, and though there be a general conspiracy among scholars and official persons to hold him up, and to say, "*Nothing is good but stealing.*" A man who commits a crime defeats the end of his existence. He was created for benefit, and he exists for harm; and as well-doing makes power and wisdom, ill-doing takes them away. A man who steals another man's labor steals away his own faculties; his integrity, his humanity is flowing away from him. The habit of oppression cuts out the moral eyes, and, though the intellect goes on simulating the moral as before, its sanity is gradually destroyed. It takes away the presentiments.

I suppose in general this is allowed, that if you have a nice question of right and wrong, you would not go with it to Louis Napoleon, or to a political hack; or to a slave-driver. The habit of mind of traders in power would not be esteemed favorable to delicate moral perception. American slavery affords no exception to this rule. No excess of good nature or of tenderness in individuals has been able to give a new character to the system, to tear down the whipping-house. The plea that the negro is an inferior race sounds very oddly in my ear in the mouth of a slave-holder. "The masters of slaves seem generally anxious to prove that they

are not of a race superior in any noble quality to the meanest of their bondmen.” And indeed when the Southerner points to the anatomy of the negro, and talks of chimpanzee, — I recall Montesquieu’s remark, “It will not do to say that negroes are men, lest it should turn out that whites are not.”

Slavery is disheartening; but Nature is not so helpless but it can rid itself at last of every wrong. But the spasms of Nature are centuries and ages, and will tax the faith of short-lived men. Slowly, slowly the Avenger comes, but comes surely. The proverbs of the nations affirm these delays, but affirm the arrival. They say, “God may consent, but not forever.” The delay of the Divine Justice — this was the meaning and soul of the Greek Tragedy; this the soul of their religion. “There has come, too, one to whom lurking warfare is dear, Retribution, with a soul full of wiles; a violator of hospitality; guileful without the guilt of guile; limping, late in her arrival.” They said of the happiness of the unjust, that “at its close it begets itself an offspring and does not die childless, and instead of good fortune, there sprouts forth for posterity ever-ravaging calamity:”

“For evil word shall evil word be said,
For murder-stroke a murder-stroke be paid.
Who smites must smart.”

These delays, you see them now in the temper of the times. The national spirit in this country is so drowsy, pre-occupied with interest, deaf to principle. The Anglo-Saxon race is proud and strong and selfish. They believe only in Anglo-Saxons. In 1825 Greece found America deaf, Poland found America deaf, Italy and Hungary found her deaf. England maintains trade, not liberty; stands against Greece; against Hungary; against Schleswig Holstein; against the French Republic, whilst it was a republic.

To faint hearts the times offer no invitation, and torpor exists here throughout the active classes on the subject of domestic slavery and its appalling aggressions. Yes, that is the stern edict of Providence, that liberty shall be no hasty fruit, but that event on event, population on population, age on age, shall cast itself into the opposite scale, and not until liberty has slowly accumulated weight enough to countervail and preponderate against all this, can the sufficient recoil come. All the great cities, all the refined circles, all the statesmen, Guizot, Palmerston, Webster, Calhoun, are sure to be found befriending liberty with their words, and crushing it with their votes. Liberty is never cheap. It is made difficult, because freedom is the accomplishment and perfectness of man. He is a finished man; earning and bestowing good; equal to the world; at home in nature and dignifying that; the sun does not see anything nobler, and has nothing to teach him. Therefore mountains of difficulty must be surmounted, stern trials

met, wiles of seduction, dangers, healed by a quarantine of calamities to measure his strength before he dare say I am free.

Whilst the inconsistency of slavery with the principles on which the world is built guarantees its downfall, I own that the patience it requires is almost too sublime for mortals, and seems to demand of us more than mere hoping. And when one sees how fast the rot spreads, — it is growing serious — I think we demand of superior men that they be superior in this, — that the mind and the virtue shall give their verdict in their day, and accelerate so far the progress of civilization. Possession is sure to throw its stupid strength for existing power, and appetite and ambition will go for that. Let the aid of virtue, intelligence and education be cast where they rightfully belong. They are organically ours. Let them be loyal to their own. I wish to see the instructed class here know their own flag, and not fire on their comrades. We should not forgive the clergy for taking on every issue the immoral side; nor the Bench, if it put itself on the side of the culprit; nor the Government, if it sustain the mob against the laws.

It is a potent support and ally to a brave man standing single, or with a few, for the right, and out-voted and ostracized, to know that better men in other parts of the country appreciate the service and will rightly report him to his own and the next age. Without this assurance, he will sooner sink. He may well say, If my countrymen do not care to be defended, I too will decline the controversy, from which I only reap invectives and hatred. Yet the lovers of liberty may with reason tax the coldness and indifferentism of scholars and literary men. They are lovers of liberty in Greece and Rome and in the English Commonwealth, but they are lukewarm lovers of the liberty of America in 1854. The Universities are not, as in Hobbes's time, "the core of rebellion," no, but the seat of inertness. They have forgotten their allegiance to the Muse, and grown worldly and political. I listened, lately, on one of those occasions when the University chooses one of its distinguished sons returning from the political arena, believing that Senators and Statesmen would be glad to throw off the harness and to dip again in the Castalian pools. But if audiences forget themselves, statesmen do not. The low bows to all the crockery gods of the day were duly made: — only in one part of the discourse the orator allowed to transpire rather against his will a little sober sense. It was this 'I am as you see a man virtuously inclined, and only corrupted by my profession of politics. I should prefer the right side. You, gentlemen of these literary and scientific schools, and the important class you represent, have the power to make your verdict clear and prevailing. Had you done so, you would have found me its glad organ and champion. Abstractly, I should have preferred that side. But you have not done it. You have not spoken out. You have failed to arm me. I can only deal with masses as I find them.

Abstractions are not for me. I go then for such parties and opinions as have provided me with a working apparatus. I give you my word, not without regret, that I was first for you; and though I am now to deny and condemn you, you see it is not my will but the party necessity.' Having made this manifesto and professed his adoration for liberty in the time of his grandfathers, he proceeded with his work of denouncing freedom and freemen at the present day, much in the tone and spirit in which Lord Bacon prosecuted his benefactor Essex. He denounced every name and aspect under which liberty and progress dare show themselves in this age and country, but with a lingering conscience which qualified each sentence with a recommendation to mercy.

But I put it to every noble and generous spirit, to every poetic, every heroic, every religious heart, that not so is our learning, our education, our poetry, our worship to be declared. Liberty is aggressive, Liberty is the Crusade of all brave and conscientious men, the Epic Poetry, the new religion, the chivalry of all gentlemen. This is the oppressed Lady whom true knights on their oath and honor must rescue and save.

Now at last we are disenchanting and shall have no more false hopes. I respect the Anti-Slavery Society. It is the Cassandra that has foretold all that has befallen, fact for fact, years ago; foretold all, and no man laid it to heart. It seemed, as the Turks say, "Fate makes that a man should not believe his own eyes." But the Fugitive Law did much to unglue the eyes of men, and now the Nebraska Bill leaves us staring. The Anti-Slavery Society will add many members this year. The Whig Party will join it: the Democrats will join it. The population of the Free States will join it. I doubt not, at last, the Slave States will join it. But be that sooner or later, and whoever comes or stays away, I hope we have reached the end of our unbelief, have come to a belief that there is a divine Providence in the world, which will not save us but through our own co-operation.

THE ASSAULT UPON MR. SUMNER.

A SPEECH AT A MEETING OF THE CITIZENS IN THE TOWN HALL, IN
CONCORD, MAY 26, 1856.

Mr. Chairman : — I sympathize heartily with the spirit of the resolutions. The events of the last few years and months and days have taught us the lessons of centuries. I do not see how a barbarous community and a civilized community can constitute one State. I think we must get rid of slavery, or we must get rid of freedom. Life has not parity of value in the free state and in the slave state. In one, it is adorned with education, with skilful labor, with arts, with long prospective interests, with sacred family ties, with honor and justice. In the other, life is a fever; man is an animal, given to pleasure, frivolous, irritable, spending his days in hunting and practising with deadly weapons to defend himself against his slaves and against his companions brought up in the same idle and dangerous way. Such people live for the moment, they have properly no future, and readily risk on every passion a life which is of small value to themselves or to others. Many years ago, when Mr. Webster was challenged in Washington to a duel by one of these madcaps, his friends came forward with prompt good sense and said such a thing was not to be thought of; Mr. Webster's life was the property of his friends and of the whole country, and was not to be risked on the turn of a vagabond's ball. Life and life are incommensurate. The whole State of South Carolina does not now offer one or any number of persons who are to be weighed for a moment in the scale with such a person as the meanest of them all has now struck down. The very conditions of the game must always be, — the worst life staked against the best. It is the best whom they desire to kill. It is only when they cannot answer your reasons, that they wish to knock you down. If, therefore, Massachusetts could send to the Senate a better man than Mr. Sumner, his death would be only so much the more quick and certain. Now, as men's bodily strength, or skill with knives and guns, is not usually in proportion to their knowledge and mother-wit, but oftener in the inverse ratio, it will only do to send foolish persons to Washington, if you wish them to be safe.

The outrage is the more shocking from the singularly pure character of its victim. Mr. Sumner's position is exceptional in its honor. He had not taken his degrees in the caucus and in hack politics. It is notorious that, in the long time when his election was pending, he refused to take a single step to secure it. He would not so much as go up to the State House to shake hands with this or that

person whose good will was reckoned important by his friends. He was elected. It was a homage to character and talent. In Congress, he did not rush into party position. He sat long silent and studious. His friends, I remember, were told that they would find Sumner a man of the world like the rest; ‘t is quite impossible to be at Washington and not bend; he will bend as the rest have done.’ Well, he did not bend. He took his position and kept it. He meekly bore the cold shoulder from some of his New England colleagues, the hatred of his enemies, the pity of the indifferent, cheered by the love and respect of good men with whom he acted; and has stood for the North, a little in advance of all the North, and therefore without adequate support. He has never faltered in his maintenance of justice and freedom. He has gone beyond the large expectation of his friends in his increasing ability and his manlier tone. I have heard that some of his political friends tax him with indolence or negligence in refusing to make electioneering speeches, or otherwise to bear his part in the labor which party-organization requires. I say it to his honor. But more to his honor are the faults which his enemies lay to his charge. I think, sir, if Mr. Sumner had any vices, we should be likely to hear of them. They have fastened their eyes like microscopes for five years on every act, word, manner and movement, to find a flaw, — and with what result? His opponents accuse him neither of drunkenness, nor debauchery, nor job, nor speculation, nor rapacity, nor personal aims of any kind. No; but with what? Why, beyond this charge, which it is impossible was ever sincerely made, that he broke over the proprieties of debate, I find him accused of publishing his opinion of the Nebraska conspiracy in a letter to the people of the United States, with discourtesy. Then, that he is an abolitionist; as if every sane human being were not an abolitionist, or a believer that all men should be free. And the third crime he stands charged with, is, that his speeches were written before they were spoken; which of course must be true in Sumner’s case, as it was true of Webster, of Adams, of Calhoun, of Burke, of Chatham, of Demosthenes; of every first-rate speaker that ever lived. It is the high compliment he pays to the intelligence of the Senate and of the country. When the same reproach was cast on the first orator of ancient times by some caviler of his day, he said, “I should be ashamed to come with one unconsidered word before such an assembly.” Mr. Chairman, when I think of these most small faults as the worst which party hatred could allege, I think I may borrow the language which Bishop Burnet applied to Sir Isaac Newton, and say that Charles Sumner “has the whitest soul I ever knew.”

Well, sir, this noble head, so comely and so wise, must be the target for a pair of bullies to beat with clubs. The murderer’s brand shall stamp their foreheads wherever they may wander in the earth. But I wish, sir, that the high respects of

this meeting shall be expressed to Mr. Sumner; that a copy of the resolutions that have been read may be forwarded to him. I wish that he may know the shudder of terror which ran through all this community on the first tidings of this brutal attack. Let him hear that every man of worth in New England loves his virtues; that every mother thinks of him as the protector of families; that every friend of freedom thinks him the friend of freedom. And if our arms at this distance cannot defend him from assassins, we confide the defence of a life so precious, to all honorable men and true patriots, and to the Almighty Maker of men.

SPEECH AT THE KANSAS RELIEF MEETING IN CAMBRIDGE, WEDNESDAY. EVENING, SEPTEMBER 10, 1856.

I regret, with all this company, the absence of Mr. Whitman of Kansas, whose narrative was to constitute the interest of this meeting. Mr. Whitman is not here; but knowing, as we all do, why he is not, what duties kept him at home, he is more than present. His vacant chair speaks for him. For quite other reasons, I had been wiser to have stayed at home, unskilled as I am to address a political meeting, but it is impossible for the most recluse to extricate himself from the questions of the times.

There is this peculiarity about the case of Kansas, that all the right is on one side. We hear the screams of hunted wives and children answered by the howl of the butchers. The testimony of the telegraphs from St. Louis and the border confirm the worst details. The printed letters of the border ruffians avow the facts. When pressed to look at the cause of the mischief in the Kansas laws, the President falters and declines the discussion; but his supporters in the Senate, Mr. Cass, Mr. Geyer, Mr. Hunter, speak out, and declare the intolerable atrocity of the code. It is a maxim that all party spirit produces the incapacity to receive natural impressions from facts; and our recent political history has abundantly borne out the maxim. But these details that have come from Kansas are so horrible, that the hostile press have but one word in reply, namely, that it is all exaggeration, 't is an Abolition lie. Do the Committee of Investigation say that the outrages have been overstated? Does their dismal catalogue of private tragedies show it? Do the private letters? Is it an exaggeration, that Mr. Hopps of Somerville, Mr. Hoyt of Deerfield, Mr. Jennison of Groton, Mr. Phillips of Berkshire, have been murdered? That Mr. Robinson of Fitchburg has been imprisoned? Rev. Mr. Nute of Springfield seized, and up to this time we have no tidings of his fate?

In these calamities under which they suffer, and the worse which threaten them, the people of Kansas ask for bread, clothes, arms and men, to save them alive, and enable them to stand against these enemies of the human race. They have a right to be helped, for they have helped themselves.

This aid must be sent, and this is not to be doled out as an ordinary charity; but bestowed up to the magnitude of the want, and, as has been elsewhere said, "on the scale of a national action." I think we are to give largely, lavishly, to these men. And we must prepare to do it. We must learn to do with less, live in a smaller tenement, sell our apple-trees, our acres, our pleasant houses. I know people who are making haste to reduce their expenses and pay their debts, not

with a view to new accumulations, but in preparation to save and earn for the benefit of the Kansas emigrants.

We must have aid from individuals, — we must also have aid from the State. I know that the last Legislature refused that aid. I know that lawyers hesitate on technical grounds, and wonder what method of relief the Legislature will apply. But I submit that, in a case like this, where citizens of Massachusetts, legal voters here, have emigrated to national territory under the sanction of every law, and are then set on by highwaymen, driven from their new homes, pillaged, and numbers of them killed and scalped, and the whole world knows that this is no accidental brawl, but a systematic war to the knife, and in defiance of all laws and liberties, I submit that the Governor and Legislature should neither slumber nor sleep till they have found out how to send effectual aid and comfort to these poor farmers, or else should resign their seats to those who can. But first let them hang the halls of the State House with black crape, and order funeral service to be said there for the citizens whom they were unable to defend.

We stick at the technical difficulties. I think there never was a people so choked and stultified by forms. We adore the forms of law, instead of making them vehicles of wisdom and justice. I like the primary assembly. I own I have little esteem for governments. I esteem them only good in the moment when they are established. I set the private man first. He only who is able to stand alone is qualified to be a citizen. Next to the private man, I value the primary assembly, met to watch the government and to correct it. That is the theory of the American State, that it exists to execute the will of the citizens, is always responsible to them, and is always to be changed when it does not. First, the private citizen, then the primary assembly, and the government last.

In this country for the last few years the government has been the chief obstruction to the common weal. Who doubts that Kansas would have been very well settled, if the United States had let it alone? The government armed and led the ruffians against the poor farmers. I do not know any story so gloomy as the politics of this country for the last twenty years, centralizing ever more manifestly round one spring, and that a vast crime, and ever more plainly, until it is notorious that all promotion, power and policy are dictated from one source, — illustrating the fatal effects of a false position to demoralize legislation and put the best people always at a disadvantage; — one crime always present, always to be varnished over, to find fine names for; and we free-statesmen, as accomplices to the guilt, ever in the power of the grand offender.

Language has lost its meaning in the universal cant. *Representative Government* is really mis-representative; *Union* is a conspiracy against the Northern States which the Northern States are to have the privilege of paying

for; the *adding of Cuba and Central America* to the slave marts is *enlarging the area of Freedom. Manifest Destiny, Democracy, Freedom*, fine names for an ugly thing. They call it otto of rose and lavender, — I call it bilge water. They call it Chivalry and Freedom; I call it the stealing all the earnings of a poor man and the earnings of his little girl and boy, and the earnings of all that shall come from him, his children's children forever.

But this is Union, and this is Democracy; and our poor people, led by the nose by these fine words, dance and sing, ring bells and fire cannon, with every new link of the chain which is forged for their limbs by the plotters in the Capitol.

What are the results of law and union? There is no Union. Can any citizen of Massachusetts travel in honor through Kentucky and Alabama and speak his mind? Or can any citizen of the Southern country who happens to think kidnapping a bad thing, say so? Let Mr. Underwood of Virginia answer. Is it to be supposed that there are no men in Carolina who dissent from the popular sentiment now reigning there? It must happen, in the variety of human opinions, that there are dissenters. They are silent as the grave. Are there no women in that country, — women, who always carry the conscience of a people? Yet we have not heard one discordant whisper.

In the free States, we give a snivelling support to slavery. The judges give cowardly interpretations to the law, in direct opposition to the known foundation of all law, that *every immoral statute is void*. And here of Kansas, the President says: "Let the complainants go to the courts;" though he knows that when the poor plundered farmer comes to the court, he finds the ringleader who has robbed him, dismounting from his own horse, and unbuckling his knife to sit as his judge.

The President told the Kansas Committee that the whole difficulty grew from "the factious spirit of the Kansas people, respecting institutions which they need not have concerned themselves about." A very remarkable speech from a Democratic President to his fellow citizens, that they are not to concern themselves with institutions which they alone are to create and determine. The President is a lawyer, and should know the statutes of the land. But I borrow the language of an eminent man, used long since, with far less occasion: "If that be law, let the ploughshare be run under the foundations of the Capitol;" — and if that be Government, extirpation is the only cure.

I am glad to see that the terror at disunion and anarchy is disappearing. Massachusetts, in its heroic day, had no government — was an anarchy. Every man stood on his own feet, was his own governor; and there was no breach of peace from Cape Cod to Mount Hoosac. California, a few years ago, by the testimony of all people at that time in the country, had the best government that

ever existed. Pans of gold lay drying outside of every man's tent, in perfect security. The land was measured into little strips of a few feet wide, all side by side. A bit of ground that your hand could cover was worth one or two hundred dollars, on the edge of your strip; and there was no dispute. Every man throughout the country was armed with knife and revolver, and it was known that instant justice would be administered to each offence, and perfect peace reigned. For the Saxon man, when he is well awake, is not a pirate but a citizen, all made of hooks and eyes, and links himself naturally to his brothers, as bees hook themselves to one another and to their queen in a loyal swarm.

But the hour is coming when the strongest will not be strong enough. A harder task will the new revolution of the nineteenth century be, than was the revolution of the eighteenth century. I think the American Revolution bought its glory cheap. If the problem was new, it was simple. If there were few people, they were united, and the enemy 3,000 miles off. But now, vast property, gigantic interests, family connections, webs of party, cover the land with a network that immensely multiplies the dangers of war.

Fellow Citizens, in these times full of the fate of the Republic, I think the towns should hold town meetings, and resolve themselves into Committees of Safety, go into permanent sessions, adjourning from week to week, from month to month. I wish we could send the Sergeant-at-arms to stop every American who is about to leave the country. Send home every one who is abroad, lest they should find no country to return to. Come home and stay at home, while there is a country to save. When it is lost it will be time enough then for any who are luckless enough to remain alive to gather up their clothes and depart to some land where freedom exists.

JOHN BROWN: SPEECH AT BOSTON.

REMARKS AT A MEETING FOR THE RELIEF OF THE FAMILY OF JOHN BROWN, AT TREMONT TEMPLE, BOSTON, NOVEMBER 18, 1859.

Mr. Chairman and Fellow Citizens :

I share the sympathy and sorrow which have brought us together. Gentlemen who have preceded me have well said that no wall of separation could here exist. This commanding event which has brought us together, eclipses all others which have occurred for a long time in our history, and I am very glad to see that this sudden interest in the hero of Harper's Ferry has provoked an extreme curiosity in all parts of the Republic, in regard to the details of his history. Every anecdote is eagerly sought, and I do not wonder that gentlemen find traits of relation readily between him and themselves. One finds a relation in the church, another in the profession, another in the place of his birth. He was happily a representative of the American Republic. Captain John Brown is a farmer, the fifth in descent from Peter Brown, who came to Plymouth in the Mayflower, in 1620. All the six have been farmers. His grandfather, of Simsbury, in Connecticut, was a captain in the Revolution. His father, largely interested as a raiser of stock, became a contractor to supply the army with beef, in the war of 1812, and our Captain John Brown, then a boy, with his father, was present and witnessed the surrender of General Hull. He cherishes a great respect for his father, as a man of strong character, and his respect is probably just. For himself, he is so transparent that all men see him through. He is a man to make friends wherever on earth courage and integrity are esteemed, the rarest of heroes, a pure idealist, with no by-ends of his own. Many of you have seen him, and every one who has heard him speak has been impressed alike by his simple, artless goodness, joined with his sublime courage. He joins that perfect Puritan faith which brought his fifth ancestor to Plymouth Rock, with his grandfather's ardor in the Revolution. He believes in two articles — two instruments shall I say? — the Golden Rule and the Declaration of Independence; and he used this expression in conversation here concerning them, "Better that a whole generation of men, women and children should pass away by a violent death, than that one word of either should be violated in this country." There is a Unionist, — there is a strict constructionist for you. He believes in the Union of the States, and he conceives that the only obstruction to the Union is Slavery, and for that reason, as a patriot, he works for its abolition. The Governor of Virginia has pronounced his eulogy in a manner that discredits the moderation of

our timid parties. His own speeches to the court have interested the nation in him. What magnanimity, and what innocent pleading, as of childhood! You remember his words: "If I had interfered in behalf of the rich, the powerful, the intelligent, the so-called great, or any of their friends, parents, wives, or children, it would all have been right. But I believe that to have interfered as I have done, for the despised poor, was not wrong, but right."

It is easy to see what a favorite he will be with history, which plays such pranks with temporary reputations. Nothing can resist the sympathy which all elevated minds must feel with Brown, and through them the whole civilized world; and if he must suffer, he must drag official gentlemen into an immortality most undesirable, and of which they have already some disagreeable forebodings. Indeed, it is the *reductio ad absurdum* of Slavery, when the Governor of Virginia is forced to hang a man whom he declares to be a man of the most integrity, truthfulness and courage he has ever met. Is that the kind of man the gallows is built for? It were bold to affirm that there is within that broad Commonwealth, at this moment, another citizen as worthy to live, and as deserving of all public and private honor, as this poor prisoner.

But we are here to think of relief for the family of John Brown. To my eyes, that family looks very large and very needy of relief. It comprises his brave fellow-sufferers in the Charlestown Jail; the fugitives still hunted in the mountains of Virginia and Pennsylvania; the sympathizers with him in all the States; and I may say, almost every man who loves the Golden Rule and the Declaration of Independence, like him, and who sees what a tiger's thirst threatens him in the malignity of public sentiment in the Slave States. It seems to me that a common feeling joins the people of Massachusetts with him.

I said John Brown was an idealist. He believed in his ideas to that extent that he existed to put them all into action; he said, "he did not believe in moral suasion, he believed in putting the thing through." He saw how deceptive the forms are. We fancy, in Massachusetts, that we are free; yet it seems the Government is quite unreliable. Great wealth, great population, men of talent in the Executive, on the Bench, — all the forms right, — and yet, life and freedom are not safe. Why? Because the judges rely on the forms, and do not, like John Brown, use their eyes to see the fact behind the forms. They assume that the United States can protect its witness or its prisoner. And, in Massachusetts, that is true, but the moment he is carried out of the bounds of Massachusetts, the United States, it is notorious, afford no protection at all; the Government, the judges, are an envenomed party, and give such protection as they give in Utah to honest citizens, or in Kansas; such protection as they gave to their own Commodore Paulding, when he was simple enough to mistake the formal

instructions of his Government for their real meaning. The state judges fear collision between their two allegiances; but there are worse evils than collision; namely, the doing substantial injustice. A good man will see that the use of a judge is to secure good government, and where the citizen's weal is imperilled by abuse of the Federal power, to use that arm which can secure it, viz., the local government. Had that been done on certain calamitous occasions, we should not have seen the honor of Massachusetts trailed in the dust, stained to all ages, once and again, by the ill-timed formalism of a venerable bench. If judges cannot find law enough to maintain the sovereignty of the state, and to protect the life and freedom of every inhabitant not a criminal, it is idle to compliment them as learned and venerable. What avails their learning or veneration? At a pinch, they are no more use than idiots. After the mischance they wring their hands, but they had better never have been born. A Vermont Judge Hutchinson, who has the Declaration of Independence in his heart; a Wisconsin judge, who knows that laws are for the protection of citizens against kidnappers, is worth a court house full of lawyers so idolatrous of forms as to let go the substance. Is any man in Massachusetts so simple as to believe that when a United States Court in Virginia, now, in its present reign of terror, sends to Connecticut, or New York, or Massachusetts, for a witness, it wants him for a witness? No; it wants him for a party; it wants him for meat to slaughter and eat. And your *habeas corpus* is, in any way in which it has been, or, I fear, is likely to be used, a nuisance, and not a protection; for it takes away his right reliance on himself, and the natural assistance of his friends and fellow-citizens, by offering him a form which is a piece of paper.

But I am detaining the meeting on matters which others understand better. I hope, then, that in administering relief to John Brown's family, we shall remember all those whom his fate concerns, all who are in sympathy with him, and not forget to aid him in the best way, by securing freedom and independence in Massachusetts.

JOHN BROWN. SPEECH AT SALEM, JANUARY 6,

Mr. Chairman:

I have been struck with one fact, that the best orators who have added their praise to his fame, — and I need not go out of this house to find the purest eloquence in the country, — have one rival who comes off a little better, and that is John Brown. Every thing that is said of him leaves people a little dissatisfied; but as soon as they read his own speeches and letters they are heartily contented, — such is the singleness of purpose which justifies him to the head and the heart of all. Taught by this experience, I mean, in the few remarks I have to make, to cling to his history, or let him speak for himself.

John Brown, the founder of liberty in Kansas, was born in Torrington, Litchfield County, Conn., in 1800. When he was five years old his father emigrated to Ohio, and the boy was there set to keep sheep and to look after cattle and dress skins; he went bareheaded and barefooted, and clothed in buckskin. He said that he loved rough play, could never have rough play enough; could not see a seedy hat without wishing to pull it off. But for this it needed that the playmates should be equal; not one in fine clothes and the other in buckskin; not one his own master, hale and hearty, and the other watched and whipped. But it chanced that in Pennsylvania, where he was sent by his father to collect cattle, he fell in with a boy whom he heartily liked and whom he looked upon as his superior. This boy was a slave; he saw him beaten with an iron shovel, and otherwise maltreated; he saw that this boy had nothing better to look forward to in life, whilst he himself was petted and made much of; for he was much considered in the family where he then stayed, from the circumstance that this boy of twelve years had conducted alone a drove of cattle a hundred miles. But the colored boy had no friend, and no future. This worked such indignation in him that he swore an oath of resistance to Slavery as long as he lived. And thus his enterprise to go into Virginia and run off five hundred or a thousand slaves was not a piece of spite or revenge, a plot of two years or of twenty years, but the keeping of an oath made to Heaven and earth forty-seven years before. Forty-seven years at least, though I incline to accept his own account of the matter at Charlestown, which makes the date a little older, when he said, “This was all settled millions of years before the world was made.”

He grew up a religious and manly person, in severe poverty; a fair specimen of the best stock of New England; having that force of thought and that sense of right which are the warp and woof of greatness. Our farmers were Orthodox Calvinists, mighty in the Scriptures; had learned that life was a preparation, a

“probation,” to use their word, for a higher world, and was to be spent in loving and serving mankind.

Thus was formed a romantic character absolutely without any vulgar trait; living to ideal ends, without any mixture of self-indulgence or compromise, such as lowers the value of benevolent and thoughtful men we know; abstemious, refusing luxuries, not sourly and reproachfully but simply as unfit for his habit; quiet and gentle as a child in the house. And, as happens usually to men of romantic character, his fortunes were romantic. Walter Scott would have delighted to draw his picture and trace his adventurous career. A shepherd and herdsman, he learned the manners of animals, and knew the secret signals by which animals communicate. He made his hard bed on the mountains with them; he learned to drive his flock through thickets all but impassable; he had all the skill of a shepherd by choice of breed and by wise husbandry to obtain the best wool, and that for a course of years. And the anecdotes preserved show a far-seeing skill and conduct which, in spite of adverse accidents, should secure, one year with another, an honest reward, first to the farmer, and afterwards to the dealer. If he kept sheep, it was with a royal mind; and if he traded in wool, he was a merchant prince, not in the amount of wealth, but in the protection of the interests confided to him.

I am not a little surprised at the easy effrontery with which political gentlemen, in and out of Congress, take it upon them to say that there are not a thousand men in the North who sympathize with John Brown. It would be far safer and nearer the truth to say that all people, in proportion to their sensibility and self-respect, sympathize with him. For it is impossible to see courage, and disinterestedness, and the love that casts out fear, without sympathy. All women are drawn to him by their predominance of sentiment. All gentlemen, of course, are on his side. I do not mean by “gentlemen,” people of scented hair and perfumed handkerchiefs, but men of gentle blood and generosity, “fulfilled with all nobleness,” who, like the Cid, give the outcast leper a share of their bed; like the dying Sidney, pass the cup of cold water to the wounded soldier who needs it more. For what is the oath of gentle blood and knighthood? What but to protect the weak and lowly against the strong oppressor?

Nothing is more absurd than to complain of this sympathy, or to complain of a party of men united in opposition to Slavery. As well complain of gravity, or the ebb of the tide. Who makes the Abolitionist? The Slaveholder. The sentiment of mercy is the natural recoil which the laws of the universe provide to protect mankind from destruction by savage passions. And our blind statesmen go up and down, with committees of vigilance and safety, hunting for the origin of this new heresy. They will need a very vigilant committee indeed to find its

birthplace, and a very strong force to root it out. For the arch-Abolitionist, older than Brown, and older than the Shenandoah Mountains, is Love, whose other name is Justice, which was before Alfred, before Lycurgus, before Slavery, and will be after it.

THEODORE PARKER.

AN ADDRESS AT THE MEMORIAL MEETING AT THE MUSIC HALL,
BOSTON, JUNE 15, 1860.

At the death of a good and admirable person, we meet to console and animate each other by the recollection of his virtues.

I have the feeling that every man's biography is at his own expense. He furnishes not only the facts but the report. I mean that all biography is autobiography. It is only what he tells of himself that comes to be known and believed. In Plutarch's lives of Alexander and Pericles, you have the secret whispers of their confidence to their lovers and trusty friends. For it was each report of this kind that impressed those to whom it was told in a manner to secure its being told everywhere to the best, to those who speak with authority to their own times and therefore to ours. For the political rule is a cosmical rule, that if a man is not strong in his own district, he is not a good candidate elsewhere.

He whose voice will not be heard here again, could well afford to tell his experiences; they were all honorable to him, and were part of the history of the civil and religious liberty of his times. Theodore Parker was a son of the soil, charged with the energy of New England, strong, eager, inquisitive of knowledge, of a diligence that never tired, upright, of a haughty independence, yet the gentlest of companions; a man of study, fit for a man of the world; with decided opinions and plenty of power to state them; rapidly pushing his studies so far as to leave few men qualified to sit as his critics. He elected his part of duty, or accepted nobly that assigned him in his rare constitution. Wonderful acquisition of knowledge, a rapid wit that heard all, and welcomed all that came, by seeing its bearing. Such was the largeness of his reception of facts and his skill to employ them, that it looked as if he were some President of Council to whom a score of telegraphs were ever bringing in reports; and his information would have been excessive, but for the noble use he made of it ever in the interest of humanity. He had a strong understanding, a logical method, a love for facts, a rapid eye for their historic relations, and a skill in stripping them of traditional lustres. He had a sprightly fancy, and often amused himself with throwing his meaning into pretty apologues; yet we can hardly ascribe to his mind the poetic element, though his scholarship had made him a reader and

quoter of verses. A little more feeling of the poetic significance of his facts would have disqualified him for some of his severer offices to his generation. The old religions have a charm for most minds which it is a little uncanny to disturb. 'T is sometimes a question, shall we not leave them to decay without rude shocks? I remember that I found some harshness in his treatment both of Greek and of Hebrew antiquity, and sympathized with the pain of many good people in his auditory, whilst I acquitted him, of course, of any wish to be flippant. He came at a time when, to the irresistible march of opinion, the forms still retained by the most advanced sects showed loose and lifeless, and he, with something less of affectionate attachment to the old, or with more vigorous logic, rejected them. 'T is objected to him that he scattered too many illusions. Perhaps more tenderness would have been graceful; but it is vain to charge him with perverting the opinions of the new generation.

The opinions of men are organic. Simply, those came to him who found themselves expressed by him. And had they not met this enlightened mind, in which they beheld their own opinions combined with zeal in every cause of love and humanity, they would have suspected their opinions and suppressed them, and so sunk into melancholy or malignity — a feeling of loneliness and hostility to what was reckoned respectable. 'T is plain to me that he has achieved a historic immortality here; that he has so woven himself in these few years into the history of Boston, that he can never be left out of your annals. It will not be in the acts of City Councils, nor of obsequious Mayors; nor, in the State House, the proclamations of Governors, with their failing virtue — failing them at critical moments — that coming generations will study what really befell: but in the plain lessons of Theodore Parker in this Music Hall, in Faneuil Hall, or in Legislative Committee Rooms, that the true temper and authentic record of these days will be read. The next generation will care little for the chances of elections that govern Governors now, it will care little for fine gentlemen who behaved shabbily; but it will read very intelligently in his rough story, fortified with exact anecdotes, precise with names and dates, what part was taken by each actor; who threw himself into the cause of humanity and came to the rescue of civilization at a hard pinch, and who blocked its course.

The vice charged against America is the want of sincerity in leading men. It does not lie at his door. He never kept back the truth for fear to make an enemy. But, on the other hand, it was complained that he was bitter and harsh, that his zeal burned with too hot a flame. It is so difficult, in evil times, to escape this charge! for the faithful preacher most of all. It was his merit, like Luther, Knox and Latimer, and John Baptist, to speak tart truth, when that was peremptory and when there were few to say it. But his sympathy for goodness was not less

energetic. One fault he had, he overestimated his friends, — I may well say it, — and sometimes vexed them with the importunity of his good opinion, whilst they knew better the ebb which follows unfounded praise. He was capable, it must be said, of the most unmeasured eulogies on those he esteemed, especially if he had any jealousy that they did not stand with the Boston public as highly as they ought. His commanding merit as a reformer is this, that he insisted beyond all men in pulpits, — I cannot think of one rival, — that the essence of Christianity is its practical morals; it is there for use, or it is nothing; and if you combine it with sharp trading, or with ordinary city ambitions to gloze over municipal corruptions, or private intemperance, or successful fraud, or immoral politics, or unjust wars, or the cheating of Indians, or the robbery of frontier nations, or leaving your principles at home to follow on the high seas or in Europe a supple complaisance to tyrants, — it is a hypocrisy, and the truth is not in you; and no love of religious music or of dreams of Swedenborg, or praise of John Wesley, or of Jeremy Taylor, can save you from the Satan which you are.

His ministry fell on a political crisis also; on the years when Southern slavery broke over its old banks, made new and vast pretensions, and wrung from the weakness or treachery of Northern people fatal concessions in the Fugitive-Slave Bill and the repeal of the Missouri Compromise. Two days, bitter in the memory of Boston, the days of the rendition of Sims and of Burns, made the occasion of his most remarkable discourses. He kept nothing back. In terrible earnest he denounced the public crime, and meted out to every official, high and low, his due portion. By the incessant power of his statement, he made and held a party. It was his great service to freedom. He took away the reproach of silent consent that would otherwise have lain against the indignant minority, by uttering in the hour and place wherein these outrages were done, the stern protest.

But, whilst I praise this frank speaker, I have no wish to accuse the silence of others. There are men of good powers who have so much sympathy that they must be silent when they are not in sympathy. If you don't agree with them, they know they only injure the truth by speaking. Their faculties will not play them true, and they do not wish to squeak and gibber, and so they shut their mouths. I can readily forgive this, only not the other, the false tongue which makes the worse appear the better cause. There were, of course, multitudes to censure and defame this truth-speaker. But the brave know the brave. Fops, whether in hotels or churches, will utter the fop's opinion, and faintly hope for the salvation of his soul; but his manly enemies, who despised the fops, honored him; and it is well known that his great hospitable heart was the sanctuary to which every soul conscious of an earnest opinion came for sympathy — alike the brave slaveholder and the brave slave-rescuer. These met in the house of this honest

man — for every sound heart loves a responsible person, one who does not in generous company say generous things, and in mean company base things, but says one thing — now cheerfully, now indignantly — but always because he must, and because he sees that, whether he speak or refrain from speech, this is said over him; and history, nature and all souls testify to the same.

Ah, my brave brother! it seems as if, in a frivolous age, our loss were immense, and your place cannot be supplied. But you will already be consoled in the transfer of your genius, knowing well that the nature of the world will affirm to all men, in all times, that which for twenty-five years you valiantly spoke; that the winds of Italy murmur the same truth over your grave; the winds of America over these bereaved streets; that the sea which bore your mourners home affirms it, the stars in their courses, and the inspirations of youth; whilst the polished and pleasant traitors to human rights, with perverted learning and disgraced graces, rot and are forgotten with their double tongue saying all that is sordid for the corruption of man.

The sudden and singular eminence of Mr. Parker, the importance of his name and influence, are the verdict of his country to his virtues. We have few such men to lose; amiable and blameless at home, feared abroad as the standard-bearer of liberty, taking all the duties he could grasp, and more, refusing to spare himself, he has gone down in early glory to his grave, to be a living and enlarging power, wherever learning, wit, honest valor and independence are honored.

AMERICAN CIVILIZATION.

Use, labor of each for all, is the health and virtue of all beings. *Ich dien*, I serve, is a truly royal motto. And it is the mark of nobleness to volunteer the lowest service, the greatest spirit only attaining to humility. Nay, God is God because he is the servant of all. Well, now here comes this conspiracy of slavery, — they call it an institution, I call it a destitution, — this stealing of men and setting them to work, stealing their labor, and the thief sitting idle himself; and for two or three ages it has lasted, and has yielded a certain quantity of rice, cotton and sugar. And, standing on this doleful experience, these people have endeavored to reverse the natural sentiments of mankind, and to pronounce labor disgraceful, and the well-being of a man to consist in eating the fruit of other men's labor.

Labor: a man coins himself into his labor; turns his day, his strength, his thought, his affection into some product which remains as the visible sign of his power; and to protect that, to secure that to him, to secure his past self to his future self, is the object of all government. There is no interest in any country so imperative as that of labor; it covers all, and constitutions and governments exist for that, — to protect and insure it to the laborer. All honest men are daily striving to earn their bread by their industry. And who is this who tosses his empty head at this blessing in disguise, the constitution of human nature, and calls labor vile, and insults the faithful workman at his daily toil? I see for such madness no hellebore, — for such calamity no solution but servile war and the Africanization of the country that permits it.

At this moment in America the aspects of political society absorb attention. In every house, from Canada to the Gulf, the children ask the serious father,— “What is the news of the war to-day, and when will there be better times?” The boys have no new clothes, no gifts, no journeys; the girls must go without new bonnets; boys and girls find their education, this year, less liberal and complete. All the little hopes that heretofore made the year pleasant are deferred. The state of the country fills us with anxiety and stern duties. We have attempted to hold together two states of civilization: a higher state, where labor and the tenure of land and the right of suffrage are democratical; and a lower state, in which the old military tenure of prisoners or slaves, and of power and land in a few hands, makes an oligarchy: we have attempted to hold these two states of society under one law. But the rude and early state of society does not work well with the later, nay, works badly, and has poisoned politics, public morals and social intercourse in the Republic, now for many years.

The times put this question, Why cannot the best civilization be extended

over the whole country, since the disorder of the less-civilized portion menaces the existence of the country? Is this secular progress we have described, this evolution of man to the highest powers, only to give him sensibility, and not to bring duties with it? Is he not to make his knowledge practical? to stand and to withstand? Is not civilization heroic also? Is it not for action? has it not a will? "There are periods," said Niebuhr, "when something much better than happiness and security of life is attainable." We live in a new and exceptional age. America is another word for Opportunity. Our whole history appears like a last effort of the Divine Providence in behalf of the human race; and a literal, slavish following of precedents, as by a justice of the peace, is not for those who at this hour lead the destinies of this people. The evil you contend with has taken alarming proportions, and you still content yourself with parrying the blows it aims, but, as if enchanted, abstain from striking at the cause.

If the American people hesitate, it is not for want of warning or advices. The telegraph has been swift enough to announce our disasters. The journals have not suppressed the extent of the calamity. Neither was there any want of argument or of experience. If the war brought any surprise to the North, it was not the fault of sentinels on the watch-tower, who had furnished full details of the designs, the muster and the means of the enemy. Neither was anything concealed of the theory or practice of slavery. To what purpose make more big books of these statistics? There are already mountains of facts, if any one wants them. But people do not want them. They bring their opinion into the world. If they have a comatose tendency in the brain, they are pro-slavery while they live; if of a nervous sanguineous temperament, they are abolitionists. Then interests were never persuaded. Can you convince the shoe interest, or the iron interest, or the cotton interest, by reading passages from Milton or Montesquieu? You wish to satisfy people that slavery is bad economy. Why, the "Edinburgh Review" pounded on that string, and made out its case, forty years ago. A democratic statesman said to me, long since, that, if he owned the State of Kentucky, he would manumit all the slaves, and be a gainer by the transaction. Is this new? No, everybody knows it. As a general economy it is admitted. But there is no one owner of the state, but a good many small owners. One man owns land and slaves; another owns slaves only. Here is a woman who has no other property, — like a lady in Charleston I knew of, who owned fifteen sweeps and rode in her carriage. It is clearly a vast inconvenience to each of these to make any change, and they are fretful and talkative, and all their friends are; and those less interested are inert, and, from want of thought, averse to innovation. It is like free trade, certainly the interest of nations, but by no means the interest of certain towns and districts, which tariff feeds fat; and the eager interest of the few

overpowers the apathetic general conviction of the many. Banknotes rob the public, but are such a daily convenience that we silence our scruples and make believe they are gold. So imposts are the cheap and right taxation; but, by the dislike of people to pay out a direct tax, governments are forced to render life costly by making them pay twice as much, hidden in the price of tea and sugar.

In this national crisis, it is not argument that we want, but that rare courage which dares commit itself to a principle, believing that Nature is its ally, and will create the instruments it requires, and more than make good any petty and injurious profit which it may disturb. There never was such a combination as this of ours, and the rules to meet it are not set down in any history. We want men of original perception and original action, who can open their eyes wider than to a nationality, namely, to considerations of benefit to the human race, can act in the interest of civilization. Government must not be a parish clerk, a justice of the peace. It has, of necessity, in any crisis of the state, the absolute powers of a Dictator. The existing Administration is entitled to the utmost candor. It is to be thanked for its angelic virtue, compared with any executive experiences with which we have been familiar. But the times will not allow us to indulge in compliment. I wish I saw in the people that inspiration which, if Government would not obey the same, would leave the Government behind and create on the moment the means and executors it wanted. Better the war should more dangerously threaten us, — should threaten fracture in what is still whole, and punish us with burned capitals and slaughtered regiments, and so exasperate the people to energy, exasperate our nationality. There are Scriptures written invisibly on men's hearts, whose letters do not come out until they are enraged. They can be read by war-fires, and by eyes in the last peril.

We cannot but remember that there have been days in American history, when, if the Free States had done their duty, Slavery had been blocked by an immovable barrier, and our recent calamities forever precluded. The Free States yielded, and every compromise was surrender and invited new demands. Here again is a new occasion which Heaven offers to sense and virtue. It looks as if we held the fate of the fairest possession of mankind in our hands, to be saved by our firmness or to be lost by hesitation.

The one power that has legs long enough and strong enough to wade across the Potomac offers itself at this hour; the one strong enough to bring all the civility up to the height of that which is best, prays now at the door of Congress for leave to move. Emancipation is the demand of civilization. That is a principle; everything else is an intrigue. This is a progressive policy, puts the whole people in healthy, productive, amiable position, puts every man in the South in just and natural relations with every man in the North, laborer with

laborer.

I shall not attempt to unfold the details of the project of emancipation. It has been stated with great ability by several of its leading advocates. I will only advert to some leading points of the argument, at the risk of repeating the reasons of others. The war is welcome to the Southerner; a chivalrous sport to him, like hunting, and suits his semi-civilized condition. On the climbing scale of progress, he is just up to war, and has never appeared to such advantage as in the last twelvemonth. It does not suit us. We are advanced some ages on the war-state, — to trade, art and general cultivation. His laborer works for him at home, so that he loses no labor by the war. All our soldiers are laborers; so that the South, with its inferior numbers, is almost on a footing in effective war-population with the North. Again, as long as we fight without any affirmative step taken by the Government, any word intimating forfeiture in the rebel States of their old privileges under the law, they and we fight on the same side, for Slavery. Again, if we conquer the enemy, — what then? We shall still have to keep him under, and it will cost as much to hold him down as it did to get him down. Then comes the summer, and the fever will drive the soldiers home; next winter we must begin at the beginning, and conquer him over again. What use then to take a fort, or a privateer, or get possession of an inlet, or to capture a regiment of rebels?

But one weapon we hold which is sure. Congress can, by edict, as a part of the military defence which it is the duty of Congress to provide, abolish slavery, and pay for such slaves as we ought to pay for. Then the slaves near our armies will come to us; those in the interior will know in a week what their rights are, and will, where opportunity offers, prepare to take them. Instantly, the armies that now confront you must run home to protect their estates, and must stay there, and your enemies will disappear.

There can be no safety until this step is taken. We fancy that the endless debate, emphasized by the crime and by the cannons of this war, has brought the Free States to some conviction that it can never go well with us whilst this mischief of slavery remains in our politics, and that by concert or by might we must put an end to it. But we have too much experience of the futility of an easy reliance on the momentary good dispositions of the public. There does exist, perhaps, a popular will that the Union shall not be broken, — that our trade, and therefore our laws, must have the whole breadth of the continent, and from Canada to the Gulf. But, since this is the rooted belief and will of the people, so much the more are they in danger, when impatient of defeats, or impatient of taxes, to go with a rush for some peace; and what kind of peace shall at that moment be easiest attained, they will make concessions for it, — will give up the

slaves, and the whole torment of the past half-century will come back to be endured anew.

Neither do I doubt, if such a composition should take place, that the Southerners will come back quietly and politely, leaving their haughty dictation. It will be an era of good feelings. There will be a lull after so loud a storm; and, no doubt, there will be discreet men from that section who will earnestly strive to inaugurate more moderate and fair administration of the Government, and the North will for a time have its full share and more, in place and counsel. But this will not last; — not for want of sincere good-will in sensible Southerners, but because Slavery will again speak through them its harsh necessity. It cannot live but by injustice, and it will be unjust and violent to the end of the world.

The power of Emancipation is this, that it alters the atomic social constitution of the Southern people. Now, their interest is in keeping out white labor; then, when they must pay wages, their interest will be to let it in, to get the best labor, and, if they fear their blacks, to invite Irish, German and American laborers. Thus, whilst Slavery makes and keeps disunion, Emancipation removes the whole objection to union. Emancipation at one stroke elevates the poor white of the South, and identifies his interest with that of the Northern laborer.

Now, in the name of all that is simple and generous, why should not this great right be done? Why should not America be capable of a second stroke for the well-being of the human race, as eighty or ninety years ago she was for the first, — of an affirmative step in the interests of human civility, urged on her, too, not by any romance of sentiment, but by her own extreme perils? It is very certain that the statesman who shall break through the cobwebs of doubt, fear and petty cavil that lie in the way, will be greeted by the unanimous thanks of mankind. Men reconcile themselves very fast to a bold and good measure when once it is taken, though they condemned it in advance. A week before the two captive commissioners were surrendered to England, every one thought it could not be done: it would divide the North. It was done, and in two days all agreed it was the right action. And this action, which costs so little, (the parties injured by it being such a handful that they can very easily be indemnified,) rids the world, at one stroke, of this degrading nuisance, the cause of war and ruin to nations. This measure at once puts all parties right. This is borrowing, as I said, the omnipotence of a principle. What is so foolish as the terror lest the blacks should be made furious by freedom and wages? It is denying these that is the outrage, and makes the danger from the blacks. But justice satisfies everybody, — white man, red man, yellow man and black man. All like wages, and the appetite grows by feeding.

But this measure, to be effectual, must come speedily. The weapon is slipping out of our hands. "Time," say the Indian Scriptures, "drinketh up the essence of every great and noble action which ought to be performed, and which is delayed in the execution."

I hope it is not a fatal objection to this policy that it is simple and beneficent thoroughly, which is the attribute of a moral action. An unprecedented material prosperity has not tended to make us Stoics or Christians. But the laws by which the universe is organized reappear at every point, and will rule it. The end of all political struggle is to establish morality as the basis of all legislation. It is not free institutions, it is not a republic, it is not a democracy, that is the end, — no, but only the means. Morality is the object of government. We want a state of things in which crime shall not pay. This is the consolation on which we rest in the darkness of the future and the afflictions of to-day, that the government of the world is moral, and does forever destroy what is not. It is the maxim of natural philosophers that the natural forces wear out in time all obstacles, and take place: and it is the maxim of history that victory always falls at last where it ought to fall; or, there is perpetual march and progress to ideas. But, in either case, no link of the chain can drop out. Nature works through her appointed elements; and ideas must work through the brains and the arms of good and brave men, or they are no better than dreams.

Since the above pages were written, President Lincoln has proposed to Congress that the Government shall co-operate with any State that shall enact a gradual abolishment of Slavery. In the recent series of national successes, this Message is the best. It marks the happiest day in the political year. The American Executive ranges itself for the first time on the side of freedom. If Congress has been backward, the President has advanced. This state-paper is the more interesting that it appears to be the President's individual act, done under a strong sense of duty. He speaks his own thought in his own style. All thanks and honor to the Head of the State! The Message has been received throughout the country with praise, and, we doubt not, with more pleasure than has been spoken. If Congress accords with the President, it is not yet too late to begin the emancipation; but we think it will always be too late to make it gradual.

An experience agrees that it should be immediate. More and better than the President has spoken shall, perhaps, the effect of this Message be, — but, we are sure, not more or better than he hoped in his heart, when, thoughtful of all the complexities of his position, he penned these cautious words.

THE EMANCIPATION PROCLAMATION.

AN ADDRESS DELIVERED IN BOSTON IN SEPTEMBER, 1862.

In so many arid forms which States incrust themselves with, once in a century, if so often, a poetic act and record occur. These are the jets of thought into affairs, when, roused by danger or inspired by genius, the political leaders of the day break the else insurmountable routine of class and local legislation, and take a step forward in the direction of catholic and universal interests. Every step in the history of political liberty is a sally of the human mind into the untried Future, and has the interest of genius, and is fruitful in heroic anecdotes. Liberty is a slow fruit. It comes, like religion, for short periods, and in rare conditions, as if awaiting a culture of the race which shall make it organic and permanent. Such moments of expansion in modern history were the Confession of Augsburg, the plantation of America, the English Commonwealth of 1648, the Declaration of American Independence in 1776, the British emancipation of slaves in the West Indies, the passage of the Reform Bill, the repeal of the Corn-Laws, the Magnetic Ocean-Telegraph, though yet imperfect, the passage of the Homestead Bill in the last Congress, and now, eminently, President Lincoln's Proclamation on the twenty-second of September. These are acts of great scope, working on a long future and on permanent interests, and honoring alike those who initiate and those who receive them. These measures provoke no noisy joy, but are received into a sympathy so deep as to apprise us that mankind are greater and better than we know. At such times it appears as if a new public were created to greet the new event. It is as when an orator, having ended the compliments and pleasantries with which he conciliated attention, and having run over the superficial fitness and commodities of the measure he urges, suddenly, lending himself to some happy inspiration, announces with vibrating voice the grand human principles involved; — the bravos and wits who greeted him loudly thus far are surprised and overawed; a new audience is found in the heart of the assembly, — an audience hitherto passive and unconcerned, now at last so searched and kindled that they come forward, every one a representative of mankind, standing for all nationalities.

The extreme moderation with which the President advanced to his design, — his long-avowed expectant policy, as if he chose to be strictly the executive of the best public sentiment of the country, waiting only till it should be unmistakably pronounced, — so fair a mind that none ever listened so patiently to such extreme varieties of opinion, — so reticent that his decision has taken all

parties by surprise, whilst yet it is just the sequel of his prior acts, — the firm tone in which he announces it, without inflation or surplusage, — all these have bespoken such favor to the act, that, great as the popularity of the President has been, we are beginning to think that we have underestimated the capacity and virtue which the Divine Providence has made an instrument of benefit so vast. He has been permitted to do more for America than any other American man. He is well entitled to the most indulgent construction. Forget all that we thought shortcomings, every mistake, every delay. In the extreme embarrassments of his part, call these endurance, wisdom, magnanimity; illuminated, as they now are, by this dazzling success.

When we consider the immense opposition that has been neutralized or converted by the progress of the war (for it is not long since the President anticipated the resignation of a large number of officers in the army, and the secession of three States, on the promulgation of this policy), — when we see how the great stake which foreign nations hold in our affairs has recently brought every European power as a client into this court, and it became every day more apparent what gigantic and what remote interests were to be affected by the decision of the President, — one can hardly say the deliberation was too long. Against all timorous counsels he had the courage to seize the moment; and such was his position, and such the felicity attending the action, that he has replaced Government in the good graces of mankind. “Better is virtue in the sovereign than plenty in the season,” say the Chinese. ‘T is wonderful what power is, and how ill it is used, and how its ill use makes life mean, and the sunshine dark. Life in America had lost much of its attraction in the later years. The virtues of a good magistrate undo a world of mischief, and, because Nature works with rectitude, seem vastly more potent than the acts of bad governors, which are ever tempered by the good-nature in the people, and the incessant resistance which fraud and violence encounter. The acts of good governors work a geometrical ratio, as one midsummer day seems to repair the damage of a year of war.

A day which most of us dared not hope to see, an event worth the dreadful war, worth its costs and uncertainties, seems now to be close before us. October, November, December will have passed over beating hearts and plotting brains: then the hour will strike, and all men of African descent who have faculty enough to find their way to our lines are assured of the protection of American law.

It is by no means necessary that this measure should be suddenly marked by any signal results on the negroes or on the Rebel masters. The force of the act is that it commits the country to this justice, — that it compels the innumerable

officers, civil, military, naval, of the Republic to range themselves on the line of this equity. It draws the fashion to this side. It is not a measure that admits of being taken back. Done, it cannot be undone by a new Administration. For slavery over-powers the disgust of the moral sentiment only through immemorial usage. It cannot be introduced as an improvement of the nineteenth century. This act makes that the lives of our heroes have not been sacrificed in vain. It makes a victory of our defeats. Our hurts are healed; the health of the nation is repaired. With a victory like this, we can stand many disasters. It does not promise the redemption of the black race; that lies not with us: but it relieves it of our opposition. The President by this act has paroled all the slaves in America; they will no more fight against us: and it relieves our race once for all of its crime and false position. The first condition of success is secured in putting ourselves right. We have recovered ourselves from our false position, and planted ourselves on a law of Nature:

“If that fail,
The pillared firmament is rottennes,
And earth’s base built on stubble.”

The Government has assured itself of the best constituency in the world: every spark of intellect, every virtuous feeling, every religious heart, every man of honor, every poet, every philosopher, the generosity of the cities, the health of the country, the strong arms of the mechanic, the endurance of farmers, the passionate conscience of women, the sympathy of distant nations, — all rally to its support.

Of course, we are assuming the firmness of the policy thus declared. It must not be a paper proclamation. We confide that Mr. Lincoln is in earnest, and, as he has been slow in making up his mind, has resisted the importunacy of parties and of events to the latest moment, he will be as absolute in his adhesion. Not only will he repeat and follow up his stroke, but the nation will add its irresistible strength. If the ruler has duties, so has the citizen. In times like these, when the nation is imperilled, what man can, without shame, receive good news from day to day without giving good news of himself? What right has any one to read in the journals tidings of victories, if he has not bought them by his own valor, treasure, personal sacrifice, or by service as good in his own department? With this blot removed from our national honor, this heavy load lifted off the national heart, we shall not fear henceforward to show our faces among mankind. We shall cease to be hypocrites and pretenders, but what we have styled our free institutions will be such.

In the light of this event the public distress begins to be removed. What if the brokers’ quotations show our stocks discredited, and the gold dollar costs one

hundred and twenty-seven cents? These tables are fallacious. Every acre in the Free States gained substantial value on the twenty-second of September. The cause of disunion and war has been reached and begun to be removed. Every man's house-lot and garden are relieved of the malaria which the purest winds and strongest sunshine could not penetrate and purge. The territory of the Union shines to-day with a lustre which every European emigrant can discern from far; a sign of inmost security and permanence. Is it feared that taxes will check immigration? That depends on what the taxes are spent for. If they go to fill up this yawning Dismal Swamp, which engulfed armies and populations, and created plague, and neutralized hitherto all the vast capabilities of this continent, — then this taxation, which makes the land wholesome and habitable, and will draw all men unto it, is the best investment in which property-holder ever lodged his earnings.

Whilst we have pointed out the opportuneness of the Proclamation, it remains to be said that the President had no choice. He might look wistfully for what variety of courses lay open to him; every line but one was closed up with fire. This one, too, bristled with danger, but through it was the sole safety. The measure he has adopted was imperative. It is wonderful to see the unseasonable senility of what is called the Peace Party, through all its blindiner their eyes to the main feature of the war, namely, its inevitableness. The war existed long before the cannonade of Sumter, and could not be postponed. It might have begun other wise or elsewhere, but war was in the minds and bones of the combatants, it was written on the iron leaf, and you might as easily dodge gravitation. If we had consented to a peaceable secession of the Rebels, the divided sentiment of the Border States made peaceable secession impossible, the insatiable temper of the South made it impossible, and the slaves on the border, wherever the border might be, were an incessant fuel to rekindle the fire. Give the Confederacy New Orleans, Charleston, and Richmond, and they would have demanded St. Louis and Baltimore. Give them these, and they would have insisted on Washington. Give them Washington, and they would have assumed the army and navy, and, through these, Philadelphia, New York, and Boston. It looks as if the battle-field would have been at least as large in that event as it is now. The war was formidable, but could not be avoided. The war was and is an immense mischief, but brought with it the immense benefit of drawing a line and rallying the Free States to fix it impassably, — preventing the whole force of Southern connection and influence throughout the North from distracting every city with endless confusion, detaching that force and reducing it to handfuls, and, in the progress of hostilities, disinfecting us of our habitual proclivity, through the affection of trade and the traditions of the Democratic party, to

follow Southern leading.

These necessities which have dictated the conduct of the Federal Government are overlooked especially by our foreign critics. The popular statement of the opponents of the war abroad is the impossibility of our success. "If you could add," say they, "to your strength the whole army of England, of France and of Austria, you could not coerce eight millions of people to come under this Government against their will." This is an odd thing for an Englishman, a Frenchman, or an Austrian to say, who remembers Europe of the last seventy years, — the condition of Italy, until 1859, — of Poland, since 1793, — of France, of French Algiers, — of British Ireland, and British India. But, granting the truth, rightly read, of the historical aphorism, that "the people always conquer," it is to be noted that, in the Southern States, the tenure of land and the local laws, with slavery, give the social system not a democratic but an aristocratic complexion; and those States have shown every year a more hostile and aggressive temper, until the instinct of self-preservation forced us into the war. And the aim of the war on our part is indicated by the aim of the President's Proclamation, namely, to break up the false combination of Southern society, to destroy the piratic feature in it which makes it our enemy only as it is the enemy of the human race, and so allow its reconstruction on a just and healthful basis. Then new affinities will act, the old repulsion will cease, and, the cause of war being removed, Nature and trade may be trusted to establish a lasting peace.

We think we cannot overstate the wisdom and benefit of this act of the Government. The malignant cry of the Secession press within the Free States, and the recent action of the Confederate Congress, are decisive as to its efficiency and correctness of aim. Not less so is the silent joy which has greeted it in all generous hearts, and the new hope it has breathed into the world. It was well to delay the steamers at the wharves until this edict could be put on board. It will be an insurance to the ship as it goes plunging through the sea with glad tidings to all people. Happy are the young, who find the pestilence cleansed out of the earth, leaving open to them an honest career. Happy the old, who see Nature purified before they depart. Do not let the dying die: hold them back to this world, until you have charged their ear and heart with this message to other spiritual societies, announcing the melioration of our planet:

"Incertainties now crown themselves assured,
And Peace proclaims olives of endless age."

Meantime that ill-fated, much-injured race which the Proclamation respects will lose somewhat of the dejection sculptured for ages in their bronzed countenance, uttered in the wailing of their plaintive music, — a race naturally benevolent, docile, industrious, and whose very miseries sprang from their great

talent for usefulness, which, in a more moral age, will not only defend their independence, but will give them a rank among nations.

ABRAHAM LINCOLN.

REMARKS AT THE FUNERAL SERVICES HELD IN CONCORD, APRIL
19, 1886.

We meet under the gloom of a calamity which darkens down over the minds of good men in all civil society, as the fearful tidings travel over sea, over land, from country to country, like the shadow of an uncalculated eclipse over the planet. Old as history is, and manifold as are its tragedies, I doubt if any death has caused so much pain to mankind as this has caused, or will cause, on its announcement; and this, not so much because nations are by modern arts brought so closely together, as because of the mysterious hopes and fears which, in the present day, are connected with the name and institutions of America.

In this country, on Saturday, every one was struck dumb, and saw at first only deep below deep, as he meditated on the ghastly blow. And perhaps, at this hour, when the coffin which contains the dust of the President sets forward on its long march through mourning States, on its way to his home in Illinois, we might well be silent, and suffer the awful voices of the time to thunder to us. Yes, but that first despair was brief: the man was not so to be mourned. He was the most active and hopeful of men; and his work had not perished: but acclamations of praise for the task he had accomplished burst out into a song of triumph, which even tears for his death cannot keep down.

The President stood before us as a man of the people. He was thoroughly American, had never crossed the sea, had never been spoiled by English insularity or French dissipation; a quite native, aboriginal man, as an acorn from the oak; no aping of foreigners, no frivolous accomplishments, Kentuckian born, working on a farm, a flatboatman, a captain in the Black Hawk war, a country lawyer, a representative in the rural Legislature of Illinois; — on such modest foundations the broad structure of his fame was laid. How slowly, and yet by happily prepared steps, he came to his place. All of us remember, — it is only a history of five or six years, — the surprise and the disappointment of the country at his first nomination by the Convention at Chicago. Mr. Seward, then in the culmination of his good fame, was the favorite of the Eastern States. And when the new and comparatively unknown name of Lincoln was announced, (notwithstanding the report of the acclamations of that Convention,) we heard the result coldly and sadly. It seemed too rash, on a purely local reputation, to build so grave a trust in such anxious times; and men naturally talked of the chances in politics as incalculable. But it turned out not to be chance. The

profound good opinion which the people of Illinois and of the West had conceived of him, and which they had imparted to their colleagues that they also might justify themselves to their constituents at home, was not rash, though they did not begin to know the riches of his worth.

A plain man of the people, an extraordinary fortune attended him. He offered no shining qualities at the first encounter; he did not offend by superiority. He had a face and manner which disarmed suspicion, which inspired confidence, which confirmed good-will. He was a man without vices. He had a strong sense of duty, which it was very easy for him to obey. Then, he had what farmers call a long head; was excellent in working out the sum for himself; in arguing his case and convincing you fairly and firmly. Then, it turned out that he was a great worker; had prodigious faculty of performance; worked easily. A good worker is so rare; everybody has some disabling quality. In a host of young men that start together and promise so many brilliant leaders for the next age, each fails on trial; one by bad health, one by conceit, or by love of pleasure, or lethargy, or an ugly temper, — each has some disqualifying fault that throws him out of the career. But this man was sound to the core, cheerful, persistent, all right for labor, and liked nothing so well.

Then, he had a vast good-nature, which made him tolerant and accessible to all; fair-minded, leaning to the claim of the petitioner; affable, and not sensible to the affliction which the innumerable visits paid to him when President would have brought to any one else. And how this good-nature became a noble humanity, in many a tragic case which the events of the war brought to him, every one will remember; and with what increasing tenderness he dealt when a whole race was thrown on his compassion. The poor negro said of him, on an impressive occasion, “Massa Linkum am eberywhere.”

Then his broad good-humor, running easily into jocular talk, in which he delighted and in which he excelled, was a rich gift to this wise man. It enabled him to keep his secret; to meet every kind of man and every rank in society; to take off the edge of the severest decisions; to mask his own purpose and sound his companion; and to catch with true instinct the temper of every company he addressed. And, more than all, it is to a man of severe labor, in anxious and exhausting crises, the natural restorative, good as sleep, and is the protection of the overdriven brain against rancor and insanity.

He is the author of a multitude of good sayings, so disguised as pleasantries that it is certain they had no reputation at first but as jests; and only later, by the very acceptance and adoption they find in the mouths of millions, turn out to be the wisdom of the hour. I am sure if this man had ruled in a period of less facility of printing, he would have become mythological in a very few years, like Æsop

or Pilpay, or one of the Seven Wise Masters, by his fables and proverbs. But the weight and penetration of many passages in his letters, messages and speeches, hidden now by the very closeness of their application to the moment, are destined hereafter to wide fame. What pregnant definitions; what unerring common sense; what foresight; and, on great occasion, what lofty, and more than national, what humane tone! His brief speech at Gettysburg will not easily be surpassed by words on any recorded occasion. This, and one other American speech, that of John Brown to the court that tried him, and a part of Kossuth's speech at Birmingham, can only be compared with each other, and with no fourth.

His occupying the chair of State was a triumph of the good-sense of mankind, and of the public conscience. This middle-class country had got a middle-class President, at last. Yes, in manners and sympathies, but not in powers, for his powers were superior. This man grew according to the need. His mind mastered the problem of the day; and, as the problem grew, so did his comprehension of it. Rarely was man so fitted to the event. In the midst of fears and jealousies, in the Babel of counsels and parties, this man wrought incessantly with all his might and all his honesty, laboring to find what the people wanted, and how to obtain that. It cannot be said there is any exaggeration of his worth. If ever a man was fairly tested, he was. There was no lack of resistance, nor of slander, nor of ridicule. The times have allowed no state secrets; the nation has been in such ferment, such multitudes had to be trusted, that no secret could be kept. Every door was ajar, and we know all that befell.

Then, what an occasion was the whirlwind of the war. Here was place for no holiday magistrate, no fair-weather sailor; the new pilot was hurried to the helm in a tornado. In four years, — four years of battle-days, — his endurance, his fertility of resources, his magnanimity, were sorely tried and never found wanting. There, by his courage, his justice, his even temper, his fertile counsel, his humanity, he stood a heroic figure in the centre of a heroic epoch. He is the true history of the American people in his time. Step by step he walked before them; slow with their slowness, quickening his march by theirs, the true representative of this continent; an entirely public man; father of his country, the pulse of twenty millions throbbing in his heart, the thought of their minds articulated by his tongue.

Adam Smith remarks that the axe, which in Houbraken's portraits of British kings and worthies is engraved under those who have suffered at the block, adds a certain lofty charm to the picture. And who does not see, even in this tragedy so recent, how fast the terror and ruin of the massacre are already burning into glory around the victim? Far happier this fate than to have lived to be wished

away; to have watched the decay of his own faculties; to have seen, — perhaps even he, — the proverbial ingratitude of statesmen; to have seen mean men preferred. Had he not lived long enough to keep the greatest promise that ever man made to his fellow-men, — the practical abolition of slavery? He had seen Tennessee, Missouri and Maryland emancipate their slaves. He had seen Savannah, Charleston and Richmond surrendered; had seen the main army of the rebellion lay down its arms. He had conquered the public opinion of Canada, England and France. Only Washington can compare with him in fortune.

And what if it should turn out, in the unfolding of the web, that he had reached the term; that this heroic deliverer could no longer serve us; that the rebellion had touched its natural conclusion, and what remained to be done required new and uncommitted hands, — a new spirit born out of the ashes of the war; and that Heaven, wishing to show the world a completed benefactor, shall make him serve his country even more by his death than by his life? Nations, like kings, are not good by facility and complaisance. “The kindness of kings consists in justice and strength.” Easy good-nature has been the dangerous foible of the Republic, and it was necessary that its enemies should outrage it, and drive us to unwonted firmness, to secure the salvation of this country in the next ages.

The ancients believed in a serene and beautiful Genius which ruled in the affairs of nations; which, with a slow but stern justice, carried forward the fortunes of certain chosen houses, weedings out single offenders or offending families, and securing at last the firm prosperity of the favorites of Heaven. It was too narrow a view of the Eternal Nemesis. There is a serene Providence which rules the fate of nations, which makes little account of time, little of one generation or race, makes no account of disasters, conquers alike by what is called defeat or by what is called victory, thrusts aside enemy and obstruction, crushes everything immoral as inhuman, and obtains the ultimate triumph of the best race by the sacrifice of everything which resists the moral laws of the world. It makes its own instruments, creates the man for the time, trains him in poverty, inspires his genius, and arms him for his task. It has given every race its own talent, and ordains that only that race which combines perfectly with the virtues of all shall endure.

HARVARD COMMEMORATION SPEECH. JULY 21, 1865.

Mr. Chairman and Gentlemen :

With whatever opinion we come here, I think it is not in man to see, without a feeling of pride and pleasure, a tried soldier, the armed defender of the right. I think that in these last years all opinions have been affected by the magnificent and stupendous spectacle which Divine Providence has offered us of the energies that slept in the children of this country, — that slept and have awakened. I see thankfully those that are here, but dim eyes in vain explore for some who are not.

The old Greek Heraclitus said, “War is the Father of all things.” He said it, no doubt, as science, but we of this day can repeat it as political and social truth. War passes the power of all chemical solvents, breaking up the old adhesions and allowing the atoms of society to take a new order. It is not the Government, but the War, that has appointed the good generals, sifted out the pedants, put in the new and vigorous blood. The War has lifted many other people besides Grant and Sherman into their true places. Even Divine Providence, we may say, always seems to work after a certain military necessity. Every nation punishes the General who is not victorious. It is a rule in games of chance that the cards beat all the players, and revolutions disconcert and outwit all the insurgents.

The revolutions carry their own points, sometimes to the ruin of those who set them on foot. The proof that war also is within the highest right, is a marked benefactor in the hands of Divine Providence, is its *morale*. The war gave back integrity to this erring and immoral nation. It charged with power, peaceful, amiable men, to whose life war and discord were abhorrent. What an infusion of character went out from this and other colleges! What an infusion of character down to the ranks! The experience has been uniform that it is the gentle soul that makes the firm hero after all. It is easy to recall the mood in which our young men, snatched from every peaceful pursuit, went to the war. Many of them had never handled a gun. They said, “It is not in me to resist. I go because I must. It is a duty which I shall never forgive myself if I decline. I do not know that I can make a soldier. I may be very clumsy. Perhaps I shall be timid; but you can rely on me. Only one thing is certain, I can well die, but I cannot afford to misbehave.”

In fact the infusion of culture and tender humanity from these scholars and idealists who went to the war in their own despite, — God knows they had no fury for killing their old friends and countrymen, — had its signal and lasting effect. It was found that enthusiasm was a more potent ally than science and

munitions of war without it. "It is a principle of war," said Napoleon, "that when you can use the thunderbolt you must prefer it to the cannon." Enthusiasm was the thunderbolt. Here in this little Massachusetts, in smaller Rhode Island, in this little nest of New England republics it flamed out when the guilty gun was aimed at Sumter.

Mr. Chairman, standing here in Harvard College, the parent of all the colleges; in Massachusetts, the parent of all the North; when I consider her influence on the country as a principal planter of the Western States, and now, by her teachers, preachers, journalists and books, as well as by traffic and production, the diffuser of religious, literary and political opinion; — and when I see how irresistible the convictions of Massachusetts are in these swarming populations, — I think the little state bigger than I knew. When her blood is up she has a fist big enough to knock down an empire. And her blood was roused. Scholars changed the black coat for the blue. A single company in the forty-fourth Massachusetts regiment contained thirty-five sons of Harvard. You all know as well as I the story of these dedicated men, who knew well on what duty they went, — whose fathers and mothers said of each slaughtered son, "We gave him up when he enlisted." One mother said, when her son was offered the command of the first negro regiment, "If he accepts it, I shall be as proud as if I had heard that he was shot." These men, thus tender, thus high-bred, thus peaceable, were always in the front and always employed. They might say, with their forefathers the old Norse Vikings, "We sung the mass of lances from morning until evening." And in how many cases it chanced, when the hero had fallen, they who came by night to his funeral on the morrow returned to the warpath to show his slayers the way to death!

Ah! young brothers, all honor and gratitude to you, — you, manly defenders, Liberty's and Humanity's body-guard! We shall not again disparage America, now that we have seen what men it will bear. We see — we thank you for it — a new era, worth to mankind all the treasure and all the lives it has cost; yes, worth to the world the lives of all this generation of American men, if they had been demanded.

EDITORS' ADDRESS.

*MASSACHUSETTS QUARTERLY REVIEW, DECEMBER, 184[EDITOR:
ILLEGIBLE NUMBER]*

The American people are fast opening their own destiny. The material basis is of such extent that no folly of man can quite subvert it; for the territory is a considerable fraction of the planet, and the population neither loath nor inexpert to use their advantages. Add, that this energetic race derive an unprecedented material power from the new arts, from the expansions effected by public schools, cheap postage and a cheap press, from the telescope, the telegraph, the railroad, steamship, steam-ferry, steam-mill; from domestic architecture, chemical agriculture, from ventilation, from ice, ether, caoutchouc, and innumerable inventions and manufactures.

A scholar who has been reading of the fabulous magnificence of Assyria and Persia, of Rome and Constantinople, leaves his library and takes his seat in a railroad-car, where he is importuned by newsboys with journals still wet from Liverpool and Havre, with telegraphic despatches not yet fifty minutes old from Buffalo and Cincinnati. At the screams of the steam-whistle, the train quits city and suburbs, darts away into the interior, drops every man at his estate as it whirls along, and shows our traveller what tens of thousands of powerful and weaponed men, science-armed and society-armed, sit at large in this ample region, obscure from their numbers and the extent of the domain. He reflects on the power which each of these plain republicans can employ; how far these chains of intercourse and travel reach, interlock, and ramify; what levers, what pumps, what exhaustive analyses are applied to nature for the benefit of masses of men. Then he exclaims, What a negro-fine royalty is that of Jamschid and Solomon! What a substantial sovereignty does my townsman possess! A man who has a hundred dollars to dispose of, — a hundred dollars over his bread, — is rich beyond the dreams of the Cæsars.

Keep our eyes as long as we can on this picture, we cannot stave off the ulterior question, — the famous question of Cineas to Pyrrhus, — the where to of all this power and population, these surveys and inventions, this taxing and tabulating, mill-privilege, roads, and mines. The aspect this country presents is a certain maniacal activity, an immense apparatus of cunning machinery which turns out, at last, some Nuremberg toys. Has it generated, as great interests do, any intellectual power? Where are the works of the imagination — the surest test of a national genius? At least as far as the purpose and genius of America is yet

repeated in any book, it is a sterility and no genius.

One would say there is nothing colossal in the country but its geography and its material activities; that the moral and intellectual effects are not on the same scale with the trade and production. There is no speech heard but that of auctioneers, newsboys, and the caucus. Where is the great breath of the New World, the voice of aboriginal nations opening new eras with hymns of lofty cheer? Our books and fine arts are imitations; there is a fatal incuriosity and disinclination in our educated men to new studies and the interrogation of nature. We have taste, critical talent, good professors, good commentators, but a lack of male energy. What more serious calamity can befall a people than a constitutional dulness and limitation? The moral influence of the intellect is wanting. We hearken in vain for any profound voice speaking to the American heart, cheering timid good men, animating the youth, consoling the defeated, and intelligently announcing duties which clothe life with joy, and endear the face of land and sea to men. It is a poor consideration that the country wit is precocious, and, as we say, practical; that political interests on so broad a scale as ours are administered by little men with some saucy village talent, by deft partisans, good cipherers; strict economists, quite empty of all superstition.

Conceding these unfavorable appearances, it would yet be a poor pedantry to read the fates of this country from these narrow data. On the contrary, we are persuaded that moral and material values are always commensurate. Every material organization exists to a moral end, which makes the reason of its existence. Here are no books, but who can see the continent with its inland and surrounding waters, its temperate climates, its west-wind breathing vigor through all the year, its confluence of races so favorable to the highest energy, and the infinite glut of their production, without putting new queries to Destiny as to the purpose for which this muster of nations and this sudden creation of enormous values is made?

This is equally the view of science and of patriotism. We hesitate to employ a word so much abused as *patriotism*, whose true sense is almost the reverse of its popular sense. We have no sympathy with that boyish egotism, hoarse with cheering for one side, for one state, for one town: the right patriotism consists in the delight which springs from contributing our peculiar and legitimate advantages to the benefit of humanity. Every foot of soil has its proper quality; the grape on two sides of the same fence has new flavors; and so every acre on the globe, every family of men, every point of climate, has its distinguishing virtues. Certainly then this country does not lie here in the sun causeless; and though it may not be easy to define its influence, men feel already its emancipating quality in the careless self-reliance of the manners, in the freedom

of thought, in the direct roads by which grievances are reached and redressed, and even in the reckless and sinister politics, not less than in purer expressions. Bad as it is, this freedom leads onward and upward, — to a Columbia of thought and art, which is the last and endless end of Columbus's adventure.

Lovers of our country, but not always approvers of the public counsels, we should certainly be glad to give good advice in politics. We have not been able to escape our national and endemic habit, and to be liberated from interest in the elections and in public affairs. Nor have we cared to disfranchise ourselves. We are more solicitous than others to make our politics clear and healthful, as we believe politics to be nowise accidental or exceptional, but subject to the same laws with trees, earths, and acids. We see that reckless and destructive fury which characterizes the lower classes of American society, and which is pampered by hundreds of prof. ligate presses. The young intriguers who drive in bar-rooms and town-meetings the trade of politics, sagacious only to seize the victorious side, have put the country into the position of an overgrown bully, and Massachusetts finds no heart or head to give weight and efficacy to her contrary judgment. In hours when it seemed only to need one just word from a man of honor to have vindicated the rights of millions, and to have given a true direction to the first steps of a nation, we have seen the best understandings of New England, the trusted leaders of her counsels, constituting a snivelling and despised opposition, clapped on the back by comfortable capitalists from all sections, and persuaded to say, We are too old to stand for what is called a New England sentiment any longer. Rely on us for commercial representatives, but for questions of ethics, — who knows what markets may be opened? We are not well, we are not in our seats, when justice and humanity are to be spoken for.

We have a bad war, many victories, each of which converts the country into an immense chancery; and a very insincere political opposition. The country needs to be extricated from its delirium at once. Public affairs are chained in the same law with private; the retributions of armed states are not less sure and signal than those which come to private felons. The facility of majorities is no protection from the natural sequence of their own acts. Men reason badly, but nature and destiny are logical.

But, whilst we should think our pains well bestowed if we could cure the infatuation of statesmen, and should be sincerely pleased if we could give a direction to the Federal politics, we are far from believing politics the primal interest of men. On the contrary, we hold that the laws and governors cannot possess a commanding interest for any but vacant or fanatical people; for the reason that this is simply a formal and superficial interest; and men of a solid genius are only interested in substantial things.

The State, like the individual, should rest on an ideal basis. Not only man but nature is injured by the imputation that man exists only to be fattened with bread, but he lives in such connection with Thought and Fact that his bread is surely involved as one element thereof, but is not its end and aim. So the insight which commands the laws and conditions of the true polity precludes forever all interest in the squabbles of parties. As soon as men have tasted the enjoyment of learning, friendship and virtue, for which the State exists, the prizes of office appear polluted, and their followers outcasts.

A journal that would meet the real wants of this time must have a courage and power sufficient to solve the problems which the great groping society around us, stupid with perplexity, is dumbly exploring. Let it not show its astuteness by dodging each difficult question and arguing diffusely every point on which men are long ago unanimous. Can it front this matter of Socialism, to which the names of Owen and Fourier have attached, and dispose of that question? Will it cope with the allied questions of Government, Nonresistance, and all that belongs under that category? Will it measure itself with the chapter on Slavery, in some sort the special enigma of the time, as it has provoked against it a sort of inspiration and enthusiasm singular in modern history? There are literary and philosophical reputations to settle. The name of Swedenborg has in this very time acquired new honors, and the current year has witnessed the appearance, in their first English translation, of his manuscripts. Here is an unsettled account in the book of Fame; a nebula to dim eyes, but which great telescopes may yet resolve into a magnificent system. Here is the standing problem of Natural Science, and the merits of her great interpreters to be determined; the encyclopaedical Humboldt, and the intrepid generalizations collected by the author of the "Vestiges of Creation." Here is the balance to be adjusted between the exact French school of Cuvier, and the genial catholic theorists, Geoffrey St. Hilaire, Goethe, Davy, and Agassis. Will it venture into the thin and difficult air of that school where the secrets of structure are discussed under the topics of mesmerism and the twilights of demonology?

What will easily seem to many a far higher question than any other is that which respects the embodying of the Conscience of the period. Is the age we live in unfriendly to the highest powers; to that blending of the affections with the poetic faculty which has distinguished the Religious Ages? We have a better opinion of the economy of nature than to fear that those varying phases which humanity presents, ever leave out any of the grand springs of human action. Mankind for the moment seem to be in search of a religion. The Jewish *cultus* is declining; the Divine, or, as some will say, the truly Human, hovers, now seen, now unseen, before us. This period of peace, this hour when the jangle of

contending churches is hushing or hushed, will seem only the more propitious to those who believe that man need not fear the want of religion, because they know his religious constitution, — that he must rest on the moral and religious sentiments, as the motion of bodies rests on geometry. In the rapid decay of what was called religion, timid and unthinking people fancy a decay of the hope of man. But the moral and religious sentiments meet us everywhere, alike in markets as in churches. A God starts up behind cotton bales also. The conscience of man is regenerated as is the atmosphere, so that society cannot be debauched. The health which we call Virtue is an equipoise which easily redresses itself, and resembles those rocking-stones which a child's finger can move, and a weight of many hundred tons cannot overthrow.

With these convictions, a few friends of good letters have thought fit to associate themselves for the conduct of a new journal. We have obeyed the custom and convenience of the time in adopting this form of a Review, as a mould into which all metal most easily runs. But the form shall not be suffered to be an impediment. The name might convey the impression of a book of criticism, and that nothing is to be found here which was not written expressly for the Review; but good readers know that inspired pages are not written to fill a space, but for inevitable utterance; and to such our journal is freely and solicitously open, even though everything else be excluded. We entreat the aid of every lover of truth and right, and let these principles entreat for us. We rely on the talents and industry of good men known to us, but much more on the magnetism of truth, which is multiplying and educating advocates for itself and friends for us. We rely on the truth for and against ourselves.

WOMAN.

A LECTURE READ BEFORE THE WOMAN'S RIGHTS CONVENTION
BOSTON, SEPTEMBER 20, 1855.

Among those movements which seem to be, now and then, endemic in the public mind, — perhaps we should say, sporadic, — rather than the single inspiration of one mind, is that which has urged on society the benefits of action having for its object a benefit to the position of Woman. And none is more seriously interesting to every healthful and thoughtful mind.

In that race which is now predominant over all the other races of men, it was a cherished belief that women had an oracular nature. They are more delicate than men, — delicate as iodine to light, — and thus more impressionable. They are the best index of the coming hour. I share this belief. I think their words are to be weighed; but it is their inconsiderate word, — according to the rule, 'take their first advice, not their second:' as Coleridge was wont to apply to a lady for her judgment in questions of taste, and accept it; but when she added— "I think so, because"— "Pardon me, madam," he said, "leave me to find out the reasons for myself." In this sense, as more delicate mercuries of the imponderable and immaterial influences, what they say and think is the shadow of coming events. Their very dolls are indicative. Among our Norse ancestors, Frigga was worshipped as the goddess of women. "Weirdes all," said the Edda, "Frigga knoweth, though she telleth them never." That is to say, all wisdoms Woman knows; though she takes them for granted, and does not explain them as discoveries, like the understanding of man. Men remark figure: women always catch the expression. They inspire by a look, and pass with us not so much by what they say or do, as by their presence. They learn so fast and convey the result so fast as to outrun the logic of their slow brother and make his acquisitions poor. 'T is their mood and tone that is important. Does their mind misgive them, or are they firm and cheerful? 'T is a true report that things are going ill or well. And any remarkable opinion or movement shared by woman will be the first sign of revolution.

Plato said, Women are the same as men in faculty, only less in degree. But the general voice of mankind has agreed that they have their own strength; that women are strong by sentiment; that the same mental height which their husbands attain by toil, they attain by sympathy with their husbands. Man is the will, and Woman the sentiment. In this ship of humanity, Will is the rudder, and Sentiment the sail: when Woman affects to steer, the rudder is only a masked

sail. When women engage in any art or trade, it is usually as a resource, not as a primary object. The life of the affections is primary to them, so that there is usually no employment or career which they will not with their own applause and that of society quit for a suitable marriage. And they give entirely to their affections, set their whole fortune on the die, lose themselves eagerly in the glory of their husbands and children. Man stands astonished at a magnanimity he cannot pretend to. Mrs. Lucy Hutchinson, one of the heroines of the English Commonwealth, who wrote the life of her husband, the Governor of Nottingham, says, "If he esteemed her at a higher rate than she in herself could have deserved, he was the author of that virtue he doted on, while she only reflected his own glories upon him. All that she was, was *him* , while he was hers, and all that she is now, at best, but his pale shade."

As for Plato's opinion, it is true that, up to recent times, in no art or science, not in painting, poetry, or music, have they produced a master-piece. Till the new education and larger opportunities of very modern times, this position, with the fewest possible exceptions, has always been true. Sappho, to be sure, in the Olympic Games, gained the crown over Pindar. But, in general, no mastery in either of the fine arts — which should, one would say, be the arts of women — has yet been obtained by them, equal to the mastery of men in the same. The part they play in education, in the care of the young and the tuition of older children, is their organic office in the world. So much sympathy as they have, makes them inestimable as the mediators between those who have knowledge and those who want it: besides, their fine organization, their taste, and love of details, makes the knowledge they give better in their hands.

But there is an art which is better than painting, poetry, music, or architecture, — better than botany, geology, or any science; namely, Conversation. Wise, cultivated, genial conversation is the last flower of civilization and the best result which life has to offer us, — a cup for gods, which has no repentance. Conversation is our account of ourselves. All we have, all we can, all we know, is brought into play, and as the reproduction, in finer form, of all our havings.

Women are, by this and their social influence, the civiliziers of mankind. What is civilization? I answer, the power of good women. It was Burns's remark when he first came to Edinburgh that between the men of rustic life and the polite world he observed little difference; that in the former, though unpolished by fashion and unenlightened by science, he had found much observation and much intelligence; but a refined and accomplished woman was a being almost new to him, and of which he had formed a very inadequate idea. "I like women," said a clear-headed man of the world. "they are so finished." They finish society,

manners, language. Form and ceremony are their realm. They embellish trifles. All these ceremonies that hedge our life around are not to be despised, and when we have become habituated to them cannot be dispensed with. No woman can despise them with impunity. Their genius delights in ceremonies, in forms, in decorating life with manners, with proprieties, order and grace. They are, in their nature, more relative; the circumstance must always be fit; out of place they lose half their weight, out of place they are disfranchised. Position, Wren said, is essential to the perfecting of beauty; — a fine building is lost in a dark lane; a statue should stand in the air; much more true is it of woman.

We commonly say that easy circumstances seem somehow necessary to the finish of the female character: but then it is to be remembered that they create these with all their might. They are always making that civilization which they require; that state of art, of decoration, that ornamental life in which they best appear.

The spiritual force of man is as much shown in taste, in his fancy and imagination — attaching deep meanings to things and to arbitrary inventions of no real value, — as in his perception of truth. He is as much raised above the beast by this creative faculty as by any other. The horse and ox use no delays; they run to the river when thirsty, to the corn when hungry, and say no thanks but fight down whatever opposes their appetite. But man invents and adorns all he does with delays and degrees, paints it all over with forms, to please himself better; he invented majesty and the etiquette of courts and drawing-rooms; architecture, curtains, dress, all luxuries and adornments, and the elegance of privacy, to increase the joys of society. He invented marriage; and surrounded by religion, by comeliness, by all manner of dignities and renunciations, the union of the sexes.

And how should we better measure the gulf between the best intercourse of men in old Athens, in London, or in our American capitals, — between this and the hedgehog existence of diggers of worms, and the eaters of clay and offal, — than by signaling just this department of taste or comeliness? Herein woman is the prime genius and ordainer. There is no grace that is taught by the dancing-master, no style adopted into the etiquette of courts, but was first the whim and mere action of some brilliant woman, who charmed beholders by this new expression, and made it remembered and copied. And I think they should magnify their ritual of manners. Society, conversation, decorum, flowers, dances, colors, forms, are their homes and attendants. They should be found in fit surroundings — with fair approaches, with agreeable architecture, and with all advantages which the means of man collect: —

“The far-fetched diamond finds its home
Flashing and smouldering in her hair.
For her the seas their pearls reveal,
Art and strange lands her pomp supply
With purple, chrome and cochineal,
Ochre and lapis lazuli.
The worm its golden woof presents.
Whatever runs, flies, dives or delves
All doff for her their ornaments,
Which suit her better than themselves.”

There is no gift of nature without some drawback. So, to women, this exquisite structure could not exist without its own penalty. More vulnerable, more infirm, more mortal than men, they could not be such excellent artists in this element of fancy if they did not lend and give themselves to it. They are poets who believe their own poetry. They emit from their pores a colored atmosphere, one would say, wave upon wave of rosy light in which they walk evermore, and see all objects through this warm-tinted mist that envelops them.

But the starry crown of woman is in the power of her affection and sentiment, and the infinite enlargements to which they lead. Beautiful is the passion of love, painter and adorer of youth and early life: but who suspects, in its blushes and tremors, what tragedies, heroisms and immortalities are beyond it? The passion, with all its grace and poetry, is profane to that which follows it. All these affections are only introductory to that which is beyond, and to that which is sublime.

We men have no right to say it, but the omnipotence of Eve is in humility. The instincts of mankind have drawn the Virgin Mother —

“Created beings all in lowliness
Surpassing, as in height above them all.”

This is the Divine Person whom Dante and Milton saw in vision. This is the victory of Griselda, her supreme humility. And it is when love has reached this height that all our pretty rhetoric begins to have meaning. When we see that, it adds to the soul a new soul, it is honey in the mouth, music in the ear and balsam in the heart.

“Far have I clambered in my mind, But nought so great as Love I find. What is thy tent, where dost thou dwell

‘My mansion is humility, Heaven’s vastest capability.’ The further it doth downward tend, The higher up it doth ascend.”

The first thing men think of, when they love, is to exhibit their usefulness and

advantages to the object of their affection. Women make light of these, asking only love. They wish it to be an exchange of nobleness.

There is much in their nature, much in their social position which gives them a certain power of divination. And women know, at first sight, the characters of those with whom they converse. There is much that tends to give them a religious height which men do not attain. Their sequestration from affairs and from the injury to the moral sense which affairs often inflict, aids this. And in every remarkable religious development in the world, women have taken a leading part. It is very curious that in the East, where Woman occupies, nationally, a lower sphere, where the laws resist the education and emancipation of women, — in the Mohammedan faith, Woman yet occupies the same leading position, as a prophetess, that she has among the ancient Greeks, or among the Hebrews, or among the Saxons. This power, this religious character, is everywhere to be remarked in them.

The action of society is progressive. In barbarous society the position of women is always low — in the Eastern nations lower than in the West. ‘When a daughter is born,’ says the Shiking, the old Sacred Book of China, “she sleeps on the ground, she is clothed with a wrapper, she plays with a tile; she is incapable of evil or of good.” And something like that position, in all low society, is the position of woman; because, as before remarked, she is herself its civilizer. With the advancements of society the position and influence of woman bring her strength or her faults into light. In modern times, three or four conspicuous instrumentalities may be marked. After the deification of Woman in the Catholic Church, in the sixteenth or seventeenth century, — when her religious nature gave her, of course, new importance, — the Quakers have the honor of having first established, in their discipline, the equality in the sexes. It is even more perfect in the later sect of the Shakers, wherein no business is broached or counselled without the intervention of one elder and one elderess.

A second epoch for Woman was in France, — entirely civil; the change of sentiment from a rude to a polite character, in the age of Louis XIV., — commonly dated from the building of the Hôtelet de Rambouillet. I think another important step was made by the doctrine of Swedenborg, a sublime genius who gave a scientific exposition of the part played severally by man and woman in the world, and showed the difference of sex to run through nature and through thought. Of all Christian sects this is at this moment the most vital and aggressive.

Another step was the effect of the action of the age in the antagonism to Slavery. It was easy to enlist Woman in this; it was impossible not to enlist her. But that Cause turned out to be a great scholar. He was a terrible metaphysician.

He was a jurist, a poet, a divine. Was never a University of Oxford or Göttingen that made such students. It took a man from the plough and made him acute, eloquent, and wise, to the silencing of the doctors. There was nothing it did not pry into, no right it did not explore, no wrong it did not expose. And it has, among its other effects, given Woman a feeling of public duty and an added self-respect.

One truth leads in another by the hand; one right is an accession of strength to take more. And the times are marked by the new attitude of Woman; urging, by argument and by association, her rights of all kinds, — in short, to one-half of the world; — as the right to education, to avenues of employment, to equal rights of property, to equal rights in marriage, to the exercise of the professions and of suffrage.

Of course, this conspicuousness had its inconveniences. But it is cheap wit that has been spent on this subject; from Aristophanes, in whose comedies I confess my dulness to find good joke, to Rabelais, in whom it is monstrous exaggeration of temperament, and not borne out by anything in nature, — down to English Comedy, and, in our day, to Tennyson, and the American newspapers. In all, the body of the joke is one, namely, to charge women with temperament; to describe them as victims of temperament; and is identical with Mahomet's opinion that women have not a sufficient moral or intellectual force to control the perturbations of their physical structure. These were all drawings of morbid anatomy, and such satire as might be written on the tenants of a hospital or on an asylum for idiots. Of course it would be easy for women to retaliate in kind, by painting men from the dogs and gorillas that have worn our shape. That they have not, is an eulogy on their taste and self-respect. The good easy world took the joke which it liked. There is always the want of thought; there is always credulity. There are plenty of people who believe women to be incapable of anything but to cook, incapable of interest in affairs. There are plenty of people who believe that the world is governed by men of dark complexions, that affairs are only directed by such, and do not see the use of contemplative men, or how ignoble would be the world that wanted them. And so without the affection of women.

But for the general charge: no doubt it is well founded. They are victims of the finer temperament. They have tears, and gaieties, and faintings, and glooms, and devotion to trifles. Nature's end, of maternity for twenty years, was of so supreme importance that it was to be secured at all events, even to the sacrifice of the highest beauty. They are more personal. Men taunt them that, whatever they do, say, read or write, they are thinking of themselves and their set. Men are not to the same degree tempermented, for there are multitudes of men who live

to objects quite out of them, as to politics, to trade, to letters or an art, unhindered by any influence of constitution.

The answer that lies, silent or spoken, in the minds of well-meaning persons, to the new claims, is this: that, though their mathematical justice is not to be denied, yet the best women do not wish these things; they are asked for by people who intellectually seek them, but who have not the support or sympathy of the truest women; and that, if the laws and customs were modified in the manner proposed, it would embarrass and pain gentle and lovely persons with duties which they would find irksome and distasteful. Very likely. Providence is always surprising us with new and unlikely instruments. But perhaps it is because these people have been deprived of education, fine companions, opportunities, such as they wished, — because they feel the same rudeness and disadvantage which offends you, — that they have been stung to say, “It is too late for us to be polished and fashioned into beauty, but, at least, we will see that the whole race of women shall not suffer as we have suffered.”

They have an unquestionable right to their own property. And if a woman demand votes, offices and political equality with men, as among the Shakers an Elder and Elderess are of equal power, — and among the Quakers, — it must not be refused. It is very cheap wit that finds it so droll that a woman should vote. Educate and refine society to the highest point, — bring together a cultivated society of both sexes, in a drawing-room, and consult and decide by voices on a question of taste or on a question of right, and is there any absurdity or any practical difficulty in obtaining their authentic opinions? If not, then there need be none in a hundred companies, if you educate them and accustom them to judge. And, for the effect of it, I can say, for one, that all my points would sooner be carried in the state if women voted. On the questions that are important; — whether the government shall be in one person, or whether representative, or whether democratic; whether men shall be holden in bondage, or shall be roasted alive and eaten, as in Typee, or shall be hunted with blood-hounds, as in this country; whether men shall be hanged for stealing, or hanged at all; whether the unlimited sale of cheap liquors shall be allowed; — they would give, I suppose, as intelligent a vote as the voters of Boston or New York.

We may ask, to be sure, — Why need you vote? If new power is here, of a character which solves old tough questions, which puts me and all the rest in the wrong, tries and condemns our religion, customs, laws, and opens new careers to our young receptive men and women, you can well leave voting to the old dead people. Those whom you teach, and those whom you half teach, will fast enough make themselves considered and strong with their new insight, and votes will follow from all the dull.

The objection to their voting is the same as is urged, in the lobbies of legislatures, against clergymen who take an active part in politics; — that if they are good clergymen they are unacquainted with the expedencies of politics, and if they become good politicians they are worse clergymen. So of women, that they cannot enter this arena without being contaminated and unsexed.

Here are two or three objections; first, a want of practical wisdom; second, a too purely ideal view; and, third, danger of contamination. For their want of intimate knowledge of affairs, I do not think this ought to disqualify them from voting at any town-meeting which I ever attended. I could heartily wish the objection were sound. But if any man will take the trouble to see how our people vote, — how many gentlemen are willing to take on themselves the trouble of thinking and determining for you, and, standing at the door of the polls, give every innocent citizen his ticket as he comes in, informing him that this is the vote of his party; and how the innocent citizen, without further demur, goes and drops it in the ballot-box, — I cannot but think he will agree that most women might vote as wisely.

For the other point, of their not knowing the world, and aiming at abstract right without allowance for circumstances, — that is not a disqualification, but a qualification. Human society is made up of partialities. Each citizen has an interest and a view of his own, which, if followed out to the extreme, would leave no room for any other citizen. One man is timid and another rash; one would change nothing, and the other is pleased with nothing; one wishes schools, another armies, one gunboats, another public gardens. Bring all these biases together and something is done in favor of them all.

Every one is a half vote, but the next elector behind him brings the other or corresponding half in his hand: a reasonable result is had. Now there is no lack, I am sure, of the expediency, or of the interests of trade or of imperative class-interests being neglected. There is no lack of votes representing the physical wants; and if in your city the uneducated emigrant vote numbers thousands, representing a brutal ignorance and mere animal wants, it is to be corrected by an educated and religious vote, representing the wants and desires of honest and refined persons. If the wants, the passions, the vices, are allowed a full vote through the hands of a half-brutal intemperate population, I think it but fair that the virtues, the aspirations should be allowed a full vote, as an offset, through the purest part of the people.

As for the unsexing and contamination, — that only accuses our existing politics, shows how barbarous we are, — that our policies are so crooked, made up of things not to be spoken, to be understood only by wink and nudge; this man to be coaxed, that man to be bought, and that other to be duped. It is easy to

see that there is contamination enough, but it rots the men now, and fills the air with stench. Come out of that: it is like a dance-cellar. The fairest names in this country in literature, in law, have gone into Congress and come out dishonored. And when I read the list of men of intellect, of refined pursuits, giants in law, or eminent scholars, or of social distinction, leading men of wealth and enterprise in the commercial community, and see what they have voted for and suffered to be voted for, I think no community was ever so politely and elegantly betrayed.

I do not think it yet appears that women wish this equal share in public affairs. But it is they and not we that are to determine it. Let the laws be purged of every barbarous remainder, every barbarous impediment to women. Let the public donations for education be equally shared by them, let them enter a school as freely as a church, let them have and hold and give their property as men do theirs; — and in a few years it will easily appear whether they wish a voice in making the laws that are to govern them. If you do refuse them a vote, you will also refuse to tax them, — according to our Teutonic principle, No representation, no tax.

All events of history are to be regarded as growths and offshoots of the expanding mind of the race, and this appearance of new opinions, their currency and force in many minds, is itself the wonderful fact. For whatever is popular is important, shows the spontaneous sense of the hour. The aspiration of this century will be the code of the next. It holds of high and distant causes, of the same influences that make the sun and moon. When new opinions appear, they will be entertained and respected, by every fair mind, according to their reasonableness, and not according to their convenience, or their fitness to shock our customs. But let us deal with them greatly; let them make their way by the upper road, and not by the way of manufacturing public opinion, which lapses continually into expediency, and makes charlatans. All that is spontaneous is irresistible, and forever it is individual force that interests. I need not repeat to you, — your own solitude will suggest it, — that a masculine woman is not strong, but a lady is. The loneliest thought, the purest prayer, is rushing to be the history of a thousand years.

Let us have the true woman, the adorer, the hospitable, the religious heart, and no lawyer need be called in to write stipulations, the cunning clauses of provision, the strong investitures; — for woman moulds the lawgiver and writes the law. But I ought to say, I think it impossible to separate the interests and education of the sexes. Improve and refine the men, and you do the same by the women, whether you will or no. Every woman being the wife or the daughter of a man, — wife, daughter, sister, mother, of a man, she can never be very far from his ear, never not of his counsel, if she has really something to urge that is

good in itself and agreeable to nature. Slavery it is that makes slavery; freedom, freedom. The slavery of women happened when the men were slaves of kings. The melioration of manners brought their melioration of course. It could not be otherwise, and hence the new desire of better laws. For there are always a certain number of passionately loving fathers, brothers, husbands and sons who put their might into the endeavor to make a daughter, a wife, or a mother happy in the way that suits best. Woman should find in man her guardian. Silently she looks for that, and when she finds that he is not, as she instantly does, she betakes her to her own defences, and does the best she can. But when he is her guardian, fulfilled with all nobleness, knows and accepts his duties as her brother, all goes well for both.

The new movement is only a tide shared by the spirits of man and woman; and you may proceed in the faith that whatever the woman's heart is prompted to desire, the man's mind is simultaneously prompted to accomplish.

ADDRESS TO KOSSUTH.

Sir , — The fatigue of your many public visits, in such unbroken succession as may compare with the toils of a campaign, forbid us to detain you long. The people of this town share with their countrymen the admiration of valor and perseverance; they, like their compatriots, have been hungry to see the man whose extraordinary eloquence is seconded by the splendor and the solidity of his actions. But, as it is the privilege of the people of this town to keep a hallowed mound which has a place in the story of the country; as Concord is one of the monuments of freedom; we knew beforehand that you could not go by us; you could not take all your steps in the pilgrimage of American liberty, until you had seen with your eyes the ruins of the bridge where a handful of brave farmers opened our Revolution. Therefore, we sat and waited for you.

And now, Sir, we are heartily glad to see you, at last, in these fields. We set no more value than you do on cheers and huzzas. But we think that the graves of our heroes around us throb to-day to a footstep that sounded like their own: —

“The mighty tread
Brings from the dust the sound of liberty.”

Sir, we have watched with attention your progress through the land, and the varying feeling with which you have been received, and the unvarying tone and countenance which you have maintained. We wish to discriminate in our regard. We wish to reserve our honor for actions of the noblest strain. We please ourselves that in you we meet one whose temper was long since tried in the fire, and made equal to all events; a man so truly in love with the greatest future, that he cannot be diverted to any less.

It is our republican doctrine, too, that the wide variety of opinions is an advantage. I believe I may say of the people of this country at large, that their sympathy is more worth, because it stands the test of party. It is not a blind wave; it is a living soul contending with living souls. It is, in every expression, antagonized. No opinion will pass but must stand the tug of war. As you see, the love you win is worth something; for it has been argued through; its foundation searched; it has proved sound and whole; it may be avowed; it will last, and it will draw all opinion to itself.

We have seen, with great pleasure, that there is nothing accidental in your attitude. We have seen that you are organically in that cause you plead. The man of Freedom, you are also the man of Fate. You do not elect, but you are elected by God and your genius to the task. We do not, therefore, affect to thank you. We only see in you the angel of freedom, crossing sea and land; crossing parties,

nationalities, private interests and self-esteem; dividing populations where you go, and drawing to your part only the good. We are afraid that you are growing popular, Sir; you may be called to the dangers of prosperity. But, hitherto, you have had in all countries and in all parties only the men of heart. I do not know but you will have the million yet. Then, may your strength be equal to your day. But remember, Sir, that everything great and excellent in the world is in minorities.

Far be from us, Sir, any tone of patronage; we ought rather to ask yours. We know the austere condition of liberty — that it must be reconquered over and over again; yea, day by day; that it is a state of war; that it is always slipping from those who boast it to those who fight for it: and you, the foremost soldier of freedom in this age, — it is for us to crave your judgment; who are we that we should dictate to you? You have won your own. We only affirm it. This country of working-men greets in you a worker. This republic greets in you a republican. We only say, ‘Well done, good and faithful.’ — You have earned your own nobility at home. We admit you *ad eundem* (as they say at College). We admit you to the same degree, without new trial. We suspend all rules before so paramount a merit. You may well sit a doctor in the college of liberty. You have achieved your right to interpret our Washington. And I speak the sense not only of every generous American, but the law of mind, when I say that it is not those who live idly in the city called after his name, but those who, all over the world, think and act like him, who can claim to explain the sentiment of Washington.

Sir, whatever obstruction from selfishness, indifference, or from property (which always sympathizes with possession) you may encounter, we congratulate you that you have known how to convert calamities into powers, exile into a campaign, present defeat into lasting victory. For this new crusade which you preach to willing and to unwilling ears in America is a seed of armed men. You have got your story told in every palace and log hut and prairie camp, throughout this continent. And, as the shores of Europe and America approach every month, and their politics will one day mingle, when the crisis arrives it will find us all instructed beforehand in the rights and wrongs of Hungary, and parties already to her freedom.

ROBERT BURNS.

SPEECH AT THE CELEBRATION OF THE BURNS CENTENARY,
BOSTON, JANUARY 25, 1869.

Mr. President and Gentlemen:

I do not know by what untoward accident it has chanced, and I forbear to inquire, that, in this accomplished circle, it should fall to me, the worst Scotsman of all, to receive your commands, and at the latest hour too, to respond to the sentiment just offered, and which indeed makes the occasion. But I am told there is no appeal, and I must trust to the inspirations of the theme to make a fitness which does not otherwise exist. Yet, Sir, I heartily feel the singular claims of the occasion. At the first announcement, from I know not whence, that the 25th of January was the hundredth anniversary of the birth of Robert Burns, a sudden consent warmed the great English race, in all its kingdoms, colonies and States, all over the world, to keep the festival. We are here to hold our parliament with love and poesy, as men were wont to do in the Middle Ages. Those famous parliaments might or might not have had more stateliness and better singers than we, — though that is yet to be known, — but they could not have better reason. I can only explain this singular unanimity in a race which rarely acts together, but rather after their watchword, Each for himself, — by the fact that Robert Burns, the poet of the middle class, represents in the mind of men to-day that great uprising of the middle class against the armed and privileged minorities, that uprising which worked politically in the American and French Revolutions, and which, not in governments so much as in education and social order, has changed the face of the world.

In order for this destiny, his birth, breeding and fortunes were low. His organic sentiment was absolute independence, and resting as it should on a life of labor. No man existed who could look down on him. They that looked into his eyes saw that they might look down the sky as easily. His muse and teaching was common-sense, joyful, aggressive, irresistible. Not Latimer, not Luther struck more telling blows against false theology than did this brave singer. The Confession of Augsburg, the Declaration of Independence, the French Rights of Man, and the *Marseillaise*, are not more weighty documents in the history of freedom than the songs of Burns. His satire has lost none of its edge. His musical arrows yet sing through the air. He is so substantially a reformer that. I find his grand plain sense in close chain with the greatest masters, — Rabelais, Shakspeare in comedy, Cervantes, Butler, and Burns. If I should add another

name, I find it only in a living countryman of Burns.

He is an exceptional genius. The people who care nothing for literature and poetry care for Burns. It was indifferent — they thought who saw him — whether he wrote verse or not: he could have done anything else as well. Yet how true a poet is he! And the poet, too, of poor men, of gray hodden and the guernsey coat and the blouse. He has given voice to all the experiences of common life; he has endeared the farm-house and cottage, patches and poverty, beans and barley; ale, the poor man's wine; hardship; the fear of debt; the dear society of weans and wife, of brothers and sisters, proud of each other, knowing so few and finding amends for want and obscurity in books and thoughts. What a love of nature, and, shall I say it? of middle-class nature. Not like Goethe, in the stars, or like Byron, in the ocean, or Moore, in the luxurious East, but in the homely landscape which the poor see around them, — bleak leagues of pasture and stubble, ice and sleet and rain and snow-choked brooks; birds, hares, field-mice, thistles and heather, which he daily knew. How many “Bonny Doons” and “John Anderson my jo's” and “Auld lang Synes” all around the earth have his verses been applied to! And his love-songs still woo and melt the youths and maids; the farm-work, the country holiday, the fishing-cobble, are still his debtors to-day.

And as he was thus the poet of the poor, anxious, cheerful, working humanity, so had he the language of low life. He grew up in a rural district, speaking a *patois* unintelligible to all but natives, and he has made the Lowland Scotch a Doric dialect of fame. It is the only example in history of a language made classic by the genius of a single man. But more than this. He had that secret of genius to draw from the bottom of society the strength of its speech, and astonish the ears of the polite with these artless words, better than art, and filtered of all offence through his beauty. It seemed odious to Luther that the devil should have all the best tunes; he would bring them into the churches; and Burns knew how to take from fairs and gypsies, blacksmiths and drovers, the speech of the market and street, and clothe it with melody. But I am detaining you too long. The memory of Burns, — I am afraid heaven and earth have taken too good care of it to leave us anything to say. The west winds are murmuring it. Open the windows behind you, and hearken for the incoming tide, what the waves say of it. The doves perching always on the eaves of the Stone Chapel opposite, may know something about it. Every name in broad Scotland keeps his fame bright. The memory of Burns, — every man's, every boy's and girl's head carries snatches of his songs, and they say them by heart, and, what is strangest of all, never learned them from a book, but from mouth to mouth. The wind whispers them, the birds whistle them, the corn, barley, and bulrushes hoarsely rustle them, nay,

the music-boxes at Geneva are framed and toothed to play them; the hand-organs of the Savoyards in all cities repeat them, and the chimes of bells ring them in the spires. They are the property and the solace of mankind.

WALTER SCOTT.

REMARKS AT THE CELEBRATION BY THE MASSACHUSETTS HISTORICAL SOCIETY OF THE CENTENNIAL ANNIVERSARY OF HIS BIRTH, BOSTON, AUGUST 15, 1871.

The memory of Sir Walter Scott is dear to this Society, of which he was for ten years an Honorary Member. If only as an eminent antiquary who has shed light on the history of Europe and of the English race, he had high claims to our regard. But to the rare tribute of a centennial anniversary of his birthday, which we gladly join with Scotland and indeed with Europe to keep, he is not less entitled, — perhaps he alone among the literary men of this century is entitled, — by the exceptional debt which all English-speaking men have gladly owed to his character and genius. I think no modern writer has inspired his readers with such affection to his own personality. I can well remember as far back as when “The Lord of the Isles” was first republished in Boston, in 1815, — my own and my school-fellows’ joy in the book. “Marmion” and “The Lay” had gone before, but we were then learning to spell. In the face of the later novels, we still claim that his poetry is the delight of boys. But this means that when we re-open these old books we all consent to be boys again. We tread over our youthful grounds with joy. Critics have found them to be only rhymed prose. But I believe that many of those who read them in youth, when, later, they come to dismiss finally their school-days’ library, will make some fond exception for Scott as for Byron.

It is easy to see the origin of his poems. His own ear had been charmed by old ballads crooned by Scottish dames at firesides, and written down from their lips by antiquaries; and, finding them now outgrown and dishonored by the new culture, he attempted to dignify and adapt them to the times in which he lived. Just so much thought, so much picturesque detail in dialogue or description as the old ballad required, so much suppression of details and leaping to the event, he would keep and use, but without any ambition to write a high poem after a classic model. He made no pretension to the lofty style of Spenser, or Milton, or Wordsworth. Compared with their purified songs, purified of all ephemeral color or material, his were *vers de société*. But he had the skill proper to *vers de société*, — skill to fit his verse to his topic, and not to write solemn pentameters alike on a hero or a spaniel. His good sense probably elected the ballad to make his audience larger. He apprehended in advance the immense enlargement of the reading public, which almost dates from the era of his books, — which his books

and Byron's inaugurated; and which, though until then unheard of, has become familiar to the present time.

If the success of his poems, however large, was partial, that of his novels was complete. The tone of strength in "Waverley" at once announced the master, and was more than justified by the superior genius of the following romances, up to the "Bride of Lammermoor," which almost goes back to Æschylus for a counterpart, as a painting of Fate, — leaving on every reader the impression of the highest and purest tragedy.

His power on the public mind rests on the singular union of two influences. By nature, by his reading and taste an aristocrat, in a time and country which easily gave him that bias, he had the virtues and graces of that class, and by his eminent humanity and his love of labor escaped its harm. He saw in the English Church the symbol and seal of all social order; in the historical aristocracy the benefits to the State which Burke claimed for it; and in his own reading and research, such store of legend and renown as won his imagination to their cause. Not less his eminent humanity delighted in the sense and virtue and wit of the common people. In his own household and neighbors he found characters and pets of humble class, with whom he established the best relation, — small farmers and tradesmen, shepherds, fishermen, gypsies, peasant-girls, crones, — and came with these into real ties of mutual help and good-will. From these originals he drew so genially his Jeanie Deans, his Dinmonts and Edie Ochiltrees, Caleb Balderstones and Fairservices, Cuddie Headriggs, Dominies, Meg Merrilies and Jenny Rintherouts, full of life and reality; making these, too, the pivots on which the plots of his stories turn; and meantime without one word of brag of this discernment, — nay, this extreme sympathy reaching down to every beggar and beggar's dog; and horse and cow. In the number and variety of his characters he approaches Shakspeare. Other painters in verse or prose have thrown into literature a few type-figures; as Cervantes, DeFoe, Richardson, Goldsmith, Sterne and Fielding; but Scott portrayed with equal strength and success every figure in his crowded company.

His strong good sense saved him from the faults and foibles incident to poets, — from nervous egotism, sham modesty, or jealousy. He played ever a manly part. With such a fortune and such a genius, we should look to see what heavy toll the Fates took of him, as of Rousseau or Voltaire, of Swift or Byron. But no: he had no insanity, or vice, or blemish. He was a thoroughly upright, wise and great-hearted man, equal to whatever event or fortune should try him. Disasters only drove him to immense exertion. What an ornament and safeguard is humor! Far better than wit for a poet and writer. It is a genius itself, and so defends from the insanities.

Under what rare conjunction of stars was this man born, that, wherever he lived, he found superior men, passed all his life in the best company, and still found himself the best of the best! He was apprenticed at Edinburgh to a Writer to the Signet, and became a Writer to the Signet, and found himself in his youth and manhood and age in the society of Mackintosh, Horner, Jeffrey, Playfair, Dugald Stewart, Sydney Smith, Leslie, Sir William Hamilton, Wilson, Hogg, De Quincey, — to name only some of his literary neighbors, and, as soon as he died, all this brilliant circle was broken up.

REMARKS AT THE MEETING FOR ORGANIZING THE FREE RELIGIOUS ASSOCIATION.

Mr. Chairman:

I hardly felt, in finding this house this morning, that I had come into the right hall. I came, as I supposed myself summoned, to a little committee meeting, for some practical end, where I should happily and humbly learn my lesson; and I supposed myself no longer subject to your call when I saw this house. I have listened with great pleasure to the lessons which we have heard. To many, to those last spoken, I have found so much in accord with my own thought that I have little left to say. I think that it does great honor to the sensibility of the committee that they have felt the universal demand in the community for just the movement they have begun. I say again, in the phrase used by my friend, that we began many years ago, — yes, and many ages before that. But I think the necessity very great, and it has prompted an equal magnanimity, that thus invites all classes, all religious men, whatever their connections, whatever their specialties, in whatever relation they stand to the Christian Church, to unite in a movement of benefit to men, under the sanction of religion. We are all very sensible, — it is forced on us every day, — of the feeling that churches are outgrown; that the creeds are outgrown; that a technical theology no longer suits us. It is not the ill-will of people — no, indeed, but the incapacity for confining themselves there. The church is not large enough for the man; it cannot inspire the enthusiasm which is the parent of everything good in history, which makes the romance of history. For that enthusiasm you must have something greater than yourselves, and not less.

The child, the young student, finds scope in his mathematics and chemistry or natural history, because he finds a truth larger than he is; finds himself continually instructed. But, in churches, every healthy and thoughtful mind finds itself in something less; it is checked, cribbed, confined. And the statistics of the American, the English and the German cities, showing that the mass of the population is leaving off going to church, indicate the necessity, which should have been foreseen, that the Church should always be new and extemporized, because it is eternal and springs from the sentiment of men, or it does not exist. One wonders sometimes that the churches still retain so many votaries, when he reads the histories of the Church. There is an element of childish infatuation in them which does not exalt our respect for man. Read in Michelet, that in Europe, for twelve or fourteen centuries, God the Father had no temple and no altar. The Holy Ghost and the Son of Mary were worshipped, and, in the thirteenth century,

the First Person began to appear at the side of his Son, in pictures and in sculpture, for worship, but only through favor of his Son. These mortifying puerilities abound in religious history. But as soon as every man is apprised of the Divine Presence within his own mind, — is apprised that the perfect law of duty corresponds with the laws of chemistry, of vegetation, of astronomy, as face to face in a glass; that the basis of duty, the order of society, the power of character, the wealth of culture, the perfection of taste, all draw their essence from this moral sentiment, then we have a religion that exalts, that commands all the social and all the private action.

What strikes me in the sudden movement which brings together to-day so many separated friends, — separated but sympathetic, — and what I expected to find here was, some practical suggestions by which we were to reanimate and reorganize for ourselves the true Church, the pure worship. Pure doctrine always bears fruit in pure benefits. It is only by good works, it is only on the basis of active duty, that worship finds expression. What is best in the ancient religions was the sacred friendships between heroes, the Sacred Bands, and the relations of the Pythagorean disciples. Our Masonic institutions probably grew from the like origin. The close association which bound the first disciples of Jesus is another example; and it were easy to find more. The soul of our late war, which will always be remembered as dignifying it, was, first, the desire to abolish slavery in this country, and secondly, to abolish the mischief of the war itself, by healing and saving the sick and wounded soldiers, — and this by the sacred bands of the Sanitary Commission. I wish that the various beneficent institutions which are springing up, like joyful plants of wholesomeness, all over this country, should all be remembered as within the sphere of this committee, — almost all of them are represented here, — and that within this little band that has gathered here to-day, should grow friendship. The interests that grow out of a meeting like this, should bind us with new strength to the old eternal duties.

**SPEECH AT THE SECOND ANNUAL MEETING OF THE FREE
RELIGIOUS ASSOCIATION, AT TREMONT TEMPLE, FRIDAY,
MAY 28, 1869.**

Friends:

I wish I could deserve anything of the kind expression of my friend, the President, and the kind good-will which the audience signifies, but it is not in my power to-day to meet the natural demands of the occasion, and, quite against my design and my will, I shall have to request the attention of the audience to a few written remarks, instead of the more extensive statement which I had hoped to offer them.

I think we have disputed long enough. I think we might now relinquish our theological controversies to communities more idle and ignorant than we. I am glad that a more realistic church is coming to be the tendency of society, and that we are likely one day to forget our obstinate polemics in the ambition to excel each other in good works. I have no wish to proselyte any reluctant mind, nor, I think, have I any curiosity or impulse to intrude on those whose ways of thinking differ from mine. But as my friend, your presiding officer, has asked me to take at least some small part in this day's conversation, I am ready to give, as often before, the first simple foundation of my belief, that the Author of Nature has not left himself without a witness in any sane mind: that the moral sentiment speaks to every man the law after which the Universe was made; that we find parity, identity of design, through Nature, and benefit to be the uniform aim: that there is a force always at work to make the best better and the worst good. We have had not long since presented us by Max Müller a valuable paragraph from St. Augustine, not at all extraordinary in itself, but only as coming from that eminent Father in the Church, and at that age, in which St. Augustine writes: "That which is now called the Christian religion existed among the ancients, and never did not exist from the planting of the human race until Christ came in the flesh, at which time the true religion which already existed began to be called Christianity." I believe that not only Christianity is as old as the Creation, — not only every sentiment and precept of Christianity can be paralleled in other religious writings, — but more, that a man of religious susceptibility, and one at the same time conversant with many men, — say a much-travelled man, — can find the same idea in numberless conversations. The religious find religion wherever they associate. When I find in people narrow religion, I find also in them narrow reading. Nothing really is so self-publishing, so divulgatory, as thought. It cannot be confined or hid. It is easily carried; it takes no room; the

knowledge of Europe looks out into Persia and India, and to the very Kaffirs. Every proverb, every fine text, every pregnant jest, travels across the line; and you will find it at Cape Town, or among the Tartars. We are all believers in natural religion; we all agree that the health and integrity of man is self-respect, self-subsistency, a regard to natural conscience. All education is to accustom him to trust himself, discriminate between his higher and lower thoughts, exert the timid faculties until they are robust, and thus train him to self-help, until he ceases to be an underling, a tool, and becomes a benefactor. I think wise men wish their religion to be all of this kind, teaching the agent to go alone, not to hang on the world as a pensioner, a permitted person, but an adult, self-searching soul, brave to assist or resist a world: only humble and docile before the source of the wisdom he has discovered within him.

As it is, every believer holds a different creed; that is, all the churches are churches of one member. All our sects have refined the point of difference between them. The point of difference that still remains between churches, or between classes, is in the addition to the moral code, that is, to natural religion, of somewhat positive and historical. I think that to be, as Mr. Abbot has stated it in his form, the one difference remaining. I object, of course, to the claim of miraculous dispensation, — certainly not to the *doctrine* of Christianity. This claim impairs, to my mind, the soundness of him who makes it, and indisposes us to his communion. This comes the wrong way; it comes from without, not within. This positive, historical, authoritative scheme is not consistent with our experience or our expectations. It is something not in Nature: it is contrary to that law of nature which all wise men recognize; namely, never to require a larger cause than is necessary to the effect. George Fox, the Quaker, said that, though he read of Christ and God, he knew them only from the like spirit in his own soul. We want all the aids to our moral training. We cannot spare the vision nor the virtue of the saints; but let it be by pure sympathy, not with any personal or official claim. If you are childish, and exhibit your saint as a worker of wonders, a thaumaturgist, I am repelled. That claim takes his teachings out of logic and out of nature, and permits official and arbitrary senses to be grafted on the teachings. It is the praise of our New Testament that its teachings go to the honor and benefit of humanity, — that no better lesson has been taught or incarnated. Let it stand, beautiful and wholesome, with whatever is most like it in the teaching and practice of men; but do not attempt to elevate it out of humanity by saying, “This was not a man,” for then you confound it with the fables of every popular religion, and my distrust of the story makes me distrust the doctrine as soon as it differs from my own belief.

Whoever thinks a story gains by the prodigious, by adding something out of

nature, robs it more than he adds. It is no longer an example, a model; no longer a heart-stirring hero, but an exhibition, a wonder, an anomaly, removed out of the range of influence with thoughtful men. I submit that in sound frame of mind, we read or remember the religious sayings and oracles of other men, whether Jew or Indian, or Greek or Persian, only for friendship, only for joy in the social identity which they open to us, and that these words would have no weight with us if we had not the same conviction already. I find something stingy in the unwilling and disparaging admission of these foreign opinions, — opinions from all parts of the world, — by our churchmen, as if only to enhance by their dimness the superior light of Christianity. Meantime, observe, you cannot bring me too good a word, too dazzling a hope, too penetrating an insight from the Jews. I hail every one with delight, as showing the riches of my brother, my fellow-soul, who could thus think and thus greatly feel. Zealots eagerly fasten their eyes on the differences between their creed and yours, but the charm of the study is in finding the agreements, the identities, in all the religions of men.

I am glad to hear each sect complain that they do not now hold the opinions they are charged with. The earth moves, and the mind opens. I am glad to believe society contains a class of humble souls who enjoy the luxury of a religion that does not degrade; who think it the highest worship to expect of Heaven the most and the best; who do not wonder that there was a Christ, but that there were not a thousand; who have conceived an infinite hope for mankind; who believe that the history of Jesus is the history of every man, written large.

THE FORTUNE OF THE REPUBLIC.

LECTURE DELIVERED AT THE OLD SOUTH CHURCH, BOSTON,
MARCH 30, 1878.

It is a rule that holds in economy as well as in hydraulics, that you must have a source higher than your tap. The mills, the shops, the theatre and the caucus, the college and the church, have all found out this secret. The sailors sail by chronometers that do not lose two or three seconds in a year, ever since Newton explained to Parliament that the way to improve navigation was to get good watches, and to offer public premiums for a better time-keeper than any then in use. The manufacturers rely on turbines of hydraulic perfection; the carpet-mill, on mordants and dyes which exhaust the skill of the chemist; the calico print, on designers of genius who draw the wages of artists, not of artisans. Wedgwood, the eminent potter, bravely took the sculptor Flaxman to counsel, who said, "Send to Italy, search the museums for the forms of old Etruscan vases, urns, water-pots, domestic and sacrificial vessels of all kinds." They built great works and called their manufacturing village Etruria. Flaxman, with his Greek taste, selected and combined the loveliest forms, which were executed in English clay; sent boxes of these as gifts to every court of Europe, and formed the taste of the world. It was a renaissance of the breakfast table and china-closet. The brave manufacturers made their fortune. The jewellers imitated the revived models in silver and gold.

The theatre avails itself of the best talent of poet, of painter, and of amateur of taste, to make the *ensemble* of dramatic effect. The marine insurance office has its mathematical counsellor to settle averages; the life-assurance, its table of annuities. The wine merchant has his analyst and taster, the more exquisite the better. He has also, I fear, his debts to the chemist as well as to the vineyard.

Our modern wealth stands on a few staples, and the interest nations took in our war was exasperated by the importance of the cotton trade. And what is cotton? One plant out of some two hundred thousand known to the botanist, vastly the larger part of which are reckoned weeds. What is a weed? A plant whose virtues have not yet been discovered, — every one of the two hundred thousand probably yet to be of utility in the arts. As Bacchus of the vine, Ceres of the wheat, as Arkwright and Whitney were the demi-gods of cotton, so prolific Time will yet bring an inventor to every plant. There is not a property in nature but a mind is born to seek and find it. For it is not the plants or the animals, innumerable as they are, nor the whole magazine of material nature that

can give the sum of power, but the infinite applicability of these things in the hands of thinking man, every new application being equivalent to a new material.

Our sleepy civilization, ever since Roger Bacon and Monk Schwartz invented gunpowder, has built its whole art of war, all fortification by land and sea, all drill and military education, on that one compound, — all is an extension of a gun-barrel, — and is very scornful about bows and arrows, and reckons Greeks and Romans and Middle Ages little better than Indians and bow-and-arrow times. As if the earth, water, gases, lightning and caloric had not a million energies, the discovery of any one of which could change the art of war again, and put an end to war by the exterminating forces man can apply.

Now, if this is true in all the useful and in the fine arts, that the direction must be drawn from a superior source or there will be no good work, does it hold less in our social and civil life?

In our popular politics you may note that each aspirant who rises above the crowd, however at first making his obedient apprenticeship in party tactics, if he have sagacity, soon learns that it is by no means by obeying the vulgar weathercock of his party, the resentments, the fears and whims of it, that real power is gained, but that he must often face and resist the party, and abide by his resistance, and put them in fear; that the only title to their permanent respect, and to a larger following, is to see for himself what is the real public interest, and to stand for that; — that is a principle, and all the cheering and hissing of the crowd must by and by accommodate itself to it. Our times easily afford you very good examples.

The law of water and all fluids is true of wit. Prince Metternich said, “Revolutions begin in the best heads and run steadily down to the populace.” It is a very old observation; not truer because Metternich said it, and not less true.

There have been revolutions which were not in the interest of feudalism and barbarism, but in that of society. And these are distinguished not by the numbers of the combatants nor the numbers of the slain, but by the motive. No interest now attaches to the wars of York and Lancaster, to the wars of German, French and Spanish emperors, which were only dynastic wars, but to those in which a principle was involved. These are read with passionate interest and never lose their pathos by time. When the cannon is aimed by ideas, when men with religious convictions are behind it, when men die for what they live for, and the mainspring that works daily urges them to hazard all, then the cannon articulates its explosions with the voice of a man, then the rifle seconds the cannon and the fowling-piece the rifle, and the women make the cartridges, and all shoot at one mark; then gods join in the combat; then poets are born, and the better code of

laws at last records the victory.

Now the culmination of these triumphs of humanity — and which did virtually include the extinction of slavery — is the planting of America.

At every moment some one country more than any other represents the sentiment and the future of mankind. None will doubt that America occupies this place in the opinion of nations, as is proved by the fact of the vast immigration into this country from all the nations of Western and Central Europe. And when the adventurers have planted themselves and looked about, they send back all the money they can spare to bring their friends.

Meantime they find this country just passing through a great crisis in its history, as necessary as lactation or dentition or puberty to the human individual. We are in these days settling for ourselves and our descendants questions which, as they shall be determined in one way or the other, will make the peace and prosperity or the calamity of the next ages. The questions of Education, of Society, of Labor, the direction of talent, of character, the nature and habits of the American, may well occupy us, and more the question of Religion.

The new conditions of mankind in America are really favorable to progress, the removal of absurd restrictions and antique inequalities. The mind is always better the more it is used, and here it is kept in practice. The humblest is daily challenged to give his opinion on practical questions, and while civil and social freedom exists, nonsense even has a favorable effect. Cant is good to provoke common sense. The Catholic Church, the trance-mediums, the rebel paradoxes, exasperate the common sense. The wilder the paradox, the more sure is Punch to put it in the pillory.

The lodging the power in the people, as in republican forms, has the effect of holding things closer to common sense; for a court or an aristocracy, which must always be a small minority, can more easily run into follies than a republic, which has too many observers, — each with a vote in his hand, — to allow its head to be turned by any kind of nonsense: since hunger, thirst, cold, the cries of children, and debt, are always holding the masses hard to the essential duties.

One hundred years ago the American people attempted to carry out the bill of political rights to an almost ideal perfection. They have made great strides in that direction since. They are now proceeding, instructed by their success and by their many failures, to carry out, not the bill of rights, but the bill of human duties.

And look what revolution that attempt involves. Hitherto government has been that of the single person or of the aristocracy. In this country the attempt to resist these elements, it is asserted, must throw us into the government not quite of mobs, but in practice of an inferior class of professional politicians, who by

means of newspapers and caucuses really thrust their unworthy minority into the place of the old aristocracy on the one side, and of the good, industrious, well-taught but unambitious population on the other, win the posts of power, and give their direction to affairs. Hence liberal congresses and legislatures ordain, to the surprise of the people, equivocal, interested and vicious measures. The men themselves are suspected and charged with lobbying and being lobbied. No measure is attempted for itself, but the opinion of the people is courted in the first place, and the measures are perfunctorily carried through as secondary. We do not choose our own candidate, no, nor any other man's first choice, — but only the available candidate, whom, perhaps, no man loves. We do not speak what we think, but grope after the practicable and available. Instead of character, there is a studious exclusion of character. The people are feared and flattered. They are not reprimanded. The country is governed in bar-rooms, and in the mind of bar-rooms. The low can best win the low, and each aspirant for power vies with his rival which can stoop lowest, and depart widest from himself.

The partisan on moral, even on religious questions, will choose a proven rogue who can answer the tests, over an honest, affectionate, noble gentleman; the partisan ceasing to be a man that he may be a sectarian.

The spirit of our political economy is low and degrading. The precious metals are not so precious as they are esteemed. Man exists for his own sake, and not to add a laborer to the state. The spirit of our political action, for the most part, considers nothing less than the sacredness of man. Party sacrifices man to the measure.

We have seen the great party of property and education in the country drivelling and huckstering away, for views of party fear or advantage, every principle of humanity and the dearest hopes of mankind; the trustees of power only energetic when mischief could be done, imbecile as corpses when evil was to be prevented.

Our great men succumb so far to the forms of the day as to peril their integrity for the sake of adding to the weight of their personal character the authority of office, or making a real government titular. Our politics are full of adventurers, who having by education and social innocence a good repute in the state, break away from the law of honesty and think they can afford to join the devil's party. 'T is odious, these offenders in high life. You rally to the support of old charities and the cause of literature, and there, to be sure, are these brazen faces. In this innocence you are puzzled how to meet them; must shake hands with them, under protest. We feel toward them as the minister about the Cape Cod farm, — in the old time when the minister was still invited, in the spring, to make a prayer for the blessing of a piece of land, — the good pastor being

brought to the spot, stopped short: "No, this land does not want a prayer, this land wants manure."

"T is virtue which they want, and wanting it,
Honor no garment to their backs can fit."

Parties keep the old names, but exhibit a surprising fugacity in creeping out of one snake-skin into another of equal ignominy and lubricity, and the grasshopper on the turret of Faneuil Hall gives a proper hint of the men below.

Everything yields. The very glaciers are viscous, or regelate into conformity, and the stiffest patriots falter and compromise; so that *will* cannot be depended on to save us.

How rare are acts of will! We are all living according to custom; we do as other people do, and shrink from an act of our own. Every such act makes a man famous, and we can all count the few cases, — half a dozen in our time, — when a public man ventured to act as he thought, without waiting for orders or for public opinion. John Quincy Adams was a man of an audacious independence that always kept the public curiosity alive in regard to what he might do. None could predict his word, and a whole congress could not gainsay it when it was spoken. General Jackson was a man of will, and his phrase on one memorable occasion, "I will take the responsibility," is a proverb ever since.

The American marches with a careless swagger to the height of power, very heedless of his own liberty or of other peoples', in his reckless confidence that he can have all he wants, risking all the prized charters of the human race, bought with battles and revolutions and religion, gambling them all away for a paltry selfish gain.

He sits secure in the possession of his vast domain, rich beyond all experience in resources, sees its inevitable force unlocking itself in elemental order day by day, year by year; looks from his coalfields, his wheat-bearing prairie, his gold-mines, to his two oceans on either side, and feels the security that there can be no famine in a country reaching through so many latitudes, no want that cannot be supplied, no danger from any excess of importation of art or learning into a country of such native strength, such immense digestive power.

In proportion to the personal ability of each man, he feels the invitation and career which the country opens to him. He is easily fed with wheat and game, with Ohio wine, but his brain is also pampered by finer draughts, by political power and by the power in the railroad board, in the mills, or the banks. This elevates his spirits, and gives, of course, an easy self-reliance that makes him self-willed and unscrupulous.

I think this levity is a reaction on the people from the extraordinary advantages and invitations of their condition. When we are most disturbed by

their rash and immoral voting, it is not malignity, but recklessness. They are careless of politics, because they do not entertain the possibility of being seriously caught in meshes of legislation. They feel strong and irresistible. They believe that what they have enacted they can repeal if they do not like it. But one may run a risk once too often. They stay away from the polls, saying that one vote can do no good! Or they take another step, and say One vote can do no harm! and vote for something which they do not approve, because their party or set votes for it. Of course this puts them in the power of any party having a steady interest to promote which does not conflict manifestly with the pecuniary interest of the voters. But if they should come to be interested in themselves and in their career, they would no more stay away from the election than from their own counting-room or the house of their friend.

The people are right-minded enough on ethical questions, but they must pay their debts, and must have the means of living well, and not pinching. So it is useless to rely on them to go to a meeting, or to give a vote, if any check from this must-have-the-money side arises. If a customer looks grave at their newspaper, or damns their member of Congress, they take another newspaper, and vote for another man. They must have money, for a certain style of living fast becomes necessary; they must take wine at the hotel, first, for the look of it, and second, for the purpose of sending the bottle to two or three gentlemen at the table; and presently because they have got the taste, and do not feel that they have dined without it.

The record of the election now and then alarms people by the all but unanimous choice of a rogue and brawler. But how was it done? What lawless mob burst into the polls and threw in these hundreds of ballots in defiance of the magistrates? This was done by the very men you know, — the mildest, most sensible, best-natured people. The only account of this is, that they have been scared or warped into some association in their mind of the candidate with the interest of their trade or of their property.

Whilst each cabal urges its candidate, and at last brings, with cheers and street-demonstrations, men whose names are a knell to all hope of progress, the good and wise are hidden in their active retirements, and are quite out of question.

“These we must join to wake, for these are of the strain
That justice dare defend, and will the age maintain.”

Yet we know, all over this country, men of integrity, capable of action and of affairs, with the deepest sympathy in all that concerns the public, mortified by the national disgrace, and quite capable of any sacrifice except of their honor.

Faults in the working appear in our system, as in all, but they suggest their

own remedies. After every practical mistake out of which any disaster grows, the people wake and correct it with energy. And any disturbances in politics, in civil or foreign wars, sober them, and instantly show more virtue and conviction in the popular vote. In each new threat of faction the ballot has been, beyond expectation, right and decisive.

It is ever an inspiration, God only knows whence; a sudden, undated perception of eternal right coming into and correcting things that were wrong; a perception that passes through thousands as readily as through one.

The gracious lesson taught by science to this country is, that the history of nature from first to last is incessant advance from less to more, from rude to finer organization, the globe of matter thus conspiring with the principle of undying hope in man. Nature works in immense time, and spends individuals and races prodigally to prepare new individuals and races. The lower kinds are one after one extinguished; the higher forms come in. The history of civilization, or the refining of certain races to wonderful power of performance, is analogous; but the best civilization yet is only valuable as a ground of hope.

Ours is the country of poor men. Here is practical democracy; here is the human race poured out over the continent to do itself justice; all mankind in its shirt-sleeves; not grimacing like poor rich men in cities, pretending to be rich, but unmistakably taking off its coat to hard work, when labor is sure to pay. This through all the country. For really, though you see wealth in the capitals, it is only a sprinkling of rich men in the cities and at sparse points; the bulk of the population is poor. In Maine, nearly every man is a lumberer. In Massachusetts, every twelfth man is a shoemaker, and the rest, millers, farmers, sailors, fishermen.

Well, the result is, instead of the doleful experience of the European economist, who tells us, "In almost all countries the condition of the great body of the people is poor and miserable," here that same great body has arrived at a sloven plenty, — ham and corn-cakes, tight roof and coals enough have been attained; an unbuttoned comfort, not clean, not thoughtful, far from polished, without dignity in his repose; the man awkward and restless if he have not something to do, but honest and kind for the most part, understanding his own rights and stiff to maintain them, and disposed to give his children a better education than he received.

The steady improvement of the public schools in the cities and the country enables the farmer or laborer to secure a precious primary education. It is care to find a born American who cannot read and write. The facility with which clubs are formed by young men for discussion of social, political and intellectual topics secures the notoriety of the questions.

Our institutions, of which the town is the unit are all educational, for responsibility educates fast. The town meeting is, after the high school, a higher school. The legislature, to which every good farmer goes once on trial, is a superior academy.

The result appears in the power of invention, the freedom of thinking, in the readiness for reforms, eagerness for novelty, even for all the follies of false science; in the antipathy to secret societies, in the predominance of the democratic party in the politics of the Union, and in the voice of the public even when irregular and vicious, — the voice of mobs, the voice of lynch law, — because it is thought to be, on the whole, the verdict, though badly spoken, of the greatest number.

All this forwardness and self-reliance cover self-government; proceed on the belief that as the people have made a government they can make another; that their union and law are not in their memory, but in their blood and condition. If they unmake a law they can easily make a new one. In Mr. Webster's imagination the American Union was a huge Prince Rupert's drop, which will snap into atoms if so much as the smallest end be shivered off. Now the fact is quite different from this. The people are loyal, law-abiding. They prefer order, and have no taste for misrule and uproar.

America was opened after the feudal mischief was spent, and so the people made a good start. We began well. No inquisition here, no kings, no nobles, no dominant church. Here heresy has lost its terrors. We have eight or ten religions in every large town, and the most that comes of it is a degree or two on the thermometer of fashion; a pew in a particular church gives an easier entrance to the subscription ball.

We began with freedom, and are defended from shocks now for a century by the facility with which through popular assemblies every necessary measure of reform can instantly be carried. A congress is a standing insurrection, and escapes the violence of accumulated grievance. As the globe keeps its identity by perpetual change, so our civil system, by perpetual appeal to the people and acceptance of its reforms.

The government is acquainted with the opinions of all classes, knows the leading men in the middle class, knows the leaders of the humblest class. The President comes near enough to these; if he does not, the caucus does, the primary ward and town meeting, and what is important does reach him.

The men, the women, all over this land shrill their exclamations of impatience and indignation at what is short-coming or is unbecoming in the government, — at the want of humanity, of morality, — ever on broad grounds of general justice, and not on the class-feeling which narrows the perception of English,

French, German people at home.

In this fact, that we are a nation of individuals, that we have a highly intellectual organization, that we can see and feel moral distinctions, and that on such an organization sooner or later the moral laws must tell, to such ears must speak, — in this is our hope. For if the prosperity of this country has been merely the obedience of man to the guiding of nature, — of great rivers and prairies, — yet is there fate above fate, if we choose to speak this language; or, if there is fate in corn and cotton, so is there fate in thought, — this, namely, that the largest thought and the widest love are born to victory, and must prevail.

The revolution is the work of no man, but the eternal effervescence of nature. It never did not work. And we say that revolutions beat all the insurgents, be they never so determined and politic; that the great interests of mankind, being at every moment through ages in favor of justice and the largest liberty, will always, from time to time, gain on the adversary and at last win the day. Never country had such a fortune, as men call fortune, as this, in its geography, its history, and in its majestic possibilities.

We have much to learn, much to correct, — a great deal of lying vanity. The spread eagle must fold his foolish wings and be less of a peacock; must keep his wings to carry the thunderbolt when he is commanded. We must realize our rhetoric and our rituals. Our national flag is not affecting, as it should be, because it does not represent the population of the United States, but some Baltimore or Chicago or Cincinnati or Philadelphia caucus; not union or justice, but selfishness and cunning. If we never put on the liberty-cap until we were freemen by love and self-denial, the liberty-cap would mean something. I wish to see America not like the old powers of the earth, grasping, exclusive and narrow, but a benefactor such as no country ever was, hospitable to all nations, legislating for all nationalities. Nations were made to help each other as much as families were; and all advancement is by ideas, and not by brute force or mechanic force.

In this country, with our practical understanding, there is, at present, a great sensualism, a headlong devotion to trade and to the conquest of the continent, — to each man as large a share of the same as he can carve for himself, — an extravagant confidence in our talent and activity, which becomes, whilst successful, a scornful materialism, — but with the fault, of course, that it has no depth, no reserved force whereon to fall back when a reverse comes.

That repose which is the ornament and ripeness of man is not American. That repose which indicates a faith in the laws of the universe, — a faith that they will fulfil themselves, and are not to be impeded, transgressed, or accelerated. Our people are too slight and vain. They are easily elated and easily depressed. See

how fast they extend the fleeting fabric of their trade, — not at all considering the remote reaction and bankruptcy, but with the same abandonment to the moment and the facts of the hour as the Esquimaux who sells his bed in the morning. Our people act on the moment, and from external impulse. They all lean on some other, and this superstitiously, and not from insight of his merit. They follow a fact; they follow success, and not skill. Therefore, as soon as the success stops and the admirable man blunders, they quit him; already they remember that they long ago suspected his judgment, and they transfer the repute of judgment to the next prosperous person who has not yet blundered. Of course this levity makes them as easily despond. It seems as if history gave no account of any society in which despondency came so readily to heart as we see it and feel it in ours. Young men at thirty and even earlier lose all spring and vivacity, and if they fail in their first enterprise throw up the game.

The source of mischief is the extreme difficulty with which men are roused from the torpor of every day. Blessed is all that agitates the mass, breaks up this torpor, and begins motion. *Corpora non agunt nisi soluta* ; the chemical rule is true in mind. Contrast, change, interruption, are necessary to new activity and new combinations.

If a temperate wise man should look over our American society, I think the first danger that would excite his alarm would be the European influences on this country. We buy much of Europe that does not make us better men: and mainly the expensiveness which is ruining that country. We import trifles, dancers, singers, laces, books of patterns, modes, gloves and cologne, manuals of Gothic architecture, steam-made ornaments. America is provincial. It is an immense Halifax. See the secondariness and aping of foreign and English life, that runs through this country, in building, in dress, in eating, in books. Every village, every city has its architecture, its costume, its hotel, its private house, its church, from England.

Our politics threaten her. Her manners threaten us. Life is grown and growing so costly that it threatens to kill us. A man is coming, here as there, to value himself on what he can buy. Worst of all, his expense is not his own, but a far-off copy of Osborne House or the Elysée. The tendency of this is to make all men alike; to extinguish individualism and choke up all the channels of inspiration from God in man. We lose our invention and descend into imitation. A man no longer conducts his own life. It is manufactured for him. The tailor makes your dress; the baker your bread; the upholsterer, from an imported book of patterns, your furniture; the Bishop of London your faith.

In the planters of this country, in the seventeenth century, the conditions of the country, combined with the impatience of arbitrary power which they

brought from England, forced them to a wonderful personal independence and to a certain heroic planting and trading. Later this strength appeared in the solitudes of the West, where a man is made a hero by the varied emergencies of his lonely farm, and neighborhoods must combine against the Indians, or the horse-thieves, or the river rowdies, by organizing themselves into committees of vigilance. Thus the land and sea educate the people, and bring out presence of mind, self-reliance, and hundred-handed activity. These are the people for an emergency. They are not to be surprised, and can find a way out of any peril. This rough and ready force becomes them, and makes them fit citizens and civilizers. But if we found them clinging to English traditions, which are graceful enough at home, as the English Church, and entailed estates, and distrust of popular election, we should feel this reactionary, and absurdly out of place.

Let the passion for America cast out the passion for Europe. Here let there be what the earth waits for, — exalted manhood. What this country longs for is personalities, grand persons, to counteract its materialities. For it is the rule of the universe that corn shall serve man, and not man corn.

They who find America insipid, — they for whom London and Paris have spoiled their own homes, can be spared to return to those cities. I not only see a career at home for more genius than we have, but for more than there is in the world.

The class of which I speak make themselves merry without duties. They sit in decorated clubhouses in the cities, and burn tobacco and play whist; in the country they sit idle in stores and bar-rooms, and burn tobacco, and gossip and sleep. They complain of the flatness of American life; “America has no illusions, no romance.” They have no perception of its destiny. They are not Americans.

The felon is the logical extreme of the epicure and coxcomb. Selfish luxury is the end of both, though in one it is decorated with refinements, and in the other brutal. But my point now is, that this spirit is not American

Our young men lack idealism. A man for success must not be pure idealist, then he will practically fail; but he must have ideas, must obey ideas, or he might as well be the horse he rides on. A man does not want to be sun-dazzled, sun-blind; but every man must have glimmer enough to keep him from knocking his head against the walls. And it is in the interest of civilization and good society and friendship, that I dread to hear of wellborn, gifted and amiable men, that they have this indifference, disposing them to this despair.

Of no use are the men who study to do exactly as was done before, who can never understand that to-day is a new day. There never was such a combination as this of ours, and the rules to meet it are not set down in any history. We want men of original perception and original action, who can open their eyes wider

than to a nationality, — namely, to considerations of benefit to the human race, — can act in the interest of civilization; men of elastic, men of moral mind, who can live in the moment and take a step forward. Columbus was no backward-creeping crab, nor was Martin Luther, nor John Adams, nor Patrick Henry, nor Thomas Jefferson; and the Genius or Destiny of America is no log or sluggard, but a man incessantly advancing, as the shadow on the dial's face, or the heavenly body by whose light it is marked.

The flowering of civilization is the finished man, the man of sense, of grace, of accomplishment, of social power, — the gentleman. What hinders that he be born here? The new times need a new man, the complementary man, whom plainly this country must furnish. Freer swing his arms; farther pierce his eyes; more forward and forthright his whole build and rig than the Englishman's, who, we see, is much imprisoned in his backbone.

'T is certain that our civilization is yet incomplete, it has not ended nor given sign of ending in a hero. 'T is a wild democracy; the riot of mediocrities and dishonesties and fudges. Ours is the age of the omnibus, of the third person plural, of Tammany Hall. Is it that Nature has only so much vital force, and must dilute it if it is to be multiplied into millions? The beautiful is never plentiful. Then Illinois and Indiana, with their spawning loins, must needs be ordinary.

It is not a question whether we shall be a multitude of people. No, that has been conspicuously decided already; but whether we shall be the new nation, the guide and lawgiver of all nations, as having clearly chosen and firmly held the simplest and best rule of political society.

Now, if the spirit which years ago armed this country against rebellion, and put forth such gigantic energy in the charity of the Sanitary Commission, could be waked to the conserving and creating duty of making the laws just and humane, it were to enroll a great constituency of religious, self-respecting, brave, tender, faithful obeyers of duty, lovers of men, filled with loyalty to each other, and with the simple and sublime purpose of carrying out in private and in public action the desire and need of mankind.

Here is the post where the patriot should plant himself; here the altar where virtuous young men, those to whom friendship is the dearest covenant, should bind each other to loyalty; where genius should kindle its fires and bring forgotten truth to the eyes of men.

It is not possible to extricate yourself from the questions in which your age is involved. Let the good citizen perform the duties put on him here and now. It is not by heads reverted to the dying Demosthenes, or to Luther, or to Wallace, or to George Fox, or to George Washington, that you can combat the dangers and dragons that beset the United States at this time. I believe this cannot be

accomplished by dunces or idlers, but requires docility, sympathy, and religious receiving from higher principles; for liberty, like religion, is a short and hasty fruit, and like all power subsists only by new rallyings on the source of inspiration.

Power can be generous. The very grandeur of the means which offer themselves to us should suggest grandeur in the direction of our expenditure. If our mechanic arts are unsurpassed in usefulness, if we have taught the river to make shoes and nails and carpets, and the bolt of heaven to write our letters like a Gillott pen, let these wonders work for honest humanity, for the poor, for justice, genius and the public good. Let us realize that this country, the last found, is the great charity of God to the human race.

America should affirm and establish that in no instance shall the guns go in advance of the present right. We shall not make *coups d'état* and afterwards explain and pay, but shall proceed like William Penn, or whatever other Christian or humane person who treats with the Indian or the foreigner, on principles of honest trade and mutual advantage. We can see that the Constitution and the law in America must be written on ethical principles, so that the entire power of the spiritual world shall hold the citizen loyal, and repel the enemy as by force of nature. It should be mankind's bill of rights, or Royal Proclamation of the Intellect ascending the throne, announcing its good pleasure that now, once for all, the world shall be governed by common sense and law of morals.

The end of all political struggle is to establish morality as the basis of all legislation. 'T is not free institutions, 't is not a democracy that is the end, — no, but only the means. Morality is the object of government. We want a state of things *in which crime will not pay*; a *state of things which* allows every man the largest liberty compatible with the liberty of every other man.

Humanity asks that government shall not be ashamed to be tender and paternal, but that democratic institutions shall be more thoughtful for the interests of women, for the training of children, and for the welfare of sick and unable persons, and *serious care of criminals, than was ever any the best government of the Old World.*

The genius of the country has marked out our true policy, — opportunity. Opportunity of civil rights, of education, of personal power, and not less of wealth; doors wide open. If I could have it, — free trade with all the world without toll or customhouses, invitation as we now make to every nation, to every race and skin, white men, red men, yellow men, black men; hospitality of fair field and equal laws to all. Let them compete, and success to the strongest, the wisest and the best. The land is wide enough, the soil has bread for all.

I hope America will come to have its pride in being a nation of servants, and not of the served. How can men have any other ambition where the reason has not suffered a disastrous eclipse? Whilst every man can say I serve, — to the whole extent of my being I apply my faculty to the service of mankind in my especial place, — he therein sees and shows a reason for his being in the world, and is not a moth or incumbrance in it.

The distinction and end of a soundly constituted man is his labor. Use is inscribed on all his faculties. Use is the end to which he exists. As the tree exists for its fruit, so a man for his work. A fruitless plant, an idle animal, does not stand in the universe. They are all toiling, however secretly or slowly, in the province assigned them, and to a use in the economy of the world; the higher and more complex organizations to higher and more catholic service. And man seems to play, by his instincts and activity, a certain part that even tells on the general face of the planet, drains swamps, leads rivers into dry countries for their irrigation, perforates forests and stony mountain-chains with roads, hinders the inroads of the sea on the continent, as if dressing the globe for happier races.

On the whole, I know that the cosmic results will be the same, whatever the daily events may be. Happily we are under better guidance than of statesmen. Pennsylvania coal mines, and New York shipping, and free labor, though not idealists, gravitate in the ideal direction. Nothing less large than justice can keep them in good temper. Justice satisfies everybody, and justice alone. No monopoly must be foisted in, no weak party or nationality sacrificed, no coward compromise conceded to a strong partner. Every one of these is the seed of vice, war and national disorganization. It is our part to carry out to the last the ends of liberty and justice. We shall stand, then, for vast interests; north and south, east and west will be present to our minds, and our vote will be as if they voted, and we shall know that our vote secures the foundations of the state, good-will, liberty and security of traffic and of production, and mutual increase of good-will in the great interests.

Our helm is given up to a better guidance than our own; the course of events is quite too strong for any helmsman, and our little wherry is taken in tow by the ship of the great Admiral which knows the way, and has the force to draw men and states and planets to their good.

Such and so potent is this high method by which the Divine Providence sends the chiefest benefits under the mask of calamities, that I do not think we shall by any perverse ingenuity prevent the blessing.

In seeing this guidance of events, in seeing this felicity without example that has rested on the Union thus far, I find new confidence for the future. I could heartily wish that our will and endeavor were more active parties to the work.

But I see in all directions the light breaking. Trade and government will not alone be the favored aims of mankind, but every useful, every elegant art, every exercise of imagination, the height of reason, the noblest affection, the purest religion will find their home in our institutions, and write our laws for the benefit of men.

NATURAL HISTORY OF INTELLECT.

I. POWERS AND LAWS OF THOUGHT

I have used such opportunity as I have had, and lately [1850.] in London and Paris, to attend scientific lectures; and in listening to Richard Owen's masterly enumeration of the parts and laws of the human body, or Michael Faraday's explanation of magnetic powers, or the botanist's descriptions, one could not help admiring the irresponsible security and happiness of the attitude of the naturalist; sure of admiration for his facts, sure of their sufficiency. They ought to interest you; if they do not, the fault lies with you.

Then I thought — could not a similar enumeration be made of the laws and powers of the Intellect, and possess the same claims on the student? Could we have, that is, the exhaustive accuracy of distribution which chemists use in their nomenclature and anatomists in their descriptions, applied to a higher class of facts; to those laws, namely, which are common to chemistry, anatomy, astronomy, geometry, intellect, morals, and social life; — laws of the world?

Why not? These powers and laws are also facts in a Natural History. They also are objects of science, and may be numbered and recorded, like stamens and vertebræ. At the same time they have a deeper interest, as in the order of nature they lie higher and are nearer to the mysterious seat of power and creation.

For at last, it is only that exceeding and universal part which interests us, when we shall read in a true history what befalls in that kingdom where a thousand years is as one day, and see that what is set down is true through all the sciences; in the laws of thought as well as of chemistry.

In all sciences the student is discovering that nature, as he calls it, is always working, in wholes and in every detail, after the laws of the human mind. Every creation, in parts or in particles, is on the method and by the means which our mind approves as soon as it is thoroughly acquainted with the facts; hence the delight. No matter how far or how high science explores, it adopts the method of the universe as fast as it appears; and this discloses that the mind as it opens, the mind as it shall be, comprehends and works thus; that is to say, the Intellect builds the universe and is the key to all it contains. It is not then cities or mountains, or animals, or globes that any longer command us, but only man; not the fact but so much of man as is in the fact.

In astronomy, vast distance, but we never go into a foreign system. In geology, vast duration, but we are never strangers. Our metaphysic should be able to follow the flying force through all transformations, and name the pair

identical through all variety.

I believe in the existence of the material world as the expression of the spiritual or the real, and in the impenetrable mystery which hides (and hides through absolute transparency) the mental nature, I await the insight which our advancing knowledge of material laws shall furnish.

Every object in nature is a word to signify some fact in the mind. But when that fact is not yet put into English words, when I look at the tree or the river and have not yet definitely made out what they would say to me, they are by no means unimpressive. I wait for them, I enjoy them before they yet speak. I feel as if I stood by an ambassador charged with the message of his king, which he does not deliver because the hour when he should say it is not yet arrived.

Whilst we converse with truths as thoughts, they exist also as plastic forces; as the soul of a man, the soul of a plant, the genius or constitution of any part of nature, which makes it what it is. The thought which was in the world, part and parcel of the world, has disengaged itself and taken an independent existence.

My belief in the use of a course on philosophy is that the student shall learn to appreciate the miracle of the mind; shall learn its subtle but immense power, or shall begin to learn it; shall come to know that in seeing and in no tradition he must find what truth is; that he shall see in it the source of all traditions, and shall see each one of them as better or worse statement of its revelations; shall come to trust it entirely, as the only true; to cleave to God against the name of God. When he has once known the oracle he will need no priest. And if he finds at first with some alarm how impossible it is to accept many things which the hot or the mild sectarian may insist on his believing, he will be armed by his insight and brave to meet all inconvenience and all resistance it may cost him. He from whose hand it came will guide and direct it.

Yet these questions which really interest men, how few can answer. Here are learned faculties of law and divinity, but would questions like these come into mind when I see them? Here are learned academies and universities, yet they have not propounded these for any prize.

Seek the literary circles, the stars of fame, the men of splendor, of bon-mots, will they afford me satisfaction? I think you could not find a club of men acute and liberal enough in the world. Bring the best wits together, and they are so impatient of each other, so vulgar, there is so much more than their wit, such follies, gluttonies, partialities, age, care, and sleep, that you shall have no academy.

There is really a grievous amount of unavailableness about men of wit. A plain man finds them so heavy, dull and oppressive, with bad jokes and conceit and stupefying individualism, that he comes to write in his tablets, Avoid the

great man as one who is privileged to be an unprofitable companion. For the course of things makes the scholars either egotists or worldly and jocose. In so many hundreds of superior men hardly ten or five or two from whom one can hope for a reasonable word.

Go into the scientific club and hearken. Each savant proves in his admirable discourse that he and he only knows now or ever did know anything on the subject: "Does the gentleman speak of anatomy? Who peeped into a box at the Custom House and then published a drawing of my rat?" Or is it pretended discoveries of new strata that are before the meeting? This professor hastens to inform us that he knew it all twenty years ago, and is ready to prove that he knew so much then that all further investigation was quite superfluous; — and poor nature and the sublime law, which is all that our student cares to hear of, are quite omitted in this triumphant vindication.

Was it better when we came to the philosophers, who found everybody wrong; acute and ingenious to lampoon and degrade mankind? And then was there ever prophet burdened with a message to his people who did not cloud our gratitude by a strange confounding in his own mind of private folly with his public wisdom?

But if you like to run away from this besetting sin of sedentary men, you can escape all this insane egotism by running into society, where the manners and estimate of the world have corrected this folly, and effectually suppressed this overweening self-conceit. Here each is to make room for others, and the solidest merits must exist only for the entertainment of all. We are not in the smallest degree helped. Great is the dazzle, but the gain is small. Here they play the game of conversation, as they play billiards, for pastime and credit.

Yes, 't is a great vice in all countries, the sacrifice of scholars to be courtiers and diners-out, to talk for the amusement of those who wish to be amused, though the stars of heaven must be plucked down and packed into rockets to this end. What with egotism on one side and levity on the other we shall have no Olympus.

But there is still another hindrance, namely, practicality. We must have a special talent, and bring something to pass. Ever since the Norse heaven made the stern terms of admission that a man must do something excellent with his hands or feet, or with his voice, eyes, ears, or with his whole body, the same demand has been made in Norse earth.

Yet what we really want is not a haste to act, but a certain piety toward the source of action and knowledge. In fact we have to say that there is a certain beatitude, — I can call it nothing less, — to which all men are entitled, tasted by them in different degrees, which is a perfection of their nature, and to which

their entrance must be in every way forwarded. Practical men, though they could lift the globe, cannot arrive at this. Something very different has to be done, — the availing ourselves of every impulse of genius, an emanation of the heaven it tells of, and the resisting this conspiracy of men and material things against the sanitary and legitimate inspirations of the intellectual nature.

What is life but the angle of vision? A man is measured by the angle at which he looks at objects. What is life but what a man is thinking of all day? This is his fate and his employer. Knowing is the measure of the man. By how much we know, so much we are.

The laws and powers of the Intellect have, however, a stupendous peculiarity, of being at once observers and observed. So that it is difficult to hold them fast, as objects of examination, or hinder them from turning the professor out of his chair. The wonder of the science of Intellect is that the substance with which we deal is of that subtle and active quality that it intoxicates all who approach it. Gloves on the hands, glass guards over the eyes, wire-gauze masks over the face, volatile salts in the nostrils, are no defence against this virus, which comes in as secretly as gravitation into and through all barriers.

Let me have your attention to this dangerous subject, which we will cautiously approach on different sides of this dim and perilous lake, so attractive, so delusive. We have had so many guides and so many failures. And now the world is still uncertain whether the pool has been sounded or not.

My contribution will be simply historical. I write anecdotes of the intellect; a sort of Farmer's Almanac of mental moods. I confine my ambition to true reporting of its play in natural action, though I should get only one new fact in a year.

I cannot myself use that systematic form which is reckoned essential in treating the science of the mind. But if one can say so without arrogance, I might suggest that he who contents himself with dotting a fragmentary curve, recording only what facts he has observed, without attempting to arrange them within one outline, follows a system also, — a system as grand as any other, though he does not interfere with its vast curves by prematurely forcing them into a circle or ellipse, but only draws that arc which he clearly sees, or perhaps at a later observation a remote curve of the same orbit, and waits for a new opportunity, well-assured that these observed arcs will consist with each other.

I confess to a little distrust of that completeness of system which metaphysicians are apt to affect. 'T is the gnat grasping the world. All these exhaustive theories appear indeed a false and vain attempt to introvert and analyze the Primal Thought. That is up-stream, and what a stream! Can you

swim up Niagara Falls?

We have invincible repugnance to introversion, to study of the eyes instead of that which the eyes see; and the belief of men is that the attempt is unnatural and is punished by loss of faculty. I share the belief that the natural direction of the intellectual powers is from within outward, and that just in proportion to the activity of thoughts on the study of outward objects, as architecture, or farming, or natural history, ships, animals, chemistry, — in that proportion the faculties of the mind had a healthy growth; but a study in the opposite direction had a damaging effect on the mind.

Metaphysic is dangerous as a single pursuit. We should feel more confidence in the same results from the mouth of a man of the world. The inward analysis must be corrected by rough experience. Metaphysics must be perpetually reinforced by life; must be the observations of a working-man on working-men; must be biography, — the record of some law whose working was surprised by the observer in natural action.

I think metaphysics a grammar to which, once read, we seldom return. 'T is a Manila full of pepper, and I want only a teaspoonful in a year. I admire the Dutch, who burned half the harvest to enhance the price of the remainder.

I want not the logic but the power, if any, which it brings into science and literature; the man who can humanize this logic, these syllogisms, and give me the results. The adepts value only the pure geometry, the aerial bridge ascending from earth to heaven with arches and abutments of pure reason. I am fully contented if you tell me where are the two termini.

My metaphysics are to the end of use. I wish to know the laws of this wonderful power, that I may domesticate it. I observe with curiosity its risings and settings, illumination and eclipse; its obstructions and its provocations, that I may learn to live with it wisely, court its aid, catch sight of its splendor, feel its approach, hear and save its oracles and obey them. But this watching of the mind, in season and out of season, to see the mechanics of the thing, is a little of the detective. The analytic process is cold and bereaving and, shall I say it? somewhat mean, as spying. There is something surgical in metaphysics as we treat it. Were not an ode a better form? The poet sees wholes and avoids analysis; the metaphysician, dealing as it were with the mathematics of the mind, puts himself out of the way of the inspiration; loses that which is the miracle and creates the worship.

I think that philosophy is still rude and elementary. It will one day be taught by poets. The poet is in the natural attitude; he is believing; the philosopher, after some struggle, having only reasons for believing.

What I am now to attempt is simply some sketches or studies for such a

picture; *Mémoires pour servir* toward a Natural History of Intellect.

First I wish to speak of the excellence of that element, and the great auguries that come from it, notwithstanding the impediments which our sensual civilization puts in the way.

Next I treat of the identity of the thought with Nature; and I add a rude list of some by-laws of the mind.

Thirdly I proceed to the fountains of thought in Instinct and Inspiration, and I also attempt to show the relation of men of thought to the existing religion and civility of the present time.

I. We figure to ourselves Intellect as an ethereal sea, which ebbs and flows, which surges and washes hither and thither, carrying its whole virtue into every creek and inlet which it bathes. To this sea every human house has a water front. But this force, creating nature, visiting whom it will and withdrawing from whom it will, making day where it comes and leaving night when it departs, is no fee or property of man or angel. It is as the light, public and entire to each, and on the same terms.

What but thought deepens life, and makes us better than cow or cat? The grandeur of the impression the stars and heavenly bodies make on us is surely more valuable than our exact perception of a tub or a table on the ground.

To Be is the unsolved, unsolvable wonder. To Be, in its two connections of inward and outward, the mind and nature. The wonder subsists, and age, though of eternity, could not approach a solution. But the suggestion is always returning, that hidden source publishing at once our being and that it is the source of outward nature. Who are we and what is Nature have one answer in the life that rushes into us.

In my thought I seem to stand on the bank of a river and watch the endless flow of the stream, floating objects of all shapes, colors and natures; nor can I much detain them as they pass, except by running beside them a little way along the bank. But whence they come or whither they go is not told me. Only I have a suspicion that, as geologists say every river makes its own valley, so does this mystic stream. It makes its valley, makes its banks and makes perhaps the observer too. Who has found the boundaries of human intelligence? Who has made a chart of its channel or approached the fountain of this wonderful Nile?

I am of the oldest religion. Leaving aside the question which was prior, egg or bird, I believe the mind is the creator of the world, and is ever creating; — that at last Matter is dead Mind; that mind makes the senses it sees with; that the genius of man is a continuation of the power that made him and that has not done making him.

I dare not deal with this element in its pure essence. It is too rare for the

wings of words. Yet I see that Intellect is a science of degrees, and that as man is conscious of the law of vegetable and animal nature, so he is aware of an Intellect which overhangs his consciousness like a sky, of degree above degree, of heaven within heaven.

Every just thinker has attempted to indicate these degrees, these steps on the heavenly stair, until he comes to light where language fails him. Above the thought is the higher truth, — truth as yet undomesticated and therefore unformulated.

It is a steep stair down from the essence of Intellect pure to thoughts and intellections. As the sun is conceived to have made our system by hurling out from itself the outer rings of diffuse ether which slowly condensed into earths and moons, by a higher force of the same law the mind detaches minds, and a mind detaches thoughts or intellections. These again all mimic in their sphericity the first mind, and share its power.

Life is incessant parturition. There are viviparous and oviparous minds; minds that produce their thoughts complete men, like armed soldiers, ready and swift to go out to resist and conquer all the armies of error, and others that deposit their dangerous unripe thoughts here and there to lie still for a time and be brooded in other minds, and the shell not be broken until the next age, for them to begin, as new individuals, their career.

The perceptions of a soul, its wondrous progeny, are born by the conversation, the marriage of souls; so nourished, so enlarged. They are detached from their parent, they pass into other minds; ripened and unfolded by many they hasten to incarnate themselves in action, to take body, only to carry forward the will which sent them out. They take to themselves wood and stone and iron; ships and cities and nations and armies of men and ages of duration; the pomps of religion, the armaments of war, the codes and heraldry of states; agriculture, trade, commerce; — these are the ponderous instrumentalities into which the nimble thoughts pass, and which they animate and alter, and presently, antagonized by other thoughts which they first aroused, or by thoughts which are sons and daughters of these, the thought buries itself in the new thought of larger scope, whilst the old instrumentalities and incarnations are decomposed and recomposed into new.

Our eating, trading, marrying, and learning are mistaken by us for ends and realities, whilst they are properly symbols only; when we have come, by a divine leading, into the inner firmament, we are apprised of the unreality or representative character of what we esteemed final.

So works the poor little blockhead manikin. He must arrange and dignify his shop or farm the best he can. At last he must be able to tell you it, or write it,

translate it all clumsily enough into the new sky-language he calls thought. He cannot help it, the irresistible meliorations bear him forward.

II. Whilst we consider this appetite of the mind to arrange its phenomena, there is another fact which makes this useful. There is in nature a parallel unity which corresponds to the unity in the mind and makes it available. This methodizing mind meets no resistance in its attempts. The scattered blocks, with which it strives to form a symmetrical structure, fit. This design following after finds with joy that like design went before. Not only man puts things in a row, but things belong in a row.

It is certain that however we may conceive of the wonderful little bricks of which the world is builded, we must suppose a similarity and fitting and identity in their frame. It is necessary to suppose that every hose in nature fits every hydrant; so only is combination, chemistry, vegetation, animation, intellection possible. Without identity at base, chaos must be forever.

And as mind, our mind or mind like ours reappears to us in our study of nature, nature being everywhere formed after a method which we can well understand, and all the parts, to the most remote, allied or explicable, — therefore our own organization is a perpetual key, and a well-ordered mind brings to the study of every new fact or class of facts a certain divination of that which it shall find.

This reduction to a few laws, to one law, is not a choice of the individual, it is the tyrannical instinct of the mind. There is no solitary flower and no solitary thought. It comes single like a foreign traveller, — but find out its name and it is related to a powerful and numerous family. Wonderful is their working and relation each to each. We hold them as lanterns to light each other and our present design. Every new thought modifies, interprets old problems. The retrospective value of each new thought is immense, like a torch applied to a long train of gunpowder. To be isolated is to be sick, and in so far, dead. The life of the All must stream through us to make the man and the moment great.

Well, having accepted this law of identity pervading the universe, we next perceive that whilst every creature represents and obeys it, there is diversity, there is more or less of power; that the lowest only means incipient form, and over it is a higher class in which its rudiments are opened, raised to higher powers; that there is development from less to more, from lower to superior function, steadily ascending to man.

If man has organs for breathing, for sight, for locomotion, for taking food, for digesting, for protection by house-building, by attack and defence, for reproduction and love and care of his young, you shall find all the same in the muskrat. There is a perfect correspondence; or 'tis only man modified to live in a

mud-bank. A fish in like manner is man furnished to live in the sea; a thrush, to fly in the air; and a mollusk is a cheap edition with a suppression of the costlier illustrations, designed for dingy circulation, for shelving in an oysterbank or among the sea-weed.

If we go through the British Museum or the Jardin des Plantes in Paris, or any cabinet where is some representation of all the kingdoms of nature, we are surprised with occult sympathies; we feel as if looking at our own bone and flesh through coloring and distorting glasses. Is it not a little startling to see with what genius some people take to hunting, with what genius some people fish, — what knowledge they still have of the creature they hunt? The robber, as the policereports say, must have been intimately acquainted with the premises. How lately the hunter was the poor creature's organic enemy; a presumption *inflamed*, as the lawyers say, by observing how many faces in the street still remind us of visages in the forest, — the escape from the quadruped type not yet perfectly accomplished.

From whatever side we look at Nature we seem to be exploring the figure of a disguised man. How obvious is the momentum in our mental history! The momentum, which increases by exact laws in falling bodies, increases by the same rate in the intellectual action. Every scholar knows that he applies himself coldly and slowly at first to his task, but, with the progress of the work, the mind itself becomes heated, and sees far and wide as it approaches the end, so that it is the common remark of the student, Could I only have begun with the same fire which I had on the last day, I should have done something.

The affinity of particles accurately translates the affinity of thoughts, and what a modern experimenter calls “the contagious influence of chemical action” is so true of mind that I have only to read the law that its application may be evident: “A body in the act of combination or decomposition enables another body, with which it may be in contact, to enter into the same state.” And if one remembers how contagious are the moral states of men, how much we are braced by the presence and actions of any Spartan soul; it does not need vigor of our own kind, but the spectacle of vigor of any kind, any prodigious power of performance wonderfully arms and recruits us. There are those who disputing will make you dispute, and the nervous and hysterical and animalized will produce a like series of symptoms in you, though no other persons ever evoke the like phenomena, and though you are conscious that they do not properly belong to you, but are a sort of extension of the diseases of this particular person into you.

The idea of vegetation is irresistible in considering mental activity. Man seems a higher plant. What happens here in mankind is matched by what

happens out there in the history of grass and wheat. This curious resemblance repeats, in the mental function, the germination, growth, state of melioration, crossings, blight, parasites, and in short all the accidents of the plant. Under every leaf is the bud of a new leaf, and not less under every thought is a newer thought. The plant absorbs much nourishment from the ground in order to repair its own waste by exhalation, and keep itself good. Increase its food and it becomes fertile. The mind is first only receptive. Surcharge it with thoughts in which it delights and it becomes active. The moment a man begins not to be convinced, that moment he begins to convince.

In the orchard many trees send out a moderate shoot in the first summer heat, and stop. They look all summer as if they would presently burst into bud again, but they do not. The fine tree continues to grow. The same thing happens in the man. Every man has material enough in his experience to exhaust the sagacity of Newton in working it out. We have more than we use. I never hear a good speech at caucus or at cattleshaw but it helps me, not so much by adding to my knowledge as by apprising me of admirable uses to which what I know can be turned. The commonest remark, if the man could only extend it a little, would make him a genius; but the thought is prematurely checked, and grows no more. All great masters are chiefly distinguished by the power of adding a second, a third, and perhaps a fourth step in a continuous line. Many a man had taken their first step. With every additional step you enhance immensely the value of your first.

The botanist discovered long ago that Nature loves mixtures, and that nothing grows well on the crab-stock, but the blood of two trees being mixed a new and excellent fruit is produced. And not less in human history aboriginal races are incapable of improvement; the dull, melancholy Pelasgi arrive at no civility until the Phoenicians and Ionians come in. The Briton, the Pict, is nothing until the Roman, the Saxon, the Norman, arrives.

It is observed that our mental processes go forward even when they seem suspended. Scholars say that if they return to the study of a new language after some intermission, the intelligence of it is more and not less. A subject of thought to which we return from month to month, from year to year, has always some ripeness of which we can give no account. We say the book grew in the author's mind.

In unfit company the finest powers are paralyzed. No ambition, no opposition, no friendly attention and fostering kindness, no wine, music or exhilarating aids, neither warm fireside nor fresh air, walking or riding, avail at all to resist the palsy of mis-association. Genius is mute, is dull; there is no genius. Ask of your flowers to open when you have let in on them a freezing

wind.

The mechanical laws might as easily be shown pervading the kingdom of mind as the vegetative. A man has been in Spain. The facts and thoughts which the traveller has found in that country gradually settle themselves into a determinate heap of one size and form and not another. That is what he knows and has to say of Spain; he cannot say it truly until a sufficient time for the arrangement of the particles has elapsed.

These views of the source of thought and the mode of its communication lead us to a whole system of ethics, strict as any department of human duty, and open to us the tendencies and duties of men of thought in the present time.

Wisdom is like electricity. There is no permanent wise man, but men capable of wisdom, who being put into certain company or other favorable conditions become wise, as glasses rubbed acquire power for a time.

An individual body is the momentary arrest or fixation of certain atoms, which, after performing compulsory duty to this enchanted statue, are released again to flow in the currents of the world. An individual mind in like manner is a fixation or momentary eddy in which certain services and powers are taken up and minister in petty niches and localities, and then, being released, return to the unbounded soul of the world.

In this eternal resurrection and rehabilitation of transitory persons, who and what are they? 'T is only the source that we can see; — the eternal mind, careless of its channels, omnipotent in itself, and continually ejaculating its torrent into every artery and vein and veinlet of humanity. Wherever there is health, that is, consent to the cause and constitution of the universe, there is perception and power.

Each man is a new power in Nature. He holds the keys of the world in his hands. No quality in Nature's vast magazines he cannot touch, no truth he cannot see. Silent, passive, even sulkily Nature offers every morning her wealth to man. She is immensely rich; he is welcome to her entire goods, but she speaks no word, will not so much as beckon or cough; only this, she is careful to leave all her doors ajar, — towers, hall, storeroom and cellar. If he takes her hint and uses her goods she speaks no word; if he blunders and starves she says nothing. To the idle blockhead Nature is poor, sterile, inhospitable. To the gardener her loam is all strawberries, pears, pineapples. To the miller her rivers whirl the wheel and weave carpets and broadcloth. To the sculptor her stone is soft; to the painter her plumbago and marl are pencils and chromes. To the poet all sounds and words are melodies and rhythms. In her hundred-gated Thebes every chamber is a new door.

But he enters the world by one key. Herein is the wealth of each. His

equipment, though new, is complete; his prudence is his own; his courage, his charity, are his own. He has his own defences and his own fangs; his perception and his own mode of reply to sophistries. Whilst he draws on his own he cannot be overshadowed or supplanted.

There are two mischievous superstitions, I know not which does the most harm, one, that "I am wiser than you," and the other that "You are wiser than I." The truth is that every man is furnished, if he will heed it, with wisdom necessary to steer his own boat, — if he will not look away from his own to see how his neighbor steers his.

Every man is a new method and distributes things anew. If he could attain full size he would take up, first or last, atom by atom, all the world into a new form. And our deep conviction of the riches proper to every mind does not allow us to admit of much looking over into one another's virtues. Let me whisper a secret; nobody ever forgives any admiration in you of them, any overestimate of what they do or have. I acquiesce to be that I am, but I wish no one to be civil to me.

Strong men understand this very well. Power fraternizes with power, and wishes you not to be like him but like yourself. Echo the leaders and they will fast enough see that you have nothing for them. They came to you for something they had not.

There is always a loss of truth and power when a man leaves working for himself to work for another. Absolutely speaking I can only work for myself. All my good is magnetic, and I educate not by lessons but by going about my business. When, moved by love, a man teaches his child or joins with his neighbor in any act of common benefit, or spends himself for his friend, or rushes at immense personal sacrifice on some public, self-immolating act, it is not done for others, but to fulfil a high necessity of his proper character. The benefit to others is contingent and not contemplated by the doer.

The one thing not to be forgiven to intellectual persons is that they believe in the ideas of others. From this deference comes the imbecility and fatigue of their society, for of course they cannot affirm these from the deep life; they say what they would have you believe, but what they do not quite know. Profound sincerity is the only basis of talent as of character. The temptation is to patronize Providence, to fall into the accepted ways of talking and acting of the good sort of people.

Each has a certain aptitude for knowing or doing somewhat which, when it appears, is so adapted and aimed on that, that it seems a sort of obtuseness to everything else. Well, this aptitude, if he would obey it, would prove a telescope to bring under his clear vision what was blur to everybody else. 'T is a wonderful instrument, an organic sympathy with the whole frame of things.

There is no property or relation in that immense arsenal of forces which the earth is, but some man is at last found who affects this, delights to unfold and work it, as if he were the born publisher and demonstrator of it.

As a dog has a sense that you have not, to find the track of his master or of a fox, and as each tree can secrete from the soil the elements that form a peach, a lemon, or a cocoa-nut, according to its kind, so individual men have secret senses, each some incommunicable sagacity. And men are primary or secondary as their opinions and actions are organic or not.

I know well what a sieve every ear is. Teach me never so much and I hear or retain only that which I wish to hear, what comports with my experience and my desire. Many eyes go through the meadow, but few see the flowers. A hunter finds plenty of game on the ground you have sauntered over with idle gun. White huckleberries are so rare that in miles of pasture you shall not find a dozen. But a girl who understands it will find you a pint in a quarter of an hour.

Though the world is full of food we can take only the crumbs fit for us. The air rings with sounds, but only a few vibrations can reach our tympanum. Perhaps creatures live with us which we never see, because their motion is too swift for our vision. The sun may shine, or a galaxy of suns; you will get no more light than your eye will hold. What can Plato or Newton teach, if you are deaf or incapable? A mind does not receive truth as a chest receives jewels that are put into it, but as the stomach takes up food into the system. It is no longer food, but flesh, and is assimilated. The appetite and the power of digestion measure our right to knowledge. He has it who can use it. As soon as our accumulation overruns our invention or power to use, the evils of intellectual gluttony begin, — congestion of the brain, apoplexy and strangulation.

II. INSTINCT AND INSPIRATION

In reckoning the sources of our mental power it were fatal to omit that one which pours all the others into its mould; — that unknown country in which all the rivers of our knowledge have their fountains, and which, by its qualities and structure, determines both the nature of the waters and the direction in which they flow.

The healthy mind lies parallel to the currents of nature and sees things in place, or makes discoveries. Newton did not exercise more ingenuity but less than another to see the world. Right thought comes spontaneously, comes like the morning wind; comes daily, like our daily bread, to humble service; comes duly to those who look for it. It does not need to pump your brains and force thought to think rightly. O no, the ingenious person is warped by his ingenuity and mis-sees.

Instinct is our name for the potential wit. Each man has a feeling that what is done anywhere is done by the same wit as his. All men are his representatives, and he is glad to see that his wit can work at this or that problem as it ought to be done, and better than he could do it. We feel as if one man wrote all the books, painted, built, in dark ages; and we are sure that it can do more than ever was done. It was the same mind that built the world. That is Instinct.

Ask what the Instinct declares, and we have little to say. He is no news monger, no disputant, no talker. 'T is a taper, a spark in the great night. Yet a spark at which all the illuminations of human arts and sciences were kindled. This is that glimpse of inextinguishable light by which men are guided; though it does not show objects, yet it shows the way. This is that sense by which men feel when they are wronged, though they do not see how. This is that source of thought and feeling which acts on masses of men, on all men at certain times, with resistless power. Ever at intervals leaps a word or fact to light which is no man's invention, but the common instinct, making the revolutions that never go back.

This is Instinct, and Inspiration is only this power excited, breaking its silence; the spark bursting into flame. Instinct is a shapeless giant in the cave, massive, without hands or fingers or articulating lips or teeth or tongue; Behemoth, disdainng speech, disdainng particulars, lurking, surly, invincible, disdainng thoughts, always whole, never distributed, aboriginal, old as nature, and saying, like poor Topsy, "never was born, growed." Indifferent to the dignity of its function, it plays the god in animal nature as in human or as in the angelic, and spends its omniscience on the lowest wants. The old Hindoo Gautama says,

“Like the approach of the iron to the loadstone is the approach of the new-born child to the breast.” There is somewhat awful in that first approach.

The Instinct begins at this low point, at the surface of the earth, and works for the necessities of the human being; then ascends step by step to suggestions which are when expressed the intellectual and moral laws.

The mythology cleaves close to nature; and what else was it they represented in Pan, god of shepherds, who was not yet completely finished in god-like form, blocked rather, and wanting the extremities; had emblematic horns and feet? Pan, that is, All. His habit was to dwell in mountains, lying on the ground, tooting like a cricket in the sun, refusing to speak, clinging to his behemoth ways. He could intoxicate by the strain of his shepherd’s pipe, — silent yet to most, for his pipes make the music of the spheres, which because it sounds eternally is not heard at all by the dull, but only by the mind. He wears a coat of leopard spots or stars. He could terrify by earth-born fears called *panics*. Yet was he in the secret of nature and could look both before and after. He was only seen under disguises, and was not represented by any outward image; a terror sometimes, at others a placid omnipotence.

Such homage did the Greek, delighting in accurate form, not fond of the extravagant and unbounded, pay to the inscrutable force we call Instinct, or nature when it first becomes intelligent.

The action of the Instinct is for the most part negative, regulative, rather than initiative or impulsive. But it has a range as wide as human nature, running over all the ground of morals, of intellect, and of sense. In its lower function, when it deals with the apparent world, it is commonsense. It requires the performance of all that is needful to the animal life and health. Then it requires a proportion between a man’s acts and his condition, requires all that is called humanity; that symmetry and connection which is imperative in all healthily constituted men, and the want of which the rare and brilliant sallies of irregular genius cannot excuse.

If we could retain our early innocence we might trust our feet uncommanded to take the right path to our friend in the woods. But we have interfered too often; the feet have lost, by our distrust, their proper virtue, and we take the wrong path and miss him. ‘T is the barbarian instinct within us which culture deadens.

We find ourselves expressed in nature, but we cannot translate it into words. But Perception is the armed eye. A civilization has tamed and ripened this savage wit, and he is a Greek. His Aye and No have become nouns and verbs and adverbs. Perception differs from Instinct by adding the Will. Simple percipiency is the virtue of space, not of man.

The senses minister to a mind they do not know. At a moment in our history the mind's eye opens and we become aware of spiritual facts, of rights, of duties, of thoughts, — a thousand faces of one essence. We call the essence Truth; the particular aspects of it we call thoughts. These facts, this essence, are not new; they are old and eternal, but our seeing of them is new. Having seen them we are no longer brute lumps whirled by Fate, but we pass into the council-chamber and government of nature. In so far as we see them we share their life and sovereignty.

The point of interest is here, that these gates, once opened, never swing back. The observers may come at their leisure, and do at last satisfy themselves of the fact. The thought, the doctrine, the right hitherto not affirmed is published in set propositions, in conversation of scholars and philosophers, of men of the world, and at last in the very choruses of songs. The young hear it, and as they have never fought it, never known it otherwise, they accept it, vote for it at the polls, embody it in the laws. And the perception thus satisfied reacts on the senses, to clarify them, so that it becomes more indisputable.

This is the first property of the Intellect I am to point out; the mind detaches. A man is intellectual in proportion as he can make an object of every sensation, perception and intuition; so long as he has no engagement in any thought or feeling which can hinder him from looking at it as somewhat foreign.

A man of talent has only to name any form or fact with which we are most familiar, and the strong light which he throws on it enhances it to all eyes. People wonder they never saw it before. The detachment consists in seeing it under a new order, not under a personal but under a universal light. To us it had economic, but to the universe it has poetic relations, and it is as good as sun and star now. Indeed this is the measure of all intellectual power among men, the power to complete this detachment, the power of genius to hurl a new individual into the world.

An intellectual man has the power to go out of himself and see himself as an object; therefore his defects and delusions interest him as much as his successes. He not only wishes to succeed in life, but he wishes in thought to know the history and destiny of a man; whilst the cloud of egotists drifting about are only interested in a success to their egotism.

The senses report the new fact or change; the mind discovers some essential copula binding this fact or change to a class of facts or changes, and enjoys the discovery as if coming to its own again. A perception is always a generalization. It lifts the object, whether in material or moral nature, into a type. The animal, the low degrees of intellect, know only individuals. The philosopher knows only laws. That is, he considers a purely mental fact, part of the soul itself. We say

with Kenelm Digby, "All things that she knoweth are herself, and she is all that she knoweth." Insight assimilates the thing seen. Is it only another way of affirming and illustrating this to say that it sees nothing alone, but sees each particular object in just connections, — sees all in God? In all healthy souls is an inborn necessity of presupposing for each particular fact a prior Being which compels it to a harmony with all other natures. The game of Intellect is the perception that whatever befalls or can be stated is a universal proposition; and contrariwise, that every general statement is poetical again by being particularized or impersonated.

A single thought has no limit to its value; a thought, properly speaking, — that is a truth held not from any man's saying so, or any accidental benefit or recommendation it has in our trade or circumstance, but because we have perceived it is a fact in the nature of things, and in all times and places will and must be the same thing, — is of inestimable value. Every new impression on the mind is not to be derided, but is to be accounted for, and, until accounted for, registered as an indisputable addition to our catalogue of natural facts.

The first fact is the fate in every mental perception, — that my seeing this or that, and that I see it so or so, is as much a fact in the natural history of the world as is the freezing of water at thirty-two degrees of Fahrenheit. My percipiency affirms the presence and perfection of law, as much as all the martyrs. A perception, it is of a necessity older than the sun and moon, and the Father of the Gods. It is there with all its destinies. It is its nature to rush to expression, to rush to embody itself. It is impatient to put on its sandals and be gone on its errand, which is to lead to a larger perception, and so to new action. For thought exists to be expressed. That which cannot externize itself is not thought.

Do not trifle with your perceptions, or hold them cheap. They are your door to the seven heavens, and if you pass it by you will miss your way. Say, what impresses me ought to impress me. I am bewildered by the immense variety of attractions and cannot take a step; but this one thread, fine as gossamer, is yet real; and I hear a whisper, which I dare trust, that it is the thread on which the earth and the heaven of heavens are strung.

The universe is traversed by paths or bridges or stepping-stones across the gulfs of space in every direction. To every soul that is created is its path, invisible to all but itself. Each soul, therefore, walking in its own path walks firmly; and to the astonishment of all other souls, who see not its path, it goes as softly and playfully on its way as if, instead of being a line, narrow as the edge of a sword, over terrific pits right and left, it were a wide prairie.

Genius is a delicate sensibility to the laws of the world, adding the power to express them again in some new form. The highest measure of poetic power is

such insight and faculty to fuse the circumstances of to-day as shall make transparent the whole web of circumstance and opinion in which the man finds himself, so that he releases himself from the traditions in which he grew, — no longer looks back to Hebrew or Greek or English use or tradition in religion, laws, or life, but sees so truly the omnipresence of eternal cause that he can convert the daily and hourly event of New York, of Boston, into universal symbols. I owe to genius always the same debt, of lifting the curtain from the common and showing me that gods are sitting disguised in every company.

The conduct of Intellect must respect nothing so much as preserving the sensibility. My measure for all subjects of science as of events is their impression on the soul. That mind is best which is most impressionable. There are times when the cawing of a crow, a weed, a snow-flake, a boy's willow whistle, or a farmer planting in his field is more suggestive to the mind than the Yosemite gorge or the Vatican would be in another hour. In like mood an old verse, or certain words, gleam with rare significance.

But sensibility does not exhaust our idea of it. That is only half. Genius is not a lazy angel contemplating itself and things. It is insatiable for expression. Thought must take the stupendous step of passing into realization. A master can formulate his thought. Our thoughts at first possess us. Later, if we have good heads, we come to possess them. We believe that certain persons add to the common vision a certain degree of control over these states of mind; that the true scholar is one who has the power to stand beside his thoughts or to hold off his thoughts at arm's length and give them perspective.

It is not to be concealed that the gods have guarded this privilege with costly penalty. This slight discontinuity which perception effects between the mind and the object paralyzes the will. If you cut or break in two a block or stone and press the two parts closely together, you can indeed bring the particles very near, but never again so near that they shall attract each other so that you can take up the block as one. That indescribably small interval is as good as a thousand miles, and has forever severed the practical unity. Such is the immense deduction from power by discontinuity.

The intellect that sees the interval partakes of it, and the fact of intellectual perception severs once for all the man from the things with which he converses. Affection blends, intellect disjoins subject and object. For weal or woe we clear ourselves from the thing we contemplate. We grieve but are not the grief; we love but are not love. If we converse with low things, with crimes, with mischances, we are not compromised. And if with high things, with heroic actions, with virtues, the interval becomes a gulf and we cannot enter into the highest good. Artist natures do not weep. Goethe, the surpassing intellect of

modern times, apprehends the spiritual but is not spiritual.

There is indeed this vice about men of thought, that you cannot quite trust them; not as much as other men of the same natural probity, without intellect; because they have a hankering to play Providence and make a distinction in favor of themselves from the rules they apply to the human race.
